COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent
Who else must sweat and toil and gain but scanty fare."
William Blake

VOL. LXXXVII. No. 2213 | BOMBAY, 11 JULY, 1953 | PRICE Rs. 1/8

PLANNING FOR EMPLOYMENT

THE All-India Congress Committee which met this week at Agra, adopted a resolution, moved by Mr. Gulzarilal Nanda, Member, Planning Commission and Minister for Planning and Irrigation, to the effect that the Five-year Plan must be re-examined with a view to securing an increase in the volume of employment. This is a surprising recommendation in view of the fact that the Plan has been formulated after considerable thought and discussion so that the assumption, implied in the resolution, that the Plan is imperfect in so far as employment aspects of the Indian economic problem are concerned, seems unreal. It is the more surprising because the resolution was moved by Mr. Nanda, who was himself one of the prime architects of the Plan. It is not as if unemployment has reared its ugly head only after the Plan was finalised. The problem is no new phenomenon to compel its authors to examine afresh the whole edifice of the Plan. Apart from this consideration, the acceptance of the resolution is a reflection on the capacity of the country's leaders to plan even for a short period. The Plan, as finally evolved, has hardly been in operation for a year. If it needs to be revised so soon within its formulation, it certainly tantamounts to the admission of failure on the part of the planners.

Far more surprising than the resolution were the arguments by which it was supported, and the explanations and solutions which were offered for the problem of unemployment. Mr. Nanda was certainly not at his best when he spoke on the resolution. He attributed the growth in unemployment to the increase in population and to the dearth of savings which could be invested. He pointed out that the Plan stressed the need for increasing the purchasing power of the agricultural masses. All this is common knowledge. It was when he came to discuss the remedies, that he tripped not once but several times. He argued that development work should be intensified; he did not indicate, so far as we can see from the version of his speech reported in the daily Press, in what directions this should be done. But he urged that people should support fully the Government's loans and small savings schemes. It is not clear how this could be squared with his earlier assertion about the dearth of savings. He concluded by saying that unemployment was the result of the failure of industrial production and employment opportunities to keep pace with the increasing number of job-seekers. He certainly could not have begged the question better.

The other participants in the debate on the resolution were less cautious and were also less logical. Mr. N. V. Gadgil assumed, without proof, that "we have not exhausted our capacity to tax." Here is some unconscious irony. The question is not about the capacity to tax but the capacity to be taxed. He suggested conscription of "matriculates and intermediates" for work in villages on a "stipend of Rs. 30 to Rs. 40." He was apparently overwhelmed by the righteousness of the cause, for he did not care to examine whether conscription was consistent with the system of democratic planning. If money was scarce, he was certain that it could be created "under certain safeguards." Obviously, Mr. Gadgil is not one of those who have fears about deficit financing.

What vitiated the arguments of those who sponsored the resolution was their failure to take into account the basic facts about the Indian economy. An important fact is that there has always been a certain measure of under-employment in the agricultural sector as well as in the sector of cottage industries. The situation is aggravated in the agricultural sector by partial unemployment during the period following the harvest and by enforced idleness in times of drought, flood and consequent famine. Unfortunately, this year several parts of the country have been visited by these natural calamities. During periods of such acute distress, the rural folk turn to towns, which offer an assured supply of food at low prices (thanks to rationing) so that rural unemployment reappears as urban unemployment. Surely, this problem cannot be solved by merely translating the services of the urban educated unemployed—conscription would cause needless misery—to the rural sphere. Nor can it be solved by keeping alive low-productivity industries, such as handloom weaving, which are—sentimentalism apart—merely anachronistic survivals of a medieval economy.

Now, how does the Plan propose to solve the problem? There is little doubt that the implementation of the Plan will promote agricultural production, through both extensive and intensive methods. To this extent, it may be trusted to provide a higher level of employment. But it is in relation to the industrial sector and the trade sector that its deficiency is somewhat glaring. And here, it is unlikely that the Plan could be vastly improved, for the problems, presented by these fields, call not so much for a revision of the Plan as for a whole series of fiscal, legal and mental (policy) adjustments by the Government. Both the industrial and trade sectors have laboured under the weight of vexatious controls, undue solicitude for labour and heavy taxation. Their removal will itself give a fillip to additional employment in trade and industry. To give only one instance, the removal of control on cloth and foodgrains has already created fresh employment opportunities over a wide area. The average trader's services cannot certainly be deprecated in a country of vast distances, large population, and divergent habits of consumption. He performs a truly economic function not only by distributing the goods at a comparatively small margin but by acting as a liaison authority between the manufacturer and the consumer whose tastes he interprets to the manufacturer and thereby ensures the production of the right types of goods.

If the Government recognises at an early date that it cannot itself create any large expansion in employment opportunities which can be effectively created only by private enterprise, half the battle against unemployment will have been won. If this is accepted, then the question reduces itself to one of creating the climate under which the private sector can expand and develop. It is necessary to investigate why some existing industrial enterprises tend to close down, why many do not expand and why no new ones are being set up. A potent cause for the closure of factories is the shortage of power. This must be remedied by lessening the dependence of power production on the vagaries of the monsoon; this could be done by setting up thermal units at convenient centres. Again, the lack of transport is a serious hindrance to expansion of economy. And here, the policy of nationalisation of transport as well as the structure of taxation of motor vehicles deserve reorientation.

But these defects, grave as they are, are small as compared with the defects in the Government's policy in respect of large-scale industries and industrial labour. The Government speaks with two voices when it speaks about large-scale industries; it is extremely solicitous about the welfare of organised industrial labour but is not tired of burdening the industry with taxes. Again, it speaks with two voices when it demands the expansion of large-scale industries but also circumscribes the industry by limiting its sphere of operation under the plea of aid to small-scale industry. It speaks with two voices again when it wants prices to be reduced but sets its face against rationalisation and insists on payment of higher wages. The contradictions are, in fact, too glaring to escape attention. Their presence is not half as bad as the fact that their existence is not recognised by the Government.

And yet, each of these sets of disagreeable paradoxes in the Government's policy interferes with the provision of employment opportunities. Thus, the high rate of taxation leaves industry little finance for re-equipment and development; it can hardly meet the cost of labour welfare and of raw materials. By circumscribing the sphere of large-scale industries (the limitation on mills in regard to the production of *dhotis*, for instance) and by imposing additional burdens, such as excise duties, it not only makes economic production difficult but renders the units high cost ones, thereby limiting the demand for manufactured articles. It is time the Government defined its attitude towards cottage industries. Large-scale industries create, in the long run, more employment (and certainly more productive employment) than small-scale industries by enabling ancillary industries to develop. Further, since large-scale industries can pay liberal wages they have a multiplier effect on employment opportunities.

Finally, the Government's labour policy is itself a serious deterrent to wider employment. This is so for two reasons. By insisting on the payment of big wages and provision of costly amenities which industries cannot afford, the Government has brought about an atmosphere in which managements are disinclined to expand their activities and thereby take on additional labour. Again, by virtually prohibiting even moderate retrenchment of workers that is necessary for vital reasons of economy, it compels the factories to close down. The closure of the Madras Tramways is an instance in point. If a small measure of retrenchment had been permitted, it would have enabled the Company to carry on without a breakdown. The Government strains at the gnat of small retrenchment but is willing to swallow the camel of wholesale unemployment.

It should, therefore, be clear that what is urgently needed is the creation of conditions under which private enterprise can function freely, effectively and confidently. The creation of these conditions would mean the pursuit of an

entirely realistic fiscal, industrial and labour policy. By providing incentives for capital formation and by prompt and sympathetic attention to the industry's ills, it could bring about industrial expansion which would in turn create wider opportunities for employment. Private enterprise, on its part, should show a clearer sense of public responsibility, for it cannot claim freedom and, at the same time, disown obligations to society. The stakes are high; they are peace and economic prosperity through evolutionary processes. They are, in fact, too high to permit either the Government or the industry to indulge in mutual recrimination. Both must join hands with a clear understanding of their responsibilities to the public and for a social free enterprise economy, based on liberal economic principles and traditions.

OWN-YOUR-OWN-WAGON SCHEME

IT is difficult to appreciate the logic behind the "Own-your-own-wagon" scheme which the Railway Ministry has announced this week. Government spokesmen are seldom tired of preaching to private enterprise that it should not frequently run to official sources for help and succour. The boot, it now seems, is entirely on the other leg. It is the Government that has come to private enterprise for help, though this unwholesome approach is being made under the inviting slogan, "Own-your-own-wagon." That it bears a strong resemblance to the Government's earlier "Own-your-own-telephone" scheme, which had a certain measure of undeserved success in the early months, is no argument in favour of the scheme. At this rate, there will be no end to the "Own-your-own" schemes. The railways themselves may extend this ownership basis to passengers and the nationalised road undertakings may follow suit. On principle, the idea that a nationalised industry, such as the railways or the telephones, should ask the public—rather the private sector—to own the very means by which the industry serves the public should be deprecated. It means, in effect, that a few private firms will become favoured partners in what is essentially a public enterprise. This robs what little justification there is for nationalising a public utility industry.

It is true that even an important principle may have to be violated in times of national emergency. No such argument could be urged in favour of the "Own-your-own-wagon" scheme which permits private firms to have a share, however small, in a public enterprise. If the real difficulty is an acute shortage of wagons, it is not clear how the proposed scheme will solve it. Mr. Lal Bahadur Shastry, the Railway Minister, gave no indication in his last Budget speech that the wagon position was desperate. On the contrary, he drew much comfort from the thought that indigenous production was "able to meet the normal annual requirements of the railways in regard to rails, wagons and coaches." He was anxious to ensure that imports were reduced to a minimum. He placed the new acquisitions for 1953-54 at 10,663 wagons, of which 6,834 wagons were expected to be made available from domestic output. If indigenous production, it is now found, is unable to cope with the demand for wagons, there is no reason why a slight deviation from the principle of national self-sufficiency in wagons should not be made, and the much-needed wagons imported from abroad.

As the Government must ultimately make available wagons, either to itself or to private firms which agree to the scheme, it is clear that it is not the non-availability of wagons that seems to be the real cause of the trouble. Obviously, the cause of the trouble is "finance." It is a sad commentary on the way in which the railways are run that they should not be able to find the necessary finance for the wagons which the country needs, in spite of their effecting a sizable increase in fares and freights. Surely, it should have been possible for the railways to discover, by a suitable redistribution of its expenditure-pattern (by economies, for instance, in constructional activities, such as building costly railway stations, housing amenities for workers, etc.), the means by which the investment on wagons could be made.

The "Own-your-own-wagon" scheme, like the "Own-your-own-telephone" scheme, is only a disguised request for loan. Is it right for the Government to disguise the request for financial accommodation under an ingenious caption? The telephone scheme is, in fact, worse than the wagon scheme for, the net interest earned on the capital invested in the telephone and telegraph services is of the order of 9.6 per cent. If private enterprise were to earn this rate of profit in a public utility industry, it would be dubbed as indulging in profiteering at public expense. That, despite the high rate of profit involved in running the telephones and the railways, the Government should be unable to finance expansion in the services of these two undertakings without resorting to such ingenious methods as those under reference, is a confession of financial incompetence.

That the authors of the scheme have no clear idea of how the scheme should be worked in actual practice seems to be clear from the questionnaire they have circulated among commercial bodies. The firms are being asked, for instance, wherefrom they will obtain their wagon requirements, as if firms have had experience in importing wagons. Again, they are asked as to what freight reduction they expect in respect of the traffic that will be carried in their wagons. Obviously, no firm could answer this question, for the reply depends on certain other issues which themselves form the subject matter of the questionnaire and on which they can scarcely be expected to have any reliable information. Thus, they should know the cost of wagons, the rates of depreciation which the railways will allow, the stabling, shunting and overhauling expenses which the railways will charge for the wagons. Again, owning a wagon or a fleet of wagons is not such a small matter as owning a telephone, for the financial stake involved in the former is quite substantial. As against a deposit of only Rs. 2,000 per telephone, a covered broad-gauge wagon will cost as much as Rs. 11,500 and an open one Rs. 10,500; the cost of a covered metre-gauge wagon is estimated at Rs. 8,450 and of an open one Rs. 7,500. An investment of such magnitude should be easily realisable in times of need. If a firm or a company buys a few wagons now, to whom can it sell them when they are no longer needed except to the railways? And what guarantee is there that the railways will pay a reasonable price. It is possible that there will be a market for them overseas, but will their export be permitted? Considering the manner in which the Government took over the aircraft when they decided to nationalise the air transport industry, one should be extremely careful in investing in anything in which the Government will be the sole buyer. As readers are already aware, the compensation paid for aircraft was so poor that the whole transaction amounted to nothing short of partial expropriation. Further, the scheme runs counter to all accepted notions of property and offends every known law relating to transfer of property. The persons who own the wagons will have no control over them, will pay for their upkeep, will indemnify the railways against "any damage or destruction due to accidents" and will also bear the cost of repair or replacements caused by such accidents. The whole scheme is a travesty of economic justice.

It is not as if the new "wagon" scheme will solve all difficulties. It may well create new problems. So far as the private sector is concerned, it will mean the diversion of the capital it needs for other worthwhile operations to wagons. For the railways, it means a surrender of the freedom for allotting priorities for carriage of goods—the freedom, which must necessarily be used in the national interest. If, for instance, the manufacturer of less essential goods owns wagons, should he be given preference in the matter of carrying his goods vis-a-vis another manufacturer of, or trader in, more essential articles, who may not own wagons? It is not compulsory on the part of those who own wagons to allow them to be used when they are idle and, if a large number of firms choose to keep their wagons idle during the time they are not used by them, it is clearly a national waste of wagon space. That private industrial and trading units, which have been sorely exercised over the need for transport, might be induced to invest money in wagons, cannot be construed as an argument in its favour. The railways will do well to refrain from the temptation to trade on the private sector's anxiety over transport bottlenecks.

TRAGIC EPISODE OF BURNPUR

THE recent developments on the labour front in the iron and steel industry are deplorable. The country is short of steel, a serious handicap to the development of industries, that means growth of employment. In order to eliminate this handicap, high priority is being given to the expansion of this industry. At this juncture, the country can ill-afford loss of production brought about by misguided sections of labour in the industry. Yet the country had the misfortune to see this happen in its largest steel units, namely, the workshops of both the Tata Iron and Steel Co., Ltd., and the Indian Iron and Steel Co., Ltd. In the factory at Jamshedpur, belonging to the former Company, production was suspended on account of a five-day strike. In Burnpur, it has been still worse, as a "go-slow" movement, initiated six months ago by certain irresponsible workers has continued to thin down the output that is badly needed by the country.

The two incidents need mention, as they provide a typical example of how progress in industry in India is often held up by labour. In the Tata factory at Jamshedpur, about 2,000 workers went on strike for five days, as a protest against the suspension of two of its workers, even though it was for a valid reason. The workers suspended were responsible for the breakage of a roller worth Rs. 10,000. A thorough investigation into the incident revealed that the breakage was due to gross negligence of duty. Fortunately, however, the strike was called off on the 4th inst., thanks to the sagacious move on the part of the management. Under the terms of agreement brought about by the Bihar Government, the workers' union agreed to call of the strike, accepting the Government's decision to declare the strike illegal. The Company agreed to convert the sentence of suspension against the two employees into letters of warning. Thus, the recalcitrant workers, who ought to have given a better account of themselves, have been allowed to retain their position which they ill deserve.

The case of the Indian Iron and Steel Company, Ltd., is altogether on a different footing. In fact, it is developing into a very serious situation which has to be speedily brought under control in the best interests of the workers themselves, the industry and the country. The trouble first appeared as far back as 18th January last, when some men staged a lightning strike without any previous notice and for no valid reason. They formed themselves into an Action Committee and demanded recognition from the management. This Committee was neither a trade union nor a works committee which alone are recognised under the law. Besides, there being already a recognised union, and works committees being under formation by a Government agency, the management was not in a position to meet the demand of the self-appointed Action Committee, an unauthorised body which represented none, but was capable of creating mischief. On being denied the illegal and short-cut approach to power, the Committee initiated a "go-slow" movement in the hot mills of the factory. The matter did not end there, for the workers have also a variety of leadership in their ranks sponsored by various political parties such as the Communist Party of India, the Forward Bloc, the I.N.T.U.C., all of which vied with one another to assume control over the workers. As a result of this bid for power, the slow-down move spread throughout the works and it went on for the first two weeks without the management being informed of the reasons for the move.

In the serious situation thus created, the Company had to make appeals after appeals to the State and Central Governments to intervene and solve the complicated labour problems. Accordingly, officers of the Directorate of Labour, West Bengal Government, contacted the workers and persuaded them to desist from acts of indiscipline. Their efforts were of no avail. The Labour Commissioner too did his best to bring about reconciliation. The Labour Minister of the West Bengal Government personally visited the works at Asansol, stayed there for four days, and even his attempts at a peaceful settlement failed. He was perforce compelled to suggest to the Company to discharge those men who failed to give an understanding not to "go-slow." As many as 322 men were discharged, but the "go-slow" activity continued and the Action Committee carried on virulent propaganda against the Company. The Iron and Steel Controller, who also intervened, attempted to bring about a settlement by agreeing to offer an unconditional reinstatement of all the men discharged. Not only was this offer refused, but, throwing overboard all responsible leadership, the ringleaders of which readers are already aware.

The lessons of this tragic episode at Burnpur are clear. The most important of them all is that no amount of persuasion and reasoning will work when politics is allowed to be imported into trade unionism, and when irresponsible outside elements with scant regard for law are out to capture the control of trade unions. On such occasions, the authorities must act ruthlessly and root out mischief-mongers. It is astounding as to why the West Bengal Government and the Government of India allowed the situation to deteriorate as it has done now. They ought to have taken effective steps earlier to nip the trouble in the bud.

STATE LOANS TO BE FLOATED NEXT WEEK

BILL MARKET SCHEME EXTENDED—TATA HYDROS SEEK MORE CAPITAL

THURSDAY, 5 P.M.

TRADING in city markets during the week under review has once again failed to yield any significant trend. Markets have moved both ways within a narrow margin. The volume of business in all of them has been below normal. Equities on the Stock Exchange have drifted in a downward direction. Although the underlying trend continues to be steady, values are a shade lower than a week ago. Enthusiasm among the speculators has ebbed out and investors seem to be more keen on picking up first class fixed-yielders than going in for equities in spite of the high yields available on them. This reflects lack of confidence in the future. They seem to be assailed by fresh doubts about profit-margins of industries and their ability to maintain dividends. Talks of growing unemployment and statements that production in such industries as coal, textiles and sugar is likely to fall in the coming months have been primarily responsible for these fears. Signs of labour unrest in the iron and steel factories have also induced caution among operators. Although the dispute in the Tata Iron and Steel factory has been promptly settled, the continuance of the trouble in the works of Indian Iron and Steel has become a source of anxiety not only to those interested in the shares of this Company but also to the stock markets as a whole, as these shares hold a prominent place in the lists of Stock Exchanges.

MARKET GOSSIP

• • • •

Among the other markets, bullion is featureless but quiet, while commodities have tended to look up under the leadership of groundnuts and jute. The Government's hope that, by reducing the import duty on copra, it could bring down the prices of vegetable oils has proved a fond one. Groundnuts have, on the contrary, jumped up by nearly Rs. 4 per cwt. to Rs. 51-8. Groundnut oil has shot up from Rs. 25 to Rs. 27 per quarter, an increase of 8 per cent. There has been a rise in the prices of linseed and linseed oil also, while castorseeds are practically unchanged in spite of keen competition in overseas markets. The rise in edible oils is attributed to scarcity and something more effective must be done to bring their prices down if the cost of living index is not to go higher still. Liberal imports of palm oil, as suggested by us last week, as well as of cottonseed oil that can be used for making vahaspati, must be promptly allowed.

• • • •

As will be noted from a survey of banking trends in 1952, published elsewhere in this issue, the usance bill market scheme, inaugurated by the Reserve Bank in January, 1952, has proved useful in implementing a policy of selective credit control. This has enabled the Reserve Bank to extend credit to banks for financing genuine and essential business. The outstanding feature of this scheme is the self-liquidating character of the credits sanctioned under it. This facility was hitherto confined only to Scheduled banks having deposits of Rs. 10 crores and over. This restriction led to complaints that the Reserve Bank was discriminating against small banks. We now understand that the Reserve Bank has relaxed this restriction to some extent. Thus, the Scheduled banks having deposits (including deposits outside India) of Rs. 5 crores or more are now eligible for discounting usance bills with the Reserve Bank. It may be noted here that, out of 92 Scheduled banks (as at the end of December, 1952), there are only about 14 banks with deposits of Rs. 10 crores and over. The bill market scheme, therefore, covered only these 14 Scheduled banks. But, as a result of the aforesaid relaxation, it will now cover an additional 11 Scheduled banks, which is the number of banks with deposits of Rs. 5 crores and over. In other words, 25 Scheduled banks are now eligible for the bill market facilities provided by the Reserve Bank. It is true that these 25 banks constitute only about 26 per cent. of the total number of Scheduled banks but, between them, they account for as much as 87 per cent. of the total advances. Thus, the benefits of the bill market will now be available to most of the business men whose credit requirements are served by the Scheduled banks.

• • • •

As readers are aware, advances by the Reserve Bank of India against usance bills are charged at the rate of 3 per cent, as against 3½ per cent.—the Bank rate—on loans against Government securities. One effect of extending the bill market scheme as noted above is that 3 per cent. will be the effective Bank rate and not 3½ per cent. It is true that this has been so for some time past, but the extension of the scheme strengthens that position considerably further. To this extent, therefore, the latest development may be regarded as a relaxation of the dear money policy of the authorities.

• • • •

As was hinted in these columns a fortnight ago, the Tata Hydro-electric Companies have announced their proposals to raise fresh capital. The total amount that is now being sought to be raised is Rs. 3 crores and the new shares are being offered to the existing shareholders at par. The details are as follows:

The Tata Hydro-electric is offering 60,000 ordinary new shares of Rs. 100 each in the proportion of one such share for every three shares. This will raise its issued capital from Rs. 269.28 lakhs to Rs. 329.28 lakhs, that is, by Rs. 60 lakhs. The Andhra Valley is raising Rs. 90 lakhs of fresh capital by issuing 9,000 new ordinary shares of Rs. 1,000 each in the proportion of one new share for every two old shares. The Tata Power Company is raising fresh capital to the tune of Rs. 150 lakhs by issuing 15,000 new ordinary shares of Rs. 1,000 each in the proportion of two new shares for every five old shares.

• • • •

The new capital on the above lines is being raised to provide funds required for installing the proposed thermal plant at Trombay. The project is a joint project of the three hydro companies. The following extracts from the Directors' circular to shareholders will throw enough light on the project and the outlook for it:

"Pending completion of the formalities for the new licence for the thermal station and the extension of the three hydro licences up to 1975, the Companies have undertaken all the preliminary steps, such as, the selection and acquisition of a site for the station, the appointment of technical consultants, the preparation of designs, layout and specifications and the issue of tenders for the plant. The stage has now been reached, when funds have become necessary to enable the companies to proceed with the ordering of plant and the work at site. The project consists of two units of 50,000 kw. steam turbo generators, boilers, cooling water installation, transformers and distribution system. The total cost is now estimated at approximately Rs. 13 crores. It is proposed to obtain these funds as under:

	Crores Rs.
(i) By loan to be obtained from the International Bank for Reconstruction and Development	7
(ii) Temporary borrowings from banks ...	3
(iii) Issue of fresh capital of the three hydro companies	3
Total ...	13

"The scheme of the three companies was to build the thermal plant under one continuous plan, whereby the second unit would follow close upon the installation of the first unit of 50,000 kw. The Government of Bombay, however, does not accept the Companies' plan and proposes that the construction of the first unit alone should be proceeded with at this stage. On that basis, the complete equipment for the first unit, the receiving station and the transmission system for transmitting and distributing the supply are estimated to cost approximately Rs. 9 crores, the remaining Rs. 4 crores being the estimated cost of setting up the second unit. However, the question whether the Companies should proceed with the construction of both units, as proposed by them, or only with one unit in the first stage is still under discussion with Government and an early decision is expected. The Companies anticipate no difficulty in selling all the electricity which will be produced and the provisions of the Electricity (Supply) Act, 1948, assure to the Shareholders a return of 5 per cent. free of tax. As the station will be backed by the existing resources of the present hydro system, it will operate at maximum efficiency and economy."

The above proposal has been well received by the market, the value of the shares of all the three Companies having registered small gains.

• • • •

Conditions in the short-term money market suggest that the traditional slack season is in full swing. The relaxation in restrictions on imports has not led to any sizable demand for credit. On the contrary, the loans and advances to trade and industry are being repaid in large sums. The statement of affairs of the Scheduled Banks for the week-ended 26th June, 1953, discloses a recession of Rs. 11.44 crores, which is substantially higher than the drop of Rs. 8.45 crores in the preceding week. Practically the whole of this influx of funds has again been utilised to reduce the banks' borrowings from the Reserve Bank, the exact amount thus repaid being Rs. 10.67 crores. According to the Reserve Bank's statement for the week-ended 3rd July, 1953, there has been a further reduction of Rs. 8 crores in bankers' borrowings. The whole of this decline represents the repayment of the loan taken by the Imperial Bank, the advances and bills of which declined by about Rs. 3.47 crores in that week. The total outstandings of the Reserve Bank's loans to the banks as on 3rd July, 1953, were no more than about Rs. 10 crores, the lowest for several months. It would not be surprising if by now even this balance has been paid off.

• • • •

Hitherto, the banks had utilised the return of their funds borrowed by trade and industry for reducing their ways and means accommodation provided by the central banking authority. Henceforth, they will have to utilise the inflow of their funds either to build up their cash balances or to invest in Government obligations. The cash balances of banks are still by no means comfortable, the cash ratio being no more than 8.71 per cent. (as at 26th June, 1953), as against 10.01 per cent. a year before. This reveals that the capacity of banks to lend from their own resources is not yet quite appreciable and the position is not as comfortable as is being made out. The banks, of course, can borrow from the Reserve Bank and lend, but they are not yet suffering from a surfeit of funds. Nevertheless, the short-term money market is distinctly easy, with inter-bank call money being quoted well below 2 per cent. The interest rates for short-term deposits are also lower by ½ to ¾ per cent., as compared with those two weeks before, and "house money" is freely available at 2½ to 2¾ per cent. The bidding for three months' Government of India Treasury Bills has become keen, enabling the Government to borrow at slightly more favourable rates than in recent weeks.

• • • •

While such is the position of the short-term money market, the Gilt-edged market has been showing a sagging tendency for the past two or three days. Considering that the unconverted portion of the 3 per cent. 1953-55 loan is repayable on the 15th inst., the market should be firm, other things remaining the same. The fact, however, is that other things are not going to be the same and the market knows this. Talks about the forthcoming State loans are having a disquieting effect. All long-dated loans are on offer now, though there is no perceptible change in rates. The short-dated loans, however, are fully steady, presumably due to support from the Reserve Bank. Officials of some of the State Governments and other influential persons are going round the city, actively canvassing support for the loans of their respective States. The market, however, is still left guessing as to the exact date of flotation. Last week, reports from Madras indicated that the list would open in the first week of August, 1953. The controversy created by Mr. Prakasam, the Andhra leader, questioning the appropriateness of the Madras Government raising a loan on the eve of the partition of the State, lent support to this report. The latest information is that this controversy has been amicably settled and that there will be no opposition to the new loan. It, therefore, looks as though the list for all State loans will open, as was originally planned, on the 15th inst., that is, the date on which the balance of 3 per cent. 1953-55 falls due for repayment. It is estimated that the amount of this loan outstanding for repayment is about Rs. 13 crores. This sum will come in quite handy for reinvestment in the more lucrative State loans. Thus, it is possible that the major portion of the cash payable by the Centre next week will be roped in by the States.

• • • •

How many States are going to borrow? What is the amount required by them? A few weeks ago, it was reported that only five or six States would be allowed by the Reserve Bank to enter the market and that the amount would be restricted to about Rs. 20 crores. But since then, we understand that a few other States, too, have been successful in persuading the Central Government to let them borrow. In all, therefore, nine or ten States will approach the market, their total requirements being Rs. 30 crores. As mentioned in a previous issue of Commerce, the largest borrower will be Madras (Rs. 6 crores), followed by Bombay (Rs. 5 crores) and Bengal (Rs. 3 crores). Subscriptions to the Madras loan will also be in its 3 per cent. 1953 loan, falling due for payment on 15th September next. The outstanding amount of this loan is Rs. 1.42 crores. Of the remaining seven States, four are Part B States, namely, Mysore, Travancore-Cochin, Saurashtra and Madhya Bharat, the other three being U.P., Bihar, and Madhya Pradesh. The rate of interest on all the State Loans will be 4 per cent., subject to tax. The duration of the loans will also be the same for all, at 10 years. The issue price, however, is expected to be at a slight discount of As. 8 in order to make the loans a little more attractive than the existing ones. But Bombay and West Bengal are said to be unwilling to issue at less than par. In fact, Dr. B. C. Roy has already got his State's loan privately placed at this rate. Dr. Jivraj Mehta, Bombay's Finance Minister, is also said to have succeeded in obtaining promises of support for the Bombay loan at par.

• • • •

Representatives of a few other State Governments also are here, vying with one another in canvassing support for the loans of their respective States. Conspicuous among them are the Saurashtra Chief Minister and the chief of the Saurashtra State Bank, both of whom have been appealing to the business men hailing from Saurashtra to take up their State's first loan. Another State official wanted the permission of the Reserve Bank to get his State loan to be underwritten. But this had to be refused, as it would have upset the chances of the success of the other State loans. This competition among the States in selling their loans has become a regular annual and an unpleasant feature. The banks and other institutional investors with their activities spread all over India are finding it embarassing. The monetary authorities will do well to consider whether there is no effective alternative to the present system of floating loans by State Governments.

• • • •

The award of the Industrial Tribunal in the dispute arising from the closure of the Madras Electric Tramways (with effect from 12th April, 1953) will be read with interest, because it raises, once again, the issue of considerable importance to industrial managements, namely, the right of the workers to a share in a company's reserves. The other features of the award are such as might be normally anticipated. The Tribunal has decided that the refusal of the management to employ the workers did not amount to a lock-out, inasmuch as it was done "due to the financial position of the Company." The Company was, however, wrong in ordering the closure without the permission of the Tribunal before which a dispute was pending. Regarding compensation to the workers, the Tribunal has ordered payment of 15 days' basic wages for every year of service, subject to a maximum of six months' wages; the wages should be calculated on the basis of wages paid in March, 1953. If the Company resumes service, it should re-employ its old servants, preference being given in the order of seniority. The workers should be allowed to

(Continued on page 91)

SHARE MARKETS QUIET

VALUES DRIFT LOWER

(From Our Own Correspondents)

BOMBAY, *9th July*

SLUGGISHNESS characterised trading on the Stock Exchange during the week under review. The undertone was quiet. In fact, there were a few disincentives to discourage support to equities. Thus, the international political situation suggested that armistice was nearer than was expected before. On the home front, the labour situation at the works of the Indian Iron and Steel Co., Ltd., in Burnpur, deteriorated further and market men entertained apprehensions regarding production and earnings of the Company. Early in the week, there were reports of labour unrest at the Tata Iron and Steel Works at Jamshedpur which too tended to undermine confidence of operators. In the latter part of the week, however, equities tended to steady up on reports about the settlement of labour dispute in Jamshedpur. Anticipations of an early announcement in steel retention prices and the recovery in bullion, cotton and commodity markets, induced revival of modest support and short-covering. This lifted the main body of shares above the lowest levels touched earlier in the week. The volume of trading was very moderate, as the operators preferred to postpone commitments. On balance, equities, disclosed moderate losses over a wide front.

The outstanding feature of trading in the steel section was the weakness of Indian Irons. On liquidation, induced by the unfavourable reports about the labour situation at Burnpur, the shares fell from Rs. 24-10 to Rs. 24-1 on Monday. There was a feeble attempt at recovery on Tuesday when they looked up to Rs. 24-3, but renewed selling took them down to Rs. 23-15½ at the close. Reports of labour unrest and fears of lower production during June caused some selling in Tata Deferreds early in the week. The shares, as a consequence, dropped from Rs. 1,887-8 to Rs. 1,857-8 on Monday. Later on, as advices from Jamshedpur indicated the settlement of the labour trouble, there was replacement purchases. Further, the low level also attracted some switching over from Tata Ordinaries to Deferreds. This, coupled with covering by shorts, lifted up the rates to Rs. 1,875, before they finished at Rs. 1,871-4. Tata Ordinaries were marked down from Rs. 329 to Rs. 322, but at the close they steadied up to Rs. 325.

Apart from general factors, activity in textiles was uninspiring on reports of a decline in offtake in the cloth market. Business was restricted, as operators appeared to await the Government's decision on price and production control. In the closing sessions of the week, however, some shares were marked up slightly. Bombay Dyeings drifted down from Rs. 375-10 to Rs. 371-14, but gained ground to Rs. 374-6. Kohinoors dropped early in the week from Rs. 303 to Rs. 299-12, before recovering to Rs. 302-8. Centurys showed minor loss, on balance, at Rs. 272. Central Indias could gather no more than a rupee to Rs. 156. Indu Ordinaries were picked up As. 3 better at Rs. 10-1. Simplex were conspicuously steady, having been placed at Rs. 171-8 *ex-div.* (dividend Rs. 9), as against Rs. 179 *cum div.* at the close of last week. Standards advanced by Rs. 2-8 to Rs. 306-4. Swadeshis showed no change at Rs. 245. Swans were taken down by Rs. 2-8 to Rs. 432-8. Vishnus receded by Rs. 9-6 to Rs. 149-6.

Bank shares displayed steadiness in view of the impending dividend announcements of banks for the past half-year. Imperial Fully Paid-ups were better by Rs. 2-8 a... 1,875, while Contributories were lower by as much as Rs. 452-8. Centrals were fractionally better at Rs. 65-8 and their new shares by As. 12 at Rs. 67. Barodas were fairly steady at Rs. 111-4. Bank of Indias were well held at Rs. 158 and United Commercials at Rs. 36.

In the insurance section, British India Generals were conspicuous with a gain of As. 14 to Rs. 14-8. New Indias were done at Rs. 40 *ex-div.* after going down from Rs. 40-4 to Rs. 39-4 at one time. Empire of Indias changed hands Rs. 2-8 better at Rs. 627-8. Orientals were unchanged at Rs. 7,170, while Jupiters were a shade quiet at Rs. 7-1.

In the public utility section, Tata Group of Companies attracted attention. The Companies have announced the terms of their new capital issue. The Andhra Valley Power proposes to raise the authorised capital from Rs. 3½ crores to Rs. 4½ crores, by the creation of 10,000 new ordinary shares of Rs. 1,000 each. Out of these, 9,000 shares of Rs. 1,000 each are to be issued to the existing ordinary shareholders at par, in the ratio of two new ordinary shares for every five shares now held. The amount payable is Rs. 250 per share on application and a further sum of Rs. 300 per share on allotment and the balance Rs. 250 per share as and when called up. Tata Hydro-electric Power proposes to create 100,000 new ordinary shares of Rs. 100 each and issue 60,000 such shares of Rs. 100 each to the existing ordinary shareholders at par, in the ratio of one new share for every three existing shares. A sum of Rs. 25 per share is payable on application and a further sum of Rs. 50 on allotment and the balance as and when called up. Tata Power proposes to issue 15,000 new ordinary shares of Rs. 1,000 each and offer them to the existing ordinary shareholders in the ratio of two new ordinary shares to existing five shares held by them. A sum of Rs. 250 per share is payable on application, Rs. 500 per share on allotment and the balance as and when required. On the Stock Exchange, Andhra Valleys picked up Rs. 5 to Rs. 1,427-8, Tata Hydros Rs. 3 to Rs. 153-8 and Tata Powers Re. 1-4 to Rs. 1,508-12. Surat Electrics showed a drop of Re. 1-14 to Rs. 124-6.

Miscellaneous shares were generally quiet with small losses on a broad front. Associated Cements were dull at Rs. 170-8. Belapurs moved down by Rs. 5 to Rs. 224. Bombay-Burmahs were unchanged at Rs. 355-10. B.I.Cs. steadied up by As. 2½ to Rs. 8-5 on denial by the management of rumours about the management changing hands. Indian Coppers were a shade quiet at Rs. 2-13. Killick Industries were done at the unchanged rate of Rs. 149. National Rayons were taken down by Re. 1-8 to Rs. 101-12. Tata Chemicals were a fraction down at Rs. 8-13½. Tata Oils were held at Rs. 32. Wimcos were steady at Rs. 216-4. Alcocks drifted lower by Rs. 2-8 to Rs. 287-8. Shivrajpurs hardened a little to Rs. 55-4. Scindias were dull, but steady, at Rs. 12-13½. Air-Indias had business at Rs. 87-8 and Air-India International at Rs. 107-8.

• • • •

Calcutta Stock Exchange

CALCUTTA, *7th July*

Lacking in both incentives and adequate funds and faced with a number of uncertainties, the Calcutta Stock Exchange could not do better than record a restricted volume of business at declining prices during the week. The recent National Plan Bonds have taken a part of the money in the market, and, judged from the present mood of the market, they offer a better investment proposition than share business. It is not surprising, therefore, that the middle class investing public are reluctant to go in for shares at present. The further deterioration in the labour situation at Burnpur has left Indian Irons completely lifeless and, for the Calcutta market, if this speculative counter is depressed, other sections can only move down in sympathy, even though the general conditions are favourable. And such a trend can only be all the more powerful, as it was this week, when the general conditions are far from favourable. The settlement of the TISCO strike at Jamshedpur is, however, a good sign, and may as well be a forerunner to a settlement at Burnpur.

The emergence of nothing definite from the Korean situation is a great uncertainty, and as far as the Share Market is concerned it can only hold up business. Another factor which encouraged restricted business was the landslide in the prices for both hessian and sacking goods, although a recovery was in evidence in these rates in the last two days. However, jute shares are bound to come to the forefront, as hessian output is more or less equal to demand. The extension of the Indo-Pakistani Trade Agreement up to 30th September and Burma's need to purchase a wider range of industrial products from India have been encouragingly noted, but a tendency to wait and watch the forthcoming talks of the Indian and Pakistani Prime Ministers at Karachi made operators postpone commitments, and the hope that the scope of trade between the two countries would be widened is held. The rumour that the B.I. Corporation is to change hands has been authoritatively denied, and this denial enabled the shares to move from Rs. 8-2 to Rs. 8-5.

For reasons already stated, Indian Irons touched a low of Rs. 23-15, the week's loss being as much as As. 11. To-day's closure at Rs. 24-3 recorded an insignificant recovery. In transactions, Braithwaites rose from Rs. 11-2 to Rs. 11-7, while Kumardhubis were almost unchanged at Rs. 7-13. Jessops were quiet at Rs. 23-15, and National Irons were bought at Rs. 5, as against a previous rate of Rs. 5-3.

The jute section was marked with a reduced volume of business, and sellers who desired to dispose of holdings could only realise lower values. Thus, Howrahs retreated from Rs. 24-4 to Rs. 23-15. At Rs. 337, Fort Glosters showed a loss of eight points, and Landsdownes were hammered down from Rs. 140 to Rs. 130. Megnas eased from Rs. 107 to Rs. 101, Naihattis from Rs. 128 to Rs. 122, and Nationals from Rs. 25 to Rs. 24-12. Presidencies were, however, unchanged at Rs. 5, and Agarparas gained an anna to Rs. 18-6. Anglo-Indias were the worst sufferers with a loss of Rs. 17-8 to Rs. 215.

Coals also searched for lower levels, but buyers were interested to secure holdings coming to them at declining rates. New Beerbhooms realised Rs. 19-2, at which rate the loss incurred was as much as As. 15. Pench Valley eased fractionally to Rs. 24, while Burrakurs were placed around Rs. 10. Other counters that submitted to lower levels included Raneegunges at Rs. 8-8, Borreas at Rs. 28-8, and Dhemo Mains at Rs. 10-1, as against Rs. 8-10, Rs. 30 and Rs. 10-4, respectively last week. East Indians were, on the other hand, fractionally better at Rs. 24-3, and Central Indias were unchanged at Rs. 4-13.

Teas were deserted counters, and it was difficult for anxious sellers to find buyers. However, quotations were affected less significantly than in other sections as many holders prudently preferred to wait. Thus, Dhelakhats were unchanged at Rs. 10-6, as were Kilcotts at Rs. 12-12. Singtoms eased from Rs. 4-3 to Rs. 4.

Although miscellaneous shares also remained generally dull, the section was not devoid of features. Apart from the recovery in B.I.Cs. already mentioned, Angelo Bros. moved from Rs. 18-15 to Rs. 19-2. At Rs. 30-8, Godfrey Phillips showed a gain of As. 6. Alkali Chemicals were steady at Rs. 14-10 and at one time realised Rs. 14-13. Rallis were fractionally lower at Rs. 74-14. Sone Valley Cements and Metal Boxes recorded business at Rs. 7-1 and Rs. 18-6, respectively.

Madras Stock Exchange

MADRAS, *8th July*

The Stock Exchange passed through another week of listless conditions. Transactions put through were on a minor scale. Price fluctuations were confined to a very narrow range. Sectionwise, textile shares met with selling pressure, on rumours of a possible relaxation of restrictions on production of *dhotis* by mills and slackness in piecegoods markets. Uninspiring advices from Calcutta were responsible for dullness in tea shares. Coffee and rubber shares failed to evoke support, in the absence of fresh stimulants. Bank scrips also were somewhat easy and so were miscellaneous shares. Over a broad front, values generally drifted downwards and the undertone was weak.

The weakness of the market was perceptible in the textile section. Coimbatore Pioneers were the worst sufferers with a loss of 9 points to Rs. 106 *cum-div.* Buckinghams retreated by Rs. 2-4 to Rs. 120. Maduras fell from Rs. 36-12 to Rs. 36-3. Cambodias declined by As. 3 to Rs. 10-6 and Trichinopolys by As. 2 to Rs. 9. Radhakrishnas and Lakshmis, however, received special buying support and moved up by Rs. 2 and Re. 1-8 to Rs. 144 and Rs. 178-8, respectively. Exceptations of a decline in Japanese rayon yarn prices led to a drop of As. 2-6 to Rs. 4-14 in the quotation for Travancore Rayon scrips.

In the planting section, rubber shares were easy. Nerunenys receded by As. 10 to Rs. 8-4 *ex-div.* Cochin Malabars and Vaikundams lost an anna each to Rs. 6-9 and Rs. 13-15, respectively. Thiruvadis were a shade lower at Rs. 2-12-6. Among tea shares, United Nilgiris slided down by Rs. 4 to Rs. 190. Peermades declined by As. 8 to Rs. 27-4. Periakaramalais, on the other hand, were done As. 2 higher at Rs. 27-12. Blue Mountains also were a shade better at Rs. 2-13-6. Among coffee shares, Consolidated Coffees were easy at Rs. 18-7, as against Rs. 18-12. Puthuthottams were lower by an anna and a half at Rs. 5-0-6. Values of tea-*cum*-rubber shares were fully maintained. T.R.T. & Co. put on As. 3 to Rs. 7-1 and Midlands As. 2 to Rs. 10-11.

Scrips of miscellaneous companies were neglected. Mettur Chemicals and Mysore Papers lost As. 2 each, the former to Rs. 4-2 and the latter to Rs. 14-8. T.A.C.Ts. were enquired at Rs. 3-3, as against Rs. 3-4. Sugar shares were steady and even registered slight improvement. E.I.D. 'A's and 'B' recorded a rise of As. 8 each to Rs. 15 and Rs. 20-2, respectively.

BANK OF INDIA LTD.

The working of the Bank of India Ltd. during the half-year ended 30th June, 1953, has resulted in a profit (subject to taxation) of Rs. 36.11 lakhs, which shows a drop of Rs. 0.78 lakh from the profit (Rs. 36.89 lakhs) earned in the corresponding six months of the previous year. The amount brought in from the previous year's account is Rs. 6.36 lakhs, as against Rs. 5.61 lakhs a year ago. With the addition of this sum, the total available for disposal amounts to Rs. 42.47 lakhs (Rs. 42.50 lakhs). Out of this, the Directors have appropriated Rs. 15 lakhs for payment of an interim dividend at the rate of 12 per cent. per annum (Rs. 3 per share of Rs. 50), free of income-tax, for the half-year under review, which is the same as that paid for the half-year ended 30th June, 1952. This leaves a sum of Rs. 27.47 lakhs (subject to taxation) to be carried over to the next half-year, as compared with the corresponding sum of Rs. 27.50 lakhs of the previous year.

HONGKONG AND SHANGHAI BANKING CORPORATION

The Hongkong and Shanghai Banking Corporation has declared an interim dividend of £2 per share, free of Hong Kong Corporation profits tax, which is the same as that paid last year. The dividend is payable on 10th August, 1953. Transfer books will remain closed from 24th July to 8th August, 1953, (both days inclusive).

Notice

CAWNPORE TEXTILES LIMITED

NOTICE IS HEREBY GIVEN THAT THE Share Transfer Books of the Company will be closed from 14th July to 31st July, 1953, both days inclusive.

By Order of the Board.

Per Pro. BEGG, SUTHERLAND & Co., LTD.,

E. C. CALDWELL,

Registrar

Managing Agents

KANPUR U.P., 1st *July*, 1953.

NEWS IN BRIEF

THE six cities of Ahmedabad, Bombay, Calcutta, Delhi, Kanpur and Madras use 56 per cent. of the country's generated electrical energy.

Madhya Pradesh has the largest area under forests, which cover 66,962 sq. miles as against only 135 sq. miles in Ajmer.

The limit of gold and bullion that can be transmitted by insured post in the inland service, that is upto a value of Rs. 2,500, has been extended for another year from 1st July, 1953.

The Central Government has declared the coal industry, so far as it is concerned with the production and supply of coal and coke, to be a public utility service for the purpose of the Industrial Disputes Act, 1947 (XIV of 1947) for a further period of six months from 14th July, 1953.

The first staple fibre factory, which is under construction at Nagda, about 45 miles from Indore, on the Bombay-Delhi main line of the Western Railway and under the management of Messrs. Birla Bros., will go into production early in October. The output of viscose staple fibre from the factory will be 450 tons per month. The estimated cost of the factory is Rs. 3 crores.

The share of the passenger and goods traffic carried during 1951-52 by the four types of gauges on Indian Railways is as follows: broad-gauge, 829 million passengers and 101 million tons of goods; metre-gauge 389 million passengers and 27 million tons; and the two narrow-gauges 59 million passengers and 4 million tons of goods.

The Government of India has revised its agreement with the Swiss firm, entered into in May, 1949, for setting up of a factory for the manufacture of all-metal light-weight coaching stock. The revised agreement has fixed targets to be reached every year till the Project is completed and has tied up the payment to the Swiss firm with completion of each target.

According to the Directorate of Economics and Statistics, Ministry of Food and Agriculture, the all-India final estimate of tobacco, 1952-53, puts the current year's area and production at 768,000 acres and 211,000 tons, as against 659,000 acres and 192,000 tons, respectively, in the adjusted final estimate of last year. This shows an increase of 109,000 acres or 16.5 per cent. in area and 19,000 tons or 9.9 per cent. in production.

The Government of India, in accordance with its policy of reviewing from time to time the incidence of export duties, has had under consideration the incidence of the present export duty on tobacco seed oil, falling under item 15 of the Second Schedule to the Indian Tariff Act, 1934. In order to improve its competitive position in foreign markets, the Government has decided to abolish the export duty on tobacco seed oil, with effect from 8th July, 1953.

The Planning Commission has brought out a brochure, entitled *Building New India*, which gives glimpses of the India that is now in the making, against the background of the first Five-Year Plan. Divided into several sections, the brochure deals with the country's plans and achievements in the field of industrial undertakings, scientific research, transport and communications, irrigation and power schemes, agricultural and community development and social sciences.

The Travancore-Cochin Government has requested the Government of India to revise the recent reduction in the import duty on copra. The State Government, in a telegram to the Prime Minister and the Commerce Minister, has asked them to reconsider the Union Government's decision, since the reduction of the import duty would vitally affect the common man's economy in this State. The State's Minister in charge of Food and Civil Supplies has left for Delhi to take up this question with the Government of India.

It has been pointed out by the Customs authorities in Ceylon that some manufacturers in India are not stamping the country of origin of goods exported to Ceylon. This is in contravention of the provisions of the Ceylon Merchandise Marks Ordinance, which are now being rigidly enforced, with the result that importers in Ceylon are allowed to clear the goods only after paying a penalty. The Commerce and Industry Ministry, Government of India, asks the manufacturers and exporters in India to see to it that the words "Made in India" are clearly stamped on goods exported from this country.

A conference of the representatives of the Government of India and the Governments of Madras, Mysore and Hyderabad was held in New Delhi on the 9th and 10th inst., when matters relating to the Tungabhadra Project were discussed. The allocation of the expenditure so far incurred on the Project between the States of Madras, Mysore and Andhra, the agency which is to undertake the further execution of the Project and allied matters were the subjects on the agenda for the meeting. The Conference is a sequel to the decision to create the Andhra State and merge the Bellary taluka (in which the Project is situated) with the Mysore State, in accordance with the terms of the Misra Award.

A typewriter in Malayalam will shortly be put on the market in India, and its component parts are now on the way from the U.S.A. for assembly in the Calcutta factory of Remington Rand of India Ltd., This Malayalam typewriter represents the successful culmination of efforts to design a satisfactory keyboard in this language. Typewriters are at present available in eight Indian languages—Hindi, Marathi, Gujrathi, Tamil, Bengali, Gurumukhi and Urdu. Hindi was the first to be developed in 1910, and it is estimated that 4,000 typewriters of this language are in use today. Development work on Kanarese, Oriya and Telugu typewriters is at present in progress.

Mr. Justice Mehr Chand Mahajan, Mediator in the dispute between the workers and management of the Hindusthan Shipyard, is understood to have suggested a compromise to settle the dispute over retrenchment of workers. The formula would result in the retrenchment of 800 labourers, as against 813 retrenched since April. The conditions are that labour should agree to the retrenchment of the medically unfit, superannuated workers, those willing to resign voluntarily and retrenchment on "last come first go" basis. The Labour Union has accepted the plan and it has also agreed, it is stated, to withdraw unconditionally the allegation made against the management and express regret for the same. A recent meeting of the Board of Directors is stated to have insisted on this. The Board has not yet expressed its opinion on the compromise formula.

The Indian Chamber of Commerce of America has decided to sponsor an "India supplement," which the *Journal of Commerce*—one of the most important business dailies of the U.S.—plans to publish about the middle of September, 1953. The Supplement will be devoted completely to India and Indo-American trade and commerce and will be the first of its kind in America. The Chamber hopes that the special issue will help promote closer commercial relations between India and America and stimulate interest in American markets for Indian products. The Chamber is anxious that the advertisement space should, if possible, be taken up by Indian and U.S. parties in equal proportions. The advertisement tariff for the Supplement will be on the basis of about $20 for a two inch by two inch space. The question of making available dollar exchange to parties in India, desirous of placing advertisements in this supplement, has been taken up by the Chamber with the Indian Embassy at Washington D.C. and the Reserve Bank of India. Further information will be available from the Chamber at 148, East 47th Street, New York 17, New York.

From Abroad

No less than 1.7 million new jobs were created by the German Federal Republic during the past five years. The gross social product per head of population had risen from 904 to 1,385 marks, in spite of an increase of 2.6 million in population.

The total number of unemployed in West Germany, by about the middle of last month, was 1,117,732, of whom 703,024 were men. As compared with the position a year ago, this figure showed a decline of 173,800. As compared with the highest level of unemployment reached in February, 1953, this showed a fall of 784,500.

The House of Commons has unanimously approved the Marshall Aid Commemoration Bill as a special contribution to Anglo-American understanding. The Bill gives effect to the proposal that, as an expression of Britain's gratitude for the European Recovery Programme, 12 "Marshall Scholarships" should be founded at British universities, to be competed for annually by U.S. students.

The campaign organised in Norway to raise money by voluntary contributions to supplement the £1,000,000 voted by the Norwegian Parliament for technical aid to India has now concluded. The total sum raised is about £150,000. Districts in poorer parts of the country, particularly in North Norway, are reported to have made the best contribution. Machinery and equipment for a boat-building yard is among the material recently shipped to India. At the yard, it is hoped to build new types of fishing boats, as the types now used in the Travancore-Cochin State, where Norway's technical aid programme is concentrated, have proved unsuitable for mechanisation.

The French Cabinet has approved of the financial plans, presented by the Minister of Finance and Economic Affairs, which aim at raising the Government revenues by sixty milliard francs a year. In order to raise new revenues, the programme calls, in particular, for increases in sales taxes on gasoline and alcohol. Other measures in the programme include granting of special powers to the Government in the financial domain, creation of a fund for housing construction, farm equipment and economic expansion, and an additional advance of 110 milliard francs from the Bank of France to the Government.

U.S. imports in April increased more than $8 million over those for the preceding month, total U.S. imports being $1,012.4 million in April, as against $1,004.1 million in March. The increase was entirely accounted for by larger shipments from the countries of Asia, Africa and Oceania. The countries recording the most notable gains in exports to the United States were India, the Philippines, Australia, New Zealand, British Malaya, Indonesia, Egypt and the Gold Coast. Imports from India increased from $20.5 million to $23.2 million, while U.S. exports to that country dropped from $23.5 million to $9.4 million.

Two liners of the P. & O. Steam Navigation Company, the *Strathaird* and the *Strathnavar*, will be carrying next year one class of passengers only between the U.K., India, Ceylon and Australia. Since the war, the two ships have been carrying some 570 first-class and 470 tourist-class passengers on this run. After conversion, they will each take about 1,200 tourist-class passengers. The decision to convert the liners has been taken by the Company, in order to prepare for the expected entry into the Australian service next year of the new 28,000 tonners *Arcadia* and *Iberian*.

PERSONAL

MR. M. P. Pai, I.C.S., Joint Secretary, Union Ministry of Production, who has been appointed Managing Director, Sindri Fertilisers and Chemicals Ltd., has assumed charge of his office.

Mr. M. A. Rahaman, First Secretary, Indian High Commission, Nairobi, has been appointed India's Consul-General at Pondicherry.

Mr. A. K. Ghosh, I.C.S., Chief Commissioner of the Andamans, is understood to have been offered the post of General Manager of the proposed Bharat Electronics Industry at Bangalore.

Mr. Matadin Khaitan, of Messrs. Matadin Khaitan & Co., Ltd., Calcutta, has been elected President of the Bengal Sugar Merchants Association for the current year.

Mr. N. Dandekar, I.C.S., whose services had been lent by the Government of India to the Scindia Steam Navigation Co., Ltd. in 1949, has decided to retire from Government service and join the Company permanently in order to be able to guide its affairs.

Mr. Kenneth Aston, a British Electrical Engineer and former Professor and Head of the Department of Electrical Technology at the Indian Institute of Science, Bangalore, has been appointed Professor of Electrical Engineering at the University of Roorkee, U.P. The services of Mr. Aston have been made available by Britain under the Colombo Plan.

"COMMERCE" 1928

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

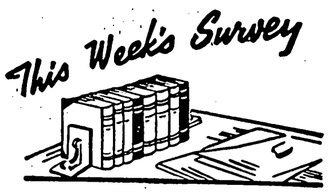
CALCUTTA, *14th July*

The Best Use of Coal

The coal trade of India moves from bad to worse, collieries are being closed down in quick succession; but our legislators remain lethargic. Vast fields of valuable coal are disappearing from the sight and from the ken of man, lost for ever and to be soon forgotten. Yet the Government of India, complacent in the knowledge that it can get all the fuel required for its railways at a ridiculously cheap rate, ignores this grave problem of senseless waste. They do things much better in South Africa. Assisted by Government subsidies and by railway and steamer freight concessions, South Africa is able to compete with Indian coal in India's own markets—a disgraceful state of things! And in the South African House of Assembly quite recently a motion was agreed to that "In the opinion of this House, the Government should take into consideration the advisability of instituting a physical and chemical survey of the coal resources of the Union and of encouraging the production of oil and petrol from oil shale and coal on a commercial scale." In the course of the debate, Sir Thomas Watt, the mover of the motion, said that, although the extraction of gold and diamonds employed more men and capital than coal mining did, and although the State obtained more revenue from them than from coal, it must be admitted that, as a fundamental necessity, coal was of more value to South Africa as a nation than gold or diamonds. In our day, no country was so powerful as those with large deposits of good coal. South Africa was fortunate in possessing seems covering hundreds of square miles in the Transvaal, Natal and the Free State, but they burned up the coal in grates and furnaces, as was done in other countries, and 30 to 40 per cent. of the value of the coal went up the chimney. Very little was done in extracting the by-products, and the result was that they did not make the best use of their coal. The transformation of coal into coke and gas has been going on in South Africa for years, but few people know that pitch for road-making, disinfectants and benzol are also produced in Natal from coal. Five hundred gallons of benzol a month are sold to the defence force, and, when mixed with petrol in the proportions of 70 per cent. petrol and 30 per cent. benzol, it is used daily in flying. In Europe and America, other by-products are extracted from coal in large quantities, such as paraffin, ammonia, methyl alcohol, acetylene, ethyl and other gases, and even medicines.

The *Strathaird's* first voyage after conversion is expected to be from London next April, and the *Strathnavar* will sail in July, 1954.

Mr. Achmad Soenartadirja, industrial expert and Chairman of the Small-scale and Cottage Industry Commission of the Government of Indonesia, has been appointed head of the newly established Cottage and Small-scale Industries Section of the United Nations Economic Commission for Asia and the Far East. Mr. Soenartadirja has been in charge of a major programme of the Government of Indonesia, which is being carried out in co-operation with the United Nations Technical Assistance Administration and the U.S. Technical Co-operation Administration, for the rapid expansion of domestic production in Indonesia of textiles, ceramics, leather goods, and other cottage and small-scale industries products. The Indonesian programme, built around 23 key central production plants, is designed both as a direct method of increasing the standard of living, and as means of reducing imports and hence improving Indonesia's balance of payments position. The Indonesian plan is widely regarded as outstanding. E.C.A.F.E., in requesting the Indonesian Government to second Mr. Soenartadirja, hopes to be able to assist many other countries of Asia and the Far East in this field.



ADMINISTRATION OF INDUSTRIES

INDUSTRIAL administration, in the modern age, consists of two parts, the administration of industry by the management, as such, and the administration of industry by the Government. Much more depends now than in the last, and early years of the present century on the correct policies adopted by Government towards industry. The State should learn to act well, and act promptly, if industrial progress is to be ensured. In this connection, it is noteworthy that Mr. M. Visvesvaraya, President of the All-India Manufacturers' Organisation, returned last week to his favourite theme, namely, the adoption of a more efficient system of administration by the State in relation to industries. Speaking at the first quarterly meeting of the Organisation, he deplored that the present system was "century-old," incapable of giving rapid results without suitable changes or reorganisation. He attributed the failure of the system to the fact that it is "centralised." Elsewhere in this issue, another authority—the Chairman of the Kolar group of gold mines, Mr. M. A. Sreenivasan—has made a pointed reference to the same defect. He says how business men are often compelled to "maintain a representation in New Delhi or arrange pilgrimages to that costly capital, or both."

Mr. Visvesvaraya suggested—rather, he repeated his earlier suggestion—that there should be two committees—a permanent central committee and a committee of travelling commissioners—each consisting of three persons of the highest technological, financial or business qualifications. The latter committee will supervise the working of industries by making on-the-spot studies, solve industrial problems with the help of the expert liaison committee that is permanently stationed at the central capital. The whole idea is to establish closer contact between the seat of the Government and the many industrial units which are dotted all over the country. The scheme is based on the wholesome principle that, as it is a costly, laborious, and irksome adventure for the industrial Muhammads to go to the New Delhi mountain, the mountain itself should come to the Muhammads. Commending his scheme, Mr. Visvesvaraya said: "This arrangement will render supervision effective, will help to maintain a drive, reduce correspondence and formalities and ensure prompt attention to ailing industries."

Mr. Visvesvaraya's scheme has much to commend it. But the scheme depends for its success on the correct choice of personnel. In the absence of such a choice, the system might end up in yet another coil—or two—of red-tape which might well create new problems without solving any of the existing ones.

INCENTIVES TO PRIVATE ENTERPRISE

If India is to forge ahead in the economic field on the lines indicated in the Five-year Plan, it is imperative that the Governments—Central and State—should take such steps as will dispel the fear complex in the investing sector. This, in brief, was the substance of the address of Mr. Sohan Lal, President of the Indian Chamber of Commerce, Punjab (I), at the fortieth annual general meeting of the Chamber held in Simla on Monday last. Evidently, Mr. Sohan Lal has been provoked by the series of hasty legislations that the authorities have passed in their anxiety partly to better the lot of labour and partly to gather as much revenue as possible. "There is," to quote him, "a tendency or a feeling of fear complex or a kind of untouchability regarding private enterprise... that is why there is not much private finance forthcoming to develop trade, commerce and industry." He, therefore, rightly emphasised that, in order to stimulate investments, the Government should create conditions under which the people's confidence could be won.

The major problem standing in the way of a higher *tempo* of industrial development is capital shortage. Alluding to this, Mr. Sohan Lal pointed to the need for supplementing indigenous capital with foreign capital. He wanted the Government to give to the foreign investor an assurance of fair and reasonable treatment. He, however, warned against inviting foreign capital at any price. In the opinion of Mr. Sohan Lal, the several pronouncements made by the Government on the subject had not led to any clear understanding of the terms and conditions under which the country was willing to allow investment of foreign capital. He urged the Government to define its policy clearly.

Mr. Sohan Lal also chose for special comments the question of sales tax. He regretted that no agreement had so far been reached between the Centre and the States for enforcing some sort of uniformity in regard to the levy, collection and administration of sales tax. Any effort that the Punjab Government could make to solve the problem, he observed, would be of great help not only to the people of that State but also to the rest of the country.

Commending the efforts of the Punjab Government to set up an industrial finance corporation, he offered two valuable suggestions. First, the Corporation should render assistance to sectors where normal banking accommodation was not available. Secondly, it should function as an investing trust.

DEFICIT IN U.S. FINANCES

The deficit in the U.S. finances for the fiscal year ended 30th June, 1953, it is now computed, is of the order of $9,389 million. This is larger than any deficit since 1946 when it was $20,676 million. The large deficit is mainly attributed to the increase in "spending" which was higher during the last fiscal year by $8,462 million at $74,607 million and to decline of $3,089 million in tax receipts which aggregated $65,218 million. Public debt rose by $6,966 million over the year to $2,66,071 million. Specialists in American finance attribute a large part of the decline in tax receipts to the direct and indirect influence of the steel strike. So much for what labour unrest may mean to a nation's budget.

Against this background, it is scarcely surprising that the American administration is anxious to limit its expenditure and foreign aid payments. For the fiscal year 1953-54, it is proposed to allot only $4,998 million for Mutual Security Programme as against $5,550 million last year, and only $5,318 million for foreign aid or about $2,000 million less than what President Truman had proposed. Asia, however, gets a larger proportion of foreign aid funds than what it received in the last fiscal year. Thus, the Bill, passed by the U.S. Senate last week, allocates 34 per cent. of the foreign aid funds to Asia and 50 per cent. to Europe. Last year, 73 per cent. went to Europe and only 13 per cent. to Asia. It is also noteworthy that the Senate has approved an amendment to fix 30th June, 1957, as the date on which the U.S. would end its military assistance spending overseas in the foreign aid programme and 30th June, 1956, as the "cessation" date for economic aid. Authorisations (in millions of dollars) in the Senate Bill are:

Military aid for Asia and the Pacific, 1,081; Europe, 2,179; Near East and Africa, 405; Latin America, 15.

Aircraft production in U.K., 100; weapons production in France, 100; aid to France for Indo-China war, 400; Korean rehabilitation, 71; special weapons progamme to modernise military equipment in non-Communist countries, 0.1; movement of European refugees, 10; ocean freight charges on relief packages, 2.

Economic and technical assistance to Asia, 250 inclusive of 94 for aid to India and Pakistan; economic aid to Europe, 300; economic and technical aid for the Near East and Africa, 238; Latin America, 24.

For a programme to develop essential raw materials in the free world, 15; technical assistance programmes sponsored by the U.N. and other bodies, 14. U.N. Children's Welfare Fund, 13.

The U.S. Secretary of the Treasury, Mr. Humphrey, forecast the total deficit in the coming six months at $8,800 million, and said that this might rise as high as $12,000 million if the holders of maturing debt obligations of the American Government were to demand more cash than anticipated. The deficit financing operations of the new year have commenced with the Treasury's offer of about $5,500 million Tax Anticipation Certificates (maturity date: 22nd March, 1954) which carry an annual interest rate of 2½ per cent. The new obligations are called Tax Anticipation Certificates to call attention to the fact that they can be used by corporations and others for payments of taxes to the Government. The banks are expected to underwrite the offering of certificates by purchasing them and reselling them to corporations. The way for the success of this offer has been paved by the recent relaxation of the reserve requirements of the members of the Federal Reserve System. Asked whether these changes indicated any violation of the Treasury's "hard money policy," the Deputy to the Secretary of the U.S. Treasury, Mr. Randolph Burgess, is reported to have said: "The Treasury does not have any hard money policy."

TAXATION AND ECONOMIC DEVELOPMENT

Since taxation is one of the most effective means of mobilising domestic capital, the economic aspects of taxation and their bearing on general economic organisation deserve careful study. The study is certainly of great importance to the underdeveloped countries in Asia and the Far East where vigorous efforts have still to be made in order to raise the living standards of the people. It is, therefore, quite appropriate that the Economic Commission for Asia and the Far East should have convened a Working Party of Experts to consider the questions concerning taxation in relation to economic development. The Working Party is scheduled to meet at Bangkok from 7th to 12th September next.

In view of the complexity of the problems involved, the whole question of taxation will be discussed by the Working Party under the following three heads:

(1) Taxation and related measures as instruments of development policies;

(2) variability in tax yields in relation to economic development; and

(3) taxation in relation to individual development projects.

The discussions on the uses of taxation and related measures as instruments of development policies are expected to cover three important fields, namely, public and private investments, trade and income distribution. The discussions will then centre round other means, such as physical and financial controls, which can be used in conjunction with, or as alternatives to, taxation, in furthering Government policies. The next item on the agenda is the review of the revenue aspects of taxation, particularly the tax structure as determined by the economic organisations of the countries of the region. The implications of existing tax structures for stability of revenue, as also those of development expenditure, together with the means available, as, for example, borrowing and employment of special funds, to offset variations in tax revenue, will also be examined.

The Working Party will next take up for consideration relations between tax systems and individual development projects, large and small, due recognition being paid to the use of taxation and other means to spread the benefits accruing from such schemes as between the Government (at various levels) and other beneficiaries. The discussions will cover alternatives to taxation proper and the forms of administrative organisation and taxation most suited to local development. Subsidies and other incentives to development at village level, possibly by self-help techniques, are also to be discussed.

It will be seen from the aforesaid items on the agenda that the Working Party will cover a fairly wide ground in the field of taxation. The deliberations of the Party and the recommendations that it will make will surely be awaited with considerable interest in all the countries, particularly in India. These recommendations, there is no doubt, will be helpful to the Taxation Enquiry Commission, which is now engaged in the task of laying down a pattern of taxation best suited to India, provided they are submitted in good time.

STERLING AREA RESERVES RISE FURTHER

Once again, the gold and dollar reserves of the sterling area have risen. According to returns for June, 1953, the amount of increase is of the order of $46 million, as compared with $48 million in May and $107 million in April. This surplus of $46 million includes $28 million received from the U.S. on account of defence aid, the total aid received in the first six months of the year being $167 million. The balance of $18 million was made up of $10 million received from the European Payments Union and $8 million on account of other gold and dollar movements.

The figures for June, however, conceal certain factors the absence of which would have resulted in a larger improvement. During the month, there was a payment of $22 million to the U.S. on account of acquisition by Morgan Grenfell of a large U.S. holding in the Associated Electric Industries. The General Electric Company of New York sold to Morgan Grenfell 2,205,899 units of £1 each at approximately 72s. 2½d. a unit. The deal was put through in May but payment fell due in June. But for this deal ($22 million), the gold and dollar reserves would have risen by $68 million.

Again, the surplus with the E.P.U. which has been shown at $10 million would have been $19 million, had there been no payment of interest to the tune of $9 million to the E.P.U. The interest was on the outstanding book debt which Britain still owes to the E.P.U. and was due for payment at the end of the half-year. The book debt is still of the order of $190 million. Another reason for the decline in the surplus with the E.P.U. was the advantage taken by the E.P.U. countries of the relaxation of import controls and increase in tourist allowances. The resulting contraction in the E.P.U. surplus has prompted the British Treasury to call on exporters to take full advantage of the improved opportunities afforded by the European market.

With the surplus of $46 million earned in June, 1953, the total sterling area reserves of gold and dollars stand at $2,367 million, an improvement of $521 million in the half-year. The reserves now stand at their best level since the beginning of 1952, and are almost $700 million above the low point touched in August, 1952, at $1,672 million. But they are still far below the mid-1951 peak of $2,867 million. It is expected that the surpluses cannot continue at the rate achieved in the first half-year. But there are also no reasons for expecting an unfavourable outcome in the second half-year, unless some unforeseen developments take place.

HOUSING INDUSTRIAL LABOUR IN BOMBAY

At last wiser counsels seem to have prevailed upon those in authority in the Bombay Government in regard to their industrial housing policy. For the Government has now relaxed the condition governing the provision of housing for workers while granting building permits to industrial undertakings either for extensions or for the establishment of new ones in the island of Bombay. Hitherto such permits were being granted only to those concerns which agreed to provide accommodation for housing 60 per cent. of the labour to be employed in the proposed extension or new undertaking, provided the total labour employed exceeded nine persons. Under the revised formula, the percentage of labour for which housing should be provided has been brought down from 60 to 40 and the exemption limit has been raised from nine to 20 persons employed. The revision is in accordance with the recommendations made by the State Advisory Council of Industries at its meeting held in the last week of April. The Council (*vide Commerce* dated 9th May, 1953) represented to the Government of Bombay that the original condition involved severe hardship for industries and, therefore, discouraged industrial enterprise. Further, it raised the cost of production and placed the industries concerned at a disadvantage *vis-a-vis* its confreres in other States in the country and elsewhere. As there was surplus labour in the city itself, establishment of new factories would not put additional strain on housing, the Council said.

The foregoing arguments in favour of relaxation of the housing provision have nothing new in them. For ever since the Government imposed the condition some years ago, the illogicality and the impracticability of the provision have been impressed upon the Government from time to time by business organisations in the city. Being hard-headed and impervious to any reason, the authorities stood adamant all these years—although in one case, namely, that of the National Machinery Manufacturers Ltd., they were compelled by force of circumstances to reduce the percentage referred to above from 60 to 25. This had made the business community to hope that the concession shown to this undertaking would be finally extended to all similar cases. It is, therefore, sure to be disappointed even with the latest decision of the Government in that the percentage has been lowered to 40 only. Industrial undertakings will find it difficult to comply with even this percentage, as it will be difficult to raise funds for investments of this type which yield little or no return at a time when dear money conditions prevail. In view of the urgency for encouraging industrial enterprise as a means to relieve unemployment, the Government will do well to reconsider its present decision. The best thing for the Government to do will be to leave the question of housing to the good sense of employers, or provide liberal financial assistance to them for building houses for workers.

OFF THE RECORD

(By "ROVER")

THE international political situation is to-day at a critical stage. It is as if the whole world is on its toes trying to get a glimpse into what to-morrow holds for it in the mystery of its fruitful womb. While the situation might be said to have been critical at all times during the last eight years since the war came to an end, it has acquired a new quality of instability, in comparison with which quicksilver can be classed as a stable and static element. The internal economic situation in the country is equally critical and baffling. It is developing along unforeseen and paradoxical lines. All the pieces in the puzzle do not go to make an intelligible or familiar pattern. It is more like an ultra-impressionist painting, with its ungainly daubs and splashes, supposed to represent masses of forms and colour in a frenzied whirl of movement, than a work of art conforming to the tenets of an accepted and orthodox school. To most laymen, such a painting represents only the chaos and confusion in the mind of the artist.

A public bewildered by the wholly incongruous phases of the economic situation and a still more bewildered business community naturally looked to the Finance Minister of the Union for enlightenment and comfort. But Mr. Deshmukh in his attitude and utterances is becoming even more of an enigma than the economic situation itself, for which he is at least partly responsible. He appears to view it from his exalted position with a detachment worthy of a religious recluse but rather disconcerting in an active politician occupying one of the key positions in the Government of the country. With a Finance Minister inclined to view all untoward developments as normal and likely to adjust themselves automatically and obligingly in their own good time, it was not surprising that the people in general, and business men in particular, should have looked forward to the meeting of the A.I.C.C. at Agra this week for solace and enlightenment. How far the deliberations and the resolutions of this somewhat unwieldy body, wedded to certain ideological prepossessions which for Congressmen carry the same sanction as what is written in the scriptures do for unquestioning anchorites, provided either a lead or a comfort for these people, is a matter for economic and political experts to judge and for the future to prove. All I propose to do here is to record a few stray and disjointed thoughts which emerged on the surface of my mind as I scanned reverentially through the proceedings of this body as reported at great length in the daily Press.

I learnt with a sense of amusement to begin with, that this historic meeting (all meetings of the A.I.C.C. are regarded as historic by those taking part in it) was being held unappropriately enough in the warehouse of an idle ginning and spinning mill. I cannot understand how those responsible for making arrangements for this meeting at Agra should have so far forgotten themselves and their cherished convictions as to select this site for it. It is almost as absurd as borrowing an illicit brewery at Andheri in Bombay for holding a convention of ardent prohibitionists. The very atmosphere of the unhallowed precincts of a textile mill must have worked like an evil spell on the souls of the *khaddar*-loving members of this body devotedly trying to produce their daily quota of handspun yarn.

Perhaps, the rowdyism which marked the inaugural session of the A.I.C.C. last Monday must be attributed to the evil effects of the unsanctified building rather than any lack of discipline on the part of Congressmen and their friends and admirers. I am inclined to believe that the mischief stopped short of physical violence, because this mill, had so far not gone into active production; the resulting demoralisation of those using the unholy premises, even temporarily, would have been much greater if the factory had actually been in commission. In any case, poor Mr. Achal Singh, Chairman of the Reception Committee, paid dearly for his indiscretion of selecting such an evil site for such a pious gathering. He was not allowed to complete the reading of his address, over the preparation of which he had devoted long hours and undertaken great research. It is the privilege of a host to bore his guests and it was singularly unkind on the part of the Congress President to cut short this peroration on the beauties of Agra. Were this impatience not a regular feature of Mr. Nehru's temperament, I might have been inclined to attribute even this lapse on his part, who is otherwise so courteous and considerate, to the evil influence of this place.

Mr. Nehru's own opening address, which lasted for an hour, was itself a rambling affair. Because of the wide range of subjects covered by it, it must have been as interesting to listen to as it was when read in cold print. But it certainly failed to throw fresh light on any of these subjects or to add anything to what we already knew about international affairs. But this is easily understandable. He naturally could not take us, and with us the whole world, into his confidence about all the secret conversations he had in London and Cario with the Commonwealth Prime Ministers and General Neguib. He would not retain his post for a day if he straightaway told us on his retrun what he told Sir Winston Churchill or what this ailing statesman confided to him about his struggles with the U.S.A. and Egypt. It would have been madness on his part to disclose from the open platform in Agra every word that passed between him and Sir Dudley Senanayake or Mr. Mohamed Ali. So I do not feel in the least disappointed with the way he enlarged on foreign affairs for a good half hour or more without disclosing anything worthwhile.

But I do feel disappointed with his desultory handling of the domestic issues in general. He, perhaps, realised this inadequacy and was in a sense apologetic too about it. He said it was obvious that, whether India wished it or not, she was being tied up more and more with international problems. He confessed that it was not his wish to be tied up in this manner with them, as there were problems enough within the country. He, however, pleaded that this could not be helped, because India's status and prestige demanded it. This helplessness, however, is mostly of his own seeking. He must realise that henceforth international affairs will always have an air of urgency about them and that, at this rate, he would never be in a position to give his whole mind for any stretch of time to the numerous problems which affect the life of the people in the country very intimately. Even when he puts foreign affairs aside for a while and devotes his mind exclusively to home affairs, his thoughts have a trick of turning from more real problems to our relations with Kashmir or to his obsession about putting down communalism, of which there is really precious little to be seen in the country now.

While flogging the dead horse of communal outlook, which the Congress President characterised as representing the narrowest form of religious bigotry in politics, he made a very significant statement. In a very picturesque manner, Mr. Nehru declaimed, "we must learn from our experience and realise that life is an integrated whole. You cannot keep one foot in one century and another foot in another century and your head in a third century." I agree that this is very well put, but I suggest that it applies with even greater force to the economic outlook of the Congress Party and of the Governments controlled by it than to the political outlook of some sections of the Opposition.

Mr. Nehru is not an economist. Perhaps, it is all to the good that he is not. Because he has not given much time to this dismal science, he has continued to remain so human. But he ought to know that his advisers in the Party on matters economic are leading him on to a policy which forces his Government to live with one leg in an era of handlooms and oil *ghanies*, the other leg in an era of weaving mills and oil expellers and its head in a mass of clouds of scientific and even atomic research. The illogicality of this policy is so patent and its disintegrating effect so obvious that I am surprised at Mr. Nehru's failure to locate it, when he is so ready to spot it and snuff it out in the social and political life of the country. He was ready to denounce Mr. Biswanath Das from Orissa for his alleged political apostasy in criticising the Government's policy regarding the Hindu Code Bill. He called him a reactionary who wanted this country to remain behind and stick to something which was long past and which had no relevance to-day. But he has not a word to say against Mr. Rajagopalachari who is more reactionary where industrial progress is concerned than Mr. Das was about social progress in his criticism from the A.I.C.C. platform of the Working Committee's resolution on the social and economic programme.—*All Rights Reserved.*

GOVERNMENT TO PAY MORE ATTENTION TO ECONOMIC PROBLEMS

TRADE AGREEMENT WITH SWEDEN RENEWED

(From A Special Correspondent)

NEW DELHI, *7th July*

DELHI LETTER

DURING the coming weeks, the Government of India is likely to give more attention to the solution of the economic problems that have begun to confront the planners during the last few months. The high cost of living, the sharp rise in the prices of many essential consumer goods, the growing unemployment among the educated classes, the lack of purchasing power among a number of sectors of people, the slow industrial expansion, the complete absence of capital formation and the receding entrepreneurship among the industrial classes—all these are doubtless serious problems for Government to tackle. The spokesmen of Government are, at any rate, not unaware of these as is indicated by the lengthy resolution passed at the Agra session of the All-India Congress Committee.

The resolution notes that the recent upward trend in industrial, as well as agricultural production, in the country is not such as to stem the growing unemployment. The higher public expenditure in regard to various industrial projects does not prove adequate in preventing unemployment either. The resolution says that "the major cause of unemployment is the insufficient expansion of opportunities of work in relation to the increasing population of the country." It further adds that "in view of the underdeveloped condition of the country, the deficiency can be made up only by a vigorous, adequate and many-sided programme of economic development." It is suggested that the Five-year Plan should be modified in such a manner as to augment the volume of employment, especially by absorbing the more vociferous classes of educated unemployed in the towns. The sponsors of the resolution have doubtless laid considerable emphasis on the expansion of cottage and small-scale industries on a co-operative basis through active Government help in regard to production, distribution and also to the provision of technical, financial and other assistance. In order to bring down the intensity of unemployment among the educated classes, it is suggested that the State should "undertake programmes of work including public works of different kinds" with a view to increasing the purchasing power among this section of the community. The resolution further observes: "Every effort should be made to add to the volume of investment for development purposes. With this end in view, small savings schemes as well as other methods of saving should be progressively introduced. A system of State insurance should be extended to rural areas and credit facilities on an adequate scale, more especially through co-operatives, should be provided."

Economic Tempo to be Increased

It is, therefore, possible that the Government of India will shortly be taking up some measures to increase the tempo of economic activity in the country, with a view to providing more employment. Wherever any public works can absorb more men so that such projects could be completed before the target date, Government might increase the allocation of resources to them. It may be noted that, according to the Five-year Plan, the total expenditure for the first three years should be slightly over Rs. 1,000 crores, as against Rs. 2,069 crores for the whole period and, in order to attain the various targets, a more vigorous public works policy will become necessary. Perhaps, this may necessitate a reallocation of the resources to various States. At the same time, Government might take away unexpended expenditure under some social items and utilise them on the furtherance of industrial projects. Wherever necessary, some special inducements will be provided to private enterprise to enable it to invest 'risk' capital in key industries.

The first fruit of the nationalisation of the air corporations will be the curtailment of the number of operating units to the absolute minimum so that, according to Government, the civil air transport should be able to work efficiently without being a burden on the national exchequer. In the course of his speech at the preliminary meeting held this week, the Communications Minister pointed out that Government desired that the air corporations should work economically, so that they could contribute to the development of aviation in India. He assured those present that the Government would not interfere in their day-to-day work and that its interference, if any, would be the "minimum necessary" to ensure safe, efficient and economic service to the public and fair deal to employees. He also told them that the Government would always pay prompt and careful attention to the recommendations and suggestions made by the Corporations from time to time. The two Corporations are expected to be inaugurated on 1st August next.

Trade Policy

Bilateral trade agreements, with a view to promoting the country's external trade, still continue to be the cardinal policy of the Government of India. Generally, the Government has been trying to maintain most cordial relations, political and economic, with its neighbouring countries. With many distant European countries with whom its political links have been of recent growth, trade expansion is being encouraged through bilateral agreements. Thus, India has trade agreements with West Germany, Switzerland, Poland, Hungary, Finland, Sweden, Yugoslavia, etc. During this week, it has renewed, for another two years, the trade agreement with Sweden which expired in December last. The agreement provides for imports from Sweden of such commodities as newsprint, paper and its products, machinery, etc., while India has agreed to supply spices, tea, jute goods, minerals, etc. During the last few years, India has been experiencing adverse trade balances with Sweden, its exports to the latter in 1951-52 and 1952-53 being Rs. 2.41 crores and Rs. 1.81 crores, as against imports valued at Rs. 7.47 crores and Rs. 5.66 crores, respectively. Since the balance of trade has been running against India, special efforts are being made to step up exports to many of the above mentioned countries.

With its neighbours, Burma on the east and Egypt on the west, India has entered into fresh trade agreements. In the Far East, it has already close economic relationship with the Commonwealth countries such as Australia and New Zealand, while with Japan and Indonesia the volume of trade has been steadily increasing in recent years. With the latter, an agreement was recently concluded. As regards last week's trade negotiations with Burma, it is stated that India will supply more iron and steel goods, as also a number of consumer goods. In view of the prohibitive price quoted for rice by Burma, India was reluctant to make firm commitments, especially when its price idea ranged around £40 per ton, as against £60 per ton quoted by Burma. During the first half of this year, India is stated to have bought about 150,000 tons. In view of the relatively comfortable supply position of many consumer goods in the country at the present time, it may not be difficult for India to export more piecegoods, jute manufactures, tea, spices, soaps, fish, tobacco, etc., to Burma.

More Exports to Egypt Likely

The Indo-Egyptian Trade Agreement, which is expected to be signed this week, will be conducive to the promotion of India's exports to that country in view of the improved procedure regarding settlement of accounts. Under the new procedure, 60 per cent. payment will be in sterling and 40 per cent. in rupees to enable Egypt to buy Indian goods in rupees. At the end of the year, however, the balance of unutilised rupees, if any, will be converted into sterling. It is stated that Egypt will put 10 per cent. of the sterling payment received from India in a special account, to be converted into rupees if it utilises the entire rupee payment for purchases in India and needs more rupees. Until now, Egypt has been purchasing from India only a limited number of articles such as jute goods, tea, vegetable oils, etc. In 1952-53, Egypt increased its purchases of Indian tea appreciably from 3.6 million lbs. (1951-52) to 13.2 million lbs. It is expected that in view of the latest payments agreement, Egypt may be in a position to buy more Indian goods such as soaps, toilet requisites, semi-durable consumer goods such as diesel engines, sewing machines, electric motors, etc.

END OF ECONOMIC PLANNING

TRIUMPH FOR PRIVATE ENTERPRISE

(From Our Own Correspondent)

LONDON, *4th July*

LONDON LETTER

ECONOMIC planning is not wholly a post-war Socialist idea: during the war, as the Government assumed responsibility over a wider and wider sector of the national economy, the need for some broader direction of economic affairs than that dictated solely by finance was indicated. Indeed, finance itself became of minor importance in deciding what could and should be done: Lease-Lend removed balance of payments problems and, internally, if a job had to be done, then the money had to be found somehow. The Treasury, Lord of the Civil Service hierarchy, took a back seat and the Executive Departments had things all their own way. To help the Cabinet in considering economic problems, there was established an Economic Section of the Cabinet Office, with the Lord President in command—and he carried far more weight than the bookkeeping Chancellor of the Exchequer.

When the Labour Party came to power in 1945, they found the paraphernalia of planning already in existence and their elaborations were to appoint a Minister of Economic Affairs (who took over the Lord President's planning responsibilities) and a Planning Board to bring industry and commerce into formal association with the Government's economic planning. An industrialist was appointed head of the Board —though it was alleged that he was never very keen on planning!

Treasury's Job

There is a story that when Sir Winston Churchill came to power and was presented with a list of the committees advising the Government, he asked what some of them did and on being told they were concerned with planning, exclaimed "Planning! What's that?". The turn of the Treasury had come again, but, till now, the main instruments of economic planning retained their nominal independence in the Government machine. This independence was, indeed, nominal, since the Government has been turning the economy more and more back to private direction. If Government is not to be responsible for the direction of investment (except to exhort) and is to rely purely on financial controls such as credit restriction and the level of the Bank rate for encouraging or discouraging the general volume of investment spending, there is little that economic planners can do. It is the Chancellor of the Exchequer who determines the measures to be taken to enforce the economic policy of the Government—measures gradually becoming restricted to the Budget for internal matters and to control over imports for balance of payments matters. For long little has been heard of the Planning Board and its industrial head is now to give way to the Deputy Secretary of the Treasury. The Economic Section of the Cabinet Office folds back into the Treasury and its head becomes—inside the Treasury—Economic Adviser to the Government. But these are formal changes recognising what has been true for some time—that the Treasury is responsible for such economic planning or direction (a better word) as there is.

Economic planning, as distinct form financial planning, is, therefore, formally at an end. Under a Government committed to private enterprise in national economic affairs and busy denationalising what its predecessor nationalised, this is a logical development. The supremacy of economic planning can only exist when the Government of the day regards it as its responsibility to determine broadly the flow of investment, to build up industries it considers of national importance and to discourage those it regards as diversionary of national wealth and effort, to determine how the major expenditure of foreign exchange resources shall be allocated and so on. In these circumstances, the Treasury's job becomes that of finding the money and of administering (not making) policy. For good or ill, the Government to-day is the watch-dog of economic well-being not the determiner of it and the Treasury, holding the purse strings, decides what the Government can and cannot afford to do.—*All Rights Reserved.*

AMERICAN LETTER

SEASONAL RECESSION QUITE LIKELY

SHARP FALL IN TAX REVENUE

(From Our Own Correspondent)

NEW YORK, *2nd July*

THE precarious balance in the American economy continues. It is true that activity remains at extraordinary levels but the question remains how long this will continue. The gross national product is $361,000 million, a new high annual rate. The largest component part, personal consumption expenditures, are about $226,000 million, also a new high. Personal incomes are touching an annual rate of $281,300 million and personal savings are at $19,500 million. Government purchases have attained a new high since the last war of $82,400 million and private investment, including construction, durable equipment, etc., is at about $57,700 million, an annual rate never exceeded. None of these figures can be looked upon as economic danger signals of any sort. It is, however, quite possible that there will be some marginal decline in building in certain areas because of some over-building beyond normal demand. There is also the consideration that, traditionally, a building boom has always been the final cycle of a boom period, but the question is whether this will also be true under present conditions.

To many observers, including the fiscal authorities, another disturbing element exists in the overall economic picture—personal indebtedness continues to rise. Consumer credit touched a new peak at $25,700 million. There is an interesting debate whether this is absolutely or relatively too high. The point is that it is rising to business volume at the present time. In fact, it could continue to rise until there is a downturn in employment, wage rates and personal income, but of this there is no sign yet. Employment is at a practical maximum. The presently debated proposal that down payments on low cost Government-insured houses should be reduced would almost automatically increase personal indebtedness still further. There may be a slight overall downturn for July and August, but this is to be expected, owing to seasonal industrial vacation shutdowns. All told, however, the first half of the year has been a period of extraordinary business, income and employment.

The Government has not been doing so well, financially. The deficit of $3,389 million for the fiscal year ended 30th June, 1953, was not only the largest for any so-called peace-time period, but it is $3,300 million above estimates of the preceding Administration. While expenditures were "right on the nose," receipts have been lagging. Personal income-taxes for the year 1952, payable this year, were off substantially, some $800 million of refunds had to be made and corporation taxes were off more than $2,000 million, owing chiefly, it seems, to the prolonged steel strike last year. Thus, it is interesting to note that the strike, which was hailed by many as having postponed the evil day of overproduction, has done a very substantial harm not only to the workers, who, even at higher wages, will have to work long to make up the strike losses, but also the companies in terms of lower earnings and to the Government itself in terms of tax revenue.

It is now estimated that Government's cash requirements for the next six months will be between $10,000 and $12,000 million. This probably means that the debt limit will have to be raised. It now stands at $275,000 million and outstanding debt is about $265,000 million. This will be an extremely unpopular measure with the people and with Congress, particularly since the request will come from an economy-bent Republican Administration which has been demanding that appropriations be slashed right and left.

All this comes at a time, too, when the last remnants of the Eisenhower political honeymoon have disappeared. The General is still held in high regard by the masses of the people, but there is growing dissatisfaction. This stems primarily from the lack of decisions by the various branches of the Administration. At this point, it is felt, real decisions are necessary, but none are being made pending staff studies. One of the chief outright mistakes which have been made, in popular opinion, is the political bungling of the Korean affair, where the release of 26,000 prisoners which could have been prevented, has set back armistice chances appreciably, besides having made the United States a laughing stock.

Domestically, very little, if anything, has been accomplished so far. The Defence Department under Mr. Charles Wilson is especially the target of criticism. The demand for reduction of expenditure, for example, is cutting deeply into research. This includes such intricate fields as jet engines and scientists feel it could do irreparable harm to both military and civil aviation in the U.S. Then, there is Mr. Eisenhower's well meant desire for unity within the Republican Party which keeps him from taking a firm stand towards such men as Senator McCarthy. The witch-hunt for Communists and subversives, therefore, continues. The well-publicised book-burning episodes are one facet. Another is that threatened investigations and accusations have led to a near-demoralisation in many Government departments. One incident along those lines is quite revealing. A well-known research and industrial organisation suggested that several European scientists be permitted to enter the U.S. The proposal was seconded by the Office of Naval Research and by the State Department, yet visas were refused to these men without explanation either to them, to the company or other Government agencies merely because of fear that some accu-

PROGRESS OF BANKING IN 1952

SMOOTH CHANGEOVER TO DEAR MONEY CONDITIONS

MANY features of note in the sphere of banking in India during 1952 are impressively described in the annual report on the *Trend and Progress of Banking in India*, published this week by the Reserve Bank of India under section 36(2) of the Banking Companies Act, 1949. The most important among these is the readjustment of the banking system in the new monetary policy initiated by the Bank towards the close of 1951, as also in the beginning of 1952. It will be recalled that, with a view to curbing the excessive credit expansion and to exerting an anti-inflationary pressure, the Reserve Bank of India not only increased the Bank rate, in November, 1951 from 3 per cent. to 3½ per cent. but also withdrew its unrestricted support to the Gilt-edged market. These measures heralded the changeover from cheap money to dear money conditions.

At the beginning of the 1951-52 season, bank credit was over-extended, and advances by banks remained at an abnormally high level. Thus, the net expansion of bank credit, in 1951, as disclosed by the weekly statement of the Scheduled banks, was as much as Rs. 109 crores. In 1952, however, things took a different turn, and there was a net contraction of Rs. 69 crores. This was on account of the restricted open market policy of the Reserve Bank.

The twin measures which the Reserve Bank took in November 1951 led to a sharp fall in the value of Government securities and anyone wanting to sell them stood to suffer a heavy capital depreciation. Banks which needed funds were, therefore, unable to liquidate their investments in the open market. They had to approach the Reserve Bank for funds. Thus, the new monetary policy brought the banking system under the effective control of the Reserve Bank. The required accommodation was provided by the Reserve Bank at the higher rate of interest, though advances against securities. This led to closer scrutiny of loan applications by banks and to raising of lending rates, with the result that non-essential borrowing was discouraged. Meanwhile, care was taken to see to it that genuine business was not starved of legitimate credit needs by providing accommodation to banks at ½ per cent. less than the Bank rate under the new bill market scheme which was given effect to in January, 1952. Commenting on this development, the Report says: "The provision of finance through the medium of a self-liquidating instrument of credit which, while ensuring that *bona fide* trade transactions would not suffer from lack of adequate finance, did not strain unduly the resources of the Banking system and which ensured automatic flexibility of Reserve Bank credit, proved to be most useful in the 1951-52 season."

Special Finance Scheme

Apart from providing banks with finance through advances against Government securities and the new bill scheme, the Reserve Bank, in consultation with the Government of India, devised specific measure to enable banks to extend the requisite credit facilities in a few cases where it was found that genuine difficulties existed which the banking system could not meet fully on its own account. The first of such a scheme was designed to help in the financing of imported cotton, announced in April, 1952. As a result of the heavy indenting of high-priced foreign cotton, particularly from the U.S.A., and the sudden slump in cotton markets all over the world, difficulties were experienced in the financing of such cotton imports. The Reserve Bank followed up a Government announcement guaranteeing to buy, if necessary, cotton held by banks, at specified prices with an assurance that it would grant reasonable facilities for the financing by banks of the purchase of Indian and imported cotton.

Later in the year, the sugar mills experienced considerable difficulties in securing bank accommodation owing to heavy accumulations of stocks with them. In order to provide relief to sugar mills, the Reserve Bank advised some of the bigger banks in U.P. and Bihar to consider the question of reducing margins for advances against stocks of sugar produced in the earlier crushing season, that is 1951-52, as the Government had directed that such stocks would have to be disposed of before production of the 1952-53 season was released on the market.

One more instance of provision of special finance was in respect of the tea industry. Towards the end of 1952, a number of tea estates had to suspend operations for want of adequate credit facilities. There was besides a slump in the tea trade. The Reserve Bank devised steps to ensure an adequate supply of funds and, accordingly, a formula was evolved. The Government of India guaranteed repayment to Scheduled banks and to apex-Co-operative banks of a certain portion of the advances made to such tea gardens in respect of the 1953-54 crop. The guarantee was, however, limited in amount to 20 per cent. of the total amount that may have been repaid by the borrowing garden to the Scheduled bank or the apex-Co-operative bank in discharge of the loans or advances availed of by it for financing the 1952-53 crop, if the borrowing tea garden was situated in the Cachar, Tripura, Dooars and Terai areas and to 15 per cent. of such amount of the repayment, if the borrowing garden was situated elsewhere.

Painless Change

The measures noted above, namely, (a) increase in the Bank rate, (b) withdrawal of unrestricted support to Gilt-edged securities, (c) the self-liquidating bank credit in the shape of the usance bill, and (d) special scheme of finance for assisting parties in distress were intended to bring about a smooth and orderly process of transition from the easy to dear money conditions. In fact, the Report of the Reserve Bank observes: "Looking back over the year 1952, the readjustment of the banking system to the new monetary and credit policies has been effected without adverse results." Critics of the Reserve Bank's monetary policy will thus concede that the changeover has been a painless one. It is, of course, true that the banks, along with other financial institutions such as insurance companies, had to earmark heavy sums to cover their losses on account of the sharp decline in the market values of their investments in Government securities. But the losses were a matter of book adjustment and as such had no adverse results on their financial position. It may be contended that the same cannot be said of the innumerable non-institutional investors who had kept their savings invested in Gilt-edged securities, as a source of protection against certain future contingencies, for these investors, the effects of the new policy in reducing the market value of their holdings are certainly a painful one. This, however, is true only of those investors who had to sell their holdings in Government securities before the date of maturity. In any case, it is not contended that the change in the monetary policy has not cost anything to anyone. Some did suffer a loss and some were adversely hit. But this was unavoidable.

It is conceded on all hands that the impact of the new policy was anti-inflationary, but only to a limited extent. This is fully borne out by the variations in price index. The Economic Adviser's General Index (Base: 1939=100) moved down from 432.2 at the end of December, 1951 to 374.4 in the same month of 1952. This represents a fall of about 13 per cent. over the year, as against a rise of 4.7 per cent. in 1951. This fall is, however, not solely due to the monetary policy, because, the reduction in prices of commodities which had started in world markets in the latter half of 1951 would also have brought down the prices, of course, to a lesser extent, even if the Bank had not changed its policy. That the effect of such policy has not been a sustained one is evident from the fact that, recently, the index has once again resumed its upward trend and it stood as on 13th June at 406.1, a rise of nearly 9 per cent. since December last. Further, there has again been a revival of speculative activity in certain commodities, as for instance, sugar. Stricter supervision over bank advances and the tightening of credit control are likely to check these undesirable tendencies which portend the revival of inflationary conditions in the country.

The provision for special financing in cases of distress fully indicates that the authorities of the Reserve Bank are alive to the changes in the economic conditions in the country and are not lacking in desire or anxiety to rush assistance where it is needed. This is creditable indeed. But how far the special schemes were made use of by the business community is a question which is not answered in the Report. As the financial assistance given by banks to cotton, sugar and tea under the special schemes are not shown separately, it is difficult to appraise the extent to which these schemes were useful. Precise information on this point would have enabled the public to know as to what extent the complaints about lack of credit by the interests concerned were correct.

Now to come to the other features of the Report. It is disclosed that owing to (a) the fall in prices in March, 1952, (b) restricted availability of bank credits and (c) its high cost, hoarding of goods for speculative purposes was conspicuous by its absence. The return of funds to the banks, therefore, outstripped the extension of credit in the breeding season. Banks were anxious to keep idle resources to the minimum and were as a result receptive to short-term investment opportunities. The issue of weekly Treasury Bill sales provided them with such opportunities. Their holdings formed as much as Rs. 17.41 crores, out of the total Treasury Bills of Rs. 24 crores outstanding as on 31st December, 1952. Consequently, the Bank's investments in Government obligations showed a distinct improvement of Rs. 17 crores, as against a decline of Rs. 51 crores during 1951. The pattern of composition of investments of Scheduled banks also changed. Thus the holdings of Scheduled banks in short-dated securities rose by over Rs. 30 crores, as a result of some loans having shifted to this group, while holdings of securities in other maturity groups showed a fall, the largest decline taking place in medium longs.

Money Supply

During 1952, money supply declined by Rs. 92 crores, as compared with a fall of Rs. 50 crores in 1951 and a rise of Rs. 60 crores in 1950. In 1951, the decline in money supply had taken place on account of heavy balance of payments deficit and to accretion to the cash balances of the Central Government. Again the expansion of bank credit in 1951 of Rs. 109 crores was due mostly to purchase of Government securities by the Reserve Bank. In 1952, however, there was a decline of Rs. 30 crores in Central Government balances, but there was a deficit in balance of payments. While the reduction in the volume of bank credit influenced money supply, a part of the decline was more directly related to the shift from demand to time deposits.

Total deposit liabilities of all Scheduled banks fell by Rs. 5.3 crores over the year. This was because of a decline in demand deposits of Rs. 31.3 crores accompanied by a rise in time deposits of Rs. 26 crores. Over the year, the total deposits of major Indian Scheduled banks and other Indian Scheduled banks fell by Rs. 10 crores and Re. 1 crore, respectively, while deposits of Exchange banks rose by Rs. 4 crores mainly due to an increase in the time deposits with them. The increase in time deposits was mainly the result of higher interest rates offered by banks.

Advances

1952 generally witnessed a relatively smaller degree of credit extension than in 1951. Scheduled bank advances dropped by Rs. 60.2 crores during 1952. The return of funds to the system in the slack season of 1952 was greater than the increase in advances in the preceding busy season. With the beginning of the 1952-53 season advances were again rising, and at the end of the year stood at Rs. 486.2 crores, as against Rs. 552.4 crores at the end of December, 1951.

UNBALANCED BUDGETS

ARE THEY ALWAYS AN EVIL?

(By Dr. N. DAS, I.C.S., Secretary, Commerce and Industries Department, West Bengal.)

DURING the past few months, the phrase "unbalanced budgets" has figured rather prominently in discussions relating to the financing of the Five-year Plan. The expression is rather an unfortunate one. Under the orthodox canons of public finance, a budget is called "unbalanced" when expenditure on Governmental account, both current and developmental, outstrips its revenues, and the "deficit" is sought to be covered either by public borrowings, or by obtaining loans and advances from the central bank, or by printing additional currency notes. Now, there is a general fear that an "unbalanced budget" and the "deficit financing" it leads to, result in inflation and are, therefore, injurious to the economy of a country. This apprehension has been rather pointedly expressed since the end of the last war, because the very large scales of Governmental expenditure during the war gave rise to inflationary conditions in practically every country of the world. Even at the end of the war, the need for economic reconstruction and development and the emphasis laid on various social welfare projects created a situation in which most Governments have found it extremely difficult to cut down the scale of expenditure. The inflationary pressure, therefore, continues, and every Government is hard put to, to maintain an equilibrium between prices, cost of living, wages and cost of production. The problem is all the more acute in underdeveloped countries like India where the desire to achieve economic development as fast as possible and promote greater employment happens to be keen and insistent.

What is Inflation?

It would be useful at this stage to go back to fundamentals and consider what exactly is meant by "inflation." The popular definition of "inflation" is a rise in prices caused by monetary expansion—a situation in which "too much money chases too few goods." This, however, is only a one-sided and static description of "inflation." Inflation undoubtedly means a rise in price level, but this rise may result as much from non-monetary as from monetary causes. For example, increase in prices may be due, not to the expansion of the note issue, but to an adverse trade balance. Then again, increase in prices may be due to an increase in the cost of imported raw materials. An inflationary situation may also be caused through over-investment or under-production or dis-saving or devaluation. A correct definition of an inflationary situation is, therefore, one in which prices, monetary requirements, cost of living, wages, etc., chase one another incessantly and tend to influence each other in an upward direction. As has been well put by a recent writer "inflation is an expansionary trend of purchasing power that tends to cause, or to be the effect of, an increase of the price level." It is more a state of disequilibrium than anything else: this disequilibrium ceases—notwithstanding prices being stabilised at a higher level—as soon as the various factors have adjusted themselves to a new equilibrium level.

It follows from the above that expansion of purchasing power or of prices does not necessarily constitute a state of inflation. An inflationary situation is likely to arise when this expansion is sufficiently pronounced and persistent to set in motion a spiral of rising cost of living, wages, cost of production, monetary requirements and volume of money. On the other hand, if the increase of purchasing power also leads to an increase of production (a situation which is by no means inconceivable), there is no real inflation. Normally, however, there is a time-lag between the increase in the volume of purchasing power or prices and an increase in the volume of goods, and it is during this intervening period that the more harmful consequences of inflation make themselves felt.

We should, therefore, guard against an oversimplification of the effects of inflation caused by "unbalanced budgets" or "deficit financing." In certain circumstances, the Government of a country may deliberately prefer a moderately unbalanced budget. It is also important to remember that, in a planned economy, one should judge a series of annual budgets as a whole rather than each of them separately. In this context, the fact that some budgets show deficits is comparatively important, as long as others show surpluses, balancing the series as a whole.

As has been stated already, the anti-inflationary bias of Governments, as well as of the public, in the post-war era is due largely to the historical fact of large and cumulative inflationary pressure during the closing years of the last war. On the other hand, during the inter-war period, when there was much hardship through deflation, the attitude of economists as well as politicians was definitely anti-inflationary and the cry was for a policy of "reflation." To-day, when the price level has reached a new equilibrium in most countries, there has been a cautious return to a demand for deficit financing: unbalanced budgets do not shock the public as much as they used to do even a couple of years ago.

Examples of Deficit Budgetting

We may go a step further and say that unbalanced budgets need not necessarily be an evil. In Mussolini's Italy, for example, deficit budgetting was carried out with conspicuous success until the war actually broke out. In that country, the method adopted was that of deferred payments. During the inter-war period, Italy undertook large projects of land reclamation, road construction, irrigation, afforestation and improvements of harbours and ports. Most of these involved heavy expenditure. The technique followed was that the entire expenditure for a particular project over a period of years was authorised in advance, together with the assignment of expenditure for each particular year. These projects were then let out "in concession" to various corporations, and a method of "deferred payments" was adopted. Payments were made by the State in the form of terminable annuities (this would include both capital and interest) spread over a period of 20 to 30 years. Corporations to whom the projects were "conceded" obtained funds occasionally from banks, but mostly from "parastatal" credit institutions. These latter differed from ordinary banks, in that they were authorised and capitalised by the State and guaranteed by special conditions of privilege and *monopoly*: they could, therefore, specialise in the provision of extended credits and allow their funds to become "frozen" to an extent the ordinary banks would have been unable to do. The essence of the system was that the credit institute dealt with the *entrepreneur* instead of the State, accepted the annuities issued to him by the State under the terms of the concession and provided the actual sums estimated by the *entrepreneur* as necessary for the prosecution of the work. The State was thus relieved of the immediate, though not of the ultimate, fiscal burden of such undertakings. Under this system, the financial burden of a particular project was spread over a number of years and this made it possible for the State to initiate a much larger number of projects at a time.

Sweden's Experiment

Another country where "unbalanced budgets" have been accepted as a matter of deliberate policy is Sweden. Recognising that one of the obvious shortcomings of deficit spending is the adverse reaction of the general public to an unbalanced budget, the Swedish Government adopt a policy of long-range budget planning. They arrange deficit spending in such a way that, in the so-called "lean" years, they virtually mortgage the otherwise ample resources of good years, both past and future. No attempt is made to conceal the deficit (on the other hand, it is made ostentatiously visible) and a technique is invented by which the deficits are carried forward until they are liquidated. The Swedish Government believe in a long-term balancing of incomes and expenditures and, in an unfavourable year, the deficit is transferred as a negative item to a budget equalisation fund, specially created for maintaining the continuity in public finances. This fund is made self-liquidating by the rule that one year's deficit shall be debited to the ordinary budgets during the next five or ten years by one-fifth or one-tenth, as the case may be, each year: it provides a maximum amortisation term, but this does not prevent the State from paying off the debt in a shorter period, if it so desires. The guarantee of "sound finances" is sought, not in a mechanical balancing of budgets, but in the openness with which a deficit is registered and in the setting up of the equalisation fund by which the deficits are carried forward until they are paid. Secondly, many projects (for example, the State's public buildings, schools, post offices and even hospitals), although not "productive" in the conventional sense, are made self-liquidating by instituting public corporations to administer them. This has the added advantage of making the relative costs of different branches of public activity measurable and comparable with much more rationality and accuracy than is possible under the orthodox system.

The Problem in India

The problem in India to-day is in certain respects similar to the problem in the two countries mentioned above and, in certain other respects, quite different. The similarity lies in the fact that, as in Italy and Sweden, we, in India, have enormous potential resources to develop and we want to develop them in the shortest possible time so as to eradicate poverty, hunger and unemployment. The difference consists in the situation that the growth of savings and capital formation in this country have been very slow in recent years and may not increase appreciably in the immediate future. Colin Clark recently estimated that, in order to absorb the increasing labour force and maintain even the past rate of increase in productivity, India would need savings at the rate of 12.5 per cent. of her national income—a rate much larger than the present investments per annum in the public and private sectors combined. On the other hand, it is arguable that, if India waits indefinitely for voluntary savings to catch up with her actual requirements, the balance may never be struck and the goal of the Five-year Plan may never be reached. It is in this context that one has to evaluate the pros and cons of the mild dose of "deficit financing" which has been proposed in the Plan itself. The dangers of an inflationary spiral arising as a result of indiscriminate spending need not be minimised, but we may take comfort from the fact that only the other day the leader of the International Monetary Fund Mission paid a tribute to the general soundness of the economic and financial policy envisaged in the Plan. Reared as we have been in the orthodox British tradition of conservation finance, Mr. Bernestein's advocacy of slightly "unbalanced budgets" may have shocked many of us, but the facts and instances cited in this article would show that, in a dynamic equilibrium, a certain measure of uncovered support by central banks or by other methods would be not merely desirable but necessary for a speedy attainment of our objectives.

This does not mean that the possibility of inflation (in the dynamic sense) should be overlooked. As has been emphasised in the Plan itself, "the scope for deficit financing is intimately bound up with the policy regarding physical controls. Without a firm and clear policy regarding controls, and without also assurance of continuity in that policy over a period of time, not only does the scope for deficit financing become limited but there is a perpetual danger of even relatively small budgetary deficits generating inflationary pressures." Secondly, while the budgets may remain unbalanced, the mobilisation of savings and of external assistance for development purposes will continue to be of fundamental importance.

Economic Engineering

What is needed is a new kind of economic engineering, constructing a new framework of fiscal and institutional regulations to work out the economic policies of Government. The economy of the country should be viewed as a whole and over a given period, and not with reference to a particular sector or a particular fiscal year. While the soundness of public finances in the long run should be guaranteed, there should be enough flexibility from year to year. The public should note that "unbalanced budgets" are not always an evil, and, provided deficit financing is resorted to as part of an overall plan and with due regard to the necessary physical controls, such spending may help to accelerate economic development and promote employment without bringing in its train the dreaded consequences of inflation.—*All Rights Reserved.*

EXPORTS OF COTTON TEXTILES

INDIA STEADILY LOSING MARKETS

EXPORTERS of cotton textiles in India are rather perturbed over the recent trends in world trade. In recent weeks, the export demand for Indian cloth has been quite unimpressive, while Japan and Lancashire have been receiving good support. They, therefore, feel that India is steadily losing its hold over the overseas markets for cloth and yarn. All available statistics confirm this impression. Here is, for instance, a comparative statement of exports of mill-made cloth from India, Japan and the U.K. during the first quarter of this year:

	India	Japan	U.K.
Quantity exported (million yards)..	117.05	186.88	173.24
No. of destinations	39	57	51

It will thus be noted that, during the three months ended March, 1953, India exported a bare 117.05 million yards, a quantity which falls short of the target. On the basis of a target of 1,000 million yards per annum, exports in the first quarter should have been at least 250 million yards. It is true that exports during the second quarter were somewhat higher, the quantity exported during the period up to 25th June being about 193 million yards. This, however, should not lead one to think that the upward trend will be maintained in the coming months. For the little improvement that was noticeable in the second quarter was due to the seasonal and spasmodic demand from certain markets which are unlikely to take continued interest in Indian goods.

According to latest reports about the overseas textile markets, it would appear that Japan is doing brisk business in cloth and yarn with Indonesia, Hong Kong, Singapore, Thailand, South Africa, etc. During April, 1953, Japan exported over 65 million yards of cloth, Indonesia alone accounting for as much as 24 million yards. Exports from Japan to Pakistan, China and the Near East countries are reported to have been still higher in recent months, consequent on the relaxation of restrictions on barter trade with these countries. The reimposition of import duties in Sudan—at the rate of 10 per cent. on grey cloth, 15 per cent. on bleached goods, and 20 per cent. on dyed and other varieties—is said to have brought the cloth trade almost to a standstill. Importers in that country, it is stated, are hesitating to book their requirements, even in permissible imports, of fancy varieties. Burma and Ceylon are booking negligible quantities. The forthcoming termination, as from 30th September next, of the system of preferential tariffs by Burma is bound to result in a marked fall in India's exports of cloth to that country. The market in Aden is also reported to be dull, owing to slackness in demand from Ethiopia and prevalence of low prices. The usual post-*Ramzan* demand there is stated to have not materialised yet, which, combined with rumours of abolition of export duty on coarse and medium cloth by the Government of India, has resulted in listless conditions in the Aden market for Indian textiles.

From the foregoing brief account it looks as though India is gradually losing its hold in the countries which are its traditional markets in favour of Japan and also the U.K. The following table indicates how India's trade in cotton textiles fared in a number of important countries during the first quarter of this year, as compared with that of Japan and the U.K.:

(In thousand yards)

Destination	Exports from India	Exports from Japan	Exports from U.K.
Siam	210	28,540	..
Indonesia	610	23,590	1,950
U.K.	930	15,700	..
U.S.A.	..	15,170	2,870
Iran	830	17,210	940
Ceylon	3,300	5,730	2,480
Iraq	1,040	2,970	1,810
Philippines	..	2,380	..
South Africa	..	8,710	23,760
Br. W. Africa	6,890	8,660	39,590
Belgian Congo	130	4,740	1,980
Hong Kong	470	970	1,520
Ethiopia	390	870	180
Pakistan	440	300	191
Australia	2,330	1,320	12,970
Other Commonwealth countries ..	10	10	820
Other foreign countries	310	2,680	6,230

It will be noted that, in the Commonwealth and British Colonial countries, the U.K. has been the principal supplier and that India holds, invariably, only third place, with Japan taking the second place.

The low level of exports of cotton textiles from India in recent months has lent additional support to the plea for the abolition of the remaining 10 per cent. export duty on coarse and medium cloth. But, in view of the fact that the bulk of India's exports consist of coarse and medium varieties—the quantity of these actually shipped during the four months ended April, 1953, was 148.5 million yards, out of a total of 200 million yards—and of the need for maintaining adequate supplies of these varieties for domestic consumption, the Government may be inclined to feel that the plea for the abolition of duty is not justified. Even a section of cotton textile exporters seems to be of the same view, as witness the remarks of a leading firm in cotton piecegoods in Bombay that "the time for it (abolition of duty) is still far off." This view, however, conveniently overlooks the need for enhancing the competitive position of Indian cloth in world markets which has become imperative in the present context of the buyers' market the world over, as already noted. And few would dispute that the best way of achieving the objective is to abolish the export duty.

Inasmuch as exports of fine and superfine varieties have rather been at a low level, the need for giving a drawback of the import duty on cotton used in the manufacture of such types of cloth meant for export must be stressed once again. This need seems to have been recognised, albeit indirectly, by the Union Minister for Commerce and Industry, Mr. T. T. Krishnamachari. Thus, while detailing the Government's export policy, in the course of his address at the recent meeting of the Export Advisory Council, Mr. Krishnamachari revealed that the Government would assume statutory powers to ensure that the export trade was not handicapped by import duties on raw materials. The time has now arrived for the Government to implement this policy in regard to exports of cotton textiles. The Government should also examine, in a dispassionate manner, the question of sales tax on cloth exports. There is the need, too, for liberalising the restrictions on exports of certain varieties as, for example, mill-made *lungis* and pseudo-fine cloth, effective enforcement of proper standards of cloth exported, and simplification of customs procedure.

WORLD WOOL OUTPUT AND CONSUMPTION

World wool output in 1952-53 is provisionally estimated at 4,190 million lbs. (greasy basis), which represents an increase of 6 per cent. as compared with that in the previous season. This rise is the largest so far seen in the post-war period, the level of output itself being the highest for the past ten seasons. The bulk of the increase is accounted for by Australia, the production of which during the season under review is estimated at 1,240 million lbs., which compares very favourably with 1,040 million lbs. in 1951-52. The other major producing countries, with the exception of Argentina, also account for a rise in production.

On a clean basis, world output of wool in the 1952-53 season is expected to be a record in the history of wool, the actual estimate being placed at 2,435 million lbs., as against 2,301 million lbs. a year before and 2,058 million lbs. before the war. Production of merino wool shows a sharp rise of 11 per cent. to 785 million lbs., but this figure still falls short of the war-time peak.

The rise in wool production closely follows the continued increase in sheep population. The number of sheep during 1951-52 was 769 million, as compared with 745 million in the previous year. For the first time since the war, it exceeded the 1938-39 level of 752 million. Figures relating to sheep population for the current season are not available. But there are indications to suggest that the number will be higher than in 1951-52.

The improvement in the world production of wool has been followed by a steady advance in consumption in each of the successive quarters of 1952, the advance being particularly marked during the last quarter. The first quarter of this year also witnessed a further rise in consumption, the quantity actually consumed being higher by 30 per cent. as compared with the corresponding quarter of 1952.

The steady rise in wool consumption is an indication of higher standards of living. The rising demand has brought to the fore the importance of raising the output of wool. Referring to this aspect of the question, Mr. Ewen M. Waterman, Chairman of the International Wool Secretariat, said, in the course of his address at the annual conference of the International Wool Textile Organisation held in Lisbon recently, that, by improved husbandry and pasturage and closer association between scientists and wool producers, the growers were striving their best to raise wool production. In his considered view, wool is unlikely to be affected by anything other than "superior promotion"; it cannot be affected by the quality of any other fibre yet marketed. Nevertheless, he urged continued collaboration for the development of joint promotion by all sections of the wool trade—promotion at all levels. To quote Mr. Waterman: "It is the extension and expansion of this collaboration which is the greatest insurance to the mutual well-being of all sections of the trade."

IMPORT POLICY FOR WOOLLEN GOODS

The Government of India's import policy for wool and woollen goods for the current half-year, announced recently, has been welcomed by traders. The policy envisages liberalisation of imports of hand-knitting wools. Thus, the quota has been increased from 75 per cent. to 100 per cent.; an import licence for Rs. 100 will be granted for every Rs. 75 sanctioned in the previous half-year. What is more, the period of validity of import licences is extended from six months to one year. Applications from newcomers are also being considered. These changes in the import policy, it is stated, will enable importers to secure delivery of hand-knitting yarns at a more appropriate time to meet consumer demand for the coming winter and, if they so desire, to import two consecutive six-month quotas in one delivery only.

Another welcome feature of the new policy is the inclusion, albeit on a token basis, of carpets and rugs in the list of imports. Established importers are permitted 5 per cent. of their approved quota and the validity of the licence will be only for six months.

The quota for wool fabrics generally, excluding felt or fabrics made of shoddy or waste wool, is unchanged at 25 per cent., but the validity of licence is extended to 12 months. There is a concession for importers having their own tailoring establishments. Similarly, the quotas for woollen yarns and woollen manufactures (not otherwise specified and including felt), are unchanged at 40 per cent. each, as also for woollen hosiery and knitted apparel at 75 per cent. The period of validity of licences for these three varieties is up to 31st March, 1954. Licences for import of raw wool (merino and crossbred) and wool tops which are on O.G.L.XXX will be valid till the end of September next.

INDUSTRY SURPRISED AT RAW COTTON COMMISSION'S LOSSES

YARN OFFTAKE STEADY—EXPORTS TO PAKISTAN

(From A Special Correspondent)

MANCHESTER, 30*th June*

MANCHESTER LETTER

IT is impossible at the moment to keep raw cotton affairs out of the picture and they look like retaining their position in the centre of the stage for some considerable time to come. Hardly had the trade had time to digest the implications of the second Hopkins Committee report than the sensational accounts of the Raw Cotton Commission for the 13 months to the end of August, 1952, became public property.

What perhaps surprised the industry most was not that the Commission during this period made a loss but the magnitude of the deficit, which amounted to more than £28,500,000. This was slightly alleviated by crediting tax provisions of £3,000,000. The result is that the Commission's reserve fund, built up during the prosperous years, had last August shrunk to about £10,000,000. Subsequent events must have placed a severe strain on this balance, which in all probability has already been exhausted.

The publication of such a document could not have come at a more opportune time for the supporters of private purchasing. They have not been slow to point out the faults of a system which can prove so costly in a relatively short period of time. The Commission itself provides explanations for some of the losses, and certainly everything seems to have gone wrong during the year concerned. Yet from its inception the Commission has made no secret of the fact that its system of buying cotton, accumulating it and selling it to spinners at the current world price, meant inevitable surpluses during periods of rising prices and equally inevitable deficits when values were falling.

The following table shows the peak quoted by the Commission for selected types during the period of the report, the December delivery price in August, 1952, and the current price:—

	Highest 1951-52 season	August 1952	June 1953
	Pence per lb.		
American strict middling 1"	48.05	39.05	51.80
Egyptian top grade Karnak	123.00	70.80	59.60
Sudan high grade (SXIS)	124.75	70.80	52.30
Egyptian Ashmouni (SOTO)	66.40	44.20	34.50
Pakistan (IEEK)	44.50	36.10	27.05
East African (ISG)	49.00	39.15	34.00

The further fall in values since the end of the 1951-52 season, although by no means as drastic as that which occurred from the peak rates, must be taken to indicate that the next accounts issued by the Commission will also show a substantial deficit.

Empire Cotton Supplies

The provision of alternative cover arrangements for Lancashire spinners and the problem of what types of cotton should be tenderable against the American futures contract were referred to by Mr. J. Littlewood, Chairman, at the annual meeting of the Empire Cotton Growing Corporation. Mr. Littlewood said the solution to the problem of finding other cover facilities which would not depend on public funds may or may not involve the opening of a futures market in the not too distant future. If and when that happened the question must inevitably arise as to what cottons should be tenderable against the American futures contract.

Before the war, Colonial cottons were not tenderable against the contract and as a result laboured under a serious handicap, which in effect drove the cottons into the mills of India and Japan instead of into Lancashire mills, as was originally intended. It was true that a separate contract was made available for these cottons before the war but it never really functioned and in effect placed a penalty on the cottons included in it as compared with American cotton.

Mr. Littlewood said such growths as Uganda, Nigeria and Tanganyika were not inferior in grade, staple, character or spinning qualities to American cottons. "I submit to the committee that will have to be very soon appointed to deal with the matter to take into most serious consideration the inclusion in the contract of cottons equal to American on an equal footing. It is a matter not only of equity but of great political importance," he said.

The inclusion of these cottons from the futures contract could have a very bad impression overseas. Inclusion of the cottons would encourage the use of Colonial growths here to a greater extent. Mr. Littlewood declared that if and when that happened there would be a great responsibility resting on the Colonial Governments concerned to see that the selection, grading and marketing were absolutely reliable so that the confidence of spinners would be built up and strengthened.

The President of the Corporation, Lord Derby, said that a notable feature of cotton growing in the last few seasons had been the rise of the smaller producing territories. This spread of production was particularly welcome, as it should lead to greater stability of supplies in the near future.

Steady May Exports

Viewed against the background of the latest Treasury warning to industry that export earnings must rise, the May returns for cotton goods were not encouraging. Shipments from Britain remained at very much the same level as during the earlier months of the year, and for the five months were valued at £54,359,446 compared with £75,589,799 in the same period of 1952.

There was a slight decline in the volume of cloth shipments compared with April and the total for the five months was only 290,516,000 square yards, valued at £36,428,344, compared with 320,918,000 square yards worth £50,204,535 in 1952. The following table shows the details:—

	Piecegoods sq. yds.	Value £	Average price per sq. yd. d.
Monthly average—			
1939	116,115,000	2,665,000	5.51
1949	75,294,000	8,846,000	28.07
1950	68,539,000	8,358,000	29.26
1951	72,090,000	11,016,000	36.67
1952	59,234,000	8,401,647	34.05
1953 (5 months' average) ..	58,103,000	7,285,669	30.09
January	64,796,000	8,223,374	30.46
February	52,027,000	6,611,000	30.49
March	56,243,000	7,136,820	30.43
April	59,528,000	7,372,000	29.72
May	57,039,000	7,129,471	29.53

Leading consumers of British cotton cloth remained the chief Commonwealth markets, the quantities absorbed during the five months being (in square yards, with 1952 comparisons); —West Africa 61,514,000 (71,988,000); South Africa 39,253,000 (21,931,000); Australia 24,502,000 (47,472,000) and Malaya 13,229,000 (10,323,000).

Imports of cotton goods this year continue to be on a very reduced scale. The value of arrivals so far has been less than £6,000,000, compared with over £21,000,000 in the same period last year. Shipments of yarn for the five months aggregated only 513,605 lbs. against 5,707,091 lbs., in 1952, the cost being £136,299 against £1,611,775.

Grey cloth imports in May amounted to 7,510,000 square yards, of which 5,902,000 square yards came from Japan. There has recently been some comment at the continued arrivals of Japanese fabric, which account for more than 25,000,000 square yards this year out of a total of 35,457,000 square yards. Most of this trade is attributed to orders placed by Colonial Governments in Japan, stipulating that supplies must be finished in this country.

Yarn Offtake

By a slight margin May exports of cotton yarn exceeded the quantity shipped in January, thus becoming the highest monthly exports of the year. As in the case of cloth, however, the level of overseas trade has remained exceedingly steady, there being a variation of barely 350,000 lbs. in the highest and lowest figures so far. To the end of May total shipments were 16,651,800 lbs., valued at £6,834,813, compared with 17,691,000 lbs., worth £9,396,750, in the first five months last year. Details are given below:—

	Yarn lbs.	Value £	Average price per lb. d.
Monthly average—			
1939	9,471,600	745,500	18.89
1949	6,438,400	1,062,500	64.84
1950	5,915,500	2,127,000	86.33
1951	5,547,000	2,848,500	116.46
1952	2,976,900	1,479,163	119.25
1953 (5 months' average) ..	3,330,400	1,366,963	94.51
January	3,467,700	1,427,349	98.79
February	3,264,000	1,434,004	104.77
March	3,114,500	1,241,552	95.67
April	3,202,200	1,354,790	99.06
May	3,485,100	1,320,965	94.40

Chief buyers of Lancashire-made yarn for the first five months this year have been (with 1952 comparisons):—Irish Republic 2,205,000 lbs. (1,393,000); Canada 1,910,300 lbs. (873,300) and Australia 1,891,200 lbs. (1,746,500).

Anglo-Pakistan Trade

Prospects for Lancashire-made cotton piecegoods in the Pakistan market largely depend on how Pakistan solves her current food problem. This warning was given in Manchester

COTTON SCENE IN PAKISTAN

RECENT DEVELOPMENTS REVIEWED

CLOSE on the heels of the news relating to the enormous losses suffered by the U.K. Raw Cotton Commission comes another item of news, from Karachi, according to which the Pakistan Cotton Board has, during the current season, suffered a loss of Rs. 5 crores. Report has it that the Government has decided to discontinue the cotton price support scheme with effect from the next cotton season beginning from September this year. It is true that strict comparison cannot be instituted between the Raw Cotton Commission in the U.K., which is a cotton importing country, and the Cotton Board in Pakistan, which is a cotton exporting country. Even so, it is noteworthy that the two organisations have one common feature, namely, bulk handling of cotton by Government, and that both these organisations have suffered losses.

Despite these losses, the Pakistan Government might well look back upon the last six months of the current calendar year with some satisfaction. If one remembers the low levels to which cotton prices had sunk last year, and the little hopes that cotton men had about improvement in cotton prices, and compares these conditions with the present state of affairs, under which a sizable portion of cotton stocks has been disposed of, it will be readily conceded that the Government has enabled its cotton economy, through determined efforts, to pull through the critical months of this year. The success of the Government's efforts has no doubt been made possible by the change in the world textile situation which assisted the recovery in the cotton markets the world over.

At the beginning of the current calendar year, cotton prices in Karachi were quoted at about Rs. 64 for N.T. R.G., Rs. 67 for 289F R.G. and Rs. 51 for Bengal *Deshi* as against the current prices of Rs. 69½, Rs. 72½ and Rs. 77, respectively. In the very first month of this year, there was a debacle in the cotton market following the disappointment of the traders who expected that the Pakistan currency would be devalued. Alarmed by the continued stagnancy in cotton prices, the Pakistan Government decided to prohibit export of cotton at prices below Rs. 56 for 4F R.G., Rs. 58 for L.S.S. R.G. and Rs. 61 for 289F R.G., with a premium of Rs. 3 per maund for saw-ginned varieties. The Government also decided to permit private barter deals of cotton for artificial silk, yarn, coal, iron and steel, and sugar with any country. It followed up this announcement with efforts which were designed to conclude barter arrangements with a number of countries. Before the end of March, the Cotton Board was successful in disposing of the entire quantum of the old crop cotton, that is, the 1951-52 crop cotton. Also, Italy, Belgium, Germany and the U.K. were good customers for Pakistan cotton in the first quarter of this year. A recovery in cotton prices thus ensued. By the end of March, Pakistan's cotton exports had already begun to show signs of expansion, for, between the beginning of the 1952-53 cotton season and the end of March, 1953, Pakistan had exported 998,300 bales, as compared with 778,500 bales in the same period in the previous year.

The most important of the barter deals concluded during the half-year under review was the Pakistan-Japan Trade Agreement which provided for a supply of 80 million square yards of Japanese fabrics against the exports of 650,000 bales of Pakistani cotton. Japan was expected to buy its cotton requirements in the following order:

	Bales
2nd quarter of 1953	150,000
3rd " "	100,000
1st " " 1954	125,000

It is not, of course, clear what quantity of cloth has been received by Pakistan from that country. But Japan remains the largest importer of Pakistani cotton. Both prices and export figures continued to look up. From the beginning of the season up to 15th April, 1953, Pakistan had disposed of 1,049,543 bales as compared with 667,427 bales in the corresponding period of the previous year. Prices advanced by Rs. 20-30 per candy, so that at the beginning of May, N.T. R.G. was quoted at Rs. 63-64 per maund as against about Rs. 60 in the previous month. These improvements were the more remarkable because they were achieved in the face of the larger cotton output in the 1952-53 season. According to the final Pakistan cotton crop forecast, the 1952-53 crop shows an increase of 5.7 per cent. as compared with the final forecast for last year. The following are the acreage and output figures for the 1952-53 and 1951-52 cotton seasons:

	1952-53	1951-52
Acreage	3,430,000	3,244,000
Production (in bales of 400 lbs. each) ...	1,468,000	1,376,000

Unofficial estimates place the crop at much higher levels.

Since April, there has been an almost uninterrupted improvement in export sales and prices, thanks to the intake by such cotton-importing countries as France, Australia, the U.K. and China. In May this year, the Pakistan Government placed cotton exports on the Open General Licence till 31st August, 1953, though the authorities banned all transactions in new crop cotton. The sizable expansion in cotton exports will be evident from the following table which gives the exports of cotton from 1st September, 1952, to 18th June, 1953, and the export figures for the corresponding period in 1951-52:

Exports of Cotton

(In bales of 400 lbs. each)

Destination	From 1-9-1952 to 18-6-1953	Corresp nding period 1951-52
U.K.	124,571	86,507
Continent	363,353	279,523
China	141,914	378,691
Japan	552,724	277,657
U.S.	12,070	337
Australia	23,393	8,576
Asiatic ports	14,958	1,941
Other foreign ports ...	89,295	8,507
Indian ports	100	400
East Pakistan	28,588	21,518
Total	1,350,966	1,063,657

It will be seen from the above table that Japan is the largest single buyer of Pakistan cotton, followed by the Continental countries and the U.K. Cotton exports from the beginning of the season to 18th June, 1953, have exceeded the exports in the corresponding period in 1951-52 by as much as 287,309 bales. Exportable surplus for this season has been computed at 1.7 million bales. As against this surplus, the country has already exported about 1,350,000 bales, while at least another quantity of 100,000 bales, it is stated, has been earmarked against sales already effected. Thus, Pakistan is left with only about 2½ to 3 lakh bales of cotton to be disposed of. These figures are interpreted as a bullish factor for Pakistan cotton. This explains why Pakistan cotton prices have moved up to a level at which they are reported to be slightly higher than the prices of the equivalent varieties of American cotton.

Impressive as these achievements are, it must be noted that the recovery in Pakistan's cotton prices owes a great deal to world factors, such as revival of trade in cotton textiles and that the part played by the price support scheme is not as great as is may be generally supposed. The price support scheme, it may be noted here, was maintained at a not inconsiderable loss to the Exchequer, estimated at Rs. 5 crores. Bulk purchase arrangements, as experience in most other countries where it has been tried shows, succeeds best only in a period of rising prices. The Pakistan Cotton Board seems to be alive to this risk now, as witness its decision to withdraw the price support scheme.

The Board's achievement, in the shape of disposal of cotton stocks, must be set against the background of lower cotton prices secured by growers and merchants. It has been able to dispose of its stocks not at the comfortably high level of prices which prevailed in the 1951-52 season but at the comparatively low levels which came to prevail in the first and second quarters of 1953. Even in the beginning of the 1952-53 season prices were a little higher, with N.T. S.G. fetching about Rs. 100 (as against Rs. 125 early in 1952) and L.S.S. R.G. Rs. 95 (per Bengal maund). There was little foreign demand at these higher levels and it began to manifest itself only when prices were reduced and the export duty was slashed in the case of staple varieties and completely abolished for Deshi varieties.

An important effect of official interference with the cotton market has been that the cotton price-pattern has been distorted. Normally speaking, the superior styles, such as N.T. and Punjab 289F, should command a good premium of about Rs. 20-25 over the short-staple variety, Bengal *Deshi*. Now the position has been reversed, with Bengal *Deshi* being quoted at a premium over the long-stapled varieties. This will have an undesirable effect on the future of cotton cultivation, for farmers might prefer to grow the more remunerative short-staple varieties. In that case, the good work done by the Indian Central Cotton Committee, and now being continued by the Pakistan Central Cotton Committee, in the sphere of improving the quality of cotton, will be lost to that country.

Hence, the mere fact that the cotton stocks have been disposed of successfully by the Pakistan Cotton Board should not blind one to the defects of the system of bulk purchases and bulk sales, nor to the price that has been received by farmers and other domestic interests in order to keep the system. It is gratifying to note, in this connection, that the Government has set up a committee of experts to study the cotton market and suggest ways and means of removing "unhealthy" practices in the cotton trade and to examine whether futures in cotton is essential. The report of the Committee will be awaited with interest. Only, it is to be hoped that the Committee will not merely apportion blame between traders and Government but will make constructive proposals which will enable the cotton market to function effectively without the need for Governmental interference in its day-to-day affairs.

1952-53 COTTON ESTIMATE

The estimate of the 1952-53 cotton crop made by the Textile Commissioner's office places the crop, as our readers are aware, at 34.6 lakh bales (*vide Commerce* dated 20th June, 1953). In this connection, the Textile Commissioner says that he has seen statements, made in certain sections of the Press (not *Commerce*), to the effect that, in computing the statistical position of cotton at the end of the current year, his organisation has deliberately left out of account the non-factory consumption of cotton in the country. He says that such statements are "misleading and quite incorrect," inasmuch as a non-factory consumption of 2.7 lakh bales was assumed this year as it was last year, and that the estimate of 34.6 lakh bales represents "commercial crop," exclusive of village consumption. He further points out that cotton estimates of reputed commercial houses also estimate the availability, leaving out the non-factory consumption, and that their estimates resemble closely the official estimates. Since such statements may result in considerable harm to the trade, he hopes that they will "not be repeated without due enquiry."

BRAZILIAN COTTON

The Brazilian Government has decided to sell the stocks of 1952 cotton held by the Bank of Brazil at prices which are related to the New York Futures Contract. Thus, the f.o.b. Santos price for Type 5 is fixed at par with New York July, to which 2.50 cents per lb. are to be added to arrive at the c.i.f. price for European ports. Premiums and discounts for higher and lower grades are also specified. It now remains to be seen how far this plan assists the Government in disposing of the stocks which are estimated at about 1.2 million bales.

INDIAN COTTON CROP

Latest weather and crop reports show that good progress in sowing has been maintained in Hyderabad, Madhya Pradesh, Madhya Bharat and Rajasthan where 40 to 60 per cent. of the area has been sown. In Bombay State, sowings in the Surat tract are completed. The new seed 2087 has been sown in large quantities between the Narmada and the Tapti Rivers and a crop of 25,000 bales is expected. Sowing operations have been completed in the Vijaya tract also, while sowing is nearing completion in Khandesh. Cotton crop is making satisfactory progress in East Punjab and P.E.P.S.U.

PERUVIAN COTTON

Sales of Tanguis cotton till 5th June, 1953, aggregated about 226,000 bales. Latest estimates place the crop at about 350,000 bales. This cotton mainly consists of medium qualities. Pima-Karnak quality of the crop, it is feared, will be lower than last year, due to poor growing conditions and insect infestation.

The Gash crop of 30,000 bales, it is stated, has remained unsold. It would appear that the Gazira Board is unwilling to sell this cotton, until it is ginned and classified. The Mahdi crop of 25,000 bales of 'L' type cotton is yet to be sold. There are also small quantities of private crops still available.

Exports of Egyptian cotton from the beginning of the current season upto 31st May, 1953, are placed at 730,000 bales, as against 491,000 bales last season.

ANNUAL MEETING OF ROHTAS INDUSTRIES LIMITED

MR. SHANTI PRASAD JAIN'S REVIEW OF COMPANY'S PROGRESS

SUGGESTION FOR RAISING PURCHASING POWER OF PEOPLE

ADDRESSING the shareholders of Rohtas Industries Ltd., at their Twentieth Ordinary General Meeting, held at Dalmianagar, Bihar, on the 7th inst., Mr. Shanti Prasad Jain, Chairman of the Company, reviewed at great length the progress made by the Company's various units during the year ended 31st October, 1952, thanks to the vigilant efforts of the management. Alluding to the rapid strides made in the industrial production of the country, Mr. Shanti Prasad drew attention to the low level of purchasing power of the people to absorb the increased production. The purchasing power could be raised only through increasing employment of the people at wages above the subsistence level. This, in turn, would be possible only through expansion of industries which could afford to pay such wages. One of the directions in which the expansion of industries could be achieved, according to Mr. Shanti Prasad, was production of goods that are now imported. He also referred to the transport problem in the country. The availability of transport was steadily falling, he said and added that railways should be geared up to meet the growing demand.

The following is the full text of Mr. Shanti Prasad Jain's address:

"GENTLEMEN,

"I have pleasure in welcoming you to the Twentieth ordinary general meeting. The audited accounts of your Company for the year ended 31st October, 1952, together with the Directors' report, are already in your hands. With your permission, I shall take them as read.

Improved Production

"At the last meeting, I gave a factory-wise review for your information and expressed confident hope as regards further improvement in the working results of the Company. I am glad to report that all-round vigilant efforts have borne fruit, as will be evident from the details already in your hands. Barring the *vanaspati* factory which, as apprehended, had to be closed down in June, 1952, the various other units have shown better performance.

Sugar

"Your sugar factory registered 100 per cent. increase in production. Improved supply of cane to your factory will be ensured with the completion of the laying down of rails connecting Nasriganj. To maintain and augment sugar production, as a whole, in the next season, steps have to be taken to divert all available cane to the industry. The position is that more than 35 per cent. cane is being transported by rail and, if the railway freight is increased, as is contemplated, I am afraid all the cane will not be available to the industry and production will be adversely affected.

"Sugar is very much in the news now. There have been some fluctuations in the market and the price of sugar went up by 10-12 per cent. over the Government specified price, primarily due to increased consumption and the apprehension of lower production in the next season. The production of the current season is 13.1 lakh tons. While the normal consumption per year is 12 lakh tons, consumption during the past months has been of the order of 1.4 lakh tons per month, and on this basis the total annual consumption will be 16 lakh tons. Though any increase in price by itself is regrettable, a rise of 10 to 12 per cent. is by no means of any significance and much more so when we compare the rise in the price of commodities like mustard oil, oilseeds, *gur*, etc., to the extent of 40 to 80 per cent. The Government of India have taken certain steps to keep the situation under check. It is, however, a matter for regret that, after carrying on several years without imports, there should be a move to resort to sugar imports now. It is relevant to note that the price of Formosa sugar went up by Re. 1 to Re. 1-8 per maund merely on the reported move of the Government of India to import sugar. It is also worthy of note that, against the import duty of Rs. 7 per cwt., the internal imposts on sugar, in the shape of excise duty, cane cess and co-operative commission, work out to Rs. 8-4-6 per cwt. This is a singular instance where taxes on an indigenous product are higher than import duty.

"What is very clear in the context of events is that production of sugar within the country should be increased. It is very difficult to make any definite assessment of next year's production on account of the immatured state of the cane crop. Assuming next year's consumption and production also at the same level as this year, it will be found that production will fall short of requirements by about 3 lakh tons. With the carry-over of this year of about 1.5 lakh tons, there will be real shortage, unless effective steps are taken to increase production. This basic factor should not be overlooked.

Cement

"The increase in the production of your cement factory is to the extent of 50 per cent. The offtake from your factory continues to be satisfactory. The full production is being disposed off without any marketing problem. Your Company is examining the possibilities of improving the working of the factory by remodelling the old plant, so as to achieve better efficiency and higher production. This is expected to take about two years. In view of the growing pace of industrial development, there is great need to augment production of cement in this country. The future of the cement industry, as a whole, will depend on the report of the Tariff Commission on the price structure. I hope that the Tariff Commission will view the question in all its aspects realistically and the final report will be such as to stimulate development of the industry leading to larger supplies of cement in the country.

Paper and Boards

"The consumption of your Company's regular products of boards has declined considerably. The cigarette manufacturers who are among the principal consumers reduced their offtake. Your Company, therefore, has resorted to production of new varieties of papers, like M.G. pressings, covers, poster paper, etc. The production of these items will work out in tonnage to much less than the output of boards manufactured earlier. The German tissue paper plant, most of the machinery for which have been transported to Dalmianagar and erection is well in progress, will, combined with the Yankee paper machine from Japan, which has already gone into production, enable your Company to manufacture the finest varieties of lightweight papers and meet a very large percentage of the country's requirements. Further, with the operation of the new paper machines, the output of the pulp plant, which could not previously be put to full use on account of the limited capacity of the paper machine, will be fully absorbed. The manufacturing costs and overhead expenses will, thereby, be reduced and the profits of the paper section would be steadied up. This will reflect itself in the general working results of the Company.

"The manufacture of vulcanised fibre boards is another activity, in which your Company's efforts have been directed. This type of boards is required for specific uses, such as for making sliver cans for the textile industry, fibre suit cases, distribution boards for the electrical industry, etc. Your Company hopes that arrangements for distribution, which have been satisfactorily made, will result in building up for this quality of board a good market.

Asbestos Cement Sheets

"The arrangements for regular and adequate supplies of asbestos fibre have proved successful and your asbestos cement sheets plant will be now in regular production. The sheets have passed official tests and I feel confident that the 'Ashoka' asbestos cement sheets will win in due course the consumer's preference.

"Before concluding this review, I would like to bring to your notice one important aspect. Due to various extensions and installation of new plants, etc., in recent years, there is substantial amount of unabsorbed depreciation brought forward from previous years on account of initial, additional and triple-shift allowances. The profits of your Company for the year under review will not, therefore, be liable to tax.

Employment and Development

"Indigenous industrial production is achieving rapid strides and the supply position in respect of most of the essential consumer goods has been steadily improving. The purchasing power of the community at present is, however, at a level that the existing production of goods cannot be absorbed. Unless, therefore, the purchasing power is increased, there does not appear to be any great possibility of production being augmented further in a large number of industries. The consumer goods produced through cottage industries, as commonly understood now, at comparatively higher cost can be absorbed only in a society with a high level of purchasing power. The cottage industries workers themselves, getting not anything more than subsistence wages, cannot buy their own products. Purchasing power can be created only through increasing employment at wages above the subsistence level. Greater employment has, therefore, to be achieved through expansion of industries that will afford to a large percentage of the population not only wages above the subsistence level but also steadily improving measure of prosperity. It is such industrial expansion alone that will provide increasing employment and create additional purchasing power, which will, in turn, stimulate further production. The expansion at this stage can take place in the direction of goods that are being imported into the country now and are absorbed by the Society. We are now importing manufactured goods to the order of Rs. 250 crores, excluding imports of materials required for their production. The total under this class is about 340 crores of rupees, of which nearly 90 crores of rupees will be of materials and special items. It should be possible to produce many of these goods in the country itself and provide a large measure of employment. Taking the average wage per worker at Rs. 1,000 per annum, the manufacture of goods now imported into the country will result in providing employment for about 2.5 million workers. Let us not, therefore, solve the unemployment problem in other countries first, as the Commerce and Industry Minister expressed at one of the conferences. This indigenous development will create fresh purchasing power and expanded market for the consumer goods produced. This will also render implementation of rationalisation leading to improved productivity and higher wages, so essential for strengthening the economy, possible, as the new development will be able to provide additional employment. I may add here that this development will not result in the total shutting out of imports, but will give rise to fresh and varied demands which may alter the character of the imports. What is required now is, therefore, to shake off complacency and despondency and to apply earnestly to the immediate task of industrial expansion, which will not only provide increasing employment to millions in the country but will also create additional purchasing power and enable better standard of living.

"We are to-day in a comparatively comfortable position. Three years of the Five-year Plan period are over and we have seen increase in industrial production and improvement in the food front. With the completion of the various river valley schemes which are well on their way, solution to the food problem is in sight. The problem of employment and higher standard of living which has to be tackled is serious, but by no means incapable of solution with the country's man-power and material resources. On the solution of the problem depends the future of our country. Now is the time to plan and prepare for this. To reap the fruits during the bigger phase of development in the next five or seven years, beginnings have to be done now.

Transport

"A problem that is assuming serious importance side by side with industrial development is that of transport. The availability of transport is steadily falling. The Railway Ministry, in their attempt to cover shortfalls, emphasise the amount of movement in respect of a few commodities like coal, fertiliser, sugar,

(*Continued on page 79*)

RISE IN SUGAR PRICES

GOVERNMENT'S IMPORT POLICY COMMENDED

A REFERENCE was made in these columns last week, to a Deccan millowner's criticisms of the Government of India's decision to import sugar. These criticisms have not elicited the support of a section of the sugar trade and industry, which feels that the measures taken by the Government, including imports of sugar, should be generally appreciated. Mr. Matadin Khaitan, President of the Bengal Sugar Merchants' Association, for instance, observes, in the course of his address at the tenth annual general meeting of the Association held in Calcutta recently, that the Government of India has moved in the matter very promptly and the steps it has taken would have the desired results. With the arrival of sugar at the consuming centres, the prices, he maintains, must go down and stabilise at a lower level.

The allegation that the recent rise in sugar prices was the direct result of an all-round hoarding tendency on the part of traders has been refuted by Mr. Matadin Khaitan. According to him, prices of sugar in Calcutta, the largest sugar market in the country, had all along remained low and it was only towards the end of May that prices registered a rise. He attributes this rise to two important factors, namely, depletion of stocks due to poor arrivals and lack of adequate wagon allotments last month. In support of this contention, he cites certain statistics. The rate of consumption of sugar at Calcutta is at present 6,000 bags per day—of this quantity, 2,500 bags are required for local consumption and 3,500 bags for being exported to outside States such as Orissa, Assam, Malabar, Madras, etc.—while the daily arrival for some time past had been only 1,000 to 2,500 bags. It was, therefore, natural that when stocks got depleted, prices took an upward turn. Nevertheless, Mr. Khaitan feels that the price of sugar *vis-a-vis* that of its substitutes—*gur* and *khandsari*—is still cheap and this explains its excessive demand. In other words, he considers it as an established fact that, owing to a fall in gur and *khandsari* output and rise in their prices, people normally eating these commodities are now taking to sugar. In this connection, he observes:

"... during the 1951-52 season, a record figure of 1,486,000 tons was reached due to the incentive given in season 1950-51, as also relaxation in the latter part of the season when cane price was allowed to be paid on recovery. *Gur* and *khandsari* prices were comparatively low and there was diversion of cane from *gur* to *sugar*. This year's production of mill sugar is around 1,300,000 tons. Another significant factor has been a sharp rise in gur prices. In Meerut, whilst last year the gur price was ruling in the neighbourhood of Rs. 7 per maund, this year, after remaining stationary at Rs. 15 for some period, it has been going up for the last few months and now it stands at Rs. 20 to Rs. 22 per maund. *Khandsari* has been selling at Rs. 30 to Rs. 33 a maund. This has resulted in much larger consumption of crystal sugar. Last year, despite all relaxations, the total offtake during the year did not exceed 1,170,000 tons. Against this, the offtake from the mills this year during the first seven months has been of the order of 912,000 tons. For the corresponding period last year, the offtake was only 680,000 tons. On 1st November, 1952, we had a carry-over of 496,000 tons, whilst this year it is expected to be a little more than 200,000 tons."

A Welcome Feature

Mr. Khaitan admits that the high rate of sugar consumption has been most unexpected and might have slightly disturbed the equilibrium, as supplies could not keep pace with demand, thanks to transport difficulties. But he emphasises that higher consumption in itself is a most welcome feature, considering the fact that, in the matter of sugar consumption, India ranks the lowest as compared with several other countries. Thus, the per capita consumption of sugar (excluding *gur*) in India is only 7 lbs., as against as much as 116 lbs. in Australia, 106 lbs. in the U.K., 97 lbs. in the U.S., 88 lbs. in Cuba, 52 lbs. in France, 34 lbs. in Brazil and 33 lbs. in Japan. The Planning Commission has observed, in this connection, that the per capita consumption requirement of sugar (including *gur*) for a balanced diet should be 2 ozs. per day (or about 45 to 46 lbs. per annum), while at present it is only 1.62 oz. per day (or about 36 to 37 lbs. per annum). Mr. Khaitan, therefore, concludes that higher consumption rates are indicative of better standards of living "to which the people are getting accustomed and for which the Government has been striving."

In view of the increased demand for sugar in the country, the Bengal Sugar Merchants' Association President lays utmost stress on the need for raising output in the ensuing (1953-54) season. Incidentally, he suggests an upward revision in sugarcane price, as, in his opinion, the present price of Re. 1-5 per maund has not proved to be economical. Such a step, he feels, will check the rising tendency of *gur* prices and ensure larger supplies of cane to the factories. The President alludes, in this connection, to the question of controls and urges the continuance of the policy of decontrol. To quote his own words:

"... some fluctuations in the price of a decontrolled commodity are inevitable. I personally feel that fluctuations up to 10 per cent. either way should be considered normal. Judged from this standard, it would be appreciated that the price of sugar had not gone up to any unreasonable level. There was a time when sugar was actually selling much below the standard price assumed by the Government. In other commodities, too, prices have moved up recently. Compared to them, fluctuations in sugar prices have been only modest. By this I should not be misunderstood as justifying higher prices. I am only trying to explain that fluctuations in a decontrolled commodity are inevitable and, so long as these fluctuations remain within the narrow range of about 10 per cent., they should not be considered abnormal to pass any judgment on the policy of decontrol. There should be no hasty conclusions with regard to this policy which has been formulated after due consideration of all relevant factors. The past experience of control in the sugar industry has demonstrated beyond any doubt that it benefits no one. While the production is hampered, the consumer is required to pay high black market prices. Additionally, the normal trade channels are disrupted causing great hardships to the middle classes. I will, therefore, warn the critics not to rush to hasty conclusions. But they should try to assess fully the advantages and disadvantages of the present policy vis-a-vis the policy of control."

Transport Facilities

Mr. Khaitan also lays particular stress on the need for ensuring satisfactory transport facilities. Even after the consuming markets have been flooded with sugar, he avers, transport of sugar should continue to receive the Government's best attention, so as to avoid any recurrence of shortages and higher prices. Important markets like Calcutta should be kept well supplied. Mr. Khaitan wants the sugar trade to be consulted when the Government draws up the movement programme. He suggests, in this context, that the Government should consider the desirability of setting up a small board with representatives of the sugar trade and industry.

COST SCHEDULE FOR SUGAR INDUSTRY

It is indeed strange that the Expert Committee appointed by the Government of India to revise the Srivastava sugar schedule—Dr. B. V. Narayanaswami Naidu, Member, Tariff Commission, is the Chairman of this Committee—should have taken as long a period as nearly two years to conclude its deliberations. It was only last week that the Committee met in Bombay to discuss the results of the analysis of the cost data collected from 45 sugar factories and to record the evidence of the Indian Sugar Mills Association's representatives. And, according to latest indications, the Committee is expected to submit its report to the Government within a week.

In the course of their discussions with the Expert Committee, the representatives of the Indian Sugar Mills' Association urged that, while working out a cost schedule for the sugar industry in general, it was necessary to consult the representative factories in the various regions, so that the inclusion of the cost of efficient units may not unduly lower the estimate of sugar cost, and thereby prove disadvantageous to the industry. They also emphasised the importance of giving due consideration to the increased cost of replacement of machinery, insurance and other contingencies.

WASHING OF COAL

CONSUMERS SUGGEST NECESSARY MEASURES

THE questionnaire issued by the Coal Washing Committee has evoked suggestions from many quarters as to how washing of coal can be made attractive. The Coal Consumers' Association of India, Calcutta, which has submitted its reply to the questionnaire, has suggested a number of steps calculated to encourage adoption of washing coal in India. These are as under:

"(1) the Government should give 100 per cent. traffic facilities to the collieries setting up washing plants. They should also assure supply of open type wagons suitable for mechanised loading and unloading. Old wagons which are not serviceable on the main line can be used on sidings bringing the coal from collieries to a central washing plant;

"(2) the Government should give assisted sidings terms for sidings required by washing plants;

"(3) the Government should revise the terms of royalty where such is paid on raisings and not on despatches;

"(4) the coal despatched to the central washing plant should not be subject to the double cess;

"(5) according to the present freight rates for distances below 20 miles, whatever the actual distance, a minimum freight of Re. 1-14 is charged. Thus even if a colliery is 12 miles only from the washery, it will pay a freight of Re. 1-14 per ton. Again, from the washery to destination, the washed coal will pay the usual freight. Thus payment of freight from the colliery to the central washery at Re. 1-14 per ton will tend to make the washing process very expensive. It is, therefore, suggested for the urgent consideration of the Government that in the case of despatches of coal from the collieries to the consumers through a central washing plant, the railways should base their freight charges on washed coal as a continuous journey from the colliery via the washery to the consumers' destination and separate charge from the colliery pit-head to the washing plant should not be paid. This will encourage coal washing and, at the same time, make the process economic;

"(6) since the setting up of washing plants involves heavy capital outlay, the Government should grant financial assistance to the colliery setting up washing plants;

"(7) the colliery which sets up a washing plant should be allowed to raise coal up to its capacity for washing;

"(8) the Government should assist in the disposal of middlings resulting from the washing of coal. They can use these middlings in their power plants. It is further suggested that the Chief Combustion Engineer of the Coal Board should investigate as to the possibility of the use of middlings both by Government and industrial consumers; and

"(9) when coal washing was installed in South Africa, a greater part of the machinery was manufactured by the engineering industry in South Africa itself by purchasing patent rights, etc. Our Government should also consider how far coal washing machinery can be manufactured in India in collaboration with foreign manufacturers by purchase of their patent rights, etc. This will not only help the local engineering industry, but would also reduce considerably the cost of installing washing plants in the washeries.

Most of the aforesaid suggestions advanced on behalf of the coal consumers are practicable, and therefore, deserve consideration at the hands of the authorities. The only snag which strikes one most is the number of "do's" to which the Government is asked to commit itself. Although it is the responsibility of the Government to render assistance wherever possible, provided such assistance does not involve it in heavy financial commitments, the Association's list of "do's" seems to be a formidable one. It would stand to reason, if the coal producers themselves were to give the lead wherever possible and then seek assistance.

On the issue of the prices to be charged for washed coal, the Association is of the view that if a producer adopts a means of coal beneficiation such as washing or hand preparation or any other means to improve his coal to a grade better than that for which he is paid, the consumer will derive a benefit and, therefore, a surcharge will be permissible. It feels that the steady ash percentage, that is, consistency in ash content, should be rewarded by what may be called consistency, extra, over and above the controlled price for the grade reacted by washed coal. This would be in accordance with the prevailing grading system under which a surcharge is allowed for inferior grade coal. The Association, however, is not in favour of making price differentiations between washed coal and coal beneficiated by hand preparation or by other means.

While on this subject, the Association draws the attention of the authorities to the defects in the present control on prices of coal. The prices were fixed during the war. The exigencies then demanded increased production of coal, whether low or high grade. Price bore no relationship to quality, the difference between prices of low and high grade coal being very narrow. As the circumstances prevailing during the war no longer exist, a revision of prices in accordance with the value of coal is considered by the Association as not only necessary but urgent. This, it says, would also encourage washing of coal.

CASHEWNUT INDUSTRY IN INDIA

ITS IMPORTANCE IN THE EXPORT TRADE

ALTHOUGH the Indian cashewnut industry is a comparatively young industry, it has carved for itself an important place in the foreign trade of the country, which few industries of the same age can boast of. As earner of hard currency, it occupies the third place, next to jute and pepper. But an exhaustive study of this important industry has not so far been attempted owing to paucity of statistical data. In this connection the results of a study undertaken by the Economic and Statistical Section of the United Commercial Bank Ltd., which are contained in a supplement to the May issue of the *United Commercial Bank Review*, under the caption "Cashewnut Industry in India," will be read with great interest.

The origin of cashewnut plantation in India, according to the journal, dates back to 400 years ago, when it was introduced by the Portuguese missionaries. More than 70 per cent. of the production is concentrated in the West Coast regions of India, between Bombay and Travancore, while the rest comes from the interior districts and from the eastern coast, but mainly from the south of the Vindhya range of mountains. The bulk of the production in the West Coast is from South Canara, Malabar, Goa, Cochin and Travancore. The season for collection of mature fruits is from the end of February to the end of May or June. A fully developed tree is capable of yielding 100 lbs. of nuts per annum. In the West Coast, the average yield per tree is about 20 lbs., in the eastern districts of Madras 30 lbs. and in Orissa about 40 lbs. No statistics of the production or consumption of cashewnuts in India are available, but it is stated that the Indian output of raw nuts is not sufficient to meet the requirements of the processing factories. Nearly two-thirds of the total supply of raw nuts comes from Portuguese East Africa and British East Africa. The cultivation of cashewnut trees has not been organised well enough to meet the entire requirements of the factories. This is evident from the figures of import of African nuts for the years 1939 to 1952. In 1939, India imported 37,000 tons from the two African countries and in 1952 the imports aggregated 55,000 tons. This shows that, despite the commercial importance of the commodity to India, no attempt has been made to reduce imports.

No estimate of the area of land suitable for cashewnut cultivation has been made. It is stated that in Travancore-Cochin State, plenty of uncultivated land remains unexploited. One of the difficulties in the way of more extensive cultivation is the extreme poverty and lack of resources of the agriculturists. As the tree generally takes three or four years before it matures, the agriculturist cannot afford to wait for a return on his capital for such a long time.

The methods of collecting and marketing of nuts in India are still primitive. The middlemen visit small growers and collect the nuts and the marketable quantity is brought to the shandy and sold to the highest bidder. The price of raw nut varies in accordance with the variation of the price of cashew-kernels in overseas markets, which, it is stated, fluctuates widely from time to time. The cashew-kernel exporters to overseas countries place their demand for raw nuts after receiving quotations from foreign importers of kernels. Actual transactions between the suppliers of raw nuts and producers of kernel take place when producers find that the American quotation for kernels and the Bombay quotation for nuts leave a reasonable margin of profit. In fact, a previous knowledge of the kernel market gives sufficient time for the cashewnut brokers to manœuvre the prices.

There are 164 factories in India which process cashewnuts and manufacture kernels, over 100 of which are concentrated around Quilon in Travancore-Cochin State and some in Mangalore and Tanjore districts of Madras State. Although cashewnuts are abundantly produced in East Africa and Brazil, Quilon is reputed to be the only place where both processing and exporting are done on a large-scale. On an average, a bag of about 168 lbs. (net) of nuts yield 37-38 lbs. of kernels. Every year, about 55,000 to 60,000 tons of African nuts and 40,000 to 46,000 tons of Indian nuts are roasted.

As already noted, cashew-kernel occupies an important place in the export industry of India. Export trade in cashew-kernels as such has developed only in the last two decades. Thus, up to 1925, exports of kernels did not exceed 50 tons, but in the year ended 31st March, 1953, these amounted to 27,417 tons worth Rs. 12.76 crores. In terms of both volume and value, exports during 1952-53 have shown considerable increase over the pre-war average of 13,000 tons worth Rs. 1.29 crores. The importance of the industry as a dollar earner is evident from the fact that in 1950-51, exports to the U.S. alone brought in $15 million or one and a half-times the sum earned in the previous year. Despite a decline in the volume of exports, the dollar earnings in 1951-52 amounted to $14 million. During the year 1952-53, the value of cashew-kernels exported to the U.S. amounted to $19.75 million. In terms of quantity, India's exports to the U.S. rose from 15,136 tons in 1949-50 to 20,515 tons in 1950-51, but slumped to 14,429 tons in 1951-52. In 1952-53, the exports rose to 19,203 tons. Except in 1951-52, the U.S. has been buying from India on an average 16,000 tons per annum or 80 per cent. of India's total exports. Britain is the next best customer of cashew-kernels, buying on an average 3,000 tons, or 14 per cent. of the total exports, in recent years.

Next in importance to the manufacture of kernels is the extraction of oil from nuts. India's exports of the oil in 1950 were estimated to be of the value of Rs. 60 lakhs. Although extraction of oil has been rendered easier by modern processes, these processes have yet to be adopted on a large-scale, thanks to the heavy cost of the necessary plant and equipment. Cashewnut shell oil has considerable commercial importance, because of its vast industrial application.

In view of the great possibility for the extended use of the products of the cashewnut industry, it is necessary to develop the industry and place it on a sound economic footing. The author of the article offers a few notable suggestions: (1) The possibilities of India becoming self-sufficient in nuts should be explored; (2) raw nuts should be mobilised and channelled into appropriate factories, by legislation, if necessary; (3) intensive cultivation should be undertaken; (4) modern plants should be introduced for extraction of cashew-shell oil without spoiling the kernels; (5) factories should be improved structurally and hygienically; and (6) proper and adequate statistics should be maintained for a proper study of the industry.

PROPAGANDA FOR INDIAN TEA

Following the withdrawal of India from the International Tea Market Expansion Board last year, the Government of India has been exercising its mind on the arrangements to be made in the various consuming countries for propagating Indian tea. In this connection, Mr. H. V. R. Iengar, Secretary, Union Ministry of Commerce and Industry, undertook recently, a tour of the U.K. and the Continent. In Amsterdam, Mr. Iengar and the Commercial Minister of the Indonesian Embassy had a joint meeting with the tea trade. In Dublin, Mr. Iengar had talks with both the Irish Government and the tea trade.

Latest reports from New Delhi indicate that the propaganda to popularise Indian tea will be carried on through autonomous local councils in certain selected countries. The proposal to do propaganda in selected countries is presumably due to the Government's desire to concentrate on intensive propaganda in countries where there is good scope for extension of the tea-drinking habit rather than on carrying on extensive propaganda. It is stated that it is unnecessary to spread propaganda over too many countries where possibilities of consumption is greatly limited. It is also learned that the Government of India proposes to send a mission to Australia and the U.S.A. shoring to explore the possibilities of increasing the consumption of Indian tea in these countries.

A Tea Council has already been set up in the U.S.A. in which two other tea-producing countries, Ceylon and Indonesia, are participating. These countries are propagating tea drinking mainly through the medium of television. The expenditure incurred for tea propaganda in the U.S.A. is shared by the producing countries and the tea trade in the proportion of 55 and 45. India's annual contribution for this purpose is about Rs. 10 lakhs.

A tea council is proposed to be set up in each of the countries, Germany, Holland, Austria and Denmark, which will adopt suitable means of propaganda. It will be left to each council to decide upon the medium of propaganda that will appeal most to the people of each country. As regards the U.K., the largest consumer of tea and India's best customer, it is felt that there is little scope for increasing the consumption of tea in that country. Nevertheless, it is admitted that some propaganda will be necessary for maintaining the present level of consumption there.

