In the season 1951-52 as well, the Government of India continued the policy of selective control as in the year 1950-51, with certain modifications. As the season progressed, it was found that much more cane was available to all the sugar factories than estimated at the beginning of the season with the result that sugar production in the country in the season 1951-52 reached the all time record figure of 14.90 lakhs tons, which is almost equal to the target of 15 lakhs tons that was laid down in the Five-year Plan of the Government of India to be achieved by 1955-56. The consumption in the country was estimated at nearly 12 lakhs tons and, therefore, the year's production plus the carry over of 1.80 lakhs tons from the season 1950-51 being much in excess of the consumption, the sugar prices in the free market started declining and a stage came when even the controlled rates could not be obtained. The Government nominees also did not lift their allotted quotas at the controlled rates.

Controlled rate for the year was fixed by the Government of India on average recovery basis of 9.6 per cent. for Western U.P. In view of actual lower recovery (which was only partially compensated by proportionate reduction in price of cane crushed during the months of May and June) and some sales even below the controlled rate, the anticipated margin of profit could not be realised. In spite of that and over-all inadequacy of profits, the payment of bonus to employees amounting to a sum of Rs. 1,67,298 had to be made in terms of the State Government's notification relating thereto. Appropriation of this sum from the year's profit works out at 46.3 per cent. of profit available to the Company without any provision for taxation and any return on capital.

The supplies of sugarcane to all the factories are controlled by the cane co-operative societies and they hardly take any care to arrange for the supply of the right type of cane at proper time. The Societies have not so far taken any steps to supply cane in the order it matures and within the shortest time after it is harvested, so that better recovery is ensured. It may also not be out of place to mention that the Company has no free hand even in getting cane from its own farm. This makes it impossible for the Company to regulate supplies even from its own farm in a most advantageous manner.

The State Government is collecting a huge amount by way of cess on cane with the sole object of utilising the same towards improving cane cultivation for the benefit of the industry, but it is a matter of regret that this amount is not being utilised by the Government for the purpose it is collected. Hardly any cane development work has been taken up in the area. The Indian Sugar Mills Association has placed these anomalies before the Government, times without number, but without any appreciable result.

		Cash ...	42,541
Rs.	1,24,22,559	Rs.	1,24,22,559

Buland Sugar Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Govan Bros. (Rampur) Ltd., New Delhi) submitted the audited accounts of the Company for the year ended 31st October, 1952.

The year's working showed a surplus of Rs. 8,65,993 (Rs. 3,78,416), out of which, provision was made for depreciation Rs. 1,39,882 (Rs. 1,41,855), leaving a net profit of Rs. 7,26,110 (Rs. 2,36,561). From this sum was deducted bonus paid to employees Rs. 1,68,923 (*nil*) leaving a balance of Rs. 5,57,187 (Rs. 2,36,561). To this amount was added the balance brought forward from last year of Rs. 4,64,518 (Rs. 374) making the total amount available of Rs. 10,21,705 (Rs. 8,00,270). The directors paid a dividend of As. 12 (Re. 1) per share, i.e., 7½ (10) per cent. amounting to Rs. 2,51,814 (Rs. 3,35,752), leaving a balance of Rs. 7,69,891 (Rs. 4,64,517) to be carried forward. No provision of liability under the Indian Income-tax Act (which is applicable to the Company's profits from 25th November, 1950) has been made and the position thereof would crystalise only after first assessment under the Act is completed.

During the year under report cane crushing operations commenced on 29th November, 1951, and ended on 26th June, 1952, which comes to a working season of 211 days as against 95 days in the preceding season. 50.4 lakhs maunds of cane was crushed, yielding an average recovery of 8.96 per cent. for the season as compared with 24.79 lakhs maunds of cane and 9.73 per cent. recovery of the preceding season. Excessive supplies of cane being available, the crushing operations had to be continued till practically the end of June, which is responsible for a lower average recovery for the season. The months of May and June are unsuitable for crushing due to deterioration of sucrose content in cane.

Budge-Budge Jute Mills Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 30th April, 1953.

After providing Rs. 1,60,000 (nil) for taxation there is a balance of Rs. 2,74,644 (Rs. 2,75,083) at the credit of profit and loss account from which the directors recommend payment as follows:—

Dividends on preference shares at Rs. 3-8 (Rs. 3-8) per share Rs. 31,500 (Rs. 31,500) and on ordinary shares at Rs. 6 (Rs. 6-8) per share Rs. 2,16,000 (Rs. 2,34,000) and leaving Rs. 27,144 (Rs. 9,583) to be carried forward.

In accordance with the working time agreement of the Indian Jute Mills Association the mills worked 42½ hours per week with 12½ per cent. of the total looms sealed.

Accounts in brief are as under:—

Rs.	89,21,751	Rs.	89,21,751

Nagaisuree Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Duncan Brothers and Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December, 1952.

The accounts disclose a loss of Rs. 1,29,122 (loss of Rs. 55,780). On transfer of this sum to profit and loss account and after sundry adjustments, including a transfer of Rs. 1,04,000 (*nil*) from revenue reserve, there is a balance at credit of profit and loss account of Rs. 325 (Rs. 53,778), which the directors propose to carry forward. The continued high cost of statutory concessions to labour and the depressed state of the tea market during 1952 contributed mainly to this unfavourable result.

Crop was 11,836 maunds as compared with 11,327 maunds in 1951. The average selling price was Re. 1-5-8 per lb. as against Re. 1-5-10 per lb. in the previous year. Planted area remained at 1124.90 acres. Estimates for 1953 provide for a crop of 12,000 maunds at an outlay of Rs. 11,67,750, including inland freight and sale charges.

Accounts in brief are as under:—

Notice

THE SINGARENI COLLIERIES COMPANY, LIMITED

(Incorporated in Hyderabad-Dn.)

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Thirty-second Annual General Meeting of the Shareholders of The Singareni Collieries Company, Ltd., will be held on Monday, 17th August, 1953, at 4 p.m., at the Registered Office of the Company, "Meher Manzil," Red Hills, Hyderabad-Deccan, to transact the following business:—

(1) To read the Minutes of the Thirty-first Annual General Meeting of the Company held on 4th August, 1952.

(2) To receive and adopt the Directors' Report and Audited Statement of Accounts for the year ended 31st December, 1952.

(3) To sanction the declaration of a Dividend.

(4) To approve donations paid by your Directors.

(5) To appoint Directors in place of:—
(1) Mr. Syed Abdul Quader,
(2) Mr. S. N. Bilgrami, and
(3) Mr. T. M. Jagtiani,

who retire under Article 93, and in accordance with Regulation No. 78, Table "A" of the Indian Companies Act (Amended), and being eligible for re-election offer their services.

(6) To appoint Auditors for the current year and fix their remuneration.

(7) To transact any other business that may be brought forward by the Chairman.

The Transfer Books of the Company will remain closed for the purpose of dividend from 4th August, 1953, to 17th August, 1953 (both days inclusive).

By Order of the Board,
For and on behalf of
THE SINGARENI COLLIERIES CO., LTD.,
INDUSTRIAL TRUST FUND,
GOVERNMENT OF HYDERABAD,
R. DWARKA PERSHAD,
Secretaries.

"MEHER MANZIL", RED HILLS,
HYDERABAD-DECCAN, *29th June*, 1953.

Note.—Subject to the Directors' recommendation being accepted, Dividend Warrants will be posted on 24th August, 1953.

Shareholders are requested to give immediate notice to the Company of any change of address.

HIGHLIGHTS OF OUR FINANCIAL OPERATIONS

As at 31st December 1952

Our Policyholders number . . . . . over 1,13,000
Life Assurances in Force . . . over Rs. 25,32,00,000
Life Assurance Fund . . . over Rs. 6,85,00,000

SURPLUS DISCLOSED . . over Rs. 42,75,000

Bonus to Policyholders at:

Rs. 12/- PER 1,000/- PER ANNUM ON WHOLE LIFE POLICIES
Rs. 10/- PER 1,000/- PER ANNUM ON ENDOWMENT POLICIES

MONEY QUITE EASY

(From Our Own Correspondent)

BOMBAY, *29th July*

The downward trend in notes in circulation and Scheduled banks' advances seems to be the order of the day, thereby reflecting the return of the traditional slack season. During the week under review, almost all the leading banks appeared as leaders of overnight money, while the scope for employing such funds narrowed down considerably. The effect of this was a further decline in the inter-bank call money rate to as low as 1 per cent. from 1¼ per cent. a week ago and 1¾ per cent. two weeks before. *Occasionally, some small business was done* at 1¼ per cent., but it was mostly of a renewal nature. Exchange banks were neither lenders nor borrowers. As they *cannot transfer* their funds abroad beyond specified limits, some of them are said to have transferred their surplus cash to Calcutta, where funds are still usable on account of export bill business, and inter-bank call money fetches 2½ per cent. The rate among the smaller Indian banks in Bombay was placed during the week at 2½ per cent.

Short deposits of three to seven days fetched slightly better rates than overnight money, namely, 1½ to 1¾ per cent. One to three months' money fetched no more than 2 per cent. and 6 to 12 months' deposits 2½ per cent. House money was quoted at 2 per cent.

An outstanding feature of this week's tenders for three months' Government of India Treasury Bills was the sharp rise in the amount offered to Rs. 3.76 crores (against an invitation for Rs. 1 crore), a record for the past eight months, and compares with the previous highest of Rs. 5.12 crores tendered in the second week of November, 1952, against an invitation for Rs. 2 crores. The average rate of accepted tenders, however, remained unchanged at Rs. 2-6-2 per cent. per annum. The large amount tendered indicates that more banks than before are now interested in these bills. Encouraged, presumably, by this week's response and having regard to the fact that there are enough funds in the market even after all the States had more than obtained their requirements, the Reserve Bank has stepped up the amount of tenders to Rs. 1.5 crores for next week.

For the third week in succession, the Reserve Bank's weekly statement (for the week ended 24th July, 1953) discloses a contraction, the decline during the week under reference being of the order of Rs. 16.70 crores. Notes held in the Banking Department are, however, higher by Rs. 2.51 crores. Consequently, total notes issued show a depletion of Rs. 14.19 crores. This contraction in currency has been adjusted by reducing rupee securities to the extent of Rs. 15 crores and by the withdrawal of rupee coin to the extent of Rs. 81 lakhs. In the Banking Department, deposits of the Central Government do not show any notable variation, but those of other Governments have registered an increase of Rs. 9.37 crores, representing further cash subscriptions received during the week for the State loans. Deposits of banks have gone up by Rs. 9.37 crores, indicating the further return of funds lent to trade. Deposits of others are lower by Rs. 1.42 crores. On the assets side, cash balances have improved by Rs. 2.58 crores, while balances held abroad are down by Rs. 1.32 crores. There has been a decline of Rs. 60 lakhs in ways and means advances to Governments and an increase of Rs. 81.80 lakhs to loans to banks. Investments disclose a rise of Rs. 14.99 crores, evidently representing the transfer from the Issue Department.

The Scheduled banks' statement for the week ended 17th July, 1953, as compared with that for the previous week, reveals an increase of Rs. 4.68 crores in their demand deposits. There is, however, no change in time deposits. Inter-bank borrowings are higher by Rs. 2.17 crores. Borrowings from the Reserve Bank show a fall of Rs. 38 lakhs, while those from the Imperial Bank disclose a rise of Rs. 1.80 crores. On the assets side, advances and bills purchased and discounted record a decline of Rs. 5.56 crores, investments of Rs. 89.44 lakhs and cash-on-hand and balances with the Reserve Bank of Rs. 1.27 crores. Balances with other banks in current account and money at call and short notice have risen by Rs. 65.18 lakhs and Rs. 77.91 lakhs, respectively.

The Gilt-edged market was dull, the undertone being quietly steady. The prices of almost all the short-dated loans were unchanged, while those of the medium and long-dated and undated ones tended to decline. Among the State loans, the process of downward adjustment of prices of 4 per cent. 1964 loans to the yield basis of the new loans continued. 3 per cent. 1957 was unchanged at Rs. 98-6, 3 per cent. 1958 at Rs. 98-3 and 3 per cent. 1959-61 at Rs. 96-3. 3 per cent. 1963-65 and 3 per cent. 1964 were placed an anna lower at Rs. 92-5. 3 per cent. 1966-68 had sellers and declined by As. 2 to Rs. 90-2. 3 per cent. 1970-75 was, however, unchanged at Rs. 86-6. 3 per cent. 1986 Conversion loan moved down by As. 8 to Rs. 82. 3 per cent. 1961 National Plan Bonds were placed at Rs. 99-5. The Reserve Bank of India, which had resumed the sale of these Bonds last week, is reported to have refrained from doing so this week. Among the State loans, 4 per cent. 1964 Madras receded by As. 4 to Rs. 99-8 and 4 per cent. 1964 U.P. loan by As. 6 to Rs. 99-6. 4 per cent. 1964 Bombay and West Bengal loans were unchanged at Rs. 100. Of the new issues, 4 per cent. 1963 Bombay had business at Rs. 100, Madras loan had sellers at Rs. 99-7; U.P. loan had buyers at Rs. 99-5, that is 3 annas under the issue price.

(Concluded from next column)

initial trends of the London Metal Exchange where copper is to be freely dealt with as from early next month. Electrolytic ingots were offered at Rs. 170. On higher advices from London, electrolytic zinc gained one point to Rs. 54. Reports that the better quality of zinc available would be unable to meet world demands added further cheer. Lead remained at Rs. 65.

BULLION QUIETLY STEADY

(From Our Own Correspondent)

BOMBAY, *29th July*

The notable feature of the trading on the Bullion Exchange during the week under review was the tussle in the silver section between the bulls and bears which ended in favour of the former, as reflected by the widening of the *budla* charges. Despite the arrival of a fairly large quantity of *kutcha* silver and the Korean armistice, bulls were able to hold their ground and exact heavy carry-over charges which widened from Rs. 2-2 at the close of last week to Rs. 4-8 yesterday when the July settlement ran out. Even though quite a good part of the sales in the maturing settlement was arranged to be carried over to the next settlement during the course of the week, by mutual agreement with the bulls, the bears had fairly heavy outstandings at the close of the settlement. To-day being the last day for squaring up outstanding sales, a leading bear operator was reported to have arranged to carry-over a part of his outstanding positions at as high a rate as Rs. 5-8. Notwithstanding this, the outstanding sales are stated to be 1,500 bars.

The bulls are stated to have paid in money for taking delivery of all the 1,500 bars, but only 1,250 bars are expected to be delivered. The balance of 250 bars will then be treated as "false sales." It will mean that those who made these sales are now unable either to give delivery or carry them forward. If the sale of these 250 bars is proved to be false, then the parties concerned will have to pay a penalty of Rs. 3 per 100 tolas to the Bullion Association and also pay the price dictated by the bulls at the auction of these bars. If they fail to meet this commitment, they will, we presume, be declared defaulters.

This is the third settlement in succession in which the bears have had to pay heavy *budla* charges. Market circles are wondering why certain operators always choose to sell short, despite the well-known fact that stocks of silver in the country are very limited.

In gold, the undertone was steady, because of poor arrivals and the demand was even. Even here, the bears had to pay *budla* charges, but not at a widening rate. The rate, which stood at Re. 1 at the close of last week, widened to Re. 1-5 at the opening of the week, but declined to As. 10 on Saturday. On Monday, however, the rate again widened to Re. 1.

Silver for forward delivery (28th July settlement) opened at Rs. 154-1 and, after touching a high of Rs. 155-10, reacted to Rs. 152-15 yesterday, on reports of the signing of the armistice in Korea. But renewed bull support and some nervous bear covering pushbd it up to Rs. 154-11 before the settlement ran out yesterday. Business for the next settlement (26th August) was done at Rs. 152 early in the week and, after being done up to Rs. 152-13, reacted to Rs. 150-7 to-day. The closing was, however, slightly better at Rs. 151-6.

Ready silver (.996 Mint) began at Rs. 154-9 and wound up the week at Rs. 154-10. The floating stocks of silver are placed at 1,200 bars. The daily average offtake was 10 to 15 bars, while the average arrivals were said to be of the order of 100 bars per day.

Gold for forward delivery (27th July settlement) began at Rs. 86-12 and rose to Rs. 87-8 early in the week before finishing at Rs. 86-4 on Monday when the settlement ran out. Business in the next settlement (25th August) opened at Rs. 85-11 and closed to-day at Rs. 85-14.

Ready gold opened at Rs. 87 and closed at Rs. 87-4. The floating stocks of gold are estimated at 20,000 tolas. The daily average arrivals and offtake matched each other at 2,000 to 3,000 tolas.

The following comparative table shows the trend of the market during the week under review:

	29-7-53	Highest	Lowest	22-7-53

COPPER FEATURELESS

(From Our Own Correspondent)

CALCUTTA, *28th July*

The first reaction of metal products manufacturers to Korean peace was reflected in the introduction of further caution in covering their requirements of raw materials. In fact, for some time past, producers have been showing a tendency to buy raw material only against firm orders for finished products. Those who have melting facilities are interested to use as much scrap as are available with them. Tin touched at one time a low of Rs. 390, as against the opening quotation of Rs. 402. Advices from Singapore were far from encouraging, the sentiment having been affected by reports of American interest in Bolivian tin. However, the rate in Singapore recovered a little on possibilities of the mine owners restricting output. This trend was answered by the recovery in the local quotation to Rs. 405, although the quantity changing hands was insignificant. Quick silver remained quiet; any quantity was available at Rs. 440 a flask.

Copper was featureless. The buyers desire to enter into commitments only after knowing the

(Continued in previous column)

COTTON STEADY

(From Our Own Correspondent)

BOMBAY, *29th July*

The main issue for speculation and discussion in the forward market in cotton at Kalbadevi is the quantity of cotton likely to be tendered against the August delivery purchases. This issue has practically overshadowed all other activities in the market. The February contract in the new crop lies almost neglected, with few transactions and hardly any fluctuation in prices. There is a good game of bluff going on in the market at present on both sides. The longs are proclaiming their readiness to take delivery of all the cotton that is tendered and have so far succeeded in this claim to push up prices to Rs. 706-8 per *candy*. Substantial purchases were effected by them during the last two days to frighten and demoralise the bears.

On the other hand, the shorts are reported to be preparing for delivering large quantities, both in Bombay and at upcountry centres. They claim that what happened to the May contract is likely to be repeated once again in spite of all the boasts of the bulls about their ability to weigh over cotton in large quantities. They seem to believe that at the first touch of reality the buyers will crumple up and start unloading their contracts in the open market. This battle-royal between the two sections is likely to prove interesting during the next few weeks. There are rumours that some of the buyers who are prepared to take delivery have arranged privately with certain mills to hand over the cotton to them at a discount of about Rs. 20 per candy which will still leave them with sizable profits. If there is some truth in this there is a possibility of the bears being squeezed and forced to cover their sales at increasing prices.

Crop news from all centres is encouraging. This has gone to widen the gap between the last delivery for the 1952-53 crop and the first one for 1953-54. This is also likely to effect the volume of trade and demand in the spot market. Even the delivery contract in the new crop which has been allowed by the Textile Commissioner is not very active, though this is partly attributed to the absence of new quotas to the mills against the initial release of 25 per cent. However, the unwillingness on the part of textile mills to enter into large commitments for the future can be attributed partly to optimistic estimates of the next crop. The August delivery in the forward market has rendered the whole position in the cotton market somewhat artificial and the normal position is not likely to be restored till this contract is out of the way. By that time, the cotton crop would also have progressed sufficiently to give a better idea of the production for 1953-54. Prices of and premia for spot cotton will also depend largely on the time when the new crop might be expected to come into the market. With a normal season, premia may go down. On the other hand, any signs of late arrival of new cotton in the markets would tend to put up prices. During the last day of the week under review there was a significant shift in the mills' interest in the spot market from the medium-staple varieties to short-staple cotton and to imported cotton.

In the forward market, I.C.C. February opened the week at Rs. 667½ and gradually firmed up to touch a high of Rs. 674 to-day. I.C.C. August delivery commenced the week at Rs. 698, and moved up, on moderate support by bulls, to Rs. 710½, to-day, though it eased, on some profit-taking, to Rs. 709½ towards the close of the session. The following is the trend of prices in the forward market during the week under review:

		Opening	High	Low	Closing
I.C.C. Feb. ...	Rs.	667½	674	664	674
I.C.I. Aug. ...	Rs.	696	710½	695	709½

The following are the latest available quotations from the ready section: Bengal *Deshi* Rs. 560; Berar Jarillas Rs. 745; Khandesh Rs. 865; Vijay Rs. 880; Oomra *Deshi* Rs. 695; Mogtai Rs. 695.

A wholly unexpected situation has arisen in connection with Indian purchases of Egyptian cotton during the interval between the announcement regarding the Indo-Egyptian Payments Agreement and its ratification. Most of the cotton so purchased has still to be shipped and the shippers at Alexandria are reluctant to receive payments on the basis of the recent agreement which allows 60 per cent. of the price to be paid in rupees. Egyptian shippers used to earn premia on their sterling earnings and they hesitate now to honour those transactions on this new basis of payment. The position has been reported to the Government of India and it is expected that some satisfactory solution to this development will be found at the diplomatic level. In the meantime prices of Egyptian cotton held here have been increased and it is expected that future prices also will be upgraded by Rs. 30 per candy.

At Karachi the steady trend in prices which had ruled for the last few weeks has been disturbed by lack of overseas demand. The recession in most of the varieties is to the extent of about Rs. 4 per maund, and as the slack season is likely to continue for some time, prices are expected to decline further. The latest available rates from Karachi are:—

Punjab *Deshi* Rs. 78; 4F Punjab R.G. Rs. 53; S.G. Rs. 63; L.S.S. Punjab R.G. Rs. 62; S.G. Rs. 68; N.T. R.G. Rs. 68; S.G. Rs. 73½; 289F Punjab R.G. Rs. 70½; S.G. Rs. 76½.

At Alexandria also, market activity has been comparatively slack. Interest in old crop is naturally now giving way to that in the new crop. But the market has been sustained on certain rumours with regard to renewal of trade agreements at an early date with some countries in Western and Eastern Europe, like Germany and Yugoslavia. The only buyer of note during the week was Chile which is reported to have acquired about 10,000 bales from the stocks of the old crop.

At New York, activity in the forward market has been on a fairly modest scale during the week, with fluctuations within a narrow range. Mill

demand for local consumption was, however, normal and this went to support prices which would otherwise have sagged. In the absence of any important factors, the market is now more sensitive to weather reports from the cotton-growing areas and this position is likely to continue for some time.

The following are the latest available quotations from New York, as compared with those of a week and a fortnight before:

(In cents per lb.)

ART SILK YARN FIRM

(From Our Own Correspondent)

BOMBAY, *29th July*

The Government's decision to limit imports of 150D and 120D bright finish yarns to 5 per cent. and 20 per cent. of the values of licences issued for the current half-year, respectively, turned out to be a bullish factor for the local art silk yarn market. Two other factors which fanned the bullish enthusiasm of operators further were dwindling floating stocks, following decline in arrivals of yarn under previous contracts, and refusal of the Japanese rayon mission to commit itself about the price issue. There was also optimism about better Indo-Pakistan trade relations in future leading to resumption of normal export business in art silk fabrics to Pakistan. The cumulative effect of all these factors was a good buying support which even overlooked the possibility of larger arrivals of imported yarn, consequent on the Korean peace, and weak advices from rayon cloth markets. Prices of art silk yarn, as a result, staged an impressive rise over the week, the tendency of the market remaining firm.

In the forward section, 150D July delivery contract rallied 22 points to Rs. 806 to-day, although, towards the close, it was a shade lower at Rs. 805 on profit-taking. August contract moved up from Rs. 789 to Rs. 806; at one time, it had even touched Rs. 808. These levels were the highest for the past eight weeks. Values of yarn in the ready section were fully maintained. 150 Italy was higher by an anna and a half at Rs. 4-0½. 120 *Italy* gathered an anna to Rs. 4-4. 150 Japan was done slightly better at Rs. 4-2½. 120 Japan was steady at Rs. 4-3½.

The table below gives the prices of art silk yarn quoted to-day, as compared with those on the 21st and 19th inst:

	29-7-53	21-7-53	15-7-53
	Rs. a.	Rs. a.	Rs. a.
150D July (per case of 200 lbs.) ..	805 0	784 0	788 0
150D August	806 0	792 0	791 0
120 Japan (per lb.)	4 3½	4 3½	4 3
150 Japan	4 4	4 3	4 4
120 Italy	4 0½	3 15	4 1½
150 Italy			4 1½

The Japanese rayon mission has held discussions with several sections of art silk yarn industry and trade in the country, but nothing concrete have emerged from these discussions. As reported last week, the mission has not so far committed itself over the price issue, although it has exhibited its anxiety to enlarge its trade in art silk yarn with India in competition with Italy. It is not, therefore, clear whether this mission's efforts would result in any downward revision in Japanese art silk yarn prices. In the context of such uncertainty, it is indeed encouraging to hear that the Japanese mission told the Surat Chamber of Commerce on Saturday last that "very soon, there will be a revision in the price of Japanese art silk yarn" and something very attractive and suitable to the foreign consumers had to be done "immediately."

The staple fibre yarn section continued to remain weak. Renewed arrivals of yarn from local main and South Indian mills led to a further fall in prices. The fall was particularly in evidence in 2/40s and, to some extent, in 20s. Following marked improvement in supplies, the Committee of the Yarn Merchants Association has decided to commence forward trading in 2/40s staple fibre yarn with effect from 1st August. The number of mills, the yarn of which will be allowed for trading, has been increased from 9 to 11. Forward trading in staple fibre yarn has remained suspended since 1st March, 1953.

GROUNDNUTS EASY

(From Our Own Correspondent)

BOMBAY, *29th July*

In striking contrast to the firm conditions that had prevailed for some time past, the oilseeds market ruled bearish this week. In fact, groundnuts came under selling pressure induced by profit-taking at the higher levels touched last week. Increased arrivals of gingeli seeds and quiet tendency in the coconut oil market also contributed to the easiness. There were, besides, reports of larger arrivals of groundnuts summer crop in South Indian markets. The castorseeds section ruled weak in sympathy with groundnuts. Also, truce in Korea served as a damper on the enthusiasm of operators, as it might mean the release of stockpiles of castoroil in the free market. The linseed section too looked downward, as crushers preferred to wait before committing themselves to further purchases. The *kardi* and *niger* sections were cheerless, despite rumours today that free exports of *kardi* and *niger* seeds would be allowed upto the end of September, 1954. As a result, there was an all-round decline in prices, the decline being more pronounced in the groundnuts section than in others.

The downward trend that has set in this week in groundnuts might not persist long, in the absence of easier overall oilseeds position, which can be ensured only by import of coconut and palm oils, among others, in larger quantities. It is not clear as to why the Government has not yet taken any action in this direction, despite its show of repeated anxiety about the hectic rise in prices. That apart, on arrivals of considerable quantities of gingeli seeds in the market, groundnuts Bold F.A.Q. declined from Rs. 53-12 to Rs. 51-8. August-September deliveries were lower by Re. 1-4 at Rs. 49 and December-January by Re. 1-14 at Rs. 35-14. Khandesh quality lost Re. 1-12 to Rs. 52-4. Groundnut oil ready eased from Rs. 29 to Rs. 28-10 and railway receipts from Rs. 28-12 to Rs. 28-4. August and September deliveries were done at Rs. 27 and Rs. 25-10, as against Rs. 27-6 and Rs. 26-6, respectively.

In the castorseeds section, a leading bear was shifting his interest from September to May contracts. Upcountry interests who are longs in September contracts were also liquidating their positions. As a result, September delivery ruled easy. After opeping at Rs. 155, as against Rs. 154-4, it fluctuated between Rs. 155-4 and Rs. 150, before closing at Rs. 153-4. May delivery was done at Rs. 134-4, as against Rs. 136-4, the highest and the lowest touched during the week being Rs. 138-8 and Rs. 132-8, respectively. Madras quality dropped by As. 4 to finish at Rs. 32-4. Castor oil I Pressure lost As. 2 to Rs. 18-2, and Commercials As. 6 to Rs. 17-6. B.S.S. was done lower by As. 2 at Rs. 18-6.

In the linseeds section, business was mostly of an adjustment nature. Bold ready fell from Rs. 32-12 to Rs. 32. August-September deliveries were lower by As. 6 at Rs. 32. October-November deliveries were done at Rs. 31-12, as compared with Rs. 32-6 last week. Linseed oil changed hands at Rs. 18-2, as against Rs. 18-6.

Among other seeds, niger F.A.Q. slipped from Rs. 39-8 to Rs. 38-12, and Madras quality from Rs. 40-4 to Rs. 39-4. *Kardi* Bold gave way from Rs. 27-4 to Rs. 25-12. August-September and October-November deliveries were done at Rs. 25-6, and Rs. 25-8, as compared with Rs. 26-12 and Rs. 26-14, respectively, last week.

The following table shows the prices of oilseeds and oil on the 29th inst., as compared with those at the end of the previous two weeks.

	29-7-53	21-7-53	15-7-53

SHARP BREAK IN PEPPER PRICES

(Messrs. Parekh and Co.)

BOMBAY, *29th July*

The pepper market in all primary centres during the week experienced a sharp break in prices, owing to complete withdrawal of foreign buyers. The chief bearish factors which were responsible for such a state of affairs were as follows:

(1) Underselling by Sarawak in New York and London. Singapore and Sarawak exporters are reported to have sold July and August shipments in New York at as low as $0.88 and $0.85 per lb. c. & f. New York A.S.T.A. terms, respectively. Weakness in other Malayan produce appears to have affected pepper adversely;

(2) Lampong black from Indonesia, where crop is reported moving, is said to be selling in competition with Sarawak and Malabar. July shipment is reported done at as low as $1.04 with further anxious sellers, buyers remaining scarce;

(3) despite the persistent weakness in other commodities in New York in the past several days, pepper which was maintaining its own is now reported giving way under selling pressure from competitive producers like Sarawak, Lampong and India;

(4) general feeling of fear among importing countries of the impending competition from India, in view of large balance of unsold stock in the hands of growers who were till recently reserved sellers;

(5) chances of the Indian Government's reducing export duty on Malabar black, with a view to making it more competitive in the foreign markets;

(6) Korean truce and its effect on the erstwhile strong holders among growers; and

(7) reduction in the export duty on whole pepper by the Ceylon Government from Rs. 250 to Rs. 150 for every 100 lbs.

Pepper at Alleppey, which was showing remarkable resistance at Rs. 2,800, is now being offered at Rs. 2,450, but with a few buyers. Growers in Tellicherry area, who are reported holding heavy stocks, are anxious sellers to meet buyers, but, so far without any notable result. They are willing to sell even at Rs. 2,400. Knowledgeable sources are expecting very soon a drastic reduction in the present export levy, as, otherwise, India is likely to lose its export markets, particularly New York, to the detriment of producers and at the cost of losing valuable earnings in dollars. An announcement to this effect is expected in the beginning of August.

In the A.S.T.A. section, August shipment was done at as low as $1.09, while September was done at $1.00 with a few buyers. In the delivery section, August and September deliveries were done at Rs. 1,945-75 and Rs. 1,845-75, respectively.

To-day's nominal quotations are: Ready delivery Rs. 320 per cwt.; and August Rs. 2,000-2,030 and September deliveries Rs. 1,885-1,915 per candy of 5½ cwts. respectively.

COMMONEST TEAS FULLY FIRM

(Messrs. Forbes, Ewart & Figgis Ltd.)

COCHIN, *25th July*

The total offerings in sale No. 15 which was held on Tuesday, 21st July, amounted to approximately 16,50,000 lbs. Quality remained much the same as the previous sale, although a few teas showed some seasonal improvement. The sale opened to a good general demand and commonest kinds remained fully firm. Low medium and medium brokens met with less support and prices were irregularly As. 1 to As. 2 easier. Best liquoring teas were steady at last rates. The strongest feature of the sale were black leaf, Middle East type fannings, and these must be quoted fully As. 2 dearer. Whole leaf teas of all descriptions were extremely well supported and advanced by As. 1 to As. 2. There were some withdrawals. The following are the quotations:—

	1953 Rs. a. p.
Low grown Travancore B.O.P.	1 9 6
Medium Travancore B.O.P.	1 10 0
	to 1 11 0
Anaimallais B.O.P.	1 11 0
	to 1 12 0
Best liquoring Nilgiri B.O.P.	2 3 9
Clean Black Leaf O.P.	2 2 0
	to 2 3 0

London Market.—Except for colours of old seasons, market irregular 1½d. to 2d. lower.

Colombo Market.—Black leaf Persian types firm to dearer. All others less demand, generally five to ten cents lower, except limited selection best quality.

Calcutta Market.—Export.—24,000 packages. Market generally firm. Better liquoring teas in good demand.

Dust.—Good general demand. Commons and medium Assams half anna dearer. CTC and Middle East types strongest feature. Flavoury Darjeelings well supported.

Export Quota.—The market opened to a slightly easier tendency with the quotation standing at 17-18 pies. It has since hardened to 18 pies and some business has been done.

Forthcoming Auctions.—Sale No. 16 will be held on Tuesday, 4th August.

As we go to Press, Messrs. Forbes, Ewart and Figgis wire:—

Dust Sale O:—2,75,000 lbs. Strong general demand. Common types firm. Medium and good medium half to one anna dearer. Best sorts steady.

FOODGRAINS ARRIVALS POOR

(From Our Own Correspondent)

HAPUR, *28th July*

Mr. G. L. Nanda, Central Minister for Planning, has reiterated his faith that the present policy of decontrol of foodgrains is incompatible with the planned economic development of the country. "We are now reaching a stage," he is reported to have told his colleagues in the Cabinet, "when the conflict between the needs of planning and some of the assumptions on which the present food policy is based, is becoming increasingly apparent." The defence of the Food and Agricultural Ministry is that complete decontrol of foodgrains has never been contemplated, despite the fact that the overall food position in the country has improved appreciably. Only the irksome controls have been relaxed where they were found to be absolutely unnecessary.

The incursion of mixed locust swarms continued across the Indo-Pakistan border during the fortnight ended 15th July, 1953. Immature swarms already present in the country are rapidly maturing. Breeding on an extensive scale is, therefore, expected in North-West India during July-August. Swarms are most active in the Punjab, P.E.P.S.U. and Rajasthan where breeding also started in many places. The sites of initial breeding are the Jaisalmer and Nagpur Districts of Jodhpur, the Sikat District of Jaipur, the Mohindergarh District of P.E.P.S.U. and perhaps the Gurgaon District of Punjab.

The overall food position in Uttar Pradesh continued to be good. Scarcity conditions are reported from the four hill districts of Almorha, Nainital, Garhwal and Tehri Garhwal, on account of damage caused to crops by hails and storms. Offtake from cheap ration shops under the hill provisioning scheme is high this year and over 100,000 maunds of foodgrains have been issued since April last. Reports have been received that river side villages in Gorakhpur, Deoria and Ballia Districts are under water with the river in spate. Thousands of acres of grown crops are threatened with destruction. The markets have remained quiet to steady. Owing to rains, seasonal arrivals had been reduced, while offtake remained fairly good. Hapur continued to export wheat to eastern districts.

It is officially stated this week that the food position in Punjab is very satisfactory and the Government has in stock about 100,000 tons of foodgrains to meet any emergency. The Government has now stopped buying wheat. Total arrivals of wheat in the Punjab markets from the beginning of the crop year until recently were about 150,000 tons. The amount of rice procured so far has been about 90,000 tons. It is officially learned that the recent rains in the State have been well spread and the condition of the standing crops is satisfactory.

STOCK & SHARE QUOTATIONS

Abbreviations:—D=Deffered shares. G=Guaranteed shares. P=Preference shares. P.O.=Preferred Ordinary shares. R=Rebate shares. Y=Accounts published yearly. H=Accounts published Haf-yearly. Q=Accounts published once 15 months T=Company has Debentures. R.L.=Reserve Liability on shares. N=Nominal Quotation. i=Interim Dividend. f=Dividend for first half-year, y=Dividend for the year. x=Ex. Dividend c.d.=Cum. Dividend

Shares:—If a company has different classes of shares—as, for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under "Paid-up Per Share."

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12 indicate the months of June and December, respectively. "Reserves" includes general and other reserves and all other funds which a company may have as also depreciation on block items, when this is charged to separate account "Block" represents actual cost of land, buildings, machinery and all such other items on which depreciation is allowed, less sales, if any, and stands for the gross figure except where otherwise indicated.

Dividends:—Dividends for completed years are calculated at per cent. per annum, but, where quoted for portion of a year, they represent percentages of the dividend on the paid-up share value. For companies closing the books half-yearly in the first three months of the year, and for companies closing their books yearly during the first half of the year dividends are shown as for the previous year.

• The following explanatory notes relate to the abbreviations and marks shown on page 236 in the debentures section:—

‡‡ Option to repay on six months' notice, on any interest date after 31st December, 1951, at 102 per cent. Also redeemable out of a cumulative sinking fund of 1½ per cent. per annum (commencing in 1938) by drawings at 102 per cent. or by purchase at or 102 per cent.

(a) Option of repayment at any time at 3 per cent. premium

(b) Bearer bonds of Rs. 1,000 each repayable at par.

(c) Bearer bonds of Rs. 1,000 each repayable on 31st July, 1959.

(d) Bearer bonds of Rs. 1,000 each with option of redemption in whole or in part at par on 30th June, 1952 or on any subsequent interest date at one month's notice

(e) Redeemable on or after 31st July, 1950, at Rs. 102-8 or at par after 31st July, 1955, on six months' notice in each case

(f) Bearer bonds of Rs. 1,000 each with option of redeeming on 3 months' notice at ½ per cent. premium after 1st March, 1954, but before 1st March, 1957, and 1 per cent. premium on or after 1st March, 1957.

(g) Option of redemption on or after 1st July, 1949, at par.

(h) Option of repayment at any time at par at any time on or after 30th June 1947 on six months notice.

MARKET REPORTS

(Concluded from page 225)

Latest quotations in the Hapur market are: Wheat Rs. 16-12 to Rs. 18-8; gram Rs. 16-3; barley Rs. 12-12; *bejhar* Rs. 13-4; *rice: basmati* Rs. 35; *hansraj* Rs. 31; *sela* Rs. 29 and coarse Rs. 23; peas; *dara* green Rs. 15; white Rs. 19 to Rs. 17; and *bhadon* Rs. 15-2-3; *arhar* Rs. 14-12 and *bhadon* Rs. 13-1-6; *urd* Rs. 23, *maha* Rs. 18-4 and *moong* Rs. 22 to Rs. 23.

Arrivals into the markets were negligible, due to rains.

SUGAR QUIET TO STEADY

(From Our Own Correspondent)

HAPUR, 28th July

Crystal sugar markets remained quiet to steady during the week under review and prices at some places recorded slight advance. Sellers were more reserved, there being no panicky sales. There was little apprehension regarding any serious competition from foreign sugar by the end of September, when the first consignment of about 30,000 tons of imported sugar is expected to reach Indian shores.

A new sugar factory is likely to be established in Madhya Bharat. The yearly sugar consumption in Madhya Bharat aggregated 27,000 tons, as against only 18,000 tons of sugar produced in the State. The site selected for the factory is Nungaoll which has almost all the facilities required for the sugar industry.

Calcutta reported very steady conditions in the sugar market, as South Indian buyers were lifting considerable quantities against their contracts for July shipment. Poor arrivals steadied the Bombay trend.

The following were the latest quotations: Ambala Rs. 31-12, Amritsar Rs. 32-12, Delhi Rs. 31-12, Jullundur Rs. 31, Agra Rs. 31-6, Hapur Rs. 31-6, Kanpur Rs. 30-13, Mathura Rs. 31-8, Meerut Rs. 31, Muzaffarnagar Rs. 30-14, Patna Rs. 29-10, Calcutta Rs. 31-3, Gauhati Rs. 33-10, Madras Rs. 33-4, Bombay Rs. 32-10, Nagpur Rs. 33-3 and Indore Rs. 30-8.

JUTE GOODS LOOK UP

(From Our Own Correspondent)

CALCUTTA, 28th July

Following renewed purchases of both hessian and sacking in increasing quantities for shipment overseas, steady conditions prevailed in the jute markets during the week. Moderate gains were naturally recorded in the prices of jute goods, and mills became reserved as the week progressed. Hessian was bought on behalf of importers in the United Kingdom, while deals with American buyers for small quantities were taken in the market as indications of the need of American stockists for replenishment. Firm prices for burlap in New York also encouraged stockists and mills here to proceed cautiously and to sell only against definite demand. Buyers for Argentina took possession of as much as 4,000 tons during the week and this factor whipped up market enthusiasm further.

Although the Korean factor is no longer present to increase "emergency" stocks in the United States, yet more exports to that country are foreshadowed by traders. For recent reports from America have indicated that, in view of the new cheapness for burlap and assured supplies from producing countries including India, the tendency to use substitutes, which came into being during war-time, is gradually disappearing. Burlap bags are being used in greater numbers by American feed manufacturers, who had been using multi-wall paper bags, the utility of which has been found to be much less than that of hessian. This again proves the correctness of the trade view, repeatedly stated in these columns, namely, that the utility of jute as a packaging material cannot be conquered by any substitutes, although interested propaganda had threatened that substitutes were gradually ejecting jute from world markets. Jute is after all the "king" of packing materials, and this being a natural gift to jute, any attempt to do without it is bound to be only temporary.

Ready hessian 40" 10 oz. opened at Rs. 45-12 last Wednesday and the mills were successful in putting through some deals. Although conditions were steady, a decline to Rs. 45-10 was a feature on Thursday. At this stage, the U.S. bought some quantity and this was reflected in the rate advancing to Rs. 40 on Friday. Sentiment was further boosted by business over the week-end with Argentina and the quotation shot up to Rs. 46-6 with the August-September position quoting Rs. 46-8, as against Rs. 45-14 earlier. The presence of actual demand and moderate purchases yesterday neutralised any possible shake-up, following peace in Korea, and the rate went further to Rs. 46-12, the f.o.b. quotation showing a similar rise to Rs. 35-3. Hessian 40" 8 oz. was also steady at Rs. 36-6 f.a.s. and at Rs. 43-2 f.o.b.

The sacking market also remained steady, and purchases for shipment overseas enlivened market activity, pushing up prices. B. twills opened rather idle at Rs. 100-4, as, up to that time, the quantity taken by shippers failed to reach market expectations. This situation remaining unchanged, a recession to Rs. 99-12 was the feature on Thursday. On the following day, activity of bulls put up the rate to Rs. 100-8. The week-end showed some easiness and the rate receded to Rs. 101-2. However, in sympathy with the improvement in hessian, the quotation at Rs. 102 yesterday showed strength.

Mills gave moderate support to the raw jute market and stockists noted with satisfaction the upward movement which was aided by fears of a much restricted supply of raw jute this season. Nevertheless, the mills consider that these fears are invented and exaggerated only to boost up sentiment and that, although the Pakistani crop would be considerably lower than the 1952-53 output, raw jute is not expected to be in short supply as compared to world requirements. Arrivals of the first consignments of new crop were in small quantities and their quality was poor. New crop Assam bottoms were quoted steady at Rs. 28-8. Sellers were, however, reserved. Mills were interested to secure the old crop, transactions being reported on the basis of Rs. 26 for Assam bottoms.

SUGAR FIRM

(From Our Own Correspondent)

BOMBAY, 29th July

It is indeed paradoxical that sugar prices should continue to remain at high levels in all parts of India, despite the expected arrivals of foreign sugar under the deal which the Central Food Ministry recently concluded with British refiners. The stock position is reported to be thin and heavy post-monsoon demand is drawing very near. The blame for this situation is laid on the Government, as no definite policy has yet been announced with regard to the sale of imported sugar.

The forward section of the sugar market continued to be steady this week also. To-day's quotation for *Shravan* delivery is Rs. 88-8 per bag (buyers). The price is Rs. 3 higher than the price at which the Government of Bombay has been selling the controlled stocks of sugar. It is thus evident that the forward section (as also the spot section) has not at all been affected by the sale of sugar by the Government at lower prices, namely, Rs. 85-4-6 per bag.

Persistence of normal demand for sugar in a market with limited stocks has imparted further steadiness to the spot section, with slight improvement in prices as compared with those in the previous week. Bold grain sugar is quoted at Rs. 94-96 per bag, as against Rs. 94-95 last week. Quotations for small grain and medium grain sugar are fully steady at Rs. 90 and Rs. 91-92, respectively.

There was a fall in arrivals of sugar into the Bombay market during the week under review, the quantity actually received being 8,700 bags, as against 15,000 bags a week before. The opening stock with the spot trade to-day is estimated at 20,000 bags.

LINSEED FIRM

(Messrs. A. Bradley & Co.)

CALCUTTA, 27th July

Firm conditions have prevailed in the linseed market throughout the past week and prices have advanced appreciably, whilst trading has been on a small scale. Up-country markets are reported to be firm and movement of supplies is still on a very small scale. Sellers are rather reserved, and although there have been fairly keen enquiries from crushers, the volume of trading during the week has been limited. In the oil section, prices have advanced in sympathy with seeds. There has been an increased offtake locally, but export business remains at a standstill.

Latest quotation is July-August Rs. 23-8 per maund.

KEEN DEMAND FOR KIPS

(From Our Own Correspondent)

MADRAS, 27th July

Steady conditions prevailed in the kip market. Prices locally ruled one penny above U.K. levels. Except tanned cow calf, all other lines were in keen demand at steady prices.

There have been more enquiries for tanned goat skins though at 6d. below pre-July auction prices. Stocks of lining sheep skins continue to be in demand. Enquiries from U.S. buyers for drysalted goat skins have not resulted in business, in view of the high prices ruling here *vis-a-vis* those in Brazil.

HIDES UNALTERED

(From Our Own Correspondent)

KANPUR, 27th July

Conditions in the hides and skins market during the week under review were more or less similar to those that prevailed last week, except for this fact that fresh stocks of cow and buff were not as considerable as those during last week. The undertone of the market was one of sustained confidence. The main purchasers of the superior items were the local tanners. The Madras dealers were lukewarm. Latest quotations are as follows:—

Wet salted cow 1st grade Rs. 380, 2nd grade Rs. 280 and 3rd grade Rs. 180 per score; wet salted buff 1st grade 1 lb. 10 ozs. and 2nd grade 2 lb. 6 ozs. per rupee; goat skins 1st grade Rs. 250 and 2nd grade Rs. 210 per 100 pieces; and sheep skins Rs. 300 per 100 pieces.

TEA PRICES IMPROVE

(From Our Own Correspondent)

CALCUTTA, 28th July

During yesterday's export sale, best liquoring Assams were very steady and, supported by moderate demand, scored As. 2 above brokers' valuations. Offerings aggregated 21,937 packages. Low mediums and commons realised half anna more than the last rates. Ready buyers were found for mediums of improved quality. The rates were: best C.T.C. Assam BP Rs. 2-10 to Rs. 2-12, clean black pekoe Re. 1-13, clean common BP Re. 1-11, and medium Assam BP Re. 1-13.

The best feature of last week's auction for domestic consumption, where offerings amounted to 7,139 and 324 packages of dust and other grades, respectively, was C.T.C. Assams, prices of which were raised by as much as As. 3. Demand was very good. Buyers paid

Who else must sweat and toil and gain but scanty fare."
William Blake

VOL. LXXXVII. No. 2217 BOMBAY, 8 AUGUST, 1953 PRICE Rs. 1/8

AN UNJUSTIFIABLE DEMAND

AT the annual meeting of the Tata Oil Mills Co., Ltd., held on Monday last, Mr. J. R. D. Tata made certain remarks of far-reaching significance to foreign capital. Although they referred only to foreign capital that is already invested in this country, they may, if they are acted upon, have an adverse effect on the flow of fresh foreign private capital into this country. Referring to alleged competition from a foreign soap manufacturing unit, Mr. Tata said:

"We have in the industry a powerful foreign unit, forming an integral part of a great world-wide organisation, which has had a tight hold over the Indian market for over 75 years. With its tremendous resources, it can well afford to dictate prices to the indigenous industry and does so. Whilst it would be unfair on my part to explain away our lower profits this year by reference exclusively to this aspect of our problem, I would be failing in my duty if I did not take this opportunity publicly to support the strong case put up to Government by the Indian Soap and Toiletries Makers' Association against the grant of the licence applied for by this foreign unit for increasing its installed capacity."

Mr. Tata did not stop with that. He went a step further and advocated the following course of action:

"I believe that close co-operation at least between the leading members of the Indian industry is essential, if the many handicaps with which we are faced are to be overcome. The extent to which forces can actually be joined in order to meet competition is a matter which requires careful consideration. I believe, however, that there is scope for sinking personal advantages, often more apparent than real, for the good of the group, and that the future of this industry will depend largely on the ability of its members to co-operate in a common and united effort. Apart from what we can ourselves do in that direction, I believe the time has come for Government to consider the need for an enquiry into all aspects of this industry, preferably by the Indian Tariff Commission. Such an enquiry would at least bring under public scrutiny facts and figures concerning the industry, too large a proportion of which are to-day kept secret."

There is, of course, nothing new in the foregoing extracts. They merely endorse what the Indian Soap and Toiletries Makers' Association demanded at their last annual meeting held in the first week of June, 1953. But what is surprising, however, is that they should have been reiterated by Mr. J. R. D. Tata, a person known for his progressive views and the prominent position he holds among the business leaders of this country. Nowadays, it has become the fashion in this country for the less efficient units to blame the more efficient units for all or for part of their ills, as witness the controversy, handlooms versus mills. The complaints of the organised section of the Indian units of the soap industry against the foreign unit are an imitation of this fashion. It is a pity that Mr. Tata, too, should have succumbed to it. It will not be surprising if one day his company also becomes a victim of the same charge which is being made against the foreign unit. To-day, as the second largest unit, the Tata Oil Mill Company itself would have been the target of this criticism had there been no foreign unit; or if the foreign unit had been a little smaller than itself.

Lest we should be misunderstood, we must make one point pretty clear at the very outset. And that is that we do not hold a brief for any foreign interest. If a reference to this subject is being made in these columns, it is because two issues of vital importance to the public are involved. One is the interest of consumers of soap and the other is investment of foreign capital which, it is widely acknowledged, the country badly needs for its speedy economic development. To take the latter first. India can get foreign capital only in two ways, through Government-to-Government deals or through private enterprise. In the existing circumstances, both in India and in countries from where this country can hope to receive foreign capital, investment in India by small, or medium-sized business units or individuals is most unlikely. For, in the first place, the risks are not small and, secondly, the scope for making profitable investments in their own countries is still large. Unless a world-wide depression of the nature witnessed in the 'thirties comes about, reducing such scope, these small investors are not likely to venture into the underdeveloped areas. Accordingly, the only source from which India can expect foreign private capital are the "great world-wide organisations" which can afford to take a risk and invest in countries like India, which offer a relatively lower margin of profit as compared with their domestic markets. They naturally have certain advantages which the indigenous investors do not have, the most important of them being efficiency, born of many years of experience, and technical research. It is precisely these advantages that enable them to venture into underdeveloped countries. In fact, this is not such an unfavourable feature as it may appear to some, because the country needs the assistance of these large concerns in order to achieve rapid economic progress at minimum cost.

Now, if leading industrialists in this country, who wield considerable influence over the Government, were to decry the "great world-wide organisations," as Mr. Tata did this week, it is obvious that the already slender possibilities of India getting foreign private capital will become slender still. And to that extent the chances of creating employment opportunities will diminish. Worse still would be the position in this respect, if the Government were to concede the demand of Indian soap manufacturers that a public enquiry should be conducted into all the aspects of their industry, including the working of the foreign unit. Such a development will upset the confidence of foreign investors who may be contemplating investment in this country. They may fear that they may at any time be made the victim of a false propaganda by a few indigenous manufacturers with whom they have to compete. Another possible result will be that the more efficient foreign manufacturers, who are already operating in this country, will become chary of passing on the benefits of their efficiency to consumers, for they may then be accused of unfair competition. The country may thus be a net loser. We advisedly use the expression "net loser," because, according to our knowledge of affairs of the soap industry and its prospects, an enquiry of the type demanded by Mr. Tata will not solve the problems of the section he seeks to represent, the causes of which lie far deeper than in the alleged unhealthy competition of the foreign-owned unit, provided such an enquiry is conducted in an impartial manner with the primary object of serving the genuine interests of consumers.

All along the charges against the foreign unit—foreign simply because the capital employed is not indigenous—have been vague. No precise description of the nature of competition offered by it has been given. In fairness to the foreign unit, Mr. Tata should have named it and stated clearly in what manner this unit was offering competition. As pointed out by us on a previous occasion, there are no signs of excessive competition. Nowhere are soaps being sold at rockbottom rates. On the contrary, even the cheapest soap is being sold at a rate which is not in consonance with the average consumer's ability to pay. There are no indications to infer that the market has been flooded with unsaleable stocks. Even in the city of Bombay, there have been occasions in recent months when one could not buy some of the well-known brands of laundry soap. There is certainly no boom in the soap industry; at the same time, there seems to be no depression either, for the production statistics do not reflect it.

The only crime (in the eyes of Indian soap manufacturers) that the foreign unit seems to have committed was that, some months ago, it reduced the prices of its popular brands by a few pies. It might have been able to do so, because of its superiority in technical skill and efficient marketing arrangement. The suggestion, implied in the demands of the indigenous sector, that it is indulging in unhealthy competition even at the risk of incurring losses sounds absurd, because a foreign investor does not come to this country to make a gift of his capital. It is stated that the foreign unit is deliberately undercutting the indigenous manufacturers with the object of eliminating them first and then dictating its own terms to consumers. In other words, it is suggested that the foreign unit will more than recoup its present losses later when it becomes the sole manufacturer of soaps. This line of argument is just fantastic; it might have held good in the nineteenth century, but it certainly does not in the latter half of the twentieth century when the State has a tight hold over the affairs of all industrial concerns, the Press is vigilant and the public highly vocal. The public should not let itself be fooled by such arguments. Indeed, it seems to us that, if the foreign unit, against which so much complaint is being made, is wise, it can capture the hearts of the public

of this country by voluntarily inviting an impartial enquiry by a competent body, so that the real defects of the industry can be spotlighted. After all, it must be aware that the chief reasons why soaps, so essential for healthy and clean living, are so costly as to make them a luxury in this country are the high cost of raw materials, to which aspect Mr. Tata made a reference in his speech, and the predominance of sub-standard units in the industry, a point which Mr. Tata conveniently ignored. A ban on establishment of new units or on expansion or modernisation of an existing unit cannot make sub-standard units prosperous except at the expense of consumers. There is no getting away from the fact that, unless the sub-standard units are replaced by highly economic units which can stand economic crises and healthy competition, in both internal and external markets, it will not be possible to ensure a sustained progress of the industry and to make available to consumers good quality soap at progressively lower prices. The contention that there is no scope for raising the production of soap is fallacious, for the per capita consumption of soap in India is only 10 to 12 ounces, as against 6.1 lbs. in Malaya and 2.1 lbs. in Ceylon, both of which are as economically backward as India. Consumption of soap will certainly go up if it is produced cheaply and if effective propaganda is carried on. It is to this constructive task that the indigenous soap manufacturers must address themselves, instead of demanding restrictive measures which may at best prove to be no more than a palliative.

RESTRICTIVE BUSINESS PRACTICES

THE economic conscience of the free world has often felt outraged by the anti-social behaviour of cartels and monopolies, which utilise their enormous economic power not only to earn large and excessive profits for themselves but also to stifle the growth of both potential and actual rivals in their markets. The immediate reaction of the democratic world has been to condemn these restrictive practices in no uncertain terms, for the essence of democracy lies in giving maximum opportunities for the small, as well as the big, trade or industrialist, and to see that no one individual or group of individuals carries economic power so far as to banish all competition through unfair practices which will ultimately prevent the economic growth of the community as a whole. The democratic world's resentment of restrictive business practices is based on the ready acceptance of the principle that, in economics, as in politics, "fair play." "equal opportunity for all" should be the watchwords for regulating conduct and behaviour. From this point of view, the U.N.'s two reports, entitled *Restrictive Business Practices* (published by the Economic and Social Council), will be welcomed both for the flood of light which they throw on this important but much misunderstood subject and for the most constructive suggestions they make for curbing these practices.

The importance of the subject received its well-merited recognition when the U.N. Economic and Social Council appointed an *ad hoc* committee in 1951, consisting of Belgium, Canada, France, India, Mexico, Pakistan, Sweden, the U.K., the U.S. and Uruguay, to obtain information on restrictive business practices, whether based on cartel arrangements or not, on legislation adopted and measures taken by individual States in relation to these practices, and to evolve a draft agreement which will have as its object the prevention of these practices. The Committee elected as its Chairman Mr. Ingvar Svennilson (Sweden). It commenced work from January, 1952, and submitted its report in March, 1953. That so important a document, covering a wide and intricate field, should have been drafted within a period of one year is a matter that calls for both special mention and congratulation.

The Committee recognises that it is not possible to set forth, within even broad ranges of approximation, the prevalence of restrictive business practices in either national or international trade. There are obvious difficulties in estimating concentration of industrial power. It has, however, prepared a list of over 100 items in the production and sale of which excessive concentration has been alleged. Further, the Committee has made up for the absence of more accurate and specific information about these practices by its four case studies. These refer to electric lamps, titanium pigments, aluminium and non-ferrous metal industries. They reveal the marked extent to which monopolists could go in order to buttress their superior position and the great harm that unrestricted power of monopolies might cause to consumers, in general, and to ambitious entrants into their field, in particular. Whether the restrictive practices adopted by the particular monopolists dealt with in these studies did really lead to as great harm as one might expect, is a highly debatable point. The fact, however, remains that an unregulated monopoly is a danger to economic freedom.

The Havana Charter gives what might well be taken as a working definition of "restrictive business practices." The Charter defines such practices as those which tend to "restrain competition, limit access to markets or foster monopolistic control." Restraint of competition, the Committee points out, is the object of agreements between business enterprises which possess the effective control of production of, or trade in, the particular commodity in which they deal. These agreements may, and often do, take the form of allocation of territorial markets among the participating enterprises. Foreign territories, which are not exclusively allocated to a single enterprise, may be shared by the cartel members on a quota basis. Each contracting enterprise may agree to grant to the others exclusive right to exploit its patents in their respectiue territories. Again, trade marks may be used to serve as a cloak for unfair practices. Thus, members of a cartel may agree to use the same trade mark and to divide among themselves the countries in which each member shall have the exclusive right to own or use the mark.

Perhaps, the most persistent form of restrictive business practice is the agreement relating to fixation of prices and reduction in production or fixation of production quotas. There is, of course, nothing unusual in price fixation by a single industrial unit. But price restriction becomes unfair when it is adopted by international cartels to protect the reserved markets from invasion by competitors who may otherwise be in a position to break the price structure fixed by the monopolists. Since efforts made in pursuit of control of prices may be fruitless if the members are not able to control supply, such efforts are usually accompanied by allocating production quotas to participating countries.

Other restrictive practices include: (1) allocation of different fields of business activity among different enterprises, (2) discrimination against particular enterprise, (3) suppression of technological improvements. An example of the first kind is the agreement, in pre-war years, between I.G. Farben of Germany and Standard Oil of New Jersey of the U.S., whereby the former agreed not to enter the oil industry and the latter chose to remain outside the chemical field. The second type is resorted to when there is an inconvenient competitor who does not toe the line of the monopolists. Through judicious price-cutting and other means, he is made to agree or is just eliminated. Perhaps, the most anti-social practice is the suppression of technological improvements. The concerned enterprise will not exploit its own patents for fear that the new patent may reduce its profits, though it may be useful to the consumer, nor will it let other concerns exploit the patent.

Monopolists' ambitions have been checked in recent years by the Governments of most countries where cartels, combines and monopolies are known to operate to the detriment of consumers. The Committee has surveyed the legislation, undertaken in several countries, in order to protect consumers as well as smaller manufacturers from the giant combines. Sometimes, legislation is undertaken deliberately to foster these practices. All this legislation falls into four broad divisions: (1) legislation providing for supervision of restrictive practices, (2) legislation requiring the adoption of restrictive business practices, (3) legislation providing for the prevention and control of restrictive business practices and (4) emergency legislation. The first type of legislation, that is found in certain countries, notably, South Africa and Uruguay, is designed to collect information concerning restrictive business practices. In some countries it is incumbent upon enterprises, which adopt such practices, to register themselves with the Government. In some countries, notably the U.S. and Japan, the anti-trust laws, which are designed to check monopolistic combinations, are not applicable to export trade. The second type of legislation, namely, the active encouragement of restrictive practices, is the outcome of the depression years, namely, the thirties, when it was thought necessary, in the interest of stable prices and high profits, to promote restriction. Thus, legal attitudes, contrary to the spirit of the anti-trust laws, were developed. Emergency legislation, which fixes prices, and regulates production and exempts concerns from laws relating to restrictive business practices, were found necessary during times of war and economic crisis. They are still being continued, though the circumstances in which they were introduced do not obtain any longer.

By and large, many of the countries have legislation to prevent the growth of monopolies and the adoption of restrictive practices. In the U.S., and certain British Commonwealth countries, legislation has been enacted protecting the freedom of competition, prohibiting monopolies and restraints on trade, and providing for the investigation and punishment of violations. These laws, as the Committee remarks, are based on the assumption that monopoly will impair the flexibility in prices and production which is felt to be the characteristic of a competitive system, and will not be conducive to the most effective utilisation of productive plant, manpower and materials. Most laws, however, permit, either explicitly or implicitly, exemptions to be made in respect of export trade, primary commodities, labour relations and certain services, such as banking and insurance. Thus, the producers of primary commodities are expected to comply with the regulatory provisions of special legislation applicable to those commodities. In some countries, general legislation exempts State-owned services, such as radio, telephone and telegraph, from within its purview, while, in others, special exemption has to be obtained by the owners of shipping and other services before they adopt restrictive practices. The Austrian control law exempts even credit and banking institutions and insurance companies. Collective bargaining by labour is similarly exempted in all countries from legislation affecting the adoption of restrictive practices by manufacturers. In a few countries, there is an express statutory exemption for co-operative societies of producers and consumers.

Because all monopolistic organisations have international ramifications and their restrictive practices cut across national boundaries, it is clear that no national legislation, however comprehensive and stringent it may be, will effectively provide for free competition by checking the growth of monopolies. Such action, if it is to be effective, must be reinforced by international law. In his judgment on the case relating to the concentration of power in the aluminium industry, Chief Judge Knox of New York rightly held that, in view of the "monopolistic character of the aluminium industry in most producing countries and the national interests involved, some positive form of inter-Governmental action may be required in this field in the post-war period to avoid undue restriction of production by more efficient plants through understandings between dominant firms or efforts by individual States to protect high-cost manufacturers." His remarks about the aluminium industry apply with equal force to all industrial monopolies. In his report on international cartels, the Canadian Commissioner, under the Combines Investigation Act, for instance, has suggested that it is difficult for any single country to devise effective measures to deal with integrated industrial enterprises and that such measures should be taken both under national laws and by international collaboration.

The need for international action to prevent restrictive practices is, therefore, clear. Since by its terms of reference the Committee was asked to suggest methods for taking such action, it has drawn up draft articles of international agreement which may serve as a basis for concerted action. The draft agreement provides that the member-countries should take steps to prevent the adoption of restrictive practices and also co-operate with other members in fighting such practices as tend to restrain competition, limit access to markets, or foster monopolistic control. These practices are defined as fixation of prices, exclusion of enterprises, limitation of production, suppression of technology, misuse of rights under patents and trade marks and any other practice that may be declared as undesirable by two-thirds of the members. The draft agreement provides for initiating studies of restrictive practices, for investigation of complaints about the prevalence of such practices made by individual members and for prescribing such remedial action as may be necessary to counteract them. The draft agreement, it is to be hoped, will receive the widest possible measure of support from democratic countries, for the essence of democracy in the economic field is that no individual or organisation should be prevented from contributing to the economic well-being of the society through wanton discriminations against, and restrictions on, efficiency and enterprise.

SUGAR PRICES SHOOT UP AGAIN

FURTHER FREE TRADING IN BRITAIN—COMPANY LAW ADMINISTRATION

THURSDAY, 5 P.M.

MARKET GOSSIP

LACK of uniformity in trend was the only feature of trading on the Stock Exchange this week. In the steel section, for instance, while Tata Steel Deferreds and Tata Ordinaries gained quite a few points, Indian Irons were distinctly quiet. Similarly, in textiles, Bombay Dyeings were slightly higher in value, while the others were a shade lower. In the miscellaneous section, A.C.Cs. were on offer, but Belapurs and Wimcos met with some buying enquiry. The strength of Tata Steel shares, even in the face of reports that the Company's workers at Jamshedpur were demanding a higher bonus, was due to speculative buying and bear covering. As between the Deferreds and the Ordinaries, the rise in the latter has been more than that in the former, thereby widening the disparity between the two. This again was the result of substantial bear covering in the Ordinaries. On the basis of Rs. 337-4 for the Ordinaries—to-day's closing rate—the Deferreds should be quoting at Rs. 2,023-8, for the ratio fixed by the mediator and accepted by the Board of Directors of the Company is 6 Ordinaries per Deferred. But, as against this, the actual rate for Deferreds to-day was only Rs. 1,940. It will thus be seen that the Deferreds are underpriced *vis-a-vis* the Ordinaries to the extent of over Rs. 80. It may be argued that the Ordinaries are overpriced. But it does not appear to be so, considering that, even at the rate of Rs. 340 *cum*-dividend, these shares offer an attractive yield of 6.5 per cent., free of tax. There are no weighty reasons to feel that the proposed capital reconstruction scheme, under which a larger sum will be required to maintain the current level of dividend, will adversely affect the dividend prospects. On the contrary, the chances of the shareholders getting a better deal in the coming years are good.

• • • •

Those who are in the know of the working of cotton mills feel that the trend of textile shares does not correctly reflect it. They aver that the profits of leading mills in Bombay for the first half of the year are not so poor as to grumble about; in fact, they are fairly satisfactory. Shares of first class mills like Bombay Dyeings, Kohinoors, Centurys are considered to be quite cheap at the ruling rates. This, however, does not necessarily mean that the values will jump up automatically, for there are no investors in the market. What little activity there is at present is mostly of a speculative nature. And there can be no sustained improvement in equity values merely on the strength of speculative buying.

• • • •

Now that the States have completed their borrowing programme, the Bombay Municipality will shortly be allowed to enter the capital market. At one time, it was stated that this Municipality would require Rs. 4 crores. Later, this figure was lowered to a mere Rs. 75 lakhs, in view of the Central Government's proposal to advance large sums to it for completing its capital project. The latest reports are that the Municipality wants at least Rs. 1.5 crores. It remains to be seen whether the Reserve Bank will agree to this. The terms of the issue, however, appear to have been settled. The duration of the loan is said to be 10 years, the rate of interest 4 per cent, and the issue price Rs. 99-4. For a municipality, these terms are doubtless quite favourable to the borrower, considering that eight of the ten States Governments, which borrowed a fortnight ago, had to offer practically identical terms.

• • • •

Several other municipalities of Bombay State are also waiting to borrow. Ahmedabad alone wants Rs. 1 crore. Poona, it seems, requires half of that amount. Then, there are four or five other upcountry Local Bodies in the list, their aggregate requirements being Rs. 2 to Rs. 2.5 crores. All these municipalities may have to offer ¼ per cent. more than the yield on the proposed Bombay Municipality issue, besides carrying the guarantee of the State Government, if they are to attract the support of investors. Among industrial borrowers belonging to the private sector, who are in the queue, Dunlop Rubber is reported to be in the forefront. Its needs are placed at Rs. 2 crores. Market circles are of the opinion that, as its last debenture issue, carrying interest at 5 per cent., is at a premium of Re. 1-8, the Company should be able to borrow at par and at the same rate of interest. In that case, it will be able to borrow on more favourable terms than the Stanvac Refinery which offered 5¼ per cent. There is, however, one difference between the Stanvac debentures and those of Dunlops. Whereas the former issue does not automatically qualify itself for investment by insurance companies, the latter does. To invest in Stanvac debentures an insurance company must have a resolution unanimously passed by its full board of directors and get the formal consent of the Controller of Insurance within 15 days of making that investment. In the case of Dunlop debentures, there is no need for such special formalities to be gone through and the executive can straightaway decide to invest in them. It was because of this difficulty, perhaps, that the Stanvac Refineries decided to offer a special incentive of ¼ per cent. more than the ruling rate for first class debentures.

Among the commodity markets, cotton and oilseeds are rather quiet, with the latest rates being well below the highest levels registered earlier in the week. In fact, groundnuts are perceptibly weak, the rate at the time of writing being about Rs. 6 below the record high level of Rs. 54-8 registered a fortnight ago. Jute and jute manufactures are steady but not firm. The one outstanding exception appears to be sugar. This commodity has once again shot up to levels well above those that were obtaining before the Government decided on import of sugar and measures to rush supplies to all the principal markets. To-day, the rates are Rs. 102 per bag for bold grain and Rs. 93 for small grain, as against Rs. 94-96 and Rs. 90, respectively, a week ago. It may be noted here that, just immediately after Mr. Kidwai's announcement of the measures to bring down the prices, these two qualities of sugar were being quoted at Rs. 88 and Rs. 84, respectively, and further that the current rates are about Rs. 14 higher than the price considered as fair by the Government. These rates clearly show that the authorities have once again failed to keep down the prices of sugar at reasonable levels. This, however, is not surprising, because of the defects in the Government's policy explained by us on an earlier occasion, as well as by our sugar market correspondent. Even the greatly attenuated scheme for importing sugar is being worked in such a way that private importers are not in a position to submit tenders freely and compete effectively for the limited overall quota of 30,000 tons. Consequently, the possibility of imported sugar arriving in sizable quantities in the near future is remote. It is, however, reported, just as we go to Press, that a leading Calcutta firm has succeeded in getting its tenders accepted for the entire quantity of 30,000 tons at about Rs. 70 per bag ex-godown, Bombay. But this does not seem to have made any impression on the market, presumably because (a) the quantity is small, (b) it will take at least two months for this sugar to arrive, and (c) one does not know at what price the Government will release this sugar to consumers. If the report that it has paid for the first lot of 20,000 tons directly bought by it in London as high a price as £44 per ton, while the market price was £40 to £41 per ton, is correct, it may try to cover the loss by suitably raising the selling price of the second lot of 30,000 tons bought at a lower price through the trade channels, as mentioned above.

• • • •

The U.K. Government continues to implement its policy of relinquishing its hold on commodities in which it has held the monopoly for purchase and sale to consumers. This week, copper has returned to private trading, and thus joins the metals, lead and zinc, for which free markets had already been restored some months ago. Wheat has come into private hands, though activity in wheat trade is still somewhat restricted. Cotton may well be the next commodity to earn freedom, though one cannot be too optimistic about this raw material being returned to free trade. London's copper market re-opened on 5th inst., for the first time since the outbreak of the war. Initial quotations were around £200 per ton for forward delivery and £215 for spot. These rates, it is noteworthy, are much below the Continental price. In Germany, for instance, the metal commands £240-248 per ton. The future trend of prices will naturally enough be watched with interest. In the meanwhile, it is interesting to note that the Government has agreed to release, in an orderly manner, its own stocks of copper so that the market could function freely but without large fluctuations. This is necessary because it will be some time before the private importers can obtain copper stocks from abroad. It would appear that the Government will release stocks in sufficient quantities to fill the gap in supply between 5th August and the time when supplies of copper become available through normal trade channels. The release from the existing stocks—estimated at 240,000 tons—will be limited, in the first instance, to 60,000 tons.

• • • •

Although private imports of wheat were permitted as far back as in May, few traders have so far availed themselves of this freedom in any large measure. This is because they know that the U.K. Government was obliged to buy, under certain conditions, its wheat requirements under the International Wheat Agreement, of which it was a member till recently. The new Agreement, to which the U.K. is not a signatory, came into effect from 1st August. Now that the old Agreement has expired, private traders are busy negotiating with their foreign sources of wheat. Also, active preparations are being made to restore the grain futures market in Liverpool. It is believed that the market will start functioning in September. The market will, when reopened, initially deal in barley and maize. The Bank of England has already created the necessary facilities for U.K. residents to deal in foreign futures markets and for dealings by non-residents in U.K. futures markets. But the grain futures market, when it is restored, cannot possibly resemble, in entirety, the pre-war market, since the export of grain is not now permitted. Also, many grain exporting countries permit sales for "destination only," so that the imported grain may not be re-exported. All this will restrict the scope of the free market.

• • • •

So far as raw cotton is concerned, there seems to be no immediate prospect of the re-opening of the Liverpool cotton market. Mr. Peter Thorneycroft, President of the U.K. Board of Trade, stated in Parliament last week that the Government was opposed to the plea for permitting hedging facilities on the New York futures market since it would cost dollars. He also rejected, though not finally, the suggestion that the Liverpool futures market should be opened on the old pre-war basis. This would need full convertibility and a free market and Britain's recovery had not yet reached that stage. He revealed that he was, however, considering the report of the Hopkins Committee and that he was holding discussions with the members of the cotton trade. The Government policy, he said, was to find the best buying methods and, at the same time, to give traders cover against some of the risks inherent in the trade.

• • • •

A large part of the private sector of Indian economy is covered by joint-stock companies. Some idea of the importance of this sector will be gained when it is realised that there are 22,674 such companies, with a total paid-up capital of about Rs. 570 crores. These figures refer to the year 1947-48. Since then, the number of companies and total paid-up capital must have certainly gone up. There has been no adequate machinery to supervise the working of these companies, although it is certainly no part of the Government's functions to interfere in the working of these companies so long as they are well managed. It may be recalled that the Company Law Reform Committee, which submitted its report last year, suggested that there should be a central authority, to be known as the Corporate Investment and Administration Commission, which should have powers and duties arising from the accounts provisions of the Indian Companies Act. The Committee also suggested that this authority should keep the investment markets in the private sector under continuous observation and carry out functions relevant to capital issue control, regulation of stock exchanges and any other subject connected with the promotion and formation of joint-stock companies which the Central Government may delegate to it.

• • • •

It would now appear that the Government has finalised its arrangements for setting up such an authority and that the new body will begin working from September next. This body, which will function under the Ministry of Finance, will consist of a commission and four directors. The work relating to joint stock companies, now performed by the States, will be taken over by the Centre from September next. The set-up now contemplated will consist of four divisions. One division will deal with corporate finance, including the control of capital issue, and another with the administration of companies, including inspection and investigation of their affairs. The third division will be in charge of research, including analysis of balance-sheet and profit and loss account. And the fourth will deal with questions of personnel. A fifth division which, it is stated, will be added after the Stock Exchange Regulation Bill is passed, will deal with the working of stock exchanges.

• • • •

An interesting case in income-tax law has been decided in the U.K., where the Government of India preferred a claim for the recovery of outstanding income-tax (about Rs. 16 lakhs) against the Delhi Electric Supply and Traction Co., Ltd. (incorporated in England), now in voluntary liquidation. The case was heard by Mr. Justice Vaisey in the Chancery Division, who held that the Government of India could not enforce its claim for tax against the Company. The Company was incorporated in 1906, with its registered office in England, to carry on electric supply and tramway undertakings in Delhi. These services were operated under licence from the Government of India, one of the terms of the licence being that the Indian Government should have an option to purchase the undertakings. In March, 1947, the Government exercised the option and purchased the undertakings for Rs. 82.12 lakhs. In 1949, the Company went into voluntary liquidation and joint liquidators were appointed. In 1951, the Indian revenue authorities asked the liquidators to hold up the liquidation in order to enable them to formulate their claim. Thereafter, they notified the liquidators that a sum of about Rs. 16 lakhs was due for tax. The liquidators rejected the Indian Government's claim on the ground that, since the Company had no longer any assets in India, the claim was unenforceable against its assets in England. Upon their rejection, the Government asked the Court to reverse the liquidators' decision, so as to enable it to collect the tax. When the case came up before Mr. Justice Vaisey of the Chancery Division, counsel for the liquidators quoted a 200-year-old law on the subject, which stated that "no action lies in England to recover penalties imposed by law of foreign revenue law."

• • • •

Giving judgment, Mr. Justice Vaisey said the liquidators justified their rejection of the proof on the ground that no action could be taken in England to enforce the payment of Indian Government tax. He thought that was correct. His lordship, however, admitted that there was a certain measure of hardship in the present case, because he thought the Indian Government might have retained part of the purchase money of the Company's undertakings in order to meet the tax. Also, the fortunes of the Company had been built up in India, and it seemed regrettable that now English law compelled the liquidators of the Company to disregard local tax claims. His lordship added: "It may well be, that it will be thought an appropriate case in which to seek a review by a higher tribunal." Thus, the Government of India has lost its claim against the Company in liquidation. It is, however, not clear why the question of tax was not considered by the Government when it paid out its purchase money to the Company's management.

Last week, the shares of companies under the management of Messrs. Kettlewell Bullen & Co., Ltd., the well-known managing agency house of Calcutta, experienced a sharp increase in value.

(Continued on next page)

EQUITIES RULE QUIETLY STEADY

BOMBAY DYEINGS WELL FAVOURED

(From Our Own Correspondents)

BOMBAY, *6th August*

THE Stock Exchange ruled quietly steady during the week under review and the moderately cheerful tone noted towards the close of the previous week could not be sustained as selling pressure, touched off by a few adverse factors, intervened to affect sentiment. Equity values were pruned over a wide front. Advices from Calcutta were none too helpful as operators at that centre were concerned over the continued labour trouble at Burnpur. No doubt, the higher production figures of Tata Steel for July were helpful in sustaining interest in Tata Steel shares in the earlier part of the week, but the persistent heavy unloading in Indian Irons by Calcutta operators and the unimpressive performance of textile shares acted as a heavy drag on the sentiment of the operators.

In the steel section, Tata Deferreds opened at Rs. 1,935 and steadily advanced to Rs. 1,952-8 on reports of a shortage of scrips and higher production at Jamshedpur during July. The Company's output of steel in July amounted to 64,800 tons, as against 59,000 tons in the previous month and is the highest for the Company's current financial year so far. The heavy unloading in Indian Irons brought a recession in Tata Deferreds, wiping off a considerable part of the earlier gain and the shares wound up the week at Rs. 1,940. Tata Ordinaries, however, displayed a very steady tone with fair gains over the week on good demand. Opening at Rs. 334, the shares moved up to Rs. 338-12 before declining to Rs. 337-4. For reasons already stated, Indian Irons were concerned in a wave of selling and they dropped from the opening level of Rs. 23-15 to Rs. 23-3 at the close. In the kerb yesterday the scrips had touched a low of Rs. 23-0½.

Bombay Dyeings provided a feature, in the textile section, with a smart rise on rumours about the possibility of a higher interim dividend. A section of the market expects that the interim dividend will be stepped up from Rs. 7-8 paid last year to Rs. 10 per share. But another section is of the opinion that the interim distribution will not be raised. Be that as it may, the shares, after a mild reaction from Rs. 383-2 to Rs. 381-14 on the opening day, rose smartly to as high as Rs. 391-4 to-day, before closing at Rs. 388-12. Kohinoors lagged behind on predominance of sellers due to reports of sluggishness in cloth markets and reduction in selling prices of the Company's cloth. After an early rise from Rs. 305-8 to Rs. 306-4, the shares declined lower to Rs. 302-12. Central Indias reacted from Rs. 162-8 to Rs. 158, Finlays stood Rs. 2 lower at Rs. 323 and Gokaks Re. 1-8 down at Rs. 226. Indu Ordinaries invited sellers on the Directors' decision to pass over the dividend for the year ended 31st December, 1952, and reports of a heavy loss incurred by the Company for that year. New Citys were quiet at Rs. 150-10 and New Greats at Rs. 150. Sholapurs declined by Rs. 50 to Rs. 1,600 and Simplex dropped Re. 1-8 to Rs. 170. Standards moved down by Rs. 3-12 to Rs. 315 and Svadeshis by Rs. 4-4 to Rs. 253-8. Centurys were steady around Rs. 275-8. The Company has maintained the interim dividend for the year ended 31st December, 1953, at Rs. 3 per share of Rs. 100. Swans advanced by Rs. 2-8 to Rs. 455. Ahmedabad Advances gained Rs. 5 to Rs. 146-4. Mysore Spinnings rose by Re. 1-4 to Rs. 126-4. The Company has declared a final dividend of Rs. 3 and a bonus of Rs. 4 per share of Rs. 50 for the year ended 28th February, 1953. This final distribution together with the interim of Rs 3 paid in February, 1953, makes a total of Rs. 10 per share for the year or 20 per cent. per annum. For the previous year, the Company had made an interim distribution of Rs. 4 per share (made up of a dividend of Rs. 3 and a bonus of Re. 1) and a final one of Rs. 6 per share (made up of a dividend of Rs. 3 and a bonus of Rs. 3). Bradburys were in the limelight in the cash section with a smart advance of Rs. 73-12 over the week to Rs. 837-8. The Company has maintained the dividend for the year ended 31st March, 1953, at Rs. 100 per share of Rs. 250, contrary to expectations of a lower dividend. Further, the Directors have decided to split each of the ordinary shares of Rs. 250 each into five shares of Rs. 50 each and each preference share of Rs. 250 into five shares of Rs. 50 each.

Barring a small rise in Ahmedabad Electrics, following the announcement of a higher interim dividend of Rs. 2-8 for the current year, as against Re. 1-8 for the previous year, electric shares showed a mild reactionary trend. Ahmedabad Electrics gained As. 5 to Rs. 111-9. Bombay Suburbans lost Re. 1-14 to Rs. 126-4 and Surats As. 10 to Rs. 124-6. Andhra Valleys shed Rs. 7-8 to Rs. 1,452-8. Tata Hydros Re. 1 to Rs. 153-8 and Tata Powers Rs. 10 to Rs. 1,535.

In the miscellaneous section, a decline of Rs. 3 to Rs. 168-12 in Associated Cements were a feature. The shares experienced some selling pressure on fears of a lower selling price being fixed by the Government for the Company's cement. There were some switching over operations to Tata Ordinaries also. Belapurs were steady at Rs. 235, Bombay-Burmahs at Rs. 358-12 ex-div. (dividend Rs. 5), and B.I.Cs. at Rs. 8-5. Killick Industries added a rupee to stand at Rs. 151-8. On reports that the shares will be placed on the forward list, National Rayons were supported and gained Rs. 2-4 to Rs. 110-12. Although the Company has not commenced payment of dividend on its ordinary capital, which is a condition for a company's shares being placed on the forward list, it is stated that there is a precedent, in that Tata Chemicals are on the forward list. Tata Chemicals declined by As. 2 to Rs. 9 and Tata Oils by Re. 1-8 to Rs. 30-12. There were good enquiries for Wimcos, which gained, as a result, Rs. 5 to Rs. 225, presumably on expectations of a bonus issue.

Among transport shares, Scindias reacted from Rs. 13-11 to Rs. 13-9½ and C.P. Railways from Rs. 96-12 to Rs. 96-8. Bharat Lines had sellers at Rs. 83.

• • • •

Calcutta Stock Exchange

CALCUTTA, *4th August*

Conditions on the Calcutta Stock Exchange were slightly better during the week. Selected counters in the different sections made impressive gains, and the volume of transactions also enlarged this week. Encouragement was derived from higher Bombay advices, and the steadiness in the prices of jute goods raised the confidence of operators in jute shares. The big news of the week was the sale of the Kettlewell Bullen group of companies to Messrs. Mugneeram Bangur & Co. The market received this news with evident satisfaction, and shares of textile and jute mills under this managing agency changed hands at hardening rates. A slightly better tone prevailed earlier in Indian Irons following the possibility of the 'slow-down' being withdrawn by the workers at Burnpur. However, yesterday and to-day an easier tendency was noted and the closing to-day at Rs. 23-10 was the lowest for the week. Coals continued to lack enthusiasm, but selected miscellaneous industrials put up an improved appearance. The possibility of India securing a market for textiles in Korea is discussed, and this factor together with the interest displayed in the shares of the two cotton mills owned by Kettlewell Bullen contributed to an increase in the business volume among textile shares.

Section-wise, although Indian Irons showed an early improvement from Rs. 23-13 to Rs. 23-15, profit-taking not only neutralised the gain but made the rate go down to Rs. 23-10. Latest news from Burnpur is still confusing, and operators do not desire to enter into commitments merely on a reported possibility of the Works returning to normal production. The management of I.I.S.C.O. has stated that the Action Committee's offer to raise production from the present level of 20 per cent. to 35 per cent., only in certain sections, is "conditional on a number of points, the majority of which had nothing to do with the Company." Among other engineering shares, Indian Standard Wagons were quiet at Rs. 88-8, while in cross transactions Sarans were better at Rs. 9-14. Kumardhubis changed hands at Rs. 7-2 and Texmacos at Rs. 5-11.

In the textile section, for reasons already stated, shares of Bowreah Cotton Mills and Dunbar Mills of the Kettlewell Bullen group were two distinct features. Bowreahs improved to as high a rate as Rs. 3-12 from a previous quotation of Rs. 261, while Dunbars, after advancing from Rs. 185 to Rs. 202, shaded to Rs. 198 on profit-taking. Kesorams were fractionally better at Rs. 18-12. Muir Mills came to business to-day at Rs. 215. Elgin Mills were sought at Rs. 16-13.

The continued dullness in the export market made coals lose further ground, Burrakurs moving down from Rs. 9-11 to Rs. 9-1. At Rs. 514, Bengals lost 11 points, and Karanpura Collieries slipped from Rs. 94-8 to Rs. 84. Interest was shown in Pench Valley at Rs. 20-5, New Beerbhoums at Rs. 19-4 and Standards at Rs. 20-13, all the three counters showing an improvement of 1 anna to As. 2 each. North Damudas came to business at Rs. 3-10, as against Rs. 3-6 previously.

Moderate business was put through in the jute section, and there were some interesting features. Fort Glosters of Kettlewell Bullen were very prominent and improved impressively from Rs. 372 to Rs. 475 early in the week, and after receding to Rs. 419 on Monday on fresh offerings, recovered to Rs. 427. Gourepores were steady at Rs. 285, with Dalhousies coming to business at Rs. 143 ex-div. Another feature was Deltas which were raised from Rs. 234 to Rs. 237. Indias eased from Rs. 130 to Rs. 129-8 and Champadanies were quiet at Rs. 150.

In the miscellaneous section, F. & C. Oslers were again in the forefront, and attracted buyers at rates up to Rs. 7-6, but later profit-taking reduced the gain to Rs. 6-15. Indian National Airways were in constant demand and rose from Rs. 3-7 to Rs. 4-8. Ganges Ropes were steady at Rs. 203. Indian Cables found buyers at the fractionally improved rate of Rs. 18-13, but later on shaded to Rs. 18-10. India Steamships were better at Rs. 6-12, but Rallis were quiet at Rs. 71-8. On interested buying, Carew Sugars were higher at Rs. 7-4. Calcutta Electrics were wanted at Rs. 13-10 and Titaghur Papers at Rs. 36-4.

• • • •

Madras Stock Exchange

MADRAS, *4th August*

Apart from the textile counters which ruled firm, the rest of the counters in the Madras Stock Exchange experienced dull trading conditions. Advices from Bombay were not encouraging. The firmness in textiles was due to sizable export enquiries, as also to considerable enquiry for cloth in the various consuming centres in Madras. Plantings, however, ruled dull. Weak London advices damped the enthusiasm of operators in the tea section. Rubbers were quiet in the absence of any favourable development. Miscellaneous scrips were no exception to the general trend. Thus, while textiles recorded substantial gains, others disclosed no notable changes.

MARKET GOSSIP

(Concluded from previous page)

This was attributed to reports that the managing agency firm had changed hands. These reports have now been confirmed. It is said that the managing agency firm has been bought by Messrs. Mugneeram Bangur & Co. The terms of the sale, however, are yet to be finalised and the transfer to be sanctioned by the Government of India.

• • • •

Messrs. Kettlewell Bullen & Co., Ltd., was registered as a private company in 1923 and converted into a public company in September, 1946. Its paid-up capital is Rs. 70 lakhs, made up of Rs. 40 lakhs in 40,000 ordinary shares of Rs. 100 each, Rs. 20 lakhs in 20,000 5½ per cent. (taxable) cumulative first preference shares of Rs. 100 each and Rs. 10 lakhs in 10,000 4 per cent. (tax-free) cumulative second preference shares of Rs. 100 each. The ordinary shares were all privately held by the Directors and their friends and have now been sold to Messrs. Mugneeram Bangur & Co.

• • • •

There is, perhaps, a no more disconcerting feature of the present law on industrial relations than the fact that, while employers could be punished for violating the law, there is no effective means to check similar violations by the employees. In 1950, the Bombay textile industry witnessed a two-month-old textile strike—a wholly ineffectual affair it was—which was "illegal" in every sense of that word under the terms of the law on industrial relations. There was considerable loss of production, loss of wages and allowances for workers, and of profits for that neglected community, the shareholders. It looks as though a similar occurence will mar the city's industrial life to-morrow, when a few labour unions are determined to launch a strike in textile mills in "sympathy" with three workers of the Khatau Mills, who are on hunger strike. The hunger strike is a sequel to the introduction by the management of the four-loom system in that mill, and against rationalisation in general. The management has, on its part, complied with the provisions of the law by notifying the change in working conditions. Further, the representative Union (Rashtriya Mill Mazdoor Sangh) had agreed to abide by the decision of two persons, one nominated by the employer and the other by the Union. And these two persons have held that conditions in the mill are satisfactory and that the four-loom system might be permitted. The introduction of the system will, of course, render some workers superfluous, but the management has agreed to start a third shift in which the displaced workers could be employed.

• • • •

It is, therefore, surprising that the three workers should have resorted to hunger strike. But what is still more surprising is that the workers in all textile mills should want to stage a one-day strike. Hunger strike is a bad enough weapon for winning labour demands. It is worse when it is used to support unreasonable demands. That such a strike should impel all workers in the industry to go on a general strike is not only illegal, but positively mischievous, especially when one remembers that a day's strike will mean a loss of 4 to 5 million yards of cloth and Rs. 7 lakhs in wages. Mr. Shantilal Shah, Minister for Labour, Bombay Government, has rightly urged the workers not to resort to such "misguided action."

Notice

THE INDIA UNITED MILLS, LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Thirty-third Ordinary General Meeting of the Shareholders of THE INDIA UNITED MILLS, LIMITED, will be held at the Registered Office of the Company at Indu House, Dougall Road, Ballard Estate, Bombay, on Friday, the 18th September, 1953, at 4 p.m. (S.T.), to transact the following business:—

(1) To receive and adopt the Directors' Report and the Audited Statements of Accounts upto 31st December, 1952.

(2) To confirm the payment of Rs. 72,551 made by the Company in the year 1951 and to sanction further payments for the years 1952 and 1953 to the Bombay Hospital Trust as mentioned in the Directors' Report.

(3) To elect two Directors in place of those who retire by rotation but are eligible for re-election.

(4) To appoint Auditors for the current year and to fix their remuneration.

The Share Transfer Books of the Company will be closed from Thursday the 27th August, 1953, to Friday the 18th September, 1953, both days inclusive.

By Order of the Board,
AGARWAL & CO.,
Agents.

BOMBAY, *27th July*, 1953.

To,

THE SHAREHOLDERS OF THE INDIA UNITED MILLS, LIMITED.

NEWS IN BRIEF

OUT of the total production of 3,169 million coconuts in India in 1951-52, the States of Madras and Travancore-Cochin accounted for 2,802 million.

During the period January to April, 1953, internal air operating companies carried 157,250 passengers, 28,071,900 lbs. of freight and 2,938,587 lbs. of mails.

The Government of Assam has earmarked Rs. 4 crores for the construction of bunds in the various districts of the State with a view to arresting depredations by floods.

The total amount realised during 1952-53 from rentals charged by Government for films distributed by the Films Division was Rs. 31,18,300 and that realised from foreign companies was Rs. 7,952.

During the first six months of the operation of the Community Programme in 81 development blocks all over India, nearly 11,500 acres of waste land were reclaimed and work on another 5,700 acres was in progress.

The Madhya Bharat Government has decided to prepare a master plan for the construction of houses for the lower income group, besides the industrial housing scheme. The plan covers all district headquarters and towns with a population of 15,000 or more.

A proposal for integrating the collection of land revenue, *taccavi* irrigation and canal dues is under the consideration of the U.P. Government. In the meantime, district collection officers have been appointed under the Collectors for the collection work. No special powers, however, have been given to these officers.

Following the reduction in the pool price of overseas wheat charged to the State by the Government of India, the Bombay Government has reduced, with effect from the 2nd inst., the retail sale price of overseas wheat from Rs. 20-6-8 to Rs. 19-9-4 per maund in the rationed area. The reduced price in the rest of the State will come into effect from such convenient date as will be fixed by the Collector concerned.

A conference of the representatives of the Governments of Bihar and West Bengal has been convened by the Government of India early next month to consider the report of the Committee on the working of the Damodar Valley Corporation. This Committee, as already reported, has recommended the system of autonomous corporation as the best organisation for executing the multi-purpose project.

India will be represented at the International Congress of Industrial Aesthetics to be held in Paris from 15th and 16th September, 1953. Organised by the Paris Institute of Industrial Aesthetics, this Congress will bring together industrialists, industrial designers, engineers, architects, Government representatives, etc., for a review of developments in industrial design in different parts of the world. Mr. R. K. Sirkar, who has been nominated by the Indian Institute of Art in Industry to represent India, will read a paper before the Congress on the graphic arts of India.

The Bombay Port Trust has given a contract for building a pipeline system connecting two oil refineries now under construction at Trombay, with an offshore marine terminal, to Merrit-Chapman and Scott Corporation, U.S.A. The project, involving construction of more than 15 miles of pipeline to provide a network of seven lines between the piers and the refiners, will be built by the Indian subsidiary of Merrit-Chapman and Scott Corporation in association with the Hindustan Construction Co., Ltd., Bombay. The lines will be used to pump crude oil from tankers to refinery, to return the finished product to shipside, and to supply the tankers with water.

The Government of India has worked out a scheme for providing facilities for training scientific workers, employed in laboratories maintained by trade or private manufacturers, in Government research institutions, with a view to achieving co-ordination and uniformity of standards. The institutions where training will be given are Central Research Institute, Kasauli, Central Drugs Laboratory, Calcutta, Haffkine Institute, Bombay, King Institute, Guindy, Institute of Science, Bombay, and Veterinary Research Institute, Mukteswar. Candidates for training will be selected by a Board. A consolidated fee of Rs. 1,200 per annum, payable in advance, will be charged to each candidate.

The Government of India proposes to revise the system of export licensing for iron ore and manganese ore in the light of the availability of transport and other relevant considerations. It has called upon the shippers of these ores to furnish to the export trade control authorities at the ports full particulars of all shipments made by them during the period January, 1950 to June, 1953. The shippers have also been asked to declare their outstanding commitments and to complete exports against these commitments upto the middle of October, 1953, when the revised procedure for export of these ores is likely to be introduced. The intending exporters have been warned not to enter into fresh commitments which cannot be completed before 15th October, 1953.

The Income-tax (Amendment) Act, 1953, has introduced a new sub-section (2A) to section 22, which enables persons, who have sustained losses under the head "business, profession, or vocation" and who wish to carry forward on to the succeeding year or years, a part or whole of such losses, to submit returns in the usual form declaring such losses. On receipt of such returns, the Income-tax Officer will take the usual steps to make an assessment and determine the loss to be carried forward. The filing of voluntary returns showing losses had not hitherto been provided for in the Income-tax Act. The new sub-section removes the lacuna. The returns showing the loss should be filed within the usual period allowed for the filing of voluntary returns by those who have taxable income. This period may, in suitable cases, be extended by the Income-tax Officer. As the time for the filing of voluntary returns for 1952-53 and earlier years had already passed when the Income-tax (Amendment) Act, 1953, was enacted and as very little time was left after the enactment for the filing of voluntary returns for 1953-54 also, it has been decided, as a matter of concession, to receive voluntary returns showing losses for 1953-54 and earlier assessment years, till 31st December, 1953.

• • • •

From Abroad

The Swedish Government has imposed an anti-dumping duty on nylon stockings from the U.K.

Gold production in Canada in May, 1953, was 368,592 ozs., as compared with 365,982 ozs. in the same month last year. The production for the first five months was 1,843,113 ozs., as compared with 1,800,958 ozs. during the corresponding period in 1952.

Indonesia proposes to enlarge its mercantile marine by purchasing several vessels with capacity of over 2,000 tons each. The foreign missions in Sweden, Norway, Denmark, France, Italy and Japan have accordingly been asked to make enquiries and accept tenders for their construction.

The large Netherlands companies, namely, the Deli Company, the Deli-Batavia Company and the Deli-Batavia Rubber Company, with substantial interests in tobacco, rubber and palm oil, in the East Coast of Sumatra (Indonesia) as well as in the U.S., have decided to merge themselves into one company.

The crude oil production in the Middle East during the first half of this year was a record for any six-month period. Thus, the total production was 59.0 million metric tons, as against 50.5 million metric tons during the corresponding period of 1952 and 54.5 million during June-December, 1952.

The new International Wheat Agreement came into effect on the 1st inst. The Agreement provides for the distribution of wheat among 41 importing countries. The wheat will be exported by the U.S., Canada, Australia and France with minimum and maximum prices. The new maximum price is 205 cents per bushel of wheat.

A £200,000 contract to build for the Gold Coast Government 51 miles of railway line, which will pass through dense forests and swamps, has been awarded to a British firm. The new line, a single track connecting the existing mainline stations of Achiasi and Kotoku, will shorten the journey between Accra, the Gold Coast capital, and Takoradi, the main port, by cutting out the loop line through Ashanti.

The United States had the largest ocean-going tanker fleet in the world on 1st July, 1953, with 445 vessels accounting for 6,898,174 tons deadweight. This fleet is larger by 61 vessels and 2,600,000 deadweight tons than that in 1939. The most remarkable change in the U.S. tanker employment was that 546,000 tons were engaged in trading between foreign ports, as compared with none before the war.

The United States Government has turned down an urgent request from the Government of Israel for a $75 million loan. The latter Government wanted the loan to pay off numerous small and short-term outstanding obligations and to convert it into a long-term U.S. debt. The State Department, the Treasury, the Mutual Security Administration and the Export-Import Bank are all reported to have ruled that no American Government agency had authority to lend loans for such a purpose.

The latest figures relating to steel production in the U.K. show that output in June last reached the highest figure ever recorded for the month. The production was at an annual rate of 17.55 million tons, as compared with 16.25 million tons in June, 1952, which was the previous peak rate for the month. The comparative weekly averages were 337,000 tons in June this year, and 312,500 tons in June, 1952. The U.K. steel output in the first six months of this year aggregated 9.03 million ingot tons, as against 8.02 million ingot tons in the first half of last year. Pig-iron output also shows a steep rise, as compared with last year.

The Japanese industry is turning increasingly to heavy oil instead of coal in a move for greater efficiency in the utilisation of fuel. The current year's oil consumption is estimated at approximately 4.5 million kilolitres, as compared with 3.3 million kilolitres in 1952. This will be equivalent to the amount of oil consumed by the Imperial Japanese Navy in war-time. By the end of the year, the textile and pulp industries will each have replaced 27 per cent. of their coal consumption with oil, the iron and steel industry and food stuffs 18 per cent. each, ceramics 14 per cent., electric industry 8 per cent., chemical industry 5 per cent. and gas industry 4 per cent. To meet this mounting and continuing demand, Japan must import a total of 2.2 million kilolitres of heavy oil this year.

PERSONAL

MR. Ghazanfar Ali Khan, Pakistan's High Commissioner-designate for India, arrived in New Delhi on Tuesday last.

Mr. Madan Mohan R. Ruia, President of the Cotton Buyers' Association, Bombay, has returned after an extensive tour of the Continent.

Mr. J. J. Anjaria, Chief, Economic Division, Planning Commission, has been appointed Economic Adviser to the Central Ministries of Finance and Planning.

Sir Paul Benthall, K.B.E., a Director of Bird & Co. (London) Ltd., has been elected a member of the Court of Directors of the Chartered Bank of India, Australia and China.

Mr. Sydney Holland, Prime Minister of New Zealand, who was in India on a short visit on his way back home from London, left Calcutta for New Zealand on Wednesday last.

Mr. H. L. Jerath, until recently Senior Deputy Director-General of the Indian Posts and Telegraphs, has assumed charge as Director-General, vice Mr. Krishna Prasad who has retired.

Mr. D. F. Kerr, Acting Director, British Information Services, India, has been appointed Deputy Director of the United Kingdom Information Office in Canada. Mr. R. McC. Samples, D.S.O., at present Editor-in-Chief in New Delhi, will succeed Mr. Kerr as the Deputy Director.

Dr. S. Chandrasekhar, Professor of Economics, Baroda University, has been appointed Nuffield Foundation Fellow in Social Sciences at Oxford University for one year. Dr. Chandrasekhar will work on some problems in Indian demographs. He is also expected to work for a term in the London School of Economics and Political Science.

Mr. K. V. P. Rao, and Sardar Sucha Singh Anand, Managers, Southern and Northern Divisions of the Firestone Tyre and Rubber Company of India Ltd., respectively, returned from the U.S. after a survey of the latest developments in Firestone products, merchandising, sales and engineering service.

Dr. R. Maclagan Gorrie, a British forestry expert, will be arriving in India early in September next to advise the Damodar Valley Corporation on conservation of forests in the Valley, and proper exploitation and to suggest measures for soil and water conservation in connection with the construction of the dam. The services of Dr. Gorrie are being provided by the British Government under the Technical Co-operation Scheme of the Colombo Plan.

"COMMERCE" 1928

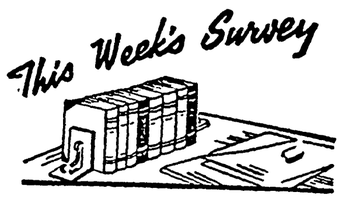
FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, *11th August*

International Commercial Policy

The Economic Committee of the League of Nations on Commercial Policy, which held its session towards the end of June last, has submitted a report which constitutes a general statement of its doctrine as regards commercial policy, a doctrine which has been drawn up in accordance with the conclusions of the International Economic Conference of May, 1927. This statement is in three parts, the first dealing with tariff systems and treaty-making methods, the second with the most-favoured-nation treatment and the third concerning collective action with a view to tariff reduction. In the first part, the Committee unanimously recognises that no new tariffs should be instituted nor existing tariffs reorganised without taking account of the effect which the rates or methods of application of these tariffs may have on international trade. However, the various States may desire to adopt independently their tariffs to their financial or economic requirements. The Committee considers that they should, nevertheless, not establish them without considering what obstacles they may constitute for international trade. But whereas certain of the members considered that the procedure for this purpose should be that of negotiations with a view to an exchange of tariff guarantees, others maintained that tariff treaties were incompatible with theory and practice of certain States which claimed the right to make their laws as they wished in this respect, subject to the condition that these laws should be applied without discrimination prejudicial to the interests of any country. In the second part, the report states that the different ideas as regards the tariffs and treaty-making methods seem, in general, bound up with varying ideas of most-favoured-nation treatment. The third part of the report draws attention to the fact that the resolutions of the Economic Conference laid stress upon the necessity of bringing about a reduction of tariff, not only by bilateral agreemtnts but also by the collective action of States.

Various systems were contemplated for the gradual reduction of all tariffs by a definite percentage. During the discussion, it nevertheless became clear that the time was not yet ripe for a general reduction of tariffs and the committee felt that it would be preferable first to study specific cases and to test the value of the methods and systems put forward.



TAXES ON PLANTATION CROPS

THE Taxation Enquiry Commission's questionnaire, recently issued seeks the widest possible range of information regarding the incidence of taxation of all types on different industries and groups and individuals in India. Among the six sections dealt with in the questionnaire, those relating to direct taxes, commodity taxes, agricultural income-tax and local taxation are of particular interest and value to the plantation industries, and tea and coffee industries, in particular. Included in Part II are questions which have provoked much controversy in recent times, such as the abolition of the distinction between agricultural and non-agricultural incomes for income-tax purposes, and the means of avoiding the contingency of the same income being taxed by the Central Government as well as State Governments, namely, dividends from agricultural companies.

The question of abolition of the distinction between agricultural and non-agricultural income appears to have a special significance. Ever since the Central Board of Revenue issued its famous Circular 35-D regarding assessment of dividends from agricultural companies in the hands of shareholders, there has been a feeling that the tax experts of the Central Government are trying to discover a new source of revenue by tapping agricultural income. In support of this statement, we would say that Income-tax officials in some parts of Madras are reported to have just issued notices to certain coffee-growing companies expressing the opinion that a portion of the profits derived from coffee estates should be considered as having accrued from the manufacturing process before sale, and should, therefore, be treated as business income which attracts income-tax. The analogy here is no doubt drawn from the income of tea estates, 40 per cent. of which is considered as industrial income liable to income-tax. But what the tax officials in Madras have clearly overlooked is that, in the case of coffee, there is really nothing that can even remotely be considered as a manufacturing process. There are, of course, certain processes, such as pulping or curing, but they are processes which make the crop deliverable to the market. It is incredible that they should be regarded as manufacturing processes. The attempt to tax is, however, a serious step and is full of dangerous consequences. Whether the attempt has originated from Delhi or from the local officials, it is a move that needs careful watching. At any rate, the tax officials should be asked to withdraw their notice until such time as the Taxation Enquiry Commission has completed its work.

PLEA FOR LOWER TAXES

There is no exaggeration whatever in the statement of Mr. Karam Chand Thapar, President of the Indian Chamber of Commerce, Calcutta, made in the course of his address at the first quarterly general meeting of the Chamber, held in Calcutta last week-end, that the high rate of taxation in India has considerably diminished the savings of the investing classes, which form the main source of capital formation. This is not the only disquieting feature of our tax structure; there are several others too. For instance, the taxes in India, unlike those in the highly advanced counties like the U.S. and the U.K., do not, as Mr. Karam Chand Thapar pointed out, extend the benefits of the various generous allowances to the individual taxpayer which lighten his burden appreciably. What is worse, the incidence of taxation in India is borne, in the main, by a very small proportion of the population. In India, a mere 0.25 per cent. of the total population pays income-tax, while the remaining 99.75 per cent. does not pay any income-tax at all, and 0.0013 per cent. of the total population accounts for nearly 63.5 per cent. of the total gross demand. In the U.S. on the other hand, about 37 per cent. of the population pays income-tax, and in the U.K., the percentage is 44, in Australia 34 and in Canada 20.

It is thus evident that the spread of taxes among people in India is very narrow. Moreover, the levy of taxes is based more on revenue considerations than on considerations of savings. To quote the words of Mr. Thapar: "The heavy rate of taxation that the taxpayer in India has to bear, if continued to be imposed on mere revenue considerations without regard to the deleterious effects it is having on the rate of capital formation, is bound to retard further expansion of our industries." Indeed, as he rightly warned, if all the savings are siphoned off to the public sector in the shape of taxes, the private sector of industry will languish for want of funds. It is to be hoped that the Taxation Enquiry Commission will recommend positive measures designed to encourage savings and capital formation.

Another difficulty that industries have been experiencing, and to which Mr. Thapar drew particular attention, is the inadequacy of railway transport. Thus, the total number of wagons loaded on broad- and metre-gauge class I railways during the first five months of this year was 4,897,000 which compares unfavourably with 4,912,000 in the corresponding period last year. The capacity of rail transport falls far short of the traffic offered. The gap is bound to widen further, as, with the rising *tempo* of economic activity following the implementation of the Five-year Plan, the demand for railway transport increases. Appropriately enough, Mr. Thapar remarked that the carrying capacity of railways must be expanded to cope with not only all the traffic that was now being offered but what might be expected to be offered at the end of the five-year period. He also urged the Planning Commission to re-examine the entire question of railway transport, with a view to readjusting allocation of financial resources in order that railways got larger funds for their development. Considering the series of complaints of transport difficulties made by practically the entire industrial and commercial community, Mr. Thapar's plea for a probe into rail transport deserves to be examined by an expert body.

MR. LAXMANRAO KIRLOSKAR

When Sir George Schuster toured the country last year, he invariably emphasised that India should learn to implement the doctrine that "work is worship." If work is regarded as worship, there is one person who might well be called a high priest of that worship—that is, Mr. Laxmanrao Kirloskar. The Mahratta Chamber of Commerce and Industries did itself a signal honour by conferring the honorary membership of the organisation on this 86-year-old industrialist who has become almost a legend in this country. Born in 1868, with no claims to wealth or position, Mr. Laxmanrao has spent over half a century in translating his industrial ideas into action, so that his life, as Mr. G. L Natu, President of the Chamber, suggested, has been an "epic in the history of the industrial development, not only of this State but of this country at large."

From humble beginnings—a mere cycle repair shop and iron plough makers—the Kirloskar organisation has grown into a big enterprise, employing in all more than 3,000 workers and producing Rs. 2 crores worth of goods every year. The main seat of this enterprise is located at Kirloskarwadi, which might well be described as a place of industrial pilgrimage in this country, considering how ably its founder has evolved an industrial township out of what was once a barren village. But Kirloskarwadi, where the parent concern, Kirloskar Brothers Ltd., is situated, is more than that; it is a nursery of other enterprises, for the three other Kirloskar concerns, Mysore Kirloskar Ltd., Harihar; Kirloskar Electric Co., Ltd., Bangalore, and Kirloskar Oil Engines Ltd., Poona, owe their birth to the success which attended the pioneering enterprise at Kirloskarwadi. Altogether, these concerns have played a notable role in the country's agricultural and industrial development. Agricultural implements, ploughs, sugarcane crushers, machine tools, electric motors and diesel engines are only a few of the many articles which the Kirloskar concerns produce.

What is the secret of the growth of the Kirloskar organisation? On the material side, its development must be attributed to the consistent practice of the management to plough back as large a proportion of profits as possible into business. The parent concern, Kirloskar Brothers Ltd., has, for instance, built up, over a period of 32 years, a general reserve of Rs. 45 lakhs, besides a depreciation reserve of Rs. 34 lakhs, as against a share capital of Rs. 15 lakhs. But no industrial organisation can grow merely on a material base. Its growth is often the result of sustained endeavour. This was supplied by Mr. Laxmanrao Kirloskar himself. For, the growth of this organisation is, as Mr. Natu pointed out, due to Mr. Laxmanrao's "devotion to duty, steadfastness, honesty, foresight and, above all, infinite capacity for work." Small wonder, then, that Mr. M. Visvesvaraya, another high priest of the religion of work, paid the tribute that Mr. Laxmanrao's career "ought appropriately to find a place in every student's manual and every apprentice's guide book which may be published in the near future in this country." At present, private enterprise is no doubt on trial in this country. Before its critics condemn it, they will, perhaps, do well to ponder over the achievements of this octogenarian industrialist who is still at work on his farm, near Poona. They would also do well to consider the conditions under which he was able to work and find out for themselves whether similar conditions obtain to-day. Mr. Kirloskar had, of course, the handicap of having to work under an alien Government which was by no means sympathetic towards indigenous industrial enterprises but that seems to be nothing as compared with the numerous disincentives contained in the present Government's industrial, labour and fiscal policies.

PUBLIC ENTERPRISES

The most striking feature revealed in the economic development of the countries in Asia and the Far East in recent years has been the rapid expansion in the role of the Government's functions, as witness the incursion of the State not only into such spheres as railways and postal services, or even defence industries, but also into others hitherto untouched by it, such as foreign trade and manufacture of goods and commodities. This has necessitated assumption of new and difficult responsibilities by the Governments. Naturally enough, the successful implementation of the series of projects in these countries will depend largely on the extent to which the machinery of economic administration of the Government is strengthened. The efficient functioning of public enterprises is an aspect of this problem which cannot be stressed too strongly. It is quite appropriate, therefore, that the problems concerning organisation and administration of public enterprises will be discussed at a conference which is scheduled to be held at Rangoon some time in March next, under the joint auspices of the E.C.A.F.E., the U.N. Technical Assistance Administration and the International Institute of Administrative Sciences.

The Rangoon Conference will consider and formulate general recommendations on the types of organisation suited to State industrial undertakings, financial and commercial aspects of public enterprises, recruitment and training of personnel, and public understanding and support. The Conference will not concern itself with the controversial question as to whether private enterprise or State enterprise is better suited for the countries of Asia and the Far East. It will only take the existing organisations as they are and suggest methods by which they could be made so effective and efficient as to serve the community's interests better.

The question of inviting expert observers from Western countries to help the Conference in its deliberations is still under consideration. About four or five experts from England, Sweden and New Zealand will be invited to attend the Conference. In the meantime, Dr. Walter Laves, Secretary-General of the Conference, and U Nyun, Chief of the Industrial Development Division of the E.C.A.F.E., are on a tour of the countries with a view to ascertaining their needs and finding out the subjects they would like to be placed on the agenda.

The deliberations of the Conference and its recommendations will be awaited with keen interest by all the countries of Asia and the Far East. India, in particular, should be keenly interested in the Conference, considering that the numerous State enterprises in this country have generally laid themselves open to some bitter complaints regarding their inefficiency and that there is still considerable confusion over the manner in which they should be administered. The State enterprises, like Cæsar's wife, must be above suspicion. It should be judged solely by the standard of its efficiency. This implies the maintenance of requisite quality at minimum cost. It is to be hoped that this twofold criterion, which Mr. A. D. Gorwala stressed very forcibly in his report on the efficient conduct of State enterprises, submitted to the Planning Commission some time ago, will receive at the Conference the attention it deserves.

DEVELOPMENTS IN BENELUX

With the successful completion of the talks at the full Ministerial conference of the Benelux countries—Belgium, the Netherlands and Luxembourg—held at The Hague recently, the final stage has now been set for the formation of an Economic Union between the countries, instead of the present customs union. The Governments of the three partner countries have agreed to take temporary protective measures in the event of serious industrial difficulties. These measures will be taken, if (1) competition between two States forces a decline in production in either country, (2) exports from one State to another register a notable rise, and (3) serious crisis occurs in any of the States through other causes. The Governments have also agreed on the question of establishing a consultative inter-parliamentary Benelux Council and arbitration in case of disagreement.

The need for the formation of an Economic Union between the Benelux countries was recognised as early as in 1946. Since then, many conferences have been held, but progress has been retarded, thanks to the sharp differences of opinion on a wide range of subjects, particularly wage and price levels. The industries in Belgium, for instance, complain of unfair competition from lower-wage Dutch industries. They have urged the Government to protect them against duty-free Dutch competition in the home market. The Dutch, though willing to allow temporary protection in special cases, are not prepared to allow the claim to be based on wage discrepancies. For they argue that high wages in Belgium are the effect of high prices which should be tackled by recourse to agricultural and fiscal reforms. Further, they feel that the special difficulties arise practically in the industries which have not adequately modernised their plant and equipment since the war.

In this context it is, indeed, gratifying that the Benelux countries should have, as stated at the outset, come to an agreement on the question of substituting the present customs union by an Economic Union. The economic conditions for forming such a union also have improved since the Netherlands established equilibrium in its external position. In various respects, the Netherlands' economic position at present is much more in line with that prevailing in Belgium than it was a few years ago. Thus, gold and convertible exchange holdings in both countries are about the same ($700 million). Again, neither in Belgium nor in the Netherlands is the number of totally unemployed men is larger than what is considered "unavoidable." The industrial production in both countries has risen to a level which is higher by 20 per cent. as compared with the previous volume. Nevertheless, it would be too premature to say anything precisely as to how far and to what extent the proposed Economic Union will succeed in bringing about not only free movement of goods, capital and labour from one country to another but also co-ordination and unification of economic, financial and social policies among the Benelux countries *vis-a-vis* third countries.

NATIONALISATION OF AIRLINES

With the formal inauguration of the two Air Corporations, namely, Indian Airlines and Air-India International, on 1st August, the twenty-year old period of free enterprise in aviation industry has come to an end. That Mr. J. R. D. Tata has accepted the Chairmanship of Air-India International is a standing testimony to the readiness of private enterprise to co-operate with the Government, in order to make the experiment, to which it was opposed, a success. After all, nationalisation is not an end in itself but only a means to an expected result. Nationalisation will have justified itself only if it ushers in an era of expansion of Indian airways and does so at no excessive cost to the community. Now that profit motive, the driving force of private enterprise is lacking, it remains to be seen how far the Corporations are able to work successfully.

According to the Air Corporations Act, 1953, the two Corporations will function as autonomous bodies and manage the industry committed to their care. The Government retains the power to issue directives. It is feared that this may lead to undesirable and unnecessary interference by the Government, in spite of the assurance of Mr. Jagjivan Ram, Union Minister for Communications, that it will not do so, unless it becomes essential in public interest and that it will respect the autonomous character of the Corporations. He has also personally assured to do his utmost to keep out departmentalism in the functioning of the Corporations. The success of the Corporations will further depend on how best their activities are co-ordinated by the Air Transport Council. There will be an advisory council for each Corporation which will provide representation for those who use air services.

OFF THE RECORD

(By "ROVER")

BOLD banner headlines in newspapers sometimes just do not mean a thing. I do not mind confessing that, for some time, I have been sorely troubled, in my capacity as a responsible citizen of this country, by the growing volume of unemployment both in the urban areas and in the countryside. With the irresponsible and happy-go-lucky manner in which we, who have always been short of food in this country, have been going without any thought of or check on the alarming increase in our population, I had comfortably slipped into the habit of viewing this problem only in the context of food supply. As the position in this respect had been showing definite improvement, many like me were naturally lulled into a false sense of security, unmindful of the fact all the time that, with every new birth in the country, a fresh mine was being laid, which, when it exploded, would blow us and our none-too-stable economy sky-high one day.

It was only when distress arising from unemployment began to assume alarming proportions and unrest in the country started to seek expression in wanton acts of violence, I realised, for the first time, the intimate relation between the rise in population and the increase in the number of the unemployed. During the second quarter of 1953, I grew very uneasy on this score and when the cost of living also began to rise simultaneously, I grew apprehensive about general security and maintenance of law and order itself. Having long ago lost faith in the capacity of that effete body—the A.I.C.C.—which believes in ignoring problems rather than solving them, I was looking up to the Planning Commission for producing some effective and quick remedy to ease the situation.

I had no reason to be so sanguine about this, considering that this wing of the Government had neither shown any special aptitude for constructive but imaginative thinking in the Plan it had produced, nor given any proof of its freedom from many of those inhibitions which have turned the once active Congress Party into an anachronism. These early prejudices which later grew into positive inhibitions have taken deep root in the minds of Congress men and they go to render most of their economic policies futile and unfruitful. Perhaps, the Planning Commission has succumbed to these, because of Mr. Nanda's dark shadow over all that it thinks and does. But, considering the urgency of the problem and the presence, on this body, of that great administrator and politician of varied experience, with so much achievement to his credit, Mr. V. T. Krishnamachariar, I had somehow come to pin my faith on the Commssion for bringing us some relief from this spectre not of famine but of something much worse—large-scale unemployment, with all its ugly and demoralising implications.

On awakening from my uneasy slumber last Sunday morning, with rain beating on my window panes and a gloomy and overcast sky telling me in mournful tones of another wasted Sunday, my eyes happened to fall on four-column headlines on the front page of my morning paper, proclaiming that the Planning Commission had evolved a plan to check unemployment. Even though the sun was hidden behind thick layers of dark and menacing clouds, it looked to me as if a ray of sunshine had penetrated this gloom and entered my bedroom. Forgetting the fury of the elements and the comfort of a steaming cup of tea, I plunged into the message from New Delhi, only to be sorely disappointed by the 11-point programme drawn up by the Commission, to relieve involuntary idleness to some extent amongst the educated unemployed.

I could not understand why the Commission, and more so my favourite newspaper, should have played such a scurvy trick on my poor trusting mind of all the days on a Sunday morning. Many profane and unworthy epithets came to my mind and had I not been a well-brought-up youngster in my early days, I should have been inclined to contaminate the white, unblemished columns of *Commerce* by recording some of those choice expressions with which I relieved my utter sense of frustration on that sabbath morning. From some of the semi-veiled suggestions I have been throwing out above, you must have gathered that the 11-point scheme of this august body had failed to come up to my expectations. If I had been at my desk, I should have pinched the Editor's blue pencil and ran it through most of the 11 points, with which the Commission hoped to disable and down this monster of unemployment.

I felt exasperated with the Commission, to begin with, because, when they were at it, the members of this institution should have uncannily stopped at this awkward number 11, instead of giving us a good round dozen. I could have understood if they had stopped short at 3 or 7, which are universally recognised as auspicious and sacred numbers. Perhaps, the astrologers at New Delhi had told the Commission that, judging by the hour of its birth, 11 was its lucky number. It remains to be seen, however, what luck this numeral brings to even a small section of the poor, unhappy unemployed.

Stripped of all its pious verbiage and reiteration of some of the suggestions which have already been found to be impracticable or unacceptable to the State Governments for reasons of their own and robbed of its eternal grouse against the private sector for not hanging itself by the neck, to oblige the authorities bent on putting some of their mad schemes through, the Commission's effort is aimed more at defending its precious Five-year Plan, which is being assailed now by friends and foe alike than at helping the educated unemployed. If these had wanted to share a common shelter over their heads and a ration of bread and water from a community kitchen twice a day, as offered at the proposed work and training camps in some far-away places where opportunities for work exist on road construction, afforestation, soil conservation or co-operative land settlement projects of the Governments, they would, perhaps, not have remained unemployed to-day.

This thing was tried with the displaced persons when their plight was extremely heavy and even they would have none of it. But apart from the willingness or suitability of the educated unemployed for breaking stones into road metal or hewing earth, how many Governments are there in the country which can plan and run such camps successfully? Most of these have made a sorry mess even of small camps of famine-stricken people established at certain work centres. Similarly, we have been hearing intermittently of implementing slum clearing schemes and programmes for the construction of houses for low income groups in urban areas. Scheme after scheme has been put forth also to encourage private building activities, but few if any houses have been built as a result of these schemes.

It did not require a highly expert body of hand-picked men like the Planning Commission to put forth the bare bones of these old ideas, which failed time and again to make any headway. I also fail to recognise anything novel or helpful in the recommendation to provide planned assistance to refugee townships, to reduce unemployment amongst its inmates. The other townships are away but the Commission could not have been unaware of the fiasco at Faridabad, which lies only at a walking distance from its headquarters. A second or third division clerk in a poorly equipped office could have culled these old shells of exploded ideas from rusty files and stringed them together. He could also have informed these Rip van Winkles of the Planning Commission that for years now all the Governments have been making quite a lot of fuss about giving encouragement to the products of the cottage and small-scale industries both by giving special assistance for establishing them and by making purchases of their products for the stores required for use in their offices and other institutions, without making any headway in this direction.

This leaves me with four out of the eleven brain-waves of the Commission. I am glad about two of these, numbered 6 and 11, because they are by way of an implied admission of failure of certain of the policies followed by a large number of State Governments. The Commission wants the existing licensing policies with a view to stepping up road transport development, particularly through private agencies. The last but one in the list of suggestions made by this body relates to schemes for the development of power sponsored by private capital. Both these suggestions go to constitute a good smack in the face for the Government of Bombay, which has been perversely pursuing policies going against the grain of these two proposals. For the latter, I would suggest the Commission to get in touch with Mr. K. G. Milne of Killick Industries and I am certain, judging by the bitterness underlying some of his speeches to the shareholders of the various electric supply concerns of which he is the Chairman, that he shall be in a position to enlighten it further on this issue. If these two suggestions of the Planning Commission can be taken as effective for promoting additional employment, they also go to prove the Bombay Government guilty of throwing people out of work for no good reason, because, as I have observed before, this Government has been consistently behaving as if it wanted to drive private capital out of these two fields of road transport and electric power supply.

These are not the only two ways in which the Central Government and the more primitive and misguided ones in the States have been preventing the private sector from expanding to its full possibilities and thereby enlarging the scope for employment for the growing population of the country. The whole trend of official policies since the Congress Party came into power has been to wage a relentless war against this sector functioning naturally. No living organism could grow when put into a straight jacket and even if it did show some growth, it would be unbalanced and ugly. If the authorities are more keen on solving the problem of unemployment, which is today the country's enemy No. 1, than on maintaining their prestige, they will not only have to revise all their policies which go to cramp industry and trade, but to change their very attitude and approach to the private sector. In the meantime, the Pundits of the Planning Commission would do well to keep mum, if they cannot do better than drag out some stinking corpses from the bottom of the pool and offer them as edible fish to the hungry. It would be kinder to leave the educated unemployed alone in their misery than to mock them by such fatuous schemes as establishing a few adult education centres in towns and some one-teacher schools in the rural areas, which would not touch even the fringe of this gigantic problem.—*All Rights Reserved.*

PLANNING COMMISSION'S REMEDY FOR UNEMPLOYMENT ANALYSED

MINERAL POLICY OF GOVERNMENT

(From A Special Correspondent)

NEW DELHI, 4th *August*

THE monsoon session of Parliament has begun in right earnest from to-day. Yesterday, before it adjourned after a short session as a mark of respect to the late Dr. S. P. Mookerjee, it paid handsome and well merited tributes to his Parliamentary ability, debating powers and skill in repartee. Parliament has doubtless become poorer to-day on account of his untimely death, but it is compensated to some extent by the presence of Mr. J. B. Kripalani, an ex-Congress President and now Chairman of the Praja-Socialist Party. Mr. Kripalani is noted for his ready wit, subtle humour and devastating satire, qualities that are required to enliven the debates in Parliament, but his contribution to the evolution of a correct parliamentary system in the country will be useful only if he develops a constructive approach to the country's economic and political problems. Viewed from this angle, his contribution in the past was very disappointing.

DELHI LETTER

During this week, Parliament will be largely concerned with the disposal of about 18 minor Bills which are mostly in the form of amendments. Thereafter, it will be tackling the Andhra State Bill and the Estate Duty Bill. That the latter will excite considerable controversy may be seen from the fact that as many as 250 amendments are reported to have been received. In order to smoothen the passage of the Bill according to time schedule and to avoid duplication in the moving of amendments, the Finance Minister has convened an informal conference of members who are anxious to participate in the debate.

Urban Unemployment

It has for some time been evident that unemployment in the urban centres of the country is growing at a rate which must make the Central and State Governments pause and think about the entire problem from a new angle. That the Central Government has been seized of the importance of the problem is clear from the fact that the Planning Commission has now announced a 11-point programme which is designed to check, if not altogether stop, the growth of unemployment in the urban sphere. In regard to the rural sector, the Commission points out that there are large schemes in the Plan which have added considerably to employment opportunities. The programme, which has been communicated to the State Governments for necessary action, consists of:

(1) Special assistance to individuals or small groups of people for establishing small industries and businesses under the State-aid to Industries Acts or other similar legislation in other ways. (2) Expansion of training facilities in those lines in which man-power shortage at present exists. There are, according to the Commission, several directions in which shortages of personnel exist which impede the progress of schemes under the Five-year Plan. Expanded training facilities will do away with these shortages at the same time opening up new employment opportunities for semi-skilled workers. (3) Active encouragement to be given to the products of cottage and small-scale industries through the purchase of stores required by State Governments and public authorities. (4) Municipal authorities, private educational institutions and voluntary organisations should be assisted in establishing adult education centres in urban areas. In rural areas, one-teacher schools should be encouraged to be opened. (5) The proposed National Extension Service should be handled with courage, for its own sake, inasmuch as it is fundamental to the growth of rural economy in India as well as for the immediate contribution it can make towards the solution of the problem of educated unemployment. (6) Development of road transport. The existing licensing policies should be re-examined with a view to stepping-up road transport development, particularly through private agencies. (7) Implementation of slum clearance schemes and programmes for the construction of houses for low income groups in urban areas. (8) Encouragement of private building activities. (9) Planned assistance to refugee townships, which suffer from a somewhat chronic unemployment, with a view to developing a sound economic base for their continued existence. (10) Encouragement of schemes for development of power sponsored by private capital. At present, in several growing towns there is shortage of power which impedes the maintenance of employment and development of industry. The State Governments may review the power position in different areas and to the extent that schemes for meeting power shortage have not been included in the Five-year Plan, send up further proposals indicating the extent to which private capital might be available. (11) Establishment of work and training camps at places where mainly, through action taken by the Government, work opportunities exist, for example, in projects for slum clearance, housing for low income groups, irrigation and power projects, road construction programmes, afforestation and soil conservation and co-operative land resettlement projects, etc.