JUTE INDUSTRY IN PAKISTAN

PLANS TO CAPTURE U.S. MARKET

REPRESENTATIVES of Pakistan jute mills are reported to have unfolded, at a meeting of the American Textile Bag Manufacturers' Association held at New York a fortnight ago, Pakistan's plans for further expansion of burlap production in that country. According to a Press message from New York, they told American consumers that Pakistan had already in operation 750 looms and that by the middle of 1954 the country proposed to have 3,000 looms working with an annual productive capacity of 75,000 tons of burlap. All this quantity of burlap, they are reported to have said, was intended for sale in the U.S. markets. Pakistan's production target was, it would appear equal to the total American consumption of burlap. The U.S. importers were, however, keen on knowing the price which Pakistan would charge for its burlap, as they felt that, unless the Pakistan Government subsidised exports, the price might not be able to compete with Calcutta quotations. On the price question, however, the Pakistan spokesmen are stated to have preferred to remain silent.

The New York message referred to above is of considerable significance to India. It indicates the anxiety of Pakistan to capture the U.S. market for burlap. Pakistan has already shipped its first consignment to America—an event which was celebrated with great eclat —and ere long bigger consignments will reach American ports. A point of importance that deserves to be borne in mind by Indian jute mill interests is the advantages which Pakistan jute mills enjoy over their confreres in India. Thus Pakistan mills, as has been emphasised in these columns time and again, are quite new and are equipped with the latest types of plant and machinery. Their output per hour will, therefore, be larger than that of jute mills in India. They can be operated even three shifts, if need be, with consequent reduction in the cost of production. They are not handicapped by restriction on working hours as Indian mills are under the Working Hours Agreement. The mills in India are not working even one full shift, as, under the agreement they are required to operate on 42½ hours a week with a ceiling of 12½ per cent. on looms. Pakistan mills again have at their disposal the finest quality jute and the goods manufactured from the jute can easily attract customers. They are particularly suited to cater for the tastes of American consumers and, therefore, may prove a very strong competitor to Indian goods.

There is, of course, the other side of the picture. Although Indian mills are handicapped by restrictions on working hours, worn out or obsolete machinery and low quality jute, they have to their credit vast experience of the problems of the industry and its markets. They have also established trade contacts abroad which can be turned to their best advantage. The publicity section opened last year in America should also help serve better the interests of the Indian mill industry. Besides, India has a vast home market which is capable of expansion under the Five-year Plan. Above all, comes the currency advantage which the Indian rupee scores over the non-devaluated Pakistani rupee. Further, there is some force in the views held by the Indian representatives in New York, as reported in the Press message referred to above, that the position of Indian burlap in the world market is fairly strong now, especially after the recent sale of 360 million yards to Argentina. It is stated that the country is expected to buy another 60 million yards, and that the world demand for burlap may exceed supply during the current year. Recently Mr. Allan H. Heald, outgoing Chairman of the U.K. Jute Goods' Association, declared that the jute trade had won a decisive victory in the battle with substitutes. Provided prices were kept at a reasonable level, he felt that the outlook for jute would steadily improve. The same views have also been stated by the I.J.M.A. delegation which visited Australia and New Zealand last April. These views are indeed encouraging but they should not be allowed to give room for complacency regarding competition from Pakistan. For the threat is there, and is bound to assume serious proportions, if not now, at a latter stage. It behoves, therefore, the industry and the Government to be on their guard and to take timely steps against any possible danger from that source.

TUNGABHADRA IRRIGATION PROJECT

FIRST FLOW OF WATER LET OUT

THE little town of Munirabad in Hyderabad hummed with activity on Wednesday last week, when, amidst scenes of rejoicing, the first flow of water from the Tungabhadra dam, one of the major river valley projects in the South, was let out through the two main canals of the project—on the Madras and Hyderabad sides. The waters of the river Tungabhadra were hitherto flowing into the sea. Thanks to engineering skill, these have now been harnessed for the betterment of the people. Readers are doubtless aware of the miseries the people of Raichur in the Hyderabad State and of the Ceded Districts in the Madras State had been subjected to owing to continued prevalence of drought conditions. Surely, with the completion of the Tungabhadra Project, chronic drought would be a thing of the past.

The construction of the Tungabhadra dam marks the fulfilment of a project conceived more than six decades ago. It was as early as in 1895 that investigations for utilising the water resources of the Tungabhadra basin were first carried out. These investigations led to the drawing up of the Bennur Anicut Scheme, which was given up later. In 1903, however, the Government of Madras, on the recommendation of the Indian Irrigation Commission, undertook a survey for the construction of a dam across the river Tungabhadra. The estimates drawn up in 1905 and finalised in 1906 were submitted to the Government of India. But it was not until 1930 that detailed investigations began. It was only at this stage that the Hyderabad Government also agreed to participate in the joint schemes of constructing a reservoir at Malapuram. Scores of conferences were held between the Governments of the two States on the question of the apportionment of the probable water-supplies. Finally, at the conference held in November, 1938, the two Governments agreed that a joint scheme for partial exploitation of the waters of the river was practicable and should be worked out. But the progress made in designing the joint work was very slow, as the question of a suitable level for full reservoir and the requirements of the existing irrigation area of the Krishna delta could not be agreed upon. World War II was responsible for the delay, as the Governments were too busy with the war effort to pay any serious thought to this question. The differences, however, were thrashed out at a conference held in Hyderabad in June, 1944, and the project in its present form was inaugurated on 28th February, 1945. The construction of the dam actually commenced in February, 1948, but, due to unsettled conditions in the Hyderabad State, the work did not progress satisfactorily till after the Police Action. It was in 1949 that the work was started in right earnest.

Canal System

The Tungabhadra Project consists of a dam across the river, two canals on either bank of the river for the irrigation of lands in the Hyderabad and Madras States, and hydro-electric plants at the headworks and at falls in the canals. The length of the dam is 6,007 feet, besides 2,000 feet of rolled-earth fill and composite dam, and the height 160 feet above the lowest foundations. It also carries a 22 feet wide roadway at the top. The total quantity of masonry in the dam is 14.21 million cubic feet and that of earthwork 6.04 million feet. The reservoir has a water-spread of 133 square miles, submerging 37 villages on the Hyderabad side and 81 villages on the Madras side.

The canal on the Hyderabad side is 127 miles long and terminates at Raichur. The total length of the distribution system will be about 1,000 miles. The canal commands a gross area of 1,080,000 acres, spreading in nine taluks of Raichur District, and provides irrigation water for 450,000 acres. Water is also to be supplied to another 135,000 acres for pasture and fuel. The drainage area of the reservoir is 10,880 square miles, the dependable yield of water from which is estimated at 300,000 million cubic feet. Hydro-electric power, it is stated, can be economically developed at the dam site and at four other places along the canal. The first power station will be located immediately below the dam. The station consists of five power generating units with a capacity of 9,000 kv.a. each. The power will be transmitted by 66 kv. to Raichur and Gulbarga via Yadgir and Narayanpet to meet the increasing demands at these places and to replace the uneconomic diesel plants of the district power stations, as well as those of industrial concerns and private parties. At the dam site, it is proposed to generate 24,300 kw. of electricity in the first stage and 40,500 kw. in the second stage.

The cropping scheme of the project on the Hyderabad side is as follows:

	Acres
Rabi crops	120,000
Cotton	120,000
Sugarcane	20,000
Alfalfa	16,000
Fruit	8,000
Heavy two seasonal garden ...	17,000
Light two-seasonal garden ...	17,000
Abi	82,000
Late paddy	10,000
Tabi	8,450
Gram	15,300
Fodder	77,940
Pasture and fuel	1,35,000
Green manure	1,01,000

Development of Industries

The cultivation of sugarcane in 20,000 acres will yield about 370,370 tons of cane—on the basis of the average yield of 18 tons per acre. Excluding 72,000 tons for *gur* production, nearly 300,000 tons of cane, it is expected, will be utilised for the manufacture of sugar. In addition to the Salar Jung Sugar Factory at Munirabad, it is proposed to establish a new factory at Gangawati. A power alcohol producing unit is also proposed to be set up in due course. As a large area of irrigated land is to be brought under cotton, the posibility of starting a spinning and weaving mill is being considered by the Industries Department of the Government of Hyderabad. With a view to improving communications, the Central Railway has been requested to construct a metre-gauge railway line connecting Gadwal, Gangawati and Gadag. A road programme is also being chalked out. The Government is taking steps to introduce anti-malaria schemes in Tungabhadra.

The density of population in the area served by the dam in the Hyderabad State is now 175 persons per square mile, while, according to experts, it should be at least 260. It is, therefore, proposed to attract cultivators from the adjacent districts of Gulbarga and Mahbubnagar. If sufficient numbers do not turn up in good time, the Government may consider the possibility of settling evacuee families from Punjab (P) and East Bengal. For providing easy credit facilities, it is proposed to start two land mortgage banks, one at Gangawati and the other at Manvi. It is likely that the Government will approach the Centre for a ten-year allotment of Rs. 2 crores per annum to develop this area which is estimated to cost about Rs. 22 crores.

On the Madras side, the Canal—the Low Level Canal—commands a total area of 750,000 acres. Initially, the supply of water is limited to only 250,000 acres. The length of the canal is 210 miles. The waters impounded by the reservoir, after generating power at two stages within the first 15 miles of the canal, will flow into the irrigation canal. As, however, the work at the power house is still not complete, water is let into the irrigation canal direct from the reservoir. The area commanded by the canal has been divided into distributories and direct pipes, each distributory having been aligned between two major watercourses so as to provide for natural drainage. The entire area on the Madras side is classified into three district zones, namely, (1) the perennial zone having 15,000 acres, (2) the wet crop zone accounting for 43,000 acres, and (3) the dry-cum-wet irrigated zone with 192,000 acres. The perennial zone is concentrated on the west of Hagari to three main distributories. Water here will be available throughout the year, except for a short period of about a month for silt clearance in the channels. The wet zone is spread through the entire drainage area and only one crop of paddy can be grown per year, as water is made available for one crop of paddy only, half the wet area receiving water during September-October.

Financial Position

The Tungabhadra Project, as noted above, is a joint undertaking by the Hyderabad and Madras States at a total cost of Rs. 60 crores. Of this, the share of Hyderabad is Rs. 23.04 crores, of which Rs. 17.45 crores represent the cost of canal construction and Rs. 5.59 crores that of the dam. The Planning Commission has recommended the levy of betterment fee in the area irrigated under the Project. Accordingly, the Government of Hyderabad proposes to charge a betterment fee of Rs. 150 O.S. on 450,000 acres to be irrigated under the Project. The amount so realised will be Rs. 5.76 crores which will go to the capital cost of the Project. Deducting this amount and a sum of Rs. 4.5 crores being debited to power towards proportionate cost of the dam, the net capital outlay will be Rs. 12.78 crores. The net revenue of Rs. 57.39 lakhs will thus work out to a return of 4.5 per cent. on the capital outlay. Similar information about the economics of the dam on the Madras side is not yet available.

The construction of the major portion of the dam and a few stretches of canals have now been completed. But it is not until all the canals included in the Project plan are completed that one can expect the full benefits of the Tungabhadra reservoir to the famine-ridden areas. It is difficult to say precisely as to when exactly they will be completed. It, however, looks safe to conclude that such will take quite a long time, considering the none-too-happy financial position of the Hyderabad and Madras States, not to mention the division of the latter into two linguistic States.

STATISTICS OF SHIPPING

The Government of India, it is reported, has decided to constitute an eight-member committee, with Mr. M. A. Master as Chairman, to examine questions relating to collection and maintenance of ports and shipping statistics. The reported decision is a sequel to the recommendations of the National Harbour Board made at the latter's meeting held in Cochin in December last. The terms of reference to the Committee are as follows:

(1) To review the type of port and shipping statistics now being collected and maintained in the major and minor ports;

(2) to study the extent to which such statistics are being published either by Government Departments or by port authorities, with particular reference to the question as to whether there is any duplication of effort;

(3) to recommend as to what further statistics should be collected in regard to ports and coastal and ocean-going shipping, due consideration being paid to the needs of the Government, trade and international agencies;

(4) to suggest the type of agencies for collecting and compiling statistics, the material that should be published and the manner of such publication.

Besides Mr. Master, the proposed Committee will consist of Mr. S. N. Hajl, Joint General Manager, Scindia Steam Navigation Co., Ltd.; Mr. D. K. Guha, Superintendent, Traffic Department of Calcutta Port Commissioners, Mr. A. Mudi of the State Port Office of Madras, Mr. C. R. Menon, Director-General of Commercial Intelligence and Statistics (or his deputy, or S. G. Rao); Mr. P. R. Subramaniam, Deputy Director-General of Shipping in Bombay; Mr. Ramamurti of the Central Statistical Organisation, New Delhi, and Mr. B. B. Gujral, Assistant Collector of Customs, Calcutta. Mr. D. K. Guha will act as the Secretary of the Committee, which will have its headquarters at Bombay.

NEW CALTEX GROUP TANKER

The tanker s.s. *Caltex Perth* was launched successfully last week, according to an announcement by the Caltex Trading and Transport Co., Ltd., the agents for Overseas Tankship (U.K.) Ltd. The *Caltex Perth*, the ninth ship to be launched for Overseas Tankship (U.K.) Ltd., in England, was built by the Turmess Shipbuilding Company at Haverton Hill-on-Tees, England. The ship is 544 feet in length and weighs 17,400 deadweight tons. It is propelled by turbines with reduction gears to give it a trial speed estimated at 15 knots.

A new type of prefabricated house which can be assembled or taken down in record short time is being used by the U.S. Army at Camp Stewart, near Hinesville, Georgia. In a preliminary test, one of the houses was recently taken apart and reassembled in an hour and 39 minutes by the Pressed Steel Car Company, the firm erecting the houses. (This firm manufactures the houses in Chicago.) The houses have two or three bedrooms, a living room, dining room, storage area, kitchen, utility room, hallway and bathroom, all on one level. They are set in place on concrete piles sunk 18 inches into the ground. The two-bedroom model sells for $7,700.

NEW GREAT INSURANCE COMPANY OF INDIA LIMITED

MR. TULSIDAS KILACHAND'S ADDRESS AT ANNUAL MEETING

NEED FOR HEALTHY BUT NOT RUINOUS COMPETITION

A CLEAR warning that, while healthy competition among insurers was both necessary and welcome, it was wrong to indulge in ruinous competition that would recoil on the insurers themselves, was given by Mr. Tulsidas Kilachand, Chairman of the New Great Insurance Company of India Ltd., at the Tenth Ordinary General Meeting of the Company, held at its registered office in Baroda, on Saturday, 4th July, 1953. Mr. Ambalal Kilachand presided over the deliberations of the meeting owing to the unavoidable absence of the Chairman, Mr. Tulsidas Kilachand.

At the outset, Mr. Tulsidas made a moving reference to the passing away of Mr. Walchand Hirachand, a Founder-Director, from whom the Company received great support. He was the doyen of Indian shipping and a pioneer in the shipbuilding, aviation, and automobile industries, and his contribution to the economic development of the country was very considerable. In his death the country had lost a great industrial leader and it would be difficult to fill the void.

Five-year Plan and Insurance Business

Proceeding, the Chairman referred to the Five-year Plan, in so far as it had a bearing on insurance business in this country. In view of the heavy draught of taxation and public borrowing on the private sector in order to finance the development programme initiated in the public sector of the order of Rs. 2,069 crores, the private sector would not be able to raise adequate funds to finance the investment programme of Rs. 613 crores in the organised sector of private industry which the Plan outlined and also for small-scale unorganised industry, housing and other private investment which the Plan did not cover. This circumstance placed a great responsibility on insurance companies, banks and other credit institutions, who mobilised the country's savings and canalised them into investments, public and private. Insurance companies had about 50 per cent. of their combined life and general funds invested in Government securities, and a substantial portion in industrial securities. Credit was a highly sensitive mechanism, and for its proper functioning, the Government should provide stable conditions, and refrain from making injudicious pronouncements such as those relating to the nationalisation of insurance business lest they undermined public confidence on which credit was based.

Taxation Enquiry Commission

Welcoming the appointment of the Taxation Enquiry Commission, Mr. Tulsidas appealed to it to make sure that the economic efficiency of the country was not undermined by the political cry for equality through taxation. He pointed out that the Report of the Planning Commission emphasised, on the one hand, the desirability of allowing incentives to corporations to retain and plough back their profits, yet refrained from lending its full support to this proposition, merely because it would lead to concentration of wealth of those in control. As far as his reading of the Constitution went, the Directives of State policy were clearly against any redistributive measure that was likely to be detrimental to the common interest, viz., where it was likely to lead to a lowering of productive capacity.

Problem of Urban Unemployment

He emphasised that the present policy to sustain public investment by a continuous financial transfusion from the private sector as well as deficit financing was not as harmless as it was made out, and that it might be partly responsible for the increase in urban unemployment. If the Government cannot provide employment opportunities, they can at least provide fiscal incentive to stimulate activity in the private sector.

Codes of Conduct

In dealing with some of the specific problems confronting insurance, Mr. Tulsidas referred at the outset to the position created as a result of the enforcement of the Insurance (Amendment) Act, 1950. He was inclined to think that some of the provisions of the Codes of Conduct introduced by the General and Life Insurance Councils for insurers to observe in their business would lead to the setting up of a uniform pattern for all companies to follow, which might not suit all of them and, on the contrary, might seriously jeopardise the working of small and new insurers.

Need for Freedom and Publicity

Although he fully shared the anxiety of the authorities to place the business of Indian insurance on a sound footing, he would like that in suggesting corrective measures, sufficient caution was exercised, so that certain units of the trade were not adversely affected. After all, the object of the Government as well as the trade was to see that insurers transacted business on healthy, clean and sound lines. To bring this about, he would like insurers to face the problems boldly and evolve a scheme which should command a great measure of acceptance and ensure that insurers in this country carried on their activities just like any other private enterprise anywhere in the world, in an atmosphere of healthy competition. In other words, there should be minimum Governmental interference in its routine work as was the case in the more advanced countries like the U.K. where "Freedom" and "Publicity" were the keynotes of the policy of statutory control.

Unhealthy Competition Deprecated

At the same time, Mr. Tulsidas was of the opinion that whilst competition was the keynote of private enterprise, companies should avoid ruinous competition which was sure to recoil on them to their detriment in the long run. If only they maintained the highest standards of rectitude and business morality, and conducted their business in such a way as to offer maximum security to their clients, there was ample scope for each one of them, particularly in the context of the development and expansion of industries under the Five-year Plan which would be throwing up new opportunities for securing increased business, apart from developing new classes of insurance.

Reconstruction of Company's Capital

He made a passing reference to the reconstruction of the capital structure of the Company, as required under the provisions of the Insurance (Amendment) Act whereby the Company had now only one class of shares, viz., ordinary shares with an authorised capital of Rs. 2 crores and a paid-up capital of Rs. 20 lakhs, as from 31st May, 1953.

Routine Working

The Chairman then proceeded to deal at length with the day-to-day working of the Company for the year 1952 and gave the following salient figures:

Department	Premium income Gross	Premium income Net	Amount of losses	Loss ratio	Amount of commission and expenses of management	Commission and expenses ratio	Reserve for unexpired risks	Carried to profit and loss account
	Rs.	Rs.	Rs.	Per cent.	Rs.	Per cent.	Rs.	Rs.
Fire	51,00,169	24,54,047	4,06,848	20.25	10,17,896	41.48	12,27,023	+ 6,39,797
Miscellaneous ..	14,47,936	11,92,979	5,02,031	42.16	5,51,589	46.24	5,96,490	+ 68,737
Marine ..	36,44,907	12,43,619	8,82,663	70.98	4,41,762	35.52	12,43,620	— 6,13,172*

Life Department

Intro-duced	Proposals Amount	Proposals Completed	Proposals Sum assured	Re-assurance	Net new Premium	Renewal Premium	Claims paid and outstanding	Life Assurance Fund at the end of the year
	Rs.		Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
2,984	93,65,875	2,454	77,86,875	3,88,760	3,59,154	13,41,559	76,641	46,23,609

* The Chairman drew the special attention of the shareholders to the fact that the loss of Rs. 6,13,172 appearing in the Marine Department was not a trading loss, but due partly to increase of marine fund from Rs. 7,10,409 to Rs. 12,43,620 as a result of increased premium income, and partly due to increase in percentage of closing fund from 90 per cent. to 100 per cent. of the year's premium income.

Dividends

Dealing with the profit and loss account, Mr. Tulsidas said that the net amount carried forward to the profit and loss appropriation account amounted to Rs. 2,51,519. After adding a sum of Rs. 21,160, being the balance brought forward from last year, the total amount to the credit of profit and loss appropriation account was Rs. 2,72,679. It was proposed to transfer to taxation reserve Rs. 1,00,000 and to pay the eighth dividend on preference shares for the year 1952 amounting to Rs. 50,000 less tax. The Directors were also very happy to recommend payment of dividend at Re. 1, free of income-tax, on ordinary shares.

INSURANCE COUNCIL DECIDES TO IMPLEMENT CODE OF CONDUCT

TASK BEFORE ADMINISTRATIVE MACHINERY

THE battle for the Code of Conduct for general insurers has now been won. To those who feared that there would be some weakening in the resolve of the Executive Committee of the General Insurance Council to enforce the Code in all its severity the recent decision of the Committee must be heartening. There were many suggestions from several insurers which were designed to substitute a less exacting machinery in place of the Code. Apparently, these suggestions have not received the support of the Executive Committee, as a whole, so that the Code again emerges triumphant from the recent deliberations of the Committee.

At the last meeting of the Committee, held in New Delhi in April, 1953, the Committee received the suggestions put forward by certain insurers sympathetically, and gave them preliminary consideration. It decided to examine in detail the suggestions, which were in the nature of alternative proposals to take the place of the Code of Conduct, at the next meeting. It would appear that the Committee examined all aspects of the problem, including the suggestions that had been deferred consideration at the last meeting, at the meeting held in Bombay last week, under the chairmanship of Mr. K. G. Ambegaokar, Secretary, Finance Department, Government of India. It is stated that, although no decision was reached on the proposals submitted by the insurance interests represented by the Advisory Committee of Directors of the Indian Insurance Companies Association, the Committee had the benefit of a "full and frank discussion" on them. The Committee, however, reaffirmed its faith in the Code of Conduct for general insurers.

The Code is drawn up in two parts. The first part consists of four sections: (1) Insurance agents; (2) branches; (3) inspectors, organisers and field workers; and (4) general. Under the first section, the Code emphasises that, since "own-case" agencies are prohibited under the Insurance Act no attempt should be made to get round this provision of the law. The main aim of the section relating to branches is the prevention of the practice of setting up uneconomic branches. Thus, it states that each mofussil should have a clearly defined underwriting territory for its work, and that no insurer should establish a branch within a distance of 40 miles from another branch of his company. The third section, which deals with inspectors, organisers and field workers, lays down conditions for the appointment of full-time and part-time employees. The fourth section, designated as "General matters," seeks to ensure prompt settlement of accounts by insurers with their agents and with insured interests. It also lays down that each "insurer should agree for an inspection of his books, records, etc., by the Administrative Machinery at any time without previous notice."

The second part of the Code of Conduct deals with the conduct of insurance business after the Administrative Machinery is set up. Thus, insurance agents should register themselves with the Administrative Machinery. Insurers should inform the Machinery about the territorial jurisdiction of branches. This part also specifies the number of field-workers which an insurer may employ, the number being related to his premium income.

The chief objectives of the Code are easily stated. It seeks to prevent the direct or indirect grant of rebate and the making of false entries by an insurer in his books of accounts. The provisions of the Code are, therefore, designed to set up machinery which is specifically intended to screen appointments of field officials and branch offices to ensure that no fictitious jobs are created, to regulate recovery of premium, to ensure that no rebates are paid and to provide for the inspection of books. It must also be noted that the Code is designed mainly to enforce the provisions of the Insurance Act itself, so that it could rightly be regarded as being intended to enforce something that is already on the statute book.

It would, however, appear that several insurance interests have some honest misgivings about the practicability of enforcing the Code —that is, about the efficiency of the Administrative Machinery. The Code has been before insurers for over a year now. But it has not eliminated malpractices in the trade. It remains to be seen whether the position would improve after the Administrative Machinery is set up. The Machinery, it is learned, will begin functioning within the next few days, since the head of the Machinery has already been chosen.

It is true that the Code is not "knave-proof," for it might still be possible to circumvent it. After all, the Administrative Machinery can bring the erring members to book only when a complaint is made. If an insurer, who loses business through the fraudulent means of another insurer, chooses to remain silent, it will be difficult for the Machinery to act promptly. The insurer, who is affected thereby, may hope to make his uncomplaining behaviour a selling point in his favour; for clients would prefer an insurer who, they know, will not complain of loss of business, if they choose, at a later date, to change the insurer with whom they deal. Also, insurers who frequently complain against other insurers, might be victimised by being denied reinsurance business. Also, all insurers dislike the interference involved in the examination of books by an external authority. This might breed some opposition to the Administrative Machinery.

Despite these defects, the Code deserves to be given a fair trial. After all, the alternative proposals, which were suggested by several insurers, have not commended themselves even to those who feel that the Code cannot function as effectively as its sponsors believe it will. Also, the Code represents the views of a representative body, such as the Executive Committee; the majority of the members of the Committee consists of elected members. The Code is, therefore, not an imposed solution. In view of these considerations, it is to be hoped that the Code will be given the support which it deserves, and that insurers will observe both the spirit and letter of the Code. What is at stake is the strength and prosperity of Indian insurance business. In the long-term interests of insurers themselves, it is necessary that the Code should be supported. It would, however, be open to insurers to modify it or to improve it if, after a period of trial, they find that it needs such revision. In the meantime, the Administrative Machinery will have to work with caution and imagination. Its function should not be that of a policeman, but that of a friend and guide. It is only in the last resort that force should be used. If the Machinery approaches its task in that spirit, it may possibly help place the insurance industry on a firm basis.

BOMBAY CO-OPERATIVE INSURANCE DOES RECORD BUSINESS

A smart rise in new business done to a record level, a more favourable claims ratio, a notable reduction in expense ratio and a satisfactory yield on investments are the highlights of the results of working of the Bombay Co-operative Insurance Society Ltd. (Head Office: Bombay; Manager and Secretary: Mr. G. H. Thakore), during the year ended 31st December, 1952. The triennial valuation of the Society's assets and liabilities for the period ended 31st December, 1952, shows a substantial surplus which has rendered it possible for the Directors to raise the reversionary bonus by 80 per cent. over that paid for the previous valuation period.

The new business completed during the year under review shows a sizable expansion, the number of policies recording an increase from 4,576 to 5,713 and the sum assured from Rs. 64.94 lakhs to Rs. 81.66 lakhs, thus establishing a record in the history of the Company. The Company has thus maintained the rising trend in new business since 1947. Barring the years 1946 and 1947, the rising trend has been maintained since 1942 and during the decade ended 1952, the Society's new business has increased more than 3½ times, from Rs. 22.94 lakhs in 1942 to Rs. 81.66 lakhs in 1952. The substantial increase in new business during 1952 has been responsible for the rise of Rs. 35.67 lakhs to Rs. 457.40 lakhs in the total business in force.

It is gratifying to note that sizable increase in new business has been accompanied by a decline in claims, those by death from Rs. 1.77 lakhs to Rs. 1.37 lakhs and those by maturity from Rs. 3.24 lakhs to Rs. 3.19 lakhs. This decline in claims, coupled with the increase in premium income from Rs. 22.05 lakhs to Rs. 23.70 lakhs, accounts for the decrease in the claims ratio from 22.7 per cent. to 19.24 per cent. The renewal expense ratio has come down from 13.40 per cent. in 1951 to 11.94 per cent. which, we are told, is the lowest ratio reached in the history of the Society. The Company's housing-cum-insurance business is claimed to be partly responsible for the reduction in the renewal expense ratio. The overall expense ratio also has gone down from 25.89 per cent. to 25.49 per cent.

The life fund at the end of the year stands at Rs. 117.10 lakhs, having been strengthened by the addition of Rs. 14 lakhs during the year. The investments of the life fund in securities and approved shares amount to Rs. 80.64 lakhs (at cost). The market value of the same is Rs. 71.02 lakhs, the depreciation being covered by an investment reserve fund of Rs. 9.62 lakhs, which includes an addition of Rs. 2.68 lakhs in the year under review. The net yield on the investments works out to 4.01 per cent. as against 4.04 per cent. in 1951.

The triennial valuation referred to above shows a surplus of Rs. 6.63 lakhs for the three years. This surplus has been arrived at after taking into account the provision for depreciation made during the three years aggregating Rs. 6.66 lakhs. But for this depreciation, the surplus could have been substantially higher. Nonetheless, the valuation results have been so satisfactory that an increase in the reversionary bonus from Rs. 5 per thousand per annum to Rs. 9 for endowment policies and from Rs. 7 per thousand per annum to Rs. 11 for whole life policies, as recommended by the actuary, have been declared by the Directors. Needless to add that the bonus could have been higher but for the depreciation on investments provided, as noted above. Now that the monetary policy has stabilised and higher interest rates are expected in the coming years, without further material depreciation, the Society's policyholders can reasonably share the Chairman's confidence that the Society will be in a position to improve substantially upon the present rates of bonus at the next valuation.

ENCOURAGING RESULTS OF INDUSTRIAL AND PRUDENTIAL

A welcome recovery in new business, which had suffered a setback in 1951, is disclosed by the audited accounts of the Industrial and Prudential Assurance Company, Ltd. (Head Office: Bombay; Managing Director: Mr. V. C. Setalvad), for the year ended 31st December, 1952. The number of proposals that resulted into policies, which had declined from 6,919 assuring a sum of Rs. 236.58 lakhs in 1950, to 6,013 covering Rs. 230.91 lakhs in 1951, has improved to 6,694 assuring a sum of Rs. 254.24 lakhs. It may be noted that, although the number of policies issued in 1952 is not as large as that in 1950, the sum assured is sizably higher than that in 1950. The average sum assured per policy, which had gone up from Rs. 3,419 in 1950 to Rs. 3,840 in 1951, has been very nearly maintained in 1952, the exact figure for the year under review being Rs. 3,800. The satisfactory increase in new business done in 1952 has enabled the Company to bring the total business in force at the end of the year to over Rs. 20 crores—Rs. 20.02 crores to be precise—covered by 63,642 policies, and to strengthen its life fund by Rs. 49.62 lakhs to Rs. 5.83 crores.

A matter of greater importance to insurance companies than the new business done is their claims experience. No doubt, in the case of the Industrial and Prudential, the amounts paid out and due in 1952 by way of maturity and death have been higher than in 1951, namely, Rs. 11.06 lakhs and Rs. 23.03 lakhs, respectively, as against Rs. 9.04 lakhs and Rs. 22.38 lakhs. But their combined ratio to the total premium income received during the year has been a little more favourable than in 1951, at 32.6 per cent., as against 33.5 per cent.

A matter of concern to insurers in recent years is their obligation to keep their level of expenses within the statutory limits. In the case of the Industrial and Prudential, the ratio of expenses of management and renewal expense ratio in the year under review were a little higher at 23.9 per cent. and 14.9 per cent., as against 22.8 per cent. and 13.8 per cent., respectively, in 1951. This increase is presumably due to the all-round rise in costs of almost everything and to the improvement in new business during the year.

The following comparative table shows the trend of the Company's progress since 1949:

(Value in lakhs of rupees)

	For the year ended 31st December			
	1952	1951	1950	1949
New business done—				
No. of policies	6,694	6,013	6,919	6,730
Sum assured	2,54.24	2,30.91	2,36.58	2,10.56
Total business in force at the end of year—				
No. of policies	63,642	60,853	59,144	56,046
Sum assured	20,02.46	18,46.90	17,37.67	16,23.62
Life fund at the end of the year	5,82.95	5,33.33	4,93.84	4,48.09
Claims—				
By death	11.06	9.04	11.37	10.86
By maturity	23.03	22.38	17.58	17.52
Claims ratio	%	%	%	%
Expenses of Management	32.6	33.5	32.9	32.8
Renewal expense ratio	23.9	22.8	24.7	23.7
	14.9	13.8	13.9	14.3

The Company's total assets as at the end of the year under review show an expansion of Rs. 68.54 lakhs to Rs. 6.57 crores. Of these, investments in stocks and shares (at cost) account for Rs. 4.76 crores, an increase of Rs. 37.73 lakhs. The market value of these investments, amounting to Rs. 4.31 crores, shows a depreciation of Rs. 44.81 lakhs. This depreciation is covered by an investment reserve fund of Rs. 45 lakhs, which, it may be noted, has received a sum of Rs. 16.25 lakhs from the revenue account for the year. Out of the total investments, those in Government and approved securities amount to Rs. 295.09 lakhs. Another notable feature of the accounts is the increase in the dividend to the shareholders from Rs. 14 per share of Rs. 6 to Re. 1-4, free of income-tax.

INDUSTRIAL AND PRUDENTIAL ASSURANCE COMPANY, LIMITED

MR. VELJI LUKHAMSI ON LIFE ASSURANCE UNDER ESTATE DUTY BILL

AN increase of 10 per cent. in new business, a higher dividend per share and increase of Rs. 66 lakhs in the total assets of the Company were the highlights of the working of the Industrial and Prudential Assurance Company, Ltd., Bombay, which were revealed by Mr. Velji Lukhamsi, Chairman of the Company, at the thirty-ninth Annual General Meeting of the Company, held on 2nd July, 1953. In his speech, Mr. Velji reviewed the progress of the Company. He said:

Assets and Investments

"The total assets of the Company have increased from Rs. 590 lakhs to Rs. 656 lakhs. The investment reserve fund now stands at Rs. 45 lakhs. I am hopeful that since more than 45 per cent. of the investments of life fund are represented by securities bearing fixed dates of redemption, a fairly large amount of the deficit will be recovered when these securities are redeemed on maturity.

Valuation

"The results of the valuation of the life insurance business of the Company as at 31st December, 1951 were satisfactory. The rate of interest assumed was the same as in the last valuation, viz., 2½ per cent. The valuation disclosed a surplus of Rs. 26,03,848. **The rate of bonus declared was Rs. 7-8 per thousand on endowment assurance policies and Rs. 10 on whole life assurance policies** as against Rs. 5 per thousand and Rs. 7 per thousand respectively at the previous valuation, **an increase of about 50 per cent. In the matter of declaration of bonus, your Company did not think it desirable to make any discrimination between old and new policyholders.**

"The net yield on mean life fund earned during the year was 3.99 per cent. showing an increase over the previous year.

"The lapse ratio to the mean business in force during the year worked out to 4.5 per cent. as against 5.4 per cent. last year.

Allowance in Tax

"Under the Bill further to amend the Indian Income-tax Act, 1922, the Government have at last considered substantially the demands placed by the insurance companies. Accordingly, 80 per cent. of the amounts belonging to or provided for or reserved for or expended on behalf of the policyholders will now be allowed as deduction to life insurance companies taxed under rule 2 (b) of the schedule to the Income-tax Act. The above amendment will give the much desired relief to the life companies when they are taxed on surplus basis.

Five-year Plan

"Since we last met, the important event in the year was the publication of the full details

1952 BUSINESS FIGURES THAT MATTER

	Rs.
Total business in force ...	20,02,45,838
New business completed ...	2,54,24,000
Life insurance fund as at 31st December, 1952	5,82,94,780
First year premium income ...	12,91,604
Renewal premium income ...	90,50,600
Single premium income ...	1,27,729
Total assets	6,56,74,392

of the Five-year Plan. I am hopeful that the success of the various projects undertaken in the Plan is fairly assured. It is hoped that the country will eventually enter an era of substantial increase in food, daily necessities of life and industrial production. **The successful implementation of the Plan, it is hoped, will have a very favourable effect on the insurance industry.**

"Our Government have been enacting legislations with a view to improving the general condition and the health of the working population. I would briefly refer to the two major legislations passed by the Government, the Employees' Provident Fund Scheme and the Employees' State Insurance Scheme. The first scheme will cover six specific industries employing a total labour force of about 16 lakhs of workers. Evidently, the scheme has provided a very necessary and useful apparatus whereby the industrial workers, who are generally illiterate, will be compelled to contribute a part of their earnings and thus, save the same. Again, under this scheme, while the members will be denied loans to meet day-to-day expenses or other expenses, they will be allowed to raise a loan for payment of insurance premiums. The other scheme is the first Health Insurance Scheme in our country and is calculated to give insurance cover to about two and a half million industrial workers. The scheme is manifestly a step in the right direction.

Estate Duty Bill

"I will now refer to a development which will vitally influence the future of life insurance in our country, the Estate Duty Bill, 1952. The present Bill proposes to levy a duty on estates passing or deemed to pass on the death of an individual. The Bill provides a specific exemption in respect of proceeds of life assurance policies from the levy of estate duty, whereby moneys payable under one or more policies of life assurance effected by a deceased person on his life for the purpose of paying estate duty or assigned to the Government for the said purpose will be exempt to the extent of duty payable. **I feel that keeping in view the backwardness of insurance habit in our country and to give a fillip to insurance business, the Government should consider exemption for moneys payable under one or more policies of insurance effected by a deceased person on his life to the extent of at least Rs. 50,000.**

"You are all aware that to check the evils which are generated during the post-war years in the conduct of business such as acquiring control of life insurance companies, interlocking of funds, etc., the Insurance Act was amended. I, however, have a feeling that the confidence of the people in Indian insurance cannot be sustained merely by legislation. There must be voluntary and earnest efforts on the part of companies to put their houses in order. The 'Code of Conduct' has been issued by the Executive Committee of the Life Insurance Council. I feel that it is ultimately the companies who should so act as not to force the Government to undertake further drastic measures. I, therefore, hope that the companies will co-operate in implementing the 'Code of Conduct.'

"In conclusion, I offer my sincere thanks to my colleagues on the Board, our field force and our staff at the head office and the branches."

CENTRAL AND WESTERN RAILWAYS

THE KOLAR GOLD FIELD MINING COMPANIES

MR. SREENIVASAN'S SPEECH AT ANNUAL GENERAL MEETINGS

SOME NOTABLE SUGGESTIONS FOR STIMULATING PRODUCTIVE INVESTMENTS

MR. M. A. Sreenivasan, Chairman of the Mining Companies on the Kolar Gold Field, namely, The Mysore Gold Mining Company (K.G.F.) Ltd., The Champion Reef Gold Mines of India (K.G.F.) Ltd., The Ooregum Gold Mining Company of India (K.G.F.) Ltd., and Nundydroog Mines (K.G.F.) Ltd., addressed the members at the Second Annual General Meetings held at Oorgaum on 30th June at which the Directors' reports and the audited accounts and balance-sheets for the year ended 31st December, 1952, were submitted.

Mr. Sreenivasan opened his remarks by referring to the appointment to the Boards of the four Companies in September, 1952, of Mr. R. J. Rego, Secretary to Government, Development Department, following his nomination by the Mysore Government in succession to the late Mr. R. Ramakrishna, and in the case of Champion Reef to the appointment in June, 1952, of Mr. R. E. Castell to fill the vacancy caused by the retirement from the Board of Mr. B. W. Batchelor.

Proceeding, Mr. Sreenivasan said:

"In my speech last year, I referred to the steep fall in the price of gold which occurred in the early part of 1952. After a partial recovery to Rs. 240 per ounce, there was a further decline to a minimum of about Rs. 210 per ounce in October and November, 1952. The average price received for the Companies' production of gold during 1952 was approximately Rs. 237 per ounce which is about Rs. 57 per ounce lower than for the previous nine months—a drop of 19 per cent. Since the end of 1952, the price has improved and steadied itself somewhat and has averaged approximately Rs. 235 per ounce to-date. The present price is about Rs. 244 per ounce.

"Relations with labour continued to be cordial. In the course of recent negotiations with the Labour Associations, at which Mr. S. C. Joshi, Chief Labour Commissioner of India, presided, it was agreed to pay a bonus to labour equivalent to 39 days' basic pay in respect of 1951. Other benefits given to labour in recent months have included issue of rations on credit and increase in the contribution to the provident fund by an amount equal to 6¼ per cent. on half of the dearness allowance. In addition, the Company has maintained welfare facilities for labour at a high standard.

Gamble in Monsoons

"Operations at the Mines since the close of the year under review continued without serious interruption up to the end of May, despite a threatened power shortage from January. From the 1st to the 22nd of June, however, the supply of power to the mines was once again cut, owing to shortage of water in the Krishnarajasagara Reservoir. This cut was very severe and averaged at over two-thirds of the normal supply. Fortunately, it was not of long duration.

"Indian agriculture has been known for ages as a gamble in monsoons. In recent years, a large part of Indian industry has also come to share the same fate. Power cuts have become a recurring hazard, resulting in loss of production, hardship to labour and a fall in earnings that has at times been calamitous.

"The position is particularly onerous in the case of certain industries like gold mining in the K.G.F. which depend on a nationalised source of power and are precluded from installing plants for generating their own power requirements.

"These paralysing power cuts have come at the same time as the nation's plans for increasing the generation of hydro-electric power, and serve to underline the wisdom and foresight of the planners in giving a high priority to such projects. While it is hoped that the completion of these installations will help to remedy this new and recurring nightmare, one expects, too, that State Governments will take urgent steps to make industries dependent on them for their power supply less vulnerable to monsoonal vicissitudes by installing thermal stand-by plants of adequate size. It is gratifying to learn that the Government of Bombay and the Government of Madras have planned to install such thermal units. One confidently hopes that the Government of Mysore, which has taken the lead in hydro-electric development in India, will not lag behind in installing similar plant, and thereby insuring industries in the State against recurring dislocation and loss.

"There have been, since we last met, two notable and welcome events to which I would like briefly to refer. India's First Five-year Plan has been published and has rightly been acclaimed as a realistic, if modest, programme which sets out to rehabilitate and raise our country's economy and the standard of living of our people. It is recognised as the forerunner of many more such plans which will, in time, help us win our age-long battle against poverty, and to secure for our people an economic status more consistent with our man-power and material resources. The Plan recognises the role of private enterprise, and individual initiative; and to the extent that it does so it offers a challenge to enterprises such as ours, which I am confident will be loyally and enthusiastically met.

"The Plan depends, for its success, on increased capital formation and investment in productive enterprise. In this connection, one cannot help sharing the general feeling that the economic climate in the country has, during the past few years, tended to become one that is not calculated to stimulate initiative or investment in industrial development. Apart from the high level of taxation which, in the opinion of many responsible industrialists, has run away from and far outstripped the pace of the country's earning power and economic progress, there are several other causes that have contributed to this unhealthy condition of affairs. With the activities of ambitious politicos and rival political groups who have succeeded in securing the leadership of labour unions all over the country and the attitude that Governments have often adopted towards such activities, with the many restrictions imposed and uncertainties caused by import and export control policies, and the trend of politically-biassed opinion regarding the earning of profits, it would seem that the starting of a new industry to-day is an adventure calling for bravery bordering on heroism. Capital and enterprise that should be harnessed for industrial diverted to distribution and trade, if not speculation. If this view is correct, it is obvious that means have to be found to remove some of the existing disincentives and handicaps and to provide some positive incentives that will encourage the investment of private capital in productive industrial enterprise."

Less Official Intervention Needed

Continuing, Mr. Sreenivasan said:

"If I may be permitted to refer to one of the existing disincentives, it is the amount of official intervention that industry in the private sector has daily to cope with, from womb to tomb. Practically every industrial concern of any consequence to-day feels obliged not only to employ extra staff to cope with the growing volume of inquiries from and correspondence with Government offices and officials but has, in addition, either to maintain a representation in New Delhi or arrange pilgrimages to that costly capital, or both. This is not intended as a criticism of Government or its helpful, competent and hard-worked officials. It is realised that part of such intervention is, perhaps, unavoidable in a planned economy. One hopes, however, that it may be found possible to remove or reduce a sizable proportion of it, and thus lighten the handicaps it imposes.

"The implementation of the First Five-year Plan and its successors will call for considerable amounts of foreign exchange. In my speech to you last year, I tried to indicate the not insignificant contribution that a vigorous and expanding gold mining industry can make to the country's credit. I also pointed out how foreign exchange, estimated at between Rs. 7 and Rs. 10 crores in value, is at present being found by devious means and employed in the business of smuggling gold into this country, and how increased gold production in India—for which there is scope—can assist in rescuing this foreign exchange for nation-building needs.

"The other event I wish to refer to is the appointment by the Government of India of the Taxation Enquiry Commission under the chairmanship of the eminent economist and industrialist, Dr. John Matthai who was formerly Finance Minister of India. The appointment did not come a day too soon. The structure of taxation of mining in general and of the gold mining industry in the Kolar Gold Field in particular, has been out of line with what has, after careful thought, been devised by other countries of the world which have been more successful in developing their mineral wealth, and have thereby enriched themselves and their peoples. As you know, your Directors have made reasoned representations in this regard to the Government of India who are giving the case their sympathetic consideration. I trust it will not be very long before the industry gets some much-needed relief, and encouragement."

Mysore Gold Mining Company

Dealing with the affairs of the individual Companies, Mr. Sreenivasan said, in reference to the Mysore Gold Mining Company (K.G.F.) Limited, as follows:

"During the year, 206,172 tons of ore and 857 tons of mill-tank cleanings and mill excavation were treated with a recovery of 74,729 ounces of gold which gives a recovery grade of 7.22 dwts. per ton. Both the tonnage milled and the grade of the ore were higher than in the previous year, resulting in an increased gold return.

"The total proceeds of the sale of gold amount to Rs. 1,77,14,737 to which is added Rs. 19,792 in respect of sales of silver. After deducting royalty payable to the Mysore Government of Rs. 8,83,222 and adding Rs. 42,146 for rents and bank interest, there is a net credit to the revenue account of Rs. 1,68,93,453. Deducting from this sum the total costs, amounting to Rs. 1,44,37,589, there is a balance of Rs. 24,55,864 which is carried down to the profit and loss and appropriation account where there is added Rs. 8,967 in respect of deposit and loan interest, bringing the total credit to that account to Rs. 24,64,831. Against this, there is charged Rs. 86,567 for staff provident fund, Rs. 12,00,176 representing 8.3 per cent. of costs for transfer to the depreciation and development expenditure reserve and Rs. 6,90,084, being the provision for income-tax, leaving Rs. 4,88,004, the whole of which your Directors recommend should be utilised in paying a tax-free dividend of 6 per cent. for the year.

"Due to the higher tonnage treated, there was a fall of nearly Rs. 2 to Rs. 64.8 in the cost per ton, excluding development, compared with that of the previous period."

In the course of the speech of the Managers, Messrs. John Taylor and Sons (India) Limited, in respect of the Mysore Company, Mr. J. K. Lindsay said:

"The total development done during the year was 8,895 feet; 6,434 feet was on reef, of which 1,132 feet or 18 per cent. was payable at an average value of 31.9 dwts. per ton over a width of 17 inches. No further development was done on the upward extension of the rich 43 ore-shoot as this is awaiting the sinking of a shaft from 32nd level. Progress was made during the year with the scheme of access to Edgar's shaft pillar from the footwall. In the bottom section of the mine, development was continued on the small oreshoots in the vicinity of north and south auxillary vertical shafts.

"The payable ore reserves were estimated to be 198,800 tons at 12.80 dwts. per ton at 31st December, 1952."

Champion Reef Gold Mine

Referring to the results of the Champion Reef Gold Mines of India (K.G.F.) Limited, Mr. Sreenivasan said:

"During the year, 148,890 tons of ore were milled, with a recovery of 66,477 ounces of gold, which gives a recovery grade of 8.93 dwts. per ton. The output was seriously affected by rockbursts in Glens oreshoot and by a fire in the mine and was consequently at a considerably lower rate than for the previous period.

"The total proceeds of the sale of gold amount to Rs. 1,58,78,386 to which is added Rs. 19,443 in respect of sales of silver. After deducting royalty payable to the Mysore Government of Rs. 7,92,310 and adding Rs. 40,148 for rents, bank interest and sundries, there is a net credit to the revenue account of Rs. 1,51,45,667. Deducting from this sum the total costs amounting to Rs. 1,21,26,615 and Rs. 1,106 in respect of an adjustment of additional royalty for the previous period, there is a balance of Rs. 30,17,946 which is carried down to the profit and loss and appropriation account where there is added Rs. 5,457 the balance brought forward from 31st December 1951 and Rs. 34,943 in respect of deposit and loan interest, bringing the total credit to that account to Rs. 30,58,346. Against this, there is charged Rs. 73,161 for staff provident fund, Rs. 15,82,799 representing 13.0 per cent. of costs for transfer to the depreciation and development expenditure reserve and Rs. 11,36,924 being the provision for income-tax, leaving Rs. 2,65,462, out of which your Directors recommend the payment of a tax-free dividend of 6 per cent. for the year which will absorb Rs. 2,60,004, to leave Rs. 5,458 to carry forward to the succeeding period. The considerably reduced profit, as compared with the previous period, was due to the lower gold price together with the effect on production of the rockbursts and fire previously mentioned.

Bonus To Labour

"The question of bonus to labour for the year 1950 was referred to an Industrial Tribunal which awarded four months' basic wages as bonus. In consequence of the lower rate of production and the cost of the bonus to labour for 1950 which was charged in the accounts for the year under review, the cost per ton of Rs. 65.5 excluding development, showed an increase of nearly Rs. 10 compared with that of the previous period.

"As I said last year, the scheme of joint working with the Ooregum K.G.F. Company was being reconsidered because of the difficulties being experienced by that Company. As a result of the lower price of gold last year and the reduction in output which, for technical reasons, cannot be avoided, the Directors of the Ooregum K.G.F. Company reluctantly came to the conclusion that the Ooregum Mine must be closed. It has taken some time to give effect to this decision, but, at present, all the employees of that mine are under notice of termination of employment. The Mysore Government has recently given its consent to the transfer of the Ooregum leases to this Company, and the scheme for taking over the leases and the purchase of certain buildings, machinery and plant, will be placed before the shareholders in the near future."

In the course of the Managers' speech, Mr. J. K. Lindsay said:

"The total development done during the year was 11,029 feet; 7,882 feet was on reef, of which 4,671 feet or 42 per cent. was payable at an average value of 23.8 dwts. per ton over a width of 35.5 inches. Development of Glens oreshoot and of the oreshoot south of Osborne's shaft crosscut has continued. Development of the folds in the north section was continued down to 98th level. The main reef was developed to the Ooregum boundary between 92nd and 96th levels on good values, despite the presence of pegmatite which, however, did not appear to affect the values.

"The payable ore reserves at 31st December, 1952, were estimated to be 640,219 tons at 10.53 dwts. per ton."

Ooregum Gold Mining Company

Dealing with the affairs of the Ooregum Gold Mining Company of India (K.G.F.) Limited, Mr. M. A. Sreenivasan said:

"During the year, 118,386 tons of ore and 8,794 tons from various old dumps, which were excavated and found to contain gold, were milled. 34,600 ounces of gold were obtained which is equivalent to an overall recovery grade of 5.45 dwts. per ton. In addition, 27 tons of the Company's ore were treated by the Nundydroog Company with a recovery of 21 ounces of gold.

"The total proceeds of the sale of gold amount to Rs. 82,45,635 to which is added Rs. 13,571 in respect of sales of silver. After deducting royalty payable to the Mysore Government of Rs. 4,11,477, and adding Rs. 50,399 for rents, bank interest and sundries, there is a net credit to the revenue account of Rs. 78,98,128. Deducting from this sum, the total costs amounting to Rs. 77,52,706, there is a balance of Rs. 1,45,422 which is carried down to the profit and loss and appropriation account where there is added Rs. 93,447, the amount brought forward from 31st December, 1951, and Rs. 2,752 in respect of interest accrued on advance income-tax payments, bringing the total credit to that account to Rs. 2,41,621. Against this, there is charged Rs. 64,552 for staff provident fund, and Rs. 1,77,069 representing 2.3 per cent. of costs for transfer to the depreciation and development expenditure reserve. The actual capital expenditure for the year was Rs. 3,05,692. The Directors regret it is not possible to recommend a dividend for the period under review.

"In consequence of the higher rate of tonnage treated, the cost per ton of Rs. 49.6, excluding development, showed a decrease of Rs. 4.1, as compared with that of the previous period.

"As was indicated to you last year, the position at the mine has become such that it is impossible for the Company to continue operating as a separate unit. For technical reasons, the output from the mine has had to be reduced and cannot possibly be increased. This, together with the lower price of gold, made it necessary to close the mine. Your Directors had decided to close the mine in March. On the advice of the Central and Mysore Governments, however, the Directors had to agree to postpone the closure to enable a committee, which the Governments wished to set up to report on the position, as the closure of the mine involved about 3,500 men being thrown out of work. This Committee, on which the Company was represented by Mr. Sydney E. Taylor, Director, made its report during May and confirmed the necessity to close the mine. It also recommended the acceptance by the Mysore Government of the proposal of the Directors that the Ooregum leases should be transferred to Champion Reef. The Government of India have accepted the Committee's report and, accordingly, one month's notice was given to all employees on 9th and 10th June. The mine will be closed down on expiry of this notice but the cleaning up of the mill is expected to take several months.

Compensation to Workers

"The said Committee also made detailed recommendations regarding the rehabilitation of and compensation to be paid to the Company's discharged employees. It is now an accepted principle that compensation should be paid to employees for loss of employment and the amount of compensation proposed by the Directors, namely, half a month's wages (including dearness allowance) for every completed year of service, was accepted by the Committee as reasonable. This will naturally be a heavy burden on the Company's resources but, under existing legislation, is unavoidable. It is expected that it will be possible to offer continuing employment in other mines on the K.G.F. to about 900 to 1000 of the men who would otherwise be discharged.

"The Government of Mysore has recently given its consent to the transfer of the Company's leases to the Company's partner in the Joint Operation, the Champion Reef K.G.F. Company. The scheme for the transfer of the leases and the sale of certain buildings, machinery and plant to the Champion Reef K.G.F. Company will be placed before the shareholders in the near future."

Managers' Speech

The Managers' speech made by Mr. J. K. Lindsay, contained the following remarks:

"The total development done during the year was 9,031 feet; 7,733 feet was on reef, of which 3,391 feet or 38 per cent. was payable at an average value of 28.4 dwts. per ton over a width of 27 inches. In auxiliary section on the main reef, driving was continued at the 101st and 102nd levels and started at 103rd level. This lode is very erratic and irregular and patches of high values alternate with poor areas. However, the last 200 feet to the boundary has consistent quartz of good value as the main reef there forms one of the limbs of the folds which, at these levels, are partly in Ooregum and partly in Champion Reef property. The other limbs of the folds, which straddle the southern boundary, have also been developed.

"The payable ore reserves were estimated to be 253,390 tons at 8.48 dwts. per ton at 31st December. This is 57,065 tons more than at the end of the previous year and the grade is 0.11 dwt. per ton higher. In addition, the low grade ore reserves were estimated at 39,333 tons at 3.75 dwts. per ton. 90 per cent. of the ore reserves are now concentrated in a small area below the 94th level in the southern half of the mine. At these depths between 9,000 and 9,500 feet, the ground pressure and the danger of rockbursts make it necessary to adopt a single plan for the sequence of stoping which also has to include the ore over the boundary in the Champion Reef mine. This has made it impossible to maintain the output at an economic level. It was just possible to maintain a small working surplus up to August, 1952, by augmenting the output by treating certain old dumps on surface but these have been exhausted. Since then, the mine has been making losses. Under present conditions, in order to cover costs and pay a 6 per cent. dividend, a monthly production of 3,200 ounces of gold would be required; but the maximum output which could be produced on average from the mine is only 2,300 ounces, declining to 1,900 ounces. In these circumstances, there was no alternative to closing the mine."

Nundydroog Mines

Turning to the report and accounts of the Nundydroog Mines (K.G.F.) Limited, Mr. M. A. Sreenivasan said:

"During the year, 228,082 tons of ore were milled, with a recovery of 65,165 ounces of gold, equivalent to 5.71 dwts. per ton and 32,620 tons from old dumps were treated, with a recovery of 2,577 ounces of gold, equivalent to 1.58 dwt. per ton. The total gold returned was thus 67,742 ounces. There were no serious interruptions to production during the year.

"The total proceeds of the sale of gold amount to Rs. 1,60,09,380 to which was added Rs. 24,885 in respect of sales of silver. After deducting royalty payable to the Mysore Government of Rs. 7,98,619 and adding Rs. 81,136 for rents, bank interest and sundries, there is a net credit to the revenue account of Rs. 1,53,16,782. Deducting from this sum the total costs amounting to Rs. 1,32,73,086, there is a balance of Rs. 20,43,696 which is carried down to the profit and loss and appropriation account. Against this, there is charged Rs. 74,413 for staff provident fund, Rs. 11,25,702 representing 8.5 per cent. of costs for transfer to the depreciation and development expenditure reserve and Rs. 5,60,576 being the provision for income-tax, leaving Rs. 2,83,005 the whole of which your Directors recommend should be utilised in paying a tax-free dividend of 7½ per cent. for the year.

"In consequence of the higher rate of production, the cost per ton of Rs. 43.5, excluding development, showed a decrease of Rs. 3.2 compared with that of the previous period."

Mr. Lindsay's Speech

Mr. J. K. Lindsay, in the course of his speech on benalf of the Managers, said:

"The total development done during the year was 25,050 feet, most of which was on the west reefs. The 62nd level N16 crosscut intersected the Oriental lode and 39 feet was driven which averaged 3.7 per ton over 71 inches. This is the deepest level at which the Oriental lode has been developed so far. On the 44th level, from N17 crosscut, 39 feet average 24 dwts. per ton over 62 inches and 1,418 feet on lode aggregated 4.2 dwt. per ton over 58 inches. The 3800-foot level north from N21 crosscut was driven 1,053 feet. Of this, 173 feet averaged 11.3 dwts. per ton over 60 inches and 708 feet averaged 4.3 dwts. per ton over 64 inches. In the level south, of 489 feet driven, 255 feet averaged 10.0 dwts. per ton over 61 inches.

"The payable ore reserves at 31st December, 1952, were estimated to be 538,397 tons at 8.90 dwts. per ton. This is 116,336 tons more than at the end of the previous year, but the grade is 0.37 dwt. per ton lower.

DEARTH OF VENTURE CAPITAL IN U.S.

EARLY TAX REFORM URGED

[In view of the enquiry into the structure and incidence of taxation now going on in this country under the distinguished chairmanship of Dr. John Matthai, the following article taken from the June, 1953 issue of the Guaranty Survey, published by the Guaranty Trust Company of New York, is of topical interest. The article contains a penetrating analysis of the causes for the dearth of venture capital in the U.S. and a warning of the consequences of such shortage. As readers are aware, there is an acute scarcity of risk capital in India, too. Although the magnitude of the problem in the two countries may differ and there are also factors other than those mentioned in the article responsible for the dwindling supply of venture capital in India, there is no doubt that the general conclusions of the article, especially those relating to the consequences of dearth of venture capital, apply with equal force to this country. We feel that those who are now urging the commercial banks in this country to extend credit facilities for the expansion of capital assets of industries will do well to pause and reflect on the relevant remarks made by the authors of the article—Ed.]

RECENT statements by Treasury officials give renewed assurance of the Administration's aim to overhaul the Federal tax system as soon as the budget can be brought under control. The main purpose of the "radical revision" contemplated by Secretary Humphrey will be to strengthen incentives for the creation of jobs and for the making of more, better, and cheaper goods. "The present tax system," says Mr. Humphrey, "threatens to stifle initiative, expansion and ultimately jobs. A better balanced system is required."

It is encouraging to find this economic need so strongly emphasised by Federal officials, whose social responsibilities embrace all the people and all business, including the small and new enterprises whose welfare is especially threatened by some features of the present revenue system. The need for tax revision has long been recognised. Thoughtful analysts have often warned that not enough "risk" or "venture" capital was becoming available for healthy business growth, and that the shortage, unless corrected, would ultimately result in industrial stagnation, financial anemia, or both. It was difficult, however, for such forebodings to gain widespread acceptance while employment was large and industry was rapidly expanding. One of the many unfortunate effects of war and post-war inflation has been to conceal the magnitude and seriousness of the dearth of venture capital.

Why Venture Capital is Needed

Vigorous and enduring economic expansion requires not only that adequate amounts of capital be available but also that a sufficient proportion of the capital be of the risk-taking kind. Risk capital performs two unique functions. First, it finances new business ventures, the success of which is usually uncertain. Many such ventures fail, but some develop into large and well-established industries, providing new employment opportunities and supplying new goods and services for the public. This is the essence of economic progress. Only capital that can be exposed to serious risks can finance these industries in their early stages.

Second, venture capital serves as the foundation of the whole financial structure of industry. Other forms of capital investment, such as bank loans and bond purchases, become possible only after owners have supplied enough "net worth" to act as a financial cushion and relieve creditors of the broader risks arising from business fluctuations. If debt increases too fast in relation to owners' equity, the result is a "top-heavy" financial structure that exposes both debtors and creditors to excessive hazards —creditors to the risk of loss of their loans or investment, and debtors to the risk of bankruptcy.

Venture capital comes from two sources: the reinvested earnings of business concerns and the savings of individual and (to a limited extent) institutional investors. Reinvested earnings are, of course, available only to the companies that earn them. New enterprises, and enterprises which require more equity capital than can be supplied from earnings, must depend upon the savings of outside investors. Hence, it is essential to the maintenance of a dynamic, competitive, free-enterprise economy that investors be able to supply adequate amounts of risk capital to new and growing businesses, and that they have the incentive to do so.

The N.A.M. Analysis

The apprehension that these basic requirements are not being met has received strong support from two recent analyses, one by the National Association of Manufacturers and the other by the New York Stock Exchange. Both agree that there is a serious shortage of equity capital which menaces the vitality of our economy. The N.A.M. study deals with conditions, not remedies. The Stock Exchange report traces the difficulty to its causes and submits several recommendations, aimed principally at Federal tax revision.

The original purpose of the N.A.M. study was merely to compile a statistical record of broad tendencies in business finance. Analysis of available data, however, yielded some "wholly unanticipated results," indicating that "the real key to the mystery of business growth amidst a shortage of venture capital lies elsewhere than has been supposed."

Inflation, the N.A.M. finds, has tended to obscure the real situation. Of the $20 billion to $30 billion that business has invested annually in new plant and equipment in recent years, about four-fifths has been required to replace the rising capital values currently used up. Of the $8 billion average annual increase in the book value of business inventories since 1945, approximately half represents the additional cost of carrying the same physical volume of inventory at a higher price level in debased dollars. Of the $10 billion yearly average of retained corporate profits, two-thirds has been needed simply to maintain the existing volume of tangible assets. If dividends had been increased to the same percentage of national income as prevailed in the 1930's, the surplus of profits available for net expansion would have been wiped out.

The N.A.M. finds further that the amount of new capital supplied by stock issues since the war has totalled less than $2 billion annually and the book increase in owners' equities in unincorporated business less than $1 billion. This latter amount is deemed insufficient to make up for the failure of current cost charges to provide for the maintenance of assets. Although business accumulated large amounts of liquid assets during the war, these have not been drawn upon to any substantial extent. The chief source of funds for expansion has been borrowing, with corporate debt increasing from $85 billion at the end of 1945 to $156 billion at the end of 1951. The burden of this indebtedness has been made tolerable by *inflation*, which has lightened the relative load of existing debt as new obligations were incurred. This relief has been gained at the expense of creditors.

The final conclusion to be drawn from these findings, according to the N.A.M., is that, unless the supply of venture capital increases, one or a combination of the following results will ensue: (1) business expansion must cease; (2) the real burden of business indebtedness must increase; (3) inflation must continue, reducing the real burden of debt. These alternatives, all socially undesirable, are held inescapable "unless certain changes occur in the general economic climate."

The Stock Exchange Study

The Stock Exchange outlines some of these needed changes. For one thing, it is believed necessary to popularise equity ownership for millions of new investors. The most effective and quickest remedies, however, are seen in the field of tax revision. Suggested steps include a lowering of personal income-taxes, reduction in the high rate of progression of such taxes, elimination of the excess profits tax, revision of the capital gains tax, and abolition of double taxation of dividends.

Three specific changes in the capital gains tax are recommended. The first is that the holding period be reduced from six months to three. The second is that the effective rate of the tax be halved by reducing the percentage inclusion from 50 to 25 per cent. The third is that the law be changed to provide for offsetting capital losses against ordinary income up to $5,000 annually (as against the $1,000 now allowed), with a carry-over for a period of five years against ordinary income.

Finally, as a start towards the elimination of double taxation of dividends, the Stock Exchange recommends that individuals be allowed a credit against their income-tax liability of an amount equal to 10 per cent. of the dividends received, such credit not to exceed the tax otherwise payable.

These recommendations, as the Stock Exchange recognises, are aimed only at some of the more glaring defects in the present Federal tax structure. Revision will have to go further than this in order to put business finance back on a strong foundation. The double taxation of dividends is indefensible from almost any point of view. Not only is it inequitable in its discrimination against stockholders, but this discrimination in effect penalises risk capital and thus tends to inhibit the formation of such capital. This tax should be abolished.

Much the same is true of the tax on capital gains. True capital gains are not income, and a tax on such gains is not a tax on income but on capital. As such, it is a violation of one of the basic precepts of sound public finance. No other important country levies such a tax. Like the double taxation of dividends, the capital gains tax strikes directly at the incentive to venture-capital formation.

Individual incomes, especially those in the middle and higher brackets, are traditionally the principal source of the savings that normally supply the great bulk of the venture capital available to new business. Small savers are not usually in a position to assume broad risks, nor are the "institutional" investors that have become the principal custodians of small savings. The heavy tax rates on personal incomes in general, and the almost confiscatory rates on the larger ones, leave relatively little surplus for investment in equity securities and little incentive to assume the risks that such investment necessarily involves. The situation is aggravated by the estate taxes, which further weaken the incentive to risk-taking investment and tend to depress the market for equity securities both by forcing liquidation and by breaking up estates into smaller units for which such securities represent a less suitable form of investment.

Weakened Incentives

While business in general suffers from this drying-up of the sources of risk capital, probably the chief sufferer is small business. Prominent companies with long earnings records have access to the organised capital markets, and their equity securities are known to millions of investors who are beyond the reach of small business concerns. The latter are usually dependent upon individual savers in their own localities who have sufficient means to assume broad risks in the hope of substantial gain. These are the savers whose capacity and incentive to furnish venture capital have been so dampened by the tax penalties that have been placed upon financial success.

The incentive to equity-capital formation has probably been weakened further by heavy taxes on corporations and by high and inflexible costs of operation. Tax rates on corporate income ranging from 52 per cent. upward, except for the very small corporations, act as a strong deterrent to expansion in many cases, especially expansion of the more venturesome sort. Wage costs have risen sharply and have become more inflexible, introducing new risks that are not apparent in most divisions of industry as long as production, employment, and prices remain at high levels, but that could become a source of serious weakness in the event of a general decline in the volume of activity and the price level. The rising "break-even" point for industry—the level of activity that marks the dividing line between profit and loss—has become a matter of increasing concern.

Very little examination of the tax laws is needed to show how the incentive to equity investment has been weakened. At present rates and prices, a married couple, with a net income exceeding personal exemptions by $32,000 a year can receive a higher net return from an average high-grade municipal bond (which is tax-exempt) than from an average common stock. A person in the highest tax bracket must receive a return, before taxes, of 29 per cent. a year from a taxable investment in order to equal the return from a high grade municipal bond. For a common-stock investment, this 29 per cent. dividend rate represents a 60 per cent. earnings rate for the corporation (unless it is a very small one), even if all earnings are paid out in dividends.

Unfortunately, there still seems to be strong political opposition to needed tax revision. Every suggested change in the interests of a strong and healthy economy brings forth the cry of "favouring the rich at the expense of the poor." Such appeals to class feeling ignore the essential fact that a situation has been developing which, unless corrected, must ultimately work to the disadvantage of poor and rich alike. Underlying the superficial conflicts in group interests is an immeasurably deeper and more vital community of interest in maintaining the driving force behind our free-enterprise system.

TAX CUTS IN BRITISH BUDGET

RESULT OF FUNDAMENTAL CHANGE IN CONCEPT

(By PERCY ARNOLD)

BRITAIN'S Budget for 1953-54 is the first in the post-war years in which there are both some reductions and no increases in taxation. This happy change is not due to any decision to reduce military expenditure following the Kremlin's more conciliatory line. On the contrary, Britain's defence expenditure is expected to increase further in 1953-54, though at a much slower rate than in the past year. The tax cuts have been made possible primarily by what looks like a fundamental change in the concepts on which post-war British Budgets have been based.

In earlier post-war years, from 1947-48 onwards, it became standard procedure or almost axiomatic that the Chancellor of the Exchequer should budget for a substantial surplus of current revenue, in order to finance the expenditure of a capital nature undertaken by the Government. In Britain, this capital expenditure has, since the war, consisted largely of loans to municipalities for their house-building and other projects. War-damage payments have been another substantial item. Such capital outgoings have in recent years amounted to roughly some 15 per cent. of normal current expediture. In pre-war days, they were met by borrowing.

In Mr. Butler's Budget estimates a year ago, the intention was to continue in the post-war tradition, and produce a current surplus big enough to meet nearly all capital as well as current expenditure. But, as things turned out, expenditure was above and revenue was below the estimate and the actual surplus was only £88,000,000, leaving £436,000,000 of capital expenditure to be met by borrowing.

Inflation Checked

Yet, what might have been expected did not happen. The Government's failure to save enough, in the sense of covering capital expenditure out of revenue, did not produce noticeable inflationary pressure. Indeed, the Government claims—with some justification—that 1952 was the first year in which post-war inflationary tendencies were really brought under control. It looks as though what the Government failed to save was more than made up by greater savings by businesses and individuals.

In this, Britain was undoubtedly helped by the fall in the prices of many world commodities of which she is a large importer. The Government's orthodox monetary policy, with its higher interest rates and restrictions of business credit, also encouraged savings, though it made the Budget problem more difficult by increasing the cost of the interest on the national debt.

But further, it seems that, while the earlier theory by which the Government aimed at large Budget surpluses was sound up to a point, it did not take sufficient account of the fact that the very high rates of tax needed to get those surpluses discouraged business and private saving, and probably worsened as much as it relieved the inflationary pressure in the economy.

Mr. Butler now feels that, with some slack in the economy, and with a stronger gold reserve than a year ago, he can deliberately aim at the result that was achieved, partly by miscalculation, in the financial year just ended. For 1953-54 he estimates a current *revenue* surplus of £109,000,000, £21,000,000 greater than 1952-53. On the other hand, the Government's net capital outgoings are also expected to be greater by a similar sum, leaving as in 1952-53 some £440,000,000 of capital items to be met by borrowing.

At the same time, the Budget makes appreciable, though not large, tax concessions both to business and individuals. On the basis of past taxes, estimated revenue in 1953-54 would have been £98,000,000 greater and total expenditure is put at £92,000,000 less. This gain of £190,000,000 is being used to reduce direct taxes on incomes of business and individuals by £124,000,000 and purchase taxes by £45,000,000 the remaining £21,000,000 being accounted for by the rise in the estimated surplus. For individuals, the reduction in income-taxes is 6d. in the £—right through from the lowest rate on the first £100 a year of taxable income, where the rate becomes 2s. 6d. in the £ (12½ per cent.) instead of 3s. (15 per cent.), up to those fortunate few (some 4,000 people in 1950-51) whose taxable incomes are £15,000 a year and over, who will now be able to keep 1s. in the £ (5 per cent.) of their earnings above £15,000, against 6d. (2½ per cent.) last year.

These reductions will, however, still leave a heavy burden of income-tax, particularly, on the middle and upper incomes. Taking the family man with wife and two children throughout, the new Budget means that the £500-a-year man is hardly affected, as he pays only just over £1 a year at present; the £1,000-a-year man keeps £10 a year or more, his tax going down to £102; the £2,000-a-year man pays £451, as against £481; while at £5,000 a year what the tax-collector takes goes down from £2,416 to £2,311.

The reduction in purchase tax is one-quarter. This means that the tax on luxury goods such as jewellery and cosmetics is now 75 per cent. of the wholesale value, while cars, television, radio, refrigerators and similar articles now bear 50 per cent., and simpler articles now pay the lowest rate of 25 per cent.

Benefit to Businesses

Apart from the effect of purchase-tax changes, businesses will benefit immediately from the lower rate of income-tax, which makes up a big part of the total or corporate taxes. These add up to between 50 and 75 per cent. of total profits at present. More important to business in the long run, though, is the abolition of the Excess Profits Levy as from 1954. This was a new levy introduced in the first Conservative Budget a year ago to tax increases in profits above a pre-Korea standard.

The Budget also re-introduces the special first-year rates of tax write-off for capital expenditure on plant machinery and mining works. This encouragement to investment in fixed capital was orginally introduced in 1945, but had to be suspended in 1951 to discourage civilian demand on engineering resources which could be used for rearmament.

The Government's total tax revenue in 1953-54 is expected to aggregate £4,230 million, as compared with £4,282 million the previous year. The National Exchequer will, therefore, continue to take and spend nearly a third of the country's gross national product—estimated at £13,648 million in 1952. With local taxes and compulsory national insurance contributions added, the proportion becomes something like 35 per cent.

For the continuance of this state of affairs, the need for holding a high level of defence expenditure must take a large share of the blame. At £1,497 million, defence expenditure is £93,000,000 up, and, in addition, there is a further £139,000,000 for civil defence, stockpiling and other military preparations—quite apart from the cost of atomic research, which is included elsewhere and not revealed.

It is on the basis of these figures of national income and defence expenditure that the Chancellor of the Exchequer, broadcasting to the nation after his Budget, made his grim claim that Britain was bearing the heaviest defence burden of any country of its size in the world. —*Exclusive to Commerce.*

PLACE OF SMALL ENTERPRISE IN BRITISH INDUSTRY

It will be recalled that, some months ago (*vide* page 165, *Commerce* dated 31st January, 1953), we published some interesting details about the place of small units in the American industry and their important role in the economic development of the U.S. We now give below a brief account of the place of small enterprise in British industry, by Mr. Ernest Atkinson, a well-known Parliamentary Correspondent in the U.K. It will be seen from this account that there is a strong numerical preponderance of small undertakings in Britain also. This account makes interesting reading, especially in the light of the Government of India's move to introduce estate duty. It is to be hoped that administrators in this country

INDIA'S SEA- AND AIR-BORNE TRADE IN 1952-53

SHRINKAGE IN ADVERSE TRADE BALANCE

THE cumulative effect of such factors as restrictions on foreign trade, decline in commodity prices, non-availability of certain types of goods and fall in demand for certain others is reflected in the accounts of India's sea- and air-borne trade for the financial year, 1952-53. As compared with the corresponding period of 1951-52, the accounts show a marked recession in the value of total foreign trade (sea- and air-borne) of this country from Rs. 1,578.40 crores to Rs. 1,189.73 crores in 1952-53, although it was slightly better than that in 1950-51. In the last mentioned year, the total trade was lower because high prices and hoarding following the Korean War restricted trade generally all over the world.

The fall in the total value of trade in 1952-53 as compared with that in the previous year, is shared by both exports and imports. The value of exports declined during the year from Rs. 715.56 crores to Rs. 556.78 crores. And the value of imports fell even steeper from Rs. 862.84 crores to Rs. 632.95 crores. In the result, the aggregate adverse balance of trade improved by just above 50 per cent. as it dropped from Rs. 147.28 crores to Rs. 76.17 crores. This narrowing down in the adverse balance of trade is due, in the main, to reduction both in value and volume of imports of raw cotton, foodgrains, and machinery of all kinds. Since a substantial quantity of imported wheat was from the loan account, the balance of payments position did not create any difficulty during the year.

The table below gives the value of total foreign trade of India by sea and air and the balance of trade in each of the three years, 1950-51, 1951-52 and 1952-53.

TABLE I

(Rs. in crores)

	1950-51	1951-52	1952-53
Total Exports	586.84	715.56	556.78
Total Imports	565.40	862.84	632.95
Total trade	1,152.24	1,578.40	1,189.73
Balance of Trade + or —	+21.42	—147.28	—76.17

Imports

During the year under review, the total value of imports amounted, as stated at the outset, to Rs. 632.95 crores, as against Rs. 862.84 crores. Foodgrains accounted for a high figure of Rs. 153.10 crores, representing about 24 per cent. of the total. But they were lower than in the preceding year when they amounted to Rs. 228.12 crores. With the improvement in the overall food position this year, imports are expected to be lower in 1953-54. Machinery of all kinds, which used to head the import list a few years ago, and had occupied third place in 1951-52, moved up to second rank during the year under review, with its total value amounting to Rs. 87.87 crores, as against Rs. 104.31 crores and Rs. 93.0 crores in 1951-52 and 1950-51, respectively. Raw cotton imports stepped down to third place, with a value of Rs. 76.67 crores as against Rs. 137.13 crores in 1951-52. Vehicles, other than locomotives, continued to hold fourth place at Rs. 28.17 crores, as compared with Rs. 34.41 crores. Petroleum imports, however, recorded a sharp increase from Rs. 17.87 crores in 1950-51 to Rs. 25.18 crores in 1952-53, and so also metals (iron and steel manufactures) from Rs. 19 crores to Rs. 23.71 crores. Metals other than iron and steel, however, receded during the period from Rs. 27.84 crores to Rs. 19.37 crores. But lubricating oil jumped up from Rs. 6.95 crores in 1950-51 to Rs. 13.10 crores in 1952-53. Similarly, imports of electrical goods rose from Rs. 9.96 crores to Rs. 13.81 crores during the same period. Chemicals and drugs, paper and paste board, and dyes and colours recorded decreases as compared with 1951-52. That sulphate of ammonia imports dropped sharply from Rs. 11.45 crores in 1950-51 to only Rs. 85 lakhs indicates, in part, the increase in domestic production.

TABLE II—*Value of Principal Imports into India*

(Rs. in crores)

	1950-51	1951-52	1952-53
Foodgrains and flour	80.41	228.12	153.10
Machinery of all kinds	93.00	104.31	87.87
Cotton raw	100.76	137.13	76.67
Vehicles (excluding locomotives) ..	24.60	34.41	28.17
Petroleum	17.87	24.37	25.18
Chemicals, drugs and medicines ..	19.37	35.95	24.87
Metals and iron and steel manufactures	19.00	21.97	23.71
Cutlery hardware implements and instruments	14.48	19.70	14.28
Electrical goods	9.96	10.86	13.81
Paper and pasteboard	9.92	13.96	11.72
Dyes and colours	14.60	19.20	10.42
Lubricating oils	6.95	10.95	13.10
Metals other than iron and steel ..	27.84	20.65	19.37
Ammonia sulphate	11.45	2.45	0.85

While the total value of imports declined by as much as 26.6 per cent., that of exports recorded a fall of 20 per cent., thus resulting in the narrowing down of the adverse balance of trade of the country. Exports of Indian merchandise came down, as stated already from Rs. 715.56 crores to Rs. 556.78 crores. The recession in value as compared with that in the preceding year was mainly due to the decline in the prices of goods exported from this country such as jute manufactures, cotton manufactures, tea, raw cotton, raw and tanned hides.

In the food group (which includes tea) the total value of exports receded from Rs. 158.16 crores to Rs. 142.16 crores, while the recession was sharper still in the manufactured articles group in that the value of these dropped from Rs. 400 crores to Rs. 259.77 crores. In the raw material section, there was, however, some improvement as the value of exports of commodities under this group rose from Rs. 139.68 crores in 1951-52 to Rs. 154.02 crores.

TABLE III—*Value of Principal Exports from India*

(Rs. in crores)

	1950-51	1951-52	1952-53
Jute manufactures	113.85	269.96	129.05
Tea	79.87	93.36	80.30
Cotton manufactures	136.71	58.09	69.32
Metallic ore and scrap iron ..	9.68	15.53	30.09
Raw cotton and waste	17.35	21.02	28.94
Oils vegetable	24.18	29.65	23.05
Spices	24.92	27.89	20.47
Hides and skins (tanned)	25.77	25.69	20.35
Fruits and vegetables	10.95	13.41	16.31
Tobacco	13.20	16.03	13.46
Non-metallic mining other than coal	10.34	14.19	9.85
Wool	7.56	4.90	8.41
Gums, resins and lac	13.60	16.24	8.26
Coal	3.36	7.81	7.66
Hides and skins (raw)	9.56	8.22	5.89
Sugar	0.16	0.57	4.26

In Table III, given above, well merited increases are indicated in respect of certain new items of export. The value of metallic ore and scrap iron exports shot up, during the three years, ended 1952-53, by 300 per cent. and that of coal by 100 per cent. Sugar, with a value of Rs. 4.26 crores, figured prominently, but this feature will, however, recede into the background this year, in view of the move by the Government of India to permit imports and the ban on exports placed some months ago.

Among the other principal items of exports, both jute manufactures and tea were marked down from Rs. 269.96 crores and Rs. 93.36 crores to Rs. 129.05 crores and Rs. 80.30 crores, respectively. A substantial increase, however, was recorded by cotton manufactures from Rs. 58.09 crores to Rs. 69.32 crores. Exports of raw cotton and waste also advanced from Rs. 21.02 crores to Rs. 28.94 crores. Similarly, the export of vegetable oils and wool. However, recessions were noted in tobacco, spices, gums, resins and lac and raw and tanned hides and skins.

Geographical Distribution

During the year under review, there was a sharp fall from Rs. 370 crores to Rs. 263.7 crores in India's exports to Commonwealth countries. Part of this decline was due, in part, to lower offtake by the U.K. which amounted to Rs. 122 crores as against Rs. 187.81 crores in 1951-52. Nevertheless, the U.K. still continued to be India's best customer. The offtake by Ceylon and Singapore was, however, better at Rs. 19.28 crores and Rs. 15.44 crores, as against Rs. 16.49 crores and Rs. 11.88 crores, respectively, in the previous year. Pakistan's intake of Indian goods declined from Rs. 19 crores to Rs. 13.7 crores and so also Australia's purchases from Rs. 46.6 crores to Rs. 16.9 crores. Canada too took less, the value having dropped from Rs. 16.24 crores to Rs. 12.83 crores. Aden's share, however, improved from Rs. 6.29 crores to Rs. 9.29 crores.

Among the non-Commonwealth countries, the U.S. topped the list of India's customers, although its share in India's exports of merchandise receded in 1952-53 from Rs. 130.11 crores to Rs. 111 crores. Shipments to Burma, on the contrary, rose slightly from Rs. 19.55 crores to Rs. 22.03 crores. Japan's purchases more than doubled, from Rs. 14.27 crores to Rs. 31.06 crores. Cuba and Argentina lifted goods valued at Rs. 7.55 crores and Rs. 6.85 crores, as against Rs. 11.43 crores and Rs. 17.49 crores, respectively. Shipments of cargoes to West Germany, the Netherlands and Italy rose from Rs. 8.65 crores, Rs. 7.33 crores and Rs. 6.93 crores to Rs. 12.35 crores, Rs. 10.03 crores and Rs. 10.47 crores, respectively, but purchases by France fell almost by half, from Rs. 10.45 crores to Rs. 5.57 crores.

As compared with 1951-52, the value of imports from Commonwealth countries registered a setback from Rs. 288.6 crores to Rs. 252.6 crores. This reflects partly the fall in imports from the U.K. from Rs. 158.13 crores to Rs. 138.57 crores. India's purchases from Bahrein Islands rose from Rs. 10.92 crores to Rs. 18.47 crores. Merchandise received from Singapore, however, declined from Rs. 17.86 crores to Rs. 12.57 crores.

Among the non-Commonwealth countries, the U.S. shipped cargoes worth Rs. 181.38 crores to India, which were lower than those in 1951-52 by Rs. 107.32 crores. Western German imports declined from Rs. 28.27 crores to Rs. 22.28 crores. Burma's share in India's imports rose from Rs. 23.33 crores to Rs. 26.43 crores. Saudi Arabia sent goods of the order of Rs. 14.72 crores, as against Rs. 10.04 crores. Imports from Japan declined from Rs. 24.64 crores to Rs. 15.82 crores and from Egypt from Rs. 40.49 crores to Rs. 15.12 crores.

INDO-BURMA TRADE TALKS CONCLUDED

Trade negotiations which had been carried on between the representatives of the Governments of India and Burma since 29th June were concluded on the 3rd inst. Exchange of letters has taken place between the two parties agreeing to make modifications in the existing Indo-Burma Trade Agreement which was signed in 1951.

Details of the agreement have not yet been published. But a Press Note issued by the Ministry of Commerce discloses that additions have been made to the list of commodities entering the trade between the two countries from both sides. It is learned that India has agreed to make available to Burma increased supplies of a number of commodities during the next six months. The Burmese requirements from India cover a wide variety of goods. To mention them briefly, these include jute goods, cotton piecegoods, coal, hardware, cutlery, groundnut, paraffin wax, tea, iron and steel goods, transport and communication equipment, electrical goods, paper, soaps and toilet requisites, tobacco and miscellaneous items. The new engineering industries can now look forward to build a market of their own in Burma, taking advantage of the present Indo-Burmese Agreement.

The Press Note referred to above adds that an understanding has been reached between the two countries regarding the purchase of rice from Burma in future. The Burmese representatives, it would appear, were disinclined to commit themselves to any modification of the price quoted by their Government when the Indian Trade Delegation visited Burma last April. The price of rice then mentioned was £60 per ton, while India was not willing to pay more than £40 per ton at the most. Since its rice position has improved this year, India has not been anxious to purchase rice at high prices. If at all India were to decide to buy rice, such would be only for the purpose of building up reserves. India has already contracted to import 150,000 tons of rice of which only 10,000 tons are due to arrive. As regards next year, there will be separate negotiations to settle the price. In the case of an emergency, however, Burma has agreed to supply 200,000 tons of rice in accordance with the present Agreement covering the purchase of 150,000 tons.

The present trade negotiations being tied on to the existing Indo-Burma Trade Agreement, 1951, a reference to the latter will be topical. The 1951 Agreement, it may be noted, consists of three parts. The first part covers the period between 1st May and 31st December, 1951. Under this Agreement, the Government of Burma agreed to supply 245,000 tons of rice to India. In turn, the Government of India allotted certain quantities of gunny bags, groundnut oil, galvanised iron sheets to Burma. The second part of the Agreement extended from 1st January, 1952, to 31st December, 1955. It provided for annual export from Burma of 350,000 tons of rice, 230,000 tons of it being on Government-to-Government basis. Indian exports include gunny bags, groundnut oil, cotton yarn and iron and steel products. Under the third part, the two Governments agreed to hold periodical consultations with each other in respect of trade during the pendency of the Agreement.

The pattern of India's trade with Burma has undergone many changes in recent years. In the pre-war years, India's exports to Burma amounted to Rs. 11 crores, as against imports of the order of Rs. 25 crores. In 1949-50, India had a favourable trade balance of Rs. 1.80 crores which rose to Rs. 3.56 crores in 1950-51. In the following two years, it turned unfavourable to India, to the extent of Rs. 3.79 crores and Rs. 4.40 crores respectively, mainly on account of import of rice.

There has also been a change in the composition of the trade. Before the war, Indian exports to Burma consisted generally of butter, ghee, coconuts, sugar, and salts. These have since disappeared. In the early post-war years, cotton piecegoods, twist and yarn were being sent. These have now dwindled. Again, the entire needs of the Burmese *lungi*, supplied by India, are now met from imports from Formosa. Formerly Burma was purchasing salt from India, but now the country is self-sufficient in it. As for Burmese exports, India now hardly imports rubber or lead, as was the case previously. In respect of teakwood, however, the trade has more or less been maintained.

Being neighbours, India and Burma can contribute to the well-being of each other through mutual understanding and co-operation. The understanding resulting from the present negotiations will, it is confidently hoped, strengthen the relationship between the two countries.

PAYMENT BY RESULTS IN INDIA

You have realised that the design of payment by result schemes in India offers problems which are now seldom met with in western countries. Here we have an under-industrialised country, with more men than jobs, and the fear of the worker that by doing more work he will leave fewer jobs for his relations and friends. Also you may hold the general impression that as long as a worker has enough for his immediate needs, he will not make the extra effort necessary to earn production bonuses. There is a further point of difference between India and western countries, technical rather than psychological, and that is the very wide disparities found here in the same plant; the productivity of the best groups usually being three times that of the worst. None of the standard western methods of incentive payment are applicable where, on daily wages, you are paying your best groups only one third as much per work unit as you are paying your worst groups. While you admit that there is no speedy solution to such problems, you feel nevertheless that there must be ways and means of establishing the principle of payment by results among your workers, and in this you are correct.

U.N. COMMITTEE ON FORCED LABOUR

CONSIDERATION BY COUNCIL POSTPONED

THE consideration of the United Nations Committee Report on Forced Labour was postponed by the U.N. Economic and Social Council at its meeting held on 30th June last. The discussion on the Report will be taken up at its seventeenth session next spring. The French proposal for postponing discussion was accepted by 10 votes as against five opposing it. The countries which voted in favour of postponement were India, France, Australia, Poland, the Soviet Union, Britain, Yugoslavia, Venezuela and Uruguay. The opposing nations were the U.S., Cuba, China, Argentina and the Philippines.

The Report on forced labour was the result of an investigation into the system in about 24 countries by a Committee of eminent personalities. Mr. A. Ramaswami Mudaliar was the Chairman of the Committee. Other members were Mr. Paal Berg, former President of the Norwegian Supreme Court, and Senor Enrique Garciasayan of Peru.

The Report has found that forced labour exists in communist countries and South Africa, while there are laws in the British Commonwealth, the United States and Spain which can lead to forced labour. The prevailing systems of forced labour result from two forces, namely, political coercion and economic purposes. Forced labour for economic purpose is witnessed in South Africa, the Soviet Union, Czechoslovakia and Bulgaria. Forced labour by political coercion exists in the Soviet Union, Bulgaria, Czechoslovakia and Rumania.

In South Africa, the Suppression of Communism Act, 1950, can be used as an instrument for the correction of political opinions differing from the ideology of the State. The law is susceptible to a variety of interpretations. It can be used as deterrent for political offenders. If need be, it can be turned into an instrument of political persecution and oppression, thereby resulting in the use of forced labour. The interpretation of the law depends on the meaning placed by the competent judicial and administrative authorities on the numerous provisions of the law.

The U.N. Committee seems to be convinced of the existence of a legislative system, in the Union of South Africa, applied only to the indigenous population and designed to maintain an insuperable barrier between these people and the inhabitants of European origin and to create a permament abundant and cheap labour force. The ultimate consequence of this system is to compel the native population to contribute by their labour to the implementation of the economic policies of the country. The compulsory and involuntary nature of this contribution, however, results from the particular status and situation created by special legislation applicable to the indigenous population alone rather than from direct coercive measures designed to compel them to work, although such measures which are the inevitable consequences of this status are also found to exist.

Coming to the position in other countries, the Committee has found that certain legal provisions can be applied as a system of forced labour for political coercion in Spain, Hungary and Poland. In the Australian territory of Nauru (a small island, north-east of Australia) breaches of labour contracts by Chinese and other non-European workers are punishable as criminal offences and such legislation, if abused or vigorously implemented, might lead to a system of forced labour. The emergency regulations in Malaya, if broadly interpreted and extensively applied, could lead to a system of forced labour as a means of political coercion. It is, however, stated that there is no evidence that the regulations have been so interpreted and applied as to force work on labourers. The voluntary unemployed ordinance in Kenya can be applied in a like manner.

The U.N. Committee's investigations show that, in two cases in the U.S., there appears to be *prima facie* evidence of the existence of practices similar to forced labour. These relate to illegal Mexican immigrants and to peonage. These practices are, however, directly outlawed in the U.S. and the Committee has no evidence to suggest that, when offences are brought to the knowledge of the U.S. Government, the laws are not enforced. In some States in the U.S. the term "vagrant," under the vagrancy laws, is broadly defined and the punishment for the offence is so severe that, if extensively interpreted and applied, it can lead to a system of forced labour for economic purposes.

In the Soviet Union, penal legislation constitutes the basis of a forced labour system as a means of political coercion or punishment for holding or expressing political views. People sentenced to deprivation of liberty, particularly political, were, for the most part, employed in corrective labour camps or colonies on large-scale projects. The system, therefore, seemed to play a significant part in the national economy. The Committee, however, is not able to say as to how many corrective labour camps or colonies existed in Russia or where they were. Much less has it been able to assess how many people are detained in them.

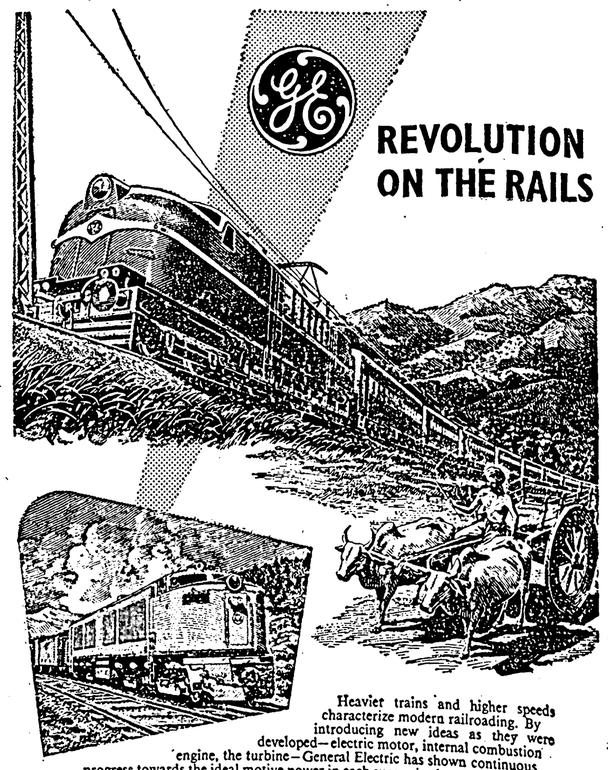
The Committee has cleared Britain and its 12 territories of allegations of forced labour, warning, at the same time, of the possible danger of certain laws in Malaya and Kenya being used for introducing forced labour.

The value of the U.N. Committee Report lies in focussing attention on one of the worst forms of social and economic systems, namely, man compelling man to carry on drudgery against will. Forced labour was in its ugliest form in the ancient days when slavery was widespread. The credit for the gradual disappearance of slavery should go chiefly to Christianity. In the ancient and middle ages, forced labour arose as a result of the desire on the part of the victors or richer and privileged classes to exploit to their benefit the vanquished or weaker sections of populations. Serfdom under the feudalism of the sixteenth and seventeenth centuries is another species of forced labour. In modern days it persists in countries with overpopulation where opportunities for employment are limited. It is opposed to the democratic ideas of liberty, equality and freedom of speech and, therefore, should not be allowed to prevail in any form in human society.

ASIAN REGIONAL MARITIME CONFERENCE

The Governing Body of the I.L.O. is reported to have approved the agenda for the consideration of the Asian Regional Maritime Conference, the first session of which is scheduled to be held at Nuwara Eliya (Ceylon) from 5th to 15th October, 1953. The agenda covers three subjects, namely, (1) Report of the Director-General, containing a survey of maritime developments in Asia, general conditions of seafarers and position in regard to ratification of maritime conventions by the Asian countries, (2) methods of recruitment and engagement of seafarers, and (3) welfare facilities for Asian seafarers in Asian ports.

The delegations to the Nuwara Eliya conference will consist of two Government representatives and one each representing shipowners and seafarers, besides such number of advisers as the Government may see fit to appoint. Besides the Asian countries which are members of the I.L.O., France, Norway, the U.K. and the Netherlands will also be invited to attend the conference. An observer from the U.S. and another from Nepal are also to be invited.



REVOLUTION ON THE RAILS

Heaviet trains and higher speeds characterize modern railroading. By introducing new ideas as they were developed—electric motor, internal combustion engine, the turbine—General Electric has shown continuous progress towards the ideal motive power in each successive locomotive type. Since 1895, when the first heavy-duty electric locomotive was built for the Baltimore and Ohio Railroad in U.S.A., General Electric's research and engineering skill have contributed to the development of locomotion by electricity, diesel-electric and gas, the latest contribution being the gas turbine electric locomotive. Inaugurated 75 years ago in U.S.A., when its parent company was first established, General Electric's unlimited resources, skill and research have been used and are available to India for the development of her industrial potential.

This is General Electric's 50th Anniversary of Service in India.

LACK OF DEMAND AFFECTS METAL BOX COMPANY

DIVIDEND, HOWEVER, REPEATED FOR THIRD YEAR

IT was an irony of circumstances that the Metal Box Company of India Ltd. (Chairman and Managing Director: Mr. H. Chiswell Jones, Calcutta), the turnover and sales of which had been adversely affected by the shortage of tinplate during the year ended 31st March, 1952, should have found that, in the following year, when the supply position of tinplate greatly improved, its sales were again considerably restricted by the lack of demand, due to consumer resistance to higher prices. For the greater part of the year ended 31st March, 1953, the demand for the Company's products was at a much lower level than in the previous year. In terms of value, the sales show a fall of Rs. 56.69 lakhs.

This sharp decline in sales has, inevitably, had its effect on the profits, the gross profit recording a recession from Rs. 65.37 lakhs to Rs. 39.07 lakhs, a drop of over 40 per cent., and the net profit (after providing for depreciation and taxation) from Rs. 29.38 lakhs to Rs. 17.92 lakhs, representing a shrinkage of nearly 40 per cent. This set-back in profits during the year under review is a reversal of the progressively rising trend noted since the Company's conversion into a public company in April, 1949.

In keeping with the fall in profit, the Directors have found it necessary to reduce the allocations to the various reserves from Rs. 12.14 lakhs to Rs. 5.05 lakhs. A breakdown of this total reveals that a sum of Rs. 2 lakhs has been credited to the general reserve, which is only half the sum allocated last year. The reserve for replacement of fixed assets has been credited with Rs. 3.05 lakhs, as against Rs. 3.25 lakhs. Last year, they had, in addition, provided an aggregate sum of Rs. 4.89 lakhs for stock reserve and provisions for contingencies and doubtful debts. The dividend, however, is proposed to be maintained at 10 per cent. which had been paid for the previous two years.

The Company's progress during the last three years is well brought out in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st March			
	1953	1952	1951	1950
Sales	343.68	400.37	304.99	271.78
Other income	1.91	2.03	1.92	1.33
Stocks of manufactured goods	3.62	2.19	3.02	1.34
Expenses	307.93	337.21	255.61	229.19
Gross profit	39.07	65.37	51.97	43.01
Depreciation	8.30	17.94	7.36	6.79
Taxation	12.85	23.05	17.19	14.06
Net profit	17.92	29.38	27.42	22.16
To reserves	5.05	12.14	10.06	9.67
" dividend—				
6 per cent preference	1.33	1.33	1.24*	0.85†
Ordinary	11.50	11.50	11.50‡	9.00
	(10%)	(10%)	(10%)	(7½%)
Carry forward	12.89	12.85	8.44	11.43

† Preference shares of the value of Rs. 25 lakhs were issued in April, 1949 and ranked for dividend from 15th May, 1949. * In November, 1950 the preference capital was raised to Rs. 35 lakhs. ‡ In January, 1951 the ordinary capital was raised from Rs. 50 lakhs to Rs. 115 lakhs by capitalising reserves and undistributed profit, including a sum of Rs. 7.61 lakhs from the surplus of Rs. 11.43 lakhs carried forward from 1949-50.

The lack of demand is due to the fact that "there is," in the words of the Chairman, "less money in the hands of the consuming public and a growing resistance by the public to high prices, particularly in the consumers' goods market." Although in the last few months of the year, the Company's sales showed improvement, there is yet no evidence, according to the Chairman, that the recession in trade of the consumers' goods industry is over. There are, however, "signs of a fair measure of trade revival." As regards the supply position of tinplate, the Company was in a more favourable position during 1952-53, following the great improvement in the supply from within India, due to a reduction in demand from kerosene oil packers. In the previous years, the Company had to depend for more than half of its requirements of tinplate on imports and the higher cost of the imported tinplate had to be passed on to the consumers. With the improvement in Indian supplies the Company's indents from abroad were reduced to a negligible scale. The Company's whole organisation had been geared up to a much higher level of activity than actually materialised, in anticipation of meeting the entire demand of consumers. In order to meet the unexpected consumer resistance, the Company did take steps to effect every possible economy in its operations, in line with the reduced demand. Even then a substantial reduction in profits became inevitable.

The Company's financial position, as seen from the latest balance-sheet, reflects largely the strain on its resources by the increased cost of Indian plate, following the upward revision of the selling prices of tinplate of 11½ per cent. (as a result of the Tariff Board's enquiry into the retention prices of tinplate during the year), and the high cost of plant replacement. During the year, a sum of Rs. 16.96 lakhs was spent on making additions to buildings, machinery, etc. Consequently, the Company had to borrow large sums against the hypothecation of stocks. These borrowings as at the end of the year under review stood at Rs. 14.43 lakhs. The cash balances show a depletion of Rs. 18.95 lakhs. The balance-sheet as on 31st March, 1953, shows the following position:

Liabilities	Rs.	Assets	Rs.
Capital	1,45,00,000	Gross block	1,32,91,886
Reserves and surplus	48,30,212	*Less*—Depreciation	52,58,165
Provision for taxation	10,25,000	Net block	80,33,721
Liabilities	65,44,160	Stocks	1,45,90,694
		Debts, deposits and advances	39,82,321
		Investments	12,240
		Cash	2,80,396
	Rs. 2,68,99,372		Rs. 2,68,99,372

The Company's Chairman states, in his review of the year, that the overdraft taken from the Company's bankers is likely to continue for some time to come; for "it is considered essential to replace certain plant without further delay, and stocks cannot be reduced much further." Proceeding further on the Company's financial needs, he observes:

"In these days it is extremely difficult for any company to keep its existing business efficient and at the same time put aside money for new developments. Many new burdens have been placed on industry during the past few years, and while we all realise the vital importance of achieving a steady improvement in the standard of living, it seems that in certain directions we are being forced to go much too quickly. If industry is deprived of its essential finance, it is hard to see how large-scale unemployment can be avoided."

The Company's development projects are going ahead. The plant for manufacture of aluminium collapsible tubes was installed and operated successfully in Bombay in the latter part of the year under review. The Company expects a substantial demand for collapsible tubes from consumers in India who had hitherto been importing them. The Company has decided to proceed with its plan for building a part of a new factory in Calcutta, which will house the whole of the printing and photolitho equipment. The completion of the remainder of the new factory will depend upon the availability of finance.

The prospects for the current year are fair, as the Company expects to meet the full demands of its customers with lower-priced tinplate. The Chairman is, however, cautious in gauging the outlook. Thus, he says that increased sales and consequent profits are, to some extent, dependent on an improvement in the economic position of the middle classes, who are the main buyers of the products packed in the Company's containers.

The Rs. 10 paid-up ordinary shares of the Company are being currently placed at Rs. 18-8, at which rate and on the basis of the dividend for 1952, the yield works out to 5.4 per cent. per annum free of tax.

SIMPLEX MILLS' BONUS ISSUE

In the course of his address to the shareholders of the Simplex Mills Co., Ltd., at their annual general meeting held last week, the Company's Chairman, Mr. •F. H. Kemple, confirmed that the Directors' proposal, made in April last, to capitalise part of the reserves by issue bonus shares would be carried through shortly, the proposal having received the approval of the Assistant Controller of Capital Issues. The details of the proposal disclosed by him at the aforesaid meeting, however, show a slight modification of the original proposal, though there is no change in the amount of reserves to be capitalised. The Directors have now decided to raise the present paid-up capital of the Company from Rs. 31.5 lakhs to Rs. 42 lakhs, by capitalising the sum of Rs. 10.5 lakhs, being part of the machinery renewal reserve of Rs. 37 lakhs, and issuing bonus shares to the existing shareholders at the rate of one share for every three fully paid-up shares held by them. It may be mentioned here that they had originally proposed to capitalise the sum of Rs. 10.5 lakhs, by drawing Rs. 4 lakhs from out of the E.P.T. post-war refund of Rs. 7.35 lakhs and the balance of Rs. 6.5 lakhs from the machinery renewal reserve. Later on, they transferred the said E.P.T. refund of Rs. 7.35 lakhs to the profit and loss appropriation account for the year ended 31st March, 1953, although a good part of it, namely, Rs. 6 lakhs, was placed to the dividend equalisation fund. According to the latest proposal, they are not, therefore, utilising any part of the E.P.T. refund for capitalisation.

BRITISH INDIA CORPORATION LTD.

For some days past, there have been rumours in the principal Stock Exchanges of the country to the effect that a change in the managing agency of the Corporation was in the offing and these gained currency as there was no prompt denial of them by the management. We are, however, now informed by the management that there is no foundation for the rumour that a change in the management of the Corporation is contemplated or that a large block of shares of the Corporation has recently changed hands. There is also no foundation whatsoever for the rumour that the managing agencies held by the Corporation's subsidiary, namely, Begg, Sutherland & Co., Ltd., have been transferred.

RESULTS OF LARSEN AND TOUBRO

TURNOVER AND PROFITS AT RECORD HIGH

AS briefly indicated in our last issue (*vide* page 4), the year ended 31st March, 1953, marked another period of successful activities for Messrs. Larsen and Toubro Ltd. [Managing Agents: L. & T. (Management) Ltd. Bombay], recording, as it has done, an all-round improvement in its results. The Company's direct sales have registered an expansion of Rs. 22.95 lakhs to Rs. 162.80 lakhs and indirect sales, namely, indent sales and sales effected as selling agents for managed companies, of Rs. 22 lakhs to Rs. 89 lakhs. The trading profit has advanced from Rs. 36.12 lakhs in 1951-52 to Rs. 43.59 lakhs and net profit from Rs. 5.60 lakhs to Rs. 6.05 lakhs. The turnover and profits for the year under review constitute a record for the Company. What is even more noteworthy is that the Company has been able to establish such a record in a year which witnessed a general recession in all the markets. This achievement redounds to the credit of the management; it is a tribute to its salesmanship.

The satisfactory results have enabled the Company to create a general reserve by providing a sum of Rs. 1 lakh from the net profit. The dividend is maintained at 10 per cent. Incidentally, it may be noted, the Company has maintained this rate of distribution for the fourth year in succession and for the second year in succession after it was made a public company early in 1951.

The improvement in the results of working of the Company during 1952-53 is in keeping with the slow and measured progress that the Company had shown in previous years. This trend is clearly indicated by the following comparative table:

(In lakhs of rupees)

	For the year ended			
	1953	1952	1951	1950
Sale proceeds	162.80	139.85	137.55	109.89
Trading expenses	119.21	103.73	104.61	82.88
Trading profit	43.59	36.12	32.93	27.01
Other income	8.95	9.17	5.92	5.27
Establishment expenses	37.05	30.01	28.89	23.93
Depreciation	2.72	3.23	2.54	2.10
Managing Agents' Commission	1.25	1.21	0.80	0.68
Taxation	5.45	5.23	3.75	2.50
Net profit	6.05	5.60	3.46	2.78
To write off goodwill	0.95	2.15	0.70	0.58
To write off commission and brokerage on issue of shares	0.43	..	..	..
To general reserve	1.00	..	..	..
Dividends—				
Preference 5%	0.65	0.64	0.84	0.32
Ordinary	3.20	2.99	1.91	1.82
	(10%)	(10%)	(10%)	(10%)
Carry forward	0.15	0.30	0.54	0.03

The supply position of the products which the Company handles with the exception of "caterpillar" crawler tractors continued to improve during the year and the Company was able to meet the requirements of its customers on a relatively short notice. Caterpillar crawler tractors, however, continued to be in short supply. It is not the successful sale of the earth-moving equipment and agricultural tractors and implements that counts for ensuring established markets for them, but the maintenance of regular supply of spare parts for these equipments and the careful servicing of the equipments sold. In this respect also, the Company has been able to make very good impression on consumers by prompt delivery of spare parts. This, we are told, materially assisted the Company in expanding its sales. Nonetheless, the Company had to fight against the general recession in business conditions and increased competition from others in the field. It had, therefore, to make a determined and sustained effort in maintaining and expanding the turnover. This naturally involved a larger expenditure.

The balance-sheet of the Company as on 31st March, 1953, shows that its paid-up capital is Rs. 45 lakhs. The reserves and surplus amount to only Rs. 1.18 lakhs, but this is not surprising because the Company is only two years old. The gross block of the value of Rs. 21.93 lakhs has been written down to Rs. 12.46 lakhs. The goodwill (original cost Rs. 7.30 lakhs) has been completely written off and so also commissions and brokerage on issue of shares. The current assets, at Rs. 154.04 lakhs, provide ample cover for current liabilities aggregating Rs. 126.73 lakhs.

The outlook for the Company during 1953-54 can be better described in the Directors' own words. In their report to the shareholders, they observe thus:

"With an easier supply position, buyers are becoming more selective and competition is expected to become keener. Under such conditions, the sales opportunity depends on the quality of the products and the service reputation. The Directors are satisfied that the products which the Company handles, and the manufacturers, it represents, are the best and have the finest possible reputation. This, in conjunction with the Company's highly qualified technical and commercial staff, and its extensive service facilities, makes it destined to play a major role in the execution of India's Five-year Plan, in development of agriculture, building of highways and village roads, producing more electric energy, and generally developing industry and raising the standards of living of the people. With these great opportunities to serve—and the Company's ability to render the service—the Directors view the future with confidence."

KOLAR GOLD MINING COMPANIES

PROFITS SHRINK DESPITE HIGHER PRODUCTION

THE Directors' report and statement of accounts of the four Kolar Gold Field Mining Companies, namely, the Mysore Gold Mining Company (K.G.F.) Ltd., the Champion Reef Gold Mines of India (K.G.F.) Ltd., the Nundydroog Mines (K.G.F.) Ltd., and the Ooregum Gold Mining Company of India (K.G.F.) Ltd., for the year ended 31st December, 1952, together with the addresses of the Chairman and Managers to the shareholders, extracts from which are published elsewhere in this issue, provide an interesting study on the economics of gold production in India, inasmuch as the Companies constitute, as a group, the largest gold producer in India. For the purpose of such a study, an analysis of the working of individual companies is not necessary, but it is not entirely purposeless. It is, therefore, proposed to confine this brief review to the salient features of the results of working of the four companies.

A comparative study of the Companies' results for the year under review with those for the previous years has been rendered a little difficult by (1) the conversion of the sterling companies, which they were two years back, into rupee companies, and (2) the changes in their financial year-end, once from December to March and from March back again to December. However, a rough idea of the progress can still be gained from a comparison with the results for the previous nine months. Such a comparison reveals that, despite the larger quantity of gold extracted, the profit shows a considerable shrinkage, the main contributing factor for such a setback being the sharp drop in the price of gold.

The aggregate quantity of ore milled by the four Companies during the year under review amounted to 711,108 tons, as against 527,945 tons for the previous nine months. From this 243,629 ounces of gold were extracted, which is proportionately higher than those of 168,994 ozs., for the previous period. The production would have been higher still but for the rockbursts and fire in the mines of Champion Reef which seriously affected the output. The cost of production of this Company was, therefore, higher by nearly Rs. 10 per ton at Rs. 65-8 per ton, while, in the case of the other three Companies, the cost was lower, thanks to the higher rate of production. The cost of production of Mysore Gold was Rs. 64-13, as against Rs. 66-12 per ton, Nundydroog Rs. 43-8 (Rs. 46-11) and Ooregum Rs. 49-10 (Rs. 53-12) per ton. These costs exclude cost of development. The average price of gold realised during the year was Rs. 237-8 per ounce, which as compared with that realised in the previous nine months shows a decline of nearly Rs. 58 per oz., or 19 per cent. The royalty paid to the Mysore Government on the net sale proceeds amounted to Rs. 28.86 lakhs for the 12 months under review, as against Rs. 28.54 lakhs paid for the preceding nine months. The gross profit earned amounted to Rs. 76.72 lakhs, which is lower, both absolutely and relatively, than that of Rs. 98.69 lakhs earned in the previous period under comparison. The sum of Rs. 98.69 lakhs of the previous period, it may be noted, was arrived at after taking into account the sum of Rs. 13.95 lakhs being the contribution to the Mysore Government, other than royalty, in terms of the Companies' agreement with the State Government (arrived at in May, 1949, at the time of the transfer of control and management of the Companies from London to Mysore State) for a share of the profit in replacement of the gold duty. There was no such payment during the year under review and to this extent there was a saving for the Companies. If there had been any such contribution, the gross profit would have been much lower. The provision for taxation was lower at Rs. 23.88 lakhs (Rs. 44.08 lakhs). An aggregate sum of Rs. 40.86 lakhs (Rs. 39.53 lakhs), representing 8.6 per cent. of the total cost or 53.2 per cent. of the gross profit, has been set aside for depreciation and development reserve. These appropriations leave a sum of Rs. 10.31 lakhs for the three Companies, Mysore Gold, Champion Reef and Nundydroog, as against Rs. 12.79 lakhs for all the four Companies in the previous period. The whole of this was utilised to pay dividend to the shareholders of the three Companies. The dividend of Mysore Gold was maintained at 6 per cent. per annum, while that of Champion Reef was reduced from 20 per cent. to 6 per cent. per annum. The dividend of Nundydroog was, however, raised from 6 per cent. to 7.5 per cent. per annum. Ooregum Gold had to pass over the dividend, as in the previous period.

During the year under review, the Companies spent Rs. 33.36 lakhs on capital expenditure.

The operations of the Ooregum Gold Mining Company have since been discontinued, as the management has found it impossible to continue them as a separate unit. The circumstances leading to such a position and the steps taken by the Directors to lease the mine to Champion Reef are explained by the Chairman in his address to the shareholders, referred to at the outset.

Points From The Chair

Official Intervention in Private Industry

"IF I may be permitted to refer to one of the existing disincentives, it is the amount of official intervention that industry, in the private sector, has daily to cope with, from womb to tomb. Practically every industrial concern of any consequence to-day feels obliged not only to employ extra staff to cope with the growing volume of inquiries from and correspondence with Government offices and officials but has, in addition, either to maintain a representation in New Delhi or arrange pilgrimages to that costly capital or both. This is not intended as a criticism of Government or its helpful, competent and hard-worked officials. It is realised that part of such intervention is perhaps unavoidable in a planned economy. One hopes, however, that it may be found possible to remove or reduce a sizable proportion of it, and thus lighten the handicaps it imposes."

M. A. SREENIVASAN,
Kolar Gold Field Mining Companies.

Inadequacy of Life Insurance Cover

"A vast majority of the people have not yet been covered by life insurance. It is our duty as insurers to seek an answer to the 'why' and 'wherefore' for this state of affairs and to make efforts to remedy the situation as far as it may lie in our power. Some of the reasons are obvious, namely, (1) lack of insurance habit, (2) comparative high cost of insurance, (3) lack of educative propaganda, (4) lack of efficient service to the policyholders, (5) illiteracy, and (6) lack of adequate banking and transport facilities in the rural areas. Some of the ways in which we can assist in resolving these difficulties and make available the benefits of life insurance to larger sections of the Indian population than has been the case so far, are such as can be rapidly adopted by all insurers. The method of recruitment of agents needs to be considerably improved and the agent should be given the necessary training to enable him to make his career an honourable calling and himself a respected member of the society. The agent should have faith in his profession and know the benefits of what he is selling and he must know the art of salesmanship. It is the duty of the life insurers to provide such training for all its workers through life insurance institutes at important centres throughout India and to make it a rule to appoint workers who have had the necessary training in preference to others."

A. L. CHANDAVARKAR,
Bombay Co-operative Insurance Society Ltd.

Misconception About Coffee Board

"I wish I could be as confident regarding the future of coffee prices. As shareholders may be aware, an unfortunate and, within my knowledge, an unwarranted suspicion has been implanted in Government's minds that the Indian Coffee Board is an unholy alliance of producers with no other object than to influence prices to the benefit of the producers and against the interest of consumers. Prices have certainly risen in recent years, but so also have costs, the latter largely as a result of Government's own idealistic legislation. The role of the Coffee Board has thus been the difficult one of striking the mean between a price which gives the planter a fair, though not a lavish, return for his investment and labours, and which at the same time does not provoke buyers' resistance. In my view, this object has been most successfully achieved and I hope that this will be fully demonstrated when the enquiry which Government are undertaking into production costs is completed, and that, thereafter, the suspicion against producers will abate."

W. W. KILGOUR,
Savamalai Estates Ltd.

Responsibility of Textile Industry

"Much has been said and written about the mill industry, as a whole, in recent months and I do not propose to go over details of the various factors affecting our business, which must already be well known to you. It is very pleasing that Government have lifted price controls on many varieties of cloth and have shown a more realistic attitude towards exports. It is hoped that this policy will continue and it is up to the mill industry to see that their business and actions are managed in such a way that Government are encouraged still further to relax controls and restrictions and so leave the mill industry to manage their own affairs."

F. H. KEMPLE,
Simplex Mills Co., Ltd.

Competitive Position of Natural Rubber

"It was reassuring, however, to read the statement made by the American manufacturers at the Rubber Study Group meeting, held in Copenhagen in May, to the effect that there was not likely to be a surplus of natural rubber during the next 12 months, in view of the current competitive price situation between natural rubber and GR-S synthetic. This would seem to indicate that, for the time being, the present price is a floor price, but, unfortunately, as I have just said, this is not likely to be remunerative to producers generally. We must, therefore, seek for some other assistance and I suggest that the Malayan Government should help producers by making reductions in export duty and other Government levies."

P. B. L. COGHLAN,
Central Perak Rubber Co., Ltd.

(*Concluded from page 71*)

will profit by the experience of Britain in regard to the incidence of this tax on small enterprises:

Of the 56,638 industrial establishments that make returns to the Ministry of Labour—and every establishment having more than 10 employees must submit certain figures to the Ministry each year—some 42,644 employ fewer than 100 workpeople. These comparatively small firms employ nearly one-quarter of all the employees in the industries represented—1,547,000 out of 7,180,000. A much bigger batch of employees comes in the next range. There are 13,014 establishments employing between 100 and 999 people and the total of workers there is 3,409,000. Really big concerns employing more than 5,000 people number no more than 71 and they have 541,000 workers on their pay-rolls. Altogether in the smaller units of industry women account for about one-third of the total staff; in big concerns having more than 2,000 workers, the proportion of women drops to some 20 per cent.

In a very broad way one can go into the figures further and deduce where small—and private—enterprise still has the strongest hold. London and the south-east region of the country, where the tendency is for many of the lighter industries to congregate, have 10,600 firms (out of a total of 13,400) employing less than 100 people each.

The Midland region, with its formidable concentration of basic and big engineering industries, still has 4,950 of these quite small firms, out of a total of 6,550. The North Midlands have 3,300 small ones out of a total of 4,400. The north-western region, with all its textile and engineering interests, has 6,350 small firms out of 9,000. And Scotland has 4,100 out of 5,300.

All this, whether an individual M.P. recalls the actual figures or not, is a kind of thing that must be at the back of his mind when he goes about his parliamentary duties. There was interesting reflection on some of these considerations in the course of a long debate in the committee of the House of Commons on the Finance Bill. A Conservative member, Sir Wavell Wakefield, took up a complaint that has long been heard among those concerned with the so-called family manufacturing businesses—those, generally of comparatively small size, whose shares are not usually on the market and in which there are strong family traditions of ownership and management—that estate duties press unfavourably and very heavily upon them when any of their principals dies.

The small family business, he said, was the home of experiment in new processes and inventions and, at a time when more intensive production was vital, it was a serious matter that a high proportion of those businesses should have to be disorganised to meet death duties. Sir Wavell wanted the Government to provide that estate duties should be lightened in such cases.

All of his case was not admitted on the Labour side of the House. Mr. Austen Albu, for instance, while admitting that small businesses ought to be encouraged, said that they could make a major contribution to the economy of the country, and they usually continued after the deaths of private owners. One of the biggest defects of industry, and especially of private industry, he argued, was nepotism and "the handicap of family ownership."

All these points were argued out with the Government spokesman, Mr. Reginald Maudling, Economic Secretary to the Treasury, coming in at the end to remark that what was in fact being asked for was a special discrimination in taxation—a matter that should always be approached with great caution. But he acknowledged that the particular section of the Act under which these things were controlled might not, if a widespread feeling were well based, be working justly. And the Chancellor of the Exchequer himself, with his official advisers, was going to enquire into the whole business of assessment of death duties. The hopes of small family business are, therefore, now put into what should turn out to be a very interesting enquiry.

KOLAR GOLD MINING COMPANIES

(*Concluded from page 69*)

"The sudden fall in the price of gold in February, 1952, and the steps being taken to counteract its effects were described last year. The tonnage milled was increased by over 10 per cent. compared with the previous twelve months by working the mill to capacity throughout the year. To increase the mill capacity, two light stamp batteries in the old north mill were reconditioned and put into operation in December, thereby increasing the total number of heads available to 80. In addition, the grade was also increased, and the gold returns were 13,048 ounces, or nearly 24 per cent. higher than in the previous twelve months."

Mr. M. A. Sreenivasan on behalf of the Directors and shareholders and Mr. J. K. Lindsay speaking for the Managers expressed appreciation and thanks to the Superintendents of the mines and their staffs for the efficient and energetic manner in which they had carried out their duties. Mr. Sreenivasan also expressed the Boards' appreciation of the work of the Managers, Messrs. John Taylor and Sons (India) Limited.

The report and accounts of each of the four Companies were adopted and the following dividends were declared.

Mysore Company, 6 per cent.; Champion Reef Company, 6 per cent.; Nundydroog, 7½ per cent. and the Ooregum Company, nil.

POWER CUT AFFECTS WORKING OF METTUR INDUSTRIES

SONE VALLEY CEMENT RAISES DIVIDEND DESPITE LOWER PROFIT

Mettur Industries Ltd.

THE directors of the above Company (Managing Agents: Messrs. W. A. Beardsell & Co., Ltd., Madras) submit the audited accounts of the Company for the year ended 31st March, 1953.

The accounts show that the net profit for the year, after providing for depreciation and reserving for taxation Rs. 10,50,000 (Rs. 14,50,000) and taking into account the amount of Rs. 50,249 (Rs. 22,690) brought forward from 1952, amounts to Rs. 15,27,484 (Rs. 20,50,249), the directors recommend the payment of a dividend of 12½ (12½) per cent. free of tax, amounting to Rs. 7,50,000 (Rs. 7,50,000), the transfer to general reserve Rs. 2,00,000 (Rs. 5,50,000) and to fixed assets replacement reserve Rs. 5,00,000 (*nil*) leaving a balance to be carried forward of Rs. 77,484 (Rs. 50,249 after providing Rs. 2,50,000 for raw materials fluctuation reserve and Rs. 4,50,000 for dividend equalisation fund).

The year's working has been influenced to a large extent by power cuts and a little more than 25 per cent. of the total possible working hours were lost on this account. In order to minimise the effects of continued power cuts, a diesel generating set has been installed capable of supplying about 50 per cent. of the Mills normal power requirements. This set was not in operation during the year, to which these accounts relate, but it is hoped that the benefit will be felt in the current and future years. The keen demand for our cloths has continued throughout South India. Under these circumstances the directors consider the results of the past year very satisfactory and, even though the net profit is less than the previous year, feel justified in recommending a dividend of 12½ per cent. As the plant and machinery is now largely depreciated, a fixed assets replacement reserve account has been established to which a sum of Rs. 5,00,000 has been appropriated.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	60,00,000	Block ...	16,97,586
Reserves ...	62,50,000	Stock-in-trade	20,36,437
Provision for taxation ...	3,62,047	Stores, tools, etc. ...	14,54,673
Liabilities ..	14,56,927	Debts, deposits and advances ...	10,82,092
Profit and loss account ...	77,484	Investments	82,285
		Cash ...	77,93,385
Rs.	1,41,46,158	Rs.	1,41,46,158

Sone Valley Portland Cement Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Martin Burn Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December, 1952.

Cement produced during the year 1952 amounted to 2,32,640 tons, as compared with 2,50,330 tons for 1951, thus showing a decrease of 17,690 tons. Despatches aggregated 2,38,657 tons, as against 2,45,082 tons or a decline of 6,425 tons. The decrease in production is principally due to the failure of bearings of No. 2 dry compound mill which curtailed output for some weeks.

The limestone quarries have been further extended and developed to ensure the supply of the full quantity of the Company's increased limestone requirements. Coal raised from the Hutar Colliery totalled 39,214 tons and 34,239 tons were delivered to the works. With the progressive development of the mines and the improved transport facility, the raisings and deliveries of coal to the works have gone up to 5,000 tons p.m. since the beginning of 1953. Coal now being raised from the new pit, is of better quality and will enable the Company to use a greater tonnage of coal from its own property. The labour position was satisfactory and cordial relationship has been maintained throughout the year.

During the year under review the price of cement bags generally declined and there were violent fluctuations at lower levels. This led the Government of India to revise the packing price under an evolved formula and the rate fixed thereunder was much below the actual cost to the industry. Joint and individual representations were made to Government by the industry for a revision in the new method of the fixation of the price for packing material. Although the Government of India refused to revise their decision in the matter they have, however, referred this question and also that of an increase in the selling price of cement to the Tariff Commission. The investigation by the Tariff Commission started at the beginning of this year, and concluded at the end of April, 1953. The report by the Commission and Government's decision on their recommendation is now awaited.

After charging all expenses including managing agents' remuneration, depreciation and making provision for taxation and bonus to staff and labour for the year the net balance amounts to Rs. 10,56,818 (Rs. 12,50,898). But of this reserves amounting to Rs. 3,50,000 (Rs. 6,00,000) have been made, leaving a balance of Rs. 7,06,818 (Rs. 6,50,898) which together with Rs. 81,840 (Rs. 30,942) brought forward from the previous year amounts to Rs. 7,88,658 (Rs. 6,81,840) which is available for distribution. The directors recommend a dividend of 10 (8) per cent. for the year, free of tax, absorbing Rs. 7,50,000 (Rs. 6,00,000) and the balance of Rs. 38,658 (Rs. 81,840) to be carried forward.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	75,00,000	Block ...	34,76,831
Reserves ...	19,85,000	Stocks ...	15,73,274
Provision for taxation ...	17,13,061	Stores ...	38,81,099
Liabilities ...	25,92,054	Other assets	3,94,058
Profit and loss account ...	7,88,658	Debts, deposits and advances ...	39,08,517
		Investments	4,66,800
		Cash ...	8,78,194
Rs.	1,45,78,773	Rs.	1,45,78,773

Colaba Land and Mill Co., Ltd.

The directors of the above Company (Managing Director: Mr. V. J. Pilani, Bombay) submitted the audited accounts of the Company for the year ended 31st December, 1952.

The working during the period resulted in a loss of Rs. 25,54,080 (profit of Rs. 15,02,037). Deducting the revenue from land and property Rs. 1,99,034 (Rs. 1,90,450) and the balance of profit brought forward from last year of Rs. 9,066 (loss of Rs. 16,87,421) the net loss carried forward to next year, amounted to Rs. 23,49,980 (profit of Rs. 5,066).

The directors report that the year's working resulted in a loss of Rs. 23,49,980 (profit of Rs. 15,02,037). The consumption of large quantities of high-priced foreign cottons which the mill was compelled to take up and use at a time when the selling prices of cloth and yarn registered a serious decline; the slackness in demand for cloth and the disposal of goods at a discount to avoid accumulation of huge stocks; the payment of bonus to workers for the year 1951 not provided for in the last year's account; the temporary prohibition of exports; the incidence of fresh burdens on the mill in the shape of contributions to the State Insurance Fund and Workers' Provident Fund; the imposition of multi-point sales tax, and the extra payment for electric power—these were the main causes which contributed to the above loss.

During the year there was a heavy slump in cotton textiles. The price and distribution controls were lifted on such popular varieties of cloth as *dhotis, saris*, mulls, voiles, poplins, etc., but the price control continued on certain other varieties of cloth and also on yarn. The combers which were imported during the previous year were installed. The addition to the machinery and replacements were to the tune of Rs. 3,62,107. Provision to the extent of Rs. 2,03,000 were made for depreciation for the year.

A bonus to workers equivalent to 25 per cent. of their basic earnings for the year 1951 amounting to Rs. 3,14,500 was paid in terms of the consent award of the Industrial Tribunal for the year. No provision was made for bonus to workers for the year 1952.

The cut on the consumption of electrical energy imposed by the Government of Bombay due to power shortage during the previous year continued for the major part of the year and the directors had to obtain the requirements of electric power from "The Power Pool" in order to avoid a shut down of the mill. This additional power costs the Company Rs. 67,419. No generating sets were installed.

The introduction of Employees' State Insurance and the Workers' compulsory Provident Fund, burdened the Company with an additional expenditure of Rs. 22,172 and Rs. 28,634 respectively, during the year. The land department yielded a profit of Rs. 1,99,034 (Rs. 1,90,450).

The Government is still retaining 14 plots in Scheme 'A' and one plot being plot No. 17 has been leased out and the building thereon is nearly completed. As regards Scheme 'B' the same is now fully developed and no plots are available for lease. In Scheme 'C' the Government has released 5 plots and is still retaining 12 plots. Out of the 5 plots so released possession of 3 plots were given to the lessees and the remaining 2 plots are available for lease. The directors have been calling for offers from the public for the same. In regard to the proposed acquisition of the land in Scheme 'A' by the Government of Bombay for the purpose of a Municipal School and a Fire Bridge Station and the Company's claim for compensation thereunder, proceedings are still in progress and it may take some time for the Award of the Special Land Acquisition Officer.

The Company's property including buildings, machinery and stocks has been insured against fire and riot for Rs. 2,67,34,800 and profit and standing charges of the Company have been insured for Rs. 15,00,000 to cover a maximum stoppage of 24 months, such insurance to run from 1st April, 1953 to 31st March, 1954.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	49,00,000	Block ...	1,10,40,660
Reserves ...	76,79,642	Stock-in-trade	43,36,973
Provision for taxation ...	1,36,355	Stores and spare gear	8,39,784
Liabilities ...	65,60,734	Debts, deposits and advances ...	6,32,677
		Investments	47,000
		Cash ...	30,160
		Profit and loss account ...	23,49,980
Rs.	1,92,77,234	Rs.	1,92,77,234

Oodlabari Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Octavius Steel & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December, 1952.

A crop of 7,928 maunds was manufactured and disposed of for sale in Calcutta for export 6,341 maunds, for sale in Calcutta for internal consumption 1,515 maunds, and for sale locally for internal consumption 72 maunds. The teas realised an average price of Re. 0-15-1 a lb. as compared with Re. 1-6-5 a lb. obtained for the previous season's crop of 8,151 maunds. Hail damage was sustained in the spring of 1952 resulting in an estimated loss of 1,456 maunds of green leaf. The Company's export quota for season 1952 was 5,550 maunds. No extensions were put out during the year and the area under cultivation remains unchanged at 578.33 acres, as registered with the Indian Tea Licensing Committee at 31st December, 1952.

The revenue account shows a loss of Rs. 1,74,714 and after adding to this the manager's planting commission Rs. 1,346, gratuity to retired manager Rs. 19,200, loss on sale of investments Rs. 3,549 and depreciation Rs. 28,937, there is a total of Rs. 2,27,746. After deducting from this amount the interest on investments (net) Rs. 3,174, sale of car Rs. 450, forfeited dividends Rs. 2,175, transfer from contingencies account Rs. 10,000 and excess provision for taxation written back Rs. 15,000, there is a loss for the year of Rs. 1,96,947. After deducting from this the credit balance of Rs. 30,888 brought forward from the previous year and transferring Rs. 1,70,000 from reserve account there is a credit balance of Rs. 3,941 on profit and loss account which is carried forward.

The unsatisfactory result of the season's working is mainly attributable to the depressed state of the tea market in 1952, which resulted in the Company's teas fetching As. 7 per lb. less than in the previous year. In addition higher wages had to be paid in accordance with the provisions of the Minimum Wages Act.

The crop for the season 1953 has been hypothecated to the Mercantile Bank of India Ltd. to secure overdraft facilities to the extent of Rs. 3,00,000 which is the limit of the present borrowing powers of the Board. Largely owing to the loss sustained by the Company in the 1952 season it will probably be necessary for a few months during the current season to exceed that amount in order to finance the Company's operations, and the shareholders are requested to sanction an increase in the borrowing powers accordingly.

The estimates for season 1953 are as follows:—

Garden	Crop	Expenditure		Total
		Garden	Calcutta	
	Mds.	Rs.	Rs.	Rs.
Oodlabari ...	7,206	5,25,971	1,09,140	6,35,111*

*Excluding expenditure of a Capital nature estimated to amount to Rs. 28,215.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	3,20,000	Block ...	6,16,149
Reserves ...	4,10,000	Stocks ...	2,76,439
Provision for taxation ...	87,758	Stores ...	1,65,341
Liabilities ...	4,30,152	Debts, deposits and advances ...	1,12,298
Profit and loss account ...	3,941	Investments	78,678
		Cash ...	2,948
Rs.	12,51,851	Rs.	12,51,851

Seeyok Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Duncan Brothers & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December, 1952.

The accounts disclose a loss of Rs. 1,25,216 (Rs. 41,491). On transfer of this sum to profit and loss account and after sundry adjustments, including a transfer of Rs. 1,20,000 (Rs. 17,500) from revenue reserve, there is a balance at credit of profit and loss account of Rs. 311 (Rs. 842) to be carried forward.

Enhanced production costs following implementation of the Minimum Wages Act coupled with lower prices obtained for produce on a depressed market contributed largely to this unfavourable result.

Crop was 1,779 maunds as compared with 2,225 maunds in 1951. The average selling price was Re. 1-12-7 per lb. against Re. 1-14-2 per lb. in the previous year. Planted area remains at 389.32 acres.

Estimates for 1953 provide for a crop of 2,000 maunds at an outlay of Rs. 3,07,670 including inland freight and sale charges.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	3,00,000	Block ...	2,60,000
Reserves ...	63,990	Stores and supplies ...	63,137
Provision for taxation ...	11,106	Tea sales receivable ...	88,219
Liabilities ..	81,298	Advances and deposits ...	38,958
Profit and loss account ...	311	Cash ...	6,091
Rs.	4,56,705	Rs.	4,56,705

Engo Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st December, 1952.

After providing Rs. 19,332 (Rs. 15,002) for depreciation, the season's working resulted in a loss of Rs. 86,363 (Rs. 11,661). After bringing in the balance from last year and charging managing agents' minimum commission, there remains a balance of Rs. 85,600 (credit of Rs. 8,763) at debit of profit and loss account. The directors recommended that no dividend be declared and that the debit balance of Rs. 85,600 (credit of Rs. 2,763) in the profit and loss account be carried forward.

A total crop of 3,075 maunds was secured, which was sold at an average price of Re. 1-6-10 per lb. This compares with a crop of 2,726 maunds manufactured in season 1951, which sold at an average price of Re. 1-10-5 per lb. The heavy fall in the tea market resulted in most of your Company's crop being sold at below cost of production.

Estimates for the current season have been framed for a crop of 3,075 maunds to cost Rs. 2,89,330 and it is hoped that the average sale price to be received for the 1953 crop will be in excess of the cost of production. Current market rates are considerably higher than was the case when the major part of the 1952 crop was sold and there is reason to hope that the results for 1953 will show an improvement compared with the previous season.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	1,20,000	Block ...	2,07,103
Reserves ...	1,89,000	Stock ...	2,14,722
Provision for taxation ...	22,220	Stores ...	61,706
Liabilities ...	3,23,841	Debts, deposits and advances ...	70,777
		Investments	278
		Cash ...	14,875
		Profit and loss account ..	85,600
Rs.	6,55,061	Rs.	6,55,061

Mim Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December, 1952.

After providing Rs. 16,383 (Rs. 16,741) for depreciation, the season's working resulted in a loss of Rs. 38,769 (profit of Rs. 1,30,781). After bringing in the balance carried forward from last year and charging managing agents' minimum commission, there remains a balance of Rs. 3,160 (credit of Rs. 37,609, after paying Rs. 39,750 as dividend) at debit of profit and loss account. The directors recommend that no dividend be declared and that the debit balance in the profit and loss account be carried forward.

A total crop of 2,307 maunds was secured, which has been sold at an average price of Rs 2-6-3 per lb. This compares with a crop of 2,157 maunds harvested in season 1951 which sold at an average price of Rs. 3-4-0 per lb. The heavy fall in the tea market particularly affected Darjeeling prices and most of the Company's crop sold at below cost of production.

Estimates for the current season have been framed for a regulated crop of 2,128 maunds to cost Rs. 3,41,895 and it is hoped that the average sale price to be received for the 1953 crop will be in excess of the cost of production. Current market rates are higher than was the case when the major part of the 1952 crop was sold and there is reason to anticipate that the results for 1953 will show an improvement compared with the previous season.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	1,59,000	Block ...	1,94,354
Reserves ...	2,35,000	Stocks ...	1,32,618
Provision for taxation ...	44,847	Stores ...	57,180
Liabilities ...	69,018	Debts, deposits and advances ...	43,415
		Investments	9,700
		Cash ...	67,440
		Profit and loss account ...	3,160
Rs.	5,07,865	Rs.	5,07,865

N.B.—Figures within brackets relate to the corresponding period of the previous year.

COMPANY MEETINGS AND DIVIDENDS

ORIENTAL COAL CO., LTD. Annual General Meeting, Calcutta, 15th July, 1953. Transfer books closed from 6th to 15th July, 1953, both days inclusive.

BOMBAY UGANDA CO., LTD. Annual General Meeting, Bombay, 15th July, 1953. Dividend: Rs. 4 per share, free of income-tax. Transfer books closed from 4th to 15th July, 1953, both days inclusive.

METAL BOX COMPANY OF INDIA LTD. Annual General Meeting, Calcutta, 16th July, 1953. Dividend: Re. 1 per share (including interim dividend of As. 8 per share). Transfer books closed from 2nd to 17th July, 1953, both days inclusive.

OODLABARI CO., LTD. Annual General Meeting, Calcutta, 17th July, 1953. Dividend: *Nil*. Transfer books closed from 10th to 17th July, 1953, both days inclusive.

MANABARRIE TEA CO., LTD. Annual General Meeting, Calcutta, 17th July, 1953. Dividend: *Nil*.

MIM TEA CO., LTD. Annual General Meeting, Calcutta, 17th July, 1953. Dividend: *Nil*. Transfer books close from 13th to 17th July, 1953, both days inclusive.

LARSEN AND TOUBRO LTD. Annual General Meeting, Bombay, 17th July, 1953. Dividend: Re. 1 per share, free of income-tax. Transfer books closed from 2nd to 17th July, 1953, both days inclusive.

JESSOP & CO., LTD. Annual General Meeting, Calcutta, 17th July, 1953. Dividend: Re. 1-8 per share. Transfer books closed from 29th June to 17th July, 1953, both days inclusive.

BOKAKHAT TEA CO., LTD. Annual General Meeting, Calcutta, 17th July, 1953. Dividend: *Nil*. Transfer books closed from 10th to 17th July, 1953, both days inclusive.

DALMIA CEMENT (BHARAT) LTD. Annual General Meeting, Dalmiapuram (Dist. Tiruchirapalli), 20th July, 1953. Dividend: As. 10 per ordinary share. Transfer books closed from 1st to 20th July, 1953, both days inclusive.

SHANKAR SUGAR MILLS LTD. Annual General Meeting, Calcutta, 20th July, 1953. Transfer books closed from 8th to 20th July, 1953, both days inclusive.

SHREE DIGVIJAY CEMENT CO., LTD. Annual General Meeting, Sika, 21st July, 1953. Dividend: Rs. 6 per share. Transfer books closed from 4th to 21st July, 1953, both days inclusive.

BURHANPUR TAPTI MILL LTD. Annual General Meeting, Bombay, 24th July, 1953. Transfer books close from 22nd July to 5th August, 1953, both days inclusive.

BOMBAY SUBURBAN ELECTRIC SUPPLY LTD. Annual General Meeting, Bombay, 24th July, 1953. Dividend: Rs. 7 per share (including *ad interim* dividend of Rs. 3 per share) payable on and after 6th August, 1953. Transfer books close from 13th to 24th July, 1953, both days inclusive.

HIND MILLS LTD. Annual General Meeting, Bombay, 27th July, 1953. Transfer books close from 13th to 27th July, 1953.

KALYANMAL MILLS LTD. Annual General Meeting, Indore, 30th July, 1953. Transfer books close from 23rd July to 6th August, 1953, both days inclusive.

MYSORE GOLD MINING CO. (K.G.F.) LTD. Dividend of As. 9-3/5 per share, for the year ended 31st December, 1952, payable on 28th August, 1953.

CHAMPION REEF GOLD MINES OF INDIA (K.G.F.) LTD. Dividend of As. 9-3/5 per share, for the year ended 31st December, 1952, payable on 9th October, 1953.

NUNDYDROOG MINES (K.G.F.) LTD. Dividend of As. 12 per share, for the year ended 31st December, 1952, payable on 18th September, 1953.

UNION COAL CO., LTD. Dividend of Re. 1-4 per share for the half-year ended 31st December, 1952.

COMPANY REGISTRATIONS

KOLHAPUR ELECTRIC SUPPLY CO., LTD. (Managing Director: Mr. H. P. Ghatge.) Business: Generate and Supply Electric Power. Authorised capital: Rs. 10,00,000. Private company. Address: Bhausingji Road, Kolhapur City.

DAREL (INDIA) LTD. (First Director: Mr. M. A. Parikh.) Business: Importers, Exporters and Merchants. Authorised capital: Rs. 5,00,000. Private company. Address: Yusuf Building, 43, Mahatma Gandhi Road, Fort, Bombay.

GERMAN REMEDIES AND TRADING CO., LTD. Business: Chemists, Druggists and Dealers in Chemicals, Foodstuffs, Oils and Pharmaceutical Products, etc. Authorised capital: Rs. 5,00,000. Private company. Address: Queen's Mansions, 7, Prescott Road, Bombay.

AMERICAN LETTER

(*Concluded from page 53*)

sations could possibly be made under the new immigration statutes.

So far as the American money markets are concerned, there continues widespread complaint, although some improvement was noted when the Federal Reserve Banks, with the approval of the Treasury, decided to reduce reserve requirements of member-banks the other day. Since that time, fluctuations in bond prices have been fewer and not so great and Treasury obligations have somewhat firmed. Also, the Federal Reserve is back in open market operations again. This has brought forth support of the entire list of Government obligations and has created a better atmosphere, even though portfolio losses resulting from lower bond prices generally continue as a serious problem for the smaller country banks and insurance companies.

—*All Rights Reserved.*

ANNUAL MEETING OF ROHTAS INDUSTRIES LIMITED

(*Concluded from page 59*)

etc. These are not the only commodities for movement. The wheel of industry must be kept moving. Unfortunately, bottlenecks that did not exist before have been created. Traffic on the Eastern Railway, for instance, via Niani is only open for priority traffic upto a few classes and other priority items are not being moved at all. The sidings at Dalmianagar, which, along with the private sidings, including Jamshedpore and Kulti, handle large traffic, have had to remain closed for all non-preferential traffic and preferential traffic beyond class VIII for 24 out of 30 days in June. This situation would not have been tolerated had the railways been worked by a private agency. The matter deserves Government's prompt attention. The cost of transport is rising without adequate facilities being made available. The cost should have actually come down, instead of steadily rising, since there is increasing utilisation of the capacity. I do not wish to go into details here. It is necessary to remember that increasing industrial development and marketing requirements result in pressure on the railway transport and the railways have to be geared up to meet the growing demand efficiently and economically.

Labour Relations

"Your Company is planning for extension of the labour colony with the co-operation of the Central and State Governments. During the next three-four years it is proposed to build up quarters and provide various amenities costing about 40 to 50 lakhs of rupees.

"It is a matter for gratification that labour relations in Dalmianagar during the year have been more cordial. While the question of bonus for the year 1950-51 was pending before adjudication, the management and the recognised union of the Company entered into negotiations for settlement by mutual agreement in the spirit of the new approach initiated by our Central Labour Minister. The voluntary agreement thus entered into was examined by the Adjudicator on merits and, considering it fair, he gave an award on the basis of the agreement. But disturbing forces are still at work. A registered, but not recognised, union of the place is questioning the validity of the agreement, as it was not a party either to the agreement or to the adjudication, and has taken the matter to the Appellate Tribunal. This attitude is regrettable. It will vitiate the fundamental basis of collective bargaining and mutual agreement. Faith in the new approach will also be shattered, as no management will be inclined to enter into such negotiations or agreement. As this method cannot successfully implement the desirable policy of direct approach, on which industrial relations in the country are to be harmonised, the outlook of the trade unions has to be chastened up. The modified Labour Relations Bill is expected to embody the principle of collective bargaining and mutual agreement. It is hardly necessary to point out that the new legislation should contain adequate provisions to avoid developments that would cut at the root of the new approach. I would like to express the hope that, in Dalmianagar, mutual confidence between the management and labour will grow in the common good of the industrial undertakings concerned.

"With these words, I thank you all. I am sure you will join with me in extending a hearty vote of thanks to the staff and labour who have combined to support the effort of the management to improve the working results of your Company."

MONEY RATES DECLINE

(From Our Own Correspondent)

BOMBAY, 8th July

There was a further inflow of funds from mofussil centres, with the result that the supply of money in the short-term money market increased. There were more lenders than borrowers and the interest rates, therefore, fell sharply. In the inter-bank call sector, money was offered at as low a rate as 1¼ per cent., as against 2¼ per cent. last week. On some days, money was unlendable after clearing hours of banks. House money was freely available at 2¼ to 2 per cent., as against 2¼ to 2¾ per cent. last week. The short-term deposits were quoted at 2¼ per cent. for one month, 2¼ per cent. for two to five months, while the rates for six to twelve months ranged from 2¼ to 2¾ per cent., as against 2 to 2¼ per cent.

It will be noted from the above rates for inter-bank call money and house money that the gap between the two which was almost negligible during the previous weeks has widened. In other words, whereas little difference was noticed between the two rates for some time past, during the week under review, the inter-bank call money, which is really in the nature of surplus funds with banks, was offered at distinctly lower rates than those at which house money was on offer.

The outstanding features of this week's sale of three months' Government of India Treasury Bills were the sharp rise in the amount offered, the largest for some months past, and the distinct fall in the rate to a level which is the lowest for the current year so far. The amount offered, in response to an invitation for Rs. 100 lakhs, was as much as Rs. 302.25 lakhs, as against Rs. 270.50 lakhs in the previous week, and compared with the previous highest of Rs. 512 lakhs in the second week of November, 1952 offered against an invitation for Rs. 2 crores. The average rate of accepted tenders was Rs. 2-6-2 per cent. per annum, the lowest rate since the last sale in December, 1952, when the rate was Rs. 2-5-11 per cent. as compared with the rate for the previous week, it shows a drop of 4 pies per cent.

In distinct contrast to the aggregate contraction of Rs. 31.52 crores noted in the previous three weeks, the notes in circulation during the week ended 3rd July, 1953, show an increase of Rs. 3.51 crores. The Reserve Bank's statement for that week discloses a fall of Rs. 3.67 crores in notes held in the Banking Department. The decline of Rs. 13.09 lakhs in total notes issued has been offset by a similar fall in the rupee coin. On the assets side of the Issue Department, an increase of Rs. 10 crores in foreign securities is noted, accompanied by a similar fall in rupee securities. The former is due to the transfer from the Banking Department and the latter is accounted for by the sharp decline in investments noted in the Banking Department. The liabilities side of the Banking Department shows a decline of Rs. 14.28 crores in Central Government's deposits. Deposits of other Governments and banks are also down by Rs. 61.29 lakhs and Rs. 2.76 crores, respectively. A sharp fall of Rs. 19.42 crores is disclosed by "other liabilities." On the assets side, cash balances are lower by Rs. 3.73 crores and balances held abroad by Rs. 11.61 crores. Loans and advances to Governments show no variation, while other loans and advances reveal a decline of Rs. 7.99 crores, on account of a fall of Rs. 8.10 crores in advances to banks against usance bills. Investments are lower by Rs. 10.79 crores.

The Scheduled Banks' statement for the week ended 26th June, 1953, as compared with that for the previous week, reflects the return of funds and the comfortable position of banks. Demand deposits have gone up by Rs. 3.83 crores and time deposits by Rs. 2.93 crores. Inter-bank borrowings have dropped by Rs. 43.19 lakhs. Borrowings from the Reserve Bank have gone down by Rs. 10.67 crores and those from the Imperial Bank by Rs. 3.76 crores. Advances and bills purchased and discounted have declined by as much as Rs. 11.49 crores. Investments are up by Rs. 1.59 crores and cash balances (including money at call and short notice and balances with other banks in current account) by Rs. 3.97 crores.

The Gilt-edged market experienced another week of dull conditions, with hardly any variations in most of the issues. Despite the easy conditions in the money market, investment support was not forthcoming. Investors were inclined to await the announcement of the new State Loans which is expected in a few days' time. Even the 3½ per cent. National Plan Bonds had sellers, but, in the absence of buyers, there was no change in the rate, which stood at Rs. 98-5. 3 per cent. 1953-55 which is due for repayment on the 15th inst., stood unchanged at Rs. 100-1. 3 per cent. 1957 and 3 per cent. 1958 were placed at Rs. 98-5 and Rs. 98-3, respectively. 3 per cent. 1959-61 was an anna lower at Rs. 96-3. 3 per cent. 1963-65 was maintained at Rs. 92-7 and 3 per cent. 1964 at Rs. 92-6. 3 per cent. 1966-68 was quoted at Rs. 90-3 and 3 per cent. 1970-75 at Rs. 86-7. 3 per cent. 1986 Conversion Loan, which had moved up by an anna to Rs. 82-13 early in the week, reacted to Rs. 82-12 towards the close.

KIPS OFFTAKE SLOW

(From Our Own Correspondent)

MADRAS, 6th July

Arrivals of kips were moderate and offtake slow. Local prices ruled one penny above U.K. levels. Enquiries for inferior grade cow hides and buff calf were insistant, but buyers refused to accept increased prices.

In the London public sales, prices of tanned goat skins declined by 3d. to 6d. except for common tannages, and light weights suffered most. Tanned sheep skins advanced by 1s. to 1s. 6d. and semi-puimes by 6d. Commons were steady. Middle class, however, suffered a decline of 3d. to 6d.

BULLION IRREGULAR

(From Our Own Correspondent)

BOMBAY, 8th July

The trend of prices on the Bullion Exchange was erratic, but the undertone was generally subdued. The decline in prices of silver and gold noted in the previous week gathered momentum during the earlier half of the week under review and prices touched the lowest levels on Saturday for several weeks now. In the latter part of the week, however, both the metals steadied up to close well above the lowest levels, but a shade lower than the previous week's closing rates.

The earlier recession was attributed to the decline in offtake and larger arrivals. Bears were active and pushed down the rates. From Monday onwards, however, the downward movement was arrested and an upward reaction set in due to some enquiries in ready silver and short covering, and to reports of better offtake in gold on purchases by Calcutta operators. Arrivals of the yellow metal were from Mysore only and supplies from other sources were conspicuous by their absence. Even then, day-to-day fluctuations during the last three days were confined to a small range.

Silver for forward delivery (28th July settlement) opened at Rs. 154-7 and reacted to a low of Rs. 151-12 on Saturday, the lowest level since 6th April last. It, however, recovered to Rs. 153-6 yesterday. After an early weakening to Rs. 152-1, the white metal closed better at Rs. 153-3.

Ready silver (.996 Mint) began at Rs. 155-3 and, after receding to Rs. 153-2, finished at Rs. 154-3. The premium for ready metal over the forward which stood at As. 8 at the close of last week, widened to Re. 1-8 early in the week, but again narrowed to Re. 1 at the close. The floating stocks of silver are estimated at 1,000 bars. The daily average offtake was placed at 10 to 15 bars.

Gold for forward delivery (27th July settlement) opened at Rs. 87-9 and fell to touch a low of Rs. 85-11 on Saturday, the lowest since 2nd May, 1953. Thereafter, for reasons stated above, the quotations advanced to Rs. 87-4 to-day, before closing at Rs. 87-2.

Ready gold commenced at Rs. 88-14, receded to Rs. 86-13 on Saturday and wound up the week at Rs. 88-9. The floating stocks of gold are reported to be 20,000 tolas. The daily average arrivals were 3,000 tolas, while the offtake was 4,000 tolas on an average.

The international free market price of gold in Europe showed a small recession from $36.45 on 30th June to $36.35 on the 3rd inst., but regained to $36.50 yesterday.

The following comparative table shows the trend of the market during the week under review:

	8-7-53	Highest	Lowest	1-7-53
	Rs. a.	Rs. a.	Rs. a.	Rs. a.
GOLD				
Ready (.99 fine Mint)	88 9	89 6	86 13	89 0
Forward	87 2	88 1	85 11	87 10
Sovereign	68 4	68 12	67 12	68 6
SILVER				
Ready (.996 fine Mint)	154 3	155 9	153 2	155 1
Forward	153 3	154 13	151 12	154 9
London Ready	74*d.*	—	—	74*d.*
London Forward	74*d.*	—	—	74*d.*
New York Ready	85½*c.*	—	—	85½*c.*

FURTHER RECESSION IN PEPPER

(Messrs. Parekh & Co.)

BOMBAY, 8th July

The week under report witnessed further recession in the prices of Malabar black pepper in the A.S.T.A. section at Bombay, the highest and the lowest being $1.28 and $1.23 respectively for July shipment and $1.23 and $1.12 per lb. c. and f. New York for August shipment respectively. Heavy fluctuations were due to aggressive selling by bears who were encouraged by the easier advice from New York where Sarawak was reported pressing sales. In the delivery section, the rates for July and August positions also staged a setback, the lowest being Rs. 2,230 and Rs. 2,080 respectively.

At Alleppey, the turnover in the ready goods was disappointing, and there was no notable business for export as buyers' ideas were much below those of the sellers who, though disposed to sell something below Rs. 2,900, were not prepared to bring down their prices in line with those ruling in the consuming markets. The market for garbled at Cochin was showing wide fluctuations almost every day, as there was a regular tussle between the bulls and the bears. The recent widespread rain in Malabar is reported to have benefited the crop, and the earlier fear of a shorter crop for want of rain is now being slowly replaced by optimism for the future, though a section, in the trade, opines that the coming crop will be late owing to late rains in almost the entire pepper growing tracts. Though exporters, in general, are bearishly inclined, the growers are still refusing to change their opinion, and are clinging to the high prices, in spite of the poor export during the months of May and June and of still poorer prospect for the export during August onwards, owing to possible competition from Sarawak and Lampong.

Following are to-day's nominal quotations:—Ready Rs. 350-360 per cwt.; July Rs. 2,270-2,300 and August Rs. 2,120-2,150 per candy of 5½ cwts.

Particulars of shipment during the month of June, 1953 are: To the U.K.: 5,452 bales tanned cow, 410 cow calf, 106 buffs, 447 buff calf, 1,285 goat and 899 sheep skins. To the Continent: 5 tanned cow, 291 goat and 61 sheep skins. To the U.S.A.: 119 tanned cow, 2 cow calf, 65 buffs, 65 buff calf, 191 goat, 14 sheep and 166 dryssalted goat. To Japan: 12 tanned goat and 343 tanned sheep skins.

FORWARD COTTON STEADY

(From Our Own Correspondent)

BOMBAY, 8th July

The forward market during the week was exercised not so much by the question of forward trading in the new crop as by the proposed change in the staple basis of such trading which the authorities wanted to bring about. It now appears that on reconsideration the Government will abandon this proposal and permission to commence forward trading in the 1953-54 crop will be forthcoming before the middle of the month. In spite of this, price fluctuations in the market, though not quite hectic as in the past, are still fairly wide and the market has failed so far to find an anchorage. On the whole, however, it looks as if a time of comparative steadiness is ahead because a feeling is gaining ground that with the revived mill enquiry in spot cotton only a small quantity of tenderable cottton will be left for delivery by the time the current contract matures. This has led to a good deal of short covering and there are signs also of a slow building up of long interest. The rank and file of the operators are still hesitant and the battle on the floor of the trading ring is between the giants. Another sign of future firmness in the rates for the current contract is the widening of the gap between the present rates and the unofficial rates for February, 1954 delivery. This difference in favour of the August contract has risen from Rs. 7 last week to Rs. 11 now.

The controversy with regard to the statistical position and the likely carryover at the end of the season has been set at rest by a note issued from the Tax Commissioner's office. With regard to the new crop, the authorities, as usual, are inclined to pitch it higher than the more conservative estimates of the trade. If the Government's expectations are fulfilled, the crop next year should be only a lakh or two bales short of the target of four million bales. In any case, it is premature at this stage to start worrying about the size of the next crop. There are too much uncertainties ahead to arrive at even a workable guess in this respect. Besides, apart from assisting the trade in its programme of imports during the next six months, such an estimate is at present of no practical use except to operators in the forward market. In spite of higher estimates for the next crop mills have been buying steadily all desirable styles and the spot market had a good turnover during the week under review, though there was a slight falling off at the fag end of this period. On the whole, the spot position is satisfactory.

In the forward section, I.C.C. August opened the week at Rs. 672 as against the closing rate of Rs. 673½ for the previous week, but advanced on buying from spot interests to touch a high of Rs. 684 on 4th inst. Profit-taking at higher levels depressed the price to Rs. 669 on 7th inst. There was, however, some revival of confidence towards the close of the week, which lifted the price to Rs. 677½. The following is the trend of prices in the forward market during the week ended to-day:

	Opening	*High*	*Low*	*Closing*
I.C.C. Aug. ...	Rs. 670½	684	668	677½

The following are the latest quotations from the Sewri cotton market: Bengal *Deshi* Rs. 678; Berar Vanilas Rs. 720; Khandesh Rs. 835; Vijay Rs. 865; Moglai Rs. 670; and Oomra *Deshi* Rs. 670.

At Karachi, expectations of good business with Japan are entertained by the trade. This has gone to maintain a steady front in the market with regard to prices. The market has now come to realise that this business with Japan will continue only so long as prices remain at a reasonable level and that it would dry up the moment there was any attempt to exploit this demand by raising the rates. Exports during the year from Karachi show an increase of about 25 per cent. over the same period last year, though even with this improved position with regard to exports there must still be sizable stocks of unsold cotton at Karachi. This may, however, not entail any severe pressure on the prices of the new crop as it is expected to be of a smaller size. The following are the latest quotations from the Karachi cotton market: Punjab *Deshi* Rs. 80; 4F Punjab R.G. Rs. 62; S.G. Rs. 68; L.S.S. Punjab R.G. Rs. 65; S.G. Rs. 71; N.T. R.G. Rs. 71; S.G. Rs. 77; 289F Punjab R.G. Rs. 73½; S.G. Rs. 79½.

With the recent developments in the U.K. there is a growing feeling in cotton circles that the time for reopening of the Liverpool forward market is not very far. The spinners will have exercised their option of buying their requirements for the next cotton year from the R.C.C. or from private importers and as the proportion of those contracting out from the R.C.C. is likely to rise considerably, bulk purchase may come to be abolished for 1954-55. In this case, the Liverpool market might begin to function a year hence. This is bound to affect the whole pattern of world trading in cotton, such an estimate is at present of no practical use except to operators in the forward market. In spite of higher estimates for the next crop mills have been buying steadily all desirable styles and the spot market had a good turnover during the week under review, though there was a slight falling off at the fag end of this period. On the whole, the spot position is satisfactory.

At Alexandria, activity has been on a downward grade because the varieties most in demand from its regular customers are in short supply. However, if exports continue at the present rate till the end of the season, the carryover may be in the neighbourhood of about 400,000 tons. This carryover is, therefore, not likely to exercise a bearish effect on the prices of the new crop.

At New York, the market is naturally awaiting the first official acreage report which is expected to be out to-day. The general feeling, however, has turned bullish during the days preceding the issue of this report and the October position has appreciated considerably during the last two days. This may, however, not be due to any expectation on the part of the trade of a lower acreage but because of current reports of bad weather likely to affect the yield in important cotton producing areas.

The following are the latest available quotations from New York as compared with those of a week and a fortnight before:

(In cents per lb.)

	7-7-53	30-6-53	24-6-53
Spot	34.55	34.15	34.15
July	33.57	33.16	33.45
October	34.12	33.81	33.95
December	34.31	33.97	33.95
March	34.52	34.17	34.14
May	34.51	—	—

ART SILK YARN DEPRESSED

(From Our Own Correspondent)

BOMBAY, 8th July

Barring some improvement in values on Friday, the art silk yarn market remained depressed throughout this week on fears of a possible downward revision in prices of Japanese yarn. Further, the Government of India's announcement raising the limit for the import of 120D yarn from 5 per cent. to 25 per cent. of the face value of the licence also adversely influenced the sentiment of operators. Week advice from other commodity markets, particularly the staple fibre yarn section, too added its bit to depress the market. Selling pressure that ensued in the consequence, pushed down art silk yarn values, with the result that the closing quotations to-day were very much lower than those at the end of last week.

In the forward section, 150D July delivery contract opened lower by Rs. 4 at Rs. 775 and, after rising to Rs. 784 on the following day due to bull support and bear covering, gradually receded to finish at Rs. 766 to-day, the net loss over the week being 13 points. Likewise, August contract was hesitant at Rs. 776 on the opening day, as against Rs. 781 last week-end. After staging a recovery to Rs. 786 on the 3rd inst., the contract reacted again to touch Rs. 768 to-day.

Values of yarn in the ready section were fully maintained during the first two sessions of the week. Profit-selling at high levels brought about a setback and values drifted downwards. Thus, 120 Japan, after remaining fully steady at Rs. 4-4 till Saturday, declined to Rs. 4-3 to-day. 150 Japan and 150 Italy remained a shade higher on Friday, but reacted subsequently to close at Rs. 4-6-8 and Rs. 3-12-6, respectively. 120 Italy, however, remained steady throughout the week at Rs. 4-4.

The table below gives the prices of art silk yarn quoted to-day, as compared with those on the 1st inst. and 23rd June 1953.

	8-7-53	1-7-53	23-6-53
	Rs. a.	Rs. a.	Rs. a.
150D *July* (per case of 200 lbs.) ..	766 0	772	761 0
150 August	764 0	779 0	—
120 Japan (per lb.)	4 3	4 4	4 3
150 Japan ,, ...	4 6½	4 8	4 5
120 Italy ,, ...	4 4	4 4	4 2
150 Italy ,, ...	3 12½	3 14½	3 13

The three-man Japanese mission is expected to arrive in Bombay on Monday next to discuss with the representatives of rayon industry and trade the question relating to the sale of rayon yarn. The traders are eagerly awaiting the outcome of the talks which the Japanese mission will hold here. In the course of their discussions, the art silk mills and the dealers are expected to press for a downward revision in prices of Japanese yarn to the extent of at least 5d. per lb. The question whether the Japanese mission will agree to this proposal will, of course, depend on the successful conclusion of a bulk selling system with the art silk mills, as also on the attitude of Continental exporters.

Imports of art silk yarn into Bombay Port have declined in the past few weeks. The quantity actually imported during the month of June was about 2.56 million lbs., as against more than 4.62 million lbs. in the previous month.

The staple fibre section remained easy during the week under review. This was due to heavy arrivals of imports, amounting to as much as 9.59 million lbs. during June, 1953. In the yarn section also, prices declined by As. 3 to As. 4 per lb., following the announcement of the Government's decision to allow imports of staple fibre yarn over 60 deniers (single or double).

GROUNDNUTS FIRM

(From Our Own Correspondent)

BOMBAY, 8th July

With the exception of castorseeds, other sections in the oilseeds market presented a firm trend this week. Groundnuts elicited renewed buying support from Saurashtra and Gujrat interests, while groundnut oil had enquiries from *vanaspati* interests. The tight supply position in groundnuts also induced some operators to go long in August-September deliveries. Linseed, kardi seed and niger seed sections moved in sympathy with the groundnut section. The castorseeds section, however, as mentioned at the outset, proved an exception. The reported removal by the Brazilian Government of exchange restrictions for exports of castorseeds, buyers' resistance in U.S. market, rumours of the Government of India not allowing free export of castor oil after the end of this month, and competition from China in Continental markets were cumulatively responsible for the downward trend in prices. This trend would have been more pronounced but for the tightness of the ready position.

An impressive rise in prices was recorded in the groundnut section. Bold ready spurted by Rs. 4 to Rs. 51-8. Coramandal and Khandesh advanced, by Rs. 2-12 each, to Rs. 51-12 and Rs. 51-8, respectively. August-September moved up from Rs. 45-6 to Rs. 48-9. Groundnut oil ready and Rs. 45-6 to Rs. 48-9. Groundnut oil ready and railway receipts rose, by Re. 1-12 each, the former to Rs. 27 and the latter to Rs. 26-8. July delivery was better at Rs. 26-3, as against Rs. 24-11, and August delivery at Rs. 25-12, as against Rs. 24-7.

Values in the linseed section were fully maintained. Small Satna rose by Re. 1-12 to Rs. 29-4 and Kanpur by Re. 1-10 to Rs. 28-14. Indore gained a rupee to Rs. 31-2. Bold ready was higher by a rupee at Rs. 31. August-September delivery put on As. 14 to Rs. 30-14. Linseed oil ready was fully steady at Rs. 16-8.

Niger seed ready F.A.Q. and ready Madras registered a rise of Rs. 2 to Re. 1-12 to Rs. 38-8 and Rs 39, respectively. Kardi seed ready bold was done Re. 1-4 higher at Rs. 26. August-September delivery also gained Re. 1-6 to Rs. 25-12.

As already noted, the castorseeds section was weak. September delivery, which had shot up to Rs. 154 at one time on Wednesday last was quoted at as low as Rs. 147-8 to-day. The closing rate, however, was higher at Rs. 150. The loss over the week was As. 12. Ready F.A.Q. slided down from Rs. 31-4 to Rs. 30-12. Madras declined by As. 4 to Rs. 31-12. Kanpur quality also lost a like amount to Rs. 29-14. Castorseeds oil B.S.S., 1st Pressure and Commercial were all lower, by As. 4 each, at Rs. 18-4, Rs. 18 and Rs. 17-6 respectively.

The Board of the Bombay Oilseeds Exchange has decided to allow, with effect from the 20th inst., trading in castorseeds new crop contract, viz., May, 1954 delivery.

Arrivals of groundnuts in Bombay during the first six months of this year amounted to 75,777 tons, which compare favourably with 69,858 tons in the corresponding period of last year. Arrivals of castorseeds during the same period were also higher at 27,054 tons, as against 20,115 tons. Arrivals of linseed, on the other hand, declined from 9,499 tons to 4,227 tons.

The following table shows the prices of oilseeds and oil on the 8th inst., as compared with those at the end of the previous two weeks.

	8-7-53	1-7-53	24-6-53

SUGAR FIRM

(From Our Own Correspondent)

BOMBAY, 8th July

The forward section of the sugar market was under the pressure of persistent bear covering during the initial sessions of the week, on rumours that licences for import of sugar would not be granted to traders. With the announcement of the Government's decision to import sugar on its own account and to cancel the licences already given, the price of sugar in the forward section shot up to Rs. 88 per bag, but finished a shade lower at Rs. 87-8. The undertone of the market appears to be quite steady at present.

A fresh release of one lakh tons of sugar was announced by the Central Food Ministry on Friday the 3rd inst., but the release orders were actually issued only yesterday afternoon. It is reported that a novel and an ingenious device has been adopted by the Ministry in issuing this release. Releases to millers have been issued on the basis of 19 per cent. of the total despatches effected by millers against the total releases issued in their favour. Thus, if a particular mill produced two lakh bags and so far received releases aggregating one lakh bags and if it has despatched all the one lakh bags released on the 15th ultimo, it has been issued a release order for 19,000 bags. Special appreciation in the shape of higher releases has thus been extended to those millers who have been good enough to sell and despatch their released sugar, instead of hoarding in the hope of getting better price!

Although details regarding the official policy for importing and marketing imported sugar on Government account have not yet been announced, it is rumoured that the Government will not import more than 50,000 tons at the moment for July shipment and that it will not sell the imported sugar below Rs. 85 per bag ex-godown in Bombay and/or Madras. The Government's decision to import sugar on its own account has been widely appreciated and it is reported that the Government has assured the Industry that it would not sell the imported sugar in a way that might affect the legitimate interests of the industry. In other words, imported sugar may not be sold below Rs. 85 per bag in the ports. Since the foreign sugar (Spanish), which is reported to have been purchased at £40 for July shipment, will not arrive in Bombay and Madras before the end of August next, it is felt that effective measures must be taken by the Government to see that the spectacular rise in spot sugar does not assume serious proportions and thereby reduce the Government's scheme to a farce. Since the trade and industry had been unnerved and stunned on learning the drastic measure announced by the Government to bring down prices, there was a virtual suspension of normal buying, with the result that to-day stocks in consuming and feeding centres are very small. This position is responsible for the prevailing high spot prices. Small grain spot sugar in Bombay cannot be had for less than Rs. 88-8 per bag, medium grain for Rs. 91 and bold grain for Rs. 93 to Rs. 95 per bag. The situation, therefore, calls for an early announcement of a clear-cut policy in regard to the quantity of imports, marketing policy and selling price of imported sugar.

Arrivals of sugar into the market so far this month amounted to 13,000 bags. The opening stock with the spot trade to-day was 30,000 bags. Spot demand is fairly normal and the sale of sugar by the Bombay Government at Rs. 85-4 per bag has had practically no tangible effect on the comparatively higher prices in the market.

REDUCTION IN FOOD IMPORT TARGET LIKELY

(From Our Own Correspondent)

HAPUR, 7th July

The food import target, which was reduced from 2.9 million to 2.5 million tons early this year, is likely to be reduced further to 2.1 million tons, according to authoritative circles. This reduction, if effected, must be seen against the background of a fairly sound stock position (2.3 million tons), a generally good *kharif* harvest and the improved rice position in the country. Till the end of May, 1953, about 1.27 million tons of foodgrains, including about a million tons of wheat, 170,000 tons of rice and 100,000 tons of milo, had been imported. It is planned to import 183,000 tons of rice this year—150,000 tons from Burma, 23,000 tons from Pakistan and 10,000 tons from Ceylon. The rice received from Ceylon and Pakistan constitute repayment of rice loans extended to them by India last year. Out of the 1,000,000 tons of wheat imported this year, 800,000 tons form part of the minimum of 1.5 million tons that India has contracted to purchase under the International Wheat Agreement. Another 170,000 tons of wheat have been received from Argentina as part of the 250,000 tons contracted under the Indo-Argentina Wheat Barter Agreement of last year. A balance of 80,000 tons of Argentina Wheat and 700,000 tons of wheat under the International Wheat Agreement are yet to be imported. These outstanding commitments of 780,000 tons of wheat, together with the small balance of Burmese rice that has yet to come, will bring the total food imports, now standing at a little under 1.3 million tons, to about 2.1 million tons by the end of the year.

The Government of India has announced a reduction of Re. 1 per maund in the price of imported wheat supplied to the States from the Central Pool. It is not yet known whether there would be any relief in the rationed wheat price in U.P., as the State Government had already purchased about 80,000 tons of wheat at prices ranging between Rs. 18-8 and Rs. 17-8 per maund earlier this year. The offtake of imported wheat had come to a stop with the flooding of indigenous wheat at cheaper rates throughout the State. It is now learned that the State Government has sold 65,000 tons of wheat to the Centre at the pool price of Rs. 17-8 per maund, out of the old stocks lying with it and purchased from the Central Pool at the rate of Rs. 18-8. It had also to pay the incidental charges of Rs. 1-4 per maund over these stocks. This wheat is being handed over to the flour mills in the State.

Foodgrains market in U.P. have remained quiet and, in most cases, stationary, which is an indication of the sound overall food position in the State. This year's monsoon has begun and the agricultural specialists forecast that, if the monsoon goes on and also ends in the happy manner it has begun, there would be plentiful *kharif* crops this year.

The Punjab Government has built up a total wheat reserve of 67,000 tons. Of this, 27,000 tons were purchased out of the current year's crop and the balance was the quantity brought in from last year. The Government has stopped purchasing wheat in Ambala Division, except where growers have difficulty in disposing of their produce. To deal with scarcity conditions in parts of Hoshiarpur and Kangra districts, it has opened foodgrain depots, where found necessary.

The Government of India has despatched 20,000 tons of wheat to be sold at Rs. 14 per maund in the distress areas in 24 Parganas in West Bengal.

The quantum of rice at fair price shops in Madras State has been increased, in order to bring down the cost of rice in the free market which is reported to be soaring in some districts. The State Food Minister attributed the rise in price to two reasons, namely, commencement of the usual lean period and delay in the release of water from the Mettur Reservoir for irrigation. The latter has created a fear in ryots that the ensuing crop may not be good. This, in fact, has led to speculative trends in the rice market. The increase in the quantum and a reduction in the price now ordered by the Government will have a salutary effect on the free market.

The latest quotations in the Hapur market are: Wheat Rs. 16 to Rs. 18, gram Rs. 15-8 to Rs. 15-12, barley Rs. 11-12, *bejhar* Rs. 12-6, *maize* Rs. 13-8, *bajra* Rs. 13-4, *jowar* Rs. 12-8 to Rs. 15-8, *juwar* Rs. 15-4; Rice: *basmati* Rs. 34-8, *hansraj* Rs. 30, *sela* Rs. 29, and coarse Rs. 29; Peas: green *dara* Rs. 14, white special Rs. 17-8; *arhar* Rs. 14-3; *urd* Rs. 21 to Rs. 23; *moong* Rs. 23; and *masoor* Rs. 16 to Rs. 19.

SUGAR QUIET TO BEARISH

(From Our Own Correspondent)

HAPUR, 7th July

Crystal sugar markets remained quiet to bearish for most of the period and prices moved within a narrow range. The Government of India's announcement of a three-point programme for bringing down sugar prices did induce a price fall and larger offerings in face of declining demand. The decision of the Government to allow imports of sugar at ports is generally welcomed, but fears are expressed about the advisability to let imports in Bombay and Calcutta only. The allegation is that this would result in concentration of imports in a few hands and may facilitate profiteering by importers. Domestic sugar according to present

STOCK & SHARE QUOTATIONS

Abbreviations:—D=Deffered shares. G=Guaranteed shares. P=Preference shares. P.O.=Preferred Ordinary shares. R=Rebate shares. Y=Accounts published yearly. H=Accounts published Half-yearly. Q=Accounts published ance 15 months T=Company has Debentures. R.L.=Reserve Liability on shares. N=Nominal Quotation. I=Interim Dividend. f=Dividend for first half-year, y=Dividend for the year. s=Rs. Dividend c.d.=Cum. Dividend.

Shares:—If a company has different classes of shares—as, for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under "Paid-up Per Share."

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12 indicate the months of June and December, respectively. "Reserves" ncludes general and other reserves and all other funds which a company may have as also depreciation on block items, when this is charged to separate account "Block" represents actual cost of land, buildings, machinery and all such other items on which depreciation is allowed, less sales, if any, and stands for the gross figure except where otherwise indicated.

Dividends:—Dividends for completed years are calculated at per cent. per annum, but, where quoted for portion of a year, they represent percentages of the dividend on the paid-up share value. For companies closing the books half-yearly in the first three months of the year, and for companies closing their books yearly during the first half of the year dividends are shown as for the previous year.

* The following explanatory notes relate to the abbreviations and marks shown on page 92 in the debentures section:—

‡‡ Option to repay on six months' notice, on any interest date after 31st December, 1951, at 102 per cent. Also redeemable out of a cumulative sinking fund of 1½ per cent. per annum (commencing in 1938) by drawings at 102 per cent. or by purchase at or 102 per cent.

(a) Option of repayment at any time at 3 per cent. premium.

(b) Bearer bonds of Rs. 1,000 each repayable at par.

(c) Bearer bonds of Rs. 1,000 each repayable on 31st July, 1959.

(d) Bearer bonds of Rs. 1,000 each with option of redemption in whole or in part at par on 30th June 1952 or on any subsequent interest date at one month's notice.

(e) Returnable on or after 31st July, 1950, at Rs. 103-8 or at par after 31st July, 1953, on six months' notice in each case.

(f) Bearer bonds of Rs. 1,000 each with option of redeeming on 3 months' notice at ½ per cent premium after 1st March, 1954, but before 1st March, 1957, and 1 per cent. premium on or after 1st March, 1957.

(g) Option of redemption on or after 1st July, 1949, at par.

(h) Option of repayment at any time at par at any time on or after 30th June 1947 on six months notice.

MARKET GOSSIP

(Concluded from page 47)

"participate in the unused reserve fund of the Company provided for improvement and extensions, taxation and general purposes, and 50 per cent. of the funds shall be divided among the workers on the rolls on the date of closure." In the event of the Company being permanently closed, each of the workers will get the amount due to him from the provident fund as if they "have all been retired after a continuous service of 10 years and more." This will enable the workers to get back the amount of their subscription together with the Company's contribution and any interest that may have accumulated.

• • • •

The award does certainly raise an important principle, namely, whether workers are entitled to a share in the reserves of a company of which they are the employees. The Tribunal has held, in the dispute under reference, that 50 per cent. of such reserves should be distributed among the workers. This runs counter to accepted ideas about a company's reserves. After all, reserves are created through a self-denying process by the shareholders, who agree to plough back a portion of the profits in the company, in order to enable it to replace its assets or to fall back on the funds in times of need. It is really shareholders' money, in every sense of that phrase. It is not clear on what grounds the Tribunal has held that a portion of the reserves should be distributed among the workers. There are *two aspects* to this decision—the economic and the legal. The economic aspect will become clear when one reflects on the consequences of such a *decision* to company finance. If the *impression* gets abroad that reserves are the property of the workers, it would kill all incentive to retain profits in industry. Managements would be tempted to distribute profits in the shape of dividends. This would leave little *finance for* the managements to expand their undertakings. There would also be a clamour for bonus shares from the shareholders of the companies which have large reserves. All this is certainly detrimental to industrial progress. The legal aspect is that the decision has the effect of reversing an earlier decision. It may be recalled that the Adjudicator in the industrial dispute in the Cawnpore Electric Supply Co., Ltd. supported the workers' claim for a 50 per cent. share of the Company's reserve fund. The Company's appeal against this decision was heard in 1950 by the Allahabad High Court, which reversed the Adjudicator's decision. The Madras Tribunal's decision thus runs counter to the Allahabad High Court's judgment.

MANCHESTER LETTER

(Concluded from page 57)

by Mr. F. B. Arnold, Senior U.K. Trade Commissioner in Pakistan, who visited the Manchester Chamber of Commerce to outline export opportunities.

Mr. Arnold said Pakistan hoped to obtain a large amount of food from the United States, either on loan or as a gift. Until that issue was decided it would not be known how much would be available to give in the form of licences for cotton piecegoods. "If Pakistan obtains her food free there is every hope and indication that Lancashire will get licences in the second half of this year which should enable her to maintain her share of the market," he said.

Before restrictions were imposed in the middle of last year Pakistan spent £40,000,000 a year on cotton piecegoods of which 60 per cent. was supplied by Japan and 15 per cent. by Lancashire. At the moment, said Mr. Arnold, no licences were being issued except to Japan, who had agreed to take 650,000 bales of Pakistan raw cotton. In return for Japan agreeing to buy in the three months from April to June 150,000 bales out of the 650,000, Pakistan had agreed to issue licences for cotton piecegoods from Japan to the value of £3,500,000 from July to September. Mr. Arnold warned that Lancashire's ability to sell cotton and other goods to Pakistan depended to some extent on what could be bought from her.—*All Rights Reserved.*

BANKING

(Concluded from page 54)

The paid-up capital and reserves of Indian Scheduled banks increased during the year by Rs. 1.8 crores, of which the rise in reserves accounted for Rs. 1.6 crores. Of even greater interest was the large increase of Rs. 4.9 crores in the paid-up capital and reserves of Non-scheduled banks, but this is due to the additions to the list of reporting banks, the number of which rose from 309 to 425. The reserves of Indian Scheduled banks are now over four-fifths of their paid-up capital, as compared with three-fourths last year and over two-thirds in 1949. A disquieting feature, however, is the *inability of Non-scheduled* banks to attract proportionately large deposits. Thus, in 1952, there were 8 Scheduled banks and 79 Non-scheduled banks whose deposits were actually less than the sum of their paid-up capital and reserves.

Another feature which needs attention is the large increase in the Reserve Bank's advances to Scheduled banks. In 1952, these advances amounted to Rs. 246 crores, as against Rs. 77 crores in 1951 and Rs. 13 crores in 1950. Increasing attention was also paid to the Co-operative banks. As many as 391 loans were made to State Co-operative banks at the preferential rate of 1½ per cent. for financing agriculture, marketing of crops, etc. The aggregate amount of these loans was Rs. 10.44 crores, as compared with Rs. 9 crores in 1951, Rs. 5 crores in 1950, and Rs. 2 crores in 1949.

The net profits of banks, as revealed by the profit and loss account of 18 larger Indian Scheduled banks, were slightly lower at Rs. 5.2 crores in 1952, chiefly as a result of the rise in interest paid on deposits. Gross earnings increased by *Rs. 2.1 crores to Rs. 28.3* crores, owing to higher earnings through discount rates.

MARKET REPORTS

(Concluded from page 81)

indications, is not likely to be sold below Rs. 27 per maund, at which price the imported sugar may be freely available.

During the mid-week, the sugar market remained fully steady, on the general scepticism over possibilities of imports and on reports that no import deal has yet matured. The upward tendency, however, was soon arrested by the release of a further quantity of 100,000 tons of sugar for sale in the free market out of the 1952-53 production of all factories in the country.

The latest *sugar quotations are:* Ambala Rs. 31-8, Amritsar Rs. 32, Delhi Rs. 31-12, Jullundur Rs. 30-14, Agra Rs. 30-4, Hapur Rs. 32, Kanpur Rs. 29-8, Mathura Rs. 31, Meerut Rs. 31, Muzaffarnagar Rs. 31-4, Calcutta Rs. 29-12 to Rs. 33-8, Gauhati Rs. 35-8, Madras Rs. 32-6 and Bombay Rs. 31 to Rs. 33-4.

Gur markets were quiet to bearish, in sympathy with crystal sugar market. There has been a general fall in offtake at present level. Arrivals in most of the markets have been negligible, stock movements—mostly on previous commitments—affecting the already accumulated stocks which are by no means burdensome. There is easy supply of wagons for loading of *gur* at the local station and not all of them have been used. Advises from principal *gur* markets in the south indicate a general fall in prices of about a rupee per maund and a fall in the offtake. The latest quotations are: Ambala Rs. 18, Amritsar Rs. 20, Delhi Rs. 20, Jullundur Rs. 18, Agra Rs. 18-13, Hapur Rs. 18-8, Kanpur Rs. 20-4, Mathura Rs. 18-2, Meerut Rs. 18-8 to Rs. 19, Muzaffarnagar Rs. 19-2, Calcutta Rs. 18-4 to Rs. 22-4, Madras Rs. 22 to Rs. 23 and Bombay Rs. 21 to Rs. 28.

AUSTRALIAN WOOL STRONG

(Messrs. J. Hardacre & Co.)

BOMBAY, 7th July

The Dominion wool marketing season ended in Australia yesterday on a strong note, with prices being firm on all, except shabby and inferior, lots which were in buyers' favour. Despite this firm tendency, at origin, there is a general feeling of hesitancy throughout the trade and all sections complain of lack of new business. At the same time, it must be taken into account that this is also the mid-season period for the woollen manufacturers and this section is particularly quiet in most consuming countries. Stocks held by mills are, in general, very small and it is anticipated that the present policy of hand-to-mouth buying will continue. Good demand, particularly for spot wools, is, therefore, expected from August onwards, when the spring garment season opens.

To-day's quotations (in pence per lb. c.i.f. Bombay) for Bradford oilcombed tops are given below:

48's carded (Aug.-Sept., 1953)	...	...	88

TEXTILE DECONTROL

WITH the Central Government's announcement last week, abolishing the remaining controls on prices and distribution of cotton textiles, the curtain has been rung down on the penultimate scene of the three-act drama of textile controls; the only remaining scene is that relating to production control. The first act, which commenced a little over 10 years ago, saw the imposition of controls while the second act, a brief one, was the removal of controls in the first quarter of 1948. The third act witnessed the reimposition of controls in the third quarter of 1948. If the climax of the play, the final removal of price and distribution controls, has aroused little interest in the country, it is because the audience had for long anticipated the event. Through a series of relaxations which preceded the complete removal of controls last week, the public had been tutored to expect nothing short of total decontrol.

The movement towards decontrol began in April last year, when the Government lifted the control over distribution of superfine and certain varieties of fine cloth and over 80 per cent. of coarse and medium cloth. Export restrictions on fine and superfine cloth were also removed while the freedom for medium and coarse cloth exports was allowed to continue for a further period. These relaxations were followed by further measures of a similar nature in October, 1952, and April, 1953, the net effect of which was to exclude all but 15 per cent. of coarse and medium varieties of cloth from the scope of the price and distribution controls. The latest decision removes even these last vestiges of the control on price and distribution of cloth and yarn.

The Government has acquired a reputation for acting with unbecoming haste in clamping down controls and with unbecoming tardiness in removing them. This time too, it has lived up to that reputation. Textile decontrol has been long overdue. In fact, some varieties had already decontrolled themselves without waiting for official action, for they were selling below the levels at which they were controlled. No risk is, therefore, involved in the latest decision, even as there was none in the earlier decisions of decontrol. If any further justification were necessary for decontrol, it would be found in the fact that production has been consistently on the uptrend. During the four months ended April, 1953, cloth and yarn production was 1,613 million yards and 487 million lbs., respectively, or an annual rate of 4,840 million yards and 1,460 million lbs., as against the lion yards and 1,460 million yards and 1,640 million target of 4,700 million yards and 1,640 million lbs. fixed by the Planning Commission, to be reached by 1955-56. While production, especially of cloth has thus been rising, absorption of cloth and yarn has been lagging behind. Exports have not been very encouraging. During the same period, in the current year, exports of cloth aggregated 200 million yards or an annual rate of 600 million yards, as against the target of 1,000 million yards fixed at the last Buxton Conference. Internal offtake too has not shown any spectacular improvement. In these circumstances, the Government has acted wisely, if not very promptly, by shaking off whatever semblance of responsibility it had towards the industry in respect of prices and distribution of cotton manufactures. Indeed, if the decision had been delayed much longer, it is not unlikely that it would have faced a situation in which it would have had at least the moral obligation to support the prices of cloth and yarn.

Past experience in textile decontrol shows that every relaxation of control has been followed by an improvement in production. But this experience, however, offers no indication to suggest that the present step will be followed by a similar result. On previous occasions, decontrol meant, in effect, a slight increase in prices, which provided the stimulus to higher production. But it is extremely unlikely that textile prices will move up now. There is a strong buyers' market at present in all varieties of cloth, including the coarse and medium varieties which have just been decontrolled. There is, therefore, no immediate prospect of any increase in prices. We use the word "immediate" advisedly, because a good export trade might change the prospects. An equally important factor would be a good monsoon which would stimulate economic activity in this predominantly agricultural country and thereby help augment the demand for cloth. In any case, the industry cannot look forward to the bumper profits of the war or the early post-war years. It will have to fight hard for widening the internal and external markets. Conceivably, even the maintenance of these markets might create problems for at least some sections of the industry, if not for all.

The industry has been controlled for well over a decade now. It has lived in a sheltered climate. Its first exposure to the rough weather of a free market will call for new adjustments. In this task, the industry, which gives employment to over seven lakh workers and many thousands of traders, has a right to expect some support from the Government. For the industry's problems are not entirely of its own creation. The major problem is, of course, to reduce the cost of production. But then, the room for manœuvre here is not very large, considering how rigid is the cost structure of the industry. It has been computed that the average cost of production is about As. 10 per yard, of which cotton accounts for As. 5. Of the balance, namely, As. 5, the various Government imposts (apart from the taxes which all manufacturers pay), such as import duty on cotton, excise duty on cloth, higher freight on coal, increase in wage bill, provident fund and State Insurance contributions, sales tax and other levies account for As. 2. These represent additional imposts, in the sense that, but for them, the manufacturing charges, other than cotton, would be only As. 3. In other words, the new levies have added As. 2 to the price per yard. In absolute figures, thanks to these burdens, the industry contributes to the Exchequer and other participating interests an additional Rs. 50 crores. Whether these burdens, imposed at a time when the going was good for textiles and not compensated by any advantages, whether direct or indirect, could be continued any longer in their original form is a question that must engage the attention of the Government. If the industry were ever to fall on evil days, as it did in the thirties, resulting in distress to millions of homes—those of the cotton farmers, textile workers and cloth traders, not to mention the investors—the Government could not possibly absolve itself of all responsibility for such a situation.

It is true that the outlook is not really so gloomy. But it is none too bright either. And the Government's wisdom lies not so much in taking remedial steps after a depression sets in but in forestalling events and in taking appropriate measures that would stave off a recession. A prosperous internal market is necessary for the industry. It would be wrong to think that the industry could continue to market an increasingly larger quantity of goods without effecting a sizable reduction in production costs. Apart from what the Government can do to help the industry bring down its costs of production, there is the far more important question of man-hour productivity. Available evidence shows clearly that the Indian level of man-hour output is low; it is low even after allowance is made for the relatively lower wage levels which prevail in the industry as compared with its confreres in other countries. This means that either production should be correspondingly stepped up or wage levels brought down. Since the latter course is always fraught with the danger of industrial unrest, it is to be hoped that labour will co-operate with any endeavour made by the management to raise production through the adoption of rationalisation of work-loads and modernisation of equipment. After all, labour leaders will now have to weigh the slight hardship of partial displacement of workers and heavier work-loads, that might be caused by rationalisation of work, against the more acute misery that would result from the industry's failure to put its cost structure in order.

The need for ensuring a substantial volume of export trade arises for three reasons. In the first place, there is the ever-present demand for foreign exchange which could be met, in no small measure, by textile exports. Secondly, the Partition of the country has deprived the Indian Union of the former markets in the territories which now form Pakistan. Thirdly, a good export market is an effective insurance against any fall in internal offtake. But export markets are not easily won; nor can they be so easily maintained, when once won. The Indian textile industry has to reckon with serious rivals which do not suffer from the same handicaps as it does. These rivals suffer from no State-imposed restrictions in regard to rationalisation and modernisation. They enjoy comparatively greater freedom when it comes to modernising their equipment or rationalising the work-loads. Again, the competitive disadvantage from which they suffered *vis-a-vis* Indian mills because Indian cotton was controlled at below world levels has now been greatly reduced, thanks to the decline in world prices of cotton. Finally, they are not, unlike the Indian mills, compelled to conform to a predetermined pattern of production.

WEEK'S STOCK EXCHANGE TREND	140

The retention of production control is the most incongruous part of the present textile regulations. If the mills are free to sell their goods at prices determined by the free market, they must also be given the freedom to produce the fabrics which the consumer wants. Sartorial fashions are notorious for their ephemeral character. It should be the responsibility of the mills to meet the demand—often shifting demand—of the consumer who is now gradually coming into his own. It is not clear why production control, which interferes with the discharge of this responsibility, is still being retained. If it is necessary to regulate production in the interests of the handloom industry —we have always been critical of this policy of robbing Peter in order to render aid of doubtful value to Paul—it is reasonable to expect that the Government will retain only such controls as are necessary to aid the handloom weaver. The rest of it all may easily be ended with no injury to anyone. Hitherto, production control had two objectives. First, it was instituted with a view to reducing the number of varieties so that they could be properly grouped for facilitating price fixation. Secondly, it was meant to assist the production of maximum yardage even at the expense of some quality. Quantity, rather than quality, was its supreme objective. Now, these considerations do not certainly hold good. If, however, it is the Government's contention that production control could be utilised to improve the quality of goods produced by the mills, we can say without the least exaggeration that the Government is wasting its time and resources, as well as those of the mills, for we are certain that this objective cannot be achieved through bureaucratic directives. It is a free and competitive market that will ensure an improvement in the quality of cloth and yarn produced by Indian mills. Conditions are now propitious for the operation of such a market.

Now that cloth and yarn prices have been decontrolled, the question whether the next logical step is not the removal of control on cotton will naturally engage the attention of the interests concerned and the Government. But the question bristles with certain difficulties. It is true that the decontrol of cotton cannot for long be delayed when the chief consumers of cotton, the mills, are enabled to market their goods in a free market. But cotton does not answer the test of adequacy of supply which has finally determined the question of freedom for cloth. The cotton season, 1953-54, will commence, according to present indications, with a carry-over of 1.93 million bales (1.57 million bales of Indian and 360,000 bales of foreign cotton), as against the 2.40 million bales (1.91 million bales of Indian and 490,000 bales of foreign cotton) brought into the 1952-53 season. Thus, there is an initial deficiency of about 500,000 bales of cotton. It is yet too early to anticipate the size of the crop in the next season. If the weather continues to be as favourable as it has been for sowing, a crop of about 3.8 million bales can be expected. This, together with the carry-over, will assure enough supply to meet the mills' requirements of domestic cotton of the order of 4 million bales per annum to maintain the production at the present rate. But it is now too early to say whether this supply could be anticipated. It should, however, be possible to decide the question by October next, when a clearer picture of the cotton position would become available. A delay of two or three months is not going to mean anything to the farmer, whose interests have a prior consideration over those of traders, inasmuch as he has probably no old crop to sell now and is just sowing the next season's crop. In the meanwhile, of course, the important question on which the Government has to take a decision without any further delay is whether trading in futures should be allowed in the new crop. If permission is given for futures trading in the new crop within the existing ceilings and floors fixed by the Government and if cotton is decontrolled, say, within the next three months, it may give rise to a controversy later on. Some may argue that the Government is not justified in abolishing the controls after certain contracts had been concluded on the understanding that their risk had been limited by the floors and ceilings. In order to avoid such a controversy and with a view to ensuring continuity of futures trading, the Government will do well to declare, in the clearest possible language, that it is giving permission for futures trading in the new crop without prejudice to its right to decontrol cotton at a later date.

• • • •

As we go to press comes news that the Government has permitted trading in the hedge contract for February delivery only.

MORE ABOUT SUGAR

RELIANCE on expedients, rather than planned effort with a clear vision of the future, has been one of the drawbacks of the present Government of India's economic policy. Nowhere is this so clearly visible as in its policy relating to the sugar industry. This policy is being chopped and changed so frequently that one wonders whether the Government has any policy at all. Control on prices and distribution was first introduced in order to protect the interests of consumers. Later, when production exceeded demand, it was modified in such a way as to protect the interests of producers. When the time was fully ripe for complete decontrol of the industry, it hesitated to act, because it was frightened by the dark picture of the consequences painted by certain vested interests. It was easily persuaded to believe that there was a glut of sugar in the country and that the only way out of that situation was to permit exports, even by providing a subsidy, if need be. Within a few months, the country experienced symptoms of scarcity, though there had been no export of sugar in any sizable quantity and there was really no shortage of stocks. Prices started climbing up, even though the cost of the raw material, sugarcane, had been reduced. The situation threatened to deteriorate to such an extent that, within six months of its decision to encourage exports, the Government had to permit imports. In order to make imports possible, it had to cut the import duty also. For once, we thought the Government had a mind of its own on this subject, though in the execution of that decision it erred in some respects. But we were proved wrong, for the Government soon changed its mind. The import policy has now been altered in such a manner that the object of allowing imports is not likely to be realised in full.

The necessity for resorting to imports in order to prevent sugar prices from shooting up would not have arisen, had the Government completely decontrolled the industry either at the beginning of the current season or some time in February or March last, when the fear of glut had practically disappeared. By retaining its policy of periodical releases and reserving a buffer stock of 3 lakh tons, the Government prevented the weight of the record supply of sugar in the country from making itself felt on prices. On the contrary, this policy was conducive to hoarding and speculation. By last month, a stage had been reached when the only effective way in which a boom in sugar could be prevented was to allow imports. A mere abolition of all the remaining controls on releases and stocks would not have had the desired effect, for by then a bullish atmosphere had come to prevail. The price of *gur* had shot up to a record high level and forecasts of a serious shortfall in the next season's output were in the air. The contention that the Government could have brought the situation under control without taking the drastic step of permitting imports is, therefore, untenable. In fact, if the consumption of sugar in the country has gone up to as much as 16 lakh tons per annum, as is contended by some, substantial imports will have to be allowed in the coming season, inasmuch as production in that season is very likely to fall, owing to a reduction in the output of cane and the high prices of *gur*. The alternative to this course will be a return to complete control on prices, movement and distribution, a step which will be more unwelcome to the industry and trade than the prospect of controlled competition from imported sugar.

While the Government's move to allow imports of sugar was thus warranted, the reduction in import duty to the extent of more than 50 per cent. (from Rs. 14-14 per cwt. to Rs. 7 per cwt.) was not. As was pointed out by us on a previous occasion, the reduction in the duty was much more than necessary and has placed the domestic industry at a disadvantage *vis-a-vis* the importers, for the revised duty has not fully offset the Governments' various imposts on the industry, such as excise duty, cane cess, etc. To this extent, therefore, the industry will be perfectly justified in protesting against the Government's action. Equally justified will it be in demanding that the import duty should be fixed at such a level as will not enable the importer to sell sugar at less than the rate which the Government itself considers fair, because the Government has forced the factories to pay a particular price for their raw material. But the demand of some sugar millowners that no imports at all should be allowed and that no reduction at all was necessary in the old rate of import duty (namely, Rs. 14-14 per cwt.) has no justification whatever, for the industry has ceased to enjoy tariff protection. If the industry feels that its position is being jeopardised as a result of imports, the proper course for it would be to ask for protection, in which case the whole issue will be dispassionately examined by the Tariff Commission.

But the Government has practically conceded the industry's demand. By doing so, it has again ignored the interests of consumers. It has dropped its first proposal to allow imports through the trade without prescribing any ceiling on the total quantity of imports. Instead, it has decided to restrict the quantity to 20,000 tons. Further, imports are to be only on Government account. The one saving grace in this decision is to allow the importers to submit tenders to the Government for delivery of sugar at specified ports. The imported sugar will then be sold to merchants and their distributing agencies at fixed prices in advance of the actual arrival of the shipments. This arrangement is evidently a compromise between complete State trading and private trading, under which private traders will be able to earn a small margin, while the Government will retain the major portion of the profit, arising as a result of its fixing the import duty at an unduly low level and of the high level of domestic prices. In short, a move which was meant to safeguard the consumer from the possibility of a sharp rise in the price of sugar is now sought to be used as a means for augmenting the revenue of the Exchequer.

If the object of the Government in making these changes was to rectify a defect in the import policy announced earlier and not to increase its revenues, then the Government could have achieved it in a straightforward manner. It could have raised the import duty to a level sufficient to offset the handicaps placed on the domestic producers of sugar and allowed the imports to take place completely on trade account. This would have eliminated all the defects inherent in the Government entering trading activity. There is no certainty now that the undesirable results that flowed from the Government's control over releases of domestic sugar will not follow the Government's control on the quantum of imports and on the prices at which the imported sugar are to be sold for distribution in the country. How can anyone have confidence in the ability of the Government to handle imports of sugar successfully (successful from the point of view of consumers) after all its blunders in the past? That this restricted import policy has failed to make any impression on the sugar markets is evident from the revival of bullish fervour, accompanied by a rise of Rs. 4 per bag in the forward section and of Rs. 5 in the spot section in the past few days.

Even now it is not too late for the Government to change its policy in regard to imports of sugar in a realistic manner. Such a change will, of course, be more convenient if the Government can take a decision about its policy relating to domestic industry and trade for the next season. And it is needless to add that such a policy should aim at placing the industry on an economic footing, which will prevent it from drifting into chaos and crisis every now and then. The keynote of such a policy should be the withdrawal of the system of minimum price for sugarcane. All those who are acquainted with the sugar industry know full well that the abolition of minimum price for sugarcane is politically inconvenient and that the U.P. and Bihar Governments will strongly oppose any such move. But this must be squarely faced, in the long-term interest of the sugar industry which is bound up with the consumers' ability to pay. Further, there is no reason why the growers of sugarcane alone should be assured of a handsome price for their crop, while those producing other agricultural crops should be denied it. Moreover, if the contention that the consumption of sugar, as well as of *gur*, is rapidly expanding is correct, the fear that the withdrawal of minimum price will result in uneconomic prices for sugarcane is baseless.

RESPONSE TO STATE LOANS BETTER THAN EXPECTED

BANK PROFITS LOWER—COMMODITY PRICE TRENDS

THURSDAY, 5 P.M.

AS was indicated in these columns last week, ten State Governments have entered the long-term capital market. They propose to raise Rs. 28 crores in all, a large sum indeed, considering that cash subscriptions to the recent Central Government loan did not exceed Rs. 23.3 crores. All the States are offering a uniform rate of interest at 4 per cent. per annum, though their issue prices vary slightly. Whereas West Bengal and Bombay are offering their loans at par, others are doing so at a discount of As. 8. These terms are relatively more attractive than those at which the Centre issued its loan. The running yield is higher than that on the Central loan by half per cent. The redemption yield, however, is higher by only a little more than quarter per cent., for the Central loan was issued at a discount of Re. 1-4. Further, it is an eight-year loan, whereas the State loans are for ten years.

MARKET GOSSIP

• • • •

As will be seen from the table on State Loans, published on this page, the terms of the new loans mark a further climb down, in that they are slightly more favourable to lenders than it was a year ago. It is true that the rate of interest is unchanged at 4 per cent., but, last year, that rate was paid for a 12-year loan, whereas it is now being offered for a ten-year loan. The issue price in the case of the Madras loan is a shade lower as compared with last year, but it is the same in regard to the other States. Another interesting feature disclosed by the table is the extent to which money has become dearer than in 1946 when the cheap money policy was at its height. The rate of interest has gone up from 2½ per cent. per annum for 15 years to 4 per cent. per annum for 10 years and the issue price, which was at a premium of As. 8, is now at a discount of As. 8 The retreat has been faster since 1950, when the States could borrow on the basis of 3 per cent. for 10 years.

• • • •

It is profitless to speculate at this stage whether the new State loans will be a success or not, for, by the time these lines appear in print, the results of most of the loans will have been known. The progress made by them till the time of writing suggests that the response will exceed expectations. The West Bengal loan has already been over-subscribed. That is not surprising, because it was common knowledge that, even before Dr. B. C. Roy left for Europe, he had placed the loan privately with institutional investors in his State. The success of this loan is, therefore, more a tribute to his popularity with these investors than to any superior merit which is not found in the other State loans. It looks as though the loans of the Bombay, Madras and Uttar Pradesh States also will be fully subscribed. There is no reason why the Travancore-Cochin loan also should not be fully subscribed, as it is a cash-cum-conversion loan, with the outstandings of the maturing loan being equal to the amount of the new issue. As regards the other States, the progress is slow, but it will not be surprising if they are also taken up by the public, since active canvassing is going on in the respective States.

• • • •

Since, for all practical purposes, there is no difference in the creditworthiness of the borrowing States, we do not see why there should be a difference in the issue prices of the State loans. Can it be claimed, for instance, that the credit of Bombay or West Bengal is higher than that of Madras? Can anyone envisage a situation in which the Madras State will not be able to pay the interest on its loans regularly, whereas the Bombay State will be able to do so? If a State is unable to pay either the interest or the principal, the Centre is bound to do so. So, why make a distinction between the borrowing States? It is true that market prices of the existing State loans have always varied to some extent. One of the reasons for this variation is that some of the States are able to buy their own loans for investing some of their funds. Ordinarily speaking, a State which regularly creates a sinking fund will be able to buy back a part of its loans every year. But now that every State is in need of large funds, this factor may not hold good to the same extent as before. In any case, the Reserve Bank should discourage such a trend, at least by making a beginning with the issue prices. It must, however, be conceded that this year there is a greater measure of uniformity in this respect than in the past.

• • • •

All the States are borrowing, in order to finance capital projects which will take time to yield results. It is, therefore, doubtful whether they are wise in borrowing for ten years, which is a relatively short period. They may later on be faced with the problem of repayment. It would have been desirable if they had extended the duration of the loans. At least, those States which are borrowing large sums, such as Bombay, Madras and Uttar Pradesh, should have covered their requirements by issuing both medium-term and long-term loans according to the nature of the projects for which they are raising finance. Another interesting aspect of these new issues is the manner in which support for them is being sought by the various State Governments concerned. There are two views on this question. One is that the Centre itself should borrow on behalf of the States and distribute the amount according to their needs, so that the danger to the integrated capital market in India arising from competition from the various States can be avoided. The other view is that it is better to continue the present practice, as it provides some incentive to the State Governments actively to push the sale of the loans and a chance to mobilise local savings for local effort. There is much to be said in favour of both the viewpoints, as we shall show in our next issue.

• • • •

It would, of course, be wrong to jump to conclusions about the trend of bank profits from the results of the two banks—the Bank of India and the Imperial Bank of India—which have now published their results for the half-year ended June, 1953. But it is noteworthy that both the Banks have reported lower profits, though both of them have maintained their interim dividends at the same rate as for the corresponding half-year of 1952. In the case of the Bank of India, the results of which were published in *Commerce* last week, the decline is only a small one, namely, Rs. 0.78 lakh. Thus, for the half-year ended June, 1953, the profit was Rs. 36.11 lakhs, as against Rs. 36.89 lakhs for the corresponding half year in 1952. The results of the Imperial Bank show a much steeper decline. Thus, for the first half of this year, the net profit was only Rs. 63.10 lakhs, as against Rs. 70.07 lakhs in the first half of 1952. This sum, together with the amount brought forward from the previous half-year's accounts, makes in all Rs. 105.17 lakhs. The *ad-interim* dividend of 8 per cent. for the half-year under review absorbs Rs. 45 lakhs. Of the balance, the Directors have transferred Rs. 2.78 lakhs to pension funds and provided Rs. 20 lakhs for bonus to staff, leaving Rs. 37.39 lakhs to be carried forward to the current half-year's account. These appropriations, too, are the same as those made a year ago. Only the amount carried forward is less by Rs. 9 lakhs, mainly due to the fall in profit.

• • • •

It is a moot question whether the banks should vary their dividends in accordance with their profits or whether they should maintain them at a constant level. The decline in bank profits, which has been in evidence in this country, should, of course, make even the prosperous banks think twice before altering their dividend policy in favour of higher distribution. In the U.K., where a conservative dividend policy has for long been the tradition in banking circles, the National Provincial Bank (one of the big seven) has once again chosen to deviate from the accepted norm by changing its dividend level. It will be recalled that it was this Bank which had broken the tradition six months ago by increasing its final distribution from the usual 7½ per cent. to 8½ per cent. It was not expected that it would raise the interim dividend for 1953 also. But it has raised the interim rate from 7½ per cent. to 8½ per cent., thereby making the interim rate equal to the final rate for 1952. This has again given rise to some speculation about the dividend policy of the other big banks. None of these banks has, of course, chosen to pay a higher interim dividend; they have all elected to pay the same rate as in the previous years. If, despite this, there is still speculation about the possibility of a higher dividend, it is because operators in London realise that banks generally do not raise their dividend level through the interim payment first. Informed observers, however, feel that the other banks are not likely to follow the example of the National Provincial, despite the fact that bank profits have been quite encouraging. In this connection, they recall the fact that last year a few bank chairmen declined the request made by shareholders for higher dividends and announced that they had no intention to change the dividend levels in the near future.

STATE LOANS IN RETROSPECT

• • • •

It is now becoming increasingly clearer that the post-Korean commodity boom in the world's markets is a thing of the past. From the dizzy heights to which articles such as wool, tin, and rubber, climbed in the immediate post-Korean period they have now moved down to substantially lower levels. The London *Economist* has worked out an interesting index number for commodity prices with the base (June 1950=100) which coincides with the commencement of the Korean war. This index reached a peak of 157 in March, 1951, and now stands at 99. This, of course, is the general trend. But individual commodities show wide variations. Some have risen proportionately more than the rest, while others have recorded only modest increases. But, by and large, they have all come down to lower levels. Wool (64s), for instance, rose from 140d. per pound in June, 1950, to 314d. in March, 1951. In September, 1951, it reacted to 112d. while it now stands at about 148d. American cotton, Middling grade rose from 34.47 cents per lb. in June, 1950, to 46.06 cents in February, 1951, and is now in the neighbourhood of 34 cents. Tin prices, which stood at £600 per ton on the eve of the Korean war, moved up to £836 in March, 1951, and still further to £1,000 in October of that year. But it now stands at only £610 per ton. Rubber (No. 1. R.S.S.) stood at 23d. per lb. in June, 1950, before it started its onward march. In February, 1951, it had touched a peak of 71½d. It has been almost continuously declining since then and is now standing in the neighbourhood of 19d.

• • • •

So much for world commodity prices. How have the Indian commodity prices behaved? Broadly, they have followed the same pattern as world commodity prices. But the prices are not back to the pre-Korean level. Thus, the index number of wholesale prices (Base: August 1939=100) stood at 395.6 in June, 1950. It moved upto 456.5 in the following year but reacted to 374.8 in June, 1952. But thereafter, the downward trend was reversed, and it was as high as 405.4 for June, 1953. The average for each of the years 1950-51, 1951-52 and 1952-53 was 409.7, 434.6 and 380.6 respectively. Over the year ended June, 1953, food articles have risen by 14.0 per cent. to 398.7, industrial raw materials by 11.8 per cent. to 481.0, semi-manufactures by 10.0 per cent. to 363.3 and miscellaneous articles by 11.8 per cent. to 674.5. Only the item "manufactures" shows a decline of 0.9 per cent. to 370.1. If these figures mean anything at all, they show that manufacturers have had to sell their goods at comparatively low prices, despite the increase in raw material prices. At any rate, the industrial sector has been relatively more successful than other sectors in the battle against inflation. The following table brings out the increase in the index number of wholesale prices over the year ended June, 1953:

INDEX NUMBER OF WHOLESALE PRICES

(Base: Year ended August, 1939=100)

	June, 1952	June, 1953	Percentage increase (+) or decrease (—) in June, 1953 as compared with June, 1952
Food Articles	349.6	398.7	+14.0
Cereals	445	474	+ 6.5
Pulses	434	560	+29.2
Others	216	277	+28.2
Industrial Raw Materials ..	430.3	481.0	+11.8
Fibres	447	430	— 3.8
Oilseeds	412	641	+48.4
Minerals	466	450	— 3.4
Others	295	360	+20.3
Semi-Manufactures	330.6	363.5	+10.0
Leather	316	417	+32.0
Mineral oils	220	224	+ 1.8
Vegetable oils	410	583	+42.2
Cotton yarn	455*	445*	— 2.2
Metals	199	225	+13.1
Oilcakes	424	448	+ 5.7
Others	260	252	— 3.1
Manufactures	373.6	370.1	— 0.9

Jute	491	416	—15.6
Cotton	393*	407*	+ 3.3
Rayon and silk	534*	601*	+12.7
Woollen	302	312	— 3.0
Metal products	311	336	+ 8.0
Others	298	296	— 1.0
Miscellaneous	603.2	674.5	+11.8
All Commodities	374.8	405.4	+ 8.2

* Estimated.

• • • •

There are two spots which stand out prominently in the picture of wholesale prices—oilseeds and vegetable oils. The index number for vegetable oils improved over the year ended June, 1953 by 42.2 per cent. to 583, while that of oilseeds increased by 48.4 per cent. to 641. These are large increases, by any standard. The point may be illustrated by a reference to groundnut prices. Groundnut bold, ready, was quoted at Rs. 43-12 per cwt. in May 1950, that is before the Korean war. A year later, it climbed to Rs. 51-12. In March, 1952, when there was a general slump in India, it moved down sharply to Rs. 25. Since then, there has been a steady increase and it is now quoted at as much as Rs. 54, a record high. Since groundnut and groundnut oil constitute the only important sources of fat for most Indian families—milk and milk products are now above the reach of a large section of the population—it is necessary that their prices should be well within the reach of people of modest means. We, therefore, welcome and support the move made by the Bombay Oilseeds Exchange to get the Government to agree to larger imports of vegetable oils, particularly edible oils. In a communication addressed to the Government, the Board of the Exchange has drawn the attention of the Government to the rising prices of groundnut and groundnut oil. It urges that necessary steps should be taken

SHARE MARKETS STEADY

TEXTILES FARE BETTER

(From Our Own Correspondents)

BOMBAY, 16*th July*

A SMART rise in the values of textile shares and the Tata Hydro group shares was the most notable feature of trading on the Stock Exchange during the week. Steel shares met with some pressure on bearish rumours regarding retention prices of steel and on possible fears of refusal by the Government to allow an increase in the return on the gross block from 8 per cent. to 10 per cent. These sales were, however, absorbed and, on the closing day, some steadiness was noted on reports that the retention prices would be announced next Saturday. The sharp rise in textiles also favourably influenced sentiment in steels. Prices, therefore, improved, but the improvement was not enough to wipe off earlier losses. Consequently, final quotations were below those at the end of the previous week. Textile shares, on the contrary, fared better. Although they were, for the most part of the week, in a narrow groove these shares staged a rally on the closing day under the stimulus of a number of favourable factors. Thus, the abolition of price and distribution controls in cloth, the encouraging outlook for textile mills, particularly on hopes of an accord between India and Pakistan, and the proximity of interim dividends of some of the mills all cumulatively joined to raise values in this section over a broad front.

In the steel section, Tata Deferreds opened on a quiet note at Rs. 1,861-4 and reacted to Rs. 1,852-8 on Monday, due to disappointment over the delay in announcing the steel retention prices. Subsequently, short-covering and some replacement buying lifted them to Rs. 1,873-12 yesterday morning. But a reaction set in on adverse rumours about the steel prices, as stated above, and the shares were brought down to Rs. 1,856-4 before closing at Rs. 1,866-4. Tata Ordinaries were marked down from Rs. 325 to Rs. 321-12, but were restored to Rs. 324-8. Indian Irons touched a low of Rs. 23-8 and finished at Rs. 23-11, as against Rs. 23-15½.

In the textile section, Bombay Dyeings advanced from Rs. 372-8 to Rs. 379-6, but finished at Rs. 378-12. Kohinoors were in demand on dividend considerations and gained Rs. 3-4 to Rs. 305-12. Central Indias were picked up Rs. 5 better at Rs. 161 and Centurys Rs. 3-8 higher at Rs. 275-8. Finlays staged a well merited rally of Rs. 12 to Rs. 325 and Gokaks were supported to score a gain of Rs. 9 to Rs. 222-8, on reports of brisk demand for the Company's yarns. New Greats were marked up Rs. 3 better at Rs. 150. Simplex put on a rupee to Rs. 172-8. Standards were keenly bid and a large parcel of shares changed hands at Rs. 316-4, showing a rise of Rs. 10 over the week. Svadeshis gained ground from Rs. 245 to Rs. 248.

Bank shares were steady. Imperial Bank Fully Paids moved up by Rs. 7-8 to Rs. 1,882-8 and the Contributories by Rs. 5 to Rs. 457-8 on investment support. Centrals were a fraction lower at Rs. 65, while their new shares were unchanged at Rs. 67. Indias were a shade better at Rs. 158-8, and Barodas at Rs. 112.

A rise of Rs. 41-4 to Rs. 1,550 in Tata Powers was the highlight of trading in the public utilities section. Andhra Valleys advanced by Rs. 12-8 to Rs. 1,440 and Tata Hydros by Re. 1-8 to Rs. 155.

Leading industrials in the miscellaneous section presented a steady front. A.C.C.s were a fraction better at Rs. 171. After moving narrowly, Belapurs picked up strength to-day and rose to Rs. 228-8, a gain of Rs. 4-8 over the week. Bombay-Burmahs were dull at Rs. 355. B.I.C.s were quiet at Rs. 8-3½.

• • • •

Calcutta Stock Exchange

CALCUTTA, 15*th July*

The Calcutta Stock Exchange ruled easy again this week, and further losses were recorded. The volume of transactions was very much limited. The absence of any improvement in the labour situation at Burnpur, the unsatisfactory rate of production of the Indian Iron and Steel Company for June, which is a reflection of the labour troubles of recent weeks, and the uncertainty regarding higher retention prices for steel, were all factors which depressed the leading counter, Indian Irons. A fractional recovery was staged in the last two sessions, on hopes of an early settlement at Burnpur following yesterday's conference between labour leaders and the West Bengal Government. However, the Tokyo report that Dr. Rhee has after all been made to agree not to hinder a Korean truce acted as a damper against general enthusiasm. Later reports of heavy fighting between South and North Koreans were not taken notice of as market circles believed that undue importance should not be attached to the Korean reports in view of the fact that the whole situation was somewhat shrouded in mystery.

Poor turnover in hessians and sackings discouraged buyers of jute shares, and marking down of values in jutes invited a general air of lethargy. The flotation of loans by the State Governments at an attractive rate of interest means a further diminution of funds to the market, which is now all the poorer, as a result of diversion of funds on the recent National Plan Bonds. Although the announcement of textile decontrol did not cause any change of sentiment, in view of the general depression, it was welcomed in the market.

Sectionwise, jutes changed hands at lower levels, but on Thursday and Friday last enquiries were a little broadbased. Deltas were better by one point at Rs. 230, Kamarhattis rose from Rs. 180 to Rs. 190 early in the week, but profit-taking soon reduced the price to Rs. 184. In transactions, Khardahs gained as many as 12 points to Rs. 175. Opening at Rs. 23-13 speculative Howrahs lost to Rs. 23-9 but recovered to Rs. 23-14 on Tuesday. Champdanies were earlier quiet at *Rs. 150, but to-day* realised Rs. 150-8. Nuddeas declined from Rs. 46-8 to Rs. 44-4.

Indian Irons opened at Rs. 24-1 and although in transactions of small lots, an improvement to Rs. 24-8 was recorded early in the week, a slump to Rs. 23-6 followed the publication last Friday of the production figures for June, according to which the output of pig iron showed a decline from 57,810 tons in May to 36,730 tons, steel ingots from 32,850 tons to 23,940 tons, and finished steel and semis from 19,640 tons to 13,020 tons. A recovery to Rs. 23-14 was possible yesterday, following the attempts now being made by the Government to ease the Burnpur situation. The rate, however, receded to Rs. 23-11 to-day on profit-taking. Jessops were fractionally lower at Rs. 23-13 earlier, but realised Rs. 24-2 yesterday. Texmacos eased from Rs. 6 to Rs. 5-12.

More sellers appeared in the tea section, with the result that values were brought down rather violently. Thus, Bishnauths declined from Rs. 29-2 to Rs. 28, Hantaparas from Rs. 158 to Rs. 152 and Hansquas from Rs. 15-6 to Rs. 14-6.

Depression also invaded the miscellaneous section. Angelo Bros. lost from Rs. 18-14 to Rs. 18-10 and Indian Wood Products from Rs. 33-8 to Rs. 33-4. At Rs. 18-6, Indian Cables were extremely quiet.

Madras Stock Exchange

MADRAS, 14*th July*

The Madras Stock Exchange came in for some speculative activity during the week under review. Textiles met with selective enquiry following the removal of price and distribution controls of yarn and cloth. A somewhat cheerful tendency prevailed in the tea section on encouraging advices from overseas countries. Rubbers scrips were generally steady on reports of depletion of stocks of rubber with the leading consumers. Sugars revealed fair improvement on revival of demand for certain leading scrips. While prices in these sections tended to look up, coffee shares were a shade lower in the absence of any encouraging development. Miscellaneous and banking scrips also depicted a similar trend. The undertone, however, was, on the whole, steady.

The textile section met with selective enquiry during this week. Radhakrishnas shot up from Rs. 144 to Rs. 146 and Coimbatore Spinnings from Rs. 40 to Rs. 41. Rangavilas were higher by As. 12 at Rs. 43-8. Loyals and Maduras improved by As. 8 and As. 4 to Rs. 16-8 and Rs. 36-8, respectively. Kotharis were done at Rs. 10-8, as against Rs. 10-4. Buckinghams, however, lost Re. 1 to Rs. 120. Cannanores also receded by a similar amount to Rs. 99.

Among plantings, teas were slightly on the uptrend induced by considerable demand for better grade tea leaves. Periakaramalais gathered As. 10 to Rs. 28-4, and Devasholas As. 8 to Rs. 16-8. Chembras, Ouchterlonys and Kil Kotagiris were fractionally better at Rs. 2-14½. Rs. 3-14 and Rs. 4-13, respectively. In the rubber section, Cochin Malabars gained an anna to Rs. 6-10. Rajagiris too put on a similar amount to close at Rs. 10-11. Peninsulars and Velimalais were better at Rs. 8-5 and Rs. 2-5½, respectively.

Miscellaneous scrips also lacked support. Mysore Papers and Matches slipped by As. 6 and As. 4 to finish at Rs. 14-4 and Rs. 2-5, respectively. Mysore Tobaccos fell by As. 5 to close at Rs. 10.

GOVERNMENT OF UTTAR PRADESH

FINANCE (BUDGET) DEPARTMENT

Dated Lucknow, July 11, 1953

PRESS NOTE

4 per cent.

Uttar Pradesh State Development Loan 1963

THE Government of Uttar Pradesh are floating a loan of Rs. 5 crores in order to finance their irrigation works, electricity projects and other State development schemes. The main terms of the loan are that the issue price will be Rs. 99-8 for every Rs. 100 of the loan applied for. The loan will have a currency of ten years from July 15, 1953, and will be repaid at par on July 15, 1963, and will bear interest at the rate of 4 per cent. per annum from July 15, 1953, payable half-yearly on January 15 and July 15, and will be subject to income-tax. Subscriptions for the loan can be made in the form of cash or cheque, and will be received at the branches and treasury pay offices of the Imperial Bank of India in Uttar Pradesh, the Government treasuries located at the headquarters of the districts in Uttar Pradesh where there is no branch or treasury pay office of the Imperial Bank of India and at the offices of the Reserve Bank of India at Bombay, Calcutta, Delhi, Madras and Bangalore.

Full details of the terms of the loan are contained in Finance Department Notification No. B-3243/X—88-1953, dated July 11, 1953, copies of which with the application form are obtainable at the receiving offices mentioned above.

2. *Financial Position of the Government of Uttar Pradesh—*

Revenue Position.—The revenue receipts and expenditure and the surpluses for the last ten years are as follows:

(Figures are in lakhs of Rupees)

	Revenue Receipts	Revenue Expenditure	Surplus (+)
1943–44	2,426	1,927	+499
1944–45	2,747	2,330	+417
1945–46	2,995	2,551	+444
1946–47	3,265	3,061	+204
1947–48	3,876	3,771	+105
1948–49	4,920	4,729	+191
1949–50	5,626	5,626	..
1950–51	5,189	5,184	+5
1951–52	5,556	5,550	+6
1952–53	6,309	6,309	..

The major portion of the revenue surplus from 1943-44 to 1948-49 was put into various reserve funds. The excess expenditure of 229 lakhs over receipts in 1949-50 was incurred on Development Schemes and was covered by transfer of an equivalent amount from the Revenue Reserve Fund. A similar excess estimated at 134 lakhs for 1952-53 has been similarly covered by a transfer from that Fund.

Balances in the Reserve Funds.—The balances at the credit of the various reserve funds at the end of 1952-53 were 22 lakhs in the U.P. Road Fund, 112 lakhs in the Hospitals Fund, 66 lakhs in the Famine Relief Fund, 1,165 lakhs in the Revenue Reserve Fund, 91 lakhs in the Sugar Research and Labour Housing Fund, 3,178 lakhs in Zamindari Abolition Fund, 177 lakhs in the Depreciation Reserve Fund—Irrigation, 143 lakhs in Depreciation Reserve Fund—Government Bus Services and 84 lakhs in the Depreciation Reserve Fund—Electricity. Some of these are invested in Government of India Securities. The total balance in these Reserve Funds amounts to 5,040 lakhs.

Debt Position.—On March 31, 1953 the debt of Uttar Pradesh amounted to 5,960 lakhs consisting of 1,118 lakhs representing the consolidated debt due to the Central Government and 2,077 lakhs taken from that Government for development purposes and 778 lakhs for Relief and Rehabilitation Schemes *plus* 1,749 lakhs representing the amount of public loans floated by this Government from time to time *plus* 213 lakhs as Uttar Pradesh Encumbered Estates Act Bonds and 25 lakhs other loans. Sinking Funds for all the public loans and the loans taken from the Central Government for development purposes have been formed and they are invested in Government of India Securities.

Assets of the Government.—Against the outstanding debt of 5,960 lakhs there are assets in the form of the Ganga, Yamuna and Sarda Canals, various other small canals, the State tube-wells and the Hydro-Electric Grid, Electric Supply undertakings and Government Bus Services, in which about 6,865 lakhs have been invested. Another asset is the balance due to Uttar Pradesh Government on account of loans and advances amounting to 1,755 lakhs. Besides these, there are a large number of buildings and roads for which no separate capital accounts are maintained.

State Balance at the close of 1952-53.—The Uttar Pradesh Government had a free cash balance of 756 lakhs at the end of 1952-53.

NEWS IN BRIEF

INDIA'S rice production of 23.4 million tons in 1952-53 has been the highest on record.

India has the third longest telegraph channel mileage in the world, with 2,44,931 miles of cables and overhead wires, and the sixth largest inland telegraphic traffic, with an average of 24.5 million telegrams a year.

A new agreement has been signed between the Government of India and the Ford Foundation, under which the latter will make available to India a sum of $1,041,310 for the implementation of the community development programme.

The Government of India has ratified the International Wheat Agreement, which will become effective from 1st August next. It will, accordingly, buy one million tons of wheat from the International Pool, at the rate of $2.05 per bushel of 60 lbs., during 1953-54.

According to the Directorate of Economics and Statistics, Ministry of Food and Agriculture, the all-India fourth estimate of wheat for 1952-53 puts the current year's acreage and production at 23,082,000 acres and 6,388,000 tons, as against last year's corresponding adjusted estimates of 22,874,000 acres and 5,700,000 tons. It shows an increase of 1.0 per cent. in area and 12.1 per cent. in production.

The annual output of cotton in Uttar Pradesh is expected to reach one lakh bales this year. According to the Five-year Plan, this target was to be attained in 1956, but is actually being achieved three years ahead of the schedule. Before 1950, when the cotton extension scheme was started, the annual production was only 30,000 bales, and, in 1952-53 it went up to 70,000 bales.

The Pharmaceutical Enquiry Committee concluded its *South India tour* last week, after going through about a fortnight's crowded programme of visits to factories and discussions with the representatives of associations of manufacturers, wholesalers, importers, retail chemists and druggists and members of the local branch of the Indian Medical Association and Indian Pharmaceutical Association.

The Government of India has abolished, with effect from the 16th inst., the export duty on jute specialities and miscellaneous jute manufactures (other than cloth and bags), such as jute mesh, jute carpet yarn, paper-lined hessian, jute tarpaulins, jute rope and jute mattings. This step has been taken because the Government considers that the rate of duty that has hitherto been existent on these specialities is retarding the export trade and that the competitive position in foreign markets should be improved.

The Government of India will shortly appoint a Commission to regulate and control forward markets in India. The Commission will be a permanent and statutory body and will have jurisdiction over commodity markets only. The forward trading on Stock Exchanges will be governed by a separate Bill now under preparation. The Forward Markets Commission will have power to control the forward markets and to amend, when necessary, the by-laws of any market or to impose certain conditions.

The Government of India proposes to develop cottage industries more vigorously with a view to ending unemployment, according to Mr. Gulzarilal Nanda, Union Minister for Planning. The Government would encourage the "labour incentive" rather than "capital incentive" in suitable industries, and the Five-year Plan would be re-examined from that point of view. All technical and financial help would be given to the cottage and small-scale industries which should produce consumer goods as far as possible.

The regional meeting of the Food and Agricultural Organisation will be held in Bangalore from the 27th July to 5th August next. The main objectives of the meeting will be to promote action by member Governments in the formulation and review of national policies and programmes, to promote regional co-ordination, and to make available to the seventh session of the F.A.O. Conference, to be held in Rome in November, 1953, an appraisal of the prospective development of agricultural, fisheries and forest resources in Asia and the Far East, during the next few years.

• • • • •

From Abroad

112,100 foreign workers are employed in Sweden at present, as against only 10,000 employed in 1939. This increase is stated to be in accordance with Sweden's policy of encouraging the creation of a common North European labour market.

The Governments of the Netherlands and the United States of America have come to an agreement as regards the use to be made of the remainder of the Counterpart Account of the American economic aid held by the Netherlands Bank of the value of 900 million guilders.

The Pakistan Government has placed an order for 6,000 cotton textile looms to be set up as part of the first phase of the six-year development programme. Of these, 5,500 looms have already been allotted. The total estimated cost of erection of the looms is Rs. 16.5 crores, in which the Government's investment alone is Rs. 6.5 crores.

The amount spent on construction in the U.S. during the first half of 1953 was $16,000 million, or eight per cent. above that in the same period last year, according to a joint compilation of the Commerce and Labour Departments. Two-thirds of the spending was for private building. Home building alone accounted for nearly $5,500 million.

The National Assembly of France passed last week the three key clauses of the financial reform Bill, which enable the Government to borrow another 110,000 million francs (110 million sterling) from the Bank of France, to extend previous loans, increase taxes by 60,000 million francs a year, to pay these loans off, and to make administrative reforms and economies.

The freight revenue earned by Swedish shipping vessels during 1952 showed an increase from Kr. 1,750 million in 1951 to Kr. 1,900 million, or a rise of 8.5 per cent. 94 per cent. of the revenue was accounted for by trade with foreign countries or between foreign ports. Regular line shipping accounted for a large share of the revenue, which was also favourably influenced by contracts signed before the freight market began to weaken in 1952.

The rate of production of steel in the U.K. during May, 1953 was at the highest recorded for that month in any year, with a weekly average of 350,700 tons. The previous best output for the month was in 1950, when the figure was 319,200 tons. Pig iron production was also at a record rate for May, averaging 214,700 tons a week.

PVC plastics are now being used in Hungary for a wide range of industrial products. At a factory in Nagyteteny, water piping is being produced by extrusion moulding. Plastic sheeting is also manufactured. Plastics are being used for manufacture of tooth-paste and other tubes, and the production of shoe soles and machine belting is said to be projected. Plastic powder is, at present, being imported from Eastern Germany. Plans are afoot to manufacture it in Hungary, where existing supplies of coal, petroleum and natural gas provide ample raw materials.

Tata Chemicals Ltd., *Bombay*, Dr. Vikram A. Sarabhai of the Ahmedabad Physical Research Laboratory, Mr. M. D. Chaturvedi, Inspector-General of Forests, Dr. S. S. Bhatnagar, Director, the Council of Scientific and Industrial Research, and Mr. M. S. Bhatnagar, Joint Secretary of the Union Ministry of Finance. Dr. S. D. Mahant of the Council of Scientific and Industrial Research has been appointed non-member Secretary of the Committee.

PERSONAL

DR. C. L. Katial, Director-General, Employees' State Insurance Corporation, relinquished his post on the 16th inst.

Mr. T. Sivasankar, I.C.S., Joint Secretary, Ministry of Irrigation and Power, Government of India, has been appointed Secretary to the same Ministry.

Mr. Ghaznafar Ali Khan, Ambassador of Pakistan to Turkey, has been appointed High Commissioner for Pakistan in India.

Mr. John A. Thivy, Commissioner for the Government of India in Mauritius, has been appointed Minister to Ethiopia, *vice* Sardar Sant Singh, whose term expires shortly.

Mr. S. Boothalingam, I.C.S., has been appointed officiating Secretary, Union Ministry of Commerce and Industry, *vice* Mr. H. V. R. Iengar, who has been granted leave for two and a half months.

Mr. P. P. Varma has been appointed Chairman, and Messrs. K. S. V. Raman, I.C.S., and A. B. Ganguli, I.C.S., Members, of the temporarily reconstituted Damodar Valley Corporation consequent on the expiry of the term of appointment of the previous Chairman and one of the members of the Corporation.

Mr. Walter Laves, Chairman of the U.S. National Commission for U.N.E.S.C.O. and Vice-President in charge of Research of the Governmental Affairs Institute of the American Political Science Association, has been appointed as Secretary-General for the Conference on Organisation and Administration of Public Enterprises in the Industrial Field. The Conference is scheduled to be convened in Rangoon in March, 1954, under the joint sponsorship of the Government of the Union of Burma (E.C.A.F.E.), the International Institute of Administrative Sciences (I.I.A.S.), and the United Nations Technical Assistance Administration.

Mr. Kasturbhai Lalbhai, prominent industrialist of Ahmedabad, has been appointed Chairman of the seven-man Committee, constituted by the Government of India to undertake preliminary work in connection with the establishment of the National Research Development Corporation. The other members of the Committee are: Lala Shri Ram, Chairman of the Industrial Finance Corporation of India, New Delhi; Mr. P. A. Narielwala of

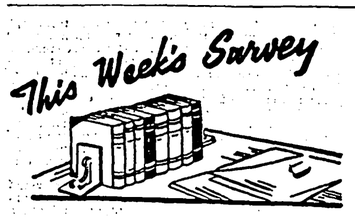
DRAX 68



U. S. FOREIGN AID

A JOINT conference of U.S. Senate and House of Representatives has agreed on an authorisation of $5,157 million for foreign aid. This will be widely welcomed, for it means a compromise between the House and the Senate. The former, it may be recalled, had originally declined to agree to a part of the aid funds for Europe on the ground that the funds could be given only after the treaty setting up a unified six-nation army, had been fully ratified. Apart from this consideration, *the grant of the aid is notable* for the reason that both Mr. Harold Stassen, Mutual Security Director, and Mr. Foster Dulles, U.S. Secretary of State, expressed themselves very clearly on the scope and aims of the U.S. aid when they appeared before the Senate Appropriations Committee. Mr. Dulles rightly pointed out that "hunger, poverty, disease and illiteracy provide an open invitation to subversion," and that the direct aims of the increased foreign aid programme in the Far East were to develop internal stability and strength so that the non-Communist countries could make an effective contribution to the collective strength of the free world. He said: "Economic health of the free world is the best preventive against internal subversion and that is why this programme must be concerned with both military and economic assistance." He also emphasised that the U.S. must stand ready for many years to build and maintain the strength of the non-Communist world.

The House of Representatives has voted to let the Mutual Security Administration (M.S.A.) end, as scheduled in the present law, in mid-1954, fixing 1956 as the expiration date on spending for both economic and military aims. The Senate, however, has voted to close down the M.S.A. on 30th June, 1955, with a final deadline of 1956, on economic aid spending and 1957 on military spending. Mr. Harold Stassen, on his part, was convinced—he told the Committee as much—that the U.S. would have to continue some sort of foreign aid programme for ten years. It is true that both the Senate and the House of Representatives contain men who are understandably impatient about the burdens which the U.S. now bears. It is only reasonable to expect that Americans should be sorely exercised not only over the magnitude of the aid but also over the fact that the aid has remained a continuing feature of the U.S. foreign economic policy. That the assistance should be stopped as early as possible admits of little doubt. And some of the aid-receiving countries themselves are anxious to eliminate their dependence on the bounties of the U.S. The present Government in the U.K., for instance, is striving hard to live within its resources and not to depend upon the U.S. even for military aid. Nevertheless, it would be truly tragic if the aid were stopped before the purposes for which the aid programme was initiated are fulfilled. These purposes have been stated very often before, both by Mr. Eisenhower and Mr. Truman. They were restated by Mr. Dulles when he said that the basic principle of the aid programme was that the U.S. national security could not rest on "her own strength." He drew pointed attention to the fact that economic conditions on the Indian sub-continent made political instability or Communist subversion a constant threat to both India and Pakistan. He added: "Both have shown initiative in undertaking programmes for economic development despite the very limited resources at their disposal. Economic progress is demanded by the people in these new nations and the survival of free Government in them depends on whether such progress will take place. It is important for us that these nations do continue along the path of free development, and it is worth while for us to help them through the assistance requested in this measure." These words reflect the international economic idealism that lies behind the aid programme. If it is wrong, however understandable, on the part of a section of American opinion, to ignore this idealism, it is equally wrong, on the part of the recipients of the aid, to ignore the need for realistic adjustments in their economic policy that would promote economic expansion through democratic means.

REPORT ON CURRENCY AND FINANCE

The Reserve Bank's annual publication, the *Report on Currency and Finance*, is becoming more and more widely recognised, as the years go by, as a detailed up-to-date and objective survey of economic events in this country and in the international field. The latest issue of the *Report* (priced at Rs. 5) will be particularly welcomed, for it deals with events in the year 1952-53, which, for more reasons than one, might well be regarded as a critical turning point in recent economic history. The year witnessed, both at home and abroad, the return of a buyers' market, the end of the Korean boom, and the revival of the use of monetary weapons for controlling inflation. For India, the year meant the inauguration of a well-laid economic plan, the Five-year Plan. It is against this background that the *Report* presents a broad review of economic changes. As usual, the *Report* is presented in two parts, International Economic Development in Part I and Indian Currency and Finance in Part II. The major change in world economy in recent months is the attainment of a fair measure of stability. The movement towards stability, as the *Report* points out, resulted from the operation of such factors as increased production, fall in demand, the decline in stockpiling and stretching out of defence expenditure. There was a noticeable tendency in many countries to relax or discard physical and price controls. The international payments position also underwent a marked improvement. The *Report* quotes changes in discount rates in a number of countries to show how the year witnessed the operation of monetary discipline.

In the domestic sphere, the *Report* emphasises that the year 1952-53 recorded further progress in several directions, although the year was not free from difficulties, some of which had their origin in external factors. Industrial production showed a further substantial improvement during 1952, the average index (Base: 1946=100) of industrial output for 1952 rising by 10 per cent. to a post-war record level of 128.9. Higher production was facilitated, among other factors, by the continued prevalence of industrial peace and larger availability of raw materials, including raw jute and cotton. The general price index during the year was comparatively stable, though price movements of some individual commodities showed rather wide fluctuations. Referring to the relaxation of controls, which was another main feature of the year, the *Report* says that the main objectives underlying these relaxations were to minimise the irksome features of controls and to restore normal conditions of trade wherever possible, as well as to help maintan production by stimulating demand through freer distribution.

Seasonal variations in bank credit and money supply, according to the *Report*, generally conformed to the traditional pattern; money supply showed a further downward adjustment, the decline being smaller at Rs. 37 crores, as compared with Rs. 173 crores in 1951-52. The *Report* attributes the smaller contraction partly to the deficit in the Central Government's budget in 1952-53, as against a small surplus in the previous year and partly to the fact that foreign assets of the Bank were maintained almost in balance in the year 1952-53 as against a considerable decline in the previous year. Since recourse to the Bank for accommodation during the year was considerably less than in 1951-52, and there was little change in the Bank's lending policy, the *Report* draws the conclusion that the "decline in money supply during the year which was of the order of 2 per cent. in itself did not materially affect the legitimate requirements of credit." This view might appear somewhat incorrect to some in the context of the increase in industrial and agricultural production. But the *Report* defends its view about the adequacy of credit by reference to the fact that the decline in money supply must be set alongside the other features of the economy during the year, such as the absence of large-scale building up of stocks, decline in speculation, and recession in prices.

The *Report*, which is an authentic compilation of data relating to economic trends, serves, as usual, the purposes of a reliable reference work. It avoids, of course, all economic polemics. But it is an invaluable guide to facts. The topics are very clearly arranged and fully indexed. It is particularly well illustrated by graphs which are both clear, and neatly drawn.

LOCAL DEVELOPMENT WORKS

The Government of India has announced the procedure governing the grant of financial assistance to local development works. The basic idea underlying this scheme of financial assistance is to stimulate the enthusiasm of the people for the Five-year Plan through local schemes which are of direct help to them and in the execution of which they contribute either in cash or kind or through voluntary labour. The local contribution—expected to be 50 per cent. of the cost of each work—is to be made by the State Governments, local bodies and people of the locality concerned. This local contribution is to be matched by a Central grant. A sum of Rs. 3 crores, it will be recalled, has been earmarked in the current year's budget, which represents 20 per cent. of the provision of Rs. 15 crores made in the first Five-year Plan. Out of this sum, Rs. 25 crores have already been allotted to State Governments on the basis of their population. The balance of Rs. 50 lakhs is retained by the Planning Commission for direct allotment. Grants out of this sum are to be allotted on application from well recognised voluntary associations which submit suitable schemes.

The maximum limit of the Government of India grant has been fixed at Rs. 10,000 for each work. In other words, this means that the cost of a scheme should not exceed Rs. 20,000. The chief consideration which has weighed with the Government in fixing the maximum limit is the intention to spread the benefit over as wide an area as possible. The categories of local works which are considered most suitable for assistance include schemes relating to water-supply, agriculture, rural sanitation, village roads (including small bridges and culverts), schools and dispensary buildings in places where such institutions already exist but are not adequately housed, godowns for storage of goods. The schemes which are designed to effect permanent improvements in the countryside are also eligible for assistance.

The payments for approved schemes will normally be made on the satisfactory completion of the work, as also on the certificate of completion by Government Liaison Officers. Before certifying the claim for the grant, the Liaison Officer concerned will satisfy himself, "in the most expeditious manner possible," to the effect that the expenditure claimed has actually been incurred.

Two specific conditions, however, have been laid down for granting financial assistance to local works. First, the nature of works selected should be such as will not involve "much" recurring expenditure. Secondly, there should be adequate and effective arrangements for the purpose of maintenance of the work after its execution. Preference, it is stated, will be given in areas which do not derive any benefit directly or indirectly from either Central or State grants or projects. Even here, special consideration is to be given to the needs of underdeveloped areas.

The financial assistance that the Government of India is at present giving for the execution of local development works has no doubt supplemented the resources of the local bodies. But considering the vast sums required for implementing the various projects by the Local authorities, the contemplated assistance is a mere trickle. What is wanted, therefore, is assistance on a larger scale. This, however, cannot be expected in the present context of the financial position of the Government of India, on the one hand, and competing demands for assistance, on the other. In the circumstances, the Local bodies will have to decide their own priorities within the limits of their capacity for providing finance. They will also do well to tap properly the resources available, as, for instance, proper assessment and collection of their taxes.

LEASE OF COALFIELDS

Indian coal interests are perturbed by the Bihar Land Reforms (Amendment) Bill, 1953, which is now before the President for his consent. The Bill seeks to amend section 10 of the Bihar Land Reforms Act, 1950, relating to subsisting leases of mines and minerals, in order to extend the scope of that section. It provides for the cancellation of the leases in respect of not only the area wholly unprospected or undeveloped, but also that portion of the leased area, where prospecting has not been done before the commencement of the Act. Under section 10 of the 1950 Act, however, the State could cancel the lease only if its holder had not done any prospecting or development before the commencement of the Act.

It is not clear what purpose the Government seeks to achieve through the amendment which certainly violates private rights. It is doubtful whether there exists any necessity at the present moment for such an amendment. For, if the Amendment Bill is enforced, every colliery in Bihar will lose the entire undeveloped portion of its leasehold area, unless it is in a position to satisfy the State Government that it has been prospected in its entirety. It would act as a serious deterrent to further investment, because they might be served at any time with notices terminating their leases in respect of the *unprospected leaseholds*. Incidentally, there is the difficulty regarding the definition of prospecting. This is a serious omission which might occasion many legal disputes.

The coal industry rightly contends that the Amendment Bill virtually amounts to expropriation and that the legislation contravenes Article 31 of the Constitution which forbids deprivation of property of any person without compensation. The industry further contends that the State Government has no competence to legislate for the termination of existing leases with retrospective effect, since the regulation of mines and mineral development is a Central subject and the States have only residuary and subordinate powers.

It may be that most of the fears of the industry are unfounded and that the State Government desires to use the legislation, when enacted, as sparingly as possible. But the vesting of such a power in the Government does provide the State with a weapon with which it can threaten the industry in and out of season. At a time when the industry is facing several other troubles, the Amendment Bill comes as an additional handicap. Bihar is the main coal-producing State in India. If the State's collieries were to lose the undeveloped portions of its leases and confine their operations within the present prospected limits, certainly the day would not be far off when India's coal output would be on the down-trend.

There is, again, the question as to what the Government is going to do with the unprospected coal areas after terminating the present leases. Is it going to settle new parties on them? If so, what is the purpose of settling new parties on these areas? There does not appear to be any justice in taking away the leaseholds from the present holders and allotting them to others, unless the former are guilty of not carrying out their obligations. It is, therefore, to be hoped that the President will withhold his consent and call for a critical examination of the Amendment Bill.

FINANCES OF BORROWING STATES

Ten States are now in the market to raise loans aggregating Rs. 28 crores. The States are Bombay, Madras, West Bengal, Madhya Pradesh, Bihar, Uttar Pradesh, Mysore, Travancore-Cochin, Madhya Bharat and Saurashtra. In this context, a review of the financial soundness of these States will be read with interest. The three criteria for judging this posttion are the States' revenue and expenditure, their cash balances, and assets and liabilities.

To take first the revenue and expenditure position of the States. All the borrowing States, with the exception of Bombay and Madhya Pradesh which have presented surplus budgets, have budgetted for a deficit during the current (1953-54) financial year. An idea of the budgetary position of the ten States under review can be had from the table given below:

(In crores of rupees)

	1952-53 (Revised Estimates)			1953-54 (Budget Estimates)		
	Revenue	Expenditure	(+) Surplus or (—) Deficit	Revenue	Expenditure	(+) Surplus or (—) Deficit
Bombay	64.84	69.24	—3.90	67.84	67.76	+0.80
Madras	63.36	68.75	—5.39	65.75	65.75	..
W. Bengal ..	38.80	42.13	—3.83	39.16	43.27	—5.11
Madhya Pradesh ..	23.90	21.20	+2.70	25.06	24.53	+0.53
Bihar	35.77	31.36	+4.41	33.00	33.34	—0.34
Uttar Pradesh ..	66.41	66.41	..	74.38	78.80	—4.42
Mysore	19.67	20.21	—0.54	20.62	22.20	—1.58
Travancore-Cochin.	16.73	16.83	—0.10	17.14	17.28	—0.14
Madhya Bharat ..	13.01	12.73	+0.28	14.30	14.49	—0.19
Saurashtra ..	9.84	11.66	—1.82	9.42	9.95	—0.53

In addition to the revenue deficits, as noted above, some of the States have also been incurring heavy deficits on capital account, thanks to the steady and substantial rise in developmental expenditure and schemes of States trading. Consequently, the overall deficits have been quite large. The deficits are covered largely by depleting investment reserves partly by drawing down cash balances and partly by borrowings. The following table shows the extent to which the cash balances were depleted in 1952-53 and are expected to be run down in 1953-54:

(In crores of rupees)

	1952-53 (R.E.)	1953-54 (B.E.)
Bombay	— 8.79	—13.62
Madras	— 5.57	— 4.16
W. Bengal	— 5.26	— 6.13
Madhya Pradesh	— 3.56	+ 8.89
Bihar	+ 4.56	— 0.01
Uttar Pradesh	+ 1.73	— 0.59
Mysore	— 2.05	— 1.37
Travancore-Cochin	+ 0.36	— 1.65
Madhya Bharat	+ 0.63	— 0.21
Saurashtra	+ 0.11	— 0.06

A review of the debt position of States may now be made. The gross liability of the Government of Bombay as at the end of March, 1953, amounts to Rs. 62.89 crores. Of this, the consolidated debt due to the Centre (including Rs. 1.49 crores loaned to the Bombay Municipal Corporation through the State Government) amounts to Rs. 11.00 crores. Open market loans aggregate Rs. 26.89 crores, unfunded debt (mainly State provident fund balances) Rs. 8.36 crores and advances granted by the Centre for various purposes, viz., rehabilitation of displaced persons, industrial housing, minor irrigation, tube-wells scheme, other irrigation works, etc., for Rs. 16.55 crores. If the amount of Rs. 22.91 crores due to the Central Government on account of outstanding loans to local bodies, agriculturists, etc., were to be deducted from this, the Government's net debt liability comes to Rs. 39.98 crores. The total interest-yielding assets of the Government as on 31st March, 1953, amount to Rs. 79.85 crores, that is an amount which is Rs. 16.90 crores in excess of the interest-bearing obligations.

The total public debt of the Madras Government as at 31st March last amounts to Rs. 75.07 crores. Of this, the long-term loans from the Centre account for Rs. 30.77 crores, open market loans for Rs. 25.47 crores, short-term accommodations from the Centre, Reserve Bank, etc., for Rs. 18.80 crores, and special irredeemable loans for Rs. 0.03 crore. In addition, there are liabilities on account of various deposits received from the public from time to time and guaranteed sums (of about Rs. 7.75 crores). Against these liabilities, the Government has its own capital and remunerative assets worth about Rs. 94 crores, the share of assets in the Andhra area being Rs. 20 crores. This includes Rs. 64.50 crores under irrigation and electricity schemes, Rs. 24.5 crores under loans and advances due, Rs. 3 crores under investments in cinchona plantations, State transport and other commercial undertakings, and Rs. 1.5 crores under shares in Industrial Investment Corporation and other private industrial concerns. There are, besides, assets (Rs. 5.95 crores) held in the shape of Government securities. The Government has also incurred capital expenditure of the order of Rs. 37 crores on irrigation and navigation works technically classed as "unremunerative." Taking all items together, the assets of the Madras Government are substantially in excess of its liabilities.

The outstanding debt of the West Bengal Government, due to the Government of India as at the end of 1952-53, is Rs. 52.58 crores. The Government has also a public debt of Rs. 3.75 crores. Against these liabilities, there are assets in the form of investments in productive schemes, as, for example, the Damodar Valley Project. It may be noted, in this connection, that the Government has provided, out of its own resources, during the current financial year, a sum of Rs. 18.5 crores for implementing the various development schemes of a productive nature. It has also earmarked Rs. 19.9 crores for welfare schemes (unproductive).

In the case of the U.P. Government also, the assets are higher than the liabilities, as will be shown presently. The debt of the Government as at 31st March, 1953, amounts to Rs. 59.60 crores. This consists of Rs. 11.18 crores representing the consolidated debt due to the Centre, Rs. 20.77 crores taken from the Centre for developmental

MORE FREEDOM FOR COTTON MILLS

CONFUSION OVER UNEMPLOYMENT PROBLEM

(From A Special Correspondent)

NEW DELHI, 13*th July*

A WELCOME announcement of Government to the industry and the trade this week is doubtless the total abolition of all controls over prices and distribution of cloth and yarn. Although the Government's Press *communique* is guarded in its expression, characterising the new move as "an experimental measure," it is likely that the decontrol policy of the Government has come to stay. This decontrol is not unexpected. For the last few months, the supply position of cloth in the country has been comfortable and the main markets have been literally flooded with all varieties of cloth. Production of cloth and yarn has been steadily mounting up in recent months. In April and May, the output of cloth amounted to the high figure of 419 and 423 million yards and, at this rate, the annual production is likely to cross the 5,000-million yards mark by next year. Yarn production has also been satisfactory, the total for the first five months being 609 million lbs., as against 569 million lbs. for the corresponding period a year ago. The output of cloth in 1951 and 1952 amounted to 4,076 and 4,603 million yards and that of yarn 1,304 and 1,448 million lbs., respectively. Now that the power supply position in Bombay and Madras is reassuring on account of the satisfactory progress of the south-west monsoon, it is possible that the trend of cloth and yarn production will be maintained at fairly high levels in the coming months.

DELHI LETTER

The decontrol of prices in respect of this basic commodity can indicate the return of normal conditions after a lapse of nearly ten years. Although there is a small measure of control on production at present, the Government might be able to modify it to some extent after some time. Complete decontrol in respect of production will not, however, be possible, since Government is wedded to protect the handloom industry. Hence the restriction in respect of mill production of *dhotis* and *saris* will remain at least for a few more years. The abolition of control over the prices of manufactured goods naturally poses the problem of decontrol over those of raw cotton. Although there is a good case for decontrol in this respect, the Government is not likely to take immediate decision in the matter, being anxious to watch the entire situation for some more time.

Another important commodity with a good case for a limited decontrol is cement. During the last one or two months, production of cement has been standing around 3.25 lakh tons, the annual rate being very near four million tons. Within a few months, additional capacity will come into existence and before the year is out the monthly production rate is expected to cross the 3.5 lakh tons mark. If the movement of transport does not impede the regular flow of cement from the producing to the consuming centres, the industry will not find itself difficult to satisfy demands from Government and the public. The Government may, therefore, favourably consider the question of partial decontrol in respect of this industry, after reserving sufficient stocks for its multi-purpose projects.

Unemployment Problem

There is considerable confusion in Government circles in regard to the solution of the unemployment problem in this country. Apart from paying lip service to the fact that something must be done to utilise the vast resources of the man-power, non-technical as well as technical, no concrete workable proposals are being put into action. It is suggested that the Government should totally prohibit imports of many consumer goods such as biscuits, confectionery, crockery, soaps, ready-made garments, etc., but the total value of these goods may not even exceed one per cent. of the imported articles into the country. Ban on imports of these is, therefore, utterly inadequate to stem the unemployment problem. Emphasis is again placed on the development of cottage and small-scale industries. Some of the primary requisites for the expansion in these sectors are a proper machine tool industry and the availability of substantial quantities of iron and steel at fair prices. In both these respects, India is considerably handicapped.

The progress in regard to the expansion of the steel output in the country has been painfully slow during the post-war period, while many leading countries in the world have made strident advances in this respect during this period. At present Mr. A. K. Chanda, Secretary to the Production Ministry of Government, is now in Germany, carrying on negotiations with a few leading firms for the establishment of a new steel factory on Indo-German co-operation. There are reports that a leading Austrian firm has been using a new process in the manufacture of steel which is considered economical and it is likely that the Production Secretary will examine this aspect of the problem during his present tour. Unless and until the basic parts of the Indian economy are strengthened, it is very difficult to tackle the other problems.

In these circumstances, the report that local works will be established in towns to absorb the educated unemployed is vague and impractical. Similarly, changes in the present educational system with a bias towards the development of industrial skill are not likely to cut ice at the present juncture. However, the solution to the unemployment problem lies to some extent on the enlarged economic activity in the country, both from private and Government sectors. In regard to the former, Government must provide more incentives to capital formation by allowing some concessions on the capital ploughed back in the industry. At the same time, it must conduct an exhaustive study on the optimum limit upto which deficit financing in the country could be adopted, the correlation between money circulation and the price trend, the influence of food supply on the cost of living index, etc. This sort of research studies can enable Government to arrive at a correct decision on the problem of development finance through note issue. There is already a school of thought in the country that, in case the food and cloth supply position shows a definite improvement, even large-scale deficit financing will not have any adverse effect on living costs and that investment on short-term productive projects will exercise considerable beneficial effect on the economy of the country in the long run. There are already reports that the Planning Commission, the Finance Ministry, the Reserve Bank and the concerned Government departments will shortly be examining the various issues from different angles.

Railway Coaches

The plans for the manufacture of railway coaches at Perambur (Madras) have at long last reached a decisive stage and production of coaches, it is stated, is expected to begin by the end of 1955. The erection of the factory is estimated to cost about Rs. 4 crores, half of which will be the cost towards plant and machinery and the other half for the construction of building. As per agreement with the Swiss firm, Messrs. Schleiren, the Integral Coach Factory is expected to manufacture about 350 coaches per year at its maximum. For technical help, etc., Government will be paying the Swiss firm about Rs. 30 lakhs; more than half of the payment is linked with the actual performance from year to year. The contract with the firm is for eight years and there is provision for payment of royalty and bonus to the Swiss staff in case the factory were to reach the production target earlier.—*All Rights Reserved.*

(Concluded from next column)

earlier, declared how important it was for more investment to take place, but failed to show how this could happen. Are both the Government of the present and the Government of the future both equally bankrupt in the practical ideas whereby national investment is to be increased? The Commonwealth countries as well as Britain, are interested in the answer, because they are being constantly assured that more capital is to be made available to them for fresh investment whereby their wealth—as well as that of Britain—is to be increased. Just where is this new investment to come from? Did the Commonwealth Premiers ask Sir Winston and Mr. Butler that question at the recent conference? or, at some informal gathering did they quiz Mr. Morrison or Mr. Gaitskell for the answer.—*All Rights Reserved.*

SOCIALISTS' PLAN

WHERE IS THE MONEY TO COME FROM?

(From Our Own Correspondent)

LONDON, 9*th July*

IN a recent letter, Your Correspondent mentioned the salient points of the Labour Party's new programme "Challenge to Britain." One part of it deserves more detailed examination, since it is of concern not only to Britain but also to the Commonwealth; that is the part devoted to capital investment and the need to "invest large sums" in developing resources "at home and in the Commonwealth."

LONDON LETTER

Taking the major industries, the programme—without mentioning any figures—states that coal and the transport services, two of the principal bases of industry, must have their capital investment increased. Steel—at present producing 17 million tons per annum and planning to do 20 million tons within four years—is expected to increase its output by 50 per cent. by 1960 at a corresponding outlay in new investment. The engineering and chemical industries are singled out among productive enterprises as requiring especial expansion, since it is to them that the country should look for large increases in exports; the machine tool industry, mining machinery, aircraft, the heavy electrical industry, shipbuilding and repairing—are all candidates for more capital investment; so are the heavy chemical industries, fertilisers, explosives, dyestuffs, petro-chemicals and plastics. Taking a look at home agriculture, the Labour Party declares that output must go up by one-third in five years and that the extra fixed capital must be found.

As for the Commonwealth, we are told that the development of dollar-saving and dollar-earning projects will depend "primarily on the provision, and financing, by Britain of large supplies of development goods and equipment."

Where is the Money?

But where are the resources coming from? In 1952, total capital investment in industry amounted to £2,000 million but, if allowance is made for depreciation, the net increase to national wealth cannot have exceeded £1,100 or at most £1,200 million. But last year, for the second year in succession, capital investment was slightly down on the previous year. From 1948 to 1950, there was an increase of about 7 per cent., but, since then, the figure has gone back almost to the original level of five years ago. £1,200 million does not seem much against a total national income of £17,000 million or a total expenditure on consumption goods of £10,000 million but the narrow movements in the total from year to year indicate how tightly strained the economy is and how little margin there is to divert resources to investment.

Of the total of £2,000 million gross investment last year, £870 million went into plant and machinery, £855 million into new building and £275 million into vehicles and transport. The Labour Party give no clue how they are going to increase these totals or at the expense of what. For less money is not to be spent on housing or the social services, fewer resources are not to be devoted to the cold war "as long as necessary"—and defence expenditure in 1952-53 took £837 million in production, research and development, a sum two-thirds the total net new capital formation! Fewer resources are not to go to exports—which took £2,700 million in 1952, but even so gave a negligible margin for overseas investment.

Living in the Moon?

The Labour Party says that "it is no good Whitehall working on blue-prints for increasing agricultural output or expanding engineering exports, unless the Government has the power to ensure that these blue-prints are put into effect. Without an extension of Socialist planning and public ownership this expansion will be impossible to achieve." But how will public ownership provide the answer—it can provide the power to command priorities in delivery of equipment (although even the war-time machinery for doing this proved very cumbersome), but since the private sector of industry is still going to remain very important even under the next Labour Government, the scope for robbing Peter to pay Paul is limited. Is higher production and productivity the answer—the document states that output must be increased. but how? After all, the Government's own *Economic Survey*, produced three months

PAKISTAN NOTES

INDO-PAKISTAN RELATIONS

PRIME MINISTERS TO MEET NEXT WEEK

ALL eyes are now turned towards Karachi, the venue of the forthcoming meeting of the Prime Ministers of India and Pakistan, which is scheduled to be held there on Saturday next. This is only to be expected, considering that, apart from political issues, there are important economic issues such as evacuee property, canal water and Indo-Pakistan trade relations, which still remain unsolved. With the assumption of office as Prime Minister by Mr. Muhammad Ali, the attitude of Pakistan towards India has changed. Earnest efforts are being made by Mr. Muhammad Ali to bring about harmonious Indo-Pakistani relations. The gesture has been reciprocated by the Prime Minister of India. The proposed Karachi meeting of the two Prime Ministers is a sequel to these efforts. It is to be devoutly hoped that the meeting will prove a success and that the two countries would come closer together. Such a friendly relationship, it is scarcely necessary to point out, would be in the common interest of both the countries which have so much in common, historically and geographically.

In the meantime, the first joint meeting of the Steering Committees of India and Pakistan was held at Karachi on Tuesday last. At this meeting, the Committees adopted the procedure for their working and prepared the ground for the Prime Ministers' Conference. The items which came up for discussion were classified into three categories, namely, (1) those that would be discussed by the Prime Ministers, (2) those that would be dealt with by the concerned Cabinet Ministers, and (3) those that would be settled at Secretariat level. The Prime Ministers of India and Pakistan, it is understood, will concentrate on policy matters and will take up for discussion only the Kashmir issue, evacuee property question and general review of Indo-Pakistani relations since the signing of the Prime Ministers' Agreement in 1950.

Foreign Capital

The assurance that the Government of Pakistan would encourage foreign capital investment and enterprise to promote industrial and economic development of the country was given by Pakistan's Prime Minister, Mr. Muhammad Ali, while performing the opening ceremony of General Motors assembly manufacturing plant at the Sind Industrial Trading Estate at Mauripur recently. The Government, the Prime Minister said, sincerely hoped that it would be in a position to give "further and greater incentive" to accelerate the pace of such investments. He regarded the opening of the plant not only as an important link between Pakistan and the U.S. but also as a gesture of friendship towards an under-developed country like Pakistan.

Commending the efforts of General Motors to establish the assembly manufacturing plant, Mr. Muhammad Ali expressed the hope that it would become a full-fledged factory turning out Pakistan-made motor vehicles. He referred, in this connection, to the restriction on imports and averred that they were an "unfortunate sequel to certain factors beyond control." Nevertheless, he assured that, with the improvement in the foreign exchange position, the restriction would be progressively relaxed. Said he: "I am happy to find that there is a genuine appreciation of our difficulties and, therefore, General Motors propose to follow a programme of the assembly of trucks and bus chassis, and the manufacture of commercial bodies which will relieve pressure on our foreign exchange position." The Prime Minister of Pakistan laid particular stress on the need for providing cheap and efficient transport services. He, therefore, urged the manufacturers to devote more attention to the manufacture of cheaper type of vehicles which were in greater demand.

Price Control

Several steps designed to ensure availability of essential commodities in short supply to people at fair prices are under the active consideration of the Government of Pakistan. The Government has already issued a directive to the Provinces to adopt regional price control measures, so that essential articles locally produced, such as ghee, milk, etc., might reach the people at reasonable prices. The Provincial Governments are considering suitable measures to implement the Centre's directive. The Controller-General of Prices and Supply is taking steps to enforce price control vigorously. Price control on coal, iron and steel, and newsprint was in force even before this organisation was set up. Since then, 16 articles have been brought under control. A few articles of general use are expected to be added to the list shortly.

Food Production

Inaugurating the first session of the Food and Agricultural Council of Pakistan at Karachi the other day, Mr. Muhammad Ali, the Prime Minister, made a fervent appeal to the people to augment food production. And he urged the agricultural experts and field workers to win the confidence of the farmers. While planning agricultural research, the practical needs of farmers should, he emphasised, be kept "very much in the forefront" and the results of research should be conveyed to the farmers in an intelligible manner. For it was the farmer, not the expert, who was to produce food and raise other crops.

Mr. Muhammad Ali commended the endeavours of the Grow-more-food Emergency Committee to raise food output. The four-point programme in regard to seed supply, pest control, use of chemical fertilisers and extension of cultivation, he hoped, would lead to higher production by the end of the *kharif* season. He referred particularly to the Committee's decision to provide a crore of rupees for bringing 400,000 additional acres of land under food cultivation. He deplored the low yield of wheat in Pakistan and suggested the extensive use of fertilisers and manures as one of the chief methods to improve the yield. He revealed, in this connection, that the Central and Provincial Governments had decided to subsidise, to the extent of 60 per cent. of the cost, the sale of the 75,000 tons of ammonium sulphate which would be received from the U.S. this year. The Prime Minister also availed himself of this occasion to deprecate the claims of those who believed that the pattern of agriculture in Pakistan could be changed overnight. He appreciated the ability of the mechanisation of agriculture and said that such could not be effected in small farm holdings. He, therefore, called for collective co-operative endeavours towards mechanisation.

The Planning Committee of the Council of Scientific and Industrial Research has recommended the setting up of a Central Laboratory at Karachi and two regional laboratories, one each at Lahore and Dacca. It has also recommended, in association with the University, of a research section in Peshawar, to cater to the special needs of the N.W.F.P.

A PENSION FOR LIFE

Are you in non-pensionable service, trade or business? You too can have a pension for life with this easy "Help Yourself" investment Plan.

Start right now. Every month buy regularly for the next 12 years a Twelve-Year NATIONAL SAVINGS CERTIFICATE of say, Rs. 150. These certificates will mature, one every month, onwards from 1964. Cash a certificate each month thereafter; take the bonus of Rs. 75 as your pension and re-invest the principal, Rs. 150. Thus from 1964 onwards, you will have a regular monthly income of Rs. 75 for yourself plus the accumulated principal of Rs. 21,600 for your dependants. Begin today and go on buying a Certificate every month for the next twelve years.

NATIONAL SAVINGS CERTIFICATES

SECURITY FOR THOSE WHO LOOK FAR AHEAD

Issue of these certificates is subject to the National Savings Certificate Rules, 1944, as amended from time to time. For further information or details please apply to the National Savings Commissioner, Simla-3.

STRUCTURE OF BANKING IN INDIA

SALIENT FEATURES ANALYSED

IT will be recalled that, while reviewing the *Annual Report on the Trend and Progress of Banking in India* in our last issue, attention was focussed on the readjustment, during 1952, of the banking system to the new monetary policy initiated by the Reserve Bank of India at the end of 1951. Considerations of space precluded us from making a reference to the main features of the changes in the structure and a few other aspects of banks in India. As these trends reflect the position regarding the inherent strength of the system, it is proposed to deal with them in this issue. This task has been rendered easier by the publication this week of the *Statistical Tables Relating to Banks in India* for 1952 (priced at Rs. 6) by the Reserve Bank of India, giving the relevant statistics in an easily digestible form. An attempt has been made by the Bank to co-ordinate the banking statistics and the *Annual Report on the Trend and Progress of Banking in India*, with a view to eliminating unwieldy and unnecessary material. A review of the statistics relating to banks reveals certain notable features. These include the process of adjustment of the banks to the new provisions in the Banking Companies Act, continued concentration of business in the hands of a few large banks, and the existence of a large number of Non-scheduled banks with a high ratio of capital and reserves to deposits, evidently reflecting their inability to attract more deposits. The review also indicates how, in spite of higher rates of interest charged by banks, their net profit, especially of certain major Indian banks, turned out to be slightly lower than that in the previous year. The system, as a whole, continued to remain in a sound position.

The total number of all types of banks in India in 1952 was 979, as against 981 in the previous year. Of these, banks the registered offices of which are located outside India numbered 17 and those in India 962, as against 21 and 960 in 1951. Thus, while the number of Indian banks rose by 2, that of foreign banks declined by 4. Hence the contraction in the total number by two.

Some interesting changes are seen in the character of the Indian banking system. Out of their total of 962, as many as 517 were Joint-stock banks, the remaining 445 being Co-operative institutions. In 1951, however, the number of Joint-stock banks was larger at 545, while Co-operative banks were smaller at 415. In other words, during 1952, whereas Co-operative banks registered an increase of 30 in number, a decline of 28 was noticed in the number of Joint-stock banks. The decline in the latter category is due to the coming into effect of the provisions in the Banking Companies Act, 1949, relating to the limitation of reserves and capital and the use of the words bank, banker or banking in the mane of a company. Some of the banks were granted extension of time limit for complying with these provisions, while some went into liquidation. Banks with a paid-up capital and reserves of less than Rs. 50,000 each were those which were adversely affected by these provisions.

Reporting Banks

All the 979 banking companies, which functioned during the year, did not submit their reports to the Reserve Bank of India; only 500 reported. This number was, however, larger by 123, as compared with the number of reporting banks in 1951. Despite the increase in the number of reporting banks, the number of banks with capital and reserves below Rs. 50,000 was lower than that in 1949, because of the provisions of the Banking Companies Act mentioned above. The number declined from 83 in 1949 (in Part A States) to 60 (in Parts A and B States).

During the year under review, two Scheduled banks and 48 Non-scheduled banks were permitted to issue capital for an amount of Rs. 84.24 lakhs, of which Rs. 70.57 lakhs were to be called up. 35 companies complied with the minimum capital requirement laid down in the Act. 26 companies raised their capital to the limit prescribed in the Act, while 11 companies reduced the area of their operations, as they could not raise their capital. As many as 32 companies were converted into non-banking companies.

Apart from the readjustment of the banking system to the requirements of law, there were also notable changes in the structure of assets and liabilities. The paid-up capital and reserves of *Indian Scheduled banks* rose over the year by Rs. 1.8 crores. Of this, the increase in their paid-up capital amounted to Rs. 20 lakhs, while their reserves increased by Rs. 160 lakhs. The Exchange banks increased their reserves by Rs. 30 lakhs. The paid-up capital and reserves of Non-scheduled banks rose by Rs. 4.9 crores of which paid-up capital accounted for Rs. 3.1 crores. This increase reflects mainly the rise in the number of reporting Non-scheduled banks from 306 to 425.

Dominance of Big Banks

A striking feature of the banking system is the growing dominance of big banks, which shows that the bigger a bank is the greater is the confidence of depositors in it. The bulk of the paid-up capital, reserves and deposits of the system is held by a few large units. Thus, 25 large Indian Scheduled banks, each with a capital and reserves of Rs. 50 lakhs and over, accounted for, total capital and reserves amounting to Rs. 51.6 crores, the share of the remaining 52 Indian Scheduled banks being Rs. 9.7 crores.

Again, 72 per cent. of the Indian Scheduled banks and Non-scheduled banks, with capital and reserves of less than Rs. 5 lakhs each, accounted for only 7 per cent. of the total capital and reserves of the Indian Joint-stock banks and 3 per cent. of total deposits. On the other hand, banks with a capital of Rs. 50 lakhs and over representing 6 per cent. of the total number of Indian banks accounted for 73 per cent. of the total capital and reserves and 86 per cent. of total deposits.

Among the Non-scheduled banks, a high ratio of paid-up capital and reserves to deposits was another peculiar feature of the structure of assets and liabilities of banks in India. In the U.K. the ratio was 2 per cent. and in the U.S. it was 8 per cent. But, in India, the ratio was as high as 23 per cent. in the case of Non-scheduled banks, though it was no higher than that (namely, 8 per cent.) in the U.S. in regard to Scheduled banks. The higher ratio in regard to Non-scheduled banks was the result of their inability to attract, proportionately, large deposits. In fact, in 1952, as many as 79 Non-scheduled banks had deposits less than the sum of their paid-up capital and reserves. The most surprising feature disclosed by the Reserve Bank's publications is that there were no less than 8 Scheduled banks which were also in the same position as the 79 Non-scheduled banks.

Although the ratio of reserves to paid-up capital registered an upward trend, there were three Scheduled and 38 Non-scheduled banks without reserves at all, a feature which is very disquieting. This position is due to the use of reserves for writing off losses on investments in Government securities before declaring a dividend out of the profits of the year. Admittedly, the change in the monetary policy of the Government has exposed the inherent weakness of these institutions.

Shift in Deposits

The year under review was noted for a sizable shift from demand to time deposit liabilities. One of the reasons for this was that banks were generally reluctant to have recourse to the Reserve Bank for large and continuing accommodation; they, therefore, offered higher rates on deposits, especially time deposits. Another reason for this change was the preference of business men to place their funds in time deposits with established banks rather than enter into new lines of activity owing to uncertain business conditions. While demand deposits declined by Rs. 31.3 crores, time deposits rose by Rs. 26 crores. In the result, total deposit liabilities of all Scheduled banks fell by Rs. 5.3 crores. Consequently, the share of demand deposits to the total declined from 65 per cent. to about 62 per cent. Savings deposits at Rs. 137 crores formed 17 per cent. of the total. It is of interest to note that, over the year, while total deposits of the major Indian and other Scheduled banks fell by Rs. 10 crores and Rs. 1 crore, those of Exchange banks rose by Rs. 4 crores of which increase the major portion was in time deposits. Total deposits of Non-scheduled banks registered a steep rise from Rs. 35.9 crores to Rs. 59.6 crores, but this was mainly due to the increase in the number of reporting banks.

The survey of ownership pattern of deposits disclosed no appreciable change. Over one-half of demand deposits and one-quarter of time deposits were, as usual, owned by business concerns. Personal deposits formed over a quarter of demand deposits and 54 per cent. of time deposits. Savings deposits were entirely personal. Taking the deposits in all the three categories together, the largest single group was represented by personal deposits which formed 47 per cent. of the total.

As stated last week, the trends in Scheduled banks' investments in Government securities reflected the changes in the manner of relieving seasonal stringency which formed part of the revised monetary policy introduced in late 1951. Investments in Gilt-edged declined from Rs. 305.9 crores to Rs. 293.8 crores in the busy season months at the beginning of 1952. The fall was more than made up in the slack season which followed in the latter part of the year. By December 1952, investments amounted to Rs. 323.3 crores. The major portion of the increase in investments reflects the sale of Treasury Bills to which the Imperial Bank was the biggest supporter.

The advances of Scheduled banks showed a marked fall during the year. They stood at Rs. 486.2 crores at the end of 1952, as against Rs. 552.4 crores a year before, the recession over the year being of the order of Rs. 66.2 crores. Their distribution among different classes of business showed, however, no material change.

Net Profits

A review of the profit and loss accounts of 18 larger Indian Scheduled banks showed that the year 1952 was not as profitable as the previous year was for banks. The table below containing a summary of earnings and expenses of the 18 banks provides a clear picture of their financial results for 1952, as compared with those for 1951:

	Rs. in crores		Percentage of gross earnings	
	1951	1952	1951	1952
(1) Gross earnings	26.2	28.3	..	..
(i) Interest and discount earned	19.5	21.5	74	76
(ii) Other earnings	6.7	6.8	26	24
(2) Total expenses	20.7	23.1	79	82
(i) Interest on deposits ..	6.1	7.4	23	26
(ii) Establishment expenses.	10.8	11.7	41	41
(iii) Other expenses ..	3.8	4.0	15	14
(3) Net profit	5.5	5.2	21	18

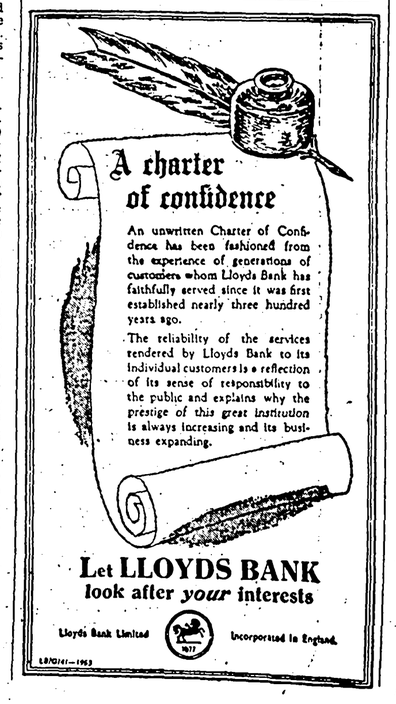
Thus it will be seen from the table above that net profit slightly declined, from Rs. 5.5 crores in 1951 to Rs. 5.2 crores. This decline was due to an increase in the total expenses which rose from Rs. 20.7 crores to Rs. 23.1 crores, the net increase being of the order of Rs. 2.4 crores. Of this increase, interest paid on deposits alone accounted for Rs. 1.3 crores, while the establishment expenses accounted for Rs. 90 lakhs.

Defects

The past year may be said to have witnessed a further improvement in the quality of the banking system as a whole. Regular inspections conducted by the Reserve Bank have been responsible for this improvement. The inspection reports have revealed a number of defects mostly among the small banks. These, according to the report on the *Trend and Progress of Banking in India*, are as follows:

"During 1952, the Banking Companies Rules were extended to more States and now apply to the entire country. The comprehensive regulation of banking has been having a salutary effect in promoting sound banking traditions. The first round of inspections was confined to Scheduled banks and a number of Non-scheduled banks. These inspections have afforded the Reserve Bank an opportunity to examine the practices of banks. They have revealed the existence, in varying degrees, of many undesirable features in individual cases, mainly in the Non-scheduled banking sector. The more common defects noticed have been the lack of experienced and trained staff, unsatisfactory maintenance of books of accounts, inadequate attention to the affairs of the banks by boards of directors and laxity of control and supervision by head offices over branches. Among others, unsatisfactory reserve positions despite the existence of the banks for a long period, insufficiency or lack of provision in respect of depreciation in the book value of investments and offering comparatively high and unremunerative rates of interest for attracting deposits have also been noticed. The liquidity ratio in certain cases has been impaired by chronic borrowing. The advances of some banks, again mainly in the Non-scheduled sector, have been observed to be rather high relative to their resources and, in certain cases, unsecured advances and/or those against real estate have been found to be excessive. Credit reports on the parties to whom clean advances were made have not been maintained in some cases; sometimes large advances have been given to directors, their relatives and associates and/or to concerns in which they are interested. It has been observed, that in some cases banks do not take the necessary precautions such as the display of sign-boards, insurance against fire risks, etc., to safeguard their interests in respect of advances against goods and merchandise."

With a view to removing these defects, the Reserve Bank has not only issued directives to the defaulting banks but has also been keeping an eye on their affairs through its inspecting staff. This should, in due course, help the promotion of sound banking traditions in the country.



TRUTH ABOUT HIGHER INTEREST RATES

MISCONCEPTIONS AND MISGIVINGS CLEARED

[The change in the monetary policy of the U.S. Government in favour of higher interest rates has led to keen controversy on the use of this traditional weapon for fighting inflation—a debate reminiscent of the one that went on in this country some 20 months ago when the Bank rate was changed and the Reserve Bank's support to the Gilt-edged market was withdrawn. Most of this controversy is due to several misconceptions about the functions of the Treasury and unwarranted misgivings about the effects of tight money conditions. These misgivings and fears are convincingly exposed by the Guaranty Trust Company of New York in the June 1953 issue of the Guaranty Survey. Who are the beneficiaries of higher interest rates? Are the present rates of interest high? Will tight money bring on a business recession? Will an increase in Bank rate lead to a fall in the credit of the Government? What is the real test of the credit of a sovereign State? These are some of the questions to which the Guaranty Survey provides concise and convincing answers. As there appears to be still some confusion in this country also on these very questions the observations of this publication bear reproduction here.—Ed.]

HAVE twenty years of governmental controls caused Americans to forget the meaning of free markets? The query seems pertinent in view of the controversy that has arisen over higher interest rates, especially the issue of 3¼ per cent. Treasury bonds. The outcry against "tight money" reveals a surprising number of basic misconceptions, even in quarters where more understanding might be expected and is needed. Perhaps, the most pervasive of these misconceptions is that the Federal Treasury is responsible for the interest-rate level. In reality, Treasury domination of the money market ended more than two years ago. In March, 1951, the Treasury and the Federal Reserve system reached an accord whereby the Federal Reserve abandoned its wartime and early post-war policy of "pegging" prices of Government securities and resumed its normal statutory function of regulating the credit supply "with a view to accommodating commerce and business and with regard to... the general credit situation of the country" (*the language of the Federal Reserve Act*).

As long as the Federal Reserve continued to support the Government securities market, the Treasury remained free to borrow at such interest rates as it chose to pay, and the Federal Reserve was obliged to stand ready to purchase from owners all securities offered at prices corresponding to the predetermined rates. Such purchases increased bank reserves and thereby formed the basis for an expansion of the money supply.

Cheap Money Means Inflation

Any effective regulation of credit by the Federal Reserve under such conditions was obviously impossible. The supply of and demand for money can never be balanced at a fixed interest rate, any more than the supply of and demand for a commodity can be balanced at a fixed price. If the interest rate is set too low, demand will increase, and the only way to keep the rate low is through a continuous and unlimited expansion of the money supply. That is inflation.

To-day, by contrast, the first rule of Treasury policy is, as W. Randolph Burgess, Deputy to the Secretary, recently expressed it, "that the Federal Reserve System shall be free to exercise its policy without interference. This means, of course, that the Treasury must sell its securities in the market, at the going rate of interest, and not at an artificial rate supported by the Federal Reserve System."

In offering the 3¼ per cent. bonds, the Treasury was conforming to this requirement. At the same time, it was carrying out the second rule of its policy, which is—again in Mr. Burgess' words—"that more Government securities must be sold to non-bank investors." This need has long been recognised, but little progress has been made towards meeting it. The sale of short-term, low-interest securities to the banking system is the most inflationary way of managing the debt. Hence the funding of such obligations into long-term securities attractive to non-bank investors is a highly desirable objective, although it is one that cannot be attained quickly because of the sheer magnitude of the task. Of the $140 billion of marketable Federal debt now outstanding, 40 per cent. is due within one year and an additional 16 per cent. within two years. The preponderance of short-term debt is so great that about $12.5 billion would have to be funded into securities of a maturity beyond five years during each of the next five years simply in order to avoid adding to the amount of debt due within one year. If progress toward reduction of the floating debt is to be made, a larger or longer funding programme will be needed. The 3¼ per cent. bond issue was merely one short step in this direction.

The fact that the initiative in money-market policy has passed from the Treasury to the Federal Reserve System does not mean that the latter has raised interest rates. The Federal Reserve exercises no direct control over rates, nor does it attempt to fix any pattern of prices or yields on securities. Interest rates are determined by the market—by the demand for and supply of loanable funds. Moreover, the Federal Reserve has no direct control over the demand for such funds. It influences the supply, and its actions affect demand only to the extent that the resulting fluctuations in interest rates may encourage or discourage borrowing.

As a matter of fact, the role of the Federal Reserve in the money market during the last two years has been essentially passive. The System has not tightened the market; it has merely allowed the market to tighten itself. It has done nothing more than discontinue its earlier practice of holding interest rates at an artificial and inflationary level in order to support the market for Government securities.

The real reason for the rise in interest rates is evident. Since March, 1951, the amount of intermediate and short-term consumer credit has increased by more than $5 billion. Bank loans have risen by $15 billion. Total private debt has expanded by $33 billion. Banks and other lenders are becoming "loaned up."

In the absence of open-market purchases by the Federal Reserve, commercial banks can obtain reserves to extend further credit only by borrowing from the Reserve banks or by selling securities to non-bank investors. Both of these expedients have recently been used more freely than had been the case for many years. There is, however, a limit to borrowing beyond which banks are unwilling to go and beyond which the Reserve banks will not allow them to go. As for sales of securities outside the banking system, these can be made only at increasingly higher yields and lower prices, which mean losses to the banks and higher costs to borrowers.

Who Benefits?

Another widespread misconception regarding the advance in interest rates is that banks and other lending institutions are the principal beneficiaries. Among the comments of critics are such statements as that tighter money has "made it easier for banks, insurance companies, corporations, and private investors to obtain higher interest rates, and thus higher profits, on money loaned to the Government" and that "it has been a decidedly favourable set-up for the banks and banking interests."

The critics might recall that money has likewise been loaned to the Government by millions of small holders of savings bonds, who have found that they made a bad bargain when they responded to patriotic appeals for their savings, because the value of the invested dollars shrank faster than the number of dollars increased, and who as a result have become more and more reluctant to buy such bonds. They might recall the other owners and receivers of dollars, such as pensioners and others dependent upon fixed incomes, who have suffered severely from the cheapening of the currency and whose position could become dire if the depreciation should continue.

These groups, not the lending institutions, are the chief direct beneficiaries of the rise in interest rates. For interest rates are not merely the score in a contest between borrowers and lenders of money. They are one of the most powerful stabilising factors by which the value of money is maintained. Indirectly, everyone benefits, because sound money is indispensable to a healthy economy.

Other Misconceptions

Comment on the money market has revealed a number of other misconceptions. One of these is that the present rate level is unduly high. As a matter of historical fact, it is very moderate for a time of active business and expanding credit. Only in comparison with the abnormally low rates of the depression years and the artificial rates of the war and post-war periods is the present level high. The 2½ per cent. rate on commercial paper, for example, seems high by contrast with the low of ½ per cent. in 1941, but not when it is compared with the 6 per cent. reached in 1929 or the 7½ per cent. attained in 1920. Before 1929 a rate below 4 per cent. was a rarity.

In the light of such comparisons, assertions that to-day's rates are injurious to business and agriculture fall rather flat. Perpetually easy money is, of course, agreeable to borrowers who are concerned only with immediate dollars-and-cents considerations. Perpetually easy money, however, means inflation, which is injurious to all in the long run. Those who find fault with the present situation refer to the "dangerous spiral of interest rate increases" but omit to mention the spiral of wage and price increases that gave the country its fifty-cent dollar during the years when the Federal Treasury was dictating the interest rate for its own supposed benefit.

Some critics apparently fear that tight money will bring on a business recession. It can be argued with equal force that tight money will check the exuberance of the boom and thereby ease the recession when it comes. If there is a business recession, it will be the result of a preceding over-expansion. To allow the over-expansion to run on unchecked by maintaining artificially easy money would be a curious way of preventing or moderating the recession.

Even among those who approve of the new monetary policy as a matter of broad principle, there are some who believe that the time has come to reverse the trend and make funds more readily available. This view is based on the expectation of a coming business recession and the belief that easier money would help mitigate its effects.

Such forecasts are defensible and may even be right. Central bank policy, however, must be based on existing conditions, not on unprovable assumptions regarding what may happen at some indefinite future time. Against such vague fears, it is possible to point to dozens of reasons for the present hands-off policy. Credit demands continue unabated. Employment is at a practical maximum. Industrial production and gross national product are at all-time highs. Demands are being made for a new round of wage increases. The velocity of circulation of the existing money supply is still relatively low, and an acceleration would be equivalent, in its inflationary effect, to an increase in volume. The Federal Treasury is faced with a heavy deficit for the current calendar year, and a substantial portion of this may have to be borrowed from the banking system. Tens of billions of dollars of Federal debt is redeemable at the option of holders on short notice.

What is Public Credit?

Of all the misconceptions underlying recent criticisms of monetary policy, none is further from the truth than the notion that the Federal Reserve System is refusing to "support the credit of the United States." Federal Reserve policy has nothing to do with the credit of the United States in the sense of confidence in the ability and willingness of the Government to meet its obligations at maturity. No one doubts that the obligations will be met, nor can there be any reason for such doubt so long as the Government has the power to issue money. The only question that arises is, what will be the value of the money in which the obligations are repaid? This is the real test of the credit of a sovereign State with money-issuing power. If the Federal Reserve System, by refraining from pumping more credit into an already heavily inflated base, is helping to safeguard the value of money, it is doing all that it can do to support the credit of the United States.

Some recent comment, especially in political quarters, might be taken to imply that the rise in interest rates was the result of a Washington-Wall Street conspiracy to exploit taxpayers, consumers, farmers, and businessmen in general for the benefit of banks, insurance companies, and other lending institutions. Politically motivated as some of these insinuations are, they indicate that the spokesmen either have, or attribute to their audience, an abysmal lack of grasp of the true situation. Such absurd fabrications have no chance of belief where the behaviour and the function of the money market are understood.

Actually, the rise in interest rates is simply one manifestation of the return to free markets. The money market, like any other market, must be allowed to fluctuate if it is to perform its proper function in a free economy. It cannot be artificially stabilised without creating far more serious instability elsewhere. Its fluctuations cannot always be immediately advantageous to everyone. Yet an adequately informed public will not hesitate to accept the inconveniences incident to free markets in preference to the immeasurably greater evils of chronic currency inflation, on the one hand, or economic regimentation, on the other.

ENQUIRY INTO COTTON TEXTILE INDUSTRY

PROBLEM OF PROTECTION TO HANDLOOMS

ALL the sectors of the Indian cotton textile industry and trade, not to mention the consumer, are eagerly awaiting the findings of the Cotton Textile Enquiry Committee and the Government of India's decision thereon. The Committee, it is now reported, is considering the various replies to its questionnaire submitted by chambers of commerce and other associations. Two of such replies are before us—one from the Federation of Indian Chambers of Commerce and Industry and the other from the Bombay Chamber of Commerce. The Federation has dealt with the broader aspects of the problem of inter-relationship among the different sections of the cotton textile industry, while the Bombay Chamber has confined itself to questions relating to exports of textiles. Since the views expressed by these important commercial bodies which represent, between themselves, a wide cross-section of informed opinion in the country, it is proposed to refer to them in these columns at some length.

At the very outset, the Federation emphasises the fact that the recommendations of the Textile Enquiry Committee should be such as would ensure direction of the Government's policy towards promoting the economic and efficient functioning of the industry as a whole, that is, mills, powerlooms and handlooms. The chief consideration which has weighed with the Federation in laying this special emphasis is the emergence of a buyers' market for cotton textiles the world over in which quality and price are the dominating factors. In its opinion, the handloom sector cannot face the competition of the more technically advanced modes of production. This conclusion is based on the following premises:

(1) The handloom sector has not been able to make much headway, despite the special assistance given by the authorities for several years now, in various forms, such as transport facilities, exemption of handloom cloth from sales tax, absence of control over prices, and reservation of markets in certain fields.

(2) The handloom is a very poor machine, in comparison with the powerloom, for producing almost all the fabrics now required on a substantial scale.

(3) The preference of the consumer, either because of patriotic sentiment or of conservatism, is not something that can stand permanently in aid of handlooms, whatever the price disadvantage.

(4) The organisational skill, except in very rare cases, is, if anything, inferior to that available to the mills.

(5) In the absence of any other advantage, the technical inefficiency of the handloom as a machine comes to be reflected in wages paid to the operator; in spite of the handloom weavers earning no more than a mere subsistence wage, the cost of weaving on the handloom is higher than the weaving costs per yard of cloth either on a powerloom or in a mill.

A Retrograde Step

In view of these factors, the Federation maintains that the bulk of the handlooms must yield ground in any normal market to the more mechanised forms of weaving. It, therefore, warns that any attempt at fostering expansion of handlooms is a retrograde step which will only aggravate the difficult problems of social policy that must arise in the long run. The Federation is somewhat critical about the magnitude of the targets set by the Planning Commission for the mill and handloom sectors of the textile industry. It says:

"The Planning Commission, in their Report, have stated that, by 1955-56, the production of mills would reach about 4,700 million yards, while that of handlooms should increase from 810 million yards in 1950-51 to 1,700 million yards. It should be noted that the target for mill production was virtually reached in 1952 and it seems likely that it may be exceeded in the current year. On the other hand, it needs to be remembered that the increase envisaged in the handlooms is more than 100 per cent. The Committee feel that the target of output in the handloom sector, supposedly based on full utilisation of all handlooms, is unrealistically high. They imply a level of production far above that achieved at any time in the history of the handloom industry. What is even more exceptionable is the implicit assumption that the handloom industry can expand its production to 1,700 million yards without leading to a simultaneous increase of great dimension in the number of handlooms or without adversely affecting mill production which is more economical to the community.

In this connection, the Federation makes it clear that it is not averse to assistance being afforded to the handloom sector. It realises its social and economic importance in the present circumstances. But it finds itself unable to reconcile to the claim that, because a substantial handloom sector has existed for so many years, despite the power of the mill industry, it implies that the handlooms have sufficient strength and vitality to survive. For it observes:

"While, no doubt, in certain specific lines of production, the handlooms may possess certain special advantages, it is necessary to point out that the mere survival of handloom industry does not prove anything. In a country as large as India, where there is chronic underemployment or disguised unemployment, it is inevitable that certain sections of the population should continue in the traditional occupation of weaving. In fact, it is wrong to regard India's experience of co-existence of handlooms and mills as anything unique in economic history. It happened in the United Kingdom, China and Japan, to mention a few examples. But, in all these countries, over a period of time, handlooms came to be replaced, except in specific lines, by the technically more developed powerlooms or by composite mills.

"The point that the Committee would like to emphasise is that it is necessary to accept that the handloom industry as such has a limited scope in specialised production, that by itself it cannot face the competition of the more technically advanced modes of production and that, while assistance may legitimately be given in order to reduce the hardships which might be caused to a large section of the population during the period of transition, the fact must not be lost sight of that such assistance is a palliative measure only. Moreover, the assistance that may be extended should be such as will not disrupt the technically advanced modes of production."

Restrictions on Mills

Proceeding, the Federation refutes the thesis put forward in certain quarters that restrictions on mill industry in regard to varieties of cloth to be produced, etc., need not affect the mill industry adversely, if such restrictions are imposed only on production meant for the home market and that, therefore, the mills can concentrate on exports, while leaving a larger proportion of the home market to handlooms. "This," to quote the Federation, "is a misconception. The very ability of the mill industry to export depends on its ability to produce at low costs and this, in turn, is dependent on a large internal market. A restriction of the home market will, therefore, add to the cost of the industry and handicap it in the export market also." The criteria for judgment, the Federation points out, should be: (a) the extent to which the mill industry is already burdened with restrictions on production of certain varieties of cloth and taxation and whether these are not likely to affect the financial strength and competitive ability adversely, and (b) whether and to what extent the measures now in force would benefit the handloom industry without reducing employment in the mill industry. The Government of India's policy regarding the levy of additional excise on mill-made cloth and reservation of markets, it feels, does not satisfy either of these criteria. The arguments that the Federation has put forth in support of this contention are as follows:

"The restrictions placed on the mills in respect of manufacture of certain types of cloth which have been in force since 1950 have not materially helped the handloom weavers so far, because the problems of the handloom industry are more deep-seated. Further, if, in the context of the buyer's market, reservations are to be multiplied, then the mills can maintain or increase employment provided by them only by increasing the output of other varieties of cloth. To the extent that these other varieties are also produced by handlooms, it would mean that either the mills would not be able to sell their production or that the handloom production of these varieties will have to be curtailed. In other words, the possible consequence of any artificial reservation of spheres would be the creation of employment in handlooms only by reducing production and employment in the mill industry. Moreover, reservation helps only those (handloom weavers) who are engaged in the production of reserved varieties, or those who can shift to the production of the latter, and it ought to be remembered that these two categories do not cover the entire handloom industry. In addition, any reservation in favour of the handloom industry only would affect adversely the small-scale powerloom industry."

Burden of Taxation

Referring to the burden of taxation which the industry is now compelled to bear, the Federation says:

"The industry pays more than Rs. 30 crores to the Treasury annually by way of excise and export duties on cloth and import duty on raw cotton—though a part of this import duty is, to some extent, borne by the handlooms using finer counts of yarn spun from imported cotton. Apart from this, the State Governments benefit to the extent of about Rs. 10 crores, by way of sales tax on cloth, and Rs. 5 crores probably paid in the form of octroi duties. The textile industry alone, apart from income and corporation taxation, pays to the Central, State and Local Governments between Rs. 40 to Rs. 50 crores annually. It is a point to be considered whether this burden is not too heavy, particularly in the context of an emergence of a buyers' market and stiff competition in export markets by foreign producers like the U.K. and Japan."

The Federation refers next to the problem of unemployment in the handloom sector. It fully appreciates the difficulties involved in the process of transition—the process "by which numbers dependent on handlooms are weaned away to other more productive occupations," but nevertheless points out that a beginning must be made, as soon as possible, in a comprehensive and realistic policy which seeks to reduce dependence of persons on handlooms. This, of course, is only one aspect of the broader question of creating employment. There are a few steps which, the Federation feels, deserve immediate attention. For instance, the weavers should be encouraged to improve their techniques by providing them, on a co-operative basis wherever possible, with technical advice, financial help, marketing facilities, etc. Further, steps should be taken to extend the use of electric power for weaving. Again, a broad policy which will assist orderly dispersion and planned elimination of surplus human material acquired during the war and later years by the handloom industry should be evolved. Active encouragement should be given to those who are willing to leave the handloom industry. Attention should be focussed only on such of the weavers as are likely to be able to face competition from the mills successfully. Similarly, special assistance must be given, as a short-term measure, to those who are producing fabrics which are likely to suffer most directly from mill competition. There is the need, too, for providing special facilities, in the "depressed areas"—that is, areas where the problem of handloom weaving is most acute—for creating alternative sources of employment through the establishment of new industries.

Cotton Textile Exports

To turn now to the views of the Bombay Chamber of Commerce on cotton textile exports. The Chamber agrees with the view of the Buxton delegate that the target of 1,000 million yards is the maximum export volume that India could hope to attain. It feels that India's competitive position is higher in respect of coarse and medium cloth than of finer varieties. If exports are to be sustained and if India is to maintain its position in the overseas markets, it is necessary, according to it, that there should be a consistent export policy on the part of the Government, that prices should be competitive—in this respect, the Government should keep a close watch on export duty—and that qualities and deliveries should be improved.

With regard to the question of utilising the different sectors of the cotton textile industry, the Chamber opines that mills must be utilised for the best known varieties, while the handlooms for specialities. Powerlooms, which have not figured prominently in exports, may be able to take a larger part if they are organised for more economic and uniform production.

Replying to the question relating to the existing organisation for cotton textile exports, the Chamber says: "There is no single organisation for the export of cotton textiles. The export trade in these goods is handled by business houses—exporters and manufacturers—who each have their own organisations, most of them built up after years of experience in the trade. The efficiency with which the export trade of the country is carried on is dependent upon the efficiency of the exporters engaged in it. Ordinary competition leads to efficiency, for the simple reason that overseas buyers will very quickly cease doing business with an inefficient exporter. Those who have been successful have built up their foreign trade by paying due attention to the requirements of the markets to which they export their goods and by a close connection with their buyers in those markets."

The Bombay Chamber of Commerce urges that the mills need all possible encouragement for expanding their weaving capacity, not only to meet the growing demand for cloth at home but also to retain their hold on overseas markets. To the extent that the present spinning capacity of the industry falls short of the total increased weaving requirements of the mills, there would be a case for expansion in spinning. It is rather difficult to divide the cotton textile industry in any one or more sectors, except in the case of mills which are located at a considerable distance from the port. Examining the question relating to exports of processed varieties of cloth, the Chamber feels that it would be possible to export larger quantities of such varieties, but this depends "entirely" on the efforts of the

(Continued on page 127)

EXPORTS FAIL TO REACH TARGETS FIXED BY BUXTON CONFERENCE

TRENDS IN FIBRE PRICES

(From A Special Correspondent)

MANCHESTER, 7th July, 1953

MANCHESTER LETTER

OPTIMISM, as portrayed by the estimates for cotton cloth export trade in 1953 given by the leading countries participating at last year's Buxton Conference, and reality, in the shape of actual shipments abroad, are two very different things. Lancashire is not the only country to have fallen far short of its target in the early months of the year and it is more than doubtful whether any of the main exporters will be able to achieve their objectives in 1953. The trend at the moment in international trade is downwards rather than upwards.

The figures below give an indication of how the leading cloth exporting nations have fared in their search for overseas trade in recent months. The totals are not complete but provide a guide to the situation.

Cotton Cloth Exports—1953

(In million sq. yards)

	U.K.	Japan	India	U.S.
January	64.8	49.8	48.4	100.6
February	52.0	65.4	33.6	
March	56.8	72.2	53.9	..
April	59.0	..	62.5	..
Totals ..	232.6	*186.9	208.4	†106.6

* 3 months. † 2 months.

Lancashire set a target higher than her competitors at Buxton and in consequence is further behind in actual shipments, the total for the four months being little more than half the estimate of 450 million square yards. On the basis of exports accomplished in the first quarter, Japan should achieve around 250 million yards in the four months against an estimate of 367 million yards, while India's four-monthly total, shown above, compares with a target of 333 million yards.

Early returns from the United States show a lower level of shipments than in 1952 and, unless there is some improvement, the quantity of cloth exported in the four months will be around 213 million yards. The Americans at Buxton, however, were rather less optimistic than the other delegations and their estimate on a four-month basis was export trade of some 242 million yards, so that in the result they should be nearer their target than the other countries.

Rayon Cloth Exports

In considering these figures the part played by rayon cloth shipments should not be discounted, although they were not included in the Buxton estimates. In the first quarter this year exports of rayon and mixture piecegoods from Lancashire were 36,300,000 square yards, which was less than half the overseas trade achieved by the Japanese mills, amounting to 78,200,000 yards.

At the same time there was a definite spurt in sales of American rayon cloth abroad, for in the first quarter of the year shipments were 51,700,000 square yards, against 75,700,000 square yards in the second half of 1952. This was chiefly due to a sharp increase in exports to the Philippines.

It is clear that import restrictions in many parts of the world are still having an adverse effect on international trade in cotton goods. Rivalry to obtain what orders are available is naturally intense and no quarter is being asked or given in the struggle which is in progress. Lancashire cannot afford to lose more overseas trade if our local cotton industry is to retain its call on the Government to ensure that supplies of raw material, involving expenditure of dollars, are made available for the mills.

Meanwhile, output of piecegoods in Lancashire is steadily growing despite the persistent shortage of manpower. Cotton and rayon cloth production in May was at its highest weekly level since March, 1952. Although Whitsuntide intervened, weavers' output almost reached 51,000,000 linear yards weekly.

Rayon Prices

Whether the relationship between the different fibres which go to make the textile industry should be regarded as competitive or complementary is an argument which is inexhaustible. Traders with foresight recognise the inevitability of an advance in the use and production of synthetics but this should not necessarily mean that the consumption of the natural fibres will automatically decrease. A new development which affects the situation has been the decision of the producers of viscose rayon staple to cut prices by 3d. per lb. to 24d. per lb. from the beginning of this month.

This change in price direction for rayon staple is the first downward movement for nearly ten years, during which time the cost of raw cotton throughout the world has fluctuated violently and has risen to unprecedented heights. During the past 18 months, however, while rayon has remained unchanged in price, the sharp decline in the value of cotton has brought the natural fibre increasingly into competition with rayon.

The following table shows the variation in the price of rayon staple compared with American and medium staple Egyptian cotton as sold to spinners in Lancashire during the past decade:

(Pence per lb.)

	Rayon staple fibre	American cotton	Egyptian Uppers cotton
December, 1942	17.00	8.90	10.40
March, 1944	14.00	7.50	9.40
September, 1947	16.50	22.20	23.00
March, 1949	18.00	23.00	30.15
October, 1950	21.00	39.65	46.55
January, 1951	25.00	47.80	73.80
March, 1951	25.00	47.80	63.80
May, 1951	25.00	53.00	75.80
February, 1952	27.00	45.50	60.00
July, 1953	24.00	30.60	33.05

Rayon's competitive position is amply illustrated during the period two years ago when staple was firm at a price of 25d., while cotton quotations were soaring more than twice its cost for American varieties and three times for Egyptian qualities. At that stage the sellers' market in Lancashire was in full swing, but as conditions worsened the falling values for raw cotton hastened the arrival of the inevitable slump.

Rayon was among the first of the textile fibres to feel the chill wind of hard times but equally it was the first to stage a revival—its recovery has, in fact, been so pronounced that former peak levels of spun rayon output have been exceeded and the main problem which now exists is supplying customers with their requirements.

The new price cut has been adopted in an effort to expand export trade in woven fabrics, which has not shared to quite the same extent in the revival of activity this year. Rayon cloth shipped abroad for the five months to the end of May amounted to 62,523,209 square yards compared with 71,664,874 yards in 1952, while the volume of exports this year is barely two-thirds of the 1951 level.

Even at the former level of 27d. per lb., rayon staple was the cheapest fibre available to spinners. It also had the additional advantage of great price stability, as is shown by the infrequent changes in recent years. The uses of synthetic fibres have broadened considerably as experiments have been made. Its increasing competitiveness should stimulate other textile fibres to greater efforts and accordingly assist in broadening trade in textile goods generally.

D-scheme

There are many subjects on which leaders of the cotton industry differ in their views, but one which arouses antagonism from all sides is the system of assessing purchase tax on textiles known as the D-scheme. The Douglas Committee which put forward the proposal had, admittedly, impossible terms of reference and the subsequent history of the plan has borne out the worst forebodings of its critics.

Scarcely a week goes by without some company chairman making very disparaging remarks about the scheme in his annual review, and it is entirely evident that the industry is at one accord in agreeing that the whole scheme should be abandoned.

One of its worst features has been the threat to quality standards which it has caused because firms have tried their utmost to keep prices down below the level which incurs taxation. It is perhaps going too far to describe Lancashire goods as "descending to the cheap and nasty" as was contended by Mr. James F. Simpson, Chairman of Simpson & Godlee, Ltd., the Manchester manufacturing and merchant firm, this week, but the fact remains that the operation of the D-scheme has had a very detrimental effect on the industry as a whole.

So long as taxation is intertwined with the products of textile mills it is bound to have unfortunate repercussions. The period leading up to each year's Budget must cause buyers to hold off in possible anticipation of some reduction in the tax level, while the present system which gives an incentive to manufacturers to offer cheap goods is a complete negation of the background on which Lancashire's cotton trade was built up.—*All Rights Reserved.*

U.S. COTTON ACREAGE ESTIMATES

LOWER OUTPUT INDICATED

THE first estimate of the 1953-54 cotton acreage in the U.S. released by the Department of Agriculture on 8th July, reveals a decline. Thus, the land under cotton is placed at only 26,051,000 acres as against the estimate of 27,917,000 acres made on the same date last year. The estimate has not, however, created any surprise among cotton men in that country or in other countries, because trade opinion had almost reconciled itself to a lower acreage and lower output. Even so, the estimate is lower than the trade estimates. The U.S. *Journal of Commerce*, for instance, had recently predicted an acreage of 26,819,000 which exceeds the official estimate by 768,000 acres.

The U.S. normally accounts for nearly 55 to 60 per cent. of free world output of cotton, which, during the 1952-53 season, was placed at 28.4 million bales of 478 lbs. each. If the output in other countries (outside the free world), such as U.S.S.R., China and Eastern Europe were included, the total world output would be over 35 million bales. On this basis, the U.S. production is about 40 to 45 per cent. of the world output of cotton. It is, therefore, natural for the outside world to watch with interest the acreage and output figures relating to cotton, which are released by the U.S. Department of Agriculture.

The present low estimate of acreage under cotton need not, however, be taken as a correct index of the final estimate about the cotton acreage, for there have been, in the past, significant variations between the first and final estimates. But this time, the low estimates must be regarded with some respect because it might possibly be a correct one. The Department of Agriculture, it may be noted here, has, for some time past, been actively campaigning for a reduction in acreage under cotton. Early this year, the Department officials requested farmers to grow only 12 to 12½ million bales. They had also promptly scotched rumours about possible grant of export subsidy, lest such an expectation should induce the farmers to grow more cotton.

It is difficult to base any estimate of the magnitude of the 1953-54 crop on the acreage estimate. If the yield is assumed to be the same as last year, namely 282.7 lbs., the acreage of 24.6 million would yield a crop of 14.5 million bales. But if the average (269.09 lbs.) for the last ten years were taken as the basis, the present acreage estimate points to a crop of only 13.5 million bales. Again, if the yield were to equal the best yield in recent years, namely 311.2 lbs. per acre, attained in 1948-49, the present estimated acreage would yield a crop of 16 million bales. It should, therefore, be clear that a great deal depends upon the actual yield per acre. Indeed, a change of 1 lb. in the yield may make a difference of over 50,000 bales to the total crop.

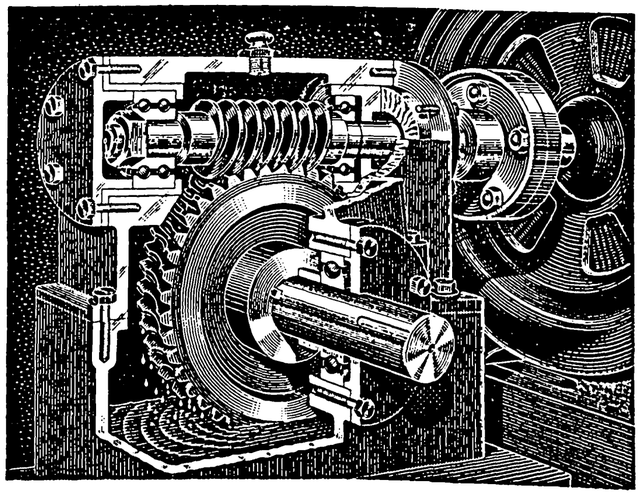
It is, therefore, too early yet to estimate the cotton supply position in the 1953-54 cotton season. But available indications are that it is likely to be a little larger than it has been in the current season because, though the actual crop may be a little smaller than in the 1952-53 season, the carry-over of the latter season is expected to be very much higher than the quantity brought in. For the 1952-53 season, the total cotton supply has been placed in the neighbourhood of 18.8 million bales, made up of about 2.7 million bales of cotton brought in from the last season, domestic production of 15 million bales and imports of about 0.1 million bales. Mills are likely to consume about 9.4 million bales in the current season, while the total export trade in cotton is expected to account for only 3 million bales, as against 5.6 million bales in 1951-52. Thus, the carry-over of cotton on 1st August, 1953, may be placed at 6.4 million bales. Even if the 1953-54 season output were to be no more than the minimum expectation of 13.5 million bales, the total supply would be of the order of 18½ to 19 million bales. This figure, however, would be exceeded if the yield per acre were to be a little better.

The prospect of a larger surplus in cotton is only part of the prospect of larger agricultural surpluses which face the U.S. to-day. Mr. John H. Davis, President of the Commodity Credit Corporation, is reported to have told a meeting of the American Seed Trade Association recently that there was no doubt that, if the present price support programmes were not in effect, agriculture would be in a depressed condition similar to that of the 1930's. But the present 90 per cent. support price for the 1953-54 crop is regarded as more attractive than the price for competing crops. Under the present law, the Secretary for Agriculture must proclaim marketing quotas for the 1954 crop if the "total supply" exceeds "normal supply" and such proclamation must be made by the 15th October, 1953. The declaration of marketing quotas means, it may be mentioned here, a definite restriction on the acreage to be devoted to cotton. "Total supply" is defined as the carry-over at the beginning of the marketing year, plus the estimated production of the crop and the estimated imports. "Normal supply" is defined as the estimated domestic consumption of cotton plus the estimated exports plus 30 per cent. of the total of such consumption and exports as an allowance for carry-over. The proclamation of marketing quotas, according to some observers, is inevitable, unless the per-acre yields of the 1953 crop are much below the recent average yield.

The outlook for cotton prices does not, therefore, appear to be distinctly bullish. But it must also be recognised that there has, in recent months, been some notable improvement in the U.S., both as regards consumption and exports. Referring to these aspects of the U.S. cotton problem, the London *Financial Times* says:

"For one thing, the domestic consumption of cotton in the U.S. has recently shown definite signs of improvement—in this following a movement away from recession which had already become apparent in most other parts of the world. Recent calculations have placed the prospective domestic consumption for the season at around 9.4 million bales compared with a consumption of 9.1 million bales in the 1951-52 season. And though exports of cotton from the U.S. have fallen by half this season, there have recently been signs of an improvement in this direction as well. Outside the U.S. the demand for non-dollar cotton has remained good and values have been little affected by the recent decline in world commodity prices. It is also probable that production of non-dollar cotton will also be reduced next season since prices for food crops are relatively more attractive. Cotton will nevertheless remain abundant and in the U.S. the carry-over this year is expected to be double that of last season. The competition of man-made fibres is another factor which will militate against any return to former price levels. But when allowances for these factors are made, the outlook for cotton still seems considerably firmer than it was six months ago."

Be that as it may, the initial reaction of the New York cotton market to the first acreage report under discussion was bullish, with futures prices rising by about 20 points, though a part of this gain was lost later owing to profit-taking.



Only a few molecules of oil ..but they keep the wheels turning!

In a properly lubricated gear system, the metal surfaces of the gear wheels are separated by a thin film of oil. Under heavy loads, the great pressure on the gear surfaces 'squeezes' the oil film to a few molecules in thickness.

Yet this minutely thin film of oil, transmitting the entire load from gear to gear, must never break. It must not rub off as the wheels go round, or fly off at high speeds. If metal-to-metal contact occurs between the gear surfaces, they may weld together and the machine will seize up.

Plain oil isn't enough!

To meet the exacting demands of modern machinery, it's little wonder that old-fashioned oils have been replaced by Gargoyle Industrial Lubricants. These modern lubricants have tremendous *affinity* for metal. They cling fiercely to metal surfaces, forming a lubricating film that even extreme pressure cannot break.

Three main ingredients go into making these oils. The first: careful selection of crude oils with high natural affinity for metal. The second: scientific incorporation of additives which increase this affinity, and give great 'anti-weld' properties.

And the third ingredient? Every engineer knows, the answer — *experience*. Eighty-seven years of experience go into every drop of oil we sell. Perhaps we can put this experience to work on *your* lubrication problems!

Whatever the load... a LINE of oil has to take it!

At any moment while gears rotate, contact is limited to a microscopically narrow line of oil. The pressure on the oil is enormous — but thanks to 87 years of lubrication experience, Gargoyle Industrial Lubricants can take it.

LINE OF CONTACT

For every industrial application, correct lubrication by Standard-Vacuum offers four vital benefits:-

- Reduced power consumption;
- More continuous production;
- Decreased maintenance;
- Lower lubrication costs.

V.8382

WORLD'S MONEY SUPPLY

POSITION SINCE 1937 REVIEWED

THE past 15 years have witnessed a considerable expansion in economic activity the world over. An indication of this is provided by the marked rise in the volume of money supply, to the extent of three and a half times since 1937. The dollar value of the world's money supply during 1952 amounted to over $218,000 million, as against about $62,439 million in 1937, according to an interesting article contained in the latest issue of *International Financial Statistics*, the monthly bulletin of the I.M.F. Since the U.S. prices are nearly twice their 1937 level, the purchasing power of the world's money supply appears to have increased by 75 per cent. in terms of the purchasing power of the U.S. dollar. More than half the world's money supply is accounted for by the U.S.

There have been great changes in the relative position of countries and areas during the period 1937 to 1952, as will be seen from the table given in the next column.

The figures in the table reveal that the share of the U.S. in the world's money supply has risen substantially, while that of the E.P.U. countries has correspondingly declined. The expansion in the U.S. money supply has been more than twice as great as the rise in dollar prices. The dollar value of the money supplies of the European countries (including the U.K.) has been about equal to, or a little less than, the increase in dollar prices. The rate of increase, as compared with the position in the U.S., is greater in Canada and most of the Latin American countries and smaller in the majority of the Far Eastern countries.

Money Supply

	Value (In million $)		*Per capita* (In $)		*As per cent. of National Income*	
	1937	1952	1937	1952	1937	1952
U.S.A. ..	29,600	129,000	229	835	40	44
Canada ..	1,044	5,327	92	380	26	28
Latin America ..	2,081	15,016	18	97	21	29
Continental E.P.U. ..	14,214	32,746	91	191	43	41
Sterling area ..	11,824	25,691	26	43	31	40
Rest of the world ..	3,676	10,267	14	34	..	..
Total ..	62,439	218,047	..	..	..	..

The same pattern is revealed when the increase in money supply is computed on a *per capita* basis. The *per capita* value of the world's money supply has advanced by 300 per cent., the figure for the U.S. being substantially higher than that of any other country or area. The rise from pre-war to date has been much larger for the U.S. than for the U.K. and the Continental E.P.U. countries. The rate of increase for Canada and the Latin American countries has been higher than that for the U.S., while the same for the countries of Asia has been lower.

The comparisons of the U.S. dollar purchasing power of the money supplies of various countries are made by converting money supply data at the exchange rate. The domestic purchasing power of a country's money supply is measured by depleting money supply data at domestic prices. The domestic price levels of countries can change relatively to each other to a degree not reflected in changes in exchange rates for a number of reasons, particularly changes in terms of trade and in the levels of subsidies or consumption taxes. Latin America is the principal example among the areas the terms of trade of which have improved substantially since 1937. Naturally enough, such improvement permits its domestic price level to be relatively higher than that of the U.S. The valuation of Latin America's money supply in terms of dollars, therefore, overstates its increase in real purchasing power. Among the countries which have used domestic price subsidies in the post-war period, the U.K. stands out prominently. The subsidies have been responsible for the higher level of prices in the U.K. *vis-a-vis* the U.S. The valuation of the U.K.'s money supply in terms of dollars, therefore, tends to understate its real purchasing power. The U.K. has also suffered a worsening of the terms of trade. On this account, too, the valuation of its money supply in terms of dollars understates its true purchasing power. While the U.S. has suffered an equal or greater worsening of its terms of trade during the period under review, the importance of trade to the country is much less than that to the U.K.

4 PER CENT. STATE GOVERNMENTS LOANS, 1963

(1)	Government of Bihar	Rs. 100 lakhs	Issue price Rs. 99-8%
(2)	Government of Bombay	Rs. 500 lakhs	Issue price Rs. 100%
(3)	Government of Madhya Bharat	Rs. 100 lakhs	Issue price Rs. 99-8%
(4)	Government of Madhya Pradesh	Rs. 100 lakhs	Issue price Rs. 99-8%
(5)	Government of Madras	Rs. 500 lakhs	Issue price Rs. 99-8%
(6)	Government of Mysore	Rs. 300 lakhs	Issue price Rs. 99-8%
(7)	Government of Saurashtra	Rs. 100 lakhs	Issue price Rs. 99-8%
(8)	Government of Travancore-Cochin. ..	Rs. 300 lakhs	Issue price Rs. 99-8%
(9)	Government of Uttar Pradesh	Rs. 500 lakhs	Issue price Rs. 99-8%
(10)	Government of West Bengal	Rs. 300 lakhs	Issue price Rs. 100%

Each loan will bear interest from the 15th July 1953.

The Madras Loan will remain open from the 15th July to the 31st July 1953 (inclusive). Loans of other Governments will open on the 15th July 1953 and close on the 23rd July 1953 or earlier without notice as soon as subscriptions approximate to the amount of each issue.

Subscriptions will be in the form of cash/cheque in respect of all the loans.

3% Madras Government Loan, 1953 and 3% Travancore Government Loan, 1952-54 will also be accepted for conversion into the new loans of the respective Governments.

Interest on the securities of the 3% Madras Government Loan, 1953 tendered for conversion will be paid upto the 14th July 1953.

Interest on the securities of the 3% Travancore Government Loan, 1952-54 tendered for conversion will be paid upto 31st July 1953.

Applications for all the loans will be received at the offices of the Reserve Bank of India, Bombay, Calcutta, Delhi, Madras and Bangalore and at branch/es of the Imperial Bank of India situated within the State issuing the loan and at other receiving offices as indicated in the relevant loan notifications.

Applicants for the Madras Loan can earmark their subscription for utilisation in the Andhra State to be formed or for utilisation in the residuary Madras.

N.B.—*Copies of the Notifications and Application Forms may be obtained at any Receiving Office.*

PROTEST AGAINST SUGAR IMPORTS

ABOLITION OF CONTROLS OVER RELEASES URGED

EVER since the Government of India announced its decision to import sugar, with a view to bringing down the high level of sugar prices in the country, there has been a keen controversy on the merits of that decision. Diverse opinions have been expressed by several sections of the sugar industry and trade. While one section has welcomed the Government's policy, another section has taken strong exception to it. The Deccan Sugar Factories Association belongs to the latter. Thus, in the course of a communication addressed to the Joint Secretary, Central Ministry of Food and Agriculture, the Association has lodged a vigorous protest against the policy of sugar imports.

The Association has sought to defend its stand on three grounds. In the first place, there is according to it, no scarcity of sugar in the country, for the existing stocks are more than enough to meet the requirements till the new crushing season (1953-54) begins. Secondly, the policy is opposed to the principle of encouraging a national industry like sugar industry. Finally, the policy cannot be justified on economic grounds, inasmuch as imports of sugar involve loss of valuable foreign exchange. To quote here the Association's own words: "In fact, it is very strange that, for preventing the Indian sugar manufacturers from making an alleged extra profit of a few rupees per bag, the Government should be prepared to spend many times the amount in foreign exchange."

The Association does not dispute the wide fluctuations in sugar prices witnessed in recent months, but points out that such is a normal feature of a free market where prices are governed by the law of supply and demand. The Government, it feels could meet the situation by fixing, as in the case of commodities like cotton, ceiling and floor prices for sugar. It is rather intrigued as to why the Government has not deemed it necessary to take any steps to bring down our prices which have gone up from Rs. 6-7 during 1951-52 and Rs. 10 in the beginning of the current season to Rs. 25 per maund now.

Reduction of Import Duty

The Association is also very critical of the Government's decision to reduce the import duty on sugar by 50 per cent. Such a reduction, it fears, will force the factories to sell sugar below what the Government considers as a fair ex-factory price, namely, Rs. 27 per maund. Importers will thus make huge profits at the cost not only of the indigenous industry but also of the Government. It accordingly urges restoration of the cut in import duty. Similar apprehensions, it may be noted, have been expressed by the Indian Sugar Mills Association, as witness the following remarks in one of its recent communications to Mr. R. A. Kidwai, Minister for Food and Agriculture, Government of India:

"....prices of sugar have generally come down, which was the Government's objective. The Committee believe that the Government should have also viewed with satisfaction the favourable reaction to their announcement. They are, therefore, unable to appreciate that, despite the downward tendency of prices now in evidence, the Government have decided to reduce the import duty on sugar regardless of its serious repercussions on internal prices. While the Committee themselves do not desire that prices should rule unreasonably high, they do feel that there should be a certain amount of stability in the market. The Committee apprehend that, if the present policy is pursued further by allowing imports at reduced duty, the good effects already achieved will be lost and the prices would tumble down, causing serious panic in the market. If the prices go down to an uneconomic level, which is very likely with the reduction in the duty, it will have serious repercussions on next season's production which will not be in the country's interest. With increased demand for sugar in the country, you will appreciate, an all out effort is necessary to maximise production and any effort in that direction would largely depend on the stability of internal prices."

More or less the same view was expressed by Mr. Shanti Prasad Jain, in the course of his address at the recent annual meeting of Rohtas Industries. Regretting the Government's decision to import sugar after carrying on several years without imports, he said:

"It is relevant to note that the price of Formosa sugar went up by Re. 1 to Re. 1-8 per maund merely on the reported move of the Government of India to import sugar. It is also worthy of note that against the import duty of Rs. 7 per cwt., the internal imposts on sugar, in the shape of excise duty, cane cess and co-operative commission, work out to Rs. 8-4-6 per cwt. This is a singular instance where taxes on an indigenous product are higher than import duty. What is very clear in the context of events is that production of sugar within the country should be increased. It is very difficult to make any definite assessment of next year's production on account of the immature state of the cane crop. Assuming next year's consumption and production also at the same level as this year, it will be found that production will fall short of requirements by about 3 lakh tons. With the carry-over this year of about 1.5 lakh tons, there will be real shortage, unless effective steps are taken to increase production. This basic factor should not be overlooked."

To revert to the Deccan Sugar Factory Association's representation. The effects of a reduction in import duty on sugar, it warns, are bound to be more severe in the case of Bombay sugar factories than in the case of the factories in U.P. and Bihar. For, according to it, the sugar factories in the Deccan, unlike those in U.P. and Bihar, grow their own sugarcane. The cost of cane production has actually gone up on account of a rise in irrigation water rates, higher prices for manures, and increase in wages fixed for their agricultural workers by the Industrial Court's awards. Fixation of cane prices at Re. 1-5 per maund, therefore, has not brought any advantage to these factories, while those in Uttar Pradesh and Bihar have derived "full advantage" by purchasing, at that price, all cane supplies required from private cultivators.

Most Objectionable Step

In view of these considerations, the Association feels that it would be most objectionable if the Deccan factories were compelled to reduce the price of sugar further below Rs. 27 per maund—a rate conceded to be a fair one by the Government itself. According to its calculations, the cost of imported sugar—on the basis of the reduced import duty—will be Rs. 70 or even less per bag, as against Rs. 80 for Deccan sugar on the basis of the "fair" price of Rs. 27 per maund. In other words, if the factories in the Deccan are to compete with imported sugar, they must sell their sugar at Rs. 64 per bag or Rs. 23-8 per maund (ex-factory), which is lower by as much as Rs. 3-8 than what the Government has admitted to be the fair price for Indian sugar. This is especially so when the Government has restricted sugar imports only to Bombay and Madras ports.

In the opinion of the Association, the proper course to counteract the rise in sugar prices lies in releasing the entire stocks of sugar, including the 25 per cent. kept as reserve with the factories. If this step were taken, it says, prices of sugar would automatically come down "as a result of keen competition among the sugar traders for the quick disposal of the ample stocks." It has further urged the Government to announce its sugar policy for the ensuing (1953-54) season at the earliest.

STANDARD FOR POWER ALCOHOL

Standard for power alcohol has been issued by the Indian Standards Institution (I.S.I.). The standard prescribes requirements and methods of sampling and test for this material which is used either by itself or in admixture with petrol as a fuel for automobile engines. The standard defines power alcohol to include partially or completely denatured methyl alcohol only and does not include blends that may be produced for marketing motor fuels. This standard is one of a series of five Indian standards on materials containing ethanol.

This standard has been formulated by the I.S.I.'s Heavy Chemicals (Organic) Sectional Committee which includes nominees of the Industrial and Power Alcohol Distillers' Association, Indian Sugar Mills Association, Bengal Chemical and Pharmaceutical Works Ltd., and other important chemical interests, as also experts drawn from the Council of Scientific and Industrial Research, Central Revenues Control Laboratory, New Delhi, the Institute of Science, Bombay, the Directorate General, Ordnance Factories, Ministry of Commerce and Industry, and other organisations. The standard is priced at Re. 1-8 and is now available for sale at the office of the Institution.

SUGAR PRODUCTION AND STOCKS

The total production and despatches of sugar during the current season (1952-53) up to 15th June, 1953, amounted to 1,315,731 tons and 983,132 tons, as against 1,453,675 tons and 710,981 tons respectively, during the corresponding period of the previous season.

The opening stocks, production, despatches and closing stocks of sugar during the fortnight ended 15th June, 1952 were 779,207 tons, 1,535 tons, 57,812 tons and 722,930 tons, respectively. The figures for the corresponding fortnight of the previous season were 823,904 tons, 17,846 tons, 37,404 tons and 804,346 tons. Figures for the current fortnight relate to 125 factories representing 90.94 per cent. of the total cane-crushing capacity, while those for the previous year relate to 124 factories representing 88.50 per cent. of the total cane-crushing capacity.

WORLD TEA POSITION LAST YEAR

SHORTFALL IN SUPPLY EXCEEDS EARLIER ESTIMATES

THE general impression this time last year was that world supply of tea during 1952 would be well ahead of that in the preceding year. In fact, by the end of July, 1952, the North Indian crop was 42.5 million lbs. ahead of the previous season's output and South Indian tea production was over 1 million lbs. above the output in the corresponding period of the previous year. It was, however, only at the beginning of 1953 that the true supply position became apparent. The total Indian crop for the year 1952 was then estimated to be less by nearly 4 million lbs., thus more than wiping out the surplus seen in the middle of that year. It was also suggested that the output of other leading tea-producing countries also would be lower than that for the previous year. The latest Report of the International Tea Committee for the year 1952-53, received just now, shows that the shortfall in world supply of tea in 1952 was much sharper than generally believed. The Report also reveals that, for the first time after 1949, the upward trend in supply was reversed.

The following table gives an idea of the trend of world supply of tea since 1947, as compared with the pre-war average:

(In million lbs.)

	1934-38	1947	1950	1951	1952
A. *Production:*	Average				
India	414	561	613	629	622
Pakistan		41	53	53	53
Ceylon	229	299	316	326	317
Indonesia	165	5	78	102	81
Kenya, Uganda, Tanganyika ..	9	19	21	22	21
Nyasaland ..	8	13	15	16	15
Total ..	825	937	1,097	1,148	1,109
B. *Exports:*					
China	90	26	24	26	20
Formosa	22	10	17	25	20
Japan	39	7	16	19	21
Other countries ..	5	5	11	11	8
Total ..	156	48	67	81	69
Total supply ..	981	985	1,164	1,229	1,178

It may be mentioned that the output of Indian tea in 1951 was generally estimated at 625 million lbs., as against the Committee's original estimate of 622 million lbs. The above table shows that the actual output in 1951 was much higher at 629 million lbs. Similarly, the exports of tea from China and Formosa during 1951 have been revised from 40 million lbs. to 51 million lbs. Thus, the total world supply during 1951 was higher than the original estimate by 18 million lbs., that is at 1,229 million lbs., as against 1,211 million lbs. The world supply during 1952 (at 1,178 million lbs), therefore, shows a decline of 51 million lbs. from the revised quantity for 1951. It will be interesting to note that the decline in the output of Ceylon and Indonesian tea during 1952 is much sharper than that of Indian tea.