Costly Programme

Many genuine objections might be raised against the programme. In the first place, it is not clear why the Central Government should try to pass on the inconvenient baby to the States, as if it is entirely of the States' creation. Actually, the Centre should bear some part of the responsibility for the solution of the problem. Secondly, the implementation of the programme involves heavier expenditure by the States which, in their present financial position, must necessarily find it difficult to incur. A large part of the programme, inclusive of the expected lead to private housing activities and assistance to refugee townships, must all flounder on the rock of finance. Thirdly, the assumptions made by the authors of the programme will not bear close examination. It is not clear, for instance, how the establishment of cottage and small-scale industries would be able to solve the problem, considering that the industries are bound to accentuate the problem created by high cost of production and uneconomic units. The days which goods could be produced and sold at any cost are over. There is not enough demand for the products of the existing cottage industries. The position will not materially improve by having more cottage industries. There are, however, two points of the programme which deserve immediate notice by the State Governments—the development of road transport, particularly through private agencies, and encouragement of schemes for development of power sponsored by private capital. The implementation of these two suggestions will certainly go a long way towards the creation of not only direct employment opportunities but also indirect employment opportunities through the impetus their implementation could be expected to give to trade and industry.

What vitiates the programme is that its authors seem to believe that unemployment is a specific disease calling for a specific remedy. Actually, employment cannot be created at will. It is the by-product of general economic activity. More employment will be brought about precisely to the extent that the Central and State Governments give a fillip to that activity. This fact must be squarely faced. If it is necessary to give up some part of the present economic policy—particularly that part which relates to high taxation, belief in nationalisation, and State controls—it ought to be given up in the interests of a more permanent solution of the problem of unemployment. The programme, except for its emphasis on private road transport and private electrical undertakings, provides no such solution.

Mineral Advisory Board

The forthcoming meeting of the Mineral Advisory Board, scheduled to be held this weekend, is important in that it is expected to examine critically the mineral policy of the Government and suggest ways and means to intensify the prospecting and production of some of the scarce and strategic minerals in the country. The Board will particularly consider the possibilities of increasing the output of copper, lead and aluminium and also the measures to be taken for discouraging the export of raw materials and encouraging the export of finished or semi-finished products. In this connection the Board will consider the action necessary for bringing into production the Khetri and Alwar copper mines, for stepping up the development of lead deposits in Zawar (Rajasthan) and the production of the existing aluminium plants in Bihar and Travancore. The Board will also consider what help should be offered to industry to start the manufacture, on modern lines, of refractory goods, ceramics, by-products of coal distillation, etc.

DECONTROL OF GRAINS

FARMERS, HOWEVER, ASSURED OF MINIMUM PRICES

(From Our Own Correspondent)

LONDON, 1st *August*

THIS week-end, farmers in Southern England are making their first cut at the new harvest. Bad weather in July has spoilt the hopes of many of what had been expected earlier to be one of the finest crops on record. This new harvest coincides with the most significant event in the British grain trade since the outbreak of war 14 years ago—the abolition of rationing for feeding stuffs and the throwing open of the import trade in wheat to private importers. Control by the Ministry of Food on wheat has meant a Ministry monopoly of import and restrictions on the use of wheat other than for flour milling. Wheat to the millers has also been subsidised and there has been a further subsidy paid to the bakers on the flour which they buy. Now all restrictions on the use of wheat are removed, the Ministry ceases to import wheat and the subsidy to the flour millers is abolished, but, to avoid an increase in the price of bread, there is, for the time being, a corresponding increase in the flour subsidy paid to the bakers. Bread in this country thus still continues to be a subsidised food.

LONDON LETTER

On the import side, for some time the Ministry has been encouraging private trade to make their contracts, although the Ministry has acquired the stocks. Thus, the transition to a complete freeing of imports will be smoothed; but, because of the existence of large Ministry stocks of wheat, for some time overseas purchases by the trade are likely to be limited. This does not minimise the long-term significance of turning over to private business the import of 5 million tons of grain a year.

Feeding Stuffs

The decontrol of feeding stuffs means more widespread changes domestically than does that of wheat. Nearly 3 million tons of feeding stuffs have been imported by the Ministry of Food annually, but the whole of the feeding stuffs sold off farms in this country has also gone into the ration pool which has allocated nearly 5¼ million tons of feeding stuffs each year. This rationing has been a complicated process based partly on the total amount of stock which the farmer had to feed and variable in accordance with the changing emphasis of Government policy on particular types of production. Thus, when all the emphasis was on more milk, the dairy farmer received a higher proportion of rations; and, when the emphasis moved to bacon and pork, the pig farmer received a bigger ration. Now the Government will no longer be able to influence the course of farm production by manipulating its control through the prices it is prepared to pay for the product. The Ministry has, as in the case of wheat, very heavy stocks of feeding stuffs and these will be unloaded into the market gradually—in August 125,000 tons of coarse grains will be sold and in September 100,000 tons.

This decontrol comes at a time when world prices of feeding grains are dropping and when there is some expectation that, because of continued high production in the building up of surpluses overseas, wheat prices will also come down. It was, of course, on this expectation that the British Government refused to adhere to the International Wheat Agreement with its maximum price limit of $2.05 per bushel. The fall in feeding stuffs prices is bringing these for the first time since the war below the prices guaranteed to the British farmer. But the latter, under the Agriculture Act of 1947, is still protected by an assured market and a floor price for all the grain he produces. The Ministry of Food, therefore, has to maintain a buying machine which will take off the farmer at the guaranteed prices all the grain which he is unable to sell commercially. With a fall in the prices of imported feeding stuffs, the risk of large quantities of grain being offered to the Ministry becomes considerable and the latter will undoubtedly have to devise other means by which it can guarantee the farmer his price; otherwise we shall see the absurd spectacle of farmers carrying all their grain off their farms to the Ministry stores and then buying more cheaply on the market and carrying back imported and home-produced grain for use on their farms. However, neither the Ministry nor farmers have yet made up their minds what new schemes of marketing shall be introduced.—*All Rights Reserved.*

AMERICAN LETTER

NO SLUMP IS LIKELY

REACTION TO TRUCE IN KOREA

(From Our Own Correspondent)

NEW YORK, 30th *July*

BUSINESS leaders of America see no slump as a result of the truce in Korea, according to various surveys which have been made. It is a fairly obvious conclusion which, however, is not generally recognised. In the first place, the truce was anti-climatic; it did not settle anything and, in the final analysis, it provides merely a breathing spell of 180 days before some sort of decision will have to be made. In the meantime, the visit of John Foster Dulles, U.S. Secretary of State, to Korea at this time is regarded as a sign of the uneasiness in official United States quarters over what the leaders of the South Korean Republic may or may not do.

Harlow H. Curtice, President of General Motors Corporation, pointed out that overall business was not dependent upon defence expenditures in the long run. He said, the truce should have very little influence. L. L. Colbert, President of Chrysler Corporation, suggested that the truce "should stimulate our aggressive economy in the direction of more and better things." Other executives of a number of industries, questioned on the same subject, said they expected a temporary adjustment period followed by improving business. One suggested some "rather tough readjustments" may be in store. This statement came from Paul W. Litchfield, Chairman of Good-year Tire and Rubber Company. He observed, however, he was sure America would take this in stride and would emerge "with great strength and promise."

A spokesman for the chemical industry remarked that he expected a slowdown in orders for three to six months as customers are likely to reduce inventories. This adjustment, he added, "will be followed by a continuing expansion of markets for chemical goods." The steel industry indicated it was not greatly concerned over the effect of the Korean truce on its mill operations. The Government does not dare cut back on defence orders, in view of the uneasy peace, and civilian demand for steel is expected to continue at a high level. C. W. La Pierre, Vice-President of General Electric Company, said that "it will probably be a long time before our country can feel safe enough to ease off on our defence build-up and, if that time ever comes, we will undoubtedly be able to divert our energies to civilian production."

Outlook for Transport

The shifts which could be foreseen more clearly at this time were in specialised industries. The transportation industry foresees continuing heavy demand and heavy military business in the near future, but with eventual slackening in shipments of personnel and supplies. William A. Patterson, President of United Air Lines, said he expected a gradual decline in the ton-miles flown, possibly amounting to as much as 15 per cent. This should not begin for three or four months, he thought, and business may even be stimulated for a time as a result of the truce.

The armistice will make easier the Eisenhower Administration's aim of gradually cutting defence spending and—what is more—lowering taxes, it was noted in another survey. At the same time, it will make it almost impossible for Congress to enact an expansion of the Federal debt limit which, at the present time, is $275 million and which, for the safety of Treasury operations, should be raised. If it is not, however, for prevailing political reasons, the President has statutory power to reduce spending in his own right without going to Congress.

(The House of Representatives has just given its permission for raising the debt limit but it is not known what the Senate will do about this.—Ed.)

Administration advisers are talking of a continuation of the present boom and lower taxes would certainly be a considerable stimulant. Big spending, both for plant and equipment, high levels of building and construction, record savings and personal incomes certainly give promise that such prognostications are not too far wrong.

Meanwhile, the Government must continue to pump about $1,000 million per week into the spending stream according to contracts and blueprints authorised long ago—regardless of the truce. Thus, the gradual nature of the changes facing the economy is really the outstanding aspect of any consideration as to the effect of the Korean truce.

Indeed, business is good. In many lines, it could not be better. Even in the money markets, earlier disruptions have been stemmed by Federal Reserve and Treasury action. By lowering of reserve requirements, the central bank released sufficient funds for the multi-billion dollar issue of U.S. tax anticipation certificates to be taken up. The money market is back to normal, with a moderate tightness, and the volume of business loans by banks attests to the soundness of the general situation, although some soft spots remain. One of these is the commodity situation. As a result, farm income has been slipping but this decline is not serious enough at this point to cause any serious alarm. This year's crop will certainly be one of the largest in history, despite the drought in the South-west.

Synthetic Fibres

But synthetic fibres continue to make great inroads, for example, in the field of cotton, so that the long-range outlook for that commodity is not so good. In fact, it may be relegated to the same kind of decline, as was silk because of the advent of rayon. A leading manufacturer announced the other day, he will come out this fall with a line of nylon bedsheets and pillow cases. These goods, so far, have accounted for an appreciable volume in the entire cotton goods output. Previously, too, cotton was used largely in the manufacture of tyre walls. This has been abandoned in the face of more durable artificial fibres. All these, however, are natural developments which have nothing to do with war or peace. They merely reflect the gain in technology and every generation had to adjust itself towards changing and changed conditions.

The pessimists also cite the large production of automobiles as a soft spot. It is true that used cars are piling up and that sales of new motor cars are not too satisfactory. But, in this new competitive era, greater sales efforts than previously are required and, perhaps, lower production schedules will have to be adopted, but they would hardly be disastrous. In other words, truce in Korea finds the American economy in a state of flexible stability, with the strong hope that this will continue for some time to come.—*All Rights Reserved.*

Notice

THE GANGES ROPE COMPANY LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE ONE Hundred and First Ordinary General Meeting of the Shareholders of the above Company will be held at the Registered Office of the Company, No. 2, Fairlie Place, Calcutta, on Friday the 14th August, 1953, at 3-10 p.m., for the following purposes:—

(1) To receive and consider the Directors' Report and the Accounts for the half-year ended 31st March, 1953.

(2) To declare a Dividend.

(3) To elect a Director.

(4) To appoint Auditors and fix their remuneration.

(5) To transact any other competent business that may be brought forward.

The Share Transfer Books of the Company will be closed from the 7th to 14th August, 1953, both days inclusive.

By Order of the Board,
MACNEILL & BARRY LTD.,
A. W. TAYLOR,
Managing Director,
Managing Agents.

2, FAIRLIE PLACE,
CALCUTTA, 28th *July*, 1953.

PAKISTAN NOTES

PAK CENTRAL JUTE COMMITTEE

NEED FOR GUARANTEED INCOME STRESSED

THERE are two effective solutions for the ills of the Pakistan jute industry. First, attention should be focussed on cultivation of superior variety of jute. Secondly, demand for jute should be stimulated whenever it falls short of the productive capacity. It was precisely to these aspects that Mr. Khan Abdul Quiyum Khan, Minister for Food and Agriculture, Government of Pakistan, drew the pointed attention of the Pakistan Central Jute Committee, while inaugurating the fourth annual meeting of the Committee at Dacca on Monday last.

The Pakistan Central Jute Committee would appear to have been handicapped by lack of fresh avenues of an assured income. The Committee, according to Press reports, had put forward a proposal to the Government of Pakistan to impose a cess on jute. Alluding to the proposal, Mr. Quiyum Khan could not say as to how the proposed cess would fit in with the general plan of taxation. Nevertheless, he assured that a "reasonable" proposal to secure a guaranteed income for the Committee would receive his Government's prompt and sympathetic consideration.

Mr. Quiyum Khan struck a note of confidence when he said that, with the completion of the several jute mills now under construction in the Province of East Bengal, Pakistan would be able to acquire its rightful position in the market. The number of jute mills under construction is 9, with an aggregate capital investment of Rs. 16.5 crores. These are jointly sponsored by Government and private enterprise, their respective shares being Rs. 6.5 crores and Rs. 10.0 crores. Already, the Adamjee Jute Mills—the number of looms allotted to this mill is 3,000—has put into operation 300 looms. Another 300 looms are expected to commence operation shortly. Two more units are under construction, the first of which is scheduled to go into production in about a few months' time and the second by the end of next year. The productive capacity of this mill is estimated at 32,000 tons of sacking and 16,000 tons of hessian per annum.

Development Projects in Sind

The Pakistan Industrial Development Corporation is expediting implementation of the various industrial projects in Sind. These projects include a cement factory, a cardboard factory and six sugar mills in Lower Sind. The Government of Pakistan is assisting the Sind Government in the speedy implementation of these projects. Paucity of power supply, it is reported, is one of the main obstacles in the way of the development of industries in this Province. The Pakistan Government has provided for the establishment of a thermal station of 15,000 kw. in Hyderabad. Orders for the plant and equipment have already been placed in the U.K., Sweden and Germany. The gas discovered at Sui is expected to go a long way towards meeting the power requirements of Sind, thereby opening up a new era of prosperity for the Province.

Meanwhile, the Sind Government is making determined efforts to go ahead with the Guddu irrigation scheme, estimated to cost Rs. 28 crores. The construction of the Lower Sind Barrage is to be completed by May, 1954.

Inland Water Transport

Many aspects relating to the dredging programme designed to keep the navigational routes in East Bengal open throughout the year were considered at the second Inland Water Transport Conference held in Dacca last week. The Conference urged the Government to give top priority to navigation work as far as dredging was concerned. Two important recommendations which it made relate to (1) the appointment of a special officer to enquire into river accidents and (2) the establishment of a separate river police organisation.

The Government of East Bengal has been taking steps to improve navigational facilities in the Province. It has, for instance, purchased a fleet of 36 dredgers, at a cost of Rs. 1.75 crores, which is expected to be in operation before the end of this year. The Government is also considering a proposal to set up a pilot boat building yard for constructing wooden tugs and barges made of local timber and fitted with easy-to-operate diesel engines.

FEDERAL RESERVE BANK SYSTEM IN U.S.*

ITS FUNCTIONS AND RESPONSIBILITIES

(By Wm. McC. MARTIN, Jr., Chairman, Board of Governors, Federal Reserve System)

CENTRAL banking—or, more accurately, reserve banking—in the United States has been adapted to the requirements of a free people with a minimum of Government interference. The genius of the framers of the Federal Reserve Act lies in the creation of regional banks, knit together by a national governing body in Washington, rather than in the establishment of a central institution with authoritarian powers. Each Federal Reserve Bank and each branch office is a regional and local institution as well as part of a nation-wide system. Through their boards of directors, the banks are in a position to represent the views and interests of the particular region to which they belong and, at the same time, they are the administrators of nation-wide banking and credit policies.

Instead of functioning from the centre outward, we function through an interdependence of all our parts. The vitality of the Federal Reserve System is in its members. The health of each member affects the whole, and it is only through the work, and the conviction, and the determination of the members that the whole has life. Within the framework, carefully outlined by law, the Federal Reserve Board is charged with the responsibility for formulating national credit policies and supervising their execution. The Federal Reserve System is not perfect, but it is unquestionably the main bulwark of our private banking system. Without a strong and independent reserve banking system, private banking must inevitably lose the initiative it now possesses.

It is well always to bear in mind that the Federal Reserve System is a service institution, and that the more than 250 directors of the 12 banks and 24 branches, the 20,000 officers and others who work in them, as well as the Board and staff in Washington, are all serving as trustees of the money of all of the people of this vast country, not any one group, or faction, or section.

Although the Federal Reserve Banks sometimes are referred to as bankers' banks, that describes only a part of their function. The various services which the Federal Reserve Banks perform for the banking community, such as supplying currency, transferring funds, and collecting cheques, are an essential element in keeping the mechanics of modern commercial banking in step with the financial needs of a growing and changing private enterprise economy. But the overriding purpose of this Reserve System is to serve the interests of the general public in business, industry, labour, agriculture, and all walks of life.

Fountain-head of Credit

This institution is the fountain-head of credit—of the great bulk of our money supply. It is the medium for distributing the pocket money in daily use, but that is of subordinate importance. The ebb and flow of pocket money is determined by day-to-day needs of the merchant, the shopper, and all who use cash. Of far greater importance is the System's responsibility for creating or extinguishing credit. For credit—bank credit—is the life-blood of our economy.

The trusteeship to which I refer is carried out in the exercise of the System's responsibility for influencing the volume, availability, and cost of credit. The purpose is to see that, so far as Federal Reserve policies are a controlling factor, the supply and flow of credit are neither so large as to induce destructive inflationary forces nor so small as to stifle our great and growing economy. Now that is a very great responsibility. By its very nature it must be carried out in the interests of all of the people. And if it is not so executed then the country would demand and deserve a new and faithful trusteeship over the creation of credit.

Some critics have charged the System with failing in one of its fundamental purposes—protecting the value of the dollar—because, in the four decades since the System was founded, the value of the dollar has been cut more than in half. The truth of the matter is, of course, that in these years we have had two world wars. We are still in the cold war. The resultant economic upheavals could not have been prevented by monetary policy alone. And this is not to say that monetary policy has always been as timely or effective as it might have been. The fact remains that without an appropriate and effective monetary policy there is no adequate safeguard against the distortions and distress that can be brought about either by much too little or much too much money. The ideal would be enough to meet the growth needs of the economy, without either inflation or deflation.

For most of the post-war period, the aim of monetary policy and action has been to prevent inflation. The war ended with a money supply which was so excessive in relation to the available supplies of goods and services as to result in a strong upward pressure on prices, and a rising cost of living. We had more than a taste of that when the harness of price, wage, and other controls which temporarily held back the war-created flood of money, was removed and the tide of unchecked funds inundated the market places. Following Korea, there was a sharp resurgence of these upward pressures. These quite recent experiences should have taught us, if the long history of monetary excesses in other parts of the world did not, that there are no sound substitutes for intelligent fiscal and monetary policies and measures. And it illustrates once more that when an economy is running at peak levels of production and employment, creating more money will not create more things to buy. It can only bid up the prices of available supplies.

Inflation is a sneak thief. It seems to be putting money into our pockets, when, in fact, it is robbing the saver, the pensioner, the retired workman, the aged—those least able to defend themselves. And when deflation sets in, business man, banker, worker, suffer alike, as most of us here know from the early thirties.

Ideal Economic Situation

All of that is an old story, to most of us, yet there are voices being heard even to-day that seem to say that just a little more inflation won't do any harm—or that the price of even a few ounces of prevention is too high. What we are seeking to prevent in the end, of course, is deflation. In these past two years we have had the almost ideal economic situation—we have had a remarkable degree of economic stability at record levels of employment and production. We have not had another round of inflation. We have not had anything resembling a deflation. This desirable state of affairs cannot be ascribed to monetary policy alone, of course. But I do not believe it would have been achieved without the monetary policy and actions of the past two years. I do not think it would have been possible had the Federal Reserve System let the creation of credit go on unchecked in this period. The transition to free markets, as I have called it, made possible the adjustment of the money supply during this period in the orderly growth of the economy, without further inflation or speculative excesses. And this has been accomplished, despite the diversion of economic resources to the defence programme.

All of us here have been affected in one way or another in this transition. Member-banks have not had unrestrained access to Federal Reserve credit by the sale of Government securities at known prices. In many cases, they have had to come to the Reserve Bank discount windows to borrow reserves and pay the cost of the borrowing. The officers and directors of the Reserve Banks have had to shoulder again the very important responsibility for these discount operations. The use of discount facilities has been termed a privilege. It is one of the privileges of membership in the Federal Reserve System. It is not an automatic privilege, however. The Reserve Banks are authorised to extend credit to each member-bank with due regard for the claims and demands of other member-banks, the maintenance of sound credit conditions, and the accommodation of commerce, industry, and agriculture.

When a member-bank experiences unexpected drains on its reserves, it may appropriately apply to a Reserve Bank for credit. As it adjusts its operations to these new conditions, the member-bank is expected to repay these temporary borrowings promptly. Member-banks are expected to anticipate normal seasonal requirements and be in a position to meet them by adjustments in liquid assets with a minimum reliance upon borrowing at the Federal Reserve. The Reserve Banks, of course, stand ready to meet exceptional, or extraordinary, needs for funds by member-banks. All of the Reserve Banks are now authorised in a period of general stress to lend on any acceptable paper, not merely on so-called eligible paper.

Appropriate Uses of Discount Rates

These, I think, are the appropriate uses of the discount privilege. Clearly they do not contemplate misuse of that privilege for the purpose of enlarging a bank's capital base, or earning a rate differential, or facilitating speculation of any kind. The initiative in the determination of discount rates is placed by the Federal Reserve Act in the boards of directors of the respective Reserve Banks—and this is a very important responsibility, even though final determination of discount rates rests with the Federal Reserve Board. Similarly, the responsibility for granting or withholding loans to individual member-banks is also vested in the directors and officers of the Federal Reserve Banks. They must be the judges. They are on the ground and are presumed to be familiar with local conditions, as well as the state of the economy nationally.

The Reserve Act, as I have said before, is an ingenious blending of public and private participation in a public institution created by the Congress to regulate the money supply. The ingenuity is exemplified, I think, in the composition of the boards of directors of the Reserve Banks. They represent a broad cross-section of industrial, business, banking, agricultural, and professional activities, both large and small, and they, in turn, are called upon to act in the national interests and not for the special advantage of any group or faction or section of the country. They have a duty, also, to foster a wider understanding of the role that monetary policy should play—what it can and what it cannot accomplish.

Flexible Policy and Action

The universal desire for orderly, steady economic progress, and a constantly improving standard of living, certainly cannot be achieved without flexibly administered monetary policy and action, with restraint on creation of excessive credit in a boom and a policy of liberal monetary ease when inflationary dangers no longer threaten stability. Criticism of Federal Reserve Policy and performance has mainly sprung from ascribing to monetary action an omnipotence that does not and would not exist—even if there were men omniscient enough to devise and execute monetary policy perfectly. I am not objecting to criticism—we should, and I think we do, sincerely welcome critical appraisal of our performance. But critical analysis and comment that can be useful in guiding future action, though it cannot rectify past mistakes, has to be well informed and understood.

The Federal Reserve Banks recognise, I know, the special responsibility they bear in their respective areas for gathering economic information and making it available. They have a duty to explain what they do, and why, in carrying out their part in the trusteeship over credit. The report on "Steps to Maintain Economic Stability," which was issued by the Committee on Economic Stabilisation of the Board of Directors of this Bank, is a commendable example of informed discussion of economic affairs.

Your task is more than ever an exacting one—but it is an inspiring one. The trusteeship which this System and its member-banks share is vital to the preservation of our system of private enterprise. The System, I am certain, has made a notable contribution to the attainment of the sustained economic progress of the past two years. It can, I am confident, continue to make an important contribution in the years ahead. That confidence, I deeply feel. I was asked the other day in Detroit what would happen to us after a few years of a genuine peace and I can do no better, in concluding these remarks, than to give you the reply as I made it then:

"I can only give you my philosophy on this. To me the most heinous statement, that is made by some people, is that war leads to prosperity, or that war is prosperity. I can't conceive of an economy based on war that can ultimately be prosperous. We have to go through certain readjustments to have an intelligent peace-time economy. We have got to have our business based on initiative and competence and salesmanship—on raw materials and products—and not on dependence upon spending for war purposes. I believe that this country has the flexibility—and the capacity—and the character—because it requires character—to unravel this ball of twine that we have wound up, and to do it in a way that will lead us to a higher, a more expansive, and a better standard of living for all of the people. I have that faith."

* *Extracts from Mr. Martin's address delivered on the occasion of the opening of the new building of the Federal Reserve Bank of Boston, Mass., on 6th May, 1953.*

ANNUAL MEETINGS OF THE WORLD BANK AND I.M.F.

The annual meetings of the International Monetary Fund and the International Bank for Reconstruction and Development will be held at Washington in the first week of September this year. It is customary for the Finance Ministers of member-countries to attend the annual meetings of these two bodies. It is not known whether the Indian Finance Minister, Mr. Chintaman Deshmukh, will lead the Indian delegation this year. There are, however, reasons to doubt whether he will be able to leave the Capital, as Parliament is in session and a crowded legislative programme is on the agenda, including the controversial Estate Duty Bill, which needs an expert like Mr. Deshmukh to pilot it successfully. No indications are yet available as to who will lead the Indian delegation in the absence of Mr. Deshmukh. Last year, too, it will be recalled, Mr. Deshmukh could not go. The Indian delegation was then led by the Governor of the Reserve Bank, Mr. B. Rama Rau.

So far as the U.K. is concerned, Mr. Richard Butler, Chancellor of the Exchequer, has intimated the two world bodies of his inability to attend the meetings, although arrangements had been made for him to do so. Mr. Butler will be unable to leave because of his additional responsibilities in Britain, consequent on the absence of Sir Winston Churchill Prime Minister, and Mr. Anthony Eden, Foreign Minister, both of whom are convalescents. Mr. Butler is the next senior minister to handle Government business. The U.K. delegation will, therefore, be led by Mr. Reginald Mandling, Economic Secretary to the Treasury. The delegation will consist of officials of the Treasury and the Bank of England.

The full agenda for the meetings is not known, but according to the *Financial Times*, London, one of the subjects likely to be discussed at the World Bank meeting is the extent to which the £60 million from the U.K.'s quota in the Bank is being used for Commonwealth development projects. It will be recalled, in this connection, that Mr. Butler had stated in February last in the course of the Parliamentary debate on the Commonwealth Economic Conference, that the U.K. Government had agreed to make sterling available for lending by the Bank to other Commonwealth countries in the sterling area. It was the intention of Britain, according to Mr. Butler, that sterling for such loans should come from subscriptions to the capital stock of the World Bank. It would add, he said, a real burden on Britain's resources. The above sum of £60 million is to be made available over a period of about six years and the Bank has been advised to plan accordingly.

Another subject which may come up for review, it is stated, is that of dollar retention schemes by some exporting nations. While it is regarded as being too early to expect any long-term definition of U.S. foreign economic policy, Mr. Butler's slogan of "Trade Not Aid" is certain to be mentioned, in the light of the comments, in the Fund's annual report, on the decisive part in any progress towards currency convertibility which must be played by the creditor nations.

BANK OF MYSORE LTD.

The Directors of the Bank of Mysore Ltd. have declared an *ad-interim* dividend of 12 per cent. per annum and a bonus of 4 per cent. per annum for the half-year ended 30th June, 1953, thus maintaining the distribution at the same level as that paid for the corresponding half-year of 1952.

USE OF STERLING IN WORLD TRADE

SIZABLE DECLINE IN 1952 RECORDED

THE latest Annual Report of the Bank of England for the year ended 28th February, 1953, contains some interesting data relating to the use of sterling in world trade during 1952 and the investments of U.K. residents in overseas countries through the medium of securities quoted on, or known to, the London Stock Exchange in 1951. These reveal that there was a decline in the use made of transferable sterling during the year 1952, a trend contrary to the one noted in the preceding two years, and that the decline in the nominal value of U.K. investments in overseas securities which had been proceeding almost continuously since the outbreak of war persisted in 1951 and that too at a quicker pace.

The total amount of world trade done in sterling during 1952, under automatic facilities, as well as administrative facilities, aggregated £379 million, as compared with £463 million in 1951, to which level it had risen from £298 million in 1950 and £269 million in 1949. The contraction in turnover during 1952 was due partly to the fall in prices of many commodities which participated in world trade, and partly to the reduction in the volume of trade on account of the cuts imposed by various countries on their imports. The shortage of sterling felt by some countries towards the close of the year also seems to have assisted the decline. It must, however, be noted that, despite the sharp fall in 1952, the turnover of the transferable account system during 1952 was 27 per cent. higher than that in 1950 and nearly 41 per cent. more than that in 1949. This suggests that sterling continued to find increasing use, albeit in a lower value, of international trade. The Bank of England report, however, shows that there was a further increase in the total of U.K. merchanting transactions on a sterling basis between non-sterling area countries. Thus, the amount of sterling used on this account amounted to £151 million in 1952, as compared with £125 million in 1951 and £72 million in 1950. It is pointed out that the increase in 1952, as compared with 1951, occurred, in spite of a fall in transactions under the various commodity schemes to facilitate the reopening of the London commodity markets. This rise in the amount of sterling used was largely due to the payments in sterling to American account under the Bank of England's commodity arbitrage scheme of August, 1952, which was designed to provide facilities for the purchase of dollar commodities for re-export to E.P.U. countries, but which had only a short-lived career, as it was abandoned after a short interval.

Overseas Investments

The Bank's survey of U.K. overseas investments for 1951, the latest year for which statistics are available, discloses that the total nominal capital values of overseas securities quoted on, or otherwise known to, the London Stock Exchange and including U.S. and Canadian dollar securities formerly registered with the Bank of England under Exchange Control Regulations, owned by U.K. residents, amounted to £1,985 million at the end of 1951, as compared with £2,019 million at the end of 1950, £2,038 million two years ago and £3,545 million at the close of 1938. The survey excludes certain other important forms of British foreign investment, such as direct investment in overseas countries in the form of establishment of subsidiary undertakings by British industrial concerns. A country-wise analysis of the investments reveals that, out of the decline of £34 million in the nominal value of securities during 1951, £13 million are accounted for by the decline (from £1,133 million to £1,120 million) of investments in Commonwealth countries. The realisation of investments in Canada was responsible for a fall of £5 million and the redemption of Australian Government and municipal loans for £10 million. As in the preceding year, Commonwealth African countries provided the main field for new investment, mainly in Government and municipal loans for British West, East and Central Africa, and in shares and loans of commercial and mining companies in South Africa. The investment in most of these countries, therefore, continued to grow. Holdings of securities in non-Commonwealth countries are reported to have dropped in 1951 by £32 million to £718 million. Of this drop, sale of properties in Brazil and Venezuela by British companies which operated railways there account for £18 million. There was a substantial recession in investment in Chile and other Latin American countries.

Higher Dividend Receipts

Notwithstanding the decline of £34 million in capital investments, the earnings by way of interest and dividends showed an increase of £15.6 million, that is, from £143.8 million in 1950 to £159.4 million. As compared with income in 1938, at £155.4 million, the income in 1951 represents an increase of only £4 million. The rise between 1950 and 1951 was almost entirely explained by the increase in dividends on shares. Thus, the dividend on share capital records an increase from £116.2 million for 1950 to £131.4 million for 1951. This increase reflects the higher profits earned by overseas companies, thanks to the Korean war boom. Between 1938 and 1951, the income from this source rose by £53.5 million or 69 per cent., despite the interim contraction of £333 million or 26 per cent. in nominal share capital. This points to the fact that, as compared with 1951, the boom year, 1938 was generally a year of depression for most of the industries and commodities. Interest receipts too show an insignificant rise from £27.6 million in 1950 to £27.9 million in 1951, but a drop of £49.6 million, as compared with £77.5 million earned in 1938.

EXPORT-IMPORT BANK LOAN TO FRANCE

Negotiations have been concluded for the grant of a loan amounting to $100 million by the Export-Import Bank on American offshore orders to France during the year 1953-54. Such advance payments are granted only in exceptional cases. The advance has been granted, it appears, as an emergency measure to replenish France's foreign exchange reserves. These reserves were said to have recently depleted following the settlement of its deficit of $56.8 million in June with the E.P.U. The proposed loan will enable France to settle any fresh deficits in the next two or three months.

A similar loan was granted last year to France by the Bank on account of future offshore orders.

U.S. AID TO INDIA

The latest reports from the U.S. suggest that India will receive $93.5 million (Rs. 44.6 crores) in special economic and technical assistance during the current fiscal year ending 30th June, 1954. This will comprise $63.5 million (Rs. 30.3 crores) for special assistance and $30 million (Rs. 14.3 crores) for technical assistance. In the first year of the U.S. Foreign Aid Programme, that is in 1951-52, India had received $50 million and in the second year $38.35 million. For the third year, that is, the current year, a sum of $110 million was originally recommended by the Mutual Security Director and the U.S. Secretary of State. This was, however, scaled down, following the scaling down of the entire global programme.

THE CHOICE OF THOUSANDS

Over 50,000 people are saving with this bank every day. With a network of over 80 offices spread all over South India and 28 years of experience we can also offer you unrivalled facilities for collection of bills and cheques. You will like our quick, efficient and friendly Savings Bank Service. We have a variety of attractive Savings Schemes.

Resources of over Rs. 5,00,00,000

WORLD WOOL SITUATION

NO NEED FOR A COMMODITY PACT

RAW wool has ceased to figure in discussions on international commodity problems of late. This is not surprising, in view of the fact that the commodity is no longer in short supply. The world output of wool in the season ended 30th June, 1953, is said to be a record in the history of wool, the actual estimate being 2,435 million lbs. (clean basis), as against 2,301 million lbs. a year before and 2,058 million lbs. before the war. The quantity, together with the huge stocks of about 840 million lbs. in importing countries, including strategic reserves and stocks afloat, was more than sufficient to meet the aggregate demand, estimated at about 2,500 million lbs. It was no wonder, therefore, that the International Materials Conference discontinued the Wool Committee in September, 1952. In other words, there is no need for a world commodity agreement on wool.

It would be too premature to forecast the trend of wool output in the current (1953-54) season, for such depends on factors which cannot be estimated accurately at present. There are, however, certain indications to suggest that the steady upward trend witnessed in the past six years will be maintained. The persistence of the marked improvement in the world consumption of wool, for instance, may induce the wool growers to maintain a high level of output. In fact, it is reported that, by improved husbandry and pasturage and closer association with scientists, wool growers are striving their best to step up production. The table below gives a broad indication of the trend of wool consumption (the figures relate only to 11 selected countries—Australia, Belgium, Canada, France, W. Germany, Italy, Japan, Netherlands, Sweden, the U.K. and the U.S.—which account for about 70 per cent. of the total world wool consumption):

(In million lbs.)

	1950	1951	1952
First quarter	509.2	447.2	361.0
Second quarter	478.0	420.6	372.0
Third quarter	475.8	338.4	417.0
Fourth quarter	492.9	354.8	467.0
Total	1,955.9	1,561.0	1,567.0

It will be seen from the above table that, although consumption of wool in the world during 1952 was below the levels reached in 1950 and the first half of 1951, there was an upward trend, as compared with the whole of 1951. The high level of consumption registered in 1950 was due more to the artificial demand created by the stockpile programmes the world over following the outbreak of the Korean war. The increase in wool consumption in recent months has been the result of a rapid recovery in the wool textile industry, particularly in the U.K.

Export Trade

The consumption requirements in respect of wool are largely met by Argentina, Australia, New Zealand, Union of South Africa and Uruguay, which are the world's five major raw wool exporters. Wool exports from these countries during 1951-52 did not duplicate the pattern of the previous year.

Exports from Australia, reflecting lower production and disappearance of stocks accumulated during the war which had been held by the Joint Organisation, were 10 per cent. below those in the previous season. On the other hand, shipments from the Union of South Africa rose by 8 per cent. and those from New Zealand by about 75 per cent., mainly because shipments of wool had been held up in the previous season. Exports from Argentina and Uruguay were less than one-fifth of those of the preceding season, but in the latter part of 1952, shipments increased considerably, owing partly to special rates of exchange. Sales of Australian wool in the latter half of 1952 were 16 per cent. more than in the comparable period of 1951. Exports from Australia rose even more sharply in the 1952-53 season; in the five months ended November, 1952, exports of Australian wool to the United Kingdom, for example, amounted to 135 million pounds (greasy basis), as compared with 57 million pounds in the corresponding period of the previous season. A special feature was the increase in Japanese imports; during the period July to November, 1952, Japan imported 45 million pounds of Australian wool (greasy basis), as compared with 29 million pounds in the corresponding period of 1951. Another notable feature was the modest scale of buying by the United States, which, during the period July to November, 1952, imported only 24 million pounds of wool (greasy basis), as against 50 million pounds in the corresponding months of 1951. The decline was probably due, to some extent, to the use of synthetic fibres in place of wool. At the end of 1952, some uncertainty in the wool trade was caused by an enquiry of the United States Tariff Commission into the case for a higher import tariff on wool.

Wool Textile Trade

As already stated, consumption of wool has been steadily rising. How far and to what extent this trend will be maintained in future depends, to a considerable extent, on the changes that occur in the sphere of world wool textile industry and trade. Prospects for wool textile exports seem to be quite favourable. World trade in wool textiles is heavily concentrated on Europe, North America and the areas where the European settlement has been important. The major markets outside Europe are Africa—notably South Africa and Egypt—North America and Oceania, the first two being roughly equal in importance, about twice as large as the last. The U.K. is the main supplier of wool textiles in these markets, followed by France and Italy. Incidentally, it may be noted that competition in world wool textile trade is less than in cotton textiles. Prior to the Second World War, Japan was an important exporter, but primarily for the Chinese market, which it is now trying to re-open.

Prospects

Prospects for world wool textile export trade depend largely on the growth of demand for woollen goods, which, in turn, is influenced by a score of factors, particularly development of wool textile industries in the deficit areas. In the case of countries like the U.S. and Canada, which have well-established textile industries and the imports into which form a small proportion of domestic consumption, the danger of further substitution of domestic production for imports is not great. The real danger lies in the possibility of enlarged competition from synthetic textiles. The greater the instability of wool prices, the more this process will be stimulated. To quote the U.N.'s *Economic Survey of Europe Since the War*: "It is impossible to assess how important this factor will be, but it is perhaps prudent with this in mind to assume that further increases in income in North America are not reflected in higher demand for imported wool goods."

In Egypt and South Africa, on the other hand, the growth of indigenous industry is a serious threat to wool textile exporting countries. The worsted industry, set up in South Africa during the war years, is said to be now capable of supplying nearly 75 per cent. of that country's needs. With a view to giving further fillip to the woollen industry, the Government imposed protective duties in 1951. Australia is unlikely to import, at least in the immediate future, the huge quantity that it has been importing in recent years. In the Asian market, industrialisation plans cover wool as well as cotton. In view of all these developments, the level of world wool textile export trade, attained in 1951, may be regarded as the maximum that is not likely to be exceeded in the near future.

COTTON TEXTILE OUTPUT IN JAPAN

Thanks to the withdrawal of restrictions on textile production and the recent rise in prices of cloth, cotton textile production in Japan has registered remarkable improvement. The output of pre cotton yarn in the month of June, 1953, touched the post-war record of 76,377,202 lbs. (190,943 bales), exceeding the previous record of 71,068,919 lbs. (177,672 bales) attained in January, 1953. The output of combined cotton yarn including cotton-staple fibre mixture and special cotton yarn, amounted to 77,826,361 lbs. (194,566 bales), which represents an increase of as much as 15,304,160 lbs. (38,260 bales) as compared with the previous month. The improvement in yarn supplies thus facilitated higher production of pure cotton cloth, the quantity actually produced during the month under review being 88,231,530 yards, the highest figure since the beginning of this year. The combined textile output, including cotton-staple fibre mixtures, also advanced to 96,818,932 yards, a rise of 10 million yards over May, 1953.

The following table gives the total production of various kinds of cotton textiles during the first half of this year, as compared with that in the corresponding period of 1952:

(Yarn in million lbs.; cloth in million yards)

	1952	1953
Pure cotton yarn	365.67	382.67
Cotton yarns of all varieties	388.56	389.31
Pure cotton cloth	461.76	460.86
Cotton cloth of all varieties	499.84	500.52

The rise in cotton yarn production in June, 1953, as noted above followed an expansion in the spinning capacity. The total operatable spindleage in June was higher by 19,820 at 7,505,113 as compared with the previous month. The number of registered spinners, however, remained unchanged at 129.

A vehement protest against the proposed Japanese-Egypt trade agreement, for which negotiations are now being held at Cairo, has been lodged by the Japan Cotton Spinners' Association. The agreement, it is feared, provides for heavy imports of high-priced Egyptian raw cotton in return for only small exports of Japanese textiles. The Association also complains that Egypt does not apply its export promotion foreign exchange system to open-account countries. It is, therefore, felt that it would be to the greater advantage of Japan to buy, as at present, raw cotton in sterling area countries.

Meanwhile, the Japanese plan for sending a special cotton mission to London and Africa, with a view to stimulating purchase of Japanese textiles by the Commonwealth, has been dropped, following lack of favourable response by Britain, according to a recent report from Osaka. Notwithstanding this, Japan does not wish to take any action which might be detrimental to good relations with Britain. In this, the chief consideration which has weighed with the Japanese is the fact that textile exports from Japan to the Commonwealth have recently begun to move up. In any event, the representatives to the Anglo-Japanese financial conference on sterling, to be held in London shortly are expected to avail themselves of the opportunity to discuss problems relating to textile trade. They are also expected to visit Africa on their way back to conduct an on-the-spot survey of the trade potentialities in that Continent, "to which the Japanese textile industry is looking with increasing interest."

FRENCH COTTON INDUSTRY GEARING ITSELF TO CAPTURE EXPORT MARKETS

A comprehensive scheme for reorganising and re-equipping the cotton textile industry is now being implemented in France. The scheme envisages the replacement of some 4.6 million spindles (representing 55 per cent. of the total), which are at present working only one shift, by 2.3 million spindles to be worked on two shifts. It envisages also the replacement of 105,000 looms (out of the total 175,000 looms), which are operated by one shift, by 52,500 new looms to be worked on double shift. The aggregate cost of implementing the scheme is estimated at Frs. 120,000 million (£120 million), the investment in new spindles and looms accounting for Frs. 50,000 million (£50 million) and Frs. 47,000 million (£47 million), respectively. The cost is being met by means of 10 to 15-year credits, to be granted by banks at low rates of interest.

The first results of the implementation of the scheme, according to the leaders of the French cotton textile industry, will be achieved by September next in two ways, (1) stimulation of exports and (2) projected reconversion of cotton mills. Details are still not available as to how many mills will be closed down or converted under the scheme, with special safeguards for the personnel to be transferred to other trades.

Additional aid, it is contemplated, will be granted to exporters who increase their sales abroad and to firms which enter the export trade. To this end, the existing price equalisation fund, set up by the industry itself, will be used more extensively, thereby supplementing the export subsidy given by the Government. It is also proposed to merge the different export organisations and to send special missions to foreign countries. An interesting feature of this export drive is that no sales efforts on the markets of the O.E.E.C. countries, except in Scandinavia, the traditional buyer of yarn are contemplated. To quote the Paris correspondent of the *Financial Times*:

"The effort will be directed exclusively to overseas. On the other hand, the scheme has a definitely protectionist character and would eventually result in a fresh and sharp curtailment of textile imports into France and the French Union, if present demands were underwritten by the French Government. The French cotton industry considers, indeed, that there should be no competition within Europe between the various national cotton industries of the Continent—since this would amount to 'exporting unemployment' from one country to another—and that the main problem with which Europe's cotton industry is faced is that of finding outside Western Europe sufficient markets for the part of its production which was exported traditionally."

It is to be hoped that the Indian cotton textile industry and the Government of India will take note of this significant development, which shows that sooner or later this country will have to face keen competition from France. The latter is not the only country gearing itself thus to capture export markets in textiles. Other West European countries also have taken similar steps and are striving their best to stimulate exports of their cotton goods. And all of them put together contribute a substantial share to the world trade in piecegoods.

DECLINE IN WORLD TEXTILE TRADE

REVIVAL OF ACTIVITY IN BRITISH SPINNING MILLS

(By A Special Correspondent)

MANCHESTER, 28th July

MANCHESTER LETTER

WORLD trade in textile goods has certainly declined since the post-war peak reached in 1951. The depression which followed caused a sharp drop in exports from all the main producing countries but the revival of some has been much quicker than others. In particular the expansion in shipments from India should be noted. In the first half of the current year Indian cotton cloth exports were 330,000,000 yards, only 12,000,000 yards behind the Lancashire total. In fact, in the second quarter of the year Indian shipments were practically equal to the Japanese, which still lead the field.

According to preliminary figures, Japan's cotton cloth shipments for the first six months of this year were 389,000,000 yards, a drop of 75,000,000 yards on the corresponding total a year previously. Unfortunately, the comparative details from the United States are not yet available, but the table below shows cotton cloth shipments from the other three main exporting countries last year and so far in 1953:—

(In million yards)

	India	*Japan*	*U.K.*
1952—			
1st quarter	107	271	212
2nd quarter	127	193	161
3rd quarter	208	143	153
4th quarter	150	146	185
1953—			
1st quarter	134	187	173
2nd quarter	196	202	169
Half-year ...	330	389	342
1952—			
1st half-year	234	464	373

Enough comment has been made in Lancashire at the relative absence of overseas trade compared with the brisk demand for goods for home use this year, to need no further underlining. Keen competition is obviously growing for export markets and is likely to become even more intensive as time goes on. The fact that all the countries represented at last year's Buxton conference now find their exports well below their estimates is no reason for relaxing efforts in Lancashire to regain trade wherever possible.

Exports at Mid-1953

The value of Lancashire cotton goods shipped abroad in June was the lowest for any month this year, being £9,825,950, a drop of more than £1,000,000 compared with May. For the six months, total earnings from cotton yarn and manufactured goods were £64,178,304, against £86,025,040 in the same period of 1952.

A further decline took place in the volume of exports of cotton cloth and the total for the half-year was 342,498,000 square yards, valued at £42,916,231. This compared with 372,905,000 square yards, worth £57,758,677 last year. The following table shows the details:—

Monthly average—	*Piecegoods* Sq. yds.	*Value* £	*Average price per sq. yd.* d.
1939	116,115,000	2,665,000	5.61
1949	75,299,000	8,809,000	28.07
1950	68,539,000	8,355,000	29.26
1951	72,096,000	11,016,000	36.67
1952	59,234,000	8,404,647	34.05
1953*	57,083,000	7,152,705	30.07
January	64,796,000	8,223,374	30.46
February	52,027,000	6,611,090	30.49
March	56,283,000	7,136,920	30.43
April	59,526,000	7,372,000	29.72
May	57,939,000	7,129,471	29.53
June	52,229,000	6,491,454	29.83

* 6 months' average.

The Commonwealth markets still lead the way as the largest consumers of Lancashire cloth, the results for the half-year being (in square yards with 1952 comparisons):—West Africa 70,309,000 (86,460,000); South Africa 46,044,000 (26,698,000) and Australia 33,280,000 (51,138,000).

Imports of cotton cloth last month again showed the effect of the curtailment of licences. The value of all arrivals barely exceeded £1,000,000 and for the six months was £6,858,632, against £24,960,941 in the first half of 1952. Grey cloth imports in June were lower at 5,913,000 square yards, of which more than 4,000,000 yards came from Japan. In the half-year 41,381,000 square yards of unbleached cotton cloth has arrived in Britain compared with 97,203,000 square yards in the same period of 1952. The respective values were £3,022,023 and £14,050,836. Japan has been the only supplier of note this year, providing 29,687,000 square yards.

Yarn Position Held

Exports of cotton yarn in the past six months have continued on a very steady level, although in June the average showed a slight reduction. For the half-year shipments totalled 19,817,300 lb., valued at £8,043,491 against 19,637,100 lb., worth £10,338,381 in the first six months of 1952. Details are given below:—

Monthly average—	*Yarn* Lbs.	*Value* £	*Average price per lb.* d.
1939	9,471,600	745,500	18.89
1949	6,838,400	1,962,500	68.88
1950	5,918,500	2,127,900	86.33
1951	5,547,900	2,648,500	116.46
1952	2,976,800	1,479,163	119.25
1953*	3,302,900	1,840,582	97.41
January	3,467,700	1,427,849	98.79
February	3,268,900	1,434,904	104.77
March	3,114,500	1,241,552	95.67
April	3,292,200	1,358,790	99.06
May	3,485,000	1,370,865	94.40
June	3,165,000	1,208,478	91.64

* 6 months' average.

Chief buyers of cotton yarn from Lancashire in the first half of 1953 have been (with 1952 comparisons in brackets):—Irish Republic 2,618,500 lb. (1,591,100 lb.); Australia 2,434,400 lb. (1,778,300 lb.) and Canada 2,190,000 lb. (694,300 lb.)

From time to time estimates are put out as to the amount of re-equipment which has taken place in the producing sections of the Lancashire cotton trade since the war. The subsidy scheme is believed to have accounted for more than £11,500,000, which represented expenditure on the spinning branch only.

Although complete figures of the total amount of new equipment delivered to the Lancashire cotton industry is not available, estimates have been made of deliveries of British textile machinery to the home market. In the six years from 1947 to 1952 inclusive the value of new plant installed for cotton and rayon staple spinning has been given as £28,000,000. Partly due to dearer prices, there has been a steady rise in the value of machinery delivered from £3,000,000 in 1947 to £6,300,000 in 1952.

Weaving plant installed during the same period cost £14,400,000, rising from £1,500,000 in 1947 to a peak of £3,100,000 in 1951. Figures have also been released showing the proportion of automatic looms now in place in the industry. These have risen from 15,224 at the end of 1936, which represented 3 per cent. of all looms erected in running mills, to 34,282 at the end of July, 1952, or 10 per cent. of the total.

The revival in activity in Lancashire spinning mills in the first half of this year has been duly reflected in higher production of cotton and rayon yarn. In the six months to the end of June, output amounted to 457,280,000 lb., against 393,620,000 lb. in the corresponding period twelve months ago.

This advance of more than 63,000,000 lb. was only to be expected in view of the dire state of trade in the early part of 1952, but this year's aggregate is still well below the level achieved in the previous year, when the mills turned out 539,220,000 lb. of yarn between January and June. A gap of nearly 82,000,000 lb. still exists between current output and the totals then recorded.

In the first half of this year the manpower for spinning mills has increased by 2,089 operatives, but the number actually at work before the holiday season began barely exceeded 100,000 in the single spinning section, whereas in 1951 the corresponding labour force was around 115,000.

Another of the big textile groups has declared its intention of contracting out completely from the Raw Cotton Commission next season and obtaining all its raw material supplies privately from 1st September. Announcing this step at the annual meeting in Manchester Mr. Richard F. Haworth, Chairman of the Salford spinning and weaving firm of Richard Haworth & Co., Ltd., said:

"We have a feeling of confidence that we shall be able to purchase the qualities of cotton we require at the right price. We hope that the time is not far distant when we shall be able to welcome the reopening of a futures market in Liverpool."

The Ministry of Materials has officially estimated that about 56 per cent. of raw cotton supplies in the 1953-54 season will be imported by private merchants in Liverpool and Manchester for use in Lancashire spinning mills.

Indian Union Leader's Visit

Mr. Raja Kulkarni, General Secretary of the All-India Federation of Textile Workers, this week met Lancashire cotton leaders in Manchester for talks on conditions in the British textile industry. Mr. Kulkarni is making a nine-month world tour to compare conditions in the rival textile producing countries of the world. He met members of the Legislative Council of the United Textile Factory Workers' Association. When his visit to Lancashire ends he will tour Scandinavia and other Continental countries.—*All Rights Reserved.*

INDO-EGYPTIAN TRADE AGREEMENT

ITS EFFECT ON COTTON IMPORTS

A PIQUANT situation has arisen in the sphere of cotton trade, following the Indo-Egyptian Trade Agreement, which was concluded recently between the Indian and the Egyptian Governments. The new method by which payments are to be effected by the Indian importers of Egyptian cotton are not so advantageous to the Egyptian exporters as the former arrangements. Both importers here and the exporters at the other end feel that unless the method is modified, at least in respect of the sales already concluded between the Egyptian exporters and the Indian importers, it might lead to considerable delay in the shipment of cotton and even, in certain extreme cases, to cancellation of contracts.

The Indo-Egyptian Trade Agreement, it might be recalled, was signed in Cairo on 8th July, 1953. The Agreement, which is effective from 1st June, 1953, remains in force till it is modified or terminated by either party on three months' notice. Under the Agreement, India and Egypt have agreed to grant each other "most-favoured-nation" treatment. The Agreement covers a number of articles of export from Egypt to India, including raw cotton and cotton yarn, and a long list of articles which may be exported from India to Egypt, including tea, oilseeds, cotton piecegoods and textile machinery. The Agreement makes a striking departure from the existing practice in that it envisages payment for the value of Egyptian exports in two currencies—60 per cent. in sterling and the rest in rupees. Under this Agreement, the National Bank of Egypt and the Reserve Bank of India will buy and sell Indian rupees and sterling on the basis of par values declared to the International Monetary Fund and within the spread permitted under the Articles of the I.M.F. 60 per cent. of the payments for exports from Egypt to India will be made in sterling. The remaining 40 per cent. will be paid in rupees which will be utilised by Egypt only for financing purchases of goods from India. The sterling part of the payment for exports from Egypt to India will be eligible for the facilities of the import entitlement account procedure in accordance with the regulations prevailing in Egypt.

Special Account

In addition, the National Bank of Egypt will keep 10 per cent. of the total value of Egyptian exports to India in a special sterling account which would be made available for financing purchases from India when the rupee balances of Egyptian banks are exhausted. Any accumulation in this special sterling account, which remains unutilised at the end of each year of the Agreement, or of a shorter period in the event of the Agreement being terminated before the expiration of a full year, will not be carried forward. If the aggregate amounts credited during any one year of the Trade Agreement to the Egyptian Bank's rupee accounts reach Rs. 100 million, any further credits during the year will be convertible into sterling. The Reserve Bank of India will favourably consider the question of granting reasonable rupee-sterling swap facilities to the National Bank of Egypt before the limit of Rs. 100 million, referred to above, is reached, on terms and conditions to be agreed between the two Banks. If at any time the balances in the rupee accounts are not sufficient to finance purchases from India, Egypt will sell sterling to India in exchange for the necessary rupees. Any balances remaining to the credit of the rupee accounts at the termination of the Trade Agreement could either be utilised for the purchase of goods in India or converted into sterling at the option of the Egyptian Government.

The immediate effect of the ratification of the Agreement was a rise in the prices of cotton offered by the Egyptian exporters to India for the following reason:

The Egyptian exporter is entitled to sell freely 75 per cent. of his export earnings in sterling. Since all payments by India before the conclusion of the Agreement were in sterling, he could realise a certain premium on these sales. This enabled him to quote somewhat attractive prices for the cotton he sold to the Indian importer. He could quote the prices at a "discount," the extent of discount depending upon the additional income he could hope to get by disposing of 75 per cent. of his export earnings in the free market. This discount used to vary between 2 per cent. and 12 per cent. Now, all this has changed. He will be paid, in terms of the new Agreement, only 60 per cent. of the value of the cotton exports in sterling currency. This reduces the availability of "free" sterling to 45 per cent. of his export earnings, which in turn reduces the premium he could earn on the sterling exchange. He is naturally less willing than formerly to quote attractive prices for the cotton he sells.

Retrospective Effect

The new arrangement would not have caused much difficulty if it had been made applicable only to sales which took place after the Agreement came into force. At best, it would have meant somewhat higher prices for the cotton imported by India. But since the Agreement has been given retrospective effect, the Egyptian exporter, who quoted his prices under the impression that he would be able to sell 75 per cent. of the export earnings in the free market, now finds that his margin of profit is likely to be restricted by the new payments arrangements. It would appear that the shipping documents are being delayed, and that some exporters are demanding an increase in cotton prices as an alternative to cancellation of contracts.

The Alexandria Cotton Exporters' Association has urged Indian importers, in a communication addressed to the Cotton Buyers' Association, to use their good offices to see that all payments are settled at 100 per cent. sterling in respect of sales concluded before 8th July, 1953, irrespective of whether the shipments have taken place or not. This is a strange request. The Indian importer is in no way responsible for an arrangement entered into between the two Governments. He cannot be expected to approach his Government to interfere in this matter. On the contrary, he would be fully entitled to demand the delivery of cotton in accordance with the contract he entered into with the Egyptian exporter. After all, the arrangement whereby the exporter was able to quote his cotton at a discount was one between the exporter and his Government. The importer at this end cannot be blamed if that position has altered now. The present position is not vastly different from what might have happened if the Egyptian Government had itself reduced the amount of free sterling available for exporters or from what might have happened if the premiums for free sterling had declined in the open market. The fact that the margin of profit on the sales of free sterling has been reduced now should not be made the reason for delay in the shipment of cotton or for a demand of increase in prices. The contract thus remains unaffected by the new payments arrangements. If Egyptian exporters fail to honour their commitments to India according to the terms of the contract, it would be a serious default on their part. Accordingly, they would be liable to pay damages and it is to be hoped that Indian importers will make this point pretty clear to them. It is but commonsense that if the Egyptian exporters are suffering any loss in their income as a result of the Agreement under reference, they should approach their Government for satisfaction.

EGYPTIAN COTTON

The official acreage estimate for Egyptian cotton places the land under cotton at 1,324,000 feddans for the 1953-54 season as against the final estimate of 1,967,000 feddans for the 1952-53 season. Under average conditions, the 1953-54 acreage, as now estimated, should yield about 6 million cantars, as compared with 9.71 million cantars harvested in the 1952-53 season. The qualitywise breakdown of the official acreage estimate is as follows:—

	(In Feddans) 1953-54 acreage	1952-53 final estimate
Karnak	476,000	933,500
Menouft	25,000	30,600
Zagora	50,000	52,600
Giza 30	351,000	271,600
Ashmouni	418,000	671,500
Dandera	3,000	6,100
Others	1,000	1,100
Total ...	1,324,000	1,967,000

PAKISTAN COTTON CROP

Prospects of Pakistan's next cotton crop, for which sowing has just been completed, are considered satisfactory. Acreage this year is expected to be some 15 per cent. less than that of last year, as big areas of cotton land have been directed to food cultivation in the Punjab and Baluchistan under Government instructions.

The coming year's crop, beginning from 1st September,1953, is expected to be 1.5 million bales, as against 1.9 million bales of the current year. The fall in production of cotton seeds is not expected to be very steep in view of better quality sowing.

FINAL ESTIMATE OF 1952-53 COTTON CROP

OUTPUT LOWER

THE all-India final estimate of cotton for 1952-53 places the area and production at 15,678,000 acres and 3,050,000 bales, as against 16,198,000 acres and 3,133,000 bales of the partially revised estimate for 1951-52. This shows a decline of 520,000 acres in area and 83,000 bales in production. This final estimate, released by the Directorate of Economics and Statistics, Ministry of Food and Agriculture, reveals thus a decline of 3.2 per cent. in area under cotton and 2.6 per cent. in outturn.

The figures compiled by the Ministry show that, although important increases in production were recorded in such varieties as Americans, Broach, Surti and Dholleras, they were more than offset by a decline in the production of other varieties of cotton. The following table gives the area and production of cotton in the 1952-53 and 1951-52 seasons.

Cotton Acreage and Output

	Area (In 000 acres)		Output (In 000 bales of 392 lbs. each)	
	1952-53	1951-52	1952-53	1951-52
Bengals	1,072	1,179	421	426
Americans	944	889	293	257
Oomras	4,557	4,825	733	998
Broach	895	924	265	295
Surti	449	517	118	125
Dholleras	1,542	1,647	290	71
Others	6,179	6,417	930	190
				1,068
Total ..	15,678	16,198	3,050	3,133

There has been a considerable decline in acreage under cotton, it is stated, in the cotton-growing regions in the Bombay, Hyderabad, Mysore and Rajasthan States. These regions also had to face deficient rains and adverse weather conditions at sowing time. The decline in acreage, it is further stated, has been offset to some extent by increases reported by Madhya Bharat, Madhya Pradesh and Madras due to favourable weather conditions at the time of sowing. It is significant that, despite the decrease in acreage, there has been an increase in production in Bombay, Punjab, Saurashtra and Rajasthan, due to favourable weather conditions at the flowering and boll bursting stages of the crop.

An Intriguing Factor

It is somewhat intriguing that the official estimates of the crop should always be lower than the trade estimates, and should differ even from the estimates made by another wing of the Government, namely, the Textile Commissioner's office. Thus, the Ministry's estimate places the 1952-53 crop at 3,050,000 bales as against the trade estimate of between 3,300,000 bales and 3,820,000 bales, and the estimates made by the Textile Commissioner's office, namely, 3,460,000 bales. It would thus be seen that the estimates made by the Textile Commissioner's office are much nearer the trade estimates than the Ministry of Agriculture's estimates which differ from either of the other two estimates by a wide margin. It is not clear why this divergence should be allowed to persist year after year. It is true that it is impossible to ensure identity of all estimates which are bound to differ from one another. Even so, it should be possible, through more accurate compilation and through the adoption of suitable checks and balances, to arrive at a more acceptable estimate which will more truly reflect the actual crop position.

EXPORT OF COTTON

The Government had announced in the middle of July this year that the licences issued for export of raw cotton on or after 1st June, 1953, with a validity date till 30th June, 1953, would be extended for shipment upto 10th August, 1953. By an earlier notification, the Government had agreed to licence Assam-Comillas, Zoda and yellow pickings, freely for shipment till 30th September, 1953. Exporters of cotton, however, had urged the Government, as was mentioned in these columns last week, to extend the validity date of all licences, irrespective of whether they were issued before or after 1st June, 1953. The Government has now agreed to the traders' request, inasmuch as it has decided to extend the period of validity of all licences issued for export of raw cotton during the current season upto the end of September, 1953. This extension will apply to (1) Bengal Deshi, (2) Mathias, Kalagins-Dholleras and (3) C.P.I., C.P.II, Central India Deshi and Ooomra Deshi varieties.

Exports of cotton from Pakistan from 1st September, 1952, upto 23rd July, 1953, aggregated 1,514,193 bales, as against 1,136,247 bales during the same period last season.

PROTECTION AND REGULATION OF INDUSTRIES: THEN AND NOW—II

MAIN ELEMENTS OF SELLING PRICES

(By PADAMJI GINWALA)

THE works costs include all the expenditure incurred at the works on stores, material, labour, supervision, etc., in producing the articles or commodities in question. Under the policy of discriminating protection, in which the interest of the consumer had to be given high priority by the Tariff Boards, the ascertainment of the works costs required very meticulous calculations to satisfy the then Governments. But, within these meticulous calculations, the Tariff Boards, whenever possible, left a very reasonable margin for the producers between the attainable works costs and those actually adopted for determining the selling prices. The present tariff-fixing authorities, under a democratic Government, should adopt a more generous spirit in calculating the works costs than was possible for their predecessors under the bureaucratic Governments, to serve as an incentive to the producer and help the industry to stabilise its financial position.

There is also another direction in which the present investigating authorities may well adopt a more liberal course than they are accustomed to do at present. The works costs cannot be ascertained without first determining the estimated production. There is a tendency to stretch the estimate of production almost to the limit of the rated capacity of the plant during the period under consideration. This has, one the one hand, the effect of reducing the works costs to a rigid level and, on the other, of depriving the producer of the necessary incentive to increase his output and, at the same time, to reduce his costs. The estimate of production to be taken into account should be appreciably below the rated capacity to enable the producer to achieve both these very desirable objects which will enable him to earn, by greater efficiency, a higher gross profit, some of which may be ploughed back, than would otherwise be possible. A short period is, for this purpose, a severe but self-imposed handicap in this respect, but is not insuperable.

A Permanent Feature?

These questions did not arise in case of the controlled industries until after the appointment of the first Tariff Board in 1948 which determined the selling prices of both protected and controlled industries more or less on the same principles. When war control was first introduced about the beginning of September, 1939, the prices were fixed by negotiation between the Government and the producers. They were normally related to the c.i.f. duty paid landed prices prevalent just before the outbreak of war, of corresponding imported material. Owing to the rearmament campaign preceding the outbreak of war, the import prices had risen considerably, of which the controlled industries had the fullest benefit, to start with. These prices were liable to revision every six months or so in either direction. But the revision nearly always resulted in their increase in proportion to the increase in the entire cost of production, which included the works costs, and all the elements constituting the final selling price, viz., depreciation, managing agents' commission, labour's profit-sharing bonus, interest on working capital, head office expenses, etc. The idea underlying the system was to maintain the trading results of the industries concerned at least at their pre-war level. The prices thus fixed were, in most cases, so remunerative that, whilst some of the major, older and well-established units naturally made higher profit than the rest, no necessity arose of fixing differential prices in any industry for similar products. When the rate of profit was cut down to a low economic level by the Tariff Board by the application of the principles originally intended for protected industries, the introduction of the system of differential prices in several of the controlled industries became inevitable and, it seems to me, threatens to be almost a permanent feature of our industrial regime.

Limited Application of Suggestions

Before I proceed to discuss the other elements which constitute the retention prices, particularly depreciation and return on investment, I would like to make it quite clear that my observations and suggestions are intended to be limited to their application *ad hoc* to the protected and controlled industries which occupy a specially important place in our national economy. They are not intended to cover other industries or to raise general issues affecting our entire industrial structure. Amongst these general issues, which I do not at present wish to raise, may be mentioned the amount of depreciation allowed by the Income-tax authorities, the high level of taxation, the cutting down of industrial profit on abstract grounds, formation of capital or the burden imposed on industries on behalf of labour without providing the industries with the means to discharge it. The point I wish to emphasise now is a very simple one. When the Government have a definite policy in view, which is not often the case, though in these particular instances, namely, of protection and control, there are unmistakable indications of the existence of such a policy, it is the duty of the Government to adopt every possible measure in their power to make the policy not only effective merely to the extent of keeping the industries barely alive, but making them capable of realising the main object for which such a policy is adopted. The Government must not be afraid to break the eggs if they wish to make an omelet.

Burden on Consumer

Even in the case of these two classes of industries, it may be necessary to limit the benefit of the measures I am about to propose to those of them of which the rapid development, rehabilitation and expansion are indispensable in the larger interest of the country, or which are essential for our national defence. Whilst the consumer may be called upon to make a heavy sacrifice in respect of such industries, the prices of other protected or controlled consumer goods should not be so precipitately raised as to reduce the demand for them below a level which would make their manufacture uneconomic and thereby retard the growth of the industries concerned. Also the national desire for protection of industries generally of whatever nature should not be so encouraged that little by little an immense increase in the cost of living is the ultimate consequence. There is a tendency to judge of the success of an industry by the present difference between the prices of imported and locally manufactured articles. The real test ought to be, whether when the buyers' market all the world over takes a stronger footing and competition increases, the domestic articles will be not only produced but sold at prices within the reach of the consumer, particularly if his income is below the taxable limit. There are few consumer goods which India cannot produce at a price. But if all of them are subjected simultaneously or successively to high protective duties, it stands to reason that the total burden on the consumer will be so heavy as almost to break his back. It will be advisable, in any case, for the Tariff Commission to estimate the burden of protection on the consumer and the taxpayer, not only in each individual industry for which they recommend protection, but the total burden that has already been thrown on him, and likely to be increased as the policy of protection gathers momentum without the national income keeping pace with it.

Overheads: Depreciation

There has been, in the matter of depreciation allowance, a serious and unwholesome departure from the principles followed by the earlier Tariff Boards and accepted by the pre-Independence Governments. The depreciation normally allowed at present is calculated on the "historical" value of the block which, in practice, seldom means more than the inadequate amounts allowed by the Income-tax authorities. The depreciation allowed by the pre-war Tariff Boards, on the other hand, was calculated on the estimated cost, during the period of protection, of a new complete block, including a plant of economic size and capacity in each industry. This cost has often been wrongly described by others as the "replacement" value of the plant as if it was intended that when the plant was worn out after many years it was to be rebuilt at the assumed cost with equipment identical with what it had at the beginning. It was recognised, and very rightly, that there was no exact point where replacement and extension or renovation could be demarcated and that the depreciation set aside could be utilised for any of these purposes. The object of the Boards in calculating and allowing the depreciation on the cost of a new block was twofold. The first was to enable the protected industry to maintain the value of the plant and machinery, to keep them in a continued state of efficiency and abreast of the improvements taking place in them from time to time.

Newcomers Must be Attracted

The second and almost the more important object was to attract newcomers into the industry by giving them an assurance that the amount of depreciation they might expect would be adequate for these purposes if they built new units. The proposals of the Board had no reference to what the Income-tax authorities allowed, nor had they anything to do with the book value, whether original or depreciated, or with the subscribed capital of the company. A flat rate of 6¼ per cent. on the estimated cost of a new block was allowed. The Tariff Boards were guided in this respect not by what the Income-tax authorities or cost accountants considered reasonable but what a prudent business man would consider it necessary to set aside. This is the only criterion which the investigating authorities ought to adopt in determining the amount of depreciation to be included in the selling prices. If the depreciation allowed is in excess of what is permitted under the income-tax law and, therefore, becomes taxable, the authority should increase the amount to cover the taxation. Such a recommendation was made as an exceptional case in respect of the iron and steel industry by the Tariff Board of 1951 and has not been departed from in later enquiries.

Exceptions, however, are always invidious and apt to create unfounded suspicion of favouritism. The better and the simpler course for the Government is to prescribe by law or, if feasible, by notification, that to all protected and controlled industries, the Income-tax authorities shall allow the amount of depreciation recommended by the Tariff Commission and included in the selling prices, free of taxation, and irrespective of the limit of 100 per cent. Simultaneously, power should be taken by the Government, if they already do not possess it, to compel each and every unit forming part of the industry in question to set aside the amount of depreciation allowed by the Tariff Commission, as a first charge on its profits after the payment of interest on its secured loans. Some of the major units of production, before and since the war have carried out honourably the undertakings voluntarily given by them to set aside the depreciation allowed by the Tariff authorities. But where, as in many industries, there may be a large number of units, some compulsion on uniform lines suggested above may be necessary and justified in the larger national interest.

It is not denied that the present-day cost of new equipment is at least three times what it was when some of the existing plants were built. This is all the greater reason why the plants should not be allowed further to deteriorate, as indeed has happened in many cases, by denying to the undertakings adequate depreciation allowance to enable them to carry out their rehabilitation and replacement or extension where necessary. Unfortunately, the high costs seem to frighten the Government and the Tariff authorities into the opposite direction of adopting the inadequate income-tax rates, with the result that neither the existing units can be maintained in a state of efficiency nor the further development of the industry by their expansion or the establishment of new units made possible. As an inevitable consequence, production must decrease, the works costs must rise and the evils of protection or control must indefinitely continue.

Safe and Effective Course

The only safe and effective course for the Tariff authorities to adopt, in these circumstances, is to allow and include in the selling price depreciation at a flat rate of 6¼ per cent. calculated on the present-day cost of a typical block, including a plant of economic size, in both protected and controlled industries. Where an industry consists, as at some period of its development it must, of old and new units, the rate of depreciation allowance must be maintained at a level which would be adequate for new units in order to attract fresh private capital into the industry. The rate of 6¼ per cent. should be free of taxation which, in the case of units built since the introduction of the principle of higher initial depreciation, should present little difficulty. As regards the older units forming a substantial part of the industry, when it may not be feasible to make any special provision

(Continued on page 283)

SUGAR INDUSTRY IN EUROPE

MARKED RISE IN OUTPUT

THE countries of Europe have always played a notable part in the world sugar economy. Apart from the fact that these countries contribute nearly a third to the total sugar supplies of the world, they are, with the exception of one or two, one of the major importers of sugar. The majority of European countries, including those under Soviet domination, are deficit in sugar supplies. The production of sugar has been at the rate of 11 million tons, which falls short of the actual requirements by over 3 million tons. In view of their dependence on imported sugar, it is quite natural that the countries of Europe should be evincing keen interest in the deliberations of the International Sugar Conference now in session at London to work out a world commodity agreement on sugar. An indication of this is provided in the Press report that the European countries represented at the London Conference have emphasised the need for preventing wide fluctuations in sugar prices through international action.

Efforts are being made by the European countries to reduce their dependence on foreign sugar. That these efforts have met with considerable success will be evident from the marked rise in sugar output and lower imports in recent years. The production of sugar during 1951-52 amounted to as much as 11.26 million tons, which compares very favourably with 8.71 million tons in 1949-49 and 9.68 million tons in 1937-38. The current (1952-53) season's output, however, is estimated slightly lower, at 11.02 million tons. It would be premature to attempt to form any idea of the production in the coming seasons, as it depends on so many factors, climatic conditions and rainfall, in particular, that cannot be sized up at present. But, assuming that the conditions for the harvest would be favourable, the production will be higher still. This, in a way, is indicated by the special efforts of the U.S.S.R.—Europe's largest producer of sugar—to raise its output. Already, sugar production in this country has considerably gone up, the current season's output, being estimated at 2.7 million tons, which exceeds the previous season's output and the pre-war level by 140,000 tons and 200,000 tons, respectively. The target placed by Russia for 1955 is as high as 4.3 million tons, an increase of 170 per cent. as compared with 1950.

Incidentally, it may be noted that sugar production in Europe consists entirely of beet sugar. Europe's contribution to world beet sugar crop is to the extent of more than five-sixths of the total, the balance being accounted for by the U.S. Beet sugar production accounts for nearly one half of cane sugar output and constitutes nearly one-third of the aggregate world sugar output.

Trend of Sugar Output

The table below indicates the trend of sugar output in European countries in recent years as compared with the pre-war period:

(In thousand tons—raw value)

	1937-38	1948-49	1951-52	1952-53 (estimated)
U.S.S.R. ...	2,500	1,850	2,560	2,700
France ...	969	940	1,232	1,080
Poland ...	562	682	937	985
W. Germany }	2,213	611	1,043	900
E. Germany }		672	738	640
Czechoslovakia ...	741	625	714	670
Italy ...	352	448	709	710
U.K. ...	426	615	659	630
Spain ...	151	260	300	500
Holland ...	246	280	345	410
Belgium ...	240	258	264	315
Other Countries ...	1,670	1,372	1,557	1,483
Total	9,680	8,713	11,258	11,023

It will be evident from the above table that production of sugar in practically all countries has registered an appreciable rise in the past two years, as compared with the 1948-49 season. In the majority of cases, the output exceeds the pre-war level.

Consequent on the rise in sugar output, as noted above, imports of sugar into the countries of Europe have been on the downward trend. The quantity of sugar actually imported during 1951-52 amounted to about 3.27 million tons, as against 3.73 million tons during the pre-war period. An idea of the import of foreign sugar into some of the countries of Europe can be had from the following statement:

(In thousand tons)

	1934-38 (average)	1951-52
U.K.	1,822	1,591
West Germany	572	647
Netherlands	72	169
Portugal	69	125
Switzerland	164	123
Ireland	42	97
Norway	90	89
Greece	81	88
Sweden	9	70
Austria	3	62
Italy	4	41

The list of countries given above excludes those in the eastern part of Europe. The latter countries do not import any sugar at all. In fact, they export sugar. Thus, during 1951-52, they exported 271,000 tons of sugar to Western Europe. The bulk of the exports is accounted for by Czechoslovakia, the quantity actually exported being 146,000 tons. Poland exported 81,000 tons and the U.S.S.R. 38,000 tons. As compared with the pre-war level, however, the exports of these countries during the 1951-52 were lower by 179,000 tons. This indicates that consumption in these countries must have gone up. The *per capita* consumption of sugar (in terms of raw value) in Poland, for instance, is more than 50 lbs., as against 29 lbs. in 1937-38. Similarly, the *per capita* consumption in Hungary, Czechoslovakia and Bulgaria is higher at 48 lbs., 70 lbs. and 19 lbs., as against 26 lbs., 59 lbs. and 11 lbs., respectively, in 1937-38.

Sugar in U.K.

Among the sugar producers in Europe, the United Kingdom occupies a minor part. Its share in the total production is a bare 1.5 per cent. Nevertheless, this country has all along been playing an important part in influencing the trend of world sugar trade by means of preferential trading system, bilateral Government contracts, and regulation of exports and imports. For instance, there is the Commonwealth Sugar Agreement under which the U.K. has been buying certain quantities of sugar from Australia, British West Indies, Fiji, Mauritius and the Union of South Africa. The agreement is intended to develop sugar production in the Commonwealth countries and to promote its orderly marketing. The exporting countries in the Commonwealth have limited their individual annual exports to a total of 2,375,000 tons (long) during the period 1st January, 1950 to 31st December, 1959. The details of the export quotas by areas are as follows:

(In thousand long tons)

	Total quotas	Negotiated price quotas: New Zealand	Negotiated price quotas: U.K. only
Br. W. Indies ...	900	670	640
Australia ...	600	314	300
Mauritius ...	470	351	335
South Africa ...	200	157	150
Fiji ...	170	125	120
Br. Honduras ...	25	18	18
Br. E. Africa ...	10	5	5
Total	2,375	1,640	1,568

The price at which the U.K. purchases sugar every year is determined by taking the 1950 sugar price of £30 10s. as the basis to which percentage increases in production costs are added. The parties are given the option to negotiate a price by mutual consent, if this method results in too high or too low a price.

The U.K. has also entered into a three-year agreement, which ends in December, 1953, with Cuba, under which it has been purchasing about 1.5 million long tons of sugar. From the Dominican Republic, it has undertaken to buy each year the whole output, less amounts required for local consumption and certain other markets. The quantity of sugar purchased from this country in 1952 was 442,969 tons.

SUGAR PRODUCTION AND STOCKS

The total production and despatches of sugar during the season 1952-53 (up to the end of June, 1953) amounted to 1,317,659 tons and 1,082,301 tons, as against 1,462,524 tons and 748,690 tons, respectively, during the corresponding period of the previous season.

The opening stock, production, despatches and closing stock of sugar during the fortnight ended 30th June, 1953, were 738,251 tons, nil, 84,889 tons and 653,362 tons, respectively. The figures for the corresponding fortnight of the previous season were 834,139 tons; 6,472 tons, 34,270 tons and 806,341 tons. Figures for the current fortnight relate to 126 factories, representing 92.05 per cent. of the total cane-crushing capacity, while those for the previous year relate to 128 factories representing 90.27 per cent. of the total cane-crushing capacity.

PRICE OF OVERLOADED COAL

DISCRIMINATION ALLEGED

LATTERLY, the policy of the Government of India in fixing different prices for overloaded coal and coke in railway wagons has come in for a good deal of criticism at the hands of certain colliery interests. At present, the Government has fixed Rs. 11 per ton for all grades of coal and coke overloaded in railway wagons from Bengal and Bihar collieries, except at Mohuda weigh-bridge. The price of coal overloaded at Mohuda weigh-bridge is, however, Rs. 9 per ton. These prices are far below the statutory selling prices fixed for coals or cokes, as the case may be which are not overloaded. The statutory rate, for instance, of selected A grade is Rs. 16-4 per ton.

The validity of fixing a different price for overloaded coal is questioned, especially when section 5 of the Colliery Control Order, 1945, read with section 7 (3) of the Essential Supplies (Temporary Powers) Act, 1946, makes it an offence, within the meaning of section 107 I.P.C., to sell coal or coke at a price lower than that fixed under the said Order. Consequently, any offer of rebate on the statutory selling prices of coal is an offence.

When the attention of the Coal Commissioner was drawn to this inconsistency, he clarified the position, through his latest bulletin (No. 9), as follows: "The prices of overloaded weigh-bridge coal in West Bengal and Bihar coalfields are statutorily fixed under the Colliery Control Order. A uniform rate is fixed for all overloaded weigh-bridge coal in West Bengal and Bihar coalfields, excepting Mohuda. A lower rate is fixed for the overloaded weigh-bridge coal at Mohuda, on account of the inferior quality of coal in that section.

Coal interests, however, are not satisfied with this clarification. They point out that clause 4 of the Colliery Control Order permits the Central Government to fix different prices only for different grades of coal and for different collieries. It does not allow for the fixation of a different price for the overloaded coal of the same variety. They say that they are at a loss to understand why a different price should be fixed for the overloaded part of the same coal, just because it is overloaded. They contend that the system of fixing different prices for the same grade of coal, on the ground that one is overloaded and the other not so, is grossly inequitous. They further point out that the inequity of fixing a lower price for overloaded coal is further aggravated by a number of other factors. To mention only two: (1) An additional charge of Re. 1-8 per ton for clerkage for overloaded coal; and (2) a penalty, with effect from 1st January, 1952, for overloading ranging between Rs. 2-8 and Rs. 12 per wagon.

Thus, it will be noted, a fundamental question of discrimination or preferential treatment is involved in fixing a lower selling price for overloaded coal. It is now upto the Coal Commissioner to explain the grounds for thus fixing different prices. On a reconsideration of the whole issue, he will, perhaps, find that he will have to rescind the system of double pricing, since it contravenes the Colliery Control Order and the Essential Supplies (Temporary Powers) Act.

PEGGING OUTPUT OF METALLURGICAL COAL

Replying to certain representations seeking clarification of the policy of the Coal Board in regard to pegging the output of A and B metallurgical coal, the Coal Commissioner points out that, although the general basis for fixing the ceiling for 1952 and 1953 was 108 per cent. and 100 per cent., respectively, of the output in 1950, the Coal Board took account of the actual position. Generally, he says, the Board has taken into consideration the annual output in three to four years in fixing ceilings for individual collieries so that the collieries might not be subjected to unnecessary hardship. For, in certain cases, the output in 1950 turned out to be abnormally low, owing to strikes or technical difficulties. The Coal Board decided not to reduce the output of the collieries taking to stowing, because the economies of collieries with stowing plans required special consideration. Accordingly, the ceilings fixed in some cases have exceeded the output of 1950, and in certain cases, they are even higher than the limit fixed in 1952 depending upon the circumstances of each case.

ECONOMIC CONDITIONS IN U.K.

WAGE SPIRAL RAISING ITS HEAD AGAIN

THAT a dynamic programme, directed towards greater production and efficiency, which would permit increased rewards for everybody in industry, should be adopted was the call made by Mr. R. A. Butler, Chancellor of the British Exchequer, in the course of his address at the National Joint Advisory Council in London recently. This call, as also the Chancellor's statement that there were new and serious problems which had to be overcome, serves to indicate the fact that the economic conditions in Britain are still none too happy, despite the impressive performance on the industrial and trade fronts in recent months. In fact, the implications for the future are considered to be rather very disquieting. The four features of Britain's economy which have aroused grave concern are stated to be as under:

(1) Revival of the spiral of wages throughout the country;

(2) stagnation of industrial production at a level which is too low to justify large wage increases;

(3) slow pace at which exports are improving in the context of the growing competition in world market; and

(4) possibility of another fuel crisis next winter.

Of these, the most disquieting problem is said to be that relating to exports. Alluding to this, the *Financial Times* (London), for instance, observes:

"What has really happened is that the problems which it was thought would have to be faced in the first six months of the year have only been postponed. At the beginning of this year, because it was generally thought that the fall in raw material prices had come to an end, a further improvement in the external balance was expected to depend on an expansion of exports. The fall in prices has, in fact, been prolonged, and the country has got by on a stable level of exports. But even if peace is now finally concluded in Korea, it hardly seems possible that there can be another big fall in raw material prices. In any case, the balance of payments ought to be improved, not merely kept stable. The real export battle, therefore, now lies ahead."

Export Level Inadequate

It was precisely to this aspect that Mr. Butler drew pointed attention in his speech at the National Joint Advisory Council. Mr. Butler gave five plain reasons as to why the existing level of exports were inadequate. First, the present fairly favourable relation between export and import prices may not persist. Secondly, the 1952 trade balance related to the then low level of imports. Now that production is rising, more raw materials have been imported, and at the present level of exports, Britain's ability to pay for necessary imports will be increasingly in doubt. Thirdly, large debts have to be repaid abroad. Fourthly, the emergence of the U.K. and the sterling Commonwealth from their economic troubles depend "absolutely" upon the development of the productive strength and efficiency of the sterling area; thus, the U.K. has to make available investment funds and capital equipment for development in the area. Firally, the gold and dollar reserves are not still sufficient to afford protection against fluctuations in world trade earnings.

If these five calls are to be met, it requires an average annual U.K. surplus of £300-350 million. True, there has been some rise in the money level of trade, with encouraging improvement in exports to North America. Nevertheless, imports have risen, while exports stand at the level of last year's final quarter. The outlook, therefore, as the Chancellor emphasised, depends more and more upon British exporters' success and, when competition is keen, price is a crucial factor.

While all are agreed on the imperative need for encouraging expansion of Britain's export trade throughout the world, opinions would appear to be somewhat divided in Britain itself on the question as to how best export markets can be conquered and prices trimmed to a really competitive level. For instance, Mr. Oscar R. Hobson, City Editor of the *News Chronicle*, London, maintains that the only effective way is to control incomes in such a way that the products suitable for export are not pre-empted by the domestic consumer. "There is," to quote him, "no room at all for any relaxation of credit control and other restraints on higher profits or higher wages. Our present danger is inflation and not deflation." On the other hand, Mr. John Kingsley, a well-known commentator on economic and financial affairs, lays stress more on the need for securing all the economies and advantages of capacity production in the industries.

Whatever may be the difference in the approach to the problem of overcoming the new difficulties confronting Britain to-day, it has been widely admitted that there is imperative need for keeping in check the rise in industrial costs. Labour in Britain seems to have overlooked this aspect, as will be evident from the series of claims for higher wages put forward by workers. Thus, the farm workers have urged for a rise in the minimum wage from 5*s.* to 7*s.* The engineering and cotton workers have asked for a rise of 15 per cent. and 10 per cent., respectively. Similarly, workers in docks, electricity supply undertakings, clothing industry, shops, furniture houses and tobacco firms, are formulating fresh claims. The railway men and the miners are also expected to follow suit.

If all these wage claims are to be satisfied, Britain's drive to step up exports will surely be impaired. To quote the London correspondent of the *Hindustan Times*, New Delhi: "Even if there were no competition in foreign markets from America, Japan, Germany, and other European industrial countries, higher-priced British manufactures would more often be refused for sheer lack of funds to pay for them." That there is no exaggeration in these observations will be evident from the following remarks of the Chancellor himself:

"During 1952, the wage and salary bill rose by about £550 million, though industrial production was lower than in 1951. In October, 1952, average earnings were 8 per cent. higher than a year before and wage rates rose 6 per cent. during the year. A 10 per cent. rise in wages and salaries throughout manufacturing industry would cause export prices to rise 4½ per cent. Taking into account increases in fuel and transport costs, average export prices would thereby be increased by over 1*s.* in the £."

Necessity of Profits

Closely allied to the question of wages is that of profits, for, if, as a result of higher level of wages, the profit margins are reduced, it will have a serious effect on the savings of industry and thereby on the growth of industry. Dealing with this question, Mr. Butler stressed the importance of ploughing back adequate sums derived by way of profits into industry. In support of this contention, he pointed out that the rate of productive investment per operative in the U.S. was about three times as rapid as that in the U.K. He revealed, in this connection, that, between 1947 and 1952, the gross trading profits of companies in Britain rose by 35 per cent., while wages and salaries increased by 50 per cent. An analysis of the national income figures showed that the share going to gross trading profits of companies and corporations was the same at 19 per cent. in 1952 as in 1947, while that going to wages and salaries was higher at 61 per cent., as against 59 per cent. Anything which tended to diminish the resources available for productive investment would, Mr. Butler added, impair national strength. It might occur through diversion of resources required for re-equipment to personal incomes.

Mr. Hobson's Remarks

Commenting on Mr. Butler's exposè of Britain's present economic situation and his appeal to workers to moderate their demands for an increase in wages, Mr. Oscar Hobson makes the following candid remarks:

"But his prescription, if he was really trying to write one, was surely utterly inadequate. It amounted to nothing more than another exhortation to employees to observe restraint and to employers to put more energy into their production and export 'drives.' We have had many of these exhortations from Ministers since the war and we know their value. It is nil or next door to it. It is, at any rate, utterly uncommensurate with the needs of the situation. Experience has time and again demonstrated that (except on rare occasions of great national danger) mere preaching unaccompanied by measures of economic inducement or pressure, is almost useless. It is no use just pleading with employees not to advance wage claims. And the present arbitration system is guaranteed to ensure that they will get a proportion of what they demand; it is a guarantee of continuing 'wage-induced inflation.'

"It is equally no use asking employers to export more while the level of incomes is such that they can sell their goods on the home market with less trouble and with equal or greater profit. It is the duty of Governments to propose the measures calculated to provide the worker and the capitalist with the incentives and motives to do those things which are demanded by the situation as they see it. Broadly, those measures may be in the nature either of specific compulsions (orders, controls, quotas, etc.) or of general persuasives (tax policy, monetary policy). But there was not the slightest hint in Mr. Butler's speech of any action at all to remedy or avert the dangers which he clearly sees to be developing.

"There was no suggestion either that the budget was too 'soft' and might have to be stiffened or that the Bank rate might have to be raised—or on the other hand that we might have to go back on such decontrol and liberalisation as we have been vouchsafed in the last year. If our situation is as Mr. Butler describes—such current news items as the purchase of 200,000 tons of dear Belgian coal on top of 300,000 tons of French certainly do not refute him—he ought to be doing something about it *now*. Otherwise we shall just drift into a new crisis. It will be a familiar experience. But it could be avoided."

INDIAN BANKING ANALYSED

Directory of Banking

In

INDIA, PAKISTAN, BURMA AND CEYLON

This is an up-to-date and authoritative survey of banking conditions in these four Asian countries. The most interesting feature is that it details a comparative study of about 2,000 banks, big or small, joint stock or co-operative, in respect of their capital, management, offices and financial position. The city-wise index of branches is very handy. The other features being a comparative study of Banking Legislations, Safety Tips for Bankers, Workings of Banks Abroad and Bankers Who's Who, etc.

It will be found very useful by all banks, businessmen and students of banking.

A TOTAL BOOK OF TOTAL BANKS

TRENDS IN WORLD RUBBER POSITION

U.S. CONSUMPTION OF NATURAL RUBBER RISES

THERE has been a significant development in the London rubber market in recent weeks. Though prices have been ruling quiet, both for the spot position and for the forward position, the forward positions are being quoted at a premium over the spot for the first time in the past several years. The premium has been widening since the beginning of July and has received a fresh fillip from the announcement that the United States' production of general-purpose synthetic rubber by the Reconstruction Finance Corporation is to be reduced from 1st August and from hopes of a higher price level for synthetic rubber after the U.S. Government-owned synthetic plants are sold to private enterprise. The latest quotation available, however, shows a slight narrowing of the premium; but the maintenance of the premium itself is a notable feature. The following table showing the trend of price during the last five weeks will be read with interest:

(Per lb.)

	22-6-1953	1-7-1953	21-7-1953	29-7-1953
	d.	d.	d.	d.
Spot	20⅛	19⅛	19⅛	18⅛
Forward:				
September	20⅛	19⅛	19⅛	18⅛
October-December	20⅛	19⅛	19⅛	18⅛
January-March	20⅛	19⅛	19⅛	19
August, c.i.f.	19⅛*	19⅛	19⅛	18⅛

* July c.i.f.

The development of a premium in the forward positions is stated to be a measure of increased optimism about the long-term outlook for natural rubber. The first cause of the optimism has been provided, as already stated, by the report that the Reconstruction Finance Corporation, which produces the general-purpose synthetic rubber for the U.S. Government, would cut down its output from 1st August by gradually shutting down the alcohol butadiene plants. The plants which will be taken out of operation are stated to be of the high cost type and account for an annual output of 100,000 tons of general-purpose synthetic product. The closing of these plants will leave with the R.F.C. an annual capacity of 600,000 tons of general-purpose synthetic from petroleum based butadiene—GR-S (styrene) rubber. The price of this product will be unchanged at 23 cents a pound. On 17th July last, the R.F.C., it may be noted, raised its price of butyl synthetic rubber —G.R. 1 (butyl) rubber—by 1½ cents to 22 cents per lb. The change in the U.S. price of butyl was received with satisfaction in London market circles as a step in the right direction. It was, however, felt that, so far as the natural rubber was concerned, the increase in price of GR-S rubber would have been a more effective action, as it would provide the natural rubber a better competitive position.

Sale of U.S. Government-owned Plants

The second factor which contributed to the optimism referred to above was the implications of the enactment of the Synthetic Plant Disposal Bill which has since been passed by the U.S. Senate, the same having been already passed by the House of Representatives. The disposal of the Government plants to private enterprise is generally taken to mean that the synthetic rubber will come to occupy a higher price level, as it will not be subsidised any longer and kept at an artificially low level.

The U.S. Senate voted on 22nd July, 1953 the Bill authorising the sale of the Government's synthetic rubber plants to private interest, but not before passing several amendments to the Bill. The most important amendment made was that the overall disposal programme should be submitted to the Congress by 31st January, 1955, instead of 1st June, 1954. After that date, the Congress will have 60 days to accept or reject the plan. Originally, the deadline for the sale of the plants was fixed as 1st July, 1954. Having thus been voted by both the House and the Senate, the measure was placed before a joint conference committee and a compromise between the two versions of the Bill was agreed upon. The compromise Bill was passed by the House of Representatives on the 28th ult. and sent to the Senate. Under the provisions of the compromise measure, the President will appoint a three-man commission to negotiate the sale. The Commission will have time until 31st January, 1955, to submit an overall disposal plan to the Congress. Transfer of the facilities to private industry will become effective 30 days after that date, unless either the House or the Senate passes a resolution disapproving the terms of the sale. The entire sale will have to be approved or disapproved as a single package, although separate plants can be sold singly to private companies. Factories which cannot be sold to private industry would be placed on a stand-by basis. The Bill requires the private companies which take over the plants to give a guarantee to produce a total of 500,000 long tons of general-purpose synthetic rubber and 43,000 long tons of butyl rubber every year.

Meanwhile, preliminary figures of consumption of rubber by the U.S. during June, 1953, indicates that its consumption during the first half-year was on the increase, as compared with that during the first half of 1952. Thus during June, 1953, consumption of rubber in the U.S., according to preliminary figures, amounted to 120,462 tons. Though this shows very little increase over that in May (119,062 tons), it was considerably higher than that in June, 1952, (106,149 tons). Of the total consumption in June, natural rubber accounted for 48,958 tons (as compared with 46,613 tons in May, 1953, and 36,946 tons in June, 1952) and synthetic for 71,504 tons (as against 72,449 tons and 66,203 tons, respectively, in the preceding months under comparison). It is significant to note that the consumption by U.S. has gone up in the very first month (which is June this year) after the U.S. gave an assurance at the last meeting of the Rubber Study Group held in Copenhagen that even a modest fall in the price of natural rubber would induce a considerable increase in its consumption. It will be noted from the foregoing figures that the proportion of natural rubber consumed to total U.S. consumption has improved in June this year, as compared with that either in May this year or June last year. It will also be noted from the table of prices that there has been a fall of 1⅛d. per lb. in spot prices of natural rubber.

The consumption of natural rubber in June, 1953, brings the total for the first half of the current year to 288,415 tons, a rise of 71,193 tons over that for the corresponding six months of 1952. Consumption of synthetic rubber during January-June, 1953, has also risen, but by a smaller amount—32,178 tons—from 408,675 tons in the first half of 1952 to 440,853 tons. Arrivals of natural rubber in the U.S. in June this year amounted to 63,898 tons, as against 54,056 tons in May and stocks at the close of June amounted to 114,798 tons, as against 113,212 tons.

The U.S. output of synthetic rubber in June, 1953, was 79,668 tons, as compared with 85,575 tons in May, 1953 and 64,040 tons in June, 1952. Stocks stood at 140,230 tons, an increase from 121,832 tons at the end of the preceding month.

World Output in First Five Months

The world output of natural rubber in May this year, the latest month for which figures are available, was 142,500 tons, the highest since January this year (when it amounted to 165,000 tons), and compares with 132,500 tons in April, 1953, and 137,500 tons in May, 1952. This brings the total output during the first five months of this year to 692,500 tons, a decline of 35,000 tons from the corresponding figure for 1952. World consumption in May, 1953, at 130,000 tons, was the lowest monthly consumption for the year so far and compares with 132,500 tons in the previous month and 117,500 tons in May, 1952. The total consumption in the first five months amounted to 667,500 tons or 47,500 tons more than a year ago. Stocks at the end of May aggregated 800,000 tons, made up of 222,500 tons in producing areas, 382,500 tons in consuming areas (excluding Government-owned rubber) and 195,000 tons floating stocks.

The world output of synthetic rubber in May is estimated at 93,500 tons, making a total of 422,500 tons for the first five months of this year. Consumption in May amounted to 80,000 tons, bringing the five months' total to 405,000 tons. Stocks of synthetic rubber at the end of May were 152,500 tons, an increase of 15,000 tons since 1st January, 1953.

The output of rubber in the Federation of Malaya during June, 1953, amounted to 46,241 tons, as compared with 47,592 tons in May. This brings the half-year's total to 273,896 tons, as against 278,392 tons in the first half of 1952, and 304,254 tons in the second half of 1952. The estates produced 27,202 in June, making 162,852 tons for the six months, compared to 166,868 in the first half of 1952. The production by smallholders, in June, was 19,039 tons, making 107,142 tons for the half-year, compared to 121,524 tons in the first half of 1952, and 22,792 tons in the second half of 1952.

SCOPE FOR JUTE GOODS IN SOUTH-EAST ASIA

OUTLOOK PROMISING

THE reports of the fact-finding missions deputed by the Indian Jute Mills' Association to the U.S., Canada, the U.K., Australia and New Zealand revealed one thing. And that was that, in all these countries, although jute goods were slowly regaining their markets, the substitutes had come to stay in some fields where jute coverings were in vogue once. Thus, the substitutes for jute still constitute a powerful rival in these countries. In South-East Asia, however, the substitutes have not made much headway and there is no fear of serious competition from them. This is the impression that one gets after going through a summary of the findings of Mr. Gardner, Chairman of the I.J.M.A., who recently visited Singapore on a fact-finding mission. It would appear from his account that this region offers expanding markets for jute goods, despite the efforts of certain countries to cultivate jute and set up jute mills.

Reports from Singapore and Malaya disclose that the markets there have been suffering from inadequate supply of gunny bags. This situation has encouraged the tendency to reduce the standard of coverings. It has also encouraged the use of secondhand bags in places where in the past new bags were specified and insisted upon. Bulk handling has not yet made any significant progress. It is true that adverse political conditions there have slowed down export trade and consequently the demand for jute bags. But India seems to have not even satisfied fully the residual demand, let alone create new demands.

Thailand

Thailand is another country in South-East Asia, the requirements of which has so far been exclusively met by Indian jute mills. The annual requirements are about 19 million to 20 million bags. These bags are mainly used for packing rice for export, as well as for internal requirements; approximately 15 million bags are required for the latter. Secondhand bags are also used for the carriage of rice internally and some of these are obtained from India. Gunny bags are also used for packing soya beans and jaggery. A small quantity of hessian is used for the baling of sheet rubber.

There are prospects of greater demand for jute goods. But it is not certain whether this demand will be met by imports from India. For Thailand has been experimenting with cultivation of jute on land unsuitable for growing rice. It is also developing a jute manufacturing industry. One jute mill was installed in 1952 and two more are planned to be completed by the end of 1954. It is expected that internal production will, by that time, be approximately 8 million bags per year. Nevertheless India can still hope to retain its present market, provided it offers its jute goods at competitive rates, for this is a country where demand is expected to be upward for several years to come.

Burma

The major part of Burma's demand for jute bags is for packing rice for export. The actual volume of demand for gunnies depends on the size of the crop. It is understood that Burma purchased large quantities of gunny bags during July, 1951 to June, 1952, and, consequently, the demand during July 1952 to June 1953 was small. It is, however, forecast that the demand for 1954 will be 25,000 tons, and still more for 1955. Thus, there is great scope for Indian jute goods in Burma. Latest reports disclose that American manufacturers of paper bags are making strenuous efforts to enter Burmese market. Burma too is said to be cultivating a certain amount of jute and contemplating erection of a jute mill.

Indonesia

The demand for jute bags in Indonesia depends, as in Burma, on the volume of its crops, especially rice. It is estimated that the normal requirements of this country account for about 20,000 tons, but, owing to heavy stockpiling in 1952, the imports in 1953 are not likely to exceed 16,000 tons. The major portion of its demand is satisfied by India, although not necessarily directly. It would appear to be in the interests of India to establish direct contacts with Indonesia, if it is to stabilise its position and explore prospects for further exports to that country.

DEVELOPMENTS IN STEEL WORLD

JAPAN TO CUT EXPORT PRICES

RECENT developments in the steel world indicate that fundamental changes in the world steel situation may be in the offing. Briefly stated, they all point to the possibility of an early emergence of a strong buyers' market in steel and steel products. There are, on the one hand, reports that the High Authority of the Schuman Pool will shortly put forth proposals before the U.K. Government for closer co-operation between the U.K. and the European coal and steel pool. On the other hand, iron and steel manufacturers in Japan propose to make drastic reductions in the export prices of their products in order to meet international competition in steel markets, which, they say, has stiffened by the operation of the Schuman Plan. Many forecast that these two developments may result in considerably cheaper steel for the underdeveloped countries of Asia and the Far East, thereby facilitating their capital expansion programmes.

A brief review of the latest available statistics pertaining to steel in certain important European countries (published by the Industry Division, Economic Commission for Europe, United Nations, Geneva), reveals some interesting features. The crude steel production figures for April and May, 1953, suggest a possible pause in the general post-war upward trend of steel production in Europe (excluding U.S.S.R.). The developments in the different countries, however, are not uniform. In the U.K., for instance, production is breaking new records, whilst elsewhere output has dropped steeply in April and May, from the post-war highs established in the first quarter of 1953. Production in the U.K. was at an annual rate of 18.52 million tons in May, as against 18.42 million tons in April and 18.50 million tons in the first quarter of 1953. The annual rate in the first quarter of 1952 was 16.24 million tons. The annual rate of production in West Germany in May was 13.98 million tons, as against 15.32 million tons in April and 17.14 million tons in the first quarter of 1953. It was 15.23 million tons in the first quarter of 1952.

Trend of Output

The following table gives the annual rate of production of steel in some important countries of Europe in the months of May and April, 1953, and in the first quarter of 1953 and the corresponding quarter of the previous year:

(In million metric tons)

	1st Quarter		April	May
	1952	1953	1953	1953
U.K.	16.24	18.50	18.42	18.52
West Germany	15.23	17.14	15.32	13.98
France ...	10.68	10.92	10.65	10.35
Belgium ...	5.45	4.89	4.84	4.53
Italy and Trieste	3.48	3.20	2.94	3.21
Luxembourg ...	3.16	2.76	2.78	2.71
Saar	2.76	2.91	2.67	2.66

Western Europe's foreign trade in steel seems to be shrinking. Imports of steel into West Germany dropped from the high level of 183,000 tons in January, 1953 to 114,000 tons in April and are expected to be back at the more normal level of 40,000 to 50,000 tons a month. This reduction in imports points to a recovery in West German steel production in the coming months. Similarly, the U.K.'s imports of steel continue to decline towards a normal level, as supplies of home-produced steel are rising. The imports fell from 113,000 tons in January, 1953, to 88,000 tons in April, 1953. Exports from West Germany increased from 99,000 tons in January, 1953, to 141,000 tons in April last, while that from the U.K. declined from 186,000 tons to 163,000 tons. Aggregate export of steel by all the West European countries were generally at a lower level than in 1951, owing to a falling off in the demand from overseas.

The consumption of crude steel in 20 European countries increased from 48.7 million tons in 1951 to 58.1 million tons in 1952, that is, an increase of 9.4 million tons. A part of this increase may represent increases in stocks, particularly those held by consumers. Stocks of finished steel held by producers in the U.K. and West Germany at the end of 1952, as compared with those at the end of 1951, were higher by a quarter of a million tons.

West European countries have ambitious plans for increasing the production capacity of their iron and steel industry. Approximate production of crude steel in 1952 and the targets of some important West European countries are as follows:

(In million tons)

	1952	Target for 1956 planned capacity
U.K.	16.12	20.00
West Germany ...	15.65	20.00
France	10.89	17.00
Saar	2.77	
Belgium	5.01	5.70
Luxembourg ...	2.95	3.40
Italy	3.48	4.00

In view of the expected increase in production in Europe and prospects of keen competition from that part of the world, it is natural that Japan should feel perturbed. The Japanese interests are stated to have agreed that they must export steel even at prices below the cost of production, if they are to stabilise their position in the South-East Asian markets. They claim that a dual price system—with domestic price bearing the loss sustained by the export price—is unavoidable, if the South-East Asian markets are not to be lost to West Europe and the U.K. Japanese exports of steel in 1952 were 1.47 million tons (valued at $231 million). But it is feared that exports will drop this year from the target of 1.20 million tons to no more than 800,000 tons, if steel is not offered at cheaper rates. Consequently, five leading manufacturers of Japan have already decided to accept an order from Pakistan for 9,500 tons of iron and steel at rates far below the current Japanese quotations.

Aid to Japanese Steel Industry

The Japanese Government is expected to aid the steel industry by revising the taxes in a downward direction and lowering interest rates on loans. The discount rate of the Bank of Japan, under the expected financial aid, will most probably be 1.4 sen (100 sens make one yen) a day per 100 yen, as against 1.9 sen at present. In other words, the rate of interest may be reduced from 6.93 per cent. to 5.11 per cent. per annum. The export insurance premium is also expected to be lowered from 40 sen to 10 sen per yen. The interest rate of the Export and Import Bank is also expected to be lowered.

The aforesaid assistance will be given to all heavy industries, including coal, electric power and ammonium sulphate. For the coal mining industry, a marginal subsidy will be granted for payment of interest on loans from the Development Bank and city banks. At the same time, payment of loans taken from the now defunct Reconstruction Finance Bank will be shelved temporarily. The present 10 per cent. consumption tax on electric power industry will be abolished. This will, however, be offset by a 10 per cent. increase in the power charge.

With a view to competing effectively in foreign markets, Japan proposes to revive the pre-war cartel system, subject to certain regulations by the State. An official Bill to this effect has already been adopted by the Lower House and is expected to be passed by the Upper House without any difficulty. The Japanese Government claims that cartels are more efficient than a mass of small firms and is confident that it can protect the public against the abuses of cartels by suitable controls.

DIESEL ENGINES

THEIR USE TO BE ENCOURAGED

REPORTS from New Delhi indicate that the Government of India has decided to encourage the use of diesel engines in place of Otto engines (or petrol engines, in common parlance) in all nationalised road transport undertakings in the country. This decision follows the unanimous agreement among the transport organisations, under the auspices of the Central and State Governments, at the Second All-India Transport Commissioners' Conference, held in Kashmir in May last, to switch over, as far as possible, nationalised road transport from petrol to diesel operation. The Tariff Commission, it may be recalled, has recommended, in its report on the automobile industry, the use of diesel engines for heavy commercial trucks and heavy passenger vehicles.

Although a diesel engine costs more than an Otto engine, and the initial costs are higher, it is more economical. The thermal efficiency of the diesel cycle is considerably higher than that of the Otto cycle. Again, the maintenance cost per mile is one-half to two-thirds of an Otto engine. Further, there is less danger of fire in the case of diesel than in that of Otto engines. Experiments have shown that the diesel can be used even on steep roads without loss of power by the vehicle.

There are also certain other advantages. Diesel oil is cheaper by some 20 per cent. than petrol. Although the calorific value per lb. of petrol and diesel oil is the same, the specific gravity of diesel oil is higher than that of petrol by 16 per cent. This, together with the higher thermal efficiency of the diesel engine, explains why the fuel consumption of a diesel truck is 35 per cent. lower than a petrol-driven truck. If the power which an Otto engine generates out of one gallon of petrol is taken as 100, the power which a diesel produces out of one gallon of diesel oil is approximately 155, that is, a gallon of diesel oil theoretically gives 55 per cent. more mileage than a gallon of petrol. Lower fuel consumption and lesser fuel price together serve to reduce the fuel cost for a diesel ton-mile by 50 per cent., as compared with a petrol vehicle. As India has to import all the motor oil, it follows that every ton-mile transported by diesel trucks, instead of petrol trucks, saves for India 50 per cent. foreign exchange. Only, the use of diesel engines will serve further to restrict the already limited market for petrol-driven vehicles manufactured in the country. There is at present only one automobile firm in India which has plans for manufacturing diesel engines. There is also a proposal to start a factory in South India for the production of Benz type of diesel engine chasis.

IMPORT OF AUTOMOBILE SPARE PARTS

Through a notification published in a *Gazette of India Extraordinary*, dated 25th July, 1953, the Government of India has sought to remove doubts about the licensing policy for imports of automobile spare parts. The notification reiterates the Government of India's desire to give liberal facilities for imports of automobile spares. It says:

"The licensing policy for the import of motor vehicle parts falling under serial Nos. 293, 295 and 297 of Part IV of the Import Trade Control Schedule for January-June, 1953, has been published in Appendix 'ZA' of the relevant Red Book and for July-December, 1953, in Appendix 'P' of the current Red Book. The policy and procedure has been designed to facilitate liberal imports of automobile spares through all possible channels, namely, established importers, recognised assemblers, fleet owners, workshops owners and spare parts merchants.

"Apart from the issue of quota licences to established importers, and newcomer licences to dealers in spare parts, provision has been made, in paragraph 7 of Appendix 'ZA' and paragraph 6 of Appendix 'P', for the grant of special licences to 'persons who had been dealing in spare parts of motor vehicles in the past and were obtaining their supplies through assemblers and stablished importers, provided they are prepared to invest a substantial sum for importing automobile parts.' In this connection, doubts have been expressed in some quarters as to whether established importers who find their established quotas inadequate or who have felt obliged in the past to obtain a portion of their requirements from recognised assemblers and other established importers are also eligible to apply for these special licences. These doubts are unfounded, for it has been the Government's intention throughout to grant reasonably liberal facilities for imports of automobile spares to all those (i) who are able to invest substantial sums of money and (ii) who had, in the past, been obtaining a portion or the whole of their requirements directly from assemblers and other established importers. Persons and firms, whether established importers or dealers in spare parts, or workshops owners, who fulfil these two conditions are eligible to apply for these special licences."

INVESTMENTS OF SWEDISH INSURERS

DETAILED CONTROL EXERCISED BY GOVERNMENT

SWEDEN is one of those European countries where insurance companies have expanded both in number and magnitude of their operations, thanks to the impetus to national economy given by the war and to the large increases in income as well as in commodity and property values which necessitate larger insurance. And Sweden is also one of those countries where the investments of insurance companies are controlled by the Government. The latest issue (the June issue) of the *Index*, the Journal of Handelsbanken, Stockholm, gives an up-to-date account of the activities of the Swedish insurance companies, which makes most interesting reading.

For a small country, such as Sweden, the number of insurance companies is certainly large, for there are as many as 1,339 insurers there. But most of these companies belong to the "casualty" group, that is, fire and accident insurers. Thus, there are 1,296 casualty companies, whereas the companies which transact life assurance are smaller in number, 23 to be precise. Life assurance companies are, as a rule, large institutions, whereas most of the casualty insurers are very small local companies whose business field is geographically very limited. The following table gives the number of insurance companies and the administered capital owned by them:

	No. of companies	Administered capital* Mil. Kr.	Percentage
Life assurance companies	23	6,324	77.8
Health insurance and workmen's compensation and insurance companies	12	239	2.9
Casualty insurance companies ..	1,296	1,511	18.5
Reinsurance companies	8	85	1.0
Total ..	1,339	8,159	100.0

* This figure refers to the total of the companies' balance-sheets less loans against insurance policies, the value of reinsurers' liability and the group "other assets."

During 1952, new life policies were taken out for Kr. 1,740 million, which was 36 per cent. more than in 1950. Similarly, fire and other casualty insurers have increased their business. The pronounced increase in new insurance policies has resulted in the growth of the investment capital of these companies. During the past three years, the rate of increase of capital has been about 10 per cent. per annum. That the Swedish insurance companies have greatly expanded their business activities will be evident from the fact that their capital investments are now of the order of Kr. 8,112 million as against Kr. 3,117 million in 1938. It is estimated that, by the end of 1952, the insurance companies' combined capital investments amounted to Kr. 9,000 million, which implies a rise of about 80 per cent. since 1945.

The following table gives the distribution of these investments:

Insurers' Capital Investments

	1938 Mil. Kr.	1938 Percentage	1951 Mil. Kr.	1951 Percentage
Real property	137	4.4	350	4.3
Equities	61	2.0	192	2.4
Mortgage loans ..	1,327	42.6	2,330	28.7
Municipal loans ..	201	6.4	486	6.0
Bonds and debentures ..	1,130	36.3	3,056	48.8
Other securities ..	132	4.2	479	5.9
Cash in hand and balances at bank	129	4.1	319	3.9
Total ..	3,117	100.0	8,112	100.0

According to current regulations, 90 per cent. of the life assurance fund, corresponding to the companies' obligations towards the insured persons, must be invested in Gilt-edged securities, mortgages within the two-thirds of the assessment value, municipal loans or in certain other approved securities. Only 10 per cent. of the fund may be freely invested, though no part of the fund may be invested in equities. There is, however, no restriction regarding the investments of their free reserves—that is, those reserves which have accumulated over years through setting aside profits. These reserves constitute about 10 per cent. of the life assurance companies' administered capital. The casualty insurance companies are, however, permitted, for the most part, to invest their funds freely at their own discretion.

The insurance companies, as the table above shows, invest their funds primarily in bonds and debentures which account for nearly half of all the investments. Mortgage loans account for 30 per cent. of their investments. The structure of the companies' investments has remained practically unchanged during the post-war years. But, as compared with pre-war years, there has been a significant change. Whereas the proportion of mortgage loans has declincd, that of bonds has increased in importance. There is also a certain difference between the investment structure of the life assurance companies and that of the casualty insurance companies. In the former, bonds and mortgage loans, entirely predominate at over 80 per cent. of total investments while the corresponding figure for the general insurers is only 55 per cent. A substantial proportion of the bond holdings consists of bonds of the various official and private mortgage institutions. It is estimated that the insurance companies devote, either directly or indirectly, about 40 per cent. of their investments to housing finance.

In 1952, the insurance companies reached an agreement with the Riksband under which they agreed to work within the general policy of credit restraint. This agreement was replaced by another agreement reached at the end of 1952. The main difference, as compared with the earlier agreement, is that the funds constituting the life assurance fund may only be invested in such bonds and debentures as have been issued after October, 1952, and in mortgage loans only on buildings created after the end of June, 1951. Loans to industry were restricted. Purchases of real property, it was agreed, should not be financed from the life assurance fund. As regards the free funds, the life assurance companies have undertaken not to alter the structure of their earlier investments. The increase in these funds, amounting to between Kr. 50 and 100 million per annum, is still being freely invested.

SENTINEL ASSURANCE CO., LTD.

The life department of the 18-year-old composite insurance office, the Sentinel Assurance Company, Ltd. (General Manager: Mr. T. Bagchee, Bombay), was able to record commendable progress during 1952, inasmuch as both the new business for the year and the total premium income in that department were higher at Rs. 25.76 lakhs and Rs. 6.95 lakhs, respectively, as compared with Rs. 17.03 lakhs and Rs. 6.58 lakhs in the previous year. The progress of the general department, consisting of fire, marine and accident sections, was, however, somewhat less encouraging. The gross premium income from all sections was Rs. 14.91 lakhs, as compared with Rs. 15.71 lakhs in 1951, and the net premium income Rs. 9.40 lakhs, as against Rs. 9.64 lakhs. The fact the Company could do with the transfer of a smaller sum of Rs. 85,000 to reserve for bad debts, as against Rs. 1,60,000 in the previous year, was mainly responsible for the decision by which the Directors were able to distribute not only the accumulated arrears of the 5 per cent. preference dividend for 1951 and 1952 but also an ordinary dividend of 3 per cent. for the latter year.

Apart from the premium income, the main source of income in the life department is the interest on investments which was slightly lower at Rs. 1.70 lakhs. The average interest yield for the year was only 4.42 per cent. as against 4.77 per cent. in 1951. Both claims by death and claims by maturity were lower at Rs. 0.67 lakh and Rs. 1.75 lakhs, respectively. The renewal expense ratio has, as in the case of most other insurers, risen. It was 17.3 per cent. as compared with 16.8 per cent. in the previous year. The Company's life assurance fund, as at the end of 1952, was Rs. 34.58 lakhs.

In the general department, the gross premium income, as already stated, declined from Rs. 15.71 lakhs to Rs. 14.91 lakhs. So did the net premium income from Rs. 9.64 lakhs to Rs. 9.40 lakhs; the net premium income in 1952 was made up of Rs. 4.79 lakhs in the fire department, Rs. 1.24 lakhs in the marine department and Rs. 3.37 lakhs in the accident department. The Company maintained the allocation to reserves in all its three sections at 40 per cent. of the net premium income, besides, additional reserves at Rs. 0.48 lakh, Rs. 0.12 lakh and Rs. 0.34 lakh in the fire, marine and accident departments, respectively. Claims experience, was, unlike in the case of several insurers, very favourable in the accident department where it was 32.24 per cent., as against 43.59 per cent. In the fire department, the loss ratio increased from 5.8 per cent. to 15 per cent. There was a steep increase in loss ratio in the marine department from 13.6 per cent. to 48.13 per cent. though it was considerably less than in 1950 when it was as high as 95.5 per cent.

The profit and loss account received the transfer of the trading profits from the fire, marine and accident departments at Rs. 1.11 lakhs, Rs. 0.35 lakh and Rs. 5,224 respectively. These sums, together, with the income from other sources such as interest and dividends, made in all Rs 1.91 lakhs. The payment of income-tax for 1950 absorbed Rs. 0.22 lakh. Depreciation of investments was provided at Rs. 15,174 and reserve for bad and doubtful debts at Rs. 85,000. Expenses of management, not applicable to any fund or account, were Rs. 15,174. There was thus a balance of Rs. 0.59 lakh which, together with Rs. 1,525 carried forward from the previous year's account, made available a sum of Rs. 0.61 lakh for appropriation. Out of this sum, the payment of 5 per cent. preference dividend for 1951 and 1952 absorbed Rs. 40,000 and of ordinary dividend at 3 per cent. Rs. 15,000. A sum of Rs. 5,000 was appropriated towards writing off a part of the amount transferred to life fund. All this left a small sum of Rs. 710 to be carried forward to the current year's accounts.

The Company's strong financial position is reflected in the fact that, apart from the capital of Rs. 1 lakhs, its reserves make up an impressive total of Rs. 48.26 lakhs which includes life insurance fund Rs. 39.34 lakhs, fire insurance fund Rs. 2.40 lakhs, marine insurance fund Rs. 0.62 lakh and accident insurance fund Rs. 1.68 lakhs.

UNITED INDIA LIFE ASSURANCE CO., LTD.

The latest valuation report of the United India Life Assurance Company, Ltd. (Manager: Mr. N. V. Nayudu, Madras), for the triennium ended 31st December, 1952, shows that this premier South Indian insurance company has had yet another period of useful service to its credit. The valuation which was performed by the Company's Actuary, Mr. J. R. Rana, on a conservative basis of an interest rate of 2½ per cent. has disclosed a surplus of Rs. 33.61 lakhs, as compared with Rs. 21.99 lakhs in the triennium ended 31st December, 1949. This surplus, together with the interim bonus paid (Rs. 51,255) and tax deducted at source (Rs. 8.67 lakhs) during the period under review, makes a total of Rs. 42.79 lakhs. Out of this sum, the shareholders receive Rs. 2.49 lakhs, provision for income-tax is made at Rs. 5.16 lakhs and policyholders receive Rs. 35.15 lakhs as against Rs. 2.21 lakhs, Rs. 5.08 lakhs and Rs. 21.04 lakhs respectively in the previous valuation. The Actuary has recommended the distribution of the policyholders' share in the shape of a reversionary bonus of Rs. 12 per Rs. 1,000 sum assured per year for whole life policies, a reversionary bonus of Rs. 10 per Rs. 1,000 sum assured per year for endowment assurance and life income policies and Rs. 4 per Rs. 1,000 sum assured per year for the closed series, formerly known as the "capitalised profits" scheme. These three classes of policies had received Rs. 9, Rs. 7 and Rs. 3 respectively in the last valuation. In the case of policies transferred to the Company in terms of the Allianz Und Stuttgarter Life Insurance Bank Ltd. Transfer Act of 1950, the Actuary has recommended a reversionary bonus of Rs. 5 per Rs. 1,000 sum assured for the years 1951 and 1952. The increase in the shareholders surplus has enabled the Company to pay a higher dividend of Rs. 50 per share of Rs. 100 each for 1952 as against Rs. 30 paid for the previous year. Ordinarily, the Company can be expected to continue the enhanced rate of dividend for 1953 and 1954 also. The life assurance fund of the Company stood, as at 31st December, 1952, at Rs. 6.86 crores.

The valuation has further disclosed that both the gross and net rates of interest earned by the Company's fund have increased, the former from 3.70 per cent. to 4.18 per cent. and the latter from 3.11 per cent. to 3.23 per cent. The renewal expense ratio has gone down considerably; it was only 14.30 per cent. for the triennium 1950-52 as compared with 15.87 per cent. in the previous three-year period. The results of the valuation, as the Actuary himself points out, must be considered "gratifying" not only on account of the handsome surplus disclosed and the consequent increase in the return to policyholders and shareholders but also for the fact that a handsome allocation could be made in the context of the stringent basis adopted for valuation, and the depreciation in securities. It is also encouraging to note that the Company will, according to him, be able to maintain its bonus in future at approximately the same rates as have now been declared. This encouraging remark should prove a strong selling point for the Company's field-workers.

During the year 1952, the Company wrote a new business of Rs. 3.82 crores, as against Rs. 3.57 crores in the previous year. The total business in force now aggregates over Rs. 25.32 crores, of which a sum of Rs. 1.94 crores has been reassured. The total revenue from premiums, interest and other sources increased from Rs. 1.29 crores to Rs. 1.37 crores. Claims were a shade higher at Rs. 34.20 lakhs. The Company has, since its establishment in 1906, paid claims aggregating Rs. 3.04 crores.

The favourable mortality experience and the increase in the rates of interest earned by the Company have enabled it to give a commendable lead to other insurers by reducing the premium rates, thereby passing on the benefit of these two factors to the policyholders. The United India must be congratulated on the bold lead given by it in reducing the premium rates for certain ages at entry. It is to be hoped that the lead will, as the Chairman, Mr. M. Ct. M. Chidambaram Chettyar pointed out in his address at the annual meeting of the Company, be "followed by other progressive-minded insurers" with a view to popularising insurance.

The welcome, albeit limited, reduction in premium, which the United India has effected, coupled with the increase in bonus rates, which it has announced, should enable the Company, to write a larger volume of business in future years, both at home and abroad. The foreign business now forms about 11.5 per cent. of the Company's total business. This proportion is bound to increase when the benefits conferred by the Company's policies receive the publicity they deserve. Referring to the importance of foreign business, the Chairman said that insurance calls for the "utmost efficiency, the highest order of integrity and a spirit of service." Having these qualities in an abundant measure and inspired by these ideals, he said, the United India men abroad are "worthy ambassadors of the institution, nay, Indian insurance and this country itself."

HYDERABAD UNITED INSURANCE CO., LTD.

The results of working of the Government-sponsored Hyderabad United Insurance Co., Ltd. (General Manager: Mr. H. D. Mehta, Hyderabad-Deccan), for the year 1952, show that the Company has been making satisfactory progress. The premium income in the Company's two principal departments, namely, fire and miscellaneous, have gone up. In the fire department the premium income has moved up from Rs. 1.96 lakhs in 1951 to Rs. 2.37 lakhs in the year under review. Similarly, in the miscellaneous section, it has increased from Rs. 0.23 lakh to Rs. 0.54 lakh. The Company commenced writing marine business only in 1951, and the premium income in that department in 1952 is, as is only to be expected, a small figure. The Company reinsures the whole of its marine business.

The loss ratio in the fire department was only 19.1 per cent. and the working of this department resulted in an underwriting profit of Rs. 0.51 lakh. In the miscellaneous section, the loss ratio was somewhat higher at 54.8 per cent. Consequently, its working resulted in a loss of Rs. 0.26 lakh. This is due to the fact that the motor department has to work in the context of the large increase in the cost of repairs. Addressing the annual meeting of the Company, Mr. L. N. Gupta, Chairman, expressed the hope that the Tariff Committee of the Bombay Regional Council, which had increased its rates in the Bombay Island area, would extend these rates to the areas other than Bombay, as "otherwise it may be difficult to operate profitably." He added: "The claims and the cost of repairs are still high and only by the most exacting standards of underwriting have we been able to keep within small proportions the loss in this department."

After taking into account the income of Rs. 24,206 by way of interest and the profit of Rs. 0.51 lakh from the fire department, and providing for depreciation on investments Rs. 52,908 and the losses suffered by the marine department (Rs. 2,318) and the miscellaneous department (Rs. 25,909), there is a loss of Rs. 5,892. This loss, together with the loss of Rs. 58,182 brought forward from last year, makes a total loss of Rs. 64,074 which is carried forward. Apart from the capital of Rs. 10.81 lakhs, the Company's funds consist of fire fund Rs. 94,804, miscellaneous and marine insurance fund Rs. 21,869 and investment fund Rs. 1,29,870.

Addressing the annual meeting of the Chartered Insurance Institute, held at London recently, Mr. Harry Routh, retiring President, dealt with the subject of recruitment to the insurance industry. He said: "Insurance is commonly regarded—though in some ways most inaccurately—as 'white collar' work and conventional 'white collar' jobs no longer enjoy the prestige that attached to them years ago. The sixth form in the average secondary or grammar school is not looking towards insurance—its eyes are fixed rather on the laboratory and the university lecture-room." Mr. Routh said that young men on the threshold of a university career should remember two things. "First, a degree does not of necessity mean a job. There is, I believe, a higher proportion of unemployment among university graduates than among unskilled labourers. Secondly, I maintain that several years in commerce give a man an education second to none. The market place is still the best university in the world."

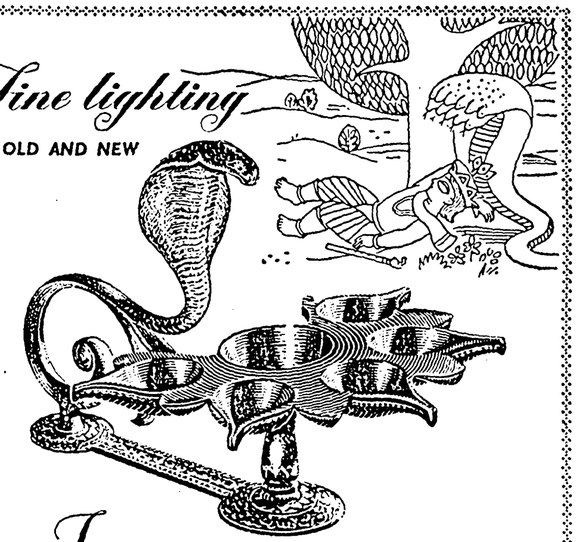
Fine lighting
OLD AND NEW



The Indian craftsman who made this light-piece combined design with mythology by casting as the central figure, a *Naga*, about whom there are many heroic stories. In one tale it is said that when Lord Krishna was a child he fell asleep in the shade of a poisonous tree which had been planted there as part of a pre-conceived conspiracy to destroy him. As he slept the tree dripped its poison onto his face. A *Naga* gliding by realized that murder was being perpetrated, and spreading his hood as a shield to protect the child-god, collected to himself the venom falling from the tree. In the light-piece, the spread hood of *Naga* forms a reflector for the flames in the five beautifully shaped *dipaks*.

Philips in India are stimulated by the knowledge that they are carrying forward India's heritage of fine lighting by producing, as the result of ceaseless research, fine lighting for all needs of the present age.

UNITED INDIA LIFE ASSURANCE CO., LTD.

MR. M. CT. M. CHIDAMBARAM CHETTYAR'S ADDRESS AT ANNUAL MEETING

A SENSE of disappointment over the tendency to subject the insurance business to non-statutory controls, in the form of the "Code of Conduct," was expressed by Mr. M. Ct. M. Chidambaram Chettyar, Chairman of the United India Life Assurance Company, Ltd., in the course of his speech at the Annual General Meeting of the Company held at Madras on 29th July, 1953. He expressed the view that no organisation could work satisfactorily, much less the insurance business, if it was put in a straight jacket. Life insurance business, in particular, because of its peculiar nature, needed a human and realistic approach to the human and realistic problems, which it aspired to answer. It was, therefore, Mr. Chidambaram Chettyar said, futile to set it to any pattern. He was not, however, opposed to any form of control. He said that statutory control should be limited to broad outlines of policy.

The following is the text of Mr. Chettyar's speech:—

"Our new business for the year amounted to Rs. 382 lakhs registering an increase of Rs. 25 lakhs over the previous year. First year's premium amounting to Rs. 16.47 lakhs was higher by Rs. 1.15 lakhs, the business in force at Rs. 25 crores increased by more than Rs. 1 crore. The life insurance fund increased by Rs. 44 lakhs to Rs. 685 lakhs. The renewal expense-ratio of the Company was 14.56 per cent.

"I am glad to announce that plans are getting ready for the construction of our building in Mount Road, Madras, to be jointly owned by the New Guardian of India Life Insurance Company and ourselves. This will be a unique construction in 14 floors providing amenities to our staff, our agents and our policyholders. I expect this building will be ready in time for the celebration of our Golden Jubilee early in 1956.

"An investigation into the assets and liabilities of the Company has been made by our Actuary as at 31st December, 1952. The report of the valuation is in your hands and you will be presently considering it in the Extraordinary General Meeting. You will observe that the results of the investigation are highly satisfactory. Our valuation bases continue to maintain our conservative standards.

"Our mortality experience, reflecting the qualities of selection of lives exercised by our agents, field officials, medical examiners and the office underwriters, has improved by over 15 per cent. during the triennium. The interest yield has also improved by nearly ½ per cent. (gross) during the triennium and present indications point to a still higher yield on new investments. I am sure that you will appreciate our having avoided the temptation to value our policy liabilities at a higher rate of interest. Our expenses of management have also reduced during this triennium by over 1.5 per cent. We have thus not only financed our expansion, particularly in the overseas territories, out of current revenues, but also consolidated the position of the Company as a whole by keeping well within the expense limitation, provided in the Insurance Rules. The provision for payment of future bonuses to policyholders has also been maintained.

"I should like to invite your attention to the valuation of the 'Allianz' portfolio transferred to us by Act XLII of 1950. It has been possible to declare a bonus to the participating policyholders of that Fund. It is a matter for gratification that, even in the first valuation since the transfer took place, the policyholders derive substantial benefits therefrom.

"The valuation has disclosed a surplus of Rs. 42,79,474, which has enabled a reversionary bonus of Rs. 12 per thousand sum assured per annum for whole life policies and Rs. 10 per thousand sum assured per annum for endowment assurance policies. The bonuses to our participating policyholders is higher by Rs. 3 per thousand per annum than the amounts declared in the previous valuation.

"We have also taken this opportunity to effect a reduction in our rates of premium for certain ages at entry and I am sure our patrons, the public, will appreciate this gesture. You will also recall that in my address to you last year, I had touched upon the fact that the cost of life assurance benefits in India is very high and it behoves us all to work towards a reduction by economy in the costs of procuring and serving the business; and, an improvement in mortality brought about by continued progress in living standards and education in public and personal health as well as by working towards a better selection of lives for insurance. You will be glad to know that in this, as in many other fields of rationalisation, we have taken the lead, which, I am sure, will be followed by other progressive-minded insurers.

"You will be happy to know that since my last address to you, we have made strenuous efforts to extend our business overseas, especially in Malaya and Ceylon. Insurance is a service which transcends national boundaries. Extension of insurance services has always been recognised as one of the most important channels of spreading goodwill among nations besides being an important means of earning foreign exchange for the home country. Insurance services call for the utmost efficiency, the highest order of integrity and a spirit of service. Having these qualities in an abundant measure and inspired by these ideals, the United India men abroad are worthy ambassadors of the institution, nay, Indian insurance and this country itself. In extending our activities through them, we have maintained our usual high standard of underwriting, management and services to our patrons, policyholders and agents; and it is a matter of justifiable pride that we have already achieved a measure of success in our enterprise.

"The proportion of our business in force overseas to the total business of the Company is about 11.5 per cent. According to our present organisational plans, the proportion is expected to increase.

"In 1950, I confessed to a sense of disappointment that 'our legislators have attempted to go too minutely into them (the details of insurance business) to succeed in their basic commendable objectives,' and, 'have failed to see the wood for the trees.' The tendencies which I deprecated even then have now become pronounced through further non-statutory controls over the business in the form of the code of conduct. No organisation could work satisfactorily, if it is put in a straight jacket. Life insurance organisation, in particular, needs a human and realistic approach to the human and realistic problems which it aspires to answer. The business has such wide ramifications, the needs it serves so diverse in character, the persons employed are drawn from so many walks of life and the technical details so complicated that it is futile to attempt to set it to any pattern. The attempts already made by law, if they have failed in their underlying objects, are due to an inadequate realisation of these characteristics of the business. In saying this, I should not be understood to oppose any form of control. I am as deeply conscious as any of the basic need for regulating life insurance business in order to build up and foster sound traditions of underwriting, investments, and actuarial valuations and to ensure fair, prompt and efficient services to the policyholders through a well-trained organisation. Statutory control should be limited to broad outlines of policy in the above directions and I would once again plead with the authorities not to let the restrictive provisions become so involved as to be unworkable and even unenforceable.

"During the previous occasions when I had the privilege of addressing you, I have been emphasising the great value we attach to the training of our agents and other field men in order to equip them for rendering better services to our policyholders, and, through satisfied policyholders, to extend our life insurance services to every section of the community. Many agents have developed into career men in life insurance and set about their work with the confidence born out of a conviction that life insurance salesmanship is a socially useful function and that they are well equipped with the knowledge necessary to perform that function efficiently. The pioneering efforts we have made in this direction have been widely appreciated in insurance circles and emulated by quite a few."

For the attention of

Far-sighted Industrialists

RAW MATERIALS CONTROL

With every prospect of a buyers' market ahead, you are concerned to keep your manufacturing costs to a minimum. The raw materials cost of a product forms a high proportion of the total factory cost in paper and textiles, and a serious item of expense in engineering and chemicals. You may be wondering whether your staff are linking the provisioning of raw materials with sufficient closeness to your manufacturing programme. Then you want to be sure that you are actually receiving the materials you have paid for and, finally, that the minimum wastage and quality loss occur in the manufacturing processes. You are not prepared to accept only verbal assurances at your plants that nothing further remains to be done along these lines. You have heard that impartial analyses and subsequent statistical control figures, (that is, quality control,) have achieved further worthwhile economies in coal, timber, and steel, and in cotton and jute fibres.

COMPENSATION FOR INVOLUNTARY UNEMPLOYMENT

TRIPARTITE CONFERENCE ACCEPTS 14-POINT FORMULA

THE two-day session of the Standing Labour Advisory Committee, which concluded on 28th July, was a great success. The most important achievement of the session was the agreement reached among the representatives of employers and workers on a 14-point formula for giving compensation to workers who become unemployed for reasons beyond the control of managements such as power shortage. It is not merely the material benefit that would result when the formula is adopted that is important, but also the voluntary acceptance of the formula by employers. It is certainly a tribute to employers, in that it is proof of their readiness to do everything in their power to alleviate the sufferings of workers.

The agreement mutually arrived at the tripartite conference provides for payment of 50 per cent. of the basic wage and dearness allowance to workers as compensation for the duration of involuntary unemployment. The duration of the benefit will, however, be restricted to a period of 45 days in a year. This agreement will shortly be considered by the Central Government and, when approved, a Bill will be prepared to be enacted into law. This scheme is the first of its kind for the benefit of Indian workers and constitutes the second social security measure, the first being the Employees' Provident Funds Scheme. The compensation formula applies both to the public and private sectors of the industry.

The following are the main features of the agreement:

Compensation will be payable only to permanent workers on the muster rolls of the company. Casual workers will not be eligible for it. Even permanent workers must have completed one year of service to be eligible for this relief. No compensation will be payable to those workers for whom alternative employment is provided. The workers will have to accept such work, where special skill or previous experience is not required. During the period of involuntary unemployment, the workers should answer the roll at least once a day. No compensation shall be payable for the days during which a worker has worked elsewhere.

Lay-off

The formula states that no matter relating to a lay-off, necessitated by factors resulting in involuntary unemployment, shall be referred to conciliation or adjudication. Any existing provision in standing orders or any agreement in existence in regard to such lay-off shall be superseded by legislation to give effect to this formula. Such legislation, it was further decided, shall be Central legislation and shall apply to all States. It was also agreed that, if as a result of a strike or slow-down in a department, there were to be unemployment in any other department, no compensation would be payable to workers thus subjected to involuntary unemployment. Factories employing less than 50 workers or doing intermittent type of work or engaged in seasonal operations are exempted from the application of this scheme.

The formula outlined above is more than just to workers. The limitation of the duration to 45 days will provide enough time for workers to seek employment elsewhere, in case the conditions of the enterprise concerned is not expected to return to normalcy within that period. Commenting on this feature of the agreement, Mr. G. Ramanujam of the Tamil Nad I.N.T.U.C., Coimbatore, is reported to have said that there should be no time limit at all, for the number of involuntary unemployment days in South India considerably exceeded the limit agreed to. This, however, is not a fair view to take. While this consideration for workers is understandable, it must also be realised at the same time that shareholders too suffer from the effects of involuntary unemployment. They cannot afford to keep on paying compensation to workers for an endless period, especially when the causes of unemployment are not of their making. While the workers will get at least half wages for a month and a half, the shareholders stand to get nothing.

Small Factories

The scheme does not impose any hardship on small factories, as they are absolved from the obligation. It will prove a deterrent to strikes, as it is clearly stipulated that involuntary unemployment in one part of a factory, consequent on strike in another part of it, will not entitle the workers affected to compensation. This provision will help provoke the assertion of the collective conscience of the workers against a few recalcitrant elements in their ranks who resort to unhealthy tactics. It is true that, as the worker gets only 50 per cent. of his total emoluments, he will still be subject to hardship. But that cannot be helped. Any deviation from this step in favour of higher compensation will amount to burning the candle at both ends.

The tripartite committee, at its last meeting also examined the question of having Central legislation for shops and commercial establishments. The workers' representatives were in favour of Central legislation, but the employers desired that special consultation be undertaken with those who would actually be affected by it, as they were not represented at the meeting. In view, however, of the fact that several States had legislation to regulate employment conditions in shops and establishments, it was felt that it would be sufficient if the Centre enacted a model legislation, laying down standards considered to be a reasonable minimum. It was accordingly decided that, if the State legislation conformed to the standards prescribed in the Central law in all respects, it would not be necessary to apply the Central law to that State, but, where the State Act did not conform to those standards, the State must either amend its law to bring it up to those standards or to follow the provisions of the Central law.

There is, however, another side to this question. There is no uniformity in economic conditions in all the States. Nor is there any uniformity in regard to social customs and religious festivals. In fact, these conditions vary from one centre to another. That being so, conditions of employment in shops and other similar establishments throughout India cannot be the same. There is need for flexibility in these matters and any move for uniformity, which will necessarily have to be based on conditions in big cities like Bombay and Calcutta, will adversely affect employment opportunities in the interior. It is, therefore, better to leave this matter to be settled by individual States, according to the circumstances prevailing in their respective areas. Indeed, even individual States will do well to formulate rules and regulations region-wise. After all, shops are local institutions seeking to serve the needs of local people. No great harm can come to inter-State commerce by the lack of uniformity in these small matters.

Holidays

The Standing Committee discussed several other topics including the need for uniform standards of paid holidays and productivity programmes. With regard to the uniform standards for paid national and festival holidays in private industrial undertakings, the Committee postponed consideration of the subject, as conflicting views were expressed at the meeting. So far as productivity schemes are concerned, the employers expressed their willingness to contribute their share towards the cost of the proposed national centre. The workers favoured productivity studies, provided they were carried out in consultation with workers' organisations and the experts confined their activities to the carrying out of studies and formulation of recommendations leaving the implementation of their proposals to the parties concerned.

The question of the composition and status of the tripartite machinery also received considerable attention at the meeting under review. The consensus of opinion was that the size of the Standing Labour Committee and the Indian Labour Conference should not be increased but, if it was found necessary to include representatives of Part C States, a proportionate increase in the number of representatives of both labour and management would be essential. The meeting was of the view that the Government should implement the unanimous decisions of tripartite conferences and committees.

THIRD ASIAN REGIONAL CONFERENCE

The International Labour Organisation has accepted an invitation from the Government of Japan to hold the next Asian Regional Conference in that country. This is the third in the series of regional conferences for Asia; the first was held at New Delhi during 1947 and the second in Ceylon during 1950. The Conference, which will be held from 14th to 26th September, will discuss problems of wage policy, workers' housing and measures for the protection of young workers, including vocational guidance and training. The meeting will also discuss a report by the Director-General of the I.L.O. which will contain a survey of the technical assistance activities of the I.L.O. in Asia. Among others, Afghanistan, Australia, Burma, Cambodia, Ceylon, France, Hong Kong, India, Japan, Laos, the Federation of Malaya, the Netherlands, Pakistan, the Philippines, Singapore, the United Kingdom, Indonesia, and Viet Nam are expected to attend the Conference. The Governments of Nepal and the United States have been invited to send observer delegates.

ECONOMICS OF STORES PURCHASE

GOVERNMENT URGED TO GIVE PREFERENCE TO INDIGENOUS GOODS

THE one signal service which the Audit Department in India has done to the country is to point to the wastage, neglect and incompetence which have marked the expenditure pattern in the several departments of the Governments—Central and State. Nowhere is this wastage so marked as in the sphere of purchase of stores and the grant of contracts. An important factor responsible for this is the defective system of stores purchase. The result has been colossal waste of public money. This could have been avoided, if a rational stores purchase policy had been followed. The need for the adoption of such a policy has long been felt. The appointment of the Stores Purchase Committee by the Government of India some time ago came, therefore, not a day too soon. It may be noted here that the total purchases of stores by the various departments of the Government of India, including the regional offices, I.S.D., London, and the I.S.M., Washington, is of the order of Rs. 95 to Rs. 100 crores per annum. This figure will be still higher if account is taken of the orders directly placed for certain types of defence and railway stores and for meeting the requirements of State projects.

The above Committee is now busy examining the replies to its questionnaire by various commercial bodies and trades associations. The recommendation of this Committee and the decisions that the Government of India will take thereon are being awaited with considerable interest, especially in the present context of the implementation of the Five-year Plan, under which the State has assumed a relatively larger share of responsibility than private enterprise. Inasmuch as the purchase policy of the State has significant influence on the production programme of indigenous industries, there is utmost need for following a rational policy with due regard, inter alia, to development of Indian industries. It is precisely this need which has been emphasised by the Federation of Indian Chambers of Commerce and Industry, in the course of its memorandum to the Stores Purchase Committee.

The most important point that the Federation has sought to stress throughout relates to "price preference" for articles manufactured in India, either wholly or in part. To quote it: "Purchases from local sources, even at some sacrifice of economy and efficiency, should be considered desirable, inasmuch as a temporary monetary loss to the Exchequer will yield, even within a measurable period of time, economic and social dividends to the community as a whole in the shape of improved quality of the products and lower prices, through increased technical efficiency, as also by way of opening new opportunities and new avenues of employment to the nationals of the country." In support of this thesis, it cites the instance of the Buy American Act.

Few will fail to appreciate the anxiety of the Federation to develop Indian industries, but not all will agree with the Federation's statement that price preference should be extended to an extent which will involve some sacrifice even in the matter of quality. Surely, one cannot expect the Governments to purchase whatever product is offered to them irrespective of quality, especially when the quality of several products is known to be very much below the standard and does not compare favourably with the imported articles. Moreover, such a policy has a tendency to take away from the factories the incentive to improve the quality of their products. The utmost that can be expected of the Government in this direction is some concession in the matter of price, provided the quality of the products concerned comes up to the specifications laid down by the authorities.

There is considerable force in the Federation's plea for widening the scope of the Central Purchasing Organisation (C.P.O.), so as to include all purchases by, or on behalf of, defence services, railways, post and telegraphs, certain State-owned industrial undertakings, river valley authorities, etc. Centralisation of authority in one organisation has two distinct advantages. First, it will ensure effective coordination between the purchase policy of the C.P.O. and that followed by the Development Wing of the Ministry of Commerce and Industry, thereby helping the development of indigenous industries. Secondly, it will enable the C.P.O. to prepare more conveniently consolidated forward indents of the different purchases and spread the purchases over a period, thereby dividing the quantities of total purchases among the different indentors.

The policy of bringing all the different purchasing authorities under the jurisdiction of the C.P.O. is not, however, without any drawback. It will not, for instance, result in quick purchases. But this can be avoided by a proper reorganisation of the purchasing agency. As the Federation has rightly observed, the feasibility of decentralising, under the centralised control of the C.P.O., purchases and strengthening the staff at the regional offices should be considered in the interest of bringing the purchaser and the contractor closer in the centres from where most of the firms submit tenders for supply of stores. The two specific suggestions that have been made in this context are, (1) strengthening of the inspecting staff, and (2) extending testing facilities to more centres, particularly in the Bombay region.

The Federation refers next to the question relating to the procedure for registration of supplies. It has put forward several valuable suggestions which, if implemented in right earnest, will not only remove the existing handicaps but also improve the procedure considerably. These suggestions include (1) revision of the list of registered firms afresh; (2) simplification of procedure regarding registration; (3) classification of items of stores under some broad groups; (4) periodical review of the list of registered firms; (5) extension of time limit for receipt of tenders; (6) supply of tender notices—not forms—to registered firms; and (7) avoidance of extending the opening date of the tender.

The Federation has also made a few pertinent observations on the tender system for the purchase of stores. The tender system, as readers are aware, is the only system which is open to a Government which is anxious to spend public money in a manner which will not arouse suspicion. Also, the tender system enables the Government to obtain supplies of stores at an economic price. There is, therefore, no exaggeration in the following remarks of the Federation:

"The object of obtaining supplies of stores through tenders is to make it possible for Government to get stores at most competitive and economic rates. This can be ensured only by healthy competition by various tenderers. The Committee, therefore, feel that, excepting in some special cases, outright purchases of stores from State-owned industries, where such stores are available from other sources, should not be made without inviting tenders. The special cases, may be where stores are needed almost immediately and are available from some Government undertakings. Ordinarily, stores to be purchased from State-owned industries should be treated on the same terms and conditions as those governing supplies to be obtained from private firms or industries, so that considerations of price and quality are allowed to operate."

Another important aspect of stores purchase policy which has been dealt with at length by the Federation relates to payments in respect of supplies bought by the Government. The chief consideration that has weighed with the Federation here is the need for ensuring prompt payment for supplies, since such payment has a healthy effect on rates of tenders. While pleading for the continuance of the present system of payment—under this, 90 per cent. of the price of each consignment is paid on proof of despatch of stores, the balance being paid on actual receipt—the Federation wants the Stores Purchase Committee to make a sample survey of the pending claims with a view to examining whether payment is being delayed or refused in some cases on minor technical grounds.

Referring to the procedure for inspection, the Federation points out that inspection should be carried out on a sample basis so as not to cause undue delay in the issue of inspection certificates in an effort to have 100 per cent. inspection. Wherever 100 per cent. inspection is desired, adequate staff should be provided to minimise delays and save expenses to contractors. In this connection, it has emphasised the importance of reducing time in handling inspection of stores by providing adequate facilities for testing stores in different centres and speeding up the work of testing.

With regard to the disposal of surplus stores, the Federation favours the present system of disposal on "as is where is" basis. It, however, feels that, before placing goods for disposal, the lots should be sorted. The assortment of lots, according to it, will enable the Government to secure better prices, for the bidders engaged in particular lines will be willing to pay more for the goods they are in need of, rather than having to buy also certain other types of goods in the marketing of which they may not have the requisite knowledge and experience.

* * * *

The Indian Merchants' Chamber, Bombay, has also submitted a detailed memorandum to the Stores Purchase Committee.

MR. KARMARKAR'S OPTIMISM

That India's economy has not only recovered from the ravages of the Great War and Partition but is now "well placed on the road to improvement and progress" was the note of optimism struck by Mr. D. P. Karmarkar, Union Minister for Commerce, in the course of his address at the annual meeting of the Rajasthan Chamber of Commerce held in Jaipur last week. It is rather difficult fully to share this optimism of Mr. Karmarkar. True, several sectors of agriculture and industry have registered improvement in recent years. The general index of industrial production (Base: 1946=100), for instance, which was as low as 105 in 1950 and 117 in 1951, moved up to 129 in 1952 and stood at 141 in April, 1953. But the point is whether this trend would be maintained in the subsequent months, what with the steady rise in cost of production and the contraction in the buying capacity of the people. The general index number of wholesale prices (Base: August, 1939=100) which had stood at as low as 374.7 early in the year has gone up to more than 407.5.

The outlook for exports also has not been quite satisfactory; the value of exports fell from Rs. 702 crores in 1951-52 to Rs. 554 crores in 1952-53. This is not surprising, considering the establishment of a buyers' market for commodities the world over. Reassuring, however, is the statement of Mr. Karmarkar that an all-out drive for export promotion would be undertaken and that suggestions made by commercial bodies for concrete steps to be taken in that direction would receive the careful consideration of the Government.

Mr. Karmarkar emphasised the importance of pursuing the policy of swadeshi and said that this principle was almost a habit with the citizens of advanced countries and did not require special propagation there. He thought that the growing industries required "consistent patronage" from the people for their development. Utilisation of local raw materials wherever available and use of capital goods indigenously made, a greater utilisation of national services like shipping, banking and insurance—all these were, in his opinion, directly conducive to the national interest. No one would dispute the reasoning behind these observations. One may, however, ask: Should the patronage for indigenous products be extended irrespective of considerations like quality, price, etc.? Surely Mr. Karmarkar will not expect such patronage. For, as he himself stressed, industry has to co-operate by keeping up a high standard of production and trade has to contribute its best by adopting fair practices in the interests of consumers.

PAPER MANUFACTURE IN BURMA

A paper and pulp factory, estimated to cost Rs. 7 crores, is proposed to be established by the Government of Burma at Natseikhonboke, about 30 miles from Akyab. The project is to be implemented as a joint enterprise of the Government and private firms—local and foreign. The Government is expected to contribute at least 50 per cent. of the total value of the shares. It will also retain the right to engage the services of engineer-consultants on general technical matters. The private participant in the project will assume responsibility for the management of business, and terms and conditions are to be mutually agreed upon. If the participant were to be a foriegn concern, it would be assured of reasonable facilities for transferring abroad profits gained from the enterprise, the details of the actual extent and the rate of transfer being worked out by mutual discussions.

The proposed factory, it is estimated, will produce from raw bamboo about 100 tons of paper per day. Of this quantity, 30 tons are for local consumption and the remaining for export.

Preliminary investigations have already been conducted in regard to the implementation of the project. These investigations are reported to have revealed that "there is sound economic justification for launching the enterprise."

THIRTY-FOURTH LAUSANNE NATIONAL FAIR

Two great trade fairs—the National Fairs of Basle and Lausanne—are held in Switzerland every year which provide a decisive stimulus to the economic life of that country. At these fairs, manufacturers regularly display and concentrate, in one vast exhibition, the main achievements of Swiss industry. The 34th Lausanne National Fair will be opening its gates from 12th to 27th September, 1953. A few figures will suffice to show the importance of this Fair. The Fair covers an area of over 1,000,000 sq. ft., possesses 16 halls, divided into 20 groups, and displays the products of 2,250 exhibitors from all the Swiss cantons. On a scale in keeping with the size of the country, it is claimed to be the most complete and instructive object lesson in agriculture, industry, trade and craftsmanship—the basic elements of an economy closely bound up with world trade.

put 'Paludrine' on your payroll

Absenteeism is today a serious problem, which employers of labour everywhere are forced to face. In India Malaria as the greatest single cause of illness has a direct effect on the absentee rate.

'Paludrine' prevents Malaria

Put it to work today in your factory and establishment. Let regular 'Paludrine' dosage raise the level of health among your employees, and so cut down that rising curve of lowered efficiency and lowered production, which always accompanies absenteeism.

All over the world today 'Paludrine' is doing just this job in many establishments and organisations, where its continued use bears silent but irrefutable testimony to its efficacy and power.

Yes—put 'Paludrine' on your payroll and fight one of the most serious causes of absenteeism in India today.

We shall be happy to co-operate with you in implementing a scheme for 'Paludrine' Protection in your establishment. Special rates are available for bulk purchases. Please write today to the nearest office of I.C.I.

STEPS TO INCREASE PRODUCTIVITY

NATIONAL CENTRE IN OFFING

MR. A. W. Baker, the productivity expert of the International Labour Organisation, disclosed the other day at Bangalore that the I.L.O. had suggested the establishment of a national productivity centre in India. He also stated that the I.L.O. had offered financial assistance for the purpose. Mr. Baker who, with the assistance of another expert, has been demonstrating that productivity in the engineering industry, centering around Calcutta, might be substantially increased by following modern methods of work, study and organisation, is of the considered opinion that such a centre is a necessity. The Government of India seems to be favourably disposed towards this idea.

The proposal for the establishment of a national productivity centre has its origin in (1) the desire, expressed in various quarters, that the work begun by the I.L.O. mission in the field of productivity in India should be continued, and (2) certain proposals relating to improvement of productivity made in the Five-year Plan such as training-within-industry, payment by results, and advisory committee consisting of representatives of employers' and employees' organisations to advise the Labour Ministry.

The objects of the Centre would be (a) to assist in the implementation of the proposals contained in the Five-year Plan for future action in the field of productivity, and (b) to further the application in India of modern techniques for raising productivity, especially those which require little or no new capital investment. In other words, the central feature of the proposal to set up a national productivity centre is the application of modern engineering and management techniques for the purpose of raising productivity and earnings by making better use of the existing plant and equipment, and by improving the working conditions and human relations in industry. The Centre will also conduct studies in selected plants and organise practical training courses.

The emphasis on the better use of existing plant and equipment cannot be too strongly made because capital for investment in India is in short supply and will be so for a long time considering the great and expanding need for it. As pertinently remarked in the Five-year Plan: "The fuller utilisation of existing capacity must necessarily be a prime consideration in policy, for where such capacity exists, increases in productivity can usually be secured at diminishing cost per unit. The increase in productivity per unit of resources already employed can make a vital contribution to the increase in total production so urgently needed at the present time." It must be noted, in this connection, that productivity is usually understood to mean capacity to produce, not in the aggregate—for in a growing country, aggregate productive capacity naturally tends to increase irrespective of other changes—but in the sense of ratio between "output" of product and "input" of labour, time, capital and other equipment, motive power, managerial effort, and other factors of consumption.

The importance of a national productivity centre will be better appreciated if it is borne in mind that productivity is reported to have fallen by 20 per cent. in the steel industry, 35 per cent. in the cotton textile industry and 20 per cent. in the sugar industry, as compared with what prevailed before the war. It is common knowledge that attempts at rationalisation of the industries has been vehemently opposed by labour unions, on the ground that they lead to unemployment. But it is an admitted fact that it would be impossible to maintain, if not improve, the living standards of the people, as a whole, unless productivity is increased in this fast-changing and competitive world.

The achievement of productivity clearly calls for concerted action on the part of Governments, employers and workers. The Governments are responsible for creating conditions favourable to higher productivity by promoting a balanced programme of economic development and by adopting appropriate economic and social policies in such matters as foreign trade, capital formation, monopolistic practices and the supply of raw materials, etc. It must also see that unemployed labour arising from the implementation of measures for realising higher productivity are gainfully deployed elsewhere and their hardship reduced, if not eliminated. It must see that the share of workers in the benefits of higher productivity is clearly determined and the consumer also gets the benefit of higher productivity by means of cheaper consumable commodities.

Increased productivity in any undertaking calls for action in three main fields, namely, (1) the organisation and control of production, (2) personnel policy and (3) plant and equipment. The question of organisation and control of production involves not only satisfying the existing demand of the market but also creating new demands, so that there may be an expanding market to absorb the additional production consequent on the application of productivity measures. There should be emphasis on research and the price policy. Progressive companies, it may be mentioned in passing, often price a new product according to its expected eventual market rather than according to present cost, or immediate sales. Productivity is, in fact, a constant experimentation with new methods, ideas and approaches. So far as policy relating to personnel is concerned, it should include industrial training, management, development programmes and the opportunity for workers to rise to the top. Industrial relations should be based on deep respect for human beings. Every attempt should be made to improve the plant and equipment and to keep it always at the highest pitch of efficiency as far as possible. It may be noted here that the productivity of a typical American labourer is higher than it was half a century ago not because he is stronger, or more skilful, or more diligent than the worker of 50 years ago, but because he uses better methods, more and better tools and machines and vastly more mechanical power. These methods, tools, machines and sources of power have been made available at great cost and risk by owners and investors and by the initiative and competitive urge of managements. This is a point which trade union leaders in this country, who are in the habit of decrying employers and investors, will do well to note and appreciate.

TRADE UNIONISM

Addressing the first meeting of the All-India Council of Labour and Welfare Officers, held last week, at the Secretariat, Bombay, Mr. Shantilal H. Shah, Minister for Labour and Health, expressed the view that all ideas of trade unionism in the professions of labour and welfare officers should be discouraged. The objective of the Council, he said, was essentially to promote the workers' welfare by discussing appropriate approaches and techniques and this should not be lost sight of. Representatives from all over India representing various industries such as cement, cotton textiles, engineering, iron and steel, jute, mining, plantations and shipping and various institutions connected with labour welfare and social work attended the meeting.

Referring to the first All-India Conference of Labour and Welfare Officers, held in Bombay recently, which appointed this Council, the Minister said that the Conference had demonstrated the need for bringing together all labour and welfare officers periodically to exchange their views and discuss common problems. Now that so many industries and regions had been represented on this Council, Mr. Shah asked them to investigate possibilities of preparing some useful and continuous programme and suggested that technical advice in labour welfare work, research pertaining to labour welfare, unification of all journals of labour welfare, planning for welfare of labour, undertaking and promoting publications in the field of labour welfare and holding periodical conferences should form some of the items of such a programme.

MINIMUM WAGES FOR HOTEL EMPLOYEES

The Government of Bombay proposes to fix the minimum rates of wages for employees in residential hotels, restaurants and eating houses. Accordingly, it has issued a preliminary notification giving three months' notice of its intention to add the employment in any residential hotel, restaurant or eating house to Part I of the Schedule to the Minimum Wages Act, 1948, with effect from 15th November next. After it is decided to include the employment in the schedule, a committee will be appointed under the Act to advise the Government in the matter of fixation of minimum wages for this class of employees.

Notices

THE TATA IRON AND STEEL COMPANY, LIMITED

NOTICE

THE FORTY-SIXTH ORDINARY GENERAL Meeting of the Shareholders of THE TATA IRON AND STEEL COMPANY, LIMITED, will be held on Thursday the 3rd September, 1953, at 4-30 p.m. (S.T.), at the Registered Office, Bombay House, 24, Bruce Street, Fort, Bombay, to transact the following business:

1. To receive and adopt the Directors' Report and Audited Profit and Loss Account and Balance Sheet for the year ended 31st March, 1953, and to declare Dividends on First Preference, Second Preference, Ordinary and Deferred Shares.
2. To elect a Director in place of Sir M. Visvesvaraya, who retires by rotation and is eligible for re-election.
3. To elect a Director in place of Sir Chunilal V. Mehta, who retires by rotation and is eligible for re-election.
4. To elect a Director in place of Mr. D. M. Khatau, who retires by rotation and is eligible for re-election.
5. To elect a Director in place of Mr. Neville N. Wadia, who retires by rotation and is eligible for re-election.
6. To appoint Auditors for the current year and to fix their remuneration.
7. To consider and if thought fit, to pass the following Resolution:

RESOLVED that pursuant to Article 130 of the Articles of Association and all other enabling powers in this behalf this General Meeting do hereby sanction borrowings by the Directors for and on behalf of the Company exceeding (with the loans already borrowed) in the aggregate the issued capital for the time being of the Company provided that the total amount borrowed and outstanding at any one time shall not exceed Rs. 20 crores or the issued capital for the time being of the Company whichever is greater and that accordingly the Directors are authorised to borrow such additional sum or sums from time to time as may be deemed expedient by them for and on behalf of the Company upto the aforesaid limits and the provisions of Articles 131 and 132 of the Articles of Association of the Company shall apply to all such borrowings.

By Order of the Directors,
TATA INDUSTRIES LIMITED,
Managing Agents,
J. D. CHOKSI,
Director.

BOMBAY, *27th July*, 1953.

Note.—The Transfer Books of the Company were closed on Monday the 29th June, 1953, and will reopen on Wednesday the 29th July, 1953.

If dividends on shares as recommended by the Directors are passed at the Meeting, the payments will be made to those shareholders whose names are on the Company's Register on the 28th July, 1953. The payments will be made on and after the 4th September, 1953.

IMPERIAL BANK OF INDIA

NOTICE

THE ANNUAL GENERAL MEETING OF THE Shareholders of the Imperial Bank of India will be held at the Local Head Office of the Bank, Madras, on Friday, the 28th August, 1953, at 3 p.m. (Standard Time), for the transaction of the following business:—

1. To receive the Central Board's Report, the Balance Sheet of the Bank made up to the 30th June, 1953, and the Report of the Auditors.
2. To elect three Auditors and to fix their remuneration.

A. R. CHISHOLM,
Managing Director.

BOMBAY, *15th July*, 1953.

INDUSTRIAL FINANCE CORPORATION OF INDIA

KEELING ROAD,
NEW DELHI

NOTICE

NOTICE IS HEREBY GIVEN THAT THE FIFTH ANNUAL GENERAL MEETING of the Shareholders of the INDUSTRIAL FINANCE CORPORATION OF INDIA will be held on Saturday the 19th September, 1953, at 4.00 p.m. (Standard Time), in the hall of the Constitution Club, Curzon Road, New Delhi, to transact the following business:—

(1) The Balance Sheet of the Corporation and the Profit and Loss Account for the year ending 30th June, 1953, together with a report by the Board on the working of the Corporation throughout the year and the Auditors' report on the said Balance Sheet and Accounts shall be read and considered.

(2) To elect one Director each in place of (1) Sir Birendra Nath Mookerjee, (2) Mr. B. K. Shah, F.I.A., (3) Mr. R. G. Saraiya, O.B.E., being Directors elected to represent shareholders referred to in clauses (c), (d) and (e) of Section 10 of the Industrial Finance Corporation Act, 1948, respectively who retire by rotation and are eligible for re-election as provided by Section 11 of the Act.

(3) To elect under Section 34 of the Industrial Finance Corporation Act, 1948, one Auditor duly qualified to act as Auditor of Companies under Sub-section (1) of Section 144 of the Indian Companies Act, 1913 (VII of 1913) by the parties mentioned in Sub-section (3) of Section 4 of the Industrial Finance Corporation Act, namely, Scheduled Banks, Insurance Companies, Investment Trusts and other like financial institutions and Co-operative Banks in place of Messrs. S. B. Billimoria & Co., Bombay, who retire at the end of the year but are eligible for re-election.

V. R. SONALKER,
Managing Director.

NEW DELHI, *29th July*, 1953.

JARDINE HENDERSON, LIMITED

NOTICE IS HEREBY GIVEN THAT THE Seventh Ordinary General Meeting of the Shareholders will be held at the Registered Office of the Company, No. 4, Clive Row, Calcutta-1, on Friday, the 18th September, 1953, at 12 o'clock noon, for the following purposes:—

(1) To receive and adopt the Directors' Report and Audited Accounts for the year ended 31st March, 1953, and the Balance Sheet as at that date.

(2) To confirm the Dividends already paid on the Preference Shares and to declare a Dividend on the Ordinary Shares of the Company.

(3) To elect Directors.

(4) To appoint Auditors and to fix their remuneration.

The Transfer Books of the Ordinary Shares of the Company will be closed from the 1st to the 18th September, 1953, both days inclusive.

By Order of the Board,
D. FORDWOOD,
Secretary.

4, CLIVE ROW,
CALCUTTA-1, *30th July*, 1953.

Note.—Payment of any Dividend declared will be made only to those members whose names are registered in the Books of the Company on the 18th September, 1953, or to their Mandatees.

No application for Warrants will be necessary. Claims on behalf of holders of shares on blank transfer will not be entertained.

THE BRADBURY MILLS LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Fortieth Ordinary General Meeting of the Shareholders of the Company will be held on Thursday the 27th August, 1953, at 5.00 p.m. (S.T.), at the Registered Office of the Company, Imperial Bank Building, Bank Street, Fort, Bombay, to transact the following business and for the purpose of considering, and if thought fit, of passing as a Special Resolution, the Special Resolution specified below:

1. To receive and adopt the Directors' Report and Audited Statements of Accounts for the year ended 31st March, 1953.
2. To declare a Dividend on Preference and Ordinary Shares.
3. To elect two Directors in place of those who retire by rotation but, being eligible, offer themselves for re-election.
4. To appoint Auditors for the current year and fix their remuneration.

SPECIAL RESOLUTION

"RESOLVED that each of the 4,000 Ordinary Shares of the Company of Rs. 250 each fully paid up and each of the 6,000 7 per cent. Cumulative Preference Shares of the Company of Rs. 250 each fully paid up be sub-divided into 5 (five) Ordinary shares of Rs. 50 each fully paid and 5 (five) 7 per cent. Cumulative Preference Shares of Rs. 50 each fully paid respectively and that the Certificates for such sub-divided shares be issued within one year from the date of this resolution against delivery of the Certificate for the original share."

The Share Transfer Books of the Company will be closed from Monday the 10th August 1953 to Saturday the 5th September, 1953, both days inclusive.

By Order of the Board,
For RAMNARAIN SONS LIMITED,
RADHAKRISHNA RAMNARAIN,
Director,
Agents.

BOMBAY, *29th July*, 1953.

N.B.—Dividend if sanctioned, will be payable at the Registered Office of the Company on and from 3rd September, 1953, to those Shareholders whose names stand on the Register on Monday the 10th August, 1953. Intimation of any change of address should be given to the Company immediately.

THE CHAMPDANY JUTE COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT THE SIXTIETH ORDINARY GENERAL MEETING OF THE CHAMPDANY JUTE COMPANY LIMITED, will be held at the Registered Office of the Company, No. 2, Netaji Subhas Road, Calcutta, on 25th August, 1953, at 12 noon, for the following purposes:—

1. To receive and pass the Directors' Report and Audited Accounts for the half-year ended 31st March, 1953.
2. To declare a dividend.
3. To elect Directors.
4. To appoint Auditors and fix their remuneration.
5. To transact any other competent business that may be brought forward.

The Share Register of the Company will be closed from 11th August to 25th August, 1953, both days inclusive.

Dividend Warrants will be issued and posted to Registered Shareholders only. Persons holding shares on blank transfer are advised to effect registration of scrip in their names before 11th August, 1953.

By Order of the Board,
JAMES FINLAY & CO., LIMITED,
Managing Agents.

2, NETAJI SUBHAS ROAD,
CALCUTTA, *1st August*, 1953.

RESULTS OF BIRD-HEILGERS JUTE COMPANIES

ALL, EXCEPT NORTHBROOK, SHOW SETBACK IN EARNINGS

IT is a paradox that the Indian jute industry, which is one of the largest exporting industries of the country and on which great reliance is being placed for maintaining India's export trade at a high level, should very often be afflicted by the ills of speculative markets in both raw jute and manufactured goods. During the half-year ended 31st March, 1953, for instance, trading conditions were rendered difficult by this adverse factor and jute mills, with a heavy percentage of sacking looms, could not do business at a profit. The financial results of the group of jute mills under the management of Messrs. Bird & Co., Ltd., and Messrs. F. W. Heilgers & Co., Ltd., Calcutta, for the half-year under reference, fully reflect the effects of these conditions.

The audited accounts of the nine companies in the group, which are briefly analysed in these columns, show that all of them, with the sole exception of one, have had uniformly adverse results. The trading profits of four of them, namely, the Auckland Jute Co., Ltd., the Kinnison Jute Mills Co., Ltd., the Lansdowne Jute Co., Ltd., and the Lawrence Jute Co., Ltd., disclose considerable shrinkage, as compared with those of the previous two half-years. The performance of four other companies, namely, the Naihati Jute Mills Co., Ltd., the Standard Jute Co., Ltd., the Union Jute Co., Ltd., and the Dalhousie Jute Co., Ltd., has been much more disappointing, inasmuch as all these four have suffered losses, albeit small, for the second half-year in succession. The Northbrook Jute Co., Ltd., is the only one which has been able to record a slight improvement in its trading profit, as compared with the previous half-year, though the profit for the half-year under review is still less than half of that for the corresponding period of last year. None of the Companies has been able to add anything to the reserves, while in the previous half-year two of them could put by something. The first four Companies mentioned above have had to cut their dividends, Standard, Union and Dalhousie have just maintained the token dividends which they had paid for the previous six months, while Naihati has had to skip over the dividend for the second half-year in succession. In fact, this Company has fallen in arrears of dividend on its preference capital for the last two half-years. Northbrook has proved to be an exception in the matter of dividend distribution also, in that it has enhanced its dividend.

Decline in Sale Proceeds

The aggregate sale proceeds of gunny for the nine Companies for the half-year under review amount to Rs. 9.21 crores, as compared with Rs. 10.96 crores for the previous half-year and Rs. 12.43 crores for the corresponding six months of the previous year. The value of closing stocks in all cases shows a considerable fall. This is partly attributed to the change in the method of treating the value of manufactured goods undelivered against sales at the close of the half-year from that adopted in the previous half-years. The value of undelivered goods against sales has been added to the sale proceeds which has had the effect of reducing, by a similar amount, the manufactured stocks held at the close of the half-year under review. This, however, has no effect on the trading results. The aggregate trading profit of all the Companies amounts to no more than Rs. 9.37 lakhs, as against Rs. 24.31 lakhs for the preceding six months and Rs. 105.52 lakhs for the corresponding six months of 1952. The contribution of each Company to this total is as follows:

(In lakhs of rupees)

	Half-year ended		
	31-3-53	30-9-52	31-3-52

N.B.—In the above table + indicates profit, while − indicates loss.

Directors' Observations

The sharp setback in the profit is attributed to the drastic fall in prices of raw jute during the half-year under review. In this connection, the following observations of the Directors will be read with interest:

"As at 31st March, prices of raw jute were at their lowest levels for a number of years, but have since improved substantially. In valuing stocks of jute at market value the effect on the profits for the half-year has been severe, but your Directors consider it desirable to pursue a consistent policy in the valuation of jute stocks and the writing down of stocks in the half-year under review will reflect on the results for the half-year ending 30th September, 1953. . . . During the period under review speculative and fluctuating markets for both raw jute and gunnies made trading conditions difficult and simultaneous business at a profit was generally impossible for mills with a high percentage of sacking looms. Early in the period, stocks of sacking commenced to accumulate and even the reduction in the export duty from Rs. 175 to Rs. 80 per ton on 28th February, 1953, did not have the desired effect of stimulating demand to any appreciable extent. During recent months shipment of heavy goods have improved and stocks were reduced, but overseas demand is still disappointing. Hessian prices have been fairly well maintained during the greater part of the period, chiefly on account of prospects of an increase in consumption in the U.S.A. and substantial buying by the Argentine. . . . Raw jute prices have fluctuated considerably during the period under review. The Government of India and the industry as a whole have no desire to see the prices of raw jute drop to dangerously low levels but, with raw jute plentiful at declining rates and prices for manufactured goods falling, jute was available at as low a price as Rs. 18 per maund basis bottoms. Due, however, to inclement weather and the shortage of good quality hessian, jute prices rose steadily and at the time of writing prices are steady at Rs. 25-8. It is pleasing to report that Pakistan on 25th March removed the discriminatory levies imposed last August on all jute entering India."

Despite the disappointing results, the provision for depreciation has been more than maintained at the previous half-year's level, the total amount set aside being Rs. 9.08 lakhs, the provision made in the preceding two half-years under comparison being Rs. 8.85 lakhs and Rs. 10.32 lakhs, respectively. The extent to which the Central Exchequer has been a loser will be evident from the drastic cut in the provision for taxation made by the companies. Thus, this provision aggregates only Rs. 1.57 lakhs, as against Rs. 8.38 lakhs and Rs. 34.41 lakhs in the previous two half-years, respectively.

Net Profit

The aggregate net result, after providing for depreciation and taxation, is a loss of Rs. 5.28 lakhs for the half-year under review, in contrast to a profit of Rs. 2.85 lakhs for the six months ended 30th September, 1952 and as much as Rs. 63.06 lakhs for the half-year ended 31st March, 1952.

As already indicated, the performance of individual Companies varies from each other. Auckland has earned a net profit of Rs. 69,645, as compared with Rs. 2.87 lakhs and Rs. 3.19 lakhs, respectively, for the previous two half-years under comparison, Kinnison Rs. 1.41 lakhs, as against Rs. 5.25 lakhs and Rs. 11.42 lakhs, and Lansdowne Rs. 60,868 (Rs. 1.25 lakhs and Rs. 2.43 lakhs). Standard has suffered a net loss of Rs. 1.29 lakhs, as compared with that of Rs. 1.84 lakhs for the previous half-year and a profit of Rs. 5.16 lakhs for the corresponding half-year of 1952. Union, which had earned a net profit of Rs. 3.75 lakhs a year ago, suffered a loss of Rs. 1.36 lakhs for the half-year ended 30th September, 1952, and this loss has widened to Rs. 2.12 lakhs in the six months under review. Naihati is the worst sufferer, with a loss of Rs. 5.07 lakhs, which represents an increase of Rs. 1.66 lakhs over the half-year under review, and stands in sharp contrast to the profit of Rs. 3.66 lakhs for the six months ended 31st March, 1952. Dalhousie's loss at Rs. 1.39 lakhs has, however, declined from that of Rs. 2 lakhs for the preceding six months, though it compares unfavourably with the profit of Rs. 3.67 lakhs a year ago. Lawrence has earned a net profit of Rs. 27,693 which shows a drop from Rs. 1.60 lakhs and Rs. 4.58 lakhs respectively, for the preceding two half-years. Northbrook's profit of Rs. 1.59 lakhs shows an improvement from Rs. 48,809 for the previous half-year. It, nonetheless, records a setback from Rs. 5.20 lakhs for the corresponding half-year of 1952.

Dividend Record

The dividend record of the Companies for the last six half-years is as follows:

(Per cent. per annum)

	Half-year ended					
	31-3-53	30-9-52	31-3-52	30-9-51	31-3-51	30-9-50
Auckland ..	4	8	10	10	12	8
Kinnison ..	8	14	20	18	20	8
Lansdowne ..	4	6	14	16	22	20
Standard ..	2	2	16	16	18	12
Union ..	2	2	20	22	25	14
Naihati	..	..	12	12	20	10
Dalhousie ..	2	2	12	12	16	6
Lawrence ..	4	8	22	22	25	16
Northbrook ..	7½	5	20	20	..	..

Explaining the results of the Naihati Jute Mills Co., Ltd., in particular, the Directors of the Company say:

"The poor results for the period under review are chiefly due to the very high percentage of sacking looms at your mill and the fact that it was not possible to keep the linoleum looms fully employed, owing to lack of orders for this particular fabric. The mill's on-costs are also very high at the present time, due to debenture interest, without the compensatory savings anticipated from the capital expenditure programme, an uneconomic power plant and heavy repairs to machinery and the mill roof. These are, however, temporary factors and on completion of the electrification and modernisation scheme the mill should become a fully efficient unit. Both these projects are expected to be implemented by late 1954."

The Lawrence Jute Co., Ltd., which had a programme of partial electrification of its mill with its own power plant and had placed orders for the supply of the necessary equipment, has now dropped the programme, in view of the prospects of getting bulk power supply in 1956-57 from the Damodar Valley Corporation through the Calcutta Electric Supply Corporation. The existing plants of the Company can work satisfactorily up to 1958. The Directors have, therefore, decided to proceed with a full electrification scheme when bulk supply becomes available in 1956-57.

The Standard Jute Co., Ltd., has a programme of modernisation. Explaining this programme, the Directors of the Company observe:

"It has been decided to modernise the hessian warp and weft section of your mill with Mackie's modern sliver spinning mahinery to cater for 470 hessian looms at a cost of Rs. 27 lakhs. The remaining 180 sacking looms will be catered for by part of the existing old type machinery. The necessary orders have been placed and delivery of the new machinery is expected in March, 1955. It has also been decided to proceed with the electrification of your mill at an approximate cost of Rs. 9½ lakhs. The capital required for the modernisation scheme will be found partly from the surplus working capital of the Company and partly from the recent issue of a debenture loan of Rs. 25 lakhs bearing interest at 5½ per cent. per annum. Your Directors are satisfied that the above expenditure is essential to make the mill a fully efficient unit."

OUTLOOK FOR TATA LOCOMOTIVE

An optimistic note about the outlook for the Tata Locomotive and Engineering Co., Ltd., was struck by Mr. J. R. D. Tata, Chairman of the Company, in his address to the shareholders at their annual general meeting held last week. Mr. Tata based his optimism on the steady improvement in the tempo of work during the past year, the production of boilers and underframes and the progressive manufacture of locomotives having been substantially higher than in the preceding year. He, therefore, said that the Company could look forward confidently to fulfilling its commitments under the agreement with the Government of India and to reaching the profit-earning stage for boilers and locomotives before the next annual general meeting of the Company.

But the task before the Company in achieving the above objective does not appear to be an easy one, according to Mr. Tata, and the Company has to contend with and overcome some severe handicaps. The Company has to depend on imports for certain specialised items and has to manufacture a large variety of components for locomotives and boilers, which, in industrially more advanced countries, would be available from specialised manufacturers. The dearth of technicians and skilled workers trained in modern production techniques is another major difficulty, though the Company has spared no efforts in building up the required strength of technicians and skilled workers. Yet another source of concern to the Company is the need for additional working funds. Its resources, in respect of working capital, have been strained on account of the fact that it has to transfer a part of its cash outlay to a development fund. This is repayable, in terms of the agreement with the Government, in instalments only after the profit-earning stage is reached. As a result, the Company has to raise additional working funds through loans from banks. The Managing Agents have furnished guarantees on behalf of the Company for raising loans to the extent of Rs. 285 lakhs. In this connection, Mr. Tata drew pointed attention to the usefulness of the managing agency system.

When the Company attains the profit-earning stage for boilers and locomotives, the difficulty in regard to finances will be eased considerably. In the meantime, the Company has requested the Government to agree to pay it a provisional price for locomotives and boilers not less than the actual cash outlay on its manufacture. Mr. Tata expressed the hope that the Government would accede to this request.

As stated in the Directors' report, the Company proposes to give up manufacture of broad-gauge underframes after March, 1954, when the present Government order will be completed, as the demand for the Company's broad-gauge underframes will diminish substantially and ultimately disappear, when the integral coach factory at Perambur commences production. The Company, therefore, proposes to change over to the manufacture of metre-gauge underframes, an order for which is under negotiation. The Company has under consideration a scheme for the manufacture of other engineering products which will find a large market, in order to utilise the surplus capacity.

The Government of India has accepted, in principle, the Company's proposal to install a steel foundry and negotiations are now proceeding for the release of funds from the Development Fund. Mr. Tata gave an assurance that the proposed foundry would not compete with existing foundries in India in producing small and medium-size castings in ordinary steel. Its object was to produce, for its own specialised requirements, as well as for those of other engineering concerns, at present dependent on imports, the heavy and complicated castings in quality steel which could not be obtained in India.

Points From The Chair

Pakistan Government's Import Policy

"IT is unfortunate that the Pakistan Government is still going through a period of difficult times when austerity is necessary. As a result, import licences are very closely scrutinised and limited to what are considered by Government to be essentials. We have great sympathy with the Pakistan Government in their difficulties, which have arisen due to a variety of circumstances, not the least of which has been the shortage of food resulting from two years of drought necessitating heavy importations of wheat. Our relations with the Pakistan Government are very good and, as we save the Government very large sums of foreign exchange, we are confident, our requirements of machinery, equipment, etc., will be treated in a broadminded way and so permit of our maintaining our production and refinery throughout and expanding both whenever we see our way to do so. We have to order much of our materials a long way ahead and it will be a great help to us, if we can get the Pakistan Government to agree to give an undertaking to grant import licences and the exchange cover, therefore, as and when the orders are ready for shipment. At present, we have to take a chance of getting licences when orders are ready for shipment, which is not a very businesslike proceeding from our point of view."

THOMAS TAYLOR MCCREATH,
Attock Oil Co., Ltd.

Old Departmental Store in Bombay to Close Down

"In September last, we received an offer for the lease of the premises occupied by the Company in Bombay and negotiations have been entered into to effect a sale. The decision to close down business in India emerged from changed local conditions which have so adversely affected our trading outlook there, that a satisfactory profit is difficult, if not impossible, of achievement. I cannot say how much I and my colleagues deplore the severance of our retail trading connections in India, as our first store to be opened was in Calcutta in the year 1882. Those shareholders who have carefully read my references to the state of our trading in that country in my address of last year and the year before that, will, I am sure, have realised that the problem of obtaining sufficient supplies of suitable merchandise to maintain turnover in India was then a matter of great concern. It has since proved insurmountable through Government restriction of the imports of that class of merchandise by which our business there built up and maintained its goodwill."

SIR HAROLD GILLETT,
Whiteway, Laidlaw & Co., Ltd.

Two Ways of Reducing Cost of Production

"There are only two ways, according to me, of reducing the cost of production, viz., to obtain raw materials at lowest prices possible and/or to increase production. It is well known that by increasing the production, incidence of cost in the item of 'over-heads' charges goes down. As regards the raw materials, as stated above, we depend upon the fluctuations in foreign markets. Therefore, the only way to reduce the cost is to increase production and this, as you are aware, will entirely depend upon the purchasing power of the people, on the one hand, and the policy of the Government with regard to imports, on the other. The Five-year Plan includes construction of many new roads and it is expected that consumption of bicycles will increase in proportion to increase in road mileage."

RAMESHWARDAS BIRLA,
Hind Cycles, Ltd.

Life Insurance Salesmanship

"During the previous occasions, when I had the privilege of addressing you, I have been emphasising the great value we attach to the training of our agents and other field men in order to equip them for better rendering services to our policyholders, and, through satisfied policyholders, to extend our life insurance services to every section of the community. Many agents have developed into career men in life insurance and set about their work with the confidence born out of a conviction that life insurance salesmanship is a socially useful function and that they are well equipped with the knowledge necessary to perform that function efficiently. The pioneering efforts we have made in this direction have been widely appreciated in insurance circles and emulated by quite a few."

M. CT. M. CHIDAMBARAM CHETTYAR,
United India Life Assurance Co., Ltd.

Freedom for Insurers

"While an overall control from the authorities is necessary for improving the trade, which is of a national character, to put the same on a healthy and sound footing it is essential that freedom be allowed to the insurers to evolve their own methods suitable to them. The working difficulties can only be judged by those experienced in the insurance field, and each insurer has his own set problems to face to develop the business suitable to him which cannot be worked out on a set pattern. From what was said by the chairmen and directors of companies at the various meetings of the Advisory Board of Directors, there appears to be a great divergence of opinion on the subject. It is but natural that with such differences it is difficult to produce a suitable working scheme acceptable to all. If, however, insurers extend to each other their active co-operation in trying to understand the difficulties facing others, and adopt a policy of 'live and let live', I am sure a common understanding can be reached by evolving a scheme which may be acceptable to all and which would ensure a healthier trend in insurance."

FRAMROZE H. MEHTA,
British India General Insurance Co., Ltd.

Company Meeting

THE NATIONAL ELECTRICAL INDUSTRIES LIMITED

EXTRACTS FROM THE SPEECH OF THE CHAIRMAN, SIR CHUNILAL B. MEHTA, AT THE SIXTH ANNUAL GENERAL MEETING OF THE COMPANY, HELD ON 30TH JUNE, 1953.

"IT is a matter for some gratification to your Board that your Company has been making fairly satisfactory progress during the last two years.

"The figures of production and sales for the year ended 31st March, 1952, were Rs. 31,49,763 and Rs. 30,35,278 respectively. For the year ended 31st March, 1953, the respective figures were Rs. 41,47,990 and Rs. 41,80,095. An increase of over Rs. 10 lakhs has been registered in production and over Rs. 11 lakhs in sales. The profits of the Company, however, have not registered a proportionate increase, because of certain factors.

"In this context, I cannot help referring to the policy of the Government of India in permitting imports of transformers from foreign countries when the indigenous production upto about 3,000 kva. is quite capable of meeting the demand in the country. It is surprising that the lower quotations received for transformers from foreign countries, who have benefited by the various American aid programmes, are being accepted and orders are being passed on by the Government of India to these countries, apparently without consideration of the adverse effects, which such imports are having on the indigenous industry.

"It is obvious that we cannot hope to develop our industries as envisaged in the Five-year Plan and at the same time try to save a few lakhs of rupees here and there by importing cheaper foreign products, instead of using the slightly costlier indigenous products. I hope this matter will receive earnest consideration at the highest levels in our country.

"The Government of India have recently sanctioned the establishment of more factories for the manufacture of electrical motors and transformers in the country. Some of them are being established by foreign interests. This again is a matter which, on the face of it, appears deplorable and it is difficult to understand what reasons have prompted the Government in permitting such establishments by foreign interests in the country, when the indigenous industry has been developed to the satisfaction of all concerned.

"Again, the Government have been considering for some time the establishment of a State-owned factory for the manufacture of heavy electrical plant. So far, the Government have not, to the best of our knowledge, consulted the indigenous manufacturers of electrical machinery to ascertain the extent to which the existing manufacturers can co-operate with the Government and co-ordinate their activities, so that the proposed Government factory may not have to go in for the manufacture of items which the existing factories are capable of manufacturing. In the recent past, we have had the example of the Government Machine Tool Factory. The Government had (after several representations were made by the indigenous manufacturers of machine tools) agreed, as a result of a conference, to the principle of avoiding any competition and overlapping between private enterprise and State enterprise. I do hope that in the case of the heavy electrical plant also, the Government of India will consult the indigenous interests before taking a final decision.

"In this context, I would like to urge upon the Government to reserve the manufacture of electrical machinery in the distribution field exclusively by private enterprise. This is a field in which private enterprise has already shown considerable initiative and ability and there is every chance of better progress being made in this direction by private enterprise, provided the necessary favourable climate is created by the Government."

LACK OF ORDERS FOR WAGONS TELLS ON KUMARDHUBI ENGINEERING

SHARP DROP IN PROFIT OF BRITANNIA BISCUIT

Kumardhubi Engineering Works, Ltd.

THE directors of the above Company (Managing Agents: Messrs. Bird & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 30th November, 1952.

The profit and loss account, including Rs. 34,385 (Rs. 42,750) brought forward from the previous year and Rs. 35,507 (*nil*) for dividends forfeited, and after allowing for sundry charges, depreciation, taxation, etc., placing Rs. 25,000 (Rs. 30,000) to tax contingency reserve, shows a credit balance of Rs. 3,14,533 (Rs. 3,49,385) which the directors propose to dispose of as follows:—

In paying a dividend on the preference shares at the rate of 5 (5) per cent. per annum without any deduction for income-tax paid by the Company Rs. 60,000 (Rs. 60,000), in paying a dividend on the ordinary shares at As. 7 (As. 8) per share without any deduction for income-tax paid by the Company Rs. 2,23,125 (Rs. 2,55,000) and in carrying forward Rs. 31,408 (Rs. 34,385).

The capacity of the works has been fairly well utilised throughout the year despite the continued shortage of steel, particularly steel plates.

The reduction in profits is mainly due to the lack of orders for steel wagon castings; in consequence the directors were unable to effect despatches within the financial year, but these should be reflected in the accounts for the following year. Orders have since been received and the position has improved.

The directors have decided to increase the foundry capacity by the installation of an electric furnace together with an increase in the moulding shop floor space.

It is hoped that Government's announced intention to feed ordnance factories with orders at the expense of private enterprise will not be carried out. This would not only be detrimental to the Company's order position, but the country's industrial strength would in the long run be undermined.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	27,30,000	Block ...	31,85,717
Debentures ...	10,00,000	Capital jobs in progress	2,79,925
Reserves ...	34,65,133	Stock-in-trade	32,60,722
Provision for taxation ...	4,68,929	Debts, deposits and advances ...	44,38,516
Liabilities ...	39,18,358	Investments	27,704
Profit and loss account ...	31,408	Cash ...	21,244
Rs.	1,12,13,828	Rs.	1,12,13,828

Britannia Biscuit Co., Ltd.

The directors of the above Company (Secretary: Mr. A. P. Chanda, Calcutta) submit the audited accounts of the Company for the year ended 31st March, 1953.

After providing Rs. 4,20,184 (Rs. 1,69,872) for depreciation and reserving for income-tax Rs. 20,000 (Rs. 4,547) the profit and loss account shows a net profit for the year of Rs. 1,18,326 (Rs. 9,01,646). To this must be added the amount brought forward from the last balance-sheet of Rs. 1,82,277 (Rs. 2,19,056) making a total of Rs. 3,00,603 (Rs. 11,20,704). The directors have transferred to reserve for income-tax contingencies the sum of Rs. 50,000 (Rs. 5,00,000) and paid half-yearly dividend on preference shares absorbing Rs. 618 (Rs. 618) leaving a balance of Rs. 2,49,985 (Rs. 3,16,975 after paying 3½ per cent. interim dividend Rs. 95,771). The directors recommend that the above balance at the credit of the profit and loss account be dealt with as follows:—

To payment of a dividend on preference shares Rs. 618 (Rs. 618), payment of a dividend of 5 (4½) per cent. on ordinary shares Rs. 1,53,234 (Rs. 1,34,080) and to carry forward to the current year's account Rs. 96,133 (Rs. 1,82,277).

The period under review has been a more difficult one than the directors have experienced for a very considerable time. The trade recession which set in, in the latter part of the year 1951, continued throughout the Company's trading year and particularly affected retail business upon which the Company relies for the distribution of its products, and had the effect of considerably reducing the volume of sales as compared with the previous year, although it is reassuring to be able to report that sales from the Company's new Calcutta factory actually increased, the main reduction in business being experienced in markets supplied by its Bombay branch factory.

Unfortunately, the general trade recession had little or no reducing effect on the cost of the main materials and ingredients used in biscuit manufacture. Flour, the main ingredient purchased by the Company and made available either directly or indirectly through Government sources, increased in cost by approximately 22 per cent. As the result of Tribunal awards, the cost of labour also tended to increase throughout the year under review, to which was added the difficulty in dispensing with the services of labour rendered surplus by the reduction in the quantum of production. In spite of these increased costs no increase in the price of the Company's goods to the public has been made.

During the year the Company's capital expenditure plan for the rehabilitation and extension of its factories and replacement of plant was completed. The new and modern plant mentioned in the last report is now installed and at the date of this report is in production. It is anticipated that a further improvement in the quality of the goods and a reduction in the cost of their production will be achieved and is, in fact, already apparent.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	30,80,130	Block ...	77,25,670
Debentures ...	15,00,000	Stock-in-trade	5,13,351
Reserves ...	33,27,348	Stores, etc. ...	19,83,736
Provision for taxation ...	20,000	Other assets	28,000
Liabilities ...	31,73,458	Debts, deposits and advances ...	8,71,561
Profit and loss account ...	96,133	Cash ...	74,751
Rs.	1,11,97,069	Rs.	1,11,97,069

Kumardhubi Fireclay and Silica Works, Ltd.

The directors of the above Company (Managing Agents: Messrs. Bird & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December, 1952.

The profit and loss account after allowing for sundry charges, providing for depreciation, taxation and placing Rs. 68,500 (Rs. 61,000) to the reserve for tax contingency, Rs. 75,000 (Rs. 1,00,000) to the reserve for plant renovation and Rs. 65,000 (nil) to general reserve and including the sum of Rs. 61,833 (Rs. 78,299) brought forward from the previous year, shows a credit balance of Rs. 2,26,448 (Rs. 2,42,058) which the directors propose to dispose of as follows:—

In paying a dividend on the preference shares at the rate of 7 (7) per cent. per annum without any deduction for income-tax paid by the Company Rs. 14,000 (Rs. 14,000), in paying a dividend on the redeemable preference shares at the rate of 5½ (5½) per cent. per annum, after deduction of income-tax paid by the Company Rs. 16,225 (Rs. 16,225), in paying a dividend, on the ordinary shares at the rate of Re. 1-8 (Re. 1-8) per share without any deduction for income-tax paid by the Company Rs. 1,50,000 (Rs. 1,50,000) and in carrying forward Rs. 46,223 (Rs. 61,833).

There was a temporary falling off in output of fire-bricks, but a compensatory increase in the production of silica bricks, which the directors consider is likely to be permanent in view of the expansion of the steel industry. This is being met by the installation of additional machinery, including another press. The Company's raw material position is satisfactory but is constantly under examination. Relations with labour were satisfactory.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	16,00,000	Block ...	69,31,820
Reserves ...	64,21,833	Work-in-progress ...	19,327

Liabilities ...	29,50,373	Stores, etc. ...	9,89,053
Profit and loss account ..	46,223	Debts, deposits and advances ...	20,50,724
		Investments	6,050
		Cash ...	66,144
Rs.	1,13,68,527	Rs.	1,13,68,527

Birpara Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Duncan Brothers & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December, 1952.

The accounts disclose a loss of Rs. 6,27,038 (loss of Rs. 9,11,230). On transfer of this sum to profit and loss account and after sundry adjustments, there is a balance at debit of profit and loss account of Rs. 10,16,394 (debit of Rs. 3,90,222), which the directors propose to carry forward.

Finer plucking together with a continuance of spasmodic labour trouble throughout the year are mainly responsible for the lower outturn. This fall in crop combined with the increased statutory wages to labour and an unfavourable market resulted in a heavy trading loss which would have been of even greater proportions had not prices improved towards the end of the season.

Crop weighed out at 15,604 maunds compared with 17,288 maunds in the previous year. The average selling price was Re. 1-1-2 per lb. against As. 12-5 per lb. in 1951. Planted area is now 1388.24 acres.

Estimates for 1953 provide for a crop of 16,000 maunds at an outlay of Rs. 14,00,100, including inland freight and sale charges.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	10,00,000	Block ...	9,00,000
Provision for taxation ...	32,904	Stores and supplies ...	1,67,944
Liabilities ...	20,35,216	Tea sales receivable ...	8,16,748
		Advances and deposits ...	1,49,521
		Investments	200
		Cash ...	37,313
		Profit and loss account ...	10,16,394
Rs.	30,88,120	Rs.	30,88,120

Ellenbarrie Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Duncan Brothers & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December, 1952.

The accounts disclose a loss of Rs. 2,53,256 (loss of Rs. 2,16,028). On transfer of this sum to profit and loss account and after sundry adjustments, there is a balance at debit of profit and loss account of Rs. 2,75,548 (debit of Rs. 24,794), which the directors propose to carry forward. The loss is mainly attributable to the persistence of a disastrously low market during the major part of the season and the continued high cost of statutory concessions to labour.

Crop weighed out at 5,695 maunds which compared with 5,628 maunds harvested in 1951. The average selling price per lb. was Re. 1-3-1 as against Re. 1-1-3 in 1951. Planted area remains at 500.30 acres.

Estimates for 1953 provide for a crop of 5,800 maunds at an outlay of Rs. 5,65,100, including inland freight and sale charges.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	3,00,000	Block ...	2,16,475
Provision for taxation ...	9,102	Stores and supplies ...	57,750
Liabilities ...	6,16,546	Tea sales receivable ...	3,10,743
		Advances and deposits ...	41,964

		Cash ...	22,968
		Profit and loss account ...	2,75,548
Rs.	9,25,648	Rs.	9,25,648

Delta Jute Mills Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st May, 1953.

After providing Rs. 3,62,000 (nil) for taxation and transferring Rs. 1,00,000 (nil) to general reserve there is a balance of Rs. 4,10,290 (Rs. 3,14,390 after adjusting the loss for the half-year amounting to Rs. 2,16,239) at the credit of profit and loss account from which the directors recommend payment as follows:—

Dividends on preference shares at Rs. 2-8 (Rs. 2-8) per share Rs. 12,500 (Rs. 12,500) and on ordinary shares at Rs. 10 (Rs. 10) per share Rs. 2,80,000 (Rs. 2,80,000) leaving Rs. 1,17,790 (Rs. 21,890) to be carried forward.

In accordance with the working time agreement of the Indian Jute Mills Association the mills worked 42½ hours per week with 12½ per cent. of the total looms sealed.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.

		Cash ...	31,14,858
Rs.	1,03,58,863	Rs.	1,03,58,863

Huldibari Tea Association, Ltd.

The directors of the above Company (Managing Agents: Messrs. Davenport & Co., Ltd., Calcutta) submit the audited accounts of the company for the year ended 31st December, 1952.

During 1952 the tea industry in North East India generally suffered the most serious crisis within experience, and Duars estates suffered particularly, with sale prices greatly below production costs. Every effort was made to improve the standard of teas made, as a result of which there was a material decrease in crop made; but this had little effect when common teas were difficult to sell even at As. 14 a pound during the height of the season.

The total net average sale price for the year 1952 was As. 17.63 per pound as against As. 22.70 for 1951; total working cost per pound of tea produced was As. 20.11, as compared with As. 17.36 for the previous year.

With improved standards of plucking, crop made totalled 1,722,656 pounds of tea, compared with 1,936,384 pounds in 1951, and this reduction is reflected in the cost of production per pound of tea it being essential to maintain a full labour force in order to make a large crop with finer plucking. Largely as a result of the minimum wages award of December, 1951, the dearness allowances in cash and in kind to labour and staff increased from Rs. 6,18,607 in 1951 to Rs. 6,84,186.

In accordance with arrangements made earlier, during the year expenditure was incurred on the frameworks of a new factory verandah, a staff bungalow and a new office; eight *pucca* labourers' houses were erected; four new rollers and three new sorters were installed; and a dust collection plant supplied but not installed. For 1953 all capital projects have been held up but it will be desirable to complete as soon as possible the erection of the factory verandah, bungalow and office referred to above; and to supply additional withering space and machinery in order to bring the manufacturing equipment into line with the current estate output, which now reaches 24,000 mds. of tea, compared with 8,000 to 10,000 mds. in pre-war years. In addition, houses for labour and water supply will require considerable attention in the future. It will be evident, therefore, that the estate must undertake substantial capital expenditure in the years ahead; and at the same time the acute difficulties experienced by a large section of the industry in the past season have emphasised the need for ample finance and the desirability of accepting every opportunity to strengthen the Company's resources.

The revenue loss for the year is Rs. 2,60,799 (gross profit of Rs. 6,08,935) and to this has to be added interest charges and reserve for staff expenses and also Rs. 65,319 (Rs. 48,544) for depreciation of assets. During the year expenditure of Rs. 76,981 (Rs. 14,643) was incurred on replacement of assets no longer serviceable, and against this Rs. 75,000 (*nil*) have been transferred from renewals and additions reserve. Allowing for these and the sundry other adjustments shown, there is a final loss for the year of Rs. 3,20,207 (profit of Rs. 3,59,973) and a final debit balance on this account of Rs. 2,12,109 (credit of Rs. 1,08,098 after paying dividend of 27½ per cent. absorbing Rs. 2,26,875 and transferring Rs. 25,000 to staff reserve), which is carried forward.

Having regard to the heavy loss sustained on the season's working, the managing agents have offered to forgo one half of their commission on tea sales, and this has been accepted.

Estimates for 1953 are based on a crop of 21,000 mds. of tea at a total cost of Rs. 17,23,936. These estimates are based on the minimum wages at present in force, and on the strictest possible economy; continuance of expenditure on this level would not be in the best interests of the maintenance of the Estate, and it is unlikely that production costs as low as the above estimate can be maintained. As. 16.42 per pound of tea can be maintained.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	8,25,000	Block ...	9,94,500
Reserves ...	8,08,650	Stocks ...	8,16,343
Provision for taxation ...	2,18,931	Stores, etc. ...	2,44,610
Liabilities ...	6,76,346	Debts, deposits and advances ...	1,59,621
		Investment	3,517
		Cash ...	98,027
		Profit and loss account ...	2,12,109
Rs.	25,28,927	Rs.	25,28,927

New Chumta Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Davenport & Co., Ltd. Calcutta) submitted the audited accounts of the Company for the year ended 31st December, 1952.

During 1952 the tea industry in North East India generally suffered the most serious crisis within experience, and common producers such as Teral estates suffered particularly, with sale prices below production costs. However, owing to the manufacture of an exceptionally large crop of tea, viz., some 7,022 maunds compared with 5,312 maunds in 1951, and to the exercise of the most careful economy, it was possible to offset the fall in sale prices by a substantial reduction in production costs.

The total net average sale price for the year 1952 was As. 17.42, per pound as against As. 24.56 for 1951; total working cost per pound of tea produced was As. 17.77, as compared with As. 16.84 for 1951.

During the year it was possible to make considerable progress with the new factory which is to replace the one destroyed by fire in 1949; the factory building itself was nearly completed towards the close of the year, but will be available for only part of the manufacture in 1953 and the transfer of most of the machinery to the new building must wait until the close of that season; while it is expected also to complete the new withering accommodation during 1953. During the year under review the boring of the tube well, which is urgently required for improvement of the estate water supply, was completed but unfortunately was found to be only partially successful and although there will be improvement in the position commonly experienced hitherto, the water supply will not by any means be all that is desired. A Britannia roller and balanced green leaf sorter also were supplied during the year.

The gross profit for the year was Rs. 7,327 (Rs. 1,31,616). During the year Rs. 10,763 were spent on replacement of machinery against which Rs. 11,000 have been transferred from renewals and additions reserve; and in addition there was a charge of Rs. 23,208 for depreciation of assets. Allowing for these adjustments and for interest charges, reserve for staff expenses, adjustment of taxation and the other sundry items shown, there was a final loss for the year of Rs. 17,726 (net profit of Rs. 58,132) and a final credit balance on this account of Rs. 25,163 (Rs. 42,890 after paying Rs. 60,000 as dividend, i.e., 20 per cent.) which was carried forward.

Estimates for 1953, are based on a crop of 6,000 maunds of tea at a total cost of Rs. 5,20,860, equal to As. 17.36 per pound of tea produced. These estimates are based on the labour wages at present in force and on the strictest possible economy; continued expenditure on this level would not be in the best interests of the maintenance of the Estate and it is unlikely, therefore, that production costs as low as the above estimate can be maintained.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	3,00,000	Block ...	3,06,554
Reserves ...	3,36,000	Stocks ...	2,02,057
		Stores ...	84,369
Provision for taxation ...	10,791	Debts, deposits and advances ...	62,378
Liabilities ...	1,70,244	Investments	1,42,932
Profit and loss account ...	25,163	Cash ...	43,908
Rs.	8,42,198	Rs.	8,42,198

N.B.—Figures within brackets relate to the corresponding period of the previous year.

COMPANY MEETINGS AND DIVIDENDS

BRITANNIA BISCUIT CO., LTD. Annual General Meeting, Alipore, Calcutta, 10th August, 1953. Dividend: As. 8 per share. Transfer books closed from 6th to 12th August, 1953, both days inclusive.

NEW MONKHOOSHI TEA CO., LTD. Annual General Meeting, Calcutta, 10th August, 1953. Transfer books closed from 3rd to 10th August, 1953, both days inclusive.

NEW ASSAM VALLEY TEA CO., LTD. Annual General Meeting, Calcutta, 10th August, 1953. Transfer books closed from 3rd to 10th August, 1953, both days inclusive.

RUNGAMATTEE TEA CO., LTD. Annual General Meeting, Calcutta, 12th August, 1953. Dividend: *Nil*. Transfer books closed from 6th to 12th August, 1953, both days inclusive.

ELLENBARRIE TEA CO., LTD. Annual General Meeting, Calcutta, 12th August, 1953. Dividend: *Nil*. Transfer books closed from 6th to 12th August, 1953, both days inclusive.

KILLCOTT TEA CO., LTD. Annual General Meeting, Calcutta, 12th August, 1953. Dividend: *Nil*. Transfer books closed from 6th to 12th August, 1953, both days inclusive.

KUMARDHUBI FIRECLAY AND SILICA WORKS, LTD. Annual General Meeting, Calcutta, 14th August, 1953. Dividend: Re. 1-8 per share. Transfer books closed from 28th July to 14th August, 1953, both days inclusive.

KUMARDHUBI ENGINEERING WORKS, LTD. Annual General Meeting, Calcutta, 14th August, 1953. Dividend: As. 7 per share. Transfer books closed from 28th July, to 14th August, 1953, both days inclusive.

UNION JUTE CO., LTD. Half-yearly General Meeting, Calcutta, 14th August, 1953. Dividend: Re. 1 per share. Transfer books closed from 3rd to 14th August, 1953, both days inclusive.

AUCKLAND JUTE CO., LTD. Half-yearly General Meeting, Calcutta, 14th August, 1953. Dividend: Rs. 2 per share. Transfer books closed from 3rd to 14th August, 1953, both days inclusive.

DALHOUSIE JUTE CO., LTD. Half-yearly General Meeting, Calcutta, 14th August, 1953. Dividend: Re. 1 per share. Transfer books closed from 3rd to 14th August, 1953, both days inclusive.

LANSDOWNE JUTE CO., LTD. Half-yearly General Meeting, Calcutta, 14th August, 1953. Dividend: Rs. 2 per share. Transfer books closed from 3rd to 14th August, 1953, both days inclusive.

NAIHATI JUTE MILLS CO., LTD. Half-yearly General Meeting, Calcutta, 14th August, 1953. Dividend: *Nil*. Transfer books closed from 3rd to 14th August, 1953, both days inclusive.

LAWRENCE JUTE CO., LTD. Half-yearly General Meeting, Calcutta, 14th August, 1953. Dividend: Rs. 2 per share. Transfer books closed from 3rd to 14th August, 1953, both days inclusive.

BLACKER & CO., LTD. (First Director: Mr. H. E. F. Taylor.) Business: Freight Brokers, etc. Authorised capital: Rs. 5,00,000. Private company. Address: 18, Strand Road, Calcutta.

(*Concluded from next column*)

hope that they will continue to assist us in future in the same way as they have done so far.

"I am glad to report that the workers and members of the staff of the Company have fully co-operated with the management, and I take this opportunity to thank the workers, as well as the members of the staff, for the same."

HIND CYCLES LTD.

MR. R. D. BIRLA'S ADDRESS AT ANNUAL MEETING

THE manufacturing programme of Hind Cycles Ltd. and the conditions which are required to make India completely independent of imports of cycles were outlined by Mr. R. D. Birla in his address to the shareholders of the Company at their Thirteenth Ordinary General Meeting held in Bombay on the 3rd inst. He also pointed out that the cost of production of bicycles could be brought down by increasing production but this was entirely dependent upon the purchasing power of the people and the import policy of the Government.

The following is the full text of Mr. Birla's address:

"GENTLEMEN,

"The report of the Directors of your Company for the year ended 31st December, 1952, is already in your hands.

"You will have seen from this report that in the year 1952 your Company manufactured 1,30,000 complete bicyles. On account, however, of the paucity of demand of bicyles in the latter half of 1952 and the first month of 1953, your Directors have revised their plan and decided to manufacture bicycles according to the demand. It will be seen that we had to carry a large stock of unsold bicycles as at 31st December, 1952. Your Directors have, therefore, decided to reduce the manufacturing programme from 1,30,000 bicycles to 1,20,000 bicycles or even lower in the year 1953.

"As you are aware, your Company has reached the present stage after facing heavy odds and I am glad to inform you that we are in a position to manufacture about 2 lakhs bicycles annually, but, due to lack of sufficient demand and heavy imports in the year 1952, it had not been possible for us to sell whatever we produced. We had, therefore, to close one shift and discharge about 127 workers.

"You will also be glad to note that, out of more than 250 components, your Company manufactures all of them, except spokes and nipples and steel balls. We have started the manufacture of freewheels and we have also put up a plant for manufacturing chains. With the addition of these two items, India is now manufacturing all the parts of a bicycle in the country. Spokes and nipples and steel balls are being manufactured in Bombay and Jaipur, respectively. India can now proudly say, without any fear of contradiction, that she makes by her own labour 100 per cent. *swadeshi* bicycles and that too in large quantities.

"The steel required for the manufacture of some of the parts of the bicycle and components has yet to be imported. Various types of steel are necessary for fabrication of various parts, out of which some of them, such as cold rolled strips for making rims and bright bars, are still to be imported. Thus, India has to depend upon foreign material to a certain extent. Steel tube is one of the main raw materials in a bicycle. It is expected that Tatas will be able to manufacture tubes in the not very distant future. There are tube manufacuring plants in the country, but, there again, raw material has to be imported, and I am glad to inform you that Premier Automobiles, Ltd., is trying to manufacture certain sizes of tubes required by the cycle industry.

"There are only two ways, according to me, of reducing the cost of production, viz., to obtain raw materials at lowest prices possible and/or to increase production. It is well known that by increasing the production, incidence of cost in the items of 'overheads' charges goes down. As regards the raw materials, as stated above, we depend upon the fluctuations in the foreign markets. The only way, therefore, to reduce the cost is to increase production and this, as you are aware, will entirely depend upon the purchasing power of the people, on the one hand, and the policy of the Government with regard to imports, on the other.

"The Five-year Plan includes construction of many new roads and it is expected that consumption of bicycles will increase in proportion to increase in road mileage.

"Besides your factory there are some other cycle factories also. If, therefore, conditions are created by which maximum production of all these plants is achieved, I feel that India can, in the near future, be completely independent of imports. The Central Government has been very helpful in looking after the development of the cycle industry and the Department of Industry and Commerce and their officers have been taking very keen and sympathetic interest in the development of this industry. I sincerely

(*Continued in previous column*)

CALL MONEY RATE SHOOTS UP

(From Our Own Correspondent)

BOMBAY, 5th *August*

The week under review witnessed a distinct change in the complexion of the short-term money market. The easy conditions, which had prevailed in the previous weeks, yielded place to one of stringency. Dealings in inter-bank call money took place as in the commodity and stock markets, in that the rates fluctuated widely and frequently between 1 and 1½ per cent. among the Exchange Banks and big Indian banks, though, at the close, there were more borrowers at 1½ per cent. It is reported that some of the big banks were even prepared to pay up to 2¼ per cent. which was the rate that prevailed among the smaller Indian banks. Having been unable to get funds, some of the big banks had to seek the aid of the Reserve Bank. The rate among the smaller Indian banks was steady at 2¼ per cent. with enquiry for funds.

House money at call fetched 2¼ per cent. Short-term deposits for 1 to 3 months, which were neglected at 2 per cent. last week, were wanted even at 2¼ per cent. Deposits for longer periods fetched 2½ per cent.

The sudden upturn in money rates was attributed more to the shortage of funds than to any sudden rise in demand for funds. Banks in Bombay had been remitting their surplus funds to Calcutta in order to be able to employ them at better rates. The effect of the subscriptions to the recent Government loans also slowly worked upon the banks' deposits, resulting in a stringency. Banks are now recalling their funds from Calcutta, as the gap between the rates in Bombay and Calcutta has considerably narrowed down.

The above state of affairs is reflected in this week's tenders for the Rs. 1.5 crores of three months' Government of India Treasury Bills. The amount offered was no more than Rs. 2.60 crores, representing a decline of Rs. 1.16 crores from that offered a week ago. What is more, the Government had to offer a slightly higher rate, the average rate of accepted tenders being Rs. 2-6-3 per cent. per annum, as against Rs. 2-6-2, a rate which had remained unchanged in the preceding three weeks. There is no change in the amount of tenders invited for next week.

The statement of affairs of the Reserve Bank of India for the week ended 31st July, 1953, as compared with that for the previous week, discloses a further, albeit smaller, fall in notes in circulation. The exact fall in the week under reference is Rs. 9.03 crores. This is more than offset by an expansion of Rs. 9.50 crores in notes held in the Banking Department. The net increase of Rs. 46.92 lakhs in total notes issued is covered by a corresponding increase in rupee coin. In the Banking Department, deposits of the Central Government show an increase of Rs. 15.62 crores over the week, while those of other Governments a depletion of Rs. 2.81 crores. Deposits of banks have fallen by Rs. 6.12 crores, while those of others have increased by Rs. 1.85 crores. The assets side of the Banking Department reveal an enlargement of Rs. 9.53 crores in cash balances. Balances held abroad, however, have shrunk by Rs. 1.73 crores. Ways and means advances to Governments are lower by Rs. 80 lakhs but other loans and advances are higher by Rs. 55.86 lakhs.

A small rise of Rs. 79.76 lakhs in demand deposits is disclosed by the consolidated statement of position of Scheduled Banks for the week ended 24th July, 1953, as compared with that for the previous week. Time deposits have registered a fractional decline of Rs. 19.36 lakhs. Inter-bank borrowings are lower by Rs. 66.63 lakhs. Borrowings from the Reserve Bank are up by Rs. 62 lakhs, while those from the Imperial Bank are lower by Rs. 1.20 crores. Advances have declined by Rs. 3.82 crores and inland bills purchased and discounted by Rs. 82.72 lakhs. Investments are better by Rs. 1.91 crores. While cash-on-hand has declined by Rs. 46.06 lakhs, balances with the Reserve Bank show a rise of Rs. 10.74 crores. Balances with other banks in current account and money at call and short notice are lower by Rs. 77.62 lakhs and Rs. 1.90 crores, respectively.

The Gilt-edged market was featureless and the turnover was small. The short-dated issues continued to elicit enquiries, but buyers were reserved in other maturities. There was, however, hardly any variations in prices; the only loan which registered a rise was 3 per cent. 1986 Conversion, which was up by As. 2 at Rs. 82-2. The Reserve Bank of India again resumed sales of the 3½ per cent. National Plan Bonds, which had buyers at Rs. 98-5. 3 per cent. 1957 were in demand at Rs. 98-6 and 3 per cent. 1958 at Rs. 98-3. 3 per cent. 1959-61 was quoted at Rs. 96-3, 3 per cent. 1963-65 and 3 per cent. 1964 were placed at Rs. 92-5. 3 per cent. 1966-68 stood at Rs. 90-1 and 3 per cent. 1970-75 at Rs. 86-7. Among the State loans, 4 per cent. 1963 Bombay loan was sought at Rs. 100 and Madras, U.P. and M.P. loans were quoted at Rs. 99-6. 4 per cent. 1964 Bombay and West Bengal declined by As. 4 to Rs. 99-12, while Madras and U.P. loans were unchanged at Rs. 99-8 and Rs. 99-6, respectively.

METALS STEADY

(From Our Own Correspondent)

CALCUTTA, 4th *August*

The metal market ruled steady during the week. Consumers continued to be cautious in covering commitments. Higher advices from London forced a recovery in electrolytic zinc from Rs. 52-8 to Rs. 54. Business was reported done between these levels for meeting day-to-day requirements of the market. Lead was held firm at Rs. 65, and some enquiries to meet Government needs were a feature. On encouraging advices from Singapore Tin recovered Rs. 9 to Rs. 392. There was, however, no change in the copper market.

BULLION DULL

(From Our Own Correspondent)

BOMBAY, 5th *August*

Listless conditions prevailed on the Bullion Exchange during the week under review. In the absence of any new developments, activity shrank considerably and price movements were extremely narrow. Demand for both the metals was very small, but, as there were no large arrivals, the undertone was fairly steady.

Silver for forward delivery (26th August settlement) began at Rs. 151-7 and staged a modest reaction to Rs. 150-5 on Friday, due to lack of support and to scattered realising. Later on, there was a gradual recovery on revival of buying by some prominent bulls and stray short-covering and the rate advanced to Rs. 152-8 to-day before terminating at Rs. 152-1.

Ready silver (.996 Mint) opened at Rs. 154-15 and drifted lower to Rs. 152 on Monday. There was, however, a fair recovery to Rs. 153-1 at the close. The premium on ready over the forward which stood at Rs. 3-8 at the opening of the week soon narrowed down to Rs. 2 and stood at that level for the rest of the week. The floating stocks of silver are placed at 1,500 bars. The daily average arrivals were insignificant at 5 bars and the offtake was about 10 bars on an average.

Gold for forward delivery started at Rs. 85-14 and shaded off to Rs. 85-2 on Friday, due to the application of *mandi* option by a prominent bear operator. A slight improvement in offtake at this level lifted the price up to Rs. 86-4 to-day, before it wound up at Rs. 85-15.

Commencing at Rs. 87-4, ready gold drifted down to Rs. 86-8 early in the week, later steadied upto Rs. 87-10 and finally closed at Rs. 87-5. The floating stocks of gold are estimated at 20,000 tolas. The daily average arrivals were 3,500 tolas. The offtake, too, was of the same order, on an average.

The following comparative table shows the trend of the market during the week under review:

	5-8-53	Highest	Lowest	29-7-53
GOLD	Rs. a.	Rs. a.	Rs. a.	Rs. a.
Ready (.99 fine Mint)	87 5	87 10	86 8	87 4

PEPPER EXPORTS POOR

(Messrs. Parekh & Co.)

BOMBAY, 5th *August*

During the earlier part of the week, Malabar black pepper showed reactionery improvement, in sympathy with New York which was reported to have offered to buy small lots for nearby shipment at an improved limit, and owing to the improvement in Sarawak and Lampong. Sarawak black improved from $0.84 to $0.94. The price of Lampong black was raised by 2 cents to $1.02 per lb. c. and f. New York. Alleppey growers also raised their price from Rs. 2,500 to Rs. 2,650. Interbazar business in ASTA section at Bombay is reported done at $1.17 for August shipment and $1.07 was paid for September shipment, the lowest being $1.09 and $1.00, respectively. In the latter part of the week, however, New York having failed to follow the rise in the supplying centres and Sarawak and Lampong having marked down their price, the Indian market once again staged a setback and, at present, there were sellers for August shipment at $1.11 and for September at $1.02 with small buying interest.

There are conflicting reports regarding difficulties of some of the parties at Cochin, where, some time back, a lot of speculation was going on in monthly deliveries of "Garbled" for July and August. Monthly delivery business in Cochin is reported to be at a stand-still. No quotations will, therefore, be available until some settlement is arrived at.

At Alleppey, though the growers were stiff sellers, they are at the time of writing reported to have reduced their selling price to Rs. 2,400 under pressure by the banks and the Indian shroffs who were reported to have advanced loans at higher prices against pledged pepper. The position of the market is discouraging, in view of the continuous poor exports in the past few months. Unless the Government reduces the export levy to a bare minimum there is little hope of improvement in the volume of the Indian export. The Government machinery is always slow in taking timely action and, if it does not act quickly, it is feared, India will miss the bus as far as pepper export is concerned as it happened in the case of other produce such as seeds, textile, jute, etc., in which buyers' market is slowly emerging. Any delayed action, if taken after a month or so, will not achieve the object in view, once the other producers like Sarawak and Lampong fill the requirements of our overseas buyers. India seems to be loosing its monopoly position for the supply of pepper, though slowly.

To-day's nominal quotations are:—Ready delivery Rs. 310 per cwt; August and September deliveries Rs. 2,005-35 and Rs. 1,865-95 per candy of 5¼ cwts. respectively.

SHORT STAPLE COTTON MOVES UP

(From Our Own Correspondent)

BOMBAY, 5th *August*

What was expected has happened in the forward market. The raising in appeal of the premium on Jarilla in the room rate by Rs. 15 had an initial adverse effect on the current August contract at the close of last week. On Monday morning, however, the bulls tried to bluff their way forward by supporting the market. But later, when it was known that the tenders on the first delivery day amounted to 26,500, there was a breach in the ranks of the bulls which brought the prices tumbling down from Rs. 708 per candy to Rs. 694. At this stage there was some support from some of the setter placed longs. The debacle in the August contract had also an equally adverse effect on the February contract which came down from Rs. 667 to about Rs. 656, with the gap between the two contracts being maintained more or less round Rs. 40.

While this cannot be taken as pointing to a definite bearish trend being developed in the market, it would make for healthier trading conditions in the new crop. The market as such is not now interested exclusively in the antics of the bears and the bulls in the August contract. The general feeling is to leave them to their fate to fight out their battles during the three weeks that remain for squaring up their business. But the market is concerned with the effect this trouble might have on the general trading in the new crop. Favourable crop reports from all centres in any case are expected to limit the price rise in the new crop by way of manipulations of groups of operators. If the bulls suffer an ultimate defeat in the August contract it would go further to underline this tendency.

In a way, what has happened in the forward market had already cast its shadow on the spot delivery of cotton on a large scale against sales in the market. On the other hand, mills which are the principal buyers at the fag-end of the season, were inclined to neglect the spot market in the hope of securing bargains at good discount from those who were forced to take deliveries in the forward market. Activity and total turnover were, therefore, adversely affected during the preceding week in the spot market, though the price trend was fairly steady. There was good activity, however, in the delivery contract for the new crop during the earlier part of the week, with premia for good varieties showing a sizable rise. But the whole atmosphere in the spot market, apart from the exchange of short-staple varieties, has been unreal and will continue to be so till the August contract is liquidated completely. The section dealing with imported cotton is fairly active, except for Sudans which are in short supply. There was keen enquiry also in Egyptian cotton, which was absent in the previous weeks and some good business was reported in this cotton.

But the main interest in the market was centred in the export trade. The Government, which had been persistently deaf to the requests of shippers for extending the period of licences, all of a sudden decided to yield to this pressure and announced that the validity of all export licences which had expired at the end of June was extended till the end of September. While one might say nothing about the merits or demerits of this policy of the Government it may be observed that the Government is laying itself open to the charge of being weak-minded and wobbling. Nothing has happened during the short interval between now and when it last refused to extend the period of these licences, to justify a change in policy. If extension was justified it should have been given in good time and even before it was asked for. If there was no justification for such extension, the Government should have been consistent in its policy. It has only to blame itself because of its undependable conduct if it is accused from time to time of being amenable to intrigues by certain quarters. Apart from this, such indecision upsets the trade and might cause unnecessary loss to certain units in it. Many might have parted with their stocks of Bengals in the conviction that the Government was not going to allow any further export of this variety. They have a legitimate grievance against officials who usurp the privilege of the weaker sex and change their minds for no reason at all from week to week.

As a result of this, there was a sudden spurt in the price of Bengals of about Rs. 20 per candy. It is reported that Japan, having secured some more this variety and if the currency supply goes further it might also be interested in further purchases in other short-staple varieties such as Dholleras. Now there is pressure from the trade for a reduction in the export duty on short-staple varieties other than Bengals and the behaviour of the Government in the matter of extending the period of licences leads the trade here and the buyers abroad to hope that the Government would yield on this score also. There is a good justification for equalising the export duty on all short-staple varieties and Government should have revised this duty long ago, to make export of otherwise non-saleable cotton possible. It is expected that even now, if this reduction is effected, about 10,000 additional bales might find buyers abroad. The shippers are also exercised considerably over the official policy regarding exports for the new crop.

With regard to imports, the difficulties mentioned last week about cotton already purchased at Alexandria have not so far been resolved. In the meantime it is understood that the shippers at Alexandria have approached the Indian High Commissioner at Cairo and also the Egyptian Exchange Control authorities for a ruling that the sales to India negotiated before the ratification of the Indo-Egyptian Trade Agreement should be subject to full payment in sterling and not in 40 per cent. of the price in rupees as arranged under this agreement. Till this impasse is resolved there are no hopes of this cotton being shipped to India. In the meantime, the Government of India believed to have allowed special facilities to pay the whole price in sterling for their purchases made before 8th July.

The following is the trend of quotations in the forward market:

	Opening	High	Low	Closing
I.C.C. Feb. ...	Rs. 675	677½	651	658
I.C.C. Aug. ...	Rs. 709	713	785	694

The following are the latest available quotations in the Sewri market: Bengal *Deshi* Rs. 600; Berar *Jarilla* Rs. 750; *Khandesh* Rs. 865; Vijay Rs. 880; Oomra *Deshi* Rs. 695; *Moglai* Rs. 695.

There has been a further small decline in prices at Karachi for lack of enquiries from abroad. Reports from Japan state that shippers in Karachi are making offers at prices even lower than those being quoted at present in the open market at Karachi. Japan has not been as active in its purchases of Pakistan cotton as was expected under the new trade agreement. It has not taken the full complement for the year and it is reluctant to do so from the present stocks at Karachi and wants the balance to be carried forward to the new crop. The real motive behind this move is to wait for the announcement of the import policy by the Pakistan Government and to judge its effect on the volume of imports from Japan. In the meantime the new crop at Karachi, as it is expected to be much smaller this year, is being quoted at a premium of about Rs. 50 per khandy over the previous prices and some business at these rates is reported to have been entered into with Australia. Exports from Karachi amount to 1½ million bales, leaving a carry-over of about 300,000 bales.

The following are the latest quotations from the Karachi market: Punjab *Deshi* Rs. 76; 4F Punjab R.G. Rs. 58; S.G. Rs. 64; L.S.S. Punjab R.G. Rs. 62; S.G. Rs. 67; N.T. R.G. Rs. 66½ to R.G. Rs. 62; S.G. Rs. 67; N.T. R.G. Rs. 66½ to Rs. 67½; S.G. Rs. 71½ to Rs. 72½; 289F Punjab R.G. Rs. 70; S.G. Rs. 76.

At Alexandria, the tempo of trading is understandably low. In the meantime, negotiations are believed to be going on between the authorities at Cairo and some other countries for large-scale transactions. Prices are likely to be maintained in this market during the coming season as the final estimated acreage this year is about 1,324,000 feddans against that of approximately two million feddans in 1952-53.

At New York the tone has been slightly easy as a result of reports regarding improved weather conditions in the Texas region. There is not much of export demand in the market. But this is more or less compensated for by good all-round consumption within the country. The American commodity markets have shaken off their early nervousness about the Korean armistice and this is likely to lead to an arrest in the declining trend of prices, as already evidenced by a slight rise in the price of cotton in the forward market on the opening day of the current week, though a part of this was lost on Tuesday. If and when the scheme for accepting payment for purchase of American farm products for shipments abroad in non-dollar currency is sanctioned and brought into effect, there might be a good revival in the demand for export from the shipping section of the trade, with a corresponding rise in prices. This, therefore, appears to be a good time for those here whose buying programme includes purchases of U.S. cottons.

The following are the latest available quotations from New York, as compared with those of a week and a fortnight before:

(In cents per lb.)

	5-8-53	28-7-53	21-7-53
Spot	34.10	34.20	34.20
October	33.80	33.87	33.91
December	34.06	34.27	34.20
March	34.27	34.49	34.41
May	34.32	34.54	34.45

STAPLE FIBRE YARN WEAK

(From Our Own Correspondent)

BOMBAY, 5th *August*

After remaining firm during the first three sessions of the week, the art silk yarn market developed a sagging tendency in the subsequent sessions. The initial firmness was due to scarcity of stocks, expectation of reduced supplies of imported yarn and renewed optimism about India's export trade in rayon fabrics with Pakistan. The firm prices at which forward trading in 2/40s staple fibre yarn commenced on Saturday also imparted strength to the yarn market. Hectic purchases by bulls and large covering by shorts, which followed, lifted up values of art silk yarn. On Monday, however, the market turned distinctly weak on extremely bearish advices from the staple fibre yarn section. This even overlooked reports of an upward revision in prices of yarn by the Italviscosa—one of Europe's leading producers of art silk yarn—by 2d. per lb. for 150 deniers and 120 deniers and by 3d. for 100 deniers, 75 deniers and 60 deniers. Selling pressure that ensued as a consequence resulted in a sharp break in values, which was further assisted by the reported decision of a number of European countries to reduce prices. Not only were the gains recorded in the early sessions completely lost, but the closing quotations to-day were substantially lower than those at the end of last week.

In the forward section, 150D August contract, after improving from Rs. 806 to Rs. 820 on Saturday, drifted downwards to finish the week at Rs. 798. September contract, business in which commenced at Rs. 820 on Saturday, receded to Rs. 798 to-day. July contract terminated at Rs. 813 on Friday. Business in this contract opened at Rs. 807 on 1st June, 1953. The highest and the lowest levels touched were Rs. 817 and Rs. 761 on 30th July, 1953, and 23rd June, 1953, respectively. The net gain during the period of the contract was Rs. 6. In the ready section, 120 Japan and 150 Italy were lower by half an anna at Rs. 4-3 and Rs. 4, respectively. 150 Japan and 120 Italy were steady, the former at Rs. 4-2½ and the latter at Rs. 4-4.

The table below gives the prices of art silk yarn quoted to-day, as compared with those on the 29th and 21st August, 1953:

	5-8-53	29-7-53	21-7-53
	Rs. a.	Rs. a.	Rs. a.
150D July (per case of 200 lbs.) ..	—	805 0	784 0
150D August	798 0	806 0	789 0
150D September	793 0	—	—
120 Japan (per lb.)	4 3	4 2½	4 3½
150 Japan	4 2½	4 2½	4 2
120 Italy	4 4	4 4	4 3
150 Italy	4 0	4 0½	3 15

Forward trading in 2/40s staple fibre yarn was resumed on the 1st inst. The undertone on the opening day was fully firm. During the subsequent sessions, the traders who had held large stocks began unloading them which depressed the sentiment considerably. The contract was quoted to-day at as low as Rs. 689, as against Rs. 730 on the opening day.

GROUNDNUTS BEARISH

(From Our Own Correspondent)

BOMBAY, 5th *August*

The oilseeds market came under the grip of heavy selling pressure. There was a landslide in the values of groundnuts on persistent speculative selling. Sporadic buying from *vanaspati* interests had very little effect on the market. The linseed section also staged a sharp recession in values in sympathy with groundnuts. There was heavy unloading in August-September contracts from upcountry interests who preferred to shift their positions to new crop. The castorseeds section ruled easy in the absence of declaration of export policy. *Kardi* and *niger* seeds proved no exception to the general trend. Consequently, business done in the market was almost negligible, and prices disclosed substantial losses over the week.

In the groundnuts section, Gujerat and Saurashtra interests were anxious to unload, in view of favourable rains in groundnuts-producing areas. Buyers kept aloof, expecting further recession in values. There was, however, some support at low levels, but their effect on the market was negligible. No wonder, therefore, that there was a virtual slump in values. Groundnuts Bold declined from Rs. 51-8 to Rs. 49. August-September deliveries were done Rs. 3 lower at Rs. 46. December-January delivery changed hands at Rs. 33-8, as against Rs. 35-14. Khandesh quality lost Rs. 2-8 to Rs. 50. Groundnut oil ready dropped from Rs. 28-10 to Rs. 26-8 and railway receipts from Rs. 28-4 to Rs. 26-8. August and September deliveries were lower by Re. 1-2 each at Rs. 25-14 and Rs. 24-8, respectively.

In view of the fact that linseed is mostly used as substitute for groundnuts by *vanaspati* and other oil interests, the downward trend in linseed was mainly influenced by the sharp recession in groundnuts. Linseeds Bold ready eased from Rs. 32 to Rs. 30-8. August-September delivery sustained a loss of Re. 1-8 to Rs. 30-8 and October-November delivery Re. 1-12 to Rs. 30. February-March transactions were done at Rs. 27-4, as against Rs. 28. Linseed oil was lower by Re. 1-1 at Rs. 17.

There was selling pressure in the castorseeds section too. In view of uncertainty about export policy, buyers preferred to be cautious. September delivery, which opened at Rs. 152-12 as against Rs. 153-4, improved to Rs. 153 before it closed at Rs. 147-8 the lowest level touched during the week. May delivery was done at Rs. 132, as against Rs. 34-4, the highest and the lowest levels being Rs. 134-8 and Rs. 131, respectively. Madras quality lost Re. 1-4 to Rs. 31 and F.A.Q. Rs. 2-8 to Rs. 29-4. Castor oil B.S.S. was lower by As. 2 at Rs. 18-4 and I Pressure by As. 6 at Rs. 17-12 and Commercials by As. 4 at Rs. 17-2.

The free export of *kardi* and *niger* seeds, declared recently, has so far had no effect at all on the market. *Kardi* Bolds eased from Rs. 25-12 to Rs. 24-4. August-September delivery suffered Re. 1-8 to Rs. 23-14 and October-November delivery Re. 1-6 to Rs. 24-2. *Niger* F.A.Q. receded by Re. 1-12 to Rs. 37 and Madras quality Re. 1 to Rs. 38-4.

The arrivals of oilseeds in Bombay from January to 31st July, 1953, were as follows as compared with those in the corresponding period last year:

(In cwts.)

	January-July 1953	January-July 1952
Groundnuts	1,596,724	1,564,893
Linseed	94,734	209,804
Castorseeds	565,207	447,956

The following table shows the prices of oilseeds and oil on the 5th inst., as compared with those at the end of the previous two weeks.

	5-7-53	29-7-53	21-7-53
Groundnuts—	Rs. a.	Rs. a.	Rs. a.

BOMBAY HEADING TOWARDS SUGAR FAMINE?

(From Our Own Correspondent)

BOMBAY, 5th *August*

The Government of India announced on Saturday last a further release of 100,000 tons of sugar. This brings the total quantity so far released to 76 per cent. of the aggregate production of all factories in the current season. Only 24 per cent. of production, or roughly about 300,000 tons, now remain with the mills. The sugar trade no doubt appreciates the Government's policy of maintaining uniformity in the matter of releasing the stocks with the mills, but it deplores the frequent changes in the policy, especially with regard to such a commodity of daily consumption as sugar. It was only a month ago that the Government devised the ingenious scheme of issuing more quotas to those millers who had despatched the largest percentage of the release orders given to them. In fact, the previous release was issued on the basis, not of the percentage production of mills, but on that of the quantity of sugar actually despatched. The result of this change in policy, it is maintained, was that those sugar mills in the Deccan which had despatched the highest percentage of the release orders given to them got very substantial releases last month. But, as a result of the change in the basis this time, the quota released now for the entire group of Deccan factories is less than 1,000 tons. Such a small release, at a time when the post-monsoon demand is already being felt in all the up-country distributing centres and when the stocks in these centres are poor, will result in still higher prices of sugar in these centres, thereby assisting the U.P. and Bihar factories to reap a good profit. In fact, what happens in the Deccan markets will have their repercussions in all other centres in India.

Commenting on the present release, a Deccan sugar merchant observes:

"Does the Food Ministry seriously believe that a monthly demand from over so wide an area like the Bombay Deccan can be satisfactorily met with the negligible quota issued to the factories in the Bombay Deccan? The logical conclusion is that the spot prices in Bombay, Poona, Nasik, Sholapur, Ahmednagar, Ahmedabad, Surat, Baroda and other centres will shoot up in the course of the next few days to a record new highest spot price reached during the entire season, presenting almost a scene of sugar famine. The only remedy is the issue of an urgent *ad hoc* quota to the Bombay Deccan factories. If this is not done very soon, we shall be facing an almost sugar famine in the abovementioned and many other districts. Be that as it may, it is now obvious that the Government's plans to flood the important consuming centres, such as Calcutta, Kanpur, Delhi and Bombay, with sugar has completely failed."

It is reported that the first consignment of British refined sugar bought by the Government of India directly through the Indian Trade Commissioner in London, will be leaving the U.K. port in a day or two. Fresh tenders for sugar invited by the Government are not forthcoming, due to stiff terms by the authorities. It is reliably learned that the Government is now negotiating purchase of foreign sugar on its own account through its Trade Commissioners in the U.K., Spain and Brazil.

The forward section of the sugar market continues to remain fairly steady. *Shravan* delivery is to-day quoted at Rs. 89-4 per bag (buyers), as against Rs. 88-8 last week. The undertone in the spot section is firm, on account of revival of normal demand and poor floating stocks. As compared with the previous week, the prices of sugar have advanced by more than Rs. 2 per bag, the latest rates being Rs. 92 for small-grain, Rs. 93-94 for medium grain and Rs. 96-98 for bold grain. The stockists of sugar are cautious, in that they are prepared to sell only in small lots.

The Government of Bombay continues to sell sugar at Rs. 85-4-8 per bag. This, however, has had no effect on spot prices. It is thus evident that spot and ex-mill prices of sugar are all far above the level considered as a fair price by the Government. Basing itself on this evidence, a section of the sugar trade argues that it is now crystal clear that consumption of sugar in India is much higher than the conventional estimates of 10 to 12 lakh tons. It, therefore, urges the adoption of a long-range policy for increasing production and a clear-cut plan for meeting the present situation.

This section further points out that, at present, prices of sugar would not have gone up to the extent they have done had the Government's policy been clear and consistent. Its threat to flood the markets had upset the confidence of merchants in the distributing areas. They, therefore, did not maintain even their normal stocks. This has resulted in an artificial scarcity and consequent high prices in certain centres. Such a state of affairs would not have arisen had the Government implemented its threat. Thus, the Government's bungling itself has contributed to the present high level of prices.

Arrivals of sugar into the Bombay market during the week ended to-day amounted to 11,700 bags. The opening stocks with the spot trade to-day is estimated at 23,000 bags.

JUTE GOODS IMPROVE

(From Our Own Correspondent)

CALCUTTA, 4th *August*

Despite the return of peaceful conditions in Korea, an air of enthusiasm was in evidence in the jute goods market during the week. Stockists consider that, if China is admitted to the United Nations and trade restrictions against China are removed, China would need more B. twills. If conditions in Indo-China also improve, that country would also need more imports of sacking goods. Activity in the sacking market was enlivened also because of the Burma Government's call for tenders for 20,000 bales of sacking. The last date for submission of tenders is the coming Monday. It is believed in market circles that very soon Burma would again be in the market for purchasing a still bigger quantity of sacking. During July, the total quantity of sacking for which shippers received instructions is estimated to be higher than that for June. Figures relating to stocks as at the end of July, which would be available soon, are, therefore, expected to show a welcome decline. Mills no doubt bearing these factors in mind, desired to push sales at the higher levels, but the

STOCK & SHARE QUOTATIONS

Abbreviations:—D=Deffered shares. G=Guaranteed shares. P=Preference shares. P.O.=Preferred Ordinary shares. R=Rebate shares. Y=Accounts published yearly. H=Accounts published Half-yearly. Q=Accounts published once 15 months T=Company has Debentures. R.L.=Reserve Liability on shares. N=Nominal Quotation. I=Interim Dividend. f=Dividend for first half-year, y=Dividend for the year. x=Bx. Dividend c.d.=Cum. Dividend

Shares:—If a company has different classes of shares—as, for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under "Paid-up Per Share."

Accounts:—Figures in the "Accounts Closed" column represent the months of the year to which the respective companies close their accounts. 6 and 12 indicate the months of June and December, respectively. "Reserves" includes general and other reserves and all other funds which a company may have as also depreciation on block items, when this is charged to separate account "Block" represents actual cost of land, buildings, machinery and all such other items on which depreciation is allowed, less sales, if any, and stands for the gross figure except where otherwise indicated.

Dividends:—Dividends for completed years are calculated at per cent. per annum, but, where quoted for portion of a year, they represent percentages of the dividend on the paid-up share value. For companies closing the books half-yearly in the first three months of the year, and for companies closing their books yearly during the first half of the year dividends are shown as for the previous year.

* The following explanatory notes relate to the abbreviations and marks shown on page 284 in the debentures section:—

§§ Option to repay on six months' notice, on any interest date after 31st December, 1951, at 102 per cent. Also redeemable out of a cumulative sinking fund of 1½ per cent. per annum (commencing in 1938) by drawings at 102 per cent. or by purchase at or 102 per cent.

(a) Option of repayment at any time at 5 per cent. premium.

(b) Bearer bonds of Rs. 1,000 each repayable at par.

(c) Bearer bonds of Rs. 1,000 each repayable on 31st July, 1959.

(d) Bearer bonds of Rs. 1,000 each with option of redemption in whole or in part at par on 30th June, 1952, or on any subsequent interest date at one month's notice.

(e) Returnable on or after 31st July, 1950, at Rs. 102-8 or at par after 31st July, 1955, on six months' notice in each case.

(f) Bearer bonds of Rs. 1,000 each with option of redeeming on 3 months' notice at ½ per cent. premium after 1st March, 1954, but before 1st March, 1957 and 1 per cent. premium on or after 1st March, 1957.

(g) Option of redemption on or after 1st July, 1949, at par.

(h) Option of repayment at any time at par or at any time on or after 30th June 1947 on six months' notice.

PROTECTION AND REGULATION OF INDUSTRIES: THEN AND NOW—II

(Concluded from page 251).

for taxation, they may have to take their chance of securing as much net amount as possible after the payment of taxation from the rate of 6¼ per cent. calculated on the cost of a new block, and included in the selling price.

I am not unmindful of the happy characteristic of our Government never to turn down a suggestion, if they can postpone its consideration, by referring it to some board, committee or commission, or by waiting for the report of any one of such bodies if it happens to be seized directly or indirectly of the subject. The Taxation Enquiry Commission is supposed to examine, *inter alia*, this question of depreciation and the Government may make that a reason for deferring the consideration of the suggestion now made, though I have made it quite clear that its application is limited to the two classes of industry, viz., protected and controlled. The Taxation Commission has nothing to do with the *ad hoc* treatment of any particular industry or class of industry. This is a question of principle which, as a special case, should be regarded as being outside the purview of the Taxation Enquiry Commission and should be decided by the Government without delay, if the development of these industries is to be expedited. The justification for such a decision is all the greater for no loss of revenue can be involved where no revenue would have been created but for the additional depreciation allowance at the cost of the consumer. Whether the Government like it or not, the Tariff Commission, as a *quasi*-judicial authority, should, like their pre-independence predecessors, allow the amount of depreciation they consider reasonable and necessary irrespective of the income-tax law and leave it to the Government to accept, reject or modify their recommendation.

(To be continued.)

MARKET REPORTS

(Concluded from page 273)

cautious support of buyers checked the rise in prices at every stage.

On Wednesday, B. twills declined to Rs. 102-4 from Rs. 102-12 on profit-taking. On the following day, a further fall to Rs. 102-2 was the feature as there was a lull after some purchases nearly a week ago. Resort to Katni transactions soon followed, and this not only stemmed the downward movement but made the rate improve to Rs. 102-10 on Friday. West Africa bought a sizable quantity of B. twills, and shippers have received instructions in this regard. It is thought that, as in the case of Burma, West Africa has still to buy a major portion of its requirements. The Continent also showed some interest. Specialities came in for special attention, but the turnover was limited. It is gratifying to note that the market attitude to sacking has changed considerably, and that mills are again able to make offers of hessian on condition that the buyer also takes some quantity of sacking. Lack of ready business, however, forced down the rate to Rs. 102-8 over the week-end.

Although prices for hessian fluctuated only narrowly, steady conditions were in evidence. Support from buyers on behalf of Argentina continued, and this factor coupled with firm conditions in New York invited the keen interest of speculators. Shipping instructions for July aggregated 30,000 tons, which records a small improvement compared to that in the previous month. Purchases for export to the United States have not yet come up to market expectations, and it would appear that importers in America are watching the price trend and awaiting to commence heavy purchases after prices move down. However, the world demand for hessian has shown such improvement as to enable traders to take the view that no abrupt fall in prices need be expected. Ready hessian 40" 10 oz. was sold at Rs. 46-8 on Wednesday, and when mills insisted to sell at the higher rate a recession to Rs. 46-4 was in evidence on Thursday. At this stage, mills withdrew from the market. Month-end commitments having been satisfied, shippers were not interested in business on Saturday, the 1st August, and the price slipped to Rs. 46. No improvement in the price was in evidence yesterday also in view of lack of business. Mills and stockists are disinterested to make offers at lower levels, and this reluctance follows expectations of moderate business with America in the coming weeks. New York reports have indicated that stocks there are fast declining.

Improved conditions in the jute goods market were naturally reflected in raw jute, where the various types of new crop on offer gained one to two points this week. Old crop also looked up. Arrivals of the new crop continued slow. What is largely available in the new crop is the poor qualities which can also be obtained from the old crop. Upper Assam bottoms old were transacted at Rs. 27 and middles were quoted at Rs. 30, the at Rs. 27 and middles were quoted at Rs. 30, the respective rates for the new crop being Rs. 29-8 and Rs. 32-8. Assam lower middles and bottoms old were available at Rs. 31 and Rs. 28, and the new crop was quoted at Rs. 33 and Rs. 30, respectively. Other latest quotations for the old crop are, the rates for the new crop wherever available being indicated in parenthesis: Pakistan bottoms Rs. 27, Indian northern middles Rs. 31, Daisee bottoms Rs. 28 (Rs. 30), Murshidabad middles Rs. 28 (Rs. 31) and bottoms Rs. 25 (Rs. 28), western bottoms Rs. 24-8, jungli bottoms Rs. 25, Orissa middles Rs. 31 (Rs. 33) and bottoms Rs. 25 (Rs. 30), Uttar Pradesh middles Rs. 17-8 and bottoms Rs. 24-8, mesta Rs. 22, and bimli F.A.Q. Rs. 23-8. Pucca bales first marks were offered at Rs. 155 a bale.

U.P. TO SELL SUGAR IN RATION SHOPS

(From Our Own Correspondent)

HAPUR, *4th August*

The *gur* markets remained steady during the major part of the week, but closed slightly lower. There were no arrivals in the principal *gur* export markets of West Uttar Pradesh. New crop *gur* arrivals are reported to have begun at Baramati (Poona) and are increasing steadily. A part of the enquiry from Gujerat, which had all along been a sustained *gur* buyer, has, therefore, been diverted to that end. Several wagon-loads of *gur* drawn from the adjoining area were despatched from Hapur last week. The standing sugarcane crop in the western districts is in excellent condition, but according to latest advices, sugarcane plants in the eastern districts are in waist-deep water and, if there is further heavy rain, they are likely to suffer extensive damage. At Hapur *pansera gur* is quoted at Rs. 20. Quotations in the principal *gur* export markets of the south ranged between Rs. 21 and Rs. 25. In Kohlapur it is quoted as high as Rs. 24-8 to Rs. 27-8.

Crystal sugar markets remained fairly steady this week. Trade circles do not expect any appreciable reaction on sugar prices even after the arrival of 30,000 tons of imported sugar by the end of September, 1953. The stockists are, therefore, not in hurry to liquidate their holdings.

It is learned that the Government of India has sought the opinions of the State Governments regarding the sugarcane fair price policy for the single fair price for sugarcane for the whole of the country is not proper, as the cost of production differs from place to place. The fair price, it is emphasised, should always take into consideration the local cost of production of sugarcane.

The sale of sugar through ration shops is likely to be introduced by the Uttar Pradesh Government in an effort to check the steady increase in prices. There will, however, be no rationing of sugar. Sale of sugar would be so regulated in 18 towns with a population of one lakh and above. The sale price will be As. 12-3 per *seer*. The present free market retail price is about As. 13 per *seer*.

Current sugar quotations are: Ambala Rs. 31-12, Amritsar Rs. 32-10, Delhi Rs. 32, Jullundur Rs. 30-14, Agra Rs. 31, Hapur Rs. 32-8, Kanpur Rs. 30-14, Mathura Rs. 31-8, Meerut Rs. 31 to Rs. 32, Muzaffarnagar Rs. 30-14, Calcutta Rs. 31-10, Madras Rs. 32-12 and Bombay Rs. 32-12.

OVERALL FOOD POSITION UNCHANGED

(From Our Own Correspondent)

HAPUR, *4th August*

The overall food position in the country remains unchanged. Serious damage has, however, been done to the standing crops by excessive rains and floods in east U.P., Bihar and Assam, but that has now become an annual feature and is not likely to disbalance the food budget of the country to any appreciable extent. Locust menace continues to trouble the peasants and the authorities alike in parts of Rajasthan. The invasions which started on a much larger scale this year, has resulted in heavy breeding in hundreds of villages in Rajasthan after ideal conditions prevailed subsequent to extensive rainfall. The possibility of a further invasion of the African countries bordering the Red Sea and of Pakistan and India, by swarms of young desert locusts is referred to in the latest situation report issued in London by the Anti-Locust Research Centre.

The question whether the increase in India's food production during 1952-53, recently estimated at 5 million tons, achieved to a great extent at the expense of commercial crops, will be maintained, has been engaging the anxious attention of the Government of India. While both acreage and production increased in the case of the principal food crops, wheat and rice, acreage under each of the main cash crops—cotton, jute, oilseeds and sugarcane—fell during 1952-53, compared to the figures of 1951-52.

The prospect of an excellent *kharif* crop is being gravely jeopardised by the monsoon which has proved ruinous in its plenty in east U.P. districts. The crops have been topped by the water from the rivers which are in spate, and cereals, like early paddy, maize and *arhar*, are bound to suffer heavily. *Charl*, used as cattle fodder, is practically a dead loss. In the western U.P., rains have been good and timely, and the condition of the standing crops is excellent.

Foodgrains markets were, however, steady during the week as receipts in the markets were negligible due to rains. The latest quotations in the Hapur market are: Wheat Rs. 16-12 to Rs. 17-12; gram Rs. 16-10; *barley* Rs. 12-6; *bejhar* Rs. 13-4; maize Rs. 13-4; *juwar* Rs. 12; *guwar* Rs. 13; rice: *basmati* Rs. 35; *hansraj* Rs. 31; *sela* Rs. 29; coarse Rs. 23; peas dara Rs. 14-12; white Rs. 15-8 to Rs. 17-8; *arhar* Rs. 14-10; *urd* Rs. 23 and moong Rs. 22-8.

TEA PRICES HARDEN

(From Our Own Correspondent)

CALCUTTA, *4th August*

One of the notable features during yesterday's export sale was the very high prices obtained by the fine Darjeelings on offer. Other varieties also were wanted at hardening rates. Offerings aggregated 35,075 chests, and demand was very fair. Keen competition was offered to the best liquoring varieties and the useful liquoring tippy Assam BOPs, the prices of both of which added gains. Among whole-leaf grades, which were strongly supported, stylish OPs gained As. 2 and pekoes half an anna. A firm tendency was in evidence in good medium Assam BOPs; medium BPs. were, however, quiet. Buyers paid moderate attention to clean black commons. The rates were: best CTC Assam BP Rs. 2-10 to Rs. 2-12, clean black pekoe Re. 1-13-6, medium Assam BP Re. 1-12-6 to Re. 1-13, and clean common BP Re. 1-11-3.

Demand being moderate, most of the varieties during last week's sale for domestic consumption recorded gains. Dusts offered amounted to 10,083 packages. Prices for the commonest varieties and medium Assams improved by an anna, while bright liquoring Dooars and clean black teas suitable for export were sold As. 2 above brokers' valuations. The trend in Assam CTC sorts was somewhat irregular. Among Darjeelings, those with flavour had a strong market. Rates were: best Assam CTC Rs. 2-5 to Rs. 2-7, medium Assam grainy dust Re. 1-10-6, and

DEBATE ON ESTATE DUTY BILL

MR. C. D. Deshmukh, Union Finance Minister, emerged from the debate on the Estate Duty Bill in Parliament this week as the most notable figure. By contrast with his somewhat vociferous supporters, he was prepared, without, of course, yielding any part of the essential ground on which the Bill is based, to accommodate the viewpoints of the Opposition. He agreed to introduce certain amendments which would more clearly define the exemptions from the Duty. What is even more important, he announced his decision to bring forward a finance Bill, embodying the rates of the Duty, before the Bill came up again for detailed discussion. This is not surprising, because the whole debate was unreal, in view of the fact that nobody knew the rates of the Duty. The announcement of the rates will lead to a pointed and purposeful debate by the House.

It is rather unfortunate that the debate was utilised by many members to preach a certain brand of social philosophy, the extremist ideology, which is now running the serious risk of being discredited by the very countries which had so wholeheartedly supported it some time ago. Estate Duty is not necessarily a socialist measure; it is in force in capitalist countries too. And yet, its opponents were dubbed "anti-people" and "pro-capitalists," as if it was a sin to entertain honest misgivings about the effects of the Bill on capital formation in this country. Dr. A. Krishnaswamy rightly pointed out that investigations had revealed that income-tax played a greater part in reducing inequality of wealth than Estate Duty. Some very uncharitable remarks were made against those who, impelled by the loftiest of motives, give their wealth in charity. All this would be deplorable in any country, but in a country, where charity has been held in the highest esteem and regarded as a religious obligation, it is particularly deplorable. If the concept of charity received little recognition, the idea of "capital formation" received even less. It was assumed, without proof, that the Bill would not seriously interfere with the formation of capital. In support of this view, the experience of the U.K. and the U.S. was quoted. It is debatable whether it is correct to compare, in this connection, an underdeveloped country like India, which needs all the capital it can muster, with the more industrially advanced countries which could afford to sacrifice a part of their capital in payment of the Duty. Even in some of these countries, there are now some who have honestly begun to doubt the wisdom of continuing Estate Duty. Be that as it may, much will depend on the magnitude of the rates of Duty. The economic effects of the Bill, as Mr. Deshmukh pointed out, would depend on the exemption limits and the rates of Duty. His decision to introduce, before the next reading of the Estate Duty Bill, a Bill fixing the rates of Duty is, therefore, to be welcomed.