The total quantity of tea absorbed by importing countries, as well as by producing countries, during 1952 amounted to 1,204 million lbs., as against that of 1,201 million lbs. (revised) in 1951. Thus, absorption of tea in 1952 exceeded supply by 26 million lbs., while there was an excess of supply over absorption in 1951 by 28 million lbs. and in 1950 by 55 million lbs. The following table shows the quantity of tea absorbed by the principal importing and producing countries during the last two years, against the background of the average for 1934-38:

(In million lbs.)

	1934-38	1951	1952
Importing countries—			
U.K.	439	443	473
U.S.A.	83	86	93
Canada	39	42	45
Ireland	23	37	17
Australia	46	50	53
Egypt	15	35	36
Iran	16	24	8
Iraq	6	21	10
North Africa	30	47	45
South Africa	14	21	24
New Zealand and Pacific Islands.	11	26	11
Producing countries—			
India	80	182	180
Pakistan		14	25
Ceylon	9	15	14
Indonesia	17	15	15
Kenya, Uganda and Tanganyika.	2	9	7

As regards the export quota of member-countries for the regulation, year 1953-54, the International Tea Committee, at its meetings held at the end of the year 1952 and the beginning of 1953, gave due consideration to this question in the light of changing circumstances affecting potential supply and absorption—particularly, in relation to probable requirements of the U.K., following the removal of rationing and of price control in that country, the ultimate effects of which were not then fully determinable. Eventually, the Committee unanimously agreed that the quota should remain at 135 per cent. of the standard quotas, the same as for the previous year, but subject to review in July, 1953. The following are the standard exports and exportable quotas for 1952-53, and quantities exported, subject to licence, during 1952-53, of the regulating countries:

(In million lbs.)

	Standard exports	Exportable quotas	Quantity exported (prov.)
India	348.24	470.13	422.91
Pakistan	35.00	47.25	21.53
Ceylon	251.59	339.64	319.21
Indonesia	173.60	234.36	69.79
Total ..	808.43	1,091.38	833.44

The Committee continued to maintain contact, as far as circumstances permitted, with non-regulating countries and to keep all available information and statistics relative thereto up to date.

HEAVY DAMAGE TO BRAZILIAN COFFEE CROP

It is reported from Rio de Janeiro that the damage done by frost to the Brazilian coffee crop is heavy, particularly among the new plantations. According to the estimate of the Secretary of Agriculture, Sao Paulo, the crop in Sao Paulo has been reduced by about 30 per cent. In Parana, it is stated, 250 to 400 million new bushes have been totally destroyed. According to Brazil's largest grower, 50 to 70 per cent. of the crop in Northern Parana has been lost. It is pointed out that, if the frost attacks the main stem, recuperation of the bushes may take two or three years.

RAW JUTE FORECAST FOR EAST BENGAL

The preliminary jute crop forecast for East Bengal, announced by the Chief Controller of Jute Regulation, on the 10th inst., places the acreage under jute crop for 1953-54 at 788,695 acres or just 41.4 per cent. of the area under cultivation in 1952-53. This acreage includes 30,390 acres of land on which jute has been grown without licence and, therefore, may be destroyed under the Government's new regulation. The yield is estimated at 2,839,302 bales, as against the Government's sanctioned 4.2 million bales for the year.

The total area for which licences were granted in 15 districts where the Jute Regulation Act is in force was 998,430 but, owing to low price prevailing during the jute-growing season, licences were taken only for 811,385 acres, as against 1,714,665 acres in the 1952-53 season.

According to the Minister of Agriculture, East Bengal, the total estimated production of jute in Pakistan and India might not exceed 5.5 million bales in 1953-54. Together with a total carry-over of 2 million bales in Pakistan and an insignificant quantity in India, the total availability of jute in the season would be about 7.5 to 8 million bales.

In view of the comfortable position of the jute crop in East Bengal in relation to world demand and supply, the Pakistan Government is reported to have decided not to support jute prices during the 1953-54 season. The staff of the Jute Board has been reduced to skeleton for keeping careful check on the trend of prices.

Floor prices are in force even now at £73 c.i.f. though the ruling prices are much above it at about £93 c.i.f.

It is reported that official circles in Pakistan feel that a considerable quantity of the jute grown this year will be of finer quality and, therefore, will fetch a high price. So the reduction in jute acreage will not unduly reduce the income from jute export. Besides, land diverted from jute cultivation will go to increase food production which will also indirectly help jute growers.

PRODUCTION OF JUTE GOODS IN JUNE

STOCKS ARE STILL HIGH

THE output of jute goods by mills in India in June, 1953, was more or less in level with that of the previous month but nearly 1,000 tons lower than that in the same month of 1952. Thus, the total production amounted to 72,807 tons, as against 72,544 tons in May, 1953, and 73,696 tons in June, 1952. The consumption of raw jute, calculated on the basis of production, during the month may be placed at 422,280 bales, as compared with 420,755 bales in the preceding month.

With the figures of output of jute goods in June, 1953, production statistics for the complete jute season, 1952-53, are now available. The total jute goods produced in the 12 months (July, 1952—June, 1953) amount to 891,622 tons, as compared with 944,919 tons in the preceding year, or a fall of 9.7 per cent. over the year. This fall may be attributed to the disinclination, generally, on the part of the mills to utilise their full capacity, on account of the slackness of the jute goods market resulting in heavy accumulation of stocks with them. The consumption of raw jute, calculated on the basis of production, during the season, amounts to 5,171,008 bales, as compared with 5,480,530 bales. It may be noted that, on account of bumper crop, both in India and Pakistan during the season, the mills experienced no difficulty in regard to the supply of raw jute as they did in the previous seasons.

The table below gives a synopsis of the output of the three categories of jute goods, namely, hessians, sackings and others at the end of June, 1953, as compared with the output in the preceding two months and the same month in 1952:

	As on			
CIVIL	30-6-1953	31-5-1953	30-4-1953	30-6-1952
Hessians	29,662	29,154	30,573	21,491
Sacking	37,631	38,206	39,625	46,059
Others	2,713	2,568	2,663	2,748
Total ..	70,206	69,928	72,861	70,298
GOVERNMENT				
Hessians	2,140	2,530	1,254	44
Sacking	310	86	177	3,356
Others	151	..	..	18
Total ..	2,601	2,616	1,431	3,398
Grand total ..	72,807	72,544	74,292	73,696

An analysis of the different types of production discloses that the output of hessians remained more or less stationary in each of the three months ended June, 1953, at about 31,000 tons. But the production of sackings at 38,141 tons was less than that in April 1953, though it remained more or less at the level in the previous month. As compared with June, 1952, the figures disclose that, while hessian output had gone up from 21,535 tons to 31,802 tons, sackings had declined from 49,395 to 38,141 tons. The fall in sackings is attributed to the pronounced decline in the demand for several months now.

There is no appreciable improvement in the stocks of jute goods as at 30th June, 1953. Although, at 133,804 tons, stocks are lower by about 500 tons over those at the end of the preceding month, they are equal to just below two months' production. A year ago stocks were pretty low, at 90,730 tons to be precise. A breakdown of the figures according to varieties reveals a decline of over 300 tons in sacking stocks (to 85,684 tons) and of about 200 tons (to 45,580 tons) in hessians, as compared with May, 1953. The stocks of other varieties show a rise from 1,942 tons in May to 2,532 tons in June, 1953. The following comparative table shows the stock position at a glance:

	As on			
CIVIL	30-6-1953	31-5-1953	30-4-1953	30-6-1952
Hessians	44,891	46,792	43,432	36,887
Sacking	84,562	86,864	88,648	47,073
Others	2,382	1,924	2,042	1,550
Total ..	1,31,835	1,35,580	1,34,122	85,510
GOVERNMENT				
Hessians	697	947	761	310
Sacking	1,122	2,262	2,630	4,784
Others	150	..	23	26
Total ..	1,969	3,209	3,414	5,120
Grand total ..	1,33,804	1,38,789	1,37,536	90,730

EXECUTION OF TUNGABHADRA PROJECT

INTER-STATE BOARD TO BE SET UP

A BOARD to direct, control and supervise the completion of the irrigation part of the Tungabhadra Project is expected to be set up shortly. A provisional agreement to this effect was reached at the two-day conference of the representatives of the Centre, Madras, Hyderabad and Mysore, held in New Delhi, last week, under the Chairmanship of Mr. Gulzarilal Nanda, Minister for Planning and Irrigation and Power. The Conference was a sequel to the difficulties in completing the Tungabhadra Project, following the decision to create Andhra State, with effect from 1st October, 1953, and the merger of the Bellary taluka with the Mysore State, in accordance with the terms of the Misra Award.

According to a Press note, issued by the Government of India, the proposed Board, scheduled to come into being on the formation of the Andhra State, will consist of a Chairman, who will be nominated by the Government of India, and the Chief Engineers of Irrigation and Power of the three States as members. One of the Chief Engineers will be elected Vice-Chairman by rotation and will hold office for a period of three months. The Superintending Engineer in charge of the irrigation side of the Project will be the Chief Executive Officer of the Board and also its ex-officio Secretary.

The duty of the Board is to discuss issues regarding direction, control and supervision of the Project under execution, with a view to ensuring its successful conclusion. In the event of disagreement among the members of the Board on any issue, the Chairman will resolve the differences and his decision will normally be final. Should, however, a State feel aggrieved at the Chairman's decision on a major question of rights or policy, it will have the option to refer the matter to the Central Government. The agreement will remain in force for a period of 18 months from 1st October, 1953, or till such time as the work is finished whichever is earlier. The agreement is subject to confirmation by the State Governments concerned. Questions relating to the execution of the power portion of the Project and future maintenance and regulation were, however, postponed for consideration at a subsequent meeting. It was suggested at the conference that work relating to power part of the Project might also be entrusted to a Board similar to the one set up for irrigation purposes. But as the Mysore State wanted time to consider the matter, there was no further discussion on it.

Necessary Step

The Constitution of the Board, as above, is a necessary step in order to ensure that the continuity of administration and the implementation of the Project is not impaired by the Partition of the Madras State. As a result of the formation of Andhra State, the Project will come under the control of three States. One part of the Tungabhadra Project is situated in Hospet North taluk and the other part of it is in Hyderabad State. That part of the Project which is situated in Hospet North taluk will be under the Mysore State, after the formation of Andhra State. The Project will feed not only those areas which go to Mysore State but also some areas in Andhra State. Consequently, both these States are interested in the Project. The finances of neither of these States are in a comfortable position. Naturally, therefore, special arrangements have to be made, among others, for the joint control and supervision of the Project by the States concerned in co-operation with the Central Government. The Ministry of Irrigation and Power will, in consultation with Ministry of Finance, the Planning Commission and the States concerned, work out the necessary financial and other arrangements.

The Tungabhadra Project, it may be noted, is now being implemented by the Governments of Madras and Hyderabad. Madras is financing it from its own resources, while Hyderabad is providing its part of the finances from a loan it secured from the Centre. Under the draft Andhra State Bill, which by now must have been returned to the Centre with comments by the Madras and Mysore Governments, the rights and liabilities of the Madras State will devolve from 1st October on the Mysore and Andhra States, and will be shared by agreement between them. Such an agreement should also provide for any adjustments required in respect of the extension or development of the Project after 1st October, 1953. The Tungabhadra Project Report contemplates supply of water and power to Rayalaseema including the portion of Bellary that would be transferred to Mysore. The share of the two areas, according to it, will be in the proportion of 70 to 30.

The Andhra State Bill also provides that, if Mysore and Andhra fail to reach an agreement on this subject, the President, by order, shall determine how rights and liabilities will be shared between Andhra and Mysore. The order of the President can be varied by subsequent agreement between the two States. In order to ensure completion of the Project and its operation and maintenance thereafter, power is also given to the President to issue directions from time to time to the States, or until the President issues an order, to determine the adjustment of the rights and liabilities of the two States, whichever is earlier.

Representatives of Andhra have been urging that the law which would provide for the handing over to Mysore of portions of Bellary district and hence of the Project, should provide also for the future administration of the Project so that it would be binding on Mysore.

Difference of Opinion

It is understood that while Mysore has accepted the decision of the Central Government that the sanctioned aspect of the Project should be binding on the future of Andhra and Mysore State Governments, there is difference of opinion in regard to the other aspects of the Project which have not been sanctioned. Andhra claims, we are told, that it has a vital interest in the irrigation canal and in the generation of power for utilisation in lower areas of Andhra. Mysore is said to feel that future aspects, especially those regarding generation of power for supply to Andhra areas, will have to be reviewed. For its contention seems to be that the power that will be generated at the headworks in two or three years should be available for consumption in Mysore in places like Bhadravati.

The Madras State, which has been representing the interests of the future Andhra State, argues, very sensibly in our view, that the Tungabhadra Project was planned and designed on a particular basis both in regard to construction and utilisation and this should be adhered to. The location of headworks in Mysore, as a result of the creation of Andhra, should not be a reason for altering the arrangement.

It will be noted from the foregoing account that the question of sharing the cost of the Project and its benefit has become a vexed one. In these circumstances, it will be difficult, if not impossible, to control and supervise the execution of the remaining part of the Project without the constitution of an inter-State Corporation with the assistance of the Centre. The circumstances which necessitated the creation of the Damodar Valley Corporation exist in this case also, especially as the resources of the State of Mysore are limited and those of Andhra are yet to be known.

ENQUIRY INTO MAHANADI BRIDGE ACCOUNTS

The Government of India has appointed a two-man committee to enquire into the financial aspects of the rail-road bridge across the river Mahanadi at Sambalpur. The members of the Committee are Mr. M. L. Champhekar, Chief Engineer, Public Works Department, Bombay, and Mr. S. S. Lakshmi Rattan, an officer of the Indian Audit Department. The appointment of the Committee is a sequel to the recommendation of the Public Accounts Committee made in the sixth report on the Hirakud Dam Project. The bridge, it may be recalled, was constructed by the Central Water and Power Commission on behalf of the Transport Ministry.

The terms of reference of the Committee are as follows:

(1) To scrutinise the accounts of the Mahanadi Bridge as already compiled and to determine the final cost of construction of the bridge;

(2) to find out the reasons for the increase in the final costs as determined by the Committee over the original estimate as sanctioned by the Ministry of Transport;

(3) to analyse the excess expenditure and indicate what portion of the excess is attributable to the speeding up of the construction of the bridge in the interests of the Hirakud Dam Project and what portion to other reasons;

(4) to examine whether, in view of the decision of the construction authorities to adopt departmental construction, instead of contract, any precautions were taken by them to ensure that the through rates provided for in the sanctioned estimates were not being exceeded in actual construction, for example, by analysing the through rates into their component elements of labour, material, etc., for the guidance of the Sub-Divisional Officers and for use in their sub-working estimates;

(5) to assess the appropriate time at which the construction authorities should have brought to the notice of the Government that the actual expenditure on the bridge was likely to exceed appreciably, the sanctioned estimate on this account and the circumstances in which they failed to do so; and

(6) to determine the shares of the actual expenditure to be borne by the Hirakud Dam Project and the Ministries of Transport and Railway in accordance with the method of allocation already agreed upon by the parties concerned.

The Committee has been asked to commence work "immediately" and submit its report within six months.

TRAINING IN THE OPERATION OF EARTH-MOVING EQUIPMENT

The Euclid Road Machinery Company, in co-operation with Messrs. Blackwood Hodge (India) Ltd., has organised a "Euclid Service Training and Maintenance School," to provide a short course, lasting for a week, on all aspects of service and daily maintenance of their earth-moving equipment. The subjects taught at these schools cover a wide ground, namely, clutch, transmission, emergency brake, drivelines, differential, near axle, hydraulic system, front axle, steering system, air brake system, wheel wind, and tyres, wheels and rims. Maximum use of visual aids is being made during the lecture portion of the course. The Euclid Road Machinery Company has provided 16 mm. and 35 mm. movie films, strip films, records and 10" transparent slides for the Vu-graph projector. Three expert engineers for the Euclid factory in the U.S. will be in charge of the school.

A service school was conducted at Hirakud from the 6th to 11th inst. One more school is now in session at the D.V.C. area. It commenced on the 15th inst. and will be in session till the 22nd inst. Another school is scheduled to be held at the Bhakra-Nangal project area from tht 29th inst. to 12th August, 1953.

The original intention of Messrs. Blackwood Hodge (India) Ltd. was to extend invitation to engineers of all the projects now being implemented in India to attend the classes. This, however, proved to be "impossible," for it was found impracticable to provide reasonable individual instructions during the shop practice sessions to a class of large numbers. The attendance at classes has, therefore, had to be restricted to about 15 persons.

The Euclid Service Training and Maintenance School will be of much interest to all those engineers and persons who have employed and operate earth-moving equipment.

TIPPER TRUCK FOR BULK GRAIN TRANSPORT

A tipper truck for the bulk transportation of grain from farm to mill has been produced by a British firm. The vehicle holds seven tons of grain, which is loaded through the open top and emptied by tipping direct onto conveyors which convey it to storage bins. The tare of the vehicle, on a Bedford short-wheelbase chassis, is low enough for it to be registered in the 30 m.p.h. class, making it economical in operation. This has been achieved by constructing the body in light alloys. Normally, grain is discharged through a trap which is manually adjusted to control the rate of flow accurately in conjunction with conveyor speed. But for speedier emptying the lower half of the rear end—which is hinged—can be dropped like the tailboard of a truck. If need arises to load sacks, a pair of vertically hinged doors above the drop board can be swung back for easy access.

NEW SMALL DIESEL AIDS THE FARMER

A new small diesel engine has just been introduced by a British firm. During a four years' test, made under rigorous practical conditions to discover any weakness that might develop, one of the prototype engines ran over 400,000,000 revolutions. The engine provides from 5 h.p. at 1,000 r.p.m. to 8 h.p. at 1,500 r.p.m. Easily started and quiet-running, it is designed to meet all requirements for a small prime mover in Britain and abroad. It is particularly suitable for manufacturers of contractors' plant, agricultural machinery and diesel-electric sets, and is already in considerable demand from overseas, principally for agricultural and irrigation purposes. Demand for the diesel for water-pumping for agricultural purposes is particularly strong from India, the company reports. The makers have a large export trade and last year sold their products to more than 50 countries.

A new Austrian high-quality material for the upholstering of motor car and motor-coach seats has been brought on the market, under the trade mark "Perfectyl." The material consists of a plastic layer inseparably and indissolubly connected with an extremely wear and tear resisting fabric layer. "Perfectyl" plastic-fabric material is washable and waterproof, resistant against blows and scratches. The material is furthermore highly resistant against ageing, since it neither becomes brittle nor changes its structure after prolonged use.

British car makers attained in May this year the highest level of car production, when their factories produced 50,587 units—or one car for every 15 seconds of time worked. Announcing this, the Society of Motor Manufacturers states that this topped the previous peak touched in November, 1950, by 1,000 units. For the first time for one year, car exports in May exceeded 30,000 units—8,000 of the 31,000 exported going to North America. At 19,700, the figure for commercial vehicles produced showed an increase of 300 a week over the previous average for this year.

Nearly 100 merchant ships were completed in British yards during the first five months of this year. The month of May, 1953 saw the completion of 22, aggregating 114,675 tons gross, making the year's aggregate to the end of that month 98 vessels of 526,902 tons.

STEEL PRODUCTION IN COMMONWEALTH

BIG EXPANSION PLANNED

IN view of India's plan for increasing its production of steel and the anxiety of the sterling area to reduce its imports of steel from the dollar area, a brief review of the present position and prospects for the Commonwealth steel industry will be found useful and interesting. The Commonwealth countries have planned to increase their steel production from 24.1 million tons in 1952 to 31.0 million tons by 1957-58, an increase of about 7 million tons to be achieved over the next five years. The production in 1952, which represents an increase 70 per cent. over the pre-war output, accounts for nearly one-tenth of the world's total. The following table, as given in the latest monthly bulletin of the British Iron and Steel Federation, discloses the course of steel production in the various Commonwealth countries since 1938 and the planned increase over the next five years:—

Crude Steel Production

('000 tons)

	1938	1946	1951	1952	1957-58 Planned
United Kingdom ..	10,398	12,605	15,633	16,418*	20,350
Canada	1,155	2,078	3,190	3,320	4,400
Australia	1,192	1,089	1,430	1,610	2,400
India	937	1,293	1,500	1,570	2,300
South Africa ..	341	499	930	1,180	1,500
S. Rhodesia ..	—	—	30	30	50
Total ..	14,013	17,654	22,713	24,123	31,000

* 53 weeks.

There is a feeling that the planned increase in Commonwealth production may result in a decline in the aggregate imports of producing countries. But such a feeling seems to be unwarranted according to the British Iron and Steel Federation. With the increases in population, consumption of steel is expected to keep pace with expansion in the output of steel. Moreover, industrial developments in the Commonwealth countries will call for progressively increasing imports of machinery, vehicles and other steel using manufactured products.

Every Commonwealth country is to-day an importer of steel and the quantities purchased have increased considerably in recent years. While each producing country has a modest export business, only the U.K. is a net exporter, and in 1951, as consumers of one-eighth of world output, the Commonwealth, as a whole, was a net importer to the extent of nearly 3 million tons. The U.K. supplied over one million tons to the Commonwealth countries. The U.K., in fact, is one of the biggest individual suppliers for most of the Commonwealth countries, except Canada. The U.K.'s sales to the Commonwealth last year represented over 60 per cent. of its total exports, as against 50 to 60 per cent. in the pre-war years. The Schuman group of countries in the aggregate supplied over one-third of Commonwealth imports in 1951 which, including supplies from the U.K., constituted 4 million tons. The Schuman countries are expected to become formidable competitors to the U.K. over the next few years.

For Canada, Australia and South Africa, the relative importance of the U.K. as a supplier of steel is less than before the war, mainly because the U.K.'s official policy has been to encourage the export of manufactured steel goods rather than steel itself. Even so, the Commonwealth countries still constitute the U.K.'s biggest market.

The Commonwealth is rich in resources of iron ore, coal, manganese ore and other minerals. It holds something of iron ore, most of which is highgrade material, and one-twelfth of the probable reserves of iron ore, most of which is highgrade material, and one-twelfth of the probable reserves of coal. It accounts for one-fifth of the world total production of coal and two-fifths of world production of manganese ore.

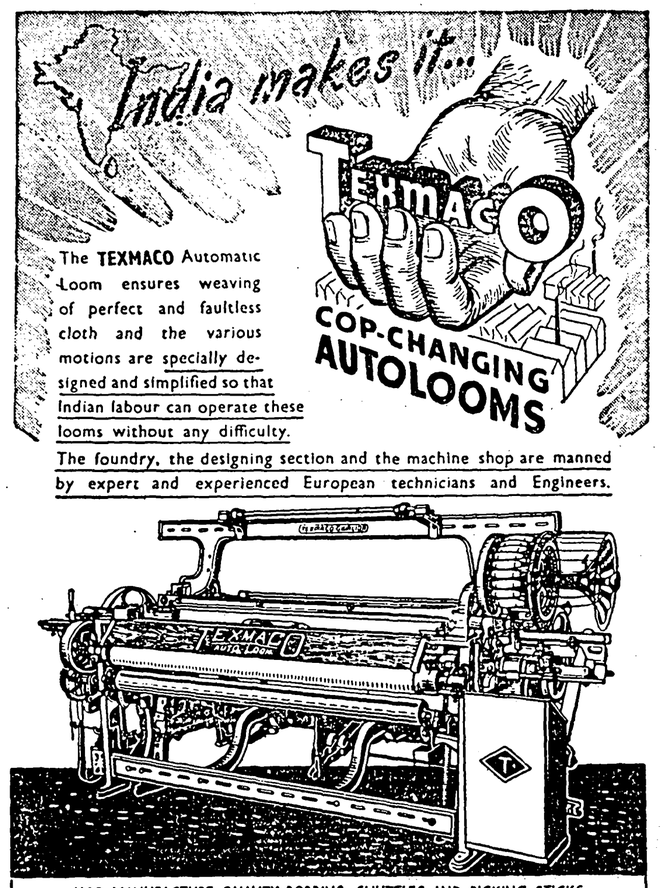
In passing, a reference may be made to the trend of steel prices. Details of new schedules of basis for steel prices recently published by the Schuman group countries show that British home trade prices are in general still at least 25 per cent. below those quoted for products of comparable quality in Western Germany. An approximate comparison between representative British home trade prices and those quoted on the Continent and in the U.S. is as follows:

(Per ton)

Product	Order	Open hearth steel			Bessemer steel	
		U.K.	U.S.	Germany	France	Belgium
		Tons	£ s.	£ s.	£ s.	£ s.
Angles ..	20	28 12	38 16	33 18½	36 13	35 4½
Joists ..	20	28 13	38 8	37 10½	35 13	34 13
Plates ..	20	32 9	38 16	45 14	42 3½	42 1
Rails ..	500	29 5	36 8	39 4	33 5	39 11
Strip ..	20	33 3½	41 8	44 7½	38 3½	38 11½
Sheets ..	25	40 16	44 4	53 17	50 2	—
Tinplate* ..	50	2 16½	3 2-5/6	—	—	—

* Per basis box.

It may be interesting to note here that in India, the base price of plates (untested), as fixed by the Iron and Steel Controller, works out to £36 16s. and that for black sheets to £36 18s. £34 16s. and that for black sheets to £36 18s. The general conclusion drawn by the British Iron and Steel Federation in its monthly bulletin is that there has been a tendency for prices in the six countries to move rather more closely together. But the gap between these prices and those quoted in the U.K. has not been significantly affected.



The TEXMACO Automatic Loom ensures weaving of perfect and faultless cloth and the various motions are specially designed and simplified so that Indian labour can operate these looms without any difficulty.

The foundry, the designing section and the machine shop are manned by expert and experienced European technicians and Engineers.

SPIRITED COMPETITION AMONG JAPANESE INSURANCE COMPANIES

GOVERNMENT INTERVENTION SOUGHT

THE adoption of unfair trading practices has, as is well known, been the bane of insurance in this country. This has created a problem both for the well-established and honest insurers and for the Government which is interested in the orderly development of insurance. Apparently, the evil exists in other countries too, for, Japan, it is stated, faces very nearly the same set of problems which this country has been facing for some time past. Excessive competition is, as in this country, the chief cause of what may well be called insurance unrest in Japan.

Judging from the number of insurers operating in Japan, the problem created by unfair trading practices, cannot, of course, be comparable to what prevails in this country. There are only 20 life insurance companies and 20 general insurance companies. The number is certainly not large for a country with so large and varied an economy as the one possessed by Japan. These general insurance companies are in the main fire and marine offices, accident business, apart from motor, being little developed in the country. Risks are carefully selected by good companies, it is stated, to avoid the so-called "market risks" where trading is done in the open, often under conditions which expose the centres to excessive risks of damage through fire. Marine insurance companies, it is stated, have suffered heavy losses in recent years. The overall revenue on non-life insurers aggregated 38.6 billion yen during 1951-52 as against 26.3 billion yen a year earlier; vessel insurance accounted for 4.8 billion yen, cargo insurance for 4.3 billion yen and fire insurance for 29.5 billion yen.

Although the non-life insurers have been able to show a 50 per cent. increase in their revenue, their continued prosperity is threatened from several quarters. In the first place, the volume of business itself, it is feared, is shrinking. This is because of the general recession in trade, the aftermath of the Korean boom. Preliminary estimates of the industry's revenues for the fiscal year ending March, 1953, indicate that the overall pace of increase would slow down. Revenues from cargo insurance are expected to decline due to the setback in export trade, though vessel insurance is expected to record a 30 per cent. increase in business. Secondly, there is keen competition for the available business both by co-operative insurers and by foreign insurers. The right wing Socialist Party submitted to the recent session of the Diet a Bill designed to facilitate the entry of the co-operatives into the general insurance field. But the insurance companies are opposed to such legislation on the ground that their entry would restrict the field even further.

But the biggest threat seems to have come from foreign insurers. There are about 37 foreign insurance companies operating in Japan. They fall into three main groups, the American International Underwriters (A.I.U.), British Insurance Group (B.I.G.) and the American Federation of Insurance Association (A.F.I.A.). Foreign insurers are able to compete successfully for the available business. This is so for two reasons. In the first place, they handle insurance against "all risks," arising from fire, earthquake, windstorm and flood. Japanese companies do not handle this kind of business although they are now reported to be studying the formula. Secondly, the companies in which foreign capital has been invested enter into insurance contracts with foreign insurance companies.

Japan's insurers complain that they are being pushed into a tight corner by the increasing competition from foreign insurers and co-operatives and by the general recession in business conditions. In fire insurance business, there is agreement as to the level of premiums that may be charged by the companies. But many of them, it is stated, are indulging in an "undercutting warfare." They are offering rebates in an increasing number of instances with the intention of obtaining larger contracts. In the field of marine cargo transportation, where no agreement about premiums exists, there has been evident a downward drift in premium rates, thanks to the competitive bid for available business by marine underwriters.

In order to cope with the problem created by the ruinous competition, a new body, called Non-life Insurance Premiums Estimation Commission, has been set up. This Commission is charged with the responsibility to calculate and fix premiums. Alarmed by the growing competition in the insurance field, this body has set up a "fire insurance premiums review panel." Apparently, these efforts have not succeeded in eradicating the evil of "under-cutting warfare." A strong demand has been made that the Government should create a "Council of Insurance Business" in order to intensify its "administrative vigil" over insurers. The Council, according to insurers, should be composed of representatives of both the life and non-life insurance interests, the Government, including the Finance Ministry, and men of proved knowledge and experience. It remains to be seen whether such a body would be able to eradicate or control unfair practices in the trade. Perhaps, the experience of such a body would be able to provide a few lessons for India which faces, as already stated, problems similar to those in that country.

BRITISH INDIA GENERAL INSURANCE CO., LTD.

The British India General Insurance Co., Ltd. (General Manager: Mr. M. S. Dastur, Bombay) is one of those well established general insurers who write a large volume of fire business. During the year ended 31st December, 1952, the Company's fire business accounted for Rs. 34.29 lakhs of net premium income, which represents almost 58 per cent. of the total premium income of about Rs. 58 lakhs from all the three principal general insurance departments, namely, fire, marine and miscellaneous. Next to fire, the Company's miscellaneous department is important as a source of revenue and profit, for it fetched Rs. 17.83 lakhs by way of net premium income. But the premium income in both the fire and miscellaneous departments was somewhat less than what these departments brought in during 1951 when they accounted for Rs. 39.56 lakhs and Rs. 20.24 lakhs, respectively. The premium income in the marine department, however, was a shade higher at Rs. 5.62 lakhs.

Despite the fall in premium income, the fire department, it is noteworthy, was able to record a slightly larger profit amounting to Rs. 6.54 lakhs, whereas the profit in the miscellaneous department was smaller at Rs. 0.56 lakhs. The marine department accounted for a profit of only Rs. 3,057. The following comparative table shows the progress of the Company during the three years ended March, 1952:

(Rs. in lakhs)

	1952	1951	1950
Fire Department—			
Net premium income	34 29	39.56	35 07
Claims paid and outstanding	11 02	10 65	9 27
Profit	6 54	5 67	7 40
Fire fund*	17.97	19 78	16 64
Marine Department—			
Net premium income	5 62	6 01	8 79
Claims paid and outstanding	3 31	3.14	2.91
Profit	0 03	0 87	0.16
Marine fund	5 90	6 01	8.79
Miscellaneous Department—			
Net premium income	17.83	20 24	17.33
Claims paid and outstanding	9 85	11 64	7 63
Profit	0.56	0.75	0.94
Miscellaneous fund*	9 31	10 63	8 67
Life Department (Current Account)—			
New business	67.96	57.79	50 89
Total business	158 22	117 91	97 59
Net premium income	8 46	7 23	6 79
Life assurance fund*	12 09	7 67	3 97
Interest yield	2 96%	2 45%	3 67%

* As at end of year.

It will be seen from the above table that the Company's life business is forging ahead, the actual business completed during 1952 having improved by over Rs. 10 lakhs to Rs. 67.96 lakhs. A welcome feature of the working of the life department, which the Company shares with many other life offices, is the fact that the average net yield from investments has gone up, from 2.43 per cent. to 2.96 per cent. to be precise. The Company has provided Rs. 2,10,000 as provision for taxation and created a further reserve of Rs. 2.14 lakhs for depreciation on securities. Reserve for bad and doubtful debts has been credited with Rs. 65,000. Besides this, the exchange reserve, general reserve and reserve for equalisation of dividend have been provided with Rs. 15,000, Rs. 50,000 and Rs. 25,000 respectively. After all these transfers, the profit and loss appropriation account shows a balance of Rs. 2.99 lakhs. The Directors have recommended the payment of a dividend at the rate of Re. 1 per share, same as that for 1951, which will absorb Rs. 2 lakhs, leaving Rs. 0.98 lakhs to be carried forward, as against Rs. 0.82 lakhs brought in.

Apart from the capital of Rs. 20 lakhs, the Company's reserves aggregate, as at the end of 1952, Rs. 96.38 lakhs of which the fire fund accounts for Rs. 17.97 lakhs, the marine fund for Rs. 5.90 lakhs, the miscellaneous insurance fund for Rs. 9.81 lakhs, life closed account fund for Rs. 34.24 lakhs, and life current account fund for Rs. 12.09 lakhs.

JAYABHARAT INSURANCE CO., LTD.

The Jayabharat Insurance Co., Ltd. (Manager: Mr. M. H. Shah, Bombay) has been able to build up during the last 10 years of its existence, a sizable volume of business in the general field, though its life section has also shown some notable improvement. During the year ended 31st December, 1952, the Company's net premium income in the fire department was Rs. 2.24 lakhs lower at Rs. 32.33 lakhs while the premium income in all the other departments, namely, marine, miscellaneous and workmen's compensation has moved up. Thus, the premium income in the marine department has moved up from Rs. 4.35 lakhs to Rs. 7.23 lakhs, in the miscellaneous department from Rs. 4.67 lakhs to Rs. 4.76 lakhs and in the workmen's compensation department from Rs. 1.36 lakhs to Rs. 1.99 lakhs.

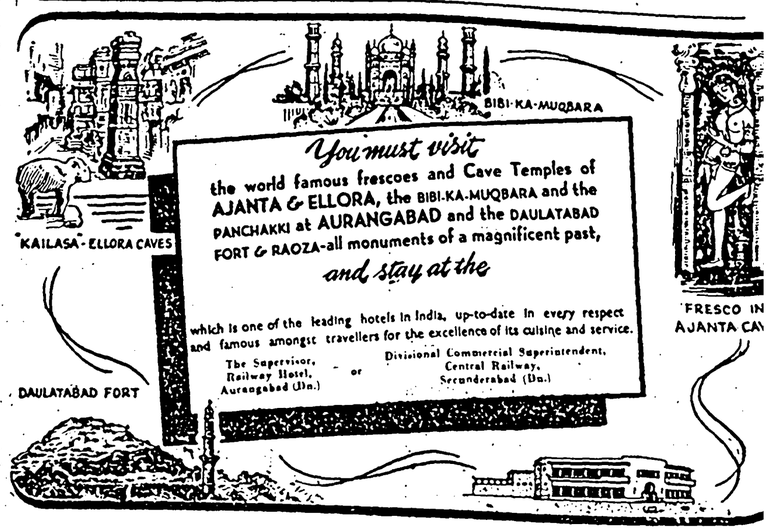
Despite the fall in premium income, the fire department has been able to record a higher profit of Rs. 8.20 lakhs, as against Rs. 5.30 lakhs in 1951. The experience of the marine department, however, has not been encouraging; in 1951 there was a small loss of Rs. 2,218 but, during the year under review, the loss was as much as Rs. 1.79 lakhs. A similar change has occurred in the miscellaneous department where the loss was Rs. 19,575, as compared with a loss of Rs. 16,798 in the year 1951. In the workmen's compensation department, too, there was a loss of Rs. 38,621 as against a small profit of Rs. 12,941 in the previous year.

In the life department, the Company wrote 2,369 policies for an aggregate amount of Rs. 77.26 lakhs. In 1951, the Company's new business aggregated Rs. 76.96 lakhs. The total business in force is now of the order of Rs. 2.87 crores and the total premium income Rs. 13.55 lakhs. Life Assurance Fund, as on 31st December, 1952, amounted to Rs. 33.54 lakhs.

After transferring Rs. 2.75 lakhs to investment reserve and Rs. 50,000 to reserve for bad and doubtful debts, there is a balance of Rs. 5.63 lakhs which, together with Rs. 18,163 brought in from the previous year, makes in all Rs. 5.81 lakhs. The Directors have recommended the payment of a dividend of Rs. 3 per share, the same as last year, which absorbs Rs. 1.50 lakhs and the transfer of Rs. 1.50 lakhs to taxation reserve and of Rs. 2.50 lakhs to general reserve, leaving Rs. 31,051 to be carried forward.

Apart from a capital of Rs. 25 lakhs, the Company's reserves and funds, as at the end of 1952, aggregate Rs. 73.49 lakhs, made up of: general reserve Rs. 7.50 lakhs, investment reserve Rs. 5.67 lakhs, fire reserve Rs. 16.16 lakhs, marine reserve Rs. 7.23 lakhs, miscellaneous reserve Rs. 2.38 lakhs, workmen's compensation reserve Rs. 1 lakh and life reserve Rs. 33.54 lakhs.

The Company writes a large volume of business outside India too. In the fire department, the Company's overseas business yielded a premium income of Rs. 18.95 lakhs and in the marine department Rs. 3.79 lakhs. The Company is now engaged in extending its business, and has appointed agents or branch managers in Burma, Egypt, Belgium and in the U.K.



NEW PUBLICATIONS

Indian Economic Journal. Published by Prof. C. N. Vakil, School of Economics and Sociology, University of Bombay, Bombay 1. Subscription: Rs. 16 or £1 5s. or $4.0 (Post Free) per annum.

THE advent of the *Indian Economic Journal* for the first time under the auspices of the thirty-four-year-old Indian Economic Association, marks a new milestone in the history of the Association. For some years now an economic journal, entitled the *Indian Journal of Economics*, was being published under the joint control of the Association as well as the University of Allahabad. In 1951, however, it was held desirable by some members that the Association should start independently a journal of its own and, therefore, a committee was appointed to go into the question. In the following year, at the annual meeting of the Association held at Trivandrum, it was decided to publish the journal from Bombay and Prof. C. N. Vakil was unanimously requested to organise and edit the *Journal* with the assistance of two persons of his own choice. The publication under reference, which made its appearance early this month, is the outcome of this decision. It will appear once a quarter under the editorship of Prof. C. N. Vakil, one of our leading economists, assisted by Mr. R. Balakrishna, Professor of Economics, Madras University, and Dr. B. V. Krishnamurti of the University of Bombay, all of whom are familiar to readers of *Commerce* through their contributions to its columns. The aim of the *Journal* is a laudable one. It will devote itself solely to "a scientific discussion of theoretical and applied economics, with special reference to India." "It will thus be a forum for professional economists and others working in the same field and will help in the development of correct economic thinking, with particular reference to the problems of this country." Since the Association is a scientific body, it is not wedded to any economic or political ideology. The *Journal* will not, therefore, seek to propagate any partisan view.

The first number of the *Indian Economic Journal* containing, as it does, seven illuminating articles, mostly on topics of current interest, bears testimony to the high standard of intellectual fare it can serve to its readers. The articles on "Capital Formation and Five-year Plan" by Professor J. Tinbergen, "Planning in Underdeveloped Countries" by Dr. B. V. Narayanaswamy Naidu, and "Some Practical Problems of Planning" by Mr. N. S. Pardasani are a treat on problems of planning in India. Equally interesting are the contributions by Mr. J. K. Mehta on "Equilibrium in Macroeconomics," Mr. V. V. Bhatt on "Motor Force of Economic Development" and Mr. K. S. Rao on "Structure of Dynamics of an Economy and Measurement of its Changes." Through his monograph on the life and work of the late Prof. K. T. Shah, Prof. Vakil has left to posterity a glowing account of one of India's ablest economists.

Judged by these as well as other features of note, particularly the section devoted to book reviews, one can confidently expect the *Indian Economic Journal* to be a source of inspiration to professional economists and others interested in a scientific discussion of economics. Its aim of promoting research in economics is undoubtedly a worthy ideal in the pursuit of which, the co-operation of University centres, Government Departments and business houses, the Reserve Bank of India and other institutions interested in economic research is necessary. In a message of goodwill wishing success to the *Journal*, Prof. Haberler, President, International Economic Association, observes: "Let me salute this event and congratulate the editors in the name of the International Economic Association. Let me express my best wishes for a resounding success. It will be of the greatest importance not only to the members of the Economic Association but also to the economic profession in other parts of the world to be able to follow, and get acquainted with the ideas and the results of researches of the many skilled and competent scholars who are working on economic problems in the great Indian universities and research institutions." Few would desist from joining hands with Prof. Haberler in his sincere message of welcome to the *I.E.J.* into the fold of economic journalism.

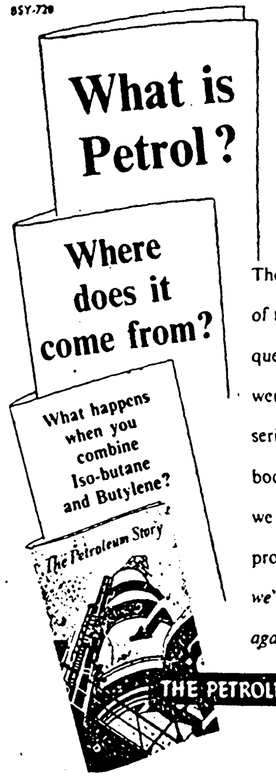
Indian Railways—One Hundred Years. Published by Ministry of Railways (Railway Board), Government of India, New Delhi. Obtainable from the General Secretary, Indian Railways Conference Association, Chelmsford Road, New Delhi. Price: Rs. 15.

The Central Railway Ministry deserves to be congratulated on bringing out this attractive and useful publication, in commemoration of the Centenary of Indian Railways held on 14th April, 1953. The publication is so replete with beautiful pictures and illustrations depicting the history, the progress and the present working of the Indian Railways that every one of its pages is of absorbing interest. The reader is first taken, in the initial chapters, to the earliest beginnings of railway construction in India. He is then acquainted with the later phases of expansion and development, the problems and difficulties which had to be faced in the process, and the final emergence of Indian Railways as the largest nationalised undertaking in the country. Several chapters have been devoted to a detailed study of the various aspects of railway working. All these, as Mr. Lal Bahadur Sastry, the Union Minister for Transport and Railways, aptly remarks in the foreword, are described in a style intelligible to non-technical readers.

At the end of the publication are given appendices giving statistical details regarding the Indian Railways. These show mileage open, capital at charge, gross earnings, working expenses and net earnings during the period 1853 to 1951-52. They also include information on the traffic carried, in stages of ten-year periods, during the century. The other particulars included cover a few noteworthy bridges and viaducts, largest railway station platforms in the democratic part of the world, resolution regarding separation of Railway from General finances, and Railway administration in India. All this information makes interest reading. The reader, for instance, will find that India has the largest platforms in the world, the biggest of them being the one at Sonepur, North-Eastern Railway.

Even a perusal of the publication under review will impress one of the vital role played by the Indian Railways in the economic, social and political life of the country. That, despite series of limitations such as those imposed by nature or political and economic factors, the Indian Railways have been able to maintain a fairly high standard of efficiency is an achievement of which they can legitimately be proved. Those who feel that this tribute is an exaggeration—there must be many who feel that way, considering the complaints that we hear nowadays about inordinate delays and the inadequacy of wagons, as well as coaching facilities—should read this volume to be convinced of what we say. This, however, does not mean that the Railway Administration can rest on its oars now. There is much more that remains to be done, if it is to meet satisfactorily the progressively growing traffic requirements of the country.

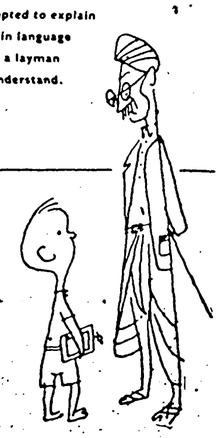
BSY-720



These are some of the many questions answered in a new series of four booklets which we have just produced (*yes, we've been at it again!*) called

One of the booklets deals specifically with refineries, which is particularly appropriate just now when work is going ahead on the Burmah-Shell Refinery at Trombay. We talk about some of the things a refinery does, and this gives a close idea of the technical skill and planning behind the setting up of the largest undertaking of its kind in India. Two million tons of oil a year need an awful lot of refining!

But refining is only a part of the story. The other three books in our series deal with the history, production and transportation of petroleum products. We have not avoided technicalities – we have attempted to explain them in language which a layman can understand.



Schools, colleges – and everyone–interested in oil – are invited to apply for these booklets at the nearest Burmah-Shell Office in Bombay, Calcutta, Delhi or Madras or to any one of our 21 Divisional Offices. When you write, please ask for the booklet by name – 'History', 'Production', 'Refineries', and 'Transportation' in "THE PETROLEUM STORY" series.

BURMAH-SHELL ... IN INDIA'S LIFE AND PART OF IT

ANDHRA CEMENT COMPANY, LIMITED

FIFTEENTH ANNUAL GENERAL MEETING

MR. V. RAMAKRISHNA EMPHASISES NEED FOR FAIR SELLING PRICE FOR CEMENT

THE need for fixing a fair selling price for cement was emphasised by Mr. V. Ramakrishna, M.A., I.C.S. (Retd.), M.L.C., Chairman of the Andhra Cement Company, Ltd., in his address to the shareholders of the Company, at their Fifteenth Annual General Meeting held at Vijayawada, on the 1st inst. The Chairman pointed out that, if the cement industry were to play its part in full in the industrial development of the country, it must be enabled to maintain its productive efficiency at the highest pitch. This meant that the industry should be allowed to build up adequate reserves for rehabilitation of old machinery and equipment. This factor should be taken into consideration by the Tariff Commission and the Government of India, he said, when fixing the fair selling price of cement. Putting forward a concrete suggestion, Mr. Ramakrishna pleaded for special free-of-tax depreciation allowances on the basis of the present-day replacement costs. This was necessary, he said, because the old plants would not be able to maintain their efficiency at the highest level, if plant reinstatement reserves were to be met out of profits after they were taxed.

The following is the full text of Mr. Ramakrishna's speech:

"GENTLEMEN,

"It is with great pleasure, I welcome you all once again to the Fifteenth Annual General Meeting of the Company.

"The Directors' Report, the balance-sheet and the profit and loss account for the year 1952 have been in your hands for some time now; and, with your kind permission, I will take them as read.

Production

"It will be seen from the statement of accounts that the working results of our Company during the year under review have been satisfactory. During the year 1952, we have produced 91,327 tons of clinker and 78,172 tons of cement, as against 46,745.5 tons of clinker and 56,021 tons of cement in 1951. Cement despatches also improved by 22,377 tons to 76,861 tons during this year. Our production would have been higher but for the intermittent troubles in the running of the new Kiln. We have been maintaining a Chemical Engineer, deputed by Messrs. F. L. Smidth & Co., the suppliers of our machinery, to work the kiln satisfactorily to give maximum production coupled with efficiency in operation. We hope that with our efforts to improve the efficiency of the plant, we will be able to step up production further during the current year. Despatches of the finished product also would have been appreciably higher, but for the continued difficulty for transport facilities which formed the main bottleneck.

"We are now making arrangements for providing additional railway siding facilities to cope with the increased traffic. In spite of the present difficulties, I am glad to state that we are able not only to release more cement than last year, but also to introduce our product in other States, like West Bengal, Orissa and Hyderabad.

"Towards the end of 1952, the Government of India, following the decline in the price of jute market, revised the price of packing material with effect from 1st December, 1952, thus resulting in a loss to the Company on the stock of gunny bags. The incidence of this loss was particularly felt by small units like ours, especially at a time when the production costs continued to be high on account of various reasons, such as increase in railway freight, stoppage of rebates in coal freights and increased labour costs, etc. The hardships caused by revising the price of packed cement on the basis of average price of gunnies over a period of nine months was brought to the notice of the Union Government for a considerate review, but the same formula is continued to be adopted, though the industry in general have asked for suspension of this basis, pending consideration of the price structure by the Tariff Commission. Since then, a further reduction of As. 6 per ton of cement is announced by the Central Government from to-day.

"In this connection, I may state that we have already made a representation to the Tariff Commission who have been entrusted with the task of fixing fair selling price for cement, that they should take into account the necessity for creating adequate reserves for the rehabilitation of old machinery and equipment, especially in view of the present high cost of new machinery. A programme of rehabilitation for the old plant of 100 tons capacity, giving priority for essential units, spread during a period of seven years on an estimated provision of Rs. 37 lakhs, has been submitted for inclusion and consideration in determining the selling price of cement for our unit. I hope the Tariff Commission, as well as the Government of India, will give their best consideration to this question, as, otherwise, it may be difficult for the private sector to fulfil the obligations imposed on it in the matter of industrial development of our country.

Depreciation on Replacement Costs

"The Government of India are now committed to a policy of mixed economy reserving a certain sector of industrial development to private initiative and enterprise, and I, therefore, trust that the Taxation Enquiry Committee, which is now entrusted with the task of conducting an exhaustive enquiry into the existing tax structure in our country, will take into account this factor and make suitable recommendations, so as to allow depreciation, for tax purposes, on the present-day replacement costs, in the case of old plants, as, otherwise, it would prove a very difficult problem for the private sector to maintain industry at its highest level of productive efficiency, if plant reinstatement reserves are to be met out of profits after they are taxed.

"Your Directors are also following a very progressive policy towards labour, and making all possible efforts to provide modern amenities such as houses, canteen etc., for the employees, so as to improve their general standard of living and efficiency. Besides provident fund introduced in the year 1949, gratuity scheme has been introduced last year when Rs. 15,000 was appropriated out of that year's profits and a like amount has been provided this year also. You will have also noted from the Directors' report that, besides providing for three months' pay as bonus to workers and staff, a recommendation has also been made for the appropriation of Rs. 2 lakhs out of the profit for 1952 for 'workers amenities reserve,' to which a sum of Rs. 1 lakh was provided from the profits of 1951. This reserve is meant to cover expenditure on the Subsidised Industrial Housing Scheme for the workers, the foundation-stone for which was laid by the Hon'ble Mr. V. V. Giri on 24th March, 1953. The total expenditure on 500 houses with other amenities connected with the colony and inclusive of the cost of land (Rs. 98,023 has been already spent) is estimated at about Rs. 16 lakhs. The Company's contribution of 37½ per cent. will be Rs. 6 lakhs, of which, together with the current appropriation of Rs. 2 lakhs, we have so far earmarked Rs. 3 lakhs, and the balance will have to be appropriated from future revenues. Under this scheme, the Central Government will give a subsidy of 25 per cent. of approved cost and will grant a loan to the tune of 37½ per cent. of the total approved cost of the scheme at 4½ per cent. interest per annum, repayable in 15 annual instalments. This labour colony, when completed, will, undoubtedly, answer a long-felt need of the workers, and will be a first class amenity for them.

Working Results

"It is gratifying to note that the working of the Company this year resulted in a net profit of Rs. 7.07 lakhs, after providing Rs. 10.0 lakhs towards depreciation, as against a profit of Rs. 5.71 lakhs in the previous year, after providing Rs. 7.76 lakhs towards depreciation.

"It is also gratifying to note that the cement industry fortunately secured a fairly high place of priority in the Five-year Plan, under which it is proposed to increase the rated capacity of the cement industry with the help of private initiative and enterprise to about 50.0 lakh tons in 1955-56 from the present rated capacity of about 40.0 lakh tons. With the gradual and steady growth in the demand for cement on account of its increasing utility, I hope, the target set by the Planning Commission may be reached by the industry at a much earlier date.

"You all know, gentlemen, that the Andhra State will come into existence on 1st October, 1953. In addition to the major project of regulator-cum-road bridge connected with the Kristna Anicut, there is likely to be extensive programme of new construction works for various irrigation, hydro-electric and road development schemes in the new State and this would naturally create substantial additional demand for our product. I hope that when demand increases, we will not be found lagging behind in increasing our productive capacity either with the existing plant or by acquiring a new plant, if necessary, to meet the demands of our new State.

Managing Agency

"Before I conclude, I wish to refer to one important development during April this year between your Directors and the Managing Agents. It has been brought to the notice of the Directors that the Managing Agents have made certain changes in the constitution of the Managing Agency company without obtaining the sanction of the Government of India. When we referred this matter to the Advocate-General, Madras, he advised us that this was clearly a contravention of the recent amendments of the company law. We had, therefore, passed certain resolutions appointing two of our Directors to take charge of the Company, on account of the Managing Agents having ceased to be entitled to act as Managing Agents, by virtue of the changes brought about by them in the constitution of their company without prior approval of Government and about their conduct of the affairs of the Company. This had become the subject matter of a suit in the High Court of Judicature, Madras, between your Directors and the Managing Agents, and the Hon'ble High Court granted a temporary injunction on the ground that the action of the Directors was not warranted. As this matter is obviously not one which could be decided quickly, but would be protracted, both the Managing Agents and ourselves felt that it was not in the interests of the Company to prolong the dispute, and we obtained a compromise decree, the main terms of which are as follows:

"'1. This agreement shall be in force for three years from 1st May, 1953.

"'2. The Managing Agents shall appoint, as the Business Manager a competent and qualified person selected from time to time by the Board of Directors of the Andhra Cement Co., Ltd., and shall authorise him to act on their behalf under a general power-of-attorney. His appointment will, however, be terminated by the Managing Agents whenever the Board of Directors so desire. The Managing Agents shall not be liable for any acts of commission or omission of the Business Manager in the performance of his duties.

"'3. The Business Manager shall receive such remuneration as may be fixed from time to time by the Board of Directors of the Andhra Cement Co., Ltd., and the Andhra Engineering Co., Ltd., shall be liable to pay towards such remuneration a sum not exceeding Rs. 1,200 per mensem. If the Board of Directors desire that the Managing Agents shall employ any technical personnel in addition to the Business Manager, the liability of the Andhra Engineering Co., Ltd., to pay towards their remuneration, inclusive of the remuneration, of the Business Manager, shall not also exceed Rs. 1,200 per mensem.

"'4. The Managing Agents agree to forgo for the time being 37½ per cent. of the annual commission which they would be entitled to under the Managing Agency agreement as and from the year 1953 onwards, the net profits being calculated as in previous years. The Directors of the Andhra Cement Co., Ltd., may, however, restore at any time all or any portion of the commission which the Managing Agents have agreed to forgo as above.

"'5. The charges against the Managing Agents regarding the management of the affairs of the Andhra Cement Co., Ltd., specified in the Board's resolution dated 10th April, 1953, are hereby withdrawn. No claim shall be made against and no liability shall attach to the Managing Agents in respect of any of the transactions covered by the said charges or any other acts of commission or omission on their part upto this date.

"'6. The resolutions of the Board of Directors of the Andhra Cement Co., Ltd., dated 10th April, 1953, regarding the cessation and suspension of the Managing Agents and the consequential resolutions are hereby revoked.

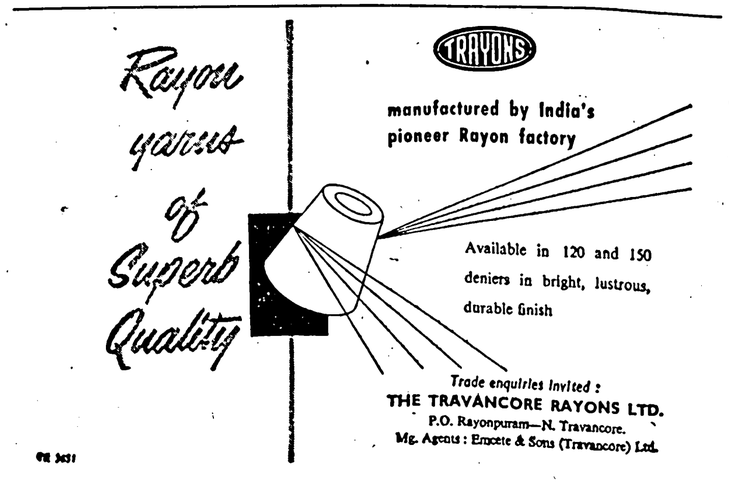
"'7. Except as herein provided, the Managing Agents shall continue to enjoy the benefits, rights, etc., vested in them under their Managing Agency Agreement.'

"In pursuance of clause 2 of the Compromise decree, your Directors selected Mr. R. C. Malhotra as the Business Manager of your Company. With his vast knowledge, of the cement industry and his considerable administrative experience, your Directors expect very rapid progress in the production and marketing of cement during the current year.

"With these few remarks, I now commend the balance-sheet and statement of accounts for adoption."

The following is a synopsis of the Company's balance-sheet as on 31st December, 1952:

		Rs.
LIABILITIES		
Capital		33,68,524
Reserves and surplus		8,91,828
Reserve for taxes		75,000
Liabilities		22,63,788
ASSETS		
Gross block		72,62,714
Less—Depreciation		25,89,341
Net block		46,73,373
Stock-in-trade		14,82,509
Stores, tools, etc.		14,48,678
Debts, deposits and advances		8,33,082
Investments		76,947
Cash		84,551
	Rs.	85,99,140



POST-WAR DEVELOPMENT OF SHIPPING IN WEST GERMANY

REMARKABLE ADVANCE IN RECENT YEARS

THE position of German shipping after the Second World War was fundamentally different from that after 1918. In those days, there were no prohibitions for German ships on the high seas and no restrictions on German mercantile shipbuilding. Shipyards, and experimental research and training institutions had been left unimpaired, so that there was no delay in starting the reconstruction of a merchant fleet immediately after the end of the war. As early as 1923, large passenger ships built in German yards were again sailing under the German flag and maintaining a regular North Atlantic service, and, by 1939, the German mercantile marine, aggregating roughly 4,500,000 g.r.t., had regained fifth place among the merchant fleets of the world. But, after World War II, all that was left was a paltry remnant of scarcely 120,000 tons of old and small vessels.

The Potsdam Agreement forbade the construction of any type of sea-going vessel. Control Council Directive No. 37 subsequently permitted only replacements for the ships that remain. The size of individual vessels was limited to 1,500 tons and their speed to 12 knots. Motor propulsion was permitted only for vessels not exceeding a length of 110 feet.

The Washington Agreement of April, 1949, however, permitted the construction of sea-going vessels upto 7,200 g.r.t. with a speed not exceeding 12 knots but only after the demand for coastal craft had been fully covered. This agreement also allowed the purchase of 100,000 tons of tankers and 300,000 tons of cargo capacity from abroad.

Restrictions Relaxed

It required long and laborious negotiations between the Federal Government and the Allies to bring about the Petersberg Agreement of 22nd November, 1949, which superseded the Washington Agreement. But it was not until the Agreement on Industrial Controls of 3rd April, 1951, had been concluded that the last restrictions regarding the size and speed of vessels, the construction of passenger ships and the extent of purchases from abroad were finally abolished. Certain reservations intended to prevent the construction of vessels with installations usual in warships remained, while the expansion of shipyard capacity required approval. Thus, the reconstruction of a merchant fleet was again possible. But all difficulties had not yet been overcome.

DEVELOPMENT OF GERMAN MERCHANT FLEET
(Gross register tons)

1914	5,460,000
1923	2,590,000
1939	over 4,000,000
1945	120,000
1946	120,000
1947	120,000
1948	120,000
1949	290,000
1950	730,000
1951	1,160,000
1952	1,500,000
1953 (April)	1,600,000

The big shipyards within the territory of the Federal Republic were largely either destroyed or dismantled. The shipyards in areas under Polish administration and in the Soviet-occupied Zone were lost altogether. In addition, the financing of shipbuilding was a matter of grave concern. Loss of their fleets had deprived the shipowners of almost their entire material assets, whereas their financial resources had been depleted by the currency reform. They were given no compensation for war damage, nor had they any claim on insurance companies. Hence, they were compelled to begin reconstruction practically without any financial resources of their own. To make matters worse, a capital market had ceased to exist since 1945 and even to-day has shown hardly any signs of revival.

Government Aid

Thus, the shipyards were dependent on the Federal Government for aid. Government subsidies could not be expected. But the "Law on Loans to Finance Reconstruction and Purchases of Merchant Vessels" of 27th September, 1950, made possible loans up to 40 per cent. of the building and purchasing costs to shipowners who had suffered war damage. To a lesser extent, E.R.P. funds were also provided, although the conditions attached to their disposal made their use in many instances very difficult. Of essential significance was the aid of the Bankdeutscher Laender and the Zentralbankrat (Central Bank Council). They made possible the financing of a major part of the expansion of the German merchant fleet, and participated in the financing of tonnage still under construction. The consolidation of these credits is now one of the Federal Government's main concerns.

Construction of new craft, purchases of vessels from abroad and reconditioning of salvaged ships raised the tonnage of West Germany's merchant fleet from 290,000 on 1st January 1950, to 730,000 on 1st January, 1951. On 1st April, 1953, that is, two years after the Agreement on Industrial Controls, 1,600,000 tons of shipping were again riding the seas. Including fishing vessels and other craft, the Federal Republic's shipping totalled 1,840,000 tons on 1st April, 1953. This included 410 new ships totalling 670,000 tons built in German yards and 170 ships comprising 568,000 tons purchased abroad. A further 109 German vessels, aggregating 284,000 tons, were under construction in West German shipyards.

Capacity Steadily Rising

The carrying capacity of the resurrected merchant fleet has thus been steadily increasing. But it is yet far from adequate to meet the economic requirements of the Federal Republic, which more than ever depends on imports from abroad. Ship and port reconstruction has contributed considerably towards the creation of employment in Germany. On 1st October, 1949, about 25,000 seamen were still unemployed or in stopgap jobs in other sectors. Only 7,500 had jobs as seamen. On 31st October, 1952, the number of seamen of all ranks serving on German merchant ships had again reached 20,000. A further 10,000 were employed on fishing craft.

As the merchant fleet slowly grew, it succeeded by degrees in recovering its former sea routes in Europe and, since 1950, throughout the world. With a further increase in the number of vessels suitable for packet service, German ships will again sail to the west coasts of North and South America, Australia and the Far East—routes which formerly were considered particularly important.

Hand in hand with the reconstruction of the merchant fleet went the repair of seaports. The Second World War had wrought grave damage to them—especially to Hamburg and Bremen. When hostilities ceased these harbours were completely, blocked by sunken ships, and the port installations largely destroyed. In Hamburg, only 10 per cent. of all wharf buildings, 28 per cent. of all warehouse space, 20 per cent. of the cranes, and 32 per cent. of the rail network in the harbour had remained intact. The rest was either totally destroyed or badly damaged. In Bremen, the extent of the damage was similar. All sea communications with other countries had ceased to operate. On 1st October, 1952, however, 56.5 per cent. of the wharf buildings, 41.3 per cent. of the warehouse space, and 56.8 per cent. of all cranes had been restored, while the rail network had been fully repaired. In Bremen, port facilities for overseas trade has been restored up to 85 per cent. of its original capacity. Port facilities for European trade, which had been almost totally destroyed, are now being reconstructed. Damage to the port installations at Bremerhaven has been almost completely repaired.

In its transport policy, the Federal Government had to consider above all the difficult situation that arose for German seaports through their severance from important parts of their natural hinterland. However, the ports have again been joined to the international network. In its policy on shipping, the Federal Government has always been guided by the interests of Europe as a whole.

Foreign shipping has shown great interest in the development of the German ports. They were soon included in regular foreign packet services. In October, 1952, 101 foreign shipping lines had been re-established to Hamburg, with 264 ships clearing the port in the course of that month. Bremen registered 73 foreign lines with 154 ship departures, and Luebeck three foreign lines with 9 departures in October, 1952.

The Federal Republic is endeavouring to contribute its share towards international co-operation by participating, for instance, in the further development of international maritime law. Moreover, German oceanographic research carried out in German ships again serves international mercantile shipping, fishing and the scientific work of all seafaring nations.

CALCUTTA ELECTRIC SUPPLY CORPORATION

A YEAR OF CONSOLIDATION AND REHABILITATION

SIR JAMES DONALD'S REVIEW

THE Fifty-sixth Annual General Meeting of the Calcutta Electric Supply Corporation, Limited, was held on 15th July, 1953 at Victoria House, Vernon Place, Bloomsbury Square, London, W.C., Sir James Donald, C.S.I., C.I.E., Chairman of the Company, presiding.

The Secretary, Mr. A. R. Colley, A.C.A., read the notice convening the meeting and the report of the auditors.

The following is the Chairman's review which had been circulated with the report and accounts for the year ended 31st December, 1952, and was taken as read:—

"Following on the decision taken at the last annual general meeting, increasing the number of members of the Board from five to seven, we appointed Mr. Godfrey Phillips, a member of our solicitors' firm—Messrs. Linklaters and Paines—and Mr. J. H. Waters, formerly our Chief Engineer in Calcutta, to be Directors. Mr. Phillips, subsequently, on retirement from Messrs. Linklaters and Paines, resigned his appointment as Director and in his place we appointed Mr. Gauntlett—a member of Messrs. Linklaters and Paines. Both Mr. Gauntlett and Mr. Waters, with their experience in their respective spheres, should give the Board valuable assistance in dealing with the many complex problems with which we are faced in dealing with this large and evergrowing undertaking.

"The year 1952 was primarily one of consolidation and rehabilitation. In the previous year, our energies were mainly centred on the construction of our additional generating plant, and, as a result, we acquired an accumulation of deferred works of repairs to buildings and maintenance of mains. With the completion of the large schemes at Cossipore and Mulajore, we were able to give attention to these matters, and it was the work in connection therewith and bringing everything up to date that constituted our main activities in 1952. Otherwise, progress was on normal lines following the pattern of, and influenced by, the same factors which prevailed in the preceding years. Political troubles were mainly confined to questions of migration between West Bengal and East Pakistan—but communal tension was absent, and, with higher living standards, there was an increase in the demand for electricity for lights and fans and for electrical appliances—now to be obtained at prices falling well within the range of an ever-increasing public. Refrigeration and air-conditioning are also proving attractive.

Increase in Sales

"In the result, our sales on the domestic side, lights and fans, rose from 149,910,422 units to 158,924,961 units, an increase of 6.013 per cent. The rising appreciation of the benefits of electricity in the domestic sphere is reflected in the increased consumption of current for household apparatus—cookers, heaters, and refrigeration. Air-conditioning is also noticeably on the increase. It will be realised that this increasing load must impose an ever-increasing strain on our L.T. network. In order to relieve this, we have encouraged large consumers to take advantage of the special tariff applicable to large buildings, by which the owners can be given a supply of H.T. current (6,000 volts) available for conversion, by the owner, and use within the buildings at low tension, suitable for fans, lights, refrigeration, and air-conditioning. On the industrial or H.T. side, there has again been a considerable increase in the number of units sold. Labour conditions were not unfavourable, communal tension on the wane, and fewer labour strikes.

"The increase is shared by jute, cotton, and paper mills and engineering works. For a few months in the early part of the year the jute industry had increased its hours of working from 42½ hours to 48 hours per week, but reverted again at the end of May to the lower figure. The benefit we secured from the three months' extra working is represented by an increase of 24 million units in the consumption by jute mills. A number of new consumers was connected to our system during the year. In all, on the H.T. industrial side, we sold 610.68 million units compared with 556.78 million units in 1951.

"The increase in our sales is reflected in our revenues. Our gross receipts rose from £4,350,517 in 1951 to £4,773,561 in 1952. Expenditure also went up from £2,990,838 to £3,539,645. With the greater output of our supply we consumed 40,000 tons more coal in our generating stations than in 1951, and this, together with an increase in railway freight charges, accounted for nearly £100,000 of the increase. The cost of repair and maintenance, to which I have already referred, was £141,000 more than in 1951. There is also an increase of £180,000 in depreciation. The cost of living continues to be a factor of some importance in wages we pay, and a steady continuing increase throughout the year in the cost-of-living index in the case of the middle classes of our employees resulted in a considerable increase in our wages bill. A claim was made by our employees for an extra month's bonus for the year 1950. This was referred to adjudication and has been decided in their favour.

Taxation Relief

"We still continue to benefit through the operation of the initial allowances for depreciation for tax purposes, and are by this means relieved from any taxation liability. As in the past three years, the Government of West Bengal have sanctioned a special appropriation, which this year amounts to £198,540, to finance the expansion of the machinery of production, this being the amount required to equate the clear profits of the Company with

FINANCES OF CALCUTTA ELECTRIC

Liabilities	£
Capital	6,162,646
Reserves and surplus	5,631,041
Debenture	4,684,297
Liabilities	3,657,417
Assets	
Gross block	26,023,353
Less—Depreciation	7,779,999
Net block	18,243,354
Stores	784,626
Debts, deposits and advances	464,234
Investments	106,328
Cash	163,460
Debenture issue expenses	283,399
	£ 20,135,401

the reasonable return allowed us by the Electricity (Supply) Act. The circumstances under which these appropriations are made and the conditions attached to them were explained in my review last year and I need not recapitulate them. One change in the conditions has been made—the initial payment, by which these appropriations will be brought back to be made available under such conditions as the Government of West Bengal may decide, has been deferred from 1952 to 1953. No provision, therefore, has been made in the accounts for 1952. It has, however, been made clear to us that the Government of West Bengal will not sanction any similar appropriation for future years. In all the circumstances the Board have deemed it expedient to add to the net revenue special appropriation a sum of £240,000 for the purpose of the expansion of the machinery of production, and, therefore, not available either for distribution to shareholders or for the payment of additional benefits to employees. The only remark, I need make, in regard to the balance-sheet is that the increase in the overdraft from £538,762 to £1,832,654 is due to expenditure on necessary capital works. It will be noticed that the liability for goods supplied and expenses accrued has been reduced from £2,318,031 to £1,021,021—roughly the increase in the overdraft.

Allocation of Profits

"We have allocated the usual amount, as required by the Electricity (Supply) Act, to the contingencies reserve and have made provision for the interest and sinking fund charges in connection with the debentures. The dividend on our preference stock and an interim dividend on the ordinary stock have been paid. We propose to make the normal contribution to the retiring gratuity fund and to pay a final dividend of 3 per cent. (free of tax) making 6 per cent. (free of tax) for the year. This leaves a carry forward of £161,233.

"The demand for electricity does not stand still. It is ever on the upward trend and the question of future development and expansion is constantly in our minds. As I pointed out in the reviews of recent years, while there is at the moment sufficient generating capacity to meet present demands and for a few years to come it will not suffice to meet the anticipated demand from 1956 onwards. This is a matter affecting not only ourselves but also most electric supply companies. I referred last year to the necessity for immediate action to remedy the situation by an amendment of some of the provisions of the Electricity (Supply) Act of 1948. Action in this direction is, I understand, still under consideration, but a year has passed and, as nothing has so far seen the light of day, it is unlikely that any change in the law will be effected within another 12 months. Meanwhile, many companies, particularly the small ones, will be hampered under the existing provisions in obtaining capital sufficient to procure new generating plant with the result that the areas which they serve are likely to suffer a shortage of supply for some years.

Agreement with Damodar Valley Corporation

"As for ourselves, we are in a somewhat better position. While still awaiting an answer to our request for an import licence in respect of plant for our proposed new southern station, we were approached by the Damodar Valley Corporation with an offer to supply current from their generating station at Bokaro where they have a generating capacity surplus to their needs. The proposal had its attractions, since, if it could be determined that the transmission of current from Bokaro—225 miles from Calcutta—would be adequate and uninterrupted, and, if the price at which the supply could be delivered within our area was comparable with the cost at which we could generate at our own stations, the construction of a new southern station could be deferred.

"We, therefore, entered into negotiations with the authorities of the Damodar Valley Corporation and, as a result, we have entered into a provisional agreement with them for a supply over a period of years, commencing in 1956. The terms of this provisional agreement require the approval and sanction of higher authority. I will not at present comment further on the scheme except to give a warning that, if there is delay in giving the necessary sanction, there is grave danger that Calcutta may suffer a serious shortage of electricity in 1956.

Visits to Calcutta

"Sir Harry Burn and Sir Willian Lamond visited Calcutta during January and February of this year. They had interviews with the Chief Minister of the West Bengal Government and discussed with him current problems connected with development. The question of connecting our system to the Damodar Valley Corporation supply was also discussed and arrangements were made to enter into an agreement for this purpose. Mr. Hobson and Mr. Waters also visited Calcutta for the purpose of attending the discussions with the D.V.C. and the consideration of the technical problems involved. I have great pleasure in placing on record the appreciation of the Board for the help accorded by the Chief Minister to our visiting Directors.

"The visiting Directors also met the leaders of Commerce and Industry and had helpful talks with them on the various aspects of the Corporation's operations.

"Our training scheme continues to show good results. Twelve men after training in this country, and subsequently in India, now hold responsible positions in our generating stations, and at the present time there are three under training in this country. We are indebted to the British Electricity Authority and to the various companies in this country for the facilities they give us in this direction.

Thanks to Staff

"Our thanks are due to the staff in Calcutta for another successful year's working. Their work throughout the year was characterised by its usual zeal and efficiency. To our regret,

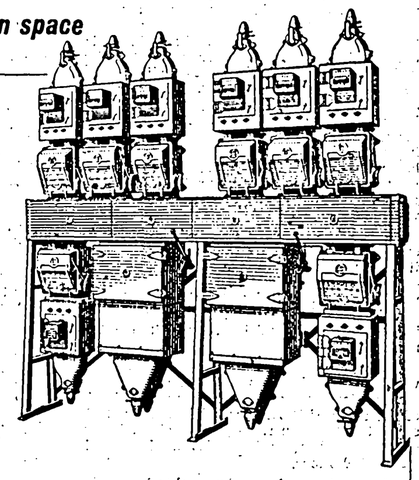
Floor space is production space



Floor space available is one of the first yardsticks of productive capacity. Excessive encroachment by factory fixtures is uneconomic; such fixtures should be inconspicuous, trouble-free, offering minimum obstruction of gangways, occupying space otherwise unproductive.
'ENGLISH ELECTRIC' Combination Fuse-Switchboards are designed to permit direct-to-wall mounting with all parts accessible from the front; back access is unnecessary. Maximum projection from the wall of the board illustrated is only 1 foot 10½ inches, the equipment using, in effect, walls *instead of* production floor-areas. Construction of these boards is arranged to give the greatest adaptability. Units are clamped to the bus-bar and busbar chamber, and may be rearranged or added to in order to keep pace with changing factory needs. The board illustrated controls four 300-amp and four 150-amp feeder circuits, with two 500-amp incoming switches.

DEVELOPMENT COUNCIL FOR CHEMICALS

TASK BEFORE IT OUTLINED

THE first meeting of the Development Council for Industries engaged in the manufacture of Heavy Chemicals (Acids and Fertilisers) was held at New Delhi on the 10th inst., the Chairman, Dr. M. D. Parekh, a well-known chemical engineer, presiding. The other members of this Council, which was constituted in March last, are Mr. V. Seshasayee, Mr. L. Gupta, Lala Charatram, Mr. S. G. Davis, Dr. I. H. Grimm, Mr. N. Adhikari, Dr. L. A. Bhatt, Mr. R. S. Mishra, Mr. M. B. Bandewdekar and Mr. Mahendra Nath Barma. This is the second Development Council set up by the Government of India under the Industries (Development and Regulation) Act, 1951, the other being the Council for Internal Combustion Engines and Power-driven Pumps. This latter Council had its first meeting on 19th April last.

Inaugurating the meeting of the Council for Heavy Chemicals (Acids and Fertilisers), Mr. T. T. Krishnamachari, Union Minister for Commerce and Industry, welcomed the members of the Council and said that they carried the responsibility of advising the Government in regard to the development of this important section of industry in India. He assured the Council of the full co-operation of his Ministry and wished it all success in the work it was going to undertake. Its task, he said, would be to deal with the expansion of particular units, efficiency, utilisation of existing capacity, modernisation of plant wherever necessary and further development of industry, among other things.

The Council had a general discussion on the procedure and steps to be taken to carry out the functions assigned to it under the Act. The Council decided to collect some basic information in regard to heavy chemical industries for this purpose. After reviewing the present position of the acids and fertilisers industries in the country, the Council considered the question of undertaking a survey of the rated capacity for the manufacture of some of the important chemicals and fertilisers.

The problems of India's heavy chemical industry are innumerable. India is at present producing sulphuric acid, soda ash and caustic soda but has not yet become self-sufficient. The production of sulphuric acid amounted to 106,932 tons in 1951. This declined to 96,081 tons in the following year, although the rated capacity continued to be as much as 150,000 tons. The country has been forced to keep nearly 33½ per cent. of its capacity idle, because of the inadequate supplies of sulphur. India's requirements of sulphur per annum are estimated at 80,000 tons, if all the sulphuric acid plants are put into operation. As against this, the country imports sulphur from America which is allocating sulphur to India on an average of about 45,000 tons. Sulphur from Japan, Italy and Argentina may be had in small lots but only at prohibitive cost. The demand for sulphur and sulphuric acid is daily growing, while the supply is dictated by the availability of sulphur. The first problem to be solved by the Development Council is to devise effective measures for covering the ever-widening gap.

Among other heavy chemicals, soda ash is one that is required by the glass silicate, textiles, paper, washing and other industries. The country produces about 50,000 tons, as against requirements estimated at 110,000 tons. It will thus be seen that the country is dependent on imports for a substantial portion of its requirements.

Caustic soda is another heavy chemical in which the gap between domestic supplies and consumption is very wide. Annual production is of the order of 15,000 tons, while the country's soap, textiles, paper, vegetable oil industry, chemical, and other industries need approximately 50,000 tons.

Apart from these three chemicals, the country produces also fine chemicals such as potassium chlorate, bichromate of soda, alum and copper sulphate in small quantities.

Production of superphosphates too falls short of the home demand, necessitating large imports from foreign countries. As this manure is mixed with ammonium sulphate in the proportion of three to one, the production of this fertiliser should keep pace with the production of ammonium sulphate by the Sindri factory. As the production of total ammonium sulphate is expected to go up to as much as about 440,000 in the next few years, the production of superphosphates should reach 1,320,000 tons by then, as against about 47,000 tons produced last year.

The all-round shortage of chemicals, as noted above, will give an idea of the magnitude of the problem facing the Development Council. The foregoing account emphasises the need for co-ordination of plans of not only the various chemical industries but also of the various other industries for which these chemicals are chief raw materials. Since the bottleneck in one will check progress of the other, the urgency lies in tackling the problem of shortages. For this, the Development Council should meet frequently and evolve suitable solutions so that the Government may implement them without much delay.

On the success of this Development Council depends the future scheme of Development Councils envisaged in the Industries (Development and Regulation) Act. Some of the industries in India are anxious that the Government should set up such councils for them also. The Government appears to be not very anxious to extend the appointment of these Councils till some experience is gained in the work done by the existing two Councils. It was originally planned to start six Councils. The fact that only two have been established is an indication of the desire of the Government to proceed cautiously, as the Development Councils which were first started in the U.K. have had a chequered career. The Government, in fact, obtained the services of an expert from the U.K., who was familiar with the working of such Councils, and this expert advised the Government to move cautiously with the scheme. Accordingly, during the debate on the Industries (Development and Regulation) Bill in Parliament in its budget session, the Commerce Minister stated that the Government would carefully watch for some time the results of working of the two Councils, namely, diesel engines and fertilisers, before it proceeded further in regard to the constitution of other Development Councils.

Meanwhile, it is worthwhile drawing the attention of the industries wishing to have Development Councils that they must be prepared for the possibility of Government imposing cess on them for meeting the expenses of the Councils. The Industries (Development and Regulation) Act, it will be recalled, empowers the Government to impose such a cess, if it feels the need for it.

CALCIUM LACTATE INDUSTRY

The question of continuance of protection to the calcium lactate industry came up for enquiry before the Tariff Commission on the 10th inst. At the previous enquiry in 1949, the old Tariff Board had made two recommendations, namely (a) the then existing revenue duty of 36 per cent. *ad valorem* (standard) and 26 per cent. *ad valorem* (preferential) on calcium lactate should be converted into protective duty; and (b) imports of the chemical should be allowed only to the extent of the excess of consumption over the indigenous production. These recommendations were accepted by the Government of India and protection was granted to the industry up to 31st December, 1953.

The units composing the industry put forward claims for several types of assistance at the enquiry inaugurated by Dr. B. V. Narayanaswamy Naidu, Member, Tariff Commission, last week. One producer has suggested a protective duty of 60 per cent., instead of the existing duties mentioned above, and another a duty of 37.78 per cent. on imports from all sources without preferential treatment to U.K. goods. Among other forms of assistance, claims have been made for banning imports, provision of transport facilities for the finished product and its raw materials, and purchase of the indigenous product by the Government.

To-day, there are three firms in the country equipped with plant for the manufacture of calcium lactate. These are the Calcutta Chemical Company, Ltd., Calcutta, the Sarabhai Chemical Works, Baroda, and Alembic Chemicals, Baroda. These three firms have an annual rated capacity of 30 tons, 72 tons and 60 tons, respectively, the aggregate for the whole country thus being 162 tons per annum. The production in the country has, however, been low, though it has been progressively rising. Thus, it increased from 10.95 tons in 1949 to 30.4 tons in 1950 and 39.1 tons in 1951. There was, however, a fall in output so far in the current years, consequent on large imports from abroad. About 65 per cent. of the imports consisted of high-priced products from the U.K. and about 35 per cent. of lower-priced from Denmark and Holland. Sarabhai Chemicals, which met the bulk of the demand in the country, had to suspend production from June, 1952 to January, 1953. The import control policy was revised toward the close of 1953 and the Company resumed production early this year.

As regards quality of the indigenous calcium lactate, the opinions received by the Tariff Commission are generally favourable. But there seems to be considerable improvement in the quality of the imported product also. The existing defects in the indigenous product are: (1) high assay due to partial dehydration, (2) incomplete solubility and (3) development of unpleasant odour on storage.

Unfortunately, data relating to domestic consumption and actual production appear to be quite confusing, as among various interests, namely, producers, importers and consumers, there are wide variations in estimates. The Commission has to ascertain the real position before considering the demands of the industry. Secondly, it has also to go into the question of not only the cost of production but also the reasons for the partial utilisation of the rated capacity of the industry. The raw materials used by the industry, namely, *jaggery*, molasses, sugar, lime, pure calcium carbonate are all available in the country. According to Dr. Narayanaswamy Naidu, the proportion of the value of indigenous raw materials to the total value of raw materials used in manufacture is about 70 per cent. by Sarabhai Chemicals, 74 per cent. by Alembic Chemicals and 85 per cent. by Calcutta Chemicals. The utilisation of this high percentage of indigenous raw materials is doubtless a point which favours the continuation of protection to the industry. But the form of protection and the period for which it should be granted can only be determined on the closest scrutiny of the various details now undertaken by the Commission.

DECLINE IN U.K.'S TRADE WITH INDIA

The figures furnished by the trade and navigation accounts of the United Kingdom for the first five months of 1953 disclose that the total value of trade between that country and India declined from £108,258,000 in the corresponding five months of 1952 to £90,306,000. The fall is shared by both exports and imports. Thus, during January-May 1953, the value of exports from the U.K. to India amounted to £46,639,000, as against £50,696,000 in the corresponding period last year, or a fall of £4,057,000. Similarly, imports of goods from India into the U.K. in the five-month period of the current year amounted to £43,667,000, as against £57,562,000 or a fall of £13,895,000. In other words the fall in imports from India was larger than the fall in exports from the U.K. to India. The U.K. had a surplus of £2.6 million in its trade with India.

The bulk of exports to India (of the total of £46.6 million) is accounted for by machinery, amounting in value to £14.8 million, as against £16.1 million in the corresponding period of 1952. Exports of vehicles, including ships and locomotives, amounted to £6.3 million as against £7.8 million, but those of electrical goods and apparatus rose from £4.3 million to £5.2 million. Exports of chemicals, drugs, dyes and colours, however, receded from £5.7 million to £3.0 million.

Of the total value of £43.6 million worth of goods imported from India, tea accounted for £17.2 million, as against £22.5 million imported during the first five months of 1952. A marked fall was registered in jute manufactures which amounted to £2.4 million, as against £10.3 million. Imports of seeds and nuts for oil, oils, fats, resins and gums also declined but slightly from £3.4 million to £2.6 million. Leather and leather manufactures imported, however, rose from £3.4 million to £5.8 million.

WORLD OUTPUT OF OILS

Although world production of oils and fats at 23.6 million tons this year will be smaller by 890,000 tons than last year, the shortfall, according to Mr. J. C. A. Faure, Chief Buyer of oils and fats for Unilever, would not normally affect the actual level of consumption. The lower production estimate for the current year is attributed to the smaller olive oil crop which accounts for a decline of 867,000 tons. Current production of olive oil together with carry-over stocks, he said, should be adequate to meet this year's consumption. Mr. Faure predicted smaller output of groundnuts, sunflower seed, copra, whale oil, sperm oil and lard but said that the decline would be offset by increased production of palm oil, palm kernel oil, linseed oil, butter and one or two other items. The break-up of the world output of oils and fats, with 1952 figures in brackets, is: edible-type oils 7.66 million tons (8.65 million tons); palm oils 3.03 million tons (3.04 million tons); industrial type oils such as linseed, tung, etc. 3.19 million tons (3.03 million tons); animal fats (butter, lard, etc.) 9.09 million tons (9.07 million tons); and marine oils 0.68 million tons (0.76 million tons). World exports this year are placed at 6.21 million tons whereas import requirements are said to amount to 5.02 million tons (3.52 million tons for Europe and 1.50 million tons for non-European countries). He stressed, however, that the fact that the total supplies of oils and fats were back to the pre-war level, after allowing for the growth in population and that the *per capita* consumption of fats and oils has recovered to its pre-war level did not mean that there could be any slackening of efforts at increased production. After referring to the continued increase in population, he said: "The present rate of world production will be quite inadequate to meet the demand in two or three years' time."

EXPORT DRIVE IN JAPAN

The Five-year Plan drawn up by the Japanese Government envisages a drive to capture South-East Asian markets and increase its shipping tonnage by 1,200,000 gross tons.

The proposals are designed to cut production costs and boost Japan's exports to world markets, backed by Japan's policy of "economic diplomacy" and higher industrial efficiency.

The Plan proposes a drive to increase exports from an estimated $1,180 million last year to $1,460 million in 1958. Imports would be cut from $1,780 to $1,660 million.

The Plan aims at cutting the price of coal and ammonium sulphate by 20 per cent. by improved methods and better use of labour. It seeks big cuts in iron and steel prices, ranging from 4 per cent. for iron to 27 per cent. for thin steel plate.

LARSEN AND TOUBRO LIMITED

SPEECH OF MR. HOLCK-LARSEN AT THE ANNUAL MEETING

ANOTHER RECORD YEAR COMPLETED

ADDRESSING the Eighth Ordinary General Meeting of Larsen and Toubro, Ltd., held in Bombay on Friday the 17th inst., Mr. Holck-Larsen, Chairman of the Company, expressed satisfaction at the results of the Company for the year ended 31st March, 1953. He observed that the Company was able to do good business during the year despite the perceptible recession in several fields of its activity, thanks to the superior quality of the products which it handled, the considerable stock of spare parts it maintained and the fine service reputation it had built up. Disclosing that the Company's expanded sales and service effort had met with encouraging results, he forecast a brighter future for the next year. The Chairman also pointed out that the Company's policy of Indianisation was progressing well.

The following is the full text of Mr. Holck-Larsen's speech:

"GENTLEMEN,

"It gives me great pleasure to welcome you to this, the Eighth Ordinary General Meeting of our Company.

"Copies of the balance-sheet and the Directors' report for the year ended 31st March, 1953, have already been circulated to you and, with your permission, I will take them as read.

"The year has been another record year for our Company, both in respect of sales and profit. Direct sales show an increase of 16 per cent. to Rs. 162 lakhs, to which must be added indent sales totalling Rs. 89 lakhs, as against Rs. 67 lakhs during the previous year. Our total annual turnover thus exceeds Rs. 2½ crores. The corresponding net profit enables us to maintain a dividend of 10 per cent. free of income-tax on the ordinary shares, after having allowed Rs. 5.45 lakhs for taxation and Rs. 2.72 lakhs for depreciation.

"You will have noticed with satisfaction that the item of 'goodwill', which stood in our books at a cost of Rs. 7,29,556, has now been completely written off. The same applies to commissions and brokerage on our last issue of shares. In addition, it has been possible to transfer Rs. 1 lakh to a general reserve fund.

"We are pleased with these results, more so because the year must be described as one of a weakening market, with a noticeable recession in several of the fields in which we do business. Machines and parts became freely available and the competition became stronger; it can reasonably be said that the 'sellers' market' has now come to an end.

After-sales Service

"To meet these conditions, we relied with confidence on the superior quality of the products which we handle, on our considerable stock of spare parts, and on the fine service reputation which we have built up. To this we added an intensification of our sales efforts; We expanded and developed our sales and 'after-sales service' organisation; we intensified our propaganda, and arranged for personal visits of our salesmen and engineers to old clients and to prospective customers. We also strengthened our organisation for arranging demonstrations in the field of the machinery we handle, and we further developed the training schools which we maintain for the personnel of our customers.

"Those of you who heard Mr. Toubro's speech last year will recall that he prepared us for stronger competition, and, in consequence, an increase in expense to meet those conditions. The decision to meet the challenge of the market, by a determined and expanded sales and service effort, has been a good one. It has paid us a good return by firmly consolidating our position in the market. We can justifiably claim that we are, to-day, extremely well established—and I venture to say that we will be able to cater for an even larger business, without any material additions to our present establishment.

"While we are firmly convinced that we are right in having expanded and consolidated our position in this manner, I need hardly tell you that a constant watch is being kept on the economy of our Company, and care is being taken that no expenses are incurred which are not, in the opinion of your Directors or the Managing Agents, essential to the furthering of this aim.

Indianisation

"In spite of the expansion of our sales, and a considerable expansion of our service facilities throughout the country, it has been possible to carry on the business without employing additional personnel from overseas. The Company's policy of Indianisation is progressing, and I am glad to say that those members of our Indian staff whom we sent abroad for specialised training and who have now returned to the Company, are doing well. We are still sending personnel abroad for training and we receive encouraging reports on their progress. In addition to this, our Company's local trainee scheme (we have to-day 75 trainees) has proved a great success and it may well be expected that some of the boys, whom we see to-day at Powai, at Madras, or in the field will be the future executives of our company.

"We view this development with satisfaction, and I wish to say here, that it is our Company's policy to bring more and more of our talented Indians to the top. This is being done by careful training, in our workshops and offices, by specialised training abroad, and by taking advantage of the many visits of experts from our overseas principals. While this is our policy, I want, at the same time, to warn against undue haste or over-zealousness. A certain flexibility is necessary. We must bear in mind that rapid progress is taking place in the Western world, not only in technical matters, but also in respect of methods of administration, inventory control, etc. To meet competition successfully, and to enable us at all times to give the best service to our customers, it is our duty to keep abreast of such developments, and, where necessary, rely on imported talent and specialised knowledge.

"The Greater Bombay Municipal Corporation has now decided to repair and widen the two-mile stretch of road from Saki Naka to Powai, and this should effectively assist us in reducing our conveyance expense. To get the scheme expedited, and to show our civic sense, our Company has agreed to contribute Rs. 49,000 towards the cost of the road-building, which is estimated at roughly Rs. 1,70,000. Our wish now is that regular public transport should be introduced to serve this increasingly important area.

Outlook

"We review the past year, which I will term a year of development and consolidation, with satisfaction, and our Company has good reason to be optimistic about the current year and the future. You will have seen from the report that we consider ourselves well equipped to play a major role in the execution of India's Five-year Plan, in the development of agriculture, building of highways and village roads, construction of dams and tanks, clearing of virgin land, bunding and ditching, producing electric energy, and generally assisting in raising the standard of living of the people.

"We have the tools and there are many and encouraging signs that we will be given ample opportunities of using them. It is our desire to serve, because we realise that only by serving the public well can business created by private enterprise survive.

"We realise that, to be a responsible business enterprise, it is not sufficient just to produce, sell or service good machinery. The welfare of all those who are affected by our Company's operations—customers, distributors, stockists, associates, shareholders and employees—must be an important factor in the Company's business decisions.

"In this connection, I wish to express, on behalf of the Company, our sincere appreciation to all those L. and T. employees, who during the past year have given of their best. Many of them have worked under difficult conditions, in remote places and in unexplored markets. It is to a great extent due to their efforts that the year has been one of added strength to our Company, enabling us to meet the future with fortitude and confidence.

"In conclusion, I wish also to express my gratitude for the valuable co-operation and assistance extended to me by my colleagues on the Board.

"I now beg to move, that the Directors' report and the audited balance-sheet and profit and loss account for the year ended 31st March, 1953, be approved and adopted."

DIGVIJAY CEMENT COMPANY'S RECORD PRODUCTION

PROFIT HIGHER—DIVIDEND RAISED

THE year 1952 was, on the whole, a satisfactory one for the cement industry. The demand for cement continued to be good, enabling the factories to maintain production at a high level. The earnings of the industry were, therefore, relatively better than those for the preceding year. The Directors' report and accounts of the Shree Digvijay Cement Co., Ltd. (Managing Agents: Shree Laxmi Agents, Ltd., Sika), for the year ended 31st December, 1952, reveal that the Company was no exception to this trend. Its production reached a record high of 120,243 tons. Its gross profit amounted to Rs. 25.22 lakhs, representing an increase of Rs. 6.47 lakhs over that for the previous year. This has enabled the Directors to add as much as Rs. 7 lakhs to the reserve fund which was created last year by the transfer of Rs. 3 lakhs from the profit for that year, and to follow up the maiden dividend of 5 per cent. paid for 1951 with an enhanced distribution of 6 per cent. for the year under review.

The salient features of the Company's results for the year under review are presented against the background of those for the preceding three years in the following table, which gives an idea of the Company's progress:

(In lakhs of rupees)

	Year ended 31st December			
	1952	1951	1950	1949
Cement sales (net)	99.98	82.17	62.14	40.22
Stocks	4.10	3.54	4.23	4.97
Operating and other expenses ..	75.94	62.89	62.71	37.33

* Dividend for the years 1949 and 1950.
† Dividend for the period ended 31st December, 1948.

The sharp rise in sale proceeds of cement during 1952 was the result of record production and favourable prices realised in export markets for a portion of the output. The results would have been far better but for the withdrawal of the special prices from 1st April, 1952, which had been granted to new factories with a view to enabling them to consolidate their position in the initial period. In his address to the shareholders last year, at their annual general meeting, Mr. G. D. Somani, Chairman, informed them that representations had been made to the Union Ministry of Commerce and Industry to the effect that, as the new companies concerned had a large amount of depreciation still in arrears, this concession should be continued for some time. Instead, there was a reduction in the price of packed cement from 1st December, 1952, due to a fall in price of jute goods. This latter reduction would have affected companies which had bought jute bags at higher prices. However, the whole question of cement prices has been referred to the Tariff Commission, the recommendations of which are awaited. No provision for taxation has been made, presumably because the Company still enjoys the benefit of special depreciation allowances. But this is no saving for the Company as the tax liability has only been merely deferred.

The financial position of the Company, as on 31st December, 1952, is indicated by the following synopsis of its latest balance-sheet:

Liabilities	Rs.
Capital	99,68,500
Reserves and surplus	11,41,034
Liabilities	60,50,366
Assets	
Gross block	1,15,48,935
Less—Depreciation	36,79,132
Net block	78,69,803
Extension works-in-progress	43,37,699
Stock-in-trade	4,09,977
Stores, spares, etc.	32,81,067
Debts, deposits and advances	8,71,317
Cash	3,90,037
Rs.	1,71,59,900

As will be seen from the above figures, the reserves and surplus aggregate Rs. 11.41 lakhs, as against the paid-up capital of Rs. 99.68 lakhs. The gross block of the value of Rs. 158.87 lakhs (including a sum of Rs. 43.38 lakhs representing extension works-in-progress) has been provided with a depreciation fund of Rs. 36.79 lakhs. The current assets aggregating Rs. 158.87 lakhs exceed current liabilities (Rs. 60.50 lakhs) by as wide a margin as Rs. 98.37 lakhs. The current liabilities include a sum of Rs. 30 lakhs, representing the loan taken from the Industrial Financial Corporation of India.

The Company's extension programme is nearing completion. The second kiln was ready for working about the end of March, 1953. The new cement mill is expected to start working from September next, as the delivery of the motor for the same has been delayed. In order to facilitate handling of raw materials and cement, the Company proposes to install a ropeway from its factory to the steamer loading point in two stages. The order for the first stage has already been placed with the manufacturers.

ANDHRA CEMENT REPORTS BETTER RESULTS

A notable rise of Rs. 4.32 lakhs in the gross profit (before providing for Managing Agents' commission, depreciation and taxation), that is, from Rs. 13.99 lakhs to Rs. 18.31 lakhs, is disclosed by the financial results of the Andhra Cement Company, Ltd. (Managing Agents: The Andhra Engineering Company Ltd., Madras), for the year ended 31st December, 1952. After making provisions for Managing Agents' commission, depreciation and taxation, the net profit shows a small increase from Rs. 5.16 lakhs to Rs. 6.07 lakhs. Out of the net profit, a sum of Rs. 2.15 lakhs has been set aside for workers' amenities reserve and workers' gratuity reserve, which is Rs. 1 lakh more than that provided in the previous year. The dividend on the shares has been maintained at 7½ per cent., to which level it was stepped up last year from 3½ per cent. paid for 1950.

The following comparative table shows the progress of the Company in the last few years:

(In lakhs of rupees)

	For the year ended 31st December			
	1952	1951	1950	1949
Sale proceeds	71.60	51.05	21.77	22.37
Expenses	53.27*	37.66*	19.86	19.50
Gross profit	18.31	13.99	8.31	3.60
Managing Agents' commission ..	1.49	1.07	0.29	0.32
Depreciation	10.00	7.76	1.13	0.73
Taxation	0.75	..	..	..
Net profit	6.07	5.16	1.89	2.45
Reserves	2.15	1.15	..	0.25
Dividends—				
Preference	0.15	0.15	0.15	0.15
Ordinary	3.83	3.83	1.91	1.89
	(7½%)	(7½%)	(3½%)	(3½%)
Carry forward	0.20	0.25	0.32	0.39

* Approximate.

The notable rise in sale proceeds during the year under review was the outcome of higher production than in the preceding year, on account of both the kilns of the Company being put on continuous operation. The Directors observe that, despite the continuous operation of the kilns, maximum production could not be achieved, owing to intermittent trouble in the running of the new kiln. They are, however, making all efforts to improve the efficiency of the plant, in order to step up production. Expenses also have gone up sizably. This is due to increases in railway freight, withdrawal of rebates on coal freights from April, 1952, and increase in prices of certain materials. The sum of Rs. 2.15 lakhs set aside for reserves includes Rs. 2 lakhs added to the workers' amenities reserve, to which had been added Rs. 1 lakh in the previous year, for providing tenements for workers, under the Central Government's Industrial Subsidised Housing Scheme. Out of the sum of Rs. 1 lakh set aside for this purpose last year, the Directors have since utilised over Rs. 98,023 for purchase of land. The Government of India has made a provision for construction of 30 houses during the current year and has sanctioned an amount not exceeding Rs. 33,850 as subsidy and a sum not exceeding Rs. 50,625 as loan.

The Company would appear to have been handicapped by the revision of price of packed cement on the basis of the market price of packing material. Referring to this difficulty, the Directors observe:

"The sudden announcement of the Government of India to reduce the price of packed cement towards the end of the year has brought about a disappointment to the cement industry in general and particularly to individual small units such as ours. The linking up of the price of cement to, and review thereof quarterly on the basis of, the average market value of packing material during a period of nine months, creates weak tendencies in the market, besides the hardship caused to units, who had large stocks of packing material purchased at high cost. We have presented our case before the Tariff Commission for recommending revision and fixation of a fair and reasonable price for cement, with special emphasis on the need for protection to single small units like ours, who have to build up adequate reserves for rehabilitating old plant with fair returns to the investors."

The balance-sheet of the Company as on 31st December, 1952, underlines the need for building up adequate reserves. As against a paid-up capital of Rs. 53.68 lakhs, the reserves and surplus amount to no more than Rs. 8.92 lakhs, of which general reserve accounts for Rs. 5.43 lakhs and workers' amenities reserve Rs. 3 lakhs. The gross block of Rs. 72.63 lakhs has been written down to Rs. 46.73 lakhs. The current assets, at Rs. 39.26 lakhs, exceed the current liabilities, at Rs. 23.38 lakhs, by a comfortable margin of Rs. 15.88 lakhs.

DALMIA CEMENT (BHARAT) LTD.

The Directors' report and audited accounts of the Dalmia Cement (Bharat) Ltd. (Managing Agents: Messrs. Hari Brothers Ltd., New Delhi) for the year ended 31st December, 1952, relate to the Company's first year of working after it was formed in November, 1951, for the purpose of taking over the Indian assets of the Dalmia Cement Ltd. as on 30th December, 1951. The old company, namely, the Dalmia Cement Company Ltd., is a subsidiary of the Dalmia Cement (Bharat) Ltd. and has been working the factories in Pakistan since 30th December, 1951. The results of working of the Dalmia Cement (Bharat) Ltd. for the year under review are not, therefore, comparable with those of the Dalmia Cement Ltd. for the previous year.

The working of the Company during the past year has resulted in a gross profit of Rs. 40.01 lakhs, out of which the Managing Agents' commission absorbs Rs. 2.87 lakhs. The provision made for initial, normal and additional depreciation amounts to Rs. 13.31 lakhs. Out of the balance of Rs. 25.83 lakhs, nearly 50 per cent.—Rs. 12.50 lakhs to be precise—has been set aside as provision for taxation, leaving a net profit of Rs. 13.33 lakhs. The Directors propose to add to the general reserve a sum of Rs. 4 lakhs. The dividend on the 6 per cent. preference shares takes up Rs. 3.53 lakhs. The balance is sufficient to propose a modest dividend of 6¼ per cent. on the ordinary shares. This will absorb Rs. 5.41 lakhs, leaving Rs. 39,834 to be carried forward to the next year.

Although the year under review is the first year of working of the Company, the factory at Dalmiapuram, which forms the main part of the assets taken over from the Dalmia Cement Ltd., is now in its fourteenth year of operation. An idea of the progress of the factory's productive capacity during these years is given by the Directors in their report. In 1939, the factory was equipped to produce 250 tons per day of cement by dry process. In order to meet the increasing demand for cement to meet the various post-war development schemes, the capacity was increased in September, 1949, by adding a wet process plant with a capacity of 500 tons per day. Thus, the factory has now a capacity of 750 tons a day. As the supply of firebricks required for its own needs, which it had been getting from Bengal and Bihar, became acute during the war, the Company undertook the manufacture of refractories and also increased the capacity to meet the needs of South India. In 1952, the Company undertook also the manufacture of underground drainage soil pipes. It has commenced production of procelainware insulators and cement pipes. These have, however, not yet been placed in the market on a large scale.

The Company's results would have been more satisfactory but for two factors, namely, (1) the power cut in South India, and (2) the reduction in the selling price of packed cement by the Government of India with effect from 1st December, 1952, on the ground that the increase granted in June, 1951, due to rise in packing material cost, was no longer justified on account of the fall in prices of packing materials. Commenting on this reduction, as well as on a further reduction for the same reason, with effect from 1st April, 1953, the Directors observe, in their report to the shareholders, as follows:

"In doing so, neither the Government has taken into consideration the high-priced packing material being carried in stock by the industry, nor the rise in cost due to several other factors. On representation having been made by the industry, the matter was entrusted to the Tariff Commission for enquiry. The enquiry has been completed. The report of the Tariff Commission is awaited by the Government. The future of the industry is very much dependent on the recommendations of the Tariff Commission and their acceptance by the Government."

The following summary of the Company's balance-sheet, as on 31st December, 1952, will give an approximate idea of its financial position:

Liabilities	Rs.	Assets	Rs.
Capital ...	1,50,22,077	Gross block ..	69,78,209
Reserves and surplus ...	43,86,214	*Less*—Depreciation ...	10,07,424
Provision for taxation ...	12,50,000	Net block ...	59,70,785
Liabilities ...	1,81,06,512	Stock-in-trade	10,33,474
		Stores ...	58,15,195
		Debts, deposits and advances ...	48,70,910
		Investments	2,08,45,225
		Cash ...	2,29,214
Rs.	3,87,64,803	Rs.	3,87,64,803

NEPA MILLS

The Government of India proposes to send three officials to examine the State-aided newsprint project, the Nepa Mills. The officials are expected to visit the site of the project at Nepanagar, near Chandni, in Nimar District, at the end of this month. It is understood that they will scrutinise the capital structure and project cost of the Nepa Mills with an eye on economy.

The Rs. 6-crore project, with an estimated capacity of 30,000 tons of newsprint a year, is expected to go into production by next year. The Madhya Pradesh Government has so far sanctioned loans to the extent of Rs. 287 lakhs for the project, and has made provision of Rs. 130 lakhs in the budget for 1953-54. The State has also subscribed Rs. 65 lakhs to the share capital of the Company. The Government of India, who have given Rs. 98 lakhs so far as loans to the State Government in connection with the project, had also agreed to give a further loan of Rs. 34 lakhs to finance the project, which has been included in the Five-year Plan.

Points From The Chair

Contribution of Tinplate to Steel Equalisation Fund

"FOLLOWING the Tariff Commission enquiry to review tinplate retention prices, the selling price of tinplate was raised during the year by 11¼ per cent. from Rs. 41-9 to Rs. 46-4 per basis box, and, at this price, it is substantially higher than the domestic price of tinplate in other countries. Tinplate is basically a steel sheet coated with pure tin, and, as such, it is called upon to make a substantial contribution to the Steel Equalisation Fund. Whatever one may feel about the necessity for steel in general (which is largely used in capital projects) bearing a substantial impost to provide, through the Equalisation Fund, the finance necessary for expanding steel production, it is, in our view, wrong that tinplate, which is used exclusively for the manufacture of containers for the packing of foodstuffs and other essential commodities, should make such a contribution. For it is, in effect, a direct addition to the cost of living, especially of the middle classes. To date, our representations to Government on this matter have been unsuccessful, but we shall continue our efforts."

H. CHISWELL JONES,
Metal Box Co. of India Ltd.

Packing Charges for Cement

"Towards the end of 1952, the Government of India, following the decline in the price of jute market, revised the price of packing material with effect from 1st December, 1952, thus resulting in a loss to the Company on the stock of gunny bags. The incidence of this loss was particularly felt by small units like ours, especially at a time when the production costs continued to be high on account of various reasons, such as increase in railway freight, stoppage of rebates in coal freights and increased labour costs, etc. The hardships caused by revising the price of packed cement on the basis of average price of gunnies over a period of nine months was brought to the notice of the Union Government for a considerate review, but the same formula is continued to be adopted, though the industry, in general, have asked for suspension of this basis, pending consideration of the price structure by the Tariff Commission. Since then, a further reduction of *As.* 6 per ton of cement is announced by the Central Government from to-day."

V. RAMAKRISHNA,
Andhra Cement Co., Ltd.

Demand for Electricity will Increase

"The demand for electricity does not stand still. It is ever on the upward trend and the question of future development and expansion is constantly in our minds. As I pointed out in the reviews of recent years, while there is, at the present moment, sufficient generating capacity to meet demands and for a few years to come, it will not suffice to meet the anticipated demand from 1956 onwards. This is a matter affecting not only ourselves but also most electric supply companies. I referred last year to the necessity for immediate action to remedy the situation by an amendment of some of the provisions of the Electricity (Supply) Act of 1948. Action in this direction is, I understand, still under consideration, but a year has passed and, as nothing has so far seen the light of day, it is unlikely that any change in the law will be effected within another 12 months. Meanwhile, many companies, particularly the small ones, will be hampered under the existing provisions in obtaining capital sufficient to procure new generating plant with the result that the areas which they serve are likely to suffer a shortage of supply for some years."

SIR JAMES DONALD,
Calcutta Electric Supply Corporation Ltd.

Marine Insurance

"There are no grounds for complacency in the marine market. Cost of ship repairs—both materials and wages—are still rising, and it was this factor which influenced the marine market recently to introduce an overall increase of 10 per cent. on all renewals, although with certain changes in the Joint Hull Understandings in favour of those shipowners whose fleets show satisfactory results. The current year, 1953, has been marked by several serious marine casualties, but, bad as these are, they may prove to be less than the aggregate cost of the large number of claims caused through the disastrous floods which occurred in Holland, Belgium and in our own coastal areas. This is but a further example of the serious addition to underwriters' liabilities arising out of extensions of marine policies to include shore risks of various kinds."

COL. A. C. TOD,
Royal Insurance Co., Ltd.

Development of Mineral Resources

"We feel that the present time, when the level of metal prices is considerably below that of recent years, is an opportune one for a company with liquid resources to undertake exploration programmes. More favourable conditions exist as regards terms under which properties or prospects may be optioned or acquired, and a more selective attitude can be taken and a sounder judgment made. In some countries outside the Commonwealth, it has been impossible upto now to regard as practicable the investment of funds for the development of mineral resources, owing to the impossibly onerous terms which have been required. There is, however, now evidence of a modification of outlook regarding such terms, as countries realise, albeit but slowly, that development of their natural resources can often best be undertaken by non-nationals, on a basis of mutual goodwill and sound businesslike terms."

A. CHESTER BEATTY, JNR.
Selection Trust, Ltd.

Notices

THE SOUTH KARANPURA COAL COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT THE Sixty-first Ordinary General Meeting of the Shareholders of THE SOUTH KARANPURA COAL COMPANY, LIMITED, will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, on Monday the 3rd August, 1953, at 3 p.m., for the purpose of receiving the Directors' Report, passing the Audited Accounts for the half-year ended 28th February, 1953, declaring the Dividend recommended by the Directors, electing Directors and Auditors and for transacting any other ordinary business of the Company.

The Share Transfer Register of the Company will be closed from the 20th July to the 3rd August, 1953, both days inclusive.

By Order of the Board,
BIRD & CO., LTD.,
Managing Agents.

CALCUTTA, *9th July*, 1953.

THE BRITANNIA BISCUIT COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT THE SIXTY-SECOND Ordinary General Meeting of the Shareholders of the Company will be held at the Registered Office of the Company, 15, Taratola Road, Alipore, Calcutta, on Monday the 10th August, 1953, at 11 a.m., for the following purposes:—

To receive the Directors' Report and to pass the audited accounts for the year ending 31st March, 1953, declare a dividend recommended by the Directors, elect two Directors in place of retiring Directors, appoint Auditors and fix their remuneration, and to transact any other business as may properly be brought before the Meeting.

The Transfer Register will be closed from the 6th August to 12th August, 1953, both days inclusive.

By Order of the Board,
A. P. CHANDA,
Director and Secretary.

15, TARATOLA ROAD, ALIPORE,
CALCUTTA, *8th July*, 1953.

As Dividend Warrants are sent only to registered shareholders or their mandatees, shares on Blank Transfers should be submitted with complete deeds for registration of transfers before the Register of members is closed. No applications for Warrants will be necessary.

THE EAST INDIAN COAL COMPANY LIMITED

(Incorporated in England)

NOTICE IS HEREBY GIVEN THAT AN interim dividend in respect of the year ended 30th April, 1953, at the rate of As. 14 (Annas Fourteen) per share without any deduction for Indian Income-tax paid by the Company has been declared payable by the Directors and will be paid to the Registered Shareholders as on 31st July, 1953.

The Share Transfer Books of the Company will be closed from the 22nd to 31st July, 1953, both days inclusive.

By Order of the Board,
JARDINE HENDERSON, LTD.,
D. FORDWOOD,
Secretary,
Managing Agents and Secretaries.

4, CLIVE ROW,
CALCUTTA, *10th July*, 1953.

N.B.—Payment of the above dividend will be made only to those members whose names are registered in the Books of the Company on the 31st July, 1953, or to their mandatees. No application for Warrants will be necessary. Claims on behalf of the holders of shares on blank transfer will not be entertained.

THE TATA OIL MILLS COMPANY LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE THIRTY-FIFTH ORDINARY GENERAL MEETING OF THE TATA OIL MILLS COMPANY, LIMITED, will be held at the Registered Office of the Company, Bombay House, 24, Bruce Street, Fort, Bombay, on Monday, the 3rd August, 1953, at 4.30 p.m. (S.T.), to transact the following business:—

1. To receive and adopt the Statement of Accounts for the year ended 31st March, 1953, and the Reports of the Directors and Auditors, and to declare Dividends.
2. To elect a Director in place of Mr. A. D. Shroff, who retires in accordance with Article 127 of the Company's Articles of Association, but is eligible for re-election.
3. To elect a Director in place of Mr. D. R. D. Tata, who retires in accordance with Article 127 of the Company's Articles of Association, but is eligible for re-election.
4. To appoint Auditors for the current year and to fix their remuneration.

The Transfer Books of the Company will be closed from Friday the 10th July, 1953 to Monday the 3rd August, 1953, both days inclusive.

By Order of the Board,
TATA INDUSTRIES LTD.,
Managing Agents,
N. H. TATA,
Director.

BOMBAY, *2nd July*, 1953.

Note.—If dividends as recommended by the Directors are passed at the Meeting, payments will be made on and after 4th August, 1953, to those Shareholders whose names are on the Company's Register on the 3rd August, 1953.

CALCUTTA ELECTRIC SUPPLY CORPORATION

(*Concluded from page 118*)

Mr. Church, our Agent in Calcutta, by his own wish and desire, resigned as from the close of the year. He had rendered 26 years of outstanding and devoted service to the Company. In his earlier years, he had exhibited talents which marked him out for eventual high office and his elevation to the post of Agent, on Mr. Gladding's retirement, was the due recognition of the ability and energy he had displayed in the various appointments he had formerly held. As Agent he had to deal with many complex problems and awkward situations and he was very successful in weathering all the difficulties which he encountered. The Company owe him a debt of gratitude for all the service he has rendered.

"As successor to Mr. Church, we appointed Mr. Macpherson, our Secretary. Mr. Macpherson is a man of undoubted ability and we have every confidence that he will maintain the high standard and reputation of the Corporation. He was in our commercial department for many years before he was appointed Secretary. In his place we selected Mr. Colley, who was our Commercial Manager in Calcutta."

The report and accounts were adopted and the dividend as recommended was approved.

The retiring Directors, Sir James Donald, C.S.I., C.I.E., Mr. J. H. Waters, and Mr. J. W. Gauntlett, were re-elected; and the remuneration of the Auditors, Messrs. J. Dix Lewis, Caesar, Duncan & Co., having been fixed, the proceedings terminated.

SIRPUR PAPER AND SIRSILK

The production of the Sirpur Paper Mills has gone up from 14.5 tons to 22 tons per day, according to an official statement. With the availability of more power, and another plant going into full production, the daily output would be raised to 60 tons by the end of this year, it was stated. The Sirsilk rayon factory, which has been under construction for the last seven years; would go into production either towards the end of September or early in October this year. The factory would produce 50,000 yards of rayon cloth from cotton linters and power alcohol per day. The management of the factory estimates that this figure can be doubled if there is a demand for this type of cloth.

CAWNPORE TEXTILES EARN HIGHER PROFIT

RESULTS OF JESSOPS SATISFACTORY

Cawnpore Textiles, Ltd.

THE directors of the above Company (Managing Agents: Messrs. Begg Sutherland & Co., Ltd., Kanpur, U.P.) submit the audited accounts of the Company for the year ended 31st March, 1953.

The results for the period, after making the usual provisions and taking into account earlier provisions for taxation no longer required, show a profit of Rs. 8,49,760 (Rs. 6,92,781), from which has been deducted taxation reserve Rs. 2,55,000 (Rs. 1,50,000), depreciation Rs. 2,00,000 (Rs. 2,00,000) and rehabilitation reserve Rs. 50,000 (*nil*) leaving a balance of Rs. 3,44,760 (Rs. 3,42,781). To this sum has been added the carry forward from the previous year of Rs. 32,599 (Rs. 27,318) leaving at credit of profit and loss account Rs. 3,77,359 (Rs. 3,70,099). This balance, the directors recommend, should be disposed of as follows:—

In payment of a dividend of As. 9 (As. 9) per share, free of income-tax, for the year ended 31st March, 1953, Rs. 3,37,500 (Rs. 3,37,500) leaving to be carried forward Rs. 39,859 (Rs. 32,599).

In view of the extensive capital replacement programme under consideration by the directors and the consequent need for a rehabilitation reserve, the existing repairs and renewals reserve of Rs. 5,00,000 has been transferred to rehabilitation reserve. The Company's property has been maintained in a proper state of repair.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	30,00,000	Block ...	3,09,103
Reserves ...	21,97,992	Stock-in-trade	36,74,681
Provision for taxation ...	82,897	Stores and spare parts	5,33,005
Liabilities ...	12,33,876	Debts, deposits and advances ...	18,16,911
Profit and loss account ...	3,77,359	Investments	75,557
		Cash ...	4,82,867
	Rs. 68,92,124		Rs. 68,92,124

Jessop and Co., Ltd.

The directors of the above Company (Managing Director: Mr. P. F. S. Warren, Calcutta) submitted the audited accounts of the Company for the year ended 31st October, 1952.

Although the Company's merchant business continued to be severely handicapped by the prevailing restrictions on imports, the overall results were exceptionally satisfactory. In common with other industrial concerns however, the Company has for some time been feeling the high cost of replacement of plant, buildings, etc., in relation to current allowances for depreciation, so the opportunity has been taken to establish a special reserve towards making good the disparity. Due to the long time needed to procure machines, steel and other materials, this special reserve is an essential provision to meet commitments already entered into. The outlook remains encouraging.

After providing Rs. 2,38,847 (Rs. 2,54,718) for depreciation, Rs. 9,50,000 (Rs. 10,40,000) for taxation, and for all other charges, the accounts showed a surplus of Rs. 14,92,567 (Rs. 10,21,023), to which was added Rs. 2,87,549 (Rs. 2,81,526), the balance brought forward from last year's accounts. A sum of Rs. 25,000 (Rs. 25,000) was deducted being the dividend on preference shares for the half-year ended 30th April, 1952. There was a balance of Rs. 17,55,116 (Rs. 12,77,549). From this sum was deducted the dividend on preference shares for the half-year ended 31st October, 1952, Rs. 25,000 (Rs. 25,000) leaving an available balance of Rs. 17,30,116 (Rs. 12,52,549). The directors distributed this amount in payment of a first and final dividend on the ordinary shares of Re. 1-8 (Re. 1-8) per share, being a dividend of 15 (15) per cent., without any deduction in respect of income-tax Rs. 7,65,000 (Rs. 7,65,000), transferred to general reserve Rs. 2,00,000 (Rs. 2,00,000), transferred to special reserve Rs. 4,75,000 (*nil*) and carried forward the balance of Rs. 2,90,116 (Rs. 2,87,549).

Accounts in brief were as under.—

Liabilities	Rs.	Assets	Rs.
Capital ...	61,00,000	Block ...	30,41,239
Reserves ...	21,52,258	Stock-in-trade	37,86,698
Provision for taxation ...	14,39,394	Stores, spare parts, etc.	19,08,621
Liabilities ...	95,77,572	Work-in-progress ...	61,17,500
Profit and loss account ...	17,55,116	Debts, deposits and advances ...	53,47,058
		Investments	3,97,234
		Cash ...	4,25,990
	Rs. 2,10,24,340		Rs. 2,10,24,340

Oriental Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Karamchand Thapar & Bros., Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st December, 1952.

Raisings during the year were 1,87,816 tons as against 1,79,654 tons of the previous year. The corresponding figures for despatches were 1,66,409 tons and 1,63,326 tons respectively.

In Begonia Colliery, development of Begonia and Laikdih seams is being carried out according to the plan. The proposed stone drift from Laikdih seam in Changari Mouza to touch the Begonia seam is expected to be completed by the middle of 1955. The work of sand stowing in Laikdih seam is taken in hand and is expected to be completed by the end of April, 1954. On completion of this work raising is expected to go to above 10,000 tons monthly.

The work of dewatering the mine in Badjna Colliery was hampered considerably by reason of the failure of Damodar Valley Corporation Ltd. to make electricity available in time. The directors expect that the mine will be dewatered in four months' time. No. 1 pit was closed down, and the Company started raising from No. 2 pit and hope to resume raising from No. 3 incline after the monsoon. The present output is being raised from No. 2 pit and the newly opened inclines in Basdevpur in Badjna seam, and it is expected that output in the current year will be more than the last year.

The accounts for the year showed a gross profit of Rs. 4,97,007 (Rs. 4,94,432) as against Rs. 4,94,432 in the previous year. After adjusting interest, commission etc., and after providing Rs. 1,98,869 (Rs. 1,90,242) for depreciation, the working of the Company for the year showed a net profit of Rs. 98,682 (Rs. 1,59,661). A sum of Rs. 39,000 (Rs. 25,000) was provided for taxation leaving a balance of Rs. 1,06,421 (Rs. 1,46,739), including the carry forward of Rs. 46,739 (Rs. 12,078) which the directors distributed in payment of a dividend at As. 8 (Re. 1) per share for the year ended 31st December, 1952, Rs. 50,000 (Rs. 1,00,000) and carried forward Rs. 56,421 (Rs. 46,739).

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	10,00,000	Block ...	21,33,295
Debentures ...	5,00,000	Stocks ...	1,68,685
Reserves ...	1,10,000	Stores, spare parts, etc.	3,56,076
Provision for taxation ...	4,53,443	Work-in-progress ...	1,71,900
Liabilities ...	21,52,994	Debts, deposits and advances ...	14,57,726
Profit and loss account ...	1,06,421	Investments	11,531
		Cash ...	23,645
	Rs. 43,22,857		Rs. 43,22,857

Reliance Firebrick and Pottery Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 28th February, 1953.

After providing Rs. 75,616 (Rs. 70,777) for depreciation and transferring excess provisions of Rs. 56,083 (Rs. 70,000) in respect of taxation and Rs. 15,275 (*nil*) in respect of managing agents' commission there is a loss of Rs. 25,650 credit of Rs. 64,903, out of which was paid a dividend at As. 10 per share, absorbing Rs. 37,500 leaving to be carried forward a sum of Rs. 27,403 to be carried forward.

Owing to the loss made by the Company during the half-year, the directors are unable to recommend payment of any dividend. Production for the half-year was 1,451 tons less than the previous half-year's figure and sales were also down by 2,938 tons.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	6,00,000	Block ...	9,56,816
Reserves ...	7,87,360	Stocks ...	7,53,336
Provision for taxation ...	1,53,055	Stores ...	4,69,784
Liabilities ...	14,90,752	Debts, deposits and advances ...	7,66,094
		Cash ...	59,487
		Profit and loss account ...	25,650
	Rs. 30,31,167		Rs. 30,31,167

Bokakhat Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Octavius Steel and Co., Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st December, 1952.

A crop of 3,336 maunds was manufactured and has been disposed of as follows:—

	Maunds
For sale in Calcutta for export	2,801
For sale in Calcutta for internal consumption	535
Total	3,336

The average price per pound realised was Re. 1-9-4 as compared with Re. 1-7-4 a lb. obtained for the previous season's crop of 3,759 maunds.

The Company's export quota for season 1952 was 3,423 maunds. No extensions were put out during the year and the area under cultivation remains unchanged at 493.8 acres at 31st December, 1952.

The revenue account showed a loss of Rs. 1,78,432 (loss of Rs. 1,77,820) which after adding depreciation Rs. 36,602 (Rs. 32,960) amounted to Rs. 2,15,034 (Rs. 2,10,780). After deducting proceeds of sale of machinery Rs. 600 (Rs. 2,488), refund of income-tax for 1951-52 Rs. 844 (Rs. 2,488) and forfeited dividends Rs. 2,050 (*nil*) there was a loss for the year of Rs. 2,11,540 (Rs. 2,00,978).

After adding to this the debit balance of Rs. 1,89,687 (credit of Rs. 10,176) brought forward from the previous year and deducting Rs. 3,65,000 (*nil*) being the amount transferred from reserve account, there was a debit balance of Rs. 36,227 (debit of Rs. 1,90,802) on profit and loss account, which was carried forward.

As forecast in the report for 1951, the loss incurred in 1952 was similar to that of the previous year. These losses, which were unavoidable if the Company's property were to be rehabilitated, have exhausted the Company's financial reserves and it has therefore been necessary to halt the rehabilitation programme for the time being. Much valuable work was, however, done and it is believed that the Company will be in a position to make a profit in 1953.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	6,00,000	Block ...	8,86,970
Liabilities ...	6,98,217	Stocks ...	1,53,560
		Stores ...	1,56,298
		Debts, deposits and advances ...	46,782
		Investments	1,000
		Cash ...	17,380
		Profit and loss account ...	36,227
	Rs. 12,98,217		Rs. 12,98,217

Murphulani (Assam) Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st December, 1952.

After providing Rs. 43,981 (Rs. 31,492) for depreciation, the season's working resulted in a profit of Rs. 1,14,973 (Rs. 85,695). After bringing in the balance from last year and the refund of excess profit tax, providing Rs. 39,000 (Rs. 23,000) for taxation and charging managing agents' commission, there remained a balance of Rs. 97,518 (Rs. 92,644) at credit of profit and loss account. From this the directors made payment of a dividend of Rs. 2-8 (Rs. 2-8) per share, on the preferred ordinary shares, absorbing Rs. 50,000 (Rs. 50,000) and Rs. 2 (Rs. 2) per share, on the ordinary shares, absorbing Rs. 10,000 (Rs. 10,000), leaving a balance of Rs. 37,518 (Rs. 32,644) to be carried forward.

A crop of 4,353 maunds was secured, which has been sold at an average price of Re. 1-11-10 per lb. This satisfactory average price, secured under unfavourable market conditions, is partly attributable to 1,829 maunds having been sold forward under a private contract entered into at the beginning of the season.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	2,60,000	Block ...	3,81,499
Reserves ...	3,65,000	Stocks ...	3,04,701
Provision for taxation ...	1,09,986	Stores ...	95,694
Liabilities ...	1,38,488	Debts, deposits and advances ...	65,506
Profit and loss account ...	37,518	Investments ...	2,343
		Cash ...	51,249
	Rs. 9,00,992		Rs. 9,00,992

Harinagar Sugar Mills, Ltd.

The directors of the above Company (Managing Agents: Messrs. Narayanlal Bansilal, Bombay) submitted the audited accounts of the Company for the year ended 30th September, 1952.

The accounts showed a net profit of Rs. 4,28,058 (Rs. 4,33,114) which together with the carry-over of Rs. 534 (Rs. 2,420) brought forward from last year's account, made a total of Rs. 4,28,591 (Rs. 4,35,534). The directors disposed of this amount as follows:—

Provision for taxation and other contingencies Rs. 2,50,000 (Rs. 2,35,000), dividend at 7½ (7½) per cent. free of income-tax Rs. 75,000 (Rs. 75,000), and dividend equalisation fund Rs. 1,00,000 (Rs. 50,000), leaving a balance of Rs. 3,591 (Rs. 534) to be carried forward.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	10,00,000	Block ...	37,25,812
Reserves ...	38,62,411	Stocks ...	46,89,460
Provision for taxation ...	7,79,760	Stores, etc. ...	8,40,532
Liabilities ...	62,42,257	Debts, deposits and advances ...	25,47,754
Profit and loss account ...	4,28,591	Investments	4,82,567
		Cash ...	26,894
	Rs. 1,23,13,019		Rs. 1,23,13,019

N.B.—Figures within brackets relate to the corresponding period of the previous year.

COMPANY MEETINGS AND DIVIDENDS

LODNA COLLIERY CO. (1920), LTD. Annual General Meeting, Calcutta, 23rd July, 1953. Transfer books closed from 6th to 23rd July, 1953, both days inclusive.

ETHELBARI TEA CO. (1932) LTD. Annual General Meeting, Calcutta, 24th July, 1953. Dividend: *Nil*. Transfer books closed from 18th to 24th July, 1953, both days inclusive.

TATA LOCOMOTIVE AND ENGINEERING CO., LTD. Annual General Meeting, Bombay, 28th July, 1953. Dividend: *Nil*. Transfer books close from 20th to 29th July, 1953, both days inclusive.

The Share Transfer Books of the Company will be closed from the 29th July to 4th August, 1953, both days inclusive.

By Order of the Board,
MACNEILL & BARRY LTD.,
A. W. TAYLOR,
Managing Director,
Managing Agents.

2, FAIRLIE PLACE,
CALCUTTA, 13th *July*, 1953.

HERCULES INSURANCE COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT THE EIGHTEENTH ORDINARY GENERAL MEETING of the shareholders will be held at the Registered Office of the Company, 16, Hare Street, Calcutta, on Wednesday the 29th July, 1953, at 3-30 p.m., for the purpose of receiving the Directors' and Auditors' Reports, adopting the Statement of Accounts and Balance Sheet for the year ended 31st December, 1952, declaring a Dividend, electing Directors and Auditors and fixing their remuneration and transacting any other business that may properly be transacted at an Ordinary General Meeting.

The Share Transfer Register will be closed from the 20th to the 29th July, 1953, both days inclusive.

By Order of the Board,
G. RAMABADRAN,
Secretary.

CALCUTTA, 8th *July*, 1953.

Note.—The dividend when declared will be paid only to those shareholders whose names appear on the Company's Register as on the 29th July, 1953.

TEXTILES

(Concluded from page 104)

mills themselves in dyeing and printing. If all the cloth which is now exported uncalendered could be exported, dyed or printed, it would mean a rough increase in foreign exchange varying from 20 to 25 per cent. The scope for this development is, however, limited, as printing and also dyeing in places like Lancashire and Japan are so far advanced that India will find it difficult to catch up with them.

PRODUCTIVITY IN TEXTILE INDUSTRY

The experts of the International Labour Organisation, who are now in India, are looking for a suitable Indian textile mill for carrying out a national demonstration project, with a view to finding out the methods by which the fullest use may be made of modern work study techniques designed to raise productivity and thereby increase the earnings and standard of living of the workers. The experts have written to the Millowners' Associations and Trade Unions submitting draft proposals for such a scheme.

The I.L.O. team arrived in India in December, 1952, one section being assigned to the textile mills in Bombay and Ahmedabad and the other to the engineering industry in Calcutta. The task of these experts was to show, by means of practical demonstrations, lectures and training, how increased output might be obtained with existing manpower and equipment by the application of improved management techniques. Both teams demonstrated successful results at an Inter-Ministerial meeting held in New Delhi recently. The textile team is now proposing to hold a full-scale demonstration project.

THE ALEMBIC CHEMICAL WORKS COMPANY, LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Forty-sixth Annual General Meeting of the Shareholders of the Alembic Chemical Works Company Limited, will be held at the Office of the Company at Baroda on Thursday the 13th August, 1953, at 4 p.m., (S.T.), to transact the following business:—

1. To receive and adopt the Directors' Report and Audited Balance Sheet and Profit and Loss Account for the year ended 31st December, 1952.
2. To declare Dividends.
3. To elect Directors in place of those who retire from the office by rotation but are eligible for re-election.
4. To appoint Auditors for the current year and to fix their remuneration.

The Transfer Books of the Company will remain closed from Friday the 24th July, 1953, to Thursday the 13th August, 1953, both days inclusive.

By Order of the Board of Directors,
For BHAILAL AMIN & SONS LTD.,
Managing Agents.
RAMAN B. AMIN,
Director.

11th *July*, 1953.

Note.—The Dividends when sanctioned will be made payable at the Office of the Company at Baroda, on or after the 31st August, 1953, to those Shareholders whose names stand on the Register of the Company on the 13th August, 1953, and to whom the Dividend Warrants will be posted.

Shareholders are requested to notify, at once, any change of address.

2. The Dividend when declared will be made payable at the Bank of Mysore, Ltd., Bangalore, or its branches, on and after the 8th September, 1953.

3. The Dividend Warrants will be posted to those Shareholders whose names stand on the Register on 3rd August, 1953.

NEW STATE LOANS ISSUED

(From Our Own Correspondent)

BOMBAY, 15th July

The main development of the week in the money market is the issue of the State Loans, the lists for which were opened to-day. As many as 10 States—six Part 'A' States and four Part 'B' States—have stepped into the market for an aggregate borrowing of Rs. 28 crores. Perhaps this is the first time that such a large number of States has come in at the same time. The total borrowing also is the largest sum sought for by the States at a time. The terms of the loans are published elsewhere in this issue, from which it will be noted that all the loans bear a uniform rate of interest of 4 per cent. and have the same maturity, that is ten years. The issue price also is the same in all the cases, at Rs. 99-8 per cent., except in the case of Bombay and West Bengal loans, the issue prices of which are at par. As at the end of the day the lists for all the loans, with the sole exception of that of West Bengal, were open. In the case of West Bengal, the list was closed at 1 p.m., as the loan was over-subscribed. Enquiries in market circles indicate that some of the Indian banks evinced fair interest in some of the loans.

The issue of State Loans did not have any effect on the short-term money market, except that it arrested the downward trend in the interest rates noted last week. Though the inflow of funds was heavier than anticipated, the inter-bank call money rate remained unchanged at 1½ per cent. among the Exchange banks and big Indian banks with no borrowers and at 2½ to 2¾ per cent. among the smaller Indian banks. House money was on offer at 2 to 2½ per cent. Banks were not keen bidders of one to two months' money at more than 2 to 2½ per cent., but were interested in deposits for longer periods at 2½ to 2¾ per cent.

In spite of the issue of State loans, the response to the three months' Government of India Treasury Bills was fairly good. The amount offered, at Rs. 2.81 crores, was, however, slightly lower than that (Rs. 3.03 crores) offered last week, but the average rate of accepted tenders was unchanged at Rs. 2-6-2 per cent. per annum.

After a break of a week, notes in circulation have again taken a downward trend, as indicated by the Reserve Bank's statement for the week ended 10th July, 1953. The exact decline in active notes during the week under reference is Rs. 5.30 crores, as against an expansion of Rs. 3.54 crores a week ago. On the liabilities side of the Banking Department, deposits of Governments show a decline, the deposits of the Central Government accounting for Rs. 3.24 crores and those of the State Governments for Rs. 3.23 crores. Deposits of banks are higher by Rs. 2.66 crores. On the assets side, cash balances have expanded by Rs. 4.76 crores, while balances held abroad have fallen by Rs. 2.09 crores. Loans and advances to Governments are unchanged, while other loans and advances are lower by Rs. 3.30 crores. It will be interesting to note that, while there is a surfeit of funds with banks, there has been a fresh advance of Rs. 3.49 crores during the week to Scheduled Banks against usance bills. As against this, however, there has been a repayment of such loans to the tune of Rs. 5.34 crores, so that the outstandings of such loans are lower by Rs. 1.85 crores. Government Treasury Bills purchased and discounted are lower by Rs. 3.21 crores.

The only notable feature disclosed by the consolidated statement of position of the Scheduled Banks for the week ended 3rd July, 1953, is the large repayments of borrowings of these banks from the Reserve Bank of India and the Imperial Bank of India. The other portfolios show minor variations. Demand deposits are lower by Rs. 42.23 lakhs, while time deposits are up by Rs. 12.67 lakhs. Inter-bank borrowings show an increase of Rs. 1.51 crores. Borrowings from the Reserve Bank have declined by Rs. 8.31 crores and those from the Imperial Bank by Rs. 1.45 crores. Advances and bills purchased and discounted rise together lower by Rs. 1.55 crores. Investments have gone down by Rs. 62.12 lakhs and cash balances, including money at call and short notice, by Rs. 1.54 crores.

Apathetic conditions were witnessed in the Gilt-edged market during the week under review. While the market's attention was focussed on the new State loans, demand for the existing loans was at a low ebb and prices in most cases showed a fractional decline. The volume of business was extremely limited. 3 per cent. 1957 was, however, in request and gained an anna to Rs. 98-6. 3 per cent. 1958 changed hands an anna lower at Rs. 98-2. 3 per cent. 1959-61 was unchanged at Rs. 96-3. 3 per cent. 1963-65 was on offer and dropped an anna to Rs. 92-6. 3 per cent. 1964 and 3 per cent. 1966-68 stood at Rs. 92-6 and Rs. 90-3, respectively. 3 per cent. 1970-75 had sellers at Rs. 86-6, as against Rs. 86-7, and 3 per cent. 1986 Conversion Loan at Rs. 82-11, as against Rs. 82-12. 3½ per cent. 1961 National Bonds met with some buying, but the rate was unchanged at Rs. 98-5.

The foreign exchange section was featureless and the rupee-U.S. dollar rates were unchanged at Rs. 475¼ per $100 (banks selling ready) and at Rs. 471¼ per $100 (banks buying ready). In New York, sterling was a little stronger in terms of the U.S. dollar with a gain of 1/16 cent per £ for spot and three months delivery. The spot rate improved from $2.81¼-2.81⅜ to $2.81.9/16-2.81.11/16 and the rate for 3 months from $2.80.11/16-2.80.13/16 to $2.80⅜-2.80¼. The rate for 6 months was unchanged at $2.80¼-2.80¼.

GOLD SUBDUED

(From Our Own Correspondent)

BOMBAY, 15th July

Narrow movements in prices continued to characterise the trading on the Bullion Exchange during the week under review, though the undertone in the two metals differed from each other. While silver was quietly steady, gold disclosed a slightly weaker tendency, due to an improvement in arrivals and a decline in offtake. The demand for silver in the ready section was also on a reduced scale and up-country advices were far from conducive to speculative activity either way. The relatively better tone in silver was due to the speculative support from option dealers.

Silver for forward delivery (28th July settlement) opened at Rs. 153-5 and moved up to Rs. 154-7 on Friday on short-covering and some fresh support. There was a mild retreat from this level on Saturday to Rs. 153-5, due to slight selling pressure induced by the weakness of gold. On Monday, however, short covering by one of the leading operators pushed up the rate to Rs. 155, but this recovery was short-lived and the rate once again retreated to Rs. 153-8 at the close.

Ready silver (.996 Mint) opened at Rs. 154-5 and after touching a high of Rs. 155-9, closed at Rs. 154-2. The premium over forward rate which stood at Re. 1 early in the week narrowed down to As. 10 at the close. The floating stocks of silver are placed at 1,000 bars. The daily average offtake was 10 to 15 bars.

Gold for forward delivery (27th July settlement) began at Rs. 87-3 and advanced to no higher than Rs. 87-12 on Friday. Subsequently, the decline in offtake and selling by a leading Calcutta operator brought down the rate to Rs. 86-6 on Saturday. After a minor improvement to Rs. 87-5 yesterday, the yellow metal failed to consolidate the gain and reacted to Rs. 86-2 at the close, due to the weight of large arrivals with no corresponding offtake.

Ready gold started the week at Rs. 88-10 and closed at Rs. 86-13. The highest level touched was Rs. 89-3 early in the week. The premium of ready position over the spot, which was as high as Rs. 1-7 at the opening of the week, stood at no more than As. 11 at the close. The floating stocks of gold are estimated at 25,000 tolas. The daily average arrivals were 5,000 tolas, while the offtake was no higher than 3,000 tolas on an average.

The following comparative table shows the trend of the market during the week under review:

	15-7-53	Highest	Lowest	8-7-53
GOLD	Rs. a.	Rs. a.	Rs. a.	Rs. a.
Ready (.99 fine Mint)	86 13	89 3	86 12	88 9

GOOD DEMAND AT COCHIN TEA SALES

(Messrs. Forbes, Ewart & Figgis Ltd.)

COCHIN, 11th July

Offerings in sale No. 14, which was held on Tuesday, 7th July, amounted to approximately 19,50,000 lbs. Although many low medium and medium teas were brighter in cup, the leaf appearance was generally poor and stalky. Some attractive high-grown teas were on offer and a few invoices had a touch of flavour. From the outset there was a good general demand and prices for low medium to medium fannings and brokens were often As. 2 dearer, despite their poor leaf appearance. Commonest kinds were well supported at rates which were fully firm. Good medium types showed some decline in leaf appearance and were irregularly half to one anna easier. Best liquoring teas were about steady. The strongest feature of the sale were fannings of all descriptions. Whole leaf grades were fully firm and occasionally dearer. The demand weakened slightly towards the close. The following were the quotations:—

	1953 Rs. a. p.
Low grown Travancore B.O.P. ...	1 10 0
Medium Travancore B.O.P. ...	1 11 0 to 1 12 0
Anaimallais B.O.P.	1 12 0
Best liquoring Nilgiri B.O.P. ...	2 3 6
Clean Black Leaf O.P.	2 2 0

London Market.—Good liquoring teas fully firm. Others irregularly lower.

Colombo Market.—Strong demand. U.V.A. types firm to dearer on quality, others irregular, but generally strongest feature.

Calcutta Market.—Export.—18,000 packages. Limited demand. Commons half anna easier. Whole leaf steady.

Dust.—Fair general demand. Commons and medium Assams irregular. Middle East types and best C.T.C. strongest feature.

Export Quota.—The market has again shown an easier tendency and transactions have been done at 21 ples.

Forthcoming Auctions.—Sale No. 15 will be held on Tuesday, 21st July.

As we go to Press, Messrs. Forbes, Ewart and Figgis, Ltd., wire:—

"*Dust Sale N:*—3,75,000 lbs. Good general demand. Milled and fine dusts occasionally dearer. Others barely steady."

COTTON ERRATIC

(From Our Own Correspondent)

BOMBAY, 15th July

There had been a welcome change in the pattern of trading in the forward cotton market during the earlier part of the week under review. Absence of fireworks and unbalanced one-sided activity of either lifting up the rates unduly or pressing them down had given way to normal fluctuations with a tendency to stabilise prices round about Rs. 675. Below Rs. 670 cotton met with good resistance while profit-taking and short selling came to prevent the rise very much above Rs. 680. But after the last week-end the pattern has again undergone a radical change and speculative long interests have joined hands to boost prices up by forming a syndicate for pooling resources to take delivery on the maturity of the current contract. With the light supply position known to all, the bears have been scared and they are now being adroitly squeezed by the bulls. The difference between the rate for August and the unofficial rate for the opening contract in the new crop has widened further and is ruling at the time of writing at Rs. 20. All this might however prove a clever bluff and the bulls might choose to pocket their gains overnight and cleverly slide out of their commitments by passing the contracts into unwary hands. Indeed, there was a sharp setback in prices to-day.

In the meantime, the market has been exercised over the prospects of complete decontrol of cotton. Some circles point to the delay in the giving of permission for forward trading in the new crop as an indication of the authorities being seriously engaged in considering this important question of decontrol. Last week's announcement of decontrol in the textile field has naturally turned market men's minds in this direction. On the other hand, more thoughtful elements in the market take into account the fact that the cloth decontrol has been described as a tentative and an experimental measure liable to be reconsidered if the cloth market shows any abnormal tendencies. With their experience in sugar, the Government, though inclined to lighten their responsibilities regarding controls, are bound to take one step after another with caution. Even if cotton is to be decontrolled it would be done only after watching the developments in the cloth markets during the next three months. This would also give the Government time to appraise the volume of cotton production this year more accurately.

Each week brings further hopes of better than normal crop this year. Reports from various producing centres are very satisfactory. It is now being accepted on all sides that the acreage shown this year will show an increase over last year. The only question now is with regard to the proportion of this increase. Yields are also expected to be better than this year. If all these hopes materialise there is a good chance for cloth decontrol to be followed three months later or even a little earlier by price decontrol of cotton.

Optimistic expectations of a good crop, however, are not likely to depress prices and premia in the spot market. Naturally, activity in this market is not uniform every day. The turnover goes up now and then, while it is moderate on other days. On the whole, however, there is an undertone of steadiness and continued enquiry from the mills for good quality cotton. As there is no pressure of sales from holders, the premia rates are tending to increase. And the mills who come in for their supplies later during the season might have to pay more for their cotton or be satisfied with indifferent quality. Demand for imported styles, however, is lacking and such cotton is still selling at lower than replacement cost. This precludes any inclination on the part of the trade to import cotton at present. The export front is even more quiet.

Opening the week at Rs. 677½ I.C.C. August moved up on good support by speculative and up-country interests and on encouraging advices from the spot section to touch a high of Rs. 689 on 15th inst. There was considerable profit-taking at this level, which resulted in a sharp setback in prices. The August delivery closed the week lower at Rs. 682½. The following is the trend of prices in the forward market over the week ended to-day:

	Opening	*High*	*Low*	*Closing*
I.C.C. Aug. (Rs.) ...	677½	689	670½	682½

The following are the latest available quotations from the Sewri market:

Bengal *Deshi* Rs. 540; Berar *Jarilla* Rs. 730; Khandesh Rs. 860; Vijay Rs. 880; Oomra *Deshi* Rs. 680; Mogalai Rs. 685.

There was no activity of note at Karachi during the week under review. With a steady trend in the market, the rates at the end of the week under review show a slight increase of only As. 8 per bale. There is a report of some internal administrative trouble in the cotton market at Karachi. This is likely to lead to the closure of the market for the next three days from to-day as a protest against the alleged maltreatment of several prominent cotton merchants by the police. The following are the latest available quotations from the Karachi market:

Punjab *Deshi* Rs. 80; 4F Punjab R.G. Rs. 62½; S.G. Rs. 68½; L.S.S. Punjab R.G. Rs. 66; S.G. Rs. 72; N.T. R.G. Rs. 72; S.G. Rs. 77½; 289F Punjab R.G. Rs. 74; S.G. Rs. 80.

At Alexandria, activity is naturally more subdued as no country on the Continent is in a hurry to enter into far-reaching commitments of any magnitude at this stage. This is the slack season for all the world markets and especially for those which depend mostly on exports. With the selling base changed from the July to the October position of the New York market, prices at Alexandria have naturally increased and this has also tended to reduce the volume of enquiries. India, one of the best markets for Egyptian cotton, is also in no hurry to import long-staple cotton as the pattern of its export trade in textiles has gradually changed. The emphasis of cloth exports from India is now more on coarse and medium cloth than on fine and superfine varieties and this will necessarily affect the volume of imports from Alexandria. The only important buyer at present at Alexandria seems to be Spain and to a very small extent the U.K. The Egyptian Cotton Commission is not likely to begin its purchases of the new crop till next month.

At New York, the Bureau estimate for acreage is 24,618,000 which is about a million and a half acres less than last year. This is, of course, likely to come down further as the season advances and sown areas are abandoned or diverted to some other crop. With this acreage and even the highest possible yield, the output in the U.S. this year cannot exceed 16 million bales. On the other hand, a poor yield can reduce it to 12 million bales. The trade expectation is somewhere about 14½ million bales, because the trade estimates of acreage are much above the official estimate. New York prices have been steadier since this report from the U.S. Department of Agriculture. But apart from the size of the crop, political developments during the coming weeks which will be of an important nature will decide the price trend. In this connection, it may be worthwhile to note that commodity and stock markets in the U.S. have shown some improvement during the last week in spite of all evidence tending to show less political tension in the world. India's interest in U.S. cotton this year, apart from the fact that New York prices go to determine prices in other world markets, is not very great. Perhaps imports of U.S. cotton in India will be the lowest on record during the coming season.

The following are the latest available quotations from New York as compared with those of a week and a fortnight before:

(In cents per lb.)

	14-7-53	7-7-53	30-6-53
Spot	34.05	34.55	34.15
July	33.16	33.57	33.16
October	34.00	34.12	33.81
December	34.20	34.31	33.97
March	—	34.52	34.17
May	34.39	34.51	—

ART SILK YARN FIRM

(From Our Own Correspondent)

BOMBAY, 15th July

The art silk yarn market presented a firm trend this week. The firmness was occasioned chiefly by support extended by traders emboldened by swift advance in prices of oilseeds and other commodities. Values of art silk yarn, as a result, registered a substantial improvement over the previous week's levels. The improvement would have been more pronounced but for the renewed weakness in rayon markets.

In the forward section, 150D July delivery contract rallied 22 points to Rs. 788. August contract rallied 22 points and gained 23 points at Rs. 791 tract forged ahead and gained 23 points at Rs. 791 as compared with Rs. 768. In the ready section, 150 Italy received special buying enquiries and advanced by As. 3 to Rs. 3-15½. 150 Japan gathered an anna to Rs. 4-1½. 120 Japan and 120 Italy, after losing an anna each, recovered to close at Rs. 4-3 and Rs. 4-4, respectively.

The table below gives the prices of art silk yarn quoted to-day, as compared with those on the 8th and 1st inst.

	15-7-53 Rs. a.	8-7-53 Rs. a.	1-7-53 Rs. a.
150D July (per case of 200 lbs.) ..	788 0	766 0	779 0
150D August ..	791 0	768 0	779 0
120 Japan (per lb.) ..	4 8	4 8	4 4
150 Japan ..	4 1½	4 0½	4 4
120 Italy ..	4 4	4 4	4 4
150 Italy ..	3 15½	3 12½	3 14½

The traders in the forward section are more inclined to buy and then sell than to sell and buy, as was the case in the previous week. A section of traders believes that selling pressure is likely to develop at Rs. 780. It, however, remains to be seen as to whether fresh support will be lent to the market and whether bulls will try to liquidate their holdings. Operators appear to be uncertain with regard to the trend of prices in the Japanese market. They are eagerly awaiting the outcome of the talks which the Japanese art silk yarn delegation is having with the art silk mills and dealers. The Board of the Yarn Merchants' Association will be meeting the Japanese delegation on Monday next.

In distinct contrast to the tendency in the art silk yarn market, the staple fibre section remained weak during the week under review. The chief bearish factor was the report regarding forward sales of yarn by some of the mills in Bombay.

GROUNDNUTS FLARE UP

(From Our Own Correspondent)

BOMBAY, 15th July

Speculative activity made history during the week when groundnut prices flared up to pierce the previous record high of Rs. 51-12 touched in May, 1951. Alarming decline in floating stocks and the continued support of Saurashtra buyers were responsible for this hectic rise in values. The prices would have shot up further, had it not been for rumours of early abolition of import duties on coconut and certain other edible oils and placing them on the O.G.L., as urged by the Bombay Oilseeds Exchange Ltd., through a telegram to the Government of India on 10th July. The Board of Oil Merchants Chamber, Bombay, has urged even free imports of groundnuts and groundnut oil, albeit as a temporary measure. In sympathy with the hectic rise in groundnuts, the castorseeds section also forged ahead, thereby recording sizable gains. The linseed section too improved, with closing quotations remaining higher than those at the end of last week, particularly on some enquiry from *vanaspati* interests.

In the groundnuts section, Bold ready was done at Rs. 53-8, as against Rs. 51-8 a week ago, and Rs. 51-12 in May, 1951. August-September delivery was higher by Re. 1-1 to close at Rs. 49-10. The highest touched so far by this delivery was Rs. 53-4 on 19th May, 1951. Khandesh quality gained Rs. 3 to Rs. 54-8. Groundnut oil ready shot up by Rs. 2 to Rs. 29 and railway receipts Rs. 1-12 to Rs. 28-4.

Under the grip of bull operators, castorseeds September, 1953 delivery advanced from Rs. 150 to Rs. 153; the lowest touched during the week was Rs. 147-8. Trading in May, 1954, will commence on 20th May. Meanwhile, it is reported that the new contract is nominally quoted at discount of about Rs. 18 per candy in relation to the September delivery. Among spots, Madras quality rallied As. 8 to Rs. 32-4. Castoroil B.S.S. and First Pressure were higher by As. 4 at Rs. 18-8 and Rs. 18-4, respectively. Commercial quality improved by As. 2 to close at Rs. 17-8.

In the linseed section, the U.P. interests were sellers at higher levels in view of the approaching settlement of the August-September contract. This contract was done at Rs. 31-8, as compared with Rs. 30-14. Bold ready put on As. 12 to Rs. 31-12. Linseed oil ready was done at Rs. 17-4, as against Rs. 16-8.

The following table shows the prices of oilseeds and oil on the 15th inst., as compared with those at the end of the previous two weeks.

	15-7-53 Rs. a.	8-7-53 Rs. a.	1-7-53 Rs. a.
Groundnuts—			
Bold Ready New (per cwt.)	53 8	51 8	47 8
August-Sept.	49 10	48 9	45 6
Linseed—			
Bold Ready (per cwt.) ..	31 12	31 0	30 0
Castorseeds—			
Sept. (per candy of 5 cwts.).	153 0	150 0	150 12
Madras (per cwt.)	32 4	31 12	32 0
Groundnut oil—			
Ex-mill Ready (per quarter).	29 0	27 0	25 4

Commercial (per quarter)..	17 8	17 6	17 10

FOOD POSITION SATISFACTORY

(From Our Own Correspondent)

HAPUR, 14th July

The overall food position in different States continues to be more or less satisfactory. In all food regions in the State of Uttar Pradesh, barring Benaras, ration shops have been allowed by the Food Ministry to sell rationed wheat without restriction—a concession to help them clear their unsold stocks. This, however, is not helpful at all, as rationed wheat prices are well above prices of indigenous wheat which is easily available all over the State. Flour mills are prohibited from purchasing home-grown wheat, lest such bulk buying in the free markets should send up its prices. But they have been allowed to buy, if they want to, unsold stocks of wheat in ration shops at rationed wheat Rs. 18-13-2 and imported wheat Rs. 21-5-4 per maund. They, however, appear to be reluctant to avail themselves of this concession, owing to prohibitive prices. The following are the wholesale prices of wheat in important markets: Shamli Rs. 16-6, Hapur Rs. 16-4, Chandosi Rs. 16-8, Kasganj Rs. 16, Gonda Rs. 16-14, and Sitapur Rs. 17-12. The Government rate of wheat in Kanpur, Allahabad, Benaras, Agra and Lucknow markets was 2 seers and 2 chattaks per rupee.

Bombay's Minister for Civil Supplies has denied that his Government has any plan to decontrol foodgrains completely. The overall food position in the State is reported to be quite satisfactory.

Madhya Pradesh had record procurement this year at increased procurement prices. The total procurement from the beginning of the *kharif* year amounted to 279,147 tons of rice and 91,622 tons of *jowar*. The corresponding figures for the last year were 225,956 and 74,487 tons respectively. Procurement of wheat was unsatisfactory. From the beginning of the *rabi* year, 2,597 tons of wheat had been procured, as against 5,922 tons last year. The total despatches out of the State from the beginning of this year amounted to 135,917 tons of rice and 55,175 tons of *jowar*. Another 20,000 tons of rice and 10,000 tons of *jowar* have been released for ex-State despatches.

The locust invasion in Rajasthan this year has been early and on an increased scale. Since May last, the movement of not less than 145 locust swarms have been reported from various parts of the State. The corresponding figure for last year was only 19. The main invasion continues to be from across the Rajasthan-Pakistan border. The early onset of the monsoon and the plentiful showers that almost all parts of Rajasthan have had so far have increased the fears of extensive egg-laying by swarms.

The latest quotations in the Hapur market are: Wheat Rs. 16-4 to Rs. 18, gram Rs. 13-12, barley Rs. 11-12, *bejhar* Rs. 12-6, rice: *basmati* Rs. 35, *hansraj* Rs. 31, *sela* Rs. 29 and coarse Rs. 23, peas Rs. 14, *arhar* Rs. 14-4, *urd* Rs. 21 to Rs. 23, *moong* Rs. 23 and *masoor* Rs. 17 to Rs. 19.

SUGAR ERRATIC

(From Our Own Correspondent)

HAPUR, 14th July

The sugar markets remained erratic this week, although fluctuations in prices were confined to a narrow range. The release of a free sale quota of one lakh tons towards the close of last week tended to react bearishly on the markets, but the tendency was soon arrested on Government's announcement that all applications for import licences had been cancelled and that imports of sugar would be made on its own account. Prices of sugar advanced by a few annas and apprehensions were expressed that neither the Government would import enough sugar to depress the markets nor would import prices be as low as the trade could manage.

Yet another amplification of the recent sugar import policy of the Government of India was issued this week. The strategy now adopted is that the Government would itself do the importing but would allow the normal trade channels to take over internal distribution of imported supplies but with the safeguard necessary to secure that this sugar is sold in the needy areas at reasonable prices. Merchants in this country, who are in a position to arrange for supplies abroad, are invited to tender, as and when necessary, for delivery of sugar to the Government at specified ports. This decision of the Government had led to rise in foreign sugar prices and, consequently, some such check had become necessary.

Sugar industrialists have complained that the total tax burden on indigenous sugar, which works out at Rs. 8-4-6 per cwt., is actually higher than the reduced import duty of Rs. 7 per cwt. on foreign sugar. It is represented that this discriminatory taxation should not be allowed to stand.

For immediate purposes, the Government is arranging for two shiploads of sugar which will presumably be so distributed as to bring down scarcity prices in the deficit areas, particularly in the South. It is also understood that the Government wants to take out its sugar reserves of about 3 lakh tons from the mills and distribute it through ration shops at the rate of As. 12-3 per *seer*.

The following are the latest sugar quotations: Amritsar Rs. 32-9, Ambala Rs. 32-1, Delhi Rs. 31-15, Jullundur Rs. 31-6, Agra Rs. 31-4, Hapur Rs. 32, Kanpur Rs. 30, Mathura Rs. 31-12, Meerut Rs. 31-4, Muzaffarnagar Rs. 30-15, Patna Rs. 29-8, Calcutta Rs. 31, Gauhati Rs. 34-8, Madras Rs. 33-2-6 and Bombay Rs. 32.

The *gur* markets remained quiet during the week and only very slight decline was recorded in sympathy with sugar markets. There was very poor offtake in the markets, arrivals from the interior were negligible, and stock movements were small, due to the monsoon. Accumulations of stocks are not burdensome. Several wagon-loads of *gur* were exported to Gujerat from Hapur. There has been no new deal for some time past but, as *gur* prices in the South had recently improved, it is anticipated that enquiry in west U.P. *mandies* would soon be revived.

The Planning Commission has been recently examining the pace and the scope of development of *gur* and *khandsari* industry in the country. The U.P. *Gur* and *Khandsari* Association has complained that, in the past, there had been very little research in the method of extracting juice, its boiling and solidifying as well as the methods of storage of *gur* and *khandsari* and its transport. Such little research as had been made was confined to laboratories and had not been carried to the farmers. It is represented that there was scope for research at various stages.

The latest *gur* and *khandsari* quotations are (*khandsari* prices are given in brackets): Ambala Rs. 18-8 (Rs. 31-8), Amritsar Rs. 20-4, Delhi Rs. 22 (Rs. 35-8), Jullundur Rs. 19-13, Agra Rs. 19 (Rs. 28-14), Hapur Rs. 18-8 (Rs. 28), Kanpur Rs. 20-4 (Rs. 25), Mathura Rs. 18-4 (Rs. 29), Meerut Rs. 19 (Rs. 30-7), Muzaffarnagar Rs. 18-12 (Rs. 30-5) Patna Rs. 17, Calcutta Rs. 21-4, Madras Rs. 23-8 and Bombay Rs. 23-5.

TEA EXPORT SALES FETCH HIGHER PRICES

(From Our Own Correspondent)

CALCUTTA, 14th July

Almost all varieties offered during yesterday's export sale, where offerings were 30,525 and 200 packages of the new and old season's teas, respectively, recorded a fractional rise in prices, the general demand having been moderate. All bright liquoring Dooars and leaf grades were bought at slightly higher rates, and the outstanding feature of the sales was the best liquoring Assams, more particularly the C.T.C. varieties, the prices of which were raised by As. 2 above brokers' valuations. The market was not devoid of a weak spot, and this was provided by commons, of which those with plain and thin liquors were the worst affected in the section. Flavoury Darjeelings had ready buyers, while prices for the plainer liquoring types were unchanged. Thus rates were: Best C.T.C. Assam B.P. Rs. 2-6 to Rs. 2-8, clean black pekoe Re. 1-12-6 to Re. 1-13, medium Assam B.P. Re. 1-12, and clean common P.B. Re. 1-10-6.

During last week's auction for domestic consumption, when the total quantity offered was 9,276 packages of dust, including 536 of old season's manufacture, demand was moderate and black leafy varieties, that are fit for export, were dealt with at dearer rates. Whereas medium Assams recorded a mixed trend, prices for commons and Dooars looked up. Darjeelings with flavour were readily bought. Thus best Assam C.T.C. were quoted at Rs. 2-4 to Rs. 2-6, medium Assam grainy dusts Re. 1-9-6 to Re. 1-10, and medium Dooars Re. 1-7-6. Leaf grades offered were a small quantity which was readily bought.

METALS RULE EASY

(From Our Own Correspondent)

CALCUTTA, 14th July

Metal prices ruled easy, and tin came down further to Rs. 425. Electrolytic copper continued to be mostly wanted in scrap form, with the result, the virgin ingots declined from Rs. 180 to Rs. 175, although supplies were tight. The fire-refined material fell, in sympathy, from Rs. 170 to Rs. 160. Antimony star metal was nominally quoted at Rs. 210 and pig lead, at Rs. 65, maintained the improvement of last week. Small consumers' support made electrolytic zinc look better at Rs. 53-8.

Manufacturers of metal products have lost no time in representing to the Government that the

STOCK & SHARE QUOTATIONS

Abbreviations:—D=Deferred shares. G=Guaranteed shares. P.=Preference shares. P.O.=Preferred Ordinary shares. R=Redeem shares. Y=Accounts published yearly. H=Accounts published Half-yearly. Q=Accounts published once 15 months T=Company has Debentures. R.L.=Reserve Liability on shares. N=Nominal Quotation. I=Interim Dividend. f=Dividend for first half-year, r=Dividend for the year. x=Ex. Dividend c.d.=Cum. Dividend

Shares:—If a company has different classes of shares—as, for example—"A" shares and "B" shares—these are indicated by the same letters 'A' and 'B' under "Paid-up Per Share."

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12 indicate the months of June and December, respectively. "Reserves" excludes general and other reserves and all other funds which a company may have as also depreciation on block items, when this is charged to separate account "Block" represents actual cost of land, buildings, machinery and all such other items on which depreciation is allowed, less sales, if any, and stands for the gross figure except where otherwise indicated

Dividends:—Dividends for completed years are calculated at per cent. per annum, but, where quoted for portion of a year, they represent percentages of the dividend on the paid-up share value. For companies closing the books half-yearly in the first three months of the year, and for companies closing their books yearly during the first half of the year dividends are shown as for the previous year.

* The following explanatory notes relate to the abbreviations and marks shown on page 140 in the debentures section:—

‡‡ Option to repay on six months' notice, on any interest date after 31st December, 1951, at 102 per cent. Also redeemable out of a cumulative sinking fund of 1½ per cent. per annum (commencing in 1938) by drawings at 102 per cent. or by purchase at or 102 per cent.

(a) Option of repayment at any time at 3 per cent. premium.

(b) Bearer bonds of Rs. 1,000 each repayable at par.

(c) Bearer bonds of Rs. 1,000 each repayable on 31st July, 1952.

(d) Bearer bonds of Rs. 1,000 each with option of redemption in whole or in part at par on 30th June, 1952, or on any subsequent interest date at one month's notice.

(e) Returnable on or after 31st July, 1950, at Rs. 102-8 or at par after 31st July, 1955, on six months' notice in each case.

(f) Bearer bonds of Rs. 1,000 each with option of redeeming on 3 months' notice at ½ per cent. premium after 1st March, 1954, but before 1st March, 1957, and 1 per cent. premium on or after 1st March, 1957

(g) Option of redemption on or after 1st July, 1949, at par.

(i) Option of repayment at any time at par at any time on or after 30th June 1947 on six months' notice.

MARKET GOSSIP

(Concluded from page 95)

promptly enough to check this trend in order to bring down the prices. With this end in view, it has suggested to the Government to permit imports of edible oils, such as coconut oil, soyabean oil, cottonseed oil and palm oil, by placing them on the Open General Licence list and also to abolish the import duty on these oils. It is to be hoped that the Government will adopt these suggestions without delay.