The whole debate centred round the aspects, which have been repeatedly urged by the Bill's critics in the recent past, namely, (1) the effect of the Bill on those to whom the Dayabhaga system of inheritance applies, (2) the need for larger exemptions, (3) the demand for a liberal treatment of gifts, (4) the rigour of the language used in the Bill and (5) the difficulties of evaluation of properties. Many members rightly held that it would weigh more heavily on those who follow the Dayabhaga school of inheritance and wondered whether the Bill could not be postponed till a uniform law of inheritance was passed. Perhaps, the Bill could have been held over till the Hindu Code Bill was passed. Apparently, the Government is unwilling to accept this view, though no acceptable argument was put forward to justify its stand.

Many members urged that not only should the exempted items not be aggregated for purposes of Duty but the list of such items should itself be enlarged by the inclusion of the deceased's dwelling house, and other items. Mr. Deshmukh did not accept the first part of this suggestion, on the ground that, since the slab system of levy was being contemplated, it would confer no real benefit to the aggrieved parties. He said that, unless the exempted items were aggregated, it would benefit the richer man more than the poorer. He agreed, however, to exclude items, such as books not for sale and household utensils but not the dwelling houses. He flatly rejected the demand that insurance policies for payment of Estate Duty should not be aggregated. But to cover the cases of persons who were beyond the insurable age but who wanted to make some provision for the payment of the Duty, he said he would consider whether any provision could be made. On the much larger question of the adequacy of the limit of exemption for insurance policies—the limit is Rs. 5,000 in respect of one's own life and another Rs. 5,000 for female dependents—Mr. Deshmukh does not seem to have thrown any light. It will be recalled that, referring to these two provisions, Mr. Purshotamdas Thakurdas, Chairman of the "Oriental," remarked recently—quite pertinently, in our view—that they gave such "meagre" relief that they were scarcely entitled to be called "reliefs."

The demand for a more generous treatment of gifts was also unfortunately overlooked by the Finance Minister. Despite all the criticism that was made against "charities," it is a fact that some of the best foundations, with educational and research work to their credit, and some of the biggest hospitals owe their existence to the munificence of their donors—the Institute of Science at Bangalore, Santiniketan, in Bengal, the Birla group of educational institutions, and the University at Annamalai, the Wadia Hospital in Bombay, to mention only a few of the many instances of disinterested charity. In his minute of dissent to the Select Committee report, Mr. Tulsidas Kilachand rightly pointed out that the existing exemption limit—Rs. 2,500 in the case of property taken under a gift made for a charitable purpose within a period of six months before the death of the donor, and Rs. 1,500 within a period of two years before death—were "ridiculously low" figures. Pleading for a more generous exemption limit, as well as for the removal of "time" restrictions on these gifts, he said:

"Governments at the Centre or in the States are not able to provide all the necessary institutions for the advancement of technology and scientific knowledge nor do they endow charities for educational, artistic, cultural, religious purposes, etc. It is only private philanthropy that can cater to such necessary needs of the public and in order to foster such donations, endowment, gifts, bequests and charities, there should be no limit to the amounts of charity that could be made. It is also to be noted that to the extent that such institutions rendering useful services to the public benefit from gifts made by individuals, the assistance required by them from Government will be considerably less."

This excellent plea has now been rejected. This is a pity, because individual charity has not—contrary to what was suggested by some members—outlived its utility in this country, considering that the bloodless revolution which Mr. Vinobha Bhave has been working out in the rural areas is based essentially upon the sense of charity. It would be tragic if these acts of generosity were brought within the purview of the Bill. Moreover, gifts have a truly economic function, for they not only lessen the burden on the State, as has been pointed out by Mr. Kilachand in the passage quoted above, but also stimulate development of fields, such as pure science and technology, which do not receive sufficient recognition from the Government by reason of the fact that they do not yield quick returns. Hence the need for making their development possible through charity. Mr. Deshmukh did well, however, to clarify the meaning of *bona fide* gifts. He said—he based his observations on the rulings under the British law—that such gifts should satisfy four conditions: (1) the donee must take immediate possession, (2) the donor must be completely excluded from possession, (3) the donor must not retain any benefit either by direct contract or otherwise and (4) there must be no secret arrangement or reservation to the benefit of the donor. But all this sounds ironical, considering that the amounts allowed for charitable purposes are only a few hundreds.

The success of the new measures, as Mr. Deshmukh seemed to realise, lies in the proper assessment of the value of estates. The correct evaluation of the estate, as he suggested, is the "very life-blood" of this measure. But he was inclined to under-estimate the difficulty. He thought there would be no difficulty in regard to the evaluation of jewellery, Government securities or shares in public limited companies. We are not, however, so certain about the correct appraisal of the value of jewellery which forms an important item of property in Indian homes. There is scope here for evasion and corruption. He admitted that there might be difficulty in regard to the evalution of immovable property, but thought that the same difficulty obtained in cases where a person applied for a probate or letters of administration. He contended that, since it was proposed to adopt the slab system of levy, any small differences of valuation would not result in

any wide variation of the Duty. This line of thought is, to say the least, blind optimism.

It is doubtful whether the procedure, contemplated in the Bill, in case of disputed evaluation is not unjust. Some members rightly urged that there must be an appellate tribunal above the Central Board of Revenue—a tribunal to which the aggrieved parties may appeal. Far too much power has been left in the hands of executive authority. It is only the legal questions that will be referred to the Court but not cases of disputed evaluation. As very rich estates are likely to be involved in these cases of disputed valuation, and as the very process of the determination of the value of estates may give rise to legal issues, it seems unwise to invest the Board with extraordinary powers.

There was considerable protest against the language of the Bill. We are in complete agreement with this protest. Many members suggested that the language was too complicated even for trained lawyers. Mr. Deshmukh explained that the Bill was based on the English law, with the various English rulings, and admitted that the language of some of the sections was bound to be somewhat difficult. But he defended it on the ground that, since it applied only to the rich persons who wanted to create trusts or settlements, they could always consult the lawyers. Nevertheless, the conclusion is inescapable that, in their anxiety to outwit the evaders of the Duty, it looks as though the framers have only succeeded in outwitting the lawyers. In the end, it may well happen that the Government itself will be outwitted. This has happened in the case of control regulations and in sales tax law already, for the affected parties have often failed to get any guidance from the concerned authorities. It is to be hoped that at least the Estate Duty authorities will be well versed in the law they administer. Mr. Deshmukh promised that a booklet would soon be published, explaining the provisions of the law on Estate Duty. And when that booklet is written, its authors will not, we trust, further complicate, in the tradition of India's ancient commentators on the Sanskrit texts, an already complicated piece of legislation.

OUTLOOK FOR COPPER

As was mentioned in our last issue, copper has returned to free trading on the London Metal Exchange, after a long interval of 14 years. This is the fourth non-ferrous metal of great strategic importance to be freed from State trading in the U.K. The first was tin which was freed from bulk purchase arrangements by the U.K. Government in 1949. This was followed by lead in 1952 and then by zinc to which freedom was restored in January this year. The one reason why copper was the last to be decontrolled was that it is essentially a dollar commodity. Britain, therefore, could not take the risk of allowing free trade in this commodity so long as its dollar and gold reserves were slender. With the transfer of copper to private hands, the only metals which are now in the U.K. Government's hands, are tungsten and magnesium. But the London Metal Exchange has never dealt in these metals in the past. Naturally enough, the return of copper is welcomed by all the concerned interests, more particularly by the brass makers and cable makers. The brass makers are interested in zinc and copper and have found some difficulty in carrying on their activity in a market where zinc was free and copper was not. Similarly, the cable makers, who need lead and copper, have experienced difficulty in a market where lead was free and copper was controlled.

When the market for copper reopened on 4th August, the spot price was quoted at £215 per ton and three months forward at £204 per ton, as against £252 per ton, the last price quoted by the Ministry, and the Continental price of about £240 per ton. Since then, there has been a partial recovery, the latest rates at the time of writing being £232 per ton for spot and £212 per ton for three months forward. It is not easy to forecast the future trend of prices. But it is interesting to recall that all the decontrolled non-ferrous metals have so far shown a sizable recession in prices. Lead was first quoted, on being restored to the Metal Exchange in September, 1952, at £131, whereas its current price is only £94. Zinc was quoted at £110 in December, 1952, when it earned its freedom, but is now being offered a shade above £73. But the same trend need not necessarily repeat itself in the case of copper. For one thing, copper is not in such abundant supply as lead or zinc. Secondly, the U.K. Government intends to release only as much copper as it considers essential for the market. For some time at least, the trend of the copper market, will, therefore, depend on the attitude of the U.K. Government. And, thirdly, though this is somewhat remote at present, the high-cost producers of copper in the U.S. and other dollar areas may take steps to prevent prices from falling. They have already resented the reopening of the London Metal Exchange, because free trading in the other metals has led to progressively lower prices and they may bring pressure on their Governments to see to it that the London Metal Exchange is not allowed to regain its full pre-war status as the "arbiter of world metal prices".

A look at the world copper situation shows that the production of the metal has been steadily expanding. Copper is mined in over 30 countries. The U.S. is the largest producer, followed by Chile, Northern Rhodesia, Canada and Belgian Congo. These five countries account for nearly 80 per cent. of the world production. World mine output of copper has been gradually rising in recent years. It was 2.25 million tons in 1950, 2.34 million tons in 1951 and 2.38 million tons in 1952. Similarly, production of copper metal by smelters also has been expanding. From 2.53 million tons in 1950, it rose to 2.62 million tons in 1951 and was nearly maintained at that level in 1952, despite the commodity slump in the first half of that year. The U.S. topped the list of producers with 985,000 tons to its credit, followed by Chile (377,000 tons), Northern Rhodesia (292,000 tons), Canada (200,000 tons), Belgian Congo (202,000 tons) and Germany (192,000 tons). Russia, it is stated, accounts for no more than 300,000 tons. It seems that the upward trend of production will continue. Expansion is still taking place in the U.S., and new mines are being worked in Northern Rhodesia. It is, of course, too early to say whether these new sources will add considerably to the present output.

The picture of world copper consumption reveals that the U.S. tops the list here also. World absorption, which was 2.30 million tons in 1948, improved to 2.59 million tons in 1952, thereby keeping in line with the trend of production. Of the total consumption in the latter year, the U.S. alone accounted for 1.29 million tons. The U.K. is the second largest consumer (348,000 tons), followed by Germany (215,000 tons) and Canada (117,000 tons). It is noteworthy that production is slightly ahead of consumption, but what is significant is the fact that the gap between the two is narrowing. The excess of output over consumption which was 227,000 tons in 1949, shrank to about 100,000 tons in 1950. In 1951, it was only 45,000 tons and in 1952 it was still lower at 25,000 tons.

There are three factors which are of some immediate significance to the trend of copper prices. In the first place, there is the question of the Chilean stocks which could, if allowed to weigh heavily on the markets, depress prices. Secondly, there is the ever-present question of the availability of scrap metal. In few other metals is the importance of scrap so great as in copper. There are few uses where it is irrevocably consumed. Generally speaking, copper is largely used in forms from which it is possible to recover the metal. The availability of scrap will also depend on the trend of prices. Any large increase in prices must naturally stimulate the recovery of used copper. Thirdly, there is the rearmament programme. Since copper is a metal of great strategic significance, any large rearmament programme increases its prices and any setback in this programme depresses them. Indeed, the recent fall in copper prices has to be attributed primarily to the truce in Korea.

It will, however, be wrong to think that copper is only a strategic metal. On the contrary, it is capable of being put to greater use in peace. Although this metal has been known to mankind since pre-historio times, its versatility was realised only during this century. Because of its high thermal and electrical conductivity—second, in this respect, only to silver—its excellent powers of resistance to corrosion, its good mechanical properties, and the readiness with which it can combine with other metals to form alloys, copper has now become a more sought-after metal than ever before. Its largest user is the electrical industry where it is used in making, among other articles, cables, wires and line conductors. It is true that copper is losing its place in the sphere of household equipment and furniture. But the loss is being more than compensated by the growing consumption of copper in pipes, cylinders, boilers and in other directions. In the past few years, it has found some extended use in the roofing of buildings, too. Further, research is constantly expanding the sphere of copper's usefulness. New alloys, with copper base, are finding a more extensive market. In combination with tellirium, copper's powers of conductivity are said to improve; its tensile strength increases substantially, when it is combined with cadmium. Copper-cadmium alloy, it is stated, has applications in fields where strength, combined with high thermal or electrical conductivity, is needed as in welding and in the making of electrodes. Again, copper, when mixed in a certain proportion with beryllium, becomes a hard material, capable of being used in the making of measuring instruments and of tools for cutting metals.

The high prices, which copper touched in recent years, have, of course, stimulated the search for substitute materials. It is possible that aluminium or plastics may have captured some fields dominated by copper. But copper is likely to come into its own again. It is unlikely to be displaced from fields where its unquestioned eminence has stood the test of time. Although no one can predict the outcome of constant technological research work, which may change the utility of copper, there are at present no signs that it has any serious rival. Indeed, it is likely that, when its prices come down, it will both recapture the fields it has lost and extend its influence over other fields. And there will ultimately be keen competition among the world's major producers to widen the scope of copper's utility by marketing it at acceptable price levels.

Copper is one of those metals in which this country is vitally interested. India meets the greater part of its copper requirements through imports. But then no accurate estimate is available of India's copper needs. The Non-ferrous Metal Panel estimated the country's copper requirements at about 40,000 tons; as against this the Indian production accounts for only about 7,000 tons. The International Materials Conference (I.M.C.) allocated about 8,800 tons per quarter to this country. This means that the country's import requirements were placed at an annual level of about 35,000 tons. Actual imports in the last three years have been less than this figure. Thus, imports aggregated 32,400 tons in 1950, but only 7,300 tons and 13,000 tons in 1951 and 1952, respectively. But these two years were abnormal years, since they were periods of high prices for copper. The I.M.C.'s allocation of a large quota for India did not benefit the country much, as the high prices quoted in foreign countries deterred this country from importing large quantities. Also, the Government's bungling in its non-ferrous metal prices policy—the Government announced its intention to control prices in 1950, and later revoked it, when it realised that the prices of an imported metal cannot be controlled by executive fiat—was partly responsible for this country's failure to import its needs.

It is, however, interesting to note that prices of copper in the Indian market have been well below the world levels. This is because the fabricated metal has not been able to command a good market. Although the industrial demand for copper has gone up considerably in recent years, the demand from the manufacturers of household utensils has slumped heavily. Apart from the general recession in the demand for utensils—these articles are in the nature of a capital investment for Indian homes, that is, they are not annually renewable—the main reason for the comparatively depressed state of the market for many varieties of non-ferrous metal goods is that there is excess capacity for manufacture. The Government itself seems to aim at a policy of self-sufficiency. For, we are told, it has itself set up non-ferrous metal factories in order to meet its defence requirements, and has thus added to the excess capacity in the country. Most units in the industry are, therefore, now working below capacity, which means that their working is uneconomic.

It is necessary to take some measures which would improve the prospects for the non-ferrous metals industry, particularly the copper-utilising section of it. There is room for improvement in the Government's system of stores purchases. The Government's vacillating export policy has also been a serious handicap for the manufacturers. There have been far too many changes in this policy. It would be much better if a long-term policy were announced and strictly adhered to. Again, the Government will do well to consult the concerned trade and industrial interests before concluding trade agreements with India's neighbouring countries which constitute a natural market for this country's non-ferrous manufactures.

GOVERNMENT'S POLICY ON OILSEEDS AND VEGETABLE OILS

BELATED ACTION MAKES IT INEFFECTIVE

THURSDAY, 5 P.M.

THE announcement in Parliament by Mr. Deshmukh on Wednesday that he would shortly introduce a Finance Bill, indicating the rates of Estate Duty on the basis of a slab system, has arrested the firm trend that began to manifest itself in equities early this week, when Tata Deferreds received considerable attention at the hands of a small group of speculators and rose to a high of Rs. 1,970. Everyone thought it would cross the Rs. 2,000-mark before the close of this week. But, in the meanwhile, Mr. Deshmukh applied a cold douche to the market and the Deferreds have dropped about 25 points from the peak to finish at Rs. 1,946. This marking down was of a precautionary nature, because there were rumours that the rates of duty would be more stiff than expected, especially at the lower slabs. The leading textile shares, which began the week in a promising fashion, have also finished somewhat lower. An additional reason for this is the decision of the directors of Bombay Dyeings to maintain the interim dividend at the previous year's level. This was a disappointment to some of the operators who had gone "long" in the hope that the interim dividend would be raised. The general trend of equities is, however, quite steady. Selective buying of scrips, based on their individual merits, still continues. As a result, some of the first class shares such as Belapurs, Wimcos, Alcock Ashdowns, Josts Engineering, have improved in value. The upward trend in National Rayons persists, but this seems to be due mainly to speculative buying in the hope that the scrip will be included in the forward list on the Stock Exchange.

MARKET GOSSIP

• • • •

Contrary to expectations at the time the new State loans were issued, the Gilt-edged market has been ruling fairly steady during the last few days, notwithstanding the fact that the money market is not easy. The fears that there will be anxious sellers of the new State loans have not yet materialised. On the other hand, there is some investment enquiry for these loans and a scarcity of stocks. Consequently, there has been a fractional improvement in the value of the Bombay and Bengal loans. Even in the case of the Madras loan, the discount under the issue price, that was seen in the previous two weeks, has nearly disappeared. There is also good demand for the 3½ per cent. National Plan Bonds of the Union Government, but they have not gone up, because the Reserve Bank has been a regular seller at Rs. 98-5. The proposed loan of the Bombay Municipality, it has been finally decided, will be confined to Rs. 75 lakhs only. There is no change in the terms indicated in these columns last week. Although the issue is being placed privately, it may be formally offered to the public, probably some time next week.

• • • •

One of the factors that have rendered this country a high-cost economy is the bungling by the Government in the administration of economic controls. If some means could be found for calculating the cost of such faults to the people, it would reveal an astounding figure. Unfortunately, however, there are no reliable means of doing so. One has, therefore, to rest content with pointing out the instances of official mistakes from time to time. These mistakes are of various types, but the one that is still very common, even after a decade of experience, is failure to take timely decisions. Such mistakes could, of course, be avoided if the Government were to listen to the suggestions made by responsible business men. It is true that, invariably, the suggestions received by the Government are from those who are interested parties. But that is no excuse for the Government to vacillate and delay action. For the Government should be in a position to judge for itself as to which of the suggestions are in the larger interests of the country. If it does not possess this ability, it should cease administering economic controls.

• • • •

The measures taken by the Government of India to bring down the prices of oilseeds and vegetables oils constitute a recent instance of belated action. India is one of the largest producers of oilseeds in the world. Perhaps, no other country in the world produces in large commercial quantities all the principal oilseeds as India does. With the exception of soyabeans, palm kernels and olives, it makes an important contribution to all the main seeds which form the basis for the world's vegetable oil industry. It has been estimated that, on an average, India contributes to the world production of oilseeds about 36 per cent. of groundnut, 26 per cent. of castorseed, 26 per cent. of sesamum, 15 per cent. of linseed, 13 per cent. of cottonseed. Then there are *kardi* and *niger* seeds, not to mention copra. The total production of oilseeds and oil-bearing nuts in India is placed at 7 million tons, valued at Rs. 450 crores at current level of prices. Thanks to such a large production of oilseeds, India has been a surplus producer of vegetable oils for decades. In recent years, however, the trend of production has been rather downward, while consumption has been steadily rising. During 1952-53, in particular, this country experienced a shortage in the most important of all the oilseeds, namely, groundnut. Owing to failure of monsoon and drought in the principal producing areas, there was a serious fall in the output of groundnut, even though a larger acreage had been devoted to it. The total production of this oilseed is estimated by the trade at 23 lakh tons (in shell), as against 30 lakh tons in the preceding year. The major portion of this fall occurred in Madras State, where the 1952-53 crop is placed at no more than 6 lakh tons, as against the normal crop of 11 to 11½ lakh tons.

• • • •

The authorities were warned by the trade, well in advance, of the consequences of such a short crop to the country's economy. They took no notice of it. On the contrary, they issued export quotas for 40,000 tons of oil for the first half of 1953, a portion of which was allowed in the form of H.P.S. groundnut. They also permitted exports of *kardi* and *niger* seeds freely and so also rape and mustard oil. What was worse, they continued this policy in respect of these minor seeds even after groundnut prices had shot up to record high levels. It is true that, early in June, they banned all further sales of groundnut oil and H.P.S. groundnut for export, but this decision came so late that it had no effect on the upward trend of prices. In fact, the prices kept on moving up and touched an all-time record of Rs. 54-8 per cwt. in the last week of July, as against Rs. 32-8 early in the year and Rs. 25 in March, 1952, when there was a sudden shake-out in all markets, and Rs. 44-4 before the Korean war started. A more impressive idea of the rise in prices of oilseeds and oils as a whole can be had by a comparison of their index numbers. The index number (Base: 1939=100) of vegetable oils stood at as high a level as 602 for the week ended 18th July, 1953, as against 469 a year before and 459, the average for 1952 as a whole, the corresponding numbers for oilseeds being 688, 482 and 484, respectively.

• • • •

The high level of prices of vegetable oils, generally, and of groundnut and groundnut oil, in particular, has caused serious hardship to consumers, especially to the middle and poor classes, for whom these constitute the only source of fat, since they cannot afford to buy milk and butter. It is undoubtedly one of the chief factors that has led to the sharp rise in cost of living all over the country and thereby in the dear food allowances payable to industrial workers. Another adverse result of it has been the high cost of production of *vanaspathi* and soaps. The price level of vegetable oils, it may be noted here, accounts for as much as 60 per cent. of the cost of manufacturing soap. As it has not been practicable to pass on this high cost to consumers of soap, the profit-margins of soap manufacturers have been greatly reduced, the marginal units among them suffering far more than the economic units. There is no doubt that it is this unfavourable factor that has offered a convenient occasion for the indigenous units to have a dig at the most economic soap unit, owned and managed by a foreign company. Readers are already aware of this unfortunate controversy and, as a reference to it was made in these columns only last week, it is unnecessary to describe it again. Suffice it to say that the rise in prices of vegetable oils has been the cause, albeit indirectly, of discontentment against a section of foreign investors which threatens to tell upon the future flow of foreign private capital into this country and that at a time when it is needed most.

• • • •

So much for the effects of the rise in prices of vegetable oils. Now to refer to the measures taken by the Government to bring them down and their results. In order to ease the position, the soap and *vanaspathi* manufacturers, as well as the organisations representing the general consumers of oils, had advised the Government long ago to ban exports of groundnut and groundnut oil and to allow liberal imports of palm oil duty-free, to reduce the import duty on copra oil and abolish it altogether on copra, and to encourage the imports of other edible oils such as cottonseed oil, soyabean oil, etc., at least as a short-term measure to make up the fall in the domestic production of oilseeds. The Government did not heed this advice promptly and, when it did, it carried it out in piecemeal fashion. By now, almost all the aforesaid suggestions have no doubt been implemented, though not fully. But the result is not as satisfactory as it would have been, had the authorities implemented all the suggestions in time and together. For more than two years, the soap makers had been advocating free imports of palm oil, so that they could cut down the use of an important edible oil needed for meeting rising domestic consumption and export. It required a famine in groundnut supply to make the authorities realise the value of that suggestion. It was only in May, 1953, that the Government made up its mind to abolish the preferential duty of 31¼ per cent. on imports from British territories and to reduce the standard rate of duty from 43¾ per cent. to 10 per cent. This was followed by a ban on exports of groundnut oil and H.P.S. groundnuts only after an interval of about three weeks. When it was found that these two measures were inadequate to keep the prices of oils down, the Government reduced, early in July, the import duty on copra from 25 per cent. *ad valorem* (standard) and 15 per cent. *ad valorem* (preferential) to 15 per cent. and 5 per cent., respectively. It, however, did nothing about the import duty on coconut oil, even though there was a clear case for reducing it. The coconut grower in this country, it may be mentioned in passing, gets double protection, through the duty levied by the exporting countries, and the import duty collected by the Government of India. It has been computed that he has been getting about Rs. 800 more per ton than his confrere only a few hundred miles away in Ceylon.

• • • •

The foregoing step, too, failed to have any effect on the domestic prices of oils. On the contrary, a few days after it was taken, the prices of both groundnut oil and coconut oil moved up to fresh high levels. After watching the position for nearly a month and thanks to the renewed agitation from consumers, the Government finally decided, towards the close of last week, to allow imports of cottonseed oil free of duty from Imperial Preference countries and at a nominal rate of 5 per cent. *ad valorem* standard rate from other areas. Before this step was taken, imports of cottonseed oil were subject to a preferential duty of 31¼ per cent. and a standard duty of 43¾ per cent., *ad valorem*. The Government has, of course, made it clear that this is purely an emergency measure and that licences will be only valid for shipment up to 30th September, 1953.

• • • •

Thus, the Government spread the implementation of the scheme for keeping down the domestic prices of oils over a period of about 4 months, with the result that the object was not achieved. Much harm has already been done to that section of the public which is badly in need of relief in the form of lower prices. Anyway, the latest move of the Government has to be welcomed, because it is always better late than never. If this step had not been taken, the position might have tended to become more uncomfortable than it is likely to do now. It can confidently be stated that the upward trend in the prices of vegetable oils is over.

• • • •

True, the permission to import cottonseed oil, which can be used in the place of groundnut oil by *vanaspathi manufacturers, has so far made no* spectacular impression on the level of oilseed prices. The groundnut oil, for instance, shows a drop of only about As. 8 per quarter and groundnuts of about As. 12 per cwt. But this is not surprising, for there is a shortage of ready stocks of these commodities. The forward positions, however, are distinctly quiet and are at a heavy discount under the spot rates. Thus, while the groundnut oil ready delivery is being quoted at Rs. 27-4 per quarter, the September delivery is standing at Rs. 24-8 and the October at Rs. 21-8. This clearly shows that operators are not taking a bullish view of the future. This, of course, is not due solely to the measures taken by the Government but is largely the result of expectations of a bumper groundnut crop in the 1953-54 season which will move into the market in a couple of months. Nevertheless, the various measures taken by the Government as described above must have contributed, in some degree at least, to the bearish outlook for oilseeds in India, inasmuch as they clearly indicate that the authorities are not unmindful of the situation.

• • • •

Are there likely to be any large imports of cottonseed oil? Market circles feel that not much is likely to be bought by consumers, for a number of reasons. In the first place, the c.i.f. price of cottonseed oil from the U.S. works out to Rs. 18 per quarter, on the basis of $295 per ton in America, the current quotation. This rate is only about Rs. 3-8 or Rs. 4 less than the forward rate for groundnut oil (October delivery). Secondly, the estimates of groundnut new crop are encouraging and some, therefore, feel that, in another two or three months, groundnut oil can be had in plenty and at lower rates. Thirdly, there are doubts whether cottonseed oil will be liked by *vanaspathi* consumers. Consequently, those *vanaspathi* makers who do not want to take a risk, may prefer to go in for groundnut oil even if it costs a little more than cottonseed oil. Market circles, however, are unanimously of the opinion that the measure which the Government has taken now would have yielded some tangible results if it had been introduced three months earlier.

• • • •

Mr. J. R. D. Tata's reply to the questions put by the shareholders of the Tata Hydro-electric group of companies, at their extraordinary general meetings held this week to pass the special resolutions for increasing the capital of the companies, suggests that the Government of Bombay has not yet seen the wisdom of changing its mind with regard to the Companies' request for permission to erect simultaneously two thermal plants of 50,000 kw. each. The point of difference between the Government and the Companies is that, while the former thinks that a single unit of 50,000 kw. will suffice to meet the demand for electricity, the latter feel that not only will there be a shortage of electricity if the two units are not erected but the erection of both units will prove economical, in that there will be a saving of at least Rs. 50 lakhs on the project. Mr. Tata, however, revealed that he was still hoping that the State Government would sanction the erection of the second unit also, as the Union Government was understood to be consulting the State authorities on the matter.

• • • •

The State Government is, however, prepared to allow the erection of the second unit, on a condition which is too onerous and risky to be undertaken. Mr. Tata told the shareholders that the Government would not object to the Companies erecting the second unit of the thermal plant, provided it did not ask for standing charges to which it was entitled under the existing Act, if the unit were to close down some time later. Evidently, the Government feels that the second unit will be surplus after its own Koyna Project is erected. If the Companies were to take the risk, Mr. Tata said, it would involve a considerable loss to the shareholders. The Companies were, therefore, negotiating with the State Government for the sanction of the second unit in the normal manner.

SELLING PRESSURE IN EQUITIES AT CLOSE

UNDERTONE, HOWEVER, REMAINS STEADY

(From Our Own Correspondents)

BOMBAY, *13th August*

THE Stock Exchange displayed a hesitant trend during the week under review because of its frequent susceptibility to selling pressure occasioned by disquieting reports and rumours. But these pressures were, however, well absorbed and a steady undertone was maintained. On balance, equities over a wide front disclosed small gains and in some cases the gains were more marked.

The Directors' report and accounts of the Tata Iron and Steel Co., Ltd., for the year ended 31st March, 1953, published this week were well received by the market, though the net profit of the Company show a decline. Operators appeared to have derived satisfaction from the progress made in the Company's development plans and the assurance of a loan of Rs. 10 crores from the Government of India for financing its plans. In lively dealings that ensued, Tata Steels scored sizable advances on continued professional buying. Though the labour situation at Burnpur had already been known to have considerably affected the Indian Iron and Steel's production, the publication of the output figures for July, which showed a sizable setback in production from that in June, gave rise to a wave of selling pressure. Mr. Krishnamachari announced in Parliament that the production at Burnpur had fallen by 40,000 tons since January this year and the slowing down of production had caused some damage to the plant and equipment. There was, however, a ray of hope in the Commerce and Industry Minister's disclosure that the Central Government and the State Governments were very seriously concerned and the two Governments were in daily contact with each other. This statement allayed apprehensions to some extent and led to hopes that the strike would soon be settled.

Early in the week, there was some improvement in sentiment which was reflected in a sharp gain in Tata Steels. But the gains were nearly wiped out in the last two days on unloading by prominent bull operators on rumours of a likely recurrence of labour trouble at Jamshedpur and baseless fears that the rates of duty under the Estate Duty Act would be rigorous. Operators took no chance to study the truth of these rumours and preferred to lighten their commitments on the eve of the end-of-account. The developments in Kashmir and concern over Pakistan's attitude towards India also restrained activity at times. In the absence of any special factors to sustain sentiment, textile shares followed the pattern of steel shares, but the miscellaneous section disclosed several bright features.

In the steel section, Tata Deferreds opened at Rs. 1,946-4 and advanced steadily to touch Rs. 1,967-8 on Monday. But the weakness of Indian Irons on Tuesday and apprehensions about the estate duty brought Tata Deferreds back to Rs. 1,947-8 on Tuesday. After a good recovery to Rs. 1,970 yesterday, the scrips came under pressure to react to Rs. 1,946-4. Tata Ordinaries came up to Rs. 342 from the opening level of Rs. 337-12, but gave way to Rs. 338 at the close. In the earlier part of the week Indian Irons made good advance from Rs. 23-3 to Rs. 23-8, but suddenly fell back to Rs. 23-1½ on Tuesday. Renewed support from Calcutta on hopes of an early settlement at Burnpur restored the shares to Rs. 23-3 at the close.

In the textile section, Bombay Dyeings moved up from Rs. 388-12 to Rs. 393-12, but reacted yesterday to Rs. 387-8. To-day, however, the shares made some headway and touched Rs. 388-12. But the announcement that the Directors of the Company had decided to maintain the interim dividend for the current year at Rs. 7-8 per share brought the shares down to Rs. 385-10, reflecting the market's disappointment over the same, in view of its earlier expectations of an increase in interim distribution to Rs. 10. Kohinoors were quiet at Rs. 302, after touching Rs. 305-8 earlier. Central Indias were in demand on expectations of a higher dividend and scored a gain of Rs. 4 to Rs. 162. Centurys put on Re. 1 to Rs. 276-8. Finlays were a rupee lower at Rs. 322, despite the official announcement of the closure of transfer books from 9th September to 23rd September, 1953, for the purpose of issuing bonus shares. The Company proposes to issue bonus shares to the existing shareholders at the rate of one ordinary share for every four shares. Gokaks showed no change at Rs. 226. Indu Ordinaries were quiet with a decline of As. 2½ to Rs. 9-6½. Indore Malwas, on the other hand, rose by Re. 1-14 to Rs. 92-8, on reports that the Directors propose to raise the dividend for the year ended 31st December, 1952, to 6 per cent. from 5 per cent. paid for the previous year. Mysore Spinnings were a feature with a rise of Rs. 3 to Rs. 130. Simplex were steady at Rs. 170-8. Standards put on Re. 1-4 to Rs. 316-4, while Svadeshis lost as much to Rs. 252-4. Swans were marked up by Re. 1-4 to Rs. 456-4. The Company proposes to issue bonus shares in the ratio of one ordinary share for every two shares held.

Activity in bank shares was limited and price movements were narrow. Barodas were done at Rs. 110-12, as against Rs. 111 a week ago. Indias declined from Rs. 158 *cum-div.* to Rs. 155 *ex-div.* Imperials Fully Paids added Rs. 1-4 to Rs. 1,830 and Contributories Rs. 2-8 to Rs. 442-8. Centrals were unchanged at Rs. 65-12 and their new shares disclosed a loss of As. 12 at Rs. 67-12. United Commercials were marked up by As. 8 to Rs. 36-8.

Insurance shares were generally quiet and dull, but Orientals provided a notable exception with a spurt of Rs. 150 to Rs. 6,875. New Indias were a fraction lower at Rs. 40-4. Jupiters lost a rupee to Rs. 6-1. Empires were unchanged at Rs. 627-8, B.I.Gs at Rs. 13-8 and Vulcans at Rs. 11-13.

Miscellaneous industrials displayed a better tone with some smart gains in several counters. Associated Cements held their ground around Rs. 168-12. Belapurs forged ahead by Rs. 3-8 to Rs. 238-8. Bombay-Burmahs changed hands Re. 1-14 higher at Rs. 360-10. Alcocks rallied by Rs. 8-12 to Rs. 305. Indian Coppers were maintained at Rs. 2-13. National Rayons attracted some active buying to touch a new high of Rs. 116-4, a rise of Rs. 5-8 over the week. Premier Constructions were well favoured and gained Re. 1-4 to Rs. 87. Tata Chemicals were quiet at Rs. 8-13½ and Tata Oils at Rs. 30-8. Walchandnagars firmed up by Rs. 10-10 to Rs. 149-6. Wimcos were in good demand to score a gain of Rs. 12-8 to Rs. 237-8. Josts Engineerings were active and advanced by Rs. 4 to Rs. 91. Shivrajpurs held their own at Rs. 57-8. Scindias were steady around Rs. 13-10. Bharat Lines had sellers at Rs. 83.

Calcutta Stock Exchange

CALCUTTA, *11th August*

Easier conditions prevailed on the Calcutta Stock Exchange during the week. Lack of fresh incentives also contributed to reduced volume of business. With the easing of the Korean situation, and the 16-nation warning to Russia, made public last Friday in New York, the stock market has to look for incentives from within the country. The economic situation in the country, however, is none too helpful. Growing unemployment and reduced purchasing power of people at work have resulted in the consumer goods industries finding it difficult to market production, while cost of production continues to remain high. It is not surprising, therefore, that investors are extremely cautious in entering into long-term commitments. The labour situation in Burnpur having shown no improvement whatsoever, the speculative counter, Indian Irons, recorded a further decline.

Interest in jute shares was restricted, and, although prices of jute goods did not move down and it had been generally expected that mills would be able to record better results during the current accounting period, poor enquiries for finished goods from overseas discouraged operators from doing business. Howrahs opened at Rs. 23-7 and business was recorded up to Rs. 23-12. To-day's closure was, however, a shade lower at Rs. 23-9. Fort Glosters were transacted at Rs. 424, while Cheviots eased from Rs. 220 to Rs. 212. Nationals were, however, fractionally better at Rs. 24-1, but Nuddeas shed two points to stand at Rs. 44. Champadanies were easy at Rs. 146, as were Ganges at Rs. 68-8.

Texmacos provided the feature in the engineering section, and improved from Rs. 5-11 to Rs. 6-3. A mixed trend was recorded in Indian Irons which opened at Rs. 23-7 and gradually receded to Rs. 23-1. At this stage a ripple of interest was in evidence and buyers were drawn by the lower rate. This raised the price to Rs. 23-6 on Saturday. Yesterday, the rate was around Rs. 23-8. During July the Company produced 21,150 tons pig iron, as against 26,730 in June, 8,370 tons steel ingots (23,940 tons) and 4,570 tons of semis and finished steel (11,040 tons). Indian Standard Wagons had buyers at the improved rate of Rs. 90, while Burn & Cos. were quiet at Rs. 282. Bhartias eased from Rs. 10-12 to Rs. 10-8. Braithwaites came to business at Rs. 11-1 and Jessops at Rs. 23-6 c.t.

Among textiles, profit-taking continued in Dumbars, which were done at Rs. 178. In small lots, Bowreahs realised Rs. 277, as against Rs. 312 last week. Banares Cottons eased from Rs. 2-12 to Rs. 2-8.

In the miscellaneous section, F. & C. Oslers were put through at Rs. 6-3, as against Rs. 7-6 a week ago. The recession after the rise received momentum when it was realised that market rumours to the effect that the Indian Cable Co., Ltd., had taken an interest in F. & C. Oslers were unfounded. Rallis were marked down from Rs. 70 to Rs. 66-8. Indian Cables came to business at Rs. 18-4. Martin Burns eased from Rs. 18-10 to Rs. 18-12, and Angelo Bros. from Rs. 18-10 to Rs. 18. Indian Wood Products were fractionally lower at Rs. 31-12. Titaghur Papers changed hands at Rs. 35-6, and Sone Valley Cements at Rs. 6-13. The announcement of a dividend of 5 per cent. on ordinary shares of India General Navigation and Railway Co., Ltd., for 1952, as against nil for 1951, was well received in the market. This was reflected in the shares of the Company improving from Rs. 85 to Rs. 86

Moderate interest was shown in sugar shares. Earlier, Carews improved from Rs. 6-14 to Rs. 7-1, but to-day realised only Rs. 6-14. Dharbangas were better at Rs. 11-3, and Champarans rose from Rs. 23 to Rs. 24-7.

Coals continued to be lifeless. However, a few counters recovered, following demand at lower levels. Thus, Pench Valley were taken from Rs. 20-4 to Rs. 20-10, and Bengals from Rs. 507 to Rs. 515. Central Indias were unchanged at Rs. 4-9, while East Indians were marked down at Rs. 22-14. Raneegunges changed hands at Rs. 8-2, Burrakurs at Rs. 9-1, and New Beerbhooms at Rs. 17-9.

• • • •

Madras Stock Exchange

MADRAS, *11th August*

The performance of the Madras Stock Exchange last week was virtually repeated this week. Textiles were once again in the limelight, with prices recording sizable gains, on continued encouraging advices for piecegoods from certain important consuming centres. Plantings lacked support. Among them, rubbers ruled easy, on speculative selling. Teas were quiet, despite encouraging reports from Calcutta regarding sale of tea leaves during the recent auctions. Coffees were colourless. Miscellaneous scrips fared no better. Consequently, price movements in planting and miscellaneous scrips were limited to a narrow range, with losses predominating. Banks were steady and the prices recorded generally minor gains.

The textile counters were active. Colmbatore Pioneers improved by Rs. 5 to Rs. 120 and Coimbatore Cottons by Rs. 4 to Rs. 150. Metturs advanced from Rs. 188 to Rs. 192. Vasantas gained Rs. 8-8 to Rs. 158-8. Radhakrishnas 'B' and Rajalakshmis rallied Rs. 2 each to Rs. 78 and Rs. 86, respectively. S. K. Rajendras hardened by a rupee and closed at Rs. 42-8 Dhanalakshmis too put on a similar amount and finished at Rs. 180. Buckinghams were done at Rs. 121-8 *cum-div.*, as against Rs. 119-8 *ex-div.* and Bangalore Woollens Rs. 265 *cum-div.*, as compared with Rs. 257-8 *ex-div.* Coimbatore Kamalas, however, lost Rs. 3 to Rs. 90.

Among plantings, teas lacked support. Except a few scrips which attracted support, the rest had an easier trend. The only notable scrips was Emerald Valley which scored As. 3 to Rs. 4. Twyfords were done at Rs. 11 *ex-div.*, as against Rs. 12-4 *cum-div.* Peermades, however, lost an anna to Rs. 27-4. Parksides and Periakaramalais were unchanged at Rs. 13-2 and Rs. 28-3 *cum-right*, respectively. Haileyburias were quiet at Rs. 13-8 *cum-div.* The directors have declared a dividend of 10 per cent. on the ordinary shares for the year ended 31st December, 1952, as against 15 per cent. for the previous year. Mysore Plantations (tea and coffee) were better at As. 11½ and T.R.Ts. (tea and rubber) at Rs. 7-3.

The rubber section was easy. Malankaras lost As. 4 to Rs. 105-12 Nenmenys were done at Rs. 8-8, as against Rs. 8-12. Valkundams lost As. 2 to Rs. 14. Rajagiris, however, gained As. 5 to Rs. 11-8. Thirumbadis were slightly better at Rs. 2-13½.

Coffee shares were almost quiet; the only notable exceptions were Nil. Neergundi and Consolidated Coffees which improved by an anna each to Rs. 3-9 and Rs. 18-10. Puthuthotams were slightly better at Rs. 3-7. The rest of the Coffee section was unchanged. Thus, Coffee Lands was quiet at Rs. 10-7 and Mysore Coffees at As. 8½.

Miscellaneous scrips came in for some selling pressure. Rallis lost Rs. 4 to Rs. 67-8. Spencers were down by As. 4 at Rs. 13-10 and Mettur Chemicals by As. 2 at Rs. 3-13. Indian Steel Rolling Mills eased by As. 4 to finish at Rs. 11. Andhra Cements 'A', however, were done better by Re. 1 at Rs. 99. Mysore Paper gained As. 2 to Rs. 14-12 *cum-div.* and India Sugars As. 6 to Rs. 22. United Breweries were done quiet at Rs. 167 *cum-div.* The Directors have declared a second interim dividend of 10 per cent. on the ordinary shares for the year ended 31st March.

MARKET GOSSIP

(Concluded from previous page)

Concern was expressed by some shareholders of the Tata Hydro Company over the prospects of maintenance of dividends by the Company during the construction stage of the plant, Mr. Tata allayed these fears by assuring them that the return on the capital employed during construction was fixed at 5 per cent. and that there was, therefore, no need to fear that the dividend would be reduced on account of the increase in capital.

• • • •

The three hydro-electric companies under the management of the Tatas propose to raise fresh capital of an aggregate sum of Rs. 3 crores to finance partly the new thermal plant. Andhra Valley's contribution to this project will be Rs. 90 lakhs, to be raised by the issue of 9,000 ordinary shares of Rs. 1,000 each. These new shares will be issued to the existing shareholders in the proportion of two new shares for every five shares held by them. Tata Hydro will raise Rs. 60 lakhs by issuing 60,000 ordinary shares of Rs. 100 each to the existing shareholders in the ratio of one new share for every three shares held by them. Tata Power will raise Rs. 1.5 crores by the issue of 15,000 new ordinary shares of Rs. 1,000 each and offer them to the existing shareholders in the ratio of two new shares for every five shares now held by them.

A CORRECTION

There has been an unfortunate error in our observations relating to the Stanvac debentures and our references to the possible issue of debentures by the Dunlop Rubber Co., Ltd., which appeared in these columns last week. The Stanvac debentures did not (contrary to what was stated in these columns) call for any special resolution on the part of the insurers before they could invest in this issue, for their investment had been facilitated by the Government's incorporation of this issue in the list of approved investments by means of a *Gazette* notification, dated 15th June, 1953. Again, we are reliably informed that the Dunlop Rubber Company is not contemplating any further debenture issue.

NEWS IN BRIEF

THE eighth annual session of the Jaipur Chamber of Commerce and Industry will be held at Jaipur on 20th August, 1953. Mr. Jai Narain Vyas, Chief Minister of Rajasthan, will inaugurate the session.

The ensuing session of the Council of States will commence on the 24th inst. The Council will have 24 sittings. Three days have been set apart for private members' business, while the rest will be devoted to official business.

Exploration of the Am Jor pyrites deposit in the Shahabad district in Bihar by the Mining Section of the Geological Survey of India suggests that the deposits are fairly extensive, with a grade indicating the possibility of their becoming a substantial producer of sulphur.

The Tariff Commission has undertaken an enquiry into the question of continuance of protection to the bichromates industry beyond 31st December, 1953. Questionnaires prepared in this connection for producers, importers and consumers of bichromates are ready for issue with the Commission.

The recommendations of the Calcutta Circular Railway Enquiry Committee have been considered by the Government of India. A team of officers has been appointed to carry out a survey in connection with the suburban electrification scheme and also to examine, in detail, the proposals made by the Committee.

India had a favourable balance of trade with the U.K. to the extent of £4.01 million during the first half of this year, as against an adverse balance of £4.24 million in the corresponding period last year. The value of exports to and imports from the U.K. was £55.09 million and £51.08 million, as against £59.10 million and £63.34 million, respectively, in the first half of 1952.

All types of synthetic resins (solid or liquid), with some exceptions have been covered by import O.G.L. XXIX. The exceptions are synthetic resin in semi-liquid form, containing volatile solvents which can be easily separated from the resins, and dispersions and emulsions of synthetic resins. Since hardeners are imported with a corresponding quantity of synthetic resins, their import is allowed as a special case.

The talks between the representatives of the Governments of India and the U.S. on the Indo-U.S. Air Agreement, which began on 11th May, 1953, concluded on the 5th inst. The talks were started at the instance of the Government of India to discuss a possible amendment of the provisions of the Agreement relating to the capacity and frequency of services of the airlines of the two countries. In all, 11 meetings were held. It was recognised by both sides that the problems involved were complex. Various methods of dealing with those problems were discussed in all their aspects and there was full exchange of views. The two delegations will now make their reports to their respective Governments for consideration.

The Government of India has permitted the import of cottonseed oil. The import is allowed as an emergency measure, as the supply of edible oils continues to be scarce and prices are high. Licences will be issued liberally to *vanaspati* manufacturers and other similar consumers and established importers of vegetable oils for imports from any country, including countries in the dollar area. Such licences will be valid for shipment only up to 30th September next. The Government has also cut the standard rate of import duty on cottonseed oil from 43¾ per cent. to 5 per cent. *ad valorem* and removed the duty from imports eligible to preferential rates which was hitherto 31¼ per cent. India is expected to import cottonseed oil from cotton-producing countries, such as the U.S., Egypt and Pakistan.

The granting of exemption from income-tax on donations to charitable institutions were, until 31st March, 1953, governed by section 15-B of the Indian Income-tax Act. With the passing of the Income-tax (Amendment) Act, 1953, the position has changed. Under the amendments now made, it is not necessary for any institution to be specifically approved by the Government for the purpose. Donations made to any charitable institution will qualify for exemption, provided (a) that the income of the institution or the fund established in the taxable territories is exempt under section 4 (3) (i), (b) that the institution or the fund is not expressed to be for the benefit of any particular religious community, and (c) that regular accounts of receipts and expenditure are maintained by the institution or the fund. The amounts upto which exemption can be obtained now are only 5 per cent. of the income in the case of all persons, including companies, and the maximum amount is Rs. 1 lakh. Donations made upto 31st March, 1953 will, of course, be subject to the previous law.

A six-point programme is being implemented by the Government of India to arrest the approach of the Rajasthan desert to Delhi. Action has already been taken on some of these proposals, while others are to be implemented soon. The steps include creation of a five-mile wide forest belt about 400 miles long, five miles inwards to the western border of Rajasthan, and its afforestation during the next ten years, development of the technique for the fixation of shifting sands in desert by means of vegetation, establishment of oases as nuclei for the spread of vegetation around Rajasthan, armed constabulary posts, railway stations, police stations, *tehsils* and schools, establishment of shelter belts along selected roads and railway lines running transversely to the direction of wind, distribution of seeds and plants to various agencies for sowing and planting, and pasture management established on behavior of the pasture in different systems of periodic and rotational closures.

From Abroad

The Government of Pakistan has lifted the ban, imposed in May, 1953, on forward trading in new crop cotton.

The total value of retail sales in the U.S. during the first half of this year was at a record level of $86,600 million, which represents a rise of 7 per cent. as compared with the corresponding period last year.

President Eisenhower has signed the Bill seeking to set up a three-man commission to sell the U.S. Government's synthetic rubber factories to private enterprise. The Bill also contains strict anti-monopoly safeguard.

Sweden's population was 7,150,606 at the end of last year, an increase of 7.24 per thousand during 1952. This is the smallest rise in the past ten years. About 20 per cent. of the increase is accounted for by immigration.

The U.S. Government has decided to ask the Tariff Commission to set import fees on foreign wool, with a view to reducing the huge domestic wool surplus. The proposed fees will be levied only on clothing wool.

About 1,000 firms are expected to be represented at an international machinery exhibition to be held in Oslo from 26th August to 6th September, 1953. An industrial design exhibition will be held in Oslo from 17th to 27th September next.

Customs duties collected in Sweden during the fiscal year 1952-53 amounted to Kr. 411 million (£28.34 million), as against Kr. 387 million for the preceding year. This is the highest figure on record, incomes having increased continuously since 1948-49.

The Bill appropriating money and carry-over funds to provide military, economic and technical aid for the free world has been signed by President Eisenhower. The Bill provides for special economic assistance of $75 million to India and Pakistan.

The Turkish Government has purchased from the I.M.F. $10 million, £2 million and 18.48 million Deutschemarks. This brings the Fund's holdings of Turkish currency to 174,289,641 liras, which represent 144.76 per cent. of that country's quota in the Fund. Turkey has undertaken to repurchase these holdings in excess of 75 per cent. of the quota by payments in gold or convertible currencies within 3½ years.

Two representatives of the World Bank are now in Vienna (Austria) studying the general economic situation, with a view to acquainting the Bank with Austria's investment plans, particularly in the field of electric power development. The mission consists of Mr. Andrew M. Kamarch, Economic Adviser to the Bank's Department of Operations for Europe, Africa and Australasia, and Mr. John H. Collier of the same Department.

Under a new Dutch foreign exchange liberalisation measure, residents are no longer required to hand in and transfer their claims to the Netherlands Bank. Accordingly, foreign exchange may now be held with a Dutch private bank or by holding a currency account with a foreign bank. Foreign claims in terms of practically all countries can be cashed as far as permitted by the country concerned. All claims on non-residents in U.S. and Canadian dollars, or in "free" Swiss francs, must be cashed in terms of these currencies.

World production of tin in 1952 was 170,500 long tons, as against 170,000 tons in the previous year. The quantity of tin actually consumed was 128,000 tons, which is 9,000 tons below the 1951 level. The decline in consumption was largely due to lowel offtake by the U.S., which amounted to 45,300 tons, as against 56,900 tons. The steel strike during the months of June and July, 1952, was responsible for upsetting tinplate production seriously, and the consumption of tin for tinplate manufacture fell by about 2,000 tons.

Negotiations are proceeding in Washington for the grant of a loan of $20 million by the World Bank to West Germany. The loan is to be paid to the Industrie-Kredit Bank by the World Bank to be apportioned among a number of medium-sized firms. West Germany hopes for bigger industrial loans—some estimates place them at $150 to $200 million—but they are still in the exploratory stage. Industrie-Kredit Bank has been receiving numerous applications and projects from the German steel, coal and chemical industries and these are being sifted and scrutinised by the Bank before forwarding them to Washington.

Brazil and the U.S. Export-Import Bank have reached an agreement on Brazil's plan to clear up past due U.S. dollar accounts. Under the arrangement, Brazil utilises the balance of a $300 million loan from the Export-Import Bank, plus other resources and credits from commercial banks, to pay all U.S. commercial arrears by the end of 1953. The Export-Import Bank has agreed to the Brazilian request that repayment of the principal on its loan to the Banco de Brazil should be deferred for one year, that is, until September, 1954. After that date, the loan will be repaid in 24 equal monthly instalments so as to complete repayment by September, 1956, as provided in the original agreement.

Britain and Turkey have just signed an agreement which lays down the principles on which certain debts due from the Turkish Government to the U.K. are to be settled. The debts concerned are principally the armaments credits advanced by the British Government to the Turkish Government just prior to, and in the early years of, World War II, in accordance with the provisions of the treaty of mutual assistance between Turkey and the United Kingdom. The capital advances outstanding under the armaments credits amount to about £24 million and there is, in addition, a certain amount of contractual interest. The British Government has now agreed to accept a sum of £7 million in full and final settlement of all claims arising within the framework of the armaments credits. This sum will be paid in seven equal annual instalments, commencing in March, 1954.

PERSONAL

MR. Yadulla Azodi, who is now working in the Iranian Foreign Office, has been appointed Iran's Ambassador to India.

Mr. T. Swaminathan, I.C.S., Textile Commissioner to the Government of India, returned from London on Monday last, after a study of the textile industry in the U.K.

Mr. S. N. Maitra, I.C.S., has been appointed Chief Commissioner of the Andaman and Nicobar Islands, in succession to Mr. A. K. Ghosh, I.C.S., who has been appointed General Manager of Bharat Electronics Limited, Bangalore.

Lala Yodhraj, Chairman and Managing Director of the Punjab National Bank, returned to India on the 8th inst., after a two-month tour of the Continent, where he visited several banks with a view to studying modern mechanism in banking.

Mr. J. R. D. Tata, Chairman, Messrs. Tata Sons Ltd., has been awarded the international management man award of the U.S. National Association of Foremen. The award is for Mr. Tata's work in developing modern and humane industrial relations in Indian factories.

Mrs. Lakshmi N. Menon, Parliamentary Secretary to the Minister for External Affairs, has been nominated by the Government of India to represent India at the fourth session of the Committee on Information from Non-self-governing Territories, which is scheduled to be held at the U.N. Headquarters on Tuesday next.

"COMMERCE" 1928

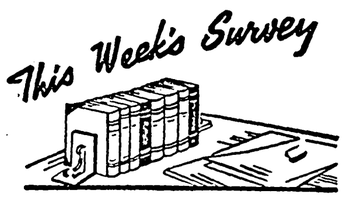
FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, *18th August*

State Aid to Industries

The Bill, which was introduced in the Bengal Legislative Council last week, with a view to affording State aid to industries, failed to enlist sufficient support, with the result that it will have to be circulated for public opinion. The reception accorded to the measure in the Council was not at all encouraging and Indian members, one after another, described it as hesitating and half-hearted. The Bill, which is entitled "The Bengal State Aid to Industries Bill," is claimed to have been modelled on the Madras, Bihar and Orissa measures which were enacted in 1923, but it was pointed out, in the Council, that it differed materially from both.

While the preamble of the Madras Act gives power to the local Government to assist in the establishment and development of industries in the Madras Presidency, the preamble of the Bengal Bill provides only for the giving of State aid to industries in Bengal. The limitation of the Bill is clearly emphasised in its statement of objects and reasons. It is stated therein that the object of the Bill is to obtain statutory power to enable State aid to be given mainly for the purpose of encouraging cottage industries and industries on a small scale, in the shape of loans, guarantees, provision of a hire-purchase system, etc. The difference is fundamental in principle and vital in effect. To take power for giving aid to a class of industrial enterprises in a given shape is one thing. And it is quite another to accept the responsibility of the State to simulate and encourage industries. Then the popular party holds that there is more than a mere majority of official and nominated members on the proposed Board. In this matter also, the Bengal Bill widely differs from the provision of the Madras Act. As regards the powers of the Board, it has been made purely advisory, without any power of initiative. The classification of industries into small and large is vague and can be given any construction, leaving them, as Mr. N. R. Sarkar put it, stranded in the "no man's land" between the Central and Provincial Governments. There should be a more definite and scientific classification of industries into "Provincial" and "Central." Let us hope that when public opinion has been elicited and clarified, the measure will be made more effective for the purpose for which it is intended.



FERRO-SILICON INDUSTRY

FEW industries in India can more legitimately feel proud of having justified tariff protection than the ferro-silicon industry. Protection to this industry was first granted in 1947 and has been continued since then; it is due to expire on 31st December next. During these six years, the industry has registered remarkable progress. Not only has the capacity been considerably expanded but the actual production also has gone up appreciably. Thus, the annual installed capacity of the industry—the Mysore Iron and Steel Works, Bhadravati, is the sole producer of ferro-silicon in the country—is now estimated at 3,500 tons, which compares favourably with 1,800 tons in 1949. The expansion in rated capacity is fully reflected in the output, which has gone up from 2,741 tons in 1950 to 2,793 tons in 1951 and 4,069 tons in 1952. What is more, the quality of the indigenous product is said to be as good as, if not better than, that of imported ferro-silicon. Even in the matter of prices, the indigenous product compares favourably with the foreign product.

Dr. B. V. Narayanaswami Naidu, Member, Tariff Commission, did well, therefore, to preface his speech, while opening the public enquiry into the question of continuing protection to the ferro-silicon industry, held at Bombay on Monday last, with a compliment to the industry for its achievements. The industry, Dr. Naidu rightly remarked, provided one of the happy instances of industries which had established themselves under the ægis of protection and had, by steady development, reached a stage where they were in a position to dispense with protection altogether. Nevertheless, it would be wrong to suggest that protection to the Indian ferro-silicon industry should be completely withdrawn, for there is still a wide gap between domestic production and demand. The Iron and Steel Controller to the Government of India has estimated the country's aggregate requirements at 4,862 tons for 1953, 5,225 tons for 1954, 5,360 tons for 1955 and 5,440 tons for 1956. Also, the industry continues to depend upon imports for synthetic electrodes, an essential raw material.

Besides continuance or otherwise of tariff protection to the ferro-silicon industry, the Tariff Commission will have to examine two other allied issues. These are: (1) Whether and on what basis should the ceiling prices for different grades of ferro-silicon be fixed, and (2) whether there should be import control. It would appear that the recent changes in production costs warrant a revision in ferro-silicon prices. As regards import control, it seems beneficial to continue the existing system whereby licence for import of ferro-silicon is granted subject to the importer taking twice as much of the indigenous product as the quantity imported, since this system provides a convenient way of securing, besides achieving the main purpose of conserving foreign exchange, a higher level of consumption of the indigenous product.

U. S. ECONOMIC POLICY

There will be modest satisfaction over the fact that the U.S. Administration has been able to secure passage through Congress for the one-year extension of the Reciprocal Trade Agreement Act and for a customs simplification Act. It is true that neither of these measures meets in any way the demand of the non-dollar countries for larger facilities for trade with the U.S.—such facilities as the reduction in customs barriers. But the President, Mr. Eisenhower, made it clear in his message to the Congress that he had remitted the whole subject of U.S. foreign economic policy to the new Commission set up to examine the issue. He said:

"Our trade policy is only one part, although a vital part, of a larger problem. This problem embraces the need to develop, through co-operative action among the free nations, a strong and self-supporting economic system capable of providing both the military strength to meet aggression and the rising productivity that can improve living standards."

Mr. Eisenhower recognised the U.S. economic policies "cast their shadows" upon nations far beyond the American borders. Advocates of a more liberal trade policy have naturally been disappointed that the U.S. has not been able to go as far as they wanted it to go. Mr. Eisenhower himself claimed only modest praise for these measures. He said: "These actions—while consistent with concern for our own industries—recognise also our own dependence upon vital markets and foreign sources of raw materials." The fact is that there will, understandably enough, be considerable opposition from U.S. interests to any excessive liberalisation of tariffs designed to promote a larger flow of imports. Exporting interests in the U.S. welcome, on the whole, a liberal import policy which will enable them to sell their goods abroad. They realise that foreign trade is a two-way traffic. But other interests, which are predominantly interested in the domestic market, are not so enthusiastic over a liberal import policy. It is not that they are all necessarily afraid of facing keen competition. But they have genuine fears that it would be difficult to maintain full employment and high wage standards, if they were compelled to compete with producers from other countries where similar standards do not prevail.

Again, the U.S. farm policy, with its emphasis on price support programmes for agricultural produce, implies higher raw material costs for industrial producers. If these producers were compelled to cut down their prices, while farm products were maintained at high price levels, it would inevitably lead to economic contradictions. Thus, the problem of reducing tariffs is complicated by the fact that its solution would have considerable repercussions on the domestic economy of the U.S. Hence Mr. Eisenhower's emphasis that American foreign economic policy has a "direct impact" on the country's internal economy. It is not, therefore, surprising that the U.S. Administration has been somewhat cautious in its approach to the problem of reducing tariffs. It is true that the record of foreign economic legislation during the recent session of the Congress did not show any spectacular change in the U.S. economic policy, but it is satisfactory to note that the Congress has at least resisted the strong pressure from vested interests for adopting measures which would have shattered the hopes of those who believe strongly in the need for the lowering of the American trade barriers. This is no small gain. Perhaps, the Commission on foreign trade policy will be able to show the lines along which these barriers could be whittled down without seriously impairing the fortunes of American industry. It is, of course, an over-simplification of the whole problem to suggest that a reduction in these barriers will be automatically followed by a prosperous dollar market for all non-dollar producers. The fact is that the rate of technical improvement, modernisation and re-equipment in the U.S. is so high that it would be difficult to expect any but the most efficient producers to gain successful entry into the U.S. market.

FILM INDUSTRY

The Indian film industry has apparently fallen on evil days. To say that it is now passing through a crisis would, of course, be to paint the picture in unnecessarily dark colours. But the fact that fewer pictures now run for more than five to six weeks at a stretch is some indication of the fall in attendance at cinemas. Men in the industry estimate that collections have fallen by 20 to 25 per cent. in the last two or three years. It is true that fabulous profits are often reported as having been made by certain producers. This provides no indication at all about the industry's general level of prosperity, for few industries are more subject to wide fluctuations in their income, expenditure and profits than the film industry. Further, this industry is one of the most heavily taxed. It is computed that the film trade collects over Rs. 25 crores a year and pays out in taxes, excluding income-tax and corporation tax, about 50 per cent. of its income. There is an appalling dearth of accurate statistics about the industry—a very deplorable thing indeed, considering that film production and distribution is one of the largest of the Indian industries—so that it is difficult to compute the precise burden of taxation. An acceptable estimate has it that the industry contributes some Rs. 12 crores a year by way of entertainment and other taxes, apart from the income-tax which the men engaged in it are paying.

It is small wonder then that Mr. S. S. Vasan, the well-known Indian producer, made a spirited plea for a reduction in the tax burden when he addressed the recent Federation Day meeting at Madras. He deplored that entertainment tax should take away so large a proportion of the industry's earnings. He said: "This is a tax on enterprise, on technique and on the producers." It has been stated in some circles that the film industry must financially help the establishment of a raw film industry. But if no film producers came forward to help finance this industry it was not because they were unaware of its importance but because the "cinema industry, taken as a whole, has no money." He said that 80 per cent. of the investors in the industry were losers. In view of the great importance of this industry he suggested that it must be controlled by a separate ministry.

It is, of course, not clear how the industry's problem can be solved merely by placing it under a separate ministry. But there is no gainsaying the fact that it has a strong case for relief from excessive tax burden. Even Mr. C. Rajagopalachari, Chief Minister of Madras, who attended the meeting, conceded that the case for relief deserved to be "looked into," although he was otherwise sharply critical of the industry's standards. Indeed, the Film Enquiry Committee, which examined the industry's position, was convinced of the need for relief in tax burden. Actually, the demand for relief by Indian film producers is no exception to the world trend, for it is being voiced even in countries such as the U.S., which have a more prosperous film industry. High costs, exhibitors' difficulties, 3-D prospects and competition from television are the factors that worsen the situation already rendered bad enough by taxation and a fall in cinema attendance. The Indian film industry's problem is, however, somewhat different. 3-D prospects are not an immediate danger. Television is an even less immediate danger, although in the West it is reckoned as a serious rival to both films and newspapers; newspapers are afraid that television will channel off some part of the money spent annually by advertisers in the papers.

DEFINITION OF "EMPLOYEE"

The Government of Bombay proposes to amend the Bombay Industrial Relations Act, 1946. The main change it seeks to make is to widen the definition of the term "employee," so as to include "persons employed primarily in a managerial, administrative, supervisory or technical capacity and drawing a basic pay of less than Rs. 350." Under the 1946 Act, "employee" is defined as "a person employed to do any skilled or unskilled manual or clerical work for hire or reward in any industry," and includes "a person employed by a contract or to do any work in the execution of a contract with an employer" and also "a person who has been dismissed or discharged on account of any dispute relating to a change," in respect of which a notice is given or an application made, under the relevant section, whether before or after his dismissal or discharge.

The widening of the definition is of dubious value. Managerial, administrative, supervisory or technical staff are now being governed by contract of service and their grievances are being settled directly by the employer. They cannot resort to labour and industrial courts to have their grievances, if any, redressed. They can, of course, seek the help of a civil court. They are now neither in the camp of employers nor of the employees, but are virtually a bridge between the two, often acting as negotiators in times of dispute.

If the proposed definition is adopted, the managerial and supervisory staff will have to be represented by labour unions. Separate standing orders will have to be framed for them. All the procedure relating to notice of change in conditions of service, hours of work, pay, etc., that now applies to non-managerial and supervisory staff will also apply to them. They can now resort to labour and industrial courts, which decides issues not purely from a "legal" angle, but from what is called a "propriety" angle.

Is this a change for the better? Perhaps not. The employees who are now sought to be brought under labour legislation, will lose, of course, their status as a privileged class bridging the gulf between the employer and the employees. They will be represented by the trade unions for labour. Since they form a small percentage of the working class, more often, the views of the majority, who are illiterate and credulous, will prevail over their considered views. They will begin to feel that their lot is with labour and this will certainly enlarge the gulf between employer and employees. Moreover, there are a number of small establishments where the managerial and supervisory staff are getting less than Rs. 350. This means that, in such establishments, all supervisory staff, including the manager himself, will have to be represented by the labour union. It appears that, if a change was needed in the Act so as to enlarge the definition of the term "employee," it would have been better if the duties of the managerial and clerical staff and not emoluments had been taken as a criterion for defining the term.

COLLIERY LABOUR DISPUTES

The decision of the Government of India to refer industrial disputes in coalfields to an industrial tribunal for adjudication will be regretted. It represents the first concrete instance of a retreat from the Giri approach to labour problems. What is surprising about the Government's decision is that labour itself had demanded the constitution of only a conciliation board consisting of its representatives and those of employers, labour and the Government. It is not clear why this demand of the workers was rejected in favour of a tribunal. Does this mean that the Government does not even want to give a fair trial to the Giri approach?

Few will deny that the 1947 Conciliation Board Award, relating to colliery labour, has been a milestone in the history of employer-employee relations. That there is a demand for its revision does not mean that the Award was a thorough failure. It has worked so far with satisfactory results. The demand for its revision has arisen because of changed circumstances and not because of any inherent defect in the Award at the time it was given.

Granting that the decision of the Government to refer the colliery labour disputes to an industrial tribunal is correct, what will be the fate of the award of the tribunal in the event of its being rejected either by one or both of the parties? Will it not lead to the repetition of the history of the banking disputes? We are at a loss to understand why the Government does not foresee these difficulties. Apparently, the Government does not like to falsify the cynical saying that "the only lesson we learn from history is that mankind has never learnt from history." It may not be possible, as alleged, to initiate a new policy of conciliation or mutual settlement of disputes in all the industries. But what prevents the Government from trying it in industries where circumstances are not unpropitious? Is it not all the more regrettable not to try it especially in an industry, where it has once been tried and found fairly successful?

The disputes between the employers and employees in the colliery industry are so complicated that they can be better handled by a conciliation board than by an industrial tribunal. The demands refer to the revision of the 1947 Conciliation Board Award in respect of minimum wages, gradation of wages as between different categories of labour and standardisation of wages, among others. A tribunal might take a purely legalistic or a humane approach. But that may not necessarily be the one which will satisfy both parties. Perhaps, it is not too late even now for the Government to revise its decision and set up a conciliation board. Unfortunately, the indications are that it will not do so.

(Concluded from third column)

irresponsible or unwise enough to let themselves be inveigled into this political snare.

I am inclined to hold that this unexpectedly firm and properly timed stand by the Government against this mischievous move, which would have gathered strength and volume if it had been tolerated or merely watched with a general display of ineffective disapproval, more than even the measures taken by the Commissioner of Police to round up the ringleaders and to place strong police pickets at all strategic points, alienated the mass of textile workers from the machinations of the Red Flag Union's workers and robbed their appeal of the glamour, which otherwise might have attracted a large number of undecided workers to join the strike, for the temporary excitement it offered to those engaged in dull and monotonous operations under cramped conditions in factories. There is no knowing to what length the mischief would have gone in course of time, if this initial move had obtained some response. The industry too must feel grateful to the authorities for affording it this protection, which, though it could claim from the Government by right, is not always forthcoming, when it is a question of disagreement between itself and a vocal section of its workers. I too feel satisfied, because, at long last, I could find a topic to comment on, without having to search for words and expressions, which, I am told, sometimes sting.—*All Rights Reserved.*

OFF THE RECORD

(By "ROVER")

EVEN Congress Ministers in the States and at the Centre, in spite of the mental and moral lethargy that has overtaken the Party as a whole, perhaps through continued over-indulgence in several brands of political opiates, can act with sanity, forethought and decision on occasions. As instances of such commendable behaviour are getting increasingly infrequent, it gives me all the more pleasure to put on record those that come my way. I do not mind confessing that I often catch myself looking for such rare acts of atonement on the part of Ministers in the record of their activities, a large part of which otherwise amounts to a mass of garbage, fit only for deposition in the almost overflowing dustbins. I believe in giving even the devil his due, both on ethical grounds and those emanating from policy and it would, indeed, be churlish of me to deny praise where it is due.

Few, even amongst those closely associated with the textile industry in the city of Bombay, must have attached any significance to a short news item, appearing early this week in a prominent daily newspaper, stating that the majority of the workers of the Khatau Makanji Mills, who had struck work since 31st July, 1953, as a protest against the introduction of the four-loom system in the weaving department of this mill, had resumed work from the beginning of this week. But the ghost of a grim struggle, which might have caused untold harm to the textile industry in the city and to the comparatively peaceful, if not exactly cordial, flow of relations between mill managements and their workers, lies behind this insignificant-looking announcement. This sinister development was averted by the firm and purposeful stand taken in the nick of time both by the State Minister for Labour, Mr. Shantilal Shah, and the Rashtriya Mill Mazdoor Sangh, which is recognised as the representative union for textile workers in Bombay.

For a long time, some of the astute brains in the country have seen in the labour movement a short and easy road to political eminence. This has possibly been a proposition common to many countries with any aspirations for rapid industrialisation. But the developments elsewhere have taken the line of promising and capable young men joining the established labour movement and trying to strengthen its ramifications by the intellectual gifts they brought with them. With us, unfortunately, the trend for idealistic young men with political ambition and a desire for seeking a prominent place in public life has been not to join established organisations of workers and to qualify for leadership by hard initial labour, but to search for early opportunities of securing leadership, by exploiting the credulous workers and starting rival organisations of their own in the field.

This multiplicity of warring unions has led to confusion of aims and objectives and a lack of that sense of cohesion, which alone could give strength to any organised movement. It has also led to trade unions being used, almost exclusively, for attainment of political power by certain individuals, who have no genuine and inborn interest in improving the lot of workers. And apart from all this, it has gone to vitiate the cardinal principle of collective bargaining by negotiations, which forms the very basis of the trade union movement in any community that has not discarded the capitalist principle, in the organisation of its industries. This multiplicity of unions, competing for allegiance of a large number of workers, could only be maintained by creating, almost continuously, causes for dissatisfaction amongst workers and large areas of disagreement and tension either between the management and the workers or the Government and the workers.

From the point of view of the management, the worst feature of this situation is its inability to negotiate on any issue with their workers' representatives, for want of a body of men who can speak with authority and who can implement any agreement that is arrived at as a result of negotiations across a conference table. And, finally, this disease in the labour movement is, to a very large extent, responsible for the rapid growth of the mischievous, if not totally vicious, principle of compulsory adjudication for the settlement of disputes in industry. I do not claim that all our industrialists are angels or that they do not themselves, in some instances, give cause for disputes and conflicts, by their attitude or actions. But quite a large majority of them want peace in industry, not so much out of any theoretical love for peace, but out of considerations of self-interest. They are not averse to purchasing uninterrupted peace and production even at a sacrifice, if they can find a party who can deliver the goods.

This trouble in the Khatau Mills in Bombay is a very good case in point. The four-loom system, which forms part of a scheme for rationalisation of the textile industry, was introduced in this concern, after an agreement had been arrived at between the Rashtriya Mill Mazdoor Sangh, the representative union for textile workers in the city, and the Mill-owners' Association. The conditions laid down by the union were fairly stringent and secured not only continuous employment for all workers, but possibly increased wages for those who opted for working under this system. These conditions were scrupulously observed and there was no complaint regarding evasion of any of these against the management of this mill. In spite of this, a rival union, seeing in this an opportunity for discrediting what it considered to be a hostile organisation and for re-establishing its own hold over workers which had been on the decline for some time, incited a section of them to resist this legitimate move and to go on a strike in order to compel the management to withdraw the measure. Borrowing a weapon from the armoury of a rival political ideology, which is becoming more fashionable these days to the detriment of all established democratic principles, it also put up a couple of men to undertake a fast at the mill premises, to coerce the management and to excite other workers and the public at large against the mill authorities.

If the Red Flag Union had stopped at this, perhaps, the affair would have passed off unnoticed and the protest would have flickered out within a few days, possibly without any untoward results. But the organisation was deliberately out for creating trouble. It, therefore, called for a general strike of all the textile workers in Bombay and its suburbs for this purpose, on an appointed day, Friday, 7th August, 1953. If this move to paralyse the industry for a day had succeeded even partially, there is not the slightest doubt that those who had initiated this struggle would have been encouraged to adopt progressively more mischievous measures, resulting in the complete disruption in cloth production and spreading distress in hundreds of thousands of homes.

Often enough in the past, in such contingencies, when one of the many unions in any industry had come to stage a strike because of its differences with a more powerful union or with the Government, the attitude of the latter has been one of neutrality and of interested watchers. Neither the representative union nor the Government come out in the open and mobilise to put a stop to such coercion. They often draw a vicarious satisfaction from the fact that, whatever the outcome of such destructive struggle, the industry concerned was bound to emerge more or less weakened. But whatever the cause for a departure from this unwritten but accepted policy of inactivity and neutrality, both the Rashtriya Mill Mazdoor Sangh, affiliated to the I.N.T.U.C. and the Government of Bombay decided to oppose and foil the move of the Communists to bring about chaos and disorder and to add to the already growing volume of unemployment in the city.

But the real credit for saving the city and the textile industry from large-scale dislocation, destruction and mischief goes to Mr. Shantilal Shah, Minister for Labour. He denounced the move of the Mill Mazdoor Sangh and exposed the real aim of this body in no uncertain terms. He took the trouble to take the Press into his confidence a couple of days before the general strike, which was really meant to light the fuse leading to the charge of explosives, and explained to its representatives, with great patience and a wealth of detailed statistics, the genesis of this struggle as well as the fact that employment in this particular industry in this centre had actually increased since the four-loom system was introduced. Besides, he explained the untenable legal position of those sponsoring this struggle and wound up with an effective warning to the workers about the consequences that would follow, if they were

(Continued in first column)

DRAMATIC DEVELOPMENTS IN KASHMIR

SILK INDUSTRY TO BE PUT ON MORE STABLE BASIS

(From A Special Correspondent)

NEW DELHI, 11th August

DELHI LETTER

KASHMIR is in everybody's lips in the Capital at the present time. Events in that "beautiful but unfortunate land" reached the climax this week with such suddenness and rapidity as took members of Parliament and citizens of Delhi by surprise and bewilderment. There were doubtless some simmerings in the political horizon for a fortnight or so, and indications were not wanting that all was not well with that State. Reports had been circulating in the Capital for some time past that Sheikh Abdullah, the erstwhile Premier of the State, had taken an unhelpful and defiant attitude towards India and that this was the main reason as to why he did not care to come to New Delhi for discussions prior to the departure of Mr. Nehru for Karachi for political talks with the Pakistan Prime Minister. Again, the attitude displayed by Sheikh Abdullah to the Prime Minister and Maulana Azad, Education Minister to the Government of India, during their visits to Kashmir in May and June, respectively, lacked his usual warmth and animation, but what began to irritate them most against Sheikh Abdullah during the last few weeks were his parochial pronouncements, not to mention his unfounded accusations against India.

Developments took a swift and dramatic turn during the last few days when his own Cabinet colleagues presented a memorandum to Sheikh Abdullah, charging him with contravention of the principle of joint responsibility of the Cabinet and also with delivering contentious speeches which tended to create confusion in the public mind and serious dislocation in public life. His colleagues could not particularly see eye to eye with him when he began to propagate the idea of independence for the Kashmir Valley. What particularly annoyed his Indian friends was his lack of appreciation of the fact that India, despite considerable difficulties, had been spending vast sums, estimated at Rs. 30 crores per annum, in order to prop up the economy of Kashmir during the last six years. Besides, Sheikh Abdullah appears to have lost his control over the party on account of alleged nepotism, inefficiency and arbitrary rule. It is no wonder, therefore, that the man who was once hailed as the saviour of Kashmir, has now found himself not only dismissed from high office but also kept under detention.

Economic Reforms

The new Premier of the State of Kashmir and Jammu, Bakshi Ghulam Mohammud, is noted for his sound common sense and practical temperament. Unlike Sheikh Abdullah, he is popular with the people of the Valley and Jammu as well as those in Ladakh. Hence he is expected to enlist full co-operation from all sections of the people in overcoming the political and economic difficulties now confronting the State. In the course of his broadcast speech immediately after assumption of office of Premiership, he promised to pay full attention to the economic reconstruction of the State. He stated that he would take measures to suppress corrupt practices prevailing in the State by setting up a high power agency with which would be associated popular committees at lower levels. He announced some tax concessions to poor peasants. Some credit agencies were to be established in rural areas and small towns to advance money to the artisan, boatman and small shopkeeper. Evictions from land would be stayed where land had been distributed under the "Grow-more-food" campaign. Special encouragement was to be provided for cottage industries. The functions of co-operative stores would be reorganised. Special measures were proposed to be undertaken for the welfare and security of the migrant labour during winter months. A certain amount of cultural autonomy was to be assured and the medium of instruction in the primary stage was to be the mother tongue. The new Premier stated that every effort would be made to keep the Banihal road open throughout the year and that the construction of the tunnel would be expedited. He also promised to implement the recommendations of the Wazir Committee regarding rehabilitation of refugees and resettlement of ex-servicemen in the Jammu Province. Special attention was to be paid towards the development of the Ladakh District and the Kandi area in Jammu Province. The working of the State Emporia was to be reorganised with a view to augmenting the volume of trade. In order to encourage tourism, the permit system would be abolished. Above all, a Planning Commission would be set up to advise priorities and also to review the working of the schemes from time to time. These are all formidable tasks, but the new Kashmir Government can depend upon the Government of India for sympathetic advice and active help whenever necessary.

Kashmir affairs provided considerable distraction to Parliament during this week, with the result that proceedings in the House of the People were relegated to the background. Earlier, the House referred to a Select Committee the Law Minister's Bill to amend the Representation of People Act of 1950, the Representation of People Act of 1951 and certain consequential amendments to the Governments of Part C States Act, 1951. A non-controversial Bill introduced by Mr. T. T. Krishnamachari, Commerce and Industry Minister, proposed to bring insecticides, fungicides and germicides within the scope of the Indian Patents and Designs Act. The Bill empowers the Government to apply the provisions of the Act to any other substance or process for which there is a patent so that licences under the patent could be granted freely wherever necessary.

Silk Board and Statistical Bill

The next amended Bill of a constructive nature passed by Parliament related to the Central Silk Board Act. The Bill seeks, among other things, to reconstitute the Silk Board, with a view to expanding its scope and functions. At present, the Board deals only with raw silk, but it is felt that, in the interest of the proper development of the industry, the Board's activities should cover the whole industry and not merely raw silk. The Bill also proposes to have a chairman nominated by Government from the members of the Board. All the members of Parliament who participated in the debate showed keen interest in the rehabilitation and development of the silk industry on a more stable basis and advocated the adoption of such measures as would be conducive to the growth of the Indian silk industry on a competitive basis. They were unanimous that Government should set up a proper organisation for research and improvement in the methods of production right from mulberry cultivation and cocoon-growing upto the manufacturing and marketing stage. Some members urged that the Government should expand its attention to the *tasar* industry of Madhya Pradesh. Mr. Karmarkar, Minister for Commerce, stated that Government had given a total sum of Rs. 15 lakhs this year for the Silk Board for improvement of this industry and hinted that the Mysore Government had proposed to set up a large-scale research station. He also urged that other silk-growing States should take up similar measures to increase production and for bringing down production costs. The House also passed another non-controversial measure, namely, Collection of Statistics Bill, which empowers the Central or State Governments to call for statistical information from any industry or class of industry, commercial or industrial concern, including a factory and on matters relating to labour and welfare of labour.

(Concluded from next column)

So far as the British public is concerned, meat to-day has largely ceased to be a problem and the worry has been transferred entirely on to the shoulders of the Government who is faced with the likelihood of having to pay producers or consumers to eat the meat which its policy has at last successfully produced.

By way of postscript, one should perhaps add that the quality of this flood of meat is not up to the pre-war standard and it is that which largely accounts for the reduced demand at current prices. The next objective will be to improve quality and the British farmer may find that that is the price he has to pay if the subsidy to him is to be continued.—*All Rights Reserved.*

TOO MUCH MEAT IN U.K.

QUITE A PROBLEM FOR GOVERNMENT

(From Our Own Correspondent)

LONDON, 7th August

LONDON LETTER

THE British Ministry of Food has for long recognised that, of all the items of British diet, meat was the one most likely to remain in short supply for the longest time. Indeed, with world supplies, particularly from the Argentine, so much lower than pre-war, there seemed, a year ago, little prospect of meat becoming derationed within the foreseeable future. A measure of the discrepancy can be gained by the fact that, pre-war, the country consumed 40,000 tons of meat. As against this, the rate of consumption a few months ago was running at only 30,000 tons. On the other hand, meat has become a relatively expensive commodity even though it is subsidised, and the public, even with the higher incomes it now earns shows little inclination to return to the pre-war level of consumption. In other words, 14 years of meat rationing on a severe scale has turned the public taste away from meat eating and towards more vegetable foods and fruits.

Production, however, has recently begun to swing upwards rapidly. The word "recently" is used advisedly since meat production is a matter of a 3-5 year policy and the seeds sown in the years after the passing of the Agriculture Act of 1947 are now bearing results—and beyond expectation.

The prices of beef, mutton and lamb, and pig meat have been steadily increased in an endeavour which for years appeared fruitless to get higher output. Now the output has come along. Only in the case of sheep are the flocks lower than before the war when they stood at 27 million, against the present 22 million. The reason for this is that sheep rearing is labour-consuming as compared with production of beef cattle or of pigs.

In 1939, the cattle population was 8.8 million. Before the seasonal slaughtering began this year, it was 10.2 million. Pigs, which for long resisted all blandishments to increase their numbers, have in the last year, multiplied rapidly. Against a population of 4¼ million in 1939, they are now over 5 million. Poultry, similarly, which stood at 74 million head before the war, are now 95 million head. Thus, the policy of incentives for meat production has worked with a vengeance and the autumn kill this year is going to embarrass the Government who is already at its wit's end as to where to put the meat. Probably refrigerator ships will have to be mobilised as stores, as they were once before.

Prices May Have to be Cut

The Government thus having called up increased production, now find that it cannot sell unless it reduces prices. A year ago, much time was expended on calculations as to how much meat the British people would eat if prices were free to find their own level, i.e., involving rises of some 20 per cent. To-day, such speculations are fruitless and the butchers have been told that they can sell meat to all and sundry once they have satisfied the ration. In other words, at current prices supplies are in excess of what the public wants. If the subsidy were removed the plethora of meat would be still more obvious and, as all the meat is owned by the Ministry of Food, it would be a Government responsibility to know what to do with it. In these circumstances, the Government might well decide to deration for good, but this would land it with a perpetual subsidy, whether it is paid to the butchers to enable them to sell cheaply or whether it is paid to the farmers so that their produce can be marketed below cost price.

Not only are supplies mounting at home, but those of the Southern Dominions are also steadily increasing. A recent goodwill mission to Australia and New Zealand to explain why this country wanted as much meat as those Dominions could send is no doubt going to strengthen the flood. Production, after years of encouragement from England, has begun to mount. Only in the Argentine are supplies likely to remain below their pre-war level but this is a development which will not cause this country any disturbance so long as production elsewhere continues to expand.

PAKISTAN NOTES

ECONOMIC CONDITIONS IN PAKISTAN

PROGRESS DURING LAST SIX YEARS REVIEWED

PAKISTAN has just completed six years of its existence and has entered the seventh year to-day. The past six years have witnessed notable progress in the economic field. Indications of this are provided in balanced budgets, revival and diversification of trade, rehabilitation and strengthening of banking service, and an era of industrial development. Since the economy of Pakistan is predominantly agricultural, it is liable to fluctuations in prices of, and demand for, the raw materials produced by it. It is no wonder, therefore, that the Governments—Central and Provincial—have constantly been endeavouring to build up a strong and balanced economy. That these endeavours have met with success will be evident from the fact that some progress has been made towards industrialisation of the country. And with the development of industries, its dependence on outside economic forces in the matter of exports and prices of raw materials will progressively decrease, as the raw materials would be largely processed in the country itself.

The measures taken by the Government to industrialise the country are bearing fruit and substantial progress has been made in the development of industries in the country. In the field of cotton textile industry, the spindleage has increased from 178,000 in 1947 to 390,000 at the end of 1952 and, with the new machinery now being installed, the spindleage is expected to go upto 1,128,000 by the end of 1954. The jute industry is now capable of meeting the entire internal requirements; and by the end of 1955, it will be yielding approximately 240,000 tons of jute goods per year. A number of other mills, including a large paper mill in East Pakistan, woollen mills at Bannu and Harnai, and other factories are under installation. The Industrial Development Corporation, which is required by law to devote particular attention to the development of certain basic industries, has so far taken in hand several projects. These include jute mills (6,000 looms) in East Pakistan, Karnafull paper mill at Chandragona in East Pakistan, with an estimated annual production of 30,000 tons, a high-grade board paper factory at Nowshera (N.W.F.P.), with an annual production of 7,500 tons, a strawboard mill at Rahwali (Punjab) to produce 7,500 tons per year, a 10-ton-a-day caustic soda-chlorine plant at Nowshera (N.W.F.P.), an ammonium sulphate fertiliser plant at Daudkhel (Punjab), with a capacity of 50,000 tons per year, a 2,400-spindle woollen mill at Harnai (Baluchistan), a 2,400-spindle woollen mill at Bannu (N.W.F.P.), and a D.D.T. plant at Nowshera (N.W.F.P.) in conjunction with the World Health Organisation and the United Nations International Children's Emergency Fund.

Power Resources

Notable progress has also been made in the development of power resources. The Malakand-Hydel Station has been extended by 10,000 kw., the Rasul Hydro-electric Project has started delivering power and the Durgai Hydro-electric Project is expected to come into commission during the next year. After the completion of these schemes, hydro-electric generation will rise to 62,000 kw. from 7,600 kw. in 1947. In addition, thermal capacity of 145,000 kw. is being set up at various load centres at an estimated cost of Rs. 13.67 crores and orders valued at Rs. 8.15 crores have already been placed for necessary plant and equipment. Blue-prints for three hydro-electric projects, namely, Warsak, Mianwali and Karnafuli, with a total installed capacity of over 400,000 kw. and at an estimated cost of Rs. 64 crores, have also been prepared. Simultaneously, long-term measures for developing irrigation are also in hand. The Lower Sind Barrage and the Thal Project are nearing completion and will, it is expected, soon reach the final stage. Plans have been prepared for the construction of a barrage at Taunsa. A scheme for the sinking of tube-wells, which will be of assistance in the reclamation of land, is being prepared by the Punjab Government. In East Pakistan, the Ganges-Kobadak Scheme and Pontoon Irrigation Scheme are under preparation with the assistance of F.A.O. experts. A special provision of Rs. 7 crores has been made during the current year for irrigation and hydro-electric projects.

The foreign trade of Pakistan has passed through different phases during the last six years and has had to adjust itself to world conditions. Being essentially an agricultural country, Pakistan depends largely on exports of raw materials. Until the beginning of 1952, Pakistan enjoyed a favourable balance of trade. There had been heavy demand for cash crops—jute and cotton—which earned good prices. The stockpiling and rearmament programmes that followed the outbreak of the Korean war in June, 1950, pushed up the prices of raw materials. As a result of this commodity boom, Pakistan's exports rose from Rs. 123 crores in 1949-50 to Rs. 254 crores in 1950-51. This, however, was checked in 1951-52, when, on account of a world-wide recession in commodity markets, the prices of Pakistan's export items suffered a severe fall, which was fully reflected in the drop in the value of exports to Rs. 200 crores.

The drop in exports, coupled with the marked rise in the cost of imports, particularly imports of foodgrains and defence equipment on Government account, resulted in adverse balance of payments to the extent of Rs. 77 crores in 1952. This is fully reflected in the decline in Pakistan's foreign assets from as high as Rs. 150.52 crores in the beginning of 1952 to Rs. 81.23 crores as on 24th July, 1953. In view of the difficult foreign exchange position, the Government has imposed severe restrictions on imports for the current year. Imports of machinery and other essential materials required for industrialisation are, however, being allowed on a liberal basis.

Diversification of Trade

A unique feature of Pakistan's foreign trade has been the policy of diversification through bilateral trade pacts. It has entered into trade agreements with West Germany, India, Indonesia, China, Japan and the U.S.S.R. (barter). A trade agreement with France has been concluded and negotiations with Italy are in progress. Negotiations for new agreements with a number of other countries are under way. The Central Ministry of Commerce has been expanding the net work of trade office in foreign countries with a view to developing markets for Pakistan's goods. So far, 30 countries have been covered by 16 trade offices, including the Consulate-General in New York. With a view to displaying samples to prospective buyers abroad, the country has been participating in international fairs and exhibitions. Alongside the measures to speed up and widen the export trade, the functions of the Commercial Intelligence Department have been widened to deal more systematically with the task of export promotion.

Railways

The sixth year of independence was a year of historical importance in the life of Pakistan's railways, in that the year witnessed the beginnings of the process of their revitalisation. The extensive modernisation, which was launched in the fifth year, began to crystallise with the arrival of modern locomotives, carriages and wagons.

Despite the disproportionate increase in working expenses, on account of substantial increase in wages and allowances to staff and the steep rise in cost of fuel and stores, the financial results of Pakistan railways have been quite satisfactory. The traffic receipts have increased from Rs. 35.13 crores in 1948-49 to Rs. 44.98 crores in 1952-53. The net gain from the working of railways has gone up by Rs. 85.70 lakhs to Rs. 4.20 crores. The improvement in receipts follows a steady rise in passenger and freight traffic. Thus, the number of passengers travelling by railways during 1952 was 132.95 million, passenger-miles being 6,118 million, as against 89.48 million (4,092 million passenger-miles) four years before. The number of wagons loaded also increased from 805,377 (1,928 million ton-miles) in 1948 to 1.25 million (2,810 million ton-miles) in 1952.

Communications

Three features mark the progress of the Pakistan Posts and Telegraphs Department in the sixth year of independence. These are: (1) Development of postal facilities in rural areas, (2) introduction of all-up air mail service between East and West Pakistan, and radio-telegraph links with U.S.S.R., Japan, China and France. The Department carried on energetically its programme of providing a post office to every village with a population of 1,000 or above. The increase in the number of rural post offices was phenomenal again this year when 613 post offices were opened, as against a target of 500. It will be recalled that, during 1951-52, 661 post offices had been opened. A further provision for opening of 500 post offices has been made in 1953-54 programme. In addition, 37 combined posts and telegraphs offices were opened during the year under review.

In pursuance of the declared policy of the Government to bring the two wings of the country closer together, the P. and T. Department introduced an all-up air mail service between East and West Pakistan from 1st April, 1952. Newspapers in both the wings have been granted special air mail concession which cost the Government over Rs. 2 lakhs by way of subsidy. The development of tele-communications was noteworthy. During the year under review, direct telegraph circuits were established with U.S.S.R., Japan, China and France. Direct links with the U.K., U.S.A. and Iran were already in existence. An event of great importance was the decision to set up a telephone factory at Haripur (N.W.F.P.). The Governor-General laid the foundation-stone of the factory on 2nd October, 1952. Orders for machinery have been placed and shipments have started arriving. The factory will start full production in about four years' time making Pakistan self-sufficient in telephone equipment. The building for the line stores factory at Kotri has been completed. The equipment received up-to-date have been installed and production on a small scale has started.

There has been vast improvement in the sphere of air-mail services. Owing to a recent air crash, however, the frequency of the air service between East and West Pakistan, which was daily, has had to be reduced to five times a week with effect from 15th March, 1953. The frequency of the Dacca-Jessore service has been increased to six times a week, instead of four. An air parcel service has also been introduced between East and West Pakistan with effect from 15th August, 1952. Mail communications has been resumed with South Korea. Till recently, insurance of air mail letters was not allowed, either in the inland service or in relation with foreign countries, except to and from Burma and Ceylon. This facility has now been made available both in the inland and foreign spheres, although, in the latter case, this service is restricted to such countries as have agreed to exchange insured air mail letters with Pakistan. Parcel post service has been resumed with those parts of Palestine which are now included in the Hashmite Kingdom of Jordan, Indonesia and South Korea.

Banking

Pakistan continues to devote particular attention to the growth and development of banking institutions in the country. At the time of Partition, there was no central authority at all. The State Bank of Pakistan was set up on 1st July, 1948. The Bank has made valuable contribution towards creating conditions favourable for the growth of banking. It has provided facilities for the training of banking personnel, the shortage of which was one of the major handicaps some time ago. The Bank has encouraged all sound banks to expand their operations, reopen closed offices and open new ones. There are now 32 scheduled banks with 213 offices. The deposits, and advances and bills discounted have shown a significant increase, from Rs. 88.05 crores and Rs. 19.78 crores on 2nd July, 1948, to Rs. 146.21 crores and Rs. 75.31 crores, respectively, on 10th April, 1953.

As a first step towards the development of a bill market in the country, the State Bank recently introduced a scheme for re-discounting bills and giving advances against bills to scheduled banks. It has also been authorised to rediscount foreign exchange bills.

In order to promote the development of banking in the country the Government of Pakistan sponsored the establishment of the National Bank of Pakistan in November, 1949, with an authorised capital of Rs. 6 crores, of which 25 per cent. has been subscribed by the Government. The National Bank had, in the beginning, concentrated on the financing of the jute and cotton trades. It commenced normal commercial banking and foreign exchange business in June, 1950, and has since then continued to make remarkable progress in all spheres of its activities. The Bank's deposits touched the peak figure of Rs. 28.6 crores during 1952, as compared to Rs. 20.08 crores in 1951 and Rs. 6.44 crores in 1950.

OVERSEAS CREDIT FACILITIES BY BANKS IN U.K.

BANK OF ENGLAND RELAXES RESTRICTIONS

JOINT-STOCK banks in the U.K. have now been granted a larger measure of freedom in the granting of overseas credits, evidently as part of the move to stimulate Britain's export trade. A recent notification by the Bank of England stated that the Exchange Control authorities were prepared to relax the restrictions on such credits. These restrictions related to (a) the drawing of U.K. acceptance credits, (b) facilities in respect of pre-finance and re-finance credits; and (c) the granting of overdraft facilities for overseas account. These restrictions were imposed in March, 1952, as a result of the sharp fall in the gold and dollar reserves, and the sterling crisis. This change of policy nearly restores the position that existed before 1st March, 1952 and has been rendered possible by the improvement in gold and dollar reserves of the U.K., which has restored the confidence of people abroad in the pound sterling.

The latest official decision means that the maximum period normally permitted for acceptance credits granted by British banks for financing trade with non-sterling countries has been restored to 120 days. This period had been reduced to 90 days from 1st March, 1952. At that time sterling was being subjected to severe pressure. The effect of this pressure was further accentuated by the tendency among non-residents to postpone remittances to sterling countries and to keep a short position in sterling with the help of London bank credit. In order to counteract this, the authorities had reduced the maximum period for which usance bills could be drawn from 120 days to 90 days.

Severe restrictions had also been imposed on pre-finance and re-finance credits. Pre-finance credits are facilities granted normally to primary producers for meeting expenditure before the goods are ready for export. These pre-finance credits have now been freed from all restrictions in cases where they are traditionally employed. Re-finance credits are intended to cover longer periods than the normal span of self-liquidating commercial transactions. They, therefore, involve the automatic renewal of bills of exchange. Prior to March, 1952, re-finance credits were usually opened for facilitating transactions with the U.S. They provided low-cost extended credit facilities to American importers after the original suppliers had been paid out of funds in London through a sight draft. In the last quarter of 1951 and early in 1952, when the sterling area dollar reserves were fast declining and there was a flight of funds from London, these facilities were openly used by American importers to "bear" sterling. The restrictions on re-finance credits which were then imposed have, however, not yet been completely removed. Each operation of this type will be judged on its own merits and if the authorities find that the facilities are being used for purposes that are not genuinely commercial, they will not permit them.

As regards the grant of advances and overdrafts to non-residents, the banks had hitherto been permitted to provide these facilities only in exceptional circumstances. But now they can grant cash credits for periods up to six months to non-residents who require finance for the import of sterling area goods. Credits will more freely be available in cases where the lack of finance actually impedes such exports of sterling area goods. This step has been taken, because many British exporters are found to have reached their limit of borrowing at a time when the need for expanding the exports to non-sterling areas is great.

The decision to relax the restrictions on overseas credits is stated to have been generally welcomed in London financial circles. There is, however, some doubt whether these relaxations will lead to any perceptible increase in the volume of acceptance credit business. Commenting on the aforesaid steps, the *Economist*, London, for instance, observes:

"These various concessions and relaxations represent another notable step in the restoration of London's position as an international financial centre. They may not, however, lead to any great revival of the commercial bill. With the commercial bill rate still pegged as high as 3 per cent. more or less by official ukase, it is still more profitable for many traders to finance their activities by *ordinary overdraft facilities*, especially when the acceptance houses' normal commission of around 1½ to 2 per cent., the British stamp duty of 0.2 per cent. and the greater convenience to the borrowers of the overdraft system are taken into account. A great deal more is likely to be heard in the next few months about the campaign for reducing the commercial bill rate, which already has the support of the accepting houses and the majority of the discount market."

In conclusion, it may be mentioned here that, before the restrictions were imposed on overseas credits in March, 1952, the London Clearing banks were holding commercial bills of the value of about £190 million and acceptances of about £530 million. These had shrunk to a mere £60 million and £320 million, respectively, when the restrictions were relaxed. No figures of overdraft facilities given to non-residents are readily available. Now the entire ground lost may not be recovered, but quite a substantial rise in the volume of credits (in all their forms) on overseas accounts is expected.

STERLING AREA GOLD AND DOLLAR RESERVES

The sterling area had a gold and dollar surplus of $89,000,000 in July, 1953, says a British Treasury announcement. On 31st July, 1953, the gold and dollar reserves stood at $2,456 million. The surplus arose after taking account of $36,000,000 in respect of U.S. defence aid and of receipts from the European Payments Union (E.P.U.) of $2,000,000 on account of the June surplus. According to provisional figures for the month, the U.K. had a deficit in July with E.P.U. of £4,000,000 which will fall due for settlement in August (50 per cent. in gold or dollars, and 50 per cent. by extension of credit by the Union).

Commenting on the increase in the reserves, a Treasury spokesman said that, in itself, July was a good month with much higher increases than in June ($46,000,000). While not so high as in the earlier months of the year, the July figures were better than would normally be expected at this time of the year, which was usually a bad period for the sterling area owing to seasonal factors affecting trade.

The spokesman pointed out, however, that, although cautious optimism was justified, it was wrong to consider any month in isolation and that, on the July figures alone, it would be impossible to detect any positive trend. It was also not yet possible to break down the surplus to see how much of the increase was due to real trade improvements. The fact that U.K. dollar exports were maintained at a good level played a part in the increase of the reserves but it would not in itself have accounted for the whole improvement.

The provisional E.P.U. deficit of £4,000,000 compares with a surplus of £1,500,000 in June. Official quarters point out that, again, no trend is noticeable. July and August are usually the worst months, owing to the seasonal flow of trade, and it had been expected for some time that factors such as the increase in the tourist allowance by the British Government and the liberalisation of European imports would combine to produce a decline in the United Kingdom's balance with the European Payments Union.

WORLD BANK'S WORKING IN 1952-53

INCREASE OF OVER 2.5 MILLION DOLLARS IN NET INCOME

THE operations of the International Bank for Reconstruction and Development during its accounting year ended 30th June, 1953, resulted in an increase of $2.61 million in the net income (after deducting the commissions received on loans which, under the Bank's charter, have to be credited to its special reserve fund) over the previous year. The net income amounted to $18.48 million, as compared with $15.87 million for the preceding year. The whole of this net income has been placed to the supplemental reserve against losses on loans and guarantees.

The gross income of the Bank for the year under review amounted to $52.39 million, as against $42.75 million in 1951-52. Of this amount, interest earned on investments accounted for $9.24 million ($8.50 million in 1951-52), interest on loans for $29.98 million ($23.67 million), and commissions for $9.55 million ($7.56 million). The last item, namely, commissions on loans, was transferred, as already indicated, to the special reserve, under Article IV, section 6 of the Bank's Charter, to be kept available for meeting obligations of the Bank created by borrowing or by guaranteeing loans. The effective rate of commission on all loans granted upto 30th June, 1953 was 1 per cent. per annum. The expenses also have gone up from $19.32 million to $24.35 million, that is by 26 per cent. The major part of this increase is due to a rise of $4.42 million (to $16.21 million) in interest paid on bonds. Administrative expenses account for a rise of $0.88 million only (to $5.72 million). There was a small rise of $0.04 million in other expenses aggregating $2.42 million.

Fresh Loans and Disbursements

During the year under review, the Bank granted ten fresh loans to various countries. The total amount of such loans was the equivalent of $178.63 million, thus bringing the total loan commitments as at the end of the year to $1,390.77 million. Disbursements, during the year, of loans sanctioned amounted to $226.76 million, an increase of $41.98 million over the year. The cumulative disbursements upto the end of the year amounted to $1,103.26 million, against a total commitment of $1,590.77 million. As at the end of the year the undisbursed balance of effective loans was $398.01 million and loans not yet effective $58.75 million.

There was no default by member countries in repayments of principal which fell due during the year. All repayments of principal due during the year were received and, what is more, some borrowers even made repayments in advance of the due dates. Of the total of such repayments—$2.33 million—received during the year, repayments of principal due during the year amounted to $1.78 million. The advance repayments included $245,000 paid in April, 1953 by Banco Nacional de Nicaragua against the loan of $1.2 million granted to it in June, 1951 for agricultural development. The maturity of the loan is 1954-1958 and the Banco Nacional de Nicaragua has not (up to 30th June, 1953) fully availed of the loan amount, the balance unavailed of being $67,089. Another borrower who repaid a part of the loan was Denmark. This country pre-paid an instalment of $302,000 in May, 1953, well in advance of the due date of 1st August, 1953. Denmark, it may be recalled, had been granted a loan of $40 million in August, 1947, for reconstruction and development purposes, the maturity being 1953-1972. The total repayments of loans made against obligations of borrowers sold to investors amounted to $17.84 million, including $6 million pre-paid by four Netherlands shipping companies and $500,000 by Belgium against its first loan.

Sale of Bonds

In order to supplement its lendable resources, the Bank sold during the year bonds to investors to the extent of $71.6 million. This consisted of two issues, one for $60 million sold in the U.S. and another for Sw. Fr. 50 million (about $11.6 million) sold in Switzerland. Total issues of the Bank outstanding on 30th June, 1953, amounted to $556.37 million. The Bank also arranged in June last another issue of Sw. Fr. 50 million, but these were to be dated 1st July, 1953.

Sales of securities from the Bank's loan portfolio during the year amounted to $13.64 million, including $5.33 million without the Bank's guarantee. The aggregate sales of such securities up to 30th June amounted to $70.01 million, of which $20.21 million represented sales without guarantee.

Three new members were admitted during the year, namely, Germany, Japan and Jordan, bringing the total number of members to 54. The subscriptions of these countries was fixed at $330 million, $250 million and $3 million, respectively, bringing the total subscribed capital of the Bank to $9,036.5 million.

NATIONAL BANK OF PAKISTAN

IMPRESSIVE PROGRESS REPORTED

BEFORE the Partition, there were in the territories now constituting Pakistan, as many as 367 commercial banks, big and small, with over 900 offices catering to the varied needs of agriculturists, traders and industrialists. Most of these banks had their head offices in areas now forming Pakistan, but, following the decision to partition the sub-continent, they were shifted to India. The widespread upheaval that followed the Partition severely hit the banks too and caused the flight of their staff and deposits, so that very few banking offices remained functioning in West Pakistan.

There was no mass migration of population from East Pakistan, but the banks transferred almost all their liquid assets from Pakistan which led to the curtailment of their activities, followed, a little later, by the closure of most of them.

In the circumstances, the need was felt to establish a large commercial bank, national in character and broadbased on the support of the Government and the public. With this end in view, a private limited company, styled Promoters Company, Ltd., was formed early in 1949, with a Board of Directors nominated by the Central Government. The idea was to inaugurate the Bank by April or May, 1950. This programme was, however, accelerated due to the devaluation of the pound sterling and the Indian rupee and the Bank had to be ushered into existence in November, 1949, by the promulgation of an Ordinance on 8th November, 1949.

Under the transitional provisions of the Bank's Ordinance, it was, in the first instance, permitted to undertake the business of financing jute, cotton and other agricultural commodities. In view of the jute crisis then facing the country, the Bank started functioning at Dacca, Narayangunj, Mymensingh, Chandpur, Rangpur and Khulna, in addition to Karachi and Lahore. To obtain funds for the purpose of financing jute, the Pakistan Government's permission was obtained for the acceptance of fixed deposits in sums of not less than Rs. 1 lakh and inter-bank call loans from Scheduled banks in sums of not less than Rs. 25 lakhs in each case. The Bank started full-fledged banking business in September, 1950.

A Joint Venture

The Bank is a joint venture of the Pakistan Government and the public, the former holding 25 per cent. of its total capital. The Bank's authorised capital is Rs. 6 crores, out of which Rs. 1,50,00,000 are subscribed and paid-up. The share capital, which was issued in July, 1951, was heavily over-subscribed within a fortnight, necessitating allotments on a *pro-rata* basis. Its shares are now selling at a premium of 36 per cent. Viewed in the context of the unsettled conditions of Pakistan's economy, this high premium is reassuring, and is an unmistakable indication of the investors' confidence in the Bank.

The Bank's head office is in Karachi and the supervision and control of the affairs of the Bank is in the hands of the Central Board of Directors. This consists of 12 Directors, of whom four, including the President and the Managing Director, are eppointed by the Government. Three Local Boards, at Karachi, Lahore and Dacca, were constituted by the Government last year and five out of six members of each of these Boards have been nominated by the Government. After the expiry of three years, the Local Boards will have elected members, as in the case of the Central Boards of Directors.

During the short period of its existence, the Bank has made impressive progress in all directions. The Bank's deposits recently touched the peak figure of Rs. 33.25 crores, as compared with Rs. 28.60 crores in 1952, Rs. 20.08 crores in 1951 and Rs. 6.44 crores in 1950. As regards advances, the Bank has provided the much-needed short-term credit to trade and industry. The highest advances during 1952 reached Rs. 24.83 crores, as compared with Rs. 20.89 crores in 1951 and Rs. 4.77 crores in 1950. The investments of the Bank, which stood at Rs. 8.54 crores in 1951, increased substantially in 1952 and now stand at over Rs. 10 crores, the increase comprising mostly Government securities, both Central and Provincial. The net profit earned by the Bank during 1952, after deducting income-tax, etc., to the extent of Rs. 28 lakhs, amounted to Rs. 30,31,706 which is very nearly twice the net profit earned during 1951. Such high earnings enabled the management (1) to give a dividend of 5 per cent. (tax-free) to its shareholders, (2) to transfer Rs. 15 lakhs to the reserve fund (Rs. 5 lakhs more than in 1951); and (3) to pay a bonus of a month's salary to the entire staff, unlike the previous year when only those members of the staff whose basic salaries exceeded Rs. 500 were paid at the rate of 50 per cent. of their salaries with a minimum of Rs. 500. The total volume of inland business transacted by all the branches of the Bank (other than deposits, advances and investments) amounted to Rs. 159.25 crores in 1952, as compared with Rs. 66.27 crores in 1951 and only Rs. 7.50 crores in 1950.

Foreign Exchange Business

Immediately after starting full-fledged banking business in September, 1950, the Bank felt the urgent need of extending foreign exchange business facilities to its commercial and trading clientele in Pakistan. Accordingly, it started handling this business from October, 1950. Due to an acute shortage of trained staff, a modest beginning was made at the local principal office at Karachi. Some of the up-country offices, particularly Lahore, Dacca and Chittagong, routed their business through Karachi. By the middle of 1952, however, all these offices began conducting this business directly. The volume of foreign exchange business handled by the Bank and the progress made is indicated by the following figures:—

	Rs.
October, 1950 to December, 1950	94,90,000
January, 1951 to December, 1951	23,84,55,000
January, 1952 to December, 1952	39,88,29,000

At the time foreign exchange business was started, the Bank had only a few correspondents in London, New York and Japan through whom the business was conducted. Since then, agency arrangements have been made with all first-class banks in important commercial centres all over the world and every type of foreign exchange business is being transacted. In order to have a sufficient number of trained personnel in this department, arrangements have been made to depute a certain number of officers to the U.K. every year for training in foreign exchange work.

The Bank took over the State Bank's agency from the Imperial Bank of India and completed the process by September, 1952, replacing the Imperial Bank of India at 25 branches in Pakistan. An application has been made to the State Bank of Pakistan for taking over chest and sub-chests at other branches and sub-offices. The programme of establishing a network of branches in Pakistan is proceeding apace. The total number of branches and sub-offices is now 50, which includes offices at Jeddah and Calcutta. More branches will be opened during the current year.

As a result of training facilities offered by the State Bank of Pakistan for the training of officers as well as the employment of suitable personnel, the Bank has been showing steady progress in the recruitment of officers and staff. By the close of 1950, there were, in all, 511 members of the staff in all ranks. This number increased to 1,534 in 1951 and the figure now stands at 2,368, which includes 181 officers.

THE

CENTRAL BANK OF INDIA LIMITED

have pleasure in announcing the opening of their

LONDON BRANCH

on

14th August, 1953

at

159, Fenchurch Street London, E.C. 3

with

Sir Cecil R. Trevor, C.I.E.
as London Adviser.

H. C. CAPTAIN,
Managing Director.

STATE BANK OF PAKISTAN

ACTIVITY IN 1952-53 SURVEYED

THE State Bank of Pakistan, as a central bank of the country, entered the fifth year of its life on 1st July, 1952, and continued to develop its services during the year. There was a steady expansion in the administrative set-up of the Bank as well as in its activities. The Bank opened a new branch at Quetta, while its Chittagong office, which dealt with exchange control work only, was converted into a full-fledged branch with a banking department.

The Banking Control Department of the Bank also expanded its field of activities, specially in relation to inspection and liquidation work. During the year 1952-53, 11 commercial banks—nine in Western Pakistan and two in Eastern Pakistan—were inspected. The inspection of the Frontier Co-operative Bank was also carried out at the request of the Provincial Government. The Bank also examined the schemes of arrangement in the case of some banks and, in two cases, the schemes were approved. During the year, seven banks went into liquidation and the State Bank was appointed official liquidator in most of these cases. In its inspection work and control of commercial banks, the State Bank was assisted by an expert, Mr. S. O. Sorensen, who was deputed to the Bank under the Technical Assistance Programme.

Bill Discounting

As a first step towards the development of the bill market in the country, the State Bank introduced the bill discounting scheme from August, 1952. The Scheduled banks are encouraged to take advantage of this facility. In the sphere of credit control, the State Bank issued certain directives in the month of June, 1952, requiring compulsory margin against letters of credit and restricting bank advances against imported goods. The banks were also asked not to make any unsecured advances, against the security of a guarantee only. These restrictions were, however, relaxed in November, 1952, and were finally withdrawn in March, 1953.

The Research Department of the Bank also showed considerable progress during the year. The Bank availed of the services of Mr. Morgan H. Rice, an expert deputed under the U.S. Point IV Programme.

During the year, the State Bank arranged flotation of four loans on behalf of the Central and Provincial Governments. The details of these loans are as under:

	Contributions received Rs.
30th August, 1952—3½ per cent. Punjab, 1964 ..	4,13,17,100
30th August, 1952—3½ per cent. N.W.F.P., 1964 ..	75,00,000
15th October, 1952—2½ per cent. Central, 1957-59 ..	12,01,94,000
15th October, 1952—3 per cent. Central, 1960-70 ..	2,97,16,900

Commercial Banking

Steady progress was registered by the commercial banking system during the year. Almost all the important Pakistani banks have before them ambitious programmes of opening a network of branches inside and outside the country. The number of Scheduled banks remained unchanged at 31. Twenty-two new offices were opened by these banks in Pakistan. The total number of offices of Scheduled banks, including head offices, branches and pay offices, stood at 213 on 31st March, 1953. The total number of non-Scheduled reporting banks stood at 98 on 27th February, 1953. During the year, the management of the Habib Bank took preliminary steps to establish an office in Rangoon.

The share of Pakistani Scheduled and non-Scheduled banks in the trade and commerce of the country showed an increase, as compared with the previous years. Thus the share of Pakistani Scheduled banks in total advances and bill discounted increased from 32.15 per cent. in 1950-51 and 45.69 per cent. in 1951-52 to 47.03 per cent. in 1952-53. Pakistani Scheduled banks were also able to attract a larger amount of deposits and the share of Pakistani banks in the total deposits of Scheduled banks in Pakistan rose from 40.44 per cent. in 1950-51 and 43.62 per cent. in 1951-52 to 50.62 per cent. in 1952-53.

The activities of the Pakistani non-Scheduled banks also registered good improvement during the year under review. The share of Pakistani banks in the total deposits of non-Scheduled banks increased from 42 per cent. for the financial year ended 30th March, 1951, and 49 per cent. for the financial year ended 28th March, 1952 to 59 per cent. for the 11 months ended 28th February, 1953. Similarly, the share in advances rose from 19 per cent. on 30th March, 1951, 16 per cent. on 28th March, 1952, to 28 per cent. on 27th February, 1953.

PROTECTION AND REGULATION OF INDUSTRIES: THEN AND NOW—III

DISCUSSION ON MAIN ELEMENTS OF SELLING PRICES CONTINUED

(By PADAMJI GINWALA)

WITH regard to the return on investment, several complicated questions arise. There is no theoretical rate at which risk capital can be attracted into an industry, or, if it is already invested, the rate of return on it which would be considered reasonable whatever the circumstances. The rate must be fixed with reference to the risk involved, the period during which a new industry is unable to earn any profit, its relation to the earning capacity of alternative industries, the availability of its supply, the repercussion on investment of the political views of Ministers' pronouncements, the rate of interest allowed by the Government on tax-free loans, or savings certificates, and many other conditions which may affect some industries in one way and others in a different way. For these reasons, it must be determined with reference to every important industry in consultation with those who are or may be interested in it as actual or potential investors and who have reliable personal knowledge of the general investment market. This was what was done by the earlier Tariff Boards. After taking in each case, a considerable body of evidence, the Boards allowed the iron and steel industry 8 per cent. and some other industries 8 or 10 per cent., not on any theoretical considerations or the block value of any particular plant, or the subscribed capital, but on the capital cost of a new block and plant of economic capacity, in the same way as in the case of depreciation. But it may be recollected that, when this rate of 8 or 10 per cent. was fixed, the income-tax did not amount to more than, perhaps, 2½ annas, whereas to-day it is nearly 7 annas in the rupee. For these reasons an allowance of 8—10 per cent. on the historical book value of the block is wholly unreasonable even in the case of existing units of production. In the case of new units, of which the capital cost will be many times higher and the risk involved much greater than that of the existing ones, such a return, calculated on the book value of the existing units, will border on absurdity.

Position in the U.K.

Even in such a rich country as the U.K., fresh equity capital cannot at present be raised from existing shareholders at a rate below 12 per cent., as the following quotation from the *Monthly Statistical Bulletin* of the British Iron and Steel Federation, March, 1952, will show:

"Even companies of the highest standing have recently had to offer yields of the order of 8 per cent. in order to raise fresh equity capital by means of 'rights' issues to their existing shareholders. ... It has been necessary to earn, in order to provide the profits tax, 12 per cent. to cover 8 per cent. paid out. Over and above this, it is necessary to see some margin in good times to give a reasonable security to earnings under less favourable conditions. The new tax provisions and the rise in the Bank rate are likely to make it necessary to earn still more to justify industrial investment. Credit restrictions will add to the difficulties of industrial financing and will reinforce the effect of the higher interest charges which have to be earned."

All these arguments apply with even greater force to the prevailing conditions and difficulties in our country. In the U.S.A., the steel industry is protected and its selling prices, until recently, were controlled. In the U.K., the maximum prices are still controlled. In both countries, the depreciation, at least equal to the amount allowed by the income-tax authorities, was included in the selling prices. In the U.S.A., the element of gross profit, subject to taxation, after meeting all other charges, including interest on debenture and other loans and dividends on preference shares was estimated at 27.4 per cent. and in the U.K. 14 per cent., on the capital employed for the year 1951. After paying a gross dividend of 12½ per cent. on the subscribed ordinary share capital, 5 per cent. of the gross profits on the capital employed was ploughed back into the business in the U.S.A. In the U.K., after paying 8¾ per cent. dividends on the subscribed ordinary share capital, 2¾ per cent. of the gross profit on the capital employed was ploughed back. In both countries "capital employed" included depreciation and all other accumulated reserves. In each of these countries, the ordinary subscribed capital was less than 30 per cent. and the "ploughed back" capital from previous earnings was 48 per cent. and 46 per cent. in the U.S.A. and the U.K., respectively, of the total capital employed.*

Whilst I have quoted only the figures relating to the iron and steel industry, which in every country is regarded as a pivotal industry, there is no reason to suppose that, in either of the two countries, the trading results and the permitted gross profits of other controlled industries were less favourable. A more dismal or less promising picture of the future of our industries can hardly be painted than is presented by the contrast between the figures of the gross profit allowed in the U.S.A. and the U.K. and in our country.

No Improvement in Rate of Return

Such considerations have had little or no weight in the determination of the selling prices of protected or controlled industries, in post-independence economy. The Statutory Tariff Commission, like its predecessor, the post-Independence Tariff Board, administers what it apparently conceives to be the general policy of the Government. Consequently, there has been no improvement in the general rate of return on investment and its incidence on profit has been reduced far below the pre-independence level. In the textile industry, the rate has been 6 per cent., in the aluminium 7 per cent., in the iron and steel and paper industries 8 per cent. and in several small industries 10 per cent. It is calculated like depreciation, on the gross historical book value of the block, with the very odd result, apart from its inherent inadequacy, that a unit forming part of the block which ought to have been scrapped 20 or 25 years ago and written off, earns the same return as if it was still serviceable. The book value may be a third or a quarter or even less of the cost of a corresponding new block. Where such a low uniform rate is allowed to the whole of an industry consisting of several old and some new units, such as the cotton textile industry, no fresh capital can be attracted by it into the industry for the construction of new units costing several times the book value of the old units. It is only in the rare cases, where the units are large and very few in number, that, by fixing differential selling prices, this difficulty can be partially overcome. The only other alternative to attract more capital is that of fixing the return on the basis of the present-day capital cost of a new block and typical economic unit in each industry.

But the rate of the return itself will have to be substantially increased for various reasons. First, the level of taxation. The income-tax on companies is at present about 7 annas in the rupee, as compared with 2½ annas when the rate of 8 to 10 per cent. was fixed by the earlier Tariff Boards calculated on the cost of a new plant. But this is not the whole story. The older Tariff Boards allowed the managing agency commission as a separate item. This has now to come out of the 8 per cent. or such other rate of return as may be allowed. In addition, the industry has to pay labour's profit-sharing bonus, of which the origin is comparatively recent, out of the same allowance. These two items normally account for about 1½ to 2 per cent. reducing the gross return of 8 per cent. to about 6.5 to 6 per cent. Deducting 7 annas in the rupee for taxation, the net return is reduced to about 3.6 to 3 per cent. on an average. The cotton textile industry, which is allowed 6 per cent. gross, and the aluminium industry, which is allowed 7 per cent. will have a still smaller net return. The Tata Iron and Steel Company's case is, perhaps, the worst of all. This Company has been a pioneer, as in many other directions, in introducing a profit-sharing bonus in the interest of labour.

Net Return Poor

All pioneering, though attended with many risks, has not seldom its rewards in time, but, in this present instance, it has been heavily penalised. The profit-sharing bonus to labour, which, under a formal agreement with labour, comes to about 27½ per cent. of the net profit and the managing agents' commission took away between them about 50 per cent. of the gross amount of 8 per cent. allowed by the Tariff Board of 1951. After taxation, the net return is reduced to 2.25 per cent. on the book value of the block. The Mysore Iron Works, I understand, have been granted 7 per cent., free of tax. This is somewhat of a vicarious sacrifice on the part of the consumer, for the Government of Mysore charges no income-tax to itself. There has also been reported one case in which the Government allowed, apparently out of the equalisation fund, the profit-sharing bonus to labour denied to other organisations. This is a kind of patronage which must expose the Government to legitimate criticism.

Since the above paragraph was written it has been reported that the Tariff Commission had raised the rate of 8 per cent. to 10 per cent. for the whole of the steel and allied industries. This is a step in the right direction and its benefit deserves to be generally extended to other industries, though, if the managing agency commission and labour's profit-sharing bonus are to be paid out of it, it falls short of what is required. It yet remains to be seen whether even this moderate recommendation will meet with the approval of a Government whose policy it is to finance some of their schemes by appropriating the well-earned profits of private enterprise. The possible rejection, for this reason, of the Tariff Commission's recommendation in this instance (The Government has since turned down this recommendation of the Tariff Commission.—Ed.) will not, I sincerely hope, deter them in future from making similar recommendations, if in their judgment, they appear to be necessary in the larger national interest.

The main ground on which the claims of the producers to the allowance as separate items of the managing agency commission and the profit-sharing bonus to labour have been rejected is that, as both these items are related to profit, they should come out of the gross profit in the determination of which allowance was said to have been made for them. The question of profit-sharing bonus was first raised in 1948-49 and has been disallowed on the further ground that the whole question of "profit-sharing was under the consideration by the Government who were examining the report submitted by a special committee appointed to go into the matter." Four years have elapsed since this statement was made by the Tariff Board in one of its reports and five since the question was first mooted by Government. It is difficult for the ordinary man to conceive why the producer should be penalised because the Government were not able to make up their minds. The managing agency commission was allowed as a separate item by the earlier Tariff Boards and no question about the profit-sharing bonus had been raised before them, because its payment had hardly come into vogue. No importance is attached to the facts that the managing agency commission is paid by the shareholders under agreements entered into many years before 1948 and that such agreements were legally binding on both parties. Whether the managing agency commission is allowed as a separate item or not, the shareholders are bound to pay it and the managing agents are entitled to deduct it from the gross profits. The method of payment does not change the fact that the payment is a charge on the gross cost of production, the managing agents being no more than higher executives.

*British Iron and Steel Federation's *Monthly Statistical Bulletin*, March, 1953.

Not in Public Interest

It should also be borne in mind that the persistent refusal to allow the managing agency commission as a separate item may lead the shareholders to substitute a fixed amount for a percentage of profit as the managing agents' remuneration. This will be hardly in the public interest. The grant of profit-sharing bonus to labour had been in force also long before the statement of the post-war Tariff Board quoted before. The ordinary rules of justice demand that no party should be penalised for carrying out undertakings previously entered into. The profit-sharing bonus is rightly or wrongly regarded by labour and paid by the employers as part of its wages and as such should be added to the works costs. Apart from the obvious injustice involved in depriving the producer, on wrong grounds, of an appreciable part of his gross profit, by the disallowance of the profit-sharing bonus as part of the cost of labour, such a policy forcibly brings out the contrast between the words and the deeds of the Government. It has been proclaimed from house-tops by responsible Ministers in speeches and in reports of committees that, in the national interest, there should be a partnership between capital and labour and that labour should have a fair share in the profits of industry, which it helps to create. But the capitalists who had anticipated the Government's policy and embarked on some sort of partnership with labour have been penalised for the last five years for their sins of being in advance of Government opinion. Here is a clear warning to the industrialists to desist from improving the lot of labour by the introduction of any scheme of profit-sharing, unless they are prepared to finance it out of their own inadequate profit in both protected and controlled industries in which the selling prices are fixed by governmental authority.

I hope, I have now clearly demonstrated that the return of 8 or 10 per cent. must be regarded as wholly inadequate, especially if the managing agency commission and profit-sharing bonus have to come out of it. If, therefore, the Tariff Commission are so wedded to abstract principle that they must include in the return these two items, it is only just and fair that the rate of return should be increased on this ground alone by at least 2 per cent. so that, after paying the managing agency commission and the profit-sharing bonus and taxation, the net return does not fall below even a low economic level. Even this rate of return would not attract enough fresh risk capital into industry. It would be appropriate, therefore, so to raise the gross rate of return, calculated on the cost of a new block, as to leave the equity risk capital a return free of tax of at least 2 per cent. as insurance over and above the tax-free dividends of 5 per cent. normally paid on preference shares and sometimes on debentures.

A Practice That Must Be Dropped

It is of vital importance to discontinue the practice of calculating the depreciation and return on the historical value of the block account, for it is obvious that an allowance on this basis would be wholly inadequate to any new unit coming into an industry which already comprises several old units. Also, unless it is the intention of the Government that every industry should remain indefinitely the monopoly of the units in existence, they must take their courage in both hands and allow a special rate of depreciation and return on capital to all the units on the present-day cost of a new unit. If they cannot muster as much courage as this, then they must give up the talk, which may be regarded as idle, of encouraging the development of industries in the private sector. They must, at the same time, be prepared to continue the burden on the producer or the consumer, as the case may be, indefinitely, because the gap in the supply and the demand which justifies protection or control cannot be closed.

Such low net returns as I have stated are not seldom supported by one of the most fallacious arguments. It is urged that the block value on which the return is calculated is, in many cases, several times the paid-up capital of the companies, the payment of reasonable dividends on which would, therefore, be more than amply provided for by the aggregate return allowed. The implication of such an argument is that those shareholders who have ploughed back into the industry their profit to maintain, in a state of efficiency, their units and to expand their capacity are to be penalised for their thrift and foresight. It also means that the rate of return on investment is to be governed not by its developed but by its par value and that the aggregate amount to be earned by an industry is not dependent on the capital actually employed, but is to be related to the paid-up capital which constitutes but a small fraction of the capital employed.

Even if the argument that a return calculated on the historical value of the block, which may be a small fraction of its present-day cost, is allowed to have some validity—which in fact it has no claim to—in its application to old and established units, can such a low return on risk capital as that of about 3½ per cent. net ever attract into the industry a new-comer whose paid-up capital will necessarily be equal, at the beginning, to the present-day cost of the block? I cannot imagine any business men so optimistic as to answer this question in the affirmative. Many companies pay a dividend of 5 per cent. free of tax, on safe preference shares and some even on debenture capital. The World Bank, of which the main function is to provide funds for industrial development, expects 4¾ per cent. to 4¾ per cent., free of local tax, on loans secured by a mortgage on the assets of the borrower's undertaking and guaranteed in addition by the Government of the country. The Government of India itself offer a rate of 3½ per cent., free of tax, to investors in the National Savings Certificates. The State Governments have recently offered, on what are called their development loans, 4 per cent. interest, which, in the case of investors below the taxation limit, means 4 per cent., free of tax. Some old and well-established companies, neither protected nor controlled, are often able to pay a consistent dividend, tax-free, of 5 per cent. to 6 per cent. on the current price of their equity capital. Why then should Government expect industries in the private sector, whether new or old, protected or controlled, to be able to attract into them fresh risk capital for their establishment or expansion at the low rate of about 3½ per cent. offered to them?

Patriotism Poor Substitute for Reasonable Return

The Ministers, both at the Centre and in the States, who exhort those whom they call or rather miscall "industrialists," to give up the profit motive in favour of patriotism and invest in industrial ventures, forget one well-known fact. These "industrialists," generally speaking, are mere *entrepreneurs*, who have little money of their own to invest in each of the numerous industrial units many of them control. But not a few of them are able, by reason of their prestige, experience and status, to command other people's money, if they can offer reasonably attractive terms to the investors, which, for the reasons discussed by me, is an impossible task in the present circumstances to impose on them. An appeal to patriotism is a poor substitute for the offer of a reasonable return.

Recently, there has been a strong desire on the part of the Government and a large section of the public to attract foreign capital into Indian industry. But, until the foreign capitalist sees some unmistakable evidence that the Indian capitalist is attracted to indigenous industries by the prospect of a better return than he is accustomed to receive in the protected or controlled industries, it is idle to expect from the foreigner any substantial co-operation. There are many obstacles in the way of the foreign capitalist entering on industrial ventures in India. Most of these can be overcome, if he is satisfied, almost as a condition precedent, that his investment in this country will be at least as remunerative as in his own, if not substantially more so. The best way in which he can be satisfied on this point is by better treatment, at least in these two classes of industries, by the Government of the indigenous capital and not by the offer of special privileges to foreign capital denied to domestic.

Mr. Deshmukh's Inconsistency

No responsible individual, especially if he has any personal knowledge of the high character and integrity of our Finance Minister, can doubt that he is inspired by a genuine desire to alleviate the burden of taxation on industry, to promote its development by making investment in industry more attractive and by offering better opportunities to it for capital formation. But how is he to be expected to reconcile this desire with his two objectives of implementing the Five-year Plan in five years, and of "reducing inequalities of income and wealth" by levelling down what little is left of them to those who earn them rather than by improving the means of augmenting them? He cannot allow industry to be able to offer a return on investment which will not only make less money available to him for the Five-year Plan, but may also compel him to raise the rate of interest on his own public borrowings. Until the Taxation Enquiry Commission works for him, in due course, the miracle of reconciling desires and objects almost unreconciliable, I am afraid, we have no other source of consolation than we can find in the words of a famous motto: "What to do on a night like this? Wait for the morning." But the danger is that, during the night, we may be completely paralysed, if not entirely destroyed.—*All Rights Reserved.*

IMPROVING PRODUCTION OF SILK

MAIN TASK BEFORE CENTRAL BOARD

THE Bill seeking to amend the Central Silk Board Act, with a view to widening the scope of the functions of the Board, was passed by the House of the People last week. The two most important changes proposed in the Bill are: (1) the Act should cover the silk industry as a whole, instead of only raw silk; and (2) the Board should consist of a chairman to be nominated by the Government, in place of the Minister in charge of the Commerce and Industry portfolio. There are also a few other changes with a view to providing for representation of various interests, including labour, on the Board.

The Government of India's move to remodel the Central Silk Board is a clear indication of its awareness of the long-felt need for infusing into the Board more vigour and drive. Although more than four years have elapsed—it was in May, 1949, that the Board was constituted—the Board has not contributed anything substantial to the development of the Indian silk industry. As pointed out by us on a previous occasion, barring, perhaps, the annual meetings, even which have not been held regularly, the Board cannot claim to have attempted to solve any of the long-term problems confronting the industry. Even at the risk of repetition, we would quote below what the Union Minister for Commerce and Industry, Mr. T. T. Krishnamachari, himself remarked some time ago:

"The manner in which the Board functions and its relations with Government are extremely unsatisfactory. I have been asking for information from the Board and I have not got it. I have sent down officers to find out what is happening. Still, very little is forthcoming by way of help. At present, the whole thing is so horrible that I would much rather bring forward a motion to repeal the Silk Board Act than allow the Board to continue in this moribund fashion."

Although the industry has been enjoying tariff protection for nearly two decades now, it has not made any progress worth the name. The production of raw silk, for instance, has not only not increased but has actually declined. The aggregate output of mulberry raw silk in 1952 was only 1.7 million lbs., as against 2 million lbs. in 1933 and the overall domestic demand of 3 million lbs. Similarly, as regards quality, the bulk of the indigenous filature silk has not improved beyond 'D' grade. Again, the prices of raw silk are very high *vis-a-vis* those in other silk-producing countries such as Japan and Italy.

Poor Progress

The none too satisfactory position of the sericulture industry, as noted above, is certainly surprising, considering the fact that, besides tariff protection, the industry has all along been receiving active assistance from the State Governments concerned. What then are the factors which have been responsible for the poor progress of the industry? It is a pity that none of the members who participated in the debate on the Bill threw any light on this question. Nor did they emphasise the need for safeguarding the consumer against unduly high prices. Perhaps, they all thought that the question relating to giving representation to various interests on the reconstituted Board would solve all the problems of the industry.

The major issues facing the sericulture industry arise from its agro-industrial character. The industry is primarily the secondary occupation of the agriculturist, while, at the manufacturing stage, it has all the characteristics of a full-fledged industry. The primary stage has been lagging far behind the manufacturing stage, for raw silk production, both in quality and quantity, is woefully inadequate to meet the country's demand. The chief factors responsible for this state of affairs are absence of proper organisation, lack of adequate research, and defective methods of production. Mr. Karmarkar did well, therefore, to emphasise these aspects, as witness the following remarks of his:

"The principal difficulty with the silk industry is not so much production as want of proper organisation, research and improvement in the methods of production. During the last four or five years, the difficulty that faced Government was financial. But this year, in addition to Rs. 4 lakhs normally granted to the Board, Government has been able to add Rs. 11 lakhs more from the funds for cottage and small-scale industries. State Governments are also working out development schemes. The Mysore Government, for instance, are contemplating the opening of a large-scale research station. Other State Governments will also have such research stations. Ultimately the silk industry will prosper only on the strength of the results of research and Government are working towards the end."

The Real Problem

The foregoing account clearly reveals that the real problem of the Indian silk industry is qualitative and quantitative improvement in production of raw silk. This is, indeed, a formidable problem to which the Central Silk Board will have to address itself energetically and in right earnest. The Board will do well to take note of some of the valuable suggestions put forward by members in the House of the People last week. First, a programme of intensive mulberry cultivation and cocoon growing should be launched. This would go a long way towards reducing costs, provided the Government made available sufficient funds to achieve this end. Secondly, modern and scientific methods of production should be introduced in all stages of the silk industry, right from the mulberry trees to the production of silk. Thirdly, there must be facilities for marketing the finished product of the industry in India and abroad.

PROSPECTS FOR U.K.'s RAYON EXPORTS

The British rayon industry and trade are rather perturbed over the revival of Japanese competition in the Colonial markets. Already, exports of rayon goods from Britain have been suffering from import quota restrictions, high level of import duties and other barriers to trade. "Difficulties outside the control of exporters," to quote one report, "seem to increase rather than diminish." The situation, it is reported, has worsened of late by the recent Anglo-Japanese payments arrangements, under which Britain has undertaken to recommend to the Colonial Governments certain limited relaxations in their restrictions on import of Japanese goods. This new policy, which was in response to a Japanese request following the fall in Japan's sterling balances, was directed towards maintaining the present level of Japanese purchases from the sterling area.

Japanese competition has adversely affected the demand from Colonial markets for British rayon piecegoods. The British Rayon and Synthetic Fibres Federation has accordingly urged the Government to see that Japanese fabrics are not allowed freely into the Colonies. More could be done, the Federation emphasises, to reopen or widen the channels of trade, if the Government were to accord better treatment for rayon, along with other textiles, in negotiation with markets in the Commonwealth and elsewhere. In this connection, it reminds the Government "of the sacrifices the British rayon industry is making in order to provide suitable fabrics at prices within easy reach of Colonial buyers."

Meanwhile, the Federation has been making efforts to promote overseas sales of rayon fabrics by direct representations. These efforts, however, are reported to have had some disappointing results. It is pointed out, for instance, that the Gold Coast has declined a request for a reduction in duties on rayon piecegoods, on the grounds that it cannot afford the loss of revenue and that reduction would give rayon an advantage over cotton prints. Again, despite representation that duties in British West African markets should be reduced, Nigeria has actually raised import duties on rayon and spun rayon fabrics early this year. Similarly, in India, Australia, Eire and South Africa, higher duties or cuts in British preferential margins on fabrics have been made or are proposed. The Australian increase in the British preferential duty on rayon and rayon-mixture furnishing and upholstery fabrics is a direct result of Britain's participation in the G.A.T.T.

CLOTH PRODUCTION IN JULY

The trend of cloth production in India during the current year has been very encouraging and indications are that the cotton mill industry will be able to set up a new production record this year. According to the latest figures available, the aggregate output of mill-made cloth during the month of July, 1952, amounted to as much as 435 million yards, which is a record for any month in the history of the industry. The previous record output was 426 million yards in December, 1952. Curiously enough, the record output in the month under review coincided with the complete abolition of price and distribution control over cloth with effect from 11th July, although it is difficult to say as to what extent this factor induced the mills to step up their output. For there were, and have all along been, several favourable factors, as, for example, comfortable raw cotton supply position, improved labour situation and better transport facilities.

The trend of production of cloth—month by month—in the first seven months of 1953, as compared with that in the corresponding month of the previous year, is shown in the table below:

(In million yards)

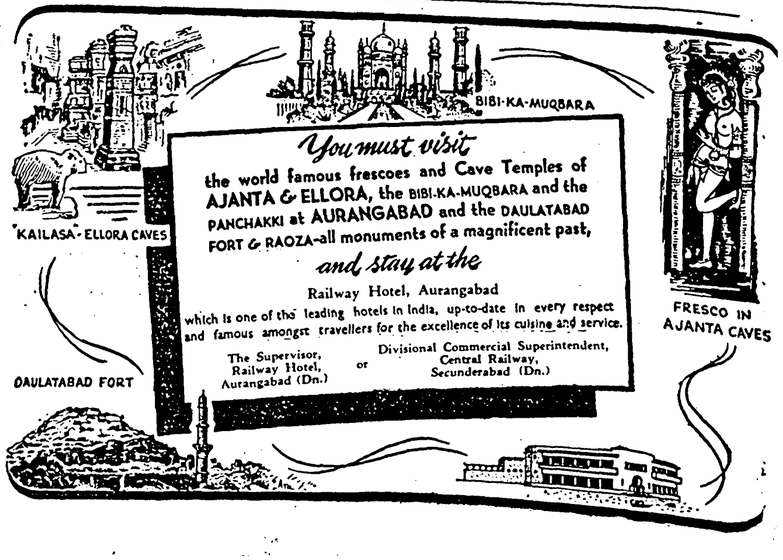
	1952	1953
January	345	416
February	341	378
March	346	400
April	363	419
May	391	420
June	376	421
July	426	435
Total	2,588	2,889

The production of cloth during the first seven months of 1953 thus aggregated 2,889 million yards, giving a monthly average of nearly 413 million yards, which compares very favourably with 2,588 million yards, or a monthly average of 384 million yards, in the same period last year. Assuming that the same trend will be maintained in the coming months also, total production for the whole calendar year may be estimated at 4,956 million yards, as against 4,608 million yards in 1952—a level which overtakes the war-time record of 4,850 million yards for undivided India. The target of production for mill cloth set for 1955-56 in the Five-year Plan, it will be interesting to note, is 4,700 million yards. Thus, the industry may exceed this target by 256 million yards this year.

COTTON INDUSTRY IN JAPAN

Medium- and small-sized textile firms in Japan have been passing through a period of crisis, according to a recent report from Osaka. In fact, several firms have already gone bankrupt; the number of firms falling into bankruptcy since January this year has been at the rate of 15 per month. The average unsettled debts are estimated at 10 million yen for each concern. Two factors, it is said, have been responsible for this disquieting development in Japanese textile industry. First, the loan facilities offered by the banks have shrunk. Secondly, the bigger textile organisations have decided to cut their losses by closing down the small units which they have been working.

The "bankruptcy trend," it is feared, will continue and may spread to other small non-textile concerns which have been hoping to survive by amalgamation under the pre-war Japanese formula of interlocking corporations on the old Zaibatsu pattern. Efforts are, however, being made to effect re-merger operations, but these depend on legislative amendments to the Occupation Anti-monopoly Act now before the Diet.



TREND OF TEXTILE PRICES SINCE KOREAN WAR

FUTURE OF U.K. COTTON PURCHASE POLICY

(From A Special Correspondent)

MANCHESTER, 4th August

FOR three long years, the war has dragged on in Korea but now that the armistice has finally been signed the world has taken the event in its stride. In particular, the commodity markets and prices generally have shown no inclination to fall, as might have been expected if the end of hostilities had come some time ago. While the wrangling over the truce terms continued, markets had time to discount any weakening tendency and the actual event produced hardly a tremor on the surface of international price levels.

MANCHESTER LETTER

A variety of circumstances combined to cause a steady reduction in cotton prices over the past two years so that current values are distinctly lower than when the Korean war began. The following table shows how cotton and yarn quotations in Lancashire have reacted during these three years, including the peak reached early in 1951:

	1950 July d.	1951 Mar./Apr. d.	1953 July d.
American cotton	37.15	63.00	80.85
Yarn—			
16s cop twist	50.12	71.25	43.95
32s " "	60.62	85.70	55.60
36s " "	61.97	87.05	55.65
40s " "	63.77	88.85	57.93
20s ring beams	54.86	79.29	49.86
30s " "	62.65	89.14	56.70
36s " "	66.61	93.49	61.45
15s plain cop weft	49.62	70.50	43.55
32s " " "	54.07	74.95	50.05
42s " " "	60.97	84.85	58.00
Egyptian—			
Uppers	46.85	85.80	34.20
Karnak	48.10	94.00	39.55
Yarn—			
32s cop twist	69.50	126.00	67.00
60s " "	80.50	136.00	73.75
80s " "	96.25	164.50	92.25
40s plain cop weft	71.50	128.00	59.50
54s doubling weft	76.50	134.00	67.25
2/80s bundles	142.50	229.00	135.75
2/100s "	165.00	251.00	163.50

Current yarn prices for medium counts reflect the change in raw cotton quotations compared with 1950, but in the meantime there has been a substantial increase in costs of output. Wages for spinning and weaving operatives were increased by 10 per cent. at the end of 1950, followed by a further advance of 5 per cent. eight months later and the special payment at Christmas, 1951. Now comes the further 5 per cent. rise in wages for which due allowance has already been made in yarn margins. In view of the dearer rates ruling for numerous other inescapable charges, it is clear that the economic consequences of 1952 have narrowed the scale of profit for spinners.

Raw Cotton Buying

The Government is seriously considering a modified version of the Liverpool Cotton Exchange as a solution of the problem of providing cover for private buyers of raw cotton without risking public funds. Talks are now going on between the President of the Board of Trade, the Minister of Materials, and the industry on the various suggestions contained in the recent report of the Hopkins Committee.

But no final decision has been taken, and Mr. Thorneycroft, President of the Board of Trade, refused to commit himself when speaking during a debate on the Raw Cotton Commission and the Hopkins Committee in the House of Commons last week. He did, however, indicate that a modified form of Liverpool futures market was the least unattractive of the Committee's suggestions.

The suggestion that facilities can be extended to hedge on the New York futures market was rejected by the Minister. It would cost dollars, he pointed out. So would the reopening of the Liverpool Cotton Exchange on the old basis, with all the old pre-war facilities. That would require conditions of full convertibility, he declared, and Britain's economic recovery had not as yet reached that stage.

Reopening the market on a modified basis could, however, be done without the need for convertibility. Under that arrangement foreign operators would have free access to the market, settling their transactions in sterling. A fourth possibility was a futures market not based on raw cotton but organised co-operatively by the various interests in the trade which would not depend on the foreign exchange position. This was an entirely new idea, quite different from the old Liverpool futures market.

"This suggestion does require careful study before it could be put into operation," said Mr. Thorneycroft. All these alternatives, he added, were now being considered in the light of the present exchange position.

Commonwealth Trade

An assessment of the part played by Empire markets in exports of cotton piecegoods during the first half of the current year brings the conclusion that there is a slight trend away from trade between Lancashire and the Commonwealth. Whereas since the war cloth shipments to these markets had persisted at a rate of between 75 and 80 per cent. of the total, the population in the first half of 1953 declined to below 72 per cent., as the table below shows:—

(In million sq. yards)

	1939	1951	1952	1953*
Malta and Gozo	1.8	1.7	1.1	0.6
Cyprus	2.4	1.8	2.8	1.6
West Africa	70.5	129.2	175.5	70.3
South Africa	109.5	114.8	89.4	46.0
Northern Rhodesia	0.6	4.8	4.6	2.2
Southern Rhodesia	14.7	21.1	14.1	7.5
East Africa	6.6	15.0	21.1	13.2
Aden	2.7	3.0	3.5	2.0
India	272.3	7.0	6.0	2.1
Pakistan	...	39.4	42.1	2.3
Malaya	39.0	48.5	83.4	15.0
Ceylon	18.3	10.8	8.8	6.7
Hong Kong	6.8	5.3	4.0	2.8
Australia	146.9	167.8	73.0	33.8
New Zealand	20.6	46.4	30.5	12.1
Canada	54.5	14.2	17.1	10.5
British West Indies	22.8	9.8	12.2	6.0
British Guiana	4.4	1.7	2.7	1.8
Sudan	1.7	9.9	11.5	5.0
Other Commonwealth	11.9	11.4	11.5	6.0
Total to Commonwealth ..	823.5	661.5	536.6	246.1
Total cloth exports ..	1,396.2	865.2	710.8	342.5

* Six months.

Several Commonwealth markets have taken smaller quantities of cloth from Lancashire this year compared with the first half of 1952. A very substantial fall has occurred in shipments to Pakistan as a result of import restrictions. In contrast, however, a welcome improvement has taken place in sales to Canada, which are nearly three times the level of a year ago, and shipments to South and East Africa have been almost doubled.

A development of some interest has been the larger turnover for markets in Europe. Exports to Eire, Sweden, Denmark and the Netherlands have all shown an encouraging trend, although the general level of Continental trade is below the 1951 average.

Trade With Argentina

Prospects of increasing Anglo-Argentine trade in textiles are not regarded as particularly encouraging, according to advices reaching Lancashire. Despite the fact that Britain supplied 19 of the 20 packages of cloth imported into Argentina in June, the fortnightly review of the Bank of London and South America comments: "The quantity of textiles entering Argentina in recent years has been so small that for practical purposes the country may be considered closed to the import of foreign textiles."

No sign of a change in policy is noted at present as Argentina is again trying to find foreign markets for her own surplus textiles. The report states there is still something of a depression in the local textile market. Manufacturers are said to be overstocked and traders complain there is a lack of purchasing power. "The present inability of the market to absorb the domestic output of textiles naturally strengthens the demand for the maintenance of a protectionist policy," declares the review.

Before the war Lancashire cotton cloth shipments to the Argentine normally exceeded 100 million yards annually but the quantity now being exported is so small that the volume is not shown separately in the Board of Trade returns.

Australian Import Quotas

A forecast of improved trade prospects for Lancashire exporters to Australia was made in Manchester last week by Mr. S. F. Ferguson, Director of the Australian Association of British Manufacturers. The more favourable balance of payments position would enable the Australian Government to make further relaxations in present import restrictions, he believed.

On his return to Manchester for a two-day visit to discuss trade problems with Lancashire manufacturers, Mr. Ferguson said it was his belief that there would be another cut of 10 per cent. in the import restrictions imposed by the Australian Government. This might well take place within three months—by October—thus allowing British firms to send an extra 10 per cent. of goods to the Australian market.

Mr. Ferguson said there was a big demand in Australia for Lancashire textiles which had only been kept in check by artificial restrictions.—*All Rights Reserved.*

WORLD COTTON CONSUMPTION DURING 1952-53 SEASON

SLIGHT INCREASE INDICATED

THE consumption of cotton in the free world during the current cotton season is now estimated at 25.4 million bales (of 478 lbs. each), or 300,000 bales over the previous season. This estimate, which has been made by the International Cotton Advisory Committee, Washington, in the July issue of its journal *Cotton* is, however, below the consumption in the 1950-51 season when it was 26.5 million bales. The increase in consumption in the 1952-53 season over the previous season's consumption level is attributed to the fact that "domestic demand in most of the main textile manufacturing countries has veered from recession to more normal volume." But the Committee observes that the "tenor of markets remains cautious," and that the outlook for foreign trade in yarn and cloth is "still uncertain."

Among the countries, where increased consumption of cotton is indicated, mention must be made of the U.S., India, Japan and Federal Republic of Germany. Prominent among the countries where a slight decline is anticipated is the U.K. The following table gives the consumption of cotton in 1950-51, 1951-52 and estimated consumption in 1952-53.

Cotton Consumption

(In 000 bales of 478 lbs. each)

	1950-51	1951-52	1952-53*
U.S.	10,569	9,196	9,500
Canada	479	343	370
Mexico	325	329	330
India	3,150	3,520	3,800
Japan	1,599	1,616	1,950
Pakistan	150	190	200
U.K.	2,135	1,759	1,500
France	1,295	1,206	1,125
W. Germany	1,059	924	1,080
Italy	957	892	950
Netherland	299	267	290
Belgium	476	407	385
Spain	245	304	350
Egypt	241	312	310
Turkey	210	210	250
Argentina	435	470	350
Brazil	570	800	800
Others	2,042	2,150	2,060
Total free world	26,500	25,080	25,400

* Estimated.

There is a return, according to the Committee, to a trend for "expanded textile production and sales" in the U.S. Consumption in this country, it is stated, could easily rise to 9.5 million bales, as against 9.2 million bales in 1951-52. The Committee observes that the expansion in textile production, and therefore of the consumption of cotton, is "still continuing in India and Japan." The U.K., France and Italy are mentioned as countries where the use of cotton by mills might be severely restricted during the current season. Germany and Spain are, however, expected to record "fairly substantial increases." Western Europe, according to the Committee, continues to be affected by the lower level of world textile trade, with the "compensatory recovery in domestic offtake being insufficient to take up the slack in export trade." Summarising the statistical position as regards free world cotton consumption, the Committee says that the estimated decline in consumption in Western Europe should, on the whole, be "more than offset by increased consumption in the U.S., India, and Japan and aggregate free world consumption should increase slightly as compared to 1951-52."

Cotton Stocks

Now that the 1952-53 (international cotton) season has just drawn to a close, a "reasonable reliable estimate," the Committee says, can be made of the end-season carry-over stocks of cotton. Cotton production is now estimated at 28.4 million bales and disappearance (consumption, export to communist countries and allowance for cotton destroyed) at about 26.2 million bales. End-season stocks will, therefore, rise to about 15.5 million bales, as compared with 13.3 million bales on 31st July, 1952. The greatest increases in stocks, it is stated, will occur in the U.S. and Brazil. Between them, these two countries will probably hold about 3 million bales more than they did a year ago. In the U.S. alone, stocks are expected to increase by nearly 2.5 million bales. Despite the fact that the Brazilian Government has recently offered to sell its holdings of the 1951-52 crop cotton (estimated at about 1 million bales) at prices based on U.S. futures contracts, only limited sales, it is stated, have actually taken place. And now that the 1952-53 South Brazil crop is also on the market, total stocks of cotton in Brazil are expected to be increased by 1st August, 1953. Referring to stock position in other countries, the Committee says:

"In most of the other important cotton exporting countries, the increase in stocks will be relatively small. This does not disguise the fact, however, that stocks in many countries may be above the post-war normal. A certain increase in stock-holdings could be expected, of course, in the light of the expansion in production in recent years. Egypt is expected to hold close to 900,000 bales on 31st July this year although here again an important part of these stocks will be in Government hands. Pakistan stocks will probably be at a record post-war level of roughly 440,000 bales."

The table alongside gives the estimated cotton stocks position in the net exporting and net importing countries of the free world as at 31st July, 1953, and on the corresponding dates in 1952 and 1951.

The changes in the pattern of distribution of world stocks, according to the Committee, are "partly indicative of the easier supply position throughout the free world and a reflection of the predominantly bearish sentiment in world cotton markets during the present (1952-53) season." It is, however, pointed out that the fact that stocks held by many net importing countries are not excessive in terms of consumption would seem to "augur well for a fairly high level of cotton export trade in the next season."

The Committee proceeds next to assess the volume of cotton trade in the 1952-53 season. It is now possible, the Committee says, to make a "fairly accurate assessment of the probable volume and distribution of world cotton trade in the 1952-53 cotton season."

Cotton Stocks

(In 000 bales of 478 lbs. each)

	As on 31st July		
	1951	1952	1953*
Net exporting countries			
U.S.	2,278	2,759	5,200
Brazil	940	1,400	1,880
Pakistan	132	365	410
Egypt	51	190	230
Sudan	430	875	940
Mexico	225	110	210
Others	265	250	170
Total	4,897	7,215	10,276
Net importing countries			
India	1,477	2,000	1,300
W. Europe	2,607	2,667	2,400
Japan	646	624	575
Others	873	894	949
Total	5,703	6,085	5,224
Total free world	10,600	13,300	15,500

* Estimated.

In this connection, the Committee observes: "It appears fairly certain that free world export, presently estimated at 10.4 million bales, will decline by nearly three-quarters of a million bales as compared to the 1951-52 season. This can be attributed mainly to the reduced imports into

RECOVERY OF JAPANESE COTTON TEXTILE INDUSTRY

GROWING COMPETITION IN ASIAN MARKETS

(By A Special Correspondent)

THE recovery of Japan's war-shattered economy has been most remarkable. There is no doubt that American assistance has played no negligible part in hastening her resources. As Mr. N. S. Roberts, Britain's Commercial Minister at Tokyo, remarks in his recent report, "In the process of rebuilding Japan's industries and reopening her overseas trade, the United States has lent Japan about 1,800,000,000 dollars." Nevertheless, her return to the world as a leading industrial country is largely due to the energy, resourcefulness and determination of her *entrepreneurs* and to the high sense of responsibility displayed by her industrial labour.

The reconstruction of the Japanese cotton textile industry, which had been virtually ruined at the end of the war, affords a striking example of Japan's capacity for resilience. By the end of 1945, the industry had lost nearly 9 million spindles out of the total of 11.6 million spindles. But, from 1945 to 1950, it was able to increase their number from 2.6 million to 4 million spindles. Its progress in subsequent years has been even more remarkable. To-day the industry possesses 7.5 million spindles, that is to say, within a short period of 2½ years, as many as 3½ million additional spindles have been installed. The number of operable looms in the industry is 308,000.

The destruction suffered by the industry during the war was a blessing in disguise to it. Forced to begin from scratch, it could avoid the problem of plant and machinery modernisation, which has assumed such gigantic proportions in India. More than 65 per cent. of the industry's productive equipment is new and quite a large percentage of the looms installed during the post-war period is automatic. According to Mr. F. S. Winterbottom, Chairman of the Cotton and Rayon Merchants' Association, United Kingdom, although the technical ability inside the Japanese mills is negligible, it is high at the top.

There is no reason to disbelieve this testimony, for most of the processes, beginning with the cleaning of cotton and ending with the manufacturing of cloth, have now been mechanised. In order to impart the strongest possible competitive ability to its products, the industry uses most of its automatic looms for the export trade. Up-to-date and efficient machinery not only helps the mills to produce cloth and yarn of high quality, but also makes it possible for them to keep their labour costs at the minimum. In fact, a Japanese unit employs only one-third to one-quarter the labour force engaged by an Indian mill of comparable size. This accounts for the strong cost advantage which Japan enjoys in textiles, despite the fact that she has to import cotton from distant countries.

Girl Labour

The type of labour employed by the Japanese textile industry also conduces to keeping down the wage bill. About 90 per cent. of the operatives are girls who start work at the age of 14 or 15, and who find working in a mill a very good occupation, as compared with labour in the rice fields for 12 hours a day. Thanks to the attractive environment and excellent working conditions, the girl operatives take a genuine interest in their work. Most of them live in dormitories, provided by employers, where they are assisted to qualify themselves not only as good workers but also as enlightened citizens. They normally stay in the factories for four or five years and the money they thus earn provides a dowry which enables them to get married. Their wages are about the same as those paid to Indian cotton textile mill workers. But, as pointed out earlier, a Japanese mill employs only one-third to one-quarter the labour force employed by a comparable Indian mill.

The girls are generally efficient and this is borne out by the steady increase in productivity. The number of looms tended by a girl recently rose to 40 to 50, as against 20 to 28 that had been normal before.

Another feature of the industry is that it is entirely free from interference by Government. Factory and labour laws are administered with moderation and with a comprehension of the pivotal position which the industry holds in the country's economy. In fact, the whole policy of the authorities towards the industry is governed by the wise consideration that it cannot flourish in an atmosphere of suspicion and red-tapism. For example, considerable latitude is permitted to mills in the recruitment of labour and in the arrangement of working conditions. The Japanese Government is fully cognisant of the fact that, with her overseas territories lost and with a considerable reduction in her foreign trade since the last war, the very survival of the nation depends upon capturing new markets in a strongly competitive world.

This, in large measure, accounts for the phenomenal development of the Japanese textile industry during the last six years. The impact of its revival is already being felt in the cloth markets of the world. Equipped with efficient machinery, manned by young, efficient and cheap labour and assisted by a sympathetic and far-sighted Government, the industry has been, to quote Mr. Winterbottom, "throwing as big a weight of cloth into world markets as she did before the war." It is against this strong tide of Japanese exports that India and the other textile manufacturing countries have to contend. In 1951, for example, Japanese exports of cotton textiles amounted to 1,094 million square yards, which made Japan the world's leading exporter of piecegoods.

Indian Industry

The story of the Indian cotton mill industry is somewhat different, although its production record, both during the war and in subsequent years, has been most impressive. Its most vital problem is how soon and in what manner it can replace its worn-out equipment, about 90 per cent. of which is several decades old. Rehabilitation finance is not the only problem of the industry, although inadequacy of resources and high replacement costs are in themselves of a baffling character. The Government's policy in regard to machinery imports is hardly helpful to a speedy modernisation of the industry. Even in Britain, pressure is being brought to bear on her Government to permit imports of machinery, free of duty, with the object of helping the national industry "to keep its equipment up-to-date and keep machinery makers in England on the alert."

There is also an unfortunate tendency in this country to regard "rationalisation" as a pestilential doctrine, which must be resisted at all costs. Productivity in Indian mills, it is well known, is low. Thus, as against an average of four to six ordinary looms handled by one operative in Britain, and 32 and 40 automatic looms in the United States and Japan, respectively, the Indian worker handles a minimum of one ordinary and a maximum of four ordinary looms. It is noteworthy that, since 1938, the emoluments of cotton mill workers have increased by more than 400 per cent. Moreover, the labour force in the Indian cotton mills is being maintained almost at the war-time level, despite the fact that the profits of the industry have declined considerably since that period. Next to cotton, the wage bill constitutes the highest individual burden on the industry, contributing not a little to the high cost of production.

If India is to meet her formidable competitors abroad on their own ground, it is necessary that the productive machinery of the industry should be modernised and geared up to the highest level of efficiency. It is equally necessary that the principle of rationalisation should be accepted, or Indian cloth will be entirely uncompetitive. Nor will it do to make a fetish of working conditions and impose new burdens on the industry, thus rendering the financial position of even sound units unstable. The problem of industrial unemployment will take a turn for the worse if more and more mills become uneconomic and go out of production.

It is unnecessary to emphasise the need for stepping up the country's export trade in cloth. The home market is not in a position to absorb all the cloth produced by the industry which must necessarily export some 1,000 million yards a year, in order to maintain production at the present high level. The Government fully recognises this necessity, but, unfortunately, it does not seem to realise that suitable steps must be taken to impart greater competitive strength to Indian textiles in foreign markets.—*All Rights Reserved.*

COTTON IMPORTS INTO JAPAN

Because of Japan's meagre sterling reserves, the import quota of raw cotton from the pound area for the July-September period will be only 20,000 bales (equivalent to $3,850,000), as compared with 170,000 bales from the dollar area (equivalent to $31.6 million). In the sterling area, 10,000 bales will be imported from Egypt ($2½ million) and 10,000 bales from Pakistan, Burma and India ($1.6 million). The bulk of the dollar buying will be from the U.S. and Mexico, including 40,000 bales ($7.4 million) in accordance with actual exports during May, 60,000 bales ($11.1 million) in accordance with importer capacity, and 50,000 bales ($9½ million) as priority allotments linked with the purchase of high-priced Argentine cotton during the January-March period.

Stocks of cotton cloth in the hands of spinner-weavers at the end of June, 1953 aggregated 26,972,000 sq. yds. a decline of 116,000 sq. yds. since the end of May. Stocks of cotton yarn increased by 458,000 lbs. to 14,185,000 lbs. at the end of June.

The cotton spinners in Japan are asking the Government to press Pakistan for faster release of licences for the import of Japanese cotton cloth. Japanese cotton-spinning industry imported a total of 277,000 bales of cotton from Pakistan during the three months ended June, 1953, which is in excess of Japan's agreed purchases under the agreement. In the first four months of this year, however, Japan exported to Pakistan only 37,000 yards of cotton cloth, as against 99,680,000 yards in the corresponding period of 1952.

CENTRAL AND WESTERN RAILWAYS

TAXATION ON SUGAR TOO HEAVY

DOWNWARD REVISION IMPERATIVE

FOR every ounce of sugar that one eats, the consumer in India is paying one pie as tax. To express it differently, the tax on every maund of sugar consumed is Rs. 5-10-1, which represents no less than 21 per cent. of the total price of sugar. This is, indeed, a high rate of commodity tax, particularly for such an article of food as sugar. In fact, it is this high rate of taxation that has been responsible for the high level of sugar prices *vis-a-vis* that in other sugar producing countries. If, therefore, sugar is to reach the consumer at prices which suit his pockets, it is imperative that the Governments —Central and State—be prepared to reduce their taxes on it. Instead of doing so, the Governments nowadays are showing a tendency to increase their share of burden on the consumers. This is a matter which calls for the special attention of the Taxation Enquiry Commission.

That there is scope for reduction in the cost of sugar to consumers by lowering Government taxes will be clearly revealed by a glance at the table below giving the different elements entering into the cost of producing one maund of sugar (all-India average) at present:

	Cost Rs. a. p.	Percentage to total
Price of cane	13 2 0	51.4
Transport charges	0 5 3	
Co-operative societies' commission.	0 6 9	20.8
Cane cess	1 14 0	
Central excise	3 12 1	
Salaries and wages	3 12 10	14.1
Manufacturing expenses (less molasses realised)	1 13 6	6.7
Packing charges	0 5 0	1.1
Overhead charges and profit ..	1 8 7	5.9
Total ..	27 0 0	100.0

It will be seen that, next to the cost of raw material, taxes constitute the single largest item of cost of sugar to consumers. Now, if prices of this commodity are to be reduced, it can be done in two ways, either by a reduction in the cost of cane or in that of taxes or by a cut in both. It is, of course, true that there is scope for a reduction in the price of cane, but this will depend, to a large extent, on the price of *gur*, on which the burden of taxation is practically *nil*. Again, a substantial cut in cane price, unaccompanied by a similar cut in taxes, will certainly be resented by cane growers on the ground that, while they are being asked to make a sacrifice, the Government is forcing them to pay a higher price for sugar. If sugar is to be made cheaper, a reduction in the burden of taxation is, therefore, necessary. This is precisely the plea which the Indian Sugar Mills' Association, Calcutta, has vigorously put forward in the course of a memorandum submitted to the Taxation Enquiry Commission.

Multiplicity of Taxes

The Association draws the attention of the Commission to the multiplicity of taxes which the sugar industry has been paying to different authorities, notwithstanding the fact that the industry is regulated under the Industries (Development and Regulation) Act, 1951. The latest position in respect of these taxes is as follows:

Besides the Central excise duty of Rs. 3-12-1 per maund of sugar, which is payable by factories in all the States, there are a number of levies charged by the State Governments or local bodies at varying rates. The State Governments, for instance, are charging cess on cane crushed by the factories. In addition, the factories in U.P. and Bihar are paying a commission to co-operative societies at the rate of nine pies per maund of cane supplied through them. It may be noted, in this connection, that these societies supply nearly 80 per cent. of the cane consumed by the factories in this area. The factories in Bihar also pay sales tax on cane whenever the turnover exceeds Rs. 10,000. The Government of Bihar has recently levied cess on molasses sold to parties other than the distilleries at a high rate of As. 8 per maund. In Bombay, Deccan, the factories pay heavy licence fees for molasses and also a duty on electricity generated by them by using bagasse and utilised for running the factories. Besides the State Governments, the local authorities, such as district boards, *panchayat raj*, municipal committees, etc., realise a number of taxes, as, for example, property tax, licence fee, octroi duty and *panchayat raj* tax.

In view of the tendency to keep on burdening the industry thus, the Association rightly points out that, if the State Governments are left free to resort to any measure of taxation, all the advantages expected to accrue from the centralisation of the industry would be lost. In its considered opinion, the taxes which the sugar factories pay should conform to the general policy as laid down by the Government of India.

The Association is particularly critical of the cess on sugar cane. This is not surprising, considering the fact that the cess of As. 3 per maund of sugarcane represents as much as 15 per cent. of the cost of cane. Nowhere in the world is such a heavy cess being collected for the development of cane. What is even more disquieting is that the major part of this revenue flows into the general revenues of the State Governments. According to the figures cited by the Association, the up-to-date collections by the Governments of Uttar Pradesh and Bihar by way of sugarcane cess amount to over Rs. 30 crores, but the sum actually spent on cane development work is negligible. During 1948-49, for instance, the U.P. Government spent only Rs. 37 lakhs out of a total collection of Rs. 3.12 crores. In 1949-50, the Bihar Government spent Rs. 13 lakhs out of Rs. 70 lakhs of cess collected by it. The former Tariff Board had recommended that the cess could be reduced to, say, As. 1-6, which would be quite sufficient to meet the probable requirements of cane development.

Sales Tax Laws

The Association has also referred to the difficulties experienced by the sugar factories as a result of the administration of sales tax laws. Thanks to the recent judgment of the Supreme Court, Article 286(1) of the Constitution entitles all the States, in which goods are delivered for the purpose of consumption therein, to collect sales tax. For example, sugar delivered in West Bengal, Bombay, Assam and Orissa for consumption therein by a factory in U.P. will be subject to the tax in these States and the factory delivering sugar is required to register itself in all these different States. Moreover, the sales tax authorities in these States require the supplying factory to submit to them its books of accounts, documents and other relevant papers. The Association suggests, therefore, that the Taxation Enquiry Commission should consider the desirability of the Central Government administering the sales tax law on behalf of the States on the basis of a model sales tax law and rules applicable uniformly throughout India.

Rehabilitation Finance

Apart from penalising the consumer, the heavy taxes have checked the expansion, re-equipment and modernisation of plants in sugar factories. While determining the tax burden on the sugar industry, the Taxation Commission should take particular note of the need for leaving sufficient funds with the industry for purposes of further expansion and development. Drawing attention to this need, the Indian Sugar Mills' Association observes thus:

"The sugar industry was the first to be taken under control in April, 1942, which continued till the end of 1952 with a brief break of about 1½ years. Throughout this period, the profit margin of the industry was fixed in the controlled rates at the pre-war level regardless of the increase in taxation rates. The profit margin actually allowed was at the rate of 10 per cent. on the bloc, which was taken to be Rs. 18 lakhs for an average factory, as was recommended by the 1937 Tariff Board. No doubt, the Board had recommended this rate on the assumption that, after paying taxes, 8 per cent. on the bloc or 80 per cent. of the profits would be left for reserve and shareholders, but now, with increased taxation, actually 40 per cent. of the profits are taken away by taxation, and what is left is not sufficient even to provide for a reasonable return to the shareholders. The 1950 Tariff Board on sugar has also observed that the profits in this industry have been lower than in other industries. In the circumstances, the industry has not been able to build up adequate reserves for re-equipment, modernisation and expansion. Moreover, the sugar industry also needs funds for development of sugarcane in factory areas and for undertaking several other schemes connected with cane supplies. For instance, the factories are required to lay down tramway lines for quicker and more efficient transport of cane. This at present would cost each factory about Rs. 20 lakhs. Factories also need funds for organising their own farms, seed nurseries, etc."

Allied to the question of development finance is the problem of depreciation allowances. It is common knowledge that the sugar industry, like so many other industries, does not have adequate reserves to finance purchases of new plant and machinery at enhanced prices, thanks to the Government of India's policy of allowing depreciation allowances on the basis of original cost which do not bear any relationship to the current market prices. As the Association has pertinently remarked, if all the backlog of repairs and replacements has to be carried out in a thorough manner and the industry put on a modernised basis, large expenditure will become necessary. It is, therefore, imperative that depreciation allowances should be so liberalised as to enable the industry to plough back sufficient funds for purposes of replacement and repairs. Otherwise, as the Association rightly warns, the efficiency of the sugar industry is bound to be considerably impaired. It is to be hoped that the Taxation Enquiry Commission will devote some special attention to the points raised by the Association.

SUGAR POSITION IN INDIA

Replying to a question in the House of the People the other day, Mr. Rafi Ahmed Kidwai, Union Minister for Food and Agriculture, reviewed the latest sugar position in the country with particular reference to the rise in prices. The rise in sugar prices, Mr. Kidwai said, was found to be due to short production of *gur* and *khandsari* and the consequent increased demand for factory sugar; the rise in *gur* and *khandsari* prices, the feeling in trade circles that the quantity of sugar available for consumption was not enough, and the paucity of wagons for movement of sugar had also contributed to the rise. According to him, the prices of sugar remained at a reasonable level upto the third week of April, 1953, when they began to display an upward trend and recorded an increase of about Rs. 2 to Rs. 4 per maund over the fair average price. The Minister referred to the several steps taken by the Government to bring down prices. These include accelerating movement of sugar, arranging distribution of sugar released out of reserve stock at a statutory ex-factory price of Rs. 27 per maund through fair price ration shops and announcing its intention to import sugar. As a result of these measures, the prices in different areas, he said, had fallen by about Re. 1 to Rs. 2 per maund.

Referring to the stock position, the Minister stated that the stock of sugar with factories on 1st November, 1952, and 1st July, 1953, was 503,143 and 709,205 tons, respectively. The corresponding figures for value work out to Rs. 424.60 lakhs and Rs. 521.27 lakhs. The production of sugar during the last three years, he said, was as under:

(In thousand tons)

Year	Production
1950-51	11,16
1951-52	14,97
1952-53	12,93

Mr. Kidwai enumerated reasons for the fall in production of sugar during 1952-53, as compared with 1951-52. First, there was decrease in production of sugarcane by about 5 per cent. Secondly, there had been diversion of cane in factory zones to *gur* production, owing to relatively high prices of *gur*. Thirdly, the number of sugar factories working during the 1952-53 season was lower at 134, as against 141 in 1951-52. Finally, factories started crushing late by about three weeks.

The wholesale and retail prices were as follows:

(Per maund).

As on	Calcutta Wholesale	Calcutta Retail	Kanpur Wholesale	Kanpur Retail	Bombay Wholesale	Bombay Retail
	Rs. a.	As. p.	Rs. a.	As. p.	Rs. a.	As. p.
6-12-1952 ..	29 6	13 0	27 10	11 8	33 0	14 0
25- 7-1953 ..	31 14	13 3	31 0	12 9	31 12	13 9

The exports of sugar outside the country during the 1951-52 and 1952-53 seasons aggregated 10,755 and 6,432 tons, respectively. There was no export of sugar during the 1950-51 season.

SUGAR EXPORTS FROM INDONESIA

Indonesia will export 150,000 tons of sugar out of its production of 600,000 tons this year, according to an announcement of the Economic Affairs Ministry. There has been a marked rise in sugar production. This is due to better security conditions in East Java, larger yield by the peoples' plantations, and Government assistance to planters and factory owners. Crushing of sugarcane in factories in East Java has begun and results are reported to be satisfactory with per hectare yield averaging 1.1 ton. In the pre-war period, Indonesia used to export over a million tons of sugar. The Government now hopes to reach this target within the next three years.

Dr. Subandrio, Indonesian Ambassador to Britain, who led the Indonesian delegation to the International Sugar Conference in London, said, in the course of his address recently, that nothing could be farther from truth than the suggestions that Indonesia might disappear as a major sugar exporter. Quoting figures of production in Indonesia, he told the delegates that Indonesian production of sugar was rising and could be expected to rise still further in the near future.

SUGAR PRODUCTION AND STOCKS

The total production and despatches of sugar during the current (1952-53) season upto 15th July, 1953, amounted to 1,317,659 tons and 1,145,856 tons, respectively, as against the corresponding figures of 1,485,486 tons and 815,314 tons in the previous season.

The opening stocks, production, despatches and closing stocks of sugar during the fortnight ended 15th July, 1953, were 681,717 tons *nil*, 58,028 tons and 623,689 tons, respectively. The figures for the corresponding fortnight of the previous season were 823,843 tons, 2,037 tons, 53,049 tons and 772,831 tons. Figures for the current fortnight relate to 129 factories representing 93.67 per cent. of the total cane-crushing capacity, while those for the previous year relate to 129 factories representing 91.39 per cent. of the total cane-crushing capacity.

LABOUR IN MADHYA PRADESH COLLIERIES

THREAT OF GENERAL STRIKE

HARDLY a few weeks have passed since the 32-day strike of 5,100 coal-miners of Belamalli, Hyderabad State (Deccan), resulting in a loss of production of 70,800 tons valued at Rs. 15 lakhs, was withdrawn. And now comes the threat of a general strike of coal-miners of Madhya Pradesh from 31st August. The decision to strike was taken by the Madhya Pradesh Mine Workers' Union at its thirteenth annual general meeting, held at Eklehra colliery, recently.

The main reason for a general strike is stated to be the violation of the 1947 Wage Award by the colliery owners. Wage rates are alleged to have been changed without the sanction of the Government of India. It is also complained that there has been, of late, retrenchment of workers, consequent on the introduction of new machines and that the retrenched workers were not paid compensation. The colliery owners are further indicted of threatening the workers with dire consequences, if they do not change over their membership from the Madhya Pradesh Mine Workers' Union to the Indian National Trade Union Congress.

Speaking at a Press conference at Nagpur, Mr. Haldulkar demanded the constitution of a board of conciliation immediately to settle the demands of workers. A council of action has already been formed to contact the workers and conduct the strike. Mr. Haldulkar has listed 20 main demands of workers. They are as follows:

(1) Rs. 35 as basic wage for daily rated workers; (2) increase in dearness allowance as per increased cost of living; (3) rates of coalcutters (a) for handcutting at Rs. 13-8 per 100 c.ft., (b) machine cutting at Rs. 5-10 per 100 c.ft., (c) stone cutting at Rs. 40 per 100 c.ft., and (d) As. 15 per tub of 30 c.ft. for depillaring; (4) rates for leaders at As. 15 per tub of 30 c.ft. with D.A.; (5) equal wages for both male and female labour; (6) increase in grain allowance; (7) bonus on production basis with no condition of attendance; (8) facility for getting loans against provident fund accounts; (9) gratuity to workers with ten years or more of service; (10) immediate increase of 50 per cent. in dearness allowance; (11) leave with pay for ten days and privilege leave; (12) overtime payment for work on holidays; (13) immediate abolition of contract system; (14) changes in Standing Orders; (15) application of the recommendations of the Central Pay Commission with regard to basic pay, D.A., leave rules, etc., for the technical staff; (16) immediate construction of hospitals, maternity homes and places of entertainment from labour welfare fund; (17) conveyance fare to workers to visit their homes once a year; (18) well ventilated houses; (19) increase in the amount of compensation for accidents; and (20) full safety arrangements.

Some of the demands, especially those relating to safety arrangements, abolition of contract system, well ventilated houses, immediate construction of hospitals and the like may be conceded, despite the additional financial burden involved. But few will deny that the question of revising the structure of wages and dearness allowance and increased food allowance should be deferred till the return of better days. For, whatever may be the arguments, on humanitarian grounds, for increasing the present rates of emoluments, one cannot ignore the capacity of the industry to pay. Judged from the existing circumstances, the coal industry is not in a position to pay more.

The demand for bonus on production basis not linked with attendance is also of dubious value. It is common knowledge that increase in the total emoluments of workers has not so far resulted in any perceptible improvement in their standard of living. Instead, it has encouraged absenteeism. This is a state of affairs which should be discouraged and one effective way of doing it is to link the payment of bonus to attendance.

The demand for the grant of loans against provident fund accounts, too, is wrong, at any rate in principle. Provident funds are meant to be an insurance against old age. Loans can be allowed only for payment of insurance premiums and such other things, but not for meeting current expenditure. In fact, loans against provident funds should be discouraged at all costs. And those who agitate for such loans are doing a distinct disservice to workers.

• • • •

Since writing the foregoing account, the Government of India has decided to refer a number of industrial disputes in the coalfields to an Industrial Tribunal, for adjudication. It is, therefore, doubtful whether the workers will go on strike.

THE WORLD'S FIRST PRACTICAL INCANDESCENT ELECTRIC LAMP

On the evening of October 19, 1879, in a laboratory at Menlo Park, Thomas Alva Edison threw a switch which released electric current into a carbonised sewing thread, bent into a horse shoe shape and set inside a sealed glass bulb. It glowed with a soft light for over 40 hours when the delicate filament burned out.

Thus the world's first practical incandescent electric lamp was born and soon the Edison Electric Company, one of the earliest of the companies which joined to form General Electric, was established to finance development of this lamp.

Today General Electric has over 25 lamp manufacturing plants all over the world, which produce a variety of lamps—from .2 watt "Grain of Wheat" lamps used in surgical instruments to 10,000 watt floodlights, huge giants of glass and metal. Inaugurated 75 years ago in U.S.A., when its parent company was first established, General Electric's unlimited resources, skill and research have been used and are available to India for the development of her industrial potential.

This is General Electric's 50th Anniversary of Service in India.

MARKETING PRACTICES OF JUTE INDUSTRY

ENQUIRY COMMITTEE SET UP

THE Government of India has appointed a Commission to institute an enquiry into the marketing practices in the raw jute and jute goods trade and the extent to which they are influenced by speculators and to recommend measures for ensuring a fair price not only to the grower of jute but also to the jute mills. The Commission, with Mr. K. R. P. Aiyangar, Joint Secretary to the Government of India, Ministry of Finance, as Chairman, and Mr. P. S. Gupta, Deputy Director-General of Supplies and Disposals, and Mr. D. Sandilya, Joint Director, Finance, Railway Board, as members, is required to submit its report within four months.

According to a Press Note issued by the Government of India, the terms of reference of the Committee are as follows:

(a) To examine and enquire into the operations of the tiers in the jute industry and trade from the grower of raw jute to the seller of jute goods;

(b) to examine and enquire into the factors which determine the return to the grower of raw jute for his product and the part played in it by the cost and the adequacy or otherwise of transport, the lack of contact between the grower of raw jute and its consumer, the absence of market information to the growers of raw jute and all matters relating thereto;

(c) to examine and enquire into the nature and the content of speculations both in raw jute trade and the jute goods trade, the extent to which market prices are affected by the operation of mill owners, jute dealers and the speculative operators in the market and to consider in relation to the circumstances which rendered the closing of the *fatka* market in Calcutta in December, 1952, the malpractices indulged in by the various units that operated in the *fatka* market resulting in undue depression of prices of raw jute as well as jute goods; and

(d) after such examination, enquiry and consideration to make recommendations to the Central Government on the measures necessary (i) to secure for the grower as well as the industry a fair price for raw jute and jute goods, (ii) to put down the malpractices engaged in by certain sectors of the jute industry in order to rig up or depress prices for their own ends, and (iii) to ensure that the jute export trade is not affected by frequent manipulation of the market by interested persons.

Unwarranted

The appointment of this Commission is quite unwarranted. It would only result in additional expenditure to the Government, without any worthwhile returns. There already exists voluminous literature on these subjects. There is, for instance, the report of the Indian Central Jute Committee on the marketing of jute and jute products. It is true that this was published as early as in 1941, but it was brought almost up to date in the revised edition published last year. Then, there is the report of the Export Trade Promotion Committee (Chairman: Mr. A. D. Gorwala) which deals extensively with the practices of *fatka* and other futures markets, among others. The memorandum on the futures market subscribed to by all sections of the jute trade and industry and submitted to Sir John Anderson, when he was the Governor of Bengal, is also a highly useful document. And then, there are the two excellent reports of Prof. Todd on the very same subjects which the present Committee has been asked to cover. Since then, there have been no complicated developments in the spheres of futures trading to require another probe. If the Government wants to take any action, all that it has to do is to read these reports again and make up its mind on the lines on which excessive speculation can be effectively curbed. Moreover, the Forward Markets Commission will soon be appointed; it can very well be asked to tackle this problem. We wonder, therefore, what useful purpose will be served by the present enquiry.

That apart, the terms of enquiry of the Committee are comprehensive, inasmuch as they cover every aspect of marketing raw jute and jute manufactures. But futures trading may easily engage the major portion of the Commission's time and energy, in view of the varied opinions on its utility or otherwise to the jute grower and manufacturer. Some allege that the *fatka* market serves no other purpose than encouraging gambling orgies. Others hold a different opinion. They contend that it is essential for ensuring liquidity and smooth marketing of jute and jute goods and for providing a hedge against future uncertainties. They attribute the hectic highs and the sharp downs in prices to the high sensitiveness of the market which, they allege, is not in itself a defect. Unless the futures market is sensitive, they maintain, it cannot provide a cover against future risks at economic premium rates. In fine, a futures market, if it is to discharge its function satisfactorily, must provide scope for keen competition among the operators and when there is keen competition, there is bound to be wide fluctuations in prices.

Whatever may be the conflicting opinions in regard to the utility of a futures market, few will deny the need to avoid violent fluctuations that has become a recurring feature of the industry. The violent fluctuations have resulted in hardship not only to the grower of jute and manufacturers of jute goods but also to members of the trade. For excessive speculation brings about business failures, results in defaults and ultimately destroys the utility of a futures market. When speculation exceeds moderation, it degenerates into gambling. This is exactly what has to be prevented. But so far no one has found a satisfactory solution to the problem, a solution which, while preserving the futures market intact, will eliminate over-speculation. And the task is rendered more difficult in this country by the inherent weakness of Indian business men to overtrade and the growing tendency, latterly, among them to condone defaults and to compromise with even the worst defaulters.

(Concluded from next column)

tea including "rejections." In the South, what is called premium tea formed 25 to 33 per cent. of the production. It was suggested by some to the Committee that it would help to support tea prices, if the "rejections" could be compulsorily destroyed, as they were used as adulterants and were depressing the price of good quality teas. The Committee concurred with this view and felt that suitable legislation should be introduced, if voluntary agreement among the trade was not reached. The Tea Act, 1953 confers powers on the Central Government to improve quality of tea. There, however, appears to be persistent enquiries for tea waste as consumers belonging to the low income group provide a market for them, evidently because they cannot afford to buy the high-priced quality tea. No amount of State control will succeed in preventing production of tea waste, as there will always be ways and means of evading it. Voluntary co-operation of the industry is, therefore, essential. Unless there is a co-ordinated effort on the part of all estates to destroy completely all waste teas sweepings and fluff, it will be difficult to prevent the flow of these "rejections" into the dealers' hands.

Statistics of shipments of Indian tea are also encouraging. Shipments from Cochin during the current season so far are nearly the same as those in the corresponding period of last season, while those from Calcutta are substantially higher, as will be seen from the following table showing exports to some of the main foreign countries:

INDIAN TEA CROP LOWER

U.P.A.S.I. TO FIX QUALITY STANDARDS

THE present statistical position of Indian tea, one of the main factors on which the outlook for this commodity depends, appears to be quite favourable for the industry. From the point of view of production, the current season (1953-54) opened on a more secured basis. The 1952-53 season ended with a production which fell short of the previous season's output by 4.75 million lbs. The export quota release and the actual tea exports for the last season would appear to have nearly tallied, there being no quota or old season's teas floating in the market as carry-over. This is in refreshing contrast with the situation that prevailed at the commencement of the 1952-53 season, when there were nearly 60 million lbs. of tea of the previous season and an excess export quota of nearly 37 million lbs.

The latest figures of production of North Indian tea for the current season so far are not available, but at the end of May the crop was stated to be 12½ million lbs. behind that at the close of May, 1952. Tea production in South India during the first five months of the year 1953 indicates that planters in that part of the country are endeavouring to bring about an automatic reduction in crop by producing better teas, though they are stated not to have found themselves able to accept any definite agreement on restriction of crop. The total output of South Indian tea in the five months ended 31st May, 1953, amounts to 51.50 million lbs. (subject to revision), as against 52.77 million lbs. in the corresponding period of 1952, thus recording a decline of 1.27 million lbs. The shortfall in output upto April, 1953, as compared with the output in the first four months of 1952, was even greater at 4.65 million lbs., the actual output in the two periods under comparison being 33.51 million lbs. and 38.16 million lbs., respectively. The narrowing of the gap at the end of May, 1953, is due to the substantial rise in output in the month of May, at 18 million lbs. (subject to revision) as compared with 12.61 million lbs. (revised) for the previous month and 14.61 million lbs. for May, 1952.

The decline in the aggregate output during the first five months is not large, but may be taken as an indication of the expectation that the total production for 1953 may not exceed that for 1952. One of the causes for this fall in output is stated to be the effort on the part of a large number of estates to concentrate more on quality than on quantity. The general improvement in the quality of tea that is produced is reported to have been well received in foreign countries. It is stated that housewives in London prefer better quality packets even at higher prices, because of the fact that quality blends prove to be economical. Further, the prices of tea are stated to be reasonable consistent with quality and there is a desire everywhere to take advantage of the position.

Standard Quality

Meanwhile, the question of ensuring that there is no slackening of the efforts to produce good quality tea is reported to have been taken up by the Tea Section Committee of the U.P.A.S.I. It has discussed ways and means of ensuring that teas below a minimum standard of appearance are not produced in future. Samples of such a minimum standard have been made up and tested and a general agreement would appear to have been reached as to the minimum standard which should be recommended for acceptance by estates. Samples of the minimum recommended standard will shortly be issued to all factories manufacturing tea in South India, with a request that they should not produce teas of quality below that standard. This is, no doubt, a desirable and welcome step and is worthy of emulation by all tea producers. But the maintenance of the standard by the factories depends on the supply of quality tea to factories by the estates. Evidently, this means that the estates should pay special attention to quality plucking and destruction of waste tea, sweepings and fluff, commonly known as "rejections." Quality tea plucking requires the co-operation of workers which, it is to be hoped, will be readily forthcoming.

It will be interesting to recall here that enquiries by the Rajaram Rao Committee revealed that 60 per cent. of the total Indian production of tea was medium tea, 20 to 25 per cent. superior quality and the balance residual

DEVELOPMENT OF MINERALS

CENTRAL CO-ORDINATION EMPHASISED

THE first meeting of the Mineral Advisory Board, constituted by the Government of India in January, 1953, which was held in New Delhi, last week, made quite a few important recommendations relating to production, conservation, utilisation, as well as exploration of minerals in India. The Government of India is expected to consider sympathetically these recommendations in formulating changes in its mineral policy. The importance of a correct mineral policy cannot be overemphasised. After all, mineral resources, as Moulana Abdul Kalam Azad said—in the absence of Mr. Azad, owing to indisposition, the inaugural address was read on his behalf by Mr. K. D. Malaviya, Deputy Minister for Natural Resources and Scientific Research—are one of the most important assets of any country and deserve special attention, particularly because they cannot be replaced once they are utilised.

The Board at the outset urged the need for Central co-ordination for mineral development and the necessity for ensuring maximum production and effective conservation and utilisation of minerals in the national interest. It recommended that the Conservation and Development Rules, which have been framed, should be promulgated, as soon as possible, in consultation with State Governments. The need for Central co-ordination requires no reiteration. Otherwise, it might lead to wasteful exploitation of the resources, with a view to making immediate and large profits, which is objectionable on all counts, in the interest of the nation. For mineral resources are wasting assets, and there is no process by which the shortage can be made good, as in the case of agriculture, dairy or fisheries. It is true that, fortunately, India has plentiful supplies of iron ore, coal, limestone, gypsum, mica, manganese, monazite, china-clay and ochres, as also considerable quantities of other important minerals, which are essential for the development of atomic energy. India accounts for 80 per cent. of the world's supply of dressed mica and is second only to the U.S.S.R. in the production of manganese. It is also true that India has not yet converted its potential reserves into actual wealth. The value of minerals produced in 1951 was Rs. 105.86 crores, as against Rs. 64.04 crores in 1947. Similarly, the value of metals produced in 1951 was Rs. 50.38 crores, as against Rs. 31.04 crores in 1947. Although the values disclose a substantial rise, in the context of rising prices and the demand for metals and minerals of all types, created in the wake of the Korean war, the increase in values is by no means satisfactory. All this does not mean that India can indulge in unregulated production. Every effort should be made to see that maximum production is realised without at the same time forgetting the need for conservation. In any case, Central co-ordination is desirable.

Minerals in Short Supply

There are, however, certain minerals and metals which are in short supply. They are, for instance, sulphur, silver, zinc, lead, tin, nickel, mercury, platinum and petroleum. Their known deposits are limited but there are vast areas in the country which have not been satisfactorily explored. During the period 1948-52 the Geological Survey has mapped some 40,000 square miles. It is gratifying to note that the Board recommended that the Government should, on its own initiative or in partnership with private enterprise, undertake exploratory operations for "proving" deposits of important minerals like copper, lead, zinc and aluminium. It also requested the Government to make available, through the Geological Survey of India and the Indian Bureau of Mines, larger funds for such investigation and suggested that, where such investigations were taken up by private enterprise, the Government should assist them by giving all possible technical help and advice.

An important aspect of mineral policy, which the Board considered, related to exports. The Board felt that the export policy should be flexible. It added that, while the aim should be to encourage export, wherever possible, of processed or semi-processed products, a liberal policy might be adopted in regard to export of minerals, which are not used or processed or fabricated in India, consistent with the availability of supplies and the principles which govern export policy. That it would be obviously advantageous to India to export processed or semi-processed forms is indisputable. For it will help develop processing industries which will provide employment opportunities. It will further help adjust better the balance of payments position, which more often has been not happy, owing to India being primarily an exporter of raw materials including minerals.

Research

The Board recommended that the Geological Survey of India and the Indian Bureau of Mines should consult both the State Governments and the industry in framing their annual research programmes. It also urged the industrialists to bring to the notice of the Government, from time to time, problems in which the industry is particularly interested which need to be investigated. When these recommendations are implemented, they will certainly help the evolution of a co-ordinated research programme. It is only such a programme that will help profitable exploitation of minerals effectively and with minimum costs. At present, the National Metallurgical Laboratory, Jamshedpur, in co-operation with the Indian Bureau of Mines and the Fuel Research Institute, Dhanbad, is carrying out research work. It is to be hoped that mining companies and other industrialists interested in prospecting and mining will utilise these research institutions in order to get their many technical problems investigated.

Disposal of Applications

The Board finally requested the State Governments to give priority to the disposal of applications for certificates of approval, prospecting licences and mining leases and to simplify the procedure of enquiry in order to ensure that the applications are disposed of without delay. The Board also recommended that a committee consisting of four members from the States, three from the Central Government and four from the industry be set up to consider the question of royalties. These suggestions are welcome for their implementation will help remove the inconveniences caused by the delay in the taking of decisions, among others, and will help promote mineral development better.

The Board's recommendations call, in effect, for a thorough overhaul of the existing mineral policy, with a view to achieving both bettter exploitation and utilisation of minerals within the country and their regulated exports. As the Mineral Advisory Board consists of representatives of the Central and State Governments, as well as the industry, its representative character needs no emphasis. The Government will, therefore, do well to give effect to its recommendations. Anyway, India's future depends to a great extent on the development of mineral reserves and the metal industry which have a vital bearing on agricultural and industrial development.

DEVELOPMENT OF MINOR PORTS

The Central Government has decided to advance a sum of Rs. 60 lakhs, as partially interest-free loans, to the State Governments to enable them to make essential improvements to the minor ports in their respective States. The improvements proposed to be made at various ports include erection of new piers and extension of existing ones, construction of workshop and storage sheds, provision of additional tugs for towing, electrification of wharves, improving navigational aids, installation of additional diesel and electric cranes, improvement of lighting and amenities to passengers and other general improvements with a view to maintaining their present efficiency. It may be noted that the aggregate cost of the improvements to minor ports proposed by the State Governments was about Rs. 3 crores. But a sub-committee of the Chairmanship of Mr. O. V. Alagesan, Deputy Minister for Transport, scrutinised the list of works and approved only essential schemes costing about Rs. 2 crores.

BOMBAY

CIVIL AVIATION IN INDIA

THREE COMMITTEES SET UP

NOW that the airlines are nationalised the Government of India is envisaging certain broad changes in the structure of the industry. The Board of the Indian Airlines Corporation, which met in Bombay on 7th August, under the chairmanship of Mr. B. C. Mukherji, I.C.S., set up three committees, to make recommendations regarding the various problems engaging the attention of the Corporation. The three committees are: the Technical Committee, the Finance Committee and the Services Committee.

The Technical Committee will enquire, among others, into suitable pattern routes for domestic airlines, organisation and location of operational and engineering bases, rationalisation of freight structure for passengers and the determination of the strength of operational, engineering and traffic personnel in each category. The terms of the Finance Committee are the procedure to be followed in effecting financial integration of air companies, the lines on which the accounting organisation of the Corporation should be set up and the like. The Services Committee's terms of reference include rationalisation of pay scales for different categories of personnel and the formulation of common service conditions in the matter of leave, holidays, bonus, provident fund, pension schemes and related matters.

Master Committee

The Government of India is considering, it is stated, the recommendations of the nine-man Committee, appointed in April, 1952, with Mr. M. A. Master, as Chairman, to examine the existing system of training civilian air pilots in India in all its aspects. These recommendations, which were submitted to the Government of India on 12th January this year, have now been published. The chief recommendation of the Committee relates to the need for the establishment of a civil air board with a non-official chairman, to be responsible for the selection of trainees in civil aviation, laying down of syllabi, appointment of instructors, conducting examinations and the issue of licences. The Board should also be empowered to grant financial assistance to flying clubs. The Board should be under the Minister for Communications and, if required, advise the Minister on questions concerning civil aviation policy or any other matter specially referred to it.

The Committee has recommended the continuance of the existing flying clubs subsidised by the State and Central Governments, the training of commercial air pilots at the civil aviation centre at Allahabad, and the substitution, without delay, of the system of licences recommended by the International Civil Aviation Organisation (I.C.A.O.) in place of existing private pilot's 'A' licence and commercial pilot's 'B' licence. The licences recommended by the I.C.A.O. include student's licence, private pilot's licence, commercial pilot's licence, senior commercial pilot's licence and air transport pilot's licence, etc. The Board has also recommended measures designed to increase operational efficiency of the air crew, to develop air-mindedness among the public, to encourage private flying for sport and to prevent unemployment among air pilots.

The recommendations of the Master Committee aim at securing a more comprehensive knowledge of ground subjects on the part of pilots and provide for stringent tests and checks more or less in line with the recommendations of the I.C.A.O. It is, therefore, expected that the Government will favour their adoption and bring India in line with international aviation standards.

NEW MORRIS COMMERCIAL VAN

A new 20-cwt. forward-control van, incorporating flush sliding doors, large-section low-pressure tyres and 2.2-litre o.h.v. engine, has just been announced by Morris Commercial Cars Ltd. Outstanding features of the van, it is claimed, are economy, speed and manœuvrability.

The specially designed interior and low-built floor give the van body a capacity of 235 cu.ft., and the slightly curved rear doors, hung on outrigger hinges, can be folded back and secured against the body sides for delivery work and loading in confined spaces. The flush-fitting sliding doors of the cab have similar advantages and are much safer than the opening-out type. Production will start almost immediately, and the new model will be available on both home and export markets as a complete van, or in chassis form.

ASIATIC
GOVERNMENT
SECURITY LIFE AND
GENERAL ASSURANCE
COMPANY, LIMITED
(Incorporated in India in 1913)

★

Founded in 1913, the **Asiatic Government Security Life and General Assurance Co., Ltd.,** has a record of over 40 years of service in the life insurance field.

Fortified by the close association with the **Prithvi Insurance Co., Ltd.,** which has existed ever since 1949, we have entered into a new period of development and expansion in all fields of insurance activities.

We are now fully equipped to handle all classes of general insurance business including fire, marine, motor, personal accident, workmen's compensation, burglary, fidelity guarantee, etc., in addition to life insurance and it is our policy to provide complete satisfaction to all our constituents.

EMPLOYEES' STATE INSURANCE SCHEME

PLACE OF REGIONAL BOARDS

THE statement on the working of the Employees' State Insurance Corporation, which Mr. V. V. Giri, Minister for Labour, Government of India, laid before the House of the People, last week, is notable for the light it throws on the scope of work of the regional boards, and also on the set-up of the Corporation. Presumably, the statement was meant, in part, as a rejoinder to the allegations of lack of trained personnel which Dr. C. L. Katial, ex-Director-General of the Corporation, made just prior to his giving up his post. The statement emphasised, contrary to what Dr. Katial had stated, that the relations between the Government of India and the Corporation had "always been cordial."

It will be recalled that Dr. Katial's charges against the Government included the allegation that the latter did not co-operate with the Corporation in the matter of making prompt appointments of certain key personnel like the actuary, chief accounts officer and medical officer. Without specifically referring to this charge, Mr. Giri stated that the post of the actuary of the Corporation had been vacant since 1952 when the incumbent was promoted as Insurance Commissioner, but he continued to attend to actuarial matters also. Since actuarial work was at present comparatively light, the Government did not think there was need for a whole-time actuary. The post of the Chief Accounts Officer fell vacant twice because of the death of the incumbents. It had taken some time to locate suitable persons. The present Chief Accounts Officer was appointed in February, 1953. The delay, Mr. Giri said, was unavoidable, but had not materially affected the work of the Corporation. He admitted that the post of the Medical Commissioner had been vacant since September, 1950. The ex-Director-General, who was himself a medical man, had been attending to that work, which was considerably reduced because of the panel system of medical care. He added: "In view of the small scale on which implementation has proceeded so far, no serious inconvenience has been caused to the Corporation by its having only three principal officers, instead of the full complement of five officers provided for the scheme when implemented throughout the country." It may be mentioned, in this connection, that the scheme has been introduced so far only in Delhi, Kanpur and in eight industrial towns in the Punjab, covering in all only about eight per cent. of the insurable labour population in the country.

Mr. Giri next referred to the recommendations made by the Sub-Committee under the chairmanship of Mr. Sri Ram, which investigated into the working of the Corporation. The Sub-Committee had stated that the State Insurance Fund should not be decentralised, and the Corporation should have financial control over regional boards. Each regional board, according to the Committee, should have the Labour Minister of the State as its Chairman and a senior officer of the State Government, to be nominated by the Minister, as its Vice-Chairman. The board should also have a representative of each of the other States included in the region, the Directors of Health Services of the States concerned, at least two but not more than five representatives of employers (to be nominated in consultation with employers' organisations), an equal number of employees' representatives (to be nominated in consultation with employees' organisations) and the Regional Director of the Corporation.

The Committee had further recommended that the regional boards should be vested with executive powers. The Committee had not accepted the idea that the entire administration of the scheme should be decentralised. It had, however, urged the closer association of the States through regional boards which should be "weighty and effective." Among other things, the regional boards should be made responsible for appointments of staff, for which the Union Public Services Commission need not be consulted, for publicity, investigation and disposal of complaints, purchase of equipment and launching prosecutions for non-compliance.

The Committee has done well to emphasise the importance of regional boards. These boards, by virtue of the intimate knowledge they could be expected to possesser should be of great help in contributing to the success of the Corporation. Indeed, the system of regional boards is a good compromise between over-centralisation, on the one hand, and decentralisation of the Corporation's functions, on the other. Over-centralisation should be ruled out in this country of vast distances and divergent regional characteristics. Even in the U.K., a certain amount of autonomy has been granted to Scotland and Wales. Complete decentralisation, especially the decentralisation of financial powers, carries the danger that there will be no uniformity of standards. It is, therefore, to be hoped that the system of regional boards, which avoids the dangers of both these extreme positions, will be set up in time, as recommended by the Committee, in order to enlist the co-operation of all States in the working of the State Insurance Scheme.

UNITED INDIA FIRE AND GENERAL INSURANCE CO., LTD.

A very satisfactory rate of progress has been maintained by the United India Fire and General Insurance Co., Ltd. (General Manager: Mr. N. Rama Rau, Madras), during the year ended December, 1952, when the net premium income amounted to as much as Rs. 22.45 lakhs, as against Rs. 20.62 lakhs in the previous year. Another notable feature is that the Company's foreign business is expanding; the net premium income from its foreign portfolio was Rs. 12.50 lakhs, as compared with Rs. 10.43 lakhs in 1951. The gross premium income was, however, considerably lower at Rs. 46.04 lakhs, as against Rs. 54.93 lakhs, such being due largely to the shrinkage in the Company's marine business in Malaya.

The Company's fire account continues to be a source of strength and profit. It yielded a net premium income of Rs. 7.73 lakhs during the year under review. Both claims (paid as well as outstanding) and expenses were somewhat higher at Rs. 1.58 lakhs and Rs. 2.99 lakhs, respectively. The working of this Department resulted in a profit of Rs. 3.39 lakhs. In the miscellaneous department, the net premium income improved from Rs. 2.75 lakhs to Rs. 3.21 lakhs. Claims and expenses were again higher at Rs. 1.93 lakhs and Rs. 1.22 lakhs, respectively, as compared with Rs. 1.56 lakhs and Rs. 0.76 lakh in 1951. The profit was for the same reason lower at Rs. 0.16 lakh; in 1951, this account yielded Rs. 0.34 lakh.

In the marine department, the gross premium income shrunk from Rs. 23.34 lakhs to Rs. 19.82 lakhs. Referring to this decline in business, the Chairman, Mr. M. Ct. M. Chidambarm Chettyar, said: "This fall in marine business in 1952 is accounted for by smaller business done in Malaya, due to a change in the trading and other economic conditions in that country. Apart from the volume of business, the premium suffered also on account of rate war among companies and the consequent reduction in premium rates." Despite the decline in gross premium income, it is gratifying to note that the net premium income was actually higher at Rs. 11.50 lakhs, as against Rs. 10.22 lakhs in 1951. The loss ratio was practically unchanged at 54.2 per cent. Expenses were, however, higher at Rs. 4.21 lakhs or 36.6 per cent. of the premium income. The Company's marine account yielded a profit of Rs. 0.70 lakh at which level it showed a reduction of nearly Rs. 1 lakh over the profit earned in 1951.

The net profit of the Company, inclusive of the balance carried forward from the previous year, amounts to Rs. 2.99 lakhs. Out of this sum, the Directors have transferred Rs. 1 lakh to the general reserve, Rs. 20,000 to the dividend reserve, Rs. 10,000 to reserve for bad and doubtful debts and Rs. 1.10 lakhs for taxation, leaving a sum of Rs. 0.59 lakh to be carried forward. Apart from the capital of Rs. 9.99 lakhs, the Company's reserves aggregate Rs. 19.22 lakhs, inclusive of fire insurance fund Rs. 3.87 lakhs, miscellaneous insurance fund Rs. 1.61 lakhs and marine insurance fund Rs. 11.50 lakhs.

METROPOLITAN INSURANCE CO., LTD.

All-round progress is reflected in the accounts of the Metropolitan Insurance Company, Ltd. (Secretary: Mr. A. B. Chatterjee, Calcutta), for the year ended December, 1952. Thus, both new life business and premium income are higher than they were in the previous year while the renewed expense ratio was lower than it was in 1951. This reflects great credit on the management, for the year 1952 was, in many ways, a particularly difficult one for insurers, since this year witnessed a recession in trade, income and profits. That the Company should have written Rs. 8.05 crores worth of new business in the face of these difficult conditions in 1952, as against Rs. 7.52 crores in 1951, does certainly call for special mention. The new business completed during the year under review takes the total business in force to an impressive level of Rs. 24.75 crores.

The Company's income continues to expand from the two principal sources of revenue, namely, premiums and investments. Thus, premium income improved from Rs. 1.17 crores to Rs. 1.29 crores and income by way of interest on investments from Rs. 10.16 lakhs to Rs. 11.99 lakhs. The Company earned 3.56 per cent. on its investments, as against 3.73 per cent. in the previous year. Although the interest earned was thus lower, it is noteworthy that the rate is considerably above the rate of 3 per cent. assumed in the 1951 valuation.

The Company's mortality experience is favourable, inasmuch as the claims by death aggregated only Rs. 9.94 lakhs as against Rs. 9.97 lakhs in 1951. At the last valuation, it was revealed that the ratio of the actual deaths to the expected deaths, based on O (25.35) ultimate table, declined appreciably over the 1948-51 period, of which it was 88.3 per cent., 76.5 per cent., 77.2 per cent. and 75.4 per cent. Claims by maturity were higher at Rs. 6.68 lakhs, as compared with Rs. 4.81 lakhs in the previous year. It is also gratifying to note that the Company's renewal expense ratio, calculated on the basis of the relevant Insurance Rules, declined from 16.69 per cent. in 1950 to 15.74 per cent. in 1951, and still further to 15.10 per cent. in the year under review. The Company's life assurance fund rose from Rs. 3.04 crores at the end of 1951 to Rs. 3.81 crores at the end of 1952. The fund includes the investments in Government securities and Indian Post Office Certificates at Rs. 85.31 lakhs, port trust, municipal securities, and shares of Industrial Finance Corporation at Rs. 78.78 lakhs, loans on the Company's policies within their surrender value at Rs. 49.27 lakhs and house property in India at Rs. 78.24 lakhs.

Each day more and more people are turning to tea because this delicious drink quenches thirst and builds up stamina. Tea is, besides, one of our major industries and, as these facts will show, plays an important part in our national economy.

India produced 622,466,627 lbs. of Tea and exported 427,565,465 lbs. in 1952. Exports represent 68·7 per cent of the total crop.

A revenue of Rs. 145,715,000 is derived by the Union Government from Customs and Excise duty on Tea.

1,250,000 workers are employed in the Indian Tea Industry.

India earns an equivalent of Rs. 930,000,000 in foreign currency from her Tea exports.

India contributes over 50 per cent of the total world consumption of 1,175,000,000 lbs. of Tea.

About 170,000,000 lbs. of Tea are consumed in India.

Over Rs. 730,000,000 have been invested in India's Tea Industry.

In India there are 6,240 Tea gardens covering 785,584 acres.

AMERICAN CAPITALISM

SOME MAIN FEATURES ANALYSED

(By SUMNER H. SLICHTER, Harvard University, U.S.A.)

EACH country of the world tends to produce more or less distinctive economic institutions and economic traditions. It is not surprising that the United States, which, for the most part is a new community that has grown up during the last century or century and a half in a rich and vacant continent, should develop distinctive economic institutions and distinctive outlook. The city of Chicago, for example, which had 3.6 million people in 1950 was still a small place only a hundred years ago. Not until after the Civil War was the Pacific Coast connected with the East by rail. Capitalism in the United States, therefore, reflects the environment in which it grew up.

The following five characteristics of American capitalism are particularly significant:

1. Its extensive use of industrial research as a tool of management.
2. The keen competitiveness of American industry.
3. The tendency of the economy to building up a large middle class.
4. The tendency of the economy to distribute large amounts of income to persons who are in need but who are unable to produce.
5. The existence of large and powerful trade unions which are concerned with the immediate betterment of the conditions of their members.

Let us look at these characteristics of American capitalism.

To take first the extensive use of industrial research as a tool of management.

It is understandable that, in a new country such as the United States, where there was little accumulated wealth but great quantities of undeveloped natural resources, emphasis should have been placed upon the practical aspects of earning a living. The applied arts flourished in the United States long before there developed an interest in pure science. Certainly, one of the distinctive characteristics of industry in the United States has been its reliance on technological research.

For many years, technological research was done by inventors and operating men who worked pretty much on their own and were limited in their activities by their own resources. Largely within the last generation, a revolutionary change has come into industry. Enterprises have begun to set up research departments that have the specific responsibilities of studying ways of improving the products of the firm, adding to these products, and improving the producing methods of the enterprise.

Large-scale Research

Discovery no longer depends on the enthusiasm of a few more or less daring individuals who are willing to make great sacrifices and risk their meagre resources in the hope of achieving successful inventions. In 1950, there were nearly 71,000 scientists employed in the industrial laboratories in the United States and about $1,100 million a year spent by American industry on industrial research. In addition, the Government employs a large number of research workers—30,000 scientists in 1946-47. Government expenditures on research in 1952 were over $1,300 million. This includes expenditures on research by the Atomic Energy Commission. The search for better products, new products, and better methods of production is rapidly becoming a routine part of business operations, financed out of current revenues. Systematic attacks on problems become possible; programmes of research that may expand over years and require large teams of workers can be organised.

The rise of industrial research is in the main a development of the last 20 or 30 years. In 1929-30, the number of scientists in industrial laboratories was less than one-fourth the number in 1950, and the number of scientists in Government laboratories increased threefold between 1929-30 and 1946-47. Industrial expenditures on research in 1950 were more than nine times as large as in 1930 and Government expenditures on research in 1952 were more than 52 times as large as in 1930. Twenty or 30 years ago, industrial research was largely confined to four principal industries—the telephone industry, the electrical products industry, the petroleum industry, and the chemical industry. Today, the large or medium-sized enterprise that lacks a research department is rapidly becoming a curiosity.

Making research a more or less normal part of business operations is truly a revolutionary change in the economy. It means that the economy has greatly raised its capacity to increase the demand for goods—that it has acquired a new capacity to expand. It is important that we understand clearly the economic significance of research. The large scale of industrial research is in the main responsible for the rapid rise in output per man-hour. The gain in productivity has made possible the rise in *per capita* consumption which has been doubling about every 40 or even 35 years, or less.

Effect on Demand

Equally important, the large scale of industrial research has greatly increased the capacity of the economy to generate an increase in the money demand for goods. Indeed, the expansion of research has offset, in considerable measure, the decline in the influence of undeveloped natural resources upon the volume of investment opportunities, and hence upon the volume of investment spending. An increase in the money demand for goods facilitates expansion, because it means that a growth in the physical production of goods has less tendency to reduce prices.

Research tends to raise the demand for goods in two principal ways. In the first place, it tends to raise (probably by only a small amount) the proportion of personal incomes after taxes which people spend on consumer goods. It does this by developing new and improved kinds of consumer goods—automobiles, deep freezers, movie cameras, television sets, and a multitude of other consumer goods. In the second place, research creates investment opportunities. It does this partly by developing new and improved kinds of equipment and processes for making goods, and partly by developing new kinds of consumer goods which create a demand for the plants and equipment to make these goods.

Competitiveness of the American Economy

American industry is highly competitive and is becoming more so. One reason for the competitiveness of American industry is the rapid growth of the economy. Had not markets been expanding rapidly, business concerns might have become interested in getting together to divide up the limited markets and to limit competition. The rapid growth of markets, however, has offered rich rewards to those concerns which were most successful in winning larger shares of the new demand. Hence, the expansion of industry has stimulated competition.

Evidence of the vigour of competition is found in the large number of new enterprises started each year. Perhaps, the most impressive evidence of competition, however, is the spectacular growth of technological research to which reference was made above. Industrial research is competition at its best, because it means that the producer is making systematic efforts to reduce his costs or to improve his product. Furthermore, the kind of competition represented by research tends to spread and to become more intense.

Capacity to Build up a Large Middle Class

About one-half of all money income before taxes and 53 per cent. after taxes goes to the middle three-fifths of the income recipients. There are several reasons for the large middle class in the United States. One is the fact that conditions of farming in the most populous parts of the country have been favourable to the development of owner-operated farms of moderate size. A second reason is that the proportion of professional and skilled workers has been rising and the proportion of common labourers has been falling. Between 1910 and 1940, the professional workers rose from 4.4 per cent. of the labour force to 6.5 per cent. When the figures for 1950 become available, a still further rise will undoubtedly be shown. Between 1910 and 1940, the proportion of common labourers in the labour force dropped from 36.0 per cent. to 25.9 per cent. In 1950, the classification of common labour is slightly different than in previous censuses, but the proportion of common labourers dropped to 20.8 per cent.

The increase in the number of professional and skilled workers relative to common labourers may be regarded as a sort of victory for science and technology over the common labourer. By embodying their skills in machines and apparatus of various sorts, the scientists and engineers force more and more common labourers to become machine operators —sometimes rather skilled operators, as in the case of much of the earth-moving machinery that replaces pick and shovel men, sometimes semi-skilled factory workers. A big market, such as now exists in the United States, helps the scientists and engineers win out in competition with common labour. A big market is good for machines, which means that it is good for the scientists and engineers who invent them, the skilled workers who maintain them, and the skilled or semi-skilled workers who operate them. But since common labourers cannot run or repair machines, the big market limits the employment opportunities of common labourers and forces them to acquire skills.

Tendency to Make Gifts

In this day and age, the importance of distributing large quantities of income on the basis of need does not need to be justified. The national and State Governments make large payments in the form of pensions, old age assistance, unemployment compensation, workmen's compensation payments, aid to the blind, aid to dependent children, sick benefits, and other forms of aid. In 1951, payments of the above kinds plus private pension payments were $12,600 million; in 1929, they were $1,300 million. About four out of five jobs in the United States are covered by the federal pension plan; about seven out of 10 are covered by unemployment compensation; in 1951, about 14,000 employers had private pension plans covering 9.6 million workers; and in 1949, over 10 million people were covered by group sickness and accident benefit plans in plants in the United States. Employer contributions to private pension and welfare funds have increased from $128 million in 1929 to over $3,000 million in 1951. During the last 20 years, payments based on need have risen much faster than incomes. Back in 1929, these payments represented about 1.6 per cent. of all personal incomes after taxes; in 1951, about 5.6 per cent.

Strong Trade Unions

I do not mean to imply that a trade union movement which rigidly and uncompromisingly pursued certain more or less remote objectives would necessarily be bad for the country. In some circumstances, it might be just what the country needed. It is plain, however, that such a movement could do immense harm. But that is not the kind of trade union movement which the United States possesses. The American trade unions are just as distinctively American as is American business. Their objectives and methods mirror the practicality and the optimism of American culture, the strong faith that this is an expanding universe, and that the key to the better life is growth, innovation and invention. American trade unions have improved our economy and, indeed, our society, in the following principal ways:

(a) They have made for better management of industry, because they have been able to question the decisions of management. Hence, they have forced managements to base their decisions on policies and on facts.

(b) They have introduced a system of industrial jurisprudence into industry which gives workers rights as against managements.

(c) They have subjected managements to strong pressure to raise money wages and have thus stimulated managements to attempt to hold down labour costs by making improvements in methods of production. Thus, trade unions have indirectly tended to raise the productivity of the economy and the level of consumption. Trade unions, of course, would not have been able to produce these results were management not strongly determined to operate their enterprises profitably—If managers were not willing to increase their efforts to keep down labour costs whenever money wages increased.

(d) Most important of all, trade unions increase the sense of participation by workers (even by non-members) in the life of the community. In this day and age, when many countries are torn by internal strife, the influence of trade unions is strengthening the ties that hold the community together. Trade unions add to the workers' sense of participation in various ways. Certainly, when the workers read in the newspapers of a wage agreement being negotiated in the coal industry, the rubber industry, or the steel industry, employees in all industries must feel a sort of vicarious participation in running the country. Furthermore, when prominent spokesmen from the ranks of labour speak out on national issues, all workers, whether they agree with the particular spokesman or not, must get satisfaction that labour is being heard from.

The five characteristics of American capitalism that I have set forth greatly add to the capacity of the American economy to grow and thrive in a tough and difficult world. The great use of technological research adds to the productivity of the economy and helps it bear the heavy costs of defence; the vigour of competition keeps managements alert and in touch with conditions; the large middle class, the distribution of large quantities of income on the basis of need, the strong trade unions and the active participation of unions in the life of the community prevent the development of serious social cleavages and keep the community cohesive.

THE SOUTH MADRAS ELECTRIC SUPPLY CORPORATION, LIMITED

DEWAN BAHADUR S. RAGHAVA AIYANGAR'S ADDRESS AT ANNUAL MEETING

PRESIDING over the Thirteenth Ordinary General Body Meeting of the South Madras Electric Supply Corporation, Ltd., held at the Power House, Tiruchirapalli, on 1st August, 1953, Dewan Bahadur S. Raghava Aiyangar stressed, in the course of his speech to shareholders, the need for (1) the revision of the "standard rate" from 5 per cent. to 6 per cent. and (2) the speedy formation of State Electricity Boards.

The following are extracts from his speech:

"GENTLEMEN,

"I have pleasure in welcoming you to this thirteenth meeting of the general body of shareholders.

"The power supply position was very unsatisfactory in the year under review to the extent that the Government had to take the drastic step of imposing a heavy penalty on consumption in excess of quotas. Fortunately, the heavy rains that came eased the situation on 1st June, and we are now happily rid of all restrictions on consumption. However, the ban on connecting new loads and on allowing increased demands to power users, continues to be in force, as the generating capacities of Government power stations are still very much behind demand. This position has compelled us to deny power supply to a large waiting list. I hope the plans of the Electricity Department to provide extra generating capacity will, however, materialise soon, and we will be in the happy position of meeting new demands, and be thus saved the embarrassment of rationing power and being obliged to enforce the penalties of Government on those who exceed their quota limits.

Tariff Increase

"We were also compelled to make an all-round increase in tariffs so as to meet increasing costs of maintenance and operation and more particularly the setbacks suffered by the Corporation on account of the cyclone and the continued restrictions which greatly affected sales. I hope that conditions will improve sufficiently early to enable us to revise the tariffs again in favour of the consumer.

Income-tax Refund

"I shall now refer to a matter that has been agitating the minds of shareholders—namely, the refund of income-tax on their dividends. Due to the difference in the rates of depreciation allowed by the Department and those adopted by us under the provisions of the Electricity (Supply) Act, 1948, the Company's tax liability is either much below the quantum of dividends paid or *nil*. On the difference of such taxable income returned to the income-tax authorities and the dividends actually paid, the income-tax authorities collect an excess dividend tax without at the same time giving relief to the shareholder. We have contended that this tax is illegal, and the matter is now before the High Court of Madras. It is understood, however, that orders have been issued to afford tax relief for the year 1951-52.

"Another matter that has been referred to in the report is the difference of opinion between ourselves and Government on capitalisation. Government have objected to certain items of capitalisation, and we have contended that our stand is the correct one, and have requested Government to allow our auditors to discuss the matter with the auditors of the Electricity Department. If need be, the matter will be referred to the Central Electricity Authority for arbitration.

Standard Rate

"The need for increasing the reasonable return from 5 per cent. on the capital base to 6 per cent. has once again been stressed by the Federation of Electricity Undertakings in a memorandum to the Government. In fact, the opportunity of a recent visit to Bombay by Mr. Gulzarilal Nanda, Central Minister for Planning, Irrigation and Power, was availed by the Federation to bring home to him the need for enlarging the upper limit of the 'standard rate' from the present level of 5 per cent. to 6 per cent. I hope the efforts of the Federation will soon bear fruit.

Nationalisation

"Uncertainty still surrounds the question of nationalisation. The Madras Electricity Undertakings Acquisition Act empowers Government to take over any undertaking on four months' notice. But, as the Chief Minister said, in an address to the Licensees Association, conditions in the country and the present 'climate' are such that the Government might not embark on nationalisation projects—their time and effort being fully required for the implementation of national plans. It would, however, have been more helpful, if the Chief Minister had been more positive in his statement. In any case in the circumstances, it would only be reasonable to expect that we would be permitted to serve for the full period of our licence.

"I am glad to say that the staff have been discharging their duties satisfactorily and loyally. During the cyclone havoc all ranks of staff worked as a team to restore supplies with the minimum of delay.

Electricity Boards

"As regards the future, if power allotment to us from the hydro-electric grid is satisfactory the scope for expansion is ample. It will, then, mainly be a matter of our being able to secure the necessary capital to carry out the programmes. I am sure that capital will be forthcoming, if the Government of India revised the standard rate level to 6 per cent. so that at least the present level of dividends might be kept up. The State Government should also form the Electricity Board visualised in the Electricity (Supply) Act, 1948, as such a body would definitely have a better appreciation of the problems relating to electrical development in the State, and being charged with statutory authority, would be in a position to concentrate solely on the problem, devoid of other considerations to which a department of the Government should necessarily be subject."

The Chairman concluded by bidding welcome once again to the shareholders.

AGRICULTURAL PROBLEMS OF THE EAST

F.A.O. ON NEED FOR INCREASED PRODUCTION

THE ten-day Food and Agricultural Organisation's regional conference of the countries of Asia and the Far East, which concluded on 5th inst., at Bangalore, provided an oportunity to some of the leading economic experts for discussing the agricultural problems of Eastern countries with a view to finding ways and means for stepping up production and thereby easing the world food situation. The Conference suggested a number of recommendations which deserve the careful consideration of the authorities of these countries, in view of their international implications and the innumerable obstacles in the way of implementing them.

The main topic of discussion at the Conference related to the question of increasing production of food supplies of the region. This is only as it should be, because, although production of food in the world has risen materially since the war, most of the increase has been in the countries which were already producers, with a surplus to spare, while the Eastern region is one where agricultural production has not made any substantial progress, as compared with the increase in population. Even if the agricultural production targets fixed by the various countries in the Far Eastern region for 1956-57 are reached, it will mean no significant achievement. For, except in regard to sugar and some pulses, the production will not be sufficient even to restore the pre-war levels of consumption, on account of the great increase in population that is expected to take place by then.

The Conference emphasised the necessity for a greater degree of regional integration in regard to production and supply of fertilisers, pesticides and the like. It further felt that some of these requisites ought to be more economically produced in one centre of the region for a group of countries or even the whole region. The delegates to the Conference evinced a great deal of interest in the F.A.O. Secretariat paper stressing the need for a co-ordinated approach to balanced development in agriculture and related economic factors.

While the desire for regional integration can be appreciated, it is very difficult of achievement. It so happens that, more often, a country, which is in an advantageous position over others, cannot overcome its weakness to strike the best possible bargain. India, for instance, has decided not to import any further rice from Burma, as it could not arrive at a fair agreement with that country. The export price of Burma rice is far higher than that for domestic consumption. And this explains the desire of each country towards achieving self-sufficiency.

That apart, the question of increasing food production is beset with enormous difficulties. First and foremost is the question of finance. In this connection, Dr. P. S. Lokanathan, Executive Secretary of the E.C.A.F.E., stressed the need for more foreign capital and foreign technical aid, as the resources of the region were not adequate for the purpose. He further added that one of the solutions lies in the establishment of a special development fund out of which loans could be made available at low interest rates payable over a long period of time.

The Conference also discussed the question of stability of prices, as violent fluctuations in commodity prices are harmful not only to producers and consumers but also to merchants and manufacturers who are unable to estimate, with any degree of accuracy, the supply position of the raw materials which they require. Further, wide fluctuations in prices of primary products have serious effects on balance of payments both of producing and consuming countries. The situation is not merely a post-Korean war phenomenon, but has been a characteristic feature of international trade in primary products at least during the past half a century. The Conference recognised that the situation may well continue in the absence of effective international measures of price stability and emphasised the importance to the economies of the region, of a greater degree of price stability in export markets for agricultural products. It held that this was an appropriate subject for the F.A.O. to tackle at higher levels. It, therefore, recommended to the Conference of the F.A.O., to be held in Rome, in November 1953, that all possible measures should be taken to further this objective.

Price stability can be achieved chiefly through international commodity agreements. But experience has shown that those agreements cannot be easily concluded. So far, only one agreement, the International Wheat Agreement, has been concluded. Even this agreement is on tenterhooks, in view of the refusal of the U.K. to sign the renewed agreement and the silent discontent among even those members that have signed the agreement over the high price. Further, this agreement has been of benefit only to those countries the economics of which are highly developed, as the principal wheat producing and wheat consuming countries belong to that group. The difficulties in the way of commodity agreements lie in devising the techniques of financing buffer stocks, expressing the internationally agreed prices in generally accepted and stable currency, etc.

The Conference accepted a resolution commending the efforts of the Fisheries Division of the F.A.O. in the direction of better utilisation of the fisheries resources of the area. It urged the need for expanded assistance programme to initiate practical programmes of co-ordinated research in relation to problems common to more than one country. It also requested that special attention should be devoted to fluctuations in the available stocks of migratory fishes such as Indian oil sardine, mackerel sead and Hilsa fish. It further suggested a study of river development schemes in so far as they affected fresh water fisheries. The importance of these suggestions needs no emphasis. For fish occupies a special place in the diet of the people of South-East Asia, second in importance only to rice. In most countries, it holds even first place as a source of animal protein essential to health.

The Conference made a few more important suggestions. They are as follows:

(1) A meeting of suitable experts of the region should be held, as soon as practicable, in order to advise member-Governments on appropriate methods of improving the production and distribution of milk and thus stimulate its consumption wherever feasible;

(2) a working party should be set up, at the earliest convenient time, to consider methods of crop and livestock insurances, which have been adopted by very few countries in the region and elsewhere, and to explore the possibilities of adopting them more widely; and

(3) subject to availability of finance, the F.A.O. should, in co-operation with one of the member Governments, hold a seminar on land problems in the region during 1954 or 1955.

The Conference also emphasised the importance of statistics as an aid to planning and assessing its progress. It was stated at the meeting that, next year, funds permitting, the F.A.O., in collaboration with the Government of India, should set up an international statistical training centre in India.

Thus reviewed, the Conference has done a "good job." The one fundamental factor that it emphasised throughout was the need for a co-ordinated approach to balanced development of agriculture and the related economic sectors of the region. While considering the various problems, the delegates showed commendable understanding of the problems of farmers in this area and also of such factors as finance and technical assistance. The Conference highlighted the fact that the eradication of hunger, although difficult, was no utopian scheme, but a perfectly attainable objective and that it required a better adjustment of men to the lands they occupied and a better distribution of the gifts of the land among them. Inaugurating the Conference, His Highness the Rajapramukh of Mysore quoted the remarkable insistence of Dr. Josue de Castro of the F.A.O. that "over-population does not cause starvation in various parts of the world, but that starvation is the cause of over-population, for hunger increases the fertility of the depressed groups suffering its permanent action." Surely, although it may be possible to eradicate hunger by controlling the growth of population, the better way to do it would be to reverse the process, that is, to control the growth of population by taking measures to do away with starvation.

ANNUAL GENERAL MEETING OF SENTINEL ASSURANCE Co. Ltd.

FULLEST SUPPORT OFFERED FOR CODE OF CONDUCT

MR. RATILAL NATHALAL'S SPEECH

PRESIDING over the Eighteenth Annual General Meeting of the Sentinel Assurance Company, Ltd. held in Bombay on Tuesday, 11th August, 1953, Mr. Ratilal Nathalal, Chairman of the meeting, emphasised the need for placing the insurance business on a "healthy and profitable" basis. He pledged, on behalf of the Company, his "fullest support" to the Insurance Act and Codes of Conduct. Nevertheless, he urged that there should be freedom for each insurer to develop business in his own way. He felt sure that a sound scheme could be evolved if all insurers joined hands in the "interest of the industry."

The following is the full text of the Chairman's speech:

"GENTLEMEN,

"I have the pleasure to place before you the report of the Directors along with the audited accounts and balance-sheet for the year ending the 31st December, 1952. I take it to be your wish that the reports and accounts now in your hands be taken as read.

"Before referring to the results of last year's business, I shall mention briefly a few outstanding events of last year which have direct bearings on the growth and development of insurance business in India.

"The Estate Duty Bill, introduced last year in Parliament, will shortly be enacted. The provision of exemption of amount secured under life insurance policies from the estate of the deceased, ironically enough, has been kept at a very low level of Rs. 5,000 only. This provision, unless suitably modified, will, I am afraid, act as a deterrent in encouraging the habit of saving through life insurance policies in this country.

"The control of insurance business in 1952 continued to be inflexible. In order to remove various malpractices in life and general insurance business, Codes of Conduct were formulated by Life and General Insurance Councils and I am happy to say that Indian insurers, in general, pledged firmly to abide by the same. The administrative machinery—a body to supervise the enforcement of the Codes—has recently been formed and I am confident that indigenous insurers will wholeheartedly co-operate with the administrative machinery in all respects.

Code of Conduct

"The control from the authorities for improving the trade of a national character is, of course, necessary to strengthen the position of the industry. The most important task of Indian insurance is to see this business on a healthy and profitable basis. At the same time, it is worthwhile to allow the freedom of methods suitable to the industry, as Indian insurance has reached its present phase through private enterprise. One must have freedom towards its development in one's own ways. One cannot judge the working difficulties without the study of the field of the individual insurer who has his own problems towards the development of business. I earnestly appeal to Indian insurers to maintain proper standards in compliance of the Insurance Act and the Codes of Conduct. It is the duty of all insurers to see that Indian insurance business is placed on a sound and healthy basis. I assure, on behalf of the Company, that the Sentinel Assurance Company, Limited, has fullest support to the Act and the Codes of Conduct. At the same time, Indian insurers have to face the problems of increase in demands from the staff unions coupled with the decrease in premiums on account of revision in rates in the Tariff. It is, therefore, very difficult to remain within the expense quantum. I am sure, a suitable working and acceptable scheme can be evolved if all the insurers join hands in the interest of the industry which is of a national character.

Company's Resources

"Before I touch upon the working of the Company for the year 1952, I will draw your kind attention to the fact that the Company, due to the concerted efforts of the management, has been able to strengthen its resources and at the end of the year 1952, the Company has been able to add 10 per cent. as additional reserves in all sections of the general department, which you will see from the balance-sheet in your hands. You will also see from the balance-sheet that the Company has got increasing assets in the general department with a balance of negligible doubtful assets against which a doubtful debt reserve is created. The Company has fully provided against investment depreciation also.

"Considering various factors, I feel, you will be well satisfied with the results achieved in 1952.

"The new life insurance business completed in 1952 amounted to Rs. 25,76,098 as against Rs. 17,02,817 completed in 1951. The life fund which stood at Rs. 39,33,902-0-10 earned an average interest at 4.42 per cent. during the year. The claims by death and maturity intimated and paid in 1952 amounted respectively to Rs. 66,805-11 and Rs. 1,74,683-5.

"A valuation of the assets and liabilities of the life insurance business of the Company, as on the 31st December, 1951, was made last year and I am pleased to inform you that the result, thanks to economic management, showed a sizable surplus. On the recommendation of our Actuary, the Directors declared an interim bonus of Rs. 8 and Rs. 6 per Rs. 1,000 sum assured per year, respectively, for the profit participating whole life and endowment policies. I am confident that at the next valuation, due to be made on the 31st December, 1954, our Company will be able to declare handsome revisionary bonuses to all profit participating policyholders.

Premium Income

"The gross premium income including those from reinsurance received in 1952 in the general department amounted to Rs. 14,91,298-12-7 which is slightly lower than the figure of the previous year. In the fire department the claim ratio stood at 15 per cent. in 1952. The fire fund is now maintained at 50 per cent. instead of the customary 40 per cent. maintained by the insurers. There has been a trading profit of Rs. 1,11,266-8-9 which has been transferred to the profit and loss account.

"In the marine insurance business the net premium received recorded a slight increase in 1952. The claims have been somewhat heavier than the previous year in spite of cautious underwriting. There has been a profit of Rs. 35,524-3-6 from the marine business in 1952 which has been transferred to the profit and loss account after creating the marine reserve at 50 per cent.

"The working of the miscellaneous insurance business in 1952 showed a reduction in claims which stood at 32.24 per cent. as compared with 43.59 per cent. in the previous year. The reserve for unexpired risks in this class of business has been increased from 40 per cent. to 50 per cent. There has been a profit of Rs. 5,224-1-9 from miscellaneous insurance business which has been transferred to the profit and loss account.

"The total funds of the company as on the 31st December, 1952, stood at Rs. 57,25,982-7.

"The total trading profit from the general insurance business of the Company amounted in 1952 to Rs. 1,53,739-14-2 including the sum of Rs. 1,525-0-2 carried forward unappropriated in 1951. Out of this sum, the Directors have thought fit to create a reserve of Rs. 85,000 for and doubtful debts and set aside Rs. 15,173-14 towards reserve for depreciation of investments and debiting income-tax of the year 1950. The Directors propose to allocate the balance of Rs. 60,710-2-11 in the following manner:—

	Rs.	a.	p.
To pay a dividend on preference shares for the year ended 31st December, 1951, at Rs. 5 per share, free of income-tax	20,000	0	0
To pay a dividend on preference shares for the year ended 31st December, 1952, at Rs. 5 per share, free of income-tax..	20,000	0	0
To pay a dividend on ordinary shares for the year ended 31st December, 1952, at 3 per cent., i.e., Rs. 1-8 per share, free of income-tax	15,000	0	0
To appropriate towards writing off a part of the amount transferred to life fund .	5,000	0	0
To be carried forward for the next year's account	710	2	11
	Rs. 60,710	2	11

"Before closing, I would refer to two matters of interest to the shareholders of the Company.

Capital Structure

"Pursuant to section 6A of the Insurance Act, we were required to reconstruct the capital structure of the Company before the 31st May, 1953, and preference shares of the Company were converted to ordinary shares in accordance with the scheme of reconstruction approved by the shareholders of the Company and sanctioned by the Controller of Insurance. I must here thank wholeheartedly the shareholders of the Company for their spontaneous co-operation given by them to me and my colleagues in the Board in this matter.

"Pursuant to Article No. 98 of the Articles of Association of the Company, the Directors appointed Mr. I. P. Shah a Director of the Company. This appointment was deemed expedient to strengthen the Board.

"I also take this opportunity to record with pleasure the appreciation of work done by the Company's officers, staff and field-workers in the last year."

YODHRAJ,
Chairman & General Manager.

PLYWOOD MANUFACTURERS ASSOCIATION OF INDIA

MR. N. N. BOSE'S ADDRESS AT THIRD ANNUAL MEETING

THE Third Annual Meeting of the Plywood Manufacturers' Association of India was held at Calcutta on 14th July, 1953. The meeting was presided over by Mr. N. N. Bose, President of the Association. The following are extracts from his speech at the meeting:—

"The year 1952 has been a dark one for the tea industry. Tea prices, which began to fall since the autumn of 1951, went on falling till towards the end of 1952, and the market was at its lowest for over a decade and tea estates were suffering huge losses. It is not my intention on this occasion to review the reasons for such a sad turn in the prosperous tea industry. That has been done by competent representatives of the tea industry on various occasions. Neither do I want to participate in the controversy as to the part played by the Government in not helping the tea industry in one of its worst crises. I would, however, like you to take one lesson to heart from this bad situation and that is best illustrated by the saying, 'It is not safe to put all your eggs in one basket.'

"I have told you on previous occasions that there is ample scope for use of plywood in other spheres. In a country like India, plywood industry can brighten the houses of many middle class and poor people by supplying cheap, light and durable items of furniture. It has got vast potentialities in neighbouring countries, both in the Middle East and in the Far East, if not in Europe itself. While making this statement, I am fully conscious of the fact that most of our plants are small and meant for tea chests only but I think that, even with these small plants, with but a few additions in machinery, it is possible to produce a certain percentage of plywood for other uses and not to depend on the tea industry hundred per cent. As you know, I am going abroad on your behalf in about a week's time. One of my aims will be to see how it is possible for plants like ours to manufacture plywood for household purposes.

No Room for Complacency

"The second lesson that we should take from the crisis which faced the great tea industry in 1952 is that there is no room for complacency even in a highly organised and prosperous industry like the tea industry, not to speak of an industry like ours. It is now well known and well accepted that one of the main reasons for the crisis in the tea industry was overproduction and the situation showed improvement as soon as it decided on curtailment of production. If an industry like the tea industry could not avert a crisis by only 10 per cent. overproduction, it is no wonder that the plywood industry is also passing through a crisis, firstly, on account of fall in demand from the tea industry for reasons stated above and, secondly, because the capacity of the tea chest industry, according to official estimate, now stands at over 9 million tea chests when the internal consumption can at best be about 5 million. The need for control is, therefore, evident. The other alternative is chaos.

"In my speech on both the occasions of the last two annual general meetings of the Association, I appealed to you for co-operation, goodwill and sacrifice. The time has come when this has to be put in practice for the common good—for the common safety. I am accordingly thankful to Dr. Nagarja Rao, the Industrial Adviser, for arranging a meeting of the Indian plywood manufacturers in Calcutta and this is going to be held day after to-marrow. We shall, no doubt, take this occasion of discussing various problems confronting the industry and, if we succeed in devising some means whereby the plywood industry can be put on a sound basis—even if it means some sacrifice from some or all of us—we shall have taken a step which we shall never repent and for which we shall feel happy in years to come.

"I have dwelt at some length on the above subjects, as these have been haunting me for some time past. I consider them as most important for stabilising the industry and most essential for freeing it from periodic ups and downs which have been a sad feature of this industry since the war ended. I shall now pass over the other subjects hurriedly.

"The most important event of the year has, as has been pointed out in the report, been the enquiry for continuance of protection by the Tariff Commission under the chairmanship of Dr. B. V. Narayanaswamy Naidu. Although the report is not out, I have every confidence that protection will be continued for another term. I would, however, urge on you, with all the emphasis that I can command, that you should take this opportunity as the last one in putting the industry on a sound footing, so that further protection becomes unnecessary. As a matter of fact, from the way the industry is expanding, I should think that we should be able to export a good quantity of plywood in course of another two or three years and the necessity for imports of foreign plywood will not arise in future.

"I take this occasion of referring to the visit of Dr. Otto Kraemer, U.N.O. expert on plywood, and expressing my sincere appreciation of the good work done by him in visiting plywood factories throughout India and offering us valuable advice. We are thankful to the Government, particularly to Mr. M. D. Chaturvedi, Inspector-General of Forests, for the initiative taken by him in the matter and we offer our heartiest thanks both to our Government and to the U.N.O. for arranging such a visit which has been most helpful to the industry.

"The import policy in 1952 was not, in the particular situation confronting the tea industry, helpful to the plywood industry. The special licence granted to the buyers of the Assam Saw Mills and Timber Co., Ltd., was uncalled for and harmful to the cause of the indigenous industry. The Government has, however, made good, to a great extent, the harm done to the industry by not allowing any import of tea chests in the first half of 1953. For this the Government deserves the best thanks of the industry.

"The Government has, however, allowed 5 per cent. imports in the second half of this year. Although this is a small quantity and may be taken as a token import to which no objection should ordinarily be taken, it may be pointed out that the condition in the plywood industry is very serious and any imports could have been postponed till the situation improved somewhat. In view of the fact that there is no demand for tea chests, either indigenous or imported, it is to be hoped that the Government will see that licences for imports are not granted immediately and that they are issued only after orders begin to be placed with the indigenous industry.

"I am very pleased to say that our laboratory and test house has been doing useful work. Not only the products of our members are being tested there but it is helping the J.F.Os. by testing samples sent by them to the Association laboratory. This shows the important part that is being played by the laboratory and the esteem in which it is held.

"I have now pleasure in referring to another important achievement of the Committee. The first issue of the journal *Plywood* is just out and the Committee can take pleasure in accomplishing a work about which it had been talking for a long time.

"I am, however, sorry to say that, due to the very bad time through which our industry has been passing for nearly a year, it has not been possible to collect funds to make much progress with the other venture, viz., the Andaman Plywood and Veneer Mills Ltd. I consider this as a most promising enterprise and most vital for Calcutta members, in particular. I hope that, with better prospects ahead, this too will take shape and start functioning in a short time to come.

"Before I conclude, I must thank you for the confidence you have placed in me by entrusting me to undertake a trip to the U.K. and the Continent for an examination of the condition in which tea chests arrive in those countries. This is a task of great magnitude and the most important that I have undertaken so far. I do not know how far I shall succeed in my mission, but I can assure you that I shall leave no stone unturned to make it a success.

"It is also my fervent hope that, by the time I return, the situation in the plywood industry will have taken a turn for the better and the clouds that pervade the present atmosphere will have passed giving place to autumnal sunshine and happiness."

IT'S GEARS THAT MAKE THE WORLD GO ROUND

Whatever poets may say, it's gears that make the world go round—gears so small that they would fit into a cigarette packet—gears so big that they dwarf a house—gears of every size and cut—spur, bevel, helical, worm, hypoid. Indian industry cannot function without gears, and gears cannot function without the right kind of lubricant.
Our research people are constantly experimenting to find ever better lubricants for use in gears.

What happens to oils in high-speed gears?
That many-sided problem is just one which our people study. They study them in gear rigs which turn up to 15,000 r.p.m.
These and other studies go on all the time.
The lubricants which Burmah-Shell supply for your gears are the result of this kind of research.

INDUSTRIAL AND COMMERCIAL STATISTICS

CENTRE TAKES POWER FOR COLLECTION

STATISTICS, it is most aptly described, are the handmaid of economics, in that statistics provide the tools on which an administrator formulates and implements his policies. In fact, a rational economic policy presupposes the existence of adequate and reliable statistical data. It is no wonder, therefore, that, in the economically advanced countries like the U.K. and the U.S., considerable importance is attached to the collection of statistical data, the task being entrusted to special organisations and bureaus. In India, on the other hand, the progress in this direction has been at a snail's pace, thanks to the absence of authority enforcing, by statutory regulation, maintenance of statistical data by the industrial and commercial firms. The result is that the statistical data relating to the various aspects of economy are woefully inadequate, not to speak of lack of authenticity in a number of cases. The assumption of powers by the Government of India, under the Collection of Statistics Act as passed by the House of the People on Thursday last week, to call for statistical information from any branch of economic activity has, therefore, come not a day too soon.

The Collection of Statistics Act is on lines similar to that enacted in 1942, but the field has been widened. Under the Act, the Government is empowered to call for statistical data from any industry or class of industry, including a factory, and on matters relating to labour and labour welfare.

In view of its importance, the Act received support from practically all sections of the House. Supporting the measure, Mr. Thakurdas Bhargava, a prominent member, for instance, remarked that statistics were a necessity in a Welfare State. From the point of view also of maintaining national safety and national prestige, it was necessary that the Government should have adequate powers to get necessary information from firms. Mr. Hariharnath Shastry, another prominent member, felt that the Act would go a long way towards preventing manipulation of accounts by private industrial concerns. For he said: "Proper settlement of a number of industrial disputes is impeded for lack of data. Difficulties are particularly great when private industrial concerns involved in disputes manipulate their accounts. Such manipulation has resulted, in some cases, in unemployment."

A Mistaken Notion

It would appear from the debate on the measure that the whole purpose of it is to collect statistical information from foreign firms. This is a mistaken notion. The general purpose of the measure, as Mr. D. P. Karmarkar, the Union Minister for Commerce, emphasised, while replying to the debate, is to cover not merely this one aspect, but the "whole" field of industry and trade. The purpose of statistics is really much bigger than dealing with one single problem. The information collected under the Act will form the foundation of economic thought. This is a basic necessity.

The majority of members who participated in the debate were unduly critical of the role of foreign firms in India. This is, indeed, regrettable. Foreign firms have contributed quite substantially to the economic progress of India. And considering the need for achieving rapid economic progress, the important role that foreign capital can play cannot be stressed too strongly. The Government's stand on this subject was correctly explained by Mr. Karmarkar when he said: "Wherever foreign participation is helpful to our industries, we will have them. The major point is that we should have our say in the matter. When foreign firms come to India, it would be for them to have as large a number of Indians in them as possible, unless it becomes unavoidable for technical reasons. That has been our opinion."

In the course of the debate, the members put forward several suggestions with regard to the enforcement of the Act. Among these, two stood out prominently. The first suggestion was that the Government should take up the responsibility for publishing all data collected by it under the powers conferred by the Act. There should be a committee of officials, members of Parliament and experts to see that the provisions of the Act were properly enforced. The second suggestion was that the statistical authority, or any person authorised by it, could inspect or take copies of relevant records or documents in the possession of any party or ask any question necessary for obtaining any information required to be furnished under the Act. This suggestion is of a drastic nature, in that the Government may demand any information under this Act and take steps to get it by going through even records of a highly confidential nature. There will thus be no scope for secrecy which may be very essential in the case of business. Nevertheless, Parliament chose to invest the Government with this drastic power and the relevant clause was amended accordingly. With regard to publication of data, the position has been made clear by the Commerce Minister. Accordingly, the Government will publish whatever it considers necessary. As, sometimes, some confidential information may militate against the very purposes of the Act, the decision regarding publication would rest with the Government.

There were a few members who were somewhat apprehensive about the penal clauses of the Act. It was pointed out, for instance, that the clause relating to offences by companies arising from neglect on the part of a director, manager, etc., was a drastic one. Alluding to this criticism, the Commerce Minister stated that the sphere of responsibility had been widened in order to ensure that no one escaped liability for offences. This was not the first time that such powers had been sought; the House had approved of such powers in earlier legislations.

SPORTS GOODS INDUSTRY

Development of the sports goods manufacturing industry and promotion of exports of Indian sports goods were the two problems discussed at a meeting of the representatives of the industry and the Government held in New Delhi on Saturday last. The meeting discussed measures to ensure that only goods manufactured up to a standard were exported. The possibility of setting up a central organisation on a co-operative basis for controlling publicity and exports was considered, since individual units in the industry were not in a position to undertake this. The representatives of the industry drew attention to certain difficulties experienced by them in procuring the raw materials from within the country as well as from abroad. The official spokesman at the meeting assured them that the Government would give them all possible help to enable them to obtain adequate supplies of raw materials.

The sports goods manufacturing industry is an important small-scale industry. It provides employment for about 4,000 workers and produces goods worth about Rs. 75 lakhs per annum.

INDIA'S BALANCE OF PAYMENTS

TERMS OF TRADE WORSEN IN FIRST QUARTER

THANKS to the worsening of the terms of trade, the trend of increasing surpluses in the current account of India's balance of payments, witnessed towards the close of last year, suffered a setback during the early months of this year. The current account surplus of Rs. 32 crores in the fourth quarter of 1952, according to the estimates prepared by the Balance of Payments Division of the Reserve Bank of India, was nearly halved—to Rs. 17.1 crores, to be precise—in the quarter ended March, 1953. The reduction in the surplus was caused entirely by the fall in receipts from exports. The payments for imports actually recorded a slight decline and the net receipts on invisible account remained more or less constant. The surplus on the capital account, however, was higher at Rs. 25.5 crores, a part of which was reflected in a rise of nearly Rs. 18 crores in the foreign assets of the Reserve Bank.

The overall balance of payments position on current account during the first quarter of 1953, as compared with the previous quarter and the corresponding quarter of 1952, is indicated in the following table:

Current Account

(In crores of rupees)

	1st quarter of 1953	4th quarter of 1952	1st quarter of 1952
	Preliminary		
Imports c.i.f.	132.2	134.0	265.6
Exports f.o.b.	129.0	145.5	161.1
Trade balance	—3.2	+11.5	—104.5
Official donations (net)	—	+0.1	+ 3.8
Other invisibles (net)	+20.3	+20.4	+ 25.3
Current account (net)	+ 17.1	+32.0	— 75.4
Errors and omissions	+ 8.4	—20.2	+ 15.9
Capital account (net)	+ 25.5	+11.8†	— 59.5†

† Revised.

As will be seen from the foregoing figures, the merchandise account showed a swing, from a surplus to a deficit, following a fall in the value of exports, which was entirely the result of a decline in export prices by about 10 per cent. The major part of the fall was in the nature of an adjustment to the reduced level of demand for India's exports. The commodities particularly affected were jute manufactures and cotton textiles. A part of the adjustment in prices was due to the downward revision in export duties on these two commodities, but the revision of export duties itself was the result of falling prices in overseas markets and consumer resistance. On the import side, commercial imports declined by Rs. 12.7 crores, while those on Government account rose by Rs. 10.9 crores, mainly on account of increased purchases of food from the dollar area. Since import prices remained stationary, this fall was solely due to a decline in the volume of imports, particularly raw materials, such as raw jute and raw cotton.

As already noted, import prices were stationary, while export prices registered a fall. The terms of trade, therefore, worsened, the exact setback being 11 per cent. In other words, the index number of terms of trade (base: 1948-49=100) declined from 94 in the last quarter of 1952 to 84 in the first quarter this year. This deterioration alone accounted for a reduction in the trade surplus to the extent of Rs. 15 crores.

Pattern of Trade

There was, once again, a considerable change in the pattern of regional trade during the quarter under review, as will be seen from the following statement giving a summary of India's balance of payments position on current account with the various currency areas.

(In crores of rupees)

	1st quarter 1953	4th quarter 1952	1st quarter 1952
Sterling area, excluding Pakistan	+ 13.7	+ 15.6	+ 23.2
Pakistan	— 0.2	— 2.6	+ 5.2
Dollar area	+ 3.4	+ 17.5	— 87.5
O.E.E.C. countries	— 10.0	— 8.3	— 9.0
Rest of non-sterling area	+ 10.4	+ 9.7	— 6.4
Total	+ 17.3	+ 31.9	— 75.4

It will be seen from the above table that the surplus with the sterling area, excluding Pakistan, during the quarter under review was lower as compared with the two preceding quarters. This was due to the widening of the trade deficit from Rs. 40 lakhs to Rs. 3.3 crores. The deficit would have been still wider but for the improvement in the net invisible receipts to the extent of Rs. 1 crore. Both exports to, and imports from the sterling area declined, the former by Rs. 5.1 crores to Rs. 61.7 crores and the latter by Rs. 2.2 crores to Rs. 65 crores. Almost all the other major items of exports to this area dropped significantly. Commercial imports fell by about Rs. 4 crores, while Government imports rose by nearly half as much.

India's balance of payments position with Pakistan improved during the first three months of 1953, the current account deficit having narrowed down to a mere Rs. 20 lakhs.

The major contribution towards this improvement came from reduced payments for imports. Imports declined between the two quarters by Rs. 6.3 crores to Rs. 3.2 crores, owing mainly to lower payments for raw jute imports. Exports also declined, but less significantly, from Rs. 5.7 crores to Rs. 2.2 crores, reflecting mainly the continuance of import restrictions in Pakistan.

Dollar Area

The gradual improvement noticed in the dollar payments position in the second half of 1952 was arrested during the quarter under review, the current account surplus having declined from Rs. 17.5 crores to Rs. 3.4 crores. Larger payments for imports, together with decline in exports, brought about the reduction in the current account surplus. Payments for imports increased by Rs. 9.2 crores over the quarter to Rs. 31 crores; the fall in private imports was more than counter-balanced by imports on Government account which, at Rs. 18.6 crores, represented nearly a threefold increase over the previous quarter's level. Increased foodgrain purchases was the main factor that accounted for the sharp rise in Government imports.

The payments gap with the O.E.E.C. countries widened further during the quarter, albeit slightly, from Rs. 8.3 crores to Rs. 10 crores. While imports registered a slight fall, exports fell by over Rs. 2 crores from Rs. 15 crores in October-December, 1952 to Rs. 12.6 crores in January-March, 1953. The adverse trade balance thus increased from Rs. 7.4 crores to Rs. 9.2 crores.

With the rest of the non-sterling area, the current account surplus improved from Rs. 9.7 crores to Rs. 10.4 crores. The entire improvement resulted from reduced payments for imports. Imports declined from Rs. 13.1 crores to Rs. 11.2 crores, owing mainly to the virtual cessation of foodgrain purchases from China and Siam. Commercial imports, however, recorded a rise of nearly Rs. 2 crores reflecting principally increased payments for Egyptian cotton. Exports to this area were well maintained at around the previous quarter's level.

COIR INDUSTRY IN INDIA

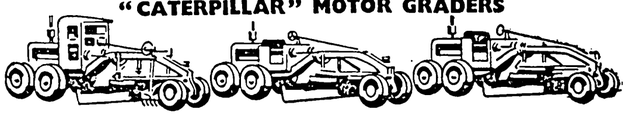
The Coir Industry Bill, 1953, was taken up for consideration by the House of the People on Friday the 7th inst. The Bill, it will be recalled, was first introduced in the House on 26th March, 1953. It seeks to invest the Government with powers to control the affairs of the industry. The control is to be exercised in two ways, namely, establishment of a Coir Board and imposition of a customs duty on coir fibre, yarn and products exported from India. The maximum rate of duty is fixed at Re. 1 per hundredweight; to begin with, the Government proposes to levy only As. 8.

Moving for consideration of the Bill, the Union Minister for Commerce related the circumstances which led to the Government of India's move to control the coir industry. He said that the coir industry in Travancore-Cochin, which exported nearly three-fourths of the total production, was faced with a crisis and thousands of people were thrown out of employment. The prosperity of the industry, he said, was linked up with the export trade which had been somewhat unhappy for some time past. Both the Centre and the Travancore-Cochin Government had taken interim measures to minimise the hardship. The Government of India sent an officer to make an on-the-spot study of the situation. Later, in November, 1952, a conference was held at Trivandrum to examine the problems facing the industry and to suggest remedies. The Conference recommended the setting up of a Coir Board for promoting and regulating export of coir yarn and coir products, and for carrying on propaganda for that purpose. The Bill, now under the consideration of the House, is a sequel to this recommendation.

While all are agreed on the need for regulating the affairs of the coir industry, opinions seem to be rather divided on the question of actual control. Some feel that, since the industry is concentrated in Travancore-Cochin, it is sufficient if the State Government assumes responsibility. Meeting this criticism, Mr. Karmarkar pointed out that the States of Madras, West Bengal and Orissa were also producing coir and coir goods. Besides, the industry depended on exports. In view of these, he emphasised that it was not only necessary that a Central Board be established but it was equally necessary this Board should have control of the industry from the first stage to the finishing stage.

SAVING TAX RUPEES
SERVING TAX PAYERS
WITH

"CATERPILLAR" MOTOR GRADERS



NO. 12 (100 H.P.) NO. 112 (75 H.P.) NO. 212 (50 H.P.)

Saving tax rupees is important to every official in a state, city, town or village. He has to in order to do his job well. But as important as saving the tax rupee is the job of making it serve the taxpayer. Service to the taxpayer means useful work and that is the speciality of "CATERPILLAR" Diesel Motor Graders. They do high-quality work at low cost. "CATERPILLAR" Diesel Motor Graders build roads and streets, widen and maintain existing roads. You will be serving your community and getting the maximum out of every tax rupee invested.