• • • •

The fall in commodity prices the world over reflects, in part, the slackening of demand, and in part, the increase in production. Among the countries which are likely to be burdened by large surpluses of agricultural produce, the U.S. deserves to be prominently mentioned. But any decline in prices in this country is, as is well known, cushioned by the price support programme. It is true that the Republican Administration in that country is wedded to the principles of free market. But it would appear that the Administration is alive to the political need for supporting agricultural price levels. It remains to be seen whether the Government will order marketing quotas and acreage restrictions. But this would depend on a poll of farmers. If they do not agree to the imposition of these restrictions, price supports will be cut. The one commodity, and it is an important one, in respect of which a poll appears almost certain now is cotton. If cotton growers turn down the proposal for restriction on acreage, the price support for cotton will be reduced to 50 per cent. of parity, instead of 90 per cent. as at present.

• • • •

The U.K. spinners have been asked to notify before the end of this week whether they would like to utilise the services of the Raw Cotton Commission (R.C.C.) for their cotton requirements or whether they would prefer to make their own arrangements for the import of cotton during the season beginning from September, 1953. It would now appear that nearly 60 per cent. of the spinners would elect to go out of the fold of the R.C.C. Many spinners, however, doubt whether the cotton traders would be able to carry large stocks of cotton in order to supply the mills' requirements in the event of their refusing the R.C.C.'s services. If the mills find that the traders are unable to carry large stocks, it will mean that they will have to provide themselves with sufficient supply. This will impose further financial strain on the mills, in that they will have to tie up large funds in the cotton they need. If, on the other hand, many spinners go out of the R.C.C.'s sphere, this organisation may find it difficult to work on an economic basis with a smaller number of clients. Already, it has sustained heavy losses; for the year ended August, 1952, it suffered a deficit of £25 million. Again, unless a large number of spinners prefers to utilise the services of free traders, it is feared that the Liverpool Cotton Exchange will not work smoothly, if and when it is re-opened. It remains to be seen how many spinners finally choose private buying of cotton, for the re-opening of the Exchange will itself depend upon their attitude.

• • • •

The two-day talks between the representatives of the Government of India and Ceylon, held in New Delhi this week, have resulted in a reciprocal trade pact of a limited nature. The talks were initiated by a Ceylon delegation now in Delhi with the object of securing tariff concessions on imports of Jaffna tobacco into India. Normally, this country imports over three million pounds of Jaffna chewing tobacco, mainly consumed by Travancore-Cochin. Before its integration with the Indian Union, Travancore was levying a duty of As. 8 per lb. on imports of this tobacco. After the integration, the Government of India provided that this rate should continue to be levied on imports upto 1,800 *candies* only, any quantity imported over and above this ceiling being subject to a duty of Rs. 9-6 per lb. Further, in 1950, the Union Government informed the Ceylon Government that the concession rate of As. 8 per lb. would continue for a period of ten years during which imports of Jaffna tobacco would be progressively reduced by 10 per cent. each year. In other words, no imports of Jaffna tobacco at this concession rate would be allowed after 1960-61. Hitherto, there were no restriction on imports of Jaffna tobacco, but the rate of duty on imports in excess of the agreed quantity was Rs. 9-6 plus the surcharge of 5 per cent. or Rs. 9-13-6, per lb. The Ceylon Government felt that this rate was prohibitive and, therefore, sent a delegation to New Delhi for negotiating a reduction in the duty on tobacco imported under the licensing system. As stated at the outset, the talks initiated by this delegation have now resulted in a new arrangement.

• • • •

Under the new agreement, India has agreed to facilitate the import of 2,500 *candies* of Jaffna tobacco a year for the next four years. The additional quantity to make up this total will be subject to a reduced import duty of As. 12 per lb. instead of at the standard rate of Rs. 9-6 plus 5 per cent. surcharge. This arrangement places Ceylon in a decidedly advantageous position than hitherto. For had the old arrangement continued, Ceylon would have exported to India, owing to the progressive cut of 10 per cent. of the ceiling each year, only 1,260 *candies* at the concessional import duty of As. 8 per pound. The chances of its exporting any quantity over and above this ceiling would have been bleak owing to the heavy incidence of the standard rate. Now that the rate on imports under the licensing system has been reduced from Rs. 9-13-6 to As. 12 per lb., Ceylon will be in a position to export not only the 1,260 *candies* mentioned above but additional quantity upto the maximum of 2,500 *candies*. In short, Ceylon will be able to despatch 1,240 *candies* more than what would have been possible under the old arrangement.

The new arrangement does not overlook the interests of the tobacco grower in Coimbatore where the Jaffna variety of tobacco is being grown in small quantities. As the total consumption of Jaffna tobacco in India is estimated at 3 million pounds, as against imports of 2,900 *candies* (or 842,500 lbs.) from Ceylon, the local producer of that variety has a market wide enough to sell all his output.

• • • •

In return for the concession shown by India, the Ceylon delegation has agreed to allow imports of Indian *bidis* on open general licence without increasing the effective rate of import duty. It has also agreed to reduce the import duty on handloom towels and towelling to the lowest rates applicable to mill-made towels and towelling. Besides, it has agreed to facilitate increased imports of Indian tobacco into Ceylon. These concessions are to remain for a period of four years.

• • • •

This new pact conceding reciprocal concessions is welcome, in that it has rendered possible the expansion of trade between the two countries. Apart from tobacco, India imports from Ceylon copra also. And Indian shipments to that Island comprise, among others, cotton piecegoods, coal, chillies and onions. In 1952-53 Ceylon imported from India goods valued at Rs. 19.28 crores while this country's offtake from the Island amounted to Rs. 4.29 crores. This big deficit in Ceylon's trade with India does not necessarily mean that Ceylon should export more to India in order to balance its imports from this country, for it enjoys a large trade surplus with other countries which can be used for settling its deficit with this country.

MARKET REPORTS

(Concluded from page 129)

export policy should be liberalised, so as to include a wide range of metal products produced in this country, in view of the improved metal supply position and the abnormal fall in the level of internal demand.

SUGAR STEADY

(From Our Own Correspondent)

BOMBAY, 15th July

The forward and spot sections in the Bombay sugar market have remained steady this week. The chief factors which has imparted steadiness to the market is the receipt of encouraging advices from Kanpur of revival of demand from consuming centres. The price of sugar in the forward section hovered round Rs. 86 and Rs. 87 till yesterday, when it shot up to Rs. 88-10. Towards the close this afternoon, however, it was a shade lower at Rs. 88-4.

It now appears that the bearish tendency of the market has almost disappeared. An indication of this is provided in the steady trend in prices of sugar. For instance, the spot price for medium grade sugar in Bombay has so far varied between Rs. 85—Rs. 90 per bag and it stands at Rs. 90 or a little above per bag. Small grain sugar cannot be had for less than Rs. 88-8. Medium grain at Rs. 90—Rs. 91 and large grain at Rs. 93—Rs. 95 per bag. The movement of free sugar from the factories has, however, been quite satisfactory. It should, therefore, be clear that consumption of sugar has gone up—the increase is as much as 20 per cent—a very welcome development indeed. Again, *gur* prices are steady, in spite of the fast approaching new season for *gur*. The unreleased stocks of sugar with the mills now appear inadequate, in view of the Government's intention to keep 300,000 tons in reserve from this season's production. In another four weeks will start the traditional busy season of demand from consuming centres—the post-monsoon demand—and this will continue unabated until *Diwali*. The Government's import policy has been vacillating and nothing definite is yet known officially about either the quantity to be imported or how the imported sugar will be marketed. The Government, it must be pointed out once again, should clarify these issues at a very early date before it is too late to check the rising spiral of spot sugar prices and before large manipulations and squeezes are indulged in by professional speculators.

Arrivals of sugar into the Bombay market since the 8th inst. amount to 13,600 bags. To-day's estimated stock with the trade is around 25,000 bags. Offtake is fairly normal.

• • • •

The following is the full text of the Government of India's modified import policy for sugar, announced on the 9th inst:

"The Government of India had announced on 22nd June, 1953, their decision to allow imports of sugar from abroad to check the rising tendency in sugar prices in the country, and had invited applications for import licences. After reconsidering the question, in view of the latest trend in sugar prices in markets at home and abroad, the Government have decided that imports of sugar will be made only on Government account. Tenders will, therefore, be invited, as and when necessary, for delivery of sugar to Government at specified ports. Import licences will be issued to parties whose tenders are accepted. Arrangements are, however, being made for the immediate import of two shiploads. The imported sugar will be sold to merchants and

NEED FOR CHECKING COMMERCIAL PIRACY

IT is a decade since trade mark owners obtained statutory protection—though the Trade Marks Act came into force in 1940, the first trade marks were registered only in 1943. Sufficient time has thus elapsed to make a reliable assessment of the working of this statute, in so far as it concerns trade mark owners. By the end of 1951-52, a total of 175,035 marks, including those of foreign proprietors, were submitted for registration. The goodwill accruing in these marks is placed at several crores of rupees. The fact that so many have sought the protection offered by the Trade Marks Act is proof, if any were needed, of its intrinsic usefulness to them. But, at the same time, it must be said that, despite this Act, piracy and counterfeiting of well-known trade marks have reached such alarming proportions that it is high time the Government of India paid some attention to the demand of trade mark owners for improving the Act so as to meet the needs of the situation.

Apart from what the State itself has to do in this matter, the trade mark owners themselves, as a body, have to rely on a certain amount of mutual help to protect their interests. In the U.K., on the trade marks statute of which the Indian Act is modelled, owners of trade marks realised, as far back as 1920, the need to form the Trade Marks, Patents and Designs Federation which would function as the watchdog of their interests and also act as a liaison with the Government so as to keep it informed of developments in the trade marks and patents world. This body, which has for its present Secretary no less a person than Sir William Jarratt, an ex-Controller of Patents and Registrar of Trade Marks, also functions as an Adviser to the Federation of British Industries and other mercantile bodies in the U.K. The need for a similar body in India has been felt very acutely in the last few years for many reasons. There has been an alarming increase in infringements of well-known trade marks over a wide range of industries and a sample survey in a small sector, conducted by the Associated Chambers of Commerce and Industry two years back, indicated that such cases were over 10,000. The survey showed commercial piracy to be very rampant in the field of the drugs and food industries, soaps and toilet industries, stationery, electrical goods, matches, and tobacco industries. Indeed, it is doubtful if any of the consumer goods industries has been spared the attention of trade mark pirates. Production of spurious articles, printing of counterfeit labels, and all sorts of illegal practices have developed enormously. These unscrupulous traders are also very elusive and cannot be tracked down easily.

The consequences of these malpractices go deep into the very structure of industry. Like Gresham's law in the field of currency, the spurious goods drive out the genuine ones, and, in the process, the genuine manufacturer sustains a damage to his reputation not easily repairable. Further, the re-filling of spurious products in counterfeit containers, bearing the trade marks of the genuine manufacturer, exposes him to the risk of action either for breach of warranty, if such had been given, or of prosecution either for not conforming to standards or for selling goods which are adulterated or injurious to health. There are instances where genuine manufacturers have sometimes been placed in such unfortunate predicaments owing to the nefarious activities of pirates. It is hardly necessary to add that the consumer, too, is vitally affected by this fraud, and he tends to doubt the *bona fides* of the manufacturer.

As India is developing many new industries and is already expanding many of the existing ones, it is entering an era in which trade marks are bound to figure more and more conspicuously. There is, therefore, need for the law on the subject to keep pace with this progress in the industrial sphere by keeping itself an efficient instrument so as to guarantee and protect the interests of both trade mark owners and consumers. In the last few years, various commercial bodies have brought the aforesaid undesirable developments to the notice of the Government of India and have been offering many suggestions for amending the Trade Marks Act. The Government of India had suggested that trade mark owners in India should first form an association for rendering mutual help and taking concerted action in the defence of their rights and of the rights of the consumer. The owners of trade marks in India had themselves realised the necessity for taking counsel with one another and acting unitedly in their own interests. As was reported in our Journal seven weeks ago (*vide* page 1042, *Commerce* dated 6th June, 1953), a trade mark owners' association was formed and incorporated in April, 1953. It is gratifying to find that right from the inception of the move to the incorporation, the co-operation of all trades associations and chambers of commerce was freely called for and given; such co-operation augurs well for the future working of this Association.

At the first general meeting of the Trade Mark Owners' Association Ltd.—that is the name of the new Association—held on Monday the 20th inst., Mr. K. T. Chandy, Chairman, delivered a very interesting speech, in which he reviewed the whole position in regard to infringements of trade marks and pressed strongly for a comprehensive review of the working of the Trade Marks Act, with a view to amending it in a number of directions so as to enhance its effectiveness. Mr. K. S. Shavaksha, Registrar, of Trade Marks, Government of India, also addressed the meeting and made a number of useful suggestions, among which perhaps the most important was that the Association should publish the judgments in all trade mark cases.

A lucid account of the directions in which the Trade Marks Act needs to be amended was given by Mr. Chandy. For considerations of space, we can, however, refer here only to a few of the most important of them. One great difficulty in the administration of the Trade Marks Act has been the question of jurisdiction of the Courts. This has cropped up in some cases and led to different interpretations by at least three High Courts. The scheme of the Act is that "trade marks" is a Central subject and the Act is being administrated by one Registrar for the whole country. As the Act stands, it would appear that appeals from the Registrar's decisions lie to all High Courts. Conflict of decisions between these High Courts has actually been experienced and the only remedy has been to take the matter to the Supreme Court which, however, entails increased costs. Mr. Chandy suggested that such conflicts might be avoided by giving the Registrar a statutory right to appear in all trade mark cases before the High Courts. This suggestion should not be taken to imply that the Judges and the Bar are not competent to deal with the questions by themselves; it only means that, if the Registrar is made a necessary party in all trade mark matters—a consequence which should flow from the fact that he is the authority which is primarily concerned with the achievement of uniformity of legal decisions—much of the confusion arising from multiplicity of decisions can be avoided.

The present provisions of the Act are unsatisfactory in regard to appeals. Under section 76 of the Act, an appeal will lie from any decision of the Registrar to "a High Court having jurisdiction." In interpreting the quoted words, the Calcutta and Lahore High Courts took different views. Mr. Justice Dass of the Calcutta High Court pointed out that the Act neither indicated the conditions that must be fulfilled by the High Court contemplated in the section, nor specified the jurisdiction of the High Court it contemplated. But Mr. Justice Rehman of the Lahore High Court felt that no High Court would have jurisdiction to hear an appeal from the decision of the Registrar of Trade Marks, unless there was a branch Registry within the territorial jurisdiction of that High Court. Amendment of section 76 is, therefore, very important. Perhaps, the most suitable amendment would be to lay down that appeals will be heard only by the Bombay, Calcutta, and Mysore High Courts, as the Trade Marks Offices are situated in these three centres, and that the parties should take their original trial in these centres. In respect of an infringement action pending in a District Court, the High Court with jurisdiction over that district could, of course, hear an appeal from that District Court.

Another urgent amendment to the Act needed is in respect of the International Convention for the protection of industrial property. India has not yet become a party to the Convention and is, therefore, deprived of the reciprocal benefits flowing therefrom. One of the important benefits is that an applicant for registration of a proposed mark in India will obtain a period of 6 months' time during which his mark would be protected in all the Convention countries from rival applicants; and that time could be utilised for submitting his application to the Registrars in those countries. The Indian Act has to be amended suitably so as to lay down precisely the benefits that will accrue to nationals of the Convention countries. Mr. Chandy did well to emphasize, in this connection, the need for India joining the International Convention soon.

A reference was made earlier to the large-scale piracy and infringements of well-known trade marks. Experience has shown that the Trade Marks Act is not entirely adequate to deal with all the problems that arise from

unscrupulous practices. The major problem to-day is to discover infringements quickly, catch hold of the guilty parties and inflict deterrent penalties upon the miscreants through due process of law. As the civil and criminal laws stand at present, the responsibility for tracing the infringers and booking them is entirely that of the trade marks owner. This would mean that a vigilant trade marks proprietor has to engage a large staff to find out infringements but it is not possible normally for him either to spend large sums of money or even to keep an efficient machinery for keeping a check. The newly formed Association can, perhaps, devise a machinery that can keep a vigilant look-out for malpractices and bring the offenders to book. Even then, nothing will deter the offenders so much as an amendment to the criminal law by which the offence of infringement can be made a cognisable offence, so that the assistance of the police would be available for prompt prevention. As the law stands at present, an infringer has plenty of time and notice to destroy all incriminating evidence, often making the task of proving the infringement very difficult. The relevant provisions of the Penal Code may perhaps be re-cast to deter all abettors of these malpractices.

Mr. Chandy's suggestion that provision should be made in law for disposal of criminal complaints about infringement of trade marks by summary trials, though somewhat controversial, deserves consideration, as its implementation would ensure prompt redress of wrongs. Likewise, it would be desirable to impose a legal obligation upon the producers of a wide variety of consumer goods to disclose their names and addresses on their labels or containers. At present, there is no such legal obligation on such traders, except in the case of the producers of drugs and foods. The Indian Merchandise Marks Act makes it obligatory only to indicate the country of origin in notified cases. This loophole has been exploited by the ingenious infringers to hide their identity. This state of affairs must be remedied. Similarly, the need for obtaining interim injunction in civil suits against offenders has been acutely felt. At present, trials drag on to such an extent that the offending party coolly carries on his nefarious activities even after a case is filed, especially as he knows that the Courts do not easily grant interim injunctions. If infringement suits and passing off actions obtain priority on the board of the High Court, the proprietors of trade marks will get considerable relief.

These are only a few of the directions in which executive and legislative action by the Central Government is imperative, in order to restrain unsocial activities on the part of merchants. Commercial bodies have been urging the Government of India to set up a committee to go into these and allied questions. It is gratifying to hear that the Government has already shown itself alive to the urgency of these questions. In the last session of Parliament, the Minister for Commerce and Industry promised to act speedily in the matter. In accordance with this assurance, the Government, we are told, proposes to appoint an expert committee to review the working of the Trade Marks Act, as well as the Merchandise Marks Act, and suggest measures for improving the administration of these and allied Acts in the national interest, particularly for dealing with evasions of the law. No official announcement has, of course, yet been made about the proposed Committee, but we trust that it will not be long delayed. In the United Kingdom, it will be interesting to note, in this connection, the appointment of the Goschen Committee in 1937 resulted in many amendments to the earlier Trade Marks Acts, and the U.K. Trade Marks Act, 1938, embodies many of the improvements that were suggested by that Committee. Law cannot, indeed, stand unchanged, while social and economic changes go on all around it. In India, the Trade Marks Act came on the statute after 50 years of demand for it. And now, a decade of working of this statute, useful as it has proved to be, has shown, as already stated, that it is not fully adequate to prevent anti-social activities. We have no doubt that the expert Committee to be appointed will cast a searching eye on all the drawbacks and suggest measures which will enable honest industrialists to carry on their activities without the fear of their good name being tarnished by the ingenious infringers and counterfeiters whose number seems to have grown enormously, thanks to the sellers' market that prevailed until recently. Although a buyers' market has come to prevail, their number is not likely to diminish owing to the high cost of production of genuine goods.

COMMUNIST EMPIRE IN METAMORPHOSIS ?

TILL recently, little unofficial information was allowed to get past the Iron Curtain in Europe. So vast and so perfect was the organisation of censorship that the rest of the world was allowed to hear, to see and to read only what the authorities behind the Curtain intended should be heard, seen or read. But the events in East Berlin, the mass arrests and the repressive measures that followed that unrest, the significant changes in the higher reaches of the Russian political hierarchy, such as the dismissal of Lavrenti Pavlovich Beria from the Deputy Premiership of the Soviet Union, have all whetted the appetite of the people outside the Curtain for news about the happenings behind it. Such reports as have escaped the vigilance of the Press censorship, coupled with eye-witnesses accounts of refugees fleeing from Eastern Europe, serve to show that in E. Europe all is not really as well as it was made out to be. Well-informed observers say that the Communist empire is now in the throes of a metamorphosis. They are of the opinion that, in Soviet Russia itself, sooner or later, the tremendous mobilised energies of the new society under the regime of the Bolsheviks "must burst the bonds of a system that had become obsolescent" and that the death of Stalin, the leader, has "acted as a catalyst in the latest processes of change that had been operating for some time."

These prophesies apart, there has been considerable unrest in Eastern Europe, in Berlin, Prague, Budapest, Warsaw and a host of other places. The Communist leaders are facing what to them is a dismal fact that workers are not machines. The East Berlin unrest, which hit the headlines of the world's Press last month, is by no means completely at an end, for reports from Bonn aver that sit-down strikes by workers are widespread. German workers are not easily roused into a revolt. They are a far too disciplined race for that. If the traditional German thoroughness and discipline, coupled with the ruthlessness of the Communist order, have not been able to act as deterrents to revolt, the only reasonable conclusion is that serious discontent prevails in the workers' ranks. It is not, however, in East Germany alone that the workers are discontented. In Czechoslovakia, industrial unrest is equally acute. Strikes have been staged in the big Tatra Motor Car Works, and the Lenin Armament Works (the former Skoda Works). Absenteeism in the country, as in East Germany, is reported to be rampant; some coal mines are working with only 50 per cent. complement of workers. In Hungary, the peasants resorted to passive resistance in order to win recognition of their demands.

It is impossible to divorce the present unrest in E. Europe from the political ideology of the countries. After all, the Governments in nearly all these countries have been made to order—the order of Moscow. Russia exercises rigorous control over the economies of these countries. Apart from the political affiliations of these countries with Russia, their trade and economic pattern is closely integrated with the Russian. Indeed, the economic plans of the satellite countries are geared to the Soviet Five-year Plan. Russian control of E. Europe is exercised through the Council of Mutual Economic Aid (Comecon), founded in January, 1949, with its headquarters in Moscow. Presumably, this was intended as a counterblast to similar organisations set up by the U.S. and the United Nations. But, unlike the American and the United Nations organisations, the Comecon works in great secrecy. Its activities are shrouded in mystery. But it is known that the Comecon has an elaborate organisation. Through this organisation and by other means, Russia controls the economies of its satellites. In Bulgaria, and more so in Hungary, Russia controls nearly all the important heavy industries. It has 50 per cent. interest in the bigger companies formed to work these industries. It supplies technicians and blue-prints, and Russians hold the key positions. The satellite countries are expected to buy from abroad only those materials which cannot be obtained within the Soviet bloc. This compels the industries to "make do" with second-rate materials; thus, the Hungarian textile industry must use inferior Russian cotton, while the Czechoslovak steel industry must accept inferior Soviet ore in preference to the superior Swedish ore it was formerly using. In fine, the E. European economy is completely regimented, and set to work along channels determined by Russia.

The immediate causes of the present unrest, the Communists in India will do well to note, must be set down to excessive economic regimentation imposed from without, aggressive currency reforms (such as the one recently introduced in Czechoslovakia), repressive labour laws and compulsory collectivisation of farms. Naturally enough, there has been resentment on the part of the people of these countries at being subjected to coercive external authority. In recent months, this resentment has been fanned by economic causes also. Far too much emphasis was placed on the development of heavy industry. This has resulted, it is stated, in a virtual famine of consumer goods. In their zeal for raising the output of heavy goods so essential for supporting gigantic defence industries, the authorities have overlooked a vital limiting factor, namely, the common citizen's ordinary needs. In Czechoslovakia, for instance, the investment target for heavy industry under the Five-year Plan has been set at about 30 per cent. of the national gross product. This has inevitably resulted in lop-sided development—in excessive concentration of capital in heavy industry and in starvation of capital for consumer goods industries. This criticism is applicable, though perhaps to a smaller extent, to economic plans in the Soviet Union also. Mr. Malenkov, it is noteworthy, has recently averred that the consumer will receive greater attention from the Government. This is held to indicate a certain change in Russia's internal economic policy.

How are the East European authorities meeting the new situation? Obviously, it is difficult to get accurate information. But all available reports claim that the rigour of the original Communist policies is being softened. The Communist leaders are now beginning to realise that private enterprise in trade, its counterpart in labour relations, namely, less irksome labour laws, and its counterpart in agriculture, peasant proprietorship, should be given a new fillip. Thus, in Hungary, licences for reopening shops and workshops, it is stated, are being issued with the promise of supplying raw materials and even credit. The Hungarian Government has rescinded its harsh labour laws under which workers could be prosecuted for absenteeism. A similar change has been made in Czechoslovakia. Economic targets in these countries are being revised in order to make them easier of achievement. In Poland, a new body, "Advisory Council for Collective Farmers," has been set up with a view to protecting the rights of farmers. At any rate, it is now seen that economic freedom and individual initiative cannot be curbed to an inordinate extent without stifling material progress. It is true that these values are recognised part of democratic administrations, and that their adoption by the once democratic Eastern Europe cannot connote a radical change. But they have been so ruthlessly suppressed in these regions that even a limited recognition of these values in that part of the world must be acclaimed as a major moral victory for democracy.

The unrest in E. Europe may have quite a few lessons for the underdeveloped countries, particularly the countries with a democratic set-up. For one thing, it shows that extremist political ideology cannot be a good substitute for private enterprise and initiative, that it cannot be trusted to deliver the goods. If excessive regimentation results in unrest, even in a technically advanced country such as Czechoslovakia, is it any more likely to produce better results in underdeveloped countries? It is not that planning, which involves a certain amount of co-ordination and centralised control, is inconsistent with democracy. But a democratic country would be well advised to keep regimentation to a minimum. Also, reliance on heavy industries, on rapid industrialisation, must be accompanied by sufficient emphasis on the consumer's immediate needs. A machine tool factory or a new steel plant is necessary in a way, but exclusive concentration on such developments at the sacrifice of more urgent needs, like cheaper *dhotis* or low-priced oilseeds, might cause serious discontentment. Secondly, the workers will do well to note that their freedom to exercise their main weapons, namely, collective bargaining and the right to strike, is best guaranteed in a democratic society, under a system of private enterprise, rather than under totalitarian and socialist systems. The essential strength of democracy lies in the fact that, under its banner, the compulsions and sacrifices are self-imposed and are, therefore, more readily accepted. But it is obviously slow in producing results. Democracy's task in underdeveloped countries lies in combining maximum speed of economic improvement with minimum sacrifices. How effectively it accomplishes this task will determine its future in these countries. And in this task, it should be clear that the economically advanced democracies have a special role to play.

TATA STEEL DIVIDENDS MAINTAINED

BONUS SHARES TO BE ISSUED—RIDDLE OF CEMENT PRICES

THURSDAY, 5 P.M.

THE performance of all the major markets in the city during the week under review was brighter than in the previous week and a distinctly firm undertone prevails at the time of writing. The feeling of pessimism that prevailed a week or two ago has more or less waned. It is true that the volume of business has not expanded, but operators appear to be in a confident mood. This is particularly the case with the share market

MARKET GOSSIP

where the week has ended with widespread modest gains. The fillip was provided by the belated Government's announcement on the retention prices for the Tata Iron and Steel Co., Ltd. This announcement, to the particulars of which we shall presently refer, had a stimulating effect on the market. Although the increase in price sanctioned by the Government fell short of the initial expectations of the market, it was a little better than the market's anticipation on the eve of the announcement. Tata Deferreds, which had gone down to a low of Rs. 1,863-12 on Monday morning, quickly rebounded to Rs. 1,925 on replacement buying by bulls and covering by bears and finished at Rs. 1,913-12. The Ordinaries also improved from Rs. 323-12 to Rs. 331-12 and closed at Rs. 329-12, though the extent of rise was proportionately less than that in Deferreds.

• • • •

The firmness of steel shares had a sympathetic effect on other counters also but this was not the sole cause for the improvement in their value. There were also other factors. Textile shares, for instance, looked up on encouraging reports about the profits for the first half of 1953 and on rumours of abolition of the export duty on coarse and medium count cotton goods. Among the miscellaneous shares, Belapurs ruled strong on the realisation that the adverse effect of the recent increase in the land rentals had been exaggerated. Well-informed sources point out that, while the result of this development will be an addition of about Rs. 1.75 lakhs to the costs of the Company, the management should be able to neutralise this addition, in due course, by endeavouring to secure still better yield from the cane grown in the Company's estates. Another scrip which spurted on specific company factors was Scindias. Market circles now feel that the results of the Scindia Company for 1952-53, when announced, will be far more favourable than expected and that the return to shareholders may be increased. It, however, remains to be seen as to how long this new-found enthusiasm for this scrip will last. The short-term outlook for shipping is by no means rosy; it is subject to a greater number of uncertain and complicated factors than many of the other industries in this country.

• • • •

The trend of the bullion market is steady. The slack season is reflected in the low level of activity, narrow price fluctuations and poor offtake. There is, however, still a sizable amount of speculative interest in the market. This is evident from the fairly high level of carry-over charges, which are about two rupees in silver and a rupee in gold, both in favour of the bulls. The technical and the statistical position is bullish alike in gold and silver. But if this is not strikingly reflected in the trend of prices, it is because of the poor demand for ready gold and silver. In fact, the prominent bulls are chary of squeezing the bears now as the circumstances are not propitious for it. If anything, they are keen on keeping the bears alive till the commencement of the busy season two months hence, when, in their opinion, it will be more profitable to squeeze their rivals.

• • • •

Arrivals of smuggled gold have considerably declined, even after making allowance for the fact that the monsoon period is not generally favourable for smugglers. A section of the market feels that, in the coming months, smuggling may not be on as large a scale as in the past, for three reasons. First, the supply of black market dollars in India is fast diminishing. Secondly, the vigilance of the Customs authorities is greater than ever before. And, thirdly, the current prices of gold do not provide adequate margin for smugglers. So much for the supply of gold through smuggling. As regards the supply from the Kolar fields, there is a tendency on the part of the management of the Kolar companies not to follow the market in its downward trend. No gold has been sold by it during this week at anything below Rs. 87-8 and it would not be surprising if it were to play for still higher prices. With their cost of production remaining rigid, these companies will naturally try to get the highest price possible. On the demand side, the offtake has fallen and is lagging behind arrivals, albeit by a small margin. Calcutta, which was absorbing large quantities of ready gold in recent weeks, is not showing any interest worth mentioning, presumably because of the civil disturbances. It is also reported that smuggling into Burma through Calcutta has practically died down. Whether this is a temporary phase or not nobody is able to judge. One view is that the floating stocks of gold in Burma may have increased to such an extent that they must be digested first before fresh demand can arise from that quarter.

It was generally known in the Share Market that the Directors of the Tata Iron and Steel Co., Ltd., would decide the dividends for the year 1952-53 immediately after the Government's decision on the retention price of steel was known. The Government's announcement on prices was published late on Monday and, within 72 hours of that announcement, the Directors took a decision on the dividends they would recommend for the past accounting year of the Company. Thus, at a Board meeting held at 5 p.m. to-day (Thursday), the Directors decided to recommend the same dividends as those for the preceding year (1951-52) on the Ordinary and Deferred shares. Accordingly, the dividend for 1952-53 will be Rs. 21 on Ordinary shares and Rs. 115-3 on Deferred shares. The following table shows how the dividends compare with those for the preceding 14 years:

	Per share					
	Ordinary			Deferred		
	Rs.	a.	p.	Rs.	a.	p.
1938-39	18	0	0	93	10	5
1939-40	25	0	0	143	11	7
1940-41	29	0	0	172	10	0
1941-42	27	0	0	158	4	4
1942-43	23	0	0	129	8	9
1943-44	23	0	0	129	8	9
1944-45	23	0	0	129	8	9
1945-46	23	0	0	129	8	9
1946-47	19	0	0	100	13	4
1947-48	14	0	0	64	15	0
1948-49	14	0	0	64	15	0
1949-50	16	0	0	79	5	0
1950-51	18	0	0	93	10	5
1951-52	21	0	0	115	3	0
1952-53	21	0	0	115	3	0

• • • •

The Directors' decision is in accordance with the general expectation of the market. During the last few days, however, there were two rumours. One rumour was that the dividend would be lowered because production of steel in 1952-53 was a little less than in the previous year. The other claimed that, as this was the last year for paying a dividend on Deferred shares, the Directors would decide to give a parting gift by proposing higher dividends. But neither of these rumours was given much credence. The vast majority of operators took it for granted that the dividends would remain unchanged. A higher dividend was ruled out, because it would prejudice the Company's case for substantial financial assistance from the Government for putting through its modernisation and expansion programmes. A lower dividend too was ruled out, because the fall in output in the year under reference was negligible and the Company had received a handsome increase in its retention prices for that year.

• • • •

After their meeting to-day, the Directors of the TISCO announced two more important decisions. One was their acceptance of Mr. M. C. Setalvad's award on the ratio of conversion of Deferreds into Ordinaries without any reservation, in accordance with an undertaking given by them to the holders of Ordinary and Deferred shares on 11th June, 1951. This decision, we are told, was taken by the Directors at their meeting held on the 2nd inst., but was announced only to-day. The other decision of the Directors was to raise the capital structure of the Company by issuing one Ordinary bonus share for every one share held after the conversion scheme was put through. For the exact wording of their decisions and the reasons that prompted them to take the decisions, readers' attention is invited to the full text of their Press note published bleow:

"In accordance with the undertaking given by the Directors in their circular dated 11th June, 1951, addressed to the holders of Ordinary and Deferred shares of the Company that the decision of Mr. Setalvad on the question of the ratio fixed by him after comprehensive enquiry would be accepted by the Board of Directors of the Company without reservation and would be incorporated in a scheme to be submitted to the High Court for being passed at separate meetings of holders of Ordinary and Deferred shares and for sanction by the High Court in accordance with the provisions of section 153 of the Indian Companies Act, the Board of Directors at their meeting held on 2nd July, 1953 resolved to carry out the above undertaking.

"In view of the unbalanced capital structure of the Company, the Directors considered it desirable to take this opportunity to improve the capital structure and have decided that along with the conversion of one Deferred share into six Ordinary shares to be given effect to in accordance with the decision of Mr. Setalvad, the holders of the Ordinary shares be given one bonus share in respect of every one share held by them after conversion. The Directors propose to incorporate these recommendations in the scheme to be submitted to the High Court for carrying out the conversion."

• • • •

That the Directors intended to issue bonus shares was first hinted at by Mr. J. R. D. Tata in the course of his informal conversation with the representatives of Deferred shareholders about a month ago. But he was believed to have told them that they might issue bonus shares only at the rate of one for every two shares. During the last few days, there were, however, rumours that the bonus issue would be at the rate of a share for share but it was not readily believed by the majority of operators. The Directors' decision will, therefore, come as a pleasant surprise to many, though not to those operators with a gambling mentality. The latter believe that this decision would increase the number of Ordinary shares enormously, thereby raising the floating stocks of shares in the market, an inconvenient development to them. Genuine investors, however, will welcome the Directors' decision for obvious reasons.

• • • •

That the capital structure of the Company is unbalanced will be evident to anyone who cares to look at its balance-sheet. As against a net block of Rs. 14.59 crores as on 31st March, 1952, the Company's paid-up capital stands at Rs. 10.47 crores only. Considering the large volume of funds required for working capital and the substantial additions to the block account that are taking place year after year, the Company will be justified in having a much larger paid-up capital than at present. As a result of the capital reconstruction that will follow the conversion of Deferred shares and also the issue of bonus shares, the paid-up capital will rise to stand at the majestic figure of Rs. 17,32,56,900. The Directors' decision to issue bonus shares on the lines indicated by them is also justified by the large reserves held by the Company. These reserves aggregate as much as Rs. 12.65 crores (as on 31-3-1952), of which the general reserve alone accounts for Rs. 10.25 crores. As against this, the sum that will be absorbed by capitalisation is only about Rs. 4.82 crores. The total number of Ordinary shares will then be as many as 1,285,000, as against only 350,000 now.

• • • •

The Government has at last decided in favour of the increase in retention prices for the Tata Iron and Steel Company Ltd. This has been a live issue for the last several months for speculators on the Stock Exchange, though not for the steel consumers, because it had been known that any increase in these prices would not necessarily mean a similar increase for steel users. This has now been confirmed, for neither the increase of Rs. 32 per ton, granted by the Government in the Company's retention prices for April 1952 to March 1953, nor the increase of Rs. 47 per ton over the existing retention prices for the period April, 1953 to March 1955, will affect the controlled price of steel for consumers.

• • • •

The increase in the Company's retention prices follows the report of the Tariff Commission, which, in pursuance of the Government's request, communicated to it in November, 1952, enquired into the Company's case for such an increase. The Commission was also requested to recommend retention prices for as long a period in the future as possible, that is to say, the period upto which a major change in the structure of production is not likely to take place. The Commission found—the Company's representatives also eventually agreed with the Commission's findings—that there was no need for revising the existing retention prices for the period July, 1951—March, 1952. The Government has accepted this recommendation.

• • • •

The Commission, therefore, concentrated its attention on the case for increase in retention prices for April, 1952-March, 1953, and for April 1953-March, 1955. The latter period has been chosen, because the effects of modernisation and expansion in steel output are not likely to be felt before that year; the Company's expansion programme aims at increasing the production of saleable steel to 930,000 tons by the year 1958-59. Since the Company's accounts were available, at the time of the enquiry, only for the period of 9 months upto December, 1952, the Commission has taken this period as representative of the year 1952-53. The over-all increase in the revised ex-works retention prices for 1952-53 over the existing prices, as worked out by the Commission, amounts to Rs. 32.31 per ton of saleable steel. In arriving at this figure, the only significant change in the basis of calculation that has been made, is in respect of the cost of coal, raised from the Company's own collieries. This cost has been assumed at the actual cost of raising, rather than the lower controlled price of coal. The return on block has, however, been kept at the previous rate of 8 per cent. In accepting these recommendations, the Government does not consider that such a major change, in respect of cost of coal is "justifiable," not only as it affects this Company but also other steel producers. It has announced that the Tariff Commission will be requested to go into this question again. But it has allowed the Commission's basis for estimating the coal costs to stand in so far as the year 1952-53 is concerned, since a somewhat similar procedure was allowed to be adopted for the Steel Corporation of Bengal when its retention prices were revised in 1952. In effect, the Government has accepted the Commission's recommendation for an increase of Rs. 32.31 per ton in Tisco's existing retention prices (Rs. 284 per ton) for 1952-53.

• • • •

The Government has, however, whittled down the Commission's recommendations in respect of retention prices for the period April, 1953 to March, 1955. The Commission recommended an increase of Rs. 66.98 over the existing prices. In arriving at this figure, the Commission included a return of 10 per cent. on the total gross block, subject to the condition that the Company should set aside the amount of extra return of 2 per cent., less taxation, for the specific purpose of modernisation and expansion in addition to the usual allocation to reserve and that no part of it should be utilised towards the payment of the Managing Agency commission or dividends or profit-sharing bonus or for distribution of profits in any other way. The Commission justified the higher rate of return on the ground that the Company should be enabled to set aside larger amount to reserves for financing

(Continued on page 187)

SHARE MARKETS FIRM UP

STEELS ADVANCE SHARPLY

(From Our Own Correspondents)

BOMBAY, 23rd *July*

THE dominant feature of trading on the Stock Exchange during the week under review was the accession of strength to steel shares after a long spell of inactivity. These shares were concerned in fairly large and active dealings, activity having been touched off by the announcement of the increased steel retention prices for the Tata Iron and Steel Co., Ltd., on Monday night. This imparted firmness to the market as a whole. Textile shares which made headway last week not only consolidated their gains, but scored fresh gains, assisted by the strength of steel shares and proximity of interim dividend announcements. There were widespread improvements in other leading industrials. Despite profit-taking attracted by higher levels towards the close, equities finished the week with fair gains on balance.

The market's suspense over the retention prices for the Tata Iron and Steel Company was relieved on Monday night when the Government of India announced its decision on the Tariff Commission's recommendations. The Government granted no increase in price for the period July, 1951 to March, 1952, but gave an increase of Rs. 32 per ton for the year 1952-53 and of Rs. 47 per ton for the subsequent two years. The prices for the period prior to 1st April, 1952 and for the year 1952-53 were in accordance with the Commission's recommendations, while that for the subsequent two years is a reduction from Rs. 67 per ton recommended by the Commission. Though the Government's decisions were below the Company's expectations, they were more than what the market expected, insofar as the price for the past year was concerned. The Government's announcement was, therefore, greeted by the Share Market, as stated above, with a smart rise in prices. The uncertainty regarding the retention price issue having been resolved, the market's attention was diverted towards speculation over the dividends on Tata Steel shares. The Directors have announced this evening their decision to maintain the dividend at Rs. 115-3 per deferred share and at Rs. 21 per ordinary share.

Sectionwise, steels provided the main stimulant for the market. Tata Deferreds opened the week at Rs. 1,866-4 and made a spirited advance to Rs. 1,925 yesterday, but profit-taking at this level stalled further advance and there was a reaction to Rs. 1,913-12 at the close. Tata Ordinaries advanced from Rs. 324-8 to Rs. 333-12, but closed lower at Rs. 329-12. Indian Irons were hesitant during the early sessions, but the strength of Tata Deferreds and expectations of an early settlement of the labour dispute at Burnpur induced a mild recovery to Rs. 24-2½ before they closed at Rs. 24, as against last week's closing of Rs. 23-11.

Sentiment in textile shares was sustained by the heartening performance of steels. Despite intermittent profit-taking, almost the entire list recorded notable gains. Bombay Dyeings which were quoted at Rs. 378-12 at the close of last week advanced to Rs. 386-14, though they closed to-day slightly lower at Rs. 385-10. Kohinoors firmed up from Rs. 305-12 to Rs. 310-8, but finished at Rs. 309. Central Indias added a rupee to Rs. 162 and Century Re. 1-8 to Rs. 277. Gokaks hardened by Rs. 2-8 to Rs. 225, New Greats by a rupee to Rs. 151 and Podars by Rs. 3-12 to Rs. 330. Standards did well and appreciated by Rs. 3-12 to Rs. 320, Svadeshis by Rs. 5 to Rs. 253 and Vishnus by Rs. 2-8 to Rs. 152-8, while Simplex showed no change, on balance, at Rs. 172-8.

Fair enquiries were noted in bank shares and fractional rises were noted. Barodas were a fraction lower at Rs. 111-12. Centrals gained a rupee to Rs. 66, while their New shares were unchanged at Rs. 67. Imperial Fully Paids were marked up at Rs. 1,837-8 *ex-div.* (dividend Rs. 40) as against Rs. 1,870 *cum-div.* last week and the Contributories at Rs. 450 *ex-div.* (dividend Rs. 10), as against Rs. 457-8 *cum-div.* Indias were fractionally higher at Rs. 159. United Commercials were placed As. 4 lower at Rs. 33-12.

A decline of Rs. 200 to Rs. 6,900 in Orientals was a feature in the insurance section. New Indias hardened by a rupee to Rs. 41 and Universals gained as much to Rs. 8-15. Vulcans were taken up As. 5 higher to Rs. 11-8. Indian Mercantiles were put up by As. 4 to Rs. 38-8. Empires were unchanged at Rs. 38-8, Jupiters at Rs. 7-1 and British Indias at Rs. 14-4.

On continued investment enquiries, public utility shares generally displayed a steady tone. Ahmedabad Electrics were in demand to go up by Re. 1-9 to Rs. 111-4. Bombay Suburbans were held at Rs. 127-8 and Surat Electrics were stagnant at Rs. 123-12. Andhra Valleys staged an advance of Rs. 13-12 to Rs. 1,453-12. Tata Hydros were well held at Rs. 155, but Tata Powers had a slight reaction to Rs. 1,545.

In the miscellaneous section, Associated Cements were in good demand and appreciated by Rs. 2-4 to Rs. 173-4. Belapurs stood Rs. 3-8 higher at Rs. 232. Bombay-Burmahs Old staged a rise of Rs. 6-14 to Rs. 361-14, but the New shares were unchanged at Rs. 133-12. Killick Industries were taken up Rs. 2 better at Rs. 150-8. On renewed rumours about the declaration of an interim dividend, National Rayons rallied from Rs. 104-8 to Rs. 111-8, but profit-taking brought it lower to Rs. 108-8. Tata Chemicals put on As. 7 to Rs. 9-5½ and Tata Oils As. 12 to Rs. 32-12. Walchandnagars improved by Rs. 5 to Rs. 141-4. Wimcos rose from Rs. 216-14 to Rs. 221-4.

In the transport group, Scindias came into the limelight after a long time on reports of better working results for the past year and expectations of higher dividend. The shares were, therefore, lifted from Rs. 12-14 to Rs. 13-10, before they closed at Rs. 13-8. Air-Indias were quoted at Rs. 86-8 and Air-India Internationals at Rs. 106-8. Bharat Lines were placed at Rs. 85.

In the mining and engineering section, Shivrajpurs added Re. 1-12 to Rs. 57-12. Indian Coppers were a fraction better at Rs. 2-13½. B.B. Petrols were in demand to go up by As. 1½ to Re. 1-2½. Alcocks had an impressive rise of Rs. 7-8 to Rs. 293-12. Premier Constructions moved up by Rs. 2-8 to Rs. 83-8. Tata Locomotives were unchanged at Rs. 84.

Calcutta Stock Exchange

CALCUTTA, 21st *July*

With prices moving further downwards in the absence of any incentives, the Calcutta Stock Exchange was featureless during the week. Excepting for a mild recovery in Indian Irons and a few miscellaneous counters to-day, the weakness received a further momentum during the last two sessions of the week, on reports of the willingness of the Communists to recommence peace talks in Pan Mun Jon. The civil disturbances in the City and the suburbs, which affected production in many factories, was also a factor which kept away investment support. The New Delhi report that the Estate Duty Bill would in all likelihood become law during the forthcoming session of Parliament chilled enthusiasm, if any left, and added further caution to the market attitude which was already cautious.

Earlier, rumours that the Government of India would shortly announce a decision on the Tariff Commission's report on retention prices for steel were not taken any note of, since such reports in the last two months had not materialised. However, the Government announcement was at long last made last night, and to-day an air of enthusiasm was in evidence in the speculative counter, Indian Irons, which were raised to Rs. 23-15 from the overnight quotation of Rs. 23-9. Sentiment to-day was also better in the miscellaneous section, although price gains were not marked. Although prices of hessian and sacking staged an impressive recovery, interests in jute shares was just nominal, in view of the general weakness and the diversion of funds for the State loans, the major ones of which having been declared successful. The announcement of the cancellation of the export duty on jute specialities is indeed welcomed, but it is stated that business in these lines is yet to be developed. Coal shares were uninteresting, and this is a reflection of the stiff competition India has been facing in the Far Eastern markets in recent months from other coal-producing countries. Trade circles are one in the opinion that more steps by the Government would be necessary to step up exports of coal, and among the suggestions offered for promoting exports is that of giving a rebate on railway freight on export coal.

Sectionwise, Indian Irons opened at Rs. 23-10 on Thursday last and moved back to Rs. 23-6. At this stage, news of the increase in retention prices forced a recovery to Rs. 23-15 at the close to-day. Kumardhubis were quiet at Rs. 7-8, while National Irons were unchanged at Rs. 4-12. Texmacos eased from Rs. 5-12 to Rs. 5-10, and Jessops realised Rs. 24-5 in small lots.

Jutes were lifeless, and further losses were reported. Speculative Howrahs were featureless at Rs. 23-10, and Caledonians dropped from Rs. 169 to Rs. 160. Lansdownes found buyers at the lower rate of Rs. 130 and Megnas declined from Rs. 101 to Rs. 96. At Rs. 160, Budge Budges lacked strength, while Champadanies were sold at Rs. 150-8. Deltas showed little change at Rs. 228, but Naihattis were better at Rs. 120. Presidencies were fractionally lower at Rs. 4-13.

Coals were deserted counters, as buyers were wanting to know what steps the Government would take to increase coal shipments. Bengals hovered around Rs. 527, while West Bengals and Burrakurs at Rs. 4-11 and Rs. 9-14 accounted for a loss of As. 2 each. East Indians were dealt with on a cum-dividend basis at Rs. 24-4. Samlas were attended at Rs. 7-5, at which rate the loss was by As. 3.

Tea shares presented a mixed trend, and some buyers were interested in scrips now coming to hand at lower levels. From a previous rate of Rs. 18-9, Murphulani Ordinaries jumped to Rs. 20 on interested buying, while Hasimaras declined from Rs. 28-8 to Rs. 27-2. Patrakolas were traded at Rs. 110, disclosing a loss of Rs. 14. Hantaparas were unchanged at Rs. 152.

In the miscellaneous section, F. & C. Oslers were supported up to Rs. 5-14, recording a gain of As. 11. Martin Burns were slightly better to-day at Rs. 18-3. Ganges Ropes gained as much as five points to Rs. 200, and Jardine Hendersons were wanted at an improved rate of Rs. 130. Indian Coppers changed hands at Rs. 2-14, Indian Cables at Rs. 18-7, and India Steamships at Rs. 6-10. There was some demand in the sugar section, where Darbhangas changed hands at Rs. 11, as against Rs. 10-4 previously and Carews were As. 2 better at Rs. 6-6.

Madras Stock Exchange

MADRAS, 21st *July*

There was considerable broadening of interest in the Madras Stock Exchange during the week under review. This was to some extent induced by encouraging Bombay advices. Textiles were in the limelight. The hardening tendency that was in evidence last week gathered some stimulus on reports of favourable export demand. Rubber scrips, among plantings, ruled cheerful, on prospects of continued demand for rubber from the leading consumers. Tea scrips, as usual, came in for selective buying, while coffees were virtually dull. Miscellaneous shares lacked support. Consequently, there was a sprinkling of gains and losses, the former predominating.

The turnover in textile scrips was fair. P. Andavars 'A' and 'B' registered a gain of Rs. 4 each to finish at Rs. 54 and Rs. 79, respectively. Rajalakshmis were higher by Rs. 2 at Rs. 74. Rangavilas improved from Rs. 43-8 to Rs. 44-8. Coimbatore Spinnings advanced by As 8 to close at Rs. 41-8. Maduras rallied As. 6 to Rs. 36-14. Buckinghams, however, lost Re. 1 to Rs. 119 and Dhanalakshmis As. 8 to Rs. 178.

Among plantings, rubbers were in good demand. Malankaras changed hands at Rs. 105, as against Rs. 104, and Kalasas at Rs. 12, as against Rs. 11-8. Travancore Rubbers and Peninsulars advanced by As. 2 each to finish at Rs. 12 and Rs. 8-7 respectively. Rajagiris were slightly better at Rs. 10-12 and Pullangodes at Rs. 2-7.

Teas met with some enquiry. Business was done in Highland Produces at Rs. 10-6, as against Rs. 10. Parksides were enquired As. 4 higher at Rs. 13-4. But, Cembras lost As. 1½ to Rs. 2-13 and Mysore Plantations an anna to As. 11. Outcherlonys (tea and coffee) were, however, better at Rs. 3-15.

Coffee shares lacked support. Coffee Lands eased by an anna and closed at Rs. 10-7. But, Mysore Coffees were unchanged at As. 9. Consolidate Coffees, however, were slightly better at Rs. 18-8 and Kadur Coffees at Rs. 1-9 *cum-div.*

In the miscellaneous section, Aluminium Industries were done higher by As. 4 at Rs. 11-10 *cum-div.* The Directors have recommended a final dividend of Rs. 6½ per cent. which together with the interim dividend makes in all 12½ per cent. for the year ended 31st March, 1953. South Arcot Electrics were quiet at Rs. 93-8 *cum-div.* The Company has declared a dividend of 6½ per cent. for the year ended 31st December, 1952, the same as in the previous year. Andhra Cements 'A' shot up from Rs. 94-8 *ex-div.* to Rs. 97-8 *cum-div.* Andhra Cements 'B' were enquired at Rs. 9-14, as compared with Rs. 9-10, a week ago. Indian Cements hardened by As. 4 to finish at Rs. 17-10. Mysore Papers were enquired at Rs. 14-2 *cum-div.*, as against Rs. 14-4. The Directors have recommended a dividend of 6½ per cent. and a bonus of 3½ per cent. on ordinary shares for the year ended 31st March, 1953, the same as in the previous year.

Among banks, Imperial Banks were done at Rs. 1,815 *ex-div.*, as against Rs. 1,855 *cum-div.*, and Contributories at Rs 435 *ex-div.* as against Rs. 445 *cum-div.* The Directors have declared an interim dividend of 8 per cent. for the half-year ended 30th June, 1953. The dividend for the year 1952 was 16 per cent. Indian Banks Rs. 100 paid-ups, hardened by As. 12 to finish at Rs. 178-12. Andhra Banks Rs. 50 paid-ups were in demand at Rs. 53, as against Rs. 51-12. Indo-Commercial Banks 'C' eased by As. 8 to close at Rs 30-8 and Travancores by As. 4 to Rs. 11-2.

Notice

THE CENTRAL BANK OF INDIA LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Share Transfer Books of the Bank will be closed from SATURDAY the 8th August to SATURDAY the 22nd August, 1953 (both days inclusive).

By Order of the Board,
H. C. CAPTAIN,
Managing Director.

22nd *July*, 1953.

N.B.—Warrants for the *Ad-Interim* Dividend for the half-year ended 30th June, 1953, on both Ordinary and Ordinary 'A' Shares will be posted to the Shareholders to their registered addresses on and after the 25th August, 1953. Intimation of any change of address should be given to the Bank immediately.

NEWS IN BRIEF

THE Commodity Controls Committee, which was appointed by the Government of India in October, 1952, submitted its report to the Government of India on Monday last.

Against a total budget provision of Rs. 36.66 crores for Grow-more-food schemes during 1953-54, the total amount so far sanctioned by the Government of India is Rs. 6.98 crores.

The Central Tractor Organisation has reclaimed about one million acres of *kans*-infected land in Central India and cleared 37,000 acres of jungle in the U.P. Teral in the past six years. The additional quantity of foodgrains produced during the period amounts to 5,00,000 tons, the average crop yield being about 750 lbs. per acre. The cost of *kans* land reclamation is estimated at Rs. 60 lakhs.

The Government of Bombay has fixed the price of all loose cement at Rs. 71 per ton (f.o.r. destination). The price of all packed cement, however, is Rs. 71 per ton, plus the actual cost of packing subject to a maximum of Rs. 11-14 per ton in full wagon-loads and f.o.r. destination. These packing charges apply only to cement packed in new bags, while those for packings in old bags are subject to settlement between buyers and sellers. The prices are effective from 1st of this month up to 30th September next.

The Punjab Government has, as a temporary measure, decided to distribute sugar at controlled rates in the towns of Simla, Ambala, Ludhiana, Jullundur and Amritsar with immediate effect. At Simla, the supply of sugar for household consumption has already been started through foodgrains depots, while, in the other four towns, stocks will arrive shortly and these will be distributed on rice ration cards and through rice depots. Free sale of sugar will also be available in the market as before. The step has been taken to check rise in sugar prices.

Rules for the registration and licensing of industrial undertakings under the Industries (Development and Regulation) Act, 1951, are being amended by the Government of India. This move is a sequel to the enactment, by Parliament in May last, of the Industries (Development and Regulation) Amendment Act, 1953, which has, *inter alia*, amended some of the existing provisions relating to registration and licensing and also introduced some new provisions pertaining to these matters. The amendments proposed to be made in the rules have been published in a *Gazette of India* (*Extraordinary*) dated 20th July, 1953. Any objection or suggestion in respect of these draft amendments may be sent to the Ministry of Commerce and Industry, Government of India, New Delhi, before 5th August next. After that date, the amendments will be taken into consideration with a view to putting them into final form, and then they will be brought into force.

From Abroad

Britain is to purchase 300,000 tons of coal from France during the next four months. The price and the quality of coal are not known.

A double taxation agreement has been concluded between the U.S. and Germany. The agreement covers U.S. income-tax, corporation tax and the German equivalents.

Air-Ceylon has suspended its international services. The regional services, namely, Colombo-Madras-Colombo and Colombo-Trichinopoly-Colombo, will, however, operate according to normal schedules.

The Egyptian National Production Council has recommended to the Government the establishment of an arsenal and a shipbuilding yard at Alexandria harbour. The proposed scheme is estimated to cost £1.25 million.

Legislation permitting wheat growers in the U.S. to plant 62 million acres of land next year, as against the 55 million acres provided in the old law, has been signed by President Eisenhower.

The Government of Pakistan has declared cigarettes as an essential commodity. It has accordingly brought this item under the purview of the Essential Commodities Control and Distribution Order, 1953.

An aluminium factory is to be established at Manila (Philippines) by the Reynolds Metals Company of the U.S. The factory, estimated to cost 3 million pesos, will produce initially 8.5 million lbs. of aluminium per annum.

The Government of Yugoslavia has banned imports of motor vehicles and restricted the import of special vehicles, ambulances, mobile workshops, post office vans, pig iron, rails, sanitary equipment, chemical products and toys.

The number of motor cars manufactured in the U.S. during the first half of this year was 3,106,000—a record in the history of the American automobile industry—which is higher by as much as one million cars produced in the corresponding half of last year.

The Trans World Airlines are planning expansion of tourist type flights beyond Cairo to India with effect from 1st October. Additional tourist service from India across the Pacific will thus enable the T.W.A. and Northwest Airlines jointly to make available round-the-world service at reduced fares.

A comprehensive exhibition of the methods of rationalisation in industry, under the slogan "Step up your living standard," began at Dusseldorf on the 16th inst. The exhibition, which will last till 18th August next, provides a synopsis of rationalisation possibilities in all the sectors of the German economy.

A trade pact has just been concluded between Indonesia and Czechoslovakia entailing trade either way of 110 million rupiahs. Under the pact, Indonesia will export to Czechoslovakia mainly copper, pepper, rubber and tin, in return for machinery, diesel engines, typewriters, matches, paper and building materials.

With the immersion of heavy cable (one mile in length) in the English Channel, between Dover and Calais as soon as the weather permits, the first stage of the £4.5-million power line between France and Britain will be completed. If the cable is found sound, the British Electricity Authority will press on with the scheme for a two-way exchange.

The U.S. Senate Banking Committee has approved the Bill which seeks to empower the Government to dispose of its 28 synthetic rubber plants to private industry before 1st July, 1954. A commission of private citizens is to be appointed by the White House to handle the programme. The proposed Commission will negotiate sales and report to the Congress by 30th June, 1954.

A World Bank Mission, which is on a fortnight's visit to Pakistan, arrived in Karachi on Sunday last. The Mission is studying the various development projects of the Pakistan Government and is expected to recommend the amount of loan that the Bank may grant to Pakistan. Pakistan has so far received from the Bank two loans aggregating $30.27 million.

The Burmese Government has decided to demonetise, with effect from 1st August next, all Indian coins bearing the effigy of British rulers which are in circulation in the country. Arrangements for exchanging Indian coins with newly-issued Burmese coins have been made in all Government treasuries, sub-treasuries and the Union Bank of Burma.

The University of Wisconsin will join the Indian and U.S. Governments in a two-year programme to help equip India's top engineering colleges and laboratories with scientific and professional equipment. The University will establish contacts with seven Indian engineering institutions, supervise the selection of technical educators going to India and co-ordinate the equipment purchasing programme.

As many as 2,500 sewing machines are being produced every day in West Germany. About 60 per cent. of this production is exported. A few producers sell almost their entire output abroad. The demand for sewing machines created in Germany by the war and its aftermath has still not been satisfied. Thus, only one in every six families has a sewing machine to-day, whereas, formerly, there was one sewing machine for every three families.

Measures to promote exports of several Brazilian goods which have been priced out of the world markets are provided in the new decree issued by the Bank of Brazil which has already been enforced. Under the decree, exporters of a long list of products are allotted 50 per cent. of the foreign exchange earnings for sale in the free exchange market. The decree will remain in force till the end of December, 1953, after which the allotment will be lowered to 40 per cent. until 9th July, 1954.

In line with the British Government's policy of expanding rice-growing in the underdeveloped countries is the announcement from Tanganyika that plans are now nearly complete for a survey of the Kilombero Valley and the lower reaches of the river Rufiji as a rice-producing zone. At present, cotton, sugarcane, tobacco, sunflower and vegetables are grown in the valley. It is believed that still higher economic returns could be obtained from the cultivation of rice. Before definite plans can be formulated, however, extensive and costly hydrological surveys will have to be carried out, for the Kilombero and the Rufiji suffer badly from floods. It is estimated that necessary surveys will cost nearly £125,000. Rice-growing in the territory has been given a further fillip in recent years through increasing demand for food. Imports were at first set at 51,000 tons of maize for the current year, but there are already indications to suggest that this amount may have to be nearly doubled.

An agreement between an unofficial British delegation and the Chinese National Import and Export Corporation has been signed recently. The agreement provides for trade amounting to £30 million each way. Payments are to be made in sterling. Under the new agreement, British business men will supply China with metal and metal products machinery, electrical appliances, chemical materials, tools and instrument, medical and surgical equipment, communications and transport equipment and other goods worth £30 million. In return, China will sell to Britain vegetable oil, oilseeds and animal products, egg products, tea, silk, handicraft products and other goods worth the same amount. The mission was organised by the British Council for the Promotion of International Trade. The provision of export of goods to China will, however, be subject to British Government export licensing.

PERSONAL

GEN. K. M. Cariappa, India's High Commissioner-designate to Australia and New Zealand, left for Sydney on Saturday last.

Mr. Neville N. Wadia, Chairman, Bombay Dyeing and Manufacturing Co., Ltd., left for Europe on a business visit.

Mr. K. T. Chandy, Secretary, Lever Brothers Ltd., has been elected Chairman of the newly formed Trade Marks Owners' Association of India.

Mr. Nakul Sen, I.C.S., has been appointed to officiate as Secretary to the Central Ministry of Rehabilitation, *vice* Mr. C. N. Chanda who has gone on leave.

Mr. K. K. Bhargav, Insurance Commissioner of the Employees' State Insurance Corporation, is in charge of the Corporation, *vice* Dr. C. L. Catial who has resigned.

Mr. Peary Lal Uppal, lately Director of Inspection, Income-tax, has been appointed Member of the C.B.R. for Estate Duty. Mr. R. R. Das, an officer of special duty in the C.B.R., has been appointed its Secretary.

Mr. Chandulal Trivedi, until recently Governor of Punjab (I), has been appointed Special Officer for Andhra Affairs under the Government of India. Mr. Trivedi is to assist in expediting administrative arrangements and other steps necessary for the formation of the Andhra State on 1st October, 1953.

Mr. T. Swaminathan, Textile Commissioner, Government of India, who has been deputed to observe the latest developments in the textile industry in the U.K. and the Continent, left for London on Saturday last. After his return, he will go to Japan to make a special study of the decentralisation of the industry in that country.

Mr. T. R. A. Pai, of the Canara Mutual Life Insurance Co., Ltd., and Mr. S. N. Agashe, of the Central Mutual Life Insurance Co., Ltd., have been elected President and Honorary Secretary, respectively, of the Association of Mutual Life Offices in India for 1953-54. The other elected members of the Executive Committee are Messrs. P. C. Ray, M. V. Sovani and Shrinivasan.

Mr. N. K. Patel, Chief Electrical and Mechanical Engineer, Mr. J. J. Mehta, Production Manager, and Mr. V. Y. Divekar, Spinning Supervisor of the National Rayon Corporation Ltd., left for Japan to study the machinery market and to find out the possibilities of obtaining up-to-date rayon yarn manufacturing machinery and other accessories.

Mr. Laxmidas P. Goculdas and Mr. M. G. Mody have been elected Chairman and Vice-Chairman, respectively, of the Indian Insurance Companies' Association, Bombay, for the year 1953. The other members of the Committee are Messrs. R. M. Desai, S. K. Desai, Mr. M. S. Dastur, F. Bloor, G. H. Thakore, V. R. Tolat, R. G. Vijayakar, T. K. Desai and E. J. Poncha.

"COMMERCE" 1928

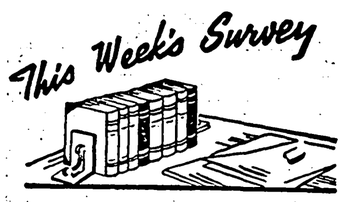
FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, 28th *July*

Trade Barriers

The League Conference for the abolition of import and export prohibitions and restrictions, which has been sitting in Geneva, ended its work on the 10th inst., and on the following day, the members signed the convention, which runs broadly on the lines recommended by last year's Economic Conference. Hundreds of reservations, originally made by various States, have been reduced to 18, most of which, broadly considered, are of slight importance. No reservations were made by Great Britain, France or Germany. The Conference is regarded as an encouraging step towards freeing trade from restrictions and, if ratifications are obtained, the convention will come into force at the beginning of 1930. Some time must, however, elapse before fuller reports of the Conference can reach India; but we have before us the report of the Economic Consultative Committee which probed the question in May last. M. Thennis, who presided over it, emphasised, in his concluding speech, the need for educating public opinion on the subject of trade barriers which, he said, had become a deeply rooted habit and were backed by powerful interests. The work accomplished by the Committee in its first session was twofold. It reviewed very carefully the progress that had actually been made since last year in putting into practice the recommendations of the Economic Conference and made a number of practical suggestions for their further application, chiefly in connection with commercial policy.

So far as past history is concerned, the principal fact which has been established is that the upward movement of tariffs, which was beginning to show a tendency to progressive acceleration, has actually been arrested largely through the influence exercised by the Economic Conference. The growth of trade barriers has, it is true, been arrested, but the demobilisation recommended by the Economic Conference has hardly yet begun. It is upon this problem that the main efforts of the Consultative Committee were concentrated. Here the chief contribution of the Committee's deliberations has been the practical suggestions as to the methods by which the lowering of tariffs can be accomplished by dealing with them piecemeal by groups of commodities. This method has already been applied with considerable success by the Economic Committee of the League, and it is not too much to hope that it may prove useful in the future.



QUESTIONNAIRE ON TAXATION

HIGH hopes are naturally entertained about the outcome of the labours of the Taxation Enquiry Commission. There is not a day that passes without someone or other connected with trade, commerce or industry, making a pointed reference to the heavy tax burden. And such references invariably end with the expression of the hope that the Commission would make a helpful recommendation. But the Commission has been set up not so much for the purpose of suggesting tax reliefs—it could, of course, do that—as for assisting the Government to evolve an integrated tax system. The Commission was set up, it may be recalled, in April, 1953; it consists of Dr. John Matthai, Chairman, Mr. V. L. Mehta, Dr. V. K. R. V. Rao, Mr. K. R. K. Menon, Mr. B. Venkatappiah and Dr. B. K. Madan, members and Sardar Indrajit Singh, Secretary. The Commission's terms of reference show how broad and comprehensive are the Commission's functions. The terms are:

(1) To examine the incidence of Central, State and local taxation on the various classes of people and in different States;

(2) To examine the suitability of the present system of taxation—Central, State and local—with reference to (a) the development programme of the country—and the resources required for it, and (b) the objective of reducing inequalities of income and wealth;

(3) To examine the effects of the structure and level of taxation of income on capital formation and maintenance and development of productive enterprise;

(4) To examine the use of taxation as a fiscal instrument in dealing with inflationary or deflationary situations;

(5) To consider other relevant matters; and

(6) To make recommendations, in particular, with regard to (a) modifications required in the present system of taxation and (b) fresh avenues of taxation.

The questionnaire which has now been issued by the Commission, does justice to its terms of reference, and shows that the Commission will cover every aspect of the problem of taxation. It is based on the memoranda received by the Commission in response to its request for suggestions regarding the issues that should find a place in the questionnaire. The questionnaire is divided into six parts—the tax system, direct taxes, commodity taxes, agricultural income-tax (including land revenue and irrigation rates), other taxes, local taxation. In Part I, relating to the tax system, the Commission has asked questions on the objectives of a sound tax policy, the relative place of direct and indirect taxes in the Indian tax system and the role of non-tax sources in the public revenue. On the incidence of taxation, opinions have been invited regarding the fairness of distribution of the burden of taxation among various classes of people and on whether the tax burden weighs particularly heavily on any industry or occupation. The Commission has also asked for views on the probable scope for taxes on capital, reintroduction of salt duty, surcharges on land revenue, betterment levies, social security taxation, and modification of the policy of prohibition.

Part II deals with income-tax, special business taxes and estate duties. Views have been sought on the provision of specific allowances for families, and dependents, the scope for amalgamating income-tax and super-tax. A question which must interest all industrial establishments, is: "Do you favour the grant of larger depreciation allowances to assist industry to finance the considerably increased costs of replacement of assets?" The questionnaire also deals with the subject of differentiation between distributed and undistributed profits, the rate of corporation taxes, and with other topics such as inter-corporate dividends, taxation of mutual insurance companies and taxation of dividends in the hands of shareholders.

In Part III, the Commission deals with commodity taxation, in general, and more particularly with customs, Central excises and sales tax. The issue of multi-point sales tax *versus* single-point sales tax has been dealt with in another question. Sales outside the State or sales in inter-State trade form the subject matter of a question; it has been asked, for instance, whether a purchase tax would be a suitable alternative. Part IV deals with agricultural income-tax, land revenue and irrigation rates, while Part V deals with "other taxes," including stamp duties, court fees, motor vehicle taxation, entertainment taxes and taxes on electricity. The whole subject of local taxation is treated in Part VI where a number of questions have been framed on the various aspects of devolution of tax powers to local bodies by the State Governments.

It will thus be seen that the questionnaire is the most comprehensive of its kind, and will demand considerable thought and care on the part of individuals, trade and commercial organisations, before replies are submitted to the Commission. The Commission has, however, been generous enough in giving the concerned interests sufficient time to submit their replies, the last date for the submission of replies being 21st September, 1953. But the Commission will appreciate the reply being sent in parts, as and when they are ready for submission. It is to be hoped that the commercial organisations, which have been urging the appointment of the Commission for a long time now, will base their replies on sound economic arguments. It is true that some questions, especially those in Part I, are too academic in character, and will not admit simple and brief replies. Even so, an attempt should be made to reply to those questions too, for commercial organisations are unlikely to get another opportunity to express their views on general questions relating to taxation.

DR. C. L. KATIAL RESIGNS

There will be widespread regret over the departure of Dr. C. L. Katial from his post as Director-General of the Employees' State Insurance Corporation, and even more regret over the circumstances surrounding his departure. There is no doubt that Dr. Katial's able and sustained work in the cause he held dear had much to do with what little success the Corporation has had so far; his persuasive powers and his unselfish zeal for the work won for him considerable respect and affection. The grounds on which the Government has relieved him of his duties are not clear. Equally vague are the charges which he has chosen to level against the Secretariat. Beyond unsupported references to the "new despotism of a few bureaucrats," the lack of opportunity for explaining his point of view, and his sense of disillusionment, there is little in his letter to the Prime Minister, on which the public could reasonably form any opinion about the justice of his case for an enquiry into this episode. It is all the more regrettable, therefore, that he should have decided to embark upon a three-week "self-purificatory" fast which, even in other circumstances, might not serve any public purpose.

As far as one can make out from his letter to the Prime Minister, three main grounds on which his present disillusionment rests, are: (1) lack of opportunity for ventilating his point of view, (2) lack of personnel, and (3) insufficient recognition of the autonomous character of the Corporation. If Dr. Katial felt that the Government officials were not co-operating with him, it was certainly open to him to place the facts before the Standing Committee of the Corporation. This does not seem to have been done. It is true that the Corporation's work would suffer through lack of personnel. He says that there "has been no Medical Commission since September, 1950, no Actuary since January, 1952, no Chief Accounts Officer from October, 1951 to March 1952 and again from July 1952 to February 1953." Again, it is not clear why the matter was not placed before the Standing Committee. May it not be that Dr. Katial has not chosen to take the Committee into his confidence and the charge of non-co-operation, which he now levels against the Secretariat, might with justice be levelled against him by the Standing Committee? In these circumstances, it is difficult not to appreciate the official contention that no serious difference has existed between the Corporation, as such, and the Government. In a Press note, the Government says:

> "Though serious differences are alleged to exist between the Government and the Corporation, and Government is charged with undue interference in the affairs of the Corporation, the Government would like it to be known that, during all the five years of the existence of the Corporation, not a single complaint of undue interference by them has been made by the Corporation or its Standing Committee or by any of their members individually."

Explaining his disillusionment, Dr. Katial says that he "had thought that the staff of the autonomous Corporation would not have to route all its work through the Secretariat as if it were a branch of the Government Secretariat." The implied allegation, if true, deserves some enquiry. Under the State Insurance Act, the Central Government has no doubt retained the power to supersede the Corporation or the Standing Committee (*vide* section 22), if there is persistent neglect of duty or gross abuse of powers conferred on these bodies by the Act. It is nowhere stated that the Corporation is a subordinate branch of the Secretariat. In these circumstances, the Secretariat has no right to condemn the Corporation to a lesser position than it enjoys under the Act. Here again, it is intriguing why it is not the Standing Committee, but Dr. Katial, that is the complainant. Perhaps, the Government will do well to evolve a procedure whereby its control is periodically exercised through its nominees on the Standing Committee, while the Corporation is allowed to exercise its powers unhampered by excessive red-tape. In the task of evolving such a procedure, the following points raised by Dr. Katial's statement on the eve of his relinquishing his post, deserve the Government's attention:

(1) Corporation's administration should be directly responsible to the Minister on questions of policy;

(2) The administrative functions of the Ministry should be transferred to the Corporation;

(3) The Corporation should consult the Ministry of Finance direct;

(4) Unless at the meeting of the Standing Committee the Central Government members objected to certain proposals, the approval of the Central Government should be implicit in the Standing Committee's approval;

(5) As in the work of the Corporation, matters relating to health and medical care are of fundamental importance, the administrative control of the Corporation should be transferred to the Ministry of Health. Until this is done, it might be more appropriate if the Vice-Chairman of the Corporation, namely, the Minister for Health, is appointed as the Chairman of the Standing Committee.

The adoption of these suggestions, particularly the fourth suggestion, will lessen the area of conflict between the Corporation and the Government, even if it cannot altogether eliminate it. After all, the only effective way of establishing co-operation is to co-operate. And no legal or constitutional instrument of co-operation can be an effective substitute for the will to co-operate. Again, the success of the Corporation will depend on the proper choice of personnel, and their prompt appointment. It is certainly disquieting that the Corporation has been allowed to shift for itself—this has been brought out by Dr. Katial's disclosures—without the help of important officers. The Government will, it is to be hoped, take early steps to remedy these defects in the set-up of the Corporation.

TRADE RELATIONS WITH AUSTRALIA

General K. M. Cariappa, High Commissioner-designate for India in Australia and New Zealand, rightly emphasised, while replying to the felicitations offered him by the Indian Merchants' Chamber, Bombay, on the eve of his departure from India last week, that it would be his duty to publicise abroad the full facts about the wares and commodities produced in India in order to build up increased demand for Indian goods. Reassuring were his two other statements, that (1) it would be his endeavour to see that the various offices functioning under his charge in the two countries extend every help and assistance to business men in developing trade contacts, and (2) he would take steps to organise exhibitions and set up emporia for the display of various Indian products of quality and repute.

The problem of developing India's markets in Australia and New Zealand, as readers are aware, has assumed special significance in the present context, thanks to changed market conditions and severe competition which have rendered the task of export promotion a rather tough one. The value of India's exports to Australia, for instance, which had attained the peak level of as much as Rs. 46.62 crores in 1951-52, registered a steep fall in 1952-53, amounting to only Rs. 19.95 crores. Similarly, India's exports to New Zealand have suffered a setback, the value of goods and commodities actually exported during 1952-53 being not more than Rs. 3 crores, as against Rs. 7.91 crores in the previous year. The fall in exports to Australia and New Zealand is indeed a matter for concern and emphasises the need for taking suitable steps for stimulating the same. It was precisely to this aspect that Mr. Ambalal Kilachand, President of the Indian Merchants' Chamber, drew pointed attention in his speech while welcoming General Cariappa to the Chamber.

Mr. Ambalal Kilachand referred, in particular, to one of the chief difficulties standing in the way of India's export trade with Australia, namely, discriminating treatment accorded by Australia to Indian goods in favour of goods of U.K. origin in the matter of tariffs. He did well, therefore, to stress the importance of making a determined effort not only to improve the quality and standard of goods but also to pay attention to the needs and requirements of the Australian market. He also made an important suggestion that an Indo-Australian trade agreement should be concluded on a long-term basis. Another major hurdle in the way of India expanding its export trade with Australia, to which he alluded, relates to the Australian Government's proposal to raise import duty on certain types of sheetings. This proposal, if implemented, will severely affect exports of cotton textiles; sheetings, it may be noted, form the largest single item of India's cotton textile exports to Australia. Mr. Kilachand urged the High Commissioner-designate to use his good offices to take up the matter with the Australian authorities in order to see that the proposal was abandoned. The Indian Merchants' Chamber President also stressed the importance of securing imports of machinery and equipment from Australia at competitive prices.

DEVELOPMENT OF BRITISH COLONIES

Problems relating to the economic development of the Colonies figured prominently in the British House of Commons debates in the past few days. This is not surprising, considering the vital role which the Colonies play in the sterling area's export trade with the dollar countries, especially the U.S. It is, therefore, appropriate that the British Government should have laid considerable stress on the need for expanding production in the Colonies, to encourage them to trade not only with Britain but also with the rest of the world, and to raise their living standards. How vast is Britain's task in further developing the Colonies is clearly revealed in the significant remarks of Mr. Oliver Lyttelton, Secretary of State for the Colonies: "Our first task must be to increase railways, harbours and roads; the second must be the development of agriculture; the third the exploration and winning of minerals; the fourth the expansion of electric power; the fifth the promotion of local industry; the sixth scientific research and development."

All these are to be achieved by implementing the series of development projects, envisaged in the £500 million Ten-year Plan, excluding private investments. Parts of the plan are being financed by loans, others by grants from Colonial development and welfare funds, and the rest by local savings and the Colonial Development Corporation.

The sum of £500 million earmarked for Colonial development no doubt sounds impressive. But as it has to be spread very wide over a period of 10 years, it becomes very thin. In order to maintain the present *tempo* of economic activity, let alone increasing it, Colonial development requires much larger financial support. Promotion of greater flow of foreign capital and loans is, therefore, considered to be very essential. True, the World Bank has performed a most valuable service, but the loans it has so far granted have only been a fraction of the actual requirements. In view of this, Mr. Lyttelton stressed that the flow of capital into the Colonies should take the form of loans, "with the Colonies and the U.K. keeping the equity interest in their own hands." Such a policy, it is emphasised, should allow at least part of the profits made, after remuneration to those who have risked their capital, to be devoted to further exploration and expansion within the Colonies themselves.

An important announcement which Mr. Lyttelton made, in this connection, relates to the policy of setting up locally-controlled companies. In other words, the British Treasury will henceforth allow more companies to transfer their headquarters to the Colonial territories in which they are operating. The policy is claimed to have two advantages. First, it will enable the directors to control the companies' affairs "authoritatively," on the spot, in close touch with the local Government, labour leaders and conditions generally. Secondly, it will enable the companies, while paying U.K. income-tax on dividends, to take advantage of lower local tax rates and thus plough the residue back into the industry, thereby helping directly in the Colonies' further development.

OFF THE RECORD

(By "ROVER")

IT is easy to go downhill. Only the very strong can resist this downward pull of gravity. It is not yet fully six years since the Congress leaders took over the administration of the country from the experienced and dyed-in-the-wool bureaucrats, trained in the use of the language of British officialdom. Many of those in office to-day in the various Governments are not even six years old, having been born as rulers long after August 1947. Several of them cannot even have cut their baby teeth. But the alacrity with which they have taken to lisping the official jargon of implied might and arrogance, of superiority and aloofness, is something amazing. It is a feat in political growth worth recording by the biologists. There must be something in the soil and atmosphere of the Secretariats which promotes such rapid growth amongst Ministers of the typical colonial ruler's attitude towards dark and dusky 'natives' and the acquisition of all the apt phrases and cliches of an officialdom which could hold its sway over millions with the aid of the magic charm of that illusive quantity known as "prestige".

The occasion for these reflections embodying my admiration for the new breed of rulers in our country and its capacity for imbibing the technique and mannerisms which took our erstwhile British masters decades to evolve, was my coming across a report of a meeting between the Union Minister for Information and a group of radio artistes in Bombay last Friday. Some of Dr. Keskar's expressions and utterances on this occasion were highly reminiscent of the days of the British bureaucrats and for a moment I actually wondered if I had picked, through mistake, a paper bearing the date 18th July, 1943.

Now, had it been the Chief Minister of Bombay instead of the reputedly gentle, mild-mannered and scholarly Dr. Keskar, who had been addressing this gathering, I should not have been surprised, because Mr. Morarji Desai's early training and bringing up was as a minor bureaucrat and the iron of authority had entered too deep into his otherwise tender soul, to be eradicated by the subsequent atmosphere of surface humility and piety. Like the early morning mist, this humility evaporated when touched by the rays of the easily acquired power in all such cases, though piety has lingered on in a vitiated form of ultra-austerity of approach to other people's lives. I had, however, no idea that the infection was so overpowering as to envelop even souls protected in layers of cotton-wool such as that of the present Minister for Information.

I consider it necessary to make it clear at the outset that, though I happen to be a moderately literate man, I can lay no claim to being anything like a man of letters. I do not, therefore, presume to subject the learned Doctor's style and diction to a critical literary analysis. Similarly, as a man engaged in studying markets and the country's economy and engrossed in spotting the economic misdeeds of the various Governments and of both the public and the private sectors of industry, I cannot conceivably be guilty of any acquaintance with or appreciation of the world of art and æsthetics. Being equally innocent of any leaning towards music, classical or light, and confining my use of the radio to obtaining the latest market quotations in the evening, I can claim complete impartiality in the controversy that is raging between Dr. Keskar's Ministry and some of the A.I.R. artistes in Bombay and Dharwar. All I was concerned with in Dr. Keskar's address to the artistes in Bombay last week was its tone and the use of some of the old, familiar touch-me-not sentiments couched in the impersonal, official style of the unregenerate days of foreign rule.

I am told the artistes on strike have some complaint about the composition of the Committee appointed to test their knowledge and performance. I can understand Dr. Keskar's simple stand that examinees cannot be allowed to choose their examiners. But the formidable and sonorous way in which he put forward this proposition of his was masterly. He stated that the question of selection of personnel of the audition Committees was within the "discretion of the Ministry of Information and Broadcasting" and that this was not a matter "for discussion with anybody." This won my instant admiration for his clear and quick grasp of the way things should be put officially. Mighty Ministers of the Union do not demean themselves by discussing matters over which they are given discretion with anybody. Any such practice would undermine the very foundation of their authority. A man invested with authority cannot stoop to discuss; he dictates.

Dr. Keskar, I believe, himself must be a real artiste, because all the unconscious and spontaneous touches were there; the word 'agitation' was preceded by the invariable adjective 'pernicious'; to one who is thoroughly groomed in the art of ruling, all agitation, whether it be accompanied by large-scale use of violence and arson as in Calcutta or in the South or amounts only to staying away from work and pursuading other colleagues to do so as a mark of protest, is something to be condemned unreservedly. Similarly, the plea that any organisation which agitates is not representative of its class also figured in Dr. Keskar's monologue. But my admiration for this smooth and easy adoption of a born dictator's manner by a mere two-year-old fledgling went up sky high; when the Minister delivered his final verdict on the demands of the Bharatiya Sangit Kalakar Mandal, which he had already condemned as not being a representative body of the artistes, Referring to these presumptuous demands, Dr. Keskar said, "Unless they stop their intimidation, threats and vilification, it is not possible to take into consideration any representation they make."

Naturally enough, rebels or those who actively oppose official measures, however short-sighted and reprehensible these measures might be, cannot expect to have even their most reasonable representation attended to or considered. If any Minister were to forget himself so far as to do this and consider legitimate grievances when an agitation is still going on, it was bound to prove subversive of all discipline. Consideration by the authorities of requests cannot but depend on the attitude of the applicant. You would be mistaken if you were so misguided as to hold that willingness on the part of the authorities to consider grievances has anything to do with the inherent reasonableness or otherwise of the request itself.

Even a Reginald Maxwell, when he was at the height of his powers fighting the national agitation for independence, could not have improved upon either the tone or the contents of Dr. Keskar's pronouncement in this case. I doubt if Lot Hailey himself in his heyday could have done it. I feel highly gratified that, whatever else might perish, law and order would be quite safe in this country of ours, as in this material respect of official vocabulary, our popular and democratic Ministers have learnt everything of value from the so-called unimaginative and wooden British bureaucracy.

Rajaji's War On Cushions

My position is like that of the flapper in the story who wanted to be good but the boys would not let her be. I would fain leave Mr. Rajagopalachari, the Madras Chief Minister, alone and forget all about him. But he would not let me do so. Every now and then, he must say or do something which makes my gorge rise and drives me to say unpleasant things about a person whom, in spite of all his idiosyncrasies, I like and respect immensely, for his shrewdness and subtlety. We are almost bored to death, not to say anything of being ruined economically by their utter inaptitude, by crowds of mediocre and intellectually almost inane Ministers at the Centre and in the score or so of States, so much so that Rajaji, in spite of his frequent excursions in the realm of the unreal and the archaic, retains not only our respect but affection by the keenness of his mind and the refreshing originality of his outlook on the world, and on men and affairs. Even when he is perverse, he is so by choice and knowingly like an engaging sprite and not under some mental compulsion, helplessly and unconsciously, as in the case of several others of his colleagues in other States like Bombay and West Bengal.

Mr. Rajagopalachari is delightful and entertaining even in his whimsicality and mischief and I suspect that he derives almost as much pleasure from his atrocious suggestions and innovations as we, his victims, do. The latest of these is his war on cushions in the State Transport buses. He has no pity on us poor, pampered weaklings with sparse and sensitive bottoms and he would make us travel long distances, when our occasions take us out, on hard wooden planks. If his aim was to educate the citizens in the practice of austerities and inuring them to the hard life in store for them ahead, as the result of the many blunders inexperienced and untrained administrators were bound to commit in the handling of economic affairs, I am surprised that so logical a man did not think of asking his Transport Minister to equip all the buses plying in the benighted South, with seats which have quite a few nails sticking out with their sharp and pointed ends up.

The scourge has been recognised from ancient days as an effective spiritualising agent and when Mr. Rajagopalachari is out to lay it on our already sore backs, he might as well lay it thick by investing the crude tortures, which he invents for our benefit from time to time with some refinements, which would make them really excruciating instead of being merely unpleasant. Or he might even go a step further and abolish the running of buses altogether, so as to make us trudge long miles along the apology for roads which his Government provides. I am not sure but he would have gone the whole hog and taken the buses off the road, if these bone-shakers did not earn a tidy income of about a lakh of rupees a month for his almost bankrupt Government.

We are often unaware of our good luck. I would illustrate this rather dark saying of mine by asking you to imagine what your fate would be if Mr. Rajagopalachari, instead of being the Chief Minister of Madras, were the Railway Minister in the Union Government. We would have to give up all our dreams of the nice amenities that the Railway Board has been promising the patrons of third class coaches in the trains, such as fans, clean lavatories and ice-cold drinking water. One of these days, when Mr. Rajagopalachari is up in Delhi once again on a visit, he is sure to demand an explanation from Mr. Lal Bahadur Shastri for all the demoralisation he is spreading in the country, which will make the little man from the U.P. squirm in his shoes. I wonder if it would not be a good thing for the Chief Minister of Madras to suggest to Mr. J. R. D. Tata, Chairman of the nationalised Air-India International, to follow suit and remove not only the offending cushions and things from his planes but to discharge all the air hostesses in the interest both of economy and spiritual uplift.—*All Rights Reserved.*

ADMINISTRATION MACHINERY FOR COLLECTION OF ESTATE DUTY

NO DECISION YET ON LOCATION OF NEW STEEL PLANT

(From A Special Correspondent)

NEW DELHI, 21st July

THE forthcoming autumn session of Parliament, which is to commence on 3rd August, will be mainly devoted to the passing of the two important Bills, namely, the Andhra State Bill and the Estate Duty Bill. The latter is of a highly controversial nature and is perhaps expected to occupy the attention of Parliament for a number of days. Immediately after its passage, the Government will also introduce a Bill fixing the rate of Estate Duty. Since this is a new impost, the authorities are expected to be somewhat receptive to the suggestions of the Opposition members for the fixation of a slightly lower scale of tax and will be inclined to watch the results before it is revised in an upward direction.

DELHI LETTER

The Central Board of Revenue has already begun to expedite the setting up of the machinery that would be needed for the enforcement of estate duty. Mr. Uppal, recently Director of Inspection, Income-tax, has been appointed member of the Central Board of Revenue in charge of the Estate Duty Section and Mr. R. K. Das, an officer of on Special Duty in the same office, as Secretary. A few able officers of the Income-tax Department are being deputed to visit the U.K. and to study the administrative aspect of the working of this measure in that country. Rules to be framed under the Act are already under preparation. A certain degree of uniformity is expected to be established in the matter of administration of the Act. More than seven States have already adopted resolutions to enact a law for the levy of estate duty on agricultural property. In due course, many States will fall in line with the Centre in this respect. Private properties of rulers will not be exempted from this tax. The general expectation is that the yield from the estate duty may amount to between Rs. 8 and Rs. 10 crores per annum at the initial stages.

Andhra State Bill

The Andhra State Bill is expected to have a smooth passage in view of the fact that most of the contentious points are being hotly debated in the Madras Legislature at present. Besides, every Ministry has got a number of minor and major Bills to be disposed of. For instance, the Commerce and Industry Ministry has a few Bills pending, such as the Indian Tariff (Second Amendment) Bill, a Bill to amend the Forward Contracts Act, the Iron and Steel Control Bill, a Bill to amend Section 23 of the Indian Patents and Designs Act, etc. The Finance Ministry has, besides the Estate Duty Bill, a few Bills such as the Banking Companies Act (Amendment) Bill, the Sea Customs (Second Amendment) Bill, etc. The Railway and Transport Ministry has, among others, a Bill to amend the Motor Vehicles Act. The States Ministry has also a few Bills to dispose of, the important among them being the merger of Bilaspur with Himachal Pradesh, etc. The amendment of the Factories Act and the Provident Fund Act, etc., are now pending with the Labour Ministry while the Food and Agriculture Ministry has a Bill to amend the Agricultural Produce (Marketing and Grading) Act. Since Parliament is expected to be in session for barely a month, many Bills may have to be deferred to the winter session.

Trade Pact

The Indo-Ceylonese trade pact, concluded this week, is a credit to both the Governments, though it is very limited in its scope. It represents the principle of "give and take" which is so necessary in foreign trade. Under the agreement, India will allow imports of 2,500 candies of Jaffna tobacco a year for the next four years. It may be mentioned here that this is a special variety of tobacco consumed by the people of Kerala and that a few years before a maximum of 5,745 candies of 600 lbs. were allowed to be imported in each Malayalam year. Since 1950-51, the Government has been following a policy of progressive restriction in regard to imports of Jaffna tobacco when the quantity allowed was 1,800 candies. This is because of the fact that the Indian Central Tobacco Committee has been successful in evolving a substitute quality tobacco in Coimbatore (Madras). In view of the above, the Government was permitting a limited quantity of Jaffna tobacco at a concessional rate of As. 8 per lb., while the standard duty on the balance was Rs. 9-6 per lb. Under the new agreement the maximum limit has been raised to 2,500 candies with a concessional duty of As. 12 per lb. or Rs. 450 per candy.

In return for this concession, the Government of Ceylon is reported to have agreed that during the four-year period of the agreement, the import of *bidies* into Ceylon will be allowed on Open General Licence and the effective import duty will not be increased. It has also agreed to reduce the import duty on towels and towelling to the lowest rates applicable for mill-made towels and towelling and also to facilitate the increased import of Indian tobacco into Ceylon.

Reclamation of Lands

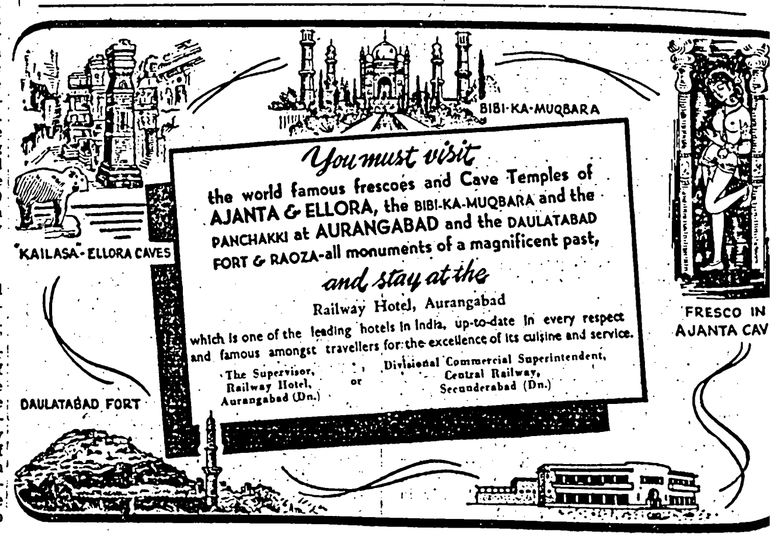
The Central Tractor Organisation has now been able to reclaim between 2.8 and 3.0 lakh acres per annum and is expected to exceed the target of reclaiming 1.41 million acres fixed by the Planning Commission. In 1951-52, the imported tractors were able to reclaim 2.25 lakh acres, excluding 57,000 acres reclaimed by the old machines. Although originally the Organisation planned to import about 375 giant tractors, the actual imports amounted to hardly 240 from the loan obtained from the International Bank for this purpose. This is but a part of the good work that is being performed by the abovementioned organisation in regard to land reclamation. The sum earmarked by the State and Central Governments for land development during the Plan period is about Rs. 35 crores, which is expected to reclaim about 7.4 million acres of land. In this connection, the State Tractor Organisations have been planning to reclaim about 1.2 million acres while farmers through individual effort and special State encouragement, are expected to develop about 4.8 million acres. The activities of the Central Tractor Organisation are now mainly centred around Madhya Pradesh (4.74 lakh acres), Madhya Bharat (3 lakh acres), Bhopal (4 lakh acres), U.P. (3 lakh acres) and Vindhya Pradesh (4,000 acres). As a result of the operations of tractors during the last few years, people are convinced of the distinct superiority of these machines in rendering the weed and *kans* infested lands fit for cultivation.

Since land development includes soil conservation measures also, the Government has proposed to reorganise the administration of this department. The proposed Soil Conservation Board will absorb the existing branch of the Forest Research Institute, Dehra Dun, and the Desert Afforestation Research Station, Jodhpur. The new Board will co-ordinate and initiate research in soil conservation in respect of forestry, agricultural grazing and other land, assist the State Governments and River Valley authorities in drawing up schemes of soil conservation and enacting legislation assist in making reconnaissances or detailed surveys of soil conservation projects, etc. Efforts have already been initiated to check the march of desert in Rajasthan. During this week tree planting by sowing seeds from air over a 30-mile long sandy belt has been done and this experiment is watched with interest. If the experiment succeeds, the Government will extend the field of operations to a wider area next year.

Steel Plant

Latest enquiries suggest that the Government has not made up its mind in regard to the location of the proposed steel plant. Both Madhya Pradesh and Orissa are vociferous in their demand that the plant should be located in their respective territories. Although a definite decision is deferred on the subject for some time more until the conclusion of an agreement with the German or some other foreign firm in respect of technical help, the odds are in favour of Hirakud (Orissa) in view of the fact that the eventual capital outlay on this plant would be less by about Rs. 10 crores. From the strategic and long-term point of view, however, Madhya Pradesh has greater claims. If the plant is established in Hirakud, the steel and heavy chemical industries of the country will all be within a radius of about 100 miles and in times of emergency, there will be considerable transport bottleneck. All the four places, namely, Jamshedpur, Sindri, Asansol and Hirakud will become easy targets from the air while the Madhya Pradesh plant will have definite advantages from the point of view of dispersal strategy and reduction in the distance of haulage.

According to latest reports from Germany the participation of foreign capital in the proposed steel industry on any appreciable scale is not likely. At best, it will be definitely less than 25 per cent. The Government of India, on the other hand, is likely to get about 30 per cent. of the capital by way of loan from the World Bank. Unless the Government of India makes up its mind on the subject and is determined to go ahead even, without the participation of foreign capital, an early establishment of the steel factory is unlikely. However, it is stated that Government is keen on this project, with or without large-scale foreign capital. Since the claims of the two States for the location of the plant are somewhat evenly balanced, it would be better if the Government set up two plants, one in Orissa and the other in Madhya Pradesh, extending at the same time some concessions to Tatas for the doubling up of the capacity of the Jamshedpur plant. By a determined attempt, it should be possible for India, within the next decade, to produce between 4 and 4.5 million tons of steel per annum. And this target will give the country considerable economic stability.



AMERICAN LETTER

NEW MONETARY POLICY REVISED

OUTLOOK FOR U.S. ECONOMY BETTER

(From Our Own Correspondent)

NEW YORK, 16th July

THE Eisenhower Administration has not made much progress, but it finally did manage to alleviate the extremely tight money conditions in the United States which prevailed in recent weeks and months. This was achieved by a revival of open market operations by the Federal Reserve banks which gave immediate support to the entire list of Treasury securities and by a reduction of reserve requirements of member-banks of the Federal Reserve system. Since that time, price changes among the more outstanding Government securities have been nominal and the new 30-year 3¼ per cent. bonds have reached par again and ascended slightly beyond that. This is an important point of prestige which should not be underestimated. It had a great psychological effect.

Meanwhile, the greatest peace-time deficit of the United States Treasury, exceeding more than $9,000 million, was alleviated with an issue of $5,500 million in Treasury tax anticipation certificates which will cover the cash requirements of the fiscal authorities for the quarter ended 30th September.

The issue was vastly oversubscribed—more than $8,000 million in applications were received—and the allocation amounted to 67 per cent. The markets will now be left alone to find their own levels for the next three months after which another similar amount will have to be raised, most likely in the form of long-term financing, at least to the extent of $1,000 million.

International Situation

What will happen between now and then, will be largely dependent, however, on the international situation. The disappearance of Lavrenti P. Beria, as the second-in-command in Soviet Russia, may mean a complete change of international policy.

Since it must be admitted that Moscow still has the initiative, decisions in Washington will have to be taken either in defence of Western interests or to combat local eruptions, such as Korea, Indo-China, etc. There is not much progress in either sphere, even now though John Foster Dulles, Secretary of State, has made extensive personal investigations in Europe and in the East.

In the meantime, Dr. Milton Eisenhower, brother of the President, is touring Latin America to get the pulse of the sister republics to the South. All of these manœuvres seem strictly exploratory and nothing in the way of decisions can be expected until the findings of these missions can be analysed and consolidated.

While a great personal loyalty of the masses to President Eisenhower remains, public opinion is becoming somewhat restive about the lack of decisions in official quarters. Nearly everyone seems to feel, this is the time to take the initiative and make decisions, right or wrong, but it is not the time to be cautious and wait for the outcome of staff studies which will be outdated by events by the time they are finished. That is the reaction of the typical American mass temperament which the late President Franklin Delano Roosevelt was keen to realise.

President Eisenhower is still bent upon persuading Congress to conform with the Administration viewpoint and to be friends with everybody including Senator McCarthy who continues with his anti-Communist investigations in the usual middle-Western perspective of isolationism.

Gloom Disappearing

Meanwhile, the gloom over future business conditions is disappearing in a cloud of optimism. Business men who were chary of the outlook a few short months ago, give the American economy at least another six months of prosperity.

Sales and profits in the last half of the year will be as good or even better than those of a year ago, they maintain now. That is what the opinions of business surveys are saying to-day.

Six out of every ten business men interviewed in a comprehensive poll the other day foresaw, for example, that fourth quarter sales will be higher than in 1952. Those who anticipate gains in net income now outnumber those who look for a decline by nearly three to one.

Consumer spending in the quarter ended 30th June, rose to an annual rate of about $228,000 million which is $2,000 million higher than in the first quarter and employment increased, as students streamed into the U.S. labour forces with the closing of schools for the summer.

Soft Spots

Soft spots remain, however. Bankers grew cautious as the people's instalment credit grew steadily and was more than $5,000 million higher than a year ago. Business inventories soared to a record of $78,000 million at the end of May which was $4,000 million above a year ago.

Many feel that new automobile production is too high and will have to be slowed down before the year is over and that steel deliveries will reach a balance between supply and demand within the next few weeks.

As a result of falling commodity prices, the Washington Government had $3,800 million invested and obligated under the price-support programmes on 31st May, 1953. This was more than double the $1,600 million of a year ago. As of this writing, the disaster drought areas of the South-west have been helped somewhat in recent days by rains, but the cotton crop promises to be 2 million bales shorter than previously estimated. The drop in commodity prices is spectacular, but only in terms of the somewhat ridiculous heights reached after the outbreak of war in Korea. Despite some soft spots, including textiles, which have been in the doldrums for a long time, the American economy could not be more satisfactory than at the mid-year term. Overall activity is still mounting.

The May check volume in 245 cities in the U.S. was up 6.9 per cent, compared with May, 1952, but in 100 of those cities the volume was actually lower. The other 145 localities showed a substantially higher volume so that the overall result is a rise of nearly 7 per cent.

The private capital markets of the U.S. provided about $11,000 million of new intermediate and capital financing in the first six months which was more than in any six months' period since the war. It compares with about $9,500 million in the first half of 1952.—*All Rights Reserved.*

(Concluded from next column)

upon to render from time to time. As a step forward in this direction, it had recently decided to subscribe to the extent of 30 per cent. to the capital of Pakistan Oilfields Ltd. and Pakistan Petroleum Limited. This 30 per cent. was originally set apart for subscription by Pakistani nationals in accordance with the Pakistan Petroleum (Production) Rules, 1949; but, since the response from the public was poor, the Government felt called upon to fill the void.

While welcoming the Governor-General, Mr. M. J. Condon, the Chairman of the Company's Board of Directors, gave a brief account of oil operations in Bugti tribal territory. Mr. Condon emphasised that the completion of the construction phase at Zin was not the signal for us to waste time in self-congratulation. He added: "It is the time when we must look forward to further tasks to the drilling of this well (successful, we fervently hope, and then to the completion of other projects. Zin, although important, is but a single stage in the exploration of this area and we look to the future with confidence and enthusiasm."

New Factories for Punjab

To the list of industrial establishments in the Province of Punjab, two more are to be added, namely, a rayon yarn factory and a sugar mill. According to a recent report from Lahore, the Pakistan Government has already given permission for the setting up of these new factories. The rayon factory is to be established at Okara, while the sugar mill will be located in the sugarcane-growing areas of the Lyallpur District.

PAKISTAN NOTES

DRAFTING A FIVE-YEAR PLAN

NATIONAL PLANNING BOARD SET UP

A NATIONAL Planning Board, with Mr. Zahid Hussain, former Governor of the State Bank of Pakistan, as the Chairman, has been appointed by the Government of Pakistan. The Board is entrusted with the task of preparing a Five-year Plan which is to be more comprehensive than the Six-year Development Programme incorporated in the Colombo Plan. The four-fold terms of reference of the Board are as follows:

(1) To assess the resources, material and human, which can be made available for development during the next five years beginning from 1st April next;

(2) to review the development that has taken place since independence and prepare a National Plan of development based on the fullest possible utilisation of those resources in a period of five years as a step towards the attainment of the economic and social objectives of the Government's policy;

(3) to make proposals to gear the administrative machinery to the successful implementation of the Plan; and

(4) to submit any other recommendation which will contribute to the success of the Plan.

The Board is expected to submit a draft plan by the end of next year. The Plan will be so designed as to develop the resources of the country "as rapidly as possible," so as to promote the welfare of citizens, social justice and equality of opportunity, and to effect the widest and most equitable distribution of income and property.

Search for Oil

The search for oil in the Zin mountain of the Bugti tribal territory began on the 17th inst., when Mr. Ghulam Mohammad, the Governor-General of Pakistan, performed the formal spudding-in ceremony of the first test well of Pakistan Petroleum Limited in this area. That oil, the life-blood of the present-day world's economy, Mr. Ghulam Mohammad said, in the course of his address, had an importance all its own in Pakistan, owing to the absence of good quality coal in that country, and it was gratifying to see new internal sources of it being discovered and tapped: "The search for oil," to quote him, "requires a spirit of enterprise, organisation and confidence in one's theories and scientific conjectures. The pursuit of oil is a very expensive one and its scope is, therefore, limited to a few highly organised companies in the world. Pakistan, broadly speaking, is not well advanced either in technical or industrial enterprises. I commend to my people the example of ideals of organised hard work which are so clearly demonstrated by oil companies. Oil companies the world over are the targets of criticism by people who do not like their immense production control of large sources of supplies. I am not here as an apologist of that aspect of life, but one cannot shut one's eyes to the spirit of enterprise shown by oil companies without which some aspects of human progress would not be possible.

Dwelling on the search for oil in Pakistan, the Governor-General said that 34 oil mining concessions had been granted since the enforcement of the Pakistan Petroleum (Production) Rules, 1949. Of these, 22 were granted to Pakistan Petroleum Limited and 10 to Pakistan Oilfields Ltd. Both these Companies had greatly intensified their exploratory efforts during the last few years. During the year ended 31st December, 1952, as many as eight test wells were spudded, of which two, the credit for which goes to Pakistan Petroleum Limited, proved successful. One of these two wells was the second Sui well and it proved that the natural gas struck in the course of drilling the first Sui well was extensive enough to admit of commercial utilisation. The Company had furnished the Government with a report on the utilisation of this gas which was under the active consideration of the Government. A measure of the concrete results achieved by the combined efforts of the Pakistan Petroleum Ltd., and the Attock Oil Company Ltd., the two producing companies operating in Pakistan, is provided by the fact that the production of oil in Pakistan increased from 333,944 barrels in 1947 to 1,384,671 barrels in 1952.

Speaking of the Government's role in the search for oil, Mr. Ghulam Mohammad pointed out that his Government had not been merely watching the activities of the oil companies as interested spectators but rendering them such active help and assistance as they were called

(Continued in previous column)

WEST GERMANY FIVE YEARS AFTER CURRENCY REFORM

DEUTSCH MARK GAINS REMARKABLE STRENGTH

THE fifth anniversary, last month, of the currency reform provided the Government and people of the Federal Republic of Germany with an occasion to take stock and to marvel at the amazing economic recovery their country had made since 21st June, 1948, when the British, French and U.S. Military Governors ordered a revaluation of the money at a rate of 10 Reichsmarks and one Deutsch mark. The situation then looked bleak indeed: Germany's industrial plant, devastated by the war, had only partly been restored and production had not even reached 50 per cent. of the 1936 output. Food, severely rationed, was hardly above the subsistence level, shops and stores were bare of merchandise except for useless knicknacks and some *ersatz* goods. Black markets dealing in almost anything, from a pound of butter to precision tools and penicillin, were flourishing; cigarettes had largely replaced the mark as a means of payment. The morale of the workers and business initiative had hit an all-time low.

To-day, to most of the citizens of West Germany, these conditions seem like a bad dream. Food is once again abundant; store windows bulge with consumer goods of every kind and quality, including imported luxury items. Industrial production now stands at about 150 per cent. of the 1936 level, and the standard of living has climbed back to pre-war heights. Exports have increased tenfold since 1948, giving Germany a favourable balance of trade of $181 million. The Deutsch mark, which only five years ago was nearly worthless, has become, for all practical purposes, a hard currency which is almost as much in demand as U.S. dollars and Swiss francs. The favourable results of the currency reform and other financial policies of the West German Government will be evident from the notable improvement in the value of Deutsch marks in foreign markets. Thus, in the Zurich exchange, which is a free market, Deutsch marks were quoted in terms of U.S. dollars at $1=4.591 DM. in April, 1953, which compares favourably with the rate of $1=5.772 DM. at the end of 1949.

This miraculous recovery, the most spectacular economic progress recorded by any European nation during the post-war period, is being attributed to a number of factors. First among these is the aid given to Germany by the United States through the Marshall Plan and other forms of economic assistance which has amounted to $4 billion within the last five years. While providing positive aid in the reconstruction of West Germany's economy, the Western occupying powers renounced any right to receive reparations out of the country's running production. Every West German worker, every farmer, every factory owner knew that every single item they would produce benefit the well-being of their fellow countrymen.

In sharp contrast, up to this day, trains in the Soviet-occupied zone of Germany keep rolling eastward, heavily loaded with "reparation" goods, foodstuffs and industrial goods. In the West, the U.S. Army engineers helped restore railroads and bridges—in the East, Russian troops tore up and shipped to the Soviet Union railroad tracks—another reparation item—dealing a crippling blow to the East German transportation system.

The currency reform which was carried out under orders and control of the Military Government and which aroused much criticism at the time is now being credited by many German leaders with having played a decisive part in the recovery process. In a speech commemorating the revaluation of the mark, Dr. Ludwig Erhard, Federal Minister of Economics, said that it provided the basis for the task of reconstruction, because the restoration of a sound monetary system, once again, gave the German people an incentive to work hard for a just reward and freed them from stifling bureaucratic restrictions. Even those who do not agree with all of Dr. Erhard's economic views admit that the currency reform administered to West Germany's economy a powerful and much-needed shot in the arm. Gradual abolition of the rationing system followed the currency reform within weeks. The disappearance of ration cards marked also the introduction of an economic system based on completely free enterprise, practically undisturbed by State control or interference.

No wonder, East Germans see with envious eyes the well-stocked stores in the West where everybody may buy what he or she wants. In Soviet-controlled East Germany, only ration cards entitle to food and clothing at normal prices. And since there is not enough food for everybody, the Communist regime simply denied large segments of the population the right to get ration cards, thus forcing them to patronise the Government-run black market stores. This involute system was changed only recently, under the pressure of general indignation.

In the opinion of most experts, the major share of the credit for their come-back, must go to the German people. A high degree of productivity, good management, ingenuity and thriftiness enabled them to rebuild their shattered cities and factories, restore their trade and finance and reconquer their foreign markets.

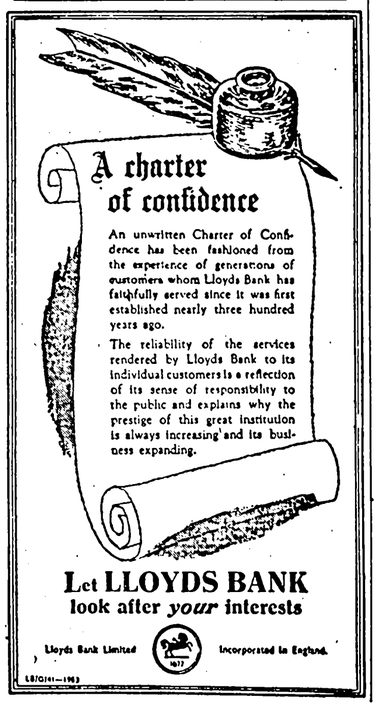
Employment has risen to over 15 million, with only 6.4 per cent. of the available labour remaining unemployed. Steel production in 1953 is expected to go up to 18 million metric tons which is higher than the pre-war level and about on a par with Britain's steel output in 1952. Agricultural production is also higher than in the pre-war period despite the loss of large food-producing areas in Eastern Germany. Most important perhaps from the point of view of people whose homes had been destroyed or damaged by the war on a scale not even remotely experienced by other countries, was the fact that housing construction since 1948 has proceeded at a pace which added 400,000 units last year alone.

This recovery is all the more remarkable, as West Germany comprises only 52 per cent. of the 1937 Reich territory. The population of the Federal Republic, on the other hand, is 22 per cent. higher than that of the same area in 1939, due largely to the influx of almost 10 million refugees from the territories east of the Oder-Neisse, from the Sudetenland, and other East European countries. In addition, thousands of people have fled and still are coming weekly from the Soviet zone of Germany to escape political persecution and economic misery. The assimilation and care of these refugees have presented the West German Government with a major economic and social problem, the magnitude of which can be measured by the fact that over six million people or 13.5 per cent. of the population are dependent on public assistance in form of unemployment, social security or relief payments.

Although expenditures for social purposes absorbed over 14 per cent. of the national income in 1952, the Federal budget was not only balanced but showed a surplus. The fiscal policies pursued by the West German Government were effective in curbing inflation and maintaining a stable currency without which, in the view of many qualified observers, the quick and far-reaching economic recovery would not have been possible.

The gross national product, calculated per head of the population, amounted to 1,705 DM. in 1949 and 2,606 DM. in 1952. At current prices, this is an increase of 77 per cent. from the day of currency reform to the second half of 1952, or 62 per cent. on the basis of equal purchasing power. Any increase in employment, any rise in the standard of living, any improvement in social benefits, is predicted upon increasing investments, especially new investments and stockpiles. Gross average weekly earnings of both male and female labour in industry, except mining, had reached a level of 191.9 in August, 1952, as compared with the 1938 level of 100. During the same period, the cost of living index rose from 100 to 169. Thus, the average industrial working man and working woman benefited by an average increase of 14 per cent. in real wages. The increase in the accumulation of capital enabled the Federation to float the first large Federal loan in December, 1952. This loan was fully subscribed—a proof of growing confidence in the financial stability of the Federation.

Although the refugees will continue to be a serious problem for a considerable time to come, particularly in regard to housing and employment, most experts take a generally optimistic view of the economic future of West Germany. They predict that, if conditions remain about the same as during the past five years, Germany would reach by 1961 a productive level about 50 per cent. higher than the present one. While the increase in population will probably necessitate larger imports particularly of food, exports are expected to increase sufficiently to maintain a favourable balance.



MORE BANK PROFITS

The preliminary results of working of three more Scheduled banks during the half-year ended 30th June, 1953, released during this week, show that their profits are in consonance with the lower trend noted in the case of the Imperial Bank of India and the Bank of India Ltd.

Central Bank of India Ltd.

The profit of the Central Bank of India Ltd. for the past half-year, subject to audit, amounts to Rs. 43.32 lakhs, which, as compared with that for the corresponding six months of 1952, reveals a contraction of Rs. 4.52 lakhs. The sum brought in from the previous half-year is also slightly lower at Rs. 17.23 lakhs, as against the corresponding sum of Rs. 17.66 lakhs brought forward in 1952. The total sum available for distribution is accordingly smaller at Rs. 60.55 lakhs, as against Rs. 65.50 lakhs a year ago. The Directors have proposed to maintain the dividend for the half-year under review at 12 per cent. per annum, free of income-tax (i.e., Re. 1-8 per share of Rs. 25), which requires, as in the previous year, a sum of Rs. 18.87 lakhs. No other appropriations have been made and the balance of Rs. 41.68 lakhs, subject to provision for taxation, is being carried over to the next half-year's account, the corresponding sum of last year being Rs. 46.63 lakhs.

Indian Overseas Bank Ltd.

The profit of the Indian Overseas Bank Ltd. for the half-year ended 30th June, 1953, including the amount brought forward from last year's account, amounts to Rs. 8,22,601, a fall of Rs. 64,091 as compared with that for the first half-year of 1952.

Andhra Bank Ltd.

The working of the Andhra Bank Ltd. during the six months ended 30th June, 1953, has resulted in a net profit, subject to audit, of Rs. 2,46,786. As compared with that for the first half of 1952, the profit for the half-year under review shows a fall of Rs. 45,891. The sum brought in from the previous year's accounts is, however, higher at Rs. 7,231, as compared with Rs. 3,977 brought in a year ago. The total sum available for appropriation is Rs. 2,54,017, as against Rs. 2,96,655.

The Punjab National Bank Ltd.

The Directors of the Punjab National Bank Ltd. have decided to pay an *ad-interim* dividend at 8 per cent. per annum, free of tax, for the half-year ended 30th June, 1953, which represents an increase of 2 per cent. per annum over that paid for the corresponding six months of 1952.

The preliminary results of working of the Bank are not available but, if the higher distribution to the shareholders is any indication, the Bank's profit for the half-year must have been higher than that for the first six months of 1952. If that happens to be so, then it will be a distinct departure from the general trend. The stepping up of the dividend is also a departure from the general trend of bank dividends.

INDIA'S STERLING BALANCES

AGREEMENT WITH U.K. CONSOLIDATED

THE Governments of India and the U.K. entered into a financial agreement, on the 20th inst., at New Delhi, in regard to the release of sterling balances which India holds in the U.K. The agreement has retrospective effect from 1st July, 1951, and will remain in force for a period of six years from that date, that is up to 30th June, 1957. This agreement does not break any fresh ground, it only consolidates the provisions of the agreement between the two Governments already in force, namely, the one entered into by an exchange of letters on 8th February, 1952, between the Finance Minister of India and the British Chancellor of the Exchequer. There is no modification whatever of the agreed arrangements for release of sterling balances. The change is only one of form and not one of substance.

The first Indo-U.K. financial agreement on the release of sterling balances, it will be recalled, was signed on 14th August, 1947. This agreement was in force originally for a period of six months ended 31st December, 1947. But it was subsequently modified and extended from time to time by letters exchanged between the two Governments. It was eventually extended for a period of six years ending 30th June, 1957, by exchange of letters on 8th February, 1952, as already stated. The ratification of the provisions of the agreement by exchange of letters by signing a formal agreement does not, therefore, involve any additional strain on the financial resources of Britain.

India's sterling balances are held in two accounts, namely, current account (No. I account) and blocked account (No II account). The current account is credited with any sterling received by the Reserve Bank of India in respect of current transactions and any sums transferred from No. II account. The No. II account will be credited with the proceeds, at maturity or on realisation, of any investments purchased in accordance with established custom, out of funds standing to the credit of that account. The No. II account will also be credited with any sums, transferred from No. I account which had been paid into it (1) after 15th July, 1947, in respect of the settlement of any matters outstanding under the Defence Expenditure Plan and of any other accounts relating to transactions which were connected with the war and took place prior to 15th July, 1947 (the date from which the first agreement came into force), (2) any amount equal to the net capital movement from the other scheduled territories to India, and (3) such other items as may be agreed upon between the two Governments.

Minimum Currency Reserve

One of the main provisions of the agreement is that the sum of £310 million unblocked and transferred to the current account under the agreement of October, 1951, will be retained in that account by the Reserve Bank of India as a currency reserve and will not be drawn upon without previous consultation with the Government of the U.K. The other provisions of the agreement are designed to regulate the flow of the annual instalment transferred from No. II account to No. I account. Every year, during the period of currency of the agreement, a sum of £35 million will be transferred to the No. I account. Such transfers will take place only as and when necessary to maintain a minimum balance of £30 million on No. I account, in addition to the aforesaid sum of £310 million held as currency reserve, and will be available for utilisation during each year. Any part of the unutilised portion of the sum transferable in any year will be carried forward and added to the sums available in the later periods, provided the minimum balance of £30 million is retained in addition to the currency reserve. Subject to this condition, the Government of India is free to overdraw in any year to the extent of £5 million without prior consultation with the Government of the U.K. If, during any particular year, India requires to draw something more, it should consult the U.K. Government. Any balance remaining on No. II account on 30th June, 1957, will be transferred to No. I account.

The result of working of the agreement during the last two years shows that the utilisation of sterling balances has been less than the amount available. Thus, at the commencement of the period of the agreement, that is, on 1st July, 1951 India's sterling balances had stood at £643.06 million, including £90 million in the current account, representing the unutilised releases during the period prior to 1st July, 1951. Under the agreement, India could have utilised £70 million during these two years, in addition to the sum of £90 million brought in from the previous years, a total of £160 million in all. If India had utilised this amount (£160 million) in full during the last two years, the balances would have run down to £483.06 million by the end of June last. But actually the balances, as on 3rd July, 1953, stood at £533.68 million, that is, £50.62 million more than the balances which would have remained, if India had followed the schedule. This unspent balance of £50.62 million, together with £105 million, making a total of £155.62 million, would be available for India, to be drawn during the next three years. It should, however, be noted that the balance of £533.68 million as on 3rd July, 1953, includes £343 million, representing the currency reserve and the minimum balance of £30 million to be kept in the current account.

NETHERLANDS SHIPPING COMPANIES REPAY WORLD BANK LOANS

Four Netherlands shipping companies, namely, Royal Rotterdam Lloyd, Nederland Line, Holland-America Line and United Netherlands Navigation Co., had taken in 1948 six loans in all from the International Bank for Reconstruction and Development, of an aggregate sum of $12 million. All the loans have a maturity of 10 years, but the shipping companies have now repaid them, five years ahead of maturity. The proceeds of the loans were utilised to purchase six cargo vessels which have been used by the companies in their inter-continental services.

The loans were secured by mortgages on ships, and evidenced by 2½ per cent. serial mortgage notes guaranteed by the Kingdom of the Netherlands. In 1948 and 1949, the Bank sold the entire issue, with its guarantee, to a group of United States commercial and savings banks. Half the notes were paid as due, and the 1954-58 maturities, recently held by banks, both inside and outside the United States, have now been purchased by the shipping companies and cancelled.

JAPAN READY TO BUY STERLING FOR DOLLARS

Japan is facing a serious shortage of sterling and steps are being considered by the Government to ease the shortage. One of these steps is an offer of dollars to Britain in exchange for sterling. No further details as to the amount in dollars to be offered, etc., have been disclosed by the Foreign Office, but Press reports estimate the amount of the new exchange swap by Japan at £10 million. According to these reports, Japan will also seek a three months' extension of the first swap authorised last April, which is reported to amount to £25 million. Japan will also ask countries in the sterling area to relax restrictions on the import of goods from Japan, the Foreign Office disclosed. It has instructed the Japanese Embassy in London to open negotiations on these matters in the very near future.

(Concluded from next column)

During the period under review, much interest was focussed on retention quota arrangements and similar practices. These arrangements are usually applied to dollar export receipts and confer special privileges on those obtaining such means of payment. Thus, during 1952, such arrangements were either introduced or expanded in three countries, but were abandoned in two others and partly abolished in another.

Two of the member-countries introduced "free" exchange markets, in which certain segments of their international trade and payments were to be handled. Three members introduced exchange taxes or increased the existing taxes.

Liberalisation of trade between countries which are members of the European Payments Union was, in general, maintained. In some cases, there was an increase of the liberalisation, while two of the leading participating countries were compelled to reduce their liberalisation. One of these last mentioned countries is stated to have since partially restored its liberalisation measures. Two E.P.U. countries had abnormal creditor position in the E.P.U. settlement and, in order to counteract this position, continued to resort to blocking part of their residents' export receipts derived from trade with other E.P.U. countries.

CHANGES IN EXCHANGE RESTRICTIONS

INTERNATIONAL MONETARY FUND'S FINDINGS

ARTICLE XIV, section 4, of the Articles of Agreement of the International Monetary Fund lays down that, not later than three years after the date on which the Fund begins operations and in each year thereafter, the Fund should report on the exchange restrictions still in force under section 2 of the same Article. In accordance with this requirement, the Fund has submitted its Fourth Annual Report this year. The first part of the Report contains the results of the Fund's consultations with various member-countries which were held during 1952 on the subject of further retention of their exchange restrictions, consultation programme for 1953 and the Fund's activity in the field of restrictions. The second part gives a general review of the developments in restrictions during the year 1952 and in early 1953, as also a series of country-wise surveys. It is, however, proposed to confine ourselves, in these columns, to the facts disclosed by the general survey of the developments on exchange restrictions.

The general survey indicates broadly the nature of the changes which had taken place during 1952 and early 1953 and thus assists an understanding of the general character of recent developments in exchange restrictions. It has, however, been found almost impossible to make any generalisation which would have widespread validity and cover developments in exchange control and restrictions during the period under review. Generally speaking, the period was one of consolidation for a number of countries and whatever changes that were noted in them were mainly in the nature of technical simplification in the operation of their exchange systems. So far as the other countries were concerned, it was essentially a period of "watching world developments to see what would take place elsewhere before taking any decisive measures to lessen their own exchange restrictions."

No Significant Relaxation

The volume of world trade was smaller in 1952 than in 1951, but the Fund is unable to say to what extent this reduction is due to intensification of international trade or exchange restrictions, which began in the second half of 1951, as contrasted with other causes. It would, however, appear that, in general, there was at least no significant relaxation in exchange restrictions, during 1952, though some countries lessened their restrictions, while the others intensified theirs. Some countries simplified their multiple exchange rate structures, while others made them more complicated.

The slowing down of the competition for raw materials in 1951 resulted in a decline in their prices, with few exceptions, during 1952 approximately to the levels of June, 1950. While the decline in price of raw materials undoubtedly helped the more industrialised countries, it tended, according to the I.M.F. Report, to produce in the primary producing countries a more cautious and restrictive attitude towards the granting of exchange and the lessening of exchange restrictions. Thus, in several leading countries, there was a reduction in the amount of exchange made available for imports directly arising out of a recognition of adverse balance of payments positions and a desire to correct them. The general use of discrimination in the application of restrictions continued during the period under review, so that payments in hard currencies were curtailed to a greater extent than were payments in soft currencies.

No additional currencies became convertible during the period. In more than half the number of member-countries surveyed by the Fund, multiple currency practices continued to operate. Three or four of them slightly simplified their multiple exchange rate systems by reducing only the arithmetical number of rates employed, but six member-countries found it necessary to elaborate their multiple exchange rate systems. Among the latter, two countries introduced additional fluctuating exchange rates by the use of negotiable certificates. These certificates entitle the holder to obtain exchange in payment for imports not otherwise permissible. Another country introduced an "auction system" by which it allocated limited quantities of available exchange. This means of exchange distribution had not been exercised for some years.

(Continued in previous column)

COTTON TEXTILE INDUSTRY IN JAPAN

DRIVE TO RAISE TECHNICAL EFFICIENCY

SINCE Japan occupies a predominant place in the international cotton textile trade, the developments in the sphere of cotton textile industry and trade in that country considerably influence the pattern of world trade in cotton textiles. Information on these developments, therefore, has always been read with great interest. As readers are aware, the past few months witnessed brisk activity in the Japanese cotton textile industry and trade. This is clearly borne out by the marked rise in the production of cloth, the quantity of woven cotton fabrics actually produced during the month of March, 1953, being nearly 215 million square yards, which is the highest monthly average for the past five years. The output in the previous month and the corresponding month of 1952 was 200 million square yards and 195 million square yards, respectively. The rise in cloth output closely follows an increase in yarn production, from 59.09 million lbs. in March, 1952, and 60.64 million lbs. in February, 1953, to 65.93 million lbs. during the month under review.

The steady rise in cotton yarn and cloth production has been followed by an expansion in exports. Thus, during the first quarter of this year, Japan exported as much as 187 million square yards of cotton piecegoods, as against 146 million square yards three months before. It is true that the quantum of exports in the first quarter of 1953 was less than the average for 1952, thereby indicating that the world trade in textiles has been running at a low level. But Japan fared better than any other textile exporting countries. It will be interesting to note, in this connection, that, during the quarter under review, exports of cotton piecegoods from the major exporting countries were roughly 5 per cent. below the previous quarter's total and were down to the level registered in the second and third quarters of 1952. Latest figures relating to exports are not available. There are, however, indications to suggest that export orders for Japanese cloth in recent months have been at a fairly high level.

Government's Assistance

The Japanese Government is actively assisting the textile industry in its task of expanding export markets. With a view to ensuring adequate supplies of cotton at reasonable prices to the mills, it has, for instance, decided to import, on a barter basis, an additional 70,000 bales of raw cotton from the Middle and Near East and Central and South America. It has also decided to expedite import of 80,000 bales of Pakistan and Indian raw cotton allotted for the July-September, 1953 period. A sum of $19.6 million has been earmarked for those increased imports, as against $16.6 million in the "switch-over trade" budget and $3 million in the "priority foreign currency" budget.

The industry itself is striving hard to expand the export trade by its own efforts. Thus, a Cotton Goods Promotion Association has been set up by a number of member-companies of the Japan Cotton Spinners' Association. The leading cotton spinning firms in Japan are now engaged in modernising their equipment, in order to improve technical efficiency and the quality of the textile output. The Kurashiki Spinning Company is the first to import an automatic spooler from the U.S. It has also placed orders for a continuous bleaching machine. The other spinners are also following suit. A few leading Japanese cotton textile interests are reported to have recently concluded arrangements with two big U.S. concerns—the U.S. Monsanto Chemical Company and the Nissan Chemical Company—for securing technical aid to the spinning industry. Another contract for technical aid has been signed by the Nisshin Spinning, Fuji Spinning, Kurea Spinning and Toyo Textiles Companies with Cluett Peabody & Co. This contract is said to cover, in particular, methods for shrinking and finishing textiles.

Although all practicable efforts are being made to increase textile exports by rationalisation of the industry, the Japan Cotton Spinners' Association has urged the authorities to take steps to bring about "further export expansion through economic diplomacy." In other words, the Association wants the Government to adopt the following four-point policy at the diplomatic level:

(1) To exert pressure for the speedy relaxation of import regulations now prevailing in Britain and other Commonwealth countries;

(2) to revise trade and payment agreements with Indonesia and other Asian nations;

(3) to approach the U.S. for another cotton credit for Japan; and

(4) to conclude urgent trade and navigation pacts with as many nations as possible.

The Association has also put forward a number of other suggestions. These relate to reduction in money rates on loans to the textile industry, revision of taxation to promote exports, cut in freight and insurance premiums, and expansion of the export credit insurance system. Yet another plea of the Association is for the amendment of the Occupation-dictated anti-monopoly law, with a view to permitting the traders to form associations for the "planned exploitation" of individual foreign markets.

Lesson to India

There is a lesson which India can draw from this brief survey of the development in the Japanese cotton textile industry and trade. It is that, if the Indian cotton mills are to meet the growing competition from the Japanese mills, they should be given the same facilities and the backing which are now being given to their competitors by their respective Governments. Far from doing anything in that direction, it is unfortunate that, within these few months, the Government of India should have suspended the issue of licences for automatic looms, despite the fact that many mills are willing to go in for this type of weaving with a view to cutting down their cost of production and improving the quality. Further, the mills are handicapped by the suspension of import licences for essential mill-stores, such as bobbins, reeds, starch (including sago), caustic soda, hydrogen peroxide, etc. As Mr. Neville Wadia, one of India's leading millowners, aptly remarked, in the course of his address at the recent meeting of the Export Advisory Council, if cloth production, particularly for export, is to be maintained, it is very essential that there should be a continuity of supplies of mill-stores of suitable qualities and in requisite quantities.

India is progressing rapidly towards self-sufficiency in the economic field—in industry, in commerce, in agriculture. OUTPUT, a quarterly magazine devoted to the survey of India's progress in these spheres of economic endeavour is informative and authoritative because experts in their several fields contribute to its contents. It is a survey that no industrialist, engineer, technician or student can afford to be without. It is the best magazine of its kind.

JAPANESE COMPETITION IN RAYON GOODS

In his statement to the shareholders of Courtaulds Ltd., the leading rayon producers, the Chairman, Sir John Hanbury-Williams, has referred to the growing threat of Japanese competition. Japan, he says, has been steadily climbing back to its pre-war position in world rayon trade, and in 1952, overtook Italy and the U.K. to become once more the world's greatest exporter, although its share in the total was small as compared with its pre-war position. This took place, despite restrictions which were imposed, on account of balance of payments difficulties, on textile imports into the British Commonwealth from Japan, as well as from other countries outside the sterling area. These restrictions have now been relaxed according to Courtaulds' Chairman, to a "serious" extent. In this connection, he refers to Japan's application for admission to the General Agreement on Tariffs and Trade (G.A.T.T.) and says:

"The application by Japan for admission to the General Agreement on Tariffs and Trade is being considered at the present time by H.M. Government and by the Governments of other G.A.T.T. countries, and I feel that I should take this opportunity to give a warning that, if Japan were admitted to membership, she would gain considerable tariff advantages in the British Commonwealth, together with important rights with regard to import licensing. We are relying on our own Government and, indeed, the other Commonwealth Governments to ensure that proper safeguards are written into the Agreement to prevent a recurrence of competition such as we experienced from Japanese rayon exports in the pre-war years."

This view, however, is not shared by all in Britain. Commenting on it, the *Economist*, for instance, observes:

"The British rayon industry, which exports as much as half its output, would do better to meet this competition commercially than to campaign against the relaxation of restrictions that would follow the admission of Japan to the General Agreement on Tariffs and Trade. The threepence a pound that was taken off the price of Courtaulds' rayon staple last week is a stronger and more proper counter to Japanese exports than arguments for the rentention of trade restrictions."

Referring to the production of rayon in different countries, Sir John says that the estimate of production of rayon and synthetic fibres show that, in 1952, output fell in most major countries, including the U.K., the U.S., France, Germany and Italy. The single important exception was Japan which increased its production by 10 per cent. The U.S. maintained its dominant position by accounting for over one-third of world output. Although the trend of production has been upward since the second half of 1952, running as it has done at a rate far higher than that recorded even at the peak of the 1951 boom, Sir John is not optimistic that this state of affairs is likely to continue much longer, as a part of the good demand for rayon in recent months is due to the building up of stocks by consumers which must come to an end sooner or later.

U.K. TEXTILE MISSION TO EAST AFRICA

It is not merely Japan that is offering competition to India in the cotton textile market; the U.K. also is offering similar competition. This is indicated by the vigorous drive, launched by the Lancashire mills and the British Government, to step up exports of cotton piecegoods in the African region. It was only in December last that a U.K. cotton textile team, appointed by the British Board of Trade, visited West Africa with a view to exploring the possible ways and means by which Lancashire mills could supply Africa the types of cotton piecegoods it wants at prices which suited the pockets of its people. This has now been followed by another team to East Africa.

The visit of this team, a report from Dar-es-Salaam avers, has been warmly welcomed by the Tanganyika textile importers. The African taste in textiles, it is stated, is always changing, so much so that a new design in different colours has to be created for every fresh consignment of prints imported into Tanganyika. At present, it is considered cheaper to buy grey-black cloth and dyed woven yarn from India. The same holds good in the case of ready-made shirts and hosiery from Honk Kong.

TEXTILE DYESTUFFS

Of much interest to the clothing industry and trade is the announcement by Dyehouse Laboratories of Ciba (Basle) that bright red and pink shades of a fastness to light hitherto unattainable and possessing excellent all-round fastness properties have been obtained with Cibanone Brilliant Pink G and 2R. These two dyestuffs, it is claimed, have proved suitable for coloured bleach styles, furnishing fabrics and goods intended for subsequent rubber-proofing made from cotton, filament rayon and spun rayon. Further, they can be applied in the open vat, in machines, and by the pigment padding method. They are dischargeable to white and can withstand crease-resist finish.

CONTROVERSY OVER COTTON BUYING

WILL FUTURES TRADING BE REOPENED?

(From A Special Correspondent)

MANCHESTER, 14*th July*

MANCHESTER LETTER

SPINNERS in Britain have now had their second—and possibly their last—opportunity of making a choice between centralised buying, as carried out by the Raw Cotton Commission, and private trading through individual Liverpool and Manchester merchant firms. Their decision will influence the trend of purchases of cotton for the next 12 months from the beginning of September, but, in a year's time, it is likely that a new set of conditions will have arisen and there may no longer be a choice to be offered.

To the outsider, either in other industries in this country or connected with cotton affairs abroad, the whole situation may appear oversimplified. To them it is merely a matter of throwing off the shackles and turning again to free enterprise in the shape of a Liverpool cotton market which performed so useful a function in pre-war days. Yet those close to the immediate sphere of activity know that the position is far more complicated, mainly as a result of the intervening years since Liverpool was open and the changes in the national economy. Were there no dollar problem for Britain, the issue would be far less intimidating.

Speculation on Cotton Purchase

Speculation on the volume of contracting-out from the Raw Cotton Commission this season has settled down to an estimate of rather more than half of the trade opting for private buying. The actual figures will no doubt be announced shortly by the Government. A few of the leading groups in the trade have made known their attitude and the trend is certainly towards acquiring more cotton on private account.

The problems facing users of Egyptian type cotton, however, are more formidable than spinners in other sections. Not only are they at the mercy of possible unsettling developments in Egypt and the Near East, but the availability of supplies of these particular growths is somewhat in question. It is believed that the Commission has considerable quantities of Sudan cotton in stock, which growths are now being increasingly used in Lancashire. Further quantities of this cotton will not be available on private account until early next year and the possibility of an interruption in supplies is naturally an eventuality which any millowner would wish to avoid.

American Influence

An angle to the raw cotton buying controversy, which is slowly being recognised, is the part which may shortly be played by American interests in the reformation of the Liverpool Cotton Market. Partly because of Treasury restrictions and partly owing to the stringent attitude adopted towards dollar purchases, the influence of American raw cotton firms is emerging from a shadow to greater substance behind the efforts to revive full freedom in cotton purchasing. This situation is understandably not entirely to the liking of Lancashire firms, among either merchants or spinners, but in the existing circumstances, it seems an almost inevitable development in which American finance will be very prominent in the moves to reopen futures trading.

In some quarters it is being questioned whether the advantage of a return to free trading is worth having the background of financial support from the United States and all that may entail. The pre-war Liverpool market functioned as an international organisation ready to offer its facilities to the cotton industries of the world, although it was, of course, entirely financed and supported by British endeavour. Times have changed, however, and the needs of the present seem to outweigh some disadvantages which may accrue from outside sources.

Fine Spinners' Views

Another of the big Lancashire cotton combines has decided to buy the majority of its raw material privately rather than through the State-sponsored Raw Cotton Commission. Mr. W. T. Winterbottom, Chairman of Fine Spinners and Doublers Ltd., told the annual meeting that the group was contracting-out from the Commission for about 55 per cent. of its cotton for the coming year. In the first opportunity for private buying during the past 12 months, the combine bought 33 per cent. of its supplies through Liverpool and Manchester merchant firms. The ending of the Commission's monopoly, declared Mr. Winterbottom, had revived the keenness of importers to offer their clients keen prices and good service, forcing the Commission to trade on a competitive basis. Although he contended that the net results between prices paid for cotton privately imported and those charged by the Commission were "marginal," the company had derived considerable benefit from the facility to secure from the growers the cotton of its own choice for contracting-out mills.

Mr. Winterbottom, who is also President of the Master Spinners' Federation, painted a brighter picture of future prospects for the cotton and rayon trades. He said: "The outlook is clearer now than it has been for 18 months. After heavy falls, raw material prices have achieved some degree of stability. In the home trade, stocks at all points between producers and consumers are low. Only a slight increase in present demand could quickly change the situation to a sellers' market. In my view, a brighter trading period is discernible."

Mr. Winterbottom is a known protagonist of the wider use of rayon in conjunction with cotton and the mills in his group include a number which are spinning rayon staple in larger quantities. But he is realist enough to admit that this trend can at times go too far. The expansion of demand for rayon is welcomed by all in the industry, as he says, so long as it is based on the recognised technical merits of the fibre.

There is, however, growing evidence that demand is being artificially inflated by the "D" scheme. For example, the pattern is being changed by the substitution of cotton shirtings, gabardines and other fabrics by cheaper materials which do not attract tax. "It is in this kind of distortion that the real danger of purchase tax lies," he said and added that, "in the long run, no one benefits by the use of materials for purposes for which they are technically unsuitable."

Not only is the present system of levying purchase tax on textiles distorting the pattern of output by the use of one fibre for another but it is also coarsening the output of the industry. At one mill in the group, production of fine counts has been abandoned and the unit has been re-equipped to spin comparatively coarse counts of rayon. This trend is noticeable in other sections, leading to the assumption that the industry is being forced, somewhat against its will, to produce coarser, although not necessarily lower, quality goods.

Rayon Trading

Leaders of Lancashire's rayon industry have warned the Government that British rayon cloth exports to the Empire will be hit by the recommendation that restrictions on Japanese imports should be partially eased. Representations have been made to the Board of Trade about the adverse effect on the demand from Colonial markets for British rayon fabrics, if Japanese fabrics are admitted more freely, according to the British Rayon and Synthetic Fibres' Federation.

The Federation drew attention to the availability of U.K. textiles "and reminded the Board of the sacrifices that the United Kingdom rayon industry is making in order to provide suitable fabrics at prices within easy reach of Colonial consumers."

Workless Total Down

Unemployment in Britain's cotton industry at mid-June was down to its lowest for 18 months. Ministry of Labour figures, issued in Manchester, show that the out-of-work total in cotton spinning and weaving had fallen to 3,100, of which 1,200 were temporarily stopped. In May, the figure stood at 4,093, including 2,000 on short time. The number of vacancies in cotton mills continues to increase. Over 3,100 operatives are required in the spinning section of the industry and 1,200 in weaving. The clothing industry has vacancies for 5,300.

Raw Cotton Imports

More than 35,000 bales of cotton for Lancashire spinning mills arrived in British ports this week. Of total supplies of 35,611 bales, the Raw Cotton Commission imported 26,891 bales. Chief suppliers were the Sudan with 9,358 bales, Peru with 6,898 bales, Brazil 5,383 bales and the United States 5,997 bales. Still at sea for Britain are more than 38,000 bales, chiefly due from the Sudan, Egypt and the Argentine.—*All Rights Reserved.*

HEDGE TRADING PERMITTED IN NEW CROP COTTON

CONTROVERSY OVER SCHEDULE OF TENDERS

THE long-awaited permission for futures trading in cotton in the 1953-54 cotton crop was given by the Central Government with effect from 17th July, 1953. Business, however, has been confined only to the February, 1954 delivery. The Government has decided to continue, without change, the floor and ceiling prices for cotton of the 1953-54 crop. Trading in the new crop was commenced early on Friday the 17th inst.

Although the Government has not explained why permission for futures trading in new crop is confined only to the February delivery, it is presumed that the Government will watch the course of this *vaida* for some time at least before granting permission in other *vaidas* and also will modify, some time in September, the schedule of tenders so as to introduce such changes as are necessary in that schedule in order to make it conform more nearly to actual conditions in cotton cultivation. The schedule prescribes, as is well known, the basic staple length and 'on' and 'off' allowances for class and staple of different varieties of cotton. On this question, there has so far been some controversy between the East India Cotton Association and the Textile Commissioner. The Association has a certain schedule which tallies in the main with the schedule prescribed by the Textile Commissioner. But the Association has acted in the belief that so long as it did not permit any violation of the fundamentals of the hedge contract, it could always allow some relaxation or restrictions. Thus, for Westerns, the Government has prescribed a basic staple length of 13/16", whereas the Association has prescribed 25/32". Similarly, the Association has fixed the basic staple length of Coomptah at 27/32" whereas the Textile Commissioner has prescribed it at 1" for this cotton. This controversy has, however, been ended by the Association's expressed willingness to enforce the schedules prescribed by the Government without making any changes therein.

The varieties which figured prominently in this controversy, have been 'Coomptah' and 'Westerns.' The Government's schedule (now accepted by the Association) in respect of these two varieties is as follows:

M.G. Coomptah 1" staple, including Jayawant, R.K. 19 and Bagalkot. Tenderable up to 15/16". Places tenderable: All places in the Dharwar, Belgaum, Bijapur, North and South Satara, Sholapur and Kolhapur Districts of the Bombay State, State of Mysore, and Raichur Protected Area in the Raichur District of the Hyderabad State.

M.G. Westerns 13/16" staple, including 881F. Umri White Northerns, Red Northerns, Hagari 1 (Western Farm) and Nandyal 14. Tenderable up to 15/16". Places tenderable: All places in Bellary, Kurnool (Pettikonda Taluka), Anantapur and Cuddapah Districts of the Madras State and Gulbarga and Raichur Districts (excluding Raichur Protected Area) of the Hyderabad State.

It is now prescribed that the schedule will be re-examined in September in the light of the experience of the men in the trade. After all, no schedule can be permanent. As new varieties are grown, quality improves and new areas are brought under cotton cultivation, all ideas about permissible staple length, and places of tender also should change. The schedule exists for the convenience of the trade, and not *vice versa*.

It is not, of course, clear what the Government proposes to do, if it decides to decontrol cotton altogether during the pendency of the February contract. It will then be open to any trader to say, when prices go against him, that he entered into the contract under the belief that the ceilings and prices would remain unaltered. In 1948, however, when a similar situation arose, the cotton was decontrolled without any difficulty although a *vaida* was pending. It is now generally believed that no precipitate action will be taken on the decontrol of cotton, without considering the legal and other implications involved in such a step. In any case, the Government would have done well to declare that it was permitting futures trading subject to its right to decontrol cotton at any time at its discretion. Such a qualification would have given no room for any future controversy.

COTTON-CUM-PADDY PROGRAMME

The Madras Agricultural Department has, as our readers are aware, been at some pains to demonstrate how best the paddy lands could be utilised to grow cotton in the off-season. A programme for this purpose has been initiated in the Department's Agricultural Research Station at Aduthurai, in the Tanjore District of that State. The station owns a farm of 52.5 acres, of which 17 acres were devoted to cotton. The major portion of the rest of the area was devoted to paddy on a double cropping system. Through intensive manuring and adoption of scientific methods of farming, the production of paddy increased between 1948-49 and 1952-53 from a bare 107,052 lbs. to 233,092 lbs. Between 1951-52 and 1952-53 the production of cotton increased by 12,000 lbs. to 17,000 lbs. Preliminary estimates show that the profit from the cultivation of cotton aggregated Rs. 300 per acre. Thus, while the total production of paddy in 1952-53 was more than double that of 1948-49, an extra crop of cotton was also grown on lands which had already grown two crops of paddy. Both land and labour were thus being kept busy all the year round. The success of this experiment shows that it is possible to utilise paddy-growing lands for cultivation of cotton without any damage whatever to the paddy crop. Mr. M. S. Sivaraman, Director of Agriculture, Madras State, rightly stated, on the occasion of the last Farmers' Day in that research centre: "What has been accomplished in this farm can be accomplished equally well on every acre of irrigated paddy in India."

PAKISTAN COTTON EXPORTS

The total quantity of Pakistani cotton, endorsed for export from 1st September, 1952 to 2nd July 1953, is 1.40 million bales as against 1.08 million bales in the same period in 1950-51. The geographical distribution of the export trade (in bales) is as follows:

	1-9-52 to 2-7-53	*Corresponding period in 1951-52*
U.K.	124,812	86,507
Continent	371,708	282,316
China	153,434	391,691
Japan	571,563	278,653
U.S.	12,170	437
Australia	30,212	8,591
Other foreign ports	91,304	8,507
Asian ports ...	15,018	1,941
Indian ports ...	100	400
East Pakistan ...	29,988	21,418
Total ...	1,400,309	1,081,464

U.S. COTTON

The U.S. is trying, according to New York reports, several methods whereby its cotton surplus might be liquidated. It is reported, for instance, that a Japanese mill is negotiating for the import of U.S. cotton on the understanding that the mill would be enabled to re-export to the U.S. a part of the cotton turned into grey cloth; the mill would receive one-third of the cotton shipped as processing charges. This arrangement, it is stated, will not involve any use of foreign exchange.

Another proposal is that the U.S. should allow the U.K., France and other countries to acquire $100 million to $250 million worth of cotton in exchange for non-dollar currency which could later be used by the Mutual Security Agency for military procurement and other objects.

MADHYA PRADESH COTTON

The Madhya Pradesh Cotton Cultivation Bill prescribes restrictions on the cultivation of cotton, with a view to maintaining the quality of cotton in the State. The Bill provides for the supply of seed of the specified improved types of cotton at reasonable rates to the cultivators by the Government before the commencement of each sowing season. It is not known whether the Bill will be introduced in the forthcoming session of the Legislative Assembly.

INDO-EGYPTIAN TRADE AGREEMENT

Under the Indo-Egyptian Trade Agreement, exports from Egypt to India, including cotton, are payable, with effect from 9th July, 1953, in transferable sterling (60 per cent. of the value of imports) and in rupee clearing account (40 per cent.). The latter account is to be utilised for financing purchase of goods from India.

The Egyptian Ministry of Agriculture estimates the area under cotton cultivation in Egypt this year at 1.32 million feddans, as compared with the 1952 acreage of 1.97 million feddans (1 feddan=1.033 acres). The estimate is nearly 20 per cent. below traders' expectations.

ESTATE DUTY BILL

SOME MODIFICATIONS SUGGESTED

(By N. T. DALAL, B.Com., F.C.A.)

THE objects of the Estate Duty Bill, as outlined in the statement of objects and reasons, are to reduce the existing inequalities in the distribution of wealth and provide the States with necessary finance for their development schemes. The idea of bringing about an even distribution of wealth is, indeed, very laudable and welcome. But, when one examines the provisions of the Bill, one gets the impression that the object of distribution of wealth is only subsidiary to the object of deriving revenue and that this latter object dominates the entire structure of the Bill. If some of the provisions of the Bill are modified as suggested hereinbelow, the Bill will definitely serve the purpose of proper and equitable distribution of wealth and, at the same time, absolve the Government from the charge of squeezing the taxpayers needlessly.

Clause 9 provides that the property in the gifts not *bona fide* made two years or more before death shall be deemed to pass on the death of the deceased. Now, the word *bona fide* in this clause may be used by officials as an instrument to harass the heirs of a deceased even in case of gifts made two years or more before the death of the deceased. It would always be the duty of the heirs to satisfy the valuer that a particular gift was made two years or more before the death of the deceased, if the same is claimed to be exempted from estate duty. This is already implied even otherwise and, therefore, the words *bona fide* are quite superfluous. Further, its retention may prove to be a bone of contention and prevent the smooth working of the Act.

Secondly, the limitation of six months in the case of gifts for public charitable purposes is not at all necessary. The deletion of this bar will greatly serve the paramount object of distribution of wealth. If a wealthy man lying on his death bed is prompted by reasons of charity or religion to donate a handsome amount to a public school or hospital in his own town, he should by no means be discouraged from doing so by such provisions of law.

Under clause (32), certain gifts by the deceased are exempted from estate duty, even if the same are made within the period of two years or six months, as the case may be, but only to the extent of Rs. 16,500. This limit is too low and is not likely to be of much value from the point of view of the beneficiaries. Here also, if a dying person desires to bequeath gifts to his poor relatives, the Government should encourage him by substantial concessions under this clause. These exemptions should be fixed in terms of percentage of estate liable to duty, instead of the absolute figure of Rs. 16,500, so that the benefit may be equitable and just. Such gifts may provide capital for business in case of male relatives and the wherewithal for children's education in case of female relatives. Further if, by such methods, business openings are provided to a few persons who would otherwise have joined the rank of job-hunters, the problem of unemployment will be solved to that extent. It may be noted that the term "relative" is not used here in the same sense as in clause 26 under which only the wife, children, mother, etc., of a deceased are termed as relatives. Here it includes such distant relatives or other persons who have no direct claim whatever under the law to the property of the deceased.

Clauses 10 and 21

By virtue of clause 10, the gifted property will be deemed to pass only on the death of the deceased and as such liable to duty, if the possession of the same is retained by the donor even though all other conditions for non-taxable gifts are complied with by the donor. This clause is likely to act very harshly in the case of married girls. Every father makes some provision for his married daughter and her children. He, however, always prefers to retain possession of the gifted property with him, lest the son-in-law should exercise his undue influence and misuse the property. For this and several other reasons, it is not desirable to insist on possession by the donee. So long as the property is irrevocably vested in the donee and its income is exclusively enjoyed by him, the purpose of the law is well served.

Under clause 21, the time limit is altered from two years to five years in cases where the deceased is holding the property as trustee under a disposition made by him. This change is unnecessary and is likely to act as a deterrent to a person desirous of making a trust only if he can be one of the trustees. This will serve as an obstacle in the distribution of wealth and defeat the very object of the Bill.

Clause 24 provides that, if a husband or wife settles any property on the other party *before the commencement of the Act*, the same shall be exempt from estate duty until the death of the survivor, subject to certain conditions. There is no reason why the exemption should be confined to settlements before the commencement of the Act only. The benefit of this clause should as well be extended to all dispositions whether effected before or after the commencement of this Act. The clause is probably inserted to afford protection to aged married couples and there is no reason to set a limit to that healthy principle.

Clause 30 deals with allowance for quick succession. The relief under this clause is most unsatisfactory, as pointed out in minutes of dissent by some members of the Select Committee. Even in countries where the rate of mortality is not so high as in our country, the periods for reduction in duty in the case of second and successive deaths are much longer. In the U.S. and Japan, no levy is made on the second death if it occurs within five years of the first. If this is the approach of such advanced countries, what has prompted the Government of India to fix such short periods and also such meagre reductions in the levy? The provisions in this regard require to be substantially liberalised in view of the high rate of mortality in our country. Further, there should also be introduced a specific provision that, in the case of a widow dying within seven years from the date of her husband's death, there will not be further levy of duty on her death in respect of the estate gifted to her by her husband. The modification of clause 30 in this light will go a long way towards removing the hardship a widow will experience. In the absence of such a modification, a person will be tempted to transfer his property in favour of his young sons and not his aged wife with a view to saving duty. Many attempts are being made through the machinery of law and otherwise, to raise the status of women. Women are themselves fighting for their own rights in all directions. The economic dependence on men is, however, the most important handicap in their way. If by slight improvement in this Bill, women are placed in a better position, the Government will have done justice to the fair sex.

Clauses 49 and 50

Clauses 49 and 50 authorise the Board to prescribe means and manner of collecting the estate duty and accept Government securities in payment of the same on such terms as it thinks fit. The benefit of this clause, however, should be extended to shares and debentures of approved concerns, as also to immovable property generally, which may be accepted at the value for which they have been listed in arriving at the value of the estate liable to duty. This will automatically serve as a check on the authorities trying to overestimate the value of the taxable estate by inclusion of the notional wealth at an unduly high value. In this connection, the experience of the income-tax proceedings may be cited as an instance. The taxable profit is increased by disallowing the expenditure and including notional and/or unrealised income. Even the liability under income-tax has been instrumental in depriving many a business of its working capital and sometimes bring about its closure altogether. When such is the impact of income-tax, one can very well imagine the plight of a business when a large part of its liquid resources are withdrawn for payment of the estate duty on the death of any of its members. This may also result in forced selling with consequent reduction in the value of the assets constituting the estate.

In order to prevent all these hardships, it would be advisable to accept any portion of the estate in kind in discharge of estate duty. The Government is probably afraid that such a provision will bring in its hands unproductive or less productive assets. On the contrary, Government should welcome this, as it is in a position, owing to its large resources of finance and personnel, to develop such assets which were lying unused in private hands, thus increasing the wealth of the country. There is no additional advantage as a whole in disturbing the assets which already bear fruit, which may, of course, be so regulated by legislation as to bring maximum satisfaction to maximum number of persons. Take the example of land. There are in private hands vast tracts of land, which are not utilised either for agricultural or building purposes. If such lands in residential areas of industrial cities like Bombay are accepted by Government in discharge of estate duty and buildings are erected thereon, the problem of housing shortage will be minimised to a great extent. The private agencies are reluctant to invest in buildings for lack of liquid resources and other reasons. To encourage the erection of buildings, income in respect of new buildings is exempted under the Indian Income-tax Act, provided the erection of the building is begun and completed within the specified period, viz., upto 31st March, 1954, at present. Provision has also been made for initial depreciation allowance in respect of new buildings by an amendment of the section 10(2)(vi) of the Indian Income-tax Act in order to encourage business concerns to go in for investment in buildings. Even these exemptions have not contributed much to the solution of the housing problem. Government can, therefore, go a step forward and accept land also in discharge of the estate duty and further its own objective of encouraging building activity and lighten its own burden of finding housing accommodation.

In this context one may also refer to the *Bhoodan* movement which is gaining in volume and strength day by day. If State Governments are fixing ceilings on landholdings, one fails to understand why the Union Government should not accept land in discharge of liability to estate duty and redistribute the same to the landless labour on certain terms and conditions or pass them on to the State Governments for doing the needful.

Succession duty is preferable to estate duty, as it will be more equitable, in the sense that its incidence will be in proportion to the inheritance by the beneficiaries.

It may be said, in conclusion, that the above is not meant to be an exhaustive or critical analysis of the Estate Duty Bill, which has emerged from the Select Committee. The discussion has been restricted to only those provisions of the Bill which deal with distribution of wealth and levy of estate duty. The revenue-grabbing mentality has so much seized the minds of the sponsors of the Bill that the primary object of equitable distribution of wealth with the ultimate view of maximum well-being of the people, has been allowed to recede to the background. No proper balance has been maintained between these two objects. On the contrary, the object of distribution of wealth has been used to camouflage the other object which has recently come in for much adverse criticism at the hands of the public and the Press.

It will be advisable for the Government to channel the available resources of the country into the more useful and productive channels rather than take upon itself promotion of all kinds of ventures and concentrate for that purpose in its own hands a greater part of the wealth of its nationals. This method will enable the Government to control the capital and income of its nationals without the accompanying irksome feature of acquiring the same by means of taxation. The policy of heavy taxation is not justified also in view of the absence of ameliorative measures and benefits flowing from the State to the people on the lines prevailing in most of the advanced countries. The process of the poor becoming poorer and the rich becoming richer should by all means be stopped by the Government. But one is afraid that such heavy taxation, without the accompanying social security and such other special features obtaining in other countries, will bring about such a state of affairs that all will have to look to the State for one thing or another. This phenomenon is already visible in the sector of charitable institutions. Private philanthropy had in the past, given birth and nourished many a hospital and school. Such institutions are these days finding it difficult to evoke a sense of charity in the minds of their patrons, as the sources which have financed them upto now are gradually getting exhausted under the burden of crushing taxation.

THE

CENTRAL BANK OF INDIA

LIMITED

The Net Profit of the Central Bank of India, Limited, for the half-year ended 30th June, 1953, subject to audit, including the sum of Rs. 17,23,014-9-9 brought forward from the last year's account, amounts to Rs. 60,54,807-3-11 which the Directors have resolved to dispose of as follows:

	Rs. a. p.
To pay an *ad-interim* dividend at the rate of 12 per cent. per annum free of Income-tax (i.e., Rs. 1-8-0 per share) for the half-year ended 30th June, 1953	18,87,255-0—0
To carry forward to next half-year's account subject to provision for taxation	41,67,552-3-11
	Rs. 60,54,807-3-11

INCOME-TAX STRUCTURE IN U.S.

In 1900, when an American made a million dollars, he could fulfil his wildest dreams. For millionaires in 1900 (there were approximately 4,000 in that year, as against 3 in 1861) often spent their millions with incredible abandon. The American who makes a million dollars in 1953 is somewhat more restricted in his purchasing ability. For one thing, he can spend only 16 per cent. of his million dollars in pursuit of his dreams. The other 84 per cent. goes back to the Government in taxes. The shift in the position of the rich has been striking, and the income-tax is, in great measure, responsible for it.

In the years since the first income-tax law was enacted, more and more Americans have been made subject to the tax. Only one person in about 275 was required to pay under the first income-tax law. To-day, more than one person in three pays a share, large or small. At the same time, the proportion of Government revenue derived from income-tax has increased and the proportion derived from indirect taxes, which generally do not take into account ability to pay, has decreased. For example, in 1947 about three-fourths of the Government's revenue from taxes was from individual and business income-taxes. Customs, which used to account for virtually all of the national tax income, now represents less than one per cent.

The American tax system is continually being changed. But all political parties support the principle of apportioning taxes according to each person's ability to pay. American tax history is one of gradual evolution of more and more equitable taxes and foreseeable modifications will be changes in detail rather than in policy.

INTERNATIONAL SUGAR CONFERENCE

BID TO REACH AGREEMENT ON MARKETING SCHEME

WITH India returning to the list of countries participating in world trade in sugar, the Government, industry and trade will naturally evince a keen interest in developments influencing the course of the world market for sugar. A development of great interest is the move of the International Sugar Conference, now in session in London, to evolve a world marketing scheme for sugar. The Conference has been convened by the U.N. Secretary-General, in pursuance of the resolution adopted by the International Sugar Council (I.S.C.) at its meeting held in London early in October last.

Although the Conference is organised under U.N. auspices, the groundwork for it has been done by the I.S.C. in London, set up in 1937 to administer the Sugar Agreement of that year. This Agreement still holds the field, largely as an international meeting ground for discussions on sugar, though for all practical purposes it has ceased to operate since the war. Since 1948, a Special Committee, appointed by the I.S.C., has been keeping the world sugar situation under constant review and holding investigations into the possible basis for a new agreement. This Committee prepared a draft of such an agreement in June, 1950. It was not, however, till very recently—on the 10th of last month, to be precise—that the final version of the draft was issued as an Economic and Social Council document. It is this document which is now before the London Conference as the basic paper for discussion and agreement.

Need for an Agreement

The circumstances which have brought to the fore the need for a new world sugar agreement are different from those that existed prior to the Second World War, that was before the Agreement of 1937. Thus, to-day the problem of world trade in sugar is one of, not sugar deflation, that is accumulation of stocks, on the one hand, and swiftly receding prices, on the other, but protection only for "free" sugar, which forms a small part of the world trade in sugar. The larger part is being regulated for long by preferential arrangements, such as those between the U.S., Cuba and the Philippines, and between the U.K. and the Commonwealth sugar exporters. The quantity of "free" sugar entering the world market amounts to no more than 5 million metric tons (of 2,205 lbs. each), as against the aggregate world exports of as much as 12.6 million metric tons and a world production of 35 million metric tons. Even here, the U.S., the world's largest importer of sugar, does not purchase any "free" sugar at all. It is only the U.K., the second largest importer, which takes over a million tons of "free" sugar. Cuba, the largest exporter and a low-cost producer, sells roughly half of its exports to the U.S. at a preferential price, offering the balance in the free market. Generally speaking, the free market price used to be a little, or substantially, higher than the preferential price. But, for the past one year, prices in the free market have been a little lower on account of a marked increase in world supplies.

From the foregoing account one should not rush to the conclusion that an international marketing scheme for sugar will only be of limited significance. For the need for the scheme has arisen from the concern over the disposal of a large surplus of "free" sugar, amounting to about 2.3 million metric tons in the current (1952-53) season, the estimates of available supplies and demand in the free market being 7.3 million metric tons and 5.0 million metric tons, respectively. It is no wonder, therefore, that the draft international marketing scheme for sugar should have been strongly supported by some of the producing countries as, for instance, Indonesia, the economy of which is greatly influenced by the export trade in the free sugar market.

The Draft Scheme

The draft scheme is modelled more or less on the lines of the 1937 Agreement. It seeks, for instance, to (1) stabilise prices, (2) prevent accumulation of huge surpluses of sugar, (3) maintain steady supplies in the free market, and (4) give those countries that depend on it a share of any expansion in world consumption of sugar. The salient features of the scheme are as follows:

Under the scheme, basic quotas are to be allocated to all exporting countries. The importing countries will be under the obligation to reserve a specific part of their needs for exporting countries taking part in the agreement. The importing countries should agree to limit their sugar output and marketing to the quantity produced in a base year (to be determined) plus an agreed percentage of the estimated increase in sugar consumption as compared with the base year. The rest of the increase in consumption is to be reserved for exporting countries which can sell sugar in the free market. On their part, the exporting countries must agree, so far as will be practicable, to limit sugar exports to their basic export quotas and to adjust their production so that it will not exceed the quantity needed for their own use plus the permitted exports and maximum stocks, as indicated in the agreement.

An Important Difference

There is, however, one important difference between the draft scheme and the 1937 Agreement. This relates to the new proposal to determine a maximum and a minimum price zone in the free sugar market. Whenever the price of "free" sugar goes above or below the zone for more than 30 consecutive days, export quotas will automatically be increased or lowered, as the case may be. To what extent this new proposal will prove effective depends, of course, partly on the zones of prices that are initially set and partly on whether the appointed authority could agree to modify it, if any exigency were to arise.

The successful outcome of the London Conference rests primarily on the way in which some of the difficulties standing in the way of an effective world sugar agreement will be removed. Of these, the question of determining the size of individual quotas stands out prominently. Each country may press for as large an export quota as possible. Indonesia, for instance, is reported to be trying to ensure its old rights on an export quota of no less than 1.05 million tons. This country, it may be noted, had ceased to be an exporter of sugar until recently; the quantity of sugar actually exported by it in 1952 was no more than 1,600 tons.

In view of the changed position of India as a buyer in the international sugar market, it cannot afford to remain as indifferent to the proposed international sugar marketing scheme as it was in regard to past agreements. India must carefully examine the provisions of the draft agreement to see to what extent membership of the agreement will be advantageous or disadvantageous to it.

In the context of the proposed agreement, a brief reference to the changes in the world sugar situation in the recent past may not be out of place here. The expansion in sugar output in the Commonwealth countries has already caused "free" sugar from these countries to be a world market factor. This sugar is over and above the proportion for which annual prices are fixed and benefits only from preferential duty. Early this year, Canadian refiners bought fairly substantial quantities of "free" sugar from the British West Indies, Mauritius and Queensland at prices which were in some cases below world value. The British Government has lately purchased about 10,000 tons of sugar (raw) from the British West Indies outside the negotiated price at 35*s.* 9*d.* per cwt. (c.i.f. U.K.) which includes 3*s.* 9*d.* preference.