NEW PUBLICATIONS

***Industrial Efficiency.* By Dr. M. C. Munshi. Published by Messrs. Vora & Co., Publishers Ltd., 3, Round Building, Kalbadevi, Bombay. Price: Rs. 8.**

THIS new book by Dr. M. C. Munshi is a useful addition to the literature on industrial economics. It covers a wide field, wider than what its title suggests, and gives interesting international comparisons of economic progress, describes India's industrial development, and discusses the measurement of industrial efficiency. It carries a preface by Prof. C. N. Vakil, who has commended the author's work.

Dr. Munshi examines industrial efficiency as a factor affecting economic progress in the current Indian context. He says that India occupies a "peculiar position" among both advanced and underdeveloped countries. While he does not say categorically that India is underdeveloped, he shows that it has certain dominant traits of underdeveloped economy. He points to the absence of any sizable capital formation and the weakness of the market to attract foreign investors. These handicaps of an underdeveloped economy call for appropriate monetary and fiscal measures as well as higher industrial efficiency. He states conclusively that higher standards of efficiency are imperative to any real advance in living standards.

Dr. Munshi enumerates certain key indicators of progress such as the shift of population from the primary to secondary and tertiary industries and the increased use of inanimate energy *per capita*. He considers industrial efficiency as an even more satisfactory criterion of industrial advance. He contends that India can ill afford to ignore efficiency and that, therefore, it should strive for attaining a high level of efficiency, even if innovation as a factor of industrial development is not within our grasp. In a rapid survey of India's industrial development, he briefly reviews the Central Government's Statement on Industrial Policy of 1945, which contained blueprints of industrial development in a mixed economy. On a critical examination of the Government's protection policy, which was developed during and after the Second World War, he finds that the recommendations of the Indian Tariff Board (now Tariff Commission gave industries over-protection to such an extent that they ignored efficiency.

After neatly summarising the principles on which India's new industrial development is planned, the author attempts to give a co-ordinated picture of industrial policy, based on the Industrial Policy Statement of 1948, the directive principles of the Constitution, the recommendations of the Fiscal Commission, the Industries (Control and Development) Act, and the First Five-year Plan. He appends an elaborate chart of industrial policy. One, however, fails to see the relevance of the reference to all these in a book devoted to industrial efficiency.

It is only towards the end of the book that Dr. Munshi discusses the methods of measuring industrial efficiency. He says that efficiency can be measured by computing "labour, management, input-output, and cost ratios." The input-output analysis is, in his opinion, very important in efficiency measurement. Yet, he condemns labour productivity as a poor yardstick to measure efficiency because it ignores input factors other than labour. Remarking that efficiency can also be measured by costs, the author says that combinations of cost data and "standard costs" give certain ratios called "management ratios." The discussion of all these issues is rather technical for the layman, but it is not rigorous for the expert. It must, however, be said that Dr. Munshi has succeeded in interpreting the place of efficiency in an industrial economy and giving a lead to hard thinking on this vital problem.

The book would have been more readable, if the publishers had paid attention to the efficiency aspects of book production.—*K.A.Z.*

Introduction to Business Finance. By Messrs. Bion B. Howard and Miller Upton. Published by McGraw-Hill Book Company, Inc. New York.

The book under review is a result of the teaching experience of Mr. Bion B. Howard and Mr. Miller Upton in the Northwestern and Washington Universities, respectively. The book deserves to be welcomed for the reason that the authors have approached the subject from an angle different from the traditional one. They deal with the subject from an administrative, rather than socio-economic, stand-point. This is only as it should be, as finance is one of the major administrative functions in business, along with production and marketing. They have also focussed their attention on financial management, the principles, institutions and instruments which are common to all types of business and which are capable of application to any situation, instead of concentrating all attention on only one type of business organisation, namely, the corporation. This is appropriate, for the beginning course of any subject should be generic rather than specific in nature.

All this is not to say that no attempts have been made so far to deal with the subject in a non-traditional manner. There are some books, which have appeared since the conclusion of the Second World War, which make somewhat different approaches. But, the book under review certainly goes further than most of them in the direction of establishing generic and consistent managerial approach to business finance. The authors do not, however, profess that further improvement is not possible, despite the caution and experimentation with which they have approached the subject.

A significant feature of the book is that it does not assume substantial prior knowledge on the part of the student, as to the operation of the individual firm, as have been usually the case while writing books on business finance, especially from a socio-economic angle. The book, therefore, should prove of immense benefit not only to students but also business administrators, inasmuch as it is comprehensive and satisfies the increasing desire among academicians and administrators alike for a new approach to business finance.

Managing Agents.

DIGEST OF INCOME-TAXES IN COMMONWEALTH

The second and final volume of *Income-Taxes in the Commonwealth*—a completely new digest of taxes on income in Commonwealth countries, compiled by Britain's Board of Inland Revenue to succeed the pre-war publication *Income-taxes in the British Dominions*—has now been published in London. (Orders for this publication can be placed with British Information Services, Eastern House, Man Singh Road, New Delhi. Price Rs. 22-8, postage extra).

The first volume, published in November, 1951, dealt with taxes in Australia, Canada, Ceylon, India, New Zealand, Pakistan and South Africa (including a note on South-West Africa) for the latest year for which the text of the relevant laws was received up to April, 1951, in each case.

The second volume covers taxes in the Isle of Man, the Channel Islands, Southern Rhodesia, British Colonies and Protectorates, and territories under United Kingdom trusteeship. Information contained in this volume is based on the text of laws received up to August, 1952, and the tax-year dealt with in each case is the calendar year 1951 (or the comparable year where it runs to a date other than 31st December).

As in the case of the first volume, it is proposed to keep the information up-to-date by means of annual supplements.

RESULTS OF TATA IRON AND STEEL COMPANY SATISFACTORY

SMALL DECLINE IN NET PROFIT

IN view of the accurate manner in which advance information on the working of the Tata Iron and Steel Co., Ltd., is nowadays got and published by the City Editors of the daily Press, there is hardly any scope for surprises in the official releases by the Company. It is, therefore, no wonder that one does not find any thing new in the Directors' report and accounts of the Company for the year ended 31st March, 1953. These show a slight rise in gross profit and a fall in net profit. But even this feature of the Company's results was known to the share market days in advance. If, nevertheless, the value of the Company's Deferred and Ordinary shares staged a rise soon after the publication of the report, it was purely a coincidence. Or it might have been just one of the irrational moods of the market for which it is well known.

A study of the Company's financial results for 1952-53 fully justify the Directors' decision, announced a few weeks ago, to maintain the dividend at the previous year's levels. No doubt, the Company's production and despatches during 1952-53 were lower than those in 1951-52 and this in turn accounted for a drop in profit. But the recession in net profit was negligible, being no more than 5 per cent. Consequently, the Company could maintain not only the return on capital but also the essential provisions as required by the Tariff Commission. On the whole, the Company fared satisfactorily in 1952-53, but it would have certainly done better had the Government been not so parsimonious in determining the margin of profit allowed to it under the Iron and Steel Control Order. And there is no reason why it should not be allowed a higher rate of return on capital employed, considering the large sums it has ploughed back in the past. In fact, if due allowances were made for the sacrifices made by the shareholders of the Company in the past and the large portion of profit they set aside for financing the expansion of the Company's block, the dividend which they are now getting could not be regarded as being quite generous.

Profit and Appropriations

The gross profit of the Company, before making provision for Managing Agency commission, reveals a fractional improvement from Rs. 9.65 crores to Rs. 9.69 crores. Because of this, Managing Agents' commission has fallen from Rs. 47.62 lakhs to Rs. 44.51 lakhs. Out of this, a sum of Rs. 5 lakhs (as against Rs. 7.50 lakhs in the previous year) has been waived by the Managing Agents and set apart for grant towards the cost of providing "engineering or other educational facilities." The provision for taxation has been stepped up from Rs. 2.68 crores to Rs. 2.80 crores, and that for depreciation from Rs. 2.15 crores to Rs. 2.35 crores. The bonus to employees is lower at Rs. 98.57 lakhs, as compared with Rs. 1.06 crores provided in the previous year. The net profit, after making these essential provisions, stands at Rs. 3.10 crores, a decline of Rs. 18 lakhs from that for the previous year. If the allocation to the plant rehabilitation reserve, which is in the form of a depreciation provision (for which a sum of Rs. 1 crore has been provided, as compared with Rs. 75 lakhs last year), is deducted from this, the net profit shows a much larger decline of Rs. 42.65 lakhs at Rs. 2.10 crores. This larger provision for plant rehabilitation reserve is in accordance with the increase in the retention price granted by the Government on the recommendation of the Tariff Commission for the purpose of financing replacements and renewals at the present high prices of plant and machinery. The Company received for this purpose a sum of Rs. 1.77 crores (as against Rs. 1.33 crores). Taxation on this absorbs Rs. 77 lakhs (Rs. 57.60 lakhs), leaving a net sum of Rs. 1 crore (Rs. 75 lakhs) for this reserve. Because of this larger allocation, the amount transferred to the general reserve has had to be reduced from Rs. 74.98 lakhs to Rs. 46.80 lakhs, but the aggregate sum provided for reserves at Rs. 1.47 crores does not show any marked variation from that of Rs. 1.50 crores transferred from the profit for 1951-52.

The decline in net profit noted above is attributed to lower production and despatches of pig iron and steel and to the curtailment of operations at the Agrico plant, owing to lack of orders. The output of saleable steel, for instance, fell from 799,000 tons to 790,000 tons. The breakdown at the blooming mill, sheet bar and billet mill and rail and structural mill were mainly responsible for the lower production. Describing the trading conditions during the year under review, the Directors, in their report, observe:

"Following an improvement in the international situation and an increase in the world production of steel, iron and steel markets slackened during the year under review. In India, finished steel production increased from 1,052,000 to 1,076,000 tons in 1952, while imports of steel rose from 178,000 to 197,000 tons. Despite this, the supplies available were much below the country's real needs; but lack of purchasing power amongst the people and the tightness of the money market resulted in a reduced offtake and an accumulation of stocks. Control on the distribution of heavy structurals, rails and certain items of scrap was relaxed by Government in July, 1952. Later, the control over the distribution of bars, rods and light structurals was also relaxed, and registered stockists were permitted to sell these categories in any quantity to persons without permits. Prices, however, remained under Government control."

Trend of Results

The following comparative table, showing the salient features of the Company's results for the year 1952-53, against the background of those for the previous three years, will enable one to study at a glance the Company's progress in the last three years:

(In lakhs of rupees)

	For the year ended 31st March			
	1953	1952	1951	1950
Sale proceeds (net) ..	35,51.72	32,81.49	27,43.77	24,62.05

Saleable steel	7.90	7.99	7.84	7.27

* Subject to deduction of income-tax.

The gross sale proceeds have gone up from Rs. 35.20 crores to Rs. 41.16 crores. The previous year's figure included Rs. 1.24 crores, representing adjustment for increase in retention prices for preceding years. The sale proceeds for the year under review include a sum of Rs. 2.27 crores, representing the increase in retention prices of steel for the year. But the rebates payable to the Government under steel control amount to Rs. 5.64 crores, as compared with Rs. 2.58 crores paid last year. The net sale proceeds, therefore, represent a rise of only Rs. 2.91 crores. This has been offset to the extent of Rs. 23.02 lakhs by the decline in other income, mainly on account of a drop of Rs. 28.01 lakhs in sale of foodstuffs and other commodities and of Rs. 19.59 lakhs in miscellaneous income. On the other hand, a sum of Rs. 20.91 lakhs, representing the net receipt of the post-war refund of E.P.T., has been credited to the revenue account, besides the sum of Rs. 27.92 lakhs taken directly to the general reserve. The net increase of Rs. 2.67 crores in total revenue has been nearly wiped off by the rise of Rs. 2.64 crores in expenses. Of this rise, consumption of coal, raw materials, stores, etc., account for Rs. 31 lakhs, payments to and provisions for employees (other than bonus) for Rs. 41 lakhs, inward freight and handling charges for Rs. 96 lakhs and works expenses for Rs. 42 lakhs. The expenses which have been capitalised out of the above represent a rise of Rs. 17 lakhs to Rs. 1.39 crores. Outward freight and handling charges have gone down from Rs. 3.17 crores to Rs. 3.02 crores, but the other expenses have risen from Rs. 38.98 lakhs to Rs. 46.89 lakhs.

The following comparative table reveals a synoptic view of the Company's financial position, as at the close of the last two years:

	As at 31st March	
	1953 Rs.	1952 Rs.
LIABILITIES		
Capital	10,47,24,135	10,47,24,135
Reserves, other funds and surplus ..	14,93,72,202	13,45,51,066
Reserve for taxation	3,21,23,616	3,11,52,192
Liabilities	19,38,81,033	15,36,14,017
Total Rs. ..	48,01,01,437	42,62,42,011
ASSETS		
Gross block	46,79,61,580	44,13,78,740
Less—Depreciation	31,36,17,074	29,54,45,185
Net block	15,43,44,506	14,59,33,555
Stores, spares, etc.	9,87,20,505	6,33,39,130
Stock-in-trade	7,40,72,097	7,91,48,673
Debts, deposits and advances ..	8,99,04,849	7,80,56,702
Investments	4,09,20,370	4,04,05,387
Cash	5,21,35,510	1,92,18,564
Total Rs. ..	48,01,01,437	42,62,42,011

It will be noted that the reserves have been strengthened by Rs. 1.49 crores. The gross block reveals an increase of Rs. 2.66 crores, reflecting the progress made during the year in the Company's programme of expansion and modernisation. The Directors report that substantial progress has been made on the various projects relating to modernisation and replacement of plant. The negotiations with the Government of India for a loan of Rs. 10 crores for this programme have been virtually completed and it is stated that the Company will be in a position to commence drawing on the loan shortly.

As regards the scheme for the conversion of deferred into ordinary shares, the Directors hope that the conversion will be completed in the course of the current financial year.

JOST'S ENGINEERING CO., LTD.

Another year of successful operations, within the limitations of the Government's import policy, has been completed by Messrs. Jost's Engineering Co., Ltd. (General Managers: Mr. C. W. Owen, Bombay) during the twelve months ended 31st March, 1953. The turnover and profit of the Company, which had gone up in the previous year, show a further expansion. The trading profit, which had risen from Rs. 4.31 lakhs for the year ended 31st March, 1951, to Rs. 5.32 lakhs for the following year, has advanced to Rs. 6.67 lakhs for the year under review. After maintaining the provision for depreciation and making a higher provision for taxation, the net profit stands Rs. 1 lakh higher at Rs. 1.93 lakhs. This satisfactory increase in the profit has enabled the Directors to transfer to the reserves a sum of Rs. 40,002. It may be noted here that they have not been able to set aside anything in the previous two years. The dividend has been maintained at 15 per cent., to which level it had been raised last year from 12½ per cent.

The following comparative table giving the salient features of the Company's profit and loss account for the last four years, shows the Company's progress since 1950:

(In lakhs of rupees)

	For the year ended 31st March			
	1953	1952	1951	1950
Sale proceeds	31.72	26.94	22.10	32.14
Stocks	4.86	7.19	4.19	4.40
Trading expenses ..	22.72	24.41	17.58	24.05
Trading profit	6.67	5.52	4.81	5.62
Other expenses	4.01	4.13	3.37	3.55
Depreciation	0.07	0.07	0.08	0.09
Taxation	1.23	1.00	0.75	1.16

Dividend	0.90	0.90	0.75	0.75
	(15%)	(15%)	(12½%)	(12½%)
Carry forward ..	0.12	0.04	0.12	0.11

The foregoing results for the year under review indicate that the Chairman's expectations of another good year of business, expressed at the last Annual General Meeting of the Company's shareholders, have materialised fairly well. It will be recalled that the Chairman had stated last year: "Although, in common with others, we are experiencing cuts in quotas for some of our most important agencies and, for some of the others, the import policy has still not been clarified, it gives me pleasure to record that the Company has firm orders in hand almost to the value of last year's turnover, of which approximately 75 per cent. are covered by valid import licences. Therefore, provided the balance of import licences are made available and the manufacturers can keep to reasonable delivery schedules, with no severe interruptions in raw materials or by way of rearmament programmes, we can confidently look forward to another good year of business."

The Company's balance-sheet, as on 31st March, 1953, discloses that the reserves and surplus aggregate Rs. 4.77 lakhs, as against a paid-up capital of Rs. 6 lakhs. The current liabilities (including provision for taxation) amount to Rs. 10.18 lakhs. The gross block of the value of Rs. 1.28 lakhs has been written down by about Rs. 99,000. The current assets aggregate Rs. 24.66 lakhs and exceed the current liabilities by a large margin of Rs. 14.48 lakhs.

AMBIKA SILK MILLS' PROFIT LOWER

DIVIDEND REDUCED

IT is common knowledge that one of the industries which had been very adversely affected by the slump of 1952 was the art silk industry. In fact, this industry had felt the depression in the latter half-year of 1951 and it was more pronounced in the following year. The sharp fall in prices of art silk cloth did not stimulate any additional demand from consumers. With the result, the art silk mills had to suffer a severe setback in their earnings—with some of them actually sustaining losses. The Ambika Silk Mills Co., Ltd. (Agents: Messrs. Maganlal Bhagwandas & Co., Bombay), is one of those mills which have been considerably affected by these adverse conditions. It is, however, gratifying to find that it has not suffered a loss, as some others have done. The Company's gross profit for the year ended 31st December, 1952, amounts to Rs. 1.94 lakhs. This represents a fall of Rs. 1.29 lakhs, as compared with that for the previous year. The net profit, after providing for taxation and depreciation, has declined from Rs. 1.34 lakhs to Rs. 70,678. On account of this recession, the Directors have had to reduce the allocation to the reserves, as also the dividend, from 10 per cent. to 8 per cent.

Explaining the reasons for the decline in earnings, the Directors in their report to the shareholders observe:

"During the year under review, there was a pronounced depression in trade beginning from March and the effect of this was felt practically throughout the year. There was a sharp fall in the prices of art silk cloth and, although the prices of art silk yarn also had a downward trend, the other prices of manufacturing charges were not affected, with the result that the margin between the cost of production and the sale price narrowed down considerably. This accounts for the fall in the profit. Taking these factors into account and considering the conditions prevailing in the art silk industry during the year under review, your Directors trust that the result achieved will be considered quite satisfactory."

The following table gives the salient features of the Company's results for the year under review, as compared with those for the preceding three years:

(In lakhs of rupees)

	For the year ended 31st December			
	1952	1951	1950	1949
Sale proceeds	60.17	57.73	39.66	36.43
Other income	1.72	1.71	2.04	1.30
Closing stocks	10.66	11.47	11.01	10.47
Manufacturing expenses (including yarn and stores consumed).	43.60	53.03	37.04	25.16
Other expenses	1.70	1.84	1.43	1.23
Gross profit	1.94	3.23	3.12	3.82
Managing Agents' commission ..	0.12	0.20	0.19	0.23
Depreciation	0.71	1.24	1.22	1.00
Taxation	0.40	0.45	0.75	1.10
Net profit	0.71	1.34	0.06	1.44
Reserves	0.10	0.72	0.40	1.00
Other provisions	..	..	..	0.40
Dividend	0.62	0.77	0.77	0.77
	(8%)	(10%)	(10%)	(10%)
Carry forward	0.04	0.05	0.19	0.40

The considerable improvement in sale proceeds which had been noted in the previous year suffered a slight recession in the year under review and this is understandable in the context of the trading conditions that prevailed during the year. The contraction in manufacturing expenses is more due to the decline in consumption of yarn and stores than to a reduction in other expenses.

Out of the net profit of Rs. 70,678, the Directors have provided Rs. 10,000 for the reserve for rehabilitation of machinery, as against Rs. 71,720 set aside last year, and Rs. 40,000 two years ago. For the third year in succession, the Directors have not been able to provide anything to the general reserve. The dividend which has been reduced from 10 per cent. to 8 per cent. absorbs Rs. 61,600, leaving to be carried forward Rs. 3,928 to the next year, as against Rs. 4,850 brought in.

The Company's balance-sheet as on 31st December, 1952, shows that the paid-up capital is unchanged at Rs. 7.70 lakhs. The capital was raised to the present level by the capitalisation of a sum of Rs. 1 lakh out of the reserve fund in November, 1947 and of a further sum of Rs. 70,000 in August, 1948. The reserves and surplus now stand at Rs. 2.32 lakhs. The gross block amounts to Rs. 15.20 lakhs, on which the depreciation so far provided aggregates Rs. 8.61 lakhs. The current assets, amounting to Rs. 15.54 lakhs, more than amply cover the current liabilities (including provision for taxation) aggregating Rs. 12.10 lakhs.

Points From The Chair

Tax Refund to Shareholders

"I SHALL now refer to a matter that has been agitating the minds of shareholders, namely, the refund of income-tax on their dividends. Due to the difference in the rates of depreciation allowed by the Department and those adopted by us under the provisions of the Electricity (Supply) Act, 1948, the Company's tax liability is either much below the quantum of dividends paid or nil. On the difference of such taxable income returned to the income-tax authorities and the dividends actually paid, the income-tax authorities collect an excess dividend tax without at the same time giving relief to the shareholder. We have contended that this tax is illegal, and the matter is now before the High Court of Madras. It is understood, however, that orders have been issued to afford tax relief for the year 1951-52."

S. RAGHAVA AIYANGAR,
South Madras Electric Supply Corporation Ltd.

Code of Conduct for Insurers

"Another problem which has latterly claimed considerable attention relates to certain evils that have grown out of unhealthy competition for procuration of business. To overcome the evils of rebating and payment of unauthorised commissions, various efforts were made in the past, but without success. With a view to eradicate these practices, and place insurance business on a healthy footing, a Code of Conduct has been evolved and the necessary machinery for its administration has been set up. I do not ordinarily favour controls in matters relating to private enterprise, but the situation to meet which the Code has been framed is an abnormal one and although there are some features of the Code which, to my mind, appear to be quite unnecessary, yet I venture to express the hope that a wise and sympathetic administration of the Code may achieve the desired result in due course."

M. CT. M. CHIDAMBARAM CHETTYAR,
United India Fire and General Insurance Co., Ltd.

Decontrol of Coal in U.K.

"The coal mines of this country have now been nationalised for 6½ years. The National Coal Board have had the support of all classes and parties in recognition of the stupendous task with which they were confronted. It must be admitted, however, that the progress made towards securing for the public the necessary quantity and quality of coal has been most disappointing. It is devoutly to be hoped that the Government and the National Coal Board will be able, between them, to act with sufficient determination to reverse the present trend and thus pave the way for decontrol in the not too distant future."

SIR JOHN CHARRINGTON,
Charrington, Gardner, Locket and Co., Ltd.

Shortage of Technical Skill in Industry

"This shortage of skill is a national dilemma and not merely a local one. Therefore, the remedy is in training within the firm; and that we are pursuing most energetically. In a few years' time we shall derive benefit from the expanded and improved apprenticeship training that we started in 1947; but a trade apprentice has to serve a five years indenture and also to do his National Service before he can settle down to his job with us as a skilled craftsman, draughtsman, or engineer. This makes it necessary, in the meanwhile, to have recourse to intensive training to overcome any bottlenecks that impede the flow of production to our customers. Fortunately, our training department is adequate for its tasks."

COMMANDER P. W. KENT,
George Kent, Ltd.

Egypt's Main and Permanent Problem

"The present difficulties which Egypt faces must not screen her main and permanent problem, that of increasing her agricultural output to feed and maintain an ever mounting population. This must be done, however, without any serious decrease in her cotton production. What is vital is not only agricultural improvement but agricultural expansion. There are in course a number of important plans, involving admittedly heavy capital expenditure, including several for bringing, by water storage and systematic irrigation, much land, now barren, into fruitful cultivation. When some or other of these are achieved, as with a return of economic stability they doubtless will be, Egypt will face the future with confidence."

THE RT. HON. LORD LATYMER,
Ottoman Bank.

QUESTION HOUR IN PARLIAMENT

Gold and Dollar Reserves

INDIA'S net drawings from the Central reserves of gold and dollar of the sterling area in 1952 was $118 million. Its net contribution to the reserves during January-June, 1953, was provisionally calculated at $9 million. During 1952, the reserves fell by $489 million. Since the beginning of 1953 up to the end of June, the reserves had, however, gone up by $521 million. The United Kingdom's dollar deficit in 1952 was $383 million. Figures for January-June, 1953, have not yet been published by the U.K.

• • • •

Currency Position in French India

The position in regard to Indian currency in French possessions has eased as a result of the action taken by the French India authorities to relieve shortage. There were reports some time ago that monthly quotas of Indian rupees had been fixed by French India for financing her imports from India. The French India authorities has, however, denied the reports, saying that Indian currency is released in proportion to the requirements of imports essential to the economy of French India. The balance of trade has been increasingly in favour of India and there is really a shortage of Indian currency in French India. I have no statistics to show what the imports into French possessions from abroad are in proportion to their own needs. It is possible that a certain amount of smuggling is taking place. This is a general problem of which the Government is well satisfied.

—*Minister for Finance*

Import of Foodgrains

Majority of purchases (of foodgrains from abroad) are made at Government level, either on barter or against cash payment. Small quantities are purchased from the trade. Wheat and flour purchases, except from the Argentine, are under the International Wheat Agreement, for which the rate is already fixed. From the Argentine, the wheat is against the barter agreement concluded by the Ministry of Food and Agriculture. All rates of purchases are normally approved beforehand by the Government. The following quantities of foodgrains were purchased during the current year up to the end of July, 1953:

	Quantity Lakh tons	*Value* Crores of Rs.
Wheat	16.29	63.08
Flour	0.75	3.92
Milo and sorghum	1.18	4.77
Rice	1.76	14.35
Total ..	19.88	86.80

The countries from which these foodgrains were purchased are the U.S.A., Canada, Australia and the Argentine (wheat); Australia (flour); the U.S.A. and Australia (milo and sorghum); and Thailand, Burma and Pakistan (rice).

• • • •

Import of Tractors

The total number of tractors imported into India, on Government as well as private account, during the half-years ended 30th June, 1952, and 30th June, 1953, were 1,609 valued at Rs. 1,67,46,683 and 2,151 valued at Rs. 1,94,52,719, respectively.

—*Minister for Food and Agriculture*

Procurement of Wheat and Rice

About 1.15 million tons of rice and 207,000 tons of wheat have been procured in India during the period 1st January to 18th July, 1953. Except for U.P. and Punjab procurement of wheat in other States has continued during the current year more or less as usual. In U.P., the procurement was given up altogether, while, in Punjab, monopoly procurement was abandoned and the State now makes purchases from the *mandi* as and when the market rates are favourable. April and May are the months of seasonal shortage for rice and, during these months, the seasonal firming up of prices was experienced this year also. On the whole, however, the prices of rice in April-May this year were lower than those during the corresponding period of the last year, indicating downward long-period trend of prices. As regards wheat, April is the peak marketing period and the prices during this month were generally lower than in February-March. In May, the position was somewhat erratic. In Uttar Pradesh, certain parts of Bihar, Himachal Pradesh, etc., the prices were generally lower than those in March, but, in Madhya Pradesh, Hyderabad, Madhya Bharat, Vindhya Pradesh, etc. they were somewhat higher than those in March. In the case of wheat also, the prices in April-May 1953, in Bihar, Uttar Pradesh, Saurashtra, etc., were lower than those during the corresponding period of last year, indicating that the long-period trend of wheat prices was also downwards.

• • • •

Russian Wheat on Barter Terms

In March, 1953, a proposal was made by the Government of India to the Government of the U.S.S.R. that the two Governments might enter into a three-year barter agreement for the supply of Russian wheat against Indian commodities. No reply has so far been received to this proposal.

—*Deputy Minister for Food and Agriculture*

Earnings of Railways

The railway goods earnings during 1952-53 amounted to Rs. 146.13 crores, as against Rs. 140.48 crores (excluding freight on carriage of railway coal and materials) in 1951-52. The passenger earnings during 1952-53 amounted to Rs. 100.36 crores, as against Rs. 109.88 crores during 1951-52.

• • • •

Class I Passenger Earnings

Gross earnings of the Indian Railways from class I passengers during the first quarter of 1953-54 were Rs. 41.25 lakhs, as against Rs. 49.59 lakhs during the corresponding period of 1952-53. The reasons for the drop in earnings were the policy of progressive withdrawal of class I accommodation and the general factors responsible for the recession in all classes of passenger traffic since 1951.

—*Deputy Minister for Railways*

TRADING RESULTS OF ATTOCK OIL SUBSTANTIALLY HIGHER

PROFIT OF HOOGHLY MILLS DECLINES

Attock Oil Co., Ltd.

THE directors of the above Company (Managing Agents: Messrs. Steel Brothers and Co., Ltd., London) submitted the audited accounts of the Company for the year ended 31st December, 1952.

Group profit for the year attributable to members of the Company after writing off all expenditure on well boring and after charging £6,460 (£6,190) relating to earlier years has amounted to £1,259,455 (£640,998) from which depreciation of fields and refinery plant, motor vehicles and chattels has been provided amounting to £214,988 (£162,751) and United Kingdom and Pakistan taxation on the year's accounts amounting to £683,019 (£344,952) leaving a balance of £361,448 (£133,295). The directors disposed of this amount as follows:—

Transfer to general reserve £160,000 (*nil*), interim dividend paid on 14th May, 1953, at 5 (nil) per cent. less income-tax £49,500 (nil) and final dividend payable on 3rd September, 1953, at 15 (12½) per cent. £148,500 (£118,125), making for the year 20 (12½) per cent. for the year £198,000 (£118,125), leaving a balance of £3,448 (£15,170). To this was added the unappropriated profits brought forward from 1951, of £229,545 (£208,612) making a balance at credit of profit and loss account of £232,993 (£229,545). This amount was carried forward to 1953. A sum of £145,000 was placed to general reserve, by transferring taxation provision in respect of previous years no longer required, £120,000 and contingencies reserve £25,000.

Trading profit for the year amounted to £1,297,655 which compares with £661,837 for 1951. The subsidiary company—Pakistan Oilfields Limited —incurred a loss for the year of £20,272 (made up of rents and licence fees, directors' fees and travelling expenses, general expenses, establishment charges and managing agents' remuneration) which, after allowing for the proportion attributable to the minority shareholders (£2,883), has been provided for in the consolidated profit and loss account.

Pakistan Oilfields Limited, (The Attock Oil Company's Pakistan subsidiary company). With reference to the directors' Report for 1950, of the 30,000 shares offered for subscription to nationals of Pakistan, 11,468 only have been applied for. In terms of the conditions imposed by the Controller of Capital Issues, Government of Pakistan, the matter has been reported to the Controller for further directions in accordance with the industrial policy of the Government and these are now awaited. The Attock Oil Company, Ltd., has expressed its willingness to take up any unsubscribed shares in Pakistan Oilfields Limited.

Pakistan Oilfields Limited has entered into a general agreement with Attock (which has the necessary machinery, plant and equipment and technical staff for prospecting and drilling) which provides that the Parent Company shall be engaged as contractor to drill wells for testing on areas held by P.O.L. Should oil in commercial quantities not be found then unless and until this arrangement is terminated by the Attock Oil Company, Ltd., further prospecting/drilling contracts will be entered into on similar terms to test additional selected areas in the hope that oil in commercial quantities will be found.

It is a term of each contract that if oil in commercial quantities be found in any area, P.O.L. will pay Attock a sum equal to the total expenditure incurred by it in carrying out the Contract together with five per cent. of such total expenditure. P.O.L. will not be liable to make any payment to Attock either by way of re-imbursement of expenditure or by way of remuneration in respect of any prospecting/drilling contract which does not result in the proving of oil in commercial quantities.

The general agreement also provides that Attock shall to the extent that it has surplus refining capacity available, refine any crude oil produced by P.O.L. It has been agreed with the taxation authorities in the United Kingdom and Pakistan that cost of prospecting/drilling by Attock for P.O.L. which does not result in the proving of oil in commercial quantity shall be a charge in arriving at Attock's liability to taxation. Conversely, any re-imbursement received and profit earned will be taxable in Attock's hands. The arrangement regarding Pakistan Oilfields Ltd., is an extension of Attock's normal activities to the limit imposed by the Pakistan Petroleum (Production) Rules, 1949. By the end of 1952, three prospecting/drilling contracts had been entered into by Attock and P.O.L. The directors consider that the provisions for depreciation and taxation are adequate.

Hooghly Mills Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Gillanders Arbuthnot & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st March, 1953.

In accordance with the Indian Jute Mills Association's main and supplementary working time agreements the mill worked 42½ hours per week, with 12½ per cent. of the looms sealed, throughout the year.

Raw jute was in fairly plentiful supply during the year, at gradually declining rates. Prices for manufactured goods, especially sacking goods, were generally unremunerative and this is reflected in the reduced profit on the year's trading.

The export duty on sacking goods was reduced by Rs. 95 per ton as from 28th February, 1953, but this has so far failed to stimulate demand.

Jute in stock and process has been taken into account at rates corresponding with forward sales of manufactured goods, and manufactured goods have been taken into account at contract rates.

The result of the year's working is a profit of Rs. 7,18,727 (Rs. 10,61,509), from which is deducted reserve for income-tax and super tax Rs. 1,90,374 (Rs. 3,57,786) and depreciation Rs. 2,00,000 (Rs. 2,50,000) leaving a balance of Rs. 3,28,353 (Rs. 4,53,723). Adding the credit balance brought forward from previous year of Rs. 64,417 (Rs. 80,294) there is a total sum of Rs. 3,92,770 (Rs. 5,34,017). The directors recommend that this amount should be disposed of as follows:—

Preference dividend at the rate of 10 (10) per cent. per annum, without any deduction in respect of income-tax payable by the Company Rs. 1,17,600 (Rs. 1,17,600), ordinary dividend at the rate of 12½ (15) per cent. per annum (Re. 1-4 (Rs. 1-8) per share) without any deduction in respect of income-tax payable by the Company Rs. 2,10,000 (Rs. 2,52,000) and carry forward to next year Rs. 65,170 (Rs. 64,417).

The managing agents have waived Rs. 1 lakh of the commission due to them.

Accounts in brief are as under:—

	Rs. 64,04,473		Rs. 64,04,473

Hattikhira Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Octavius Steel & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st December, 1952.

A crop of 14,563 maunds was manufactured and disposed of for sale in Calcutta, for export 13,074 maunds, shipped to U.K. for sale in London 175 maunds and for sale in Calcutta for internal consumption 1,314 maunds.

The Company experienced a disastrous year's trading in 1952 owing to the collapse of the market for common tea. The average price realised was only As. 14-7 per lb. as compared with Re. 1-7-2 per lb. in 1951. In an endeavour to improve the quality of the tea, finer plucking was undertaken during the season but this did not have any immediate effect on prices and the crop was considerably reduced thereby. After the close of the season it was found necessary to close the gardens temporarily.

The prospects for 1953 are considerably brighter and it seems likely that prices will revert to the level obtaining before the slump. The relatively small crop harvested in 1952 is not necessarily an indication of the crop which may be expected under a policy of finer plucking should climatic conditions prove favourable.

It is expected that the cost of production will be significantly reduced in 1953 as a result of the Government of Assam's decision to modify the minimum wages payable in Cachar. The Company's Export Quota for 1952 was 16,335 maunds.

No extensions were put out during the year and the area under cultivation as registered with the Indian Tea Licensing Committee at 31st December, 1952, was 2,153.65 acres. The managing agents' representative visited the garden in September, 1952, and his report was satisfactory.

The revenue account showed a loss of Rs. 6,97,141 (profit of Rs. 3,99,355) and after adding gratuities Rs. 5,000 (Rs. 5,000), depreciation Rs. 97,893 (Rs. 82,954), deficit on 1951 London tea sales Rs. 62,261 (*nil*) and provision for sales tax Rs. 18,252 (*nil*) there was a balance of Rs. 8,80,547 (Rs. 1,91,890). After deducting forfeited dividends Rs. 1,620 (Rs. 175) and excess provision for taxation written back Rs. 32,956 (*nil*), there was a loss for the year of Rs. 8,45,971 (net profit of Rs. 1,91,715). After deducting from this the credit balance of Rs. 25,754 (Rs. 14,552) brought forward from the previous year and transferring Rs. 8,40,000 (*nil*) from reserve account, there was a credit balance of Rs. 19,783 (Rs. 21,767 after paying a dividend of 7½ per cent.) on profit and loss account, which was carried forward. The estimates for season 1953 are as follows:—

Gardens	Crop Mds.	Expenditure: Garden Rs.	Expenditure: Calcutta Rs.	Total Rs.
Hatikhira Solgal	18,508	10,11,440	3,14,032	13,25,472*

* Excluding expenditure of a Capital nature estimated to amount to Rs. 14,595.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	12,60,000	Block ...	19,27,046
Reserves ...	3,50,000	Stock of tea	3,62,848
Provision for taxation ...	91,145	Stores, etc. ...	3,66,613
Liabilities ...	11,17,517	Debts, deposits and advances ...	1,70,012
Profit and loss account ...	19,783	Investments	1,000
		Cash ...	11,126
	Rs. 28,38,445		Rs. 28,38,445

Gillapukri Tea and Seed Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st December, 1952.

After providing Rs. 32,327 (Rs. 26,377) for depreciation, the season's working resulted in a loss of Rs. 12,532 (loss of Rs. 13,454). After bringing in the balance from last year and charging secretaries and agents' minimum commission, there remained a balance of Rs. 2,586 (credit of Rs. 16,947 after paying a dividend at Re. 1 per share absorbing Rs. 36,000) at debit of profit and loss account. No dividend was declared and the debit balance in the profit and loss account was carried forward.

A record crop of 6,377 maunds was secured and sold at an average price of Re. 1-10-3 per lb. This compares with a crop of 5,041 maunds manufactured in season 1951 which sold at an average price of Re. 1-14-5. The heavy fall in the tea market resulted in most of the Company's crop being sold at below cost of production. Current market rates are considerably higher than was the case when the major part of the 1952 crop was sold and there is reason to anticipate that the results for season 1953 will show an improvement. Estimates for the current season have been framed for a regulated crop of 5,950 maunds to cost Rs. 7,00,935.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	3,60,000	Block ...	4,32,329
Reserves ...	3,00,000	Stock-in-trade ...	4,27,396

Liabilities ...	5,87,312	Debts, deposits and advances ...	2,22,622
		Investments	3,689
		Cash ...	45,829
		Profit and loss account ...	2,586
	Rs. 12,50,436		Rs. 12,50,436

New Cinnatolliah Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Duncan Brothers & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st December, 1952.

The accounts disclosed a loss of Rs. 2,09,936 (loss of Rs. 2,27,809). On transfer of this sum to profit and loss account and after sundry adjustments, including a transfer of Rs. 30,000 (Rs. 2,05,000) from revenue reserve, and Rs. 1,26,579 (*nil*) from buildings and machinery reserve, there was a balance at debit of profit and loss account of Rs. 44,129 (credit of Rs. 2,114), which the directors carried forward.

An unfavourable market persisted throughout the season while the cost of production was proportionately higher per pound as a result of the smaller crop harvested and further statutory wage concessions to labour. Crop weighed out at 5,208 maunds as compared with 5,626 maunds in 1951, compared with Re. 1-6-1 per lb. in the previous year. The planted area remained at 935 acres. Estimates for 1953 provide for a crop of 5,000 maunds at an outlay of Rs. 6,32,300, including inland freight and sale charges.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	5,00,000	Block ...	4,00,000
Liabilities ...	5,75,603	Stores and supplies ...	87,327
		Tea sales receivable ...	4,48,044
		Advances and debts ...	53,793
		Cash ...	44,200
		Profit and loss account ...	44,129
	Rs. 10,75,603		Rs. 10,75,603

Pussimbing Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Davenport & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December, 1952.

During 1952 the Tea Industry in North East India generally suffered the most serious crisis within experience, and the Darjeeling District suffered particularly severely, with sale prices greatly below production costs. In an endeavour to meet the position the estate adopted a finer standard of plucking, which resulted in a reduced crop of 152,816 pounds of tea; and at the same time the strictest possible economy was exercised. Despite the increased cash dearness allowance introduced by the Minimum Wages Award in December, 1951, the dearness allowances in cash and kind to staff and labour increased only to Rs. 1,30,285 from Rs. 1,29,209 in the previous year.

The total net average sale price for the year 1952 was As. 32.44 as against As. 29.85 for 1951; total working cost per pound of tea produced was As. 37.36 as compared with As. 41.60 for 1951.

There is a revenue loss for the year of Rs. 45,082 (loss of Rs. 18,447); to this has to be added reserve for staff expenses, interest charges and the proportion of cost of assets written off; and after allowing for these items and the other adjustments shown, there is a final loss for the year of Rs. 54,160 (loss of Rs. 26,826) and a final debit balance on this account of Rs. 50,924 (Rs. 3,236) which is carried forward to 1953. Having regard to the heavy loss sustained on the season's working, the managing agents have offered to forgo one half of their commission on tea sales, which has been accepted.

Estimates for 1953 are based on a crop of 2,000 (2,300) maunds of tea at a total cost of Rs. 2,86,200 (Rs. 3,85,877). These estimates are based on the labour wages at present in force and on the strictest possible economy: continued expenditure on this level would not be in the best interests of the maintenance of the estate and it is unlikely that production costs as low as the above estimate of As. 28.62 per pound of tea can be maintained.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	4,10,000	Block ...	4,42,500
Reserves ...	1,99,293	Stocks ...	1,08,248
Provision for taxation ...	22,149	Stores and supplies ...	47,681
Liabilities ...	70,729	Debts, deposits and advances ...	39,591
		Investments	1,928
		Cash ...	11,299
		Profit and loss account ...	50,924
	Rs. 7,02,171		Rs. 7,02,171

North-West Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st March, 1953.

After providing Rs. 24,500 (Rs. 10,000) for depreciation and Rs. 13,000 (*nil*) for cesses and bringing in Rs. 15,000 (Rs. 10,000) from dividend equalisation reserve, there is a balance of Rs. 13,416 (Rs. 8,798) at the credit of the profit and loss account out of which the directors recommend a dividend at 5 (5) per cent. per annum Rs. 6,813 (Rs. 6,813) leaving to be carried forward Rs. 6,603 (Rs. 1,985).

Raisings during the half-year were 42,196 tons as compared with 45,720 tons and despatches 46,842 tons as compared with 35,587 tons during the last half-year.

Difficulty in selling the quality of coal raised by the Colliery at prices prescribed by Government in the Colliery Control Order makes it increasingly difficult to reduce stocks and consequently raisings have had to be restricted and the costs have consequently been adversely affected.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	2,72,500	Block ...	5,06,945
Reserves ...	3,36,004	Stocks ...	4,00,665

Caledonian Jute Mills Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st May, 1953.

After providing Rs. 500 (*nil*) for taxation and transferring Rs. 2,00,000 (Rs. 50,000) to general reserve there is a balance of Rs. 2,42,673 (credit of Rs. 1,45,646) at the credit of profit and loss account from which the directors recommend payment of dividends on preference shares at Rs. 3-8 (Rs. 3-8) per share Rs. 35,000 (Rs. 35,000) and on ordinary shares at Rs. 6 (Rs. 6) per share Rs. 1,08,000 (Rs. 1,08,000), leaving Rs. 99,673 (Rs. 2,646) to be carried forward.

In accordance with the working time agreement of the Indian Jute Mills Association, the mills worked 42½ hours per week with 12½ per cent. of the total looms sealed.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	28,00,000	Block ...	37,46,426

		Cash ...	4,829
	Rs. 74,69,571		Rs. 74,69,571

Hooghly Docking and Engineering Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Martin Burn Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December, 1952.

The improvement in the Company's activities reported last year continued during the year under review; the value of work billed amounted to Rs. 65,39,792 against Rs. 55,76,008 in 1951. The entire property of the Company has been maintained in good order and repair throughout the period.

After charging all expenses including depreciation and writing off Rs. 34,659 (*nil*) as bad debts, the profit for the year amounted to Rs. 13,78,424 (Rs. 9,29,637) to which has to be added the balance brought forward from the previous year of Rs. 41,417 (debit of Rs. 50,720), making a total of Rs. 14,19,842 (Rs. 8,78,917). Out of this sum there have been provided for taxation Rs. 6,85,000 (Rs. 2,50,000), bad debts Rs. 50,000 (Rs. 1,00,000), and transferred to development reserve Rs. 3,00,000 (nil) and general reserve Rs. 1,00,000 (Rs. 3,00,000), leaving a balance available for disposal of Rs. 2,84,842 (Rs. 2,28,917). The directors recommend this balance to be disposed of as follows:—

Payment of a dividend of 15 (15) per cent. without deduction of income tax absorbing Rs. 1,87,500 (Rs. 1,87,500) plus a bonus of Rs. 2.8 (nil) per share absorbing further Rs. 62,500 (nil) and carrying forward the balance of Rs. 34,842 (Rs. 41,417).

Accounts in brief are as under:—

	Rs. 1,06,84,808		Rs. 1,06,84,808

Mysore Coffee Curing Works, Ltd.

The directors of the above Company (Manager and Secretary: Mr. S. N. Pallegar, Chikmagalur) submitted the audited accounts of the Company for the year ended 31st December, 1952.

The directors report that during the year 1952, the working of the Concern was satisfactory and in spite of the keen competitions from the other curers, the Works received a substantial quantity of coffee for curing. The operation of the Railway Out-Agency at Chikmagalur has been satisfactorily conducted.

After providing a sum of Rs. 24,931 (Rs. 22,043) towards depreciation, there is a balance of Rs. 30,431 (Rs. 40,027) to the credit of the profit and loss account. This, with the carry over of Rs. 400 (Rs. 321) from the previous year, amounts to Rs. 30,831 (Rs. 40,348) which the directors recommend to be disposed as follows:—

In payment of dividend at 10 (10) per cent. per annum, free of income-tax and super-tax on Rs. 2,99,490, Rs. 29,949 (Rs. 29,949), payment of dividend at 10 (nil) per cent. per annum, free of income-tax and super-tax on Rs. 37,150 allotted in the month of October, 1952 for two months Rs. 619 (*nil*) and to carry forward Rs. 263 (Rs. 340).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.

National Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 30th April, 1953.

After providing Rs. 3,68,000 (Rs. 32,000) for taxation and transferring Rs. 50,000 (*nil*) to general reserve there is a balance of Rs. 4,69,332 (Rs. 3,72,764) at the credit of profit and loss account from which the directors recommend payment as follows:—

Dividends on preference shares at Rs. 3-8 (Rs. 3-8) per share Rs. 17,500 (Rs. 17,500) and on ordinary shares at Re. 1 (Re. 1) per share Rs. 3,50,000 (Rs. 3,50,000) and leaving Rs. 1,01,832 (Rs. 5,264) to be carried forward.

In accordance with the working time agreement of the Indian Jute Mills Association the mills worked 42½ hours per week with 12½ per cent. of the total looms sealed.

HIND TRADING AND MINERALS LTD. (First Director: Mr. M. R. Bhimsaria.) Business: To cultivate Tea, Coffee, etc. Authorised capital: Rs. 5,00,000. Public company. Address: 135, Canning Street, Calcutta.

FURTHER RISE IN CALL MONEY RATES

(From Our Own Correspondent)

BOMBAY, 12th August

The short-term money market experienced further stringency during the week. The scarcity of funds felt in the previous week was followed by an expansion in the demand for funds for purchase of cotton and other commodities. The available surplus funds of banks having been absorbed already, banks had to look around for more funds. Consequently, inter-bank call money was bargained for up to 2½ per cent., as against 1½ per cent. in the previous week, among the Exchange banks and big Indian banks. Stray transactions were reported even at 2¾ per cent., but this high rate did not persist long. Following the spurt in rates, funds from other centres began to flow back to Bombay. Exchange banks also had to recall their surplus funds which had been remitted overseas in earlier weeks.

The state of the market at the close was, however, fairly comfortable, the borrowers' requirements having been satisfied. There were lenders of overnight funds at 2 per cent. Among the smaller Indian banks inter-bank call money was placed at 2¾ per cent., as against 2½ per cent. a week ago. House money continued to fetch 2¼ per cent. In spite of the rise in inter-bank call money, short-term deposit rates did not experience any spurt, banks offering no higher than 2¾ per cent. for one to three months and 2¾ per cent. for longer periods.

There was a further decline in the amount tendered this week against the Rs. 1.50 crores of three months' Government of India Treasury Bills, such being no more than Rs. 2.02 crores, as against Rs. 2.60 crores in the previous week. The average rate of accepted tenders, however, remained unchanged at Rs. 2-6-3 per cent.

After several weeks, notes in circulation, as revealed by the statement of affairs of the Reserve Bank of India for the week ended 7th August, 1953, have once again risen by as much as Rs. 12.92 crores. Notes held in the Banking Department, on the other hand have recorded a contraction of Rs. 13.44 crores. The net decline of Rs. 52.17 lakhs in total notes issued is covered by a drop of an identical amount in rupee coin. On the liabilities side of the Banking Department, deposits of the Central Government have fallen by Rs. 4.47 crores and those of other Governments by Rs. 8.91 crores. Banks' deposits have declined by Rs. 35.37 lakhs and those of others by Rs. 1.43 crores. On the assets side, cash balances show a contraction of Rs. 13.57 crores and balances held abroad, of Rs. 1.64 crores. A rise of Rs. 80 lakhs is noted in ways and means advances to Governments and of Rs. 1.25 crores in other loans. Investments are higher by Rs. 1.22 crores, while Government Treasury Bills purchased and discounted are lower by Rs. 1.14 crores.

The Scheduled Banks' statement for the week ended 31st July, 1953, as compared with that for the previous week, discloses a sizable fall of Rs. 6.29 crores in demand deposits and a small decline of Rs. 25.63 lakhs in time deposits. Inter-bank borrowings are higher by Rs. 92.73 lakhs. Borrowings from the Reserve Bank have gone up by Rs. 39 lakhs and those from the Imperial Bank by Rs. 29 lakhs. The pace of decline in the Banks' advances shows a considerable slackening. Thus advances have gone down by only Rs. 74.92 lakhs, while bills purchased and discounted have actually risen by Rs. 26.07 lakhs. Cash-on-hand and balances with the Reserve Bank together account for a decline of Rs. 5.99 crores and balances with other banks in current account of Rs. 65.29 lakhs. Money at call and short notice has risen by Rs. 1.31 crores.

The Gilt-edged market was steady, though conditions were dull. The volume of business did not show any sign of expansion, though some interest was evinced in near-dateds and there was persistent demand for some of the State Loans. 3 per cent. 1957 and 3 per cent. 1958 were in demand, but quotations were unchanged at Rs. 98-6 and Rs. 98-3, respectively. 3 per cent. 1959-61 was enquired for at Rs. 96-3. 3 per cent. 1963-65 changed hands an anna higher at Rs. 92-6, but 3 per cent. 1964 was held at Rs. 92-5. 3 per cent. 1966-68 had sellers at Rs. 90. 3 per cent. 1970-75 also attracted sellers at Rs. 86-7. 3 per cent. 1986 Conversion Loan, which had risen by As. 2 to Rs. 82-2 last week, moved ahead further to Rs. 82-5, before closing at Rs. 82-4. 3½ per cent. 1961 National Plan Bonds were stagnant at Rs. 98-5. Among the State loans 4 per cent. 1963 Bombay had business As. 3 higher at Rs. 100-3 and U.P. an anna better at Rs. 99-7. 4 per cent. 1964 Bombay and West Bengal were in request and gained As. 4 to Rs. 100.

In the foreign exchange section, the rupee-U.S. dollar rate was unchanged at Rs. 475½ per $100 (banks selling ready) and at Rs. 471¾ per $100 (banks buying ready). In New York, the £ sterling moved within narrow limits, but stood on balance a fraction stronger. Thus, the spot rate rose from $2.81-9/16—2.81-11/16 on the 4th inst. to $2.81⅞—2.81⅞ yesterday. The forward rates, likewise, advanced, from $2.80⅛—2.80¼—2 81 for three months and from $2.80-3/16—2.80-5/16 to $2.80-5/16—2.80-7/16 for six months.

LINSEED EASY

(Messrs. A. Bradley & Co.)

CALCUTTA, 10th August

The linseed market has shown an easier tendency and values are, on the whole, slightly lower, whilst the undertone of the market is dull. Owing to restrictions in the movement of supplies from upcountry, arrivals to this centre have been very poor and stocks are exceedingly scarce. Sellers, as well as buyers, appear to be somewhat reserved and business has been reported on a very small scale during the week. The oil section has been dull. Absence of enquiries has had its effect on prices and trading has been very scarce. Latest quotations are Ready Rs. 22-4 and August-September Rs. 22 per maund.

BULLION STEADY

(From Our Own Correspondent)

BOMBAY, 12th August

Trading on the Bullion Exchange during the week under review centred round forward silver. There was a mild revival of a bullish fervour in this section. This gave the market a steady undertone. Ready silver was relatively dormant, but the strength of the forward section lifted up the prices. In the absence of any special factors to influence trading in gold, the yellow metal was steady in sympathy with silver and moved within narrow limits. On balance, silver (forward) gained Re. 1-9 per 100 tolas and gold (forward) Re. 1 per tola.

The encouraging advices from upcountry centres where demand for ready silver was improving and the favourable monsoon encouraged the bulls to make some sizable purchases. This forced the bears to cover their short sales.

Silver for forward delivery (26th August settlement) opened at Rs. 151-15 and moved listlessly between Rs. 152-8 and Rs. 151-13 early in the week. From Saturday onwards, however, there was a revival of confidence and prices edged forward to Rs. 154-1 on Monday. The higher level attracted some profit-taking, paring down the values to Rs. 153-5 yesterday. To-day, again, there was a spurt to Rs. 154-6, before reacting to close at Rs. 153-10.

Opening at Rs. 152-15, ready silver (.996 mint) moved ahead to Rs. 154-11. After receding to Rs. 153-13 yesterday, it revived to touch Rs. 154-14, but wound up the week at Rs. 154-2. Though the rates for ready delivery show a rise, there was a sizable fall in the premium it commanded over the forward from Re. 1 at the close of the previous week to As. 8, reflecting the strength of forward silver. The floating stocks of silver are estimated at 1,500 bars. The daily average offtake was 10 to 15 bars.

Gold for forward delivery (25th August settlement) began the week at Rs. 85-15 and covered fresh ground to touch Rs. 87-3 on Monday. Later, after a momentary setback to Rs. 86-12, it gained strength to Rs. 87-6, only to react to Rs. 86-15 at the close on reports of a slight increase in arrivals.

Ready gold touched a high of Rs. 88-3 to-day before finishing at Rs. 87-11, as against last week's closing of Rs. 87-5. The floating stocks of gold are estimated at 20,000 tolas. The daily average arrivals were 4,000 tolas, whereas the offtake was slightly lower at 3,000 tolas on an average.

The following comparative table shows the trend of the market during the week under review:

	12-8-53	Highest	Lowest	5-8-53
GOLD	Rs. a.	Rs. a.	Rs. a.	Rs. a.
Ready (.99 fine Mint)	87 11	88 3	87 0	87 5

BLACK LEAF TEAS FIRM

(Messrs. Forbes, Ewart and Figgis Ltd.)

COCHIN, 7th August

The offerings in sale No. 16 which was held on Tuesday, 4th August, amounted to approximately 15,50,000 lbs. From the outset there was a strong general demand for all types. Common and low medium descriptions were well supported at rates which were often slightly dearer. Bright liquoring low medium and medium brokens were keenly sought after and advanced by As. 1 to As. 2 per lb. High-grown teas sold at rates which were fully firm and occasionally dearer. The strongest feature of the sale were all black leaf teas, particularly fannings and teas with style. These types must be quoted As. 2 to As. 3 dearer. There was a slightly easier tendency for whole leaf grades. The following were the quotations:—

	1953 Rs. a. p.
Low-grown Travancore B.O.P. ...	1 10 0
Medium Travancore B.O.P. ...	1 11 0 to 1 12 0
Anaimallais B.O.P.	1 12 0
Best liquoring Nilgiri B.O.P.	2 4 0
Clean black leaf O.P.	2 2 0

London Market.—No sale this week.

Colombo Market.—Low-growns five cents lower. All others active demand. Mediums advanced eight cents; high-growns 15 cents; limited selection flavoury UVAS 50 cents to Re. 1 dearer.

Calcutta Market—Export.—Good general demand. Commons half to one anna dearer. Good liquoring Assams well supported. Weakest features thin liquoring brokens and fannings.

Dust.—Good general demand. Medium Assams and best C.T.C. dusts occasionally easier. Middle East types strongest feature. Darjeelings well supported.

Export Quota.—There was some activity at the beginning of the week and transactions were done at 20 pies. The market showed an easier tendency towards the end of the week and to-day's quotation is 19 pies sellers.

Forthcoming Auctions.—Sale No. 17 will be held on Tuesday, 18th August.

As we go to Press Messrs. Forbes, Ewart and Figgis, Ltd., wire as follows:—

"*Dust Sale P.*—1,70,000 lbs. Good general demand at easier rates for all, except good liquoring and clean black Middle East types, which were fully firm."

COTTON FIRM

(From Our Own Correspondent)

BOMBAY, 12th August

The situation in the forward cotton market has been undergoing radical changes every few days. It took a bullish swing after tenders amounted to only 9,400 bales on the second tendering day, followed by a stricter survey than anticipated. The bulls in the August contract, who had been frightened by the heavy tenders on the first delivery day, were heartened by large rejections and prospects of smaller tenders. The price jumped up by almost Rs. 40 to over Rs. 730 per candy. At this stage, however, the first official crop estimate and the comparatively fewer rejections from the second delivery brought about another change, though of a minor nature this time, with a drop of about Rs. 10 in the price. Since then, the price for August has been hovering round about Rs. 725 and it is now believed that the fluctuations in this flickering contract will be narrowed down during the next few remaining days of its life.

In a way, it is good that the market dealings in the August delivery have been more or less isolated and that they have ceased to exert the same influence on the February contract for the new crop which naturally engages more attention from the market, than before. The ruling sentiment, in spite of the general bull support forthcoming yesterday, is bearish, in view of several important factors. Though U.S. prices of cotton have ceased to influence the Indian market as they did at one time, the size of the crop in the U.S.A. and the general price level expected at New York cannot altogether be ruled out as a factor to be reckoned with, in deciding the price trend at Kalbadevi and other producing centres in the country.

But more than this, the optimistic estimates of the Indian crop itself had a more immediate effect on the market sentiment in Bombay, during the last week. The size of the Indian crop is now being placed at 38 to 40 lakhs bales. Reports from all up-country areas interested in cotton production so far, except South Gujerat, have been very encouraging. In Surat also, though the crop might have suffered owing to inundation during last week's heavy rainfall, it is not too late yet for resowing, where a greater part of the earlier sowings have been destroyed. It is a late ripening crop and even if sown up to the end of August, the Surti cotton has been known in the past to yield good results. There is, therefore, every reason for optimism with regard to the 1953-54 crop from the developments of the monsoon so far.

It is, however, the late rains which ultimately decide the yield. Subject to this proviso, there should be little room for any rapid advance in the forward market while a substantial recession in price cannot be ruled out completely. It may be recalled that last December's production was placed at a much lower quantity. The market began a little below Rs. 625. Once the halo cast by the August delivery prices is removed and the market settles down to normal trading on normal conditions, the price movement is likely to seek and even maintain a lower level during September.

In the spot market, things are generally quiet, in view of the preoccupation of important spot houses with the deliveries against the August contract. Mills also cannot be expected to be aggressive buyers in view of the assured position with regard to supplies from the coming season's crop. With regard to their more immediate requirements, they can rely on those who are taking fairly large deliveries of cotton in the forward market during this month with borrowed money. The volume of business is, therefore, low. Even the temporary demand for imported styles, which had materialised during the previous week, disappeared during the week under review. The quantity of Bengals available in the market being small, transactions in this variety also were fewer during the week, though as a result of this scarcity of stocks price showed some advance.

Cotton futures began the week with a buoyant note, under the influence of short-covering and bull support. The chief bullish factors were renewed expectation of lower tenders against the maturing (August) contract, reports of a further rejection of cotton lots in survey, and persistent demand in the spot section. The cumulative effort of these factors was an impressive rise in quotations, which continued to be in evidence till almost Monday. Yesterday, the buoyant note gave way to heavy selling pressure induced by reports of high issuance of tenders contrary to previous expectations. There was also the fear that the Textile Commissioner might take measures to check the unhealthy rise in prices. The result was a sharp break in values. To-day, however, cotton futures staged a marked recovery, thanks to speculative demand from prominent bulls and less offerings. The undertone of the market to-day was firm.

I.C.C. August contract improved from Rs. 694 to Rs. 731 on the 10th inst. and, after receding to Rs. 664-8 yesterday, recovered to finish at Rs. 723-8 to-day. The net gain over the week was to the extent of Rs. 29-8. I.C.C. February contract opened the week at Rs. 663-12 as against Rs. 658. It gradually rose to Rs. 667 on Saturday, but declined to Rs. 661 yesterday. After recovering to Rs. 667 to-day, it closed at Rs. 663-8. The spread between the August and February contracts, which was lowing was the trend of prices in the forward market during the week under review:

	Opening	High	Low	Closing
I.C.C. Feb. ...	(Rs.) 660	667	660	663
I.C.C. Aug. ...	(Rs.) 700	729	661	723

The following are the latest available quotations from the spot market: Bengal *Deshi* Rs. 600; Berar *jarilla* Rs. 760; Khandesh Rs. 850; Vijay Rs. 900; Oomra *Deshi* Rs. 700; Mogiai Rs. 700.

At Karachi, the Pakistan Government has lifted the ban on forward trading in cotton for the 1953-54 crop from the 8th inst. There has not been much time to gauge the price trend in this market, as it was closed on Tuesday in protest against the week-end developments in Kashmir. The ruling rate on Monday for October-November delivery was Rs. 71 for R.G. cotton with a premium of Rs. 3 to Rs. 4 for the S.G. variety. The opening of the forward market in the new crop, however, had a slightly bearish effect on the spot market dealing in the 1952-53 crop, with prices slightly lower than those ruling a week ago. Pakistan has still a substantial quantity of the present crop to dispose of and till this is done, it is likely to hang like a dark shadow over the forward market. Now that the forward trading has begun enquiries from the U.K. which has always been interested in the N.T. styles is likely to materialise, provided the price range is competitive. During this season the U.K. purchased about 1,11,000 bales from Karachi both through the R.C.C. and private buyers and if the prices this year are more attractive, there is no reason why purchases from the U.K. should not be very much higher during the coming season.

The following are the latest available quotations from the Karachi market: Punjab *Deshi* Rs. 76; 4F Punjab R.G. Rs. 57½ to Rs. 58; S.G. Rs. 62½ to Rs. 63; L.S.S. Punjab R. G. Rs. 61½; S.G. Rs. 66½; N.T. R.G. Rs. 65; S.G. Rs.70; 289F Punjab R.G. Rs. 68; S.G. Rs. 73.

At Alexandria, the demand from several centres such as Germany, South America, France, India and even the U.K. has tended to increase business, which previously was on a smaller scale. This export demand, however, is confined more to higher grades of Ashmouni and Karnak. This has led to this cotton being quoted at a premium in the up-country centres over the prices fixed by the Egyptian Cotton Commission. Even though direct buying in these centres by shippers involves selling it nominally to the Government and buying it back with the additional increase in price involved in this transaction, there is a good deal of such trading going on at present, because shippers are able to secure selected styles for and offer early delivery to the customers abroad. In addition to these cash purchases, some barter transactions are also being negotiated.

At New York, it was to be expected that on the days preceding the first official forecast of the season's crop, the price trend would be irregular. The forecast which places the crop at 14,605,000 bales, which though lower than last year's production by 3.5 per cent., is considerably higher than what the market expected. The higher production compared to the drop in the acreage announced a month earlier is based on a better average yield of 291.7 lbs. per acre which is about 8 to 9 lbs. higher than that last year and about 20 lbs. higher than the average. This had naturally a slightly bearish effect on the market, though this was not very pronounced, inasmuch as the ruling prices were very close to the loan level. It is expected that substantial part of the crop will move into loan. Unless the export position during this year improves considerably the volume of new crop is bound to exercise a bearish influence on prices, especially as the demand for local consumption is not likely to move up appreciably. At the same time there is no room for a substantial fall in prices, because of the escape provided by the loan.

The following are the latest available quotations from New York, as compared with those of a week and a fortnight before:

(In cents per lb.)

	12-8-53	5-8-53	28-7-53
Spot	33.85	34.10	34.20
October	33.59	33.80	33.87
December	33.80	34.06	34.27
March	33.93	34.27	34.49
May	33.91	34.32	34.54

ART SILK YARN WEAK

(From Our Own Correspondent)

BOMBAY, 12th August

The sagging tendency that had developed in the art silk yarn market towards the close of last week was checked in the early sessions of the week under review. In fact, the market received good stimulus, on expectation that Italy's decision to raise art silk yarn prices might be followed by other Continental producers. The buying support that ensued as a consequence, coupled with short-covering, resulted in a substantial recovery in values of yarn. The recovery continued till yesterday, when there was a setback, on account of extremely bearish advices from the staple fibre yarn section, arrivals of imported yarn and absence of demand in the ready section, following the closure of several silk mills and handlooms using art silk yarn of 150 deniers and 120 deniers. Pressure was exercised by sellers and, buyers being hesitant to enter into fresh commitments, prices drifted downward. Reports regarding heavy stocks of cotton yarn and absence of satisfactory sales of cloth also accentuated the bearish feeling. The previous gains were erased and to-day's quotations were slightly lower as compared with the previous week. The undertone of the market is at present weak.

In the forward section, 150D August and September delivery contracts each opened the week on Monday, they both receded to Rs. 794 and Rs. 799, respectively, to-day. In the ready section, 120 Italy fluctuated between Rs. 4-4 and Rs. 4-3 before closing lower by an anna at Rs. 4-3. 120 Japan and 150 Japan, after gaining half an anna each to Rs. 4-3½ and Rs. 4-3 yesterday, reacted to finish at Rs. 4-2½. 150 Italy was fully steady at Rs. 4-4; to-day, however, it slided down to Rs. 4-3.

The sentiment of operators in the staple fibre yarn section, which had been depressed considerably last week, changed for the better during the first two sessions this week. This was due to support at lower levels. Consequently, prices tended to move up. The improvement continued till yesterday, although there was a break on Saturday. But to-day, again, the section turned distinctly bearish, on continued hammering by stockists. Three factors were responsible for this. First, the Bombay and South Indian mills were eager to reduce their excessive stocks which had increased due to higher production even at low levels. Secondly, demand from important consuming centres, particularly from the Punjab side, was slack. Finally, advices from commodity markets, especially cotton, were not encouraging. In view of all these factors, 2/40s staple fibre yarn September contract failed to elicit support and the quotation fell to Rs. 680, the lowest level touched since forward trading commenced on the 1st inst. Last week's quotation was Rs. 689.

The table below gives the prices of art silk yarn quoted to-day, as compared with those on the 5th inst. and 29th July, 1953:

	12-8-53 Rs. a.	5-8-53 Rs. a.	29-7-53 Rs. a.
150D July (per case of 200 lbs.) ..	—	805 0	805 0
150D August	794 0	798 0	806 0
150D September	799 0	798 0	—
120 Japan (per lb.)	4 2½	4 3	4 2½
150 Japan	4 2½	4 2½	4 2½
120 Italy	4 3	4 4	4 4
150 Italy	4 1½	4 0	4 0½

GROUNDNUTS DECLINE

(From Our Own Correspondent)

BOMBAY, 12th August

The notable event during the week under review was the decision of the Government of India, on the 7th inst., to allow import of cottonseed oil with immediate effect. It has also abolished the preferential rate of import duty of 31½ per cent. and reduced the standard rate from 43¾ per cent. to 5 per cent. *ad valorem*. Imports can be arranged from any country including the dollar area and licences issued for the purpose will be valid for shipment till 30th September. This development did not have any appreciable effect on the trend in the market. If the announcement had been made earlier, it might have had some effect. Actually, it has been made at a time when the new crop movement is imminent. In the next two months, groundnut new crop will have commenced moving into the market.

Caught in a tussle between the bulls and the bears, the groundnuts section ruled irregular. The linseed section, however, was easy, while the castorseeds section disclosed a steady trend. Operators in the castorseeds section continued to expect early announcement of free exports of castor oil. The cumulative effect of all this was that, while the groundnuts and linseed section disclosed perceptible losses, castorseeds put on minor gains, on balance.

Bull operators tried their best to keep prices in the groundnuts section, but they could not succeed. Bearish advices from Madras and Adoni, in the later half of the week, dampened the enthusiasm of the bulls. Bold ready which opened at Rs. 48-8, as against Rs. 49, end of last week, after shooting up to Rs. 50, declined to Rs. 48. December-January delivery, after improving from Rs. 33-8 to Rs. 34-2, eased to close at Rs. 33-6. But, August-September delivery gained As. 4 to Rs. 46-4. Khandesh quality, however, lost a similar amount to Rs. 49-12; the highest touched during the week was Rs. 50-8. Groundnut oil ready shot up from Rs. 26-8 to Rs. 27-4, while railway receipts were steady at Rs 26-8. September and October deliveries were unchanged at Rs. 24-8 and Rs. 21-8, respectively.

In the linseed section, Bold ready eased from Rs. 30-8 to Rs. 30-2. October-November and February-March deliveries were done at Rs. 29-8 and Rs. 27-4, as against Rs. 30 and Rs. 27-4, respectively. Linseed oil rallied As. 4 to Rs. 17-4.

In the castorseeds section, May delivery which opened at Rs. 133-8, as against Rs. 132, fluctuated between Rs. 138-8 and Rs. 131-12, before closing at Rs. 133-8. September delivery gained Rs. 2-14 to Rs. 150-6, the highest and the lowest touched during the week being Rs. 154 and Rs. 147-8. In the ready section, Madras quality lost As. 8 to Rs. 30-8, while F.A.Q. put on a similar amount to Rs. 29-12. Castor oil I Pressure changed hands at Rs. 17-10, as against Rs. 17-12 and Commercials Rs. 17, as compared with Rs. 17-2.

The Oil Merchants' Chamber, Bombay, has urged the Government of India to announce forthwith the export policy for castor oil. The export trade in castor oil, it may be noted, has been at a standstill since 1st August, the free export licensing period for castor oil having expired on 31st July, 1953.

The following table shows the prices of oilseeds and oil on the 12th inst., as compared with those at the end of the previous two weeks.

	12-8-53 Rs. a.	5-8-53 Rs. a.	29-7-53 Rs. a.

SUGAR FIRM

(From Our Own Correspondent)

BOMBAY, 12th August

According to a Press note issued by the Central Food Ministry yesterday, one lakh tons of sugar have been purchased by the Government of India and the whole of this quantity will reach the country before the end of September, 1953. This includes 10,000 tons from the U.K. and 30,000 tons each from Mexico, Java and Cuba. About 20,000 tons of this quantity are already on their way to India. It is proposed initially to dump the first consignment of imported sugar into the high price zones such as Bombay, Cochin, and Madras. The subsequent consignments will be diverted to Saurashtra and West Bengal. That is only as it should be, for prices in these latter States have not registered such a spectacular rise as those in Bombay, Cochin and Madras. It has been further decided to offer imported sugar first to State Governments for distribution through fair-price shops, co-operative societies and ration shops and only then to the trade at Rs. 30 per maund ex-docks.

It is clear, therefore, that the Bombay spot trade in sugar will now hesitate to go in for Kanpur sugar at the existing prices, as 10,000 tons of British refined sugar will be available here within four weeks. It is anybody's guess to make out as to what will happen to spot prices in the meanwhile, if no quota is released to the Bombay Deccan mills. The terms on which imported sugar will be offered to the trade are not known; nor does one know the quantity that will be taken up by the State Governments. In view of these uncertainties, it is too early to forecast how the trade and the millers will react to the sales policy of imported sugar as announced by the Food Ministry.

The forward section of the Bombay sugar market remained firm this week. *Shravan* delivery opened the week at Rs. 90 (buyers) and soon shot up to Rs. 90-12. It touched Rs. 91-6 on the 8th inst., the highest for the week. At this level, profit-taking set in and the price moved down to Rs. 90-8 on Monday. The loss, however, was fully recovered yesterday, when the quotation touched Rs. 91-6. But to-day, it was again lower at Rs. 90-10, as a result of the Government's announcement regarding sugar imports, as noted above. The Bombay Sugar Merchants' Association has tentatively decided to open the next forward contract for *Bhadrapad* delivery. It is anticipated that this contract will open Rs. 2 lower than *Shravan* delivery.

A firm trend prevailed in the spot section. Small grains are offered at Rs. 92-93 medium grains at Rs. 94-95 and large grains at Rs. 99-103. These compare with Rs. 92, Rs. 93-94 and Rs. 96-98, respectively, a week ago. This firmness is due, as mentioned by us last week, to poor stocks, negligible quota issued to the Bombay Deccan factories in the last release and commencement of post-monsoon demand. Another bullish factor has been the firm advices from Kanpur. The price of sugar in this centre is Rs. 29-8 per maund of medium grain, a rate which the landed cost in Bombay works out to Rs. 91 per cent. But Kanpur dealers are nervous to send unsold parcels to Bombay, because it takes two to three weeks for sugar to reach this city, by which time the position may change against them, especially as imported sugar is likely to arrive here by the middle of September. They, therefore, prefer to despatch the sugar into the interior. The present trend of the spot market is likely to continue until imported sugar is available for actual delivery in Bombay.

Arrivals of sugar into Bombay during the period 6th to 12th inst. amounted to 6,800 bags. Offtake continues to be normal. Stocks with the spot trade are estimated at 12,000 bags, which exclude 5,000 bags of wet sugar.

NARROW FLUCTUATIONS IN JUTE GOODS PRICES

(From Our Own Correspondent)

CALCUTTA, 11th August

Prices of jute goods fluctuated narrowly during the week and there were no gains in hessian on balance. Speculators could not derive enthusiasm, as overseas enquiries for hessian were far from adequate. Shipper business was also poor, but this was not surprising, as, usually, every month commences that way. Holders of hessian were comforted by the publication of the stock figures of mills, according to which hessian held by them as at the end of July, 1953, fell by 900 tons to 45,600 tons. No doubt, this fall is below earlier expectations; that was why there was no price reaction on account of this factor. The recent abolition of the export duty on jute specialities is yet to be fully felt by the trade. The shippers have sought clarification of the Government's announcement in this regard. Among the constructions termed as jute specialities, paper-lined hessian has a good export market. But shippers, who attempted to export paper-lined hessian, on the belief that no duty would be levied, were told by the Calcutta customs authorities that this construction would be taken as cloth and that sacking and hessian cloth and bags would continue to be subjected to the export duty.

Lacking in business and in enquiries from foreign countries, 40" 10 oz. hessian opened quiet at Rs. 45-14 last Wednesday, as against an overnight rate of Rs. 46-14. At this low rate, mills were disinterested and the quotation advanced to Rs. 46. However, the week-end saw the price again at Rs. 45-14, but activity yesterday was enlivened by some enquiries. The quotation was steady at Rs. 46-8 and at Rs. 54-15 f.o.b. Eight oz. 40" was offered at Rs. 36-14 and at Rs. 43-10 f.o.b.

Trade circles have expressed the firm opinion that, if only the Government of India were to reduce further, if not abolish, the export duties on hessian and sacking, the mills would be encouraged to increase production, capture new markets for Indian goods, and export more to the dollar countries, thereby earning the valuable foreign exchange from that area. Such a step on the part of the Government would no doubt mean loss of considerable revenue to the exchequer, but the Indian industry would be placed on an equal footing with manufacturers abroad and any increased profits, which it could make, could be used for re-equipping mills with modern machinery which

STOCK & SHARE QUOTATIONS

Abbreviations:—D=Deffered shares. G=Guaranteed shares. P=Preference shares. P.O.=Preferred Ordinary shares. R=Rebate shares. Y=Accounts published yearly. H=Accounts published Half-yearly. Q=Accounts publish since 15 months T=Company has Debentures. R.L.=Reserve Liability on shares. N=Nominal Quotation. I=Interim Dividend. F=Dividend for first half-year, y=Dividend for the year. x=Ex. Dividend c.d.=Cum. Dividend

Shares:—If a company has different classes of share—as, for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under "Paid-up Per Share."

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12 indicate the months of June and December, respectively. "Reserves includes general and other reserves and all other funds which a company may have as also depreciation on block items, when this is charged to separate account "Block" represents actual cost of land, buildings, machinery and all suc other items on which depreciation is allowed, less sales, if any, and stands for the gross figure except where otherwise indicated.

Dividends:—Dividends for completed years are calculated at per cent. per annum, but, where quoted for portion of a year, they represent percentages of the dividend on the paid-up share value. For companies closing the book half-yearly in the first three months of the year, and for companies closing their books yearly during the first half of the year dividends are shown as for the previous year.

* The following explanatory notes relate to the abbreviations and marks shown on page 336 in the debentures section:—

$$ Option to repay on six months' notice, on any interest date after 31st December, 1951, at 102 per cent. Also redeemable out of a cumulative sinking fund of 1½ per cent. per annum (commencing in 1938) by drawings at 102 per cent. or by purchase at or 102 per cent.

(a) Option of repayment at any time at 5 per cent. premium.

(b) Bearer bonds of Rs. 1,000 each repayable at par.

(c) Bearer bonds of Rs. 1,000 each repayable on 31st July, 1959.

(d) Bearer bonds of Rs. 1,000 each with option of redemption in whole or in part at par on 30th June, 1952 or on any subsequent interest date at one month's notice.

(e) Returnable on or after 31st July, 1950, at Rs. 103-8 or at par after 31st July, 1955 on six months' notice in each case.

(f) Bearer bonds of Rs. 1,000 each with option of redeeming on 3 months' notice at ½ per cent. premium after 1st March, 1954, but before 1st March, 1957 and 1 per cent. premium on or after 1st March, 1957.

(h) Option of redemption on or after 1st July, 1949, at par.

(i) Option of repayment at any time(s) par at any time on or after 30th June 1947 on six months' notice.

MARKET REPORTS

(Concluded from page 325)

could make production cheaper. There is plenty of raw jute available, but mills are only working restricted hours. And this is in spite of the increasing nature of demand in world markets, as substitutes are, by and large, being displaced. Despite the trade demand, it is doubtful if the Government would consider the matter now, as it would like to wait for the Jute Commission's scientific study of the industry and the trade problems. The Commission has been given four months' time to submit its report and it is felt that this time could be reduced, as jute is one of the industries which does not lack up-to-date statistical information.

Although stocks of sacking goods during July, 1953, increased to 89,300 tons from 85,700 tons, the sacking market ruled better than hessian. Good business was reported in the export market later in the week, and speculators were active yesterday. Earlier, there were enquiries from East and West Africa, and B. twills opened at Rs. 102 last Wednesday. Good business was done with West Africa on Saturday, when B. twills was held firm at Rs. 102-6. The rate spurted to Rs. 104-4 yesterday, on speculative efforts to push up the price, the October-December position being as high as Rs. 106 as against the rate of Rs. 102-10 last Wednesday.

The raw jute market was steady and sellers of the new crop were extremely reserved. Arrivals of new crop in local bazars were small. Latest estimates of the crop, both in India and Pakistan, allay earlier fears of a restricted supply this season. Both the crops would give a total of 7 million bales, to which the carry-over in both the countries should be added to arrive at the total availability this season. Mills are, therefore, in no hurry to rush to the market to buy for replenishing their raw material stocks. Quotations were almost unchanged. Thus, Indian northern middles old crop were offered at Rs. 31 and bottoms at Rs. 28, the respective new crop being quoted at Rs. 32-8 and Rs. 29-8. Assam Upper new middles and bottoms were quoted at Rs. 32 and Rs. 29, respectively, and the old crop at Rs. 30 and Rs. 27. Other latest quotations are: Assam lower middles and bottoms old Rs. 31 and Rs. 28 and new crop Rs. 32-8 and Rs. 29-8; Orissa middles and bottoms old Rs. 31 and Rs. 28 and new crop Rs. 32-8 and Rs. 29-8; jungli bottoms old Rs. 23-8, U.P. middles and bottoms old Rs. 26-8 and Rs. 23-8, Bihar *mesta* bottoms Rs. 22 and *bimli* f.a.q. Rs. 23-8.

DEPRESSED SELLING IN PEPPER

(Messrs. Parekh & Co.)

BOMBAY, 12th *August*

The pepper market during the week under review turned easy, owing to distressed selling by Banks and by some of the Tellicherry and Alleppey dealers on account and at the risk of a Cochin exporter, who is reported to have stopped payment, and in sympathy with New York where prices are declining almost daily under pressure of sales by Sarawak and Singapore. Sarwak black is reported to have been sold for August shipment at as low as $0.74 per lb. c. & f. New York. Small business for Malabar black for August and September shipments was also said to have been done at $1.00 and $0.92 per lb. c. & f. New York, respectively. The recent muddle in delivery business at Cochin seems to have affected some of the growers and they are anxious to sell at round about Rs. 2,300, but no business is reported, as exporters are expecting further recession in prices, in view of the present poor demand from overseas. Yet, a majority among growers are expecting early revival in demand, particularly from New York, for August and September shipments in view of the approaching Autumn and the tight position of the spot stock there, because the shipments from India generally reach New York earlier by about 30 days than those from Sarawak or Singapore or Djakarta. Growers in primary centres are expecting some demand from Russia too within a couple of months with whom the Indian Government is reported negotiating barter business against the purchase of wheat.

The opinion among the trade as to the possible reduction in export duty on pepper is divided. One section is expecting an announcement by the Indian Government during the beginning of September, while the other opines that, as the price has now gone down below Rs. 500 per cwt., the Government might watch the situation for some time, because the export duty is leviable *ad valorem* at the present rate which is round about Rs. 400. The exportable surplus in the hands of growers is estimated at 5,000 tons. This is not considered to be too heavy by the growers.

In ASTA section, several lots for August shipment are reported to have changed hands at prices ranging from $1.00 to $1.03 and for September shipment from $0.98 down to $0.93. There was some reactionary improvement, but it did not last long, as there was no support from New York and because of hammering down by bears. The prices in monthly delivery are comparatively steady, in anticipation of an early reduction in export duty.

To-day's nominal quotations are: Ready delivery Rs. 280-300 per cwt.; August Rs. 1,915-45; and September deliveries Rs. 1,790-1,820 per candy of 5½ cwts.

STRONG DEMAND IN TEA AUCTIONS

(From Our Own Correspondent)

CALCUTTA, 11th *August*

Strong demand characterised the export auction held yesterday, when offerings aggregated 49,500 chests. The best feature was whole leaf grades, among which stylish O.Ps. and clean black pekoes were higher by one anna and half anna, respectively. Despite an insignificant decline in quality, best liquoring Assams were in good demand. The quantity on offer was, however, lower, and that was why demand did not suffer. Competition was offered to good medium Assam B.O.Ps. The market was not devoid of its weak spot which was provided by mediums and low mediums, prices of which were easy. Darjeelings were in moderate demand. The rates were: best C.T.C. Assam B.P. Rs. 2-8 to Rs. 2-10, medium Assam B.P. Re. 1-12-6, clean black pekoe Re. 1-14, and clean common B.P. Re. 1-11-3.

Teas suitable for export, i.e., bright liquoring Dooars and clean black leafy varieties, were the special favourites of buyers during last Tuesday's auctions for dusts. Offerings amounted to 11,527 packages. Medium Assams and commons were steady. Moderate attention was shown to Darjeelings, the flavoury small grainy sorts obtaining high prices. On the other hand, poor demand caused prices of best Assam C.T.C. sorts to fall by two annas. Rates were: best Assam C.T.Cs. Rs. 2-4 to Rs. 2-5, medium Assam grainy dusts Re. 1-10-6, and medium Dooars Re. 1-9-6. Leaf grades offered amounted to 641 chests, and were a steady market.

SUGAR FULLY STEADY

(From Our Own Correspondent)

HAPUR, 11th *August*

Crystal sugar markets throughout India, particularly in Western India, remained very steady, although there was no further advance in prices. Offtake was moderate, due to rains. Both stockists and sugar mills do not seem anxious to sell as they were building good hopes of the emergence of heavy post-monsoon demand when they hope to get a definitely higher price for their hoards. The release of a further free sale sugar quota of one lakh tons has not produced any appreciable bearish reaction. Calcutta, Bombay and Madras ports are particularly steady, due to low stock position.

The latest mill delivery quotations in the local market are: Jaswant Rs. 29-8, Simbhauli Rs. 29-8, Daurala Rs. 30-8, Mansoorpur Rs. 30 to Rs. 30-8, Amroha Rs. 29-4, Bijnor Rs. 29-4, Sehora Rs. 29-6. Free market quotations are: Delhi Rs. 31 to Rs. 32-8, Agra Rs. 30-8, Hapur Rs. 32-8, Ludhiana Rs. 30-4 to Rs. 31-4, Mogha Rs. 32 and Meerut Rs. 29-8 to Rs. 31-8.

The *gur* markets remained quiet to steady with no particular change, either in the technical or in the statistical positions. There were no arrivals from the producing centres in west U.P., while there was continued demand from Madras side. There were active despatches from the local station. Gur markets in the South reported steadier conditions, with declining arrivals due to rains. New crop *gur* arrivals at Baramati were curtailed and a part of the Gujrat enquiry, which had tended to be diverted to Baramati, has now been retrieved. *Gur* stocks in the main exporting *mandies* in west U.P. are small. The standing sugarcane crop in west U.P. districts again threatens to be as bad at it was last year. The latest *gur* quotations are: Delhi Rs. 21-8 to Rs. 22-8; Agra Rs. 20; Hapur: dry Rs. 20-8 and wet Rs. 18-8; Ludhiana: *desi* Rs. 17-8 to Rs. 17-12; *pansera* Rs. 19-4; *mogha desi* Rs. 22 to Rs. 23 and *khurpapar* Rs. 18-8 to Rs. 22-8; Meerut; *khurpapar* Rs. 20-12 and *pansera* Rs. 19.

SLIGHT FALL IN COARSE GRAIN PRICES

(From Our Own Correspondent)

HAPUR, 11th *August*

The Indian Food Minister and his Deputy reviewed the food situation in the country in all its aspects in the House of the People this week. It is indicated that the Government of India has advised all the States, except Delhi, to remove control on wheat and that Governments of nine States have already accepted that advice. The question of any further relaxation in the existing controls on rice is to be considered after an estimate is made of the condition of the rice crop of 1953-54, it is added.

Foodgrain markets in U.P. remained quiet to steady during the week under review. The damage caused to the crops of maize, *bajra*, *juar* and paddy in east U.P. districts raise apprehensions that scarcity pockets may again be formed this year. The State Government has taken prompt action in hurrying foodgrains stocks to the affected districts of Ghazipur, Balia, Gorakhpur, Benares, Azamgarh, Mirzapur, Basti and J

BOMBAY GOVERNMENT IGNORES CONSUMERS' INTEREST

PRESS forecasts that the Bombay Government intended to transform its multi-point sales tax structure into a two-point structure have proved correct, for the Bombay Sales Tax (Amendment) Bill, published this week, has precisely this aim in view. The Bill seeks to introduce a two-point levy of sales tax—3 pies in the rupee at the first stage and 6 pies in the rupee at the last stage—in place of the present 3 pies levy on every sale. The system, which the Bill replaces, has been opposed on the ground that it interferes with the performance of the intermediaries' function, and also on the ground that it imposes a serious strain on the consumers. The existing system has been rightly criticised on the score that it ignores the provisions of the Central Act, the Essential Goods (Declaration and Regulation of Tax on Sale or Purchase) Act, 1952. This Act declares a great many articles, including cereals, edible oils, raw cotton, iron and steel, and antibiotics, as "essential for the life of the community," and that no law made by any State legislature imposing a tax on their sale or purchase, after the commencement of the Act, shall have effect, unless it has received the consent of the President. The Bombay Government's new Bill seeks to amend the existing Act, with a view to making it conform to the Central Act.

The new system will certainly reinstate the position of intermediaries, in that, apart from the first and the last stages in a series of trade transactions, no other sale or purchase attracts tax. But the position of consumers, especially that section of the consumers who buy directly from producers or importers, has been rendered more difficult under the new system, since such direct purchases will be charged at the rate of 9 pies in the rupee in contrast to the 3 pies in the rupee under the existing system of multi-point levy. In other words, the consumer gets no special benefit in buying direct from the original source of supply and he may, therefore, as well buy through trade channels. Thus, the place of intermediaries is doubly assured. The Government's claim that the Bill aims at conformity with the Central Act is not fully substantiated, for no attempt has been made to incorporate, in entirety, the goods declared essential for the community in the list of goods exempted from tax. Surely, the Bombay Government could have given a lead to other State Governments by amending the Sales Tax Act in such a way as to exempt all the articles declared as "essential" goods by Parliament. Raw cotton, for instance, continues to be taxed at one per cent., and so also edible oils (except the *ghani*-made oils) at the rate of 3 pies in the rupee.

Under the Bill, at least four different types of taxes are envisaged, namely, "general sales tax," "sales tax," "special goods sales tax" and "purchase tax." A "general sales tax" at the rate of 6 pies in the rupee will be levied at the last stage of sale by a registered dealer, except on goods which have been declared tax-free. The rate at this stage will, however, be ½ per cent. in the case of bullion and specie, 1 per cent. in the case of raw cotton and cotton-seeds and 3 pies in the case of oilseeds, and hides and skins. A "sales tax" at the rate of 3 pies in the rupee will be levied at the first stage of sale, that is, on the sale of such goods as have not been purchased from a registered dealer in the Bombay State. All intermediate sales will be exempt from either of the two taxes, provided, of course, the purchaser produces a certificate to the effect that he needs the goods for manufacture or resale. If the first and the last stages coincide, as they will, when a manufacturer or an importer sells direct to a consumer (or to an unlicensed dealer), both the general sales tax of 6 pies and the sales tax of 3 pies in the rupee will be levied. A "special goods sales tax" at specified rates will be imposed on certain goods, such as bicycles, cement, cigarettes, *vanaspathi*, motor vehicles and typewriters, certain kinds of textile fabrics, on which rates ranging from 3 pies to 12 pies in the rupee have been imposed, in addition to the "sales tax" of 3 pies in the rupee. If goods are purchased by any registered dealer from an unregistered dealer and if no further sale of these goods occurs, such a purchaser will be liable to pay a "purchase tax" at the same rate as "sales tax," namely, 3 pies in the rupee.

The Bill envisages a five-fold classification of goods. Schedule A goods are goods exempted from sales tax; cereals, *ghani*-manufactured edible oils and *gur*, for instance, belong to the group. Schedule B goods are bullion and specie (one-half per cent. tax), raw cotton and cotton-seeds (one per cent.), and hides and skins and oilseeds (3 pies in the rupee) on which the tax at rates indicated in parentheses are applicable only at the last stage but subject to certain conditions. Schedule C goods—non-*ghani* edible oils, iron and steel, among others, belong to this group—are not subject to sales tax, albeit under certain conditions, but they are subject to general sales tax. Goods under Schedule D, such as art silk yarn, coal and matches, are unconditionally exempt from "general sales tax." The "special goods sales tax" apply to the Schedule E list, which includes bicycles, cement, clocks and others. All dealers whose turnover, sales or purchases exceeds Rs. 15,000 will be liable to pay the tax or taxes under the new system. Under the existing Act, this limit is Rs. 30,000. For the purpose of making purchases of goods required for the purpose of resale, or for sale in the manufacture or processing of any goods for sale without having to pay "general sales tax," those dealers whose turnover of sales exceeds Rs. 50,000 will be granted the necessary licences.

Such, in broad outline, are the features of the new Bill. It is difficult to resist the conclusion that the Bombay Government, in its anxiety to placate the intermediaries, has left the consumer high and dry. Not only will the consumer, who can now buy his requirements direct from the importer or the manufacturer by paying a tax of only 3 pies in the rupee, have to bear a larger burden of 9 pies in the rupee, but the fact that the intermediaries can function more freely under the new system will add to the ultimate burden on the consumer. Again, the position of consumers who buy from unlicensed dealers is, of course, even worse, considering that such dealers will have to pay 9 pies in the rupee to the manufacturer

and also charge an additional 6 pies from the consumer, making in all a total burden of As. 1¼ for the consumer. True to its statement of objects and reasons, the Amendment Bill seeks to give relief to trade without "affecting anticipated revenue," and, to this end, it is the consumer that has been sacrificed. It is doubtful whether the system can function very satisfacorily at all under a state of economic affairs in which the buyers are coming into their own. It must, however, be conceded that the manufacturers and processors have been treated with a certain consideration, in that their purchases are accorded the same status as those of intermediaries and are exempt from the "general sales tax" as well as the "sales tax."

A tax law which affects a very large number of medium-sized shopkeepers should be simple, and easy of interpretation, application and administration. But the Bill under reference is too complicated to be readily understood by the common trader. In fact, even trained lawyers will find it difficult to go through its labyrinthine clauses. It divides the men engaged in trade, commerce and industry into several groups, such as licensed dealers, manufacturers, unlicensed dealers and so on—many of these groups may, in actual practice, overlap—and the tax itself into several varieties, such as "general sales tax," "sales tax," "special sales tax" and "purchase tax." That is not all. Before a transaction takes place, the seller has to equip himself with the knowledge of the kind of buyer with whom he is dealing. If the buyer is entitled to tax-free purchase, the seller has to keep the necessary documentary evidence relating to the exemption of tax until such time as he is assessed for tax, maybe for three years or even more. The task of the administration of the new system will be even more onerous than the present system. In one sense, it will be a fruitless task, considering that the intermediaries' books may also have to be examined, though the search may yield little or no revenue. Perhaps, the Government will do well—if it must stick to the new system—to publish a pamphlet that explains the working of the system in a language that the petty traders will understand, and also the full text of the amended Act.

The new system is, in effect, a compromise between the multi-point sales levy and the single-point levy. But it is a compromise which seems to involve the evils of both systems without the virtues of either. With its bewildering complexity of division of traders and of taxes, the new system might conceivably create as many loopholes for evasion as did the single-point system. On the other hand, it will press as heavily on the consumer as the multi-point system; in fact, it does so more heavily, as we have shown. Surely the price which the State Government has to pay for the compromise is too heavy a price. And it is not clear whether the people will consent to pay it. We would not be surprised if the Government were to find it difficult to convince all the members of the legislature.

Whatever the Assembly may do, there is no getting away from the fact that the consumer gets a raw deal. This would be wrong at any time. But it is definitely so at present when trading conditions are once again tending to be difficult. All markets are developing a buyers' consciousness. Buyers' resistance is everywhere in evidence. And a tax, which must help stiffen that resistance, is hardly calculated to bring fresh revenue in any large measure, or bring it without grave injury to living standards. These are not vague fears. There is no need to "cry wolf," for the wolf is already at the door. Textile mills are already contemplating a downward revision of prices. Many other industries are complaining of lack of orders. True, the trend is not yet reflected in production figures. But, if the growing unemployment is any guide and the reluctance of industrial and trading units to expand their activities is any indication, the men engaged in trade and industry are becoming aware of the difficulties ahead. This is not an entirely bad sign either, for the real test of efficiency and progress is a buyers' market. But the point is whether it is the right time for this premier commercial and industrial State to indulge in fiscal experimentation of doubtful utility.

In the light of all that has been stated above, it appears to us that the Government would, even now, do well to pause and reconsider the entire issue. We are aware that much consideration has gone into the Bill already. Judging from the result, all this has been in vain. A smaller State than Bombay, a State with less country-wide and international connections may indulge, in disregard of consequences, in new fiscal experiments. But this State can hardly do that. At any rate, it should not. This is what makes us urge a fresh examination of the whole problem. Perhaps, such examination—especially if all relevant material about tax systems in other States in India and overseas countries were collected—will reveal a simpler and more effective system—may be, a straight turnover tax at a small rate—that will be easy to administer.

HANDLOOM INDUSTRY

IT is now more than seven months since certain major fields of textile production, such as *dhotis* and *saris*, were reserved for the handloom industry. If the findings of the All-India Handloom Board, which concluded its two-day session in Bombay last week, are any indication, this measure does not seem to have helped the handloom industry to any significant extent. The Board openly admits that there are large accumulations of unsold stocks of handloom goods all over the country and that the weavers are still faced with distress conditions. The Board, unfortunately, does not say why this state of affairs still persists, in spite of the restriction placed on mill production of *dhotis* and *saris* and a few other varieties. Ordinarily, this measure should have eased the stock position of handloom goods. Apparently, the present unsatisfactory state of affairs must be due either to the high cost of handloom products or to an increase in production or to both. The Handloom Board, however, is not prepared to face this fact. Instead, it has appealed to the Central Government "to consider the feasibility of reserving further fields of production for the handloom industry," pending the report of the Cotton Textile Enquiry Committee. The Centre, it is to be earnestly hoped, will not rush to comply with this request, because the consequences will be too serious for consumers, without, at the same time, giving any worthwhile relief to handloom weavers.

The 40 per cent. restriction on production of *dhotis*, which became effective in January last, has already made the position uncomfortable for consumers, as well as for some of the mills. The fall in output of *dhotis* has been more than 40 per cent., since the base-year (1951-52) selected by the authorities for applying this restriction was one in which the *dhoti* output was not large, as in that year, quite a large number of mills was busily engaged in fulfilling their export commitments. Consequently, the prices of *dhotis* have gone up sharply, the percentage of rise varying between 20 and 30. Thus, the handloom industry had the advantage not only of a substantial fall in the supply of mill *dhotis* but also of a marked rise in the prices of such *dhotis*. Besides, it had also the advantage of restriction on the manufacture of *saris* and a few other items by mills. All this, however, has not been of much assistance to the handlooms. So far as the mills are concerned, the restrictions have adversely affected a number of them, especially in West Bengal and Orissa. It is true that not much has been heard in the Press of their plight, but that is because they have been silently pleading with the Government for exemption. In case their plea fails, they will be faced with the alternative of a closure. In other centres, mills have switched over to other varieties of cloth, with the result that the supply of these varieties has gone up. It looks as though, ere long, there will be keen competition among the mills themselves, the impact of which is bound to be felt by the handloom weavers also. It is a proven fact that the prosperity of the handloom industry is closely linked to that of the mill industry; if the latter suffers, the former too will suffer. Thus, the restrictive measures imposed on the mill industry may well have a boomerang effect on the handloom industry itself in the not distant future.

Those who profess to serve the handloom industry do not hesitate to throw the blame on the mill industry for the travails of the handlooms. They argue that the competition from mills has gone up. By stepping up their production to record high levels, the mills, they contend, have stolen the markets of handloom weavers. They, therefore, want a further restriction on the output of mills. They do not pay any thought to consumers, who need the cheaper mill-made *dhotis* and *saris*. They will not be satisfied, unless the entire mill industry is closed down, for it is only then that consumers will have no choice but to buy handloom goods. That, of course, will be one way of providing employment for the teeming millions of the country. If the task before the Government is only to provide jobs for all, the easiest course will be to banish all machines, including the iron and steel plants, cars, railways, aeroplanes, etc. But that will not be economic progress; it will mean denying the people the benefits of science and condemning them to perpetual poverty.

As we have repeatedly pointed out, reservation of markets for handlooms at the expense of more economic units is not the way to raise the standard of living of weavers. The correct way will be to find out the root causes of their economic difficulties and evolve suitable measures to remove them. In the first place, it must be recognised that, ever since the outbreak of war, there has been a marked increase in the number of handlooms which are admittedly uneconomic means of production. According to the Fact Finding Committee, in 1940, there were in the whole of undivided India 2,193,262 handlooms of which 1,755,070 were active. By 1951, the number of active handlooms in the Indian Union alone had risen by over a million to 2,860,904. There has thus been an uncontrolled and unprecedented expansion in the size of the handloom industry, a trend which is still continuing. Secondly, the handlooms, by their very nature, cannot cater to the needs of the masses economically. The people need cheap, durable cloth which the mills alone can supply, because they can mass-produce such cloth. It will, therefore, be clearly wrong to ask the handlooms to produce the cloth needed by the masses. The real market for handlooms consists of those varieties which are not suited to mass production, that is, high quality cloth, with special designs requiring artistic touch and individual attention. The handloom weaver is a more skilled worker than his confrere in a mill; he is more an artist than a factory worker. By producing several varieties of high quality utility and fancy goods, he can cater to the tastes and needs of those who are in a position to pay a price that will ensure him a decent standard of living.

It may be argued that, in India, the market for these types of cloth is very limited and that it cannot, therefore, sustain all the handloom weavers. There is, of course, some truth in this, but the market for such goods, in our view, is not so small as all that. Then, there are good chances of developing lucrative export markets for these goods. In countries like the U.S., Canada, Australia and Western Europe, where the *per capita* national income is high, there are people who would like to buy the fancy goods and such utility cloth as coloured sheets, curtain materials, etc., produced by Indian handlooms. These markets, however, cannot be had for the mere asking. They will have to be developed by diligent market research and by producing superior quality goods. It is here that the Handloom Board can do real service to weavers. The Board must make arrangements for ensuring a steady supply of high quality yarn and other stores to weavers, for supplying them with the designs of cloth for which market research indicates profitable outlets and for seeing that such cloth is well produced, finished and packed. In fact, there is quite a lot that the Handloom Board can and must do to assist the weavers in the matter of production and marketing. It is gratifying to find that, at its last meeting in Bombay, the Board devoted considerable attention to these problems and recommended to the Government certain constructive proposals for stimulating the sale of handloom cloth. But these proposals will have no sustained effect on the industry, so long as the Board does not view the industry's problems in their correct perspective and fails to recognise its right place in the textile industry.

We are not so unrealistic as to suggest that, by the mere adoption of the aforesaid methods, sufficient work can be found for all the workers now engaged in handloom weaving at a level which will assure them a decent wage. As mentioned earlier, the handloom industry is overmanned. It cannot sustain such a large number of workers as anything between 2½ and 3 million and their dependants. This is an unpleasant fact that must be squarely faced. There must be not only a check on any further expansion of handlooms, but also a reduction in their existing number. Ways and means must be found for absorbing the surplus labour now leading a precarious life on handlooms. One obvious solution is to get on with the implementation of big projects of irrigation, power development and large-scale industrialisation, projects designed to raise the wealth of this country. The difficulty of solving the problem in this way is not minimised, but that is no excuse for resorting to dubious methods which, in course of time, will give rise to even more difficult problems to be solved.

HESITANT FEELING IN SHARE MARKETS

OUTLOOK FOR COTTON—RUSSIA'S CONCERN FOR CONSUMERS—STEEL INDUSTRY IN U.K.

THURSDAY, 5 P.M.

THE undertone of the share market is a little quieter than a week ago, thanks to a number of uncertainties. The labour situation in Burnpur, the Works centre of the Indian Iron and Steel Co., Ltd., has deteriorated. The hope that the active interest taken by the Central Government in the settlement of the dispute will yield quick results has not so far materialised. Instead, the chances of an early settlement have been rendered slender by the workers' union serving a notice of strike on the Company. There are also reports that the management of the Company is making a move to declare a lockout. Following these developments, Indian Irons have declined to Rs. 22-8, as against Rs. 23-4 a week ago; in the kerb trading to-day, they were quoted as low as Rs. 22-5. With this leading counter thus sinking to a low level, the whole share market, both in Calcutta and here, looks rather depressed.

MARKET GOSSIP

• • • •

Among the other factors that have led to a feeling of hesitancy among the operators, mention may be made of Estate Duty and the obscure outlook for some of the major industries. Rumours regarding the rates of the Estate Duty are still of a bearish nature. The fall in exports of coal, the failure of expectations of large export orders for jute goods and reports of growing competition among the cotton mills to dispose of their cloth have induced a feeling of caution among the operators. In fact, there has been some bull liquidation in the leading cotton mill shares for the past two days.

• • • •

The only prominent scrips to report a gain over the week are Tata Deferreds and Tata Ordinaries. Indeed, after plunging to as low a level as Rs. 1,933-12 on Monday, the Deferreds moved up to register a high of Rs. 1,970 to-day, before finishing lower at Rs. 1,952-8. But this was due purely to speculative activity based on considerations of the technical position of the scrip. It would appear that there was some brisk bear covering during the last two days. The floating stocks of this scrip are very small. These may become smaller still in future, for, with the conversion scheme and the bonus issue ahead, few are likely to part with these shares. Further, as compared with the Ordinaries, the Deferreds are still underpriced. At lower levels, they invariably meet with some genuine investment demand.

• • • •

An interesting development of the week is the reported selling of equities by some large-scale investors-*cum*-businessmen, in order to meet their tax commitments. It will be recalled that, early in the year, the Income-tax Investigation Commission had announced that it would concentrate on some big cases of tax evasion. It is now stated that the Commission has completed the assessment of a few of these cases and that the amounts involved aggregate quite a few crores of rupees. This has given rise to the impression in some circles that the assessees concerned may come out to liquidate a part of their investments to pay their taxes. As these investments are believed to be mostly in first class shares, a certain amount of genuine selling pressure is apprehended.

• • • •

Reports of record production of cloth in July, 1953, have tended to depress textile shares, instead of imparting a cheerful tone to them. This is not surprising, inasmuch as there is a growing realisation that, with exports running at an annual rate of no more than 600 million yards, the industry will not be able to dispose of its production, now running at an all-time record of 5,000 million yards per annum. It is admitted that, in the first half of 1953, mills fared well and that their earnings were satisfactory. But millowners feel that, in the coming months, the position may deteriorate. Keen competition among the mills to dispose of their stocks is expected; some say that it has already begun and that two or three big groups of mills have reduced the prices of their goods by 5 to 10 per cent. According to a millowner, the high level of production is the result, to some extent, of lowering the yarn content of cloth, in order to reduce the cost of production. Consequently, the quality of cloth has gone down and, when free competition develops, those mills which chose to reduce the quality of its goods will suffer most. But even those mills which maintained the quality of its manufactures cannot escape lightly, because they too will have to cut their prices substantially to stimulate their sales. And because their cost is high, any such cut will lower their profit-margin. Ultimately, however, they will emerge successfully in any such competition, for maintenance of quality always pays in the long run.

• • • •

The 1952-53 cotton season is now rapidly drawing to a close and with it the last contract of the season, namely, the I.C.C. August. The trading in this contract during its last stages has been colourful indeed. At one time, it was thought that the bull syndicate will not succeed in getting out of its large commitments successfully. But it seems to have managed to do so. Till to-day, nearly 83,000 bales have been tendered against the contract, and at least another 10,000 bales are likely to be tendered on the last day. In spite of strict surveying, the major portion of the offerings was found eligible and, by the time the contract runs out, the bulls will have taken delivery of no less than 60,000 bales. This is undoubtedly a big quantity for a handful of operators and it is a moot point whether they will succeed in disposing of all this cotton without incurring a loss. But then some say that they may be able to square up this loss by adjusting it against the gain they are expected to make on their outstanding purchases. They have so skilfully managed to keep the August contract under their effective control that the bears, who have not covered their outstandings, will have to buy back from them or carry forward their commitments to the new crop by paying a heavy premium.

• • • •

The widening of the spread between the 1952-53 August contract and the 1953-54 February contract is another striking feature of the cotton market. Operators aver that it is a long, long time since they saw such a wide margin between the two contracts as Rs. 75 per candy. At the most, it used to be no more than Rs. 30 or Rs. 40. Why this wide margin? Two reasons are given by the operators. One is the squeeze by the bulls and the other is the bearish view taken of the new crop. Progress reports of the new crop make encouraging reading. Trade estimates now place it at between 3,900,000 and 4,000,000 bales. Some feel that it may even be 4,200,000 bales. As compared with the outturn in 1952-53, these new crop estimates show a rise of 400,000 to 500,000 bales. This increase is, of course, nearly offset by a fall of 500,000 to 600,000 bales in the carry-over cotton. Accordingly, the total supply of Indian cotton in the 1953-54 season may be no more than what it was in the 1952-53 season or may be only a little higher. Nevertheless, market circles are not in an optimistic frame of mind so far as the price of cotton is concerned. They argue that, though the total supply may be more or less the same as that in the current season, there is no certainty that the offtake of cotton by mills will continue to be at the same rate. So, much will depend on the trend of the cloth market and the outlook for cotton textiles, both of which at the moment are not, as already mentioned, encouraging.

• • • •

A feature of the international cotton economy in recent years has been the growing importance of new cotton producers. A geographical analysis of the sources of cotton supply to that important cotton-consuming country, the U.K., reveals that nearly 30 per cent. of the cotton supply for that country during the year 1952 came from Empire countries, as against 8 per cent. in the pre-war years. Perhaps, the lack of dollars explains partly the increased dependence on Empire sources. But it is reasonable to assume that, while the shortage of dollars provided the opportunity for non-dollar countries to increase their cotton production, they have availed themselves of the opportunity to improve the quality as well, considering that the mill managers in the U.K. have expressed satisfaction over these supplies. In 1938-39, the U.S. supplied 507,000 bales of cotton to the U.K. In 1952-53, it supplied only 350,000 bales. But then, the total imports themselves declined between the two years from 2,250,000 bales to 1,342,000 bales. Between 1951-52 and 1952-53 the U.S. share of the total cotton imports fell from 654,000 bales to 350,000 bales, whereas the total imports declined from 1,926,000 bales to 1,342,000 bales. Egypt accounted for only 54,000 bales in 1952-53 as against 397,000 bales in pre-war years. Egyptian shippers have complained that the low offtake of cotton by the British shippers was inspired by political considerations. But this has been denied by the U.K. Raw Cotton Commission which justifies its small purchases purely on trading grounds. The other important sources and their exports (in 000 bales) to the U.K. in 1952-53 with pre-war supplies in brackets were: Brazilian 77.1 (288.8); Argentine 97.1 (17.7); Mexican 28.2 (nil); Peruvian 56.8 (179.3); West African 190.8 (58.4); East African 118.1 (41.0); Indian 21.4; Pakistani 111.6 (Undivided India 471.1) and Sudanese 128.4 (245.0).

• • • •

The denationalisation of the British steel industry has begun in right earnest. The transfer of the Templeborough Rolling Mills Ltd. of Sheffield back to private ownership, announced by the Iron and Steel Holding and Realisation Agency the other day, marks the completion of the first step in this direction. The details of this step make interesting reading. The transfer has been effected by means of a £1 million deal—incidentally, it may be mentioned that the aggregate capital of all the nationalised steel companies is £300 million—under which British Ropes and William Cooke & Co., two of the three former owners, have now regained their holdings, each purchasing 72,001 shares in the mills at a price (in cash) of £7 5s. per share *cum* div. The remaining one-third of the shares is being retained by the United Steel Company.

• • • •

Announcing this first deal by the Iron and Steel Holding and Realisation Agency, Sir John Morison, its Chairman, gave, a few days ago an idea of the Agency's plans for further realisations. According to him, a consortium of eight issuing houses already formed is expected to assist the Agency in marketing the shares of the larger steel companies. The concern that has now been restored to private enterprise is a relatively small one as compared with the giants that still remain to be handed over to private enterprise. The Agency intends to make its first equity offer of the bigger companies by early autumn; the offer will consist of issuing the ordinary shares of one of the "Big Seven" steel companies, namely, Colvilles, Dorman Long, Lancashire Steel Corporation, Stewarts and Lloyds, United Steel, Whitehead Iron and Steel and John Summers and Sons. Prior subscription rights will be given to those shareholders who were in the list at the time of nationalisation, namely, 15th February, 1951. This will apply to all offers of the shares. Subscriptions to the shares may be in either cash or a wide range of Government securities. The list of such securities and the prices at which they will be accepted will be published by the Bank of England simultaneously with the advertisement of the offers, so that the investors will be able to decide whether to subscribe in cash or securities or both. It is not expected that the list—this will probably exclude short-dated Government stocks—will vary, but the price at which they will be accepted will vary according to market quotations at the time each offer of steel shares is made.

• • • •

It is still not settled as to which of the "Big Seven" steel companies mentioned above will come first with the offer of shares. Dwelling on this aspect of the question, Sir John Morison stated: "What we are doing is to try to get as much of the preliminary mechanical work done over a fairly wide range of the public companies, to have them as far forward as possible, so that, when the time comes, we can select which is the most appropriate to shoot off as number one." Sir John, however, assured that the first offer of shares would definitely be a 100 per cent. equity offer. He considered that the subsequent offers would not necessarily all be of equity capital in the large concerns, but would be either of preference capital in such companies, or the capital of a smaller company might be offered in between the larger groups. After all, the main policy of the Agency was to be as flexible as possible, he said. A word or two may be added here about the capital structure of the steel companies to be returned to private ownership. The form in which the companies emerge from State control will undoubtedly be different from that at the vesting date. The chief problem that will confront the companies relates to the ways and means of finding large sums of money required for completing their expansion programmes. As Sir John emphasised, "we have to see that these are taken care of and that the capital structures are properly balanced so that they are sensible and that the shares are attractive."

• • • •

Now that denationalisation of the steel industry in the U.K. has become a *fait accompli*, interest naturally centres round the future of the industry. Reassuring is the statement of Sir Arthur Pugh, a former General Secretary of the Iron and Steel Confederation and President of the T.U.C. in 1926, that the improvement in steel output will be maintained whether the industry is nationalised or not. Since 1945, he states, there has been a progressive increase in steel production, from 11,824,400 tons in 1945 to 16,430,000 tons in 1952. This, for the most part, was accomplished under a system which combined private ownership with a large measure of Government control. Granted the facilities and raw material, the improvement in output will, there is no doubt, continue. Much, of course, will depend upon the spirit of co-operation which governs the relations between those upon whom success in the final result depends, namely, labour and management.

• • • •

The unrest which swept the Iron Curtain countries recently has been attributed to the high cost of living and the prevailing acute scarcity of consumer goods. Apparently, the U.S.S.R. has learnt a lesson that consumption goods cannot for long be withheld without incurring the wrath of the ordinary citizen. M. Malenkov announced only two weeks ago that the Government would soon embark on a new programme for the production of consumer goods, besides the targets, set for the current year at 38 million tons of steel, 320 million tons of coal, 52 million tons of oil, 16 million tons of cement and 133 million kw. hrs. of electricity. In order to woo the consumer, the Government has effected a big cut in retail prices. An important effect of the cut is that the turnover tax, which forms the single largest source of revenue in Russia, is affected. For the current year, this source is expected to yield only 240 million roubles out of the total revenue of 543 million roubles. Last year, the total revenue was 497 million roubles. The actual share of the turnover tax is not known, though it had been earlier estimated at 260 million roubles. Expenditure for the current year is placed at 530 million roubles, of which defence takes 110 million roubles, grants to national economy and social services 192 million roubles and 130 million roubles respectively. (The official exchange rate for the rouble is 11.2 roubles to the pound sterling).

• • • •

Yet another evidence of the new importance given to the consumer is that, in the series of trade agreements, which Russia has concluded with West European countries, a substantial volume of consumer goods, notably foodstuffs (butter, lard and fish) and textiles, has been included. Such items form part of the trade agreements concluded with Denmark, Holland, France and Argentina. It is stated that the buying of such items had been sanctioned in the past only in exceptional cases. Apart from the fact that these trade negotiations show, almost for the first time, Russia's willingness to cultivate trade relations with the West, they are notable for the inclusion of even strategic materials, such as manganese which Russia is prepared to barter in exchange for consumer goods. The Franco-Russian trade agreement, concluded last month, for instance, envisages a volume of trade (either way) of 12,000 million francs (about £12 million). France will receive chrome, manganese, oils and maize in exchange for a number of consumer

EQUITIES TURN WEAK

SELLING PRESSURE IN TEXTILES

(From Our Own Correspondents)

BOMBAY, 20*th August*

THE Stock Exchange turned easy this week under the cumulative effect of several factors. Great apprehensions were entertained regarding the rates of duty to be levied under the Estate Duty Bill. Advices from Calcutta were far from enthusiastic. The reports that the workers of the I.I.S.Co. had given notice of strike and rumours that the Company might declare a lockout were viewed with concern. It was felt that the continuance of this unhappy episode, which had already seriously damaged the plant and brought about a heavy fall in production, would not only have undesirable repercussions on other sectors of the country's economy, but affect the Company's financial results of the current year. Market circles feel, in this connection, that it would take some months for the unit, as it is, to resume its normal working. They opine that even if the Government were to give a higher retention price, as is suggested in some quarters, the current year, which incidentally is the first year of working after the amalgamation was effected, would be disappointing. Another factor which affected the operators' sentiment was the discouraging reports from the cloth market. It was reported that the mills were faced with an accumulation of cloth and some of them had cut their selling prices. Consequently, textile shares came under heavy selling pressure on the Stock Exchange.

Tata Steel shares provided a notable exception to the general trend and remained very steady till this morning, but the weakness of Indian Irons and textile shares brought a recession to these counters also. Tata Defds. were initially marked down from Rs. 1,946-4 to Rs. 1,933-12 on Monday, but a sizable rally was noted in subsequent dealings on sustained support induced by higher backwardation charges. In the process the scrips gathered strength to touch a high of Rs. 1,970 to-day before wilting away under pressure to Rs. 1,952-8 at the close. Tata Ordinaries, after shading off from Rs. 338 to Rs. 335-12, recovered to Rs. 341, but again closed lower at Rs. 338-4. Indian Irons were concerned in a wave of selling pressure and retreated from Rs. 23-3 to Rs. 22-8. After close they were quoted at even Rs. 22-5.

The textile section bore the brunt of the pressure for reasons already stated. Bombay Dyeings relapsed from Rs. 385-10 to Rs. 380 on Tuesday. After a momentary recovery to Rs. 383-2, they were marked down to Rs. 378-12. Kohinoors were on offer by several big operators who had in earlier weeks accumulated lines and, as a consequence, the shares receded from Rs. 302 to Rs. 295-8. Centurys were hammered down from Rs. 276-8 to Rs. 270. Central Indias were down by Re. 1-8 at Rs. 160-8. Indu Ordinaries drifted lower by As. 11½ to Rs. 8-11. Simplex lost a rupee to Rs. 169-8, Standards were marked down by Rs. 7-8 to Rs. 308-12. Swadeshis came down from Rs. 252-4 to Rs. 247-8 and Shriniwas were taken down by Rs. 2-8 to Rs. 172-8. Ahmedabad Advances declined by Rs. 6-4 to Rs. 140. Bradburys fell by Rs. 30 to Rs. 817-8. Finlays provided an exception by a rise of Rs.3 to Rs. 325.

Bank shares were featureless and the undertone was quietly steady. Barodas were a fraction better at Rs. 111-4, Centrals shed a fraction to Rs. 65-4, while their new shares picked up As. 4 to stand at Rs. 68. Imperials Fully Paids were placed Rs. 5 lower at Rs. 1,825 and the Contributories Rs. 2-8 down at Rs. 440. Indias were steady and unchanged at Rs. 155. United Commercials were quiet at Rs. 36-4.

The insurance section presented a steady front, though variations in most counters were of little or no consequence. Orientals were stagnant at Rs. 6,875 *ex-div.* New Indias were held at Rs. 40-4. Jupiters which had changed hands a rupee lower at Rs. 6-1 in the previous week, gained an anna this week to Rs. 6-2. British Indias were picked up As. 4 better at Rs. 13-12.

Electric shares disclosed a mixed trend and enquiries were of a select nature. Ahmedabad Electrics which were in favour in the previous weeks, met with profit-taking and lost Rs. 10 to Rs. 111-14. Bombay Suburbans were steady at Rs. 121-14 *ex-div.* Poona Electrics were quoted at Rs. 125 *ex-div.*, as against Rs. 129-6 *cum-div.* Surat Electrics were down at Rs. 123-12, as against Rs. 125, while their new shares were unchanged at Rs. 95. Andhra Valleys advanced by Rs. 2-8 to Rs. 1,452-8. Tata Hydro were quoted at Rs. 142 *ex-right*, as against Rs. 154-8 *cum-right* a week ago and Tata Powers at Rs. 1,435 *ex-right*, as against Rs. 1,532-8 *cum-right*.

In the miscellaneous section, Associated Cements were quietly steady at Rs. 168-8. Belapurs were maintained at Rs. 238-8. Bombay-Burmahs were unsettled and receded by Rs. 8-13 to Rs. 351-14. B.I.Cs. were done Re. 1-14 better at Rs. 154-8. National Rayons improved from Rs. 116-4 to Rs. 118 early in the week on continued demand, but went back to Rs. 115-8 at the close on profit-taking. Port Cannings were in demand to go up by Rs. 2-8 to Rs. 22-8. Tata Chemicals were quiet at Rs. 8-12½ and Tata Oils at Rs. 30-4. Wimcos were steady at Rs. 238-2. Digvijay Cements declined by Rs. 2-4 to Rs. 31.

In the transport group, Scindias were quiet at Rs. 13-8. Bharat Lines were on offer at Rs. 83. India Steamships were steady at Rs. 6-12½.

Among the mining and engineering shares, Indian Coppers were dull at Rs. 2-12½. Shivrajpurs were quiet at Rs. 57. Alcock Ashdowns were realised at Rs. 320-8, as against Rs. 305. Premier Constructions were put through Re. 1-8 lower at Rs. 85-8. Larsen and Toubros were unchanged at Rs. 10-10. Jost's Engineerings shed a rupee to Rs. 90.

• • • •

Calcutta Stock Exchange

CALCUTTA, 18*th August*

Lethargic conditions prevailed on the Calcutta Stock Exchange during the week. Trading was uninteresting and featureless. Operators searched in vain for incentives, and increasing commitments was, therefore, out of question. The labour situation in Burnpur showed no improvement and operators would appear to entertain the fear that the huge loss in production since the last seven months would have its effect on the working result of the Indian Iron and Steel Company for the current accounting period. It is distressing that efforts to ease the situation have so far failed, and the loss of production in this great undertaking is grave to the nation. Fears from rumours of a proposed lockout in the Burnpur Works cautioned buyers, and fresh offerings resulted in prices declining further. The loss of steel production is also causing anxiety to other engineering industries.

Although the Estate Duty Bill would soon become law, the lack of information on the rates of taxation is a factor which increases the prevailing uncertainty. The Government has stated that the duty would not affect capital formation, but investors, both genuine and professional, would enter into long-term commitments only after the rates are announced and they know their position exactly. The increase in output of, and stock with, mills during July affected sentiment in the jute section. The decline in prices of jute goods and the lack of enquiries from the United States even for moderate quantities were depressing factors.

Sectionwise, Indian Irons touched a low of Rs. 22-12 to-day, before closing at Rs. 22-14 with a loss of As. 3 over the week. Texmacos were lower at Rs. 6-2 to-day, as against Rs. 6-3 last Tuesday, while Kumardhubis changed hands at Rs. 7.

Among miscellaneous shares, interest in F. & C. Oslers were revived this week, and the shares rose from Rs. 6-4 to Rs. 7-6. However, the rate receded to Rs. 7-4 to-day. Interest was shown in Indian Cables at Rs. 18-1 and Dunlop Rubbers came to business at Rs. 27-12. Rallis were taken at between Rs. 65-8 and Rs. 66-4, Martin Burns at Rs. 18, and Titaghur Papers at Rs. 35-2. Gillander Arbuthnots changed hands at Rs. 116. Sone Valley Cements were bought at Rs. 6-9.

Among sugar shares, Carews changed hands at Rs. 6-14 earlier in the week, but were lower to-day at Rs. 6-13. Champarans, at Rs. 24-8, were an anna better. Cawnpores were raised from Rs. 34 to Rs. 34-6, but subsequently lost to Rs. 34-4. Dharbangas had buyers at Rs. 10-15 and Bairampores were unchanged at Rs. 7-8.

The volume of business recorded in the jute section was on a reduced scale, for reasons already stated. Howrahs were lower at Rs. 23-6, while Budge Budges were maintained at Rs. 155. Fort Glosters, after being transacted at Rs. 432, receded to Rs. 427. Ganges were transacted at Rs. 68-8 and Indias were quoted at Rs. 125. Hastings changed hands at Rs. 125. Coals were likewise extremely quiet, New Beerbhooms and Barrakurs changing hands at Rs. 18-4 and Rs. 9, respectively. Bengals were steady at Rs. 515. Central Indias declined from Rs. 4-9 to Rs. 4-6. Dhemo Mains had business at Rs. 9-2.

• • • •

Madras Stock Exchange

MADRAS, 18*th August*

The Madras Stock Exchange presented a mixed appearance during the week. Textiles and teas came in for considerable support, while the remaining sections experienced lack of enquiries. The upward trend witnessed in the past few weeks in textiles persisted its course this week also, on speculative enquiry. Expectation of larger offtake of piecegoods in view of the approaching festival season was the chief stimulating factor. In distinct contrast to the generally easy trend noticed last week, tea scrips ruled steady. The revival of enquiries was in anticipation of better overseas demand. Rubbers were easier, while teas fared no better. Banks too lacked support. The cumulative effect of all this was that, whereas textiles and tea scrips disclosed sizable gains, the rest generally recorded perceptible losses. The undertone, however, was not encouraging.

In the textile section, P. Andavar "A" and "B" recorded a gain of Rs. 3 each to Rs. 63 and Rs. 88, respectively. Vasantas were higher by Rs. 2-8 at Rs. 161. Bangalore Woollens were taken up by Rs. 2 at Rs. 267-8 *cum-div.* Metturs were done at Rs. 194, as against Rs. 192. Premiers put on a rupee to Rs. 91 *cum-div.* and S. K. Rajendras As. 8 to Rs. 43. Balasubramanias, Rs. 40 paid-up, were done at Rs. 33-8 *ex-div.*, as against Rs. 36 *cum-div.* and Rs. 70 paid-up at Rs. 55-10 *ex-div.*, as compared with Rs. 60 *cum-div.* Lakshmis, Rs. 50 paid-up, however, lost Rs. 3 to Rs. 83 and Coimbatore Pioneers Rs. 2 to Rs. 118. Rajalakshmis dropped Re. 1 to Rs. 85.

Among plantings, the performance of tea scrips was encouraging. Nilgiri teas advanced from Rs. 12-5 to Rs. 12-8. Parksides were higher by As. 2 at Rs. 13-4. Highland Produces also were up by a similar amount at Rs. 10-8. Midlands (tea and rubber) hardened by As. 3 at Rs. 11-4. Emerald Valleys and Kalasas put on an anna each to Rs. 4-10 and Rs. 12-7, respectively. Peermades, however, eased from Rs. 27-4 to Rs. 27. Periakaramalais dropped As. 2 to Rs. 28-6 *cum-right*.

Rubber scrips lacked support. Malankaras declined from Rs. 105-12 to Rs. 105, while Cochin Malabars put on As. 3 to Rs. 7-2 *cum-div.* Peninsulars were slightly better at Rs. 8-10. But Pullangodes were unchanged at Rs. 2-8 and Kailas at Rs. 3-8. T.R.Ts. (tea and rubber), however, were better by As. 2 at Rs. 7-5.

Coffee scrips were generally dull, although Coffee Lands gained an anna at Rs. 10-8 and Puthuthotams an anna and a half to Rs. 3-8½. But Consolidated Coffees lost As. 2 to Rs. 13-8. Mysore Coffees were unchanged at As. 8½.

In the miscellaneous section, Indian Aluminiums eased from Rs. 110 to Rs. 105. India Cements suffered As. 6 to Rs. 17-2 and Rallis As. 4 to Rs. 67-4. Aluminium Industries were lower by As. 2 at Rs. 11-10 *cum-div.* Indian Steel Rolling Mills were down by an equal amount at Rs. 10-14. Berhampurs, however, advanced from Rs. 4-12 to Rs. 5 and Spencers from Rs. 13-10 to Rs. 13-12. F.A.C.Ts. were somewhat better at Rs. 3-1.

Among banks Andhra Banks, Rs. 50 paid-up, gained As. 8 to Rs. 54. Indian Banks, Rs. 100 paid-up, were higher by a similar amount, at Rs. 180. Indian Banks, Rs 85 paid-up, were done at Rs. 143-8, as against Rs. 143. Punjab National Banks lost As. 4 to Rs. 22.

FINLAY AND SWAN MILLS TO ISSUE BONUS SHARES

The decision of the Directors of the Finlay Mills Ltd., and the Swan Mills Ltd. (Agents: Messrs. James Finlay & Co., Ltd., Bombay) to capitalise part of the Companies' undistributed profits, standing to the credit of their respective reserve funds, has been approved by the Controller of Capital Issues. The Directors of the former Company propose to capitalise a sum of Rs. 10 lakhs out of the reserve fund (Rs. 47.04 lakhs) and issue bonus shares (10,000 shares of Rs. 100 each) to the existing shareholders in the ratio of one such share for every four shares now held by them. The capitalisation of the said sum of Rs. 10 lakhs requires the present authorised capital of the Company (Rs. 40 lakhs, made up of 40,000 shares of Rs. 100 each) to be increased. The Directors propose to raise the same to Rs. 50 lakhs (made up of 50,000 shares of Rs. 100 each). The total reserves and surplus of the Company now stand at Rs. 79.03 lakhs, against a paid-up capital of Rs. 40 lakhs.

The Directors of the Swan Mills Ltd. have decided to capitalise a sum of Rs. 12 lakhs, out of the reserve fund now standing at Rs. 47.56 lakhs and issue bonus shares (12,000 shares of Rs. 100 each) to the existing shareholders in the proportion of one share for every four shares held by them. The present authorised capital—Rs. 24 lakhs—requires to be raised so as to permit the aforesaid capitalisation. The Directors propose to raise the same to Rs. 36 lakhs, made up of 36,000 shares of Rs. 100 each. The Company's total reserves and surplus now stand at Rs. 75.80 lakhs, against a paid-up capital of Rs. 24 lakhs.

MERCANTILE BANK OF INDIA LTD.

The Directors of the Mercantile Bank of India Ltd., have declared an interim dividend of 7 per cent., less income-tax, on all the classes of the Bank's shares, for the year ended 31st December, 1953. This represents an increase of one per cent. over the corresponding distribution made in the previous five years.

Notice

THE FORT WILLIAM JUTE COMPANY, LIMITED

NOTICE

THE HALF-YEARLY ORDINARY GENERAL Meeting of the Company will be held at the Registered Office, No. 14, Netaji Subhas Road, Calcutta, on Monday the 7th September, 1953, at 3-10 p.m., for the purpose of receiving the Directors' Report and Auditors' Report, passing the Accounts for the half-year ended 30th September, 1952, and transacting such other business as may be brought forward before the meeting.

The Share Transfer Registers of the Company will be closed from 25th August to 7th September, 1953, both days inclusive.

By Order of Board,
Per Pro. BANGUR BROTHERS LTD.,
R. N. BANGUR,
Managing Agents.

CALCUTTA, 14*th August*, 1953.

NEWS IN BRIEF

THE Sindri Fertiliser Factory has so far despatched 299,950 tons of ammonium sulphate valued at Rs. 9.7 crores.

The total Indian currency withdrawn from circulation in Aden by 1st April, 1953, was Rs. 6,10,95,422.

Of a total marine fish catch of about 501,900 tons in India in 1952, the West Coast of India accounted for nearly 413,300 tons.

A radio-telephone service between India and Nairobi has been introduced with effect from the 18th inst. The hours of service are 12.30 p.m. to 1.30 p.m. on weeks days.

The Indian Coal Board has set apart Rs. 23 lakhs for granting loans to collieries for the purchase and installation of stowing plant and transport of stowing material.

The recent decision of the Government of India to stop dearness allowance to officers drawing Rs. 1,000 per month and over will result in an ultimate saving of Rs. 38 lakhs to the Central Government.

The question of continuing protection to the Indian caustic soda and bleaching powder industries is now under the examination of the Tariff Commission. Questionnaires have been prepared for producers, importers and consumers.

The Government of India has decided to grant actual users licences to manufacturers of *kumkumam* for the import of sago flour. Applications for import licences should be made to port authorities supported by the usual certificate of the Director of Industries of the State concerned.

The Hindustan Aircraft Railway Coach factory has so far manufactured 402 all-metal coaches. The factory has orders for 198 more coaches and, according to present schedule, 10 coaches are being manufactured every month. The rate of production can be stepped up, if the difficulty with regard to underframes is removed.

A small body has just been set up in the Secretariat of the President to consider the steps taken to implement the recommendation of the Finance Commission regarding setting up of an organisation to make a continuous study of the finances and administration reports of the State Governments. This will start functioning in the course of a month.

The Government of Saurashtra will soon fix floor prices for coarse foodgrains, with a view to assuring fair return to cultivators. The proposed prices are to be based on those prevailing, within and outside the State, cost of production and the procurement prices that were prevailing prior to the abolition of statutory rationing a year ago.

The annual expenditure on the national and small savings collections was about 0.8 per cent. of the total collections in each of the years from 1949-50 to 1952-53. The expenditure, which included the cost of the staff employed in the National Savings Organisation, publicity charges and commission to authorised agents was Rs. 19,57,379 in 1949-50, Rs. 25,25,552 in 1950-51, Rs. 28,82,736 in 1951-52 and Rs. 31,89,946 in 1952-53.

A pilot plant for the manufacture of dicalcium phosphate from Trichinopoly phosphatic nodules, utilising hydrochloric acid, has been successfully completed by the National Chemical Laboratory, Poona. Dicalcium phosphate, being a neutral salt, is a better fertiliser for acidic soils than ordinary super-phosphate. The use of dicalcium phosphate as fertiliser would reduce transportation charges, as it is more concentrated with respect to phosphorus content than ordinary superphosphate.

India has been supporting the proposal, sponsored by several member countries of the United Nations, for the establishment of an International Development Fund under the ægis of an International Development Authority. This proposal has been examined by an Expert Committee appointed by the U.N. Secretary-General. The Committee's Report was recently discussed at the 16th session of the E.C.O.S.O.C. and will come up again for further discussion in the forthcoming session of the U.N. General Assembly.

The all-India acreage and production of linseed for the year 1952-53 are finally estimated at 3,394,000 acres and 355,000 tons, as against 3,402,000 acres and 316,000 tons, respectively, in the partially revised estimate for 1951-52. This shows a decline of 8,000 acres or 0.2 per cent. in area and an increase of 39,000 tons or 12.3 per cent. in production. This estimate includes, for the first time, information in respect of the "non-reporting areas," that is, areas for which forecasts for this crop are not prepared. The "non-reporting areas" included in this estimate are Assam, and Jammu and Kashmir, which together account for an area of 30,999 acres and a production of 1,330 tons during the current year.

The Full Bench of the Railway Rates Tribunal, consisting of Messrs. N. S. Lokur, L. M. Roy and P. V. Subba Row, delivered judgment on the 17th inst. in complaint No. 5 of 1932 which related to freight rates for jute from Calcutta to Raigarh, both stations situated on the Eastern Railway. On the basis of the evidence placed before it, the Tribunal decided that the existing rate was not unreasonable. The complaint involved the consideration of a very important point as to whether the railways in different zones under different General Managers should be considered as one railway administration for purposes of section 28 of the Indian Railways Act or as different railway administrations. The majority of the Tribunal decided that these different zones owned and administered by the Government should be considered as one railway administration for purposes of section 28 of the Indian Railways Act, in view of the definition of a railway administration in section 3(6) of the Act.

From Abroad

Plans are progressing for building a bridge across the Bosphorus (Turkey) that will link Europe and Asia. A German firm has put in a bid of $71,430,000 for a single-span suspension bridge, 215 feet high and 4,920 feet long. The Turkish authorities are studying the plan.

The 38th International Motor Exhibition will be held at Earls Court, London, from 21st to 31st October, 1953. The exhibits include cars, carriage work, motor boats and marine engines, caravans and light trailers, accessories and components, transport service equipment and tyres.

A new agreement has been signed between the Government of India and the U.S. Ford Foundation, under which the latter will make available an additional $1,041,310 to aid India's community development programme. The Foundation had previously contributed $2,193,235 to this programme.

Highest-grade deposits ever uncovered of titanium dioxide, a mineral vital to the manufacture of jet engines, have been discovered in Hawaii. The titanium content of the ore range from 2 to 40 per cent., whereas that of deposits elsewhere in the world is normally computed in tenths of one per cent.

Wheat stocks of the world's major exporting countries—Canada, the U.S., Argentina and Australia—on 1st July, 1953, amounted to 1,188.5 million bushels, as compared with 566.8 million bushels a year before. Of the total exports of wheat from these countries during 1952-53, India took 13.1 million bushels and Pakistan 13.9 million bushels.

New investments made by life insurance companies in the U.S., including refunds and replacements, during the first half of this year amounted to $7,030 million. This represents a fall of $400 million, as compared with the corresponding period of 1952. A sizable part of the new investments, $2,490 million, was accounted for by corporate securities. The aggregate assets of the life insurance companies as at 30th June, 1952, stood at $75,403 million, as against $73,034 million six months before.

The 6,800 member banks of the U.S. Federal Reserve System earned a net profit of $436 million during the first half of 1953, as against $458 million in the same period last year. The loans granted by the banks amounted to $55,500 million, as at the end of June last, as against $50,500 million a year before. The average return on loans was 4.60 per cent., as against 4.44 per cent. Loans to the Federal Government through purchases of its securities yielded a higher return of 1.97 per cent., as against 1.72 per cent.

About 2,530 firms will be represented at the Utrecht (Holland) Autumn Fair to be held from 1st to 10th September next. Of these, 1,359 firms are of foreign origin. Products from 21 countries will be exhibited at the Fair. The most important foreign participants are West Germany with 572 exhibits, Britain with 251 exhibits, France with 97 exhibits, Switzerland with 96 exhibits, U.S.A. with 88 exhibits and Belgium with 76 exhibits. The other countries to be represented at the Fair are Sweden, Denmark, Norway, Finland, East Germany, Austria, Liechtenstein, Hungary, Czechoslovakia, Italy, Spain, Nigeria, Pakistan and Japan.

A new import entitlement system, which seeks to allow Japanese exporters to count sterling balances towards buying goods from dollar area, came into effect on the 20th inst. Under the new system, exporters are allocated 10 per cent. of the value of their exports to be freely disposed of for financing payments for imports. Sterling and dollars thus allocated can be used for the import from all the three areas, namely, sterling, dollar and open account areas. Currencies of the open account area can be used for imports from other countries within the area, but cannot be used for imports from sterling and dollar areas. Indonesian currencies, however, cannot be used out of Indonesia. Goods importable and for which foreign currencies will be allocated are limited to 145 items or materials which will be re-exported as finished goods. The list of goods will remain effective till the end of September, 1953. A new list effective from October, 1953 to March next year will be announced later.

PERSONAL

MR. Clarence Randall, Chairman of the U.S. Inland Steel Corporation, has been chosen to head the new study mission set up by the U.S. Congress to make a survey of the American foreign economic policy.

Mr. M. A. Malik, Minister for Labour, Government of Pakistan, and Pakistan's representative on the I.L.O.'s Governing Body, has been elected Chairman of this body, *vice* Mr. Fernandi Garcia Oldini of Switzerland.

Mr. A. K. Chanda, Secretary to the Union Ministry of Production, who had recently been to Germany to sign an agreement with a German steel combine for the setting up of a steel plant, returned on Tuesday last.

Dr. P. W. Curtin, a high-ranking official of the Australian Commonwealth Public Service, will take up his new duties as Director of the Colombo Plan Technical Assistance Bureau, *vice* Mr. Geoffrey Wilson who is returning to the British Treasury.

Dr. H. L. Dey, a former President of the Indian Tariff Board, who joined the I.M.F. last year as adviser to the Managing Director and Chairman of the Executive Board, has been appointed Director of the Asian Department on the regular staff of the I.M.F.

Mr. N. B. Panjwani, Mechanical Engineer, National Metallurgical Laboratory, Jamshedpur, left for London, for a two-year extensive practical training with the Coventry Gauge and Tool Co., Ltd., under a scholarship awarded by the Federation of British Industries.

Mr. H. B. McAuslan, a Director of Associated British Oil Engines (Marine) Ltd., has been appointed Resident Representative of the Brush Group in India, Pakistan, and Burma. He has also been appointed a Director of Associated British Oil Engines (Export) Ltd., Aboex, National Oil Engines (Export) Ltd., Noex and Brush Export Ltd.

Sir Sydney Caine, formerly head of the U.K. Treasury and Supply Delegation to Washington and now Vice-Chancellor of the University of Malaya, is now in Ceylon to advise the Ceylon Government on the functions and organisation of an economic planning secretariat. His services have been made available by the British Government, with the agreement of the University of Malaya, under the Technical Co-operation Scheme of the Colombo Plan.

Mr. Charles Archibald Taylor, a British battery expert, will be visiting Ceylon shortly to install a heavy-duty battery-charging and rebuilding plant at Amaparai, headquarters of the Gal Oya irrigation and power project and to train Ceylonese personnel to operate the plant and in the technique of the maintenance, rebuilding and testing of batteries. Mr. Taylor's services have been made available to the Government of Ceylon by the British Government under the Technical Co-operation Scheme of the Colombo Plan.

"COMMERCE" 1928

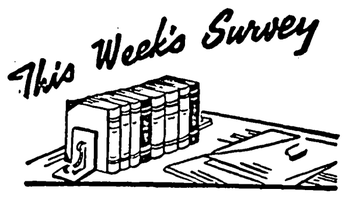
FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, 25*th August*

States and Industrial Disputes

People often claim the right to do just as they wish and, generally speaking, society allows them to enjoy such rights as long as they do not infringe on the rights of others. Where the general interest of a country is at stake, public opinion invariably urges steps to be taken to curb the power of undesirable rights. This brings us to the question as to whether the State has or has not the right to interfere in industrial disputes. We maintain that it has not only a right but a duty to interfere when law and order are endangered. This does not mean that it should take sides. But, on the contrary, to act as a mediator with a view to clarifying the situation. The tactics adopted by labour make it clear that, by withholding the contribution it makes towards the whole, it endeavours totally to paralyse the life of the whole.

We contend that, although a certain section of the community may have the right to do, or not to do, a certain thing, it has no right to use force with a view to dislocating the general life of the community. For example, the sweepers of Calcutta have a perfect right either to do their work or not to do it, but, if they succumb to outside influence and use force to prevent volunteers from clearing the dust-bins, etc., we maintain that Government has a right to interfere in such a case, and if necessary, to introduce legislation in order to restore order. The social and industrial organisation of a country is of too complex a nature to allow these disintegrating forces to create mischief unchallenged. We have hitherto been able to get on without any special power; but now there is a decided leaning among so-called labour leaders towards Bolshevik doctrines, and we know also that there has been a direct connection with Soviet Russia in all recent troubles, and the sooner we mobilise our forces to counteract them the better. We all know that trade and industrial disputes invariably burden the local police authorities and endanger public peace. The primary function of a Government is to see that its various constituent parts work harmoniously together. Therefore, if one community organises itself so as to dislocate the life of other communities, it is an offence against the State and a menace to democratic institutions and must, without delay, be checked. With this end in view, the Public Safety Bill is amply justified; but the scope of the measure is much too limited to be generally effective.



STATE-OWNED INDUSTRIES

THE exercise of Parliamentary control over nationalised undertakings has always given rise to some very difficult administrative problems. Excessive interference with the work of these undertakings will rob the administrators of their spirit of initiative and enterprise, a quality essential for the success of any commercial undertaking, whether owned by the State or private investors. If no control is exercised, there will be no knowing whether they are being efficiently run or not. After all, the taxpayer, who finances these undertakings, is entitled to know how they are being run. The issue of Parliamentary control was discussed recently in this country by the Rao Committee which examined the working of the D.V.C. Project. It urged more autonomy for the Corporation. Apparently, the Government has taken no decision on this issue. In the U.K. too, where the Government has taken upon itself the responsibility of running coal, electricity and transport industries, the subject of Parliamentary control has been engaging the attention of the Government for some time now. A special committee of M.Ps. was appointed some time ago to investigate Parliamentary supervision of nationalised industries. This committee has now suggested the appointment of a permanent committee of the House of Commons with power to examine the reports, accounts and activities of the nationalised industries. Its report has been released by the Select Committee on Nationalised Industries.

It is true that the problem in the U.K. is somewhat different from that in this country. Unlike in the U.K. there are, in India, large isolated projects such as the D.V.C. Project, State-owned single-unit industries such as fertiliser, aircraft and telephone industries, State-cum-private enterprise factories such as shipbuilding, and purely State-owned services such as civil aviation, electricity and road transport. There is thus a variety of State-owned undertakings, rendered somewhat complicated by the fact that such units are owned and operated by the Centre and the States. Even so, the suggestions made by the U.K. Select Committee seems applicable to Indian conditions. The U.K. Select Committee has arrived at its conclusions on the ground of inadequacy of the existing facilities for Parliamentary supervision of nationalised industries. It suggests that the staff of the proposed committee should include an officer of the status of the Comptroller and Auditor General and at least one professional accountant. There should be no more than 21 members nominated annually. It agrees, however, that the suggested Parliamentary committee should not aim at controlling the work of the corporations. Annual accounts would continue to be audited by auditors appointed by the Ministry concerned, but the auditors would be under obligation to give such additional information as might be required by the proposed committee. The Committee did not endorse the suggestion that the Comptroller and Auditor General should himself extend his functions to cover the nationalised industries. A committee of the kind suggested by the Select Committee secures for the nationalised industries selective control by a picked body of Parliamentary members and thereby avoids the dangers which might accrue from a full-fledged discussion of the industries by an inadequately informed Parliament. But the suggestion does not, of course, imply any diminution of Parliamentary sovereignty, for Parliament can always call for further information which the proposed committee would be able to furnish.

IS INDIA SELF-SUFFICIENT IN RICE?

Considering that India has been experiencing an acute rice shortage for the past several years, it is, indeed, comforting to be told that the position in respect of rice supplies has now improved. The aggregate rice crop for 1952-53 is placed at 23.4 million tons, which is higher by as much as 2.7 million tons, as compared with the previous season. The improvement is fully reflected in the procurement, the quantity already procured being 1.17 million tons, which is considered to be "extraordinarily good." The Deputy Minister for Food and Agriculture, Mr. M. V. Krishnappa, claimed, in the House of the People the other day, that "self-sufficiency in rice has already been reached in the country."

This claim, however, is an exaggeration of the undoubtedly perceptible improvement that has taken place in the supply of rice. No such claim, whether it be in respect of rice or any other commodity, can be justified so long as the quantity produced is not adequate to meet the normal consumption requirements of the country at reasonable prices. If this test is applied, Mr. Krishnappa's claim will not stand scrutiny. There is, of course, the difficulty caused by the absence of reliable statistics of rice production, as well as of the country's requirements of this cereal. But it is a disadvantage to both, namely, those who claim self-sufficiency and those who do not concede it. Nevertheless, there are some broad indications which point to the fact that India is still deficit in rice. These are (a) the continuation of rice rationing in several parts of the country, (b) the restrictions on the free movement of rice, and (c) the high level of prices. Even the price at which rice rations are made available is quite high and the price of rice in the free markets are still 60 to 70 per cent. higher than the controlled prices. All these restrictions are keeping down the consumption of rice at an artificially low level. It is, therefore, very misleading to say that India has achieved self-sufficiency in rice.

Although production in the country has improved, the supply is not large enough to permit complete stoppage of rice imports. In the current year (1953), India has so far imported 150,000 tons from Burma at £60 per ton and no further import from that country is contemplated this year. Besides this, 37,000 tons of rice have been imported from other countries. The position in regard to imports for next year will be considered later. Under the recently concluded trade agreement, Burma has agreed to make available to India rice upto 500,000 tons, at prices to be negotiated later.

Following the increase in rice procurement, the quantum of rice ration has been raised in all the States. In Calcutta, for instance, rice ration is now 6 ozs. per day, as against 4.5 ozs. before. Similarly, in some other States, the ration has been raised from 2 ozs. to 4 ozs. per day. But it will be agreed that even this enhanced quantity is but a fraction of what people would buy if there were to be no control.

AMERICAN AID

The U.S. Senate has proved less parsimonious than the House of Representatives in its attitude towards the Administration's foreign aid programme. The House had provided nearly 20 per cent. less than what Mr. Eisenhower had requested. But the Senate has increased the provision for aid, so that about $6,600 million will be available for Mutual Security expenditure during the current fiscal year ending June, 1954. The bulk of the sum will go for providing military assistance which will absorb no less than $5,112 million. The next important item of expenditure is mutual defence financing ($1,008 million) which includes special funds for manufacturing arms in France and the U.K., followed by technical assistance programme ($118 million) and special economic assistance ($266 million). Out of these amounts, the shares of the Asian and Pacific countries are $1,292 million by way of military assistance, $502 million by way of mutual defence financing, $62 million by way of technical assistance and $75 million by way of special economic assistance.

It is gratifying to note that the U.S. Administration continues to be alive to the need for effective foreign aid, despite the occasional protests against these aids from certain sections of American opinion. In a written report to the Congress on U.S. Mutual Security aid to foreign countries, Mr. Eisenhower emphasised that the U.S. aid to the free world must be planned on a "long-term basis." It may be recalled that Mr. Harold Stassen, the Mutual Security Director, struck the same note, when he appeared recently before the Appropriations Committee, for he said that the U.S. would have to continue "some sort of foreign aid programme for at least ten years." Mr. Eisenhower placed the problem in the correct perspective when he pointed out that the democratic way of life was undergoing its "most crucial" test in India where the largest self-governing nation in the free world was "engaged in a great effort to lift its millions into a higher plane of social and economic life through the concept of democracy and the ways of freedom." He contrasted the Indian experiment with the experiment in China which "professes a similar effort towards progress through the concept of totalitarianism and ways of the police State." He added: "This rivalry in method and ideals between the two largest countries in the world directly affects the lives of some 800 million people, almost a third of the world's population. It is inevitable, therefore, that the ultimate outcome will bear heavily upon all mankind, including ourselves."

This is an effective summing up of the position so far as the Asian centres are concerned. The real test of democratic method to lift the living standards to higher levels lies in the success which India achieves in its economic experiments. That it is a bitter struggle will no doubt be admitted. And in the matter of speed in achieving economic progress, the democratic methods are necessarily slow, even as these methods were found somewhat inefficient in the matter of building up armaments in the last war. But there is no doubt that they bring not only more permanent results in the long run, but bring them without sacrificing human values at the altar of economic progress. The Indian experiment is already imposing, as Mr. Eisenhower recognised, a "severe strain" on the country's resources inasmuch as the Central and State Governments are now called upon, under the Five-year Plan, to find an equivalent of $4,300 million and the private investors the equivalent of $3,000 million. Economic aid from the free world will do much to lessen this strain, and accelerate the speed of economic development. But, as we have often emphasised in the past, the recipients of this aid should make such realistic adjustments in their economic policy as are necessary to enable free enterprise to play a more vital role in economic development, if the aid is to serve its real purpose.

BROADCASTING IN INDIA

The elucidation of the attitude of the Government of India towards broadcasting and allied topics by Dr. B. V. Keskar, Minister for Broadcasting and Information, in the course of a Press interview, has aroused much interest. Referring to the demand for the creation of a broadcasting corporation, he said, it would be considered, provided it meant a Government corporation and not an independent private body which would run broadcasting as a commercial proposition. Broadly speaking, this view is correct, since broadcasting is a public utility service and is recognised to be so by all important centres of the world. And certainly, an autonomous corporation, run on lines similar to the B.B.C., can do better work than a Government Department entrusted with the task of broadcasting, as the former would be free from all red-tape. Appropriately enough, Dr. Keskar expressed the Government's determined opposition to commercial broadcasting. For, as pointed out by him, "it would convert the radio into a cheap vaudeville show" and put the radio network into the clutches of "foreign interests and combines who form the largest body of advertising investors in the country."

Although Dr. Keskar conceded the need for improving the All-India Radio programmes, he thought, it was "unreal optimism" to think that the sale of radio sets could be increased solely through an improvement in their programmes. He pointed out that the sale of radio sets was related to their prices being within the purchasing power of the masses. The radio merchants, however, say that, unless the demand for radio sets is created by making available better programmes and wider network of transmitters, the production cost cannot go down and the industry cannot provide sets at cheaper prices. They further point out that the Government is responsible for the higher sale price, for it is charging a heavy import duty of 44 per cent. preferential rate (*ad valorem*) on radio sets and parts imported from the U.K. and a standard rate of 50 per cent. on imports from other places. Besides, there is sales tax which ranges between 6¼ per cent. and 10 per cent. in the various States. There is, in addition, a licence fee of Rs. 15 per year which amounts to Rs. 75 per set over a period of five years, which is normally the life of a set. Although there is thus a case for reducing duties, it must be pointed out that, as radio is a luxury article, the Government is entitled to raise some revenue through import duties and sales tax.

NEW STEEL PLANT

At long last, the Government of India has made some tangible progress towards the setting up of a steel plant. An agreement has been reached between the Government and a German combine of two machine firms, namely, Demag and Krupp, to build a new steel plant in this country. According to Mr. A. K. Chanda, Secretary to the Union Production Ministry, who signed the agreement on behalf of India on the 15th inst., at Bonn (West Germany), the agreement has been concluded in the face of competition from the U.K. and other firms which had shown considerable interest in the project. Although the full text of the agreement has not yet been made available, it is said that the agreement provides, besides technical assistance, for an investment of Rs. 9½ crores by the German combine, out of the total estimated capital cost of Rs. 72 crores. Since this will be in equity capital, the combine will be an active shareholder. The project will have an initial capacity of 500,000 tons, which will later be expanded to 1,000,000 tons.

It will be recalled that, since the proposal to establish a new steel plant was mooted in 1947, various steps have been taken towards that end and as many as forty-nine reports were prepared. But, in view of the very large expenditure involved in the project, larger than any investment made in a single industrial unit in the country in recent years, as well as the complicated nature of the undertaking, it was referred to the Planning Commission for examination. Subsequently, a technical mission also re-examined the various project reports. In the meanwhile, negotiations were under progress with foreign interests for suitable financial and technical collaboration in the erection of the steel plant. Early in the year, there were hopes that an agreement with Japanese interests was imminent, but they did not materialise.

The present agreement marks the end of one stage, that is, planning and the beginning of a new stage, namely, construction. The site of the proposed new plant is yet to be determined. Several places for location have been recommended. Originally, Bombay was in the picture and later Sindri. Two centres in Orissa, and another in Madhya Pradesh have also been suggested. The Technical Committee referred to, confined itself to the examination of the possibilities of establishing a steel plant at various centres, but did not make any definite recommendation.

The establishment of the plant will go a long way towards relieving steel shortage in India. According to the Planning Commission, the demand for steel of different categories is expected to increase from 2.34 million tons in 1952 to 2.80 million tons in 1957, while the production of finished steel by the existing major producers is expected to increase from 976,000 tons to 1,650,000 tons only. Thus, there will be a shortfall of more than a million tons of steel. The present steel plant, when in full production, will cover only a part of this gap, assuming that the new plant will be in full production by 1957.

The Indo German steel pact might turn out to be the forerunner of similar associations between the two countries in other fields of industrial development. Speaking on the agreement to Press men, Mr. Chanda disclosed that a team of German technicians were expected to visit India next month when discussions about the location of the plant would be undertaken. He also said that equipment for the steel plant would be secured by inviting tenders on a competitive basis. He added further that the World Bank would be asked to co-operate in the implementation of the project by advancing a substantial amount by way of a loan.

(Concluded from third column)

and Agriculture, but it should not be burdened with a task which is foreign to its normal functioning. Much of the trouble which has arisen in recent years is due to the preoccupation of the Minister in charge of this industry with purely agricultural matters and absence of advisers in his Ministry whose outlook is normally adjusted to the nature and needs of an industry. I confess that I am in no way enamoured of Mr. T. T. Krishnamachari or his staff at the Ministry of Commerce and Industry, but I believe that the sugar industry, the sugar trade and the consumers would get a better deal from those whose business it is to deal with trade and industry. In the present context of the administrative set-up, this is all the more necessary, because in Uttar Pradesh, sugar is an important pawn in politics and a Minister not connected with this State would be able to take a more objective attitude towards the problems of this industry. Nobody, short of being a *yogi* can effectively control his subconscious mind. And Mr. Kidwai, I am positive, would not claim any proficiency in the practice of *yoga*.—*All Rights Reserved.*

OFF THE RECORD

(By "ROVER")

THINGS have been going wrong periodically with sugar for the last seven years. If someone were to write a history of this commodity, it would amount to nothing more than a series of administrative muddles, each one more messy than the one immediately preceding. At one time, we were all inclined to believe that Mr. K. M. Munshi held the record, both quantitatively and qualitatively, for the most colossal muddles in this sad and depressing series. But we would have to revise our ideas about making this award, after taking into consideration all the blunders which have been perpetrated in rapid succession, which left us aghast, even though, as students of public affairs, most of us could boast about being inured to administrative vagaries and inaptitude in general. I am now inclined to favour Mr. Kidwai's claim for top honours in this direction, especially as Mr. Munshi's subsequent handling of affairs regarding sugar, with his reputed brilliance and his innovation of partial decontrol, which raised the production of sugar by almost half a million tons, took the edge off his earlier mistakes.

There is no denying the fact that Mr. Kidwai has won many a battle on the food front, though not without a good deal of aid from the capricious Goddess of Luck. But this achievement of his in the matter of foodgrains renders his failure with sugar all the more dismal by contrast. Since last October, Mr. Kidwai has misjudged the situation at every turn and taken decision after decision, with regard to exports, excise duty, releases and imports which have landed him and with him most of us deeper into the morass. The most unfortunate part of this bungling is that all the mistakes arose from his initial failure to decontrol sugar altogether at the beginning of the current season and his retaining the authority to release sugar from each factory for sale in the open market in the hands of his Ministry. This spoon-feeding of the market created and then perpetuated a condition of artificial scarcity and gave rise to and encouraged heavy speculation in a commodity which was in abundance at the time. This initial false step led to ugly developments, in trying to correct which more and more mistakes were made leading to the present humiliating position. The humiliation lies in the fact that a country which went in search of export markets and even offered to subsidise these, only a few months ago, is now reduced to a position of seeking supplies of sugar in the most distant markets of the world. Our prestige abroad, politically, is admittedly high; it cannot remain high when people in foreign lands discover that our judgment on, and appraisal of, economic affairs is so poor.

Even with regard to importing sugar from abroad, Mr. Kidwai has shifted both his grounds for this extraordinary measure and the procedure and the machinery to be used for getting these additional supplies, with a greater frequency and more abandon than any woman on earth. He wanted imports originally to be used as a stick to beat the hoarders with. Now, he has discovered that people have taken suddenly, and for no cause at all, to consuming 50 per cent. more sugar than they did before and that imports are necessary not so much to bring down prices as to fill the unforeseen gap in supplies. What Mr. Kidwai says about increased consumption and what the industry has been saying for some months may be perfectly true. Nevertheless, it sounds rather strange, in view of the fact that there is a general complaint from almost all other producers of, and dealers in, consumer goods that sales are falling and stocks are rising, because people's purchasing power is not the same now as it was some time ago. Besides, for the last ten months, the price of sugar has been rising steadily. There is no accounting, on grounds of pure logic, for the behaviour of the people in the mass, but this concentration of the masses on eating sugar, when they have to make their dwindling supplies of money go a long way, exactly when sugar begins to get progressively dearer, is likely to baffle the orthodox students of economics.

Human nature and men's habits regarding diet must have undergone a sudden revolution during the last few months, because, if my memory is not playing me any tricks, the situation about sugar during the middle of 1952 was that sugar, though nominally controlled, was not only available freely in private grocers' shops, but it was available at less than the controlled rate, which, in itself, was much less than the free market rate during the last five or six months. However, these very people with a characteristic contrariness refused to eat more sugar when they had a little more money in their pockets than they have to-day and we were obliged to ship our sugar to Persian Gulf ports and to Japan. It is for the psychologists to explain why people should cease buying clothes, shoes, spices, oil and even foodgrains or to reduce their offtake of these things and rush pell-mell to acquire more sugar. And, in any case, neither Mr. Kidwai nor I happen to be an orthodox student of economics. I do not, therefore, propose to question Mr. Kidwai's contention that the people have unaccountably and suddenly gone mad and have started to live on sugar, just to create difficulties for his much harassed Ministry and to put more money in the pockets of sugar manufacturers and merchants. I would, however, suggest, in passing, that it is Mr. Kidwai's duty as a responsible Minister to inform the Health Minister about this whim of the people and the adverse effect it might have on their health.

I do not propose to go into the genesis of this trouble and open up all the ugly controversies regarding the raising of the excise duty, the announcement regarding the export subsidy, the sudden ban on exports a few weeks later and the starving of the markets by letting sugar out in driblets to help the bulls in the forward markets and the unscrupulous units in the industry. At the same time, I do not want Mr. Kidwai to forget that he has still to render an account to the public about his earnings from the additional excise duty which he levied on sugar for a specific purpose. I might also remind him, in this connection, while I am at it, that, if he has collected enough to defray the cost of the price difference that he undertook to pay to the factories for selling the balance of last season's production cheaper (we never got it any the cheaper) he should now take off his additional levy and use any balance held by him to subsidise imported sugar, which he proposes to sell at Rs. 30 per maund to the trade, so as to bring down the price of home-made sugar. It will serve my purpose if I can show that, even in this minor matter regarding importing a small quantity of sugar, Mr. Kidwai's Ministry has done everything it could possibly do to complicate a simple operation, to raise the cost of imported sugar, and to delay its execution.

To begin with, Mr. Kidwai did not know how much sugar he wanted to import. He threatened that he would cause 200,000 tons to be landed, but after some talks with a few representatives of the industry, relented and brought the figure down to 50,000 tons and later even to 25,000 tons. In his early enthusiasm to teach these profiteers a lesson, he prevailed upon the Finance Minister to reduce the import duty to a level which would have caused this sugar to be sold here at a cost very much below even what he considered to be a fair price for the home product. He wanted imports originally to be confined to the ports of Bombay and Madras for some mysterious reason, but has wisely revised his decision in this respect and now wants to direct these imports also to Calcutta, Cochin and some ports on the Saurashtra coast. But, in the midst of all this wavering, he happened to take one right decision almost by chance. This was to give import licences to the trade to get this sugar. Business men got busy and some even entered into contracts at economic rates for early shipments from sources near at hand.

If Mr. Kidwai had stuck to this decision and issued licences to those who had applied for them, quite a large quantity of sugar would have been landed at least a month ago. But some strings were pulled from somewhere, Calcutta, Kanpur or Bombay, and the puppets in the Food Ministry began to dance to a new tune. All the previous announcements about allowing imports, which had led to a frenzy of activity amongst importers, were hurriedly scrapped and they were advised to make offers on certain impossible terms to secure sugar from the world markets for delivery to the Government ex-docks at Indian ports. More than a month was wasted in making this shift from private imports to those on Government account and I have a shrewd suspicion that whoever was responsible for giving this advice to Mr. Kidwai, was playing for time. He must have known that the Government would get precious little sugar on these terms and even if they were offered some, it would be at a price which would not suit them. As it turned out, another month was wasted in this silly game of hide and seek and prices in the sugar market in the meanwhile kept up its steep ascent.

But the indefatigable Mr. Kidwai continued his search for sugar and at last succeeded in purchasing about a hundred thousand tons from sources far and near. What these sources are and at what price and on what terms he has purchased this sugar nobody outside his Ministry knows and it would be futile now to conjecture whether he could have secured this supply on better terms or at a lower price through the usual trade channels in the country. Even the earliest shipments from this official purchase are not expected to reach here for another month and the situation here, in the meantime, after the market has swallowed and digested the Government's offer of this sugar at ports at some indefinite date at Rs. 30 per maund, will revert to what it was last week and might even deteriorate further, in view of the spurt in seasonal demand due to the large number of holidays in the coming months. Mr. Kidwai has tried hard and often, to keep the price of sugar from rising and to bring it down, but he went about doing this in a manner which has resulted in giving a fresh spurt to the price level and helping the speculators.

I have great admiration for Mr. Kidwai for the way in which he has eased the food situation for us since his joining this Ministry. But I have come to believe that he is not properly trained and equipped to administer sugar, which is a product of industry and not of agriculture. The whole outlook of the Minister and his staff is conditioned by and tuned to the requirements of agriculture as a whole and it is not easy for them to cultivate and develop an industrial outlook or to devise administrative technique suitable for an industry. In the case of sugar, the situation is further complicated by the fact that only a small part of sugarcane cultivation is used for manufacturing sugar. Nearly three times as much goes for *gur* making, which is not an organised large-scale industry. The claims of agriculture and cottage industry, both for political and technical reasons, go to cloud every issue affecting the sugar industry and the marketing of its product.

It is time, therefore, that the administrative control over the sugar industry and the distribution of sugar was transferred to the Ministry of Commerce and Industry, where at least the staff is used to handling problems arising from trade and commerce, in the same manner as the textile industry is controlled and administered appropriately by this agency. The technical side of sugarcane cultivation might be left to the Ministry of Food

(Continued in first column)

INDIAN ECONOMY SINCE INDEPENDENCE

SUBSTANTIAL SUCCESS ACHIEVED IN TACKLING DIFFICULT PROBLEMS

(From A Special Correspondent)

NEW DELHI, *17th August*

THIS week, the capital celebrated the seventh Independence day amidst customary pomp and splendour. The Congress has been at the helm of affairs for the full six years since Independence. These years have been abnormal with considerable stress and storm; yet its statesmen have been able to grapple with the difficult problems, political and economic, with great courage and sagacity. They have been able to achieve a substantial measure of success in most of them. Political integration and consolidation apart, India has been able to launch its first Five-year Plan within less than four years after the attainment of Independence. The first fruits of planning are already becoming discernible. A few irrigation projects have been completed or nearing completion, mention among them being made of Tungabadhra, Tapti, Ghataprabha, Bhavani, and other projects. The progress in regard to the Damodar, Hirakud and Bhakra projects has been satisfactory. In the industrial field, State projects such as Sindri, Chittaranjan, Bangalore telephone factories and others have added feathers to the Government's cap.

DELHI LETTER

On the food front, India has now been able to reduce imports from about 4.8 million tons in 1951, to about 2.1 million tons during the current year. In view of the favourable trend of the monsoon during the current year, a further reduction might be possible during next year, and imports under the international agreements are expected to be utilised for building up stocks. A number of new industries have sprung up into existence during this period due to satisfactory imports of capital goods, their average annual value being about Rs. 90 to Rs. 100 crores. To-day the monthly industrial production has been running slightly over 40 per cent. as compared with that in 1946.

Rise in Prices

In the price sector alone Government has not been able to attain full success. During the last eight months the wholesale prices index has been steadily advancing, the figure moving up from 372 to 409 at the end of July. The upward trend is in distinct contrast with that of the world trend in prices. A large part of the rise in prices may be attributable to the relatively lower production of a number of essential commodities as compared with the growing demand for them and the change in the consumption habits of the people as a result of the greater diffusion of the purchasing power and the constant growth of the population. For instance, despite the fact that production of sugar is now standing at about 1.4 million tons per annum as against less than 1.0 million tons in the pre-war period (undivided India), Government has planned to import about a lakh of tons to keep sugar prices from rising. In the pre-war period, India was exporting 35 to 40 per cent. of its groundnut production (around ten lakh tons of kernels), but to-day even the imposition of a ban on export of this commodity has proved to be inadequate in checking the upward trend in prices. Consumption of tea for undivided India in 1939 was about 100 million lbs. per annum, but to-day divided India has nearly doubled the intake of this beverage. Similarly, large sectors of people in different States are reported to have begun consuming wheat and rice in place of *bajra* and other coarser grains. A stable price level can be possible only if the output of essential consumption articles is increased appreciably, making it difficult and unprofitable for merchants to corner these goods. It must be borne in mind that offtake of these generally tends to increase considerably even with a moderate rise in the standard of living of the ordinary people.

Industrial Production

Industrial production for the first half of 1953 has been higher than either for the preceding half-year or that of the corresponding period a year ago. The general industrial production index for this period is estimated at 133.3 as compared with 130.9 and 126.3 for the preceding two half-year periods. Among the major industries, the performance of the cotton textile industry has been especially impressive. For the first half of the current year, the total output amounted to the high figure of 2,459 million yards as against 2,163 million yards for the corresponding period last year. It is noteworthy that cloth output has been running at the monthly average of 424 million yards since April last. In July, it touched the high figure of 435 million yards, outstripping the previous record of 425 million yards, reached in the same month a year ago. If the present production trend continues, it is likely that cloth output will touch very near the 5,000 million yards mark this year. Production of cement recorded a small increase, the figure for the first half-year being 1.78 million tons as against 1.68 million tons for the same period a year ago. The output might have been greater had some of the cement factories not remained closed for overhauling and repairing. Steel production could not look up, due to the unfortunate slow down tactics adopted by labour in the Burnpur factory during the last few months. The output is placed at 483,000 tons as against 537,000 tons a year before.

Jute, Paper and Coal

Production of jute goods continues to remain at a lower level, the figure for the first half-year being 436,000 tons as against 496,000 tons for the same period last year. What is somewhat disquieting in regard to this industry for the last many months is the heavy accumulation of stocks that the industry has been carrying, following the reduced demand for sacking goods. Production of paper has also been remaining at a steady level, but an increase can be looked forward to during the coming months when the new machinery recently installed in some of the factories comes into the production stage. For the first six months of 1953, the output amounted to 67,200 tons as against 66,902 tons for the same period last year. Shortage of wagons and transport bottlenecks have now begun to act as restraining factors in regard to the upward trend in coal production, the six-month figure being estimated at 18.58 million tons as against 18.68 million tons a year ago.

The production in regard to many minor engineering and chemical industries has presented a mixed trend. A number of industries producing consumption articles or semi-durable goods have been meeting with consumer resistance during the last few months and, in consequence, their output has been adversely affected owing to lack of demand. Some of them have also been maintaining the upward trend noticeable in recent years, the average monthly figure likely to exceed 7,000 maunds as against 6,405 maunds last year. High prices of vegetable oils prevailing during the last few months appear to have no adverse influence on the production of *vanaspati*, the output of which has now risen to 17,500 tons as against 15,901 tons a year ago. Plywood production has begun to decline, particularly tea chests, the average monthly output during the first half of 1953 receding to 5.8 million sq. ft., as compared with 7.5 million sq. ft. a year ago.

Shortage of Sulphur

The shortage of sulphur continues to hamper the production of sulphuric acid, the average monthly figure staging a setback from 8,006 tons to 7,672 tons. The production trend in regard to soda ash is better, the half-yearly figure being placed around 25,000 tons as against the average monthly figure of 3,694 tons a year before. Production of superphosphates has declined appreciably to less than 3,000 tons per month, as against the installed capacity of 16,055 tons. The output of ammonium sulphate for the first half of 1953 is estimated at 162,000 tons. The output of paints and varnishes has been remaining steady, the six-month figure being 15,800 tons, the monthly average figure a year before being 2,681 tons. Production of matches has improved moderately, the half-year figures being 262,000 cases as against the average monthly figure of 50,700 cases last year. Soap output has remained steady, amounting to 43,250 tons as against the average monthly figure of 7,198 tons last year. In the glass and glassware sections, sheet glass has recorded an impressive increase, the monthly production is now standing around 2,534,000 sq. ft. as against the average monthly figure of 754,000 sq. ft. last year. Among minor industries, some improvement in production is noticeable in woodscrews, razor blades, hurricane lanterns, power transformers, etc. The trend of production in regard to diesel engines has been very discouraging, the average monthly production working out to less than 140, as against the installed capacity of 527. The monthly production of bicycles has also been steady, the half-year output being estimated at about 95,500, as compared with the average monthly production of 16,413 last year.

PLYWOOD INDUSTRY

The Indian plywood industry continues to face the critical situation that overtook the industry towards the close of last year, on account of slackness in demand for tea chests from the tea industry. An indication of this is provided in the marked decline in production in recent months. The aggregate production of plywood during the first five months of 1953 was only about 29 million sq. ft., a fall of as much as 31 per cent., as compared with the output of 42 million sq. ft. in the corresponding period last year. The decline in output is solely accounted for by tea chests, the actual production of which was 23 million sq. ft., as against 37 million sq. ft. Production of commercial plywood, however, recorded a rise from 5 million sq. ft. to 6 million sq. ft.

The foregoing brief account clearly emphasises the close interpendence between the plywood and tea industries. Excessive dependence on a single consumer is always harmful to a producer; after all, it is dangerous to put all one's eggs in a single basket. The effective solution to this lies in the development of the use of plywood in other spheres. It was precisely to this aspect of the question that Mr. N. N. Bose, President of the Plywood Manufacturers' Association, drew pointed attention in the course of his address at the recent annual meeting of the Association. Significantly enough, Mr. Bose remarked " . . . most of our plants are small and meant for tea chests only, but I think that, even with these small plants, with but a few additions in machinery, it is possible to produce a certain percentage of plywood for other uses and not to depend on the tea industry hundred per cent."

There is also the need for stabilising the conditions in the plywood industry. It is true that Indian plywood has been enjoying tariff protection for some time now. But protection as such cannot be expected to set the industry on sound lines. What is wanted is an earnest effort on the part of the industry to maintain a high level of production of quality plywood at low cost. Indeed, as Mr. Bose pertinently stressed, the industry should be able to devise ways and means by which it could be placed on a sound basis. Plywood is a versatile product. It could help brighten many middle class houses by "cheap, light and durable" items of furniture. It would appear that, with small additions to their existing equipment, even the smaller units, which now cater largely to the tea industry's needs, would be able to switch over to new lines of production. It is to be hoped that the plywood industry will adopt Mr. Bose's suggestion, if only to avoid disappointment through the failure of the tea industry to take all the chests offered to it.

WORLD BANK TO CONCENTRATE ON ECONOMIC DEVELOPMENT

Now that the reconstruction phase of its activities is practically completed, the International Bank for Reconstruction and Development expects to concentrate henceforth on the economic development of the underdeveloped areas of its 57 member-countries. In the seven years it has been in existence, the World Bank has made loans amounting to nearly $1,600 million. Of this amount, about one-third—or some $500 million—has been devoted to reconstruction of the basic facilities of its member-countries that were damaged in World War II. About two-thirds of its loans have gone to help economically-underdeveloped countries. Henceforth, the Bank's activities will be almost wholly concentrated on economic development.

The building of industry in the underdeveloped areas involves a lot more than construction of plants and purchases of machinery. Before plants can operate, they must have power. Transportation facilities must be available for moving raw materials to the plants and the plants' products to market. Thus far, $646 million of the Bank's loans have gone for power and transportation projects. Only $144 million of the Bank's loans have been straight "industry" loans.

The Bank's experts, however, are fully aware that development of agriculture cannot be neglected, and that agricultural output must be increased along with industrial output. Thus far, the Bank has lent $153 million on agricultural and forestry projects.

AMERICAN LETTER

OPTIMISM IN UNITED STATES

INFLATIONARY FORCES STILL ACTIVE

(From Our Own Correspondent)

NEW YORK, *13th August*

CHEERFULNESS outweighs gloom in business and financial thinking. There may be soft spots and future perils in the United States, but, by now, they have been so well advertised as previous post-war "recessions" which never quite materialised, because proper action was taken in due time. Most of the "must" legislation was passed by Congress before adjournment and truce but not peace in Korea, to which India contributed materially, has become a fact. These are the two principal encouraging factors plus the dilemma of the Communist regimes in Eastern Europe.

On the other side of the ledger is the death of Senator Robert A. Taft, whose political wisdom will be missing as a balance wheel on Capitol Hill at Washington. The Senator enjoyed the highest respect and was able to muster considerable Democratic support for the legislative programme of the Eisenhower Administration. No one of similar stature is visible in the Republican ranks.

Also disturbing are some of the findings of Dr. Milton Eisenhower, brother of the President, of his tour of Latin America, such as the obvious deterioration of previous friendships between the United States and its neighbours to the South and the inroads of Communism in the adjacent hemisphere. Softness of farm and commodity prices and weakness in metals are other grounds for concern.

But they are relatively minor in the overall picture. In the financial field, the chorus of complaints over the Administration's monetary policy has diminished to a whisper, as a result of the recovery in bond prices and the first major piece of deficit financing by the Republicans Administration was accomplished with a minimum of inflationary bank credit.

The newly freed markets, generally, have responded well to new policies, although some abusive advantages seem to have been taken in several parts of the country with the expiration of Federal rent control. In fact, with the necessity of further deficit financing, increase in rents, higher transit fares in many communities, to mention only a few factors, inflationary forces in the United States are by no means dead. They are offset, however, at this time, by greater economy in Government, already accomplished by reduction in spending and proposed by ex-President Herbert Hoover's new Government reorganisation group, as well as by lower commodity and farm prices.

Anti-recession Blueprint

To be prepared against the possibility of an economic downturn, however improbable it may appear at this time, it may be cheering news that an anti-recession blueprint is being worked out under Government auspices under the direction of Dr. Arthur F. Burns. The plan is expected to be ready by the end of the year.

So far, nothing spectacular seems to have been proposed of what should be done in the unlikely event of a downturn in business, but the obvious, such as easing of fiscal policy, a national public works programme, badly needed rebuilding of highways and, perhaps, lowering of taxes—all stimulants, if necessary. Rehabilitation of Korea, aside from its political effect, comes under the same general heading.

In such emergency operations, softer money rates could be of substantial assistance, of course. Under present conditions of moderately tight rates, quite a few capital issues have been falling by the wayside here recently.

Thus, many new projects for modern schools, water systems, sewers, airfields, hospitals and what have you, have been postponed or cancelled either because underwriters refused to bid for the securities or the bids submitted appeared to carry too high an interest rate. These postponements to a period when they may be required nationally are no calamity at the time, when all economic indices are at extraordinarily high levels. Another contraction, that of American exports, is a healthy one. U.S. exports in the first five months were $162 million below the corresponding level of last year, but imports were 3 per cent. higher.

In the economic picture, as a whole, reasons for complaint are few, indeed. Net earnings of heavy industrial concerns were about 17 per cent. higher in the first half of 1953 than in the first six months of 1952. Dividends also rose. If check clearings hold to their present levels, bank debits in 345 U.S. cities would exceed for the year as a whole, the 1952 total of $1,640,000 million by about $100,000 million. Despite a rising volume of consumer credit, delinquency ratios are declining in various categories, while, in other groups, they are higher and there has also been some increased slowness of collections, of prompt and discount payments among commercial accounts.

The reductions were more or less fractional but particularly noticeable in the manufacturing and industrial areas as well as in the retail field. Manufacturers, for example, were 87.8 per cent. prompt or discounting in May, against 90.5 per cent. twelve months previously. The respective retail figures were 81.4 per cent. and 84.2 per cent.

Outlook

So far as the outlook is concerned, some interesting comments came from leaders in various industries after signing of the truce in Korea. They were in answer to the universal question how will the end of hostilities affect the American economy. Even leading automobile executives suggested that business was no longer dependent on defence spending. Used car sales have been pushing ahead steadily which had been of some concern before. One auto spokesman said, "the truce in Korea could stimulate our aggressive economy."

Others spoke of a temporary adjustment period ahead which America would take in its stride, but which may be rather tough in spots. This came from the rubber industry. The textile people, outside of synthetic fabrics, are also complaining. A spokesman for the chemical industry expected a slowdown in orders for three to six months "as customers are likely to reduce inventories." This would be followed "by a continuing expansion of markets for chemical goods," he said.

The steel industry indicated it was not greatly concerned. In view of the uneasy peace and civilian demand, mill operations are expected at high levels. If any generalisations can be made at all, it would seem that whatever adjustments may be in the offing, will be as selective as the stock markets here have been for some time. Moreover, they are unlikely to upset the "flexible stability" of the economy as a whole.—*All Rights Reserved.*

CLIMATE FOR U.S. INVESTMENT IN INDIA

Economic conditions in India are becoming more favourable for utilisation of a greater volume of private U.S. investment, according to a recent report by the U.S. Commerce Department. The report, prepared by the Department's Office of International Trade, says that India has made, and is continuing to make great strides towards removing obstacles to private American investments. To quote the report: "Of particular importance are the efforts which the Government of India is making to simplify its screening procedure, to extend special guarantees, exemptions and concessions to new foreign and domestic investments, to improve and extend the basic facilities of the country, and to increase agricultural production."

The report notes that a treaty of friendship, commerce and navigation is being negotiated between India and the United States and that both countries have expressed interest in negotiating a double-taxation treaty, while establishment of an investment guarantee programme for India under the U.S. Mutual Security Act is being considered. Further, it observes: "Equally important is the fact that economic conditions in India are becoming more favourable to India's utilisation of a greater volume of U.S. private investment. India's large population, resources and underdeveloped conditions create a great potential for economic growth. Moreover, India's development has reached a stage from which fairly rapid and unimpeded industrialisation can take place. The development of the country is being directed by a fairly well-balanced and well-co-ordinated programme. India's development programme requires private capital, technical knowledge and business experience, which American private investors can assist in supplying. The obstacles to some types of U.S. private investments are on the whole less in India than in many countries of the world. Particularly promising is the progress still being made in removing the obstacles which exist."

PAKISTAN NOTES

RAW JUTE EXPORTS

MARKED FALL IN EARNINGS

FOR Pakistan's jute export trade, the 1952-53 season has turned out to be rather none too satisfactory. An indication of this is provided in the marked decline in earnings from exports, thanks to low prices prevailing in the first half of 1952-53. The aggregate value of jute exported from Pakistan during the season under review, according to the latest jute survey of the Pakistan Government, was only Rs. 57 crores, which compares unfavourably with as much as Rs. 99.0 crores in 1951-52. What is worse, the fall in value has taken place despite a substantial rise in the volume of exports, from 4.8 million bales to 15.3 million bales.

The bulk of the rise in jute exports from Pakistan during the first eleven months of 1952-53 is accounted for by dollar countries, the actual offtake of which was larger at 553,868 bales, as against 171,043 bales. The U.K. also accounted for a rise in exports from 500,000 bales to 800,000 bales. The offtake of jute by India, however, was lower, being 1.3 million bales, as against 1.6 million bales.

Although export of jute registered a rise, as noted above, there has been accumulation of heavy stocks. Thus, the quantity of jute lying unsold in the beginning of the current (1953-54) season was 2.8 million bales, as against 1.3 million bales a year before. Notwithstanding such a state of affairs, the price of jute is expected to be well maintained. To quote the official survey: "Limited jute production, combined with prospect of firm prices, are expected to bring large earnings of foreign exchange during the season. The average for the 1953-54 crop has been so fixed as to yield a limited quantity of jute." According to provisional estimates, the yield is placed at 4.2 million bales. Some estimates place it even lower at 3.5 million bales.

Woollen Industry

A scheme for establishing 20,000 worsted spindles, 24,000 woollen spindles, 10 finishing units, five hosiery mills and five carpet manufacturing mills by 1954-55 has been prepared by the Government of Pakistan. The successful implementation of the scheme, it is stated, will go a long way towards making Pakistan self-sufficient in woollen goods. A sizable quantity of raw wool, however, will still be available for export.

The plateaus of Baluchistan and the rugged hilly tracks in the N.W.F.P. produce 28 million lbs. of wool every year. Until recently, no arrangements existed for the manufacture of woollen goods, with the result that the bulk of indigenous wool was being exported. Effective steps have since been taken to utilise the raw wool. Two woollen mills, with 4,000 worsted spindles and 400 woollen spindles, are now in production in Karachi and the Punjab. Another woollen mill in Karachi is producing yarn for carpets and blankets. Two woollen textile mills are being set up by the Pakistan Industrial Development Corporation at Bannu (N.W.F.P.) and Harrai (Baluchistan), with 2,340 spindles and 24 looms each. Each of these mills is expected to manufacture 40,000 blankets, 400,000 yards of carpet yarn, and 270,000 yards of fine tweed and other finer woollens. Nearly 60 per cent. of the yarn produced will be made available for cottage industries. Another woollen textile mill is being established in the Thal Area (Punjab) by the Industrial Finance Corporation in partnership with private enterprise and the Thal Development Authority. The first two mills are expected to go into production this year and the third next year.

Silk Industry

The Punjab Government is preparing an "ambitious" scheme for the development of the silk industry in the Province. The scheme envisages the setting up of a silk factory in the Rawalpindi district. Incidentally, it may be noted that sericulture, as an industry, is still in its infancy in Pakistan and silk yarn is produced only in the eastern wing. About 10,000 people are engaged in the industry and the total production is at the rate of 40,000 lbs. of silk per annum.

The Government of Pakistan has considered the report of the Tariff Commission on the match industry and has agreed that protection should be extended to the industry. As recommended by the Tariff Commission, the present system of excise duties and import duties on different types of matches will be simplified as soon as possible. An intensive survey and research will also be undertaken to improve the supply position of timber for the industry at reasonable prices.

CONVERTIBILITY OF CURRENCIES

GOAL STILL NOT IN SIGHT

DISCUSSIONS on convertibility of sterling and other soft currencies have, once again, come to the fore in Europe. They seem to have originated from the expectation that the problem of convertibility will figure prominently in the deliberations of important international bodies to meet between now and the turn of the current year. Early next month, the World Bank and the International Monetary Fund are to meet at Washington. India will be represented at these meetings by its Alternate Director, Mr. B. Rama Rao, Governor of the Reserve Bank of India. Financial experts in Europe believe that these meetings will give some indication of the opinion held in general on the question of convertibility by the countries in Latin America and Asia. Again, the O.E.E.C. Council of Ministers is scheduled to meet at Paris in October. This will be followed by the Commonwealth Conference scheduled to take place by about the end of the year. In these conferences, too, the question is expected to be discussed at a high level. Whether these conferences will result in any definite progress towards convertibility of currencies remains to be seen. What strikes one most, however, is that the present speculations centre round the Commonwealth draft plan for convertibility, a plan about which very little authentic information is available. Press reports in the various European capitals, claiming authenticity, have indicated certain aspects of the plan, as if they were firm and clear cut proposals. A glance at these reports, containing as they do, a number of hypothetical alternatives, conveys the impression that the question of currency convertibility has not yet passed the stage of academic discussion.

Flexible Exchnge Rate

One or two notable features which emerge from the speculations that are current may, however, be mentioned here, if only to record what financial experts generally feel on the problem of currency convertibility. Not much has been heard of the plans for convertibility since the British Chancellor of the Exchequer and the Foreign Secretary went to Washington last March to know American reactions on the plan, and subsequently to Paris where they held discussions with the O.E.E.C. Some points of Mr. Butler's provisional plan communicated to Washington are, however, now mentioned in the Press reports coming from the Continent. The *Financial Times*, London, sees two points in these reports which have been elaborated with greater precision than before. One of them is that the sterling area has definitely decided to favour convertibility on the basis of fluctuating rate for the pound. Although there is no official confirmation on this point, competent circles in London are credited with the view that the present limits of under one per cent. on the fluctuations in the market value of sterling, as laid down in the I.M.F. rules, is a dangerously narrow base on which to meet the pressures that may come to prevail on a convertible pound. Consequently, it has been proposed by some that the limits of fluctuation should be broadened on either side of the parity rate of $2.80 to the £ from one to two per cent. Commenting on this proposal, the *Financial Times* observes: "Technically that would mean a 'floating rate,' governing the value of sterling from day to day. But, in practice, it would not represent a revolutionary departure from the system which is in force at present. A floating rate, which floated as little as this, would probably not make the other sterling area members any less willing to hold their reserves in the present form, with the value of their currencies maintained at a fixed parity with the pound in London. That is the crucial factor in considering the practical consequences of the introduction of fluctuating exchange rates."

West Germany's Views

The reactions of Western Germany to convertibility on the basis of flexible rate of exchange appear to be unfavourable. According to reports from Bonn, "flexibility" is considered to be the weak spot of the Butler Plan, for it suggests a lack of confidence in the ability to hold a fixed rate which would not be a promising state of mind in which to inaugurate the new system. Besides, it is not known whether Belgium and Switzerland, with their faith in fixed rate of exchange would be willing to support the proposal for a flexible exchange rate. It is stated that unless these countries, as also Holland, agree to convertibility of their currencies, Western Germany is not inclined to support the British plan. Holland has already expressed itself against the very idea of convertibility itself. In its official report dealing with the consequences of U.S. economic aid, the Dutch Government is reported to have stated clearly that generally gold and foreign exchange reserves in Western Europe are still too small to absorb the shock of convertibility. It points out that the volume of gold reserves outside the U.S. in relation to the volume of international trade is only a quarter of pre-war. It, therefore, observes that, as long as no solution is found for this problem, speedy progress towards convertibility is not considered feasible. West Germany also thinks that present reserves are inadequate and must be strengthened before launching on convertibility. West Germany, however, is prepared to support Britain's move towards convertibility, provided (a) other West European countries agree to fall in line, and (b) Britain undertakes to liberalise its European trade to the extent of at least 75 per cent. (at present quota-free trade is 58 per cent.) and agrees not to reimpose restrictions, if the exchange went against it.

Managing Board

The second important point of the plan referred to by the *Financial Times*, is the suggestion that an international managing board should be set up to supervise the economic relations of the countries with convertible currencies and to hold a portion of their gold reserves. The paper observes that this is one of the cases where an idea has been somewhat distorted in the course of reporting by giving it too precise a form. Proceeding, it remarks: "That the sterling convertibility proposals envisage some kind of international agreement about the rules for the future conduct of trade with countries having convertible currencies is not in doubt. ... But it seems hardly likely that the British Government, which has firmly resisted proposals for the creation of a formal administrative arrangement for the management of finances of the sterling area, would countenance the establishment of an international managing board for convertible currencies. Whatever agreement is finally reached with the European countries on this subject, it is probable that, if there is an international control of any kind, it will be loose and have only minor power."

Proposed Five-Point Plan

The two points raised and discussed above are said to form part of the five-point Butler Plan. For purposes of convenience, the summary of the five-point Plan is given below as reported in the Continental papers:

1. restoration of convertibility of sterling along with a bold move for freer world trade and payments;

2. establishment of a freely fluctuating sterling dollar rate subject to the guidance of a new Exchange Equalisation Fund, similar to the pre-war pattern;

3. the setting up of an international advisory board of eight to ten members composed of the main trading nations, which would be custodian of a considerable proportion of the members' gold reserves and ensure the maintenance of convertibility and free trade, and scrap, simultaneously, the E.P.U. which might be continued only in rump form for the benefit of a few weak members unable to restore convertibility;

4. procurement of American help in the form of an increase in the dollar capital of the I.M.F. and trade concession; and

5. abolition of dollar import restrictions after the setting up of the advisory board and an agreement on trade rules to be observed by members. According to the Paris Correspondent of the *Financial Times*, however, Britain is believed to have submitted not one plan but two or three alternative plans for consideration. He adds that on the creation of a Managing Board, the British plans are not so definite as quoted in the above summary and that, in any case, "they do not provide for the part pooling of gold resources." Be that as it may, the proposals for convertibility would appear to have received a mixed, although on the whole sympathetic, reception in the various Continental capitals. The reactions of most treasuries, central banks and business communities are said to be favourable according to various reports. But there is still a considerable section of public opinion which does not visualise a world without foreign exchange and other controls. Certain European experts still wish to maintain the E.P.U. at any cost, as in their eyes, the E.P.U. has become a sort of symbol of European co-operation. They feel that the E.P.U. is necessary for the sanctioning of the Coal and Steel Pool, although it is pointed out that small transfers of funds originating from coal and steel transactions by the Pool should not present a real problem. They hold that the E.P.U. could be improved and eventually achieve full convertibility within the present framework by progressively raising the proportion of gold payments for the settlement of deficits.

Problem of Free Trade

Again the question of currency convertibility is linked with restoration of freer world trade and payments. Freer trade in Europe is facing two obstacles: (a) payments crisis in Italy and (b) import restrictions in France. Italy, which was formerly a persistent creditor nation, is to-day a persistent debtor. Italy's deficit amounted to $15 million in July, $20 million in June and $30 million in May this year. The improvement noticed since May is expected to be temporary, as from September onwards, the deficit will rise again to $25 to $30 million a month. If no action is taken, it is feared that the Italian E.P.U. quota may be exhausted by next spring. Again, despite severe import restrictions, France has not been able to restore its balance of payments. The country continues piling up deficits with the E.P.U. And both Italy and France seem to be in favour of imposing import restrictions. The case of these two countries is sure to figure prominently in the October meeting of the O.E.E.C. Council of Ministers. The decisions reached at the meeting are likely to affect the proposals for currency convertibility.

And above all, there is the question of American attitude towards convertibility. It is still an uncertain factor. Until America makes up its mind about its trade policies, there can be no possibility of a return to convertibility of currencies and multilateral trading. No decision on its trade policy is expected to be announced before the beginning of 1954, when President Eisenhower's annual message to the nation may include definite proposals. These considerations suggest that the goal of convertibility is still a distant one.

PROFIT OF IMPERIAL BANK OF INDIA SHRINKS

EFFECT OF LOWER TURNOVER AND HIGHER EXPENSES

IF 1952 was essentially a year of transition for the banking system in India, which involved a process of adjustment in the new monetary policy initiated in November, 1951, the current year can be said to represent the first year after the transition period. This period, too, in so far as it can be judged from the financial results of banks for the first half of 1953, has proved to be no less strenuous. There has been a general decline in the turnover of banks during the year so far. Although the level of advances, as at the end of June last, was higher than in the beginning of the year, the overall level of advances during the half-year was sizably lower than in the corresponding period of 1952. Deposits, which form the main resources of banks, were on a lower level. While there was a decline in turnover, there was none in expenses. If anything, they were actually higher. The effect of these trends was a fall in profits of Scheduled banks.

The statement of accounts of the Imperial Bank of India for the half-year ended 30th June, 1953, clearly shows that the Bank was no exception to the general trend stated above. Thus, the Bank's profit for the half-year under review amounts to Rs. 63.10 lakhs, which, as compared with that for the corresponding half-year of 1952, shows a fall of Rs. 6.97 lakhs. It may, incidentally, be noted that this profit is the lowest for the corresponding period in any year since 1948. The dividend is proposed to be maintained at 16 per cent. per annum, a rate which has been consistently paid from the half-year ended 30th June, 1950, onwards.

The following comparative table shows the trend of the Bank's earnings in the first half of the last four years and the allocations thereof:

(In lakhs of rupees)

	For the half-year ended 30th June			
	1953	1952	1951	1950
Interest and discount earned.	240.63	271.31	239.46	227.74
Gross income	362.82	392.19	344.54	320.82
Interest paid on deposits and borrowings	70.61	95.18	61.61	59.76
Expenses	222.82	218.84	215.03	189.53
Depreciation and repairs ..	6.29	8.10	4.00	3.60
Profit	63.10	70.07	67.71	63.93
Sum available for distribution	105.18	113.24	116.43	123.85
Transfer to—				
Reserve fund	..	..	2.50	2.50
Pension fund	2.70	2.84	2.85	2.70
Dividend	45.00 (16% p.a.)	45.00 (16% p.a.)	45.00 (16% p.a.)	45.00 (16% p.a.)
Bonus to staff	20.00	10.00	15.50	16.60
Carry forward	37.39	40.41	47.55	57.15

The fall in the Bank's turnover is reflected by the decline of Rs. 29.37 lakhs in gross income. Of this decline, interest and discount earned account for only Rs. 4.68 lakhs, and income from commission, exchange and brokerage for no less than Rs. 24.75 lakhs. A sizable part of the decline in income has been counteracted by the decrease of Rs. 24.57 lakhs in interest paid on deposits and borrowings. This is evidently due to the fall in the Bank's deposits as well as to a decline in its borrowings from other banks. Of the increase of Rs. 3.98 lakhs in expenses, salaries and allowances and provident fund account for Rs. 1.74 lakhs and other establishment expenses for Rs. 2.24 lakhs. Despite the lower provision for depreciation and repairs to the Bank's property, the profit is lower by Rs. 6.97 lakhs. It will be noted from the foregoing table that the sum available for distribution has, in the course of the last four years, dwindled by less than Rs. 18.67 lakhs, while the provision for bonus to staff has gone up by Rs. 3.50 lakhs. This is the fourth half-year in succession in which no sum has been added to the reserve fund.

The main items of assets and liabilities of the Bank as at the close of the half-year under review are compared with those at the close of the previous three half-years in the table appearing at the end of the article.

It will be noted from that that there has been an increase of Rs. 2.66 crores in the Bank's deposits over the half-year under review in distinct contrast to the fall of Rs. 4.38 crores over the first half of 1952. But this does not mean that the Bank's resources were more in the half-year under review than in the corresponding half of 1952. The contraction in resources will be clear from a comparison of the 1953 June-end figures with those a year before. On such a comparison it will be seen that deposits had declined by no less than Rs. 18 crores. A similar comparison of the figures relating to the Bank's borrowings, loans, advances and cash credits also shows an all-round fall, as can be seen from the foregoing table. No doubt, over the half-year, total advances reveal a rise of Rs. 12.13 crores, as against an increase of only Rs. 5.82 crores in the first half of 1952. But this increase has been on a lower level and, over the year, the outstanding advances are down by no less than Rs. 21.26 crores. The trend of investments, however, has been slightly different. As compared with 31st December, 1952, total investments are lower by no less than Rs. 11.69 crores, but the fall is no more than Rs. 1.51 crores when compared with 30th June, 1952. What this means is that during the half-year under review the Bank liquidated a sizable part of its investments in Gilt-edged and other authorised securities. The resources thus realised seem to have been utilised for keeping down the borrowings from other banks. The cash balances, too, are lower by Rs. 5.26 crores.

The drop in liquid assets is an indication of this intensive utilisation of the Bank's resources to the extent permitted by general trading conditions. It is significant that the ratio of cash to deposits as at the close of June last is only a fraction higher than the conventional level of 10 per cent. The fact, however, remains that, in spite of the intensive utilisation of the Bank's funds, the profit margin has gone down, a point which the workers in the Bank should bear in mind while putting forward their claims for more salary and amenities.

EXPORTS OF INDIAN COTTON TEXTILES

DOWNWARD TREND PERSISTS

ANALYSING the trend of India's foreign trade in cotton piecegoods, we observed in these columns some time ago—vide page 488 of *Commerce* dated 21st March, 1953—that export orders were not flowing in as smoothly and as easily as they did towards the close of 1952, owing to keen competition from other countries, Japan in particular. This state of affairs persists even to-day. The quantity of cloth exported from India during the month of July—the latest month for which figures relating to cloth exports are available—for instance, amounted to 52 million yards, which compares unfavourably with 69.4 million yards a year before and 160.05 million yards in February, 1951. The exports of cloth during the first seven months of this year aggregated 370 million yards, a quantity which falls short of the target by a wide margin. On the basis of a target of 1,000 million yards per annum, exports during the seven months should have been at least 580 million yards.

The following table indicates the trend of cloth exports during the first seven months of this year, as compared with the corresponding months of 1952:

(In million yards)

	1951	1952	1953
January	120.15	30.7	43.4
February	160.05	29.4	38.6
March	156.96	22.4	53.9
April	74.96	26.0	63.6
May	49.20	46.4	62.3
June	16.45	68.9	56.1
July	25.55	69.4	52.0
Total ...	603.92	293.2	369.9

From the foregoing figures, it will be seen that exports of cloth were very high in the months of April and May. The improvement was somewhat arrested during June when exports staged a slight fall. The fall has persisted in the following month too. Exports of cloth in the past few days are reported to have improved. In fact, exports during this month are expected to be larger than that in the previous month. But this little improvement is due to the delay in the actual shipment of cloth in India in anticipation of the abolition of export duty. It is thus only a temporary phenomenon. Another temporary factor that has provided stimulus to the export trade is the fact that importers in Burma are purchasing larger quantities of Indian cloth, in their anxiety to secure as much stocks as possible before the new scale of import duties come into force, that is with effect from 1st October next.

Low Level of Exports

Be that as it may, the general level of exports of cotton goods is well below what it should be if the present rate of production of cloth and yarn is to be maintained. Several factors have been responsible for this low level of exports. The chief factor has been the general slackness in demand from overseas countries, which has hit hard all exporting nations. The level of world trade in textiles itself has suffered a contraction. There has also been severe competition from Japan and Lancashire which have been trying their best to attain targets fixed at the Buxton Conference, but with poor results. Exports to Pakistan, an important traditional market for Indian cloth, have been at a low ebb ever since the doubling of the import duty on cloth by the Pakistan Government. The latest position with regard to overseas markets for Indian cloth may be summarised as follows:

The offtake of cloth by Sudan has been very poor. This is due partly to foreign competition and partly to the continued prevalence of restrictions on import of cloth into the country. These restrictions are expected to continue for two to three months more. Exports to East African territories have been poor, thanks to shipping difficulties. In Aden, recession in cloth prices, on rumours that India would soon abolish the export duty on coarse and medium counts, and that convertibility of sterling was imminent, have entirely demoralised trade. There have been no orders from Hongkong and Singapore either. Japanese competition is reported to have adversely affected India's export trade in cotton textiles with Australia. There has been a virtual stoppage of exports to Ceylon.

The above survey serves to emphasise the need for taking steps to remove some of the handicaps to India's export trade. If India is to hold its own in competition against other countries, it is imperative that the export duty on coarse and medium varieties should be abolished. The uncertainty regarding the export duty on cloth, a section of traders feels, has largely been responsible for the poor offtake of Indian cloth by overseas importers in recent weeks. To quote one report: "... since importers are simply refraining from placing orders at a time when orders ought to flow in, it is high time that Government abolished the export duty straightaway."

There is also the need for giving a drawback of the import duty on cotton utilised in the manufacture of fine and superfine varieties meant for export. On their part, the exporters should see that their consignments conform to samples and that they supply adequate details about their offers and send samples of proper size, so that a likely importer in overseas countries may get an idea of the Indian product.

WOOLLEN INDUSTRY IN INDIA

A vigorous plea for the establishment of an expert committee to enquire into the problems of the Indian woollen industry and to suggest ways and means of placing it on a sound footing was put forward by Mr. Sohan Lal, President of the Federation of Woollen Manufacturers in India, in the course of his address at the annual general meeting of the Association held in Bombay last week. The terms of reference to the Committee, Mr. Sohan Lal said, should include the following:—

(1) To study and suggest a stable import policy for raw materials and manufactured woollen goods;

(2) to recommend an export policy for indigenous raw materials and manufactured goods, with particular reference to South, Near and Middle-East Asian markets; and

(3) to examine labour rules and regulations, with a view to suggesting a policy best suited to the conditions of the woollen industry.

Proceeding, Mr. Sohan Lal urged the Government to ban imports of civilian goods of cheap variety. With regard to raw wool exports, he suggested that such should be permitted only after the demand of the indigenous industry had been fully met. He emphasised, in this connection, the need for the Government undertaking a fresh sheep-census in the country. There is considerable force in this last plea of Mr. Sohan Lal. For, in the absence of an up-to-date census, the correct estimate of the production of indigenous wool has been rendered difficult. Different interests give different estimates. If, therefore, the Government is to follow a rational export policy for raw wool, it will be very necessary to base the policy on a correct estimate of the domestic supplies of and demand for raw wool.

Mr. Sohan Lal stressed also the need for uniformity in the levy, collection and administration of sales tax in the different States. Referring to the quality of woollen goods manufactured in India, he revealed that the Committee had been making efforts to collect from countries, such as the U.S.A., the U.K. and Australia, necessary data relating to conditioning houses for undertaking essential tests and drawing up of standards for products.

WORLD WOOL CLIP

The view that the steady upward trend in world wool output, witnessed in the past six years, will be maintained during the current (1953-54) season also, has been widely shared by practically all wool interests the world over. The Committee of London Wool Brokers, for instance, anticipates a rise of 2.5 per cent. in the world wool clip, the actual estimate being 2,495 million lbs. (clean), which is a record in the history of wool; the previous record was set in the season ended June, 1953, when the output was 2,435 million lbs. To this must be added 70 million lbs. representing the carry forward for the previous season in the Argentine. The aggregate supply that will be available for consumption thus amounts to 2,565 million lbs. This, it is estimated, will not be sufficient to meet the demand, placed at 2,600 million lbs. It is, therefore, feared that wool clothing will be a little more expensive than that sold a year before. A slight decline in the world demand for wool is also expected, but it is pointed out that it will not have any serious consequences, "provided it is not accentuated by a deterioration in the world economic climate."

A point of immediate importance to world trade in wool is the low level of raw material stocks in the majority of consuming countries, which implies keen competition among buyers for the first offerings of the new season, with, probably, little change in prices. Alluding to this, the Committee of London Wool Brokers observes that, if retail trade is satisfactory in the coming months, the industries of the world should receive adequate orders to follow the completion of outstanding exports. If these orders are forthcoming, competition for wool should, in turn, remain adequate enough, with a reasonably stable basis of prices established over the season as a whole, as in 1952-53, although the basis itself may be a little higher.

SYNTHETIC FIBRES IN JAPAN

FIVE-YEAR DEVELOPMENT PLAN UNDER WAY

THE implementation of the Five-year Plan for the development of the synthetic fibre industry in Japan, initiated by the Ministry of International Trade and Industry in April last, is well under way, according to a recent report from Osaka. Under the Plan, the Japanese Government has been giving all possible encouragement to the industry. Mention may be made, for instance, of special financial arrangements, tax exemptions, priority of electric power allocation and secured market for the finished products. The textile industrialists concerned also are showing keen interest in this development of the industry. The synthetic fibre industry is a branch of the synthetic resin industry and is considered to have a prosperous future. Thus, it will create new material for textiles, enlarge volume of employment and improve the balance of payments position by curtailing imports of raw cotton, wool, jute, etc.

The development programme for the synthetic fibre industry envisages an increase in its production from 7.64 million lbs. in 1952 to as much as 92.66 million lbs. by 1957. The major portion, about two-thirds, of this expansion will be in the form of staple fibre, the balance being in filament yarn. This feature is in keeping with the general trend throughout the textile world, namely, a growing preference for staple fibre which is more adaptable for textile manufactures than filament yarn. The bulk of the rise in output is to be under vinylon, the production target of which is fixed at 64.94 million lbs., as against 5.73 million lbs. The target for nylon is fixed at 15.84 million lbs., as against 1.91 million lbs. The other synthetic fibre is vinyl-vinyliden chloride; the target for this is 11.88 million lbs.

The cost of the Five-year Plan is estimated at 27,700 million yen. Two-thirds of the funds required by the synthetic fibre industry are to be loaned by the Japan Development Bank on long-term basis and at low rates of interest. The remaining one-third is to be found by the industry itself.

Chief Consideration

The chief consideration which has weighed with the Japanese authorities in according special attention to the development of synthetic fibre industry is stated thus: The shrinkage in exports of cotton products and other textile goods in 1952 provoked pessimistic opinion in Japan concerning the future of Japan's textiles as an exporting industry. The Government's Five-year Plan is an expression of efforts to curtail imports of cotton and wool, the two basic raw materials of the Japanese textile industry, while maintaining the standard of national clothing life. From the point of view of national economy, in order to establish economical independence of Japan, it is a matter of course that an effort should be made to utilise domestic resources, in parallel with the efforts to expand exports and the concentration of imports of raw material for necessities. In the case of textiles, importance is naturally put on wood-pulp and synthetic fibre for utilising domestic resources. Considering the condition of forests, it will only devastate Japanese land to endeavour boosting production of wood-pulp exceeding present output. The priority in exploiting indigenous textile resources, therefore, is left only to increase the synthetic fibre, especially carbolic acidic, acetylinic and chloric types producible from domestic materials.

If the implementation of the aforesaid plan were to be carried out successfully, the dependence of Japan on imported raw cotton and wool will be reduced by about 310,000 bales and 96,000 bales, respectively. Lower imports of these two items, as also of jute, etc., are expected to result in a saving of as much as $112 million of foreign exchange.

The synthetic fibre industry in Japan was, until recently, in a nascent stage of development, thanks to the absence of a well-organised basic chemical industry, discouraging war-time policy of the Government against the textile industry, in general, and economic chaos, especially scarcity of material and of electricity, in the war years. It was only in 1949 that the Japanese Government adopted a policy of giving active encouragement to the growth of the industry. The industry has since then recorded notable progress. The aggregate output of synthetic fibres in 1952 amounted to over 7.63 million lbs., as compared with a bare 41,832 lbs. in 1948.

PROTECTION AND REGULATION OF INDUSTRIES: THEN AND NOW—IV

NEED FOR SETTING UP PRICE-FIXING AUTHORITY

(By PADAMJI GINWALA)

I NOW propose to deal with controlled industries to which some of the principles applicable to protected industries should not be literally applied. I have already fully dealt with one of the most important of these, viz., that relating to the period, and have suggested that normally no period should be fixed during which the retention prices were to remain in force. Modifications of some other principles are necessitated by the fundamental difference between the effect of protection and control which must be recognised in determining the retention prices. This is that the grant of protection, even though it is in the national interest, is primarily a concession to industries which throws a substantial and often a prolonged burden on the consumer and the taxpayer. On the other hand, in the case of controlled industries, the burden is shifted to the producer who is penalised, so to say, for the benefit of the consumer.

It is not necessary for me to give any evidence to prove how much the consumer has benefited by the control of prices of essential commodities, except to say, what must be known to everybody, that since its introduction it has run into many hundreds of crores of rupees. The prices are determined as meticulously as in the case of protection, for the interest of the consumer interferes with the deliberations of the Tariff Commission and the policy of the Government even more than did King Charles's head with Mr. Dick. Every time the producer asks for an increase, King Charles's head intrudes and prevents the Commission from taking a more liberal view, and I have no doubt that if they did, it would do the same with the Government. The result has been that there has not been the necessary expansion of the controlled industries and control threatens to be a permanent feature of Government policy which would prolong the burden on the producer and, in the end, on the consumer himself, because for lack of finance for the rehabilitation and the improvement or extension of the plant and machinery, the works costs and the prices cannot be reduced by greater efficiency or greater production. From time to time during an indefinite period increases will have to be granted by which the consumer in the end must suffer.

Higher Prices

It is time, therefore, that both the Tariff Commission and the Government realise and remind the consumer that it is his turn to share with the producer at least part of the sacrifice involved in the control of prices by some curtailment of the advantages that he has enjoyed for so many years, in order to expedite the rehabilitation and expansion of the controlled industries. He must also be made to understand that he himself will, in the long run, gain more than he will lose by temporarily submitting to higher prices than the producer who, if he is provided with more depreciation to repair, renovate and extend his plant and machinery and a larger margin of profit, may be able to reduce his costs, other things being equal, and to meet the country's demand earlier than would otherwise be possible.

As I have stated earlier, the Price Control Board or other authority in the U.K., as well as the U.S.A. and other countries, fix the prices which remain in force until a change is asked for by the industry. Similar practice should be followed here and the entire structure of the retention prices should be built on the actual works costs and remain in force indefinitely, or for the whole period of control, except when the circumstances already described by me arise and an upward revision becomes necessary.

In the case of new industries which seek protection and which cannot be expected rapidly to increase their production to an economic level, or to show quick improvement in their works costs, some estimates of the works costs, the production and the amount of overheads and profit they may earn on an average throughout the period have necessarily to be made. But where old and established industries are controlled for national reasons, mainly to effect better distribution and to prevent excessive prices, the application of this principle of making estimates has little relevance. One obvious objection against adopting such a principle is that no purchaser of any commodity, just because it is controlled, is entitled as of right to purchase it at a price which has no relation to reality, but is based on an estimate of the seller's cost of production. Such transactions, if ever made outside Government, will be regarded as contrary to all known prudent business methods. In the case of all controlled industries, therefore, the only just and equitable principle is to adopt the actual production and works costs of a period of, say, one complete year or so immediately preceding the investigation as the basis for determining the prices.

Price-fixing Authority

As regards the authority on whom the duty of fixing the retention prices of controlled industries should in future be imposed I have a suggestion to make. All public bodies like individuals, such as lawyers, doctors, engineers or arm-chair doctrinaires who specialise in one particular subject as experts, develop what may be called a single-track mind. In do not claim that I or other members of the earlier Tariff Boards did not suffer from this common human infirmity. But we were concerned only with helping to administer the policy of protection which the baneful influence of the single-track mind may have sometime affected. But we were not called upon to fix, as part of our duties, the retention prices also of controlled industries for the simple reason that there were none such in our time. Where, as I have explained, there is a fundamental difference between the two classes of industries by which the burden of the sacrifice is reversed, the single-track mind is not conducive to accomplish very satisfactory results.

My suggestion, therefore, is that for fixing the retention prices of controlled industries, an entirely separate body called the Price Fixing Board, as in other countries, should be appointed. Such a body should, where possible, consist of an independent Chairman and representatives of the producers, the consumers and labour. It may be advisable to have a separate *ad hoc* Board for each important industry. Such a body should not only fix the retention prices of industries in the private, but also in the public sector, such as the Sindri Fertilisers, the machine tool industry, public utility services, electrical and irrigational undertakings, etc. It is only thus that Government enterprises can be properly controlled in the same way as the industries in the private sector, and prevented from charging whatever prices they like to the consumer, and from deteriorating into preventible inefficiency. The Auditor General and the Public Accounts Committees of Parliament only carry out belated *post-mortem* examinations which seldom do much good. It is necessary that investigations should take place from time to time to regulate the selling prices of Government enterprises and to minimise the waste of public money through incompetence, ignorance, corruption, want of experience or any other similar cause.

Tariff Commission's Task

Before I conclude I would like to take this opportunity of paying my patriarchal tribute to the post-Independence Tariff Board and its successor, the Tariff Commission, for the excellent work unostentatiously done by them from day to day and to their desire to do right by the industries whose claims they are called upon to examine within the limited discretion left to them under the somewhat narrow general policy of the Government, this overworked body has been able to make recommendations which, with very rare exceptions, have been gladly accepted as beneficial by the parties concerned.

I would express also my unshaken hope and belief that they would maintain and strengthen the traditions built up by their early predecessors, particularly in respect of putting the widest interpretation of their powers and terms of reference in favour of the applicants, of taking no evidence *in camera*, whether of Government or non-official witnesses, except when there are overwhelming reasons for adopting such a course, and of acting on no other instructions than given to them in Press *communiques* or official communications which can be published as part of their proceedings. In brief, they should permit of no contact with Government which might create on the public mind an impression that they were an executive department of the Government rather than as their advisers as a *quasi*-judicial body, as they have been intended, and always ought, to be.

(Concluded)

LOWER U.S. COTTON CROP PREDICTED

FUTURE OF PRICE SUPPORT POLICY

THE U.S. Department of Agriculturist's Second Bureau Report, released on 10th August, 1953, places the 1953-54 cotton crop at 14,605,000 bales of 500 lbs. each. This compares with the previous season's crop of 15,136,000 bales. Thus, the Department's estimate is about 3.5 per cent. below the output in the season just ended. The U.S. cotton season covers the period from 1st August to 31st July. It is, however, noteworthy that the official crop estimate is about half a million bales above average trade ideas.

On the basis of the present output estimate, the supply of cotton for the 1953-54 season in the U.S. is bound to be more plentiful than in the 1952-53 season. For the 1952-53 season, the total cotton supply was placed in the neighbourhood of 18.8 million bales, made up of about 2.7 million bales brought in from the preceding season, domestic production of about 15 million bales and imports of about 0.1 million bales. It is now estimated that the total disappearance of cotton through exports and domestic consumption might have been of the order of 13.6 million bales, leaving a surplus of about 5.2 million bales to be carried forward to the 1953-54 season. This carry-over, together with the prospective crop of 14.60 million bales, gives a total supply of nearly 20 million bales for the 1953-54 season, or about 1.2 million bales above the supply of 18.8 million bales in the 1952-53 season. Since the Department of Agriculture has estimated exports plus domestic consumption for the current season at between 12½ and 13½ million bales, the carry-over stocks, at the end of the 1953-54 season, are likely to be of the order of 6 million bales. These stocks will be a drag on the market indeed, considering that they would be heavier than the 5.2 million bales at the end of the last season or the 2.8 million bales at the end of the 1951-52 season or the still lower stock of 2.3 million bales at the end of the 1950-51 season.

The immediate impact of the crop estimate was a decline in prices. That the estimate proved somewhat above the average trade expectations only intensified the downward trend in prices. Before the announcement, New York spot cotton was being quoted at 34.00 cents, while October, December, March and May contracts were being quoted at 33.67 cents, 33.85 cents, 34.05 cents, and 34.03 cents respectively. On the 10th instant, they all declined to lower levels, spot being offered at 33.80 cents, October at 33.62 cents, December at 33.73 cents, March at 33.84 cents and May at 33.83 cents. Since then, they have declined further. But the distant positions have fallen relatively less than the earlier positions, reflecting the market optimism regarding the imposition of marketing controls on next year's crop.

Cotton Prices in U.S.

The trend of cotton prices in the U.S., it must be noted, has far-reaching effects on the cotton prices in other parts of the world. Apart from the fact that cotton prices in this leading cotton-producing country do generally exercise a great influence on the world's cotton prices, there is the important consideration that in at least two countries, namely, Egypt and Brazil, the prices of cotton are deliberately related to the New York cotton prices. Thus, in Egypt, official selling prices are based on the New York quotations with a premium of 30 per cent. and 5 per cent. for Karnak and Ashmouni varieties, respectively. Export prices in Brazil are also based upon the New York futures quotations. For instance, the f.o.b. Santos price for Type 5 is fixed on par with New York July, to which 2.50 cents per lb. should be added to arrive at the c.i.f. price for European ports. Premiums and discounts for higher and lower grades are also specified. Thus, the New York market is indirectly the arbiter of world cotton values.

Efforts to limit the land under cotton for the 1954-55 season to 22½ million acres have failed in the U.S. Senate. Under the present law, the Secretary of Agriculture (now Mr. E. T. Benson) can announce quotas as low as are necessary to produce 10 million bales, i.e., in the neighbourhood of 17.5 million acres. Farmers must, however, approve marketing quotas by a two-thirds majority to get 90 per cent. of parity price support for 1954. If the marketing quotas are rejected, the price support will automatically drop to 50 per cent. parity.

The present price support legislation will expire after 1954. The U.S. Government, it is stated, is considering the case for a two-price system for surplus or farm products, including cotton, under which farmers would get the benefit of the support prices only on production, intended for domestic use, while any crop for export or for surplus uses would be sold at world prices, without any price supports. The advocates of this dual price system claim that it would allow regular disposal of U.S. farm surpluses abroad at world market prices, while enabling the country, at the same time, to maintain domestic prices high enough to assure the basic farm income.

Surplus Cotton

The problem of disposing of the surplus of American cotton resolves itself into two aspects: (1) enabling the importers to acquire the dollars with which to buy American cotton and (2) marketing the cotton at the prices which the buyers would find it economic to pay. On both these questions, the more enlightened section of cotton opinion is beginning to think along new lines. It is now realised that the U.S. should import more if the other countries are to be enabled to obtain the dollars to pay for American cotton imports. Thus, Mr. Seton Ross, the Managing Editor of the *Cotton Trade Journal*, writes:

"Graphically, the Council of European Industrial Federations presents the basic facts of the dollar gap in an illustrated booklet called *A New Look at Our Economic World*. This study urges an increase in American imports to the tune of two billion dollars. This, the booklet argues, 'would cause no strain on the American economy, since the United States would be required to devote only an additional seven-tenths of one per cent. of its national income to the purchase of Western European goods.' American imports of this amount would close the dollar gap of Western European nations 'at a high level of economic activity,' the figures presented indicate. This increase in imports would still place the ratio of imports to national income below the level reached prior to the depression of the thirties. With respect to many individual products, the publication makes clear, U.S. imports have diminished considerably since 1929 in relation to total consumption. To-day imports constitute such a small part of total U.S. consumption that an increase cannot be considered a threat to domestic production.

"Not only does the cotton producer and cotton merchant have an important stake in the import picture, but the cotton spinner has in the past few years also become aware of the importance of export markets. In 1943, U.S. cotton textile exports totalled 538,502,000 square yards. Ten years later, in 1952, such exports were 761,595,000 yards, but this represented a considerable drop from the 1,480,025,000 yards exported in 1947. It is to the benefit of our entire economy that we import more from Western Europe and give these countries the opportunity of earning more dollars. In this way they will be in a position to buy more of our raw cotton and our textiles—provided our prices are competitive."

It would also appear that more and more Americans are becoming increasingly critical of the price support schemes. Again, Mr. Seton Ross says:

"Through an unrealistic support level, we price cotton out of the export market, accumulate burdensome carry-overs, impose acreage controls and are forced to wrestle with conflicting sectional interests; we inherit the whole sorry mess that inevitably results from tampering with a free market economy."

In another issue of the *Journal*, he writes:

"It has been our contention that many of the 'benefits' farmers have received from the past administration have been crammed down their throats with the expectation of reaping a rich reward at the polls. . . . The problem is stated simply: a high support level prices cotton, for example, out of the world market, encourages expansion of extra growths and results in burdensome stocks which exert a downward price pressure."

Despite these warnings, it appears unlikely that any hasty decision will be taken in the U.S. to alter the principle of price support policy. This is because "price support" in that country, as in fact it is in this country (as witness sugarcane price control), is an issue of political significance, since farmers' votes are involved in it.

INDIAN CENTRAL COTTON COMMITTEE

The next half-yearly meetings of the Indian Central Cotton Committee and its various sub-committees will be held at Bombay from 25th to 29th August, 1953, under the chairmanship of Mr. M. R. Bhide, I.C.S., acting Vice-President of the Indian Council of Agricultural Research. The Committee will review the progress of the cotton extension schemes sponsored by the Government of India in 1952-53 and assess the possibilities of achieving the targets fixed for the production of cotton during the 1953-54 season. The subject of rationalisation of production of different varieties of cotton in the Indian Union is another important item on the agenda. It will also consider a resolution proposed to be moved by Mr. Chimanlal B. Parikh, Vice-President of the Committee, on the question of removing the tolerance clause for Jarila and Punjab American 4-F in the Indian Cotton Contract.

The Committee will scrutinise the annual progress reports of its various research, seed multiplication and distribution and crop estimating survey schemes and make recommendations on their future programmes. Apart from proposals for extension of some of the existing research schemes, proposals for new schemes for study of agronomy of 0394 cotton from Madhya Pradesh, for conduct of manurial experiments on cottons in P.E.P.S.U. and for breeding of an early variety of cotton suitable for cultivation as an off-seasonal crop in the rice fallows of Madras State, will also receive attention.

The sub-committees dealing with agricultural and technical research and cotton forecasts will meet from 25th to 27th August and examine the subjects coming under their purview. The recommendations of the sub-committees will be considered by the main Committee on 28th and 29th August.

"OWN-YOUR-OWN-WAGON" SCHEME

Few commodities are more desperately dependent on the supply of wagons for their movement than cotton, in which commodity the producers are scattered over wide areas whereas the consuming centres are few and concentrated in a few regions. Cotton traders are, therefore, vitally interested in the adequacy of rail transport. And yet, it is noteworthy that the East India Cotton Association is opposed to the "Own-your-own-wagon" scheme, formulated by the Railway Ministry. This opposition, as the Association has stated in its communication to the Ministry, is based on certain valid considerations. The Association says: "On principle, the Board are opposed to members of the public owning their own wagons, i.e., introducing proprietory rights in nationalised undertakings." The Board of the Association is convinced that the Railway Board should itself work out an equitable solution based on its own technical knowledge and experience and the working of the railway system. The Board says that the fact that a "chronic shortage" of wagons continues even though it is eight years since the war ended shows the need for a "thorough searching enquiry into the causes that are responsible for the present unsatisfactory state of affairs." Referring to the scheme of owning wagons, the Board points out that the principle of private ownership of wagons would give a "preferential advantage to private owners of wagons at the cost of other members of the public who may not have the wherewithal to own wagons." So far as the questionnaire issued by the Railway Board is concerned, the Board emphasises that answers to several of the questions, such as those which refer to cost of haulage of empties on return journeys, freight reduction to wagon owners, etc., could come only from the Railway Board itself, since the Board does not possess sufficient information on which it can base its replies.

PAKISTAN COTTON

The total quantity of Pakistan cotton endorsed for export since 1st September, 1952 to 9th July, 1953, is 1,425,142 bales as compared with 1,083,037 bales in the corresponding period in 1951-52. The following are the chief export destinations for Pakistan cotton:

(In bales)

	1st September to 9th July	
	1952-53	1951-52
U.K.	125,712	86,507
Continent	373,415	282,316
U.S.	12,170	437
Australia	30,212	8,594
China	154,037	392,184
Japan	587,828	278,794
Indian ports	100	400
East Pakistan ...	34,096	23,018
Other Asiatic ports ...	16,268	2,030
Other foreign ports ...	91,304	8,757
Total	1,425,142	1,083,037

INDIAN COTTON CROP

Weather reports from several cotton-growing regions continue to be encouraging. Good rains have been reported in nearly all the cotton tracts in the Bombay State. Contrary to all earlier Press reports, nowhere in this State have standing crops been affected by the rains. The progress of the cotton crop throughout Madhya Pradesh is reported to be good. Increases in cotton acreage have been reported from Madhya Pradesh, Madhya Bharat, East Punjab and P.E.P.S.U., Saurashtra and Khandesh. Production in Uttar Pradesh, it is stated, is likely to be more than it was in the current season. Private estimates place the Indian cotton crop in the 1953-54 season at between 3.8 and 4.0 million bales.

COTTON TRADERS WARNED

The East Punjab Government, it is reported, has warned against the formation of pools by interested parties for purposes of buying cotton, since such arrangements result in depriving the cotton growers of an economic price for their produce. Such arrangements, according to the Government, would also affect adversely the future of cotton production in the State. It would appear that the Government has warned that it would not hesitate to take the necessary legal action against the parties concerned, if any pool were formed to the detriment of the interests of cotton growers.

BUYERS RESIST HIGHER TEXTILE PRICES

U.K. COTTON MISSION'S IMPRESSION OF EAST AFRICAN MARKET

(From A Special Correspondent)

MANCHESTER, 11th August

THE holiday season of the year in Britain is now at its height and fresh trade in cotton yarns and piecegoods has begun to move rather slowly. The present moment, therefore, is opportune for a general consideration of the state of trade and prospects.

MANCHESTER LETTER

The situation in Lancashire from the producers' point of view is certainly much more favourable than, say, three months ago. There has been a broadening demand and most spinners and manufacturers have added to their order lists. The large business done in the middle of July was exceptional, when buyers received notice that prices would be advanced to cover the additional cost of production, due to the advance in the wages of the operatives. Contract lists in all quarters were increased and producers presented a stiffer front to customers. Since then business has been rather quieter and it has been suggested in some directions that difficulties have been experienced in establishing the higher prices for goods.

There is still anxiety as to the future of export trade. Customers abroad are resisting the higher prices for goods, and in addition to this factor some foreign dealers are refusing to purchase goods when deliveries of grey cloth cannot start until the beginning of next year. Another important point is that dyers want about 12 weeks for processing the cloth so that shipment cannot be guaranteed in less than seven to eight months. There is some irregularity in the engagements of manufacturers and it is possible to secure certain goods at an earlier date.

Home Trade

Most cloth manufacturers depend to a very large extent upon demand for the home trade and the offtake for this branch remains encouraging. The extensive buying at the time of the Coronation has now been followed by purchasing for holiday wear. It may be pointed out that according to the note issue of the Bank of England the money available and being circulated at the present time is about £80,000,000 more than 12 months ago. Part of the increased activity is probably due to the larger output of goods and increased wages in several trades.

Spinners of yarn are taking full advantage of the minimum price scheme and most mills have more work to go on with than for some time back. One of the most active branches of the industry recently has been the demand for condenser yarns and waste cloths and the prices being secured are more remunerative than earlier in the year.

The industry as a whole is now enjoying comparative prosperity but profit margins in some sections are far from satisfactory, especially in the weaving branch. The present situation is very largely due to the limited output of goods, this being owing to the scarcity of operatives. The opinion is held that when the holiday season is over it will be extremely difficult to increase total production. The outlook, however, cannot be considered satisfactory when there are very few signs of larger exports and foreign trade must be regarded as most important, not only to Lancashire but also to the country as a whole.

Raw Cotton Imports

The first season for more than a decade in which some of the cotton for Lancashire spinning mills has been bought privately has now come to an end and it is possible to survey the results of importation during this period. Compared with the previous 12 months, arrivals in Britain have been considerably smaller, the gap being more than 500,000 bales.

Reduced consumption, due to the after-effects of the 1952 slump and the shortage of manpower, has not been solely responsible for this substantial cut in imports. Uncertainty over the future system of raw cotton purchasing has influenced the volume of supplies acquired by the Raw Cotton Commission. Stocks built up by this organisation during recent seasons have been allowed to run down and a continuation of this trend must be anticipated in view of current developments within the trade.

The table shows arrivals during the season just ended by country of origin and the proportion of cotton in each case obtained by the Commission and through private channels:

(In bales)

	Season 1952/53	R.C.C.	Private	Season 1951/52
American	350,833	166,558	184,275	654,835
Argentine	97,079	83,119	13,960	774
Mexican	28,188	21,427	6,761	100,313
Brazilian	77,127	75,788	1,339	176,245
Peruvian	66,755	44,624	12,161	90,554
Egyptian	54,546	16,857	37,689	47,910
West African	190,841	139,052	51,789	156,522
East African	119,148	109,929	9,217	151,116
India	21,366	750	20,616	5,558
Pakistan	111,617	64,829	46,788	87,969
Sudan	124,413	101,610	22,803	356,330
Sundries	107,780	75,091	32,069	97,727
Total ..	1,349,721	900,134	442,587	1,926,057

It will be observed at once that the quantity of cotton imported privately is very near the 30 per cent. estimated by the Board of Trade as the probable proportion obtained by Liverpool and Manchester merchants in the first season of dual purchasing. For reasons outlined above the Commission has restricted its purchases during the season.

It is also interesting to note that private buying has centred mainly on the traditional American and Egyptian cottons which were the mainstay of Lancashire's raw material supplies for many years prior to the war. The quantity of outside growths now being used in local spinning mills, however, has increased very substantially and private merchants are making fresh contacts in order to obtain the grades and qualities required by mill managers who have grown accustomed to using what were once regarded as exotic growths.

The British cotton export team which returned to Lancashire last week after a three-week tour of East Africa is to have private discussions with Mr. Thorneycroft, President of the Board of Trade, and with cotton industry representatives. In the four territories visited—Uganda, Tanganyika, Kenya and Zanzibar—the team found abundant goodwill for British goods, according to a statement issued by the Cotton Board.

In parts of Uganda and Tanganyika there was clearly discernible an increasing discrimination on the part of the African buyer for better quality goods. The statement went on:

"From Governments, from traders and from consumers alike the team met with a high degree of goodwill and well expressed preference for British goods in a stable market, and a clear indication that in such circumstances trade could be considerably stepped up providing service continued the improvement it had shown in recent years and prices met the particular conditions of the markets."

The team had gathered a great deal of information at firsthand about the types and qualities of cotton goods needed now or likely to be needed in the future and this information would be laid before the industry in the next few weeks.

One of the difficulties to increased exports of Lancashire textiles—the large backlog in shipping goods to the market owing to lack of port facilities at Mombasa—had been satisfactorily settled. Both the Kenya and Uganda Governments had granted extra facilities to clear the 1,850 tons now registered for calling forward at Liverpool and this meant that this quantity was likely to be shipped before the end of the year.

The four Governments in East Africa had listened sympathetically to the points expressed by the team on the subject of future import licensing policy and the instability resulting from uncertainty about this policy. Any long-term settlement rested largely with the United Kingdom Government but the four East African Governments would consider what, if anything, they themselves would do in the short-term.

International Conference

The International Federation of Master Cotton Spinners' and Manufacturers' Associations, which represents mill employers in many parts of the world, is to be invited to hold its 50th Jubilee Congress in 1954, in Britain. Agreement in principle to the invitation being issued was reached by owners of Lancashire's 450 spinning mills, meeting in Manchester this week.

Mr. C. Henniker Heaton, Director of the Master Spinners' Federation, said a sub-committee of Lancashire spinning employers was to be set up to consider and suggest suitable dates and arrangements.

Unemployment in the Lancashire cotton spinning and weaving industry has fallen to 2,555, of which 804 are only temporarily stopped, latest Ministry of Labour returns for the North-West show. This is the lowest out-of-work figure since December, 1951.

A year ago the figure stood at 51,500, of which 43,700 were on short-time. Job vacancies in all sections of the cotton and rayon industries have risen to 6,800, the Ministry announced.—*All Rights Reserved.*

U.P. TO RAISE SUGARCANE CESS

MOVE MOST DEPLORABLE

THE latest move of the Government of Uttar Pradesh to raise the cess on sugarcane crushed in the sugar factories by an anna to As. 4 per maund, by making a provision to this effect in the Sugarcane (Regulation of Supply and Purchase) Bill passed by the U.P. Legislative Assembly the other day, is, indeed, most deplorable. As it is, the cess of As. 3 per maund is unconscionably high, accounting for as much as 15 per cent. of the total cost of cane. The proposed increase in cess will mean an additional burden on the sugar industry in U.P. of more than a crore of rupees, even on a conservative estimate. This is certainly a heavy incidence which the sugar industry cannot bear, especially in the present context of an all-round rise in manufacturing expenses and labour charges.

The aforesaid move of the U.P. Government goes counter to the declared objective of reducing the cost of sugar manufacture. It was only last week that we referred, in these columns, to the heavy incidence of taxation on the sugar industry and emphasised that there could be no possibility of a downward revision in cost, unless the cost of sugarcane was reduced. One of the surest ways of bringing about such a reduction is to lower the rate of sugarcane cess. It is most unfortunate, therefore, that the U.P. Government should have, instead of realising this, proposed to increase the cess.

Apart from the incidence on the sugar industry, the increase in the rate of the cess cannot be justified on economic grounds. It would not be out of place to recall here what the former Tariff Board pertinently remarked three years ago. It said that it was an accepted canon of taxation that raw materials of industry should be exempted from tax, though a small cess might be imposed on such raw material and even that only for the purpose of improving the yield, quality or marketing of the commodity concerned. To quote the Board's own words: "The levy of a tax on a raw material is, as a rule, wrong in principle and it is particularly objectionable when imposed on the raw material of an industry which has been nursed by the consumers all over the country for a period of 18 years and for which they have made a heavy sacrifice during all these years." Since, however, the cess has become a part of the structure of State taxation, the State Governments may not be expected to give up this source of revenue altogether. But one can legitimately expect at least a reduction in the rate to a level which will be sufficient to meet the requirements of cane development programme, the reasonable rate, according to the Tariff Board, is an anna and a half per maund of cane. It is to be hoped that the U.P. Government would reverse its present proposal and reduce the cess to this level.

Cane Development

Be that as it may, the main object of the U.P. Sugarcane (Regulation and Supply) Bill is to ensure adequate and timely supply of cane to the factories. The statement of objects and reasons underlying the Bill says:

"With the promulgation of the Industries (Development and Regulation) Act of 1951, the regulation of the sugar industry has become an exclusively Central subject and the State Government is now concerned only with the supply of cane to sugar factories. The Bill is being introduced to rationalise the distribution of sugarcane to factories for its development on organised and scientific lines and to protect the interests of cane growers, as well as of the industry."

Under the Bill, the U.P. Government proposes to establish a Sugarcane Board and a Cane Development Council. The proposed Board will advise the Government on the regulation of supply and purchase of cane for factories. It will also strive to maintain harmonious relations between the managements of factories, on the one hand, and growers' co-operative societies and purchasing agents, on the other. Besides the Chairman, who will be the State's Industries Minister, the Board will consist of 15 members, of whom six will represent factories, six growers' co-operatives and three technical experts appointed by the Government.

The sphere of activity of the Cane Development Council will be confined only to the reserved areas. Its task will be to consider the development programmes for sugarcane, with particular emphasis on provision of irrigation and other agricultural facilities. It will also devote some attention to the problem of eradicating and controlling sugarcane pests and diseases.

A Welcome Move

The U.P. Government's move to rationalise the development of sugarcane cultivation, though belated, is certainly to be welcomed. As readers are aware, although the State possesses the largest number of sugar factories, which account for the bulk of the aggregate sugar production in India, the progress in the direction of improving cane cultivation has been none too satisfactory. A clear indication of this is provided by the low level of per-acre yield and recovery percentage *vis-a-vis* the Deccan and South India. Thus, the average yield of cane per acre in U.P. is as low as 11.7 tons, as against 28.9 tons in Bombay, 27.1 tons in Madras and 14.3 tons in Hyderabad. The recovery percentage of cane also is lower, such being 9.78, as against 11.59 in the Deccan. What is worse, not only has the yield of sugarcane in U.P. been decreasing but the State's share in the country's aggregate cane area and production has been falling, in distinct contrast to the trend in the Deccan and the South, as will be seen from the table below:

	Percentage of total cane area in India		Percentage of total cane production in India	
	1936-37	1952-53	1936-37	1952-53
Uttar Pradesh	65.5	62.7	62.5	53.7
Bombay	2.3	4.5	4.2	10.2
Madras	3.2	5.5	6.7	11.0
Hyderabad	1.2	2.1	1.9	3.2

The foregoing figures reveal that the decline in the sphere of Uttar Pradesh in the aggregate production of sugarcane has been more marked than that in area. The shares of other States in the aggregate production of cane, however, have increased more than proportionate to the rise in the cane area. It is the low yield of sugarcane in U.P. that has largely been responsible for the high cost of sugarcane cultivation and, consequently, of the high cost of sugar production. Sugarcane is the most important raw material of the sugar industry and accounts for more than 60 per cent. of the total cost of sugar production. The progress of the sugar industry is thus linked vitally to cane research and development. The success of the Sugarcane Board and the Cane Development Council, which the U.P. Government has now proposed to set up, will, therefore, be judged by the extent to which their efforts would bring about a reduction in the price of cane through increase in yield and improvement in quality of sugarcane.

SUGAR PRODUCTION IN BIHAR

The 1952-53 sugar season has turned out to be the most eventful one for the sugar industry in Bihar during the war and post-war years, in that the season witnessed a record output of 272,161 tons of sugar, which compares very favourably with 219,048 tons during 1951-52. The previous record had been reached in 1939-40, when sugar production amounted to 322,000 tons. This substantial rise in sugar output is in distinct contrast to the general decline in production.

The rise in Bihar's sugar output follows a marked increase in production of sugarcane. The quantity of cane actually crushed during the year under review was 2,712,454 tons as against 2,116,172 tons in 1951-52. The improvement in output, it is interesting to note, has taken place despite a fall in sugar recovery from 10.30 per cent. to 10.10 per cent. The number of crushing days during 1952-53 was greater, being 120, as against only 98 in 1951-52.

As already noted, supplies of sugarcane to the factories in Bihar were quite comfortable. There are indications that supplies will improve further in the coming years, as irrigation facilities are expanding and cane development work is becoming more intensive. The implementation of the Rs. 3-crore scheme of the Bihar Government for constructing 300 tube wells is reported to be almost complete. The Government has also granted about Rs. 14 lakhs as loans to the sugar factories.

CANE CESS IN PUNJAB AND P.E.P.S.U.

The Punjab and P.E.P.S.U. Governments, it is reported, have decided to levy a cess of As. 2 per maund on sugarcane crushed by the factories. The amount of revenue to be collected from the source by these two State Governments will be of the order of Rs. 5.44 lakhs and Rs. 3.63 lakhs, respectively, assuming that the quantity of cane crushed in the sugar factories in the respective States amounts to 165,300 tons and 179,600 tons. Considering the way in which the Governments of other States are misusing the cess on sugarcane, it is indeed gratifying to be told that the Punjab and the P.E.P.S.U. Governments propose to utilise the cess exclusively for the development of sugarcane cultivation on scientific lines. It is to be hoped that the Governments concerned will honour their assurances in action.

PLIGHT OF BENGAL AND BIHAR COLLIERIES

ATTENTION OF PLANNING COMMISSION INVITED

PRESS reports from Jharia indicate that the Indian Collieries Union has invited the attention of the Planning Commission to the condition of the Bengal and Bihar coalfields, which is stated to be "critical." The Union has pointed out that there has been a decline in the production of coal at the rate of 30,000 tons a month, since early this year, chiefly due to wagon shortage. It has further complained that even the available wagons are not distributed equitably among the various units. Consequently, the Union has alleged that the stock of steam coal for industrial purposes has been too low and hardly sufficient for the overall requirements of even a month. The Union has also criticised the loco coal purchase policy of the Railway Board as "disastrous," inasmuch as the overall quantity of lower grades of coal purchased from market collieries is very small, although it can economically be consumed by locomotives. It has alleged that the purchase of large quantities of high-grade metallurgical coal by the Railway Board for consumption by locomotives is against the declared policy of the Government of India of gradually reducing consumption of high-grade coal. In view of all these, the Union has urged a thorough enquiry into the affairs of the coal industry in Bengal and Bihar.

The Indian Collieries Union has also made a few suggestions which deserve careful examination. First, it has pleaded for the withdrawal of pegging orders on Grade I and Grade II coal, with a view to increasing the stock of steam coal. Secondly, it has suggested to the Government to examine, through a competent committee, the rationalisation of transport and the advisibility of giving the consumers free choice of their coal, instead of being obliged to take a reasonable percentage of lower grade coal. Thirdly, it has recommended the constitution of a non-official committee to examine the capacity of new locomotives to consume lower grade coals.

Wagon Shortage

Thus reviewed, it is clear the villain of the piece is wagon shortage and the inequitable distribution of the existing supply among the various interests. It is true that there is a shortage of wagons, despite the improvement during the past few months. But wagon shortage cannot be remedied overnight. The indigenous productive capacity of 6,000 wagons a year is quite inadequate to meet the overall requirements of the nation and even the capacity, it is stated, is used only upto 50 per cent. due to lack of the requisite type of steel plates. Much, therefore, will depend upon the pace of indigenous production of plates in large quantities and also on imports of plates as well as wagons. The allegation that the available wagons are being inequitably distributed is a matter that deserves to be examined by a competent enquiry committee, inasmuch as many others have also made similar complaints. But the solution to the problem lies in increasing the supply of wagons as early as possible.

The charge that the locomotives are using high-grade coal even though lower grades can be economically used is a controversial one. There are two schools of thought on this issue. One holds the view that the age of the locomotive will be reduced, if lower grades are used, while the other maintains that lower grade coals can be used without in any way impairing the efficiency of the locomotives or their life, provided such coals are properly used with certain adjustments in the boilers. This is rather a technical issue which can be determined only by experts.

The demand for the setting up of a committee to enquire into rationalisation of rail transport is perhaps one that can be conceded. There is a feeling that regrouping of railways has not improved appreciably the situation arising from transport bottlenecks, owing to centralisation of authority and all the attendant red-tapism.

The removal of pegging orders on Grade I and Grade II coals is one more question that needs further careful examination. The Indian Colliery Union says that "while conservation of metallurgical coal has practically been abandoned by the Coal Board and the Railway Board, on the excuse of few miles cross-traffic and so-called transport rationalisation, Grade I and Grade II coals have been pegged for an inexplicable reason."

SINGARENI COLLIERIES COMPANY, LTD.

CHAIRMAN'S PLEA FOR INCREASED OUTPUT PER MAN-SHIFT

ADDRESSING the Thirty-second Annual General Meeting of shareholders of the Singareni Collieries Company, Ltd., held on the 17th inst., Mr. C. Damoder Reddy, Chairman of the Company, expressed concern at the deterioration in labour relations. He warned that, unless output per man-shift increased, there was a serious risk of the Singareni Collieries going out of business in certain markets which would result in irreparable injury to workers themselves. He reiterated the Company's determination to give a fair deal to workers consistent with a fair price to the consumers and a reasonable return to the investor. He also detailed the measures taken to reduce the cost of production.

The following is the full text of Mr. Reddy's speech:—

"GENTLEMEN,

"I have great pleasure in welcoming you to this thirty-second annual general meeting of shareholders of the Singareni Collieries Company. The annual report and accounts have been in your hands for some time and as they correspond closely to those of the previous year, I do not think I need discuss them in detail although I shall, of course, be pleased to answer any question about them later. They are, I think you will agree, very satisfactory. There are, however, certain features of the working of our collieries which I should like to recapitulate at this meeting for the benefit of those who have not found the time amidst their preoccupations to study closely the report. At the same time, I shall add a few comments on certain important aspects.

Production

"Production during the year was 13.75 lakh tons, as against 12.07 lakh tons in the previous year, i.e., an increase of 13.9 per cent. Production during May 1952 was 122,568 tons which is the highest achieved so far.

Labour

"Labour relations during the year were very satisfactory resulting in increased production and increased profits. It was hoped that cordial relation will continue uninterrupted resulting in more production and more profits, enabling your Directors in turn to spend more and more for the welfare of workers. But, unhappily, our hopes in this direction have not materialised during the current year and the recent strike for nearly a month in June-July has resulted in loss of production of 111,393 tons, which will naturally have serious repercussion on the Company's profits and ability to spend money on welfare works.

"The recent trend of labour relations have naturally caused us much anxiety. We share entirely the desire of the union to seek improvements in service conditions of the miner in his difficult and hazardous employment, but all demands must in the last analysis be conditioned by the capacity of the industry to bear the increased costs. It is not appreciated that the cost of production of our coal is relatively much higher than that of other major collieries. Our coal has been able to find a market partly because of the protection afforded by geographical advantage and partly because of the control necessitated by transport difficulties for railing coal from Bengal and Bihar. Unless, therefore, the workers in the mines evince willingness to improve the resources of the Company by increasing the output per man-shift, there is a serious risk of the collieries going out of business in certain markets with the resultant irreparable injury to the colliery worker.

"The object of your Company has always been and will continue to be to pay a fair wage and assure a fair standard of living for its workers but consistent with the interests of the consumer who is entitled to a fair price, and the investor who must receive a reasonable return, so that necessary funds are forthcoming to finance extension and modernisation of the plant. This brings me to the next point of my review.

Output per Man-shift and Average Wage

"The overall output per man-shift, which incidentally is the lowest in India, improved from 0.28 ton per man-shift in January to 0.30 ton in December 1952. This was achieved by introduction of incentive bonuses which in turn enabled the workers to increase their earnings. The overall earnings per worker increased from Rs. 12.2 per week in January 1952 to Rs. 12.5 per week in December 1952.

Measures Taken for Reduction in Cost of Production

"The services of Messrs. Ibcon, efficiency experts, continued to be employed, resulting in the aggregate saving of Rs. 3,45,000 during the year. The strength of unproductive workers was reduced during the year by 222 men. Not a single worker was retrenched. A pool of surplus labour was formed and all indents for fresh hands in connection with our expansion scheme or in connection with the normal wastage were met with from this pool. The pool labour continued to draw their wages until they were absorbed.

Provident Fund

"As assured in my last year's speech, the amount at the credit of the provident funds which is now invested with the Company is being withdrawn in ten yearly instalments and invested in the prescribed manner. The second instalment was paid in June 1953.

Pit-head Baths

"Three pit-head baths were completed during the year and the fourth one is nearing completion. The cost of the baths is Rs. 3.2 lakhs. They are elaborate buildings with cubicles fitted with shower baths, separate dressing rooms with lockers for every worker, and flushing urinals and water closets. In fact, at the end of the day's work, a miner can leave his place of work fully dressed to attend a party. It is, however, disheartening to find that the workers so far have not shown much interest in them, in spite of the last hot weather being so severe.

Staff

"I should also like to convey, if I may, yours and the Directors' appreciation, and thanks, to the staff for their good work during the year, which has enabled the management to discharge their responsibilities and duties satisfactorily. We have come to expect a very high standard from them all and we have not been disappointed."

(Concluded from next column)

cal of their contributions. If the language is hard in places—so, at least, it would seem to Indian readers—it is necessary to remember that the subject itself calls for rigorous treatment. And he does not help who over-simplifies.

Finally, a notable feature of the book is that, apart from a bibliography of books for a more advanced study of the subject, it gives a very suggestive chronological tabulation of the important books which appear during the period. Against each year, from 1860 onwards, the table gives the important books which appeared in that year, classified subject-wise, according as it deals with principles, welfare and policy, interest or money and so on. We heartily commend this book to the attention of our readers.

Estate Duty Bill. By V. S. Kulkarni. Published by Law Book House, Poona 2. Price: Rs. 3.

It is, perhaps, symptomatic of the interest which the Estate Duty Bill, now before Parliament, has aroused that several books have already appeared on this subject. The book under review, the *Estate Duty Bill*, incorporates the changes which have been made by the Select Committee, and also the minutes of dissent appended to the Committee's report. Thus, the book is of great topical interest in that it gives the correct position of the Bill, as it now stands before Parliament. The author also gives illustrations to bring out the effect of the duty, and also the relevant sections of the Indian Constitution which have a bearing on the Bill. An important feature of the book is that it gives the analogous sections of the English law on which the Indian Bill is based.

NEW PUBLICATIONS

A Review of Economic Doctrines—1870-1929. By T. W. Hutchinson. Published by the Oxford University Press, London. Agents in India: Oxford University Press, Oxford House, Apollo Bunder, Bombay 1. Price: 30s.

ALTHOUGH economic history has, for long, been recognised in the West as an indispensable part of the intellectual discipline in economic studies, it receives less recognition than it deserves in this country. And when it does receive some recognition, it is usually regarded as a luxury which only the post-graduate student, specialising in economics, is supposed to acquire. Even when the study is pursued, little attempt is made to understand economic history as an organic whole. For too often over-simplified generalisations are drawn, sacrificing intellectual fidelity at the altar of easily remembered epigrams, such as Adam Smith's "Laissez Faire" or Marshall's "Equilibrium Economics." The result is that generations of students have stepped out into the world with hardly any acquaintance with the great masters who have contributed to the growing stream of economic thought, or of the movements which influenced their thinking. The book under review, *A Review of Economic Doctrines—1870-1929*, deserves, therefore, to be commended to the attention of Indian universities and all students interested in economic studies, not only because it presents a systematic survey of economic doctrines during what is admittedly the most fruitful period in economic history but presents it in a manner that stimulates thought as well. A great merit of the book is that, by studiously avoiding over-simplification of the great masters, it inculcates a critical approach to their doctrines.

In this historical outline, the author, Mr. T. W. Hutchinson, Reader in Economics, London University, takes as his starting point, the year 1870—by then a century had elapsed since the publication of Adam Smith's celebrated work, *Wealth of Nations*—and traces the growth of economic thought down to 1929, the year which was to prepare the world for the great economic blizzard, the worst ever depression. The book is divided into three parts. In Part I, the author gives an account of the leading lights of the neo-classical school, including W. S. Jeevons, A. Marshall, F. Y. Edgeworth, V. Pareto and J. B. Clark. The transition from static to dynamic economics is treated in Part II, where the modern doctrines, comprehensively termed "macro-economic analysis," are studied. This part covers a period when the specialist book or article had replaced the comprehensive treatises of the earlier era. Part III is devoted to the discussion of the economics of instability and disturbance.

This description of the schematic division does little justice to the book which deserves to be regarded as an important contribution to the literature on the subject. Each great economist's contribution is succinctly described, supplemented by copious quotations from their original works, and their significance to the history of development of economic thought estimated. In a sense, the author has attempted a formidable task, for the book is meant to be not a mere history but a review. A reviewer of economic doctrines may easily fall into either of two pitfalls; he may either dismiss the doctrines of the masters as the result of the peculiar complex of the times in which they lived or he may see in them truths valid for all times. If the one tendency makes for a superficial or sophisticated review, the other is too naive to be called a review. The author's approach to his book is summed up in his own words:

"Having enjoyed or endured as expensive an education in the Economics of Disturbance, Instability and Insecurity, it would surely be stupid to exploit it in captious criticism of the achievements of those who missed its advantages or its lessons. On the other hand, conservatively to deny or obscure the great limitations of doctrines formulated for a different sort of world might be even more disastrous practically. In this book, we are trying, primarily, simply to expound the economic doctrines of our period with fair accuracy, in the way and often in the words of their originators. But, in trying to expound a doctrine, we must indicate some of its implicit, as well as its explicit, assumptions, and, therefore, to some extent, we define its applicability and suggest a judgement on its significance."

The author has eminently succeeded in living up to the standards he has set before himself. And the result is a book which is at once true to the teachings of the great economists and criti-

(Continued in previous column)

BETTER PROSPECTS FOR INDIAN TEA

MR. BHANSALI PLEADS FOR DEVELOPING CALCUTTA MARKET

THE crisis that overtook the Indian tea industry last year has been almost a thing of the past and little reference is being made by producers or traders to the causes that led to it and its effects on the industry. Producers and traders are now more concerned with the measures necessary for stabilising prices and developing the marketing of Indian tea both within the country and abroad. The address of Mr. K. R. Bhansali, Chairman of the Calcutta Tea Merchants' Association, at the annual general meeting of the Association, held in Calcutta last week, is an instance to the point. In his address, Mr. Bhansali expressed the tea traders' satisfaction at the return of order and stability to the tea markets of the world and drew attention to the tasks ahead of the tea industry and trade.

Welcoming the revival in prices since the beginning of the current year, Mr. Bhansali said that, at the present level of prices, the majority of producers should be able not only to make both ends meet but to earn some profits, although not sufficient to cover all the losses that were suffered in the last recession. The initial spurt in prices noted in the earlier months of the current year has no doubt spent out, but the present level of prices was, in the opinion of Mr. Bhansali, appropriate and one at which the trade could function. So far as tea traders are concerned, it is not the actual level of prices that is of much consequence, but stability of prices which a well regulated commodity market as tea should normally ensure. "This price," Mr. Bhansali desired, "should be such as renders production regular and remunerative and facilitates off-take by different consuming countries."

Just as the disturbance in the relationship between the demand and supply, apart from other reasons, caused the crisis last year, the balancing of the supply to the demand during the current season is expected to bring about a welcome measure of firmness for tea prices. It is not suggested that there will be a complete and violent reversal of the downward trend witnessed last year, for no serious shortage of tea is expected. The supply and demand position, however, is such that a fair measure of stability in prices at somewhat higher levels than last year can be reasonably anticipated.

Demand for Indian Tea

The world production of tea during the current year is not expected to exceed that of last year. On the demand side, stocks in the U.K. are, at present, at the lowest level for some time past and packet trade, it is stated, expects to have an orderly replenishment from India. The overall exports from India during the last season were nearly at the previous season's level. Actually, India gained some ground in Australia and Egypt. It is expected that India will be able to enlarge its exports to these countries. The trade deal with Egypt, for instance, may facilitate better off-take from that country, if energetically followed up by the trade. The built-up stocks in the U.S., Canada and Eire are likely to run out. Some of the Continental countries, such as West Germany, have reduced tea import duties, and, with the increased efforts made from London, it would be possible to sell more on the Continent. Enumerating these favourable factors, Mr. Bhansali pointed out that there was not much fear that demand for Indian tea might not be sustained.