Formosan white sugar has been a prominent feature in the past few weeks. Persia purchased recently 15,000 tons at $108.9 per ton (c.i.f.), while the British Government purchased about 27,000 tons at £43 per ton for being shipped to Malaya. Other small lots have been reported sold to Red Sea and Persian Gulf destinations. Negotiations are being held between Japan and Formosa for the sale of 250,000 tons (raw) of Formosan sugar.

With regard to Spanish sugar, the authorities in that country have withdrawn all offerings of their sugar from the market for the time being. But it is said that, later, in the light of new crop production, they will make a fresh review of the position regarding domestic requirements of sugar and market prospects. On the other side of the Atlantic, Cuban sugar sold to non-U.S. destinations during the current sugar season (upto 30th June, 1953) amounted to 1.66 million tons.

WORLD SUGAR TRADE

World exports of centrifugal sugar reached 12.6 million short tons (raw value) in 1952, as compared with 12.4 million tons in 1951, according to the U.S. Department of Agriculture. Exports averaged 9.4 million tons a year from 1945-49 and 11.5 million tons a year from 1939-39.

Asia's exports increased from 1.0 million tons in 1951 to 1.4 million tons in 1952, largely as a result of increased exports from the Philippines and Formosa. Thus Philippine exports rose from 679,289 tons to 856,338 tons, while Formosan exports rose from 326,668 tons to 518,494 tons. Other significant increases were registered by India and Indo-China, from 1,376 tons and 3,020 tons to 12,324 tons and 5,469 tons respectively. Asian imports increased from 1.5 million tons in 1951 to 2.0 million tons in 1952. Japan's imports rose by about 600,000 tons, that is from 559,123 tons to 1,154,638 tons. Other significant import increases were registered by Thailand and the Republic of Korea, the quantity actually imported by the countries being 29,000 tons and 8,806 tons, as against 6,000 tons and 4,956 tons, respectively.

SUGAR IMPORT POLICY

In a communication addressed to the Union Ministry of Commerce, the Madras Provincial Foodgrains Merchants' Association has strongly criticised the Government of India's sugar import policy. For, according to it the import of sugar on Government account will not make sugar available to the public at reasonable prices and the Government will fail to achieve this object. The number of merchants to whom the sugar will be supplied cannot be large and it is only natural those who invest large amounts would expect a fair margin of profit. If, on the other hand, the Government itself fixed the selling price, it would lead to black-marketing operations.

In the considered opinion of the Association, if really the Government wants to bring down sugar prices it can be done by putting sugar import under O.G.L. when there will be open competition, and consequent fall in prices. The Association accordingly wants the Government to try at least for three months whether sugar prices could be reduced by placing the import under O.G.L., and revise its policy to import on its own account.

SUGAR IMPORTS

The Government of India has invited tenders for the import of 30,000 tons of sugar for shipment before the end of September, 1953. The import of sugar will be allowed from both sterling and dollar areas. Necessary import licences will be issued to the successful tenderers. The last date for submitting tenders is 4th August next. Details of tender have been circulated to the Sugar Merchants' Associations, Chambers of Commerce at important ports, and also the Sugar Mills' Associations.

INDIAN BANKING ANALYSED

Directory of Banking

In

INDIA, PAKISTAN, BURMA AND CEYLON

This is an up-to-date and authoritative survey of banking conditions in these four Asian countries. The most interesting feature is that it details a comparative study of about 2,000 banks, big or small, joint stock or co-operative, in respect of their capital, management, offices and financial position. The city-wise index of branches is very handy. The other features being a comparative study of Banking Legislations, Safety Tips for Bankers, Workings of Banks Abroad and Bankers Who's Who, etc.

It will be found very useful by all banks, businessmen and students of banking.

OPENING OF NEW COLLIERIES

CENTRE'S LATEST DECISION

PRESS reports from Calcutta indicate that the Government of India has decided not to entertain any application for opening of new collieries for the present in Raniganga and Jharia coalfields. This decision seems to have been taken because of the high level of production in those coalfields and the shortage of wagons to transport the same. In the case of other coalfields also, we are told, the availability of transport will be one of the main factors that will be taken into consideration before permitting opening of new collieries.

The reported decision raises certain fundamental questions. Has the production of coal reached such a level that it cannot be absorbed? Or, is shortage of wagons, and not lack of demand, the only villain of the piece? Indications are that the demand for coal either at home or abroad still remains to be largely satisfied and transport bottleneck is the major handicap. If the "own-your-own wagon" scheme were to find favour with the coal interests of Raniganga and Jharia, the main producers of coal in India, and consequently wagon shortage eases, it may be asked whether the Government will permit opening of new collieries?

It may be that the present decision of the Government is taken with a view to promoting regional development of coalfields. For the latest news from Madhya Pradesh discloses that top-level discussions held a few days ago at Nagpur between the officials of the Union and the M.P. State Governments have led to an appreciation of the advantages of prospecting and exploiting the Champa-Korba coalfields of the State. They are also reported to have seriously considered the question of leasing the coalfields for exploitation to about 50 applicants whose applications have already been scrutinised by the Union and State Government officials. The Government of India is said to be of the considered opinion that exploitation of these coalfields should be taken up simultaneously with the commencement of the 24-mile Champa-Korba railway line mainly intended for transporting coal from the region, so that the railway line, when completed, would not become uneconomic. The Dunlop Company, which has already finished prospecting an area of ten square miles, is said to have plans ready to extract 25,000 tons of coal per month from the area.

Again, the latest decision of the Government of India, referred to at the outset, may affect the companies which wish to open new collieries in the areas under reference in order to offset the closing of mines rendered necessary by the exhaustion of reserves. In such cases, will the Government give them permission to do so, or will it refuse on the ground of wagon shortage or overproduction? If it does the latter, it will mean loss of interest on capital invested, if not loss of capital itself, and loss of jobs to workers. It is to be hoped that the Government will take into consideration all these factors before enforcing its new policy. It will do well to make provision for giving exemptions in deserving cases.

ACCURATE COAL SAMPLER

Accurate coal sampling is a high-priority need in power stations. With a view to meeting this need, a British firm has developed a coal sampler, which, it is claimed, is a simple, robust and easily maintained unit with dimensions least likely to affect any plant layout. It can be applied readily to new and existing belt conveyor installations. It comprises a hinged scraper arm operated by a thruster through link mechanism, carrying the scraper across the width of the belt, thus removing a cross-section of the fuel and delivering it into a side chute for inspection. The lower section of the scraper arm is hinged and spring-loaded, so that, during the return action of the arm, the scraper rides over the material without disturbing it. Extensive tests with a unit installed for full duty have proved that the samples conform to the limits of accuracy recommended by the British Standards Institution.

COAL—"SHIPPING" THROUGH PIPELINES

The Pittsburgh Consolidation Coal Company of Cadiz, Ohio, has devised a method of "shipping" coal through pipelines that is cheaper than shipment by rail or any other system. The Company crushes the coal and pumps it through a 12-inch pipeline more than 11 miles long. The lumps of coal are crushed power-fine, mixed with water and shot through the pipeline at a rate of thousands of tons a day. The coal is then removed from water at the terminal. The system handles 1,500 tons of raw coal and turns out 1,275 tons of cleaned coal every hour.

Make this important decision—to put some savings apart before you begin spending away your income. Let your savings work for your and the nation's good. Raise your standard of security with this guaranteed investment plan.

TWELVE-YEAR NATIONAL SAVINGS CERTIFICATES yield at maturity 50 per cent. more for your money, and this 50 per cent additional benefit is *tax-free* and will not be taken into account in fixing the rate of income tax on total income.

TEN-YEAR TREASURY SAVINGS DEPOSITS offer excellent investment for those who wish to draw a current income. Interest at 3½% per annum, which is *tax-free* and which will also not be taken into account in determining the rate of income tax on total income, is paid to the depositor or remitted to his address annually.

POST OFFICE SAVINGS BANK DEPOSITS are the easiest means of securing your small savings. Interest is added at 2% per annum, *tax-free*, on balances up to Rupees 10,000 and at 1½% on balances between Rs. 10,000 and Rs. 15,000. And you can draw on your deposits to meet special calls.

INVESTMENTS THAT NEVER DEPRECIATE

INDIAN JUTE INDUSTRY IN 1952-53

STRUGGLE TO OVERCOME BUYERS' RESISTANCE

FOR the Indian jute industry, the season 1952-53, which ended on 30th June last, proved to be a year of "stocks" crises, in that production was greatly hampered by the accumulation of heavy stocks of manufactured goods. This was in marked contrast to the trend in the previous year, when the industry could steadily improve its production, thanks to the plentiful supplies of raw jute in that year. In 1951-52, for the first time since the Partition, the industry was able to obtain all its raw jute requirements. Total supplies of raw jute thus amounted to 7.53 million bales, including stocks carried forward from the preceding year. Consequently, the output of jute goods by the I.J.M.A. mills aggregated 945,000 tons, as compared with 858,000 tons in 1950-51 and 825,000 tons in 1949-50, the worst year since the Partition. In 1952-53 also, the supply of raw jute was quite comfortable, total supplies amounting to as much as 7.35 million bales. But production of jute goods could not go up higher than 892,000 tons, thanks to the burden of unsold stocks. In fact, as on 30th June, 1953, stocks with mills remained as high as 133,804 tons, as compared with 90,730 tons at the end of the previous season.

The accumulation of stocks was due to lower offtake of Indian jute goods by overseas countries, competition from Continental jute manufacturers, use of paper and cotton substitutes, continued recourse to bulk handling of commodities, and expansion of jute industry in several parts of the world, thanks to the improved supplies of raw jute from Pakistan. The industry's main concern throughout the 1952-53 season was to find methods for regaining the markets which it had lost in previous years. This concern was reflected in the sending of two trade delegations to the U.S., the U.K., Australia and New Zealand, in order to survey the position for Indian jute goods in these markets.

The year 1952-53 opened with a stock of 1.15 million bales of raw jute brought forward from the previous season, as against an opening stock of 1.05 million bales in 1951-52. With the domestic production of raw jute estimated at 4.69 million bales (as against 4.67 million bales in 1951-52), the total quantity of raw jute available in 1952-53 from internal supplies was 5.85 million bales, as against 5.73 million bales. Supplies from Pakistan, however, were lower at 1.5 million bales, as compared with 1.8 million bales in the previous year. Thus, the total supply of raw jute from all sources, as already stated, amounted to 7.35 million bales, as against 7.50 million bales in 1951-52. The decrease in the supply from Pakistan was due to the unhelpful attitude of the Government of that country towards supplying jute for India. It may be noted that Pakistan discriminated against India *vis-a-vis* other countries by imposing additional export duties and licence fees on raw jute exported to India. This rendered purchase of Pakistani jute unremunerative. Towards the close of the season, however, the discriminary treatment was done away with, following India's protest at one of the meetings of the G.A.T.T. at Geneva.

Total consumption of raw jute in the 1952-53 season (including domestic consumption) aggregated 5.61 million bales, as against 6.10 million bales in the previous season. The carry-over at the end of the season stood at 1.63 million bales, which compared with 1.33 million bales at end of the 1951-52 season.

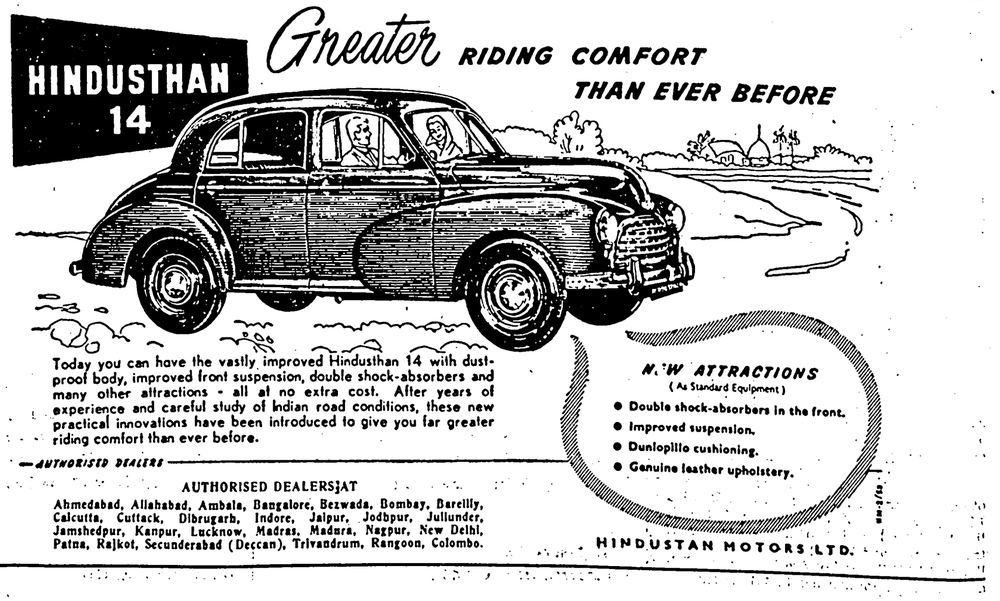
For the Indian jute mills the year opened well. Thus, jute supplies were favourable. The drastic cuts, in two stages, in the export duty on jute goods in the preceding season, had lightened, to a considerable extent, the burden on the industry. This paved the way for foreign orders. Despatches had already gathered momentum and with them production kept pace. In the first month of the season under review, it stood at as high as 83,820 tons. But, subsequently, as the season progressed, it was found that despatches were not in desired quantities and, therefore, monthly production depicted an indifferent trend. The position grew worse in February, 1953, when production at 68,615 tons was the lowest for any month in the season under review. After improving slightly to 74,000 tons in March and April, the output remained low at about 72,000 tons in May and June. The lower rate of production was due, as stated already, to continued accumulation of stocks.

Throughout the season, month-end stocks continued to remain high. They stood at 100,500 tons in July 1952. In the following two months, despatches improved, and stocks declined to 91,486 tons. Thereafter, they continued to rise and touched the highest for any month in the year in March 1953, when stocks were as high as 138,797 tons. They remained at this level in the following two months, too. In June, however, owing to better offtake by Argentina, they dropped to 133,804 tons.

Steep decline in exports of jute goods was the chief cause for the accumulation of stocks with mills. In the fiscal year 1952-53, the value of exports of jute manufactures recorded a sharp drop of more than 50 per cent. from Rs. 269.96 crores in 1951-52 to Rs. 129.53 crores. Early in the season, exports showed a tendency to look up. They improved from Rs. 11.68 crores in July, 1952 to Rs. 18.39 crores in October. In the subsequent months upto February this year, they averaged about Rs. 11.5 crores per month. In March, they fared slightly better at Rs. 13.82 crores. The general decline was due to the lower offtake of sackings rather than of hessians. For the monthly U.S. consumption of burlap till January this year remained slightly above the monthly average of 70 million yards for 1952, although, in February and March, it was lower at 58 million yards and 69 million yards, respectively. Consequently, hessian stocks ceased to be much of a problem to the industry. But the same was not the case with sackings, which continued to remain a source of serious concern to the industry throughout the season, although latterly despatches are stated to have improved to some extent.

The Government recognised the crisis facing the industry, albeit too late, and reduced the export duty on sackings from Rs. 175 to Rs. 80 per ton. The reduction was announced by the Finance Minister in the course of his Budget speech on 28th February, 1953. The rate of duty on hessian exports which had been reduced in May, 1952, to Rs. 275 per ton, however, remained unaltered. Although the relief in regard to export duty on sackings was welcome, it failed to bring about any improvement in the position of stocks. In view of the failure of the reduced export duty to stimulate demand for sacking and the continued decline in the prices of jute manufactures, the I.J.M.A. contemplated the sealing of a further 7½ per cent. looms of the mills. It was calculated that this measure would bring down sacking production to some 30,000 tons in April 1953, as compared with 43,000 tons in December, 1952. Mills were working, as they now are, on a 42½-hour week, with 12½ per cent. of their total looms sealed. The Government, however, rejected the proposal and this deepened the crisis, with prices of both jute goods and raw jute touching the bottom for the season. On or about 10th of April, 1953, B. Twills touched a low of Rs. 85-11 per 100 bags, and hessians Rs. 38-4 per 100 yards, while raw jute Assam bottoms declined to Rs. 16-8 per maund. These compared with Rs. 94-10, Rs. 43-2 and Rs. 21-8, respectively, on the eve of the announcement of reduction in the export duty on sackings. Subsequently, however, they staged a gradual recovery on slow and steady improvement in the offtake of manufactures and on expectations that the jute crop in the 1953-54 season will be smaller than that of the previous year. In fact, in the last month of the season, the prices of jute manufactures showed an encouraging upward trend. Thus, on 1st June, B. Twills were marked up to Rs. 105-4; on 13th June, hessians registered a high of Rs. 46-12; and on 29th May raw jute touched a high of Rs. 30 per maund. Towards the close of the season, the rates declined to somewhat lower levels, but they were still appreciably above the lowest levels recorded in April last.

The outlook for the industry in the 1953-54 season appears to be good, if not very bright. The demand for jute bags is likely to go up in the world markets, owing to the expected improvement in the output for foodgrains especially wheat and rice. However, as production of jute both in Pakistan and India is expected to be lower than that in the 1952-53 season, raw jute prices are likely to be higher, and as such the competitive ability of jute goods *vis-a-vis* cotton and paper may be lower. But this may not adversely affect the demand for jute goods to any appreciable extent, in view of the improved outlook for agricultural production. Again, the Continental mills may not be able to obtain as much raw jute from Pakistan and at the same rates as they did in 1952-53. In the last season, owing to the additional imposts on exports to India, the Continental mills enjoyed a price advantage over Indian mills in respect of raw jute purchased from Pakistan. These discriminatory imposts having since been removed, India is now in a better position to compete with the Continental mills in overseas markets. Further, the fact the Government has, with effect from 16th July, 1953, abolished export duties on certain special types of jute manufactures such as jute mesh, jute carpet yarn, paper-lined hessian, jute tarpaulins, jute rope and jute mattings should help promotion of exports of these varieties in the current season. Of course, Pakistan has entered the world markets with its jute manufactures. This development, however, is not likely to affect sales of Indian manufactures, as the output of Pakistan manufactures forms only an insignificant fraction of the world demand for these goods. The Indian industry can, certainly take advantages of these helpful factors; but it cannot make much headway and ensure sustained progress, unless programmes of rationalisation are carried out by the various units of the industry in order to cut down their costs and improve the quality.



CALCUTTA TEA SALES IN JUNE

PROMISING START IN NEW CROP

THE sales of the new season's tea for export, as well as for internal consumption, held in Calcutta during the month of June this year, indicate that business in new crop has started on a promising note. The quantity of tea sold during the month was substantially higher than that in the corresponding month of last year and average prices realised were sizably better than those in the corresponding month of the previous year. The following comparative table of quantity offered for export and dust sales and average prices realised during the three sales held during the month under review, as given by Messrs. J. Thomas & Co., Ltd., Calcutta, in their report for the month, clearly brings out these trends:

	1953-54		1952-53	
	Packages sold	*Average price (per lb.)*	*Packages sold*	*Average price (per lb.)*
		Rs. a. p.		Rs. a. p.
Assam	5,151	1 13 1	3,877	1 5 6
Dooars	31,636	1 12 6	17,260	1 5 3
Darjeeling	14,094	2 4 0	7,174	2 0 11
Cachar, etc.	12,225	1 11 1	3,745	1 1 2
Total ..	63,606	1 13 9	32,056	1 7 0
Dust	18,746	1 7 8	9,111	1 5 1

It will be noted from the foregoing table that the quantity sold was a little more than double that a year ago, the bulk of the quantity sold being from the Dooars and Darjeeling Districts. The sharpest increase is noted in the tea offered from Cachar district and the smallest increase in Assam tea. Messrs. Thomas & Co. report that, except for the occasional standout invoice, most of these were of ordinary first flush standard, although the leaf appearance was fairly clean, well graded and black.

The demand during the first two sales was keen and very little tea was sold at less than Re. 1-11 per lb. This demand, however, became more selective in the last sale of the month and the market for all low medium and commons declined from ½ to 1 anna per lb. Teas with bright and coloury liquors from the Dooars, flavoury Darjeelings and Assams, on the other hand, with any quality were keenly bid and realised higher prices. The present indications, in fact, point to a keen enquiry during the coming months for any teas with quality, brightness and colour. The dust market remained about steady, with only a fair demand. The strongest feature was black leafy types suitable for Egypt. Practically no Red Assams were sold and the small quantity that was offered was sold at about Rs. 2 per lb.

The average prices of tea realised on the sales for both export and internal consumption during the month of June, 1953, as compared with those for June, 1952, are as follows:

(Per lb.)

	1953	1952
	Rs. a. p.	Rs. a. p.
Clean black pekoe	1 12 0	1 6 0
Clean common broken pekoe	1 11 0	0 15 0
Medium Dooars dust	1 7 6	1 5 0

The improvement in prices realised during last month, as compared with those a year ago, is not surprising in view of the better statistical position of tea. The North Indian tea crop, as at the end of May, was 12½ million lbs. behind that at the close of May, 1952, although it showed an increase of 1 million lbs. over the average for the same period of the last three years. It is anticipated that a further decline will be shown by the crop figures for June, as the climate in most growing districts has been detrimental to heavy flushing. The stocks of tea in the U.K. upto the last week of June (19th June, 1953) were 30 million lbs. less than they were on the same date last year, the actual quantity held being only 107½ million lbs. This is stated to be the lowest stock figure on record for over 30 years.

The distribution of North Indian tea to various overseas countries from 1st April to 4th July, 1953, as compared with that during the corresponding period of last year, shows a big increase, while the offtake by quite a few other countries has considerably declined. Prominent among those which have shown considerable increases are: U.K. from 23.21 million lbs. to 29.20 million lbs., and Egypt from 519,606 lbs. to 3.31 million lbs. The offtake by the U.S., on the other hand, shows a fall from 2.62 million lbs. to 1.99 million lbs., of Canada from 2.05 million lbs. to 1.30 million lbs., of South America, Central America and West Indies from 2.96 million lbs. to 331,320 lbs. and of Amsterdam and Rotterdam from 2.18 million lbs. to 484,713 lbs.

Notices

HINDUSTHAN WOOLLEN MILLS LIMITED

NOTICE IS HEREBY GIVEN THAT THE Eighth Ordinary General Meeting of the Shareholders of the above Company will be held at the Principal office of the Company at No. 8, Royal Exchange Place, Calcutta, on Wednesday the 12th August, 1953, at 3-30 p.m., for the following purposes:—

(1) To receive and consider the Report of the Directors and to pass the audited Accounts for the year ended 31st March, 1953.

(2) To declare dividend on Ordinary Shares, payable on application to the Shareholders.

(3) To elect Directors in place of those retiring by rotation.

(4) To appoint Auditors and fix their remuneration.

(5) As special business to consider the following resolution which will be proposed as an ordinary resolution:

"RESOLVED that the steps taken by the Directors in acquiring the controlling interest in Shree Digvijaya Woollen Mills Ltd., Jamnagar, and the investments made by them in the shares of Messrs. Wattal & Co., (Jamnagar) Ltd., as also the advances made (as loan bearing interest) to Shree Digvijaya Woollen Mills Ltd., be and are hereby approved. The Directors are authorised to further invest the funds of the Company in making loans to Shree Digvijaya Woollen Mills Ltd., as may be considered necessary by them from time to time."

(6) To transact any other business which may be brought before the meeting with the permission of the Chairman.

The Share Transfer Books of the Company will remain closed from 1st August, 1953, to 12th August, 1953, both days inclusive.

By Order of the Board,
BIRLA BROTHERS LIMITED,
Managing Agents.

CALCUTTA, 13*th July*, 1953.

In particular to all the shareholders to whom a notice is required to be addressed under Article 188 of the Articles of Association of the Company.

THE BENGAL POTTERIES LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Forty-first Ordinary General Meeting of the Bengal Potteries Limited, will be held at the Registered Office of the Company, 45, Tangra Road, Calcutta, on Friday the 14th August, 1953, at 4 p.m., to transact the following items of business:—

(1) To receive and adopt the Directors' Report, the Audited Balance Sheet and the Profit and Loss Account for the year ended 31st December, 1952.

(2) To declare Dividend.

(3) To elect Directors.

(4) To appoint Auditors for the current year.

The Share Transfer Register of the Company will be closed from 3rd August, 1953, to 29th August, 1953, both days inclusive.

By Order of the Board of Directors,
S. LALL BHAGAT & CO.,
Managing Agents.

45, TANGRA ROAD,
CALCUTTA, 1*st July*, 1953.

THE SINGARENI COLLIERIES COMPANY, LIMITED

(Incorporated in Hyderabad-Dn.)

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Thirty-second Annual General Meeting of the Shareholders of The Singareni Collieries Company, Ltd., will be held on Monday, 17th August, 1953, at 4 p.m., at the Registered Office of the Company, "Meher Manzil," Red Hills, Hyderabad-Deccan, to transact the following business:—

(1) To read the Minutes of the Thirty-first Annual General Meeting of the Company held on 4th August, 1952.

(2) To receive and adopt the Directors' Report and Audited Statement of Accounts for the year ended 31st December, 1952.

(3) To sanction the declaration of a Dividend.

(4) To approve donations paid by your Directors.

(5) To appoint Directors in place of:—
(1) Mr. Syed Abdul Quader,
(2) Mr. S. N. Bilgrami, and
(3) Mr. T. M. Jagtiani,

who retire under Article 93, and in accordance with Regulation No. 78, Table "A" of the Indian Companies Act (Amended), and being eligible for re-election offer their services.

(6) To appoint Auditors for the current year and fix their remuneration.

(7) To transact any other business that may be brought forward by the Chairman.

The Transfer Books of the Company will remain closed for the purpose of dividend from 4th August, 1953, to 17th August, 1953 (both days inclusive).

By Order of the Board,
For and on behalf of
THE SINGARENI COLLIERIES CO., LTD.,
INDUSTRIAL TRUST FUND,
GOVERNMENT OF HYDERABAD,
R. DWARKA PERSHAD,
Secretaries.

"MEHER MANZIL", RED HILLS,
HYDERABAD-DECCAN, 29*th June*, 1953.

Note.—Subject to the Directors' recommendation being accepted, Dividend Warrants will be posted on 24th August, 1953.

Shareholders are requested to give immediate notice to the Company of any change of address.

THE PUNJAB NATIONAL BANK LIMITED

"Shree Niwas", 8, Underhill Road
DELHI

NOTICE OF INTERIM DIVIDEND

THE DIRECTORS OF THE PUNJAB National Bank Ltd., Delhi, have decided to pay an Interim Dividend at 8 per cent., per annum, free of income-tax, for the half-year ended 30th June, 1953, at the Registered Office of the Bank at Delhi on or after 10th August, 1953, to the shareholders whose names stand on the Register of Members of the Bank as on 2nd August, 1953.

The Transfer Books and Register of Members of the Bank will remain closed from 3rd to 8th August, 1953 (both days inclusive).

By Order of the General Board of Directors,
B. N. PURI,
Secretary.

DELHI, 18*th July*, 1953.

PROGRESS OF HINDUSTAN SHIPYARD

EXPANSION SCHEMES UNDER WAY

ADDRESSING the first Ordinary Annual General Meeting of the Hindustan Shipyard Ltd., Mr. N. R. Pillai, the Chairman of the Company, characterised the year that has just passed as one of preparation rather than of achievement. Few would deny it, for the Company has had to face innumerable difficulties such as shortage of steel and propelling machinery and surplus staff who drained the finances of the Company. The year, therefore, ended with a loss of Rs. 15.47 lakhs for the Company. The manner in which this loss should be covered still remains to be explored, as there is no prospect of its making a profit in the near future. Again, it is too early to assess the value of the Company's five-year agreement with a French firm, with effect from 15th July, 1952, for technical advice required, for training of Indian personnel at its shipyards, for securing orders for ships from outside India, and if necessary, for trying to bring about the sale of the ships built in the yard.

The current year might prove a better one for the Company, as was hinted by Mr. Pillai. The decision of the award of the mediator, Mr. Justice Mahajan, in the dispute between the management of the Company and the labour, announced the other day, permits retrenchment of 800 men, instead of 813, actually retrenched from 1st April, 1953. In other words, the award has justified practically the entire number of hands which the management wanted to retrench in order to economise expenditure. Accordingly, the retrenchment of surplus personnel means no small gain to the shipyard.

At present, two 8,000 d.w.t. *Jala*-type ships are under construction. The first of these ships is for the Bharat Line Ltd., and the second for the Scindia Steam Navigation Co., Ltd. It is true that, as compared with its past, the performance of the work in recent months has been slow. But such has been wholly due to the continuance of difficulties in obtaining shipbuilding steel, resulting from a number of unforeseen breakdowns in the only plate-rolling mill in India. But, as the Government of India has permitted the Company to supplement the indigenous supplies of plates by imports from overseas, it is expected that such hold-ups will not occur in the future. With regard to engines and auxiliary machinery needed, however, the Company is still dependent on overseas companies. Although orders were placed for engines and machineries for these two ships as early as in December, 1951, with a Glasgow firm, delivery is promised only in October, 1953 for the first ship, and December, 1953 for the second ship.

Subsidy

An important problem relating to the finances of shipbuilding in India is subsidy. It is true that, on this question, satisfactory arrangements have been arrived at between the Company and the Government of India. The Government has accepted the principle that the price to be charged for ships built in the shipyard should be equivalent, as nearly as possible, to the cost of building a similar ship in a shipyard in the U.K. and that the difference between the actual cost of construction and such a price should be paid by the Government to the shipyard as subsidy. But the main trouble is the determination of the U.K. "parity" price. Foreign shipyards, as pointed out by Mr. Pillai, cannot be expected to quote a price, unless they have a reasonable prospect of getting an order. Moreover, the cost of building the same ship is different in different shipyards, even in the U.K. Small wonder, therefore, that the Company should experience considerable difficulty in quoting a price. It may also be noted in this connection, that some shipowners have tended to compare the Hindustan Shipyard's quotations for ships with the price of similar secondhand ships. It is essential, therefore, as urged by Mr. Pillai, that some means should be found to solve this difficulty and the co-operation of shipowners in this direction would be most welcome.

It is one of the main functions of the French experts to advise the Company on its programme of development. Already, about 60 per cent. of the parts of a ship, including the hull, superstructure, deck and cabins are being constructed at the shipyard, while the remaining 40 per cent. including electric fittings, copper pipes, and steam fittings together with all the prime and auxiliary machineries, are imported mostly from the U.K. The question of manufacturing these items is also receiving the Government's attention. The report of the French experts in this connection has been received and considered by the Board of Directors. The report has been referred to the Government of India for its decision.

The Government of India has already advanced Rs. 30 lakhs for the development of works now on hand. Of the capital works that were in progress at the time of taking over the shipyard from the Scindia Steam Navigation Co., Ltd., the third berth has been completed and equipped and a keel will be laid on it in a few days' time; the 35-ton crane has been erected; the foundation of the 125-ton crane is ready. The future programme of the Company is, briefly, to build one large and one small berth, to increase the capacity of the hull-shop, machine-shop and other shops, to install more up-to-date and more extensive cranage and to build a large prefabrication shop which would be adequate, if required, for building 12 ships a year. The provision of a suitable dry-dock at the Visakhapatnam Port is considered an urgent necessity.

The Five-year Plan has provided a sum of Rs. 4.75 crores for the development of the yard and Rs. 7.34 crores for the grant of loans to shipowners for the purchase of new or additional tonnage and for payment of subsidies on the ships built at the shipyard. In addition to these sums, the Plan envisages an expenditure of Rs. 1.50 crores for the development of the shipyard. The aim is to increase the productive capacity of the yard to about 50,000 d.w.t. per year and to erect a shop for building marine engines in India (to be completed in 1957). As far as shipping is concerned, the plan is to increase the coastal and overseas tonnage from about 400,000 to about 600,000 gross registered tons The shipyard's contribution to this is expected to be 100,000 gross registered tons.

It will be recalled that the Hindustan Shipyard Ltd. was registered on 21st January, 1952, as a private limited company, with the Government of India as the majority shareholder. The new company took over the Visakhapatnam shipyard from the Scindia Steam Navigation Co., Ltd. on 1st March, 1952 at a valuation of Rs. 2.72 crores. The authorised capital of the Company is Rs. 10 crores and the paid-up capital Rs. 3.09 crores. Of the paid-up capital, the Government of India holds two-thirds, that is, Rs. 2.06 crores and the Scindia Steam Navigation Co., Ltd. the balance, namely, Rs. 1.03 crores. According to an arrangement arrived at between the Government of India and the Scindia Steam Navigation Co., Ltd. a sum of Rs. 1.67 crores has to be paid by the Government of India to the debenture trustees of the Scindia Steam Navigation Co., Ltd., spread over a period of five years, beginning from 1952-53. The balance of the compensation payable to the Scindia Company has been utilised towards the cost of acquisition of the one-third share capital of the shipyard company. The payment to the debenture trustees has been guaranteed by the company by creating a first mortgage of the Government's assets in favour of debenture trustees. Although the Government is the principal shareholder, the company has a distinct legal entity and it operations are being conducted on commercial lines, according to the Articles of Association.

(Concluded from next column)

ted companies also rose. But, the considerable rise in the level of taxation on gasoline in some countries began to have an adverse effect on the consumption of the product in those countries. Owing to high level of taxation in the U.K., for instance, there was no increase in total consumption of gasoline in 1952 and, in fact, as compared with that in 1951, the average consumption per vehicle fell.

The world shortage of aviation gasoline, however, persisted in 1952, and became more acute in summer, owing to interruption in production caused by labour disturbances in a number of United States refineries. As a result, certain airlines were obliged to cut some of their schedules, but full services were restored well before the year ended. Throughout these difficulties, the Group played its full part in keeping the airlines operating, as far as possible. The rapidly growing requirements of turbine fuel for jet aircraft were fully met and progress was made with the installation of special equipment for speed in fuelling the Comet aircraft, on the air routes from Europe to South Africa and the Far East.

Finally, the year 1952 saw the launching of Shell X-100 Motor Oil in a number of countries, including the U.K., Republic of Ireland, Italy, Sweden, Finland, Australia and New Zealand, with the result that, by the close of the year, this outstanding lubricant was available in almost every country, where Shell products are sold.

ROYAL DUTCH-SHELL GROUP

ALL-ROUND IMPROVEMENT IN ACTIVITY

IN view of the increasing activities of the Royal Dutch-Shell Group in India, a brief outline of its world-wide activities will be found useful and interesting. There was an all-round improvement in the activities of the Group under reference. Production of both crude and refined oil increased and so also total sales. The daily average rate of production of the Group and its associated companies amounted approximately to 1.3 million barrels in 1952, which was approximately 10 per cent. higher than in 1951. The aggregate supplies, including crude oil, received under long-term contracts amounted to some 597 million barrels, as compared with 549 million barrels in 1951. The following table discloses crude oil and natural gasoline production of the world in 1952 and 1951, and the share of the Group and its associated companies in the world total.

(In million barrels)

	World		Royal Dutch-Shell group (Gross production)	
	1952	1951	1952	1951
North America	2,623.8	2,579.2	120.4	109.2
South America	771.0	730.3	220.0	216.8
Europe, Middle East and North Africa	823.3	753.9	52.8	84.0
Far East	110.1	102.8	72.6	69.1
U.S.S.R. and Eastern Europe.	382.6	341.4	..	..
Crude oil received under long-term contracts	..	..	124.9	120.0
Grand total ..	4,740.8	4,507.6	590.7	549.1

The crude oil and natural gasoline processed during 1952 accounted for an average of over 1.6 million barrels per day; this is equivalent to some 595 million barrels for the year, which represents an increase of 6 per cent. over the output in 1951. A further 13 million barrels were blended direct into finished products. The high level of "throughput" was reflected in the increasing volume of finished products available to the Group and its associated companies. Energetic steps taken to increase supplies of aviation gasoline resulted in an increase in 1952 of about 60 per cent. over 1951. This went far towards relieving the severe strain imposed on aviation gasoline supplies by the closure of the Anglo-Iranian Oil Company's refinery at Abadan. The Group has planned to increase still further the supply of this essential product.

Refineries

The provision for additional refineries and the construction of new processing plants at existing refining centres called for constant study. The year 1952 marked the first year of full operation of the new refineries in the U.K. and a total intake of some 61 million barrels of oil was attained. The catalytic cracking plant at Stanlow (Britain) came into operation early in the year, and the construction of a catalytic reforming unit was started. Good progress was made in the construction of a new crude oil distilling unit, with a capacity of 65,000 barrels daily in the Netherlands. A crude oil distilling unit was completed at Balikpapan in Indonesia during the year 1952. New facilities for lubricating oil at Clyde refinery, near Sydney, in Australia, were almost completed. Progress was made in the construction of the new refinery at Geelong, near Melbourne, which will have a capacity of 25,000 barrels daily. The preliminary work for the construction of the new refinery at Bombay, India, in which the Group will have a 50 per cent. interest, is going ahead. This refinery will have a capacity of some 40,000 barrels.

The import of crude oil from producing sources to refineries and finished products to consuming centres is mainly done by tankers and pipelines. At the end of the year, the tonnage aimed by the Group and its associated companies was 2.5 million tons deadweight. But, the total tonnage controlled by them, including period chartered ships, amounted to 6.8 million tons, as compared with 6.3 million tons in the previous year. The new building programme of the Group and its associated companies provides for 16 large vessels, of which 14 will be of about 31,000 tons each, and the rest 38,000 tons each. Some 60 ships owned and chartered of over 23,000 tons each will be at the disposal of the Group within the next few years. The Group companies continued to take the lead in the development of gas turbine propulsion. The first turbine merchant ship has been in service with such success that an order for a new ship, which will depend entirely on gas turbine for its propulsion, has been placed.

In addition to ocean transport, land transport of crude oil, natural gas and oil products over long distances by trunk pipelines was rapidly extended. As at the end of 1952, the total length of pipelines was 14,500 miles, more than half the circumference of the earth.

During the year under review, there was keen competition among sellers of all petroleum products, except gasoline. This was due partly to new measures adopted by many countries to counteract inflation and restore economic stability and partly to the easier oil supply position. But, despite intensified competition, the Group and its associated companies recorded an increase in total sales, during 1952, of 11 per cent. over the previous year. The world-wide consumption of gasoline continued to expand in 1952. Correspondingly, the sales of the product by the Group and its associa-

IMMENSE SCOPE FOR GENERAL INSURANCE

BUILDING UP SOUND FINANCIAL POSITION IS OF PRIMARY IMPORTANCE

"HE who thinks is an optimist and he who feels is a pessimist" runs a well-worn adage. To those who reflect on the numerous small and financially ill-equipped insurance companies competing for an all too restricted volume of business in the country, the future of insurance must appear bleak indeed. But to others, who think of the vast and unexplored field of insurance, the low *per capita* insurance that is taken out in this country, the microscopically small percentage of persons and property that are insured, and the almost restricted nature of the risks covered in the country, it must appear that there is an almost limitless scope for expanding insurance business. Clearly, Mr. T. K. Desai, the retiring Chairman of the Indian Insurance Companies Association, belongs to the latter category, for he was emphatic, in his address at the Association's annual meeting, held last week in Bombay, that he was not pessimistic at all about the future of the insurance trade.

Mr. Desai based his robust optimism about the future of insurance on two considerations. In the first place, this country, with a population of about 360 million, derives a gross premium of only Rs. 20.5 crores. There is, as Mr. Desai said, a "vast field" which still remain unexplored by insurers. Secondly, there will be substantial additions to the available business through the various plans of reconstruction, both in agriculture and industry, in the planned economy of the future. He pointed out that not only could the existing lines of insurance business be extended but new lines developed. There were, he said, recognised lines of insurance which have become popular in Western countries and which Indian insurers could usefully offer to the insuring public.

The expansion of insurance business depends, of course, on a number of factors. Mr. Desai described, in brief, the many factors on which the progress of insurance depended. Much would depend on the Government's attitude towards insurance. As Mr. Desai suggested, the Government which is now engaging itself in an ever-increasing degree in trade and industry, should give to Indian insurers the business which would normally accrue to them if the Government had not itself chosen to run the industrial concerns. Again, Indian insurers lose a large part of the business of foreign firms operating in this country, which traditionally place their business with foreign insurers. Mr. Desai quoted approvingly the statement made by Mr. T. T. Krishnamachari, Minister for Commerce and Industry, at the last annual meeting of the Associated Chambers of Commerce, calcutta, to the effect that "every non-Indian concern should strive to see that at least 50 per cent. of their insurance business and a large percentage of their shipping business go to Indian concerns." He hoped that the foreign-owned business houses would adopt the Minister's suggestion in the spirit in which it had been made.

Mr. Desai was not, of course, oblivious of the faults and imperfections of the working of general insurers. He did not, of course, refer, in a very elaborate manner, to the biggest of those problems, namely, the task of eliminating unfair practices in the trade. He was nevertheless very emphatic on this issue, for he said that these practices have for years "menaced" the growth of Indian insurance. He added:

"You are all aware of the controversy that has raged for the last few months over this issue and I do not propose to restart it now that the Code is an established fact. I can only appeal to my colleagues in the trade to set their house in order before they are called upon to face the rigours of disciplinary action."

Mere conformity to the Code of Conduct will not enable the general insurers to improve their position. What is equally necessary is that they should strive to build up a strong financial position. Indeed, the foreign insurers, who have come to occupy an important place in world insurance, owe their present position to the careful conservation of profits over a long period. In this connection, Mr. Desai said:

"I cannot overemphasise the importance of achieving a strong reserve position for general insurance companies in India. Reserve strength is most vital to insurers, both in the risk-bearing capacity it creates and the interest revenue it brings. . . . A definite portion of our premium revenue is to be set aside annually to provide for funds to meet abnormal losses which occur at long intervals but which can sap the vitality of the market. Adequate facilities should, therefore, be afforded to companies to build up reserves."

It is to be hoped that Indian insurers will take all possible steps to strengthen their financial position. Although there are a few Indian insurance companies which have established a fine reputation for sound business even in foreign countries, there are many insurers whose financial position leaves much to be desired. In their own interest and in the interest of their clientele it is necessary that they should improve their financial structure. The Taxation Enquiry Commission will also do well, as Mr. Desai suggested, to examine the "just claims of Indian insurers in this behalf."

CONCORD OF INDIA INSURANCE CO., LTD.

A slight increase in underwriting profit in the fire and marine departments, accompanied by a small decline in such profit in the accident department, is the feature of the working of the Concord of India Insurance Co., Ltd. (General Manager: Mr. F. V. Edwards, Calcutta) during the year ended December, 1952. Thus, the profit in the fire department improved between 1951 and 1952 from Rs. 3.23 lakhs to Rs. 3.35 lakhs and in the marine department from Rs. 0.88 lakh to Rs. 1.45 lakhs. The accident revenue account, however, shows a slight setback; the profit was only Rs. 2,615 as against Rs. 20,859 in 1951. This is obviously due to the increase in loss ratio from 43.92 per cent. to 50.97 per cent. But this is a feature which is common to nearly all the general insurers in the country.

The following table shows the results of the Company's working during the three years ended December, 1952:

(In lakhs of rupees)

	1952	1951	1950
Fire Department			
Net premium	31.39	30.01	28.65
Claims paid and outstanding ..	13.68	15.12	12.43
Loss ratio .. .. .. %	43.59	50.40	43.39
Commission and expenses ..	13.66	10.97	13.51
Profit	3.35	3.23	1.32
Marine Department			
Net premium	10.69	12.18	11.06
Claims paid and outstanding ..	8.11	8.30	7.02
Commission and expenses ..	2.62	2.77	3.45
Profit	1.45	0.88	1.40
Accident Department			
Net premium	9.60	9.37	9.10
Claims paid and outstanding ..	4.89	4.11	4.43
Loss ratio .. .. .. %	50.97	43.92	43.89
Commission and expenses ..	4.56	4.91	4.88
Profit	0.02	0.21	0.20
Total profit	4.84	4.31	2.92
Transfer to:			
Taxation	2.75	2.00	1.00
Reserves	1.75	2.00	1.00
Dividend	1.09	1.51	1.35
	(25%)	(22½%)	(20%)
Carry forward	0.92	0.53	0.55

It is encouraging to note from the above table that, in the fire department, while the net premium income is somewhat higher at Rs. 31.39 lakhs, the loss ratio is lower at 43.59 per cent., as compared with 50.40 per cent. in the previous year. In the marine section, there has no doubt been a decline of Rs. 1.49 lakhs to Rs. 10.69 lakhs in premium income but the underwriting profit is actually higher at Rs. 1.45 lakhs. Although the premium income in the accident section was higher at Rs. 9.60 lakhs, the increase in loss ratio was, as already stated, substantially higher at 50.97 per cent. This explains in part the decline in the profit of this department.

After providing for taxation and making certain other adjustments, there is a sum of Rs. 4.35 lakhs to the credit of the profit and loss appropriation account. But of this sum, the Directors have transferred Rs. 1.25 lakhs to reserve for depreciation of investments and Rs. 50,000 to the reserve fund. They have recommended the payment of a dividend of As. 10 per share, as against As. 9 paid last year. The higher distribution will absorb Rs. 1.69 lakhs, leaving a sum of Rs. 92,132 to be carried forward, as against Rs. 57,959 brought in. Apart from the capital of Rs. 6.75 lakhs, the Company's funds aggregate Rs. 54.10 lakhs, which includes fire fund Rs. 15.69 lakhs, accident fund Rs. 4.80 lakhs and marine insurance fund Rs. 10.69 lakhs.

ORIENTAL FIRE AND GENERAL INSURANCE CO., LTD.

The Oriental Fire and General Insurance Company, Ltd. (Manager: Mr. Frank Bloor, Bombay), reports, for the year ended 31st December, 1952, a decline of Rs. 3.06 lakhs to Rs. 10.55 lakhs in the net premium income from the fire department, but a substantial increase of Rs. 2.47 lakhs to Rs. 3.51 lakhs in such income from the accident and miscellaneous department. The net premium income from the marine department, however, is somewhat better at Rs. 57,042. But before anything is read into these figures, it is necessary to remember certain features of the Company's working. In the first place, the year 1952 is only the second complete year of the Company's working. Secondly, the decline in the fire department's net premium income is due to the fact that a certain amount of fire business was withdrawn in 1951 in accordance with the Company's treaty understandings with its associates and also to the fact that certain non-current portfolio premiums were included in the Company's income in 1951. But it is noteworthy that the gross direct fire premium income actually increased by 22.55 per cent. Thirdly, the fact that the improvement in marine department has not been very spectacular should be understood by reference to the Company's disinclination to engage itself in unhealthy competition at uneconomic rates. Also, the marine premium income in 1952 is not strictly comparable with that of 1951, inasmuch as the Company began to write marine business only in the second half of 1951.

In the fire department, the ratio of claims, paid and outstanding, to net premium income was 34.98 per cent. and, after adjustment of reserve for unexpired risks, the account produced an underwriting profit of Rs. 2.38 lakhs. Paid and outstanding claims in the accident department amounted to 32.96 per cent. of the net premium income, but the increase in unexpired risk reserve necessary to preserve the percentage of accident insurance fund at 50 per cent. of the enhanced premium income imposed a heavy financial charge on the account. This explains why the department shows an actual loss of Rs. 19,021, despite the low claims ratio. In the marine department, claims, paid and outstanding, amounted to 68.01 per cent. of the net premium income. Since it was necessary to finance a substantially increased reserve in order to establish a marine fund at 100 per cent. of the premium income, the working of the department has entailed a loss of Rs. 34,745. Referring to the working of the marine department, the Chairman of the Company, Sir Cowasji Jehangir observes, in the course of his statement to the shareholders, circulated along with the Directors' report, as follows:

"As in the previous year, intense competition resulted in what are generally admitted to be uneconomic rates for non-tariff business and we did not, therefore, actively compete for such business. However, some progress was made in the writing of cargo business. Although we cannot but share the views of the world's leading underwriters that it will be some time before satisfactory results can be expected from marine hull insurance, it was also decided, in the broader interests of building up of a hull market in India, to make a cautious start in the development of a hull account."

The underwriting profit for the year under review, after making adjustments for the losses sustained in the marine and accident departments and including the income by way of interest and dividend, is Rs. 3.12 lakhs. After liquidating the debit balance of Rs. 2.88 lakhs carried forward from the previous year, there remains a balance of Rs. 24,004 which has been carried forward to current year's account. Referring to the outlook for the Company, the Chairman strikes a cheerful note, for he says: "Now that the subsidiary is firmly established with reasonable underwriting reserves and a nucleus of sound business in each department, we can confidently look forward to satisfactory dividends on the parent company's investment."

SOCIAL INSURANCE IN RUSSIA

The social insurance of factory and office workers in Russia is financed completely by the State. The State social insurance fund is made up of a fixed percentage of the wage bill paid regularly by all enterprises and institutions for this purpose. The workers make no payment into this fund. The State social insurance budget increase in proportion to the growth of the socialist economy.

In the first Five-year Plan period (1928-29 to 1932-33), the social insurance funds amounted to 10,400 million rubles. In the second Five-year Plan period (1933-37) they reached 32,500 million rubles. In the post-war Five-year Plan period (1946-50) they amounted to 80,100 million rubles. The 1952 social insurance budget came to 21,400 million rubles.

Benefits paid from social insurance funds include temporary disability benefits, paid to both wage and salaried workers, disablement and old-age pensions, pensions to families on loss of the breadwinner, and maternity grants. Social insurance funds go to pay the cost of construction and maintenance of trade-union health and holiday resorts, to purchase accommodation in health and holiday resorts for wage and salaried workers and for the upkeep of workers' children at summer camps and children's sanatoria. The cost of special diets served in special dining rooms and of accommodation and treatment at overnight sanatoria or one-day rest homes maintained by mills and factories also comes out of these funds.

During illness, a worker receives sickness benefit from the first day of his disability until his doctor permits him to go back to work. A worker is also paid out of this fund if he or she has to stay at home to take care of a sick member of the family.

The benefits paid range from half to the whole of the worker's earnings, depending on the length of service at the enterprise. Maternity leave benefits are paid to women who have worked at a given enterprise or institution for not less than three months. On the birth of a child a lump sum is paid as a special allowance for feeding the baby and for the purchase of a layette. The trade unions, it is stated, have complete charge of these State social insurance funds.

DALMIA CEMENT (BHARAT) LIMITED

FIRST ANNUAL GENERAL MEETING

MR. JAIDAYAL DALMIA PLEADS FOR DIFFERENTIAL PRICE POLICY

THE principle of fixing a uniform price for the cement industry as a whole, irrespective of the production problems and costs of individual units, was criticised by Mr. Jaidayal Dalmia, Chairman of the Dalmia Cement (Bharat) Ltd., in his address to the shareholders of the Company, at their First Annual General Meeting, held on the 20th inst. at Dalmiapuram (Madras). While the principle of different ex-factory prices to different units of the same industry had been conceded in the case of the steel industry, he saw no reason why such should not be applied to the cement industry, where the differences in production problems and costs of different units were far more striking than in the former. Answering the charge of inefficiency levelled against the high-cost units, Mr. Dalmia explained, in detail, how the costs of production of some of the units happened to be high. The most important causes were the heavy transport charges and cost of coal supplied to these units. Unless the Government was able to provide coal for all cement factories at a uniform price, Mr. Dalmia said, the fixation of a uniform controlled selling price for all manufacturers could not be justified. He also pleaded for zonal distribution of cement.

The following is the full text of Mr. Dalmia's address:

"I welcome you all to the first annual general meeting of your new Company, which according to the scheme approved by you, has taken over the Indian assets of Messrs. Dalmia Cement Ltd. The latter has now become a subsidiary of this Company. The balance-sheet and profit and loss account with the report of your Directors for the period ended 31st December, 1952, along with the accounts of various subsidiaries are in your hands.

"Ever since the expansion of your cement factory at Dalmiapuram, there has been failure of rains, year after year, resulting in power cut. Each year, we had hoped for better luck in the next, but the situation, instead of improving, kept on worsening. The production of the factory has suffered mainly because of this. The Company was, therefore, compelled to purchase and install diesel electric generating sets at heavy capital cost to supplement, to some extent, the available power supply, the installation of which has been completed only recently. We fervently hope that there may be ample rains in future years.

"The controlled selling price of cement has suffered a drastic cut since last December on account of availability of cheaper packing materials. It is rather regrettable that the increase in production costs resulting, for instance, from production losses, due to power cut and rise in labour costs, etc., has not been taken into consideration by those in authority while fixing the selling price.

Uniform Selling Price

"It is unfortunate that the cement industry, which occupies such an important place in the country's economy, although it is being controlled by a small number of persons, has not yet succeeded in having a combined organisation of its own to voice its common difficulties. However, on individual representations having been made by all, including the biggest combine of Messrs. A.C.C., the Government was pleased to refer the case of the cement industry to the Tariff Commission for investigation. The investigation is almost complete, and the report of the Commission is still awaited. In the case of the steel industry, both the Tariff Commission and the Government have already conceded the principle of different retention prices for individual producers based on their respective production costs, although, for consumers, the sale price of steel is the same, irrespective of its producer. The differences in production problems and costs of different units arriving from their locations, are much more striking in the cement industry. The locations of most of the high-cost factories were selected with the approval of the Planning and Development Department of the Government of India, having regard to availability of raw materials and distribution to consuming centres. Moreover, distribution of this basic industry is in the interests of defence strategy. On the recommendations of the Tariff Commission will largely depend the fate of these factories and of the industry. Perhaps, in the case of the cement industry, the principal of different retention prices may not be conceded as the persons affected are not so influential and powerful as the larger steel interests are. Even the steel re-rolling industry, where the affected interests are not so influential and powerful, has suffered an invidious distinction in this regard.

"It is regrettable that without trying to understand the basic realities of production costs, the high-cost units, in case of the cement industry, are charged with inefficiency even by those sitting high in authority. I shall welcome anyone to prove if such high cost of production is due to inefficiency.

"On the other hand, if these high-cost locations are not wanted, let these units be stopped, at least for a year as an experimental measure, and let us see if the requirements of these areas can be fulfilled at reasonable prices by bringing cement from low-production-cost units which are situated at long distances. The cheap-production-cost locations are only the adjoining areas nearer to coalfields. Almost all known and workable deposits of raw materials for cement in those areas are already being exploited. But still, all these areas are unable even to meet their own demand of cement. Then, how can they feed Southern and Western India, where production costs are necessarily higher, mainly due to their distance from coalfields or other factors beyond the control of the manufacturers.

Cost of Coal

"It is an acknowledged fact that coal is a very big item in the manufacturing cost of cement. Even with the most modern plant, the coal consumption is about 25 per cent. to 30 per cent. in cement burning alone, depending on the quality of coal. The cost of coal varies between Rs. 20 and Rs. 70 per ton from factory to factory depending on the distance from coalfields and means of transport. The factories in South Madras and in Saurashtra have to meet their requirements of coal by getting a major portion by sea route which raises the cost to about Rs. 70 per ton of coal. This accounts for a difference of about Rs. 12-8 per ton of cement in manufacturing cost of cement from factory to factory for the cement-burning process alone. Unless the Government is able to provide coal to all the cement factories at a uniform price delivered at the factories, the fixation of a uniform controlled selling price for all manufacturers cannot be justified. On the other hand, cement from Southern and Western India meets the deficit of the low-production-cost areas to a great extent, even by incurring heavy transport charges which have ultimately to be borne by the consumers there. Under such circumstances, how far is it reasonable and justified to treat the high-production-cost factories on a par with low-production-cost factories for the purpose of uniform sales realisation in a controlled economy. Concerns operating only one plant and that too near coal areas have no worry, as they are not adversely affected by the fixing of a uniform sales realisation for all factories in India. But great are the hardships of those, who have factories only in high-production-cost locations, which are, nonetheless, of great utility for the economy and development of the country and the great national projects. Their problems have not been considered with the sympathy they deserve. Such an unsympathetic attitude has discouraged and frightened many new-comers, in whose favour licences were granted for establishing cement factories. So much so that, even after getting capital subscribed, some had to liquidate their concerns and return the capital to the subscribers, instead of venturing and hazarding the same to risk. The proposed Bagalkot cement factory, backed so much by the Government of Bombay, has not been able to see the light of day so far.

"We have apprised the Tariff Commission about the considerable wastage and loss which is being caused by unnecessary cross movement of cement to long distances. The available rolling stock with the railways is grossly inadequate and, therefore, the Railway Board has come out with a complicated 'Own Your Wagon' scheme. The transport capacity is also extremely limited. In this state of rail transport facilities, the existence of unnecessary and avoidable cross movement of cement should not be tolerated. We are being compelled to despatch cement to distant stations which can be economically served from nearer factories. Similarly, those factories are supplying cement in areas far away from their locations, but involving less transport from our factory. This is a result of unscientific planning of distribution. To remedy this state of affairs, we suggest the fixing of zones of distribution for the various factories on an equitable basis taking into consideration their locations and the needs of the surrounding areas.

Industries (Development and Regulation) Act

"Important amendments have been made in the Industries (Development and Regulation) Act, by which the Government has taken extraordinary powers to control the prices and distribution of industrial products and to take over the management of an industrial undertaking without even giving it an opportunity to render an explanation. It is only to be hoped that these powers will be sparingly used in exceptional cases and not arbitrarily for serving other ends. The Hon'ble Minister for Industry, speaking in support of the amendments, stated in Parliament that 'it may be that the Government would have actively to enter into the field of expanding industries and promoting the floating of new concerns. If it does so, purely on its own, as a nationalised unit, even then, it has to make it a *profitable* one, or at any rate, see that it does not lose. So the prices have to be controlled.' It is recognised by him that an industry must be profitable, if it is to exist. The same consideration should be borne in mind while controlling the industries in the private sector. Any distinction will apparently be discriminatory.

Foreign Capital

"Fears have been expressed about the invasion by foreign capital into fields in which Indian capital is operating. There is really no cause for alarm provided the Government does not allow them special facilities and exemptions from statutory requirements. Let all be treated alike and the best interest of the country be kept nearmost to the heart. The Indian industrialists should also be helped and encouraged to improve the efficiency of their production units by effecting improvements and mechanisation. Schemes of labour economy should be appreciated and the impediments in the way of putting them through should be minimised. As it is, whenever any improvement is attempted, there is no co-operation from labour and no assistance from the Government. On the other hand, demands are being received from labour that more workers should be employed for the same jobs which have been done in the past with fewer hands and can, in fact, be done with even lesser strength than at present employed. Labour seems to have no regard for the economy of the industry, in which it is employed, and no desire to put in their best efforts towards production. The right to strike is being often abused. It is necessary, in my view, in the present state of our country, to impose reasonable restrictions on strikes and also deterrent penalties for illegal or manifestly unjust strikes. Rigorous laws have been enacted to chastise managements, if they do not conduct industries according to certain principles. The time has come when there should be laws enacted for correcting the growing indiscipline and go-slow tactics of labour. If rationalisation of labour on economic grounds is continued to be objected to, the time may not be very far, when many concerns may have to close down as the Madras Tramways had to do.

"If maintaining and feeding extra labour without work in ordnance factories demoralises labour itself, according to the Hon'ble Shri Mahavir Tyagi, Minister for Defence Organisation, it does so in the case of private employment as well. It is the duty of the State to provide opportunities of employment for all. Forcing the maintenance of idle labour by private industries is only another indirect form of tax on industry, which is entirely unjustified, and imposes an undue burden on the industry.

"I am glad that our Government has decided to make intensive effort to promote exports

BRITISH INDIA GENERAL INSURANCE COMPANY, LIMITED

EVOLVING ACCEPTABLE SCHEME FOR CONTROL OF INSURERS

MR. F. H. MEHTA ON NEED FOR ACTIVE CO-OPERATION

ADDRESSING the Thirty-third Annual General Meeting of the British India General Insurance Company, Ltd., held in Bombay on Thursday, 23rd July, 1953, Mr. Framroze H. Mehta, Chairman of the Company, emphasised that, while an overall control of general insurance business was necessary in order to improve the conditions in the insurance market, the task of evolving a scheme of control, acceptable to all insurers, could be accomplished only through "active co-operation" and "common understanding" among the insurers. He pleaded for the adoption of a policy of "live and let live" by insurers.

The following is the full text of Mr. Mehta's address:

"GENTLEMEN,

"I have great pleasure in welcoming you once again to this thirty-third annual general meeting, and submitting the Directors' report, audited accounts and balance-sheet for the year ended 31st December, 1952. The report and statements of account have been in your hands for some time and, with your permission, I take them as read.

"Last year I referred to the Insurance Amendment Act and, since then, much useful work has been done by the Government Insurance Department Executive Committee and Tariff Committee to improve insurance conditions both in the life and general departments. For the first time, an invitation was extended by the Executive Committee to meet the delegation of the Advisory Board of Directors, to consider ways and means of improving the trade and putting the same on healthier lines. The Advisory Board of Directors met several times and discussed problems pertaining to general insurance from various angles; useful suggestions were put forward, and from the trend of the discussions which ensued it seems that the Directors have realised the situation facing them. More such meetings between the delegates of the Advisory Board of Directors and the Executive Committee will be held in the near future for frank and open discussions with a view to evolving schemes and formulas in order to create a healthy growth of the insurance market. Under the Act, greater responsibilities are thrown on directors to ensure that the affairs of the company are being run on sound lines. While the directors are ultimately responsible for successfully running the company, the main functions of the board of directors are to look after the interests of the shareholders by whom they were elected, to control and invest the funds of the company, appoint suitable persons to manage the affairs of the company and to have an overall supervision.

An Intricate Business

"Insurance underwriting is of an intricate nature and has such a wide scope that it can only be managed by those who have long experience of underwriting and who can devote their whole time to the various problems created from time to time. It is not advisable to make directors responsible to look into the day-to-day affairs of well-managed and smooth-running organisations.

"While an overall control from the authorities is necessary for improving the trade, which is of a national character, and for placing the same on a healthy and sound footing, it is essential that freedom be allowed to the insurers to evolve their own methods suitable to them. The working difficulties can only be judged by those experienced in the insurance field, and each insurer has his own set problem to face to develop the business suitable to him which cannot be worked out on a set pattern. From what was said by the chairmen and directors of companies at the various meetings of the Advisory Board of Directors, there appears to be a great divergence of opinion on the subject. It is but natural that with such differences it is difficult to produce a suitable working scheme acceptable to all. If, however, insurers extend to each other their active co-operation in trying to understand the difficulties facing others, and adopt a policy of 'live and let live,' I am sure a common understanding can be reached by evolving a scheme which may be acceptable to all and which would ensure a healthier trend in insurance.

"It is an accepted fact that insurers lean to a very great extent on the interest-earning capacity of their funds. Insurance companies being credit institutions can, like banking institutions, render financial assistance to industry, thus contributing to a great extent to the national building programme. It is, therefore, desirable that a certain amount of freedom be given to the insurers in their investment policy.

"The biggest problem facing the Indian insurer to-day is expenses. With the steady increase in prices, the standard of living rising and the demands from the staff unions for higher salaries, bonuses and gratuities, coupled with the fall in direct premium income, insurers find it increasingly difficult to keep within the required quantum of expense. The scramble for direct business in India is, therefore, due to the anxiety of insurers to fall within the required quantum.

Fire Insurance

"1952 saw a considerable drop in gross direct Indian premium, especially in the fire department. The drop is mainly due to the country's economic condition, import restrictions and revision in rates in certain sections of the Tariff.

"The fire section is the mainstay of the general department as shown by the accounts of various companies. This department had yielded a reasonable percentage of profit in the past on account of the claims ratio being within limit. However, the trend in 1952 and in the first half of 1953 is towards an increase in the claims ratio, particularly in the first half of 1953 which is considered abnormal, and with the increasing claims ratio the profit-earning of this department will be affected; hence the situation calls for the very careful consideration of the underwriters. The majority of claims in this department of insurance are due to lack of reasonable care by the insured, especially industrial concerns. A fire loss can be considered as a national waste, and while the insurance companies pay for the loss to restore the property, they can never restore the loss sustained by the nation.

"With rapid industrial developments in India and congestion in big cities, increasing fire claims are evident, and it is, therefore, desirable that the Government Insurance Department, in conjunction with the insurance associations, should take a lead in educating the people in fire prevention and consequent waste.

Marine Insurance

"Marine insurance results since the last war have been good. However, the position is deteriorating rapidly, mainly due to the unhealthy rate war. In recent years the tendency has been towards cutting rates without considering the subsequent consequences, so much so that we are now reaching an uneconomical level and, if no immediate improvement is made towards stabilising the same, it may lead to disaster. To-date results of the marine accounts clearly endorse the views expressed by me last year. It is time that the Tariff Committee gave their serious consideration to this problem, taking into account the nature of the world market of the trade, and tried to remedy the present chaos created by uneconomical rate war.

"For the first time, Indian shipping companies have placed their hull insurance business direct with Indian companies. It is, indeed, a very great gesture, indicating their confidence in the stability of the Indian insurers and their ability to conduct this class of business. Our thanks are due to them for their confidence in us and we assure them that their interests will be well looked after with efficient service.

"The miscellaneous section continued to be unsatisfactory, mainly due to heavy material losses in the private and commercial vehicle section. Private motor car rates have been increased from the beginning of 1953, but it is doubtful whether the increase is sufficient to keep pace with the increasing claims' costs. From the trend of claims received in 1953, it is evident that before long a further revision will be necessary, not only for private cars but for the whole motor section.

"Personal accident and aviation business throughout the world is unprofitable. This is mainly due to the ridiculously low rate prevailing in the market and unless a revision in rates is forthcoming, this class will continue to show a loss.

"The economic conditions of the country have remained unsettled, and there has been a consistent drop in the investment market. In 1946, the book value of our investments was below the market value to the tune of Rs. 14,26,000, representing a gain of 16.50 per cent. on our investments then. Since then, this gain on our investments was wiped off and instead, our investments show a depreciation amounting to roughly Rs. 10,37,000, for which adequate reserve has been provided, by creating a further reserve of Rs. 3,39,995 in the current year.

General Department

"The accounts produced show a decrease in premium income. The total gross premium income was Rs. 1,03,66,721 as against Rs. 1,09,68,000 last year. The net premium income for the year 1952 was Rs. 57,74,464 as compared with Rs. 64,80,558 for the previous year, i.e., a drop of Rs. 7,06,094. The paid and outstanding losses give us a ratio of 40.14 per cent. as against 34.61 per cent. in the previous year.

"Although our claims' experience in all three departments is within limit, considering the trend for increased claims and to meet with any abnormal losses, your Directors considered it advisable to build up a strong reserve position and accordingly the percentage of reserve in all the three departments has now been increased.

"The reserve for unexpired risks together with the additional reserve created amounts to Rs. 33,67,609, i.e., 58.32 per cent., against 54.65 per cent. last year—a strain of 3.67 per cent.

"The gross profit as shown in the profit and loss account was Rs. 8,10,974, which works out at 14.04 per cent. of the net premium income, compared with 11.36 per cent. last year. The total fund now stands at Rs. 66,43,700.

Fire Department

"The gross premium income was Rs. 64,05,798 as compared with Rs. 67,04,000. The net premium income amounted to Rs. 34,29,550, and showed a drop of Rs. 5,26,049. Claims paid and outstanding cost us 32.13 per cent. as compared with 26.94 per cent. last year. The ratio of commission and expenses and taxes was 55.07 per cent. as against 51.47 per cent. in 1951.

"The profit transferred to the profit and loss account was Rs. 6,54,223 (19.07 per cent.) of the net premium income as against 14.09 per cent. for the preceding year. The reserve now stands at 52.40 per cent. as compared with 50 per cent. last year.

Marine Department

"The gross premium income was Rs. 15,33,730 as against Rs. 15,91,000 in 1951, but the net premium income was increased by Rs. 61,093 and now stands at Rs. 5,62,172.

"Due to continuous pruning of this account and without indulging in any uneconomical rate cutting, it was possible to bring down the loss ratio from 62.58 per cent. last year to 58.99 per cent. in the current year.

"After providing a reserve at 105 per cent. against 100 per cent. to the previous year, which, together with the increase in net premium income, absorbs an additional amount of Rs. 89,202, Rs. 3,057 was transferred to the profit and loss account.

Accident Department

"The working of the miscellaneous insurance department shows a decrease in the premium income of Rs. 2,41,138. There is a rise in the claims ratio, mainly due to the drop in premium income, which now stands at 49.62 per cent. as compared with 42.66 per cent. previously.

"Your Directors have once again considered it advisable to strengthen the reserve position in this department, and accordingly increased the reserve to 55 per cent. as compared with 52.5 per cent. last year.

"The profit transferred to the profit and loss account, after providing the above reserve, was Rs. 56,221.

Life Department

"The interest yields in these departments were slightly higher than last year, and rose from 3.59 per cent. to 3.84 per cent. in the Closed Account, and from 2.43 per cent. to 2.96 per cent. in the Current Account.

"*Closed Account.*—This being a running-off account, no comment is necessary.

"*Current Account.*—The completed new business for the period under review was Rs. 67,96,000 as compared with Rs. 57,78,000, i.e., an increase of Rs. 10,18,000. Efforts are being continued to bring down the expense ratio and the same now stands at 43.57 per cent. as compared with 44.98 per cent. The death claims amount was lower than last year the figures being Rs. 46,185 in 1952 against Rs. 54,910 in 1951, and fall well within expected claims. There was a great improvement in the lapse ratio which now stands at 19.37 per cent. compared with 33.68 per cent. last year. Further efforts are being continued to bring down the lapse ratio within a reasonable figure. After transferring Rs. 15,000 from the profit and loss account, the life funds show, at a figure of Rs. 12,08,512, an increase of Rs. 4,51,114 over the previous year.

Profit and Loss Account

"After crediting Rs. 1,73,255 as interest, and transferring the profits from the fire, marine and accident revenue accounts, the total of the account amounts to Rs. 8,87,883. Rs. 8,774 and Rs. 15,000 were transferred to the life closed account and life current account respectively. Rs. 58,008, Rs. 6,230 and Rs. 3,370 were debited as expenses not charged to other accounts, donations and exchange adjustments respectively. The amount transferred to the profit and loss appropriation account was Rs. 7,95,974 as compared with Rs. 7,36,366 in the previous year.

Profit and Loss Appropriation Account

"Rs. 2,10,000 and Rs. 2,14,000 for provision for taxation and reserve for depreciation in securities were debited to this account. After transferring Rs. 50,000 to general reserve, Rs. 25,000 to reserve for equalisation of dividend, Rs. 65,000 to reserve for bad and doubtful debts and creating an exchange reserve of Rs. 15,000, the balance of the profit and loss appropriation account was at Rs. 2,98,894, out of which your Directors recommend a dividend of 10 per cent. free of income-tax, absorbing Rs. 2,00,000.

"Continued efforts are being made to develop the business at home and abroad, and from the list of branches and agencies you will observe that we have opened new branches in India and in the foreign field. It will take some time before the effect and the progress of these branches will be felt by us.

"The Board has granted a bonus at the rate of 1½ months' salary to the members of the staff at head office and at branches.

"The present healthy position of the Company is entirely due to the team-work of all officials and staffs at all branches and head office, and their loyalty to the 'British India'. My Board and I acknowledge this by placing on record our appreciation and thanks, not only to them, but also to our agents, without whose co-operation it would have been difficult to produce the good results achieved.

"I now move that the Directors' report, audited revenue accounts, and balance-sheet be received, adopted and entered in the minutes."

(Concluded from third column)

of planned progress. The business is growing in its importance and stature and should continue to develop and prosper under private enterprise so that the Indian insuring public finds protection against every form of insurable risks on a competitive and personal basis. Whilst the industry gets the utmost co-operation marked by a really sympathetic and imaginative approach from the two Government Departments that come into day-to-day contact with the trade, the Controller of Insurance and the Controller of Foreign Exchange, there is room for active assistance from the numerous Government Departments which follow the dangerous and illusory policy of self-insurance. At a time when Government is engaging itself to an ever-increasing degree in trade and industry, any withholding or withdrawal of business which normally belongs to the indigenous market will cripple its strength and handicap its progress. Indian insurance is quite anxious to play its proper role in the development of our economy. It is well equipped to do so by the strength of its finances and the wealth of its man-power and organisation. Let Indian insurance grow to greater heights and occupy a leading position in the national economy."

INDIAN INSURANCE COMPANIES' ASSOCIATION

MR. T. K. DESAI'S ADDRESS AT TWENTY-FIFTH ANNUAL MEETING

"WHILST Indian general insurance may have its domestic difficulties, the essential fabric of the business is sound. It has great inherent strength and commands not only confidence but respect of the International markets with which it has widespread relationships. Its flag flies over more than 40 countries. In fact, in the international field Indian insurance has shown a more active approach than any other Indian enterprise." Thus observed Mr. T. K. Desai, Chairman of the Indian Insurance Companies' Association, Bombay (Deputy General Manager of 'New India'), presiding over the Twenty-fifth Annual General Meeting of the Indian Insurance Companies' Association, Bombay, on Tuesday, the 14th inst. He added: "This progress has been achieved without securing any favourable position through discriminatory legislation or with active Government support. It is the product of the trade's own efforts and initiative."

After presenting the economic background which he considered difficult, the Chairman, Mr. Desai, observed *inter alia*: "The year 1952 represents the first post-war year of depression which normally hits insurance much harder than other trades. Whilst it is inevitable that the results may reflect a downward trend, the Indian companies have successfully withstood the difficulties of the year caused by falling premiums, heavier claims-experience and rising management costs. There has been an all-round fall in the premium income in all the departments. The reduction in premium would have been much larger but for the development of new lines of business which also was not without its own problems. For instance, the handling of the insurances of imports of American cotton by the Indian market brought in its wake the claims for country-damage caused through unusual rains and lack of storage facilities in the cotton-growing districts of California. These were claims which should really belong to the policies taken out by the American exporters. The market had to meet the claims from their Indian insured and the question of recovering these losses from those on whom they must necessarily fall is under discussion. This is a matter which the American underwriters will approach from the long-term viewpoint of market-to-market co-operation. In any case, the Indian market met its essential moral obligations to the Indian cotton trade.

"Last year, for the first time in its history, the Indian insurance market began to handle hull business in an organised way. India has a vast coastline and her shipping industry receives the wholehearted support of our Government, resulting in a reservation of the coastal trade for Indian shipping. In the interests of national prestige and self-sufficiency, Indian insurance must provide a full-fledged hull insurance service. An excellent example has been set by the 'Scindias' by placing their entire hull insurance in the Indian market and I hope that the lead given by the premier shipping unit in the country would be followed by the other shipping units with the same enthusiastic approach, with a view to assist the building up of an indigenous hull insurance market which should be a normal feature of the insurance services provided in any well-developed insurance market.

"The rates for motor insurances had to be revised at the end of 1952, as a result of continuous adverse claims-experience. In this sphere, the tariff insurers have repeatedly drawn the attention of the authorities to the exemption granted to certain insurers from the requirements as to tariff-rating, transgressing the assurances given by the then Hon'ble Commerce Minister on the floor of the House when the Insurance Amendment Bill was on the legislative anvil.

"Whilst 1952 has provided an unpleasant picture, there are already signs of a turn for the better in the first few months of 1953. I am not at all pessimistic about the future of our trade. With a population of about 360 millions the total gross premium of the country is only Rs. 20.5 crores. This is too poor a figure when compared to some of the Western countries where the *per capita* insurance is over fifty times that of India. First, there is a vast existing field which still remains unexplored by insurers. We have to encourage the insurance-mindedness in the people. Secondly, there will be substantial additions to the available business through the various plans of reconstruction both in our agriculture and industry in the planned economy of the future. What I desire to emphasise is that, at present, we touch only the fringe of the potential business available in the country. We have been working in a narrow groove which gives the erroneous impression that there are too many companies catering for a limited business. Our young general insurance trade is capable of great development in various directions. For instance, there are so many recognised lines of insurance business which have become popular in Western countries which Indian insurers could usefully offer to the insuring public. I have a twofold object in referring to these possibilities. First, to increase the size and spread of the portfolio of Indian companies over numerous classes of business and, secondly, to make the service of Indian insurance quite comprehensive, so that insurance becomes a true handmaid of trade and industry.

"I do not propose to deal at length with the progress that has been made and the problems that we have faced during the last 25 years. All I wish to say is that our Association began with seven members with head offices located in Bombay, catering mainly for local business. To-day our membership consists of 59 offices, some of whom have world-wide ramifications, transacting in 1951 a total net premium of over Rs. 13.1 crores, of which over Rs. 6.3 crores are derived from outside India.

"I cannot, however, refer to this progress in the premium income without some feeling of disappointment, because, in spite of quite low claims-experience and other favourable circumstances, the companies have not succeeded in building up a strong reserve position for themselves. I cannot overemphasise the importance of achieving a strong reserve position for general insurance companies in India. Reserve strength is most vital to insurers both in the risk-bearing capacity it creates, and the interest revenue it brings. The earnings of general insurance business cannot be properly evaluated in terms of annual profits. A definite portion of our premium revenue is to be set aside annually to provide for funds to meet abnormal losses which occur at long intervals, but which can sap the vitality of the market. Adequate facilities should, therefore, be afforded to companies to build up reserves. I hope and trust that the Taxation Enquiry Commission will examine the just claims of Indian insurers in this behalf."

Welcoming the Commerce Minister's suggestion that at least 50 per cent. of the business of non-Indian business houses should be placed with Indian insurers, Mr. Desai said:

"On behalf of the Indian insurance fraternity, I take this opportunity of congratulating the Hon'ble Minister on the spontaneous suggestion which shows the great interest he has in the working and development of our business. I do hope and trust that the European business houses will adopt his suggestion in the spirit in which it has been made.

"Gentlemen, we have reached our present position of development in our trade without any discriminatory legislation against non-Indian insurers. It should not be necessary for us now to bring in politics or racial issues in our business. We have worked hand-in-hand with non-Indian insurers for over 30 years, and, I am sure, my non-Indian friends would not misunderstand me when I say that, as most Indian insurance companies have to depend on the Indian market for their business, the suggestion made by the Hon'ble Commerce and Industry Minister that at least 50 per cent. of the business should be placed with Indian companies by European business houses is a fair and reasonable one. It should not cause any hardship or heartburning. Whilst, on the one hand, we find our Hon'ble Commerce Minister pleading the cause of Indian insurance, it is disconcerting to find some Indian business houses still placing the whole or bulk of their insurance business with non-Indian concerns. The primary object, with which our Association was started way back in 1927, was to propagate the cause of Indian insurance in India. In the year of grace 1953, it should hardly be necessary for us to restart a campaign to patronise indigenous insurance. All I need add is that Indian insurance has come to stay and it offers as efficient and as economic a cover as is obtainable from non-Indian insurers either in this country or elsewhere."

In conclusion, Mr. Desai observed:

"Indian general insurance has come to stay; though there are a number of young companies, there is an inherent strength which the market has acquired by adhering to old-established principles of sound insurance. The Indian companies are capable of providing efficient and economic cover for the country's needs. The business of Indian companies is growing at a rapid rate. The Indian companies, far from being junior partners in the market, do enjoy the patronage of the bulk of Indian business. It is regrettable that there are some Indian business houses who do not yet show appreciation of the remarkable progress made by Indian insurance. We should spare no efforts in persuading these elements to recognise the importance of supporting our well-established and successful industry. Whilst Indian general insurance may have its domestic difficulties, the essential fabric of the business is sound. It has great inherent strength. Indian insurance commands not only confidence but respect of the international markets, with which it has widespread relationships. The flag of Indian insurance flies over more than 40 countries of the world to offer the aid of Indian insurance service to the friends of India. In the international field Indian insurance has shown a more active approach than any other organised Indian enterprise. This progress of Indian insurance has been achieved without securing any favourable position for Indian insurance either through discriminatory legislation or under active governmental support. It is a result of the trade's own efforts.

"There is great scope for further extension of the activities of Indian insurance both in our own home market as also in the foreign field. That scope will be enhanced in the coming era

(Continued in first column)

NEW PUBLICATIONS

Bankers' Securities Against Advances. By L. R. Suneja. Suneja Publishers, 24/90 Connaught Circus, Below Madras Hotel, New Delhi.

IF the advice of Polonius to his son, "Neither a borrower nor a lender be," were to be strictly followed, the economy of the world would be at a standstill, however sound that advice may be. Agricultural production and industrial development would not progress and, in fact, would be crippled, if the agriculturist or industrialist were to live within his own resources. Banks fulfil a necessary function, in that they actually aid lending and borrowing operations. The author of the book under review analyses the fundamentals of sound advancing by banks and the principles on which advances might be made by banks either with or without security and examines the merits and demerits of the different classes of securities taken against such advances.

The author of the book needs no introduction, especially to students of banking. His *Answers to Questions of the Institute of Bankers Examination* are only too familiar to those who have appeared for that examination. He is also the author of another useful book entitled *Bankers' Objections on Unpaid Cheques*. The author, who is himself a practical banker, has brought together, in the book under review, the results of his long study and experience extending over thirty years.

The two main functions of a bank are those of receiving deposits and lending money and each of these functions is complementary to the other. While deposits represent the main resources of a bank, advances provide the most important source of profit. A banker can ill afford either to look to the interests of his depositors alone and be extremely conservative in making advances or to disregard their interests and risk their money in reckless advances. The author has endeavoured to furnish information on practical matters connected with the making of advances together with as much commercial law as a banker requires to know in order to conduct the above functions.

As a preliminary study to an analysis of the various classes of securities, the author discusses, in Chapter I, how a banker employs his funds, the major part of which, of course, is utilised in giving loans and advances to his customer. Before he decides to lend his funds, the banker has to study carefully the type of customer seeking advance and the kind of security the customer is prepared to provide against its due repayment. The borrowers are not drawn from any particular class of customers and the banker is, therefore, required to know whether the borrower has the capacity and power to borrow. The different classes of borrowers and the contractual relationship of each of them with the bank are dealt with in Chapter II.

Advances of a banker fall under two broad classifications, namely, "secured" and "unsecured" advances, and assume one of the three forms, loan, overdraft and cash credit. The significance of these types of advances is explained clearly in Chapter III. Chapters IV to XV form the main theme of the book, in which the author deals with the various classes of securities under two broad classifications, namely, desirable securities and undesirable securities. The desirable securities which may be accepted are, guarantees, first class stock exchange securities, life policies, title deeds of immovable property, goods and documents of title to goods, and bullion. Under the undesirable securities are grouped shares in private companies, which are unquoted and not readily transferable, second mortgages, sub-mortgages, assignment of book debts, short leasehold property and other securities of a wasting character. The merits and demerits of each of the desirable securities, the precautions that a banker has to take in securing a good title to the securities offered and the various procedures adopted in the process of securing the advances and their realisation have been exhaustively dealt with. In Chapter XVI, the author describes another form of advance, namely, discount accommodation, that is, advances granted by a banker by way of discounting bills of exchange.

Loans and advances by banks in whatever form they are made are more beset by pitfalls than crowded with opportunities. A banker would be courting disaster, if he were to embark on advancing without adequate knowledge of the law and practice governing such advances and if he were to keep the lure of earning profit as his ideal. On the other hand, as the author points out, wisely conducted loans and advances will profit both the banker and the borrower, as well as promote national economic welfare.

The banker may be satisfied with the creditworthiness of the proposed borrower and the security offered by him may be ideal. But these advantages will be lost, if there is any legal flaw in the documents taken from the customer in support of the advance. Utmost care should, therefore, be taken by the banker in executing the documents. The various documents that a banker has to take from his borrowing customer and the methods of executing them are explained in the last chapter. Specimens of these forms are given in appendix A.

The book is, on the whole, a valuable guide not only to students of banking and bankers but also to business men who have to borrow from banks, from time to time, to finance their activities.

India 1953—A Reference Annual. Published by the Publications Division, Ministry of Information and Broadcasting, Government of India, Old Secretariat, Delhi 8. Price : Rs. 5.

Among the several publications about India which the Publications Division of the Central Ministry of Information and Broadcasting has so far brought out, *India 1953—A Reference Annual*, just published, is certainly the most outstanding. This is so for more than one reason. For instance, unlike the previous books, the publication under review is quite comprehensive, giving authentic information pertaining to nearly all aspects of the country —the political, economic and social aspects. Further, it is neatly printed and well got-up. What is more, the publication is attractively priced at Rs. 5.

The book opens with an interesting description of the land and the people, followed by a detailed account of the political set-up of the country. The latter covers wide ground, including constitution, national symbols, elections, Union and State Governments, judicial system, public services, and defence services. The finances of the Union and State Governments, the Five-year Plan, power and irrigation and scientific research form the subjects-matter of separate chapters. Special chapters are devoted to the study of industry, commerce, agriculture and transport. Also discussed are such activities as Community Projects, Co-operative Movement, education, health, labour, social security, Press, films and broadcasting, postal services and rehabilitation. Another special chapter is devoted to the study of scheduled castes, scheduled tribes and backward classes.

The utility of the publication is enhanced by a survey of the economic and social conditions existing in each State, an account of the main events on the sports front, a chronicle of events during the period 1st October, 1951, to 30th September, 1952, and the series of legislations passed by the Governments—Central and State. The book also includes general information relating to embassies and consulates, warrant of precedence, hill stations, mountains, bridges and rivers. At the end of the publication are given a few interesting "facts and figures."

Indeed, the publication under review contains a mine of information on practically all important aspects of Indian life. It will doubtless serve as an invaluable book of reference to the public in general, and to students appearing for the competitive examinations, in particular.

The Investors' India Year-Book, 1953. Compiled by Messrs. Place, Siddons and Gough, Stock and Share Brokers, Post Box 592, Calcutta. Published by Orient Longmans Ltd., Calcutta. Price : Rs. 20.

This annual publication from the well-known house of brokers, Messrs. Place, Siddons and Gough, Calcutta, which is in its thirty-ninth edition, has carved for itself a prominent place among the works of reference on the working of important joint stock companies. In the latest edition which refers to the year 1953, the usual features of the publication, namely, the results of working of joint stock companies in tabulated form and the latest financial position of the companies, are maintained. There is an expanded tea section and a chapter giving practical investment hints. Referring to the role of private enterprise in India, in the context of the Five-year Plan, the authors of the book say, in their introduction:

"And if the Indian national plan, despite the fact that it was written by mean who are far from holding to this truth as firmly as we do, nevertheless leaves private enterprise largely unplanned, it seems the height of ingratitude to scold them for it. A moment's thought will show that they have not left private enterprise 'unplanned' out of conviction and for all time; they have probably done so, because they lack the administrative equipment to bring it within their global plan and because they are sufficiently doubtful of the efficacy of complete socialisation to give private enterprise a fair run to show what it can do. This fact was expressed by Sir George Schuster, a former Finance Member of the Viceroy's Council, who was on a visit to India last cold weather, by saying that 'capitalism in India is on trial'. We would add only that we expect the trial to be a fair one, first, because the Government will have its hands full attending to its own section of the Plan, and, secondly, because the Indian consumer, like consumers everywhere, will support the economic system that delivers the goods."

It is to be hoped that Indian private enterprise will not be found wanting now that the call to deliver the goods is being made, both from the Governmental and consumers' quarters.

World Facts and Figures (Third Edition). Published by United Nations Department of Public Information. Available at Oxford Book and Stationery Co., Scindia House, New Delhi and Calcutta. Price: 25 cents.

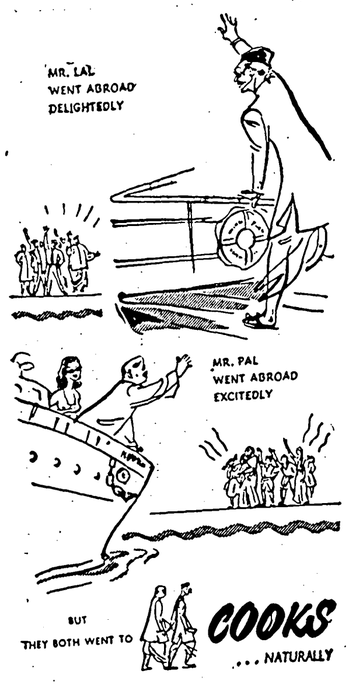
The brochure under review is a commendable synopsis of the voluminous Statistical Yearbook 1952 and the Demographic Yearbook 1952. The information covers a wide field of economic, financial, social and cultural data not always readily available elsewhere. It covers in most cases the two decades ending 1951 or early 1952, of about 250 countries and territories. Population trends, birth and death rates, unemployment, wages and living costs are some of the topics for which statistical information is given. Other subjects covered include agricultural production, livestock population, fertiliser consumption, mining and manufacturing, communications and transport, film production and newsprint consumption.

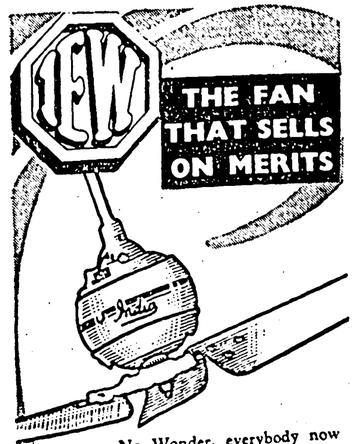
The brochure reveals that the world's farmlands are now yielding considerably more wheat, corn, barley, cotton and wool than before the war. World industrial activity has more than trebled. Steel output has increased fourfold. Sixty-five per cent. more coal was mined in 1951, as compared with 1931. Petroleum production increased by 229 per cent. and electricity generated by 288 per cent. There were over three times as many motor cars manufactured than at the depth of the Great Depression. International trade in 1951 had gone up three and a half times in value since 1938. Health conditions seem to be improving, too, as shown by substantial declines in infant mortality rate since 1930-34. Food consumption, as measured in terms of calories per person per day, seems either to have been maintained at pre-war levels or to have risen slightly. The brochure is indeed a valuable pocket reference book for all persons who have no time to go into the vast mass of information contained in the Year books referred to and who still desire to have some knowledge about world conditions in the economic and social fields.

Effective Business Correspondence. By R. L. Agrawal and B. N. Tripathi. Published by Messrs. Nand Kishore & Bros., Chowk, Banaras. Price : Rs. 6.

This book is bound to prove useful to both business firms and students of business organisation. It provides a lucid discussion of the principles and practice of business correspondence. It also gives copious specimens derived from the actual correspondence of business firms and Government offices.

The book is divided into ten parts, each dealing with different aspects of business correspondence. Part I is purely introductory in nature, being devoted to the description of the notable features of letter-writing. Business office routine and recruitment of office personnel are dealt with in the next part. It is here that a few specimen applications have been given and the technique of their composition discussed. In the subsequent six parts, business letters have been discussed and their specimens given in relation to various phases of business—inland and foreign—from the receipt of an enquiry to the final execution of orders. An exclusive chapter is devoted here to letters relating to banking and insurance companies. The last two parts deal, respectively, with techniques and forms of official correspondence and their drafting.





FUNDAMENTAL RESEARCH

A firm basis of research is essential to sound technical progress in any field. The Aero Engine Research Laboratory at Thornton-le-Moors, Cheshire, England, plays an important part in Shell's contribution to all branches of aviation. Here engineers, chemists and metallurgists study the vital factors of fuel and lubricating oil performance in relation to engine and airframe development. Application of the knowledge gained at Thornton and other research centres enables us to meet, and anticipate, the progressive requirements of the Indian aircraft industry.

works wonders!

FOUNTAIN PEN INK INDUSTRY

IS THERE A CASE FOR CONTINUANCE OF PROTECTION?

THE Tariff Commission has commenced its enquiry into the question of continuance of protection or assistance to the fountain pen ink industry. The industry has demanded that protection to it be continued for another three years. Some of the producers have also asked for an increase in the rates of protective duties and imposition of a ban or restriction on the imports of fountain pen ink. Assistance has also been sought in various forms such as facilities for importing supplies of raw materials and consumable stores, reduction in import duty on raw materials which cannot be obtained locally, control over the quality and price of glass bottles and cardboard boxes, organised distribution of raw materials, grant of loans by Government on liberal terms, exemption from octroi duty and sales tax, Government encouragement to exports of indigenously manufactured ink and extension of facilities for research so that the small manufacturers might get free technical assistance.

From the review of the position of the industry made by Dr. B. V. Narayanaswamy Naidu, Member, Tariff Commission, while opening the public enquiry into the question of continuance of protection or assistance to the fountain pen ink industry, last week, in Bombay, it is clear that the industry has an acceptable case for the continuance of protection. First of all, it is only for the past three years that the industry has been enjoying protection. This is too short a period for any industry to establish itself on sound lines. The industry is still not in a position to meet the entire domestic demand. The value of imports of fountain pen ink in 1952-53, for instance, was Rs. 4.51 lakhs, as against Rs. 3.17 lakhs in 1951-52 and Rs. 1.76 lakhs in 1950-51. Again, although the quality of its product has considerably improved, it still leaves much to be desired.

Scanty Information

The industry under review consists of a number of factories on a small or a cottage scale in different parts of the country. It has not, therefore, been possible to obtain information regarding the exact number of factories manufacturing fountain pen ink in the country and their actual production. According to the All-India Ink Manufacturers' Association, there are at present 103 units in the country, out of which 24 came into existence since the previous tariff enquiry. The total number now working is, however, said to be only 46. Of this, the rated capacity of only 36 units is available, and these account for 2.48 million dozen bottles of 2 ozs. each. This includes two new big units, namely, the Pilot Pen Company (India) Ltd., Madras, and the Parker Pen Company (India) Ltd., Madras, which together have an annual rated capacity of 0.66 million dozen bottles of 2 ozs. each. Out of the 46 factories in actual production, 17 are in Uttar Pradesh, 13 in Madras, nine in Bombay, four in West Bengal and one each in Assam and Travancore-Cochin.

As regards actual production, in 1947 it was 191,526 doz. bottles of 2 ozs. each or about 12 per cent. of the rated capacity and in 1951 it was 554,500 dozen bottles of 2 ozs. each for 37 units or 30 per cent. of the rated capacity of these units. In 1952, production was 533,567 dozen bottles of 2 ozs. each for 43 units. It may be mentioned that 10 units situated in Bombay, Calcutta and Madras account for about 80 per cent. of the total output in the country; the rest of the production is from small or cottage-scale units, for which detailed figures are not available. Certain discrepancies have also been found in the figures of rated capacity and production reported by the different State Governments and the Ministry of Commerce and Industry. Consequently, the first task of the Commission should be to collect accurate data about the number of units, rated capacity and actual production.

The estimates of domestic demand for ink vary from 200,000 dozen bottles to 7,500,000 dozen bottles of 2 ozs. each. Most of the producers, however, estimate the demand at between 1,400,000 dozen and 2,500,000 dozen bottles of 2 ozs. each. The present annual demand, according to the Ministry of Commerce and Industry (Development Wing), is 743,000 bottles, which is expected to increase to one million bottles of 2 ozs. each during the course of the next three years. The task before the Tariff Commission is, therefore, to examine the various estimates and arrive at an agreed figure, both current and future, in regard to demand.

The quality of the indigenous fountain pen ink is one of the crucial issues on which the Tariff Commission must form correct conclusions. For there is no meaning in providing protection to the industry if the industry does not improve the quality and simply takes advantage of the sheltered market to exploit consumers. While most of the producers have claimed considerable improvement in the quality of their product, some of the consumers still consider the quality of indigenous fountain pen inks a lot inferior to imported inks. The main defects of indigenous inks are said to be sedimentation, higher acidity and clogging in the pen. Many producers claim to be producing fountain pen inks in conformity with the specifications formulated by the Indian Standards Institution. Nevertheless, they say that they have found it difficult to cope with the consumers' prejudice which, according to their view, is most irrational, and not based on correct assessment of quality of indigenous inks. It is needless to emphasise that the ability of the industry to produce and supply high quality inks to the entire satisfaction of consumers will alone secure prosperity for the industry.

Raw Materials

The Tariff Commission is also enquiring into the question of raw materials. It is gratifying to hear that the industry is not finding any difficulty in getting the raw materials which are produced in the country. Even in getting imported raw materials also, we are told, there has been no difficulty except in the case of certain dyes, particularly blue ink dye, the imports of which are irregular. The producers have represented that the control on imports of dyes and such other raw materials which are not produced in India should be abolished or at least liberalised, particularly because a fairly large number of manufacturers are working as a cottage or small-scale industry basis. They also desire that the Government should pursue a steady policy, particularly in regard to the import of raw materials, and that, whenever the policy has to be changed, the Government should make it known to them sufficiently in advance. One of the manufacturers has complained that there is some discrimination in the matter of customs duty charged for ink colours and textile colours, because ink colours are classified as dry colours and textile colours as coal-tar dye. It has been pointed out that, in other countries, ink colours are classified as coal-tar dyes and, therefore, the importers there are not allowed to import ink colours under the licence for coal-tar dyes. It is also demanded that import duty on raw materials such as chemicals, dyes and solvents used in the manufacture of fountain pen ink should be reduced. The producers are opposed to a liberal import policy regarding fountain pen inks on the ground that it will adversely affect the industry in spite of a fairly high import duty. This demand will have to be examined with reference to the capacity of the indigenous industry to meet the requirements of consumers in respect of both quantity and quality. In this connection, Dr. Narayanaswamy observed that the consideration of import control as a means of protection was neither strictly within the purview of the Tariff Commission nor was it consistent with international obligation which India had assumed. Further, he added that on grounds of the most economical use of the country's foreign exchange resources, any Government would, of course, consider it wasteful to allow imports of an article on a liberal scale if the indigenous industry could meet all or most of the consumers' requirements.

A large number of producers have expressed concern at the participation of foreign capital in the preparation of fountain pen ink and the manufacture of popular brands of foreign fountain pen ink in the country. They point out that, for an industry of this type, sufficient Indian capital is available and that foreign capital should not, therefore, be encouraged. Adverting to this question, Dr. Narayanaswamy Naidu stated that it raised certain basic issues which was not within the purview of the Tariff Commission and that they were covered in the Prime Minister's statement of 6th April, 1949, on investment of foreign capital in India. He, however, promised to enquire into this question at the appropriate stage of the discussion.

TREND OF WORLD TRADE

VOLUME EXPANDS

THE full text of the latest report of the G.A.T.T. (General Agreement on Trade and Tariffs) on international trade, just published, is not yet available to us. But from the Press version of the report, it appears that, although it is entitled "International Trade in 1952," it deals with far more than the trends of international trade during the last year. It analyses the pattern of international trade during 1946 and 1951 and spotlights important developments. The report is not merely of historical interest, because it also provides information, which will help one to interpret the trend of trade during the current year also.

The aggregate volume of world trade in 1952, according to provisional data, was slightly below the record level established in the previous year. Nevertheless, it was 25 per cent. higher than the inter-war peak reached in 1929. Commenting on these figures, the report observes that the rate of growth in the volume of trade between 1946 and 1951 was unprecedented. It is significant to note that this development took place at a time when many Governments were maintaining severe restrictions on imports. The expansion in the volume of world trade, the report points out, depended to a large extent on the stimulus of the economic aid rendered by the U.S. to the various nations the world over, which amounted to $35,000 million between 1945 and 1952, an amount equivalent to one-tenth of the aggregate value of international trade during that period.

An important change in the composition of world trade, as compared with pre-war, is that manufactured goods now account for a considerably larger proportion of the aggregate volume—slightly more than half. Measured in terms of value, however, the proportions of primary products and manufactures in world trade have remained roughly constant. Whereas the prices of primary products have trebled, as compared with those in pre-war years, prices of manufactured goods have only doubled.

Although there has been a rapid increase in the volume of international trade during the past few years, the G.A.T.T. report does not express satisfaction with it. For the proportion of total production now moving across international frontiers has been declining. The share of total production entering international trade, which was 28 per cent. in 1925-32, has dropped to 20 per cent. during the post-war years.

The report analyses the profound changes that have occurred in the direction of world exports of capital goods since pre-war. Before the war, 58 per cent. of the world's exports, by volume, went to the main primary producing areas. But, in spite of an increase in the volume of capital goods exported to these areas even in post-war years, the proportion of world exports of capital goods which went to regions producing primary goods in 1951 had fallen to 49 per cent. As against this trend, the trade in capital goods among industrialised areas of the world rose by nearly two and a half times between 1938 and 1951.

Similar trends have also been in evidence as regards trade in consumer goods. Before the war, primary producing areas were receiving 58 per cent. of the volume of world exports of consumer goods. In 1951, however, they received only 46 per cent., a decline by 12 per cent.

The G.A.T.T. report also gives the average incidence of duties in some important countries based on a representative group of articles that figure in international trade. The indices for 1952, as compared with those for 1925 and 1913, in terms of percentages of value, are as follows:

	1952	1923	1913
Australia	17	13	18
Benelux	9	—	—
Belgium	—	7	6
Netherlands	—	4	2
Canada	11	17	17
Denmark	5	6	8
France	19	9	14
Germany	16	15	12
Italy	24	16	—
Sweden	6	10	13
United Kingdom	17	—	—
United States	16	26	32

The report qualifies these indices to the effect that they are "only indicative and illustrative" and that "great importance should not, therefore, be attached to any single figure, nor should the indices be taken as the basis for comparing tariff levels of the various countries. They merely indicate the relationship between the tariff levels of the same country in different years."

THE
CHARTERED BANK OF INDIA, AUSTRALIA AND CHINA
(Incorporated in England by Royal Charter, 1853)
(Liability of Shareholders Limited)
Capital (Paid-up) - £3,500,000
Reserve Fund - - £4,500,000
Branches throughout India, Pakistan and the East
AFFILIATED BANK IN INDIA & PAKISTAN:
THE ALLAHABAD BANK LTD., with over 70 offices in India & Pakistan.

PROBLEM OF UNEMPLOYMENT IN INDIA

SOME THOUGHTS ON ITS IMPLICATIONS TO INDUSTRY

THE President of the All-India Organisation of Industrial Employers, Mr. Mohanlal Shah, gave pride of place to the subject of unemployment in his speech at the twentieth session of the Organisation held at Ahmedabad last week. This is only as it should be, especially now that the problem of unemployment is making itself felt by the powers that be. It is common knowledge that the existence of unemployment reflects, from the national viewpoint, a waste of productive resources. Idle man-power means lower production and income than when the entire labour force is at work. From the human standpoint, however, unemployment means something more personal and catastrophic. It marks the complete stoppage of an individual's regular income and, in the absence of any relief, it drastically reduces the standard of his living and of those who are dependent on him. It seriously impairs the morale of the worker by making him feel that the society is no longer in need of his services.

Unemployment in India is not due to any deficiency or instability of aggregate demand but to the shortage of capital equipment and other complementary resources. The problem has found its expression mainly in the under-employment of agricultural population with extremely low productivity and income and is becoming increasingly serious owing to the progressive growth in population. The pace of movement of underemployed and unemployed to cities in search of jobs is faster to-day than at any time before. The situation is one which calls for immediate attention and effective treatment.

How to tackle this problem? Speaking the other day at Ahmedabad, Mr. Gulzarilal Nanda, Union Minister for Planning, told Pressmen that, to meet the situation, the Government would encourage schemes which were labour intensive rather than capital intensive in suitable fields and that the Five-year Plan would be re-examined from this angle. It is, however, feared that all this may end in only theoretical discussions of the subject, so long as the Governments at the Centre and in the States stick to their policy of throttling private enterprise in the disguise of public interest. How true is the recent observation of the Planning Commission that the State Governments' policy of pushing through with nationalisation of road transport at any cost has led to increasing unemployment?

Lack of Statistical Data

It is not possible to calculate the extent of unemployment and underemployment in the absence of dependable statistical information. The only reliable information available, which may be taken as a very rough index of the magnitude of the problem, is the number of unemployed registered with employment exchanges and the vacancies notified to them by the Governments and private enterprise. According to such information, the number of registrations with employment exchanges increased from 375,000 in 1951 to 1,477,000 in 1952, while the number of vacancies notified to it fell from 486,000 to 429,000. Naturally, therefore, the number of persons placed in employment in the course of the year by employment exchanges declined from 417,000 in 1951 to 358,000 in 1952. Since then, the position has deteriorated further, with the number of unemployed registered with the exchanges increasing and the number of vacancies notified to it decreasing. And, as the employment exchanges are mostly in urban areas, the figures published by them do not indicate the trends of employment in rural areas, and yet it is there that the problem of unemployment and underemployment is very acute.

The first and foremost effort towards relieving unemployment should be in the direction of deployment of retrenched personnel. Few can deny that it is not retrenchment *per se* that causes hardship but it is the inability of the persons concerned to find, within a reasonable time, alternative employment. There is a tendency on the part of the Governments to refuse small retrenchment in companies, as, for instance, the Tata Oil Company in Travancore-Cochin. But such a tendency is bad. For in certain circumstances retrenchment in a certain unit or a certain industry may be an imperative necessity. As pertinently pointed out by Mr. Mohanlal Shah:

> "The survival of the industry itself might depend upon its ability to cast off its surplus labour and this need not by itself become a social problem, unless either a large number of industries are taking similar measures at the same time or persons retrenched from industry are unable to find employment altogether in the same industry at another centre or in another industry. In a modern economy which is essentially dynamic, changes are continuously occurring in every sphere of industry—changes in the demand for finished goods, changes in the supply of raw materials and changes in the methods of production. There are a host of uncertainties which necessitate immediate action on the part of the management and should such action be impeded and curtailed, it will only result in driving industry or the factory concerned to the wall with losses to all parties including labour. Basically, deciding upon the most economic combination of labour and capital is a job which must be left entirely in the hands of those who run the industry. No Industrial Tribunal, however qualified it may be in the judicial field, or any preconceived legislation, will be able to undertake this work in the way it should be done. The proper way of tackling the question of rationalisation and consequent retrenchment is not by making it difficult for the employers to adjust their demand for labour, but by pursuing an overall policy which makes for an expansive outlook in the industrial field generally. This rather than detailed and rigid provisions to protect the immediate interests of the retrenched personnel should form the basis of governmental policy. It is in an expanding economy that the general and permanent interests of all sections of the community—workers, consumers and others—are best safeguarded."

Payment of Compensation

Closely allied with the question of retrenchment is the liability of the employer for payment of compensation for involuntary unemployment arising out of temporary stoppage or reduction of work due to shortage of coal, electric power, raw materials, etc. or overproduction. A question that arises in this connection is the extent of employers' liability. There are instances where the liability has been so burdensome as to cripple the industry altogether. Such liability should, therefore, be made to depend on the ability of the industry to pay. Alluding to this question, Mr. Shah remarked:

> "In a sense it is not fair to ask the employer to pay even under circumstances when he is unable to get any work from his employees and where the causes for such state of affairs are completely beyond his control. If, for instance, there are accumulated stocks or if the supply of essential raw materials is either inadequate or erratic, it is hardly the fault of the employer, and to make him liable during the period to pay for the labour which is required to be discharged is only adding to his difficulties. Ultimately, it merely means that while increasing the liability of the employer, his cost of production is being raised. In a sellers' market, he can possibly pass on the additional cost to the consumer; but, in the present circumstances of a buyers' market, the higher cost would merely mean that a further squeeze is being applied on the earnings of industry."

It is to be hoped that the Labour Ministry, before formulating the proposals on this question, which it is contemplating, would give full opportunity to the interested parties to discuss this question in all its aspects.

Fair Wages

There is a move on the part of the Government to fix fair wages. It is true that fair wages should be assured to all labour. But the question is whether the present moment is propitious for it. The most urgent problem facing the country to-day is the provision of opportunities for more employment and not ensuring comfortable working conditions for those who are already employed, on mere considerations of equity, irrespective of the capacity of the industry to pay, or the consumers' purchasing power to buy. In the present circumstances, it will not be possible to do both things. Any attempt to do so will amount to trying to have the cake and eat it. That apart, in the context of the present market conditions, it is indeed difficult to envisage how even the present level of workers' wages can be maintained unless their productivity increases to a substantial extent. On this issue, the views of Mr. Shah are quite pertinent. He said:

> "As it is, the wages of labour have been steadily increasing, as a result of the awards of the Industrial Tribunals, and there is probably no major industry at present that is not covered by such awards. Our industries are at present facing a situation in which wages are high relatively to the marginal productivity of labour. If our industries are to be run on competitive and economic lines, of which labour cost is a very important item. Even at the present level of wages, industries are finding it difficult in many cases to retain the present labour force and the necessity to rationalise has arisen. In these circumstances, if the limit of fair wages is to be sought by the capacity of the industry to pay—and I cannot think of any other method on which one can proceed—there will hardly be any scope for the revision of the wage structure in favour of labour. As such, any legislation pertaining to fair wages at this juncture might tend to raise hopes, which are not capable of being fulfilled and thus contribute to misunderstanding and unrest which will upset employer-employee relations."

The song of the day is that encouragement and assistance to cottage and small-scale industries would provide for increased employment. Even Mr. Shah expressed a similar opinion, but he did well to qualify it with a number of reservations. Here is what he stated on this issue:

> "It must be admitted, however, that in offering employment, the cottage industries and the small-scale industries in the country have an important part to play, provided modern methods of working are adopted and they function as economic units. In terms of numbers, even to-day, they are a more important source of employment to the large mass of people than the employment provided by the large-scale organised industries. Of course, the figures of persons employed in large-scale industries do not by themselves represent the total employment potential of such activity, because, for every worker directly engaged in organised industries, there are many more who are indirectly provided employment. For instance, in order to employ one textile worker in a factory, there must be employed a number of others at various stages from the collection and transport of raw materials to the final retail sale of cloth. Nevertheless, as a short-term measure, it cannot be denied that cottage and small-scale industries have to be invigorated, in order to sustain employment in the country. The utility of such a policy, however, is mainly as a palliative and one must bear in mind the limitations of this approach."

An important qualification which Mr. Shah failed to make but which we would like to add is that encouragement to cottage industries should not be at the expense of the more economical and already well-established large-scale industries.

Import Policy

Proceeding, Mr. Shah criticised the Government's import policy as being unhelpful to the problem of raising employment opportunities and urged the Government to assist the progress of the manufacture of many of the imported articles at home on such lines as would provide greater employment. In this connection, he observed:

> "I feel compelled to refer to the import policy of Government which is largely governed by balance of payments consideration, i.e., the import of goods is increased or decreased, according to the improvement or otherwise in our balance of payments position. Government spokesmen have at various times expressed the view that import restrictions should not be used as a means of protecting the industry and that, under the General Agreement on Tariffs and Trade also, to which India is a signatory, it will not normally be possible to use quantitative restrictions for protective purposes. I do not wish to enter here into a discussion of the pros and cons of our participation in the G.A.T.T.; the Federation of Indian Chambers of Commerce and Industry has recently addressed Government in this regard. All I would like to emphasise is that to the extent that restrictions on imports help maintain and increase indigenous production, or enable the starting of new lines of production, they are instrumental in increasing the scope for employment. This aspect—and not merely the exigencies of the balance of payments position at any particular time—should be the guiding factor and the objective of Government's import policy."

The foregoing suggestion is of dubious value, for the simple reason that foreign trade is a two-way traffic. If India must export its manufactures and raw materials, it must be ready to import the goods of others also. Such imports cannot always be the kind of goods which the country does not produce, or is not capable of producing. If this policy is carried too far, it will ultimately result in unemployment in export industries. Again, there is a danger in trying to ensure employment at any cost, for, in the long run, it is the capacity of the people to pay that will determine the level of employment.

One more solution to the problem of unemployment which Mr. Shah put forward relates to Government's stores purchase policy. He suggested that India should emulate the "Buy American Act" under which the Federal Government cannot buy goods from foreign sources, unless their price, after customs duty, is at least 25 per cent. below the domestic price. This policy, he said, would help the indigenous industries, thereby providing scope for greater employment. The Government of India has recently appointed a Stores Purchases Committee and one of the terms of its reference is to examine the working of the purchasing system in regard to Indian-made goods. It is to be hoped that the Committee will bear in mind the suggestion of Mr. Shah and strongly support the principle that the Government should buy goods of indigenous make and origin, so long as they are of the right quality, even if they cost a little more than the imported goods.

TAX MUSINGS

RENT-FREE QUARTERS

ARE THEY A PERQUISITE?

(By R. K. DALAL, B.Com., F.S.A.A., F.C.A.)

WHEN an officer or an employee of a company receives salary, commission, bonus or gratuity, he is taxed thereon. Salary also includes what are called perquisites. Section 7(1) runs as below:—

"The tax shall be payable by an assessee under the head 'salaries' in respect of any salary or wages, any annuity, pension or gratuity, and any fees, commissions, perquisites or profits in lieu of, or in addition to, any salary or wages (which are due to him from, whether paid or not, or are paid by or on behalf of, the Crown), a local authority, a company, or any other public body or association, or any private employer; and for the purposes of this sub-section, advances by way of loan or otherwise of income chargeable under this head shall be deemed to be salary due on the date when the advance is received."

Then, there are three provisos. Explanation (1) reads thus: "The right of a person to occupy free of rent as a place or residence any premises provided by his employer is a perquisite for the purposes of this sub-section."

This means that not only salary but also perquisites are liable to be taxed. Perquisite has been defined in the Oxford Dictionary as "any casual emolument, fee or profit attached to an office or position, in addition to salary and wages." Perquisites may take a variety of forms, for example, rent-free quarters, free medical aid, etc.

The right of an employee to occupy free of rent residential premises provided by the employer is considered a perquisite taxable under this section. Generally, what the Income-tax Act hits at is not what saves one's pockets, but what goes into one's pocket. Therefore, the right to occupy rent-free quarters by an employee, according to this principle, would be something saved out of one's pocket. It will not be something going thereinto. Hence, it will not normally satisfy the condition of an income receipt within the meaning of income under sections 3 and 4. In order to catch this form of perquisite within the meaning of section 7, an explanation (1) has been added. According to this, in all cases rent-free premises form part of the perquisites of an employee, the maximum cash value taken for this purpose of assessment is 10 per cent. of the employees' salary. The maximum 10 per cent. applies to quarters whether furnished or not. The principle of *Tennant vs. Smith* (3 T.C. 158) does not apply to such rent-free perquisite.

But suppose the employer engages flats on company's account and gives to his employee, not entirely rent-free, but at heavy concessional rent. An officer or a manager of a company drawing a salary of Rs. 2,500 is given a flat the rent of which is Rs. 750 per month. The company instead charges him only Rs. 150. Is the employee liable to return the whole Rs. 750 per month or 10 per cent. of the salary as his perquisite under section 7 for assessment purposes? In this connection, the circular No. 57 (LVIII-3) of 1951 issued by the Central Board of Revenue, dated 6th September, 1951, runs as under:

"It has so long been the practice of the Department to estimate the value of rent-free residence (perquisite), provided by an employer, at a figure not exceeding 10 per cent. of the employee's salary, irrespective of whether the residence was furnished or unfurnished. The Board, however, consider it unreasonable that no distinction should be made between furnished and unfurnished residence and it has, therefore, been decided that the value of rent-free residence provided by an employer should be taken:—

(i) in the case of an unfurnished residence, at 10 per cent. of the employee's salary, and

(ii) in the case of a furnished residence, at 12½ per cent. of the salary,

subject always to the right of the employee to claim the adoption of the *actual rent value* of the perquisite should it be, less than the above percentages."

There is, however, some controversy about this issue now. The fact that the manager enjoys a part rent-free quarters cannot be denied. And this is a benefit which is in the nature of a perquisite. But the question is, is such perquisite taxable? All cash perquisites are taxable; there is little doubt that they are a form of additional emolument to the employee arising directly out of his office. But the principle of the *Tennant vs. Smith's* case was that a benefit or perquisite which is not convertible into money at the will of the employee cannot rightly be regarded as income. Of all such perquisites, e.g., free board, free medical aid, free conveyance, free service, the only perquisite which is expressly made liable under section 7(1), explanation 1 is rent-free quarters and not other benefits. Hence, while the employee enjoying rent-free quarters would be assessable on the cash value of perquisite, other benefits like free medical aid, free board, etc., would not be. But, even in regard to the rent-free quarters, the explanation has to be strictly construed. Something which falls within its ambit alone is caught. If the benefit, by virtue of its nature, cannot wholly be caught, then according to the principle enunciated in the above House of Lords case, it is entirely outside the scope of taxation. Where an employee occupies premises owned by the company at concessional rent, it would be wrong to say that he is occupying premises *rent free*. "Rent free," as the word connotes, can only mean *entirely or wholly* free of rent and not at a small or concessional rent. Thus, theoretically, it seems arguable that to escape the tentacles of explanation 1, it would suffice to charge an employee a nominal rent—even a token rent would do. His case will not then fall within the meaning of the explanation 1 of section 7 and he would, it seems, not be liable to return as perquisite anything for occupying premises at concessional rent. Here, therefore, there seems to be an opening for giving an employee a substantial benefit in the shape of furnished quarters and charge only a token rent. The company would claim the balance of rent paid as an admissible deduction for the premises are rented exclusively and solely for the purpose of the business.

There is no direct case law on this, but about the legal interpretation there seems to be little doubt.

There is, however, one precaution necessary and that is that the premises must be owned by the company and not by the employee in his own name. The reason for this fineness is that, otherwise, it is possible to construe that the employer is given, not a perquisite in kind, but cash, and all perquisites of whatever nature are clearly liable to be taxed. In order to avoid such implications, flats or bungalows for employee-officers should be rented by the company and given to the employee by the company in return for a concessional rent.

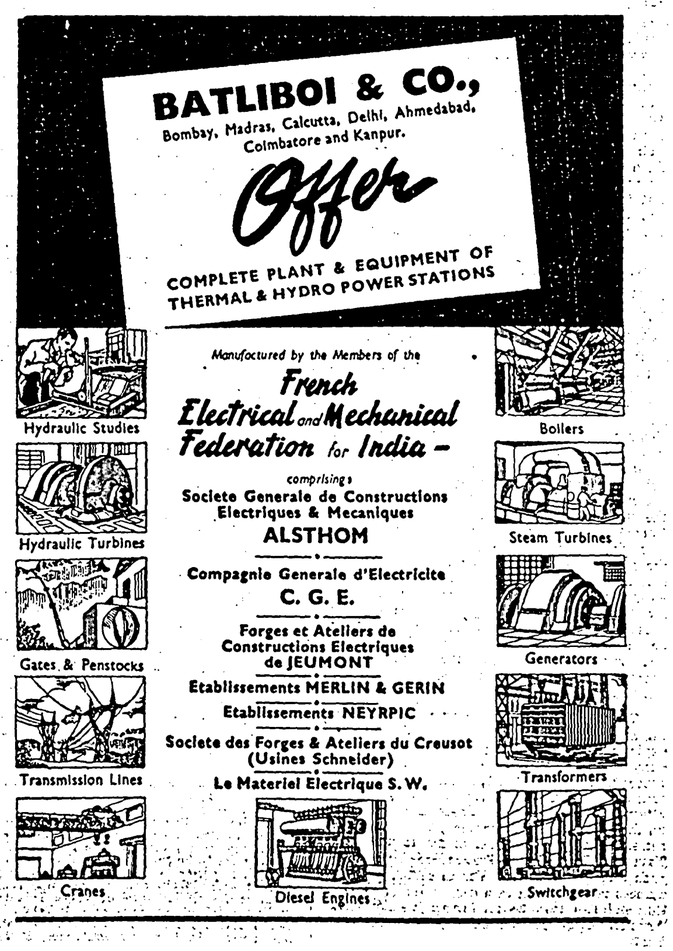
If the Department contests this view, it would pay an assessee to take the matter higher in an appeal to the Appellate Assistant Commissioner and/or the Tribunal and, if necessary, ultimately, in a reference to the High Court.—*All Rights Reserved.*

INCOME-TAX IN U.S.

The system of modern income-tax was first introduced in the U.S. in 1913 with very low rates—only one per cent. on net incomes up to $20,000, with a modest surtax for larger ones. Not until 1917 did the income-tax yield as much money to the Federal Government as customs duties did. But by 1920, it was contributing 10 times as much money as customs; and that was only the beginning of the rise of graduated income-taxes to a predominant place in the financing of greatly expanded Government. To-day the income-tax structure is grounded on the principle of "ability to pay." The Government's determination of the citizen's ability to pay takes into consideration the number of persons dependent upon him, his public contributions, and the expenses he incurs in procuring his income. The system is based on a sliding scale and puts the heaviest tax on those with the highest incomes.

The poorest people pay nothing. A single person with a net income of $5,000 pays $922. If his net income is $10,000, his tax is $2,347. If his net income is $25,000, the tax is $9,362. If his net income is $100,000, the tax is $63,541. Millionaires, 1953-style, pay about $840,147.

The Government relies on each person to keep his own income records or obtain them from his employer and to see that the full accounting is received by the tax department. Because of the possibility of error or to uncover the rare taxpayer who falsifies his return, the Government periodically "spot checks" individual returns.



TATA LOCOMOTIVE'S PROGRESS SATISFACTORY

GROSS PROFIT GOES UP BY NEARLY A THIRD

A SATISFACTORY increase of Rs. 21.67 lakhs, or about 33 per cent. in the gross profit is disclosed by the results of the Tata Locomotive and Engineering Co., Ltd. (Managing Agents: Messrs. Tata Industries Ltd.) for the year ended 31st March, 1953, as compared with those for the previous year. The net profit, after providing for Managing Agents' remuneration and depreciation, amounts to Rs. 3.87 lakhs, which, however, is only a fraction better than that of Rs. 2.27 lakhs earned in the previous year. This is due to the substantially larger provision for depreciation, amounting to Rs. 84.40 lakhs, as against Rs. 64.50 lakhs set apart in the previous year, because of the large initial depreciation allowances, permissible under income-tax law. No provision for taxation has, therefore, been made this year also. After bringing in the undistributed surplus (Rs. 24,209) of the previous year, the Directors have credited to the general reserve a sum of Rs. 4 lakhs (as compared with Rs. 2.50 lakhs) and carried forward the balance of Rs. 11,357. Thus, the Company has not yet come to the dividend list.

The Company did not earn any profit on locomotives and boilers supplied to the Railway Board, because the rate of output which would entitle the Company to a profit, in respect of these, under the terms of the agreement with the Government of India, has not been attained. The Directors' report that the year's profit, therefore, represents the earning on a part of the output of broad-gauge coaching underframes, the partial manufacture and assembly of road rollers and commission earned on sale of Messrs. Krauss-Maffei's locomotives in India.

During the year, the Company turned out 30 metre-gauge goods locomotives. The proportion of work done on each locomotive is stated to have increased progressively. The Company expects to attain the target of manufacture which, in terms of the agreement with the Government of India, would entitle it to a profit on its output of locomotives, in June, 1954. The build-up towards that target is reported to be satisfactory. The number of wholly manufactured large boilers was 29; besides this, 20 boilers were assembled from parts and sub-assemblies obtained from its technical associates, Messrs. Krauss-Maffei, A.G. Delays and difficulties in obtaining raw materials and components continued to hamper production in the boiler shop and were a source of anxiety to the Company. Despite this, the progress made during the year was satisfactory. However, thanks to the improved planning and advance purchases of materials, a better flow of raw materials and components has been assured to the boiler shop. By the close of the year under review, the work-in-hand in the boiler shop more than doubled. The output at the rate of 8 boilers per month, which will entitle the Company to a profit under the terms of the agreement with the Government of India, is expected to be attained by the end of 1953. The Company had a contract for 950 steam road rollers, all of which, except 42, have been completed, including 78 rollers made during the year. The output of broad-gauge underframes during the year amounted to 397, a record for the Company since the commencement of production of underframes in 1948.

The Company proposes to switch over the manufacture of metre-gauge underframes, after the existing orders for broad-gauge underframes are completed by March, 1954. This proposal is a sequel to the Government of India's decision to place orders for broad-gauge underframes sufficient to meet the requirements of railways for the next two or three years. The price basis on which the Railway Board was prepared to place further orders with the Company was found to be unremunerative. The Company had asked for prices on which it could make a modest profit, while at the same time remaining fully competitive with other sources of supply. When this request was turned down, the Company suggested that the question of establishing fair selling prices for underframes should be referred to the Tariff Board. The Railway Board did not agree to this suggestion and invited tenders from foreign countries. Disclosing this, at the last annual general meeting held on 9th September, 1952 the Company's Chairman had expressed the hope that the Government would not place orders abroad. The Company's capacity exceeded half of the total demand of the country. "It would be an unfortunate state of affairs, detrimental not only to the Company and to its employees who would be thrown out of work, as a result, but also in the long run to the railways, if the Company's capacity were to remain unused whilst underframes were being imported," the Chairman had declared. The Directors' report for the year under review reveals that the Chairman's expectations have been belied. The proposed change over to the manufacture of metre-gauge underframes is, however, a welcome one, inasmuch as it helps utilisation of surplus capacity and man-power.

The Company is negotiating with the Government of India for the release of funds due to the Company from the locomotive and boiler development account, in advance of the date on which they would normally be repayable under the agreement, in order to enable it to proceed with the installation of a steel foundry. This project envisages production of all large and complicated steel castings required for the locomotive industry in the country. This will also relieve the Company of its dependence on imported materials and components and will enable it to produce locomotives and boilers at competitive cost. The lack of finance has so far prevented progress on this project and this difficulty will be overcome with the release of the above funds. It is, therefore, to be hoped that the Government will sympathetically consider this request.

The following summary of the Company's latest balance-sheet will give an idea of its financial position:

Liabilities	Rs.	Assets	Rs.
Capital ...	5,00,00,000	Gross block	6,41,06,427
Debentures	1,50,00,000	*Less*—Depreciation ...	2,15,25,271
Reserves and surplus ...	34,09,722	Net block ...	4,25,81,156
Provision for taxation	1,23,928	Stores, spares, etc. ...	2,12,96,879
Liabilities	4,43,01,494	Stock-in-trade ...	89,93,860
		Work-in-progress ...	1,08,10,390
		Development account ...	1,45,48,992
		Debts, deposits and advances ...	1,41,21,493
		Investments	11,750
		Cash ...	4,70,624
Rs.	11,28,35,144	Rs.	11,28,35,144

The paid-up capital shows an increase of Rs. 50 lakhs over the year, being the final call on the preference shares held by the Government of India received during the year. The shares are now fully paid-up.

TATA OIL REDUCES DIVIDEND

After stepping up the dividend on the ordinary shares for two consecutive years, from 4 per cent. paid for 1949-50 to 6 per cent. for 1950-51 and 8 per cent. for 1951-52, the Directors of the Tata Oil Mills Company, Ltd. (Managing Agents: Messrs. Tata Industries Ltd., Bombay), have had to prune it slightly to 7½ per cent. for the year ended 31st March, 1953. This reduction in distribution to shareholders follows the setback in the Company's earnings for the latest year. The gross profit has declined from Rs. 21.86 lakhs to Rs. 18.99 lakhs and the net profit from Rs. 7.96 lakhs to Rs. 6.84 lakhs.

The Directors' report and accounts indicate a reduction in turnover and sales of the Company's products as a whole. Thus, the sale proceeds have recorded a decline from Rs. 447.66 lakhs to Rs. 414.28 lakhs, stocks of finished products from Rs. 72.91 lakhs to Rs. 56.94 lakhs and raw materials and stores consumed from Rs. 334.01 lakhs to Rs. 257.80 lakhs. The crushing of copra at the Company's two factories was at about the same level as in the previous year, but the quantity of groundnut and mowra seeds crushed was substantially lower, partly because of the poor crops and partly due to the price of oil having been more favourable than that of seeds. The shortage of groundnut and mowra oil was made up by purchasing cottonseed oil locally and palm oil from Far East. During the latter part of the year, the Company crushed castorseeds and exported the oil to the U.S.A. Production of laundry soap was lower by about 12 per cent., owing to power cut at the Tatapuram factory, but sales thereof showed an improvement. The output of toilet soap had to be curtailed due to a "fall in demand, believed to be due to the general decline in the purchasing power of the middle-class consumers." While production of glycerine declined proportionately, with the reduced production of laundry and toilet soaps, sales of the same in the local market were maintained at the previous year's level and the surplus was exported, but the price fetched abroad was lower than that in the Indian market. The Company's output of Cocogem was further curtailed during the year, owing to consumers' preference for *vanaspati*, because of the latter's lower price. The production of *Pakav* was, therefore, raised substantially. While the production and sale of Eau-de-Cologne were about the same as in the previous year, the production of hair oil had to be reduced by 18 per cent. due to a fall in demand.

Out of the gross profit of Rs. 18.99 lakhs (as against Rs. 21.86 lakhs for 1951-52), Managing Agents' commission has taken up Rs. 1.50 lakhs (Rs. 1.87 lakhs), depreciation has been provided with Rs. 10 lakhs (Rs. 12 lakhs), and taxation Rs. 65,000 (Rs. 1.90 lakhs). A sum of Rs. 60,000 has been placed to the employees' gratuity fund. The dividend on the 4½ per cent. preference shares requires Rs. 1.34 lakhs and that on the ordinary shares absorbs Rs. 4.90 lakhs, leaving Rs. 9,450 to be carried over, as against Rs. 10,002 brought in.

The Company's balance-sheet as on 31st March, 1953, reveals that the reserves and surplus aggregating Rs. 28.13 lakhs, are equal to 28.1 per cent. of the paid-up capital of Rs. 99.98 lakhs. As against a gross block of Rs. 159.19 lakhs, a depreciation fund of Rs. 85.50 lakhs has been built up. The current assets, at Rs. 251.94 lakhs, exceed the current liabilities (Rs. 197.53 lakhs) by a large margin of Rs. 54.41 lakhs.

HIND CYCLES' RECORD PRODUCTION

DIVIDEND STEPPED UP

A RECORD production of 130,053 cycles, a modest increase of Rs. 0.94 lakh (to Rs. 15.22 lakhs) in gross profit and the increase in the dividend level from 7½ per cent. to 8 per cent. are the outstanding features of the results of working of the Hind Cycles Ltd. (Managing Agents: Messrs. Birla Brothers Ltd., Bombay) during the year ended 31st December, 1952. The net profit for the year amounts to Rs. 3.85 lakhs, which represents an increase of Rs. 0.90 lakh over that for 1951. These satisfactory results have enabled the Directors to add a sizable amount of Rs. 1.67 lakhs (as against Rs. 1.50 lakhs last year) to reserves, after making the usual provision for debenture sinking fund.

The Company's production during the year increased considerably and reached a record level. Thus, as compared with the output of 108,810 bicycles in 1951, the Company's factory manufactured, in 1952, 130,053 bicycles, an increase of 20 per cent. But the rise in production has not been accompanied by a corresponding rise in earnings. This has been due to the slump in the trade. Commenting on this, the Directors, in their report to the shareholders, observe thus:

"In spite of the strenuous efforts of our sales organisation, we could not avoid the adverse effects of the slump. In our case, the conditions further deteriorated due to heavy imports of bicycles. India imported from January to December, 1952, about 250,000 bicycles, over and above parts worth about Rs. 1,40,00,000. These heavy imports, combined with general depression, resulted in severe fall in despatches and an unprecedented heavy stock of bicycles at the close of the year. The Industries Department of the Government of India were all the time vigilant in this direction and the Minister for Commerce and Industry promptly called a joint meeting of the manufacturers and trade representatives and, as a result of joint deliberations, evolved a scheme of allocation of indigenous bicycles to the importers on a certain basis. We hope that, with the sympathetic appreciation of the problems shown by the Ministry of Commerce and Industry, the position will be better during the current year."

The salient features of the Company's results for the year under review are compared with those for the preceding three years, in the following table:

(In lakhs of rupees)

	Year ended 31st December			
	1952	1951	1950	1949
Sale proceeds (gross) ..	125.07	134.09	129.51	76.51
Closing stocks ..	84.69	7.17	10.43	23.72
Expenses	134.27	121.19	103.41	67.64
Gross profit	15.22	14.25	10.31	7.44
Managing Agents' commission	0.72	0.63	0.43	..
Depreciation	7.80	8.00	6.02	6.08
Taxation	2.82	2.70	1.81	..
Net profit ..	3.85	2.95	2.87	0.46
To debenture sinking fund ..	0.50	0.50	0.50	..
Reserves	1.67*	1.50	..	..
Dividend—				
Preference	0.49	0.49	0.49	0.50
Ordinary	0.99 (8%)	0.93 (7½%)	0.93 (7½%)	0.68 (5%)
Carry forward	0.34	0.12	0.69	0.14

* Including Rs. 2,500 being the provision for depreciation on investments.

The effect of the slump in the cycle trade during the year is clearly reflected in the decline in sale proceeds and a sharp rise in closing stocks. There has, doubtless, been an increase in expenses, but such has not been in consonance with the expansion in output. The Company's contribution to provident fund and Employees' State Insurance to the extent of Rs. 1.47 lakhs was an additional impost during the year under review.

According to the Company's balance-sheet as on 31st December, 1952, the reserves and surplus stand at Rs. 5.40 lakhs, as against a paid-up capital of Rs. 24.91 lakhs. The 5 per cent. mortgage debentures amount to Rs. 4.22 lakhs. The current liabilities (including provision for taxation) aggregate Rs. 60.80 lakhs and show an increase of Rs. 21.80 lakhs, mainly on account of the increase of Rs. 1.83 lakhs in secured loans from the Company's bankers and of Rs. 12.53 lakhs in unsecured loans from the Managing Agents. During the year, the Company made an addition of Rs. 6.13 lakhs to the gross block account, bringing the total value to Rs. 60,61 lakhs, against which a depreciation reserve of Rs. 41.30 lakhs has been built up. Current assets, at Rs. 76.02 lakhs, more than adequately cover the current liabilities.

The Directors' report for the year under review is quite informative and, as usual, well got up with various charts, showing the progress of the Company since it commenced production, the proportion of expenditure to revenue for the last 12 years and the relation between the cost of living index and wages. It is undoubtedly a good model, which other joint-stock companies, still following the dull and drab pattern of the past, will do well to emulate. Such action will surely be appreciated by their shareholders.

SOUTH MADRAS ELECTRIC SUPPLY CORPORATION

DIVIDEND MAINTAINED

THE shortage of power supply in the Madras State consequent on the failure of the monsoon, resulting in a severe cut in power to consumers to the extent of 75 per cent. towards the end of March, 1953, and the damage caused by the cyclone which swept through the southern districts of the Madras State towards the end of November, 1952, are duly reflected in the financial results of the South Madras Electric Supply Corporation Ltd. (Managing Agents and Chief Engineers: Messrs. Seshasayee Bros. Ltd., Tiruchirapalli), for the year ended 31st March, 1953. The gross profit of the Company for the year shows a decline from Rs. 13.63 lakhs for 1951-52 to Rs. 11.37 lakhs. The dividend on the ordinary shares is, however, proposed to be maintained at 7½ per cent. per annum.

There was a reduction in the number of villages electrified, services connected and works put up by the Company during the year, as compared with the previous year, consequent on continued shortage of power and inability of the Government Electricity Department to allot the Company extra power due to inadequacy of generating capacity in its power stations. "These continued restrictions for the past six years, with the necessary frequent alterations in the mode and degree of restrictions," the Directors point out in their report, "has tended in loss of confidence on the part of the power consumers, some of whom have gone in for self-generating equipment." The additional impost on excess consumption over allotted quotas to domestic consumers has been opposed by the consumers, and the Directors make it clear that the excess charges have been enforced at the direction of the Government and such levies accrue only to the Government and not to the Corporation. The Directors, however, have drawn the attention of the Government to the need for finding "a permanent solution to this seemingly perennial problem," which is causing a lot of perturbation in the minds of the consumers.

The Company's revenue from sale of energy shows a small decline from Rs. 42.72 lakhs to Rs. 42.13 lakhs, while other income has increased from Rs. 2.93 lakhs to Rs. 3.81 lakhs. The increase of Rs. 1.29 lakhs in gross revenue has been more than offset by the increase in distribution expenses (from Rs. 20.75 lakhs to Rs. 21.55 lakhs), in repairs and maintenance charges (from Rs. 2.69 lakhs to Rs. 2.95 lakhs) and in other expenses (from Rs. 8.48 lakhs to Rs. 10.07 lakhs). Out of the gross profit of Rs. 11.37 lakhs, Managing Agents' commission absorbs Rs. 32,323 (Rs. 49,485) and provision for normal and arrears of extra depreciation Rs. 5.29 lakhs (Rs. 4.54 lakhs). Provision for taxation, however, is substantially lower at Rs. 25,122, as compared with Rs. 2 lakhs provided last year. A sum of Rs. 34,964 (Rs. 33,453) has been set aside for contingency reserve and Rs. 25,000 (Rs. 25,000) for staff gratuity reserve. The dividend on the 5½ per cent. preference shares takes up Rs. 92,840 which is Rs. 15,840 more than that distributed last year on account of the new issue of preference shares made during the year. The payment to the ordinary shareholders at 7½ per cent. requires Rs. 4.20 lakhs. The sum left to be carried forward is Rs. 1.01 lakhs, as against Rs. 1.19 lakhs brought in.

As regards the financial position of the Company, readers' attention is invited to the following synopsis of its latest balance-sheet:

Liabilities	Rs.	Assets	Rs.
Capital ...	82,95,823	Gross block	1,39,50,103
Reserves and surplus ...	5,29,832	*Less*—Depreciation ...	36,55,003
Reserve for taxation ...	2,75,000	Net block ...	1,02,95,102
Debentures ...	24,10,963	Goodwill ...	8,00,000
Liabilities ...	49,54,032	Work-in-progress ...	7,12,699
		Stores, tools, etc. ...	14,40,822
		Debts, deposits and advances ...	9,90,591
		Investments ...	18,35,393
		Cash ...	3,91,045
Rs.	1,64,65,652	Rs.	1,64,65,652

Expressing their disappointment at the delay in amending the Electricity Act so as to allow a higher return for electric companies, the Directors observe:

"The amendments to the Sixth Schedule of the Electricity Supply Act to increase the 'rate of reasonable return' for which the industry has been agitating are still under the consideration of the Government of India and the Federation of Electricity Undertakings has been urging upon Government to effect early legislation on the subject. The Electricity Board, which the industry rightly feels is a desideratum for rational development of power, is yet to be formed in the Madras State."

Points From The Chair

Labour Economy in Industries

"THE Indian industrialists should also be helped and encouraged to improve the efficiency of their production units by effecting improvements and mechanisation. Schemes of labour economy should be appreciated and the impediments in the way of putting them through should be minimised. As it is, whenever any improvement is attempted, there is no co-operation from labour and no assistance from Government. On the other hand, demands are being received from labour that more workers should be employed for the same jobs which have been done in the past with fewer hands and can, in fact, be done with even lesser strength than at present employed. Labour seems to have no regard for the economy of the industry in which it is employed and no desire to put in their best efforts towards production. The right to strike is being often abused. It is necessary, in my view, in the present state of our country, to impose reasonable restrictions on strikes and also deterrent penalties for illegal or manifestly unjust strikes. Rigorous laws have been enacted to chastise managements, if they do not conduct industries according to certain principles. The time has come when there should be laws enacted for correcting the growing indiscipline and go slow tactics of labour. If rationalisation of labour on economic grounds is continued to be objected to, the time may not be very far, when many concerns may have to close down as the Madras Tramways had to do."

J. DALMIA,
Dalmia Cement (Bharat) Ltd.

Outlook for British Yarns

"The outlook is clearer now than it has been for 18 months. After heavy falls raw material prices have achieved some degree of stability. Export business could hardly suffer more handicaps than it has recently experienced, and a general improvement can be anticipated. Foreign competition is becoming tempered by the high cost of new machinery in every country which forces more sanity into pricing. Those who cut prices to-day either have no intention of keeping in the business, or face the chastening effect, which replacement of plant will inevitably bring upon them. In the home trade, stocks at all points between producers and consumers are low. Only a slight increase in present demand could quickly change the situation to a sellers' market. In my view, a brighter trading period is discernible, and in spite of the obstacle to trade, both at home and abroad, I am confident your Company will make a good showing and adapt itself to the trading world in which we are determined to live and succeed."

W. T. WINTERBOTTOM,
Fine Spinners and Doublers, Ltd.

Role of Insurance Agent

"As a final word on the new Labour Party proposals, may I say that, in our opinion, the general body of policyholders, would not welcome the creation of a 'Juggernaut' of an amalgamation to take the place of many rivals and competitors, large and small. After all, the service which an insurance agent renders in the home of the policyholder is a very personal one and the preservation of a choice of the individual calling is very important. Monopolies are anathema to the consumer. The cost of administration might well rise rather than fall under a 'publicly organised service'. Perhaps, it is even more important that the caller at the home should not be the representative, direct or indirect, of the State or any other compelling authority. So might be forged an instrument of coercive suggestion which could be used to undermine independent thought and prevent the formation of any independent public opinion."

LORD GRANTCHESTER,
London and Manchester Assurance, Company, Ltd.

Is Enterprise Monopoly ?

"People are rightly concerned about monopolies, but what is the correct attitude for a firm like ours to adopt? Years ago, no permanganate of potash was manufactured in this country; we went into the question, as it was an important raw material in one of our products, and with a view to safeguarding supplies in time of war, in 1936 we put down a plant large enough to take care of the country's needs. In the face of very keen competition, principally from Japan, we built up a small export trade before the war. During the war and since, we ensured our requirements and those of other users in this country. Are we to be attacked as a monopoly, because we were the only firm in the country which was enterprising enough to undertake the production of potassium permanganate?"

THE RT. HON. LORD TRENT,
Boots Pure Drug Co. Ltd.

Notice

THE NEW ASIATIC INSURANCE COMPANY, LIMITED

NEW DELHI

NOTICE TO SHAREHOLDERS

NOTICE IS HEREBY GIVEN THAT THE Nineteenth Annual General Meeting of the New Asiatic Insurance Company, Ltd., will be held at the Registered Office of the Company at Connaught Circus, New Delhi, at 2-30 p.m. on Tuesday the 25th August, 1953, to transact the following business:—

1. To receive and adopt the Directors' Report and the Audited Balance Sheet and Revenue Account for the year ended 31st December, 1952.
2. To declare Dividend.
3. To appoint Auditors.
4. To transact such other business as may be brought forward with the permission of the Chairman.

The Transfer Books of the Company will be closed from 5th August, 1953, to 25th August, 1953, both days inclusive.

By Order of the Board,
A. DUTTA,
General Manager.

CONNAUGHT CIRCUS,
NEW DELHI, *20th July*, 1953.

N.B.—The dividend when sanctioned at the General Meeting will be payable to those shareholders whose names stand registered on the Company's register, on the 4th August, 1953. It will be payable on and after the 1st September, 1953.

DALMIA CEMENT (BHARAT) LTD.

(*Concluded from page* 163)

of Indian manufactures. The policy of the Government should be to encourage and actively help exports. For successful utilisation of exports opportunities, quick decisions are required of the Government, not only on questions of licensing policy but also for extending special facilities to enable the exports to materialise. The delays in inter-departmental references should be reduced to the minimum.

Export of Cement

"Cement manufactured in India is of high quality and up to usual standard specifications. Indian cement has been received with satisfaction wherever exported. It is no doubt true that, at present, cement is a much needed commodity in India, but exports are possible from South India, which is a surplus area. It is hoped that the Government would be liberal in allowing export of cement within limits from the southern areas.

"Some of the shareholders have been making requests to the Board of Directors to form a scheme to convert the partly paid shares of your Company into fully paid ones and thus wipe off the liability of uncalled capital and also to convert deferred shares into dividend-paying ones. This is under active consideration of your Directors. Shareholders are requested to send their concrete suggestions. After considering all suggestions, a suitable scheme will be placed before you for approval in due course.

"The difficulties of getting remittance from Pakistan have seriously affected the finances of your Company in India. Your Directors could not see their way to increase the dividend quantum to keep level with other cement companies, who have either no stake and difficulties involved in Pakistan or have a very small percentage of capital investment there, in relation to their total investment.

"Before closing, I would like to express the Company's appreciation of the services rendered by the officers, the staff and workers of the factory and offices during the period under review.

"With your permission, I now move that the audited accounts for the year 1952 and the Directors' report thereon be taken as read and be adopted."

BOMBAY SUBURBAN ELECTRIC MAINTAINS DIVIDEND ON HIGHER CAPITAL

TEESTA VALLEY TEA EARNS HIGHER PROFIT

Bombay Suburban Electric Supply, Ltd.

THE directors of the above Company (Managing Agents: Messrs. Killick Industries Ltd., Bombay) submitted the audited accounts of the Company for the year ended 31st March, 1953.

The issue of 50,000 ordinary shares of Rs. 100 each, at par, which was made on the 30th October, 1952, was oversubscribed. Shares of this new issue are at present Rs. 50 called up. 20 shares remain reserved for allotment against fractional certificates at the date of this report.

There was no change in rates for supply during the year. As many as 3,862 new consumers were connected to the mains during the year, bringing the total number of consumers to 29,507, which is 15.06 per cent. more than the previous year. The number of units purchased from the bulk suppliers was 0.46 per cent. lower than the figure for the previous year. The following table indicates in terms of units sold, the development of the sales of energy since the year 1950-51:—

(In kilowatt hours sold)

Year ended 31st March	Public lighting and general purposes	Power purposes	Total	Increased on previous year Per cent.
1951	16,387,212	14,411,967	30,799,179	20.77
1952	16,086,156	16,552,256	32,638,412	5.97
1953	16,654,977	16,439,792	33,094,769	1.40

The year under review again did not show the usual progress in sales of energy, owing to the continuation of electricity rationing imposed by the State Government from October, 1951, in addition to the restrictions on new power loads and extensions already in force. The electricity rationing was lifted in August, 1952, but it was not until the end of December, 1952, that a marked upward movement in the overall energy sales again began to take place. The sales of energy for lighting and general purposes have shown an improvement of 3.53 per cent., but for motive power a decrease of 0.68 per cent. has been recorded compared with the previous year.

The Company's transmission and distribution systems were maintained in good and efficient order, and continued to give trouble-free service. At the close of the year there were 106.41 miles of high tension and 196.41 miles of low tension mains in the Company's system. Further progress has taken place in the implementation of the Company's six-year development plan, including the erection of the 22/11 K.V. switchgear and mains transformers at the new receiving station at Kurla. During the year 9 new substations were brought into commission and the transformer capacity of 5 existing sub-stations was reorganised in order to ensure the most efficient use of the plant. The high tension system was substantially strengthened and extended. The low tension network including mains, services and street lighting were also expanded. Revised charges for street lighting have been accepted by the Bombay Municipal Corporation with effect from 1st March, 1953.

The gross profit for the year amounted to Rs. 8,15,427 (Rs. 9,11,566) after charging depreciation, in accordance with the provisions of the Electricity (Supply) Act, 1948, amounting to Rs. 4,77,140 (Rs. 3,93,402). There was no immediate liability for taxation on the profits of the year, owing to income-tax depreciation allowances. To the profit of Rs. 8,15,427 (Rs. 9,11,566) was added Rs. 8,669 (*nil*) for post-war refund of excess profits tax, Rs. 72,110 (*nil*) transferred from tariffs and dividends control reserve, Rs. 1,18,500 (Rs. 65,000) transferred from equalisation of dividends reserve and Rs. 1,643 (Rs. 3,938) brought forward from last year making a total of Rs. 10,16,349 (Rs. 9,80,504). Against this Rs. 607 (Rs. 463) and Rs. 8,950 (Rs. 8,950) have been written off new share capital issue expenses and promotion expenditure respectively, and Rs. 44,146 (Rs. 75,694) appropriated to contingencies reserve, all in terms of the Electricity (Supply) Act, 1948, while Rs. 45,340 (Rs. 43,420) was transferred to employees' retiring gratuities reserve. There then remained a balance of Rs. 9,17,306 (Rs. 8,11,249), and after deducting from this the ad-interim dividend of Rs. 3 (Rs. 3) per share proportionate to the amounts called up and which absorbed Rs. 3,74,970 (Rs. 3,16,545), there was available Rs. 5,42,336 (Rs. 4,94,704) which the directors disposed of as follows:—

To payment of dividend for the half-year ended 31st March, 1953, at the rate of Rs. 4 (Rs. 4) per share proportionate to the amounts called up (making 7 (7) per cent. for the year) Rs. 5,41,625 (Rs. 4,93,062) leaving to be carried forward Rs. 711 (Rs. 1,642).

Accounts in brief were as follows:—

Liabilities	Rs.	Assets	Rs.
Capital ...	1,37,47,375	Block ...	1,42,34,082
Reserves ...	23,20,851	Stores and tools ...	44,40,421

Rs.	2,05,59,878	Rs.	2,05,59,878

Teesta Valley Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Davenport & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December, 1952.

During the year under review the Tea Industry in North East India generally and the Darjeeling District in particular, suffered a serious crisis, with market conditions in relation to production costs probably the most unfavourable ever experienced. In an endeavour to meet this position, the estate adopted a high standard of plucking throughout the season, which resulted in a reduced total crop of 384,635 pounds of tea. At the same time the estate was fortunate to enjoy climatic conditions that were exceptionally favourable to the manufacture of teas of attractive quality, and as a result, satisfactory sale averages were achieved.

The gross average export sale price realised was As. 37.60 for 1952, as against As. 30.21 for 1951; the gross average internal sale price was As. 28.41, as against As. 30.18; the total net average sale price As. 35.62, as against As. 28.63 and the total working cost per pound of tea produced was As. 30.97, as against As. 26.71.

The increase in costs of production per pound of tea reflects the reduction of crop brought about by the high standard of plucking referred to above; and also the increased cash dearness allowance imposed by the Minimum Wages Award in December, 1951. Mainly as a result of this Award, the dearness allowances to labour and to staff in cash and in kind increased from Rs. 2,05,426 in 1951 to Rs. 2,32,921 in the year under review.

The gross profit for the year is Rs. 1,05,386 (Rs. 51,724); and after allowing Rs. 11,300 (*nil*) for taxation; Rs. 24,800 (Rs. 12,939) to be written off the cost of assets standing in the balance sheets; and Rs. 20,000 (Rs. 6,000) to be transferred to renewals and additions reserve; and for the other adjustments shown, there is a net profit of Rs. 42,642 (Rs. 32,306) and a final balance on this account of Rs. 86,158 (Rs. 75,516) from which the directors propose to pay a dividend of 10 (10) per cent. Rs. 32,000 (Rs. 32,000), transfer to staff reserve Rs. 7,500 (*nil*) and to carry forward to 1953 Rs. 46,658 (Rs. 43,516).

The crisis through which the tea industry passed in 1952 has emphasised the need for ample finance and the desirability of accepting every opportunity to strengthen the Company's resources.

Estimates for 1953 have been based on a crop of 5,000 maunds at a total cost of Rs. 6,00,095.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	3,20,000	Block ...	4,94,550
Reserves ...	5,05,908	Stocks ...	1,79,703
Provision for taxation ...	35,658	Stores and supplies ...	55,268
Liabilities ...	53,015	Debts, deposits and advances ...	72,590
Profit and loss account ...	86,158	Investments	88,200
		Cash ...	1,10,428
Rs.	10,00,739	Rs.	10,00,739

Ethelbari Tea Co., (1932) Ltd.

The directors of the above Company (Managing Agents: Messrs. Octavius Steel & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st December, 1952.

A crop of 6,313 maunds was manufactured and disposed of for sale in Calcutta for export 5,339 maunds, and for sale in Calcutta for internal consumption 974 maunds.

The teas realised an average price of Re. 1-0-3 per lb. as compared with Re. 1-7-11 a lb. obtained for the previous season's crop of 6,702 maunds. The Company's export quota for season 1952 was 3,502 maunds.

No extensions were put out during the year and the area under cultivation remains unchanged at 447 acres, as registered with the Indian Tea Licensing Committee at 31st December, 1952.

The revenue account showed a loss of Rs. 2,53,946 (loss of Rs. 39,967) to which was added depreciation amounting to Rs. 28,300 (26,190) making a total of Rs. 2,82,246 (Rs. 66,157). After deducting forfeited dividends Rs. 630 (nil) there was a loss for the year of Rs. 2,81,616 (Rs. 66,157). After adding to this the debit balance of Rs. 54,303 (credit of Rs. 10,312) brought forward from the previous year and deducting Rs. 2,50,000 (nil) transferred from reserve account, there was a debit balance of Rs. 85,919 (debit of Rs. 55,845) on profit and loss account, which was carried forward.

The estimates for season 1953 are as follows:—

Garden	Crop	Expenditure		Total
		Garden	Calcutta	
	Mds.	Rs.	Rs.	Rs.
Ethelbari ...	6,400	5,07,446	1,18,450	6,25,896

Accounts in brief were as under:—

		Debts, deposits and advances ...	75,137
		Investments	1,100
		Cash ...	26,294
		Profit and loss account ...	85,919
Rs.	10,99,654	Rs.	10,99,654

Twyford Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Parkins Ltd., Kottayam, Travancore-Cochin State) submit the audited accounts of the Company for the year ended 31st December, 1952.

The result of the year's working after providing for depreciation on buildings, factory and machinery amounting to Rs. 23,182 (Rs. 25,753) and paying debenture interest Rs. 15,000 (Rs. 15,000) and income-tax on debenture interest Rs. 5,250 (Rs. 5,339) (but without any deduction in respect of income-tax) is a net profit of Rs. 94,717 (Rs. 4,70,442) to which must be added the balance of Rs. 16,976 (Rs. 39,035) brought forward from the previous year's account, making a total of Rs. 1,11,693 (Rs. 5,09,476) available. The directors recommend the following appropriations:—

To transfer to taxation reserve Rs. 15,000 (Rs. 1,80,000), transfer to dividend account Rs. 62,500 (Rs. 1,12,500) and transfer to debenture redemption fund Rs. 25,000 (Rs. 1,25,000), leaving a balance of Rs. 9,193 (Rs. 16,976) which the directors propose to carry forward. The directors recommend the payment of dividend of 12½ (12½) per cent. by utilising a sum of Rs. 50,000 (*nil*) from the dividend equalisation fund besides the sum of Rs. 62,500 (*nil*) recommended to be transferred as above.

A total crop of 8,34,528 (8,10,571) lbs. tea was harvested during the year under report against an estimate of 8,00,000 lbs. The cost of production was 147.36 cents per lb. as against 130.87 cents per lb., in 1951. The net average sale price realised per lb. was 169.14 cents as against 202.85 cents in 1951. The stock of tea remaining unsold as at 31st December, 1952, was 3,35,746 lbs., all of which has since been sold.

The estates are reported to be in excellent order. The estimated crop for the year ending 31st December, 1953, is 8,00,000 lbs. made tea to be produced at a cost of 161.68 cents. The increased estimate of cost is due to the operation of the Minimum Wages Act which was in force only for a part of the previous year.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	41,70,000	Block ...	38,00,558
Reserves ...	13,07,220	Stocks ...	1,77,49,047
Provision for taxation ...	8,34,733	Stores, etc. ...	5,69,355
Liabilities ...	1,98,32,143	Debts, deposits and advances ...	42,52,411
Profit and loss account ...	17,49,544	Investments	1,74,317
		Cash ...	13,47,957
Rs.	2,78,93,645	Rs.	2,78,93,645

Sitalpore Sugar Works Ltd.

The directors of the above Company (Managing Directors: Mr. R. N. Dutta and Mr. H. K. Gosh, Calcutta) submit the audited accounts of the Company for the year ended 30th June, 1952.

The results for the period after providing for taxation shows a profit of Rs. 1,31,212 (Rs. 9,19,627) from which has to be deducted depreciation Rs. 93,687 (Rs. 1,17,767) leaving a sum of Rs. 37,525 (Rs. 3,06,882). After adding the carry forward from the previous year of Rs. 10,162 (debit of Rs. 86,720) there is at the credit of profit and loss account a sum of Rs. 47,687 (Rs. 2,20,162). This balance the directors recommend should be disposed of in payment of a dividend at 4 (5) per cent. for the year, free of income-tax Rs. 40,000 (Rs. 50,000), leaving to be carried forward Rs. 7,687 (Rs. 10,162).

The factory worked satisfactorily during the year. A substantial addition amounting to Rs. 2,59,992 was made to block account during the period under review. This was mainly utilised for constructing staff and labour barracks and some additions to factory buildings and godowns.

The supply of cane was maintained at the same level as that of last year viz., 16,41,600 maunds and the recovery slightly improved to 9.90 per cent. In its second year of working at Garaul supply of gate cane increased by 1 lakh maunds. Next year further improvement in the supply of gate cane is expected. The price of cane during the year under review was fixed at Rs. 1-12 and cane cess at As. 3 per maund, same as last year.

Production of sugar was highest on record during the year. Sugar price was fixed by the Government at Rs. 31 per maund for North Bihar. Though sugar was partially decontrolled during the period under review, whatever free sugar was available to the Company, could not fetch a higher price due to general depressed condition of the market and even at times free market sugar fetched price below control level. As per the directors' forecast last year, the results obtained under the circumstances must be considered satisfactory. The prospect of the industry for the season 1952-53 is considered good.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	9,99,950	Block ...	12,03,077
Reserves ...	61,825	Stock-in-trade ...	23,46,928

Liabilities ...	38,87,966	Debts, deposits and advances ...	10,08,764
Profit and loss account ...	47,687	Investments	1,84,779
		Cash ...	1,60,570
Rs.	51,42,359	Rs.	51,42,359

Shree Ambica Jute Mills Ltd.

The directors of the above Company (Managing Agents: Messrs. Bagaria More Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st March, 1952.

The accounts show a net loss of Rs. 69,91,407 after deduction of insurance, commission and other expenditure and making a provision of Rs. 3,69,406 for depreciation for the half-year ended 31st March, 1952. The above loss has been adjusted against Rs. 87,40,952 being the credit balance of profit and loss account brought forward from last half-year, showing a net credit balance of Rs. 17,49,544 which the directors recommend should be dealt with as follows:—

Reserve for taxation Rs. 8,00,000 (for the period from 1st April, 1951 to 31st March, 1952), to paying the dividend on the 7½ per cent. cumulative preference shares for the half-year ended 31st March, 1952 at Rs. 3-12 per share (free of income-tax) Rs. 43,875 and to paying a dividend on the ordinary shares of Re. 1 per share for the half-year ended 31st March, 1952 (free of income-tax) Rs. 3,00,000, and to carry forward Rs. 6,05,669.

During the period under review, in accordance with the main and supplementary working time agreement of the Indian Jute Mills Association, the mill, with 12½ per cent. of its looms (all hessians) sealed, worked on the basis of 42½ hours a week, with the exception of the period from 10th December, 1951 to 29th March, 1952 when the mill worked 48 hours per week. As mentioned in the last report, the mill continued working the purchased loom hours during the half-year being supplemented by further purchase. There has been a loss on the stock of jute of the Company due to sudden fall in jute prices. Difficult trading conditions also persisted and prices of both raw jute and finished goods continued to decline during the half-year. These have unfortunately resulted in an unsatisfactory half-year's trading.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	5,99,250	Block ...	4,33,858

Profit and loss account ...	39,153	Investments	3,86,345
		Cash ...	2,95,130
Rs.	14,36,646	Rs.	14,36,646

Cuttack Electric Supply Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Octavius Steel and Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December, 1952.

The revenue account shows a profit on the year's working of Rs. 15,563 (Rs. 7,405). After deducting gratuity to retired employees Rs. 4,504 (*nil*), arrears of depreciation Rs. 3,632 (*nil*), reserve for contingencies—under the Electricity (Supply) Act, 1948 Rs. 6,105 (*nil*) and contribution to Vallabhbhai Patel National Memorial Fund Rs. 302 (*nil*), there is a net profit for the year of Rs. 1,020 (net loss of Rs. 3,227). After adding the credit balance of Rs. 12,801 (Rs. 21,123) brought forward from the previous year and Rs. 634 (*nil*) received on account of refund of excess profits tax there is a credit balance of Rs. 14,456 (credit of Rs. 12,801) on profit and loss account to be carried forward.

An increase of approximately 18 per cent. in the number of units sold was recorded as compared with the previous year. The Company has been taking a full-time bulk supply of energy from the Government steam station at Chowdwar since February, 1952. The following table shows the number of units sold each month during the past three years:—

	Units sold		
	1950	1951	1952
January ...	1,39,018	1,60,943	1,69,445
February ...	1,34,728	1,42,528	1,77,278
March ...	1,53,980	1,84,317	2,05,046
April ...	2,07,594	2,14,562	2,59,137
May ...	2,11,022	2,26,794	2,54,324
June ...	1,79,353	2,09,095	2,61,890
July ...	1,73,873	2,03,260	2,43,983
August ...	1,77,758	2,03,080	2,44,101
September ...	1,60,693	2,06,410	2,41,807
October ...	1,93,209	2,17,333	2,70,417
November ...	1,42,773	2,02,693	2,34,859
December ...	1,45,075	1,74,053	2,09,850
Total	20,19,076	23,45,068	27,72,137

The number of consumers connected to the Company's system at the close of the year was 2,879 with a connected load of 3,950 kw., as compared with 2,668 with a connected load of 3,424 kw., at the close of the previous year.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	6,60,040	Block ...	17,95,357
Reserves ...	3,63,475	Stores ...	2,89,477

		Cash ...	45,224
Rs.	23,57,799	Rs.	23,57,799

Manabarrie Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Duncan Brothers & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December, 1952.

The accounts disclose a loss of Rs. 2,49,129 (Rs. 2,11,760). On transfer of this sum to profit and loss account and after sundry adjustments including transfers of Rs. 20,000 (Rs. 1,75,000) from revenue reserve, Rs. 5,613 (*nil*) from buildings and machinery reserve and Rs. 12,000 (*nil*) from block reserve there is a balance at debit of that account amounting to Rs. 2,10,574 (credit of Rs. 99) which the directors propose to carry forward.

An unfavourable market throughout the major part of the season, a shortfall in crop caused by hail damage and finer plucking, coupled with the high cost of statutory concessions to the labour have been the principal factors affecting this result.

Crop was 5,337 maunds, as compared with 7,069 maunds in 1951. The average selling price was Re. 1-0-10 per lb. as against As. 15-2 per lb. in the previous year. Planted area is 619.70 acres.

Estimates for 1953 provide for a crop of 6,200 maunds at an outlay of Rs. 5,84,100, including inland freight and sale charges.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	2,00,000	Block ...	2,12,000
Liabilities ...	6,60,875	Stores and supplies ...	75,293
		Tea sales receivable ...	2,51,614
		Advances and deposits ...	76,054
		Investments	200
		Cash ...	35,140
		Profit and loss account ...	2,10,574
Rs.	8,60,875	Rs.	8,60,875

Bombay Uganda Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Parakh Agencies Ltd., Bombay) submitted the audited accounts of the Company for the year ended 31st December, 1952.

The profit and loss account showed a profit of Rs. 84,693 (Rs. 1,21,796) (subject to depreciation and taxation) to which was added the sum of Rs. 32,664 (Rs. 30,679) brought forward from the last year's accounts, making a total of Rs. 1,17,357 (Rs. 1,52,475), the directors disposed of this amount as follows:—

To reserve for taxation Rs. 20,000 (Rs. 30,000), to payment of a dividend at Rs. 4 (Rs. 4) per share (free of income-tax) on 19,953 ordinary shares of Rs. 80 each Rs. 79,812 (Rs. 79,812), to depreciation fund Rs. 10,000 (Rs. 10,000) and carried forward the balance to next year's accounts Rs. 7,545 (Rs. 32,663).

Considering the trade conditions prevailing during the year the directors think the results to be satisfactory. The existing arrangement of the Company with the Ahmedabad Jaya Bharat Cotton Mills Ltd., Ahmedabad, to make loans to and borrow money from the Mills still continues.

STANDARD JUTE CO., LTD. Half-yearly General Meeting, Calcutta, 14th August, 1953. Transfer books close from 3rd to 14th August, 1953, both days inclusive.

MYSORE PAPER MILLS LTD. Annual General Meeting, Bangalore City, 23rd August, 1953. Dividend: Re. 1 per share, (including bonus of As. 6 per share) payable on and after 8th September, 1953. Transfer books close from 4th to 22nd August, 1953, both days inclusive.

EAST INDIAN COAL CO., LTD. Interim dividend of As. 14 per share, for the year ended 30th April, 1953, payable on 31st July, 1953. Transfer books closed from 22nd to 31st July, 1953, both days inclusive.

COMPANY REGISTRATIONS

POONA PRODUCTS LTD. (First Director: Mr. P. D. Patwardhan.) Business: Importers, Exporters, Manufacturers and Dealers in all kinds of Paper, Machinery, etc. Authorised capital: Rs. 5,00,000. Private company. Address: 813-14, Bhowani Peth, Poona, 2.

SHREE MULCHAND CO., LTD. (First Director: Mr. Menghraj Hassanand.) Business: Wool Merchants, Wool Combers, Woollen Spinners, Worsted Stuff Manufacturers, Bleachers, Dyers, etc. Authorised capital: Rs. 5,00,000. Private company. Address: 259, Kalbadevi Road, Bombay, 2.

RAMANLAL AMARNATH (AGENCY) LTD. (Secretary: Mr. K. J. Chinai.) Business: Importers, Exporters, Manufacturers and Dealers in Rayon Yarn, Staple Fibre, Raw Silk Yarn, etc. Authorised capital: Rs. 5,00,000. Private company. Address: Musjid Bunder Road, Bombay, 3.

MONEY RATES UNCHANGED

(From Our Own Correspondent)

BOMBAY, 22nd July

The issue of the ten State loans for an aggregate sum of Rs. 28 crores, on Wednesday last, some of which were oversubscribed during the week, did not have any effect on the short-term money market. A further inflow of funds from trade centres was in evidence. Fresh borrowings by banks in the inter-bank call money sector were conspicuous by their absence and the volume of business dwindled considerably. There was, however, no change in the rate, which was maintained at 1½ per cent. among the Exchange banks and big Indian banks and 2½ per cent. among the smaller Indian banks. Term deposits were not much in demand, the rates quoted being 2 to 2½ per cent. for one to three months and at 2½ to 2¾ per cent. for longer periods. House money was placed at no more than 2 per cent.

The declining trend in the amount offered against the tenders for the three months' Government of India Treasury Bills noted last week persisted this week also, though not to the same extent as in the previous week. The amount offered this week was Rs. 2.79 crores, as against Rs. 2.81 crores last week and Rs. 2.03 crores two weeks ago. The average rate of accepted tenders, however, stood unchanged at Rs. 2-6-2 per cent. per annum.

The statement of affairs of the Reserve Bank of India for the week ended 17th July, 1953, as compared with that for the previous week, discloses several notable features. Notes in circulation, for instance, have gone down by Rs. 16.46 crores and those held in the Banking Department by Rs. 3.25 crores. The contraction in total notes issued is, therefore, of the order of Rs. 19.71 crores. As against this decline, there has been a decline of Rs. 20 crores in foreign securities, evidently transferred to the assets side of the Banking Department, and a withdrawal of rupee coin to the extent of Rs. 28.80 lakhs. In the Banking Department, the liabilities sido reveals a drop of Rs. 19.86 crores in the deposits of the Central Government, which is evidently due to the repayment of the Government of India 3 per cent. 1953-55 loan which matured on the 15th inst. Deposits of other Governments have risen by Rs. 16.45 crores, which is chiefly explained by the subscriptions to the State loans. Deposits of banks show an increase of Rs. 24.89 lakhs, instead of declining which they should have done if the report that the banks took keen interest in State Loans were correct. Deposits of others also have gone up by Rs. 6.11 crores. On the assets side, cash balances are lower by Rs. 3.25 crores, while balances held abroad have gone up by Rs. 17.51 crores, mainly due to the transfer of foreign securities from the Issue Department. Loans and advances to Governments are up by Rs. 39 lakhs, while other loans and advances are down by Rs. 54.81 lakhs. Investments reveal a fall of Rs. 7.94 crores which may be due to the repayment of the 3 per cent. 1953-55 loan quite a large portion of which was held by the Bank.

The consolidated statement of position of Scheduled Banks for the week ended 10th July, 1953, shows a fall of Rs. 2.77 crores in demand deposits of the Banks. Time deposits, on the other hand, have risen by Rs. 72.51 lakhs. Inter-bank borrowings are higher by Rs. 43.70 lakhs. Borrowings from the Reserve Bank have declined by Rs. 2.71 crores and those from the Imperial Bank by Rs. 1.05 crores. Advances continue to show a fall, the exact decline during the week being Rs. 8.06 crores, including bills purchased and discounted. Investments also show a decrease of Rs. 60.22 lakhs. Cash on hand and balances with the Reserve Bank are together lower by Rs. 1.22 crores, but money at call and short notice records an expansion of Rs. 1.13 crores.

The Gilt-edged market was featureless, but the undertone was steady with no variations in prices. Some of the State Government loans, however, found sellers, as the new State loans are more attactive, and there was a decline in prices. Among the Government of India loans, 3 per cent. 1986 Conversion Loan was an exception and disclosed a fall of As. 2 to Rs. 82-9. Of the State loans, 3 per cent. 1960 Madras issue receded by As. 8 to Rs. 94-4 and 3 per cent. 1962 Bombay by As. 2 to Rs. 93. 3½ per cent. 1962 Madras and Bombay dropped As. 4 each to Rs. 97-12 and Rs. 98, respectively. 4 per cent. 1964 Bombay and West Bengal shaded off to Rs. 100 and 4 per cent. Madras and U.P. loans were placed As. 5 lower at Rs. 99-12.

In the foreign exchange section, there was no variation in the rupee-U.S. dollar rates. In New York, however, the £ sterling, which showed a slight weakening tendency during the earlier part of the week, regained ground and showed minor changes on balance. Thus, the spot rate which had dropped from $2.81.9/16-2.81.11/16 on the 14th inst. to $2.81½-2.81½ on the 16th came to be quoted at $2.81½-2.81¾ yesterday. The three months' rate showed no change over the week at $2.80½-2.80¾, while the six months' rate gained fractionally from $2.80¼-2.80½ to $2.80.3/16-2.80.5/16.

(Concluded from next column)

although, towards the close, it was a shade lower at Rs. 88-4 due to profit-taking. The opening quotation for *Sharwan* and *Punam* deliveries to-day was Rs. 88-6. Prices of spot sugar tended to look up in the face of limited stocks and good local demand. The Bombay Government's renewed sales of sugar to fair-price shops, co-operative societies and ration depots at Rs. 85-4-6 per bag would appear to have had no effect on the free market demand and prices. To-day's quotations are: Rs. 90 per small grain, Rs. 91 to 92 for medium grain and Rs. 94-95 for large grain.

Arrivals of sugar into the market during the six days ended yesterday amounted to 15,000 bags. To-day's opening stock with the spot trade is estimated at 18,000 to 20,000 bags.

BULLION MOVES NARROWLY

(From Our Own Correspondent)

BOMBAY, 22nd July

Narrow and irregular movements in prices were noted on the Bullion Exchange during the week under review, but the undertone was on the whole steady. In silver, the offtake in the ready section continued to be poor; in gold, the pace of offtake was less than that of the arrivals. This resulted in the narrowing down of the premium for the ready metals over forward from As. 10 to As. 8 in silver and from As. 10 to As. 4 in gold. The steady undertone of the market was mainly due to the manœuvring tactics of the speculators in view of the proximity of settlement. While the bulls purchased in the current settlement and sold in the next settlement, the bears came to cover their position in the current settlement. As a result, the spread between the two settlements widened. The carry forward charges in silver which were placed unofficially at Rs. 1-9 against sellers before the commencement of official trading in the next settlement on Monday this week, widened to Rs. 2-2 at the close of to-day. In gold, the *budla* charges against sellers which stood at Re. 1-2 at the beginning of the week, narrowed down to As. 14 yesterday, but again widened to Re. 1-1 to-day.

Silver for forward delivery (28th July settlement) opened at Rs. 153-6 and hardened slightly to Rs. 154-15 on Friday. After reacting to Rs. 153-12 on Monday, it came up to Rs. 155 yesterday and closed to-day at Rs. 154-7. Business in the next settlement began on Monday at Rs. 152-2 and after touching Rs. 152-15, closed to-day at Rs. 152-5.

Ready silver (.996 fine Mint) opened at Rs. 154 and finished the week better at Rs. 154-15. The highest rate touched during the week was Rs. 155-9. The floating stocks of silver are placed at 1,000 bars. The daily average offtake was 10 bars.

Gold for forward delivery (27th July settlement) began at Rs. 86-3 and hardened to Rs. 87-4 on Saturday. But the poor offtake and larger arrivals affected the sentiment and the forward rate shaded off to Rs. 86-14 at the close. Trading in the next (August) settlement began on Monday at Rs. 85-7 and finished the week at Rs. 85-13.

Ready gold started the week at Rs. 86-13 and closed at Rs. 87-2, after touching a high of Rs. 87-6 yesterday.

The floating stocks of gold are estimated at 25,000 tolas. The daily average arrivals were 4,000 to 5,000 tolas. The daily average offtake was 3,000 tolas.

The following comparative table shows the trend of the market during the week under review:

	22-7-53	Highest	Lowest	15-7-53
GOLD	Rs. a.	Rs. a.	Rs. a.	Rs. a.

SUGAR STEADY

(From Our Own Correspondent)

BOMBAY, 22nd July

It is rumoured that a prominent bear, who created a tremendous uproar against the rising prices and suggested to the Government to import sugar to bring down prices in the country, and who himself volunteered to co-operate with the Government in importing sugar, has let down the latter very badly in regard to tenders of foreign sugar. The present position in regard to imported sugar is that the Food Ministry has concluded a direct deal with British refiners for shipment of 20,000 tons of British refined sugar during the month around £42 per ton c.i.f. Bombay and/or Madras. The Government has also invited tenders for 30,000 tons from the trade, but the terms of tenders are stated to be so stiff that prospective tenderers have been scared. It is also rumoured that immediately the British refined sugar is loaded for India, the Food Ministry will announce the sale of imported sugar to the trade.

With steady demand from the consuming centres, as also from millers and with prices being steady around the existing levels, the spot trade is rather puzzled and nervous to make commitments at the ruling prices, since the Government has firmly notified its intention to bring down sugar prices. The net result is that the Government's threats have so far remained unimplemented by appropriate action, with consequent slim stock position all over. The experienced spot traders suggest that, in view of certain imports of sugar, the Government should now hurry up to release the entire stock with millers and simultaneously announce the sale of imported sugar to the trade at a reasonable price. Such action, it is felt, will still be in good time to check the rising sugar prices in the expectation of heavy post-monsoon demand during the months of August and September.

Notwithstanding the tenders for sugar imports invited by the Government, the forward and ready sections of the sugar market continued to be steady this week. The price of sugar in the forward section, which had touched as low as Rs. 87-3 per bag on the 14th inst., firmed up to Rs. 88-15 on Monday,

(Continued in previous column)

HEDGE TRADING IN NEW CROP COTTON BEGINS

(From Our Own Correspondent)

BOMBAY, 22nd July

Astrology still rules the markets even in the year of grace, 1953. The authorities, who profess to scoff at such absurdities in their pose of superiority, still manage somehow to accommodate the susceptibilities of market men, whether it be in cotton or seeds, by dropping their usual mood of lethargy and prognostication and replacing it temporarily with the new cult of "hustle." The Textile Commissioner and, possibly, the Commerce and Industry Ministry at New Delhi, rose to heights of urgency and expeditious handling of affairs, to humour the elders of the E.I.C.A. about giving their permission for forward trading in the 1953-54 cotton crop. It is said that even thieves and robbers, when they set out on their nefarious expeditions, consult astrologers to ascertain the most auspicious time for inaugurating their campaign. Operators in important forward markets could, therefore, be easily forgiven for their weakness in wanting to commence their activities in a new venture at a propitious moment, right to the minute, 8-55 a.m. on Friday, 17th July this month, was given as the time when the stars would be in a combination favourable to speculation. To enable the E.I.C.A. to keep this appointment with the luminaries, the authorities went out of their way to give permission to do so late in the evening of the previous day. Hedge trading was commenced at the precise moment to the satisfaction of all the parties. The irony of the situation was that this trading was asked for in the sacred name of continuity. It would tax one's capacity for metaphysical reasoning to reconcile continuity in time with the inauguration of a new activity. But nobody seems to bother with such logical niceties as asking how there could be a fresh inauguration when continuity was assured.

The commencement of hedge trading in the new crop coincided with the termination of a dull interlude and the resumption of a fresh let-off of fireworks in the forward market in cotton. Prices in the August contract have again started fluctuating with the old rapidity, though it must be said that the new February contract has managed more or less to find itself so far within a narrow price range. This has led to be a widening of the gap between the two deliveries from Rs. 25 to Rs. 40 at times. Alongside profit-taking by the bulls at good bulges, the process of squeezing the bears in the August contract is going apace. It is believed that the market will see many ups and downs within the next few days that are left for free trading in the August contract, before the market settles down to steady trading in the February contract for a couple of months.

It is significant that permission for hedge trading in the new contract is provisional and restricted to only one delivery. While the old controversy with regard to the standard staple for tendering might be regarded as resolved, that about the schedule of minima and maxima rates for various tenderable varieties has not yet been settled. Trading in the February contract would be in terms of the schedule issued by the Textile Commissioner under his notification dated 23rd October, 1952. There seems to be some confusion both in the mind of the officials and the trade with regard to the schedule. The latter feels that the schedule as devised is likely to lead to a sellers' contract and would frighten away buyers from the market. It is, however, understood that the finer points with regard to the schedule will be discussed and worked out afresh, before the authorities draft their new schedule for the next crop. When this new schedule is ready, the E.I.C.A. authorities expect to get permission for commencing business in the remaining two contracts of the 1953-54 season also. Such permission, however, is not likely to be forthcoming before October as the Textile Commissioner will be out of the country during this interval. The operators in the market in the meantime would do well to remember that the Government are about to appoint a Commission to regulate and control forward markets in commodities and that this Commission will have the power, if they find it necessary to do so, to amend the by-laws in any market or to impose new conditions in the contract. Unless they behave properly, the operators might find themselves tied hand and foot by new impositions from this Commission.

Apart from the doings in the forward market, the spot market has been maintaining a very steady tone, with persistent demand for favourite styles both in medium-staple and short-staple varieties. Premia for these have been rising and as the new cotton is expected to come late into the market, this demand is likely to persist for the rest of the year. There is some dissatisfaction still amongst exporters about the Government's refusal to extend the period of their licences to December, 1952, for Bengals. But they are now getting reconciled to this policy of the Government, which has the support of the textile industry, in view of the smaller crop of this variety expected next year. However, with a view to placating some of these interests, the Government of India has relaxed to the extent of extending the period of shipment upto 10th August in the case of those licences which were issued on or after 1st June, 1953, with validity till 30th June, 1953.

Imports are naturally slack, partly in view of good expectations about the size of the new crop and partly because of the uncertain nature of the various cotton markets in the world. Even the ratification of the Indo-Egyptian Trade Agreement and its coming into force from 1st June has failed to enthuse importers of Egyptian cotton, because Alexandria prices now based on New York prices for October delivery are higher. Another reason for this lukewarmness on the part of the Indian importers is that the Egyptian exporters are offering higher prices to India, because they would receive sterling import entitlements for all such sales for a lower percentage of their export earnings.

In the forward section, I.C.C. August opened the week at Rs. 684½, as against the previous close of Rs. 682½, and forged ahead, on good bull support, to touch a high of Rs. 701 on 21st inst. Profit-taking at the bulge induced a set-back, with the result that the delivery closed the week lower at Rs. 698½.

Trading in I.C.C. February commenced on 17th inst. on which day, two sessions were held. In the morning session I.C.C. February opened at Rs. 665¼, i.e., Rs. 23¾ below the rate for August. The fluctuations were narrow during this session, in which the contract closed at Rs. 661¼ as against the closing price of Rs. 688½ for August delivery. In the afternoon session, I.C.C. February opened at Rs. 661½, while I.C.C. August was quoted at Rs. 688½. The market again fluctuated within a very narrow range during the session and the initial gap was maintained towards the close of the session also, when I.C.C. February and August were quoted at Rs. 662½ and Rs. 690½ respectively. Minor fluctuations characterised trading in I.C.C. February during the rest of the week also before it finished the week at Rs. 669½. Thus, the premium for I.C.C. August over February widened from Rs 23¼ early in the week to Rs. 29 towards its close.

The following is the trend of prices in I.C.C. February and I.C.C. August during the week ended 22nd inst:

	Opening	*High*	*Low*	*Closing*
I.C.C. Feb. (Rs.) ...	665½	671	661	669½
I.C.C. Aug. (Rs.) ...	689	701	683	698½

The following are the latest available quotations from the ready section:—Bengal *Deshi* Rs. 560; Berar Jarilla Rs. 745; Khandesh Rs. 865; Vijay Rs. 860; Oomra *Deshi* Rs. 695; Mogalai Rs. 695.

At Karachi, the steadiness of the previous week has been maintained and prices have remained almost unchanged. Enquiries are being received from Japan, Australia and France on the Continent and a trade agreement between Pakistan and Italy has been finalised, under which Pakistan will supply, amongst other things, cotton to Italy and receive machinery, chemicals, drugs, yarn and lubricating oils. It is, however, not known what quantity of cotton is likely to be exported to Italy under this agreement. A more interesting development at Karachi is the possibility of early entry of Japan into the textile industry in Pakistan on a fairly extensive basis. New textile mills are to be set up under joint Japanese-Pakistan ownership with the latter retaining 51 per cent. of the capital in its hands. The industry will be run entirely by Japanese technicians, who will also train Pakistan nationals for this purpose. The need for exporting cotton will be less imperative for Karachi in future, if this project materialises and is found to be successful.

The following are the latest available quotations from the Karachi cotton market: Punjab *Deshi* Rs. 80; 4F Punjab R.G. Rs. 62; S.G. Rs. 68; L.S.S. Punjab R.G. Rs. 66; S.G. Rs. 72; N.T. R.G. Rs. 71; S.G. Rs. 76½; 289F Punjab R.G. Rs. 74; S.G. Rs. 80.

At Alexandria, export business is naturally of a moderate nature considering the price rise. In spite of this, there has been a small business for export in the new crop to the extent of about 6,000 to 7,000 bales, the major portion of which was of Giza 30.

At New York, movements have been very restricted and the rapid rise in prices for the previous weeks has been stemmed. The market is awaiting important developments. There is a move to allow an advance of 100 million to 250 million dollars for the purchase of U.S.A. cotton and other agricultural commodities to foreign buyers in exchange for non-dollar currencies. This move, if successful, would naturally go to encourage exports during the coming year.

The following are the latest available quotations from New York, as compared with those of a week and a fortnight before:

	(In cents per lb.)		
	21-7-53	14-7-53	7-7-53
Spot	34.20	34.05	34.55
July	—	33.16	33.57
October ...	33.91	34.00	34.12
December ...	34.20	34.20	34.31
March	34.41	—	34.52
May	34.45	34.39	34.51

ART SILK YARN QUIET

(From Our Own Correspondent)

BOMBAY, 22nd July

Quiet conditions prevailed in the art silk yarn market this week, which was in distinct contrast to the market's firm tone last week. The Government's decision to decontrol cloth and yarn comment appeared to have had no effect on the market. For the attention of traders was somewhat diverted towards the talks which the Japanese rayon mission was holding with art silk yarn dealers and consumers. Transactions put through were on a limited scale and values fluctuated within narrow limits. The closing quotations yesterday, however, were slightly lower than those at the end of last week. The market was closed to-day, on account of *Ashad Ekadashi*.

In the forward section, 150D July delivery contract opened the week Rs. 2 lower at Rs. 786. It improved to Rs. 791 on the following day. The recovery, however, was soon lost on Saturday, when, on profit-selling, prices receded. A slight recovery was visible on Monday and Tuesday last, owing to support at lower levels, and the contract finished at Rs. 784. August contract fluctuated between Rs. 793 and Rs. 785 before closing at Rs. 789. In the ready section, 120 Italy declined by an anna to Rs. 4-3. 150 Italy also was a shade lower at Rs. 3-15, although at one time it had improved to Rs 4. 120 Japan and 150 Japan, however, were slightly higher at Rs. 4-3¼ and Rs. 4-2, respectively.

The table below gives the prices of art silk yarn quoted to-day, as compared with those on the 15th and 8th inst.

	21-7-53	15-7-53	8-7-53
	Rs. a.	Rs. a.	Rs. a.
150D July (per case of 200 lbs.) ..	784 0	784 0	760 0
150D August ,, ...	789 0	791 0	768 0
120 Japan (per lb.)	4 3½	4 3	4 3
150 Japan ,, ...	4 2	4 1½	4 0½
120 Italy ,, ...	4 3	4 4	4 4
150 Italy ,, ...	3 15	3 15½	3 12½

The Japanese rayon mission held a meeting with the members of the Silk and Art Silk Mills' Association, Bombay, on Friday last. The talks were of an exploratory nature. The members of the Association emphasised the need for a downward revision in prices of Japanese yarn, for, in their opinion, it was the high level of prices which had been responsible for a larger flow of imports of Japanese yarn *vis-a-vis* those from the Continent. The Japanese mission, however, could not commit itself about the price issue, as it had no powers to do so. Nevertheless, it assured the Association that it would convey the suggestion to the Japanese principals.

The staple fibre yarn section was weak. Prices continued their downward march. This was due to pressure of sales from local and South Indian mills, following arrivals of imported raw staple fibre and expectations of still larger arrival.

GROUNDNUTS FIRM

(From Our Own Correspondent)

BOMBAY, 22nd July

The oilseeds market remained closed to-day owing to *Ashada Ekadashi*. During the week, groundnuts again were in the limelight. Early in the week, groundnut prices shot up under the grip of bull operators and pierced last week's record high level. Although profit selling set in at this level, it proved a short-lived affair on reports of revived demand from *vanaspati* interests and shorts. The linseed section ruled in sympathy with groundnuts. There were some enquiries from crushers, who were woefully short of seeds for crushing purposes. The castorseeds section proved no exception to the general trend. Consequently, the prices in all the sections disclosed substantial gains over the week.

The Madras and other States' markets have also been disclosing hectic rise in prices in sympathy with the Bombay market. Small wonder, therefore, that representations are being made to the Ministry of Commerce from almost all these States. The Madras Oil and Oilseeds Association has urged the Ministry of Commerce and Industry to take the following steps to bring down the prices of groundnuts.

Reduction of the import duty on coconut oil of Commonwealth origin from 21 to 15 per cent. and abolition of import duty on copra altogether; placing copra, palm oil and tallow on O.G.L.; allowing established importers of coconut oil to import 100 per cent. of their quota in the shape of coconut oil without insisting on the conversion of 50 per cent. quota into copra; and cancelling the unutilised export quota issued for sesamum seed.

Trading in new crop groundnut commenced on the 20th inst. and was quoted at a heavy discount. Thus, the December-January delivery which opened at Rs. 37-4 was done yesterday at Rs. 37-12. In the old crop August-September delivery was quoted at Rs. 50-4, as against Rs. 49-10, a week ago. Bold F.A.Q. was higher by As. 4 at Rs. 53-12. Groundnut oil ready was steady at Rs. 29, while railway receipts gained As. 8 to Rs. 28-12. Business was done in August and September deliveries at Rs. 27-6 and Rs. 26-6, as against Rs. 26-9 and Rs. 26, respectively.

In the linseed section, Bold ready improved from Rs 31-12 to Rs. 32-12. August-September delivery rallied As. 14 to Rs. 32-6. Up-country merchants disposed of their stocks in this contract, whilst shorts were covering their sales. Business in new crop, October-November and February-March deliveries opened on Monday at Rs. 32-2 and Rs. 27-8 and closed at Rs. 32-6 and Rs. 28-4, on the subsequent day. Linseed oil advanced from Rs. 17-4 to Rs. 18-8.

Business in castorseed, May 1954 opened on Monday last. It started at Rs. 133-4 and, after dropping to Rs. 131-4, improved to close at Rs. 136-4. September delivery fluctuated between Rs. 151-8 and Rs. 155-12, before closing at Rs. 154-4. Madras quality changed hands at Rs. 32-8, as against Rs. 32-4. Castor oil I Pressure was steady at Rs. 18-4, while Commercials gained As. 4 to Rs. 17-12.

Among other seeds *niger*, Madras quality was higher by As. 4 at Rs. 40-4 *kardi*, Bold improved from Rs. 26-8 to Rs. 27-4 and August-September delivery from Rs. 26 to Rs. 26-12. October-November which opened at Rs. 26-6 on the 20th inst., closed at Rs. 26-14 yesterday.

The following table shows the prices of oilseeds and oil on the 21st inst., as compared with those at the end of the previous two weeks.

	21-7-53	15-7-53	8-7-53
	Rs. a.	Rs. a.	Rs. a.

PEPPER STEADY

(Messrs. Parekh & Co.)

BOMBAY, 22nd July

The pepper market showed somewhat steadier tendency during the week, owing to the revival of some buying interest by New York, where spot position was reported tight, in view of the poorer export from India during the months of June and July. Heavy selling pressure from Sarawak seems to have lost its momentum, though temporarily, and the report of a steadier market from that centre contributed not to a small degree to the present tone in the Indian market. New York is reported to have bought few parcels of Malabar Black for August shipment at price ranging from $1.20 to $1.23. Growers in all the primary markets are reported resisting the downward trend under the expectation of early revival of demand from overseas. Alleppey, after selling at Rs. 2,750 improved to Rs. 2,900, at which price about 100 candies were purchased by the exporters for covering their requirements of July shipment. But, there being small buyers at a higher level, growers once again shaded their price and at the moment they are reported to be sellers at Rs. 2,850 with small business passing.

In the A.S.T.A. section at Bombay, August shipment, after touching the lowest at $1.12, improved to $1.24½ under pressure of short covering. In delivery section, business is reported poor, as there is very small stock of ready pepper in Bombay market. The most of the Indian exporters are bearishly inclined, like their counter-parts in New York, but the control of the spot pepper being in the hands of growers most of their speculative advance sales at the out of parity levels in the foreign markets have so far proved unremunerative and, therefore, one often hears about the repurchases on the Indian account in New York. Very strong holding power of the Indian growers is the only sustaining factor in the otherwise poor picture of unsatisfactory export demand. With satisfactory weather conditions in the producing districts, early arrival of light berries as a fore crop is likely to act as damper to the present bullish views of the growers. But the general belief among them is that the selling pressure from Sarawak and Lampong will soon lessen and then they will again be in a position to sell pepper at a better price. The stock of pepper in all the Continental countries is reported to be very poor and that the greater part of Lampong and Sarawak is likely to find home there at a certain level of price, thus easing the present rate-war among the producers.

The following are to-day's nominal quotations:—Ready delivery Rs. 360 per cwt. July delivery Rs. 2,450/70, August delivery Rs. 2,250/70 and September delivery Rs. 2,130/60 per candy of 5½ cwts.

BRADFORD WOOL FIRM

(Messrs. J. Hardacre & Co.)

BOMBAY, 21st July

There is no change in prices of standard tops this week and the market remains very firm. Offerings of combing wools in London were small and evoked good buying support.

Bradford export houses anticipate a big demand from China for crossbred tops. They are, therefore, buying ahead as far as November and, as Japan is also making a big effort to regain its markets, the Far East is a big factor in determining wool values. The requirements of the Indian market continue to expand and, as more and more spinning machinery is erected there, the demand for tops will also increase.

To-day's quotations (in pence per lb. c.i.f. Bombay) for Bradford oilcombed tops are given below:

48's Carded September, 1953	87
58's Super September, 1953	119
60's Super September, 1953	145
64's Super September, 1953	168
70's Super September, 1953	180
Fibro (3D. 4") August-September, 1953 ...	43½
46/48's Scoured clothing wool August, 1953	76

The tendency of the market is firm.

JUTE GOODS LOOK UP

(From Our Own Correspondent)

CALCUTTA, 21st July

A marked rise in the prices of jute goods towards the closing sessions, following revival of American interests for moderate quantities of hessian, was the outstanding feature of trading in the jute goods market this week. Purchases on behalf of the Argentine were only for a small quantity. But all the same, they prevented quotations from falling further in the earlier part of the week. Jute goods production figures for June, 1953, were available earlier, and, as expected did not show any visible change as compared with May results. The output aggregated 72,800 tons, as against 72,500 tons in May. The split-up between hessian and sacking was 31,900 tons and 38,100 tons, which were almost the same for the month of May. Noting these figures, the trade circles remarked that mills should be able to make more attempts in order that more looms could be changed over to hessian production.

The cancellation of the export duty on jute specialities, such as jute mesh, jute carpet yarn, paper-lined hessian, jute tarpaulin, jute rope and jute matting, with effect from the 16th inst., has been welcomed by both trade and industry. The likely effect of this action would be that more mills would be able to produce these varieties. At present, only few mills produce specialities. Trade circles have rightly emphasised that, at such a time as the present, when Indian hessian and sacking are subject to competition in world markets not only from similar products but from substitutes, and when Pakistan is trying its best to

STOCK & SHARE QUOTATIONS

Abbreviations:—D=Deffered shares. G=Guaranteed shares. P=Preference shares. P.O.=Preferred Ordinary shares. R=Rebate shares. Y=Accounts published yearly. H=Accounts published Half-yearly. Q=Accounts published every 15 months T=Company has Debentures. R.L.=Reserve Liability on shares. N=Nominal Quotation. I=Interim Dividend. f=Dividend for first half-year, y=Dividend for the year. x=Ex. Dividend c.d.=Cum. Dividend

Shares:—If a company has different classes of shares—as, for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under "Paid-up Per Share."

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12 indicate the months of June and December, respectively. "Reserves" excludes general and other reserves and all other funds which a company may have as also depreciation on block items, when this is charged to separate account. "Block" represents actual cost of land, buildings, machinery and all such other items on which depreciation is allowed, less sales, if any, and stands for the gross figure except where otherwise indicated.

Dividends:—Dividends for completed years are calculated at per cent. per annum, but, where quoted for portion of a year, they represent percentages of the dividend on the paid-up share value. For companies closing the books half-yearly in the first three months of the year, and for companies closing their books yearly during the first half of the year dividends are shown as for the previous year.

* The following explanatory notes relate to the abbreviations and marks shown on page 188 in the debentures section:—

‡‡ Option to repay on six months' notice, on any interest date after 31st December, 1951, at 102 per cent. Also redeemable out of a cumulative sinking fund of 1½ per cent. per annum (commencing in 1938) by drawings at 102 per cent. or by purchase at or 102 per cent.

(a) Option of repayment at any time at 3 per cent. premium.

(b) Bearer bonds of Rs. 1,000 each repayable at par.

(c) Bearer bonds of Rs. 1,000 each repayable on 31st July, 1959.

(d) Bearer bonds of Rs. 1,000 each with option of redemption in whole or in part at par on 30th June, 1952, or on any subsequent interest date at one month's notice.

(e) Returnable on or after 31st July, 1950, at Rs. 103-8 or at par after 31st July, 1955, on six months' notice in each case.

(f) Bearer bonds of Rs. 1,000 each with option of redeeming on 3 months' notice at ½ per cent. premium after 1st March, 1954, but before 1st March, 1957, and 1 per cent. premium on or after 1st March, 1957.

(g) Option of redemption on or after 1st July, 1949, at par.

(h) Option of repayment at any time at par at any time on or after 30th June 1947 on six months notice.

MARKET GOSSIP

(Concluded from page 143)

its programme of modernisation and expansion and that greater incentives should be provided for new investment. But the Government feels that, as it has already agreed to the grant of a "special loan on favourable terms" in order to enable the Company to modernise and expand its equipment, it is not necessary to allow a higher return on block. Mainly because of this divergence between the Commission's and the Government's views on the question of return on block, the increase in retention prices for the period April, 1953 to March, 1955, will be only Rs. 47 per ton, on an average, as against Rs. 66.98 recorded by the Commission. The Government has further announced that this figure, namely Rs. 47 per ton may, however, be modified, if necessary, after "consideration of the special report on the treatment of collieries owned and operated by the iron and steel producing companies."

• • • •

From what is stated above, the inference is that the terms of the Government's loan to the Company will be more favourable than the increase of two per cent. in the return on block recommended by the Commission. If the Company had been given the higher return, it would have had to finance its development programme through its own resources supplemented by borrowings. This could not have been a more welcome arrangement to the Company than the grant of a loan which will be made, on the Government's own admission, on "favourable" terms. But neither the public, rather the taxpayers, who are, in effect, the lenders at present, nor the consumers of steel, who will ultimately be asked to meet the repayment of the loan, know the exact terms on which the loan is being granted to the Company. It is a pity that in a matter of such great public importance, the Government should have chosen to remain silent. Since the loan involves large amounts and since the consideration that it will be granted has influenced the Government's decision on the Commission's findings, it is certainly the Government's duty to let the public know the facts. It is wrong to treat the whole issue of such public importance as if it were a private transaction between a bank and its client.

• • • •

An equally vital subject, on which little information has been made available, is the magnitude of the Equalisation Fund. It is not clear whether the Fund can continue to bear the increases in retention prices and if so, for how long. It must be noted, in this connection, that the demand for an increase in the retention price for the Indian Iron and Steel Co., Ltd., is also pending before the Tariff Commission. If this demand is granted, as it is likely to be, then the strain on the balances of the Fund will increase. Sooner or later, therefore, the price payable by the consumers also may have to be increased. It is true that the prices of steel in India are still lower than those at which it can be imported into India. But then world steel prices are also likely to go down, so that the advantage to the Indian consumer is bound to diminish in future years. British export prices for re-rolled steel products, for instance, were reduced last week by 12½ per cent.; this has the effect of cheapening such British steel products as merchant bars, small sections, hoops and strips. The Continental prices of these products are even lower than the British prices. These trends emphasise the need for caution in granting increases in retention prices which are not directly reflected in productivity. The Tariff Commission has, therefore, done well to draw the attention of the Tata Iron and Steel Company to the need for ensuring that the labour cost per unit of output does not go up appreciably year by year.

• • • •

At the recent annual meeting of Dalmia Cement (Bharat) Ltd., the Company's Chairman, Mr. J. Dalmia, raised an important issue when he questioned the economic propriety of fixing a uniform selling price for the products of an industry which consists of units with divergent production costs. The relevance of this question arises from the fact that, while cement, which is deemed to be in short supply, is controlled by the Government, the prices fixed by the Government for this article do not take into account the differences in production costs among the different cement producers. Under normal conditions, there would have been no cause for complaint, inasmuch as the high-cost producers would be wiped out by the low-cost producers. But in an economy of shortage, they must be allowed to play their role, even if it means slightly higher prices for the article in short supply. But the case of the high-cost cement producers is that their cost structure is high not because they are necessarily less efficient but because their costs have been affected adversely by such factors as power cut, high labour costs and long-distance haulage of coal. These factors were, in the case of Dalmia Cement, the chief influences which have moulded the cost structure. Mr. Dalmia deplored that the high-cost units in the industry should be dubbed inefficient, and he threw the challenge that he would "welcome anyone to prove if such high cost of production is due to inefficiency." Mr. Dalmia would apply a basic test to determine whether the high-cost units were unwanted luxuries. He suggested that the units be closed down as "an experimental measure" for a year to see whether the requirements of the regions served by the high-cost units could be met by the low-cost units which are situated at a great distance from these regions. It is not, of course, necessary to go through so costly an experiment to discover the utility of the high-cost units. But Mr. Dalmia's point is clear enough: the high-cost cement producers have a necessary economic role to play.

• • • •

To illustrate his point that the low-cost structure of a cement producer is no valid test of his efficiency, Mr. Dalmia pointed out how coal—it is an important element in the cost of cement production, accounting as it does for 25 to 30 per cent. of the cost—has to be hauled over long distances by some cement units. It is not as if this difficulty could be overcome by setting up all the cement units in and around coal regions. Apart from the fact that it would be strategically unwise to do so, there are physical limitations to the setting up of cement units in such areas, inasmuch as all "known and workable deposits of raw materials for cement in these areas are already being exploited." In any case, it should be clear that, even if all cement units were set up in these areas, it would still leave the problem of transportation of cement, and, therefore, of a slightly higher cost to the consumers, unsolved. Mr. Dalmia argued, on the analogy of the differential prices for steel producers, for a system of differential prices for cement manufacturers. It remains to be seen what solution the Tariff Commission, which has enquired into this industry, has to offer in order to overcome the difficulty of keeping all cement producers in production.

MARKET REPORTS

(Concluded from page 177)

capture a share of the American business in burlap, more and more attention should be paid to specialities which can occupy a portion of the manufacturing capacity. The trade has been afforded an opportunity to develop this business and thus earn for the country some additional foreign exchange.

Ready hessian 40" 10 oz. opened at Rs. 45 last Wednesday and, despite cabled information indicating that American consumption of burlap during June was 58.5 million yards, representing a fall of half a million yards from the May figure, and that the spot and afloat stocks were 200.5 million yards, which could satisfy consumption demand for about 3½ months, the rate advanced to Rs. 45-6 on Thursday. The knowledge of the market that more than 50 per cent. of mills' production capacity up to December, 1952, has already filled the order books of mills, assisted the upward trend. October-December delivery was constantly enquired for by West Africa, Great Britain and the Continent. The week-end saw the rate pushed to a high of Rs. 45-11, at which rate moderate covering business took place with shippers. Business was also recorded with the United States and both 7½ oz. and 10 oz. changed hands. Buying for export to the United Kingdom was also done, hessian of wider widths being shown preference. It is generally expected that shipping would reach a satisfactory figure this month. Although the rate was lower at Rs. 45-8 yesterday, stockists and mills were not worried. Hessian 9 porters were offered at Rs. 42-10.

The sacking goods market sympathised with steadier hessian and price gains were recorded. Opening at Rs. 98 on Wednesday, B. twills improved to Rs. 98-10 on the following day, as some enquiries from the U.K. and the Continent enlivened the market activity. On Friday, the gain was more marked at Rs. 99-8 and the week-end took the rate to Rs. 100-8. Moderate business took place for export. Liverpool and heavy Cees plains changed hands at higher rates, but mills were reserved. For, on their part, caution was needed, as any rush to the market by mills would affect prices. The August-September goods advanced from Rs. 98-10 to Rs. 101. Ready B. twills fractionally receded to Rs. 99-8 yesterday. Heavy Cees plains were steady at Rs. 101-8 and there was a Cambodian enquiry for a moderate quantity.

With the improvement in prices of jute goods, sentiment in the raw jute section was also better. With depleted stocks in the market, the demand of mills for jute fit for the production of hessian, however, could not be fully met. The inferior quality jute was available in plentiful quantities and stockists were anxious for as much business as possible. Old crop Assam bottoms changed hands at Rs. 25 per maund. Sellers of new crop continued to be reserved.

FOODGRAINS QUIETLY STEADY

(From Our Own Correspondent)

HAPUR, 21st July

It is reported that the Government of India has ratified the International Wheat Agreement which stipulates supply of wheat by producing countries at the maximum price of $2.05 and the minimum price of $1.55 per bushel. At the same time, India has reduced the imports under the Agreement from 1.5 million tons to 1 million tons. The Agreement will come into force from next month and will be effective for three years. The reduction in imports is the result of increased internal production, which has inspired the confidence that India's need of foreign wheat would now greatly diminish. The Directorate of Economics and Statistics puts the current year's production at 6.38 million tons, as against the last year's corresponding estimate of 5.7 million tons. This shows an increase of over 12 per cent. Likewise, the current year's rice crop has touched a new record of 23.4 million tons, as against 20.7 million tons last year.

Foodgrain markets in Uttar Pradesh have remained quietly steady. Arrivals are poor. There is good offtake of wheat which is being despatched to needy districts also. Peas ready and futures recorded very sharp advance, due to continued heavy despatches to Madras, Bombay and Gujrat and steadier outlook for gram in Punjab and Delhi. The latest quotations are: Wheat Rs. 16-8 to Rs. 18-8, gram Rs. 15-12, barley Rs. 12-4, bejhar Rs. 12-8, rice: basmati Rs. 35, hansraj Rs. 31, sela Rs. 29 and coarse Rs. 23; peas: green dara Rs. 15 and white Rs. 19, arhar Rs. 14-8, urd R

SETBACK TO GIRI APPROACH

WHATEVER else New Delhi may or may not do to one, it is certain that it will help cool down any minister's enthusiasm, especially enthusiasm for doing healthy things. There is obviously something in the climate of that city of conferences, reports, files and all the rest of secretariat procedure that will compel any minister, with a sense of daring, adventure and imagination, to toe the line, to turn to the beaten track. It is small wonder that Mr. V. V. Giri, Minister for Labour, Government of India, now sees the folly of having attempted to implement what is now popularly known as the "Giri Approach" to labour problems. The basic principle of the Giri approach—so called because Mr. Giri was the first to give shape to it, though at one time the idea was vigorously mooted by Mr. Nanda himself—is that managements and workers should be encouraged to settle their disputes by mutual discussions and voluntary conciliation. It has been rightly acclaimed as the first step towards ensuring healthy industrial relations. But Mr. Giri, it now seems, is not as keen on implementing his policy as he once was. In effect, he told the thirteenth session of the Standing Committee on Labour, last week, at New Delhi: "It is a good approach. But then it is a distant ideal. This is not the time to implement the new policy. We shall, of course, bear it in mind. For the present, we shall go on as we have been doing." This is, indeed, a regrettable decision. It is a great pity that even Mr. Giri, from whom we expected great things, should have thus succumbed to the pressure from reactionary elements. We thought he would have the courage of his conviction to stand by a cause which we know is still dear to his heart. No reform, however sound it may be, can be successfully introduced if even those who champion it lose their zest for it at the very first sign of opposition.

Mr. Giri's retreat from his earlier stand will gladden the hearts of all those who have a vested interest in the perpetuation of the elaborate, complicated and cumbersome machinery by which industrial relations are regulated to-day, but it will depress those who looked forward to an era of freedom and responsibility in that sphere. While addressing this tripartite Labour Conference, Mr. Giri was the very picture of a parliamentary member trying laboriously to explain his failure to implement his election promises to his constituency. He admitted that his personal view remained unchanged—this is reassuring—and that he still believed that a trade union movement, characterised by "unity, strength and vitality" should be built up, so that it would be able to enter into collective bargaining with employers on an equal footing and with confidence in its inherent power to enforce sanctions when necessary, and also that "active State intervention in disputes between labour and management is no more than a palliative." He admitted, too, that the principle of collective bargaining and mutual settlement of disputes had found "universal acceptance" in the industrial world. But it is premature, according to him, to consider any change in the present policy of "selective and discretionary compulsory adjudication." The Giri approach, according to its author, is a "long-term" reform. Its postponement may be deplorable, but is "inevitable." There is no scope for any "change in the basic policy that now governs labour-management relations." The only explanation he could offer for his go-slow policy in relation to his own "strongly held" convictions is:

"It must be readily conceded that at a time when we are only half-way through the Five-year Plan and in an economy which is showing signs of depression, and has already led to a visible increase in unemployment, there is every justification for pursuing a cautious and, perhaps, even conservative, policy in the matter of labour-management relations."

So much for what may well strike many as Mr. Giri's recantation. But the explanation he offered was hardly convincing. It is not true that the Five-year Plan would be in grave peril if the Giri approach were implemented. There is reason to believe that it is only the postponement of the day of realistic industrial relations that will spell the ruin of the Plan. Much harm has been done by representing the Giri approach as a distant, remote and unapproachable ideal, and the present system of regulating industrial relations as a realistic device. This is far from the truth, notwithstanding the fact that Mr. Giri himself, as the quoted passages show, is now inclined to agree with that view. From many points of view, it is the Giri approach that is the realistic one, because it is the surest, though not the quickest, way of ensuring a sense of responsibility among managements and workers. The present system seeks to achieve results by bringing to bear a judicial, non-economic, and impersonal mind on questions which are, if anything, purely materialistic in content and personal in character.

Again, it is not true that the country's economy is showing signs of depression, in the sense the word "depression" is generally understood. There are no burdensome surpluses of goods in the country which cannot be disposed of. Production, both industrial and agricultural, is at a high level but not high enough to assure even the pre-war standard of living. The number of unemployed people is, of course, rising but that is due more to the increase in population than to any marked setback in economic activity. What the country is suffering from now is high-cost economy. And this cannot certainly be remedied by a doctrinaire approach to employer-employee relations. The remedy lies in enabling industrial managements to bring down the costs of production. This could be done only through constructive tax reforms and through giving the managements sufficient room for adjustment in these costs. Since the wage bill constitutes an important element in production costs, there is no use shirking the responsibility for lowering the bill either through reduction in wages, or through laying off surplus labour. If the country does not voluntarily choose this, it will be forced on the country by world events.

Now, Mr. Giri averred that retrenchment should be avoided as far as possible. He added that rationalisation should be carried out only when "absolutely necessary," and that the existing workers should not be "thrown on the streets without alternative employment." He further pointed out that it would clearly be "unpatriotic" to replace men by machines, and that employers should so arrange their programmes as not to give rise to unemployment at the "wrong time." But it is arguable that when there is prosperity, there will be less need to retrench—apart from the fact that the industrial courts will have strong reasons to reject any plea for retrenchment—while, in a period of falling market, there will be need but no powers for employers to retrench. Obviously, this is a difficult position for employers to be in.

The whole issue of retrenchment is often clouded by confusing it with unemployment. It is no part of an industrialist's business to create new employment opportunities which could come only through the provision of a climate in which new undertakings could be started and existing industries expanded. By preventing retrenchment in some otherwise uneconomic units, the problem of finding employment for the many is not going to be solved. After all, the number of men likely to be affected by retrenchment is a mere fraction of the number of men that seek employment. This point will be better appreciated if it is borne in mind that the present labour policy of the Government is full of disincentives to the provision of employment opportunities by private enterprise. It is thus aggravating the problem of unemployment—a trend contrary to its fundamental objective.

Again, it is necessary to be warned against the effect of any failure to lay off surplus labour. An industry with a surplus labour force suffers from a serious handicap when it wants to sell its products in the overseas markets, even if the domestic market is sheltered from competition. Its profits are bound to fall, with inevitable repercussions on the confidence of investors and on the Government's revenues. This situation will in turn compel the Government to resort to deficit financing, with all its inflationary consequences. The entire nation will thus have to pay for keeping more men on a job than are strictly needed for performing it and a vicious situation will become even more vicious. In an economy which is not completely self-sufficient and which depends on the trends of world trade to a considerable extent—India's economy to-day is of this nature—such a policy will ultimately lead to devalua-

tion of its currency. From this point of view, it is gratifying to note that Mr. Giri recognised, unlike many industrial tribunals, that the capacity of management to pay is the ceiling limit to labour's demands, and that he urged labour to accustom itself to a "spirit of compromise." He would, however, have done well to give greater recognition to this point than he actually did.

The emphasis on benefits of labour-intensive industries, as against those of capital-intensive industries could be easily exaggerated. It is not sufficiently realised that capital-intensive industries often are the large-scale producers of real wealth that leads to a higher standard of living not only for the few that are engaged in them but also for a large section of the public, in view of their multiplier effect on a country's economy. This is not to underrate the importance of widening employment opportunities. But the creation of fresh avenues of employment, as Mr. Giri himself emphasised, is not a "hat-trick which can be performed by a mere sleight of hand." It is, however, possible to extend employment opportunities. Only this requires greater freedom to employers than that given to them now. The way to tackle the problem of unemployment is not to impede the wholesome attempts of employers at making their units economic and competitive but to provide the incentives for industrial and agricultural expansion on lines that will yield sustained results.

WHEAT PROSPECTS

NOW that the world's largest importer of wheat, the U.K., has decided to stay out of the International Wheat Agreement and entrust the task of imports to private enterprise, and that the quotas under the Agreement have been drastically cut by the importing countries, the one question that is of interest to the wheat-producing as well as the wheat-importing countries is the prospects for the free market in wheat. The Agreement stipulates a maximum price of $2.05 a bushel and a minimum price of $1.55. Under the agreement, the exporting countries are required to sell their quotas at not more than the maximum price if the importing countries call upon them to do so, while the importers are under an obligation to buy their quotas at the minimum price, if the exporters want to sell their wheat at this price. Beyond these obligations, both exporters and importers are at liberty to sell or buy wheat in the free market.

Wheat-importing countries are, according to present indications, in a moderately comfortable position. It is true that the situation does not yet conform to a purely buyers' market. But it is at least much nearer to it than it has been in recent years. In the four wheat-exporting countries, namely, Argentina (not a member of the Agreement), Australia, Canada and the U.S., the total available supply (production plus carry-over) for the 1953-54 season is estimated at 3,350 million bushels, as against 3,140 million bushels in the previous season. This includes the opening stocks of 186 million bushels in Argentina, 106 million bushels in Australia, 432 million bushels in Canada, 530 million bushels in the U.S., and estimated production of 294 million bushels, 175 million bushels, 397 million bushels and 1,175 million bushels, respectively, in these countries. together with a small import of 10 million bushels. Again, these countries are expected to consume respectively 136 million bushels, 79 million bushels, 160 million bushels and 690 million bushels, or a total of 1,069 million bushels, leaving an exportable surplus of 2,285 million bushels, as against a similar surplus of only 2,111 million bushels in the 1952-53 season (July to June). Provisionally, exports in the current season are placed at 880 million bushels, as compared with 807 million bushels in the last season. This would leave a somewhat larger carry-over of 1,405 million bushels at the end of the 1953-54 season.

It will be clear from the brief account of the statistical position of wheat given above that the world will see a much better supply position during the current season which has just begun. But this is not the only reason why the U.K. has chosen both to remain outside the Agreement and also to turn over the grain trade to private enterprise. The U.K.'s decision is prompted by the consideration that the maximum price, fixed under the I.W.A., is on the high side. During the recent negotiations in Washington, which preceded the conclusion of the present Agreement, the U.K. agreed, reluctantly though, to raising the minimum price from $1.20 to $1.55 per bushel, but would not agree to any maximum price beyond $2.00 which was itself higher than the ceiling under the previous Agreement by 20 cents. Critics of the U.S. point out that the U.S. stuck to the high price of $2.05 per bushel in order to reduce its own commitment to domestic producers by way of support prices. Indeed, the U.S. support prices have for long determined the prices for wheat. This imposes a real hardship on consumers who find that, normally speaking, exporting countries also will not have any incentive to bring down their prices so long as the U.S. price does not come down. This tendency for prices to hover around the U.S. price gains additional strength by reason of the fact that, whereas there are many competitive buyers for wheat, the wheat-exporting countries are only a few. Further, exports of wheat from these countries are carried on by single monopolistic bodies. The U.K. was, therefore, very keen that the U.S. must agree to a lower ceiling price. When the U.S. refused, it decided to withdraw its support to the Agreement, evidently in the hope that its action itself would lead to a lower level of prices of wheat in the world markets.

Since the world supply position of wheat is now more comfortable than in the recent past, it is unlikely that the U.S. will have the same important say in determining world prices for wheat. During 1952-53, the total world exports of wheat and wheat flour were 22.7 million tons, made up of 15.0 million tons under the I.W.A. (as against the actual export quota of 15.6 million tons allotted by the Agreement) and 7.7 million tons from the free markets. Export quota under the I.W.A. for the 1953-54 season is provisionally placed at only 12.0 million tons, as against 15.6 million tons in the last season. For the 1953-54 season, a major importing country, namely, the U.K., will be outside the Agreement. To this extent, the volume of trade in the free market must increase. In fact, free market exports are expected to go up to 12.5 million tons.

It is, of course, only the future trend of prices that will show whether the U.K. was wise in keeping clear of the Agreement. Although India has not proposed to leave the Agreement, it has decided to cut its import quota from 1.5 million to one million tons. Several other countries, notably Belgium and Ceylon, have, however, increased their import quotas. Nevertheless, the total import quotas notified by the importing countries to the International Wheat Council a few days ago are reported to have fallen short of the export quotas by a sizable margin even after making allowance for a substantial reduction contemplated by Australia in its export quota. The future of the Agreement is thus still very uncertain. Much, of course, will depend upon what the U.S. does. The Administration of this country is at present very much concerned with the large surplus of agricultural commodities now in its possession, thanks to its farm price support policy. If the U.S. Congress feels that the entire system of price support for agricultural produce is too costly to operate and modifies it, when the whole programme comes up for review next year, the main prop for wheat prices will have been removed. The U.S. President, Mr. Eisenhower, has set up a National Agricultural Advisory Commission to "review the policies and administration of farm programmes within the jurisdiction of the Department of Agriculture." The chief problem before the Advisory Commission is whether the present rigid high price supports for agricultural commodities should be retained or be replaced by a flexible, sliding scale price support system. In the meanwhile, it is interesting to note that the U.K. has already been able to get some small quantities of Argentine and Danish wheat at prices which are distinctly below the maximum prices under the I.W.A.

AN UNWARRANTED CONTROL

WHILE commenting on the last instalment of decontrol on prices and distribution of cotton textiles two weeks back, we questioned the necessity for retaining the control on production. A further reference to this question is warranted, because we find that the term "production control" in relation to the cotton textile industry is not correctly understood by many. This term is loosely applied to various restrictions which the Textile Commissioner had applied on the manufacture of cloth linked to various groups in terms of counts of warp, counts of weft, reed, picks, etc. These restrictions, it should be noted, were a negative form of control, the main objective being to bring the thousands of varieties of cloth within a certain number of groups to assist the fixation of prices. The grouping of cloth, with a stipulation of basic cottons, which were to be used in their manufacture, and the assessment of group-wise manufacturing charges certainly helped the fixation of cloth prices. Although this method was approximate, it was the only method available to the erstwhile Textile Control Board in order to tackle the difficult problem of fixing cloth prices. Subsequently, the Indian Tariff Board, which was asked to recommend a method for fixing fair selling prices, also recognised this fact and followed more or less an identical procedure. Thus, the production control now in force has outlived its utility. It has no positive function to perform in the sense it does not seek to control the quality of cloth.

Towards the end of 1948, the Government appointed a committee of millowners, labour, etc., to consider control over production. This Committee did useful work and made various recommendations to the Government. It clearly stated, for instance, what the strength of weaving yarn of different counts should be and laid down the specification for different broad varieties of cloth. No such directions are contained in the present production control. The necessity for such a control was conceded, as cotton was then in short supply, the purchasing power of the people was also high, and the Government itself was the sole distributor of cloth. In other words, the Government played the big role of selling agents of the mills, and so long as it took the responsibility for selling the cloth, it was thought that the mills could not object to produce the kind of cloth which the Government wanted. But even then, for various technical reasons, the recommendations of this Committee could not be implemented.

The point that is relevant for discussion now is whether the country to-day needs a production control. In this connection, it must be remembered that conditions obtaining in the cloth market now are very different from those that were prevailing in 1948. In the first place, production has gone up by something like 25 per cent. Secondly, the purchasing power of the masses has been greatly reduced, owing to the high cost of living. Thirdly, the Government has given up the control on prices and distribution; so, it is not to-day in the same position as the mills' selling agents which it held five years ago when it could direct the mills to produce cloth according to its specifications and distribute the same through the various distributing agencies of the State Governments.

Some may contend that control on production is necessary in order to ensure high quality production. Apart from the Government's ability to enforce such a control effectively, which is highly doubtful, an important point that has to be borne in mind is that, due to the very restricted buying capacity of the masses, the demand is now mainly for cheap cloth. It may be argued that it is better for one to buy durable cloth, even if it be a little costlier, than buy a cloth of poor quality just because it is cheap. But this argument, sound though it is, does not find favour with prospective buyers whose budgets do not permit any sizable outlay on cloth, because of the high cost of foodgrains and other essentials of life. It is just like one buying cheap canvas or rubber shoes to serve one's need of footwear even when fully knowing that a pair of good all-leather shoes, though five times costlier, will, besides being comfortable and elegant, outwear five pairs of canvas shoes. Such are the present economic conditions in the country. This, however, does not mean to suggest that mills should produce shoddy cloth. Far from it. All that is sought to convey here is that the existing economic conditions themselves impose certain limitations on the quality of cloth which a millowner can produce. The remedy for this undoubtedly unsatisfactory affair lies in taking suitable steps for carrying the country from a high-cost economy to a low-cost one. If a stiff production control were to be imposed on the mills in utter disregard of this state of affairs, it would make the working of mills very difficult.

That apart, mills are now producing more cloth than the population can absorb. Demand for export to overseas markets is also low. It is, therefore, better to let supply and demand balance each other. Following the complete decontrol of prices and distribution, the mills are now responsible for selling their products at prices which consumers are prepared to pay. Accordingly, they should be given the freedom to make the type of cloth which suits them best in the present buyers' market conditions, as well as facilities to make quick alterations in their production programmes in order to meet the changes that may take place in the market from time to time. It will thus be seen that there is no need for any production control at all.

STATE LOANS IN RETROSPECT

MUST THERE BE A CHANGE IN PRESENT METHOD OF BORROWING?

THURSDAY, 5 P.M.

ALL the ten States, which approached the capital market with offers aggregating Rs. 28 crores, got what they wanted; in fact, some of them got more than what they had asked. Technically, therefore, the State loans this year have been quite a success. It is stated that both the Centre and the concerned States are now happy over the result. Other States also seem to feel encouraged to approach the market. Thus, Assam wants to borrow Rs. 2.5 crores, Hyderabad Rs. 5 crores and Rajasthan Rs. 10 crores. Whether these States will be allowed to borrow and if so, how much, are, however, questions on which the Centre and the Reserve Bank will have to take a decision. They may not be able to say "no" to these States, lest they should be accused of partiality. Assam is already very sore with the Central Government, albeit over another issue. The only way in which they can induce these States to drop their demand for permission to borrow in the open market is to offer them financial assistance from their own resources. It remains to be seen whether they will do so.

MARKET GOSSIP

• • • •

Although all the State loans got fully subscribed, the response to them was not uniform. The West Bengal loan was oversubscribed in no time. Madras received as much as Rs. 10.81 crores, as against its invitation for Rs. 5 crores. Bombay and U.P. met with some difficulty, but managed to close their lists before time. Saurashtra and Bihar found it even more difficult to sell their loans. The position in respect of the Travancore-Cochin loan also was the same, if not worse. Mysore, Madhya Bharat and Madhya Pradesh had to extend the time limit by a week; even then, it is said that they had to be given some special assistance.

• • • •

There are many reasons why the response to State loans was not uniform. First comes the personality factor. In this respect, the highest marks go to Mr. C. Rajagopalachari, affectionately known as Rajaji, Chief Minister of Madras. He is an all-India figure. His popularity in his own State is still very high, especially with those who command large financial resources in some capacity or other. He enjoys the full confidence of the Central Government. In fact, he is able to get things done in his own way even if it runs counter to established traditions and conventions, as we shall presently show. He was, therefore, able to get the permission of the Centre and the Reserve Bank to alter the techniques of borrowing to suit his tactics. It is doubtful whether the Madras loan would have been such a thumping success but for Rajaji. Next to Rajaji, comes Dr. B. C. Roy, the West Bengal Premier. He seems to enjoy the confidence and full support of the big wigs of the Calcutta financial markets. Unlike Rajaji, he did not go into the interior of his State, asking the officials to canvass support from the people. He just placed the loan with the Calcutta business men and that too on his own terms. Thus, he could sell his State loan at par, as against the As. 8 discount which even Rajaji had to offer along with seven other States. He, however, was wise enough to fix his target at a modest level of Rs. 3 crores. The U.P. Chief Minister, Mr. Pant, too, must be rated high in so far as the personality factor goes. But, if this was not fully reflected in the response to the U.P. loan, it was due to other causes. As regards the other States, we do not think the personality factor had much to do with the "success" of their loans.

• • • •

The next important factor is easy access to a well-developed capital market. Those Congress men who decry the Stock Exchanges and other financial markets will do well to take note of this point. Bombay, Calcutta and Madras are the only three States which enjoy, in a full measure, the facilities offered by these markets. This was, in fact, the main reason why the Bombay Government was able to get its issue fully subscribed, although it does not at present fully satisfy the personality factor. The West Bengal Government also had the advantage of this factor to a very large extent. The financial markets in Madras are not, of course, as highly developed as in Bombay or Calcutta but this was more than offset by the personality factor.

• • • •

The third important factor that generally contributes to the success of State loans is the extent of economic development of the borrowing State. In this respect, Bombay, Bengal and Madras are, as readers are aware, well placed. Though Uttar Pradesh and Bihar cannot be said to be underdeveloped, they suffer from the lack of organised financial markets. The same explanation holds good in respect of Mysore, as also Travancore-Cochin, to a larger extent.

• • • •

The fourth important factor is canvassing. The Madras Government exploited this factor to the fullest extent and in a very tactful manner. This, combined with the popularity of Rajaji, yielded rich dividends. Bombay and Saurashtra too did achieve good results through canvassing. It will be no exaggeration to say that the Ministers of these States went to the financiers with cap in hand and appealed to their local patriotism. It is not known to what extent the other State Governments did so. Nor is it known to what extent they tried to tap the interior of the States, as was done by Madras.

• • • •

It will be seen from the foregoing account that the success of the borrowing programme of a State Government depends not on its intrinsic financial position but on a number of other factors, most of which are irrational. The question, therefore, arises whether the present method of borrowing by State Governments should be given up in favour of centralised borrowing. As mentioned in a previous issue of this journal, such a change has both advantages and certain disadvantages, apart from an almost insuperable practical difficulty. To take the advantages first. Centralised borrowing, that is, borrowing by the Centre on behalf of the States, will ensure uniformity in regard to terms. It will be considerably cheaper than borrowing by individual States which are now paying a little more than ¼ per cent. than the Centre. There will be no cause for bitterness in the States which fail to borrow as successfully as some of the other States. The financial institutions which are operating all over India will be saved from the embarrassment of having to please all the State Governments which approach them with cap in hand. The danger of disintegration of the capital market can definitely be averted.

• • • •

As against these advantages, the major disadvantage in a change-over to centralised borrowing is that the State Governments will have no incentive to tap the local savings and use their influence over investors. The Central Government cannot descend to the level of approaching the investors direct and persuading them to invest their money in its loans, while the State Governments can do so without any serious loss of face. In order to attract the savings of a certain class of investors, a slightly higher rate of interest can be offered on State loans, without any serious detriment to the value of the Central Government loans, inasmuch as investors have got accustomed to a slightly higher yield on State loans. This advantage will be lost if borrowing by individual States is done away with. In these days, when large sums have to be borrowed for implementing urgently required development projects, all methods and tactics, it is argued, will have to be adopted to raise money from the public. A little embarrassment to some or a departure from the conventional methods of borrowing has, therefore, to be ignored. If State Governments know that they will have to depend on their own ability to borrow, they will be more careful in their expenditure and the tendency to lean heavily on the Centre will be curbed to some extent.

• • • •

The practical difficulty involved in implementing the suggestion regarding centralised borrowing is constitutional, in that the States must agree to surrender their autonomy. Will they agree to do so? There is good reason for serious doubts. Even supposing they agree, it will be a hardy annual for the Finance Minister at the Centre to reconcile the claims of individual States for loans and reach a mutual agreement with them. It will certainly widen the scope for disagreement between the Centre and the States.

• • • •

The one practical way of overcoming some of the glaring defects in the existing system of borrowing by State Governments is for the Centre to insist on the States following the agreed rules of the game. It must tell them firmly that, in all these matters, they must scrupulously follow the instructions given by the Reserve Bank. It is regrettable that, this year, instead of compelling them to subject themselves to the Reserve Bank's discipline, the Central Government gave a long rope to some of the State Governments, especially to Madras. This freedom has been used by the Madras Government in a manner that has marred the prospects of future borrowings by State Governments. In the first place, the Centre meekly submitted to that State's demand that it should be allowed to keep the list open for 15 days, whereas the other States were given only a week in the first instance. Secondly, it was allowed to close the list even before the scheduled date, even though there was no provision to that effect in the prospectus. Thirdly, it was allowed to retain more than 10 per cent. of the total subscriptions, which is also against the terms of the prospectus. In order to do so, it followed an ingenious method. It said that it would give partial allotment only to those who so desired and informed it to that effect before 31st July, 1953. Now, this step, as the Madras Stock Exchange has rightly pointed out, was apparently meant to get over the difficulties in the way of accepting *in toto* all the subscriptions. The responsibility for making refunds is an obligation of the borrower, as is clear from clause 7 of the notification, but the Madras Government has thrown it on the lenders. Such tactics will undermine the confidence of the investing public. Why did the Reserve Bank agree to these tactics? This question is raised by the Madras Stock Exchange. We do not think that the Bank, which has sufficient experience in the technique of open market borrowing, could have been a willing party to this arrangement. May be, it was forced into this arrangement by the Central Government which could not probably resist the request from Rajaji. For, when West Bengal first asked for a similar facility, the Reserve Bank had firmly refused and advised it to make partial allotment. It, however, had to give permission to that State later, when it was obliged to make a concession to Madras. But we do not know whether West Bengal could avail itself of this facility, as it must have come very late.

• • • •

An attempt was, of course, made by the Madras Government this week to explain why it wished to keep all the subscriptions, but the explanation was not convincing. Thus, replying to the critics of the Government, Mr. Subramanyam, the Madras Finance Minister said that a large bulk of the subscriptions to the loan was from rural investors who were not accustomed to investing their savings in Government bonds and were not used to the practice of the money market. It might appear vexatious to these rural people to be called upon to proceed to distant Treasuries to take back a portion of their remittance and that too without any interest for the intervening period. They had to encourage this new class of rural investors and for that purpose they had to change the existing practices to the extent necessary. He revealed that the Government would watch the results of this year's experiment and gradually evolve a system which would suit the rural investors without materially inconveniencing the institutional investors in the city. The high price for agricultural commodities, he added in passing, had resulted in a shift of real savings from the city to the countryside and district officials were playing the part, which insurance companies had to play, in mobilising rural savings. Surely, the difficulty referred to by Mr. Subramanyam could have been anticipated and provided for. The failure to do so clearly shows that the move to keep all the subscriptions was an afterthought, evidently born of the unexpectedly large subcriptions that were received by the Government.

• • • •

The Madras Government's desire to raise as large a loan as possible is understandable. But it should have gone about it the right way. It could have, for instance, secured the Central Government's permission to keep the loan on tap for a pre-determined period. Or it could have made capital out of the large subscriptions by promptly closing the issue on the due date and making partial allotments and later offering a second issue of that very loan at a small premium of, say, As. 2. It is a pity, indeed, that, in its indecent hurry to retain all the money that came into its hands, the Madras Government missed a good opportunity of raising its credit in the market which would have enabled it to raise its future requirements on more favourable terms. The whole episode shows how amateurish the Madras Government is in the art of open market borrowing

• • • •

The end of the shooting war in Korea has had no adverse effects on markets. This is not surprising, because the prolonged negotiations that preceded the truce agreement, signed this week, gave sufficient time to operators to adjust their attitudes to this event well in advance. Values in all the markets have remained fairly steady and, where there was a fall, such was not appreciable. Generally speaking, market movements in this, the first week of armistice in Korea were influenced more by local developments than by this historical event. In shares, for instance, Tata Steels ruled firm, thanks to the revival of speculative buying in sympathy with the strength of the cotton market, where a group of bulls had succeeded in lifting the values up. In fine, in both markets, the healthy technical position asserted itself. In bullion, there was a post-settlement reaction, following a bear squeeze. Similarly, oilseeds were a shade easy, as a direct sequel to the high levels they had climbed up in the preceding week. There were only minor and insignificant variations in the cloth, jute and jute goods markets, and their underlying trend revealed no definite shift. The behaviour of the markets in the U.S., Britain and the Continent reflected confidence in the future. The improvement in the prospects for peace was interpreted by them constructively. Less inflation, reduction in taxation, expansion in world trade, these, they rightly thought, would be the outcome of peace in the world.

STEADY UNDERTONE IN SHARES

TATA DEFERREDS RALLY AT CLOSE

(From Our Own Correspondents)

BOMBAY, *30th July*

A MILD rally in Tata Steel shares towards the close was the only notable feature in an otherwise uninteresting week of trading on the Stock Exchange. Sentiment in the market remained dull and disclosed a slightly easier trend.

The declaration of the dividend on Tata Iron and Steel shares and the announcement by the Company's Directors of their proposal to issue bonus shares at the rate of one ordinary share for every ordinary share held after the conversion of the Deferred shares, which came after the market closed last Thursday, fell flat on the market. The issue of bonus shares in the ratio of 1:1 would mean a considerable enlargement of the floating stocks of the Ordinary shares and was, therefore, a bearish factor. The signing of the armistice in Korea had a slightly damping effect on the market, but did not result in any sharp break in prices. This was because it was long anticipated and had already been discounted in prices. Further, the signing of the armistice was nothing more than a military truce and many political issues have yet to be settled. Another factor which checked a large-scale recession was the technical position of the market.

The uninspiring performance of the market during the week was due to other factors also. The labour dispute at Burnpur has not yet been resolved, though there has been a slight improvement in the situation, inasmuch as the workers have agreed to move coal sufficient to keep the furnaces burning. Labour in Tata Iron and Steel Works at Jamshedpur have put forward a demand for a higher rate of profit-sharing bonus and the labour leader has held out a threat that, if the demand is not conceded, the workers would fight it out.

In the steel section, Tata Deferreds opened at Rs. 1,911-4 and in stages reacted to Rs. 1,895 on Tuesday. But renewed bull support and bear covering lifted up the rate to Rs. 1,935 to-day before it finished at Rs. 1,930. It is reported that some bull operators turned their attention to Tata Deferreds to take advantage of the lower prices of Tata Deferreds *vis-a-vis* the ordinaries and the shortage of floating stocks in Deferreds, and pushed up prices, which compelled the bears to cover their sales. Tata Ordinaries which had been moving between Rs. 329-12 and Rs. 327-8 till Tuesday experienced a demand and advanced to Rs. 333-8 at the close. Indian Irons which reacted from Rs. 24 to a low of Rs. 23-7 earlier in the week, moved up to Rs. 23-15 on hopes of a settlement at Burnpur, following the workers' agreement to move coal to the furnaces. The closing was, however, a fraction lower at Rs. 23-13.

Barring a few counters, which improved over the week, textile shares were quiet and prices, over a wide front, showed small losses. Bombay Dyeings were brought down from Rs. 385-10 to Rs. 379-6, but rose this morning to Rs. 386-4 in the wake of the advance in steels. They, however, met some selling pressure and closed the week at Rs. 383-2. Kohinoors drifted from Rs. 309 to Rs. 305-8, Centurys finished Re. 1-4 lower at Rs. 275-4, Indore Malwas suffered a loss of Re. 1-4 to Rs. 91-14 and Simplex accounted for a loss of a rupee at Rs. 171-8. Finlays stood a rupee lower at Rs. 325. New Greats were quiet at Rs. 150-8. A drop of Rs. 150 to Rs. 1,650 in *Sholapoors* was a feature. Standards moved down by a rupee to Rs. 318-12. Svadeshis met with good support and gained Rs. 4-12 to Rs. 257-12. Gokaks advanced by Rs. 2-8 to Rs. 227-8. Swans rallied from Rs. 437-8 to Rs. 452-8 and Gold Mohurs from Rs. 182-8 to Rs. 191-4.

Bank shares showed a mixed pattern. Barodas shed a fraction to Rs. 111. Centrals were unchanged at Rs. 66, while their New shares put on Re. 1-8 to Rs. 68-8. Imperial Fully Paids were stagnant at Rs. 1,837-8, whereas Contributories dropped Rs. 5 to Rs. 445. Indias were in demand to go up by a rupee to Rs. 160.

Renewed investment buying characterised business in electricity shares. Ahmedabad Electrics were well held round about Rs. 111-4. Bombay Suburbans and Surats changed hands Re. 1-4 better at Rs. 128-2 and Rs. 125, respectively. Andhra Valleys rallied from Rs. 1,453-12 to Rs. 1,460. Tata Hydros were steady around Rs. 154-8 and Tata Powers at Rs. 1,545.

Minor variations characterised trading in the miscellaneous section. Associated Cements had a loss of Re. 1-8 over the week to Rs. 171-12. It was reported that some holders in these shares switched over to Tata Ordinaries. Belapurs provided an exception with a smart rise of Rs. 3-8 to Rs. 235-8. Bombay-Burmahs old were steady at Rs. 362-8, B.I.Cs. at Rs. 8-4 and National Rayons at Rs. 108-8. Tata Chemicals suffered a loss of As. 34 to Rs. 9-2 and Tata Oils As. 8 to Rs. 32-4. Walchandnagars receded from Rs. 141-4 to Rs. 138-12. *Wimcos* rose by Rs. 3-2 to Rs. 138-12.

In the transport group, Scindias were in request to gain As. 3 to Rs. 13-11. Bharat Lines found sellers at Rs. 83. Air-Indias had business at Rs. 87-8. Air-India Internationals had buyers at Rs. 109.

In the mining and engineering section, Indian Coppers had a half-anna rise to Rs. 2-13-9. Shivrajpurs lost a fraction to Rs. 57-8. B.B. Petrols continued to be in favour to go up As. 13 to Re. 1-4½. Alcock Ashdowns showed no change at Rs. 293-12. Tata Locomotives found buyers at Rs. 86. Josts Engineerings were picked up Re. 1-12 higher at Rs. 86-12.

• • • •

Calcutta Stock Exchange

CALCUTTA, *28th July*

The signing of the armistice in Korea had a chilling effect on the Calcutta Stock Exchange during the last two sessions of the week and the general reluctance of operators to enlarge their commitments, but to proceed cautiously—a tendency which had been in evidence in recent weeks—became more pronounced. In spite of this, prices were hardly affected, since a peace in Korea had been considered long overdue, and operators had prepared themselves for the announcement that came on Sunday night. The volume of business was very limited. Besides the reluctance of operators to take risks, another factor which contributed to the thinning out of the turnover was the inadequacy of finance. Demand for funds from trade circles continued to persist in the city and subscriptions to the State loans had taken away quite a good slice of the money which would normally have found its way into the share market. It should, however, be said that the week, taken as a whole, recorded a better performance than the week covered by our last report. Selected counters in the coal, jute, sugar and miscellaneous shares came in for interested enquiry and recorded small gains.

Higher advices from Bombay, following the week-old announcement regarding increased retention prices for steel manufactured by the Tata Iron and Steel Company, Ltd., and expectations of a similar increase for the Indian Iron and Steel Company, Ltd., forced an earlier rally in the speculative counter, Indian Irons, which improved from Rs. 23-10 to Rs. 24-2 on Wednesday last. This improvement was, however, short-lived, as the expectations did not materialise and the rate therefore, declined to Rs. 23-14 on Thursday. A slight improvement in tone was noticed on Friday, as a result of expectations of an early easing of the disturbed labour situation in Burnpur. As no improvement in Burnpur was reported on Saturday the shares reacted to Rs. 23-8. Although it is thought that the decreased production on account of the slow-down by the workers from early this year would not affect the expected dividend announcement for the year ended 31st March, 1953, the view that, if higher retention prices are not granted and the slow-down at Burnpur continues, the working results of the current year would be affected, is held in market circles. The news from Asansol that the slow-down strike has now affected supply of coal to the furnaces had also a depressing effect. To-day sentiment was quiet, and the rate could not move higher than Rs. 23-13.

Among other engineering shares, Jessops were accorded support at Rs. 23-15, while Braithwaites, at Rs. 11-6, were fractionally lower. Texmacos were unchanged at Rs. 5-10 and Bartias suffered a decline from Rs. 12-15 to Rs. 10-12. On the other hand, Burn & Cos. featured the section with a recovery from Rs. 286 to Rs. 290. Kumardhubis changed hands at Rs. 7-6.

Excepting for a fair turnover last Friday, when transactions were put through on scrips being offered at lower levels, coals were quiet and accounted for further losses. Tokyo reports that Japan was attempting to import a large quantity of coal from the United States were sadly noted in the section, in view of the fact that if Japan also does not buy from India, exports during the year would dwindle considerably. A feature of this week's share transactions was the keen interest displayed in Orientals, which were raised from Rs. 10-4 to Rs. 12-8. New Beerbhooms were unchanged at Rs. 19-4, but Dhemo Mains were fractionally lower at Rs. 10. Bharats realised Rs. 5-14, while New Manbhooms were lowered from Rs. 10 to Rs. 9. At Rs. 4-7, Western Bengals had a loss of As. 4.

With restricted turnover, jutes were idle, excepting for a few selected features on interested buying. However, judged from the recovery in the jute goods market, a better trend ought to have been no surprise at all. For, it is generally expected that working results of mills for the current accounting period would show visible improvement compared to the previous.

Among miscellaneous industrials, F. & C. Oslers shaded earlier to Rs. 5-2 on profit-taking, but recovered to-day to Rs. 6-1. After being lower at Rs. 127-8, Jardine Hendersons improved to Rs. 130-8, and Angelo Bros. were fractionally better at Rs. 18-8. Bharat Airways, on good support, gained from Rs. 2 to Rs. 2-9. Titaghur Papers also improved from Rs. 35-2 to Rs. 35-11, but were quiet to-day at Rs. 35-8. Sone Valley Cements, after declining from Rs. 7-2 to Rs. 7, recovered to Rs. 7-1. Rohtas Industries realised Rs. 8-5.

• • • •

Madras Stock Exchange

MADRAS, *28th July*

The performance of the Madras Stock Exchange during the week under review was better than in the previous week. There was a distinctly steadier undertone. Operators appeared to be in a confident mood. Textile scrips, which made considerable headway last week, not only consolidated their gains but also advanced further. Plantings came in for a fair share of enquiry. Trading in teas was encouraging, on good prices fetched by tea leaves during the recent auctions at Cochin and Calcutta. Even rubbers disclosed a buoyant mood, while coffees came in for selective support. Miscellaneous scrips ruled in sympathy with the rest. Banks, however, were dull. There was some improvement in the volume of business and equities generally disclosed sizable gains over the week.

Scrips in the textile section came in for a good share of buying this week. Coimbatore Pioneers shot up from Rs. 106 to Rs. 113 and Spinnings from Rs. 41-8 to Rs. 43-8. P. Andvar 'A' and 'B' were higher by Rs. 6 each at Rs. 60 and Rs. 85, respectively. Rajalakshmis gained Rs. 3 to Rs. 77 and Rangavilas Rs. 2-8 to Rs. 47. Cambodias were done at Rs. 10-13, as against Rs. 10-11. Cannanores, however, lost Rs. 3 to Rs. 95. Metturs changed hands at Rs. 187-8 ex-dir., as against Rs. 199 cum-dir.

Among plantings, teas were in good request. Periakaramalais and Nilgiri Teas improved by As. 4 each to Rs. 28-8 and Rs. 12-2, respectively. Stanes Amalgamated (tea and coffee) also put on a similar amount and finished at Rs. 8-10. Kalasas were done at Rs. 12-4, as compared with Rs. 12, end of last week. Chandramalais and Peermades were higher by an anna each at Rs. 2-12 and Rs. 27-5, respectively. United Nilgiris, however, lost Rs. 3 to Rs. 185. Chembras were lower by an anna at Rs 2-12.

Interest in rubber scrips was encouraging. Business in Rajagiris was done at Rs. 11-3, as against Rs. 10-12. Travancore Rubbers advanced by As. 2 to finish at Rs. 12-2 and Peninsulars by an anna and a half to close at Rs. 8-8½. Thamaraipallys and Thirumbadis improved by an anna each and finished at Rs. 13-11 and Rs. 2-12½, respectively. Kailas Rubbers were higher by a similar amount at Rs. 3-8½, whereas Be Bees were slightly lower at Rs. 1-15½.

BOMBAY SUBURBAN ELECTRIC

Much light was thrown on the prospects for the Bombay Suburban Electric Co., Ltd., by Mr. K. G. Milne, Chairman of the Company, in his address to the shareholders. This Company, as is well known, serves the electricity needs of the vast and growing suburban area of this city. Mr. Milne rightly drew much comfort from the thought that a further expansion of Bombay's housing and industry was inevitable and that it was equally inevitable that a very large part of it must take place in the area served by the Company. Already, there are three large new consumers "in prospect or under development"—the new station of All-India Radio, the Civil Aerodromes at Santa Cruz and the Refineries construction works and colonies at Trombay. Ground is being prepared for a vast housing estate, at Vile Parle, which will be a "township in itself." In order to meet this ever-growing demand for electric supply, the Company embarked, in 1948, on a six-year plan for improvements. It would appear that nearly 75 per cent. of the plan has already been implemented. Mr. Milne was confident that, upon the completion of the plan, the Company would be able to meet the anticipated demand for 19,000 kw. in 1956; the present demand is 10,000 kw. He warned, however, that, as against these bright prospects, must be set down the "looming spectre of power shortage" and the continuing inadequacy of reward for investment in electrical undertakings.

After referring to the steep rise in distribution costs, and the 12½ per cent. increase in the cost of electricity supplied by Tatas to the Company, which necessitated an upward revision of rates for electricity supplied by the Company to its customers, the Chairman pointed out that, despite these increases, electricity was about the "only daily necessity of life that has not risen two or three hundred per cent. since pre-war in sympathy with the cost of living." He illustrated this statement by a reference to the Company's own rates. Between 1935 and 1948, the rate for lights and fans was lowered from As. 6 to As. 3 per unit, less a quarter of an anna discount for prompt payment. In June, 1953, it was raised to As. 3.375 per unit, less the usual discount. Even so, it is less than the pre-war rate, which, as Mr. Milne suggested, is "something not to be lightly disregarded." Referring to some uncritical comparisons which had been made between the Company's rates and the rates charged by the sister concern in the Bombay city area, the Chairman pointed out that the economic and physical considerations in the two areas were entirely different. Thus, the city of Bombay occupies an area only one-sixth of the area which the Company serves. One block of flats in the city could alone bring as much revenue as an entire village in the suburbs and at a "minute (capital) cost in comparison." Also, the Municipal Electricity Undertaking does not, unlike the Bombay Suburban Electric, pay the Government any income-tax or super-tax. If the Municipality paid these taxes to the Government, then there would be no "great difference" between the rates charged by the Company and those charged by the Municipality. Finally, he said, in reply to a question, that any move towards nationalisation of the Company would be ridiculous. It would involve payment of Rs. 3 crores or more to the Company by way of fair compensation, apart from the question of the difference in efficiency of service rendered by a private undertaking and that given by a nationalised undertaking. The Company, he told the shareholders, could not be legally acquired before 1976, and then only by a State Electricity Board and not by the Municipality. He rightly warned that "loose" talk of nationalisation did great harm to electrical development in the country by "further inhibiting the investment of money in such enterprises."

NEWS IN BRIEF

THE number of umbrella rib sets manufactured in India improved from 46,849 in 1951 to 120,329 in 1952.

During the first two years of the Five-year Plan, India received external assistance of Rs. 189 crores in the form of grants and loans.

Trunk telephone exchanges in India increased from 278 in 1947-48 to 608 in 1952-53. The number of trunk calls rose from 5.3 million to 12.8 million during the same period.

The Indian Telephone Industries (Bangalore) has plans for stepping up production of telephones from 40,000 to 600,000 per annum. It has also plans for raising the capacity of the tool room for the large-scale manufacture of duplicated tools required. There is a proposal, too, to start manufacture of carrier equipment, including the 12-channel carrier.

The Government of India has agreed not to levy any excise duty on goods exported to Nepal, such as cloth, sugar, salt, matches, cigarettes, tobacco and betelnuts. As a result of this decision, the Nepal Government will gain about Rs. 50 lakhs per annum, in that it will levy an import duty on these goods.

The diamond jubilee conference of the United Planters' Association of Southern India will be held at Coonoor on the 24th inst. It will be inaugurated by Mr. Sri Prakasa, Governor of Madras. Simultaneously with the Conference, the sixth U.P.A.S.I. Exhibition will be opened by Dr. U. Krishna Rao, Minister for Industries and Labour, Government of Madras.

The National Safety Council of the United States has presented its "Award of Merit" to the Firestone Tyre and Rubber Co. of India Ltd., Bombay, in recognition of the latter's success in operating 1,008,912 man-hours without a lost-time accident during the period July-November, 1952. This is the first time that such an Award has been given to an industrial undertaking in Bombay.

The Tariff Commission has prepared questionnaires for producers, importers and consumers in connection with its inquiries into the continuance of protection to (1) sago (tapioca globules) industry and (2) cotton textile machinery industry (spinning ring frames, spinning rings, spindles, plain looms and fluted and tin rollers) beyond 31st December, 1953.

The slow-down strike of workers of the Indian Iron and Steel Company's factory at Burnpur is reported to have seriously affected the loco traffic which supplies coal to the factory. The management is apprehending total stoppage of furnaces, resulting in cessation of production in all the workshops, if the supply of coal is not maintained at its minimum, namely, 50 wagon-loads per day.

The Government of India has referred to the Tariff Commission for enquiry and report the question of abolition or reduction of import duty on intermediates and raw materials used in the manufacture of certain dyestuffs, drugs and pharmaceuticals. After preliminary examination, the Commission has decided that it would be more appropriate if the investigation were to be carried out in two stages, dyestuffs at one stage and drugs and pharmaceutical at another stage. The Commission has now undertaken the first stage of its enquiry covering dyestuffs.

A programme to provide better and decent housing for the employees in the Sindri Fertiliser Factory is under the active consideration of the Government of India. The management and the Workers' Union of the Factory are expected to arrive at a satisfactory agreement shortly on issues relating to fixation of minimum wage for daily-paid workers, restoration of the Sindri allowance to the original figure of 20 per cent. and its application to new entrants, and production and incentive bonus to employees. This information was given by the Union Minister for Production at Sindri a few days ago.

The fourth meeting of the Rajasthan Industrial Advisory Council was held at Jaipur on 29th and 30th July, 1953. The meeting considered the possibility of establishing an Industrial Finance Corporation and a Cottage and Small-scale Industries Board in the State. The meeting also reviewed the industrial development and the exploitation and utilisation of mineral resources of Rajasthan. The other items on the agenda were a review of the progress of power projects and the position of power supply to industries, the desirability of the formation of a Steering Committee of the Council to advise the Government in respect of industrial policy, and a report of the Director of Industries and Commerce regarding the closed factories and factories having Government investment.

The import policy for ring frames and carding engines was announced by the Government of India on 21st March, 1953. A number of applications have since been received for the import of 37" or 38" cards under the impression that the import of these cards is not prohibited under the policy. The Government has, therefore, made it clear that the import of carding engines of any size other than of 45" is banned and that, even in respect of carding engines of 45", licences are being issued only to such users as have been actually using cards of this size. No import licences are being given for ring frames. This applies also to applications for imports that may have been made in pursuance of Public Notice dated 5th December, 1952. This import policy will apply to the whole of 1953.

A symposium on the Non-ferrous Metal Industry in India will be held under the auspices of the National Metallurgical Laboratory, Jamshedpur, in January, 1954. The symposium is being held to focus attention on the present state of the Indian non-ferrous metal industry and to discuss ways and means for stimulating its growth to meet present and future requirements. It will survey the non-ferrous mineral wealth of India, the applications of thermo-dynamic principles, melting and foundry technique, thermal treatment and fabrication technique, and powder metallurgy technique in the processing of the minerals. It will also go into the economics of the industry, the utilisation of by-products and reclamation of wastes and survey the researches into the development of non-ferrous alloys. An important subject to be discussed will be the scope of the future expansion of non-ferrous metal industry in India in relation to the Five-year Plan.

From Abroad

The U.S. Government spent nearly $2,200 million for research and development during the fiscal year ended 30th June, 1953.

The farmland area of the United States comprises approximately 1,159 million acres, or nearly 61 per cent. of the nation's total land area.

The Ceylon Government has imposed, with effect from 25th July, 1953, a tax of Rs. 4 per lb. on all Ceylon tobacco leaf used in the manufacture of cigarette and pipe tobacco.

The population of the United States reached 159,473,000 in June, 1953. This represents an increase of 8,341,000 or 5.5 per cent., as compared with the last national census in 1950.

Under the arrangements recently agreed upon between the Soviet delegation in London and the British Government, Britain is to export to Russia woollen textiles in exchange for matches.

A contract for $15 million was obtained by a group of French industrial companies for the establishment of a factory in Brazil to produce 100,000 tons of soda ash, 20,000 tons of caustic soda, and some allied products per annum.

Recent scientific experiments in the U.S. have proved that diamonds can be tinted blue or green by "atomic bombardment." As this development has created a turmoil in the international diamond market, further experiments have been banned by the U.S. Atomic Energy Commission.

Following tariff negotiations at Bonn, West Germany has reduced duties on imports of certain types of steel from Sweden. The new tariffs for hot-rolled quality steel and ball-bearing steel are 8 per cent. and 4 per cent., respectively. The cold-rolled and drawn steel bears an import duty of 10 per cent. (average).

A contract has been signed between the Japanese group hino-diesel industry and the French national motor car company, Renault, for the installation of a Renault 4 h.p. motor car assembly plant in Japan.

France is now completing the installation of quite a new type of power-station on the Ivory Coast of Africa. It is designed to pick up thermal energy from the sea. The ocean power station, it is claimed, will control a source of supply that is definitely inexhaustible, the calories of sunshine being stored away by the surface regions of the sea.

The U.S. Treasury collected more than $369,595 million in taxes during the fiscal year ended 30th June, 1953. Individual Americans paid more than half the record total—over $36,949 million in income-taxes, representing a 10 per cent. gain over the previous year. Corporations paid more than $21,548 million, with the balance coming from miscellaneous taxes, such as those on gifts and estates.

The Government of Ceylon has raised import duties on a number of luxury articles. These articles include building materials, cigarettes, pipe tobacco, brandy, tinned foodstuffs, jewellery, confectionery, perfumes, electrical goods and eggs. The Government has also raised import duty on cotton piecegoods, yarn, natural silk, woollen and worsted materials, carpets and timber. On the other hand, export duties on cardamom has been halved, while that on whole pepper reduced from Rs. 250 to Rs. 150 for every 100 lbs.

The Ceylon Budget contains certain fresh taxation proposals. One such proposal relates to the increase in taxes on resident and non-resident companies from 30 per cent. and 36 per cent. to 34 per cent. and 40 per cent., respectively. Tax relief has been accorded to civil expenditure on productive undertakings. On the basis of the new rates of tax, a company which spends Rs. 1,00,000 in any one year for opening up and planting of uncultivated land will get a reduction of Rs. 34,000. An individual who spends a similar amount will get a reduction of Rs. 85,000.

PERSONAL

DR. S. Radhakrishnan, Vice-President of the Indian Union, returned on Tuesday after a two-month tour of the U.S., Canada, the U.K. and the Continent.

Sir Cowasji Jehangir, Bart., left Bombay on Saturday last on a three-month tour of Europe.

Dr. F. S. Tomlinson, Technical Manager, Dyes Department, Imperial Chemical Industries (India) Ltd., left for London last week on home leave preparatory to retirement after 23 years of service with the firm.

Dr. M. G. Candau, Brazilian Public Health Expert, and formerly an assistant Director-General of the W.H.O., has succeeded Dr. Brocl Chisholm of the United States as Director-General of the U.N. World Health Organisation.

Mr. Abdul Qadir, until recently Secretary to the Finance Ministry, Government of Pakistan, has been appointed Governor of the State Bank of Pakistan, vice Mr. Zahid Husain who has been appointed Chairman of the Planning Board.

OBITUARY

Mr. J. K. Mehta

We regret to record the demise of Mr. J. K. Mehta in Bombay this week. Mr. Mehta was the Secretary of the Indian Merchants Chamber, Bombay, for a long time. He played a significant part in the establishment of the Federation of Indian Chambers of Commerce and Industry, of which he was the first Secretary. He attended the I.L.O. Conference twice in 1921 and 1930 as adviser to the employers' delegate.

Mr. R. C. Lowndes

We regret to record the death of Mr. R. C. Lowndes, formerly senior partner of Messrs. Killick Nixon and Co., Bombay. Mr. Lowndes was a well-known figure in the commercial life of Bombay for many years till his retirement in 1946. He had served as a Trustee of the Bombay Port Trust and also on the boards of a number of important industrial undertakings.

"COMMERCE" 1928

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

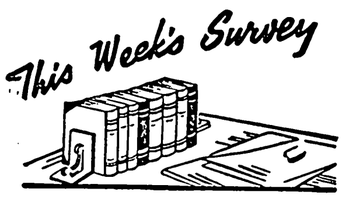
CALCUTTA, *4th August*

Does India Still Hoard?

Perplexing though the implications of the new rupee loan are to a degree, there is little doubt as to its success since the habit of hoarding in India has been steadily yielding the palm to the more insinuating habit of investing. During the past five years, the internal wealth of the country has appreciably increased, and even within the past two or three years loans to the amount of about Rs. 54 crores have been locally absorbed, while, since 1917, some Rs. 40 crores of cash certificates have been taken up. The tendency is one to be welcomed, as hoarded wealth is never fruitful, while investment is a stimulus to economic expansion. Imports of bullion afford a sure index to the waning influence of the Indian hoarding habit and, in this respect, a comparison of the imports of gold since April, 1925, when *de facto* stabilisation of the rupee at 1s. 6d. (gold) took place, with the imports for the five pre-war years, is interesting. In 1924-25, the imports were exceptionally large, due mainly to the large drop in the price, consequent upon the rise in the gold value of the rupee and the possibility that this drop in price would be temporary. This cause was operating, to a certain extent, in the first half of 1925-26, but, thereafter, the volume of imports decreased considerably, and for the years 1926-27 and 1927-28, the average net import was only Rs. 18.23 lakhs, as compared with an average for the five pre-war years of Rs. 28.15 lakhs. Allowing for the fact that, in pre-war years, gold was valued at Rs. 15 to the sovereign, the decrease in imports during the last two years, as compared with the pre-war imports, is very striking and tends to confirm the view that with the growth of the investment habit in India, gold imports in future are not likely to be as large as in the past.

Technical research undertaken by the Swiss Association for Navigation from the Rhone to the Rhine with reference to the possible development of the waterways between the Lake of Geneva and the Rhine has now shown that projected works on the Aar between the Rhine and the Lake of Bienne would cost Fcs. 140 million. Further, the construction of the Entreroches Canal joining the Lakes of Neuchatel (which is already connected by a canal to the Lake of Bienne) and Geneva would absorb some Fcs. 200 million. This research is to continue on the economic plane and is expected to be completed by the end of the year.

The Governments of Pakistan and France have agreed on a special arrangement for trade payments which will be in force till the end of this year. Under the arrangement, the Government of France will create a franc fund against payment for 75,000 tons of cotton imported from Pakistan. Similarly, the State Bank of Pakistan will create a rupee fund against purchase of some goods from France. At the end of the agreement period, the trade balances are to be settled in sterling. The arrangement covers the Pakistan-France trade agreement recently ratified by the Governments of the two countries which provides for the exchange of Rs. 20 crores worth of goods and commodities each way.



GOVERNMENT-SPONSORED CORPORATIONS

THE recent conflict between the chief of the Employees' State Insurance Corporation and the Government, not to mention the allegations of gross mismanagement that have been made against several Government-sponsored projects, such as the D.V.C., have once again brought to the fore the question of evolving a correct status and set-up of these corporations. The Rao Committee, which enquired into the administration of the Damodar Valley Project, has a few notable suggestions to make on this important question. The Committee emphasises that the acceptance of the corporation idea implies removal of Treasury control and checks and also the limitation of the authority of the Government and Parliament in respect of matters which ought to be dealt with by a statutory corporation. The concerned ministers should be responsible only for laying down the broad lines of policy but they should leave the details to the corporation itself. The Committee quotes approvingly Prof. Hobson's view that the day-to-day conduct of nationalised industries and of public corporations should be "immune from parliamentary inquisition."

The Committee further points out that if questions are allowed to be freely asked in Parliament about the working of public corporations, there will be a tendency on the part of the corporation to "avoid responsibility." The lack of initiation and absence of quick decisions, for which Government departments are noted, would then creep into the working of the corporation also.

The Committee, therefore, disagrees with the Estimates Committee which has recommended full Parliamentary control over the various river valley schemes, and prior approval by Parliament of all plans relating to the schemes. Nor is the Committee in favour of the provision in the D.V.C. Act which makes consultation with the State Governments necessary before the members of the Corporation are appointed. The Committee says: "We do not consider it a sound principle to provide for regional representation on corporations of this nature." It suggests that a public corporation should have the following duties and powers:

(1) A corporation should be created only when a project has been investigated in sufficient detail, and a fairly firm estimate has been sanctioned by the Government.

(2) Within the sanctioned project estimate, the corporation should have full power to execute the project, without any outside interference. It should not have any power to modify the scope of the project. That power should vest only in the Government.

(3) If the project estimate is likely to be substantially exceeded, the corporation must come to the Government for revised sanction.

(4) After completion of the project the corporation should have full powers to run its commercial or quasi-commercial activities, irrigation, navigation, power and flood control.

(5) In regard to non-commercial activities like soil conservation, afforestation, etc., schemes should be submitted by the corporation to the Government for approval, before they are taken up. Such schemes should be implemented only to the extent approved by the Government.

(6) The budget estimates of the corporation should be subject to Government's approval.

(7) Power should be taken by the Government to give directions as to the exercise and performance by the corporation of its functions somewhat on the lines of the Air Corporations Act, 1953.

Although there is a great deal to be said for an autonomous corporation of the type envisaged by the Committee, it is necessary to point out that the question cannot be settled by purely theoretical considerations. The fact must be faced that the defects, shortcomings, and irregularities of Government-sponsored projects which have been brought to light in recent years owe their discovery only to the persistent vigilance on the part of Parliament and to the work of the Estimates Committee. The question is whether these defects could have been avoided had there been less Parliamentary control or less inquisitorial examination. Or to pose the same question in a different form, have these defects arisen from lack of freedom for the men in charge of these projects or from a surfeit of it? The popular view is that it is not Parliamentary control but lack of it, that explains the irregularities in the administration of these projects. The fact is that the corporations should have freedom to manage well but none to manage their affairs wrongly. Perhaps, only experience will show what degree of freedom could, consistent with efficiency, be conferred on these corporations. In the meantime, it would be wise to refrain, as the Rao Committee suggests, from interference with their day-to-day working, though Parliament cannot be expected to divest itself of all responsibility, nor the Government of all powers, for the proper functioning of these bodies. After all, the corporations should be answerable to those who have provided the capital, just as those in charge of public joint-stock companies are ultimately answerable to their shareholders. In the case of the Corporations under reference, Parliament should have the same status as the shareholders, the Central Government that of the board of directors, and the administrative body that of a managing agent. From this point of view, it is the way in which the Government and Parliament discharge the functions regarding budgetary control and directive powers—the last two suggestions in the Committee's report quoted above—that will determine the success of these corporations.

ELECTRICITY INDUSTRY

The industrial atmosphere in Bombay has, in recent months, been surcharged by the controversy relating to the future of electric supply in this region, thanks to the Bombay Government's stand on Tatas' request for installing a 100,000-kw. thermal plant at Trombay. The Government has permitted the installation of only a 50,000-kw. plant. The effect of the Government's decision on the future supply of electricity in this region, and a host of other connected issues, figured prominently in Mr. K. G. Milne's address at the annual meeting of the Bombay Suburban Electric Supply Ltd. Mr. Milne prefaced his remarks by a reference to the failure of the monsoon in 1951, and its adverse effects on the Bombay industrial sector. He estimated that, irrespective of the monsoon's vagaries, this region will have to face a shortage of 100,000 kw. before 1957. Any possible failure of the monsoon would only worsen the region's precarious electricity supply position. Viewed against this background, it will be generally regretted that the Bombay Government should have refused to accede fully to Tatas' request for permission to install two plants of 50,000 kw. each. Mr. Milne pointed out, in this connection, that while both units would cost Rs. 13 crores, the installation of only one unit would cost Rs. 9 crores and not proportionately less. He estimated that the "extra Rs. 4 crores which would be spent on the second unit at Trombay would add only one-twenty-fifth of an anna per unit to the cost of Bombay's power." He rightly argued that this additional cost was a "small premium to insure that Bombay does not again suffer from a power famine." Surely, this additional cost would be regarded, under any system of actuarial calculations, as a most attractive premium, considering that the recent power famine resulted in an estimated loss to the national economy of some Rs. 60 crores in such a short period as nine months. No Government with some foresight will fail to appreciate this simple point and act so foolishly as the Bombay Government is doing at present.

The two ostensible grounds on which the Government has refused Tatas' claim are: (1) There is no evidence to show that there is sufficient demand for all the additional capacity that Tatas' want to install; and (2) the Koyna scheme, which will bring additional power supply to this region, should not be endangered by excess of supply. Mr. Milne rightly suggested that it would be difficult to adduce proof of demand of the kind that would convince the Government. So far as the Koyna Project was concerned, he was convinced that there was "plenty of room both for Koyna and for Trombay." He regarded that it was extremely unlikely that the Koyna scheme would be completed before 1960; a far less ambitious scheme, the Utran scheme (15,000 kw.), took seven years for the Government to complete. He warned: "If Tatas' plans are halved I fully expect that there will be a severe shortage of electricity in 1957, and whatever Government there may be in Bombay at that time will have to answer for the omissions of the present Administration." It is to be hoped that the Government will pay heed to this friendly warning and drop its ostrich-like policy.

Mr. Milne next dwelt on the future of the electricity industry in India. He emphasised, in this connection, the need for increasing the permissible rate of return on investment in the industry, in order to bring it into line with the present-day cost of money. Electricity undertakings have been pressing for an increase of the rate from the present five per cent. to six per cent. This is indeed a very moderate request, considering that the Bank rate, as well as the rates of interest paid by the Governments themselves have gone up since the rate of return was fixed. Further, working costs of electricity suppliers have also gone up. Apart from the general wage bill which has swelled to large proportions, there is the increase in cost of materials. Mr. Milne quoted figures to show that, while the prices of switchgear and transformers have increased 400 per cent. since prewar years, the cost of copper wire has increased by 1,000 per cent.; these articles are only two of the most important items of the capital equipment of electricity suppliers. Another problem of "formidable proportion" is double taxation of the industry which arises from the difference between the quantum of depreciation allowed under the Indian Income-tax Act and that fixed under the Electricity (Supply) Act. It would appear that while the authorities are willing to appreciate the force of these contentions, they are in no mood to secure speedy legislative sanction, on the ground that Parliament is so preoccupied with several other subjects that it is not likely to find the necessary time for carrying out a few amendments to the Act. This is regrettable in view of the fact that, while the shortage of electricity is a scourge that afflicts all parts of the country, no attempt is being made to enable private electricity undertakings to play their role in the economic development of the country.

INDUSTRIAL HOUSING

The Government of India has revised the subsidised housing scheme for industrial workers which was announced late last year. This revision is welcome chiefly because the new scheme extends the subsidised housing scheme upto 31st March, 1956, with a view to cover the rest of the Five-year Plan period. The effect of this decision is that it will be possible for State Governments, housing boards, employers and co-operative societies for workers to plan ahead for a longer period. The Five-year Plan provides for a sum of Rs. 38.5 crores in grants and loans for the construction of houses to industrial workers. According to the new scheme, 22,000 tenements estimated to cost Rs. 7.67 crores will be constructed during 1953-54. This sum, however, includes the previous year's commitments and the budgeted grant for this year. It is common knowledge that, although the 1952-53 scheme set the target at 28,500 tenements at a cost of Rs. 7.16 crores, the actual grants sanctioned were for 18,446 tenements only, at an estimated cost of Rs. 5.67 crores, as the scheme was brought into effect only late last year.

In several respects, the new scheme is more flexible and attractive than the old one. Co-operative housing societies, for instance, will now get as much as 50 per cent. of the cost, by way of loans, as against 37.5 per cent., under the original scheme. Further, loans are recoverable in 25 instalments, and not, as formerly, in 15 instalments. The subsidy, however, will be 25 per cent. of the cost, as in last year's scheme. Thus the concessions will encourage co-operative societies to extend their activities in the sphere of housing.

A significant departure from last year's scheme is the provision which permits 10 per cent. of the tenements to be two-roomed to meet the needs of the workers drawing pay of Rs. 150 or above per month. Under the last year's scheme, all the tenements had to be single-roomed ones. This step will help workers with big families to enjoy the benefit of larger accommodation. It will also help workers belonging to lower middle class. The amount of subsidy in the case of two-roomed tenements will be the same as that for single-roomed tenements. Loans will, however, be based on the standard costs of two-roomed tenements, laid down in the scheme, in accordance with the prescribed percentages, namely, 50 per cent. for State Governments, statutory housing boards and co-operative societies, and 37½ per cent. for employers. The new scheme has made it clear that ownership of tenements constructed by employers or workers' co-operatives will vest in them, subject to their fulfilling the terms and conditions of the agreement they will have to execute with the Government.

The new scheme also indicates the rates of standard rents for various types of tenements. They range from Rs. 10 to Rs. 30 in the cities of Bombay and Calcutta, and from Rs. 10 to Rs 19 in other cities and towns. The rents are inclusive of municipal rates and taxes. The maximum standard rents for different houses, after taking into account sinking fund and maintenance charges, municipal rates and taxes in the original scheme were Rs. 10 per month for one-room single-storeyed tenements, and Rs. 17-8 for one-room multi-storeyed tenements. The new scheme reiterates its earlier suggestion that the State Governments should try to persuade local authorities to allow a rebate of at least 50 per cent. of the general rate or house tax, for an initial period of 10 years, to facilitate reduction of rents, so that the workers will not feel the burden, and the rents may be within their capacity to pay. It remains to be seen whether the local authorities will be able to accede to this request, considering that their financial position is none too affluent, though they ought to be able to fulfil the Central Government's hope that the local authorities will provide schools, dispensaries and other amenities for the housing estates.

INSURERS' PROBLEMS

The practice of quoting differential rates of premium by insurers was condemned by Mr. Purshotamdas Thakurdas, Chairman of the Oriental Government Security Life Assurance Company, Limited, at the annual meeting of the Company, held this week. Some insurers, notably foreign insurers, quote lower premiums for what they regard as first class lives, thereby providing a new attraction to people with better means. This practice, Mr. Purshotamdas contended, was only a camouflage for the reprehensible practice of rebating. He emphasised that the practice was "repugnant to the very idea of insurance," inasmuch as insurance implied co-operation and the payment of the same rate of premium by the rich or the poor; the rate should vary only with the "age and state of health as revealed by medical examination." Now that insurers had been asked by the Life Insurance Council to discontinue the practice, he hoped that companies would appreciate the good that the business would derive by observing this directive. He also commended the Code of Conduct which would, when implemented, go a "long way towards eradicating other evils which unfortunately permeate the business of life insurance."

The Chairman subjected the Estate Duty Bill—those sections in the Bill which impinge on policyholders—to a critical scrutiny. He welcomed the concession that the moneys payable under an insurance policy effected by a deceased on his life for the purpose of paying estate duty would be exempt from the duty. But he rightly held that the other clauses, which relate to insurance, give either meagre or illusory relief. He was voicing the feelings of not only insurers but all existing and prospective policyholders when he said that the exemption limit of Rs. 5,000 for life policies and a similar limit for policies earmarked by a policyholder in respect of the marriage of his female relatives were much too low to constitute any real relief. The clauses relating to gifts of life insurance policies, he was afraid, might, in actual practice, give only "illusory relief." He did well to emphasise, in so many words, that it was no use copying elaborate legislation from advanced countries where social practices and State policies were entirely different. This is a wholesome warning in view of the fact that the Estate Duty Bill is modelled after the Act in Britain where every individual is protected by the State from the cradle to the grave. And where it differs from this model, it is only worse for the difference. Apart from this consideration there is a great deal to be said in favour of a high limit of exemption from duty—Mr. Purshotamdas said it must be at least Rs. 1 lakh—for insurance policies in this country where it is not so much the State as the individual himself who has to provide against risks such as unemployment, sickness, old age and death.

The Government of India, as was reported in these columns a fortnight ago, has deputed a team of three officials to study the progress of India's first newsprint project, the National Newsprint and Paper Mills Ltd. (Nepa Mills) at Nepanagar, near Khandwa (Madhya Pradesh). The team consists of Mr. C. R. Ranganathan, President, Forest Research Institute, Dehra Dun, Dr. A. Nagaraja Rao, Industrial Adviser to the Government of India, and Mr. C. V. Narasimhan, Deputy Secretary, Union Ministry of Finance. The team arrived in Nagpur on Thursday last week and has been holding disussions with the State's Minister for Industries and officials regarding all aspects of the working of the project and will determine the further steps necessary for its fruition.

OFF THE RECORD

(By "ROVER")

FROM the dawn of history, humanity has always paid heavily in blood, toil, sweat and tears for the follies and blunders of vain and obstinate rulers. Even democracy, with its many checks and counter-checks, has not succeeded in changing this position. Where many of these checks and counter-checks are not operative, the evil is as great as it was under the wholly autocratic and irresponsible rule of a single individual. Democracy itself stands in danger of being discredited as a system of government, unless we can devise some method which, though it may not cure puny politicians with more self-importance than sense of short-sightedness and an inflated ego, would at least serve to make them hesitate and weigh the consequences of launching on a given line of action, even after being duly warned by the saner elements in the society of the dangers inherent in their pet policies.

This should not be very difficult of achievement. Fortunately for us, common citizens, though the politicians are highly glamourised by some of their own silly and unworkable ideas, they are never so deep in love with them as to forget their own safety. They may stake the happiness and well-being, the very food and shelter, of millions of humble citizens, who are completely at their mercy, so long as they are in power. But the more obstinate they are than even the much maligned mule and difficult to be made to abandon a false position once they have dug their toes in, the greater would be their anxiety to renounce even their cherished convictions, when it is made clear to them that the most likely consequence of persisting in their folly would be the giving up of office.

It is easier for fish to live out of water than for some of our ministers to breathe out of office. As an out and out cynic of my acquaintance once remarked to me, even Rama, when it came to a choice between his crown and his dearly loved consort and his unborn children, kept the crown and let his queen and children go. Undoubtedly, this is an exaggerated and even a perverse view to take of the incident as narrated in the greatest epic of our country, but there is, nevertheless, the proverbial grain of truth in it to serve as a pointer, in a world which itself is getting more cynical and indifferent to finer values every day.

I admit it is not always possible to extract the full price of the damage they cause by way of punishment for the many sins of our politicians who manage to usurp the reins of power. Hitler and Mussolini paid with their lives for theirs, but what is the value of their paltry lives as compared with the untold sufferings and slaughter they heaped on the vast mass of humanity. There could never be full recompense for the mischief caused by even comparatively insignificant personalities, strutting on the political stage in some small corner of the globe, such, for instance, as the State of Bombay in a country called India, tucked away somewhere in the Continent of Asia on this vast planet of ours.

Besides, I am by no means a bloodthirsty savage viewing all punishment as just retribution for crimes—moral, political or economic. All I want is to eliminate progressively the irresponsibility of some of our petty-minded politicians, arising out of their inordinate self-love and exaggerated idea of the infallibility of their own judgment. To do this we have to discover the weakest spot in their pretty tough system and to assail them there. To make them behave better and to persuade them to desist from indulging in every whim of theirs, we have to put in their hearts the fear, not of God, but of losing their precious office, if their whim is later proved by results to be worthless and ruinous.

I am afraid I have dealt too long in generalities to prevent you from conjecturing that I am leading up by these mild and modest denunciations to Mr. Morarji Desai, Bombay's Chief Minister, and his policy of total prohibition. But you would be entirely wrong if you took a flying jump from the thesis on ministerial responsibility I have been trying to build up brick by brick, to land on Mr. Desai's head and his desperate struggle to banish alcohol from his sacred domain. I concede that it would be a very logical surmise on your part, considering that it is the sorest spot in our administrative set-up to-day and the most unpopular among the many unsound and unpopular policies of the Government in this State to-day. But my target on this occasion is more modest and the Minister whose vagaries have caused all this agitation in my otherwise placid and peace-loving mind is also not so exalted as the Chief Minister of the State. To come to the point, without any more camouflage, I may as well state that the Minister I had in mind when I raved about punishing those guilty of pursuing wrong policies to minimise such mistakes in the future was Dr. Jivraj Mehta, the State Finance Minister and the policy, for which I want that he should be pilloried, is that pet financial subject of his, the multi-point sales tax.

It is now almost certain that this excursion into the unexplored realms of public finance by a novice in politics, whom circumstances and certain vagaries of our public life had pushed up to a singularly responsible position, is going to be abandoned. Some politicians, while in office, are apt to be more blind than the proverbial bat, but the mischief resulting from this ill-advised measure even to the Government's own revenues is so colossal that even a bat could not have missed noticing it. Had the damage been confined to only trade and industry without affecting appreciably the anticipated return from this hydra-headed monster that Dr. Jivraj Mehta had fathered, the Government might have viewed the result with complacency. But both the budgetary and political consequences of this ill-conceived measure are of such dimensions that, unusual as it is for any Government to change the very structure of a tax measure, contribution from which forms the biggest item in the State's budget on the credit side, in the middle of a financial year, the Government of Bombay is being forced to take this step. I leave it to you to compute the loss of face involved in such an undertaking for a Government which has made a fetish of prestige during the past.

I want you to recall all the things which happened after the publication of the ill-fated Bill embodying the proposal to change the basis of this tax. This document, together with the Rules and the schedules, has undergone such changes that what is in force to-day is a tattered and syncopated version of the original measure. It was severely attacked in the Assembly and also by the Press and the public so bitterly that it would have opened the eyes of any Government which could claim some degree of sensitivity to public opinion. But more than all this I want you to recall that the various provisions of this unfortunate piece of legislation were subjected to a close analysis by the business community and condemned as likely to lead to disintegration of commerce in the State, transfer of business to other centres of trade outside the State resulting in an economic loss to a large class of people, which would be far heavier than the addition it would bring to the State revenues. All this was endorsed by the topmost leaders of the business community, known as much for their integrity and experience as for their moderation, like Mr. Purshotamdas Thakurdas and Mr. Pranlal Devakaran Nanjee from Bombay and several other equally eminent business men from Ahmedabad. With infinite patience, various organisations of trade and industry urged on the unwilling State Finance Minister the need for caution and more careful consideration before he took this fatal step. But fresh from his victory at the polls, this Minister, who knew nothing about the delicate structure of trade and industry in this State built up by the labours of many generations, chose to snub all his well-meaning advisers.

As confidently predicted by many shrewd judges of character and of public and economic affairs, this matter has now reached the stage where the Minister is compelled by the force of events to retrace his steps. He is not even penitent about this serious lapse of his. He would even now not revert to the old single-point sales tax but has discovered a face-saving device in a hybrid form of levy which goes by the name of two-point sales tax. This may be an improvement on his original mistake, but I am not concerned here with the comparative merits of either form of this unpopular tax. I am more concerned with the fact that a mistake, which was duly and repeatedly pointed out to him by responsible public leaders, was committed by him and as a result of this a considerable amount of damage was done to the economy of the State as a whole. It must also be borne in mind that this damage cannot be undone by merely retracing a step or two and tacitly admitting the miscalculation. Like every other citizen in a democracy, I want to assure myself that Ministers in the future will not persist in making such mistakes with impunity and in utter disregard of informed public opinion.

In other older democracies, a safeguard against wrong and injurious policies wantonly pursued by ministers is provided by the establishment of a healthy convention that a minister whose policy in any given case is proved to be wrong by results resigns his post and goes, at least temporarily, into the wilderness. There is joint ministerial responsibility in these more advanced countries, but this does not come in the way of the other ministers reconciling themselves to the sacrifice of a colleague, when that colleague, for some reason, has come a cropper with regard to any of his ventures. Joint cabinet responsibility should not, therefore, prevent us from establishing such a convention here also. There is no reason why we should continue to tolerate failures or people with defective judgment in our Governments or regard a place in the ministry in the light of providing an opportunity for training in politics to people who have spent the best part of their life in other walks of life. In all other careers a man has to pay for his mistakes; let those who seek a career in politics accept this salutary rule and pay for theirs.

There is nothing more crippling for our young democracy than our easygoing habit of regarding ministers as honorary public servants who are doing a favour to the community by accepting a position of power and authority and, therefore, entitled to make mistakes at heavy public cost. It would be equally fatal for the future of democracy, which has not yet been firmly established in our country, to indulge in the luxury of promoting people to places of greater responsibility merely because they have made a mess of a less important task. If the electricity muddle in the State of Bombay which cost the State, as computed by a competent economist, just about one hundred crores of rupees in cash and a good deal more in human distress arising from increased unemployment, had not been so easily overlooked and forgiven by the citizens, the Minister responsible for it would not have got a second chance to create a fresh multi-point sales tax calamity. It is not enough that the multi-point sales tax, which has proved disastrous to the ordered economy of this State, should go; with it must go also the man responsible for levying this tax.—*All Rights Reserved.*

NATIONAL PRODUCTIVITY CENTRE TO BE SET UP

RECOMMENDATIONS OF EXCISE COMMITTEE

(From A Special Correspondent)

NEW DELHI, *27th July*

THE signing of armistice in Korea has almost synchronised with the eventful meetings between the Prime Ministers of India and Pakistan at Karachi this week. Whatever be the final outcome of these meetings, one thing is certain; there may not hereafter be a resumption of vituperative propaganda by Pakistan against India. By and large these two countries will hereafter try to settle their differences in a peaceful atmosphere. The one tangible result of this improvement in the relationship between the two countries will be a distinct reduction in the defence expenditure of both the countries. In the first Partition year, namely, 1948-49, India spent Rs. 146.06 crores on defence, which has gradually gone up to Rs. 199.84 crores in 1953-54. With better relations with Pakistan, it may be possible for this country to scale down this expenditure by about 10 to 15 per cent. India can utilise a part of the amount thus saved to build up its defence industries, while the balance can, with advantage be devoted to the expansion of key industries.

DELHI LETTER

The Government of India is very much concerned with the growing unemployment in the country. The authorities are anxious to do something to mitigate this problem. They are, therefore, likely to take steps to intensify the development of industries, large and small scale, and also to plan and implement small irrigation projects which can provide more employment. Time is now considered favourable to carry out these expansion projects. The Korean armistice is likely to ease the capital goods markets in foreign countries to a large extent from the point of view of both price and the period of delivery. India's foreign exchange position has been satisfactory for the last many months on account of the improvement in the food and cotton supply position. It is, perhaps, these factors that prompted the Commerce and Industry Minister of Government to observe at Madras this week that the Centre would hereafter pay more attention to the establishment of new industries, as also to the expansion of old ones. With the return of the Prime Minister from Karachi, it is likely that both the Government and the Planning Commission will concentrate more on the tackling of domestic economic problems.

Productivity in Industry

Labour productivity studies are likely to be introduced on a greater scale than hithertofore in Indian industries in the coming months. This subject will be discussed from various angles at this week's meeting of the Standing Labour Committee. The Committee will consider the establishment of a National Productivity Centre which will be entrusted with the work of conducting productivity studies in selected plants, organise practical training courses and assist in applying modern industrial techniques with a view to demonstrating to Governments, employers and workers the benefits which follow from the application of such techniques. Since working conditions in an industry have an important bearing on the general turnover, the Centre will study these aspects and suggest improvements. It might, in addition, organise courses in cost accounting and in the application in industry of statistical methods. Besides, it will give advice, on request, to Governments and employers concerning the organisation, design and layout of new plants. Visual aids, travelling exhibitions and other methods will be adopted for creating public interest in raising production. This organisation will also assist in the development of existing training facilities in universities, in technical colleges and other institutions. It is possible that labour might feel apprehensive that greater productivity would lead to retrenchment and consequent unemployment, but Government is of the opinion that labour should be fully protected from any precipitate action. In fact, on any question of modernisation of plant and machinery, Government has always this aspect of the problem foremost in its mind, especially at the present time when the unemployment problem has been gathering momentum.

Expert Committee on Excise

The rate of duty on all spirituous medicinal preparations, whether they are of restricted or non-restricted category, should be Rs. 5 per L.P. gallon. This rate would be applicable only to the preparations manufactured in bond with the exception of a few recognised institutions. For preparations manufactured outside bond the rate of duty should be higher, i.e. Rs. 17-8 per L.P. gallon. Homœopathic dilution if done under bond, should pay duty at the rate of Rs. 5. The rate of duty on toilet preparations or essences containing alcohol and manufactured under bond should be Rs. 5. For *Ayurvedic* preparations of the restricted category the rate of duty should be Rs. 3 per bulk gallon of the finished product. Other *Ayurvedic* preparations should be free of duty. These are some of the recommendations of the Expert Committee (Excise) appointed by the Government of India some three years ago.

This Committee, presided over by Mr. A. N. Sattanatham, was asked (1) to report on measures to bring about uniformity in the States in the rates of duty on spirituous medicinal preparations of recognised therapeutic value which cannot be used otherwise than as medicine and to evolve a uniform list of such preparations, making a distinction between (a) preparations made out of rectified spirit and other alcohol; and (b) preparations containing self-generated spirit, (2) to prepare a uniform list of medicinal and toilet preparations, which can be put to other than medicinal use, and which should be excluded for the purpose of the concessional rate; and (3) to prepare a uniform code containing rules for adoption by all States relating to manufacture, sale, inter-State import and export of rectified spirit used for scientific and industrial purposes or used in medicinal and toilet preparations, etc. The Committee has also recommended that all manufacture should, as far as possible, be in bond and the concessional rate of duty proposed by the Committee will be applicable to manufacture in bond only. The Committee is of the opinion that there should be no restriction whatever on the movements of drugs and preparations which are not included in the restricted category. Products imported should be subjected to the same restrictions as products manufactured in the country. The Committee has suggested that, while it is desirable in the interest of prohibition, to have control over possession, storage and transport of molasses and *mohwra* flowers, the State Governments should be requested to make these articles easily available to trade for genuine industrial purposes.

Success of State Loans

The Finance Ministry at the Centre and the Planning Commission feel greatly encouraged by the commendable success of the state Loans. They have particularly taken note of the method and manner by which Mr. C. Rajagopalachari, Chief Minister of Madras, has been able to collect nearly Rs. 11 crores by way of public subscriptions as against Rs. 5 crores invited. The direct approach to the public which this Chief Minister had initiated a year ago, was somewhat intensified this year with gratifying results. The Government of India feels that Mr. Rajagopalachari has now established a successful precedent which could hereafter be adopted with considerable advantage by the popular Chief Ministers of different States in the country in the coming years.

During the last one or two years, the Government of India has been somewhat worried at the "extravagance" of some States in taking up more development projects than they could finance without difficulty and without undue dependence on the Centre. For instance, certain States like Madras had overdrawn on the Centre during the first two years of the Plan. During 1950-51, Madras received Rs. 16.4 crores from the Centre by way of assistance for financing the Plan, as against Rs. 20 crores earmarked for the five-year period. Now that Madras has been able to collect a sizable sum by way of loan from the public, the ways and means position of that State is likely to ease itself considerably during the coming months.

PAKISTAN NOTES

INDO-PAK RELATIONS

PRIME MINISTERS CONFER

THERE will be widespread satisfaction on the report from Karachi that the three-day Conference of the Prime Ministers of the two countries, which concluded on Monday last, was marked by a note of cordiality and a feeling of optimism. The two Prime Ministers have resolved that "every effort should be made not only to resolve the existing Indo-Pakistan disputes, but also to promote goodwill and friendship between the two countries." This must improve the chances of establishing harmonious political and economic relations between India and Pakistan.

The important questions which were considered at the Karachi Conference, which was purely informal in character, were: Kashmir question, evacuee property issue, canal waters dispute, and problems relating to East and West Bengal. The Kashmir question was examined from various angles. Although there was no definite progress towards a solution, it is expected that the question will be taken up at New Delhi when the Prime Ministers meet again. Throughout his talks, the Pakistan Prime Minister, it is reported, emphasised top priority being given to the settlement of the Kashmir dispute.

Since the evacuee property issue affects the lives of as many as ten million people in the two countries, the two Prime Ministers gave special consideration to it. An important outcome of the discussions was the decision to re-examine the issue *de novo*. As a sequel to this decision, the Advisers to the Ministries of Rehabilitation of the Governments of India and Pakistan commenced detailed discussions on Monday last. Both sides, a Press report avers, have expressed their views on the larger question of the desirability of the two Governments undertaking responsibility for the evacuee property left in the two countries. Inasmuch as this is a matter of major policy, any agreed solution must naturally rest on further discussion. Meanwhile, the issues relating to movable property, pension and provident fund of evacuees have been taken for consideration. An agreement has already been reached between the two Prime Ministers in regard to the care and maintenance of Sikh shrines in Pakistan. Properties of *Gurdwaras* are still intact and the Pakistan Government has agreed to safeguard them. Agreement has also been reached, in principle, that the boundaries should be readjusted so as to eliminate the enclaves in the two Bengals as far as possible.

On the canal waters dispute, both the Prime Ministers have expressed their satisfaction over the present arrangement to deal with the problem. Under the arrangement, the consultative machinery, established by the two Governments some time ago, is supervising the regular supplies of water to Pakistan. The larger question of utilisation of the water of the Indus basin is under consideration by the technical experts of the two countries under the ægis of the World Bank. The next meeting of these experts is to be held in New York early in September, 1953. Pakistan is reported to have appreciated India's viewpoint—a welcome sign indeed—that India may, in the future, have to take increasing quantities of water to develop the barren areas within its own territory.

Tea Production

According to a report from Dacca, the Pakistan Tea Board has constituted a sub-committee to examine the question of augmenting tea production in the country to 80 million lbs. per annum, as against the present level of about 53 million lbs. The need for a substantial rise in the output has arisen from two important factors, namely, (1) steady rise in domestic consumption and (2) urgency of maintaining a high level of exports. Tea, it may be noted, is one of Pakistan's major foreign exchange earners. The Board has also decided to appoint a Tea Officer at Karachi with a view to maintaining liaison with the Central Government so as to ensure quick decisions on important matters. It has also decided to appoint a sub-committee consisting of representatives of exporters, shippers and the State Bank of Pakistan to examine how best the gardens could secure reasonable price for their produce and the exporters might be enabled to purchase their requirements.

BRITAIN'S TRADE WITH CHINA

ANXIETY TO STEP UP EXPORTS

(From Our Own Correspondent)

LONDON, *19th July*

BRITAIN and British shipping companies, in particular, are the villains of the piece, in which Germany and other West European countries also play unenviable roles, in the report just published by the U.S. Senate Sub-committee on the growth of China's trade. The report claims that exports through Hong Kong into Communist China were 178 per cent. higher for the first five months this year than for the similar period in 1952, but that both import and export trade with the whole of Western Europe are now on a higher level than since the Communists gained control of China.

LONDON LETTER

The U.S. Committee regards this trade as altogether iniquitous, but the British Government have never taken that attitude, although they enforce the prohibition of export of any warlike stores to China. The American report is certainly not correct in saying that China "carries on trade only in those items which assist her war effort"; this country is as much concerned as the Americans that warlike material should not go out to be used against United Nations forces, but neither does this country regard itself as at war with China. The Foreign Office attitude is indeed cognisant of the fact that the entry of China into the Korean War was the product of a set of special circumstances, that the war is confined to Korean territory, that neither side (Koreans North and South possibly apart) wants the war and is anxious—with appropriate face-saving—to end it, and, very importantly, that for Britain the China trade has always had a special significance, from the days that Lancashire prosperity could be said to depend on an extra inch on the length of every Chinaman's shirt.

The commercial and financial communities in this country recognise the vast potential in the trade with China and, though the risks are great, profits are high and competition to do business is keen. Standing somewhat aloof are the old-established China companies—those which traditionally regarded the country as a colonial paradise and who cannot adapt themselves to doing business the way the Chinese want. But many new companies and organisations have risen to take their place. Foremost is the British Council for the Promotion of International Trade, which, under Lord Boyd-Orr's chairmanship, is anxious to develop exports to China to the limit. This Company does not import from China, but seeks to assist the Chinese in making contacts with interested importers so that the money can be provided to pay for British exports. One of the largest British imports is frozen eggs, but there are also groundnuts and the traditional pig-bristles.

Formation of Companies

Several small companies were formed a year ago after the conference of Iron Curtain countries in East Berlin, at which China was strongly represented. A good textile export to China resulted, but many of the goods which China wants are those engineering products in greatest demand by all Britain's customers and, if there is a suspicion that the goods might be used for some purpose connected with armaments, then the export is prohibited. Much trade has been lost to West Germany as a result (despite N.A.T.O.)! At the Chinese end, Peking tried to channel all its trade with West Europe through an office set up in East Berlin and British traders who would not deal that way could not get any business. But the Chinese soon saw that East Berlin was not a practicable centre for British companies and that a more direct channel was necessary. In Peking they formed the Chinese National Import-Export Corporation and set up an agency in Hong Kong—the China Resources Company. British companies prefer dealing with the Hong Kong agency, but the Chinese are anxious to deal directly in Peking as much as possible, and it is there that the British Council mentioned above has just concluded some negotiations which will no doubt rouse the U.S. Committee to even greater wrath.

From the P. and O. downwards, the British shipping companies trading with the Far East are anxious to see the China trade developed fully once again and they have been prepared to take considerable risks to keep their vessels running to Chinese mainland ports. Interference from Formosa is now negligible. Once the Korean War is ended the trade with China will go up tremendously, since a wide range of Chinese requirements will come off the forbidden list. The commercial and financial channels for this prospective trade are not yet properly established and both sides have got to learn how to do business with mutual trust, but the groundwork for all this is being laid now.

Costs and the Export Surplus

LONDON, *25th July*

The great number of outstanding wage demands and, in particular, the demand by the engineering unions for a 15 per cent. increase, has prompted the Chancellor of the Exchequer, Mr. Butler, to issue a warning to industry that substantial cost increases, unaccompanied by productivity increases, may throw this country's balance of payments into deficit. He said that a 10 per cent. wage increase might mean a 4½ per cent. increase in export prices.

Mr. Butler's concern arises from the fact that, whereas in 1952 the country had a balance of payments surplus of the order of £300 million, the prospect for this year is only some £100 million—all of which is accounted for by U.S. defence aid. The volume of imports has increased this year, as compared with last, and is now well above the average for 1951; an 18 per cent. increase over the average for 1950 compares with a *fall* in the volume of exports of some 4 per cent. Fortunately, the terms of trade have in the past two years been moving steadily in this country's favour and the improvement of 7 per cent. between 1951 and 1952 has been followed by a further improvement of 9 per cent. over the past year. On imports alone, Mr. Butler reckons that the gain over the past two years has been some £200 million, while taking imports and exports together the improvement over the past year alone is undoubtedly greater than this.

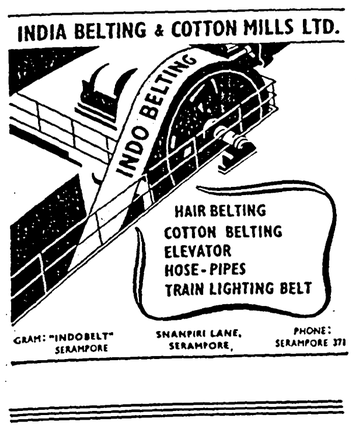
The trade figures for the past four months, March to June, show imports (c.i.f.) £1,167 million, exports £844 million, and re-exports, £35 million. The trade deficit thus comes out at £288 million but, if imports are converted to an f.o.b. basis, the deficit may be put at some £170 million or an annual rate of some £500 million. The Government are undoubtedly expecting an increase in net invisible income to offset the whole of this trade deficit of £500 million, so that the net receipts from America by way of defence aid represent a true surplus.

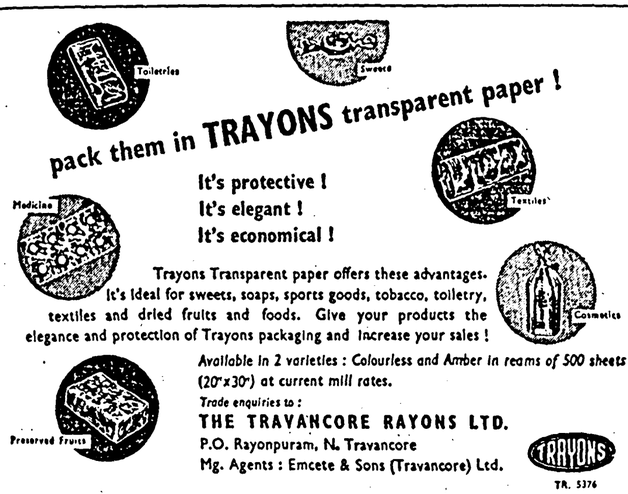
If the present relationship between import and export prices and the present volume of trade is maintained, the balance of payments surplus for next year will be substantially higher than this year, since we are still reaping the benefit of the improved ratio between import and export prices. But there is no immediate prospect of a surplus exclusive of defence aid—the continuance of which cannot be assumed—to the total of some £300 million or £350 million a year which the Chancellor of the Exchequer considers is necessary to finance both the rise in raw material imports which a developing economy will require and to enable that overseas investment which is necessary for the development of the sterling area.

Prospects for Export

There is some prospect that exports will continue the improvement they have made in the past six months over the last half of 1952—an improvement worth £70 million per annum, but Mr. Butler no doubt relates this sort of figure in his mind with the increase in the national wage and salary bill of some £550 million during 1952. It does not follow that this increase (which reflects an increase in workers' earnings of about 8 per cent. over the year) must be passed either in whole or in part on to export prices, but the latter are unlikely to escape some share of it.

Retail prices have not been going up recently to anything like the same extent as wage rates. This year the rise in the cost of living has been 2 points which is less than 2 per cent., and compared with a year ago the increase is a little over 3 per cent. But wages are in fact still in the process of catching up with prices. Over the past six years, retail prices have risen 40 per cent. and wage rates 35 per cent. It is just this time lag between wages and prices which prevents the unions from taking warnings such as Mr. Butler has just given too much to heart. They are aware that concessions they make now will not necessarily affect selling prices for some time to come, by which time other factors may have intervened. Nevertheless, the gist of Mr. Butler's warning must be taken to heart both by the unions and industry: it is that the margin between exports and imports is, in relation to the vast volume of this country's overseas trade and its sterling area commitments, still much too fine.—*All Rights Reserved.*





PUBLIC FINANCE IN EUROPE

SOME RECENT TRENDS ANALYSED

IN recent years, in advanced countries, budgetary policy has become a prime means of controlling the course of a national economy. It would, therefore, be interesting to examine the stage which the development of this policy has reached in Western Europe now. This has been done by Prof. R. C. Tress in an article in the July, 1953 issue of *Lloyds Bank Review*.

Any budgetary or public finance policy must be based up on taxable capacity. For such purposes as defence, administration and capital investment, the State cannot take more from the total national product than what is left after the minimum consumption needs of the people have been met. But, so far as the raising of tax revenue is concerned, the effective limits to taxable capacity are imposed by the quality of the public administration, the education and political sense of the taxpayers and, in the case of federal systems of government, by constitutional restrictions.

The income-tax levied at a progressive rate, on assessed personal incomes, is the most effective system for raising revenues in a sophisticated and politically stable society. As a source of revenue, it is more productive than the poll tax or a charge on the possession of land, only where the development of trade and industry yields a large income distinct from the income yielded by land and where the distribution of income is more varied than the simple division between the landed rich and the poor peasants or landless workers. Even then, the income-tax proves to be a successful tax only in a country whose citizens are able and willing to keep books and to make returns, that is, literate and law-abiding, and whose administrators are efficient and incorruptible enough to make the assessment and tax collection properly. Hence, it is very difficult to make income-tax a successful raiser of revenue in backward countries. The tax presents difficulties even in Western Europe. Thus, deliberate tax evasion is a serious problem in France, where a progressive personal income-tax was introduced only four years ago. The incomes of wage and salary earners are on the whole reported correctly by their employers to the tax authorities, but the self-employed and professional classes declare their own incomes and their deliberate understatements are well known. The inequality in the distribution of the tax burden and the reactions resulting from this evasion have been important causes of the inflationary situation that has prevailed in France.

The progressive personal income-tax is still unknown in Belgium, Italy and Spain, which have a "schedular" tax system. Under this system, different but unprogressive rates are applied to each of a number of scheduled sources of income. A progressive charge on each person's total income provides no more than a complementary addition. It is only in Denmark, the Netherlands, Norway, Sweden, the U.K., the U.S. and Canada that income-tax is the largest single source of revenue. Even in these countries, income-tax appears to be reaching its peak and two other taxes, namely, taxes on commodity sales and on business profits, are becoming more prominent.

Commodity Taxes More Burdensome

As regards taxes on commodities, that is, indirect taxes, two developments have taken place. First, there is an increased use of "purchase", "sales" or "turnover" taxes, which are a small number of rates of tax, each of which is applied to a wide range of goods and services. Secondly, taxes on tobacco and alcoholic beverages have become specially important. The reason for these developments is the same as that which made the income-tax very important earlier, namely, that they are an efficient engine of finance. But, apart from expediency, income-tax claims certain moral and political virtues. Can commodity taxes do the same? It is argued that, whereas income-tax leaves the taxpayer free to decide upon the manner in which he cuts down his real consumption, a commodity tax changes the price of the particular commodity relative to the prices of other commodities and so puts greater pressure on the taxpayer to economise in the use of that commodity than that of other commodities. On special occasions, such pressure may be in national interests. For instance, British Chancellors of the Exchequer imposed such taxes to curtail demand for imports from the dollar area and for goods needed for export. But, generally, they are more burdensome upon taxpayers than income-tax and unjustifiably so, unless there are special reasons for imposing them.

The weight of the above objection is greatly reduced if taxes are imposed upon a wide range of commodities, because then the relation between the prices of the commodities remains mostly unaltered. In such a case, commodity taxes are superior to income-tax in two respects. First, although they can be made roughly progressive, by exempting food and clothing, they do not involve a penal treatment of marginal earnings, as is done by income-tax. Secondly, savings are not liable to these taxes.

The case for the heavy taxation of tobacco and alcoholic beverages is that these commodities are not necessities of life and that taxes on them need be paid only by those who have incomes large enough to enable them to indulge in these luxuries.

"Profits taxes" or "corporation taxes" have many roots: (1) In the "schedular" taxes, which allow some incomes to be taxed when an entire personal income-tax is impossible, (2) in the principle that enterprises should be charged for benefits which are part of the costs of production of their products (3) in mistaken applications of the principle of ability to pay and (4) in sheer political prejudice. But here also arises the necessity of exempting savings made by public companies. Wherever Governments intend to continue to depend upon private enterprise and private investment for the economic development of their countries, the above necessity should be recognised.

Taxable Capacity

We now proceed to consider the pressure on taxable capacity resulting from the amount of Government expenditure to be financed and the use of "budgetary" policy as a means of financing investment and curbing inflation. Public expenditure, broadly speaking, is made up of defence expenditure, social service expenditure and the cost of administration. It is inevitable that all these three elements should increase with the growth of the population and the national income. The growth of public expenditure must be considered in two stages. First, ther is "Government expenditure on goods and services," that is, the quantity of real resources which the public authorities appropriate out of the total national product to bestow free of charge upon the public in the social services which they enjoy and the defence and police services which protect their life and property.

18/0/46—1953

Secondly, there is "total Government current expenditure" arrived at by the addition to expenditure on goods and services of "transfer payments," that is, cash payments to holders of national debt and to the recipients of social security benefits. In considering the use of real resources, these cash transfers mean private, not Government, consumption. Further, although they add to the tax burden, they also, unlike direct expenditure on goods and services, add simultaneously to the private incomes from which taxes can be obtained. For instance, the holder of Government securities pays income-tax on his interest receipt and the recipient of old age pension pays tax on his tobacco.

In the United Kingdom, Government expenditure on goods and services (excluding transfer payments mentioned above) went up from 13 per cent. of the current national product in 1938 to 17 per cent. in 1951. In the U.S., it went up from 15 to 19 per cent. during the same period. The increase was less in Denmark, France, the Netherlands, Norway, Sweden and Canada, being from 10 to 11, 11 to 12, 9 to 12, 7 to 9, 9 to 12 and 14 to 15, respectively. In the cases of the U.S. and Canada, however, the Government expenditure included items of capital investment as well as of current expenditure. Upto 1951, the large relative increase in direct Government claims on real resources in the U.K. resulted mainly from expanded social services and from a greater amount of administration and not from any increase in the proportion of defence expenditure. But, in the case of the Continental countries, the increase in Government claims was due mainly to increase in defence expenditure. This pattern is not altered appreciably even if transfer expenditure is taken into account. It was only in the U.K. that total Government expenditure exceeded one quarter of the gross national product in 1951. In the Continental countries, the proportion was less than one-fifth. In between came Canada and the U.S.

The differences between the percentages of total revenue to gross national product in 1951 in the different countries were less, although here also the U.K. stood first with a percentage of 32. The percentages in Denmark, the Netherlands, Norway, Sweden, Canada and the U.S.A. were 21, 28, 27, 27, 24 and 26, respectively.

Two Opposing Forces

In shaping their budgetary policies, all European countries have had to deal, since the war, with two opposing forces, namely, the extensive demand for capital reconstruction and expansion and the high consumption demands of fully employed people, reacting from war-time austerity. Total capital formation in every West European country during 1947-52 was at a higher level than in any corresponding pre-war period. All West European Governments endeavoured to secure high levels of real investment and, at the same time, to maintain full employment and a stable price level. But it was only in Switzerland that a measure of success in this threefold policy was achieved.

The extremes of policy were provided by France, on the one hand and by Belgium, Italy and Western Germany, on the other. In France, the full execution of its programme of real investment got delayed, but full employment was maintained. But prices rose rapidly and the cost of living doubled during 1947-52, wages chasing prices all the time. By contrast, during the same period, prices in Belgium rose by about 20 per cent.; in Italy by 15 per cent., and in Western Germany still less. In all these three cases, price stability was secured not so much by a restrictive taxation policy as by the sharpness of credit control. It was accompanied by fairly wide unemployment.

The United Kingdom, Denmark, the Netherlands, Norway and Sweden followed a different course. They maintained full employment and avoided a rapid spiral of prices and wages. But they were not able to avoid a steady rise in prices, so that, during 1947-52, the cost of living rose by about 30 per cent., in spite of subsidies. Further, they experienced recurrent crises in the balances of international payments. These features indicated a reluctance to use interest rates or credit control as the means of restricting excessive demand and a great dependence on budgetary policy to achieve this object with the help of weakening physical controls.

The original object of this budgetary policy was to check consumption demand and thereby to provide Government savings in the form of budget surpluses which, added to private savings, mainly by corporations, would satisfy investment needs to the extent of physical capacity. For the countries of North-west Europe mentioned above, except Denmark, between 1947 and 1951, there was expansion of investment in private as well as public enterprise, but the part which Governments had to play in making the necessary savings increased. In 1938, the percentages of private savings and public savings to current gross national products were 15 and 1, 20 and 6, 20 and 5, and 11 and 2 in the Netherlands, Norway, Sweden and the U.K., respectively. In 1951, they were 15 and 9, 23 and 11, 18 and 8, and 6 and 6 in the same countries, respectively.

In what circumstances and how long can budgetary policy successfully restrict consumption? Limited taxable capacity, which restricts both the choice of policy and flexibility in pursuing it, is a very important consideration in answering this question. As regards the choice of policy, Mr. Colin Clark has stated that, if taxation rises above 25 per cent. of a country's net national income, the parliamentarian, banker or administrator, facing what he regards as excessive taxation, becomes, consciously or unconsciously, more reluctant to erect those barriers which, in more normal times, he would erect against rising wages and prices. This consideration seems to have influenced the policy of the countries of North-west Europe since 1945.

In this respect, the contrast between North-west Europe and East Europe is striking. In the latter, excessive optimism regarding prospective output has been a frequent cause of inflationary pressure. But, there has not been much difficulty from the side of private incomes. With the help of turnover taxes, the East European Governments have manipulated prices freely for the purpose of equating demand and supply in particular markets. But wage rates have been fixed to secure a required distribution of labour or to encourage productivity. In the North-west European countries, on the other hand, programmes for the distribution of national resources among consumption and investment in certain proportions have been prepared. But the determination of wages has been left to bilateral agreements. The result, supported by movements in world commodity prices, has been steadily rising wage rates, divergences from the programmes of the use of resources and a number of balance of payments crises.

The budgetary policy, therefore, had to be modified so as to restrict business profits, which afforded the basis for successful wage claims, and the programmes had to be modified so as to transfer some of the restrictions from consumption to investment. But budgetary policy was not found to be sufficiently effective for controlling business profits or the demands of private enterprises for capital goods. Hence, during the last two years, credit restrictions have partially taken the place of budgetary restrictions. This does not mean that budgetary policy had failed. This policy was necessary after the war and is still found to be so. In a deflationary situation, it would become still more essential. The lesson to be learnt from recent experience is that it is a complex and difficult weapon.

UNCLAIMED BANK DEPOSITS

Section 26 of the Banking Companies Act, 1949 requires every banking company in India to submit, to the Reserve Bank of India, within thirty days after the close of each calendar year, a return in the prescribed form and manner, of all accounts, as on 31st December, in India, which have not been operated upon for ten years, giving particulars of the deposits standing to the credit of each such account. In the case of fixed deposits, the said term of ten years will have to be reckoned from the date of the maturity of each deposit. Banks in India are thus merely required to submit a statement of these dormant accounts, but no action seems to have been taken so far by the Government of India or the Reserve Bank of India as to the disposal of such unclaimed deposits. It may, however, be noted here that the notes on clauses to the Banking Companies Amendment Bill introduced in 1946 provided an indication of the intention of future consideration by the Reserve Bank of India of the advisability of transferring such unclaimed deposits to the Government. The fact that effect was not given to this proposal in the final Bill that went on the Statute Book indicates that the present Government has no intention of expropriating such deposits. No one can, however, say as to what the Government will do in future. If the returns submitted by banks were to reveal, in course of time, that there is a large amount of dormant deposits, we wonder whether the Government, needy as it is at present, would be able to resist the temptation of laying its hands on these deposits.

Occasional questions have been raised in other countries also whether unclaimed deposits should (1) be made over to the Government and become public property or, (2) be retained by the bank concerned and added to its reserve fund. For instance, only last week, these questions figured in the House of Lords. Viscount Samuel, while initiating a debate on what the Government proposed to do about the recommendations of the Nathan Committee on charitable trusts, put forward his plans for using the dormant banking accounts and intestate estates. Replying to Viscount Samuel, Lord Simonds, the Lord Chancellor, declared that there was no justification for taking the money in the unclaimed or dormant accounts in the clearing banks and handing it over to a common good fund or trust, as had been suggested by Viscount Samuel. The Lord Chancellor, however, made it clear that he was speaking personally and that he was making no declaration of Government policy. He added that such a proposal, as suggested by Viscount Samuel, would mean that the Government would have to examine the accounts in the banks and make other enquiries which would be a departure from accepted practice. There was no more justification for taking over these dormant accounts, he declared, than there was for taking the unclaimed dividends and credit balances held by companies and traders all over the country. The Lord Chancellor further added that the intestate estates and unclaimed post office and trustee bank accounts, Government stocks and dividends were held by the National Debt Commission and utilised to pay off national debt. Presumably, the law in the U.K. does not require banking companies to submit even a return of such accounts to the Bank of England, as is the case in India.

The main reason for not dealing with the question of disposal of such deposits in England and other countries is that it has been widely held, in these countries, that deposits with a bank are not affected by the laws of limitation. Under this law, the period of limitation is not regarded as having commenced before a demand for withdrawal is made. The dormant accounts are not, therefore, regarded in these countries as liable to forfeiture.

In Canada, however, the position is somewhat different. Banks in Canada are required to submit to the Minister of Finance an annual list not only of all accounts having credit balances which continue without transactions for five years, but also of all dividends which remain unpaid for more than five years and of drafts and other bills issued by a bank and similarly remaining unpaid. The Canadian law also requires deposits etc. remaining unpaid for a specified period to be paid over to the Government.

PUNJAB NATIONAL BANK LTD.

It was mentioned in these columns last week that, in refreshing contrast to the general trend of bank profits for the half-year ended 30th June, 1953, the working of the Punjab National Bank Ltd. during the half-year had resulted in a sizable increase in its profit over that for the corresponding six months of 1952. Details of the results, since published by the Bank, show that the profit for the half-year amounts to Rs. 24.67 lakhs, an increase of about Rs. 6 lakhs as compared with that for the first six months of 1952. With the sum of Rs. 1.93 lakhs brought in from the previous year's account, the amount available for disposal is Rs. 26.60 lakhs, out of which the Directors have appropriated Rs. 2.87 lakhs towards payment of bonus to staff and Rs. 26,000 for charity. The *ad-interim* dividend of 8 per cent. per annum, free of income-tax, declared for the half-year under review (as against 6 per cent. per annum paid last year) will absorb Rs. 3.50 lakhs (Rs. 2.62 lakhs), leaving a balance of Rs. 19.97 lakhs to be carried forward.

The Bank's deposits as at the end of June, 1953, are stated to have reached a record figure, surpassing even the pre-Partition record of Rs. 62.02 crores as at the end of 1946. The deposits as on 30th June, 1953, are said to be about Rs. 6.5 crores more than those at the end of June, 1952, and about Rs. 3.25 crores over those as on 31st December, 1952, when they stood at Rs. 58.94 crores. The Bank has thus recovered completely from the effects of the Partition in 1947 and built up its business steadfastly. In the matter of total resources and deposits, it has regained its former position as the second largest Indian joint-stock bank.

BANK OF BARODA LTD.

The profit of the Bank of Baroda Ltd. for the half-year ended 30th June, 1953, subject to audit, amounts to Rs. 10.23 lakhs which, as compared with that for the first half of 1952, shows a fall of Rs. 4.77 lakhs. After taking into account Rs. 2.38 lakhs (Rs. 2.15 lakhs) brought in from the previous year's account, the sum available for appropriation is Rs. 12.62 lakhs, as compared with Rs. 17.15 lakhs a year ago. The Directors of the Bank have declared an *ad-interim* dividend of 10 per cent. per annum, free of income-tax, the same as the previous year, which will absorb Rs. 5 lakhs, leaving a balance of Rs. 7.62 lakhs (Rs. 12.15 lakhs) to be carried forward to the next account.

FOREIGN INVESTMENTS IN CANADA

U.S. investments in Canada increased by $700 million last year to $8,000 million. At the same time, Canadian tourist expenditures in the U.S. were higher for the first time than U.S. tourist spending in the Dominion. British foreign investments in Canada gained also, while Canadian investments in properties and in securities outside of Canada increased substantially. Canada had a current account surplus of $151 million in transactions with all countries in 1952, including a net export of capital.

BANK AWARD

The Government of India will, it is learned, constitute a Special Bench of the Labour Appellate Tribunal, Bombay, to hear appeals against the Shastri Award. The Bench, which will have two members, will be presided over by Mr. F. Jeejibhoy, President of the Labour Appellate Tribunal, Bombay. The Board will hear about 52 appeals filed all over India against the Award. The hearing of these appeals is expected to begin on the 10th inst.

The Central Bank of Ceylon has raised its rate for advances to commercial banks from 2½ per cent. to 3 per cent. with effect from 25th July, 1953.

PAKISTAN TO BORROW FROM BRITAIN

FINANCE FOR PURCHASE OF CAPITAL GOODS

A PRESS note issued by the Ministry of Finance, Government of Pakistan, states that the British Government has arranged to make available to Pakistan a credit for £10 million to finance purchases in the U.K. of capital goods which will contribute to Pakistan's ability to solve its economic problem, particularly food problem. The terms of the credit, according to the Press note, are: (1) it will bear interest at 4 per cent. per annum, (2) it will be repayable over a period of 10 years, (3) during the first three years of the loan period, only interest will be payable and no part of the principal will be repaid, and (4) the loan will be utilised over a period of two to three years.

The loan will enable Pakistan to purchase much needed machinery and equipment for its development schemes and help it step up its food production. But the Pakistan Government Press note does not say how and through what machinery the loan will be made available to it periodically. For it will be clear from what has been stated above that the loan is not a lump-sum single payment by the U.K. Government. It will be made available over a period of two to three years. An announcement by the British Commonwealth Relations Office in London, however, says that proposals for the use of the credit would be made on the initiative of the Pakistan Government. The British Export Credits Guarantee Department will, it is stated, make payments as and when they fall due under approved contracts which the Pakistan Government may enter into with British manufacturers of capital goods. The Pakistan Government will present to this Department promissory notes or Treasury Bills sufficient to cover these payments. The Pakistan Government will simultaneously present for the Department's counter-signature instructions to the London bank to make payment from the special account to the British manufacturer of the goods in question.

Return of Buyers' Market

The foregoing financial deal, while serving as an example of Commonwealth co-operation and of the goodwill which exists between Britain and Pakistan, as is claimed by Commonwealth quarters in London, raises several noteworthy points. The loan is an all-purpose one, not being earmarked for any specific project, as is generally the case with the loans granted by the International Bank for Reconstruction and Development to underdeveloped countries. Pakistan can utilise the credit for purchasing capital goods only in Britain. It cannot be used for buying goods even in other parts of the Commonwealth. Thus, the deal represents a straight bid on the part of Britain to capture the markets in Pakistan for its goods which might otherwise be lost to its competitors such as France and Germany.

Pakistan has plans to convert its wholly agricultural economy into a semi-industrialised one and has two short-term plans, one a six-year development plan and the other a two-year plan. These include the establishment of a number of cotton mills, jute mills and power plants. Now, there is keen competition for markets in all these goods. In fine, this bargain is an indication of the extent to which a buyers' market has come to prevail in capital goods. There is almost a race among the industrialised countries of Europe to sell their capital goods to underdeveloped countries. Despite the State guarantee, German heavy engineering industries are finding it difficult to market their goods, because of the more favourable credit terms offered by French industries. It has, on this account, lost big orders in Turkey, Egypt, Spain and Pakistan. Britain has an advantage over Germany, in that its cost of steel products is cheaper than that of Germany. It will be noted that under a recent agreement with France, the latter will become the second largest supplier of capital goods to Pakistan.

The rate of interest at which Pakistan is now borrowing from the U.K. is certainly more favourable than the interest payable on the loans taken from the World Bank. Pakistan has so far been granted two 15-year loans by the World Bank, one for $27.2 million at 4¼ per cent. per annum for railway rehabilitation and another for $3.25 million at 4¼ per cent. per annum for agricultural development. The rate of interest compares favourably with what is charged by the U.S. Export-Import Bank. The Bank's lendings have now been strictly limited for financing international trade only. Even for such purposes, the rate of interest at which it can lend has been raised from 4 per cent. to 5 per cent. Thus, Britain has certainly shown some tangible concession to Pakistan, which is an indication of its anxiety to develop its export trade with that country.

BANK LIQUIDATION PROCEEDINGS

The draft Bill for regulating bank liquidation proceedings has been finalised, according to Mr. A. C. Guha, Union Deputy Minister for Finance. Disclosing this in Calcutta this week, Mr. Guha added that the Bill sought to economise expenses and expedite liquidation of bank proceedings, which, at present, involved delay and too much expense. The Government would appoint whole-time solicitors and lawyers so that exorbitant legal charges in connection with liquidation proceedings could be avoided.

ART SILK INDUSTRY IN BOMBAY

GOVERNMENT URGED TO AVERT CRISIS

THE art silk manufacturing group of the textile industry in Bombay—the group represents about 75 per cent. of the silk mills in the State—seems to have once again been confronted with a grave situation, thanks to the slump in art silk fabric trade and the lack of adequate supplies of yarn at reasonable prices. An indication of this is provided in the recent decision of some of the mills to curtail production, as well as in the move on the part of several others to follow suit, if the situation does not improve in the near future. As curtailment of output entails retrenchment resulting in unemployment, much concern has been expressed by workers. An anti-unemployment conference of silk mill workers was held in Bombay on Sunday last which urged the Government of India to take steps to avert the crisis in the art silk industry and trade. The three most important suggestions which the Conference put forward were as follows:

(1) Revision of policy regarding import of yarn;

(2) establishment of a Development Board to regulate production and prices of fabrics; and

(3) appointment of a Working Party for a detailed investigation of all the problems of the industry, such as finance, supply of raw materials, technical knowledge, standardisation of sorts, fixation of prices, etc.

The main factor which has adversely affected the art silk mills is the high cost of yarn—the principal raw material—brought about by scarcity of supplies. This, we are told, is the direct outcome of the restricted import policy of the Government. The Government has granted to the Silk and Art Silk Mills' Association, Bombay, a bulk licence for the import of Rs. 2 crores worth of art silk yarn on behalf of member mills during the current half-year. On the basis of the average import price of Rs. 2-8 per lb., this sum will be sufficient to cover imports of not more than 8 million lbs., which falls far short of the actual requirements of the industry estimated at 25 million lbs. for the half-year. This quantity has been arrived at on the basis of 8 lbs. of yarn per loom per day (2 shifts) and 300 working days in a year. Incidentally, it may be noted that the total number of looms registered with the aforesaid Association is 21,260, the number of mills being 313. This number may appear quite large, but the fact is that 60 per cent. of these mills are small units, with no more than 50 looms each.

High Prices of Yarn

The domestic output of art silk yarn is of the order of 8 to 9 million lbs. per annum, about 80 per cent. of which is sold direct to the Association's mills. This still leaves a large gap to be covered. It cannot be easily done by purchases from the local market, as the supply of yarn in the market is said to be rather scarce. This, coupled with the demands from the handloom sector, has been responsible for the high level of prices. The average price of yarn quoted in the market to-day is about Rs. 4 per lb., which is higher than the price in the Continental markets by Re. 1-8 per lb. Accordingly, "the industry," to quote one report, "will have to undergo considerable inconvenience and loss, particularly because it will not be possible for the mills to work their looms even for a few days and even for one shift, not to talk of the double shift which some of the mills have been working at present."

In view of these factors, the decision of the Government of India to restrict import of 150 deniers of bright finishes to the extent of only 5 per cent. of the face value of licences has been severely criticised by the mills. The Government has acted, it is stated, on incorrect information and has jeopardised the interests of workers and millowners.

It is not merely the shortage of yarn and high prices that have affected the art silk mills adversely; the fall in prices of art silk fabrics has also equally been responsible. So heavy has been the fall that the mills are said to be finding it extremely difficult to work on an economic basis. Such low level of prices is the result largely of a decline in demand from both indigenous and foreign markets. On account of the easy availability of cotton cloth, the demand for art silk fabrics has been slack. The export trade in art silk fabrics has become generally difficult by the growing competition from Japan, which is the world's largest and cheapest producer of art silk goods. It has been made even more difficult by the high cost of imported yarn, as already indicated.

The main factor which has made it practically impossible for the art silk mills to bear the adverse effects noted above is the rigidity of labour costs, which, after the cost of raw material, constitutes the major item in the cost structure. Owing to the steady uptrend in wages, dearness allowance and bonuses, the labour bill of a mill is to-day very large. To add to these, the mills are burdened with the contributions to the Provident Fund and State Insurance Schemes and Sales Tax. Finding no other alternative and with a view to minimising the loss, the art silk mills of Bombay have had to take recourse to the curtailment of production.

Government Measures

It will be seen from the foregoing account that the crisis facing the industry can be avoided if only the Government wakes up in time. The first thing that the Government must do is to allow larger imports of silk yarn. This will have a twofold effect. The scarcity of raw material and the consequent high prices for it will be solved. There is also the imperative need for stimulating exports. This will be possible only if the mills are enabled to quote competitive prices. It is unable to do so because of the handicap of heavy import duty on yarn. As a solution for this, it is not suggested that import duty should be abolished, because we know that there is an indigenous industry that needs to be protected. But, surely, the Government should restore the rebate of As. 12 per lb. that was being allowed till January, 1952, as a drawback of import duty in respect of exports. The import duty, it may be noted here, is as high as 36¼ per cent. on art silk yarn, and the extent to which it has severely affected the overseas demand for Indian fabrics will be evident from the marked decline in exports. The quantity of fabrics exported by India during the year 1952-53 was a bare 3.5 million yards, as against 8.4 million yards in the previous year, 7.0 million yards in 1950-51 and 12.2 million yards in 1949-50. It is, therefore, pointed out that, if the full drawback of duty were to be granted to the industry, Inddian fabrics could compete effectively with Japan and win for themselves a sizable market in the Asian countries. The industry also wants the Government not to insist on bonded warehouse scheme, as it "is absolutely unpractical for this small industry."

The prospects of developing a good export market for Indian art silk fabrics are indeed bright. The productive capacity of the industry is estimated at 350 million yards per annum, as against the requirements for internal consumption of 240 million yards. The capacity of the industry, after catering to the needs of the country in full, can still make available for export more than 100 million yards. The foreign exchange that the exports will earn at the existing level of prices may be assessed at about Rs. 16 crores per annum. Thus, the industry can easily earn all the foreign exchange it needs for importing its raw material.

THE MERCANTILE BANK OF INDIA LIMITED

(INCORPORATED IN ENGLAND)

Authorised Capital - £3,000,000
Subscribed Capital - - £1,800,000
Paid-up Capital - - £1,050,000
Reserve Fund - - - £1,500,000

Head Office

15, GRACECHURCH ST., LONDON, E.C. 3

Agents in New York:

BANK OF MONTREAL AND CHASE NATIONAL BANK OF THE CITY OF NEW YORK.

Branches and Agencies:

INDIA, PAKISTAN, CEYLON, BURMA, MAURITIUS, SINGAPORE, MALAYAN FEDERATION, HONGKONG, THAILAND AND JAPAN.

The Bank transacts banking business of every description.

Current Accounts are opened and Fixed Deposits are received on terms which may be ascertained on application.

Trusteeships and Executorships accepted.

88/66, Mahatma Gandhi Road, Bombay. S. J. ELGAR, Manager.

In conclusion, it must be said that there is no need for any control on prices or on production, as suggested at the anti-unemployment rally under the auspices of the Socialist Party. The solution for the ills of the industry rests with the Government, as already indicated by us. It is ridiculous to suggest that the prices of art silk fabrics, a purely luxury item, should be controlled. That simply will not work. Nor will it ensure employment for workers. Only in a free market can an industry producing luxury goods hope to develop on strong and healthy lines. The leaders of the art silk mill workers, if they want to be of real assistance to their followers, will do well to understand the real causes for the present difficulties of the industry and seek a solution for them on practical, instead of on doctrinaire, lines.

AID TO HANDLOOMS

Several schemes for the development of the handloom industry are now under the active consideration of the Governments of Madras and Mysore. These schemes are to be financed by the allotments made by the Centre under the fund constituted by the latter from the proceeds of the additional excise duty of three pies per yard on mill-made cloth. The allotment of funds made to the two State Governments amount to Rs. 1.25 crores and Rs. 45 lakhs, respectively.

The Government of Madras has already taken steps to provide employment to as many families of handloom weavers as possible. Replying to a question on the problem of unemployment in the handloom industry in Madras, especially in Malabar, in the State Legislative Assembly recently, the Minister for Industries stated that the Collector of Malabar had been able to induce the factory owners and handloom weavers to come to a suitable and satisfactory arrangement whereby the workers in factories were able to earn a decent sum of money. In this connection, he disclosed that the question of subsidising sale of yarn or of cloth was part of the scheme of development. Various proposals submitted by those interested were being examined by the Madras Government and the Centre. The Minister alluded to the important decisions taken by the Government of India, namely, (1) constitution of a Handloom Directorate with agencies for internal and external marketing, (2) appointment of commercial travellers in foreign countries, and (3) opening of emporia of handloom goods in foreign countries for marketing handloom products.

The Government of Mysore has drawn up schemes—at an estimated cost of Rs. 45 lakhs—for giving relief to the handloom industry which have been submitted to the Centre for obtaining the required grants. This was disclosed by the State's Industries Minister in the Mysore Legislative Council last week. According to the Minister, the most important problem facing the handloom industry is that of marketing its goods at reasonable prices with a view to ensuring a living wage for the weavers. The Mysore Provincial Cotton Handloom Weavers Co-operative Society has started 30 centres in the important weaving places in the State for supplying yarn to weavers and purchasing the finished products after payment of wages. The Society is also taking action to secure substantial orders to supply handloom goods to several Government departments and aided institutions in the State. Cash and credit facilities to the tune of Rs. 6 lakhs have been given to handloom weavers. The Government of Mysore has distributed to weavers raw silk, imported by it under the licence granted by the Centre. The Government has an idea to assist the establishment of a cotton and spinning mill on a co-operative basis in Mysore State, provided any non-official comes forward with such a proposal. The Government is considering the question of allowing a rebate of As. 3 per rupee on the purchase of khadi produced at the Khadi Centre in Badanaval.

TEXTILE IMPORTS INTO AUSTRALIA

All textile products and articles of apparel imported into Australia are now required to be marked compulsorily, in accordance with the modifications of certain provisions in the Australian Government's commerce (import) regulations. The markings should distinguish between wool, reprocessed wool and re-used wool and show percentages in respect of fibres other than wool. The modified regulations classify textile products under four heads, namely, (1) those deemed to be pure wool, i.e., where 95 per cent. or more wool is present, which will be marked "pure wool," (2) goods containing less than 95 per cent. but not less than 5 per cent. wool, the percentage of wool being shown in addition to the names of the other fibres in order of dominance, (3) goods containing less than 5 per cent. wool, the trade description showing the names of the non-woollen fibres in order of dominance, followed by the words "less than 5 per cent. wool," and (4) goods containing "no wool," the trade description will indicate the name of the fibre present. If two or more fibres are present, they will be indicated in order of dominance. These modified regulations, as noted at the outset, refer only to the marking of textile goods imported into Australia. The marking of goods produced, or put up for sale, in Australia is, however, a matter for the State Governments to decide.

MORE SPINNERS CHOOSE TO REMAIN OUTSIDE RAW COTTON COMMISSION

COVER SCHEME FOR RAYON STAPLE

(From A Special Correspondent)

MANCHESTER, 21st July

MANCHESTER LETTER

ON the basis of past consumption, the Ministry of Materials has estimated that some 56 per cent. of all cotton, other than Peruvian and Californian, will be bought privately by Britain next season, in comparison with about 30 per cent. in the current season. The proportion of Egyptian cotton thus to be obtained remains perceptibly smaller than American. Private buying of Egyptian type cotton is to rise from 15 to 40 per cent. and American type from 35 to 61 per cent.

The main conclusion to be drawn from the choice made by spinners is that the larger combines have effectively swayed the issue. It is a coincidence that exactly the same number of mills will be buying all their requirements privately as remain with the Raw Cotton Commission. Owners of 152 mills in each case have signified this decision but the number of firms involved is 131 for the Commission and only 64 for private trading.

The groups, as is well known, have an advantage in that they can dispose of supplies which may not suit one mill in other units under their control. In addition, their capital resources enable them to finance stocks to a larger degree than some of their smaller neighbours.

The stock problem, however, remains a fundamental difficulty in considering the future of raw cotton buying. When the "umbrella" of public funds is eventually lifted and some form of private cover scheme introduced, there may be a clash of interests between raw cotton merchants and spinners as to who should carry the stock burden. Despite their criticism of the organisation, millowners in Lancashire have had a wide choice of supplies offered by the Commission and they will expect private importers to give them at least equal facilities.

The dual buying system, which this year has been on a one-third to two-thirds basis, now becomes almost half and half. This proportion is below the anticipations of some interested bodies but if there had been an overwhelming movement to contract out from the Commission the organisation would have been severely strained to provide cover while catering for a minority of the trade. The steady development of private importation is generally in the best interests of the industry as a whole.

New Wage Advance

Lancashire's 280,000 cotton spinning and weaving operatives are to get a wage increase of 5 per cent. from the first pay day in August. Employers and cotton union leaders reached this agreement after negotiations in Manchester last week. The unions had asked for an advance of 10 per cent.

The average increase will be 6s. a week. This will add more than £4,000,000 a year to the industry's wages outlay, said Sir Cuthbert Clegg, Chairman of the Cotton Manufacturers' Association.

The unions' claim was based on the increased cost of living since the last wage award in October, 1951. A similar application was rejected outright by the three employers' organisations last November and was subsequently turned down by the Industrial Disputes Tribunal.

Rayon Cover Call

To avoid losses on stocks caused when rayon staple prices fall, the Rayon Staple Spinners' and Doublers' Association is negotiating with the producers to evolve a workable cover scheme.

This was disclosed by Mr. W. T. Winterbottom, President of the Association, at the annual meeting. Many spinners had been caught with substantial stocks of staple at the beginning of the month when viscose rayon was reduced by 3d. per lb., the first cut in prices for nearly 10 years. "On call" facilities for rayon staple or some form of price fixing of allocations by instalments would have prevented the losses incurred by spinners, Mr. Winterbottom declared. On present conditions in the industry, he said: "Yarn stocks accumulated during the slump have been cleared and order books are healthy. Demand for our yarns is greater than supply and our customers are using current deliveries for immediate consumption." On prospects, Mr. Winterbottom declared: "The outlook is much brighter than any of us would have dared to hope several months ago and we can face the future with every confidence."

Workers Move Headquarters

The International Federation of Textile Workers' Associations is to transfer its headquarters from Manchester to London. This decision, for the geographical convenience of representatives of affiliated associations abroad, has been taken by the Federation's executive, meeting at Stockholm, Mr. John Greenhalgh, General Secretary, said this week.

Founded in 1893, the Federation's affiliated membership is now standing at record high levels, being drawn from 16 countries with nearly 2,000,000 textile workers. Recent affiliations have included important groups of textile workers from Japan and the United States.

For many years the textile workers of Lancashire formed the largest single national bloc within the Federation membership and the pioneering work which led to the setting up of the International Federation 60 years ago was done in Lancashire.

The Federation had its offices in London until 1939 when an emergency transfer was made to Manchester because of the outbreak of war. Post-war expansion has increased the volume of administrative work and involved the secretariat in much overseas travelling.

Brighter Trading

Signs of a definite improvement in conditions in the Lancashire cotton trade have been noted by Sir Andrew Naesmith, General Secretary of the Operative Weavers' Amalgamation, in a report on North-west Britain's industrial activity, presented to the T.U.C.

"Employment within the textile industry has been exceptionally good during the past three months, and there has been an increasing demand for operatives to enter employment," he says. Although the numbers on employers' books were roughly 42,000 less than at the end of March, 1951, the numbers actually working were 228,190—a drop of 41,000 compared with March, 1951. "There is no doubt about a definite improvement in the general demand for textile production," declares Sir Andrew. He adds: "There is evidence of enquiries from abroad which is bound to reflect itself in the placing of orders. Trading has been more remunerative in consequence of the fuller time working than for the past 12 months, and the profit of the industry has definitely improved."

Among problems facing the cotton industry are the method of importing the raw material, capital investments for renewal of machinery, recruitment of young people and the building up of the right personnel for key positions in the mills.

Not Enough Exports

A warning that the Lancashire textile industry is having to rely too largely on home trade and too little on export trade was given by Mr. Philip L. Wright, Chairman of the Bleachers' Association, at the annual meeting in Manchester.

In some quarters at the present time—and certainly on the Stock Exchange—there seemed to be considerable optimism as to the immediate future of the trade. "I would have said there are really no grounds for great optimism and certainly none for complacency," said Mr. Wright. He added: "I feel sure that until we can make some headway in the cotton trade against that position there are no grounds for any undue optimism." Every country in the world seemed bent on making everything for themselves and this growth of nationalism, combined with currency problems, confronted Lancashire with a real problem.

Raw Cotton Imports

Raw cotton arrivals in British ports this week were the smallest, with one exception, for the past five months. Only 18,403 bales were received, of which 7,950 bales were on Raw Cotton Commission account.

Imports were mainly 6,308 bales from Pakistan, 3,617 bales from East Africa and 3,537 bales from West Africa. Quantities of cotton at sea scheduled for Lancashire mills amount to 45,756 bales, of which less than 3,000 bales are being bought privately. Chief suppliers are the Sudan and West Africa.—*All Rights Reserved.*

CONSUMPTION OF INDIAN COTTON MOVES UP

STOCKS WITH MILLS AT LOWER LEVELS

THE high level of production of cotton textiles, witnessed in recent months, is reflected in the figures relating to the mills' consumption of cotton which, for the eight months ended April, 1953 of the 1952-53 cotton season, aggregated 2,944,881 bales of 400 lbs. each, as compared with 2,641,291 bales in the corresponding period of the previous year, or an increase of 303,590 bales. Of the total consumption, Indian cotton accounted for 2,384,331 bales, as against 1,918,202 bales in the eight-month period ended April, 1952, while the consumption of foreign cotton accounted for only 560,550 bales, as against 723,089 bales. It will be seen from these figures that, while the consumption of Indian cotton has gone up by 466,129 bales, that of foreign cotton has fallen by 162,539 bales.

The following table shows the consumption of Indian and foreign cotton in the Indian mills during the eight months September-April, 1952-53, as compared with the consumption of cotton in the corresponding period of the 1951-52 season.

Consumption of Cotton

(In bales of 400 lbs.)

Consumption	8 months September-April 1952-53	1951-52
Indian cotton		
Total consumption	2,384,331	1,918,202
Of which:		
Bengal *Deshi*	115,766	78,920
Oomras short-staple	21,557	14,234
Jarilas	1,024,091	884,345
Gaorani 6 & 12	127,537	84,955
Hurl	71,074	63,781
Americans	169,971	101,163
Broach Vijay	186,847	191,392
Surti	84,978	73,051
Dholleras	87,744	105,100
Northerns/Westerns	98,715	124,306
Jayadhar	132,745	106,109
Cambodia*	97,502	115,886
Karunganni	61,600	66,117
Foreign cotton		
Total consumption	560,550	723,089
Of which:		
Pakistan	725	3,139
Egyptian	108,355	118,950
East Africans	113,793	131,166
U.S. cotton	297,618	402,491
Total (Indian and Foreign)	2,944,881	2,641,291

* Includes Rajapalayam cotton.

It will be seen from the above table that Jarillas enjoy, among the Indian varieties, the distinction of being the variety with the highest level of consumption; more than one million bales of this variety were consumed, during the period under review, as against 0.68 million bales in the previous year. There is a small, but significant, increase in the consumption of short-staple varieties, such as Bengal *Deshi* and Oomras short-staple varieties (*Oomra Deshi, C.P. I, C.P. II* and *C.I. Deshi*). But the consumption of Cambodia (including Rajapalayam and Karunganni, the pride of South Indian cotton growers, has declined, the former from 115,886 bales to 97,502 bales and the latter from 66,117 bales to 61,600 bales.

The Bombay State, as always, leads the other States in the consumption of cotton, accounting as it does for over 50 per cent. of the cotton consumed by Indian mills. The following table gives the State-wise distribution of the cotton consumed in the country.

Chief Cotton Consuming States

(In bales of 400 lbs.)

	8 months September-April 1952-53	1951-52
All-India consumption	2,944,881	2,641,291
Of which:		
Bombay Island	816,630	667,115
Ahmedabad	424,409	407,786
Others	271,670	241,700
Total Bombay State	1,512,949	1,316,603
Madras	379,602	349,763
U.P.	234,626	219,182
West Bengal	117,921	92,801
Madhya Pradesh	114,089	96,167
Madhya Bharat	177,437	170,331
Delhi	88,214	79,144
Hyderabad	63,139	49,699
Mysore	65,785	55,256

The monthly average consumption during the eight-month period under review was 368,110 bales. If this rate were maintained for the rest of the season, the total consumption for the season would be of the order of 4.4 million bales. This is more or less in line with general expectations regarding the consumption of cotton in the current season.

There has been a decline in the stocks of cotton held by the mills. Thus, the mills held 1,316,717 bales of Indian cotton and 249,173 bales of foreign cotton, as at the end of April, 1953, as compared with 1,367,794 bales and 380,462 bales, respectively, on the corresponding date of 1952. These stocks are sufficient to last the mills, at the current rate of consumption, for a period of 4½ months. This is the overall figure. For Indian cotton, the period of availability is 4.2/5 months and for foreign cotton it is 3.3/5 months. On the same date, last year, the stocks with the mills were sufficient to last them, at the lower rate of consumption then prevailing, 5¾ months so far as Indian cotton stocks were concerned and 4.1/5 months in respect of foreign cotton. Conceivably, the mills might not find their stock position, as the season draws to its close, as comfortable as it was last year.

COIMBATORE COTTON MARKETING COMMITTEE

The latest Annual Report of the Coimbatore Cotton, Groundnut and Tobacco Market Committee, Tirupur (Chairman: Mr. V. M. Sivaramakrishna Iyer), which relates to the year 1952, gives much useful information about the position of cotton in that important cotton-growing district in South India. For the 1952-53 season, the land under cotton in the district is placed at 1,93,140 acres; of this acreage, Cambodia CO.2 accounts for 91,220 acres, Madras Uganda 13,321 acres and Karunganni 88,599 acres. The latest estimate places the outturn of the crop in the 1952-53 season at only 50,000 bales, as against 1,03,500 bales for the 1951-52 season, as finally estimated by the Committee. The total quantity of Cambodia and Karunganni cotton marketed in the district during 1952 amounted to 1,25,000 bales, consisting of 10,000 bales of CO.4/B40, 65,000 bales of Cambodia and 50,000 bales of Karunganni. The total quantity marketed exceeds the crop estimate of 1,03,500 bales by 21,500 bales. This excess quantity represents arrivals into the district from the neighbouring districts, the better part of such arrivals being Tinnevellis or Karunganni from the Southern districts. The total ginnings in the district, including the Tirupur area, during 1952 aggregated 49,100 candies, consisting of 35,950 candies of Cambodia and 13,150 candies of Karunganni. The total pressings during 1952 amounted to 61,429 bales.

The cut in electricity supply to the mills in the district reduced the mills' consumption of cotton. Thus, the mills consumed only 1,60,000 bales in 1952, as against nearly two lakh bales during 1951. There was no overseas export of cotton from the district, but exports to other internal centres of consumption amounted to 30,000 bales.

The Government of Madras has sanctioned the establishment of new market yards at Pollachi, Udamalpet, Erode and Gobichettipalayam in the district. The Committee devoted much attention during 1952 to the choice of suitable premises at these centres for the location of market yards. The Committee continues to render much useful service to its members and others interested in cotton through its monthly and other periodical bulletins which give all relevant information about the production and marketing of cotton in the district.

AMRAVATI COTTON MARKET

The Amravati Cotton Market Committee, it is stated, has prepared a scheme which is designed to improve the amenities now provided by the Committee for the traders. The Committee is expected to spend Rs. 30,000 to Rs. 35,000 every year during the next five years on its scheme. Under the scheme, now approved by the Committee, the marketing yard will be improved and the approaches to the market will be cement-concreted. Fire-proof godowns will be constructed for storage of cotton. Drinking water facilities will be augmented. Spacious and well-built halls will be provided where traders, *adatyas* and agriculturists could gather for purposes of trading. Weighing machines will be installed in suitable places. The Committee hopes to raise the finance needed for implementing the scheme through increases in registration fees and in the cess on *kapas* carts which came into the market.

EXPORTS OF COTTON

EXTENSION OF SHIPMENT PERIOD

THE recent relaxation of restrictions regarding the validity date for exports of cotton announced by the Government of India has been welcomed in cotton trade circles. But men in the cotton trade feel that there is scope for further liberalisation. Licences for export of cotton during the current season, it may be recalled, would normally have expired before June, 1953. But exporters had appealed to the Government of India for an extension of the shipping period in order to enable them to effect export sales, inasmuch as they were unable to complete the quota allotted to them. Having considered these representations and all the relevant factors, the Government announced towards the end of June that there would be no extension of the shipping period beyond 30th June, 1953, "under any circumstances," though it agreed to licence Assam-Comillas, Zoda and Yellow pickings, freely for shipment till 30th September, 1953.

On a further re-examination of the position, the Government announced, in the middle of July this year, that the licences issued for export of raw cotton on or after 1st June, 1953 with a validity date till 30th June, 1953, would be extended for shipment upto and including 10th August, 1953. The Government advised exporters who had been granted licences for export of raw cotton on or after 1st June, 1953 and who were desirous of availing themselves of the concession to submit their shipping documents with the relevant export licence in order to enable the authorities to pass the documents.

Exporters of cotton, however, feel that the Government will do well to extend the date for shipment in respect of licences issued prior to 1st June, 1953 also. It would appear that the unutilised export quota, not covered by the recent relaxation orders, is only about 8,000 bales. The exporters argue that, if they are enabled to export this quantity through suitable relaxation in validity date, it would not make any serious difference to the cotton supply position in the country. They further point out that, since the quantity is part of the original quota allotted for exports, the fact that it was not exported in time should not be made the argument for refusing the request for extension of validity date.

Exporters further contend that they are not entirely to blame for the non-utilisation of export quota. It would appear that, in a number of instances, the export licences were received as late as in May and that the exporters could not, therefore, arrange for shipment expeditiously enough. Also, the movement of cotton from the regions where the exportable varieties are grown to port centres was hampered by transport bottlenecks which were beyond the control of the shippers. In the meantime, export enquiries also began to decline, particularly because Japan, an important customer for India's short-staple varieties, could not find the necessary foreign exchange to buy the cotton it needed. The position worsened further when that country concluded a trade agreement with Pakistan providing for imports of cotton.

In view of these factors, the exporters, it is pointed out, could not avail themselves fully of the export licences granted to them. They, therefore, feel that they should not now be penalised for not having shipped the cotton in time, and that the facility, now granted to those who acquired export licences after 1st June, 1953, should also be extended to those who acquired the licences prior to that date.

JUTE INDUSTRY IN DISTRESS

FURTHER REDUCTION IN EXPORT DUTY URGED

WHEN Mr. Ramsunder Kanoria expressed concern at the future of the Indian jute industry, in the course of his presidential address to the annual general meeting of the Gunny Trades Association, held on 21st July, 1953, he had in mind the many obstacles which the industry is battling with. He held that the expansion in the production of Continental jute mills, the efforts of Pakistan towards developing its own jute industry, and the competition to jute production from paper bags provided formidable problems to the Indian jute mills. It was true, he admitted, the goodwill missions to the U.S., Canada, the U.K., Australia and New Zealand had done some commendable work for increasing the sales of Indian jute products, but they had, he averred, only delayed the "shadow of doom." The only silver lining that he saw in an otherwise completely dark sky was that, despite these obstacles, the Indian jute industry had no immediate danger. To quote him: "It had vitality enough to struggle long before extinction—extinction in the sense of diminishing world-wide connections and relegation to an insular position." He declared that, if the Indo-Pakistan Trade Pact, recently concluded, was implemented, in the spirit it ought to be, much of the troubles might turn out to be things of the past. Characterising the pact as a "piece of first-class statesmanship," he observed:

"It has relieved the Indian jute mills of a big worry in respect of supply of raw materials, and Pakistan of the recurring problem of the disposal of its jute produce. The pact will enable both the countries to plan their productions and exports. Much, however, depends upon the spirit in which it shall be executed."

Mr. Kanoria prefaced his speech by a reference to the statistics relating to production of jute and jute goods in 1952-53. Although the production of raw jute, which was 4.69 million bales in 1952-53 was three times higher than that in 1947-48, the first year of the Partition, he deplored that the quality aspect was neglected. He said that "like a starving man who would pay heed to taste only in the last morsels of the diet," India paid little thought to quality all these years. It was only a few months ago that it suddenly began to realise the necessity to produce high quality jute. He welcomed the appointment of an expert committee by the Government of India to suggest appropriate measures for improving the quality of jute in India. On the question of future supply of jute, he observed:

"The low price of raw jute in 1952-53 threw a wet blanket on the red-hot enthusiasm of jute growers, and it is quite possible that the low jute yield in 1953-54 may not affect jute mills' production programme for this season on account of the heavy carry-over of last year's stocks in Pakistan, yet the future cannot be so safe. It seems that in fixing the target for jute and jute goods, the Planning Commission did not adequately take into account the repercussions of international events on the gunny trade and industry, and to that extent the targets may have to be revised."

Surveying the trend of production of jute goods, Mr. Kanoria remarked:

"Our jute mills in 1952 produced more goods than they did in 1951 or 1950. The figures stand at 952,000, 873,000 and 836,000 tons, respectively for the three years. But the production figures of the first six months of 1953 are not encouraging. In these months, we already lag behind by nearly 60,000 tons to what we produced in the corresponding months of 1952."

The future of the jute industry and of all those connected with it, in one way or another, depends on a buoyant export trade in jute goods. It is only, therefore, appropriate that Mr. Kanoria should have devoted the major portion of his speech to this aspect. Instead of wasting his time and energy in bemoaning the past mistakes, he did well to look ahead. He offered, in this connection, a few notable suggestions for recapturing the lost markets and sustaining them in the coming years. The following is a synopsis of what he said:

(1) The Indian jute industry should concentrate on improving the quality of its manufactures;

(2) it should try to cater to the change in tastes of customers. At present, it is producing stereotyped standard goods. Although the production of goods suitable to various tastes may have to be small, they will provide a large margin of profit;

(3) Indian exporters of jute goods should develop the habit of foreign tours at regular intervals, as this will provide them an opportunity for studying the market conditions at first hand, for reducing their risks and for building up new lines of business;

(4) whatever export duties still exist should be reduced to a nominal level with a view to increasing the competitive capacity of the industry; and

(5) the cost of production of jute goods should be brought down to reasonable levels. This requires modernisation of the jute mills. The Government of India should assist the industry in this direction in all possible ways such as securing a loan from the World Bank or providing subsidies.

A mailing leaflet tells American farmers how to reap the "hidden" profits from their empty burlap bags. Published by the Burlap Council of New York, the leaflet points out that the price of burlap bags, unlike most things which farmers buy to-day, has declined to about half of what it was a year ago, and that ample supply is now assured. As a result, "burlap is regaining its pre-war position." By practising simple methods, the leaflet suggests that the farmers can save up to several hundred dollars a year. Some special cases such as poultry farmers on the eastern shore of Maryland have been known to make over $500 a year on the resale of empty burlap bags.

WORLD AGREEMENT ON SUGAR

WILL IT MATERIALISE?

LITTLE has yet been published about the proceedings of the International Sugar Conference now in session at London to work out a world commodity agreement on sugar—aimed primarily at stabilising prices of beet sugar, cane sugar and molasses in the world market. From the brief Press reports, however, it is gathered that the Conference has appointed three committees—steering, economic and administrative—which have been meeting separately to discuss the various aspects relating to the agreement. It is further gathered that a drafting committee will be set up towards the end of the Conference in about four weeks' time "to give the final shape to a commodity agreement on sugar." A Reuter's report claims that all delegations to this 35-nation conference, including the Communists, have already agreed on the need for an international agreement to prevent wide fluctuations in prices.

India's interest in the proposed world commodity agreement on sugar arises from the fact that the country's position in respect of sugar has undergone a marked change in that it has to-day become an importer of this commodity. Naturally enough, the negotiations that are now taking place in London to bring about such an agreement will be closely watched by the Indian sugar industry and trade. Even assuming that the report that the delegations are agreed on the need for a world agreement is correct, there are grave doubts whether such an agreement will materialise. There are some special difficulties in the way of reaching an international understanding. The possibilities of India signing the agreement, for instance, are rather remote. For the Government's decision to import sugar is purely of a temporary character. The main object of these imports is to discourage hoarding and profiteering by producers and merchants. It is common knowledge that India has enough productive capacity and raw material for meeting its domestic needs. What is required is a firm policy for ensuring production at the maximum level. If, however, at any time, circumstances warrant some imports of sugar, as has happened at present, or some exports, as was found necessary towards the close of 1952 and early 1953, India can always buy its requirements from, or sell its surplus to, the "free market," as contemplated in the draft scheme, referred to in these columns last week. In short, the utility of an international sugar agreement to India will be so limited that it is not worthwhile shouldering the obligations involved in the membership of this agreement. One of these obligations is to regulate the output of sugar in accordance with the needs of the world.

Difficulties

There are also several other difficulties which may hamper the conclusion of a world sugar agreement. These difficulties spring either from the general economic and financial factors affecting the countries which produce or consume sugar or from the circumstances in which sugar is produced, marketed or consumed. Among the examples of the former type of difficulties are cases in which a consuming country is forced, by balance of payments considerations, to limit its imports from all sources or any particular source in such a way as to distort the normal pattern of supply and demand. Again, if an agreement needs to contain internationally agreed prices or price ranges, the problem of expressing such prices in a generally accepted and stable currency may give rise to great difficulty. Among the difficulties of the second type, there are the problems caused by alternative materials or by differences in grades and types. Again, it is not known how a multilateral long-term contract agreement, ensuring availability of sugar supplies at fixed prices, can work when prices of raw materials and other items of cost are left to be determined by free market forces.

Apart from these difficulties, there remains the question whether the Governments keenly interested in sugar consider an agreement worthwhile. Particularly, when questions of prices or price ranges arise, the immediate interests of the producing and consuming countries must inevitably be at variance.

There are also other considerations which may dissuade some of the Governments from joining the agreement, as will be evident from the following general remarks of the U.N. Interim Co-ordinating Committee for International Commodity Agreement:

"There may be important producing or consuming countries, which, for one reason or another, have decided not to participate in the negotiations, and in these circumstances, Governments may decide that it is impossible for them to accept obligations which others have no intention of accepting. Again, an agreement may appear on the face of it to be technically practicable, but Governments may decide that, for a variety of reasons, the agreement is unlikely to work satisfactorily and that they cannot, therefore, join in it. Moreover, they may not consider it worthwhile, in the case of a proposal for achieving stability, to accept the required degree of interference with usual channels of trade or with ready access to supplies or with the freedom of producers."

Price Stability

In the light of the aforesaid difficulties, it is too much to expect a world sugar agreement designed to achieve a substantial measure of price stability. It must, therefore, be emphasised that a commodity agreement on sugar as such is only *a* method, and not the *only* method, by which the Governments can work together towards stability. Nevertheless, it may not be unreasonable to hope that the general awareness of the problem of stability of sugar prices may lead, if not to the conclusion of a world commodity agreement on sugar, "at least to a better co-ordination of national action in the direction of stability."

Two chief factors have brought to the fore the need for achieving such stability on the world sugar front to-day, namely, accumulation of heavy stocks and general recession in prices. The stocks of sugar at the end of the current (1952-53) season are estimated at as much as 12.27 million short tons (of 2,000 lbs.), as against 9.74 million tons at the end of 1950-51 and 7.79 million tons at the end of 1949-50. This may seem rather surprising, considering the fact that world production of sugar has declined from 38.96 million tons in 1951-52 to 36.95 million tons in the current year, and consumption of sugar has increased, during the same period, from 36.17 million tons to 37.17 million tons. The heavy stock position has, however, been the result of a large carry-over from the previous season, amounting to over 12.48 million tons. Owing to easy availability of sugar in the world market, the prices have suffered a sharp setback. The price (f.o.s.) of Cuban sugar in the world market was as low as 3.57-3.59 cents per lb., as against 4.70 cents in the beginning of 1951.

Some, however, question the necessity for a world sugar agreement. Writing in the *News Chronicle*, Mr. Oscar R. Hobson, a talented City Editor of London and a champion of free enterprise, for instance, observes as follows:

"For many years, sugar has been one of the playthings of the 'planners'. Almost every Government in the world at one time or another—and most of them all the time—has interfered with the production or the consumption of this elementary necessary of life, with its import or its export or its retail price.

"The result of it all has been that, though the demand for sugar is comparatively irresponsive to price changes, production and prices, so far as they are free to move, have tended to oscillate with inconvenient violence, production generally tending to outstrip consumption. This has led Governments to attempt to remedy over-production and unremunerative prices, largely brought about by their own misplaced ingenuity, by further misplaced ingenuity designed to limit production and stabilise prices.

"The latest example of this type of scheme is now under discussion in London at the International Sugar Conference. . . It is claimed that this new draft scheme (now being discussed by the Conference) contains refinements which make it much superior to past agreements of the kind. One refinement is that the export quotas are to be adjusted up or down, if the 'free' price of sugar for a period of 30 days rises above an agreed maximum or falls short of an agreed minimum. The despised 'free price' which the planners, if they had their way, would like to stabilise out of existence, is thus brought in again by the back door by way of an extra control—a device rather characteristic of the 'planners"

"In commenting on the new draft agreement, the Food and Agriculture Organisation says that the need for such agreements 'springs from the demonstrated historical experience that unregulated marketing of primary products is associated with excessive price fluctuations which are detrimental to the long-term interests of both producers and consumers.' Maybe, but what evidence is there that any scheme for regulated marketing has ever, in the long run, been successful in avoiding these 'detrimental' price fluctuations? What evidence is there that any international control scheme can produce more satisfactory results than the free market assisted by the fullest possible information—and here at least Governments can help—about acreages and crops and weather conditions and demand probabilities?"

INDIAN COAL STATISTICS

SHARP DECLINE IN EXPORTS

THERE is a feeling among coal producers that the current production of all grades of coal is in excess of actual demand, chiefly due to contraction of exports. How far is this true? Let us see what the statistics reveal in this connection. Production of coal during the first five months of the present year was a fraction lower than that in the corresponding period of the previous year, while despatches were somewhat higher. Thus, during January-May, 1953, production of coal amounted to about 15.69 million tons, as against 15.83 million tons in the corresponding period of 1952, a drop of about 140,000 tons or 0.8 per cent. Despatches during the same period were 12.82 million tons, as compared with 12.47 million tons, that is, a rise of about 350,000 tons. Output of hard and soft coke, however, was substantially higher during the first five months of 1953 than in the corresponding half of 1952. Soft coke produced was 669,352 tons, as against 489,779 tons, and hard coke 869,321 tons as against 41,371 tons. Despatches of soft coke staged a sharp fall, while those of hard coke a substantial rise. Thus, despatches of soft coke, during January-May, 1953, were 365,065 tons, as compared with 473,327 tons in the first five months of 1952, and hard coke 208,434 tons, as compared with 46,422 tons. We are concerned here more with coal than with coke. The foregoing figures relating to the former reveal two things. One is that the production of coal was fairly well maintained, the decline being negligible. Despatches, however, were distinctly better than in the first five months of 1952. This suggests that the railways were a little more alert than in the preceding year.

Exports

Statistics relating to exports, however, disclose a discouraging picture. Exports of coal by sea (excluding those to Pakistan) during the first six months of the year were approximately 700,000 tons, as against 1.50 million tons in the corresponding half of 1952, that is, a drop of more than 50 per cent. The sharp decline is attributed to keen competition in the coal markets in the East and the Far East. Australia has emerged as a keen competitor. It is reported to have already entered the Korean markets and is said to be making a keen bid to capture other South-East Asian markets. China and South Africa are other competitors, especially in West Pakistan. Although the removal of surcharge a few months ago has stimulated exports, the position is not comfortable enough. The permission granted to shippers to negotiate individually with foreign countries, other than Pakistan, without prior permission of the Coal Commissioner, does not seem to have met with encouraging results. It is stated that Japanese importers are reluctant to enter into fresh commitments for fear that the end of hostilities in Korea may lead to a fall in its industrial activity. Hongkong, another important importer of coal, is confidently looking forward to the revival of coal trade with China. As a result, it is feared that India's export target of 2 million tons for the year 1953 will not be reached, unless it is able to sell coal at competitive rates and to export high-grade quality. It is suggested, in this connection, that a rebate on internal railway freights for exported coal, abolition of the cess and a sizable reduction of the Calcutta Port Commissioner's charges will go a long way towards enabling Indian coal to find markets in overseas countries.

Meanwhile, it is stated that coal that cannot be shipped abroad is being dumped on the internal market and that at a time when the demand is static, if not declining. It is held that the collieries which are not in a position to find markets for their output have been offering illegal rebates at a rate well below the statutory prices. The rebate in some cases is said to be as high as Rs. 4 or even more per ton or about 25 per cent. of the fixed selling prices. That the practice has become wide-spread is clear from the recent warning of the Coal Commissioner to the collieries, to the effect that such sales were an offence under the Coal Control Order and, consequently, they would be penalised.

It is held in certain circles that a possible remedy for the situation lies in restricting the production of all grades of coal on the same lines as the pegging of metallurgical coal output. But this remedy is opposed and characterised as "worse than the disease itself." For, it is pointed out that, in the event of restriction on output, a number of collieries, which are on the margin, will have to be closed. The present production is hardly sufficient to balance the finances of such collieries. Everyone, however, is agreed that rationalisation of production, which inevitably involves retrenchment of labour, is the surest way of reducing costs and of stimulating demand for coal. But there are two obstacles in this connection. First, the Government is not prepared to allow rationalisation schemes, as they involve retrenchment of labour on a fairly large scale. Secondly, the collieries will find it difficult to raise the large capital required for financing rationalisation schemes, owing to the ever-present threat of nationalisation.

SULPHUR FROM VINDHYA PRADESH COAL

A substantial contribution to the sulphur requirements of India can be made by the recovery of pyritics from Vindhya Pradesh coals and its beneficiation, according to a series of investigations conducted by the Fuel Research Institute, Jealgora, Bihar.

In view of the acute shortage of sulphur in India, many schemes for the recovery of sulphur from inferior sources are being examined. One of the promising raw materials is the sulphur-bearing coals or coal pyrites in India. Sulphur occurs in coal in three different forms: pyritics, sulphate and organic. Of these, only the pyritic sulphur can be recovered by simple processing.

In the course of the physical and chemical survey of the Vindhya Pradesh coals, carried out at the Fuel Research Institute recently, it was found that the coal of the Nowrozabad colliery contained appreciable quantities of pyritic sulphur (0.8 to 1.3 per cent.). Investigations on the washability characteristics of the coals showed that practically 80 per cent. of the pyritic sulphur could be separated from the coal which gets concentrated in the rejects. As the entire quantity of sulphur in the rejects is normally thrown away, attempts were made to recover the pyrites in them.

The removal of sulphur from coal is necessary not only for the recovery of sulphur, but also for providing coal for cement works and for power generation which is free from sulphur. Thus pyrites from coal can be obtained, without any extra expense, in the normal washery treatment of coal. Nearly 1.6 tons of pyrite (about 0.8 tons of sulphur) are recoverable per 100 tons of Nowrozabad coal. Elemental sulphur cannot be obtained from the pyrite concentrate, but the pyrites could be roasted for the production of sulphur dioxide for use in sulphuric acid manufacture. On the basis of 150 tons of coal washed per hour, for 20 hours a day, about 48 tons of pyrites per day could be had from this source.

COAL PURCHASING POLICY

The Indian Mining Federation and the Indian Colliery Owners' Association have strongly criticised the new coal purchasing policy, adopted by the Chief Mining Engineer of the Railway Board, by which the tenders for the supply of coal will have a grade-wise allocation from this month.

The new system of allocation, according to these associations, is a glaring deviation from the usual practice and might cripple the economy of a large number of small collieries, which will receive only small orders, or be totally ignored by the railways.

They prefer the previous practice of consulting representatives of the coal industry, before deciding on a new purchasing policy, as being much more wholesome than the present one. These two associations have, therefore, represented to the Coal Commissioner that the new programme should be re-examined in consultation with the representatives of the coal industry and the implementation of the new programme should be kept in abeyance in the meantime. They have further pointed out that, although in the previous purchasing programmes the requirements of the Pakistan Railways were included, this year the Pakistan quota has been totally excluded from the schedule.

LIGNITE TO REPLACE COAL IN MAKING STEEL

According to investigations carried out recently under the auspices of the Lignite Investigation and Development Department of the Government of Madras, lignite can be substituted for coking coal in the direct reduction processes for the production of iron and steel from iron ore. If the substitution is effected, it is likely to alter radically the location of the industry in India. Although iron ore deposits are known to exist in a number of places in India, the industry has been confined mainly to the areas where high grade coking coal is produced. Madras State will be particularly interested as both lignite and iron ore deposits are found there in close proximity to each other.

COAL STATISTICS FOR MAY

As much as 3,195,446 tons of coal, 182,710 tons of hard coke and 198,710 tons of soft coke were produced during the month of May, 1953. Despatches accounted for 2,585,069 tons coal, 40,839 tons hard coke and 22,514 tons soft coke. Besides, 13,906 tons of other kinds of coke were manufactured and 3,069 tons despatched. Average daily number of workers employed was 348,801, manshifts worked 8,788,964 and absenteeism 13.06 per cent. Output per man-shift for miners and loaders worked out to 1.03 tons, for underground and open workings 0.56 ton, and for all persons 0.36 ton. Pithead stocks at the close of the month was 3,353,229 tons.

NEW FUEL

Tests are being made in Pennsylvania and Colorado for the creation of a new fuel from low-temperature distillation of coal. It is claimed that the new fuel, called "char," can have revolutionary effects in the production of iron and steel, metals and electric power. The Colorado experimental plant has been developed from designs of Daniel Petit, a French engineer who is in the United States discussing application of his process to various industries.

JAYABHARAT INSURANCE CO., LTD.

SATISFACTORY RESULTS REPORTED

MR. NAVINCHANDRA MAFATLAL'S SPEECH

PRESIDING over the Tenth Annual General Meeting of the Jayabharat Insurance Company, Ltd., held on Monday, 27th July, 1953, Mr. Navinchandra Mafatlal, Chairman of the Company, observed that it was gratifying to note that the Company had shown "fairly good results," despite the very difficult conditions which the insurance trade had to face during the year.

After making a passing reference to the general depression and its effect on the insurance trade, he observed that the Government had been trying to bring the trade on a sound and healthy pedestal and hoped that, with the co-operation of insurance companies, which the directors of insurance companies have offered, the trade could be made to run on a smooth and sound basis, without any resort to such machinery as might hinder the day-to-day working of insurance companies.

Thereafter, he referred to the working of the Company and observed:

"During the year under report the gross premium income from general business was Rs. 79,57,635. The gross premium income from life business was Rs. 15,24,355.

"The net premium from the general business was Rs. 46,31,721. The net premium from the life business was Rs. 13,55,340

Fire Insurance

"The gross premium income from fire insurance for the year was Rs. 56,87,394. The net premium income was Rs. 32,32,750. The reserve for unexpired risks has been brought to 50 per cent. of the net premium income for the year. The revenue account shows a profit of Rs. 8,20,442.

"The net premium income from foreign business in 1952 was Rs. 18,94,538. The net premium income for the year from business effected in India was Rs. 13,38,212.

Marine Business

"The gross premium income from the marine business amounted to Rs. 14,54,405. The net premium income was Rs. 7,23,347.

"After bringing the reserve for unexpired risks to 100 per cent. of the net premium income the revenue account shows a loss of Rs. 1,79,310. However, on account of the increase in the premium income, the reserve for unexpired risks at 100 per cent. has increased from Rs. 4,34,744 to Rs. 7,23,347.

"The net premium income from foreign business is Rs. 3,79,286 and that from business effected in India is Rs. 3,44,061.

Miscellaneous Business

"The gross premium income of the miscellaneous department was Rs. 8,15,737. The net premium income was Rs. 6,75,624. The revenue account shows a total loss of Rs. 52,196.

Life Business

"The life business proposed during the year was Rs. 93,76,500 and the business completed was Rs. 77,25,500.

"The total assurance in force at the close of the year amounted to Rs. 2,87,19,684.

"The life assurance fund at the end of the year stands at Rs. 33,54,451 after writing off the loss of Rs. 1,484 incurred on sale of investments and transferring Rs. 67,100 to the investment reserve."

He then referred to the actuarial valuation of the Company's life business for the quadrennium ending 31st December, 1952. He said:

"Life insurance fund has increased by 268 per cent. to Rs. 33,54,451 as compared to Rs. 9,11,855 at the last valuation.

"The mortality experience of the business was favourable. The net interest yield on the assets constituting the life fund has been more than 3 per cent. since 1950. The valuation basis of 3 per cent. leaves sufficient margins for the future accrual of surplus. The expense ratio is showing a downward trend since the year 1950 and we would try to make a further reduction in the same.

"The new business has progressed quite satisfactorily according to the Actuary's report. The valuation shows a surplus and the surplus available for distribution would be Rs. 2,14,201.

"As recommended by the Actuary, we have decided to distribute the total surplus as reversionary bonus in the following manner:

Rs. 10 per thousand sum assured per annum on with-profit whole life assurances.

Rs. 7-8 per thousand sum assured per annum on with-profit endowment assurances and all other assurances of the with-profit class.

"It is a matter of great satisfaction that our life department has been able to **commence distribution of bonus at fairly good rates at its second valuation. We have fully safeguarded the interests of our life policyholders and, as observed by the Actuary, 'Now it can be said that the life department is set on a strong footing and you can look forward to brighter results of valuation in future years.'**

Profit and Loss Appropriation

"The balance carried forward to the profit and loss appropriation account amounts to Rs. 5,62,888 which, together with the balance brought forward from the previous year, amounts to Rs. 5,81,051.

"Your Directors recommend that the payment of dividend for the year be maintained at 6 per cent. i.e., at Rs. 3 per share free of tax amounting to Rs. 1,50,000.

"An amount of Rs. 1,50,000 be appropriated as taxation reserve.

"An amount of Rs. 2,50,000 be appropriated as general reserve and the balance be carried forward to the next account.

"The total funds at the end of the year under report stand at Rs. 1,04,30,136 and the total assets amount to over Rs. 1,43,00,000.

"I believe that considering the difficult conditions prevailing our Company has on the whole shown satisfactory results."

In conclusion, he sincerely thanked all his brother Directors for the valuable co-operation and advice. He thanked also the officials and the staff for their loyal services and the agents, field-workers and clients for their continued support and goodwill.

PROTECTION AND REGULATION OF INDUSTRIES: THEN AND NOW—I

PRESENT POLICY VERY SHORT-SIGHTED

(By PADAMJI GINWALA)

AS one of the members and later President of the first Tariff Board, which was appointed by a simple resolution of the Legislative Assembly in 1923, I had a considerable share in fixing the methods and the principles by which the *quantum* of protection was to be determined and its adequacy assessed in relation to the immediate needs and the future expansion of the industries to be protected. Since I relinquished my office as President in 1930, I have been more than a mere spectator of the administration of Government's industrial policy relating to the protection and control of industries. For these reasons, an examination by me of this policy in action to-day and its comparison with what it was in pre-independence days may be of some public interest. At the same time, it would not be irrelevant to consider whether and what changes in the policy have become necessary by the passage of so many years, and require to be effected for the achievement of more success than can be reasonably claimed for the policy at present.

The original Tariff Board ceased to function after the outbreak of World War II which gave such natural and automatic protection to industries as no Tariff Board would have dared to recommend. As a necessary war measure, control was introduced over the prices, production and distribution of several essential products. Soon after the termination of hostilities, a temporary Tariff Board was appointed to consider the grant or withdrawal of protection. In 1947, a Commodity Prices Board was also appointed to meet the menace of inflation. Early in 1948, the first post-independence Tariff Board was constituted and entrusted with the dual task of investigating into, and reporting on, the claims to protection and of fixing the retention prices of controlled industries. In 1951, the Tariff Board was converted into a statutory Commission by an Act of Parliament.

It is not my purpose to discuss now the questions whether the Tariff Commission Act (1951) has enlarged the powers previously exercised by the Tariff Boards or ensured for it greater independence or liberalised the policy of protection or control; or whether there has been any encroachment by the Executive Government on the constitutional powers of Parliament pertaining to finance. These are important questions which I may discuss on a future occasion. At present, I propose to deal only with the dual policy of protection and control as it is administered.

Primary Reason for Protection or Control

Whether an industry is to be protected or whether its prices, production and distribution are to be controlled, the primary reason justifying either course is that the domestic supply is short of the domestic demand and that the two should at least be equalised by the establishment of new industries or units and the expansion of those already in operation. The policy of protection or control, therefore, should be so administered that the shortage of supply is remedied, the need for protection or for control is dispensed with in the shortest possible time and the burden on the consumer or the producer, as the case may be, is not prolonged for a longer period than necessary.

Upon any reasonable view of the course, since the end of the war, of the development and expansion of protected as well as controlled industries, it is difficult to come to the conclusion that the policy of the Government has been so directed as to achieve these objects to any very appreciable extent. Claims, however, have been put forward by private enterprises now and again, and gladly accepted by the Government, for they suit their purpose, that production both in old and many new industries, has been almost spectacular between 1947 and 1952. Such claims only help to add to the abundant self-complaisance on the part of the Government, on the one hand, and give them ground, on the other, to treat the genuine complaints of the various handicaps imposed on private enterprise as somewhat unfounded. For these reasons, a brief examination of the question whether these claims are well-founded may not be considered as out of place.

So far as old and well-established industries are concerned, there is some evidence in support of the claim that their production has in most cases, with the remarkable exception of iron and steel and allied industries, shown some improvement. But their foundations were well and truly laid between 1923 and 1947 and the demand for their products, which consisted mainly of consumer goods indispensable for our daily needs, had increased. There was also a considerable backlog created by the war which maintained their demand at a high level. But recently, however, it has been claimed that there has been overproduction, particularly in the cotton textile industry and, at some stage, in the sugar industry. It is difficult for me, at any rate, to realise that, within any foreseeable future, there can be real overproduction in our country of most of these products in the sense that people's requirements have been so amply met that they did not need any more of them. What has obviously happened, and is likely to be intensified, is that the prices have risen higher than the ordinary consumer can afford, whilst his purchasing power has been so reduced that it cannot absorb even the quantities which barely meet his normal requirements. It is only in this sense that the alleged overproduction of food and other necessaries of life can be explained, and even an exportable surplus created.

New Industries

As regards new industries, the claim of spectacular achievement appears to be exaggerated, though the figures of production and the percentages of increases, if no regard be had to the kind of articles produced, may lend it some support. Few manufactured articles are useless or unnecessary for the purpose of serving some consumer need or other in such a vast country as ours. Many of these new industries supply some of these needs. But the foundations of the general industrial structure, calculated to promote the means of production, including those indispensable for the defence of our freedom and the increase of national wealth, on which must ultimately depend the improvement of our general standard of living, can hardly be said to be laid by and on the domestic manufacture, even on a large scale, of the kind of new products which are taken into account in assessing the growth of our industries in the private sector and the measure of their achievement. Barring the beginnings of fewer than even half a dozen new industries of some national importance, there is little in them on which we can congratulate ourselves or our Government. I consider myself as one of the last persons in the world who would willingly disparage what has been accomplished by private enterprise since 1947. My only purpose in making these observations is to clear our minds of what is little more than can't which may ultimately do us more harm than good by inducing us to concentrate on the development of less important industries, merely because they represent production, and to divert into them what little capital may be available which may be more usefully invested in industries of national importance.

If the main object, namely, the rapid closing of the gap between supply and demand is to be achieved, which I have no doubt, is the desire of the Government and their official instruments for carrying out their policy, conditions must be created, without any loss of time, by which capital may be made available for the renovation, rehabilitation and maintenance of efficiency from revenue and for extensions, if necessary, of the industries, particularly of the key industries in the private sector. These conditions cannot be created unless there are fundamental modifications not in the form of the general formulæ which have been inherited from the earlier Tariff Boards and are still substantially followed by their successors, but in their application to the determination of the ex-works fair selling prices which are the linchpins of the wheels of industrial investment and expansion. Some of the formulæ and principles are applicable as much to protection as to control which I propose first to discuss. I shall deal later with those of them which, in my opinion, should apply only to the control of industries.

Basis of Selling Prices

Before any comparison can be made between the past and the present administration of the policy, it is necessary to mention and analyse the points involved in the determination of the ex-works selling prices:

1. The period during which the prices are to remain in force.
2. The main elements of the selling prices:
(a) Estimate of production and works costs;
(b) Overheads:
(i) Depreciation;
(ii) Managing agents' commission.
(c) Return on investment.

There are other small items included in the selling prices, such as interest on working capital, head office expenses, etc., which need no discussion.

Period

The first and, perhaps, the most important point which needs emphasising is the period to be prescribed during which the selling prices fixed for protected or controlled industries are to remain in force at a time. In the case of the major industries such as iron and steel, including tinplate and other processing, engineering and fabricating industries using iron and steel, paper, sugar, some heavy chemicals, etc., which have been established since and under the policy of protection first introduced in 1923, the period normally fixed at a time was one of five to seven years. For the match industry there was no period fixed at all. For the sugar industry a period of 15 years was fixed. Long periods were necessary to give the units in existence a chance of adopting adequate measures which would lead to greater economy and efficiency and, at the same time, to offer opportunity to new aspirants to watch the working of the existing industries and the chances of their success and to invest capital into any of them for establishing new units. Most of the major industries which were protected needed and were granted two or even three periods of five to seven years each for their adequate expansion and for ensuring that ability which has been achieved in most cases to withstand foreign competition without protection.

Since 1948 the maximum period fixed for protection has been three years, whilst periods of two years or less have not been uncommon. In the case of controlled industries, the position has been even worse. There have been more frequent changes in the fair selling prices because they were too low or too high. In the cotton textile industry, the selling prices have been revised, under some formula, every three months or so, whilst there has been a revision of them in some industries at intervals of about a year. The cotton textile industry has had the distinction also of being the Aunt Sally of our sporting politicians. After being controlled for several years, it was decontrolled in 1948. Later it was re-controlled. After being partly mutilated for the benefit of the handloom industry, recently it has been made the subject of an experiment, apparently in *corpore vili*, in decontrol, to prepare the Government to test the feasibility of decontrol in this and other controlled industries. In such circumstances, the investor is unable to see that there is any prospect of his obtaining a reasonable and steady return during the period that would appear to him to be necessary for establishing an industry and bringing it into economic operation and for a reasonable period thereafter. These frequent changes in the selling prices have had two other deplorable consequences. First, the cautious consumer defers his purchases in the hope of a reduction, whilst the speculator or the black market expert buys up and hoards what he can in the expectation of a rise in the selling price. Secondly, the policy of protection or of control must be regarded, on the whole, as having failed of its main purpose which is to close the gap between supply and demand by the rehabilitation and expansion of the existing units and the addition, where necessary, of new ones. If the policy is expected to succeed, the pre-war practice of fixing seven years at a time, as the normal period, should be reverted to in the case of protected industries.

No Period for Controlled Industries

For the controlled industries, no period should be fixed, as is the practice in other countries where the selling prices once fixed by the price fixing Boards remain in force until their revision is proved to be necessary in the interest of the industry. If exceptional circumstances are proved to exist which make it desirable in our country to depart from this practice and to fix a period, it should normally be one of five years or the entire period of control, whichever expires earlier. The importance of maintaining reasonably remunerative retention prices for prolonged periods is even greater in controlled than in protected industries. It must be remembered that the controlled industries come within the "Essential Supplies

Act" which, in its very nature, imposes a heavier duty on the Government to expedite their expansion until the supply is at least equal to the demand. Where there is a choice, therefore, between the selection of industries, for expansion, there can be little doubt that the controlled essential industries should have priority.

There is also one difference between the prospects of the two classes of industries which should be borne in mind. Industries, whether controlled or protected, can increase their profit if their fair selling prices are not ungenerous and fixed for a prolonged period, by reducing their works costs and exceeding the estimated output. But the protected industries have this further advantage, especially in a free market, that they retain the benefit of the adventitious rise in the price of competing imported products which may occur during the period fixed. The controlled industries, on the other hand, cannot have, during the period the retention prices are to remain in force, the advantage of earning higher prices, for their prices will remain at the level fixed for the whole period. Also, the grant of protection implies that it will be continued until the industry is able to dispense with it and the industry may make good in later years some part at least, if not the whole, of the losses it may have suffered in the earlier. There is no such assurance in the case of a controlled industry, for the control may be continued or removed in circumstances which may not permit of earning higher profits to compensate for earlier losses, unless where a providential equalisation fund comes to their rescue to give retrospective relief.

Long Period Should Be Fixed

If the Government or their deputies share, as I am sure they do, the national desire that rapid expansion of industries in the private sector should take place by attracting new capital into them, it is very necessary not only that a long period should be fixed, but that a formal declaration by legislation or otherwise should be made by the Government that no downward revision of the measure of protection or of the retention prices shall be made during the period fixed. Simultaneously, provision should be made that, if the prices prove inadequate, immediate action shall be taken by the Government to revise them in the upward direction. The inclusion in the first Steel Industry Protection Act, on the recommendation of the first Tariff Board, of the clause authorising the Executive Government to impose "offsetting duties" when there was *prima facie* evidence that the protective duties had become ineffective for any reason whatsoever, was an important factor in establishing with success the steel industry and some of the more important other key industries to which the application of "offsetting" duties was later extended.

Among the facts which may furnish *prima facie* evidence justifying an immediate upward revision of protection or of retention prices may be mentioned:

1. Increase in the works costs due to (a) Governmental action, such as the raising of railway freights, of the prices of controlled raw materials like coal and coke, or of customs duties on essential raw materials. (b) increase in the emoluments of labour by reason of the award of a Tribunal, a Conciliation Board, etc. (c) a prolonged strike.
2. Sudden and intensive foreign competition.

The investigation into an application for a revision of the quantum of protection or of the retention prices on any of the above or other similar grounds should be confined to the particular grounds alleged by the applicant. It should not be made an occasion for a re-examination of the whole issue of the quantum of protection or of the prices originally fixed.

Short-sighted Parsimony

Whilst in many Governmental spheres there is so much extravagance and waste of public resources, this niggardly and short-sighted parsimony which compels Government to make the period as short as possible is perhaps explained by two among other reasons. First, it has been claimed that the post-war conditions have been so uncertain that until they became more or less normal no expansion of industries was possible and that no long-term recommendation would serve any practical purpose. It must be recollected that, when the policy of discriminating protection was introduced in 1923, the First World War had been over for only five years and that the conditions were for many years thereafter extremely uncertain, though undoubtedly less violent on their impact on trade, industry and finance. This uncertainty did not prevent the Tariff Boards or the bureaucratic Governments of the time from normally fixing periods of seven years with rare exceptions. It will strain the prescience of any Government to foretell when the present world conditions will undergo such changes as to make them normal. Common prudence, therefore, demands that, instead of waiting with the incurable optimism of Mr. Micawber for normal conditions to "turn up," some legitimate risk be taken to expedite the development, especially of the key industries, by adopting a more courageous course.

The second reason may be that the Government are afraid that the dreaded industrialists may make excessive profits which they cannot take away as they do now by the convenient method of fixing the period of protection or the validity of prices for a short period and ordering an early fresh investigation. I do not believe that it will be beyond the ingenuity or the resources of our all-powerful Government to meet such an evil, as that of excessive profits, if by any chance it ever arises, otherwise than by making it impossible from the outset for the industrialists to earn the profits.

No blame can reasonably attach to the Tariff authorities for carrying out what they apparently believe to be either the express or the implied policy of Government. As far as I know, the Government themselves have prescribed that the period should not exceed three years. As regards excessive profit, the Tariff authorities must unconsciously be influenced by what is being every day said in different ways and even in contradictory terms by various Ministers whether in *communiques* or in speeches in or outside Parliament on the inexpiable wickedness of the profit motive and the desirability of converting it into pure patriotism. Human nature in independent India is regarded as so different from it what was here in the past and what it is all the world over that our politicians consider themselves justified in acting on the supposition that it is modifiable to suit their ideology, by exhortations or, in the last resort, by legislation or some other extraneous action.

(To be continued)

ANOTHER COMMONWEALTH ECONOMIC CONFERENCE

The Commonwealth Governments are reported to be considering the question of holding another Commonwealth Economic Conference. There has been no fresh economic development since the last conference held in London in December last, which warrants the holding of another Conference. But it is stated that this may be the result of the desire expressed at the last conference that similar meetings should be held at least once a year. No decision has yet been reached about the date and place of conference. It is likely that the conference will be held in December this year, if it is decided to hold one. The venue of the conference may be a Commonwealth capital other than London. It is stated in Australian Government circles, according to the Melbourne correspondent of the *Financial Times*, London, that, while the U.K. Government is believed to favour such a conference to be held in London in December, an influential section of the Australian Government would like the meeting to be held in Canberra.

COAL AND IRON ORE RESOURCES IN ASIA AND THE FAR EAST

NEED FOR EARLY DEVELOPMENT URGED

THE United Nations' report on coal and iron ore resources of Asia and the Far East*, prepared by the Secretariat of the E.C.A.F.E., provides one with an idea of the quantities of the basic iron and coal resources which may be expected to be available to meet the demands of industrial development in the region. It is based on the realisation, evidenced by the experience of industrially developed countries of the world, that knowledge of coal and iron ore resources is essential for the sound planning of industrial development in the countries of Asia and the Far East. The report points out that the explorations made so far are inadequate and that there are still large areas unexplored. It, however, makes it abundantly clear that, despite the inadequate knowledge of resources available at present, and the urgent need to increase such knowledge, the pace of economic development could be considerably accelerated, if full and proper utilisation is made of the known reserves.

Iron Ore Reserves

According to the report, the total known iron ore reserves aggregate 11,618.59 million metric tons. Of this, India and China together possess over 78 per cent. The Philippines and Indonesia are next in importance. But, as the largest known iron ore deposits of both the Philippines and Indonesia have high nickel and chromium contents, it is difficult to take them as of the same value as those of other countries. Japan ranks as a very poor fifth in importance. The reserves of Indo-China come next in order. A country-wise estimate of the resources of iron ore are as follows:

(In million metric tons)

	Proven	Probable	Possible	Total
Burma	..	..	0.523	0.523
Ceylon	..	..	6.421	6.421
China	..	..	4,167.820	4,167.820
Hong Kong	..	..	10.000	10.000
India	..	..	5,087.410	5,087.410
Indo-China	10.000	27.500	114.000	151.500
Indonesia	370.000	..	524.950	894.950
Japan	44.100	23.500	94.200	170.800
Korea (south) ..	..	..	19.700	19.700
Malaya	25.293	4.168	15.633	45.094
North Borneo	..	..	..	..
Pakistan	..	..	41.000	41.000
Philippines	..	..	1,018.504	1,018.504
Thailand	0.719	0.092	..	0.811
Total	450.112	62.617	11,105.854	11,618.593

Coal Reserves

Coals, ranging from peat to anthracite, in rank, and permocarboniferous to quartenary, in age, have been found in the region. Taking coal in the lowest form (peat) into consideration, all countries of the region have some coal, though the quality and quantity vary. In most countries, low-grade coals predominate. Only China, India, Indo-China, Japan and Korea have substantial reserves of higher grade coals. Coking coal reserves are limited to China and India. So far as the quantity of coal reserves is concerned, China occupies the foremost position, followed by India, Indo-China and Japan. A conservative estimate made by the Geological Survey of China, including seams only three feet and over in thickness, and taking into consideration a depth of 3,000 feet, places China's reserves at 265,000 million metric tons. A more recent estimate places them at 445,000 million metric tons. In view of the dense population of the region, however, China has, in terms of *per capita* reserves, only 965 tons, in contrast with over 34,000 tons in the U.S. Indo-China has 740 tons per head and India 187 tons. The estimated reserves of coal in Asia and the Far East are as given below:

(In million metric tons)

Brunei	*
Burma	265
Ceylon	51
China	444,511
India	67,702
Indo-China	20,000
Indonesia	2,500
Japan	20,948
Korea (south)	1,091
Malaya	61
Nepal	*
North Borneo	17
Pakistan	168
Philippines	42
Sarawak	20
Thailand	*
Total ..	557,298

A healthy trend in the development of the iron and coal industries of the region has been noticeable during the past few years. Post-war production of iron ore in China, India and Japan has made sizable increases over the 1938 output. Production in other countries has been recovering. So far as coal is concerned, countries which previously had no production have made earnest efforts to develop their mines, while others are planning to increase production or to improve the quality of low-grade coals and to conserve higher grade coals or both. The production of coal and iron ore of some important countries for which statistics are available is as follows:

	Iron ore		Coal	
	1938	1951	1938	1951
China	3,336,000	N.A.	36,000,000	40,000,000
India	2,738,000	3,000,000	24,793,000	34,000,000
Japan	624,000	855,377	41,803,000	43,000,000
Malaya	1,042,000	746,803	845,000	833,000
Philippines ..	920,000	963,282	41,000	151,000

N.A.—Not available.

In order to ensure maximum utilisation of coal and iron ore resources in the industrial development of the region, the report has urged the need for a well co-ordinated programme, not limited only to intensive geological survey and improved methods of exploration, but also including mining development, preparation and utilisation. Co-ordination between Government and industry in the mineral exploration programme is desirable. Attention should be paid to increased mechanisation of mines for improving output and bringing down costs of production. But it is to be noted, as pertinently pointed out by the report, that no modern underground mines can operate without the mechanisation of basic services such as power house, hoist apparatus, pumping facilities and ventilation equipment. The report also emphasises that excessive number of separate producing units for the total tonnage produced is a situation which should be remedied at an early date. The report has highlighted the importance strip-mining. Its economic value, it says, has already been demonstrated in the Fushan coal mines in China. In India, the method of stripping the over-burden, which covers the coal deposits, by means of heavy mechanical equipment, and leaving it to be removed by hand labour at a subsequent date, is not entirely new. The report has also stressed the utility of coal washing to countries having large reserves of low-grade coals.

Coal and Iron Ore Resources of Asia and the Far East. Published by United Nations, New York. Available at Oxford Book and Stationery Co., Scindia House, New Delhi. Price $1.50.

PERAMBUR COACH FACTORY

The maximum capacity of the Integral Coach Factory at Perambur, the agreement for the establishment of which has recently been concluded between the Government of India and Messrs. Schlieren of Switzerland, is 350 coaches per year. The total capital cost of the project is expected to be a little over Rs. 4 crores, about half of which will be for the construction of the building and the other half for the purchase of plant and machinery. Under the agreement the fee to be paid to the Swiss firm is 2.5 million Swiss francs or about Rs. 30 lakhs. Of this 880,000 francs have already been paid to the firm. One advantage of the new agreement is that the payment of the balance of 1.62 million francs has been linked up with production and the actual amount to be paid year by year will depend on the number of coaches manufactured. Production is expected to commence by the end of 1955 and the contract with the firm is for a period of eight years. There are provisions for payment of royalty to the company and bonus to the Swiss staff, if the target is reached early. About 40 Swiss technicians are expected to work in the factory. Steel shells for the coaches will be manufactured by Tatas.

SLUMP IN TIN

MALAYAN PRODUCERS PERTURBED

THE outlook for world tin has become more obscure than that for any other non-ferrous metal. The undertone of the world market for tin is extremely weak at the time of writing. The other day, it slumped below the £600 per ton level, at which it stood on the eve of the Korean War in June 1950. The price of tin at present is about £581. It was £800 per ton in April 1953, £942 at the close of March, 1953 and £960 in January, 1953. The price of tin was fairly stable during 1952 in the neighbourhood of £960, the extreme points touched by it being £1,005 in January and £918 in August, as against £1,620 and £805, the maximum and minimum prices recorded in 1951.

During the last three months, tin has lost about £250 per ton in value. Such a sharp fall is due to a number of factors. The chief among them is the failure of demand to keep pace with production. The world output of this metal is said to be at the rate of about 170,000 tons per annum, as against a consumption of about 125,500 tons. The following table shows the world mine production of tin during the first four months of 1953, the total output in 1952, and the annual rate for 1953:

	1st four months of 1953	Total for 1952	Annual rate 1953
World mine production ..	56,100	170,000	168,300
Of which :			
Malaya	18,624	50,838	55,872
Indonesia	9,661	25,013	29,083
Bolivia	11,611	31,950	34,833
World metal production ..	62,300	165,000	186,900
Of which :			
Malaya	22,305	62,820	66,915
U.K.	7,325	20,521	21,975
Netherlands	9,904	27,913	29,712
U.S.	15,000	39,501	45,000
World consumption ..	44,900	127,500	134,700
Of which :			
U.S.	19,604	45,299	58,812
U.K.	6,450	22,554	19,350

The second important factor that has contributed to the recent fall in price of tin is the sharp decline in the U.S. demand, the chief consumer of tin in the world. Its purchases for stockpiling which had in the past absorbed the surplus world tin output, have diminished sharply. The slump in prices has naturally encouraged buyers to hold off. The Korean truce, signed this week, may accentuate the present downward trend in prices, if it has not been already discounted.

The tin producers in Malaya are very much perturbed about the present weak trend of the London Metal Exchange. For they are the main producers of tin ore, accounting as they do for about one-third of world total output. The fall in the prices has virtually affected the volume of Malaya's foreign trade. The large deficit of $83,391,000 for the first half of 1953 is to a considerable extent due to the fall in the price of tin. This deficit is one and half times the adverse balance of trade for the whole of last year.

Latest reports from Singapore indicate that a few marginal mines in Malaya have already suspended their activity. The miners are stated to be contemplating a move to restrict the output of this peninsula's second vital export commodity. At an extraordinary meeting of the Chinese Mining Association, held in Ipoh, the capital tin-rich Perak State, on the 23rd inst., the miners are stated to have supported the move, and held that such a scheme would be successful, provided it was also supported by their European counterparts, who produce two-thirds of the Federation's output. The Association is also reported to have suggested the establishment of a Central Marketing Board in the U.S., creation of a 10,000-ton buffer stock, and curtailment of working hours by 25 per cent., in the light of recent closure of 54 marginal gravel-pump mines. The *Straits Times*, a leading paper of the Malayan Federation, has suggested that such a pool should be financed by large producers, who have the cash resources, and that the Government should assist the small producers by advancing small sums, which will be recoverable when the tin is sold. It is thought that the pool can function without prejudice to the formation of an international pool, which could take over the pool if an international agreement were to be reached. The *Straits Times* dismisses the fear that such a pool will merely drive customers to other markets by saying that the only market for the Straits' tin is Singapore and consumers who need the Straits' tin must get it directly from Singapore. It is pointed out that, as the U.S. has forward contracts with Indonesia, the Belgian Congo and Brazil, a good part of the latter countries' production is not available for marketing elsewhere, and the consumers have perforce to buy

(Continued in previous column)

(Concluded from next column)

the Straits' tin. Malaya has no forward sales, as by general agreement, all producers sell their total production to two Malayan smelters, the Straits Trading Company and Eastern Smelting Company.

Inasmuch as violent fluctuations in the price of tin do no good either to producers or to consumers, the need for maintaining a reasonable level of prices requires no emphasis. The question of evolving a buffer pool, as suggested above, or an international tin agreement, aimed at stabilising prices, depends on the attitude of the U.S., the main consumer of tin in the world. But this country has all along objected to the regulation of tin supplies and there is no reason to believe that it will change its attitude in the foreseeable future.

A PENSION FOR LIFE
Are you in non-pensionable service, trade or business? You too can have a pension for life with this easy "Help Yourself" investment Plan.
Start right now. Every month buy regularly for the next 12 years a Twelve-Year NATIONAL SAVINGS CERTIFICATE of say, Rs. 150. These certificates will mature, one every month, onwards from 1965. Cash a certificate each month thereafter; take the bonus of Rs. 75 as your pension and re-invest the principal, Rs. 150. Thus from 1965 onwards, you will have a regular monthly income of Rs. 75 for yourself plus the accumulated principal of Rs. 21,600 for your dependants. Begin today and go on buying a Certificate every month for the next twelve years.
NATIONAL SAVINGS CERTIFICATES
SECURITY FOR THOSE WHO LOOK FAR AHEAD
Issue of these certificates is subject to the National Savings Certificate Rules, 1944, as amended from time to time. For further information or details please apply to the National Savings Commissioner, Simla-3.

ORIENTAL RAISES DIVIDEND LEVEL

TOTAL BUSINESS CROSSES RS. 200-CRORE MARK

FOUNDED in 1874, at a time when insurance was regarded as a strange and outlandish custom, practised by a small coterie of anglicised Indians, the Oriental Government Security Life Assurance Company, Ltd. (General Manager: Mr. L. S. Vaidyanathan, Bombay), has grown from strength to strength until to-day it occupies a foremost position among the institutions of its kind. From Indian standards of joint-stock enterprise, its traditions are hoary indeed, but they would stand comparison even with many of the well-established insurers in the West. Its latest report, namely, that for the year 1952, shows that the Company's financial strength, impressive as it has always been, has continued to grow, while its mortality experience is even more favourable than in previous years.

If, however, one judges the Company's 1952 results from the "new business" standard, then it must be admitted that there has been a setback, for, the impressive increase in new business witnessed in 1951 has not only not been improved upon but not even maintained. Thus, new life business in 1952 at Rs. 21.22 crores was Rs. 1 crore less than in the previous year. But the real test of new business is not, as has so often been emphasised in these columns, quantity but quality. And if the Oriental can show that it has not gathered chaff but grain—its lapse ratio in future years should be able to show that —it will have demonstrated that the fall in new business is not a factor that should cause any great disappointment. The Company's total business in force has crossed the 200-crore mark to stand at Rs. 200.07 crores.

The following table gives the progress of the Company during the three years ended December, 1952:

(Value: In crores of rupees)

	1952	1951	1950
Policies issued (Nos.)	71,359	78,459	70,957
Amount	21.22	22.22	20.52
Total insurance in force	200.07	189.25	179.77
Total income	11.32	10.89	10.27
Of which:			
Premium income	9.18	8.94	8.56
Interest income	1.98	1.81	1.70
Total outgo	6.61	9.71	5.74
Of which:			
Claims by death	1.09	1.08	1.20
Claims by survivance	2.63	2.37	2.23
Expense ratio %	23.2	21.91	22.29
Life Assurance Fund (at close of each year)	67.72	62.03	61.80
Interest earned %	4.05	2.94	2.90

Total income during the year under review was Rs. 11.32 crores, as against Rs. 10.89 crores in 1951. Of this income, premiums brought in Rs. 9.18 crores, as compared with Rs. 8.94 crores. The increase in premium income is shared by the Company's Indian, as well as foreign, business, the former having improved by Rs. 15.3 lakhs to Rs. 7.95 crores and the latter by Rs. 9.0 lakhs to Rs. 1.22 crores. Revenue from investments continues to expand; it was Rs. 1.70 crores in 1950, Rs. 1.81 crores in 1951 and Rs. 1.98 crores in 1952.

Mortality Experience

The excess of total income over total outgo was as much as Rs. 4.71 crores in 1952, as compared with only Rs. 1.19 crores in 1951. A high proportion of the Company's business has always consisted of endowment assurances, so that claims by death were only Rs. 1.09 crores, as against Rs. 2.63 crores by way of claims by survivance. It is particularly noteworthy that the mortality experience of the Company is very favourable, which is a tribute to its careful selection of lives. Thus, the ratio of actual to expected deaths, on the basis of the Company's own ultimate mortality experience during 1925-35, was 42.9 per cent., as compared with 46.6 per cent., in 1951 and 51.4 per cent., in 1950.

The Company's expense ratio is, however, heavier at 23.2 per cent., reflecting the widening of its development as well as the general increase in costs. The net rate of interest realised during the year, however, was favourable at 4.05 per cent. as against 2.94 per cent. in 1951. This large difference is mainly accounted for by the fact that, while in 1951, the Company did not receive any refund of income-tax, it received in 1952 the refund of tax for ten years. Had only one year's refund been received in 1951 and one year's in 1952, the net rates of interest for these years would have been 3.43 per cent. and 3.58 per cent. respectively.

The balance-sheet total, as at the end of 1952, has reached an impressive level of Rs. 71.40 crores. The assets are mainly invested in Gilt-edged and semi-Gilt-edged securities. The life assurance fund stands at Rs. 67.72 crores and other reserves at Rs. 11.9 crores. The paid-up capital is only Rs. 6 lakhs. Estimated liability in respect of outstanding claims aggregate Rs. 1.54 crores.

It is gratifying to note that the shareholders have been allowed to participate in the increased income of the Company, in that the dividend has been stepped up from Rs. 125 per share (62½ per cent.) paid for the year 1951 to Rs. 175 per share (87½ per cent.) for the year under review. It may be noted here that this is the first time the Company has raised the dividend after maintaining it at the former level for a long period of 18 years. For 1933, it may be mentioned here, the Company paid a dividend of 75 per cent. (including a cash bonus), but it was reduced to 62½ per cent. for the following year. The dividend for 1952, while being the highest since 1930, is by no means a record high, since a cent per cent dividend was paid for 1930, a still higher dividend of 130 per cent. for 1927 and an even higher dividend of 190 per cent. some 30 years ago, for 1924, to be precise.

BRITISH INSURERS' INCOME

The premium income of the member companies of the British Insurance Association, according to a recent statement by Mr. Edward Ferguson, Chairman of the Association, was £925 million in 1952, as against £859 million in 1951. The break-up of these incomes in terms of the main classes of insurance business was:

(In £000)

	1952	1951
Fire	208,094	198,553
Accident	266,766	237,270
Marine	67,539	63,465
Ordinary life	260,745	242,103
Industrial life	122,324	118,330
Total	925,468	859,721

(Concluded from next column)

of mutualisation of insurance companies, as Mr. Pai said in so many words, lies in the fact that it is, perhaps, the most effective answer to those who urge nationalisation of insurance. But unfortunately, those who urge nationalisation are actuated by doctrinaire considerations so that it remains to be seen whether the trend towards mutualisation will lessen the misplaced enthusiasm of these ardent socialists.

Mr. Pai referred next to an issue which has been agitating both insurers and insured in this country, namely, the effect of the proposed estate duty on insurance. He said:

"(1) Any law that comes in the way of raising the average insurance per head in India, which is at present as low as Rs. 20, is really not a healthy legislation for the time being; (2) any legislation that discourages insurance among the rich or the poor will adversely affect the growth of the nation itself; (3) certain sections of the Estate Duty Bill will in effect neutralise some of the provisions of the Insurance Act like those on assignments and nominations and this is not at all desirable; (4) besides this, I have to suggest that the limit of exemption to life insurance should be raised to Rs. 25,000 from the present minimum of Rs. 5,000 in the Estate Duty Bill. That is to say, irrespective of the status of the deceased person, however high or low it may be, an insurance of Rs. 25,000 should be exempted from the levy of estate duty."

Many of these arguments have been urged ere now by several insurers, and have been extensively publicised. It remains to be seen whether the Government will revise its earlier stand that no further reliefs are called for, and agree to amend the Bill in a manner that will meet the widespread demand for providing substantial relief for the insured in the Estate Duty Bill.

TAXATION OF MUTUAL INSURERS

MR. T. R. A. PAI URGES RELIEF

INDIAN mutual insurers have for long been agitating for the recognition of their case for relief from income-tax, their contention being that they should be treated, for purposes of tax, as co-operative insurers. This contention is based on the ground that, since they are mutual organisations, they do not earn "profit" in the same sense as the ordinary joint-stock insurers do. Mr. T. R. A. Pai, President of the Association of Mutual Life Offices in India, returned to this theme when he addressed the recent annual meeting of the Association, held in Bombay.

In the course of his address, Mr. Pai referred to the reply received from the Government of India to the Association's representation for exemption from income-tax for mutual insurers. The Government had turned down the request saying that the mutual insurers' business was in no way different in nature from that carried on by propietary companies. Mr. Pai pointed out, in this connection, that, although all insurers, whether proprietary, mutual or co-operative insurers, carried on the same kind of business, namely, life assurance, the mutual and co-operative insurers were different from the proprietary insurers. The difference arose from the fact that both co-operative and mutual insurers did business among the members of their own groups and not with outsiders. He wanted, therefore, that the principle of exemption from tax, which had been accepted in the case of co-operative insurers, should be applied to mutual insurers. He said:

"The co-operative insurers are exempted from income-tax because they do business among their own members and nobody else. The mutual insurers also do business on a similar principle. In a mutual insurance company, everything is in the hands of the policyholders and there are no shareholders or others handling the business of the Company with any motive of making a profit out of it. Therefore, we firmly affirm the mutual insurers have no profit motive and cannot be subjected to income-tax and they have to be exempted from this tax on the same basis as co-operative insurance societies."

Principle of Exemption

It is regrettable that the Government has turned down the request of the Association. The principle that mutual insurers should be exempt from tax has been accepted in many countries, particularly in the U.S. and in the U.K. In a closely reasoned memorandum, submitted by the Association to the Taxation Enquiry Commission, the Association traces the history of taxation of mutual insurers. Until 1939, both co-operative insurers and mutual insurers had been exempted from income-tax. But from that year, the Government began to tax both these classes of insurers. The position as regards co-operative insurance societies was, however, soon set right by a decision of the Bombay High Court. But the taxation of mutual companies has continued uninterrupted, notwithstanding the repeated demands made by the mutual insurers for exemption from tax. The Association quotes, in this connection, the well known decision of the British House of Lords in *Inland Revenue* vs. *Ayrshire Employers' Mutual Insurance Ltd.* This decision emphasised the distinction between "surplus" and "profits". It held that the "surplus was not profit within the meaning of the Income-tax Act but merely represented the extent to which the contribution of those participating in the scheme had provided more than what was necessary to meet their liabilities," and further that the "balance or surplus was the contributors' own money and returnable to them." Proceeding, the Association observes:

"The mutual societies, by their very nature, cannot make any profits since they trade with no outsider, and, as in co-operative insurance societies, any excess charge made is returned to the members in the shape of reversionary bonuses. May we also respectfully submit that the present taxation of mutual insurance companies is an anomalous attempt. All the reasons that lead to the exemption of co-operative insurance societies from tax also apply to mutual companies. We, therefore, urge that this anomalous position be rectified and that the mutual companies be exempted from taxation in the same way and to the same extent as the co-operative insurance societies."

To revert to Mr. Pai's address. Mr. Pai welcomed the "trend towards mutualisation prevailing among certain proprietary companies." He compared this trend with the trend towards democracy and freedom in political life. He said: "Mutualisation is in insurance what democracy is in public life." The chief merit

LIFE OFFICES AND TAX DEDUCTED AT SOURCE—II

DOES CHANGE IN VALUATION PERIOD RESULT IN ACTUAL LOSS?

(By R. N. GODBOLE, B.A., B.Com., C.A.I.I.B.)

THE assessment of a life insurance company is made according to the rules contained in the schedule to the Income-tax Act. In section 10(7), it is provided that, notwithstanding anything contained to the contrary in sections 8, 9, 10, 12 or 18, the profits and gains of any business of insurance and the tax payable thereon shall be computed in accordance with the rules contained in the schedule to the Act. According to rule (2) of the schedule, the profits and gains of life insurance company shall be taken to be either (a) the gross external earnings less management expenses or (b) the annual average of the surplus as disclosed in the actuarial valuation after adjusting disallowables under section 10, whichever is more.

Rule 4 of the schedule says that, where for any year, assessment is made under rule 2(b), i.e., in accordance with annual average of a surplus disclosed by a valuation for an inter-valuation period exceeding 12 months, then, in computing the tax payable for that year, credit shall not be given, in accordance with sub-section 5 of section 18, for the tax paid in the preceding year, but credit shall be given for the annual average of income-tax paid by deduction at source from interest on securities or otherwise during such a period. Section 18(3) says that the tax shall be deducted at source while making such a payment, i.e., interest on securities, etc., held by a life insurance company. Section 18(4) says that such a deduction shall be deemed to be income of the assessee while section 18(5) says that such a deduction made shall be treated as payment of income-tax on behalf of the person from whose income deduction was made and credit for such deduction shall be given in the assessment made for the following year.

No Restriction Before

Before the amendment of the Insurance Act, 1950, there was no restriction on the valuation period. Some companies made their actuarial valuation at an interval of three years, some at four years and some even at five years. The assessment is made on income computed under rule 2(a) or 2(b) whichever is greater. If it is under rule 2(a), the company gets the credit for the whole tax deducted at source in the previous year. If it is under rule 2(b), the company gets credit for the tax deducted at source not for the whole tax deducted at source in the previous year but the *annual average* of the income-tax deducted at source during inter-valuation period.

Now the most important question before us is whether, by compulsory change in the valuation period from five years or four years to three years under the new amendment of 1950, the insurance company has suffered any actual loss for the tax deducted at source in the previous years. To understand this point clearly, let us take the example of a life insurance company which has made its actuarial valuation in the years 1935, 1938, 1942 and 1947 and then according to the Insurance Amendment Act a triennial valuation for the year ended 1950.

Assessments and Valuation

In the above case, the 1947 valuation was a quinquennial valuation, it being based on the accounts for the years 1943, 1944, 1945, 1946 and 1947. The assessments for account years 1947, 1948 and 1949 were based on this valuation and in each assessment the annual average, that is, one-fifth of the total surplus as well as one-fifth of the total tax deducted at source during the inter-valuation period was taken into account. Thus, in the three assessments taken together three-fifths of the total surplus and three-fifths of the tax deducted was taken into account. Now before the remaining two-fifths was absorbed, the Insurance Amendment Act of 1950 was passed, whereby the company was required to prepare its next valuation report for a triennium only, i.e., as at 31st December, 1950, and, as said in the beginning, the assessment for the company's year 31st December 1950 was based on this new valuation. Now the point is what about the two-fifths of surplus and two-fifths of tax that has still remained unadjusted from the 1947 valuation? So far as the schedule to the Income-tax Act is concerned, the Income-tax Officer is correct in basing the 1951-52 assessment (i.e., assessment for the year ending 31st December 1950) on the 1950 valuation report. It cannot be argued that he should have based it on the 1947 valuation. That would not only be illegal but it would also be of great disadvantage to the life insurance company, as, in that case, the amount of refund would be substantially decreased.

After all, the assessable income of a life insurance company is taken as a notional income and whether there is any credit for the tax deducted at source on a company's account with the Income-tax Officer or not, the company concerned is given credit for the average tax deducted at source in the valuation available with him, when the assessment is made under rule (b). For example, in the above case, the valuation for 1938 was triennial and still four assessments, namely, those of 1938, 1939, 1940 and 1941 were based on this valuation, one-third of the total surplus and one-third of the total tax deducted at source being taken into account every time. Thus, in this case, the company gets credit, of tax in its assessment for 1941 accounts, although there is no balance of income-tax deducted at source in the company's account with the Income-tax Officer, it being exhausted for assessments of 1938, 1939 and 1940.

Again, it is not definite that every year the assessment will be made under rule 2(b) and it cannot definitely be said that the company must get credit of the annual average tax deducted at source. For example, in the case of one company having exactly the above valuation period, the 1943-44 assessment (account year 1942) was made under rule 2(a) and there was therefore, no question of annual average credit as under rule 2(b). Consequently, the company gets credit for the full tax deducted at source in 1942. The next four assessments in that case, i.e., for account years 1943-44-45 and 1946 were, however, based on the quadrennial valuation of 1942 and in each of them the company got credit for one-fourth tax deducted during 1939, 1940, 1941 and 1942. Thus, the company got credit of tax deducted in 1942 twice, once in the 1942 assessment and again the next four, i.e., 1943, 1944, 1945 and 1946 assessments. So there can be no case for definite annual average credit for the tax deducted at source.

Thus, although it appears that two-fifths of the tax deducted at source in the 1947 valuation still lies with the Government, it is doubtful whether the company can claim refund of the same under any provision of the Income-tax Act for, according to the Act, income as well as credit of tax for only one year can be taken into account in one assessment. No appeal can lie on this point with the A.A.C. of Income-tax under section 30 of the Income-tax Act which deals with the points that can be taken in appeal.

The only solution now that appears worth trying is to apply to the Commissioner of Income-tax for reopening and readjustments of the assessments of 1947, 1948 and 1949 and to request him to base these assessments on one-third of the tax deducted in the 1947 valuation, instead of on one-fifth as actually done.

The Only Solution

Thus, income assessed in the case of a life insurance company being a notional income when it is computed under rule 2(b) and we get credit for the tax deducted at source based on an average period, it is doubtful whether it can be said that the loss of two-fifths of the tax deducted at source is a real loss. I understand that the Indian Life Offices' Association has taken this point to the Central Board of Revenue and its result is awaited.

LABOUR LEGISLATION IN INDIA

NO ATTENTION PAID FOR BUILDING UP TRADE UNIONS ON HEALTHY LINES

(By S. SESHADRI)

ACCORDING to current reports, a few labour Bills will be introduced in the autumn session of Parliament. The declared objectives of these Bills are to provide a uniform code of labour legislation, to create scope for the growth of collective bargaining and healthy labour-management relations and to regulate and help the development of a strong trade union movement in the country. It may, therefore, be useful to review now the main provisions of some of the important labour laws passed since independence, in order to assess their contribution to labour's improvement and to see in what respects they need to be altered.

The labour laws enacted since 1947 by the Government of Free India can be classified under three heads: (1) Welfare and wages; (2) industrial relations and trade unions; and (3) social security.

Welfare and Wages

The leaders of the Congress Party who rode to power on the high tide of popularity among the working classes were anxious to raise the standard of living and improve the working and living conditions of labour. Hence, steps were taken immediately by the Government to make provision in law for labour welfare.

The comprehensive Factories Act, 1948, the first Act in this direction, consolidates all the previous enactments and makes elaborate provisions for welfare measures. The Act abolishes the distinction between seasonal and non-seasonal factories and widens the definition of the term 'factory,' so as to include all industrial establishments, employing ten or more workers where power is used, and 20 or more in all other cases.

The old Factories Act contained all the provisions regarding health, safety and welfare in one chapter. But, in the new Act, these are split into three separate chapters and far-reaching provisions of minimum requirements, worked out in minute detail, are made for raising the level of working conditions in the industrial establishments. Further, they are extended to all workplaces, irrespective of the number of workers employed, except to those where work is carried on by the occupier with the sole aid of his family members.

The Act makes an advance over all previous enactments in respect of leave with pay. It provides that every adult worker, who has put in a continuous service of one year, shall be entitled to leave with pay at the rate of one day for every 20 days' service; in the case of children, it is one day for every 15 days' service. (In a recent amendment to the Act, the need for putting in continuous service to qualify for leave with pay has been removed.) In regard to employment of children in factories, the minimum age is raised from 12 to 14 years and the maximum work hours reduced from 5 to 4½ per day.

The minimum requirements of work space per worker, cleanliness, washing and bathing facilities, canteens, creches, medical aid and other provisions are laid down in detail in the Act; and the State Governments are required to make rules for the association of workers in the management of these arrangements. While enhanced penalties are prescribed for violations of these provisions, the Factories Inspectorate are given powers for their stricter enforcement and control.

Minimum Wages

The Payment of Wages Act, 1936, regulated the payment of wages and only prevented arbitrary deductions from workers' wages and fines; but it was not helpful to a worker who had no bargaining power to secure a living wage. A law to help the unorganised workers was, therefore, a long-felt need. This was met by the Minimum Wages Act, 1948, which was a landmark in Indian labour legislation. For the first time, a legislation was made statutorily to fix minimum rates of wages in a number of employments, including agriculture and plantations. The Act required State Governments to fix, before the expiry of three years in the case of agriculture and two years in other cases, minimum rates of wages for all employments mentioned in the schedules. By an amendment in 1951, the period was extended by one year, to 31st March, 1952, for all employments other than agriculture and upto 31st December, 1953, for agricultural workers.

The constitution of a Central Advisory Board is also provided for in the Act, to advise the Central and State Governments on matters connected with the fixation and periodical revision of minimum wages. In all the Boards, Committees and Sub-Committees envisaged in the Act, employers and employees are to be represented in equal number and independent persons were to be associated by nomination. By these provisions, the Government of India has sought to extend its control on matters relating to wage fixation and revision in industrial employments.

Industrial Relations and Trade Unions

The new legislation in this sphere, which was largely based on the war-time experience of the working of section 81A of the Defence of India Rules, radically altered the machinery for the settlement of industrial disputes and regulation of employer-employee relations. The Industrial Disputes Act, 1947, in which was incorporated all the provisions of section 81A, made two innovations: first, it provided for the constitution of Works Committees of labour-management representatives in every establishment of 100 or more workers, in order to remove causes of friction and promote measures for establishing sound industrial relations; and, secondly, provision was made for the constitution of industrial tribunals, to which disputes could be referred for adjudication. A dispute could be referred for adjudication to a tribunal when the State Government considered it expedient and/or when both parties applied for it. A tribunal's award was binding on both parties for such time as might be notified by the Government.

The entire conciliation machinery is given a new orientation in the Act. Prior resort to it is obligatory in disputes in public utility services and optional in other cases; and time-limits are laid down to expedite proceedings—14 days in the case of conciliation by Conciliation Officers and two months by a Board of Conciliation, reckoned from the date of notice of strike. Strikes and lockouts are prohibited during pendency of conciliation or adjudication as well as during operation of settlements reached by conciliation or awards of industrial tribunals. And the Government is empowered to declare, if public interest required, as public utility service any of the following industries: transport, coal, cotton textiles, foodstuffs and iron and steel.

To achieve uniformity in awards, the Industrial Disputes (Banking and Insurance Companies) Act was passed in 1949, authorising the Central Government alone to refer for adjudication disputes in banking and insurance companies. For similar purpose in the case of other industries also, the Industrial Disputes (Appellate Tribunal) Act, 1950, was passed, providing for appeals against the awards of labour courts and industrial tribunals. This Act was also intended to co-ordinate the activities of the large number of industrial tribunals set up by the Central and State Governments. In 1951, section 10 of the Industrial Disputes Act was amended to include within the scope of general adjudication, even units in which no disputes might actually exist.

One predominant feature of these pieces of legislation on industrial relations is the extension of State control over all matters connected with the settlement of industrial disputes. The State has the discretionary power to refer or not any dispute for adjudication. The result was that both employers and employees looked to the Government for settlement of their disputes, without making any attempt to settle among themselves by negotiation or discussion.

State Legislations

There was a similar trend in the labour legislation by the State Governments. Bombay was the first to pass an Industrial Relations Act. The Bombay Industrial Relations Act, which was put on the statute book in 1947, repealed and replaced the Bombay Industrial Disputes Act 1938. The new Act has made several important changes in the structure of industrial relations machinery. A new class of "approved unions" receiving preferential treatment has been created and given certain privileges in return for certain obligations, the chief of which is not to go on strike until all the provisions of the Act for settling a dispute are exhausted and the majority of the members voted for it. For the first time in India, labour courts were set up in Bombay for securing quick decisions on references of illegal changes in standing orders or conditions of work. The Act provides for setting up, in various industries, joint committees of employers' and employees' representatives which, it was hoped, would give opportunities for mutual understanding and co-operation between the two partners in industry. Thus, the Act chiefly aims at regulating all matters of employer-employee relations. The sheet-anchor of the whole Act is compulsory adjudication of industrial disputes.

The Uttar Pradesh and Madhya Pradesh States, too, have followed suit and passed the U.P. Industrial Disputes Act and the Industrial Disputes Settlement Act, respectively. In their main provisions, these two Acts follow the principles of the Central Government's Industrial Disputes Act 1947. The other States are applying and following the Central Act.

It is surprising that while there has been a spate of legislation on industrial relations and labour welfare in recent years, no attention has been paid to the regulation of trade unions, except by including a few provisions, as mentioned earlier, in the Industrial Disputes and Industrial Relations Acts. In fact, the state of the trade union movement in India on the eve of and after independence and the inadequacy of the Indian Trade Unions Act 1926 warranted a more comprehensive Trade Unions Act for helping the growth of the labour movement on sound lines. But, unfortunately, this aspect was completely overlooked by the party in power. A Trade Unions (Amendment) Act was, of course, passed in 1947, providing for compulsory recognition of trade unions by employers by order of a labour court; but, for reasons unknown, it was not put on the statute book.

Social Security

Unprecedented advance was made in the field of social security for industrial workers in this period. Prior to 1947, the Workmen's Compensation and Maternity Benefit Acts were the only measures which provided some security to industrial labour. But, since 1947, several measures have been passed for providing better security to the factory workers.

The Employees' State Insurance Act, 1948, which marks a new era in the field of social insurance legislation in India, provides for compulsory insurance of a specified class of workers against the risks of sickness, maternity and employment injury. Five types of benefits are granted to all insured workers: sickness, maternity, disablement, dependents' and medical benefits. In February, 1952, two pilot projects, under the insurance scheme were inaugurated in Kanpur and Delhi. The scheme is to be extended over all the country by stages by July 1954, when it will be the largest scheme of social insurance operating in Asia.

Another important step forward was taken by passing the Employees' Provident Funds Act in 1952, which provided for the compulsory institution of provident funds for workers in all factories in existence for three years, employing 50 or more workers and engaged in the manufacture or production of cement, cigarettes, electrical, mechanical or general engineering products, iron and steel, paper and textiles. This Act was inaugurated in November, 1952, and covers about 1.6 million workers in the country.

Besides these, the Central and State Governments have passed several other acts to ensure smooth industrial relations and improve the workers' welfare. Housing, education and recreational activities have all come in for State regulation. The last act in the list is the Bombay Labour Welfare Fund Act 1953, which provides for the constitution of a Central Labour Welfare Fund in the State, by pooling all fines and unclaimed accumulations in the factories.

As the above review reveals, the extension of State control over all matters of industrial relations and labour welfare is a predominant feature of all recent labour legislation in India; so that whether a dispute is about wages, bonus, change in working conditions or any other minor question, both labour and management today look to the Government for its settlement. No attempt is made by either side to settle the dispute by mutual discussion or negotiation. No wonder, therefore, that industrial disputes coming up for adjudication are increasing in number. Nevertheless, it cannot be gainsaid that compulsory arbitration has benefited both industry and labour. Loss of time by strikes and lockouts has been greatly minimised and a certain amount of peace in industry has come to prevail, leading to increased production. Labour too has gained much by way of higher wages, more bonuses and increased welfare amenities inside and outside the factory.

All the same, the relations between employers and employees have not been lacking in cordiality and mutual confidence. On the contrary, they have been progressively deteriorating. The peace prevailing in industry to-day is mainly due to external pressure and not to correct appreciation of each others needs and position. This has naturally created an unreal and vitiated atmosphere of industrial relations in the country; this is because State intervention at every stage has prevented correct employer-employee understanding. To remedy this situation, emphasis must be put, as the Union Labour Minister, Mr. V. V. Giri, has been rightly declaring during the past one year, no mutual discussion and voluntary negotiation between management and labour. The new labour legislation should aim at enabling management and labour to come together and discuss their problems in a spirit of understanding and friendliness. The chief objective of law should be to bring the parties together, so that they can negotiate and settle their differences themselves. It is only on that basis that collective bargaining can develop in India on right lines.

But collective bargaining cannot grow without a strong trade union organisation. Trade unions are the foundation of collective bargaining in industry. It is a sad commentary on the Indian trade union movement that, even after thirty years of struggle, it is not united or strong; nor is it developing on correct lines. Its weakness has increased due to compulsory arbitration which has made it completely dependent on Government support, in some cases even for its very existence. If collective bargaining is to develop, a suitable legislation for helping the growth of strong independent trade unions from malicious prosecution, it does Unions Act 1926 has proved inadequate in this direction; for, though it affords protection to trade unions from malicious prosecution, it does not require employers to recognise and deal with even registered trade unions. Consequently, unions have come to be recognised or not according to the like and dislikes of management. Very often strong unions, with a majority of workers as members, are not recognised and treated as representative organisations, because the management do not like their office-bearers or because they do not toe the line of the management or the Government. This deplorable feature has done much harm to the Indian trade union movement and the cause of collective bargaining. It is, therefore, very essential that employers should be compelled by law to recognise all registered trade unions with a majority of workers as their members, irrespective of their party affiliations, as representative bodies and deal with them. It is only than that a sound basis will be laid for collective bargaining and voluntary negotiation to develop in India.

(Concluded from third column)

this may be required in the interests of industrial development. Sooner or later, the country may have to face the question whether it would not be worth while to secure a substantial reduction in coal freights at the cost of sacrificing part of the contribution which the railways make to general revenues.'

"These words are as true to-day as they were then. The need to revise the present freight structure to assist the development of industries is really very pressing at present and I hope the Railway Board will not persist in their policy of ignoring the viewpoint of the industry, but will undertake a scientific enquiry into the whole matter, so that the necessary relief, wherever justified, may be given. While on this subject, I would also like to draw the attention of the Railway Board to the inadequacy of railway wagons, both for the transport of raw materials as well as finished goods.

"I shall now conclude by expressing my appreciation for the sincere co-operation and hard work put in by the officers, staff and workers of the Company in bringing out the satisfactory results and I hope the same cordial relations prevailing during this period will not only be continued but will be strengthened in future."

SHREE DIGVIJAY CEMENT CO., LTD.

MR. G. D. SOMANI'S ADDRESS AT ANNUAL MEETING

THE apprehension that an increase in the price of cement would upset the cost of the projects envisaged in the Five-year Plan was dispelled by Mr. G. D. Somani, Chairman, Shree Digvijay Cement Co., Ltd. in his address to the shareholders of the Company at their Eighth Annual General Meeting held at Sika (Jamnagar) on the 21st ult. According to him, the estimates of the Plan were finalised at a time when the price of cement was much higher than at present and the enhancement of the price to that level would not, therefore, upset the Plan.

Referring to the constant increase in the manufacturing cost of the industry, which was due to the Government's action in raising the freight on coal and in enacting various kinds of labour welfare measures, Mr. Somani said that the controlled prices of manufactured goods should be such as to provide adequate return on the capital employed. He pleaded for a reduction in railway freight rates also.

The following are extracts from Mr. Somani's address:

"As you must have observed from the balance-sheet, the working results of the Company during the year under review have been satisfactory. These satisfactory results, as mentioned in the Directors' report, have been primarily due to record output as well as good prices realised in the export market for some portion of the output. You must have also observed that no provision has been made in the balance-sheet for any taxation reserve, since a huge amount of depreciation arrears still remains to be provided. The prices obtained for the Company's output, both for internal as well as export markets last year, are no longer available and the working results of the Company for the current year have not, therefore, been satisfactory so far, but I am hopeful that full justice will be done to the industry by the Government in the near future by fixing fair selling price on the basis of the recommendations of the Tariff Commission.

"Your Directors have approved the installation of ropeways from the factory's packing plant to the steamer loading point in two stages to facilitate the working operations of handling raw materials and cement at Sika Port. As previously reported, the order for the first stage has already been placed with the manufacturers, the completion of which may take more than a year or so. The capital cost involved in this scheme is, indeed, very high and your Directors have sought the assistance of the Saurashtra State Government to exempt the Company from the payment of port wharfage charges and I am glad to report that the matter is being favourably considered by the Government of Saurashtra.

Difficulties of Promoters of New Industries

"There is a general tendency even in informed quarters to blame the industries for frittering away their resources in distributing liberal dividends and in high commissions to the managing agents. It would be interesting to examine this criticism from the results of our own working. The Company was floated in 1945 and the ordinary shareholders got their first dividend of 5 per cent. in 1952 after seven years and are getting 6 per cent. in the current year. The gross profits since the Company's plant started operations and their distribution are as follows:

	Gross profit (Rs. lakhs)	Dividend (Rs. lakhs)	%	Managing Agents' commission (Rs. lakhs)	%
1949 ..	12.24	..	..	8.80	6.5
1950 ..	15.15	—	..	0.85	5.6
1951 ..	18.75	3.00	15.9	1.30	7.0
1952 ..	25.22	3.60	14.2	2.11	8.3

"It would thus be seen that the dividends and Managing Agents' commission represent only 13.05 per cent. and 6.85 per cent. respectively of the gross profits even though the same are not subject to income-tax, at present. Moreover, although as much as 55.0 per cent. of profits was provided for depreciation, still a huge amount remains in arrears. These figures fully illustrate the difficulties of the promoters of new industry in finding additional capital and Government will be doing nothing more than bare justice, if they liberalise the policy of allowing fair prices for controlled goods to ensure a reasonable return to the investors in new enterprises.

Question of Fair Selling Price

"As you are aware, the special price of Rs. 7-8 per ton to the new units was withdrawn from 1st April, 1952, and, subsequently, another drastic reduction of Rs. 11-5 per ton came into force from 1st December, 1952. These and other subsequent reductions in prices have adversely affected the earnings of the cement industry at large and especially have put the new units in a very awkward position.

"The question of fair selling prices was referred to the Tariff Commission in December last by the Government on strong representations of the industry. The Commission completed its enquiries about two months ago and it was expected that they would submit their recommendations about the middle of June, so that the new prices could be effective from 1st July. It, however, transpires that there has been some considerable further delay and the recommendations may have gone only now. I would, however, strongly urge upon the Government to give prompt consideration to the recommendations of the Commission, so that the new prices may be effective at least from 1st August next.

"I need hardly point out that the future of the cement industry, in general and new units, in particular, depends mainly upon the Tariff Commission's recommendations and Government's decision thereon.

Increase in Manufacturing Cost

"There has been some apprehension in certain quarters that by giving suitable increase in the price of cement, the cost estimates of the various projects of national importance as envisaged under the Five-year Plan may be upset. I would like to emphasise here that the Five-year Plan was finalised at a time when the prices of cement were much higher than now and hence the estimates of the Plan were based upon those prices. Therefore, any revision of the prices upto that extent will not in any way increase the cost of construction of such major projects as far as cement is concerned.

"Furthermore, it must be remembered that the constant increase in the manufacturing cost has been brought about by the policy of the Government, in substantially increasing the freight on coal and in enacting various kinds of social, welfare legislations for labour, and there should, therefore, be no objection to any increase being given on this account. I cannot too strongly emphasise that the prices of manufactured goods which are under control should provide for adequate return on capital, if the pace of development of our industrial resources is to be accelerated.

Railway Freight Rates

"The question of the railway freight rates structure is of such great importance to the development of the cement industry that, I feel, I must refer to it again as I have done in the past. I think, I cannot do better than quote what the former Tariff Board said in this connection as early as 1925:

"'Over a large part of the country progress may be seriously retarded, unless the freight on coal can be reduced substantially. We believe that no one would challenge the proposition that coal freights on the Indian railways should be kept at the very lowest point which is commercially possible. But more than

(Continued in first column)

OBSTACLES TO COMMODITY AGREEMENTS

ARE THEY INSURMOUNTABLE?

ALTHOUGH international commodity agreements are considered to be the best means for achieving stability in the prices of primary commodities, it is surprising that only one such commodity agreement, namely, the International Wheat Agreement has been concluded in recent years. Even the future of this Agreement is uncertain, as the U.K. has decided to withdraw from it. As such, a study of the obstacles to the conclusion of commodity agreements, presented by the United Nations through its latest publication on the subject, *Review of International Commodity Problems*, 1952, will be read with interest.

Few States in the world have disputed the utility of commodity agreements as a means to stabilise world prices, but, for one reason or another, many of them have not been able to participate in the negotiations for such agreements or arrive at agreements. The failure to arrive at such agreements is due not to lack of international machinery for the purpose, but to certain other difficulties. These vary greatly from commodity to commodity. The difficulties may arise, as they have already arisen, either from general economic and financial factors affecting the countries which produce or consume the commodity in question. They may also arise from the circumstances in which the particular commodity is produced, marketed or consumed.

A striking example of the type of difficulty arising from general economic and financial factors affecting the countries is provided by balance of payments considerations. This is common to the South and South-East Asian countries. Again, if an agreement needs to contain internationally agreed prices or price ranges, the problem of expressing these prices in a generally accepted and stable currency may give rise to great difficulties. Considerable discussion took place on this point at the Tin Conference in 1950. There is also the difficulty, in regard to the technique of financing buffer stocks, particularly in relation to the management of such stocks, which will have to be bought or sold in varying degrees for convertible and non-convertible currencies.

Alternative Commodities

Among difficulties arising from the nature of the commodity itself and from the arrangements for producing, marketing or consuming, mention must be made of the existence of "alternative" commodities. An instance of a commodity in which the problem of alternative materials arises is rubber. As synthetic rubber is a manufactured product, the production of which can be adjusted according to demand, its price does not fluctuate so violently as that of natural rubber. Naturally, the problem of devising an agreement for rubber requires consideration of both types of rubber. There are also the difficulties caused by differences in types and grades. Such are particularly evident in the case of wool. Further, there are difficulties due to differential prices arising from multilateral long-term contract type of agreements, because of the simultaneous availability of supplies at the prices established by agreement, and of other supplies at free market prices. Although these difficulties were present in the sphere of wheat supply, they did not, however, prevent the conclusion of the first International Wheat Agreement. Thus, wheat was then available throughout the world both at the agreement price and free market prices. Although this agreement has just been renewed, the refusal of the U.K. to participate in it owing to differences of opinion on prices has made its duration quite uncertain. The International Cotton Advisory Committee, in its recent discussions about the possibility of an international cotton agreement, paid considerable attention to this problem, and the representatives of some Governments stated that an agreement, which led to the availability of cotton at differential prices, would not be acceptable to them.

Quite apart from these technical difficulties, there remains the question whether the Governments substantially interested in any particular commodity consider an agreement worthwhile. Particularly, where questions of prices and price ranges arise, the immediate interests of producing and consuming countries may prove more forceful than the concern for stability, if it is at variance with the former.

There are, of course, other considerations, too, which may discourage any particular Government from entering into an agreement. The Governments may decide that it is impossible for them to accept obligations which others have no intention of accepting. Again, they may not accept the required degree of interference with the usual channels of trade, with ready access to supplies, or with freedom of producers.

What then is the future for commodity agreements? Certainly, in the light of these difficulties, it seems too much to expect a series of commodity agreements, which might achieve a measure of stability substantially, throughout the field of primary commodities. That does not mean that the world should remain complacent. Every effort should be made to arrive at short-term schemes, and the possibilities of converting them into permanent stabilisation arrangements should be explored. Care should, however, be taken to see that the commodity agreements do not interfere with the normal forces of supply and demand. Long-term interests should be kept in the background. In fact, the price ranges, which any commodity agreement may be designed to achieve, must conform to the long-term trend for the commodity in question, so far as it can be foreseen.

Prices

Commodity agreements should not, of course, mean that the primary producers should be compelled to choose stability at any cost. Indeed, a well regulated agreement for commodities should assure them reasonable prices, consistent with their own needs of essential equipment for industrial purposes. On this question, the Report says:

"The assistance which commodity arrangements might afford in relation to the problem of development merits some mention in this report. It seems that the avoidance of instability may carry with it certain definite, though limited, advantages for the producers of primary products. Violent swings in the external income of countries producing primary products may well impede plans for development. Not only do they lead to alternate periods of full employment and unemployment (or more often under-employment), but they also make it difficult for the country in question to be sure of a steady inflow of the needed capital equipment."

Are the commodity agreements the only method by which Governments can work together towards achieving stability? The U.N. Report says "not necessarily." Thus, for instance, when certain Governments were faced with serious difficulties arising out of extreme shortages in 1950 and 1951, they were able to achieve, through the International Materials Conference, a large degree of success in devising measures to deal with the effects of those shortages. Moreover, the system of regular meetings of study groups, consisting of experts in problems of individual commodities, has, it is claimed, contributed something towards achievement of stability. The exchange of statistics and information on an inter-Governmental basis at such meetings must have had an influence on national policies in relation to the particular commodities covered by those groups, and this influence has, no doubt, tended towards the achievement of stability to a limited extent. It may not be unreasonable to hope that these factors, coupled with the general awareness of the advantages of stability, may lead, if not to the formal conclusion of international commodity agreements, at least to a better co-ordination of national action in the direction of stability.

Pakistan. Another handicap mentioned by German business houses is the high cost of steel. This, they allege, places them at a disadvantageous position as compared with Britain, enjoying the benefit of low steel prices. Yet another factor which is making it difficult for Germany to make further headway in export trade is the balance of payments difficulties of a number of countries and the bilateral payments agreements. Among the other factors that are likely to slow down Germany's exports in the coming months, mention is made of the exhaustion of credit lines extended to some of the countries, such as Chile, Egypt, Finland and Yugoslavia. Already these countries are finding it hard to repay the credits taken by them and the Government is rather worried over this situation, for it realises full well that the soundness of German economy will be impaired, unless it gets an equivalent for goods exported. The German Government itself may, therefore, discourage exports of goods to countries the balance of payments position of which is not comfortable.

WEST GERMAN EXPORTS IMPROVE

TAX CONCESSIONS FOR PROMOTING TRADE

THE export trade of Western Germany has been faring better than ever before. There was an export surplus of £75 million during January-June, 1953. The volume of foreign orders received during the months of April-May of this year was 28 per cent. higher than in the same period in 1952. That there has been a steady rise in German exports is evident from the fact that, since 1950, when the German balance of payments position was serious, the foreign exchange accounts of the German Central Bank has changed from a deficit of £45 million to a surplus of as much as £520 million, of which gold and dollars account for more than half.

The aforesaid achievement was due, to a large extent, to the assistance rendered by the German Government in various ways. There is an impression among the competitors of Germany that the Government aided the exporters by providing subsidies on a liberal scale. That some subsidy was given is not denied, but the accusation that heavy export subsidies were being paid is denied strongly. German official spokesmen aver that Germany has repeatedly expressed its willingness to do away with all export subsidies, provided every other nation does the same. As proof of its good intention, Germany, they say, has abolished the dollar retention scheme. The German Central Bank is not issuing any vouchers for new dollar export contracts, and by 31st March, the last import voucher will have become void. Despite all this explanation, the fact remains that, only a few days ago, the Lower Chamber passed a Bill to the effect that, in future, 3.5 per cent. of export turnover could be deducted from profits for tax purposes, as against 3 per cent. hitherto. From this it is clear that export subsidies are being raised.

Other Tax Concessions

The German exporters have been enjoying other tax concessions also. A rebate of 2.5 per cent. on the turnover tax (corresponding to British surcharge tax), for instance, is allowed. This, together with the 3 per cent. temporary tax allowance on export turnover, gives a German manufacturing corporation an advantage of 5 per cent. over its competitors in other countries.

German officials also attribute improvement in exports to certain money market developments such as reduction in discount rate, which reduced the cost of export credits. The bulk of export credits is supplied by the Export Credit Bank, which was set up early in 1952. Credits average 1.5 million marks per deal and are mostly short-term. Even if the State guarantees, which serve as a basis for providing the Hermes Export Risk Insurance, are secured, credits for four years from the date of order are normally the maximum obtainable. There are, however, exceptions to this rule. If, for example, the country to which goods are exported is not a debtor country and the inter-ministerial guarantee committee (which decides on all export orders exceeding 100,000 marks, in value) deems that a practical deal is of great interest to Germany, the maximum period for credit might be exceeded, or the four-year period might be counted from the day of shipping instead of the day of booking the order. These special credit facilities are usually made available in respect of deals covering capital goods. Such an instance occurred recently when a deal for 70 million marks covering industrial installations required by Afghanistan came up for consideration. The following terms were declared acceptable through an official foreign trade circular:

25 per cent. payment on the day the order is booked; 25 per cent. when shipment begins; and the remaining 50 per cent. to be spread over four years in the following manner:

2.5 per cent. 12 months after each part shipment;

2.5 per cent. 24 months after each part shipment;

5 per cent. 30 months after each part shipment;

10 per cent. 36 months after each part shipment;

10 per cent. 42 months after each part shipment; and the last 20 per cent. 48 months after each part shipment.

German industrialists are complaining that even the credit facilities of the foregoing order are not sufficient, because French firms are able to offer even more liberal terms. They say that, because of this, the French were recently able to get big orders from Turkey, Egypt, Spain and

(Continued in previous column)

ORIENTAL GOVERNMENT SECURITY LIFE ASSURANCE Co. Ltd.

PRACTICE OF QUOTING DIFFERENTIAL RATES CRITICISED

SIR PURSHOTAMDAS THAKURDAS' SPEECH

PRESIDING over the Seventy-eighth Ordinary General Meeting of the Oriental Government Security Life Assurance Company, Ltd., held at 4 p.m. on Wednesday the 29th July, 1953, at the Head Office of the Company at Oriental Buildings, Bombay, Sir Purshotamdas Thakurdas, K.B.E., C.I.E., J.P., Chairman, said:

"The new business completed last year amounted to 71,359 policies, assuring slightly less than Rs. 21¼ crores which shows a decrease of 2,100 policies assuring slightly less than Rs. 1 crore as compared with the new business of the preceding year. Our total premium income last year was slightly less than Rs. 917¾ lakhs, showing an increase of Rs. 24¼ lakhs. Claims by death amounted to slightly over Rs. 109¼ lakhs and claims by maturity Rs. 262¼ lakhs. The ratio of actual to expected deaths during the year was 42.9 per cent. as against 46.6 per cent. in 1951. The expenses of management last year amounted to 23.22 per cent. of the premium income. The funds of the Company increased to over Rs. 67¾ crores at the end of the year. The demand for policy loans continued with increasing keenness during the year, the total amount of policy loans at the end of the year being Rs. 462¼ lakhs.

"The net rate of interest after deduction of income-tax at the source earned during 1952 was 4.05 per cent. compared with 2.94 per cent. in the preceding year. The difference is mainly accounted for by the fact that while in 1951 the Company did not receive any refund of income-tax, in 1952 we received refund of tax for two years. Had one year's refund been received in 1951 and one year's in 1952, the net rates of interest for these years would have been 3.43 per cent. and 3.58 per cent. respectively.

Malpractices

"It is surprising that when certain abuses are rampant in a type of business activity and suitable laws are passed by the legislature of the country to remove them, these very abuses reappear in a more intensified form even after the law is passed. This is precisely what has happened in the business of insurance and particularly life insurance. The Insurance Act 1938 concerned itself, amongst other things, with the removal of two sinister malpractices, viz., rebating and excessive payment of commission which, despite the stringent provisions in the Act to remove them, persist in a more intensified form. In several cases, the malpractices used to take the shape of the creation of more than one intermediary between the branch manager and the agent merely to indulge in payment of high commission and rebating with the salary of the intermediary which is paid for no service whatsoever rendered to the institution. The Insurance Act made rebating an offence both for the one that offers and the one that takes and also imposed maximum limits of commission payable on the first year's and the renewal premiums. From their very nature, it will be extremely difficult to prove the commission of these two evils of rebating and excessive payment of commission in such a manner as to convince a court of law. When these evils are present, canvassing is carried to a sphere divorced from the normal ethical standards of canvassing viz., advocating the merits of the Company and recommending the best type of policy suited to the needs of the prospect, for an agent who gives the highest rebate secures a large volume of business, irrespective of the soundness of his institution, and recommends a type of policy that gives him the largest commission regardless of the suitability of the policy to the insured.

"Some foreign companies used to give this rebating a superficially innocent garb by quoting a lower rate of premium to persons of high financial status, who, they argued, would be subject to lower mortality. Such a practice goes counter to the very basis and structure of life insurance, viz., co-operation of the highest order. If the population is to be dissected into sections on the basis of economic status, why not dissect them on the basis of climate and similar factors affecting longevity? In other words, why should not the country be cut up into sections on the pattern of a chess-board based upon climate, health and so many other factors that influence mortality and companies quote differential rates of premium corresponding to the mortality risk? Such a course would be repugnant to the very idea of insurance. Persons of lower economic status should not have to pay higher premiums than those of higher economic status and the payment of the same rate of premium by the rich and the poor varying only with age and the state of health as revealed by medical examination when effecting insurance is the very foundation of the co-operative spirit underlying the structure of life insurance. It is some consolation that the Executive Committee of the Life Insurance Council has issued a directive that the practice of quoting differential rates should be discontinued and it is to be hoped that the companies will appreciate the good that the business will derive from observing this directive.

Code of Conduct

"The Committee has also issued a Code of Conduct which, if observed, will go a long way towards eradicating other evils which unfortunately permeate the business of life insurance. The Code of Conduct has been drawn up so as to give greater latitude to younger and smaller companies as against their bigger brethren. For instance, while the former are allowed to pay the maximum rate of commission in all cases, the bigger companies are enjoined on to reach the maximum by a sliding scale based upon the volume of business introduced by the agent. Again, the bigger companies are required to have only one intermediary between the branch official and the agent whereas the smaller companies are allowed two intermediaries for a certain period.

"While on this subject, may I not give a piece of advice to foreign insurance companies which transact business in this country and ask them to realise that those days when they used to conduct their business operations in this country under the protection of one or other of the sections of the Government of India Act which prevailed prior to the securing of independence by this country no longer exist? The national feeling in this country has now been aroused and while foreign business houses will be tolerated to a certain extent so long as they act in such a way as to set a good example to indigenous institutions, they should not try to indulge, with anything like impunity, in methods calculated to hamper the growth of national institutions by dumping through rate-cutting or other methods which unfortunately are being practised by some of these institutions. I put this forward as a piece of advice and if this is not heeded by the foreign competitors who are offending in this respect, then an appeal will have to be made to our Government to take sterner measures against them. I do hope these institutions will not force indigenous companies to resort to this measure.

Estate Duty Bill

"Confining myself to those provisions of the Estate Duty Bill which affect the business of life insurance, I would point out that the Bill as originally introduced in Parliament did not contain any specific exemption from estate duty in respect of life insurance policy moneys. This lacuna was remedied, however, to a certain extent by the Select Committee to which the Bill was referred. According to clause 32(1) (f) of the Bill, moneys payable under one or more policies of insurance effected by a deceased on his life for the purpose of paying estate duty or assigned to Government for the said purpose will be exempt from estate duty to the extent of the amount of duty payable. This is a concession and would act as a fillip to the business of life insurance. The underlying object of life insurance in such cases is to prevent the land or house property or business having to be sold, mortgaged, etc., merely for the purpose of paying the estate duty as it is in the interests of the country's economy that businesses or estates which may have been built up as a result of patient and painstaking endeavours over a long period should not have to be wound up or broken up merely as a result of having to pay estate duty.

"Then there is clause 32(1) (g) in terms of which exemption from estate duty will extend to moneys payable under one or more policies of insurance effected by the deceased on his life to the extent of Rs. 5,000. There is yet another clause, viz., clause 32(1) (j), according to which, *inter alia*, moneys earmarked by a deceased parent or natural guardian, in consideration of the marriage of any of his female relatives dependent upon him for the necessaries of life, under policies of insurance will be exempt to the extent of Rs. 5,000 in respect of the marriage of each of such relatives. The latter two provisions propose to give such meagre relief that, in my opinion, it is hardly worth the name. It is well known that this country has a very low *per capita* insurance as compared to other countries. The need for intensively fostering insurance consciousness and aiding the development of life insurance business is, therefore, all the greater in this country because social security in the form of provision for one's old age and for the family in the event of his premature death has in India, as contrasted with other advanced countries, mainly to be provided for and arranged by the individual himself. It is, therefore, in my view imperative that where the policy moneys are payable to named beneficiaries, i.e., where the policies are effected under the Married Women's Property Act or where the policyholder has executed a nomination or assignment, either absolute or conditional, the limit of exemption should be fixed at a figure not less than Rs. 1 lakh.

Gifts of Property

"Apart from the specific exemptions mentioned above, there are clauses 9 and 10 of the Bill dealing with gifts which provide that estate duty will not be payable on gifts of property made not less than two years before the death of the deceased, provided *bona fide* possession and enjoyment of the property gifted away was immediately assumed by the donee and thenceforward retained to the entire exclusion of the donor. Doubts have been raised in certain quarters whether the above provision as to gifts of property applies to gifts of moneys payable under life insurance policies and these doubts will have to be removed. Quite apart from this, the conditions laid down in these clauses which would qualify a gift for exemption from estate duty are such as to whittle down considerably the value of this exemption so far as life insurance policies are concerned. It was to meet the need of expeditiously settling claims under life insurance policies that the Insurance Act, 1938, provided by statute an easy and convenient mechanism for transfer of life insurance policies in the shape of nominations as well as conditional assignments which obviated the need for taking out evidence of title in the event of the prior death of the nominee or the assignee as the case may be. If the gift of the policy in favour of the nominee or assignee were to operate as an absolute gift so that the donor retains no further interest in the policy, extreme hardship due to the necessity to obtain evidence of title will result, as used to be the case prior to 1938 in the settlement of claims. It would, therefore, be doing a disservice to policyholders and claimants to force the former to effect absolute assignments so that the donee assumes possession and enjoyment of the property to the entire exclusion of the donor as a condition precedent to exempting the policies from the scope of estate duty.

"The condition that the gift should have been made at least two years before the death of the donor should not apply to life insurance policies since it may happen that in a number of cases the policyholder may die before the expiry of the minimum period after effecting a second or subsequent nomination or assignment due to the death of the first nominee or assignee. The first nomination or assignment had established his *bona fides* and clearly indicated his intention to divest himself of the interest in the policy from the date of its execution.

Illusory Relief

"I must finally mention clause 14 which would work a real hardship in respect of life insurance policies. That clause lays down that money received under a policy of insurance effected by any person on his life, where the policy is wholly kept up by him for the benefit of a donee, whether nominee or assignee, or a part of such money in proportion to the premiums paid by him, where the policy is partially kept up by him for such benefit, shall be deemed to pass on the death of the assured.

(Continued on page 235)

TRENDS IN UTILISATION OF LAND

DECLINE IN SOWN AND FOREST AREAS OF SOME STATES

AGRICULTURAL production in India, particularly production of foodgrains, is generally affected by many factors. Changes in crops, variations in yields, differences in the soil and in its treatment, vagaries of the monsoon, etc., all have a bearing on the total volume of agricultural output year after year. Apart from these, changes in areas of land also affect production. According to the Planning Commission (although pre-war and post-war statistics are not strictly comparable for a number of States), the net increase in the area under current fallows, during the interval between the pre-war and post-war periods, is estimated at about 10 million acres. Part of this increase is ascribed to political conditions prevailing in Hyderabad and the effects of the Partition in States directly affected. Recently, the Food and Agricultural Ministry, Government of India, initiated a series of studies in the utilisation of land over a period of years. One of such studies by Dr. V. G. Panse of the Ministry, published in a recent issue of the *Agricultural Situation in India*, gives an idea of the trends in the use of land. In view of the shortage of several kinds of agricultural commodities, the conclusions of Mr. Panse merit wider publicity.

For the purpose of the study in land utilisation, relevant statistics in the different States are classified under five major heads, namely, (1) area under forest, (2) area not available for cultivation, (3) other uncultivated areas excluding current fallows, (4) area under current fallows and (5) net area sown. The total area under these five classes represents the total geographical area of each State according to the cadastral survey. The States covered by the study are: (1) Punjab, (2) Uttar Pradesh, (3) Madhya Pradesh, (4) Bombay and (5) Madras. As regards the various items which go under these five categories, all forest areas are included in the first category. Area not available for cultivation includes areas occupied by buildings, roads, beds of streams, etc., and barren areas such as bare hill slopes. Areas which have gone out of cultivation for a long time, or were never cultivated but are not classed under the other items, are included under the item "other uncultivated area," excluding current fallows. Area under current fallows refers to land lying fallow as a part of the normal crop rotation, it being understood that the fallow is of a temporary duration. The last item, namely, net area sown, refers to the actual acreage cropped, reckoning double-cropped area only once. As, however, current fallows will be changing into old fallows and as the period specified as current fallows changes from State to State and from two years to 10 years, items (3) and (4) mentioned above have been pooled together to form a single category of fallow land.

The examination of the relevant land utilisation statistics of the five States above reveals certain interesting trends during the periods mentioned above. Briefly stated, these are as follows:

In the case of the Punjab (2), the study covers 20 years from 1929-30 to 1948-49. Over this period, there was practically no change either in the total area or in the area not available for cultivation. But the area sown showed wide annual fluctuations, owing to the vagaries of the monsoon. There was a serious drop in the cropped area in 1938-39 and 1939-40, owing to unfavourable season. However, the figures reveal that neither in area sown nor in fallow land was there any notable trend and it is stated that there is no reason to believe that the acreage under crops is going down in the State.

In Uttar Pradesh, there was very little change in the total area over a period of 39 years from 1910-11 to 1948-49. The sown area did not show any trend upto the year 1929-30, but, thereafter, showed a steady increase so that the percentage of area sown to the total area rose to 56.8 in 1948-49 from 50.5 in 1929-30. The area under fallow land has shown a similar trend in the opposite direction. From 1943-44 onwards, the area under forests went down appreciably, from 13.6 per cent. to 8.5 per cent. in 1948-49. This fall is attributed generally to the method of classification than to actual deforestation, that is, land which was formerly classed under forest was steadily deforested, although it continued to be shown in the same class up to 1943-44 when a proper reclassification was commenced, but this reason requires, it is stated, further examination.

The Madhya Pradesh study covers a period of 37 years from 1910-11 to 1946-47. The total area of the State was reduced by about one million acres in 1935-36, owing to the formation of the Orissa State. The area sown underwent a decline in the same year and remained so without revealing any change. The area not available for cultivation remained the same in proportion to the total area, but the area under forest declined by about 2 per cent. over the period, the deforested area having presumably been added to the uncultivated waste land, including current fallows.

In Bombay, the total area remained the same from 1918-19 to 1948-49, that is for a period of 32 years. The area sown registered a steady upward trend practically over the entire period, while the area under the head uncultivated waste land including current fallows declined. The area under forest has shown a slight but steady decline, especially during the latter half of the period. The area denuded of forest has apparently been added partly to the uncultivated waste land and, to a lesser extent, to the area not available for cultivation.

There was an increase of 750,000 acres in the total area of Madras during 26 years between 1923-24 and 1948-49. This is attributed to the progress of survey of settlement operations. The sown area was subject to considerable annual fluctuations as in Punjab, owing to vicissitudes of the season. There was a steady increase in the fallow land practically over the entire period which rose from 18 to 21 million acres. This increase is stated to be at the expense, not of sown area but of the area not available for cultivation. It is pointed out that reclassification of areas resulting in a transfer of some area from the class "not available for cultivation" to the class "uncultivated waste land, including current fallows," had gone on steadily throughout the period. In Madras, the forest area underwent no change, or, if at all, a very slight increase.

Concluding the study which includes a detailed analysis of the position in Hyderabad State also, Mr. Panse points out that, as far as the five States mentioned above are concerned, the data provide no ground for believing that the cropped acreage anywhere is showing a downward trend. On the other hand, in U.P. and Bombay, there has been a steady and perceptible increase in the sown area. In Madras, although the sown area has shown no trend, the fallow land has registered a steady increase, owing to reclassification. In Hyderabad, there is reason to believe that the sown area has been steadily declining (not merely as a result of recent political disturbances), while fallow land has been on the increase. In Madhya Pradesh, Bombay and Uttar Pradesh, the area under forest has been declining. In view of these changes, Mr. Panse suggests the need for a further careful study, in order to arrest the disquieting trend. He emphasises that measures should be adopted for putting back under forest land which can be more efficiently used in this manner than for cultivation.

ALWAYE

NOTICE TO SHAREHOLDERS

NOTICE IS HEREBY GIVEN THAT THE NINTH Ordinary General Meeting of the Company will be held at the Registered Office of the Company at Eloor, Alwaye, on the 5th of September, 1953, at 4 p.m. to transact the following business:—

1. To receive and adopt the Directors' Report and the Audited Balance Sheet as at 31st December, 1952, and Profit and Loss Account for the year ended 31st December, 1952 (Copies of which are appended hereto).

2. To elect Directors in the place of the following:—

(i) Sri Parayath E. Raman Menon, and

(ii) Seth Mulraj Kersondas

who retire by rotation *vide* Article 82 of the Articles of Association, but are eligible for re-election.

3. To appoint Auditors for the Company for the year 1953 and fix their remuneration. The retiring Auditors, Messrs. Suri and Company, and Sri T. Velu Pillai, are eligible for reappointment.

4. As special business, to consider and if thought fit to pass the following resolutions as Special Resolutions with or without amendments:

(a) Resolved that the variation in the terms of appointment of Seshasayee Brothers (Travancore) Limited as Managing Agents of the Company contained in the draft supplemental agreement placed before this meeting and signed by the Chairman for identification be and is hereby approved.

(b) Resolved that the Company do enter into an agreement in terms of the draft agreement expressed to be made between the Company of the first part, Messrs. Seshasayee Brothers (Travancore) Ltd., of the second part and the Industrial Finance Corporation of India of the third part placed before the meeting and the Common Seal of the Company be affixed to the engrossments of the said agreement when ready in the presence of two Directors of the Company.

(c) Resolved that the Articles of Association of the Company be amended as under:—

(i) That the following provisos be added to Article 48:

"Provided however, that so long as any moneys are due and payable by the Company to the Industrial Finance Corporation of India, the Directors shall not borrow any moneys on the security of the properties mortgaged in favour of the Corporation without the previous consent in writing of the Corporation;

Provided further that no further borrowings exceeding Rs. 1 lakh shall be made by the Directors without prior consultation with the Government of Travancore-Cochin. This restriction shall not however affect the operation of the cash credit account with the National Bank of India Ltd., up to the limit of Rs. 37½ lakhs."

(ii) That the following proviso be added to Article 51:

"Provided, however that so long as any moneys are due and payable by the Company to the Industrial Finance Corporation of India, the property mortgaged to the Corporation shall not be charged in favour of any other person without the previous written consent of the Corporation."

(iii) That the following clause be added after Article 75:

"75-A. The Industrial Finance Corporation of India, a Corporation established by the Industrial Finance Corporation Act, 1948 (hereinafter called 'the said Corporation') has the right, so long as any moneys are due by the Company to the said Corporation, to appoint two Directors to be Directors of the Company. Such Directors, who shall be called 'Special Directors' and each of their successors-in-office shall be entitled to hold office until removal by the said Corporation and shall not be bound to retire by rotation and when any Special Director so appointed vacates office, whether upon removal as aforesaid by the said Corporation or by death or otherwise, the said Corporation shall be entitled to appoint another Director in his place. Such special Director shall not require any qualification and may at any time by notice in writing to the said Corporation and the Company resign his office."

(iv) That the words "including Special Directors" be added between the words "Nominated Directors" and "shall" occurring in the first sentence of Article 76.

(v) That the following be added to Article 81:—

"and provided further that so long as any moneys are due and payable by the Company to the Corporation no extra remuneration shall be paid to such Director without the previous written consent of the Corporation."

(vi) That the word "Special" be added between the words "ex-officio" and "and" occurring within brackets in the first sentence of Article 82.

(vii) That the following be added to Article 94:—

"Provided however that so long as any moneys are due and payable by the Company to the Corporation a resolution passed by circulation shall not be valid unless it has been assented to by one Special Director."

(viii) That the following be added to Article 95:—

"Provided however that any Committee constituted under this Article shall consist of at least one Special Director so long as any moneys are due and payable to the Corporation."

(ix) That the following be added to Article 105(d):—

"Provided however that so long as any moneys are due and payable to the Corporation this power to mortgage or charge the properties of the Company shall not be used without the previous written consent of the Corporation."

(x) That the following be added to Article 105(n):—

"Provided however that so long as any moneys are due and payable to the Corporation this power to mortgage or charge the properties of the Company shall not be used without the previous written consent of the Corporation."

(xi) That the following clause be added after Article 105:—

"105-A. The powers conferred on the Directors by Articles 104 and 105 are however subject to the right of the Government of Travancore-Cochin to veto any proposals for capital expenditure exceeding Rs. 1 lakh."

(xii) That the following clause be added after Article 109:—

"109-A. Except with the previous written sanction of the Corporation the Company shall not distribute as dividend during any financial year any sum which exceeds or which when taken with any sum already distributed as dividend during the same year exceeds six per cent. of the paid-up capital of the Company as on the last day of the period in respect of which the dividend is distributed after deducting from such capital all amounts attributable to the capitalisation or after the 1st January, 1952 of one or more of the following, namely, reserves, profits and appreciation of assets provided that such limit of six per cent. shall be applied to the dividend distributed by the Company among its shareholders payments made by the Company by way of income-tax being ignored; provided further that no dividend shall be distributed by the Company without the consent in writing of the Corporation first had and obtained so long as any instalments of principal moneys or interest due and payable to the Corporation remains unpaid for a period of one month after the same has become due and payable by the Company to the Corporation."

(xiii) That the following be added to Article 135:—

"So long as any moneys are due and payable to the Corporation such notice of every general meeting shall also be given to the Corporation."

(xiv) That the following be added to Article 138:—

"Provided however that the Government of Travancore-Cochin shall have the right to conduct financial investigation and technical inspection into the working of the concern where in the opinion of the Government of Travancore-Cochin circumstances justify such action, the cost of such investigation and inspection being borne by the Company."

All the shareholders are requested to be present in person or by proxy.

By Order of the Board of Directors,
SESHASAYEE BROTHERS
(TRAVANCORE) LIMITED,
Managing Agents.

ELOOR, ALWAYE, 20th *June*, 1953.

Note:—1. The Share Transfer Books of the Company will be closed from 22-8-1953 to 5-9-1953 both days inclusive.

2. Copies of the draft supplemental agreement and the draft tripartite agreement referred to in Item 4(a) and 4(b) above are available for inspection at the Registered Office of the Company and also at the Office of the Managing Agents at Srinivasa Bhavan, Main Road, Trivandrum.

NOTICE TO SHAREHOLDERS

NOTICE is hereby given that one of the Shareholders of the Company has given notice of his intention to nominate Messrs. K. Venkatachalam Aiyer & Co., Chartered Accountants, Trivandrum, to the office of Auditors of the Company for the year 1953 either alone or jointly with others at the ensuing Ninth Ordinary General Meeting of the Company.

CALCUTTA, 21*st July*, 1953.

LAKSHMI MILLS' PROFIT WELL MAINTAINED

FINANCIAL POSITION SOUND

THE financial results of the Lakshmi Mills Co., Ltd. (Managing Agents: Messrs. G. Kuppuswamy Naidu & Co., Pappanaickenpalayam, Coimbatore), for the year ended 31st March, 1953, are quite satisfactory, if not excellent. The year under review, as readers are aware, was a difficult one for the cotton textile industry. Yet the Company's gross profit for the year has been more than maintained at the previous year's level, amounting, as it does, to Rs. 34.01 lakhs, as compared with Rs. 33.04 lakhs for the year ended 31st March, 1952. The net profit, after making provision for Managing Agents' remuneration, depreciation and taxation, at Rs. 10.06 lakhs, is nearly the same as that (Rs. 10.60 lakhs) for the previous year. As in previous years, the Directors have allocated a substantial part of the net profit to the reserve and maintained the dividend at the decent level of 10 per cent. paid for the year ended 31st March, 1952.

The following comparative table of results for the past four years indicates the Company's progress in recent years:

(In lakhs of rupees)

	Year ended 31st March			
	1953	1952	1951	1950
Sale proceeds	175.57	239.29	153.12	144.86
Closing stocks ..	47.99	81.04	42.73	43.95
Cotton and stores consumed	114.70	172.27	92.69	95.45
Expenses	25.58	31.63	22.03	26.12
Gross profit ..	34.01	33.04	39.43	24.08
Managing Agents' remuneration	4.36	5.29	4.80	3.55
Depreciation	12.34	9.40	8.20	3.91
Taxation	7.25	7.75	12.10	5.25
Net profit	10.06	10.60	14.30	12.37
To reserves	4.65	4.07	10.01	8.07
,, donation	..	1.15	..	..
Dividend	5.35	4.35	4.28	4.28
	(10%)	(10%)	(8%)	(8%)
Carry forward	0.14	0.05	0.04	0.03

As will be noted from the foregoing table, there has been a considerable fall in sale proceeds, closing stocks, cotton and stores consumed and other expenses during the year under review, reflecting a reduction in output. This is understandable in the context of the serious cut in supply of power to industries in South India. However, despite this shrinkage in production, the gross profit has been maintained at as high a level as Rs. 34.01 lakhs, evidently due to the remunerative prices fetched on the Company's products, following the substantial relaxation of control over prices and distribution of cloth in the latter half of 1952 and early 1953. The Company, we have no doubt, would have shown still better results but for the power cut.

It will be noted that the provision for depreciation has been stepped up by nearly Rs. 3 lakhs. This must be due to the substantial additions to the fixed capital expenditure made during the year. Despite the slightly higher gross profit, the provision for taxation is lower by Rs. 50,000. This must also be attributed to the addition of new machinery, because the high depreciation allowances on them reduces the assessable profit. Out of the net profit, the Directors have transferred to the deferred dividend reserve a sum of Rs. 4.65 lakhs, representing 46.2 per cent. of the net profit, whereas a sum of only Rs. 1.07 lakhs was provided for this reserve last year. No other appropriations have been made this year, while a year ago the machinery replacement reserve and the general reserve were augmented by Rs. 1 lakh and Rs. 2 lakhs, respectively. The dividend has been maintained at 10 per cent. which is in keeping with the Directors' cautious policy of strengthening the reserves first, in view of the heavy programme of renewal and modernisation on hand.

Thanks to the judicious policy of conserving a good part of the profit year after year, the Company has a strong financial position now. Even after the capitalisation of reserves of the order of Rs. 17.82 lakhs in 1947, the reserves and surplus, as at the end of the year under review stand at Rs. 53.44 lakhs, which is almost equal to the paid-up capital amounting to Rs. 53.46 lakhs. The provision for taxation amounts to Rs. 16.35 lakhs. The gross value of the fixed capital expenditure aggregates Rs. 94.99 lakhs, including a sum of Rs. 18.12 lakhs spent during the year. The latter brings the total value of additions to the gross block during the last six years alone to Rs. 65.52 lakhs. On the gross value of the block up to the end of the year under review, a depreciation of Rs. 53.74 lakhs has been provided, besides a separate depreciation reserve of Rs. 5.30 lakhs. The current assets, at Rs. 102.14 lakhs, include stock-in-trade and stores of the value of Rs. 53.39 lakhs, debts, deposits and advances Rs. 22.94 lakhs, investments Rs. 24.87 lakhs (including Rs. 20 lakhs representing short-term and call deposits with banks) and cash Rs. 95,000. Really speaking, the deposits with banks represent liquid cash, so that the cash balances actually amount to Rs. 20.95 lakhs. The total current assets provide ample cover to the current liabilities, including provision for taxes, at Rs. 36.48 lakhs, the excess of current assets over current liabilities being Rs. 65.66 lakhs.

The Company's Rs. 50 fully paid-up shares are currently being quoted at Rs. 85 *cum-div.* On an *ex-div.* basis, the shares give an attractive yield of 6.25 per cent. per annum, free of tax.

TAXATION OF NON-RESIDENT SHAREHOLDERS

The non-resident shareholders of Indian companies appear to be finding it difficult to obtain every year from the income-tax authorities certificates authorising the companies, of which they are shareholders, to deduct super-tax at *nil* rate or at a rate lower than the standard one, in respect of their income from dividends on their holdings. The Government of India appreciates this difficulty, but is unable to mitigate it in the case of all non-resident shareholders. It has, however, hit upon an arrangement, whereby it seeks to minimise the inconvenience caused to non-resident shareholders whose *income* does not fluctuate widely from year to year. It has, accordingly, framed a new procedure for collection of taxes from them by way of deduction at source. According to this procedure, the income-tax officer concerned will issue certificates authorising companies to deduct super-tax at *nil* rate or at a rate lower than the standard one, which will be valid for three years, instead of one year as hitherto.

If a non-resident shareholder holds shares in more than one company in India, every one of these companies should have such a certificate in respect of its dividend declared in a year. It is, however, not possible for an income-tax officer to issue as many certificates as the number of companies in which the non-resident assessee is a shareholder. To obviate this difficulty, the Government of India has laid down that a company can accept, in place of the original certificate issued by an income-tax officer, a photostatic or a certified copy of it when produced by a non-resident shareholder or his authorised representative or bankers.

MERGER OF B.S.N. WITH SCINDIAS

The Bombay High Court has sanctioned, by an order dated 23rd July, 1953, the scheme of amalgamation between the Bombay Steam Navigation Co., Ltd., and the Scindia Steam Navigation Co., Ltd. Under the Court's order the Bombay Steam Navigation Co., Ltd. is to be dissolved within one month. Following the High Court's order, the company has called the debenture holders of the Bombay Steam Navigation Company to apply to the Scindia Steam Navigation Company for the payment of the amounts due to them and surrender the debentures held by them. According to the terms of amalgamation, the debentures of the face value of Rs. 1,000 each will be redeemed at par, and holders thereof will get interest up to 23rd July, 1953. A similar appeal has also been made to preference shareholders of the B.S.N. Company. The preference shares of Rs. 250 each will be paid Rs. 325 per share held as on 20th June, 1953.

MAHESHWARI MILLS LTD.

We are informed that Messrs. Thakorlal Chimanlal Munshaw and Kantilal Chimanlal Munshaw, the Managing Agents of Shri Ramakrishna Mills Co., Ltd., and Shri Vivekanand Mills, Ltd., Ahmedabad, have taken over the management of the Maheshwari Mills, Ltd., Ahmedabad, from 1st July, 1953, as the Managing Agents Messrs. Dhiraj-lal Khushaldas & Co., Ltd., have resigned.

WAVERLEY MILLS LTD.

The Waverley Jute Mills at Shamnagar, in the northern suburb of Calcutta, declared, a lock-out on 22nd July, 1953, following a strike by nearly 2,000 workers of the mills. The strike was a sequel to the suspension of two workers by the management. The Jute Mills Association, is however trying to bring about a settlement between the management and the workers.

(*Concluded from next column*)

Rs. 21.71 lakhs. These current assets exceed the current liabilities (including provision for taxation) at Rs. 49.24 lakhs, by a margin of Rs. 11.74 lakhs.

The Directors report that the Company is making efforts to maintain its sales by introducing new products and developing a few new lines.

The Company's two subsidiaries, the Alembic Glass Industries Ltd. and Jyoti Ltd., have reported quite satisfactory results for the year under review.

ALEMBIC CHEMICAL'S SALES DROP

DIVIDEND, HOWEVER, MAINTAINED

THE Directors' report and audited accounts of the Alembic Chemical Works Co., Ltd. (Managing Agents: Messrs. Bhailal Amin and Sons, Ltd., Baroda), for the year ended 31st December, 1952, indicate a slight setback in production and a consequent decline in sales. While expenses continued to advance, albeit slightly, the gross profit suffered a recession from Rs. 12.85 lakhs for the year 1951 to Rs. 9.48 lakhs. The net profit, after providing for depreciation and taxation, shows a drop from Rs. 3.01 lakhs to Rs. 2.37 lakhs. For the third year in succession, the Directors have not been able to add anything to the reserves, because of the low profit-margin. The dividend on the ordinary shares has been maintained at 8 per cent. which had been paid for the preceding two years.

The salient feature of the results of the Company's working during the year under review are presented in the following table against the background of those for the previous three years:

(In lakhs of rupees)

	Year ended 31st December			
	1952	1951	1950	1949
Sale proceeds	64.47	57.84	65.41	65.64
Closing stocks	57.40	57.84	37.85	32.54
Raw materials consumed ..	33.14	41.58	34.36	33.24
Expenses	26.07	20.56	21.70	24.43
Gross profit	9.48	12.85	12.01	8.02
Managing Agents' remuneration ..	1.90	3.77	3.23	2.29
Depreciation	4.31	3.06	3.32	3.04
Taxation	0.90	6.01	2.61	1.30
Net profit	2.37	3.01	2.90	1.40
To reserves	..	..	..	0.50
Dividends—				
Preference	0.86	0.86	0.86	0.71
Ordinary	2.00	2.00	2.00	..
	(8%)	(8%)	(8%)	..
Carry forward	0.11	0.60	0.45	0.34

The sale of the Company's products, which had gone up sizably during the year 1951, suffered a recession in the year under review. This was only to be expected, as was indicated by the Company's Chairman, in his address to the shareholders last year, in view of the measures taken by the State Government to clamp down production of medicinal and toilet preparations containing alcohol and to restrict the sale of these products on the ground that some of them could be used as intoxicating liquors. The closing stocks of finished products are lower at Rs. 7.50 lakhs, as against Rs. 8.94 lakhs, while those of raw materials and stores are higher at Rs. 29.90 lakhs, as compared with Rs. 28.40 lakhs. Purchases of raw materials and stores show a decline from Rs. 39.64 lakhs to Rs. 34.68 lakhs, so that the consumption of raw materials and stores has gone down from Rs. 41.58 lakhs to Rs. 33.18 lakhs. All these clearly indicate that the Company has had to restrict its output considerably. This is an unfortunate trend, clearly beyond the control of the Company's management, in the context of the emphasis laid on placing the pharmaceutical industry on a sound footing and helping its development on proper lines, so as to bring down the cost of standard quality medicinal products within the easy reach of the masses. It is to be hoped that the Pharmaceutical Enquiry Committee which is now touring the various States of India will address itself to the task of recommending removal of measures which unduly restrict the production of medicinal products. Despite the decline in production, expenses have not declined. Salaries and wages and publicity expenses have all gone up, while the main item of expenses which shows a sizable reduction is the excise duty to Government. Thus, the Government too is a loser by the restrictive measures placed on the industry.

The provision for depreciation has been stepped up by Rs. 1.25 lakhs, of which Rs. 1.04 lakhs represent extra depreciation on plant and machinery. This additional provision has evidently been made in view of the additions made to plant and machinery during the year. The substantial reduction in the provision for taxation is accounted for partly by the fall in earnings and partly by the deferred liability for tax because of initial depreciation allowances.

The Company's balance-sheet as on 31st December, 1952, discloses a satisfactory financial position. The reserves and surplus stand at Rs. 31.02 lakhs, supplementing a paid-up capital of Rs. 39.99 lakhs. The gross block stands at Rs. 69.78 lakhs, including the additions during the year under review of the value of Rs. 6.32 lakhs, and the depreciation provided so far on this amounts to Rs. 32.20 lakhs. Current assets aggregate Rs. 60.98 lakhs, excluding investment in subsidiary companies, at cost, amounting to

(*Continued in previous column*)

Points From The Chair

Differential Rates of Premium

"SOME foreign companies used to give this rebating a superficially innocent garb by quoting a lower rate of premium to persons of high financial status, who, they argued, would be subject to lower mortality. Such a practice goes counter to the very basis and structure of life insurance, viz., co-operation of the highest order. If the population is to be dissected into sections on the basis of economic status, why not dissect them on the basis of climate and similar factors affecting longevity? In other words, why should not the country be cut up into sections on the pattern of a chess-board based upon climate, health and so many other factors that influence mortality and companies quote differential rates of premium corresponding to the mortality risk? Such a course would be repugnant to the very idea of insurance. Persons of lower economic status should not have to pay higher premiums than those of higher economic status and the payment of the same rate of premium by the rich and the poor varying only with age and the state of health, as revealed by medical examination when effecting insurance, is the very foundation of the co-operative spirit underlying the structure of life insurance."

PURSHOTAMDAS THAKURDAS,
Oriental Government Security Life Assurance Co., Ltd.

Enquiry into Railway Freight Rates Urged

"The question of the railway freight rates structure is of such great importance to the development of the cement industry that, I feel, I must refer to it again, as I have done in the past. I think, I cannot do better than quote what the former Tariff Board said in this connection as early as 1925: 'Over a large part of the country progress may be seriously retarded, unless the freight on coal can be reduced substantially. We believe that no one would challenge the proposition that coal freights on the Indian railways should be kept at the very lowest point which is commerclally possible. But more than this may be required in the interests of industrial development. Sooner or later, the country may have to face the question whether it would not be worthwhile to secure a substantial reduction in coal freights at the cost of sacrificing part of the contribution which the railways make to general revenues.' These words are as true to-day as they were then. The need to revise the present freight structure to assist the development of industries is really very pressing at present and I hope the Railway Board will not persist in their policy of ignoring the viewpoint of the industry, but will undertake a scientific enquiry into the whole matter, so that the necessary relief, wherever justified, may be given."

G. D. SOMANI,
Shree Digvijay Cement Co., Ltd.

Supply Position of Tinplate

"For many years, I have recorded that a shortage of tinplate has greatly restricted our activities and developments. Towards the end of 1952 the supply position underwent a dramatic change when the new cold reduction mill of The Steel Company of Wales at Troster came into operation. It was always realised that this would create a period of readjustment after 12 years of shortage and restrictions on the use of tinplate, but, in the event, the period of readjustment has proved more acute and prolonged than could have been expected. Increased production coincided with some recession of demand in the home trade, aggravated by the fact that restrictions on the use of tinplate were not removed finally until January, 1953."

SIR ROBERT BARLOW,
Metal Box Co., Ltd.

Dearth of Technicians

"A major difficulty encountered in the establishment in India of a heavy engineering unit, such as ours, for the production of locomotives and boilers, is the dearth of technicians and skilled workers trained in modern production techniques. Your Company has had to train its staff and labour force in the technique of locomotive manufacture and the use of complicated modern machinery practically from scratch. This has involved a great deal of time, for skill and experience cannot be created overnight, and it has called for unremitting effort on the part of the management to build up the requisite strength of technicians and skilled workers."

J. R. D. TATA,
Tata Locomotive and Engineering Co., Ltd.

Improvement of Technique in Farm Industry

"It must be obvious that an industry whose activities are so closely linked with farming must pay the closest attention to agricultural development, for it is in the mutual interest of farmers and ourselves that we should encourage every improvement in technique which might be to the advantage of the industry. In this connection, the statutory Sugar Beet Research and Education Committee plays an important part, although we ourselves conduct much experimental work in addition. We regard it as vital to investigate any promising development, usually in conjunction with the well-known national research institutes. The demonstrations under practical conditions which we organise jointly with the National Agricultural Advisory Service continue to attract thousands of farmers, and what is perhaps of equal importance, agricultural engineers."

SIR ALEN SAUNDERS,
British Sugar Corporation, Ltd.

COLOMBO PLAN CONFERENCE

PROGRESS OF TECHNICAL ASSISTANCE PROGRAMME

NEW Delhi will be the venue of the second annual meeting of the Colombo Plan Consultative Committee to be held early in October next. At this meeting, the Committee is expected to review the progress in the implementation of the Plan for the development of South and South-East Asian countries and to consider other matters having a bearing on the co-operative expansion schemes of the area. The deliberations of the Committee and the recommendations it will make will surely be watched with considerable interest. For, now that more than two years have elapsed since the Colombo Plan came into operation—on 1st July, 1950, to be precise—one would naturally be interested to know the progress of the Plan and its achivements so far.

An interesting account of the progress of the Colombo Plan is contained in the latest report of the Council for Technical Co-operation, which refers to the year 1952 and to which a brief reference was made in our journal some time ago. According to the Report, there was a marked increase in the flow of assistance to the Colombo Plan countries in the form of expert advice and training facilities during 1952. In that year, 90 experts and facilities for 538 trainees were provided, which compare favourably with 45 experts and 309 training places in 1951. These brought the total of experts and training places provided since the inception of the Plan in 1950 up to the end of last year to 135 and 847, respectively. The following table gives the names of countries which provided the assistance and the type of assistance so provided:

	Experts	*Training facilities*
U.K.	67	279
Australia	40	288
New Zealand	17	119
Canada	6	106
India	5	56

The largest proportion of experts and training places has been furnished to India, Pakistan and Ceylon, which among them, account for 118 experts and 689 training places. But, in 1952, a larger proportion of assistance than in the previous year, went to other countries in the area. Indonesia, for instance, took 62 training places and Malaya 39. Facilities were provided for 13 trainees from Thailand, 11 from the Philippines, nine from Sarawak, seven from Singapore, six each from Nepal and North Borneo, and five from Burma. Of the 125 experts provided, 13 went to Malaya, three to North Borneo and one to Singapore.

Most of the 90 experts provided in 1952 were engaged in projects where their duties included training of local personnel. This was the case with engineers for river valley projects in India, irrigation engineers for Ceylon's Gal Oya Project and a director for a bacteriological laboratory in Pakistan. Moreover, experts whose primary duties would be the training of local personnel were in increasing demand; India asked for a tool-room foreman (since provided by the United Kingdom) for the Indian Institute of Technology at Kharagpur. Pakistan asked that a U.K. specialist, who reported on the establishment of new telecommunications training schools, should be spared for two more years, with the necessary equipment. The U.K. has agreed to meet this request.

There has been an increase in schemes which combine capital and technical assistance. The Governments of Australia, Canada and New Zealand have joined together to provide capital equipment and technical assistance for an experimental livestock farm in the Thal area of Pakistan. The Canadian Government is supplying equipment and personnel for a pilot project in mechanised fishing in Ceylon which involves provision of four vessels, a refrigeration plant and a canning plant, as well as about 12 experts. It will also provide equipment and personnel for an aerial and geological survey of Pakistan. Following a report made by an expert sent from the U.K., surgical teams from the U.K. are being sent out to aid the Ceylon Government in its campaign against tuberculosis. At the same time, Ceylonese doctors and nurses are being trained in the U.K. The Australian Government is financing, as part of its capital aid programme, the development of anti-tuberculosis clinics in Ceylon. A similar type of combined operation has been developed with regard to training facilities. This refers to the provision of personnel or equipment to start a training institution and, at the same time, facilities for the training of the local personnel who will eventually be responsible for its management. Thus, the Australian Government has offered to provide equipment for a model bakery in Ceylon which would be staffed by three Ceylonese who have spent some months gaining experience in Australia.

Steady improvement has been recorded, too, in the demand for provision of equipment for use by experts and for training and research institutions. The Government of Pakistan plans to set up a number of technical high schools, with a view to introducing into the secondary stage of education a technical bias of a kind suited to the requirements of the country. The U.K. Government sent a senior Inspector of Schools to advise and report on the project. In the light of this report, the U.K. Government has agreed to provide the entire equipment for eight new technical schools in Pakistan and also to supplement the equipment at a school already established in Karachi.

With a similar object in view, the Ceylon Government has decided to equip the senior secondary schools with workshop, so as to supplement the normal academic education with handicraft and practical training. It has made a request for equipment for 100 workshops in the fields of carpentry, metal work, lacquer and weaving, and these are being complied with. The Government of Australia is supplying woodwork equipment for 50 workshops and light metal equipment for 20 workshops at a total cost of £A19,300. The U.K. Government is also expected to meet a part of Ceylon's requirements. In the meantime, it is supplying tool-room equipment worth about £35,000 to the Indian Institute of Technology, Kharagpur.

The basic concept of the Colombo Plan has been one of co-operation, each member-country doing all that it can to assist in the development of the area as a whole. Acting in this spirit, India earmarked £750,000 for the provision of aid to its neighbours under the Technical Co-operation Scheme. Ceylon is similarly providing £400,000 and Pakistan £161,290. Out of these funds, India has supplied five experts to Ceylon, has taken in trainees from other countries of the region in statistics, sugar technology, customs administration, broadcasting and engineering, and has offered 55 scholarships and fellowships in Indian universities and specialised institutions. In co-operation with the U.K. Government, the British territories in South-east Asia have accepted trainees from Ceylon in rural broadcasting, besides arranging further training in response to requests from India and Ceylon.

The one signal contribution of the Colombo Plan is technical and financial assistance which the economically advanced countries have agreed to make, and have made, for the improvement of the underdeveloped areas. Nevertheless, the progress so far has not been encouraging and this is attributed to the lack of both technical service and adequate financial resources. But there is clearly some need for adjustments and co-operation in the grant of financial assistance. The Colombo Plan Technical Co-operation Programme, for instance, has £8 million at its disposal, including £2.8 million pledged by the U.K., but the amount actually committed to projects for which technical assistance had been requested up to the end of 1952 was not more than £1.3 million. The U.N. Technical Assistance Board, which has a budget of $21.3 million for 1953, finds, on the other hand, that it is unable, for the present, to meet requests for the provision of experts made by India, Pakistan and Ceylon. "The request for technical assistance already received," to quote one report, "far exceed the sum available for the current year, and certain programmes, including the U.N. scheme for scholarships to provide technical training for persons from the underdeveloped countries, have had to be cut down."

It is thus evident that, while the Colombo Plan Technical Co-operation Scheme is unable to spend all the funds available for it, the U.N. Programme is held back, because it has not enough money to spend on approved projects, several of them inside the Colombo Plan area. Inasmuch as the objective underlying the two programmes is the same, namely, raising the living standards of the people in the underdeveloped areas, the Colombo Plan Consultative Committee will do well to devote some attention to this problem and find out methods by which the two assistance programmes can be implemented on a more co-ordinated basis in the countries covered by the Colombo Plan.

Equally important is the question of self-help among the Colombo Plan countries, especially in the sphere of training technicians of all kinds. It is precisely this aspect that has been stressed by the Colombo Plan Council. It says: "Where experts for planning or execution are not available locally, they can nearly always be procured from abroad. But the medium- and lower-grade technicians, the agricultural extension workers, the teachers, and the whole range of non-commissioned officers in every branch of industry and administration, whose role is just as important as that of the qualified professional men and who will be needed in millions, rather than thousands, can only be trained in their own countries."

Allied to the above question is that relating to the manner in which the funds provided for implementing the technical co-operation schemes are to be utilised. While on this, the Council has made a few interesting observations. According to it, it takes time to develop training institutions but, unless the job is taken in hand "as a matter of urgency," some of the projects now being started may wither away through lack of trained men at all levels to sustain them. To quote the Council's own words: "The faster the underdeveloped countries approach self-sufficiency in skilled man-power, the better will technical assistance have done its job."

HEAVY ACCUMULATION OF STOCKS AFFECTS COAL COMPANIES

RAZA AND BULAND SUGARS REDUCE THEIR DIVIDENDS

Equitable Coal Co., Ltd.

THE directors of the above Company (Managing Agents: Messrs. Macneill and Barry Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st December, 1952.

The accounts show that the profit, after providing for depreciation amounts to Rs. 17,46,626 (Rs. 22,24,105) from which there has been provided for taxation Rs. 5,50,000 (*Rs.* 12,00,000), for reduction in valuation of stores of Rs. 1,50,000 (*nil*), for workmen's compensation reserve Rs. 1,00,000 (Rs. 2,00,000) and for general development reserve Rs. 4,38,000 (*nil*) leaving a balance of Rs. 5,08,626 (Rs. 3,99,105). After adding the profit on sale of plant and machinery Rs. 145 (*nil*), unclaimed dividends forfeited Rs. 1,229 (*nil*), and balance brought forward from the previous account of Rs. 10,51,946 (Rs. 1,74,131) and deducting dividends for the half-year ended 31st December, 1951, declared on 24th July, 1952 Rs. 3,82,470 (*nil*), dividends for the half-year ended 30th June, 1952 declared on 26th March, 1953, Rs. 4,56,564 (*nil*), directors' commission on the declaration of dividends for the half-year ended 30th June, 1952 Rs. 27,396 (*nil*), and dividend previously forfeited now paid Rs. 75 (*nil*), there is available for distribution a sum of Rs. 6,95,441 (Rs. 5,73,236). The directors recommend that this amount be disposed of in payment of dividend on ordinary shares at the rate of 30 (25) per cent. per annum Rs. 4,44,564 (Rs. 3,70,470) and dividend on preference shares at the rate of 6 per cent. per annum Rs. 12,000 (Rs. 12,000) leaving a balance of Rs. 2,38,877 (Rs. 1,90,766). From this sum will be deducted directors' commission on the recommended dividends Rs. 27,396 (*nil*) leaving to be carried forward to the next account Rs. 2,11,481 (Rs. 1,90,766).

Net raisings during the half-year were 8,30,430 tons compared with 8,91,022 tons during the previous six months and 8,43,235 tons in the corresponding period of 1951. Despatches amounted to 8,58,991 tons against 8,50,992 tons and 8,90,153 tons during the preceding two half-years. Stocks totalled 1,16,986 (1,05,517) tons on 31st December, 1952. The good condition of the Company's Collieries has been fully maintained. Good relations between labour and management continued throughout the period.

Raisings were lower than for the previous half-year, due mainly to mining difficulties in the Dishergarh Seam Collieries. An improvement in the supply of wagons brought about a reduction of the coal stocks at the Collieries, but this position has deteriorated considerably since the close of the half-year.

The lower raisings, with consequently increased costs, combined with reduced exports have had an adverse effect upon the Company's results for the half-year, and your Directors feel it necessary to advise shareholders that the Company's profits for the following half-year to 30th June, 1953, will be further and much more substantially reduced. Production of coal in the country, in excess of the available transport capacity, is having serious effects upon the industry's economy and the much restricted market for export coal is aggravating an already difficult situation.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	33,63,760	Block ...	63,47,753
Reserves ...	68,00,380	Stocks ...	22,63,699
Provision for taxation ...	11,67,985	Stores, etc. ...	83,87,170
Liabilities ...	2,07,75,463	Debts, deposits and advances ...	1,43,12,222
Profit and loss account ...	2,11,481	Investments	6,77,000
		Cash ...	3,31,225
Rs.	3,23,19,069	Rs.	3,23,19,069

South Kazanpura Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Bird and Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 28th February, 1953.

1,06,006 tons were raised and 1,06,285 tons were despatched during the period, in comparison with the figures of 99,222 tons and 1,02,845 tons during the preceding half-year. Of these figures, the new quarry accounted for raisings of 17,238 tons and despatches of 17,939 tons, which represents a further increase of approximately 3,000 tons raised and 5,500 tons despatched over the half-year ended 31st August, 1952. The proportion of despatches to raisings appears at first sight to be not unsatisfactory, but wagon availability in the Karanpura Field has not expanded to the required extent and still is a restrictive factor.

It would now appear that current production of all grades of coal exceeds the actual demand. A large contributory factor has been the very considerable contraction of exports which has led to the accumulation of heavy stocks at virtually all collieries. The Company's colliery has been affected and there is little indication that this tendency will be reversed in the near future. The disposal of the slack fraction of the raisings is a problem of the gravest import.

The directors report that no strikes occurred at the quarries during the half-year and that management-labour relations have, on the whole, been cordial.

The procurement of such items of plant and machinery, as have to be imported, continued to be difficult and subject to very long delays in delivery. Road cess at an enhanced rate of As. 3-6 for the year 1952-53 was paid under protest to meet the State Government's threat of certificate proceedings. Subsequently, the Central Government intervened and put a stay to any further collections at the enhanced rate.

The income-tax assessments for the years 1951-52 and 1952-53 have now been completed. In computing these assessments, the income-tax officer has charged additional income-tax for the years ended 31st August 1949 and 31st August 1950, amounting to Rs. 49,098, on dividends paid by the Company which he considers to be distribution out of previous profits which did not suffer taxation owing to assessed losses in the past. The directors claim that such tax is not payable by the Company and have, therefore, ledged Appeals against the income-tax officer's assessments. In view of the income-tax officer's ruling, it is considered necessary to contain the dividend within the assessable income after taxation in respect of the half-year ended 28th February, 1953.

The profit and loss account after providing Rs. 26,323 (Rs. 28,531) for depreciation, Rs. 50,000 (Rs. 16,000) for current taxation Rs. 10,500 (Rs. 13,000) for tax contingency reserve, and including Rs. 15,868 (Rs. 22,815) brought forward from last half-year, shows an available balance of Rs. 48,489 (*Rs.* 93,675) which the directors propose to dispose of as follows:—

In paying a dividend of 2½ (7½) per cent. per annum without any deduction for income-tax paid by the Company Rs. 21,875 (Rs. 65,625) and in carrying forward Rs. 26,614 (Rs. 28,050).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	17,50,000	Block ...	21,86,675
Reserves ...	10,86,300	Stocks ...	84,496
Provision for taxation ..	73,746	Stores, etc. ...	4,12,024
Liabilities ...	7,82,303	Debts, deposits and advances ...	10,10,668
Profit and loss account ...	26,614	Cash ...	25,100
Rs.	37,18,963	Rs.	37,18,963

Raza Sugar Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Govan Bros. (Rampur) Ltd., New Delhi) submitted the audited accounts of the Company for the year ended 31st October, 1952.

The year's working showed a surplus of Rs. 4,94,803 (Rs. 4,81,312), out of which provision has been made for depreciation Rs. 1,33,530 (Rs. 1,26,669), leaving net profit of Rs. 3,61,273 (Rs. 3,54,643). Deducting from this, the bonus paid to employees Rs. 1,67,298 (*nil*) there was a balance of Rs. 1,93,975 (Rs. 3,54,643). To this was added the balance brought forward from last year of Rs. 6,05,982 (Rs. 3,74,231) making a total amount available of Rs. 7,99,957 (Rs. 8,55,932). The directors paid a dividend of As. 12 (Re. 1-4) per share, i.e., 7½ per cent. absorbing a sum of Rs. 1,49,970 (Rs. 2,49,950), leaving a balance of Rs. 6,49,987 (Rs. 6,05,982) to be carried forward. No provision of liability under the Indian Income Tax Act (which is applicable to the Company's profits from 18th December, 1948) has been made and the position thereof would crystalise only after first assessment under the Act is completed.

Cane crushing season during the year was the longest being 208 working days, ending on the 28th June, 1952, as against 118 days in the previous year. 49.83 lakhs maunds of cane was crushed yielding 8.96 per cent. recovery for the season as compared with 31.58 lakhs maunds of cane yielding 9.57 per cent. recovery for the preceding season. The crushing has been the highest in the history of the Company. Continuance of crushing till the end of June, 1952 by utilising all excessive cane supplies available naturally resulted in lower average recovery. The months of May and June are unsuitable for crushing due to deterioration of sucrose content in cane.

During the year, double carbonatation process was put into operation, but full benefit thereof was not reaped. As a result of the experience gained by the Company's staff in the last season, the grain size and the quality produced during the year have been better. Still, further improvement therein will take place during the next crushing season as a result of some adjustments now being made.