The crisis of last year has served producers and traders to draw many important lessons for the future. So far as traders are concerned, it has brought to light the need for developing the marketing facilities available at Calcutta for disposal of tea. In other words, the desirability of building up the Calcutta market as a world centre of tea trade has gained strength. According to Mr. Bhansali, the off-take capacity of the London market in its new conditions, particularly after the auctions were resumed last year, had not been assessed and that was the reason why large quantities of tea went to London in the past and depressed prices for long. Calcutta and Colombo often paid the producers higher prices than London. In the light of this experience and the delay that normally takes place in realising payments against shipments made to London auctions, tea traders have found the necessity for developing the Calcutta market as early as possible.

But one of the handicaps in the direction of developing the Calcutta market is the inadequacy of warehousing. Referring to this, Mr. Bhansali observed that the present efforts at increasing the warehousing facilities at the port were tardy. Other factors which stand in favour of London as a terminal market, includes the 90 days' prompt discount facilities by banks. Mr. Bhansali, therefore, desired that the new Tea Board should examine this problem on the highest priority and advise the Government sufficiently ahead of each season of the sale policy that India might adopt, keeping in view the object of building the Calcutta auction centre further.

The desirability of excluding undesirable teas from auctions was also emphasised by the Chairman of the Tea Merchants' Association. To this end, he suggested, all tea waste despatched from factories should be received only at a central bonded warehouse controlled by the Government from which releases might be made direct to steamers against orders of individual shippers. If these were to be done, Mr. Bhansali argued, the Calcutta market was sure to benefit therefrom considerably.

The promotion of tea consumption is one of the important tasks of the Tea Board. On this point, Mr. Bhansali felt that it was not new ideas that were so wanted as a new enthusiasm to execute old ideas. He suggested that for expanding domestic markets methods that carry tea to the door of the prospective customer, such as campaigns organised by tea centres and mobile canteens, should have first importance. In regard to the promotion abroad, he laid emphasis on the urgency for filling the vacancy created by India's withdrawal from the I.T.M.E.B. and commended the arrangements in the U.S. for promoting tea sales.

Mr. Bhansali drew pointed attention to the difficulties created by the recent amendments to the excise duty. His main concern was the procedural difficulties of the amendments. Another source of concern to the tea trade, Mr. Bhansali said, was the notice served by the sales tax authorities of Saurashtra to assess the members of the Association to the payment of sales tax under the Saurashtra Sales Tax Act. This new measure, he felt, was a levy on commission agents and would become a multi-point levy, giving the character of a further excise levy. It would, as a consequence, prove to be an impediment to inter-State trade.

INCREASE IN U.S. TEA CONSUMPTION

Americans are taking more and more to tea. This is reflected in the steady rise in imports and sales of tea, thanks to the campaign carried on by the Tea Council of the U.S.A. Imports of tea from all tea enterprising countries during the six months ended June, 1953, amounted to 55.9 million lbs., as against 48.3 million lbs. in the corresponding period of 1952, an increase of 15.7 per cent. Retail sales for the first five months of this year have increased by 7 per cent. over those in the corresponding period of 1952, or an increase of 600 million cups of tea actually consumed.

Details of the tea promotion campaign carried on by the Council make interesting reading. 40 per cent. of all tea sold annually in the U.S. is stated to be in the three hot weather months, June, July and August. The Tea Council Intensive Television Campaign for iced tea is now reaching 69 million Americans. The campaign covers 45 per cent. of the total U.S. population.

BURLAP DOMINATES U.S. TEXTILE BAG BUSINESS

Burlap dominated the American textile bag business during the fourth quarter of 1952, according to a report issued by the U.S. National Production Authority (N.P.A.). Prices, says the N.P.A. report, were extremely competitive during the year under review. Burlap imports of 826 million yards in 1952 were the highest since 1948, and at the lowest price. Bag manufacturers operated at 60 to 70 per cent. of capacity. The U.S. consumption of burlap for bags in the third quarter of 1952 was, however, heavier still by about 6 per cent., as compared to the fourth quarter total. The industry is stated to have used 59.6 per cent. more burlap in the last calendar year than in the year preceding. For the year, as a whole, sandbag business accounted for about 10 per cent. of total bag output. Cotton bag demand, in contrast, was weak in the fourth quarter, compared with the previous periods, as bag users tended to move back into lower priced burlap. The quantity of cotton consumed in the bag business during 1952 decreased considerably. It was 11.9 per cent. lower than in 1951.

JUTE STOCKS IN JULY

SLIGHT INCREASE REPORTED

THE stock position of jute goods with Indian jute mills, as at 31st July, 1953, is far from being satisfactory. As compared with those at the end of June, 1953, the stocks disclose an increase of just over 1,800 tons. At the end of July, the overall stocks stood at as high as 135,671 tons, as compared with 133,840 tons in June, and 138,789 tons in May, 1953. Thus, it is seen that the improvement in stock position noticed in June has been lost by the slight deterioration in July. The increase in stocks at the end of the month under review is not only due to increased production by the mills but also to lower despatches of goods from the mills.

The following comparative table shows, at a glance, the position of stocks of the various types of jute goods in each of the three months ended July, 1953, as also in July, 1952.

Jute Goods Stock

(In tons)

	As on 31-7-1953	30-6-1953	31-5-1953	31-7-1952
Civil				
Hessians	44,166	44,909	46,792	40,756
Sackings	88,379	84,540	86,864	52,072
Others	1,621	2,382	1,924	1,529
Total ..	1,34,166	1,31,871	1,35,580	94,357
Government				
Hessians	537	697	947	1,539
Sackings	933	1,122	2,262	4,542
Others	35	150	..	26
Total ..	1,505	1,969	3,209	6,147
Grand Total ..	1,35,671	1,33,840	1,38,789	1,00,504

The above figures disclose that, while hessian stocks have declined from 45,606 tons in June to 44,703 tons in July, stocks of sackings have risen from 85,702 tons to 89,312 tons. Stocks of other types of goods have also fallen from 2,532 tons to 1,656 tons. This increase in stocks of sackings continued to be a source of anxiety in July also, despite reported improvement in the offtake of sackings in recent months. The position calls for vigorous action on the part of the jute mill industry and trade for increasing the sales of these goods.

The output of jute goods in July, 1953, as compared with that of the previous month, was up by about 6,500 tons. The actual production of all varieties of goods in the month under review was 78,353 tons, as against 72,807 tons in the preceding month, and 72,544 tons in May this year. The consumption of raw jute, calculated on the basis of production, during the month may be placed at 454,447 bales, as compared with 422,280 bales in June, 1950.

The table below gives a summary of the output of the three categories of jute goods, namely, hessians, sackings and others at the end of July, 1953, as compared with the output in the preceding two months and in the same month a year before.

Jute Production

(In tons)

	July, 1953	June, 1953	May, 1953	July, 1952
Civil				
Hessians	33,465	29,662	29,154	28,140
Sackings	39,064	37,831	38,206	52,807
Others	2,496	2,713	2,568	3,235
Total ..	75,025	70,206	69,928	82,182
Government				
Hessians	1,892	2,140	2,530	42
Sackings	518	310	86	1,595
Others	13	151	..	1
Total ..	2,423	2,601	2,616	1,638
Grand Total ..	78,353	72,807	72,544	83,820

The figures above show that the increase in the output during July has been shared by both hessians and sackings. The former have risen from 31,802 tons to 35,357 tons and the latter from 38,141 tons to 40,482 tons.

U.S. INTEREST IN BURLAP

American feed manufacturers who were pushed into use of multiwall paper bags, as a substitute container during the period of shortages and high prices of burlap, are reported to be reverting to burlap bags. One reason for this revival of interest is stated to be the prevailing low price and easy availability of burlap. The lower cost per trip of burlap containers, because of their resale or return value, enables farmers to save as much as $3 per ton on feed bag in burlap, compared to the price of feed in non-textile bags. This saving means much to feed manufacturers facing increasing competition and sales resistance due to declining net income of farmers and ranchers.

Preference for burlap bags is also dictated by the consideration of the high incidence of breakages experienced with non-textile bags in the course of filling, storing and loading operations. When breakage occurs the spilled feed is downgraded and sold at a loss. The loss in broken containers and down-grading to the feed tend to inflate a mill's production cost.

THE
CHARTERED BANK OF INDIA, AUSTRALIA AND CHINA
(Incorporated in England by Royal Charter, 1853)
(Liability of Shareholders Limited)
Capital (Paid-up) - £3,500,000
Reserve Fund - - £4,500,000
Branches throughout India, Pakistan and the East
AFFILIATED BANK IN INDIA & PAKISTAN:
THE ALLAHABAD BANK LTD., with over 70 offices in India & Pakistan.
The Bank offers a complete Overseas Banking Service and provides exceptional facilities for financing every description of trade with the East.
Deposits for Fixed Periods or repayable at call or at short notice are received at rates which may be ascertained on application.
The Bank's London Office undertakes Trusteeships and Executorships.
Head Office:

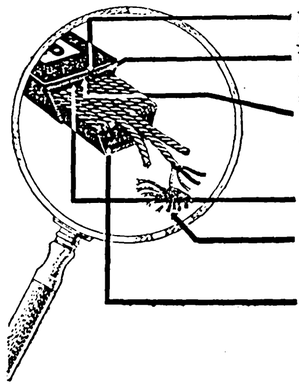
THE INSIDE STORY OF DUNLOP
INDUSTRIAL V-BELTING


THE TOPPING RUBBER seals and protects the jacket overlap.
THE JACKET, of strong woven fabric impregnated with rubber, armours the belt against surface wear.
THE FILLER RUBBER ensures that the cords are placed at the correct level to prevent distortion or undue stress of cords when flexing round the pulleys.
THE CUSHION RUBBER ensures maximum cord adhesion and long life.
THE CORDS are specially designed to provide adequate strength and resistance to stretch and fatigue.
THE BASE RUBBER, specially compounded to resist frictional heat, provides a suitable foundation for the cords, and gives a sufficiently large gripping surface on the sides.
Dunlop Industrial V-Belts are the product of advanced technical experience and methods of manufacture. They are made in the standard range of sections—M,A,B,C,D, and E—and are suitable for the efficient transmission of power in multiple belt drives.
Range of Horse Power Capacities for Multiple Belt Drives

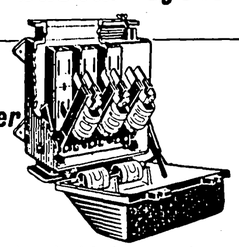
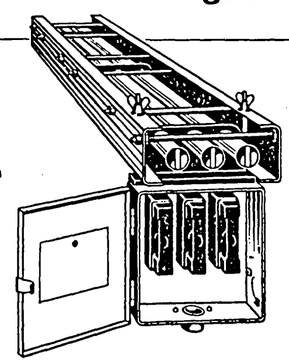
'ENGLISH ELECTRIC'
overhead busbar systems and fusegear
Electric power distribution in factories




The 'ENGLISH ELECTRIC' overhead busbar system has been designed to provide the maximum flexibility when additions or alterations have to be made to production layouts.
The system comprises a continuous assembly of insulated copper busbars enclosed in a metal chamber of bolted construction with provision for fused plug-in boxes at 2 ft. intervals. Also designed for factory distribution is the 'ENGLISH ELECTRIC' range of combination fuse switch units and industrial distribution boards.
All 'ENGLISH ELECTRIC' combination fuse switches and plug-in boxes incorporate 'ENGLISH ELECTRIC' high rupturing capacity non-deteriorating cartridge fuse links.

WORLD IRON AND STEEL DEVELOPMENTS

PROGRESS SINCE 1929 ANALYSED

THE analysis of statistics relating to iron and steel in the world during 1929-52, presented in the latest *Monthly Bulletin of Statistics*, published by the United Nations, makes interesting reading. It gives a lucid indication of the trend of industrialisation of the world, for production and consumption of steel is an index of industrial development. The world's iron and steel industry reached its peak activity in 1951, when production in each sector of the industry and in each region was higher than at any other time in history. Higher levels of output were reached in all producing regions, except in North America, where production declined, as a result of steel strike in the United States. The output of iron ore rose between 1929 and 1951 by 56 per cent., of crude steel by 74 per cent., of finished steel by 80 per cent. and of pig iron and ferro-alloys by 51 per cent. The following table discloses world production, excluding China and Korea, of ferrous materials:

(In million metric tons)

Year	Iron ore	Pig iron and ferro-alloys	Crude steel	Finished steel	Scrap	Manganese ore
1929 ..	86.7	98.1	120.7	88.7	..	1.9
1937 ..	96.8	103.1	135.3	98.9	82.3	3.0
1950 ..	114.3	132.5	188.5	..	124.1	..
1951 ..	135.6	147.6	209.6	139.4	140.6	..
1952 ..	137.1	149.5	209.7	139.3	..	..

World iron and steel production is concentrated mainly in a few countries, namely, Canada and the U.S., West European countries including Austria, Belgium, Luxemburg, France and the Saar, Western Germany, Italy, Sweden and the U.K., Eastern European countries including Czechoslovakia, Eastern Germany and Poland and the U.S.S.R. Australia, Japan and the Union of South Africa are other important producers. These countries produce most of the raw materials consumed by the iron and steel industry. In 1951, for example, they accounted for 90 per cent. of the world's iron ore (Fe. content) and 98 per cent. of the world's new and circulating scrap. Approximately, 98 per cent. of all metallurgical coke was also produced in these countries. Their share of production of manganese ore was, however, considerably smaller, being about 57 per cent. of world output.

Consumption

Regional production generally approximates regional consumption. The industrially developed countries are the principal consumers of finished iron and steel, using about 93 per cent. of finished metal output in the world. The following table shows production and consumption in 1950.

Production and Consumption, 1950

	Production of ores and new scrap		Consumption of finished steel (a)	
	Million metric tons	Percentage of distribution	Million metric tons	Percentage of distribution
Industrial countries.. ..	186.9	93	129.0	93
Of which:				
North America	95.6	47	70.3	51
Western Europe ..	51.5	26	29.0	21
Eastern Europe and U.S.S.R.	32.3	16	24.1	17
Australia, Japan and Union of South Africa.	7.5	4	5.6	4
Other countries	14.1	7	10.4	7
World (b)	201.0	100	139.4	100

(a) Excluding machinery and other fabricated products.
(b) Excluding China and Korea.

Although regional production generally approximates regional consumption, international trade in iron and steel is considerable. In 1950, for example, about 50 million metric tons of metal in the form of ores, intermediate products and finished steel (other than fabricated products), excluding billets, blooms and slabs for sale, moved between countries. Iron and manganese ores and pyrites accounted for 51 per cent. and finished iron and steel for 31 per cent. of the total trade. The balance was made up of small quantities of scrap (10 per cent.), pig iron (6 per cent.) and crude steel (2 per cent.).

Just over half the trade in 1950 represented intra-regional movements among industrially developed countries, while inter-regional trade among them accounted for 15 per cent. The trade between industrially developed areas and underdeveloped areas, on the other hand, was small. This confirms the widely held view that industrialisation of the backward areas of the world would lead to an increase in the volume of world trade. Export of ores from the latter to the industrially developed countries represented only 18 per cent. of the iron and steel entering international trade, while finished products (other than fabricated products) moving in the opposite direction accounted for no more than 15 per cent.

A study of the regional trends disclose that, measured in terms of crude steel output, the North American iron and steel industry expanded by 68 per cent. in the period 1929-51. It declined somewhat in 1952, as a result of the steel strike in the U.S. During the major part of the period under review, the various sectors of the industry were relatively well balanced, except for a deficiency in manganese ores. In recent years, however, North America's dependence on foreign raw materials has increased significantly.

The iron and steel industry of Western Europe received a severe setback during World War II, but has since made a strong recovery. Current output of steel, in fact, is more than one-fourth the volume in 1929. As in the case of North America, Western Europe is slightly deficient in raw materials. It depends on outside areas for several million tons of ores and scrap. Western Europe's imports of raw materials are, however, more than offset by exports of intermediate and finished products.

The rapidity with which the various sectors of the iron and steel industry of the East Europe and U.S.S.R. region has grown is reflected in the rise of crude steel production from 9 million tons in 1929 to 41 million tons in 1951 and 45 million tons in 1952. Exchanges of pig iron, crude steel and finished steel between this area and the rest of the world (other than China) are very small.

Japan

In the remaining industrially developed parts of the world, Japan ranks as the main contributor to the world's iron and steel. Its output expanded from an annual level of 2.3 million tons of crude steel in 1929 to 6.5 million tons in 1951. Its industry is, however, far from well balanced. In 1951, no less than 55 per cent. of the metal supplied to blast furnaces was obtained from imported ores. Almost all of Japan's scrap, pig iron and crude steel is retained for domestic use. Exports of finished steel (excluding manufactures) amounted to almost a million metric tons in 1951.

Production of ferrous metals in the underdeveloped areas of the world was confined mainly to the output of ores in the period under review. Iron ore output rose from 9.5 million tons in 1929 to 13.4 million tons (Fe. content) in 1951, while manganese ore production increased from 0.9 million to 1.5 million tons (Mn. content). Crude steel production trebled but, even in 1952, it amounted to only 4.9 million tons or 4 kg. *per capita*, as compared with a world average of about 105 kg. *per capita*. In general, the industry of the underdeveloped areas was very much out of balance throughout the period. These areas exported most of their ores to industrially developed areas for processing, while obtaining the bulk of iron and steel products from abroad. It is significant that, in 1950, such imports (other than machinery and manufactures) were nearly equal in metal content to exports of ores from these areas.

MINERAL CONCESSION RULES AMENDED

Certain amendments have been made by the Government of India in the Mineral Concession Rules, 1949, for ensuring the smooth disposal of applications for prospecting licences and mining leases. Under the Rules of 1949, when more than one application was received for prospecting licence or mining lease for the same land, preference was to be given to the application received first, unless the State Government, for any special reasons and with the prior approval of the Central Government, decided to the contrary. The amendment provides for the contingency of more than one application being received on the same day. In such cases, the State Governments are now empowered to consider the experience in prospecting mining, financial soundness and stability, special knowledge of geology or mining, and the technical staff of the applicants and grant the prospecting licence or mining lease to the applicant considered most suitable, after obtaining the prior approval of the Central Government. Where applications for both a prospecting licence and a mining lease for the same land are received on the same day, the amendment provides that the application for a mining lease shall not have any preference over the application for a prospecting licence, except in the case of an area which was held and worked under a mining lease previously.

The amended Rules also require the State Governments to specify the dates of expiry or relinquishment or cancellation of licences and the dates from which the areas are available for regrant in the register of prospecting licences maintained by them.

TELE-COMMUNICATION DEVELOPMENTS

RADIO AND CABLE BOARD MEETS

THE first meeting of the Cable and Radio Board, which met in New Delhi, on 11th August, examined matters relating to procedure and dealt with general technical developments in the field of tele-communications. It will be recalled that the Board was set up in October, 1952, to advise the Cabinet Committee on tele-communications. The Board has been entrusted with the task of reviewing the adequacy of both external and internal radio, cable and other communication systems and of ensuring the maximum and efficient utilisation of the systems. It will also co-ordinate research, development, production and provision of equipment for radio, cable and other communication systems. The members of the Board include Mr. B. V. Baliga, Chairman, Dr. K. S. Krishnan, Director, National Physical Laboratory, and Brig. M. N. Batra, Director of Co-ordination and Police Wireless, New Delhi. Mr. Jagjivan Ram, Minister for Communications, inaugurated the meeting.

Radio services have come to be used in the country so exclusively for commerce, law and order, as well as for defence, that it is necessary to take continuous and vigilant action to safeguard the frequencies which are required to sustain them. Development of radio communications in India has been progressing fast since independence. The number of frequencies used in India in December, 1952, was 3,524. Out of these, a large percentage was taken up by the departments of Defence, Police, Posts and Telegraphs and Civil Aviation. Of the balance, the broadcasting services accounted for 213. The number of wireless stations in the country, excluding those run by the Defence Services, rose from 552 in 1947 to 1,484 in 1952. In addition, there were 11 direct wireless telegraph links to various cities abroad. There were, in 1952, as much as 117,049 miles of telegraph and telephone lines. Besides, there were 742,682 miles of telegraph wires, 6,900 miles of cables and 727,241 miles of copper conductors in cables. Carrier and voice-frequency channels amounted to 409,532 miles. Inland telegrams in 1951-52 numbered 24,415,894 and foreign telegrams 4,746,528.

Need for Co-ordination

The Radio and Cable Board is born of a deep and practical realisation of the need for careful co-ordination of tele-communications in the country so as to make them capable of meeting the needs of war and peace with equal efficiency. The attainment of independence and the growing demand for speedier means of communication has made co-ordinated and planned development of different forms of tele-communications essential, in order to use the limited resources to the maximum advantage. The need for co-ordination of wireless networks is all the more necessary for under-developed countries in tele-communications like India, especially when the international developments in the field of radio-frequency usage have created an acute shortage of radio spectrum space. The Board's services will be of particular value for the wireless section, as this is the youngest and fast developing branch of tele-communications. As new regions of radio spectrum are explored, commerce and industry are always finding more than enough use to crowd them. And this intangible public resource, namely, the radio spectrum, requires, therefore, careful conservation and management, no less than its tangible counterparts such as oil, coal, minerals, forests, water power, etc.

India is on the threshold of great social and economic changes. The Five-year Plan aims at increasing the prosperity of the country by utilising India's resources methodically to nation-building purposes. The Board has a vital part to play in this, as modern science has made tele-communications the nerve system of both war and peace. It has to assess not only the relative importance of the various claimants for additional frequencies, but also to ensure the maximum and efficient utilisation of the present tele-communication channels by giving directions, if necessary, for routing traffic, to any Government department.

Reports from New Delhi indicate that the Government of India has allocated to assemblers of automobiles only so much of foreign exchange as will keep them going upto the end of 1954. The assemblers are stated to have been given freedom to use foreign exchange in any manner so as to phase out the closure of their plants by that time. Five hundred motor cars are expected to be the maximum that can be assembled during this period from the foreign exchange resources allocated.

PROGRESS OF BRITISH INSURANCE

SIR EDWARD FERGUSON DEFENDS FREE ENTERPRISE SYSTEM

THERE is no more convincing evidence of the strength and value of British insurance than the sizable increase which it was able to record in its premium income during the year 1952 as compared with the previous year. Thus, the net premium income of British insurance improved from £859.7 million to £925.5 million last year. The increase in premium income was shared by all the branches of insurance. Premium income in the fire branch moved up from £198.5 million to £208.1 million, in the accident branch from £237.3 million to £266.8 million, in the marine branch from £63.5 million to £67.5 million, in the ordinary life branch from £242.1 million to £260.7 million, and in the industrial life branch from £118.3 million to £122.3 million. This increase is the more notable because it was achieved in a year which, in many ways, was a period of dull business conditions in the world. Sir Edward Ferguson, Chairman of the British Insurance Association, took, naturally enough, some pride in mentioning these figures of new premium income, when he addressed the recent annual meeting of the Association.

The Chairman referred to the British Labour Party's attitude towards insurance. This Party, like its counterparts in all countries, including India, is politically wedded to nationalisation of the means of production and also of services, such as insurance. Socialists all the world over see in nationalisation a panacea for all evils, both real and imaginary. It is, therefore, just as well that the Chairman referred to the British Labour Party's statement on domestic economic policy in so far as that statement concerns insurance. His remarks will be read with interest in India, too, for there have recently been some dark hints of nationalisation of insurance. Sir Edward said that life assurance represented the single largest source of personal voluntary savings in the U.K. and that it was growing at the rate of about £160 million a year. He added: "All this has been achieved solely by the thrift and initiative of the ordinary citizen, who has long since learnt to rely on the soundness and good faith of the insurance companies. No State scheme—under any guise—could give greater encouragement." Referring to the Party's charge that a "few giant companies" control a large part of the nation's private savings, he pointed out that the B.I.A.'s membership consisted of 210 companies of every size, from the largest to the smallest, the interests of every one of which and, therefore, of their policyholders, were equally safeguarded by the Association and its expert sectional committees.

The B.I.A. has realised that it is not enough if it does good work but that the people should know that good work is really being done. This implies publicity. The value of publicity has been realised by the B.I.A. but that cannot be said of insurers in this country. In his statement on the work of the Association, the Chairman has referred to the cleavage of opinion in the Labour Party. It would appear that, while one section is opposed to further nationalisation schemes, others quite clearly take the contrary view. The Chairman said:

"In these circumstances, the Association would be failing in its duty to its members and to the nation if it omitted to conduct the research necessary further to substantiate the claim that those millions of policyholders at home and overseas who look to the British insurance companies to cover them, receive better service under a flexible system of free-enterprise insurance than they would receive from any rigid State scheme."

In order to tell the public the kind and magnitude of the service rendered by the British insurance industry, the B.I.A. continues to participate in the British Industries Fair. The Chairman said that year by year, increasing interest was taken by visitors, both home and overseas, in what he described as "our wares," intangible though, in a certain sense, they might appear to be. It would further appear that, last year, there was a great increase in the volume of requests for the Association's assistance from other insurance stands. Apart from meeting the requests for literature and exhibits for numerous provincial fairs, exhibitions and shows, the Association also helped, in the past year, the organisers of the three important international exhibitions overseas—the Rhodes Centenary Exhibition, Bulawayo, the International Fair, Philippines, and the Barcelona Trade Fair. The B.I.A.'s exhibits, we are told, have evoked considerable interest. In this connection, the Chairman said:

"At one time, it was suggested that insurance was too difficult a subject for an attractive exhibition stand, but the interest shown by the public in our stands at the B.I.F. and the increase in the number of insurance stands at international exhibitions seem clearly to support the contrary view and publicity of this kind is not only possible but can be made to be really effective."

Perhaps, Indian insurers, who have made no similar attempts at publicising their services, will derive some enthusiasm for the idea of this form of publicity from the knowledge that the B.I.A.'s exhibits have evoked considerable interest among the visitors. They will do well to emulate the British example—they will, of course, have to adapt the ideas to suit Indian conditions—because there is not only scope but urgent need for spreading the knowledge about the value and utility of insurance in this country.

VULCAN INSURANCE CO., LTD.

The thirty-three-year-old Vulcan Insurance Company, Ltd. (General Manager: Mr. K. C. Desai, Bombay) is one of those well established Indian insurance companies which have assiduously built up a fairly large foreign portfolio. That it pays to spread one's business, especially insurance business, over as large a geographical area as possible is evident from the latest report and accounts of this Company, which relates to the year 1952. The Company has been able to record a net increase in its premium income, because its foreign business has continued to expand. Thus, in 1952, the net premium income from the Company's foreign business increased from Rs. 15.51 lakhs in 1951 to Rs. 17.73 lakhs, although the premium income from the Indian business suffered a sharp drop of over Rs. 1 lakh to Rs. 14.06 lakhs. The total premium income has thus gone up from Rs. 31.20 lakhs to Rs. 31.79 lakhs. The increase in the Company's foreign business, it should, therefore, be clear, has averted what might otherwise have been a net decline in premium income.

The decline in the Company's Indian business is not something peculiar to this Company; it only reflects the general trend in the business of Indian insurers. It may be recalled that the Company's Chairman, Mr. Mangaldas B. Mehta, explained last year, at the annual meeting of the Company, some of the causes for this decline. He attributed it to the fall in commodity prices, the slackening of demand for riot insurance and nationalisation of transport services in some centres. Each of these factors affects, in its own way, the income of insurers, in general, and general insurers, in particular.

To revert to the Company's latest report and accounts. They reveal that, in the fire department, the net premium income has increased from Rs. 21.88 lakhs in 1951 to Rs. 23.12 lakhs in 1952. Of the total premium income, the Indian portfolio yielded only Rs. 6.79 lakhs, as against Rs. 7.86 lakhs in the previous year, while its foreign portfolio gave a larger income at Rs. 16.33 lakhs, as compared with Rs. 14.03 lakhs in 1951. The loss ratio was somewhat lower at 32.91 per cent. though the ratio of commission and expenses to the premium income moved up from 37.55 per cent. to 42.29 per cent. The underwriting profit in the department was a shade lower at Rs. 5.49 lakhs, as against Rs. 5.52 lakhs in 1951.

Next to the fire department, it is the accident department that forms the mainstay of the Company. In this department, the net premium income declined from Rs. 7.29 lakhs to Rs. 6.97 lakhs. It is, however, satisfactory to note that the loss ratio was lower at 55.7 per cent. as compared with 56.2 per cent. in the previous year. Commission and expenses, at Rs. 3.08 lakhs, formed 44.2 per cent. of the premium income, as compared with 42.5 per cent. in 1951. The underwriting profit was 0.26 lakhs.

The Company's marine business forms only a small part of its total business. The net premium income in this department declined from Rs. 2.03 lakhs to Rs. 1.70 lakhs. But it is gratifying to note that the loss ratio was significantly less at 43.45 per cent. as compared with 56.96 per cent. in 1951. Commission and expenses, at Rs. 0.92 lakh, formed 53.76 per cent. of the premium income as against 49.60 per cent. in the previous year. The year's working resulted in an underwriting profit of Rs. 0.42 lakh, as against a loss of Rs. 0.44 lakh in 1951.

The total profit of Rs. 6.17 lakhs from the three departments was transferred to the profit and loss account which, together with the income from interest and dividends and other sources of revenue, shows a total net income of Rs. 7.54 lakhs. After providing for expenses of management, not applicable to any particular fund (Rs. 21,191), for depreciation on investment (Rs. 95,071) and other items of expenditure, there was a balance of Rs. 6.19 lakhs available for appropriation. This sum of Rs. 6.19 lakhs, together with Rs. 4.28 lakhs, being the balance brought forward from the previous year after payment of dividend and bonus to staff, makes in all Rs. 10.47 lakhs. Out of this amount, taxation absorbs Rs. 2.74 lakhs and reserve for doubtful debts Rs. 0.36 lakh. A notable feature of appropriations this year is that provision has been made for the creation of a new reserve, to be known as "Catastrophe reserve," for which a sum of Rs. 2 lakhs has been appropriated. This reserve is intended to meet unforeseen contingencies like earthquakes, cyclones, tornadoes, typhoons and other natural calamities. The payment of dividend, which has been maintained at As. 12 per share, absorbs Rs. 1.15 lakhs, and of bonus to staff Rs. 0.46 lakh, leaving a sum of Rs. 3.76 lakhs (subject to taxation) to be carried forward.

The Company has a strong financial position. Apart from the capital of Rs. 15.99 lakhs, it has large reserves which include fire fund at Rs. 19.81 lakhs, marine fund at Rs. 1.70 lakhs, accident fund at Rs. 4.58 lakhs, catastrophe reserve at Rs. 2 lakhs and reserve for depreciation on investments at Rs. 1.45 lakhs.

REPORT OF THE CENTRAL BOARD FOR THE YEAR ENDED 30th JUNE, 1953

The Directors report that, the usual and necessary provisions having been made, the net profit of the Bank for the half-year ended the 30th June, 1953, amounted to Rs. 63,10,303-5-11 which, with Rs. 42,07,672-11-9 brought forward from the half-year ended the 31st December, 1952, makes a total of Rs. 1,05,17,976-1-8.

This sum the Directors of the Bank have disposed of as follows :—

		Rs.	a.	p.
1.	In payment of a Dividend to the Shareholders at the rate of 16 per cent. per annum	45,00,000	0	0
2.	Transferred to Pension Funds	2,78,800	0	0
3.	Bonus to Staff	20,00,000	0	0
4.	Balance carried forward to the Profit and Loss Account	37,39,076	1	8
	Total	1,05,17,976	1	8

The Balance Sheet of the Bank as at the 30th June, 1953, and the Report of the Auditors are annexed, together with a statement of the Profit and Loss Account for the year ended the 30th June, 1953 (wherein the figures for the past half-year have been shown separately).

By Order of the Central Board,
A. R. CHISHOLM,
Managing Director.

Bombay, *5th August*, 1953.

NATIONAL SAMPLE SURVEY

GOKHALE INSTITUTE'S REPORT RAISES SOME VITAL ISSUES

(Contributed)

THE absence of reliable statistics relating to production, consumption and other aspects of economic and social life in India has been known for a long time. Since the achievement of independence, therefore, the development of statistics has been a continuing concern of the Government of India. One of the measures adopted by the Government for the purpose was the organisation of a National Sample Survey (N.S.S.) at the end of 1949. The work was entrusted to the Indian Statistical Institute at Calcutta and the Gokhale Institute of Politics and Economics at Poona, headed by Prof. P. C. Mahalanobis and Prof. D. R. Gadgil, respectively. During the discussions that took place between the two Institutes regarding the planning and the conduct of the survey, differences of opinion came to light. The views of the Gokhale Institute were that the sample unit, as far as possible, should be the village unit; that information should be collected regarding a certain minimum number of cultivating families per village; that information required for annual estimates in relation to a large number of items should be collected by repeated, say, four visits in a year to the village; that the information should be collected only through investigators who should have a good knowledge of the local language and the local rural background and who should have received adequate training for investigational work; that the range of enquiry should be limited, the number of questions asked being kept low and the respondent not being required, as far as possible, to make a number of complicated calculations in his head in order to answer a query. The Calcutta Institute believed that a quick training of the investigators and a wider range of enquiry where feasible, would be more fruitful and were, therefore, desirable. In view of these differences of opinion, it was decided that the two Institutes should prepare two independent schedules instead of a single set of schedules for the whole enquiry.

Invidious Treatment

The Gokhale Institute surveyed 609 villages during 1950-51, sent its report to the Government of India in July, 1952, and expected that the report would be published by the Government in due course. But, far from publishing this report, the Government, when it published, in December, 1952, the report submitted by the Calcutta Institute on the data collected by the Institute during 1950-51, made no mention even of the report which had been submitted by the Gokhale Institute. With the permission of the Finance Minister, therefore, the Gokhale Institute published its report a month ago on its own responsibility. The report is called "Report on the Poona Schedules of the National Sample Survey (1950-51)".

One thousand eight hundred and thirty-three villages were selected all over India for the purpose of the National Sample Survey. Of these, 1,189 and 644 were allotted to the Calcutta and Poona Institutes, respectively. The Calcutta Institute surveyed 1,111 villages, out of which 1,091 were admitted for the final tabulation. Corresponding figures in the case of the Poona Institute were 609 and 585, respectively. Although the Calcutta Institute covered almost twice the number of villages covered by the Poona Institute, the number of families covered by the Poona Institute for items of household enterprise was almost twice as large and for items of consumer expenditure thrice as large as the number of families covered by the Calcutta Institute, which collected only some general information included in schedule 1 from the remaining families.

As in each village an equal number of agricultural and non-agricultural households were selected, the latter households obtained a disproportionately large representation in the sample of households. The Poona Institute has tried to correct this bias by appropriate underweighting of the non-agricultural households. The bias is much larger in the sub-samples of the Calcutta schedules. Thus, in the Calcutta schedules of samples for household enterprises and for consumer expenditure, the ratio between the agricultural and non-agricultural households is 2 to 3 and 2 to 4, respectively. It is not clear whether, in the tabulation, this bias was corrected by the Calcutta Institute by appropriate weighting. In the absence of such weighting, the results would be seriously biased. The Report of the Poona Institute, therefore, claims that, leaving aside the differences in the coverage of the Poona and Calcutta schedules and the differences in their approach, even from the purely statistical aspects of the sample size and the tabulation procedures, the results of the Poona schedules would be found more valuable. Further, in the tabulation of the Poona schedules, for every item for which a total or an average is given, the number of entries, that is, the number of households which reported that item, is also given. This feature would be found of value in its own right and also as an aid to assess the completeness or otherwise, of reporting.

Careful Scrutiny to be Made

The scheme of the Poona schedules was based on a programme of four periodic visits to the selected households. The discontinuance of the Poona schedules, after the first visit, for reasons explained below, detracts much from the value of the results, at least on items liable to considerable seasonal variations. For this reason, the Poona Institute has not undertaken, in its report, any examination and analysis of the

† Includes income-tax and super-tax amounting to Rs. 2,30,418-0-0, i.e., net salary and allowances amount to Rs. 90,300-0-0. In addition provision has been made for bonuses amounting to Rs. 13,000-0-0 and tax thereon amounting to Rs. 33,676-10-0.

REPORT OF THE AUDITORS TO THE SHAREHOLDERS OF THE IMPERIAL BANK OF INDIA

We, the undersigned Auditors of the Imperial Bank of India, elected under Section 58 (1) of the Imperial Bank of India Act, 1920, do hereby report to the shareholders upon the Schedule II of the Balance Sheet as at 30th June, 1953, and the Profit and Loss Accounts for the half-year and the year ended 30th June, 1953.

We have examined the above Balance Sheet (which contains the particulars prescribed by the Imperial Bank of India Act, 1920, and the Bye-laws of the Bank) and the Profit and Loss Accounts, and the Accounts relating thereto of the Central Office and of the Local Head Offices in which are incorporated the Returns submitted and certified by Branch Agents and report (i) that we have obtained all the information and explanations we have required and that they have been found to be satisfactory; (ii) that the transactions of the Bank which have come to our notice have been within the powers of the Bank; (iii) that the Returns received from Branch Agents have been found adequate for the purposes of our audit; (iv) that in our opinion the Balance Sheet and Profit and Loss Accounts are drawn up in conformity with the law; (v) that in our opinion the Balance Sheet is a full and fair one and is properly drawn up so as to exhibit a true and correct view of the state of the Bank's affairs according to the best of our information and the explanations given to us and as shown by the Books of the Bank; (vi) that in our opinion the Profit and Loss Accounts show a true balance of profit for the period covered by the accounts; and (vii) that in our opinion Books of Account have been kept by the Bank as required by law.

The audit of the books and Accounts of the Local Head Offices at Calcutta, Bombay and Madras, has been carried out by Messrs. A. K. Joscelyne, B. S. Billimoria and J. Deavin respectively.

material presented. Another reason for not attempting an analysis of the data was the character of the survey. The National Sample Survey has been termed multi-purpose and it has no specific purpose beyond that of collection and presentation of data. The Poona Institute, therefore, thought it proper merely to present the data with full details of procedures regarding their collection and tabulation, but without comment or interpretation, which would necessarily have involved its addressing itself to specific questions and adopting particular points of view. The Institute feels also that, before any useful analysis can be attempted, a careful scrutiny and assessment of the material are necessary. The Institute has undertaken this work and hopes to publish the results in a subsequent publication.

The National Sample Survey was continued in 1951-52 and thereafter. The association of the Gokhale Institute with it, however, ended at the end of March, 1951, except, of course, the Institute's responsibility to tabulate the material collected until then. This was due to the fact that the differences of opinion between the Poona and Calcutta Institutes could not be bridged, in spite of correspondence between Profs. Gadgil and Mahalanobis and personal discussions at Calcutta between Mr. V. M. Dandekar, representing the Poona Institute, and Prof. Mahalanobis and others representing the Calcutta Institute. An account of the correspondence and discussion is given, in the final chapter, called "Aftermath," of the Poona Institute's Report.

Prof. Gadgil's Note

On 21st January, 1951, Prof. Gadgil sent the following note to Prof. Mahalanobis:

"We are not getting or are not likely to get in the immediate future through the N.S.S., as at present conducted, information which is reliable enough for the purpose for which it is intended to be used.

"The main reasons for this are :

(a) The agency employed is not familiar enough with rural conditions ;

(b) the programme of work, even in the Poona schedule, does not enable it to establish contacts in the proper way with the respondents ;

(c) adequate provision has not been made for training and supervision.

"It is also doubtful whether on many aspects sought to be covered, information can really be obtained in India by a random survey. Further, too many aspects have been considered in the survey. The ambitious coverage of the present schedules has thus largely helped to defeat the objective of the survey. ... Therefore, the whole plan should best be thought out afresh. A beginning should be made with defining clearly the objectives of the Union Government in the matter of collection of social and economic data. I would define them in the following way:

(a) "the co-ordination of all the activities of Central Ministries and State Governments in the collection of statistics from the point of view of data required for framing social and economic policy ;

(b) "the planning and conduct of enquiries in specific regions and for filling specific gaps in information ;

(c) "evolution of an All-India Sample or Samples for collection of overall data for directly obtaining data for the Central Government and checking data collected by Ministries and States.

"The objectives should be followed in the priority given above.

"Objective 5(c) is best aimed at after and not before the others are attained. In case, however, it is decided to carry on with the N.S.S., as it is, then at least its coverage should be drastically curtailed, so that only such questions will be asked in it, the reliability of replies to which could be easily checked by the present type of investigator."

Prof. Mahalanobis' Reply

On 31st January, 1951, Prof. Mahalanobis sent a reply to the above note stating that, while he agreed broadly with the objectives mentioned in the note, he believed that the best plan would be to tackle them simultaneously, as they were highly interrelated; that investigators could have enough familiarity with rural conditions and adequate training only in the course of the actual surveys; that he found the N.S.S. functioning better than he had expected and did not see any reasons for serious misgivings regarding the reliability of its results; and that even if the results of the first round did not turn out to be reliable, he was confident that the experience gained in the first round would enable the schedules and the programme to be revised on scientific lines, so that the N.S.S. would operate far more efficiently during the second round, and so on during the succeeding rounds.

In a letter dated 10th February, 1951, to Prof. Mahalanobis, Prof. Gadgil further clarified the points at issue. He said *inter alia*:

"I do not share your view that mere statistical examination of any mass of data collected by such methods as those followed in the N.S.S. will enable one to judge adequately of the reliability or otherwise of original responses. ... What from our experience is most likely to happen is that large numbers, who overtly co-operate, will conceal specific personal details and will give plausible replies not likely to arouse any suspicions. Secondly, from the side of the investigator, there is the possibility that, instead of visiting sample families, he may fill in plausible figures in the light of his experience of other families, in the way in which the *patwari* is alleged to fill in crop averages. We feel that these are the two sources of the largest possible wrong information and they cannot be detected or remedied by a Central Examination of the statistical returns. ... So far as I am aware, no other agency has a staff of fieldmen drawn from rural areas and trained for years in this work as we have and I feel that it is highly unlikely that our estimates of reliability based not on examination of data on tabulation but on continuous reports from the supervising and collecting agency in the field could be found as exaggerated or as being relevant only to the districts in which we are conducting the survey. Moreover, the sources of unreliability in the data being what they are, I do not see the possibility of improving the quality of the information by a mere continuation of the field work in its present form.

"You consider that all the three objectives set out by me should be achieved simultaneously, whereas I feel that it is useless to attempt the third without having secured considerable progress in one and two. ... For policy formation, you require, not so much the National aggregates (yielded by the N.S.S.), but much more detailed information concerning specific regions and activities and a fairly clear idea of the actual operation of specific parts of the economic system. When you have gathered a fair amount of such specific information, the National aggregates may help you to build an overall realistic framework, which will give meaning to National Income and Accounts ; but, as long as the detailed information is not available, National aggregates by themselves would prove of little use for policy formation or for judging of its implications. ... I doubt whether it is possible, in the absence of attainment of the first and second objectives, to get sufficiently reliable information through such an agency as the present N.S.S."

If the Government of India were to decide to continue the N.S.S., Prof. Gadgil suggested various reforms in the organisation, such as giving up unsuitable areas, discharging incompetent investigators, drastic reduction of the field of enquiry largely to visible phenomena, but enriching it in specific respects in certain regions, and variations of sampling procedures.

This correspondence was followed by personal discussions at Calcutta between Mr. V. M. Dandekar, who represented the Poona Institute, in the absence of Prof. Gadgil from India, and the staff of the Calcutta Institute. These discussions, however, did not remove the differences of opinion between the two Institutes, and after this, the Poona Institute heard nothing in respect of the N.S.S. either from Prof. Mahalanobis or from the Government.

Some Important Issues

The foreword written by Prof. Gadgil to his Institute's Report on the Poona schedules of the N.S.S. has raised issues of even wider character. Most statistical information available to Governments is obtained for definite purposes in a suitable manner and without special cost, by their administrative personnel, who possess special knowledge of the subject matter and local circumstances. Such information is supplemented, from time to time, by special enquiries or continuing surveys on important aspects conducted by departmental authorities. Such enquiries and surveys arise out of the requirements of the activities of the departments and demand special knowledge for their planning and conduct. The advantages of allowing a particular agency connected with a subject to plan and conduct its own collection of statistical material, as well as its *ad hoc* surveys, are that it would be in the best position to time the enquiry so as to obtain the best response, to interpret the collected data in the main essentials and to make the enquiry most economical by combining the enquiry with its usual activities.

Any attempt to replace all this elaborate regional and departmental machinery, which has been gradually built up over decades, by an independent organisation, whose special knowledge is confined to statistical sampling, or even to subordinate the former to the latter, can be justified, only if it is proved, in open debate by experts, to have overwhelming advantages.

Information collected through ordinary administrative machinery, the questions asked and the data collected have some significance and relevance and cannot ordinarily be looked upon as mere idle queries ; and, usually, there are sanctions behind the request for answer or data. It is true that the known administrative purpose of a query may induce bias in replies, but the direction of such bias is usually known and can ordinarily be allowed for. But collection of statistical material by a special agency, which has no connection with the normal administrative activities, may not rouse interest and may not prove useful as the normal means of collecting continuing statistical data. This is apart from the fact that such independent agency will not have the special knowledge of either the subject or local circumstances, which the ordinary administrative machinery usually possesses.

Dangers of Centralisation

It is conceded, in all scientific observations —physical, biological and social—that the observation and counting of phenomena in any particular aspects are helped by knowledge of those aspects. The statistical expert may indicate the suitability of particular statistical designs or plans for any set of observations, but the actual planning and the conduct of the observations are best done by the subject expert or the regional expert. An attempt at centralisation of the type envisaged by the N.S.S. would not only lead to an unnecessary wastage of special knowledge, which is readily available, but also to the lowering of the quality of work through ignorance in all other directions not being adequately offset by expert knowledge of statistics only. The dangers of such centralisation would be all the greater in a country like India, possessing the size of a sub-continent. Further, statistics gathered departmentally and regionally by independent States and Ministries have the possibility of mutually correcting, qualifying and cross-checking each other. But the statistical central authority, in charge of a single national survey, would be subject to no independent check, would run a much greater risk of manipulation and may, in time, deteriorate in quality and become open to considerable doubt. With complete centralisation and independent functioning, the opportunity for doubtful operations would be much greater.

The final point raised in the foreword to the Report of the Gokhale Institute is that the establishment of an all-purposive N.S.S. may bring about the abolition of all parallel agencies in the field. Being an all-purposive survey, it has no specific work and, being created on a huge scale, it will have to keep on doing a lot to justify its existence. This is likely to lead to its encroaching on other spheres, one after another. It is already reported that some of the most important expert agencies, built up after years of careful work, have been abolished in order to extend the field of the authority conducting the N.S.S.

The points raised in the Report of the Gokhale Institute are very important for the future economic well-being of India, because the Governments in India can frame right economic policies only if they get correct information regarding the economic conditions in the country. It is, therefore, unfair to call the discussion an "unseemly feud" or even an "unseemly controversy," as a couple of financial journals have done. The points deserve the most careful and dispassionate consideration of the Government of India.—*All Rights Reserved.*

SAVINGS CAMPAIGN

A target for an annual collection of Rs. 8 crores has been fixed by the Central Advisory Committee for Women's Savings Campaign which concluded its deliberations in New Delhi on the 3rd inst. To begin with, it has been decided, the work of collection will be done through 100 registered voluntary social welfare organisations (or their branches) in the form of an organised campaign which will be launched on an all-India basis on 7th October, 1953.

Under the schemes finalised by the Committee, a number of organisations doing social welfare work in India will be selected for appointment as authorised agents for collection of small savings. The organisations must be of good standing and reputation in the field of social work and must be registered under the Societies Registration Act of 1860. These organisations or their branches, not exceeding 100 at present, will propagate the idea of small savings both in rural and urban areas and make collections on behalf of the National Savings Commissioner of the Ministry of Finance. The organisations will have to enter into a properly constituted, legally recognised, agreement with the National Savings Commissioner for carrying on this work and they will be entitled, in lieu, to a commission of 1¼ per cent. on the collections made by them.

Describing himself as "a needy person with great expectation," the Finance Minister, Mr. C. D. Deshmukh, referred in his speech at the meeting, to the financial requirements of the Five-year Plan and the vital part which small savings could play in covering up the present gap in resources. The objective of the women's movement, he said, was of no small magnitude, inasmuch as an approach had to be made to millions of homes and make the people interested in small savings as one of the important means of accelerating the implementation of the Five-year Plan; but the ground had already been prepared to a certain extent, he observed, by creating a regional interest in small savings through a decision taken by the Ministry of Finance last year, whereby all collections over Rs. 45 crores per year were to be returned to the States in the form of Central loans.

Fine lighting
OLD AND NEW

The Indian craftsman who made this light-piece combined design with mythology by casting as the central figure, a *Naga*, about whom there are many heroic stories. In one tale it is said that when Lord Krishna was a child he fell asleep in the shade of a poisonous tree which had been planted there as part of a pre-conceived conspiracy to destroy him. As he slept the tree dripped its poison onto his face. A *Naga* gliding by realized that murder was being perpetrated, and spreading his hood as a shield to protect the child-god, collected to himself the venom falling from the tree. In the light-piece, the spread hood of *Naga* forms a reflector for the flames in the five beautifully shaped *dipaks*.

Philips in India are stimulated by the knowledge that they are carrying forward India's heritage of fine lighting by producing, as the result of ceaseless research, fine lighting for all needs of the present age.

U.K.'S TRADE WITH INDIA AND PAKISTAN

FIGURES FOR JANUARY–JUNE 1953 ANALYSED

SOME interesting features are revealed by the *U.K. Trade and Navigation Accounts* relating to Britain's trade with India and Pakistan in the first half of this year. The pattern of the U.K.'s trade with the two countries is not only more or less the same but also is in line with that between Britain and undivided India in the pre-Partition days. Thus, the main imports of both India and Pakistan from Britain consist now, as in the pre-Partition days, of textile machinery, electrical machinery, electrical goods, machine tools and vehicles, particularly locomotives and cars. Similarly, exports to the U.K. from both the countries of the former Indian sub-continent comprise, in the main, tea, leather, raw cotton, raw hides and skins, raw wool and cotton. One striking difference is, however, seen in the fact that, while raw jute forms one of the chief items of Pakistan's exports, jute manufactures figure prominently among India's exports to Britain.

A point, however, to be noted from the *Navigation Accounts* is that, in respect of many items, the figures are incomplete in regard to the U.K.'s trade with Pakistan. Consequently, the overall figures for that country cover only the first five months of the current year. During this period, Britain imported from Pakistan goods worth £15.23 million and exported to it, goods of the value of £11.35 million. Pakistan thus had a favourable balance of trade to the tune of £3.8 million. On the contrary, India's trade with the U.K., for which the overall figures for the first half of the year are complete, shows that exports to the U.K. aggregated £51.07 million, as against imports from that country valued at £55.08 million. Thus, during the six-month period, India had an adverse trade balance to the extent of £4.01 million.

Tea figured well in the exports of both India and Pakistan to Britain. In the first six months of this year, India continued to be the largest supplier of tea to Britain, the total being 125.4 million lbs. valued at £18.77 million. This formed slightly more than half of total imports of tea by Britain, at 215.8 million lbs. valued at £34.6 million. Pakistani tea imported by Britain during the first half of the year amounted to 6.61 million lbs. costing £770,000.

During the six months ended June, 1953, India was by far Britain's largest supplier of leather. This country sent to the U.K., leather worth £7.24 million, which was nearly twice as much as in the same period of 1952. Britain's total leather imports during the period were valued at £10.03 million. Pakistan's export of undressed hides and skins was, however, no more than 1,071 tons, valued at £494,000.

India supplied well over two-thirds of Britain's total imports of textile materials (other than cotton, silk or wool), namely, coir mats and matting (£876,000), jute piecegoods (£2,119,000) and jute sacks and bags (£1,129,000). Britain purchased from India 11.36 million lbs. of raw and waste wool valued at £2.465 million —an increase of more than one-third over the first half of last year. U.K.'s imports of Indian raw cotton and waste during the period, amounting to £1.76 million, were nearly three times as great as in January-June 1952. These imports included 7,801 tons of unmanufactured cotton waste costing £1,192,000. Over one-quarter of Britain's imports of raw cotton of ⅞" staple and under was provided by India, the total being 5.8 million lbs. worth £548,000.

Pakistan, too, exported to Britain raw cotton and cotton waste, the value of these exports being £4,524,000. Pakistan was the fourth largest supplier of raw cotton of under 1⅛" and over ⅞" staple, having sold 26,293,000 lbs. of cotton costing £2.98 million. Raw cotton of ⅞" staple and under exported to Britain amounted to 13,779,000 lbs., of the value of £1.489 million. Again, during the period, Britain paid £1.08 million for 5,241,000 lbs. of wool imported from Pakistan. Raw jute purchased by Britain amounted to 110,574 tons valued at £8.864 million.

Among other items of exports from India to Britain was tobacco. As much as 13.45 million lbs. of tobacco worth £2.765 million was shipped to Britain during the half-year under review. Shipments of unmanufactured stripped tobacco aggregated 9.542 million lbs., valued at £2.223 million. Nearly 4 million lbs. of unmanufactured unstripped tobacco were purchased by Britain, the cost of these being £542,000. India shipped 85,501 tons of manganese ore, valued at £1.352 million.

During the first half of this year, India continued to be Britain's leading customer for textile machinery, taking 8,550 tons worth £3.813 million—nearly one-fourth of Britain's total exports of such machinery. Pakistan's offtake of British textile machinery amounted to 5,208 tons valued at £1.813 million. The country ranked second, being next to India, as the best customer for this type of machinery.

Electrical machinery was another important item in the imports of both India and Pakistan from Britain. India purchased 1,544 tons of generating sets (£992,000), 923 tons of motors and parts (£430,000), and 5,181 tons of other electrical machinery (£2,479,000). Imports of metal-working machine tools aggregated 2,598 tons, valued at £1,012,000. India's purchases of British-made electrical goods and apparatus amounted to £1.066 million and £6.304 million, respectively. Imports of British telephone, telegraph and broadcasting apparatus aggregated £1.182 million.

In the first half of the year, Pakistan took electrical goods and apparatus of British origin valued at £685,000. Other items included 65 tons of generating sets and generators valued at £123,000, and 301 tons of metal-working machine tools at £108,000 and internal combustion engines valued at £46.000. Pumps aggregating 187 tons and costing £83,000, were also purchased by Pakistan. Besides, Britain shipped to Pakistan 18,674 tons of iron, steel and their manufactures, valued at £1,343 million.

In the first six months of this year, India imported from the U.K. £7,464,000 worth of vehicles and parts. These imports included 66 locomotives (valued at £851,000), 2,546 tons of locomotive parts (£781,000) and 3,832 tons of axles, tyres and wheels for rail vehicles (£406,000), 1,940 cars (£572,000), 268 agricultural tractors (£97,000), 208 commercial vehicles (£152,000), 490 chassis for vehicles other than cars (£369,000), 1,152 motor cycles (£140,000), 53,734 cycles (£406,000) and 937 tons of cycle parts (£345,000).

In the same period, Pakistan imported £2,084,000 worth of British vehicles. These included 428 cars costing £169,000, and 76 commercial vehicles valued at £79,000, 271 chassis (for vehicles other than cars) worth £231,000, and 101 tons of cycle parts and accessories valued at £41,000.

Other leading items in India's imports from the U.K. during the first half of this year included chemicals, drugs, dyes and colours worth £3.778 million, woollen and worsted yarns and manufactures costing £2.891 million and oils, fats and resins amounting to £2.128 million.

Pakistan lifted from Britain manufactured oils, fats and resins valued at £516,000, chemicals, drugs, dyes and colours at £271,000 and woollen and worsted yarns and manufactures costing £265,000. The value of non-ferrous metals and their manufactures imported during the period amounted to £271,000.

PROTECTION TO HYDROQUINONE INDUSTRY

The Government of India has raised, in accordance with the recommendations of the Tariff Commission, the preferential rate of duty on hydroquinone from 27.3 per cent. to 50 per cent. *ad valorem* (inclusive of surcharge), the standard rate being adjusted in accordance with the terms of the India-U.K. Trade Agreement. The enhanced rate will remain in force up to 31st December, 1955. The Government has also accepted two ancillary recommendations of the Commission. First, the cost of production of sulphuric acid in India should be examined and, if necessary, suitable action should be taken under the Industries (Development and Regulation) Act to maintain the prices of this essential material at a reasonable level. Secondly, the Sindri Fertiliser Factory and the ordnance factories should jointly examine the possibility of manufacturing synthetic nitric acid, nitro-benzene and anlline.

THERMOS FLASK MANUFACTURE

An Indo-Japanese company, entitled Indo-Japan Vacuum Bottles Company (India) Ltd., has been formed for the manufacture of vacuum flasks in India. The Indian partners in this joint enterprise are Messrs. Laxmi Narain & Co. of Jodhpur (Rajasthan). The newly floated company has set up an up-to-date modern and automatic plant in Bombay. The rated capacity of the plant is 720,000 vacuum bottles per annum. The factory is expected to provide jobs for some 2,000 workers. The technical services will be provided by the Japanese counterpart of the Indian firm; about nine technicians are expected to supervise the manufacture of flasks.

DRY BATTERY INDUSTRY

PROTECTION DISCONTINUED

THE dry battery industry is one of the very few new industries to be deprotected, on the recommendation of the Tariff Commission. This industry's claim for protection was first examined by the interim Tariff Board in 1947. It recommended the conversion of the then existing revenue duty of 30 per cent. *ad valorem* into a protective duty at the same rate. This protective duty was, in the first instance, to remain in force up to 31st March, 1949. The industry's case was reviewed in subsequent years and in successive stages, the protection was extended, as a result, up to the end of 1953. The question of continuance after the expiry of this period was taken up by the Tariff Commission early this year. A public enquiry was held on 16th March, 1953. The Commission reported its findings to the Government in the following month—on 16th April—with its recommendation that the measure of protection needed by the industry was less than that afforded by the normal revenue duty, and, therefore, the protection granted to the industry need not be continued beyond 31st December, 1953.

Before proceeding to examine the ground on which the Commission based its aforesaid recommendation, it is necessary to review the present position of the dry battery industry in India. The domestic dry battery industry mainly consists of three units. One of these units, being a foreign concern, has, at its disposal, the technical and other resources of its parent concern with world-wide ramifications. It is already supplying about 80 per cent. of the home market and is also able to produce dry batteries at a lower cost. Its annual rated capacity in single shift is estimated at 125 million cells. The actual production of this unit in 1952 was 110.70 million cells, as against 114.40 million cells in 1951 and 112.38 million cells in 1950. The other two units are of indigenous origin, with a rated capacity of 40 million and 30 million cells, respectively. The output of the bigger of these two units amounted to 19.35 million cells in 1952, as compared with 28.57 million cells and 23.57 million cells in the two preceding years respectively. The smaller indigenous unit produced 0.38 million cells in 1952, as compared with 3.98 million cells in 1951 and 0.92 million cells in 1950. The total production of cells in the country, however, declined in 1952 on account of the slump in demand experienced by the industry in common with others in that year. The total amount of fixed capital employed in the three units is Rs. 110 lakhs. The number of workers employed in them in 1952 was 2,434.

The purely Indian units are apprehensive of a possible threat to its position arising from intensive competition from the foreign combine. The Indian sector, therefore, demanded assistance by way of subsidy to the extent of customs duty collected on the imported raw materials actually used by it. The spokesmen of the industry pointed out that this form of assistance would not mean any discrimination harmful of the foreign unit, particularly because the latter was not in need of any assistance. They stated further that the form of assistance suggested by them was not without any precedent, for the post-war Tariff Boards had, according to them, recommended different amounts of subsidy to different units of the same industry, as, for example, soda ash, aluminium, cotton textile machinery, etc. In the last named industry, while a subsidy of Rs. 16.80 lakhs was recommended for one unit, only Rs. 20,000 was recommended for the relatively more efficient unit. They, therefore, urged the Government to grant subsidies to the indigenous sector based on customs duty collected on raw materials imported by the units. This point of view, based on fear of competition from the foreign unit, seems to have received the attention of the Tariff Commission. It has dealt with this aspect at some length and feels that there is no justification for entertaining undue fears, as will be shown presently.

In recommending discontinuance of protection to the dry battery industry, the Tariff Commission would appear to have been guided by several reasons. Thus, the domestic demand for dry cells is estimated at 165 million cells per annum. The demand is likely to increase during the next three years at the rate of approximately 10 per cent. per year. As against this, the installed capacity in the industry, estimated at 210 million cells, is more than sufficient to meet the demand. The industry has already made some progress in the utilisation of indigenous materials. Further exploitation of these materials is considered possible by co-operation among the various units and by making fuller use of the facilities offered by the Council of Scientific and Industrial Research. The fair ex-works price of standard cells is estimated at Rs. 223 per thousand in the case of the bigger of the indigenous units and Rs. 218 per thousand in the case of the foreign concern. But the current c.i.f. prices of standard cells from Hongkong and the U.S.A. are Rs. 187-8 and Rs. 321-4 per 1,000 cells, respectively. The difference between the fair ex-works price and the current c.i.f. price is taken as an indication that the measure of protection needed by the industry is less than that afforded by the normal revenue duty of 30 per cent. *ad valorem*. Further, there have been no imports of dry batteries for the past several years, and, as the industry has adequate capacity to meet the domestic demand, the Commission considers it reasonable to assume that the present import policy will be continued. The domestic industry, including the indigenous units, is, therefore, not exposed to any

INDIAN BANKING ANALYSED
Directory of Banking
in
INDIA, PAKISTAN, BURMA AND CEYLON
This is an up-to-date and authoritative survey of banking conditions in these four Asian countries. The most interesting feature is that it details a comparative study of about 2,000 banks, big or small, joint stock or co-operative, in respect of their capital, management, offices and financial position. The city-wise index of branches is very handy. The other features being a comparative study of Banking Legislations, Safety Tips for Bankers, Workings of Banks Abroad and Bankers Who's Who, etc.
It will be ound very useful by all banks, businessmen and students of banking.

FERTILISERS AND CHEMICALS REPORT FURTHER LOSS

DEVELOPMENT PLANS PROGRESSING WELL

THE year ended 31st December, 1952, proved to be yet another period of stress and strain for the Fertilisers and Chemicals, Travancore Ltd. (Managing Agents: Messrs. Seshasayee Brothers (Travancore) Ltd., Alwaye. The Directors' report for the year speak of a tale of persistent shortage of sulphur, the inordinate delay in obtaining even the meagre supplies that were available, and shut down of plants for several months due to power cut and major repairs, besides shortage of sulphur. The cumulative effect of these adverse factors was that production was affected considerably, while the cost of production remained high on account of the substantial rise in the prices of raw materials. As a result, the Company, which had incurred a net loss of Rs. 10.84 lakhs for 1951, has had to suffer a further net loss of Rs. 15.82 lakhs for the year under review. The Company has, therefore, remained cut of the dividend list for the second year in succession, after it had paid a token maiden dividend of 2½ per cent. for the year 1950.

The Company's production of ammonium sulphate during the year under review amounted to 20,142 tons, as against 18,492 tons in 1952. Though there was thus a slight increase in production, it was far below the Company's expectations, because of shortage of sulphur. The supply of this material was not only very inadequate but there was also considerable delay in obtaining even the meagre supplies. The plant had, therefore, to be completely shut down for a period of over two months, from 18th January to 26th March, 1952, to be precise. This was followed by a power cut of 50 per cent. from 22nd March to 22nd May, 1952, due to shortage of water at Pallivasal dam. For the third time during the year, the plant had to be shut down for a month, from 10th July, 1952, for some major repairs in the ammonia plant. Consequently, the production during the first 7½ months of the year dwindled considerably, amounting to no more than 5,520 tons. During the next four and a half months, however, the Company was able to gear up production and turn out 14,622 tons of ammonium sulphate, which is a record for that period. This performance shows that given adequate supply of power and raw materials, the Company can work successfully.

The output of superphosphate during the year aggregated only 7,989 tons, which fell short by 1,522 tons of the production in 1951. This lower production was again mainly due to the very meagre allocation of sulphur, which was rationed out to the factory for the manufacture of this important fertiliser. The production was also affected considerably during the last 4½ months of the year by the sudden removal of superphosphate from the Central Fertiliser Pool. "The abrupt change from the controlled distribution through the Pool, especially when the Government depots were fully stocked" the Directors observe, "naturally created a temporary and immediate slump in the market for superphosphate." The market, however, now shows signs of improvement.

The sale proceeds of the Company's products for the year amounted to Rs. 97.86 lakhs, as compared with Rs. 122.53 lakhs for 1951. Manufacturing cost of goods sold declined from Rs. 100.55 lakhs to Rs. 78.96 lakhs. The trading profit shows a fall from Rs. 21.97 lakhs to Rs. 18.89 lakhs. Establishment and other expenses are slightly higher at Rs. 8.43 lakhs, as against Rs. 8.22 lakhs. Provision for depreciation has been stepped up from Rs. 26.55 lakhs to Rs. 28.16 lakhs, despite the decline in trading profit. This reflects the Directors' desire to follow a prudent policy of making adequate provision for depreciation, irrespective of the year's actual results, on the ground that "whatever indirectly consolidates the position of the Company is to its ultimate benefit." The resulting net loss of Rs. 15.82 lakhs, along with the last year's deficit of Rs. 10.11 lakhs brought in, makes an aggregate deficit of Rs. 25.92 lakhs to be carried over to the next year's accounts.

Notwithstanding the setback in working results in the past two years, the management has not slackened its efforts, in going ahead with its development plans, but, where necessary, it has exercised caution before embarking on the schemes. The Company's scheme for the installation of an ammonium chloride plant, capable of producing 25 tons a day, is progressing satisfactorily. The first consignment of machinery has already arrived and erection of building for housing the plant has started. The Industrial Finance Corporation of India has provided the necessary finance for this project. The plant is expected to go into production by the middle of 1954, when the Company will be able to supply India's requirement of this important chemical, which is now being met by imports. As regards the scheme for conversion of one of the acid plants for using pyrites instead of sulphur, now that the supply position has improved, and the prospects of getting adequate sulphur are brighter, the Directors have decided to investigate the pyrites scheme further before actively taking up the project. For the same reason, the Company's scheme for installing additional equipment for producing entire sulphate from gypsum, is proposed to be tied up with a scheme that is now under consideration for the complete duplication of the capacity of the factory. Considerable progress has been made with the erection of the caustic soda plant.

The following synopsis of the Company's latest balance-sheet will give one an idea of its financial position:

Liabilities	Rs.	Assets	Rs.
Capital	3,45,97,740	Gross block	4,04,54,230
Forfeited shares	8,335	*Less*—Depreciation	1,13,51,052
Liabilities	1,13,64,687	Net block	2,91,03,178
		Building-in-progress	2,36,875
		Commission on shares	92,775
		Stock-in-trade	24,38,757
		Stores, raw materials, etc.	62,21,152
		Debts, deposits and advances	26,26,628
		Investments	25,25,648
		Cash	1,33,213
		Loss	25,92,536
Rs.	4,59,70,762	Rs.	4,59,70,762

Out of the loan sanctioned by the Industrial Finance Corporation of India, a sum of Rs. 40 lakhs was availed of by the Company in April, 1953. This amount was utilised for clearing the loan taken earlier from banks and for establishing the ammonium chloride plant. A further sum of Rs. 10 lakhs sanctioned for providing the pyrites-burning equipment has been permitted by the I.F.C. of India to be diverted for reducing further the Company's overdraft limits with banks.

The outlook for the Company during the current year appears to be brighter, as the following extract from the Directors' report will show:

"Supply position of sulphur has considerably eased since the end of the year under review and we can now look forward to much better results in 1953, in spite of the plant having had to be kept idle for over three months, due to the cuts in the consumption of electricity. It may not be out of place to mention, in this connection, that the power restriction is not anticipated to recur hereafter, as the Sengulam power station is expected to be working from the end of 1953 and the Mattupatti Dam would have progressed far enough to permit the storage of sufficient water before the next summer."

BRADBURY MILLS LTD.

For some time past, the shares of the Bradbury Mills Ltd. (Agents: Messrs. Ramnarain Sons, Ltd., Bombay) have been in the limelight on the Bombay Stock Exchange. Following strong investment demand, the ordinary shares of the Company have hardened from Rs. 797-8 on 31st July to as high as Rs. 865, though of late they have reacted to Rs. 830. The rising trend was due to two reasons. One was the decision of the Directors, contrary to expectations of the market, to maintain the dividend on the ordinary shares at Rs. 100 per share of Rs. 250, which they had paid for the previous two years, and the other was their proposal to split the existing preference and ordinary shares into shares of smaller denomination, to the details of which we shall refer presently. As a result of the latter step, the negotiability of the shares on the Exchange will be rendered more easy.

The Company's gross profit for the year under review amounts to Rs. 12.76 lakhs, which, as compared with that for the previous year, shows a contraction of Rs. 3.68 lakhs. The net profit (after making adequate provision for depreciation and taxation) at Rs. 5.49 lakhs, however, shows no notable decline as compared with that (Rs. 5.91 lakhs) for the previous year. With the sum of Rs. 2.60 lakhs brought in from the preceding year, the Directors have been able to maintain the dividend, after setting aside Rs. 2 lakhs to the dividend equalisation fund, which was the recipient of Rs. 1.50 lakhs last year. In addition, the Directors had added last year Rs. 1.50 lakhs to the general reserve.

The following comparative table, giving the salient features of the Company's results for the last four years, provides an idea of its progress:

(In lakhs of rupees).

	For the year ended 31st March			
	1953	1952	1951	1950
Sale proceeds (net)	158.02	168.63	116.20	145.91
Other income	0.26	1.94	2.57	0.17
Cotton consumed	86.94	96.82	60.36	70.25
Expenses	58.68	57.31	46.50	54.61
Gross profit	12.76	16.44	12.82	17.21
Agents' commission	1.27	1.64	1.27	1.72
Depreciation	3.00	2.89	3.50	3.62
Taxation	3.00	4.00	3.00	6.00
Net profit	5.49	5.91	5.05	5.87
To reserves	2.00	3.00	1.00	2.00
,, staff gratuity fund	0.25	0.25	0.25	2.00
Dividends—				
7 per cent. preference	1.03	1.03	1.03	1.03
Ordinary	4.00	4.00	4.00	3.00
	(40%)	(40%)	(40%)	(30%)
Carry forward	0.80	2.60	4.90†	6.19†

† Includes the balance of E.P.T. deposit of Rs. 4.70 lakhs.

The Company's balance-sheet, as on 31st March, 1953, discloses a satisfactory financial position. The paid-up capital of Rs. 24.75 lakhs is supplemented by reserves and surplus aggregating Rs. 28.16 lakhs. The gross block of the value of Rs. 54.19 lakhs has been provided with a depreciation fund of Rs. 48.71 lakhs. The current liabilities, including provision for taxation, amounting to Rs. 24.02 lakhs, are covered nearly three times by current assets aggregating Rs. 71.43 lakhs. The current assets are made up of stock-in-trade Rs. 49.80 lakhs, stores and spares Rs. 3.93 lakhs, debts and advances Rs. 5.49 lakhs, investments Rs. 1.01 lakh and cash Rs. 11.21 lakhs.

The Company's authorised capital of Rs. 25 lakhs is made up of 4,000 ordinary shares of Rs. 250 each and 6,000 (7 per cent.) preference shares of Rs. 250 each. The Directors propose to sub-divide each ordinary share into five ordinary shares of Rs. 50 each fully paid-up, and each preference share into five preference shares of Rs. 50 each fully paid up. After this proposal is carried out, the capital will be made up of 20,000 ordinary shares of Rs. 50 each and 30,000 preference shares of Rs. 50 each.

The Rs. 250 fully paid-up ordinary shares of the Company are being currently quoted at Rs. 830, at which rate and on the basis of the latest dividend, the yield works out to 12 per cent. per annum, free of tax.

KANPUR ELECTRICS MAINTAIN PROGRESS

The steady progress which the Kanpur Electricity Supply Administration (General Manager: Mr. K. C. Gupta, Kanpur) had been making ever since the undertaking was taken over by the State Government in 1947, was well maintained during the year ended 31st March, 1953. The Administration's Report for the year discloses that thanks to the increasing demand for electricity, it was able to raise the connected load during the year under review by a sizable measure by generating electricity at a rate considerably higher than in the preceding years. The number of consumers went up from 24,400 in 1951-52 to 27,200 in 1952-53, the connected load from 93,850 kw. to 99,400 kw. and the annual rate of production from 101 million units to 202 million units.

Reflecting these trends is the improvement in gross income from Rs. 130.36 lakhs to Rs. 144.08 lakhs. No doubt, expenses also rose, but not to the extent as the income, the exact rise being Rs. 7.13 lakhs. This enabled the Administration to earn a higher return of Rs. 22.55 lakhs (as against Rs. 18.55 lakhs for 1951-52) on its capital base, in terms of the Electricity (Supply) Act, 1948, even after providing a substantially larger sum for arrears of depreciation.

The following comparative table gives an idea of the Administration's progress since 1951:—

(Value in lakhs of rupees)

	For the year ended 31st March		
	1953	1952	1951
Sale proceeds of energy, rental of meters and other receipts	144.08	130.36	124.95
Expenses on generation, distribution and sale of energy and other expenses	89.84	82.76	78.99
Depreciation	20.31	21.50	22.10
Appropriations:			
Contingency reserve	1.89	1.72	1.55
Arrears of depreciation	9.49	5.74	4.75
To write down intangible assets			17.40
Reasonable return	22.55	18.65	
No. of consumers	27,200	24,400	23,600
Connected load (kw.)	99,400	93,850	91,194
Annual rate of production (million units)	202	191	179
Cost of production per unit (As.)	.805	.793	.805

The increase in production during the year under review was achieved by making some improvements in the existing plants, some of which date back to more than 26 years. The capacity of these is now stated to have reached its limit. Ever since the Undertaking was taken over by the State, the annual rate of production has risen by 58 million units, that is, from 144 million in 1947 to 202 million in the year under review, an increase of over 40 per cent. The works cost, which had progressively declined from As. 0.817 per unit in 1948-49 to As. 0.793 in 1951-52, however, increased to As. 0.805 per unit in the year under review. Commenting on this aspect, the Administration's Report for the year under review says that the works cost for 1952-53 is not "directly comparable with the previous year's figure," as it includes such additional items of expenditure as increase in cost of coal delivered due to increase in freight effective from 1st April, 1952 (Rs. 3.66 lakhs), and additional cost of the Administration's contribution to the Employees' State Insurance Corporation (Rs. 0.26 lakh). These account for an increase of As. 0.035 per unit sold. "If this is deducted from the year's cost of production and distribution," the Report adds, "the comparable figure comes to As. 0.770 per unit, which shows a reduction of As. 0.023 per unit over the previous year's cost." In these circumstances, the increase in the reasonable return (in other words, interest on capital) earned must be regarded as satisfactory. It must, at the same time, be mentioned that the sum of Rs. 22.55 lakhs earned during the year under review is on an increased capital of Rs. 471.67 lakhs, as against Rs. 18.55 lakhs on a capital of Rs. 421.66 lakhs. It must also be stated that the Administration, being a State undertaking, does not pay any income and corporation tax. Subject to this qualification, the return for the year under review works out to 4.77 per cent., as against 4.40 per cent. for 1951-52.

In order to meet the growing demand for additional electricity, the Administration had undertaken a project for an additional generating capacity of 15,000 kw. An important part of this project, namely, the 150,000 lbs. per hour steam boiler and associated equipment estimated to cost Rs. 32.27 lakhs, was completed and commissioned in January, 1953. This gave the much needed relief to enable the old boilers to receive thorough servicing which, in the previous years, had perforce to be deferred owing to the heavy demand on the generating station. Erection work on the 15,000 kw. plant and equipment was pressed forward with all possible speed. Judged from the present progress, the Administration expects that the erection of this equipment will be completed during the current financial year. For the distribution of the additional electricity produced from the existing plant and that to be produced on the commissioning of the new 15,000 kw. plant, a scheme for extensions to the distribution system, estimated to cost Rs. 119.20 lakhs, has been sanctioned, against which a sum of Rs. 80.29 lakhs has been spent during the year.

INDIA GENERAL NAVIGATION

The Directors of the India General Navigation and Railway Company, Ltd. (Managing Agents: Messrs. Kilburn & Co., Ltd., Calcutta), have decided to recommend a dividend of 5 per cent. on the ordinary stock, less income-tax at 9s., and a final dividend of 3 per cent. on preference stock, less income-tax, at 8s. 6d. (after adjustment of overdeduction on interim preference dividend), making a total preference dividend for the year of 6 per cent. The dividends will be payable in sterling on 18th September, 1953, to stockholders on the Company's registers on 28th August, 1953.

The payment of dividend on the Company's ordinary stock for the year under review marks the return of the Company to the dividend list after a break of three years. The Company had paid a dividend of 5 per cent. for the year 1948 (after passing off the same for the preceding two years), but had to skip over the dividends for the next three years, 1949, 1950 and 1951.

Notice

THE BIRLA JUTE MANUFACTURING COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT THE Annual Ordinary General Meeting of the shareholders of the Company will be held at the Principal Office of the Company, No. 8 Royal Exchange Place, Calcutta, on Wednesday the 9th September, 1953, at 3-30 p.m., for the following purposes:—

(1) To receive and consider the Report of the Directors and to pass the audited accounts for the year ended 31st March, 1953.
(2) To declare dividends on Preference and Ordinary shares.
(3) To elect Directors in place of those retiring by rotation.
(4) To appoint Auditors and fix their remuneration.
(5) To transact any other business which may be brought before the meeting with the permission of the Chairman.

The Share Transfer Books of the Company will remain closed from 27th August, 1953, to 9th September, 1953, both days inclusive.

By Order of the Board,
BIRLA BROTHERS LTD.,
Managing Agents.

CALCUTTA, *12th August*, 1953.

Notice in particular to: Major General Rama Shum Shere Jung Bahadur Rana, Major General Shura Shum Shere Jung Bahadur Rana, Sm. S. N. Gribya Kumari, Sm. Sarojini Dvya, Mrs. Rubie Nanda, Messrs. Ambica Charan Neogy, Gopal Chandra Das, Burjorji D. Mama and Andrew Gibb.

Note.—If dividends on shares as recommended by the Directors are passed at the meeting, THE DIVIDENDS WILL BE PAYABLE ONLY TO THE REGISTERED SHAREHOLDERS, whose names are on the Company's Register on the 9th September, 1953. No application need be sent for dividend, as relative Dividend Warrants will be posted to such shareholders by the 21st September, 1953.

The Shareholders are requested to notify any change of address at once.

Points From The Chair

Finance for Coffee Planters

"YOUR concern is slightly at a disadvantage as compared to other sister concerns, who have developed a *sort of banking activities* also for financing the coffee planters. For the time being since our resources are limited we have entirely to rely upon the generosity of our Government to help us to finance planters. If the *Government of Mysore would be generous* to the same extent as they have been in extending financial assistance to the agriculturists and industrialists of Mysore and extend to us financial help, I am sure it will go a long way to help the needy planters and *incidentally help your concern* to secure a larger tonnage of coffee for curing. I can assure you that your Board of Directors will make their best endeavour to secure finance for planters."

K. H. SRINIVASAN,
Mysore Coffee Curing Works, Ltd.

Industrial Expansion in Spain

"The output of industry during the past financial year showed *notable increases in nearly* all branches on that of previous years. The production of electric energy in 1952 reached a new high level at 9,841 million kilowatt-hours, of which 1,560 millions came from thermal power stations. Last year's iron and *steel production in Spain*, both in pig-iron and in steel, exceeded the figures for any previous year since the advent of the National movement. The output of coal also reached a new record level. The increased production was the result of the *opening up of new mines*, although the quality of the coal has suffered in consequence. The production of iron-ore, zinc, lead and wolfram, was greater than in any previous post-war year. On the other hand, the figures for tin and potash declined. Harvest last *year were good, with a* larger production than in 1951 of wine, barley, oats, maize, rice, oranges and sugar-beet."

COUNT DEL CADAGUA,
Banco de Vizcaya.

World Wool Supplies

"Wool supplies continue to *cause anxiety*. World production of merino wools, in particular, has been considerably below consumption in every post-war year, excepting the period of recession, and world stocks are still very low. Sheep populations and consequent wool *productions* are not rising as quickly as human population, and the increase in spending power which has taken place. This situation accounts for the relatively high price of wool which still obtains, and the increasing need for substitute fibres."

SIR IAN STEWART-RICHARDSON,
Bulmer & Lumb (Holdings) Ltd.

Self-industrialisation of Countries

"In a previous statement to the shareholders I drew attention to the self-industrialisation of foreign countries, including Commonwealth countries. Whereas *in pre-war days, many countries* did not have within their territories factories for producing electric cables, this state is steadily disappearing and, since preferential treatment is accorded to manufacturers producing within such countries, *it means that the export of goods from* this country to the countries in question is being severely curtailed. One means of counteracting this difficulty is for a company to extend its own manufacturing interests abroad and by so doing protect the *valuable goodwill and connections* already established. This approach to the problem has been and is now being extensively adopted by many important industries in this country."

WILLIAM FRASER,
Scottish Cables Limited.

Future of Natural Rubber

"Of necessity, the future of the rubber industry in Malaya must be dependent upon the selling price of rubber, *and in the long run, I do not think*, it can be in doubt that natural rubber has many advantages over the synthetic product, particularly in that vital essential resiliency. *It can hardly be* open to doubt that but for emergency reasons, the *American Government would hardly* have spent what they have done on purchasing synthetic plants, and it is all to the good that these will return to private ownership. It is then, and only then, that we shall know whether the synthetic product *can compete on equal terms* with the natural product."

G. H. MASEFIELD,
Tremelbye (Selangor) Rubber Co., Ltd.

WORLD HANDICRAFTS EXHIBITION

An international handicrafts, homecrafts and hobbies exhibition, the first show of its kind ever to be held in Britain, will be staged at Olympia, London, from 1st to 10th October, 1952. Among the countries which have decided to display their handicrafts are India, Australia, Canada, France, the Gold Coast, Italy, Syria, the U.S.A., and Yugoslavia. Many of the exhibitors are arranging to give "live" demonstrations of their particular crafts. The principal aim of the exhibition is to further and encourage the great and growing interest in handicraft and homecrafts fostered by all nations in the face of mass production and industrial development.

COMMERCE AND INDUSTRY

(*Concluded from page 362*)

threat of foreign competition at present. In the circumstances, the Commission has felt that the protection granted to the industry need not be continued beyond 31st December, 1953.

In arriving at this conclusion, the Commission has not failed to examine the apprehensions, entertained by the Indian sector, of a possible unequal competition from the foreign unit as stated above. Says the Commission:

"The two Indian units are already struggling hard to maintain their position in competition with this foreign unit. Normally, the interests of the country should not be deemed to be adversely affected, if internal competition results in weeding out the less efficient ones. In the case of this industry, however, which at present consists mainly of three units, the elimination of two units will result in the remaining unit acquiring a monopolistic control of the entire field and this is obviously not in the long-term interests of the consumer. Irrespective of whether the unit which acquires such a predominant position is an Indian or a foreign one, the emergence of a monopoly is undesirable in itself, especially in the case of a product of strategic importance like dry batteries."

Thus expressing itself against the growth of monopolistic tendencies, the Commission proceeds to consider the case of the two indigenous units. It is of the opinion that these two units cannot on any score be regarded as inefficient units unfit to survive. They have, it observes, demonstrated their ability to produce dry batteries of good quality at a cost which, by the standards usually applied to other Indian industries of similar standing, can be regarded as reasonable. They have never needed a higher measure of tariff protection than is afforded by the normal revenue duty. Again, both are utilising indigenous materials to a somewhat larger extent than the foreign unit and are genuinely interested in increasing the proportion of indigenous raw materials used by them. One of them has made valuable contributions to the technology of dry battery manufacture. The foreign unit itself appreciates, it is stated, the importance of preserving competitive conditions in this industry. In the circumstances, the Commission feels that there is no likelihood of any harm to the Indian sector. However, it is noteworthy that it has taken care to add that the Government should keep a careful watch over the developments in this industry and take suitable steps to maintain conditions of healthy competition.

COMMITTEE ON TRACTOR SERVICING

A meeting of the Committee appointed by the Government of India in February last, to regulate the after-sales servicing facilities for tractors, was held in New Delhi on the 10th inst. Mr. M. R. Bhide, Joint Secretary, Ministry of Food and Agriculture, was in the chair. The Committee discussed draft proposals relating to after-sales service facilities for tractors, which were circulated to the members last month. The draft proposals related to minimum standards of after-sales service of tractors, imports and stocking of spare parts, training of tractor drivers and operators, the manufacture of tractors and implements in India, and restrictions on the import of tractors of certain horse-power. A sub-committee of nine members was appointed to work out detailed proposals in the light of the discussions held. The Chairman of the sub-committee is Mr. G. R. Damodaram, M.P., and another M.P. on the sub-committee is Sardar Lal Singh.

The Committee on servicing of tractors consists of representatives of tractor importers and dealers, tractor owners, importers of tractor spare parts, Members of Parliament and representatives of the Central and State Governments. It will be recalled that the Committee was appointed because complaints had been received by the Government regarding inadequate arrangements made by tractor importers and dealers for the supply of spare parts, and the after-sales servicing facilities for tractors sold by them.

CRUDE OIL PRODUCTION

Crude oil production in the free world in the first six months of this year is estimated at 290 *million metric tons*. This is 15 million tons more than in the first half in 1952, but only approximately 3,000,000 tons higher than in the second half. Largely owing to seasonal changes in consumption in the U.S., production in the U.S. and Venezuela showed small declines in the last six-monthly period, but this was more than offset by the continued rise in the production of oil in the Middle East which was approximately equal to the output of the whole of Latin America. Production also continued to rise in the U.S.S.R. and some other Iron Curtain countries. Consequently, the world total in January-June, 1953 is estimated at 4 million tons more than in July-December 1952, the previous record period, and about 18 million tons more than in January-June 1952. World production of crude oil for 1952, as a whole, was 617 million tons, as compared with 587 million tons in 1951. In 1948, only three years earlier, production was 471 million tons.

The absence of any substantial advance in the free world's aggregate production in the first half of this year should not be taken as an indication that the last few years' persistent upward trend in world production has now come to an end. In some countries, there is a considerable slowing-down in the rate of growth of oil consumption, but nowhere is there any decline in sight. Short of a slump in world trade, production of crude oil is expected to rise in the current half of this year.

SHARP CUT IN DIVIDEND OF CHAMPDANY JUTE COMPANY

LOWER PRODUCTION AFFECTS INDIAN GALVANIZING COMPANY

Champdany Jute Co., Ltd.

THE directors of the above Company (Managing Agents: Messrs. James Finlay & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st March, 1953.

The accounts after providing Rs. 1,41,835 (Rs. 1,34,793) for depreciation on block and Rs. 45,000 (Rs. 3,85,000) for taxation show a balance at credit of profit and loss account for the half-year of Rs. 1,57,223 (Rs. 6,55,775). To this is added the balance brought forward from the previous accounts of Rs. 1,35,299 (Rs. 1,52,215) making a total of Rs. 2,92,522 (Rs. 8,07,990) which the directors recommend should be dealt with as follows:—

Payment of a dividend of Rs. 3 (Rs. 7) per share Rs. 1,77,492 (Rs. 4,14,148) leaving a balance to be carried forward of Rs. 1,15,030 (Rs. 88,388).

It has been necessary to write off a sum of Rs. 94,900 for which provision was made in previous accounts in connection with debts due for market differences on Pakistan jute which was bought before devaluation of the Indian rupee but not subsequently delivered by the seller. In conjunction with the Company's legal advisers all possible steps were taken to recover the sums due and it has now been decided that the cost of pursuing the matter further would be out of all proportion to any amount which might ultimately be recovered. It is recorded that the managing agents have voluntarily foregone a sum of Rs. 1,00,000 for the half-year under review from the remuneration accruing to them.

The trend of prices of both raw jute and finished goods continued downwards throughout the period under review. Since the closing of the accounts all markets have improved although the prices obtainable for heavy goods have not increased in proportion to those ruling for the raw material.

In accordance with the provisions of the Indian Jute Mills Association main and supplementary working time agreements, 12½ per cent. of the looms remained sealed and the mills worked only 42½ hours per week throughout the six months under review. Seven working days were lost as a result of labour trouble at Wellington Mill.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	59,16,400	Block ...	57,73,441
Reserves ...	1,05,23,478	Stocks ...	52,80,544
Provision for taxation ...	21,27,505	Stores, etc.	14,85,790
Liabilities ...	12,34,200	Debts, deposits and advances ...	25,69,802
Profit and loss account ...	1,15,030	Investments	2,05,737
		Cash ...	46,01,299
	Rs. 1,99,16,613		Rs. 1,99,16,613

Indian Galvanizing Co. (1926) Ltd.

The directors of the above Company (Managing Agents: Messrs. Balmer Lawrie & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December, 1952.

The profit for the year, after providing for depreciation and taxation, was Rs. 2,48,730 (Rs. 2,91,978), from which is deducted the underwriting commission on the issue of new shares Rs. 1,23,153 (*nil*) leaving a balance of Rs. 1,25,577. To this sum is added the balance brought forward from 1951 of Rs. 67,372 (Rs. 60,413) making a total of Rs. 1,92,949 (Rs. 3,52,392). The directors recommend that the total amount available for distribution be dealt with as follows:—

Dividend on preference shares at the rate of 6 per cent. per annum (subject to deduction of Indian income-tax) Rs. 16,947 (Rs. 10,569), dividend on ordinary shares at 6 (12½) per cent. per annum free of income-tax; on old shares for the year 1952 Rs. 73,892 (Rs. 1,53,941), and on new shares for the eight months from May, 1952 to December, 1952 Rs. 98,522 (*nil*) leaving to be carried forward Rs. 3,588 (Rs. 67,372).

The Works were on strike from November to the end of the year. This, and the reduced production which preceded the stoppage seriously affected profits. Work was resumed in May, 1953.

The offtake of agricultural trailers was disappointing and it was the closing of this section of the works that occasioned the strike. The drum plant in Bombay was brought into commission during June, 1953, and is running satisfactorily.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	39,77,040	Block ...	6,22,010
Reserves ...	6,90,000	Stocks ...	26,33,695

	Rs. 72,36,785		Rs. 72,36,705

Benares Electric Light and Power Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Martin Burn Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st December, 1952.

Negotiations have been concluded with the U.P. Government in respect of supplying electricity for a large number of tube wells for agricultural purposes in the area lying between Benares and Jaunpur, and a loan covering the cost of the entire work has been arranged with the State Government. The transmission line that is to supply the area is to be extended into Jaunpur to enable a bulk supply to be afforded to this town.

The present plant capacity of the power station with one boiler and turbo alternator as standby is 6,950 kilowatts under ideal conditions, and 6,000 kilowatts under hot weather conditions. The power station, under peak load conditions, is already operating its standby plant and there is little margin between average load conditions and the normal plant capacity. An additional boiler and turbo alternator with ancillary equipment, estimated to cost Rs. 30,00,000 will have to be installed as soon as possible, and the Board are considering ways and means of raising the additional capital required and will notify the shareholders when the scheme is finalised.

The following schedule indicates that normal progress is being maintained.

Half-year ended	*Units sold*	*Revenue* Rs.
30th June, 1950	7,346,284	9,56,833
31st December, 1950 ...	7,881,723	11,40,343
30th June, 1951	8,243,843	11,12,177
31st December, 1951 ...	8,978,556	13,71,950
30th June, 1952	9,544,518	12,56,950
31st December, 1952 ...	9,926,818	14,50,157

After complying with the provisions of the Electricity (Supply) Act, 1948, and making adequate provision for liabilities and setting aside Rs. 50,000 (Rs. 15,000) to development and extensions account, there remains a balance of Rs. 1,39,492 (Rs. 1,53,601) including Rs. 28,534 (Rs. 30,209) brought forward from the previous half year available for distribution, and this the directors recommend be disposed of in paying a dividend at the rate of 10 (10) per cent. per annum free of income-tax Rs. 84,995 (Rs. 84,995), an additional payment of As. 2 (As. 4) per share absorbing Rs. 21,249 (Rs. 42,497), and in carrying forward to next half-year Rs. 33,248 (Rs. 31,109).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	16,99,900	Block ...	46,13,722
Debentures	12,30,483	Stores, tools, etc. ...	11,01,455
Reserves ...	19,09,685	Other assets	52,949
Provision for taxation ...	69,000	Debts, deposits and advances ...	4,26,294
Liabilities ...	21,07,930	Investments	97,025
Profit and loss account ...	1,39,492	Cash ...	8,65,045
	Rs. 71,56,490		Rs. 71,56,490

Eastern Cachar Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Octavius Steel & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December, 1952.

A crop of 6,106 maunds was manufactured and disposed of for sale in Calcutta for export 5,318 maunds, and for sale in Calcutta for internal consumption 790 maunds. The teas realised an average price of Re. 1-1-5 per lb. as compared with Re. 1-8-6 per lb. obtained for the previous season's crop of 5,320 maunds. The Company's export quota for season 1952 was 6,264 maunds. The area under cultivation at the end of 1952 was 949.25 acres but this has since been reduced to 649 acres.

The revenue account shows a loss of Rs. 4,40,466 (loss of Rs. 1,74,401) to which is added estimated loss on grow more food scheme Rs. 12,237 (*nil*), payment in lieu of notice to retrenched staff Rs. 14,518 (*nil*), and depreciation Rs. 11,878 (Rs. 3,515) making a total of Rs. 4,79,099 (Rs. 1,77,916). After deducting refund of income-tax paid at source on interest on investments Rs. 449 (*nil*), there is a loss for the year of Rs. 4,78,650 (Rs. 1,77,916). After adding to this the debit balance of Rs. 2,77,063 (debit Rs. 95,176) brought forward from the previous year and deducting Rs. 2,65,000 (*nil*) being the amount transferred from reserve account, there is a debit balance of Rs. 4,90,713 (Rs. 2,73,092) on profit and loss account, which is carried forward.

As forecast in the report for 1951, the Company experienced a disastrous year's trading in 1952 owing to the collapse of the market for common tea and the high level of wages and other emoluments of labour imposed by legislation. At an extraordinary general meeting of the shareholders, held on 12th December, 1952, the directors were given discretion to close down the Company's properties and in accordance with this resolution the garden was closed at the end of the year. Later, however, the Government of Assam's action in revising the wages payable under the Minimum Wages Act in a manner which allowed some measure of relief to the tea industry in Cachar, coupled with a marked improvement in the price of common tea, made it possible to secure some finance for season 1953 and the directors decided to re-open the properties in April, a fact of which shareholders were advised in a letter dated 21st idem. It was not however practicable to resume operations on the same scale as in the past and employment could not be found for all the staff and labour. Considerable areas of tea have also had to be abandoned but it is hoped, by concentrating on the better-yielding tea, to work the garden at a reasonable profit during the current season.

The estimates for season 1953 are as follows:—

Garden	*Crop*	*Expenditure*		*Total*
		Garden	*Calcutta*	
	Maunds	Rs.	Rs.	Rs.
Binnakandy	5,360	3,10,000	1,21,800	4,31,800

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	7,00,000	Block ...	7,35,190
Liabilities ...	9,78,028	Stocks ...	2,80,181
		Stores, etc. ...	51,808
		Debts, deposits and advances ...	1 13,908
		Investments	1,000
		Cash ...	5,228
		Profit and loss account ...	4,90,713
	Rs. 16,78,028		Rs. 16,78,028

Duffla ghur Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Williamson Magor & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December, 1952.

The season's working resulted in a profit on revenue account of Rs. 3,68,803 (Rs. 5,15,740). After adjustment and adding back Rs. 1,00,000 (*nil*) from repairs and renewals reserve account and Rs. 15,000 (Rs. 25,000) from provision for taxation previously reserved, but no longer required, and transferring the above profit and setting aside Rs. 1,00,000 (Rs. 1,45,000) for taxation, writing off development expenditure on tea estate Rs. 10,590 (Rs. 16,803), buildings Rs. 73,509 (Rs. 28,115), machinery Rs. 1,09,009 (Rs. 37,352), furniture Rs. 1,000 (4,487), transferring to staff account Rs. 5,000 (Rs. 10,000) and transferring to reserve account Rs. 1,00,000 (Rs. 40,000), the profit and loss account shows a balance at credit of Rs. 2,28,048 (Rs. 3,26,160). From this amount the directors propose to pay a dividend of 20 (40) per cent. for season 1952, absorbing Rs. 1,12,100 (Rs. 2,24,200) leaving to be carried forward Rs. 1,15,948 (Rs. 1,01,960).

The following are comparative statistics of outturn and sales for the past three years:—

	Lbs.	Average Per lb.
		Rs. a. p.
1950	847,756	1 13 8
1951	883,908	2 0 6½
1952	929,084	1 14 0½

The estimates for 1953 provide for a crop of 9,20,000 lbs. of tea at a cost of Re. 1-3-5½ per lb.

The Company's Articles of Association limit to Rs. 2,00,000 the director's power to borrow without the sanction of the Company in general meeting. Due to the high cost of production at present prevailing in the tea industry the limit of Rs. 2,00,000 is completely inadequate to finance production of the crop and the directors recommend that this limit be increased to Rs. 6,00,000.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	5,60,500	Block ...	6,80,000
Reserves ...	4,50,000	Stock-in-trade	10,62,969
Provision for taxation ...	1,38,446	Stores ...	2,64,074
Liabilities ...	9,58,413	Debts, deposits and advances ...	2,55,145
Profit and loss account ...	2,28,048	Cash ...	73,219
Rs	23,35,407		Rs. 23,35,407

New Dooars Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December, 1952.

After providing Rs. 68,827 (Rs. 56,790) for depreciation, the season's working resulted in a profit of Rs. 1,99,664 (Rs. 6,22,618). After bringing in the balance from last year, crediting excess profit tax post-war refund, charging managing agents' commission, providing Rs. 55,000 (Rs. 1,80,000) for taxation and transferring Rs. 45,000 (Rs. 1,00,000) to general reserve, there remains a balance of Rs. 2,82,691 (Rs. 4,79,828) at credit of profit and loss account. From this the directors recommend payment of a preference dividend of Rs. 6-8 (Rs. 6-8) per share, absorbing Rs. 13,000 (Rs. 13,000) and the payment of a dividend on the ordinary shares of Rs. 17-8 (Rs. 35) per share, absorbing Rs. 1,40,000 (Rs. 2,80,000 including the interim-dividend at Rs. 10 per share, absorbing Rs. 80,000) leaving a balance of Rs. 1,29,691 (Rs. 1,86,828) to be carried forward.

A total crop of 16,604 maunds was secured, which has been sold at an average price of Re. 1-7-8 per lb. This compares with a crop of 21,408 maunds secured in season 1931, which sold at an average price of Re. 1-9-9 per lb. The short-fall in crop was due to the unfavourable weather conditions that obtained during the latter part of the season and to an insufficiency of labour at the height of the season, accentuated by the finer standard of plucking made desirable by prevailing market conditions.

Current market rates are considerably higher than was the case when the major part of the 1952 crop was sold and it is hoped that the results for 1953 will show an improvement on the previous season. Estimates have been framed for a regulated crop of 18,700 maunds to cost Rs. 15,11,296.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	10,00,000	Block ...	6,85,033
Reserves ...	12,95,000	Stock-in-trade	8,71,063
Provision for taxation ...	99,920	Stores ...	3,34,033
Liabilities ...	8,21,140	Debts, deposits and advances ...	4,37,662
Profit and loss account ...	1,29,691	Investments	6,43,267
		Cash ...	3,74,193
	Rs. 33,45,751		Rs. 33,45,751

Aluminium Industries Ltd.

The directors of the above Company (Managing Agents: Messrs. Seshasayee Brothers (Travancore) Ltd., Kundara) submitted the audited accounts of the Company for the year ended 31st March, 1953.

Production during the year was satisfactory despite electric power rationing during the months of May, 1952 and March, 1953. About 4,970 miles of aluminium conductors and the full range of conductor accessories were manufactured during the year. The entire production was against orders from the Central and State Governments and public utility undertakings. There is good demand for the Company's products. The production for the next twelve months has been booked with firm orders. It is expected that the expansion of the cable mill will be completed during the current year, resulting in increased production and shorter deliveries against future orders.

The raw material supply position eased during the year and adequate supplies are now available at reasonable prices. Moreover, with the kind assistance and encouragement rendered by the Government of India, the directors are investigating the possibility of producing the main raw material electrolytic aluminium rods at Kundara.

The working capital requirements continue to be financed by the Company's bankers. The additional Share Capital of Rs. 5 lakhs raised during February-March, 1953, has enabled the Company to augment the working capital resources.

The year's working resulted in a net profit of Rs. 4,21,012 (Rs. 8,28,059) after providing for adequate depreciation and also for taxes and contingencies. This amount, together with the sum of Rs. 1,10,914 (Rs. 39,105) carried forward from last year's accounts, makes a total of Rs. 5,31,926 (Rs. 8,67,164). The directors distributed this amount in payment of dividend at Re. 1-4 (Re. 1-4) per share (12½ per cent. per annum) on 1,00,000 shares of the first issue (including the interim-dividend of As. 10 (As. 10) per share already distributed in March, 1953) Rs. 1,25,000 (Rs. 1,25,000), to payment of dividend of Re. 1-4 (As. 10) per share (12½ per cent. per annum) on 50,000 shares of second issue (including interim-dividend of As. 10 (As. 5) per share) Rs. 62,500 (Rs. 31,250), to payment of dividend at As. 3-4 (*nil*) per share (12½ per cent. per annum) on 21,799 shares of the third issue which are eligible for dividend from 1st February, 1953 Rs. 4,541 (*nil*), payment of dividend at As. 2-1 per share (12½ per cent. per annum) on 11,511 shares of the third issue which are eligible for dividend from 22nd February, 1953 Rs. 1,499 (*nil*), payment of dividend at As. 1-4 (*nil*) per share (12½ per cent. per annum) on 7,455 shares of the third issue which are eligible for dividend from 6th March, 1953 Rs. 621 (*nil*), payment of dividend at 10 pies (*nil*) per share (12½ per cent. per annum) on 9,235 shares of the third issue which are eligible for dividend from 16th March, 1953 Rs. 481 (*nil*), addition to the dividend equalisation fund (making a total of Rs. 2,50,000) Rs. 50,000 (Rs. 2,00,000) and addition to the general reserve (making a total of Rs. 7,00,000) Rs. 2,00,000 (Rs. 4,00,000) leaving to be carried forward to next year's account Rs. 87,284 (Rs. 1,10,914).

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	20,00,000	Block ...	16,58,625
Reserves ...	7,00,000	Stores, raw materials, etc.	35,45,705
Provision for taxation ...	5,62,863	Stock-in-trade	6,90,617
Liabilities ...	52,85,240	Debts, deposits and advances ...	26,76,934
Profit and loss account ...	4,38,176	Cash ...	4,14,398
	Rs. 89,86,279		Rs. 89,86,279

Gungaram Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Duncan Brothers and Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December, 1952. The accounts disclose a loss of Rs. 1,37,379 (Rs. 1,658). On transfer of this sum to profit and loss account and after sundry adjustments, including a transfer of Rs. 66,000 (*nil*) from revenue reserve there is a balance at credit of profit and loss account of Rs. 826 (Rs. 56,887 after paying dividend of 3 per cent.) which the directors propose to carry forward.

The unsatisfactory result is mainly attributable to additional statutory wage increases to labour coupled with a most unfavourable market throughout the major part of the year. A sharp improvement in auction prices towards the end of the season averted a loss of even greater proportions.

Outturns and average selling prices of crops realised compared with those of the previous year are as under:—

Crop	*Outturns* 1952 Maunds	*Outturns* 1951 Maunds	*Average selling price per lb.* 1952 Rs. a. p.	*Average selling price per lb.* 1951 Rs. a. p.
Gungaram	14,278	16,320	1 3 8	1 1 8
Ord	2,140	4,172	1 4 5	1 8 0

The area under tea at Gungaram is 1068.22 acres and at Ord 513.35 acres. Estimates for 1953 provide for a total crop of 18,500 maunds at an outlay of Rs. 16,56,890, including inland freight and sale charges.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	8,40,000	Block ...	6,06,045
Reserves ...	6,02,763	Stores and supplies ...	1,81,692
Liabilities ...	7,51,029	Tea sales receivable ...	11,81,587
Profit and loss account ...	826	Advances and deposits ...	1,26,163
		Cash ...	99,131
	Rs. 21,94,618		Rs. 21,94,618

N.B.—Figures within brackets relate to the corresponding period of the previous year.

COMPANY MEETINGS AND DIVIDENDS

EASTERN CACHAR TEA CO., LTD. Annual General Meeting, Calcutta, 25th August, 1953. Transfer books closed from 18th to 25th August, 1953, both days inclusive.

PASARI BROTHERS LTD. (First Director: Mr. B. L. Pasari.) Business: Manufacturers, Producers, Agents and Brokers, etc. Authorised Capital: Rs. 5,00,000. Public Company. Address: 158 Cross Street, Calcutta.

QUESTION HOUR IN PARLIAMENT

State-managed Concerns

THE Government does not propose to set up a board of management immediately under the Industries (Development and Regulation) Bill to manage industrial establishments which may be taken over from private management for misbehaviour. I do not see any possibility in the near future for the setting up of a body, and I hope there will be no necessity. This question will be considered, if and when the number of industrial units which come under Government management by reason of the exercise of Government powers under section 18A of the Industries Act, warrant the setting up of such an organisation. So far, action has been taken in regard to three cases, and it relates to investigation. Certain sugar factories in U.P. have been taken over by the U.P. Government under the provisions of the Act.

• • • •

Nepa Mills

Nepa Mills is expected to go into production by the middle of 1954, according to the latest information furnished by the Madhya Pradesh Government. The production capacity of the mills has been estimated at 30,000 tons of newsprint per annum.

—Minister for Commerce and Industry

Wagon Supply

There was an increase of 282 per cent. in the supply of wagons for the movement of fertilisers during April-June 1953, as compared with the corresponding period of 1952. The number of wagons supplied was 4,715 during the period mentioned in 1953, against 1,253 in the previous year. There was an increase of 63 per cent. in the number of wagons supplied for the movement of sugar during the same period in 1953, compared to the corresponding period in 1952—the respective wagon supply being 25,273 and 15,447. In the case of sugar, movement recorded a progressive improvement from November, 1952 to February, 1953, when it reached the peak. After some reduction in March and April, 1953, it again progressively increased during May and June, 1953.

—Deputy Minister for Railways and Transport

Foodgrain Production

The total rice production in the country in 1952-53 was estimated at 23.4 million tons, as against 20.7 million tons in the previous year. Wheat production was estimated at 6.38 million tons, as against 5.7 million tons in the previous year, *jowar* production 6 million tons, as against 5.9 million tons in the previous year, *bajra* 2.9 million tons, as against 2.2 million tons, maize 2.6 million tons, as against 2 million tons, ragi 1.23 million tons, as against 1.21 million tons and barley 2.17 million tons, as against 2.13 million tons. It is difficult to give any definite figure about the actual consumption of cereals in the country. The offtake of the rationed population was 7.9 million tons in 1951 and 6.7 million tons in 1952. The import target for 1953 was originally fixed at 2.9 million tons, against actual imports of 3.9 million tons in 1952 and 4.7 million tons in 1951. The actual imports during the current year may be even less than the original target. The total stocks of foodgrains with various States at the end of June was 1.8 million tons.

• • • •

Ghee Adulteration

The Government of India has taken the following steps to check adulteration of pure ghee with *vanaspati*: (1) It is obligatory to add at least 5 per cent. of sesame oil in *vanaspati*. This incorporation of sesame oil in *vanaspati* makes it possible to detect, by means of a simple chemical test, the adulteration of ghee with *vanaspati*. (2) Each batch of *vanaspati* produced by a factory is required to be certified by the factory chemist to the effect that the same conforms to the required sesame oil test. The factories are also required to maintain a record of sesame oil test of each batch of *vanaspati* produced by them for inspection and check. (3) No colour or flavour resembling the colour or flavour of ghee can be added to *vanaspati*. (4) The State Governments have been asked to instruct the local bodies to make extensive use of this chemical test to detect adulteration of ghee with *vanaspati*.

• • • •

Tube-wells Scheme

Under the tube-well construction schemes started at the instance of the Government of India, 815 tube-wells have been drilled upto 15th July, 1953. Their location and cost are: 362 tube-wells in U.P. at an average cost of Rs. 20,700 per well; 212 tube-wells in Bihar at an average cost of Rs. 20,000 per well; 216 tube wells in Punjab at an average cost of Rs. 25,129 per well; and 25 tube-wells in Bombay at an average cost of Rs. 33,075 per well. Large-scale tube-well construction has so far been undertaken in the Indo-Gangetic plain of U.P., Bihar and Punjab, where underground water suitable for irrigation is known to exist in adequate quantities. As such, the question of any failure of the schemes, does not arise.

—Minister for Food

Penicillin Factory

The penicillin factory at Pimpri is expected to go into production by April, 1954. The construction of the factory building is progressing satisfactorily. Fourteen key technical officers for the factory have been recruited, of whom four have had training abroad in penicillin technology and are now in India. Seven are under training in Europe. The remaining three are in India and are expected to go abroad for training in the beginning of November, 1953. As regards plant and equipment, the U.N. International Children's Emergency Fund has so far ordered equipment worth about $763,000 against their commitment of $850,000. Equipment worth about $502,000 has already been shipped. The plant will be completely erected by March, 1954.

—Minister for Production

STRINGENCY IN MONEY EASES

(From Our Own Correspondent)

BOMBAY, 19th August

The stringency in the short-term money market witnessed during the previous two weeks eased a little during the week under review, following a large influx of funds from other centres. Demand for advances against cotton continued to be sizable, but as there was improvement in supply of floating funds, no stringency was felt. The inter-bank call money among the Exchange banks and big Indian banks kept steady at 2 per cent. in the mornings before clearing. But, after clearing hours, left-over funds were available at 1¾ to 1½ per cent. Among the smaller Indian banks, the call money rate was 2½ to 2¼ per cent. The turnover in inter-bank call money showed a distinct fall. Short-term deposits were offered 2 to 2¼ per cent. for one to three months and 2½ per cent. for over three months.

This week's tenders for Rs. 1.50 crores of three months' Government of India Treasury Bills brought an offering of only Rs. 1.85 crores, as against Rs. 2.02 crores in the previous week and Rs. 2.60 crores two weeks ago. This is the lowest amount offered since 12th May, 1953. The average rate of accepted tenders, on the other hand, rose from Rs. 2-6-3 per cent. to Rs. 2-6-5 per cent., the highest rate since 1st July, 1953.

The consolidated statement of position of Scheduled Banks for the week ended 7th August, 1953, as compared with that for the previous week, discloses a rise of Rs. 1.84 crores in demand deposits and a fall of Rs. 33.60 lakhs in time deposits. Borrowings from banks show a decline of Rs. 2.27 crores. Borrowings from the Reserve Bank have risen by Rs. 2.19 crores and those from the Imperial Bank by Rs. 83 lakhs. Advances are lower by Rs. 1.43 crores, while there has been a slight increase of Rs. 27.79 lakhs in bills purchased and discounted. Investments have gone up by Rs. 2.64 crores. Cash-on-hand and balances with the Reserve Bank have together risen by Rs. 1.02 crores, while balances with other banks in current account have declined by Rs. 46 lakhs and money at call and short notice by Rs. 2.25 crores.

The Gilt-edged market displayed a steady tone with good enquiries for short-dated securities. Medium and long-dated issues were reported to have had some scattered enquiries but business done was of no consequence. 3 per cent. 1957 were in demand and improved by As. 2 to Rs. 98-8. 3 per cent. 1958 was placed at Rs. 98-1 *ex-voucher*, as against Rs. 98-3 *cum-voucher* and 3 per cent. 1959-61 at Rs. 96-1 *ex-voucher* as against Rs. 96-3 *cum-voucher*. 3 per cent. 1963-65 was unchanged at Rs. 92-6, as also 3 per cent. 1964 at Rs. 92-5. 3 per cent. 1966-68 was stagnant at Rs. 90. 3 per cent. 1970-75 had scattered enquiry, but the quotation stood unchanged at Rs. 86-7. 3 per cent. 1986 Conversion loan which rose by As. 2 to Rs. 82-4 in the previous week reacted this week to Rs. 82 as buying enquiries dried up and there were some sellers. 3½ per cent. 1961 National Plan Bonds were well maintained at the official selling price of Rs. 98-5. Among the State loans, 4 per cent. 1964 Bombay were well favoured even at Rs. 100-2. The Madras issue, however, declined by As. 2 to Rs. 99-6. The U.P. loan was held at Rs. 99-6 and West Bengal Loan at Rs. 100.

In the foreign exchange section, there was no variation in the rupee-U.S. dollar rate. In New York, the £ sterling experienced small movements. The spot rate, after an initial rise from $2.81¼-2.81¼ to $2.81 11/16-2.81 13/16, receded to $2.81 9/16-2.81 11/16 at the close. The forward rate for three months stood unchanged on balance at $2.80¼-2.81, although it had touched earlier $2.81-2.81¼. The rate for six months declined from $2.80 5/16-2.80 7/16 to $2.80⅛-2.80¼.

METAL PRICES ADVANCE

(From Our Own Correspondent)

CALCUTTA, 18th August

The metal market ruled better this week and impressive gains were recorded in the prices of the principal metals. Producers could no longer afford to remain quiet without buying raw materials for executing orders. At the declining levels buyers were, therefore, active early in the week and the activity continuing throughout the week, prices improved on balance. Better advices from London went a long way to change the sentiment.

Electrolytic copper ingots were firmly held at Rs. 170, as against the opening rate of Rs. 165, with the fire-refined ingots improving from Rs. 145 to Rs. 150. The shortage of virgin ingots must cause anxiety to producers who have to honour accepted dates of delivery. Tin advanced from Rs. 393 to Rs. 420, on encouraging advices from Singapore. Antimony was unchanged at Rs. 210. Zinc also accounted for a rise, as demand showed a widening tendency. The price gained from Rs. 53 to Rs. 56. Lead was better at Rs. 67, as against Rs. 65 early in the week.

LINSEED EASY

(Messrs. A. Bradley & Co.)

CALCUTTA, 17th August

In sympathy with the general decline in oils and oilseeds, the linseed market has shown a much easier tendency, and values have declined to much lower levels. A severe shortage of supplies still continues, owing to restrictions on railway bookings from producing centres. Sellers, however, appear somewhat keener for forward delivery, although buyers have shown little interest and a very limited turnover has been reported during the week. There has been little activity in the oil section and, although prices have reacted appreciably, largely owing to the decline in groundnut oil prices, buyers have remained more or less out of the market. Latest quotations are Ready Rs. 21-4 and August-September Rs. 21 per maund.

BULLION LISTLESS

(From Our Own Correspondent)

BOMBAY, 19th August

Listless conditions prevailed on the Bullion Exchange during the major part of the week under review. Prominent bulls, who had been active in silver in the previous two or three settlements, preferred to restrict their dealings considerably, presumably awaiting the outcome of the Estate Duty Bill and the political developments. Price variations were very narrow and the undertone was fairly steady. Towards the close, however, the white metal developed some weakness, owing to fresh arrivals and the change in the *budla* charges from As. 2 to As. 4 in favour of bulls yesterday, to As. 2 to As. 3 against them. It will be interesting to recall that, in the previous three settlements, the *budla* rate ranged from Re. 1-12 to Rs. 2-8 against bears at this time of the settlement.

Gold also remained dull early in the week, but, as the week progressed it developed strength following improvement in demand and high *budla* charges against bears.

Silver for forward delivery (26th August) opened at Rs. 153-9 and reacted to Rs. 152-15 on Monday this week. After recovering to Rs. 153-6, it gave way to Rs. 152-9 at the close. Business for the next settlement commenced yesterday at Rs. 152-11 and closed to-day at Rs. 152-12.

Opening at Rs. 154-1, ready silver (.996 Mint) declined to a low of Rs. 152-10 before winding up at Rs. 152-13. The floating stocks of silver are placed at 2,000 bars. The daily average offtake was 15 bars.

Gold for forward delivery (25th August) commenced at Rs. 86-15 and moved between Rs. 87-1 and Rs. 86-9 during the earlier half of the week. But from Monday onwards there was a revival of demand and bulls were a little active in widening the *budla* charges against sellers. Consequently, the forward rate for the current settlement rose to-day to Rs. 87-5 before closing at Rs. 87-3. Trading in the next settlement officially commenced yesterday at Rs. 86 and closed at Rs. 86-4.

Ready gold opened at Rs. 87-10 and, after an initial marking down to Rs. 87-2, recovered to close at Rs. 87-11. The floating stocks are estimated at 20,000 tolas. The daily average arrivals and offtake were even at 4,000 tolas.

The following comparative table shows the trend of the market during the week under review:

	19-8-53	Highest	Lowest	12-8-53
	Rs. a.	Rs. a.	Rs. a.	Rs. a.

PEPPER PRICES SLIGHTLY EASY

(Messrs. Parekh & Co.)

BOMBAY, 19th August

During the earlier part of the week, the pepper market showed improved tendency in sympathy with New York, where the dealers are reported to have purchased a parcel or two for August shipment by a named steamer at $1.10 per lb. c. & f. New York, from India, owing to the tight stock position of the spot existing there. Such small business gave a much wanted prop to the market and the growers in the primary centres raised their selling price by about Rs. 100. Ready garbled at Cochin was transacted at, as high as Rs. 430 per cwt. and the ungarbled was done at Rs. 2,350 at Alleppey. Bombay also showed sympathetic rise and some business for August and September shipment was done at $1.08 and $1.01½ respectively, lowest being $1.01 and $0.93. In the later part, however, the market became jittery on account of the news that Sarawak, once again lowered the price and began to press sales on the New York market. Though Lampong is out of the field, the pressure from Sarawak appears to be acting as a check on any sizable rise in the prices both at New York and at London. The Indian growers are reported watching closely the situation at Sarawak. Though they (Indian growers) are making small salps every now and then with a view to test the feelings of the foreign buyers, it appears that they are not in a hurry to press sales on an unwilling market at a lower level. Flowering of the next Malabar crop being late, owing to delayed monsoon, some of the growers think that the new crop of the exportable quality will not be available until early January, and that they have still four months in hand for marketing their surplus of about 5,000 tons, a greater part of which they hope to sell by the end of this year without becoming panicky. The tentative estimate of the new crop is placed at round about 18,000 tons but the final yield will greatly depend upon the north east monsoon during October-November.

In the A.S.T.A. section, there are sellers for September at $0.94 and October is quoted at $0.86 Small business for October-December and October-January shipment in equal monthly lots was reported done at $0.85 and $0.84 respectively. In the delivery section, one of the commission houses with connections in Singapore is reported to be selling short frequently on easier advices from Singapore. At the moment, Alleppey is reported to be sellers at Rs. 2,250, with small business passing.

Following are to-day's nominal quotations: Ready delivery Rs. 260-90 per cwt., and August Ready delivery Rs. 260-90 per cwt., and August Rs. 1,885-1,915 and September Rs. 1,730-60 per candy of 5½ per cwt.

COTTON RECEDES

(From Our Own Correspondent)

BOMBAY, 19th August

After an initial steady spell, values on the cotton futures market continued to recede under pressure of heavy unloading by operators. The undertone of the market was distinctly bearish in the first four sessions of the week. Under the impact of adverse factors such as continued issuance of large tenders against the August contract, further lenient results of surveys and appeals, slow and dull trading in the spot market and a general feeling of better crop prospects in the ensuing season, cotton values sank to the lowest levels of the week on the 17th inst. Thus, the February contract which was at the week's highest at Rs. 667 on the opening day (12th inst.) gradually lost ground and suffered a loss of 15 points to touch a low of Rs. 652 on Monday.

At the low levels, however, the sentiment changed for the better. The oversold position of the market strengthened the hands of bulls who did not hesitate to support at the attractively low levels. Their sentiment hardened on reports of damage done to new crop by heavy monsoon in Surat and Bihar. Further the feeling that mills are likely to appear on the market to replenish their stocks, when fresh allocations of quotas are made next week, emboldened them to sit tight on their holdings. Cotton values consequently tended to look up and moved ahead to recover the losses suffered early in the week. As a consequence, February settlement rose from the low of Rs. 652 to close at Rs. 657¼, recovering thereby no less than 5¼ points out of the loss of 15 points registered early in the week.

How the lenient results of surveys and appeals were favourable to bears for indulging in short selling is evident from the fact that, last Wednesday, appeals in respect of as many as 94 lots out of 98 lots were passed by the Survey Committee. Again, yesterday out of 32 appeals filed, only one was rejected. Encouraged by these results, the tenders too showed a tendency to increase. Thus, with 12,400 bales tendered on Monday this week, the total quantity of cotton submitted till now has amounted to 71,550 bales. There are two more days for the issuance of tenders before the August contract goes off the Board, and market circles estimate that the total deliveries against the I.C.C. August in the 1952-53 season will reach the figure of about 100,000 bales.

I.C.C. February opened the week at Rs. 665-8. It improved to Rs. 667 on the same day which was, in fact, the highest for the week. On continued selling pressure, it declined to Rs. 661 on the 13th, Rs. 653 on the 14th, and to Rs. 652 in the following session on the 17th. Thereafter an improvement set in and the rate recovered to finish at Rs. 657-4. Rs. 663-8. On continued selling by bears, the contract sank to a low of Rs. 712 on the 14th inst. The support which emanated at the low level coupled with considerable bear covering, pushed up the rate at Rs. 732-4. The spread between the August and February contracts which was Rs. 60 last week was to-day as wide as Rs. 75. The following was the trend of prices in the forward market during the week under review:

	Opening	*High*	*Low*	*Closing*
I.C.C. August ...	Rs. 723	732½	712	732-4
I.C.C. February ...	Rs. 662½	663	652	657-4

The spot market conditions were not very different from those noticed last week. Things were generally quiet, as operators' attention continued to concentrate on deliveries against the August contract. Mills too tended generally to await fresh quotas to be announced on the 25th inst. Some mills were, however, interested in Calli-fornias, Berar Jarillas, particularly, in Kala and Vagad. There were also official enquiries in Khandesh, Moglai, Mathia, and Bengal new crop cotton.

The following are the latest available quotations in the spot market. Bengal *Deshi* Rs. 600; Berar *Jarillas* Rs. 760; Khandesh Rs. 850; Vijay Rs. 890; Oomra *Deshi* Rs. 675; and Moglai Rs. 675.

In the Karachi market, prices in both the spot and forward sections were generally a shade lower. In the spot section S.S. Punjab R.G., for instance, was to-day quoted at Rs. 59 as against Rs. 61-8 a week ago; S.G. declined from Rs. 66-8 to Rs. 61-8 A fall of Rs. 3 was noticed in N.T. R.G., at Rs. 62. 289F Punjab R.G. and S.G. were on offer at Rs. 66 and Rs. 71, as against Rs. 68 and Rs. 73 respectively.

The following are the latest available quotations from the Karachi spot market: Punjab Deshi Rs. 70; L.S.S. Punjab R.G. Rs. 58-8 to Rs. 59; S.G. Rs. 65; N.T. R.G. Rs. 62; S.G. Rs. 65. 289F Punjab R.G. Rs. 66, S.G. Rs. 71.

In the forward section, new crop N.T. R.G. October-November delivery was quoted at Rs. 64-8 buyers, and Rs. 65 sellers. A week ago the quotation was higher at Rs. 71. The S.G. variety which stood at Rs. 74 last week was lower this week at Rs. 68.

In the New York market, prices drifted lower in slow dealings under liquidation and hedging. The bearish sentiment reflected, in part, the large supply in prospect, and a belief that difficulty will be experienced in maintaining exports at even three million bales. Declines in Chicago wheat futures had a bearish effect. The quietness was also due to the inclination on the part of dealers to await farmers' attitude on the disposition of New crop cotton, now that prices were around the loan level.

The following are the latest quotations from New York, as compared with those of a week and a fortnight before:

(In cents per lb.)

	19-8-53	12-8-53	5-8-53
Spot	33.70	33.85	33.10
October	33.43	33.59	33.80
December	33.60	33.80	34.06
March	33.79	33.90	34.27
May	33.76	33.91	34.32

WEAKNESS IN ART SILK YARN PERSISTS

(From Our Own Correspondent)

BOMBAY, 19th August

Distinctly easy conditions prevailed in the art silk yarn market during the week under review. Heavy selling pressure, induced by slackness in demand from consuming centres, caused prices of yarn to stage a retreat. Poor demand for rayon yarn was the result of renewed weakness in fabric markets. In view of the recent developments in Kashmir, traders appeared to be very much sceptic about the early resumption of full-fledged trade between India and Pakistan. The possibility of a large-scale export trade in rayon fabrics with Pakistan was, therefore, not considered bright. Renewed weakness in the staple fibre yarn section also adversely affected the sentiment of art silk yarn traders. The cumulative effect of all these factors was the eagerness of operators —these had previously purchased in anticipation of a rise in prices—to liquidate their holdings. The closing rates to-day were, as a consequence, very much lower than those at the end of last week. The undertone of the market continued to be weak.

Selling pressure was particularly in marked evidence in the forward section. 150D September delivery contract lost 25 points to Rs. 774. August contract slided down from Rs. 799 to Rs. 773. These quotations were the lowest for the past five weeks. In the ready section, 120 Italy receded by Rs. 2 to Rs. 4-1. 150 Italy dropped an anna and a half to Rs. 3-14. 120 Japan and 150 Japan were each lower by an anna and a quarter at Rs. 4¼.

The table below gives the prices of art silk yarn quoted to-day, as compared with those on the 12th and 5th inst:

	19-8-53	12-8-53	5-8-53
	Rs. a.	Rs. a.	Rs. a.
150D July (per case of 200 lbs.)	773 0	794 0	798 0
150D August	773 0	799 0	798 0
150D September	774 0	799 0	798 0
120 Japan (per lb.)	4 1½	4 2½	4 3
150 Japan	4 1½	4 2½	4 2½
120 Italy	4 1	4 3	4 4
150 Italy	3 14	4 1½	4 0

Conditions in the staple fibre yarn section continued to be weak during the week under review, with a further sharp fall in prices. This was due to constant pressure from local and South Indian mills to sell their yarn even at lower prices. The pressure was so great that the local stockists became nervous and offered to sell at prices which were below mill quotations. Consumers were, on their part, hesitant to make purchases in anticipation of a further decline in prices. The quotation for 2/40s. staple fibre yarn September contract touched to-day Rs. 657, the lowest level ever since forward trading was commenced on the 1st inst.

OILSEEDS EASY

(From Our Own Correspondent)

BOMBAY, 19th August

The decision of the Government of India, announced on the 17th inst., to allow export of castor oil during August-December, 1953, upto one fourth of the total shipped during the first half of the year failed to enthuse operators in the castorseeds section, as its effects had already been discounted in anticipation. Price movements in this section were, therefore, limited to a narrow range with quotations showing a tendency to decline. In the groundnut section, although spots ruled steady on tight supply situation, forward contracts were easy on weak advices from Pollachi and South Arcot. The linseed section also sagged, on account of lack of domestic as well as overseas demand. Consequently, the oilseeds market generally depicted a bearish trend during the week under review and prices recorded minor losses.

To those who expected the extension of free licensing system which expired at the end of July, the new decision of the Government of India restricting exports of castor oil was a cause for considerable disappointment. It is calculated that the amount which could be expected on the basis of one-fourth of January-June exports will be no more than about 5,400 tons. It is, however, to be noted that the U.S. quotations at 16½ cents per lb. for Commercial oil was out of parity with the Bombay prices. Continental prices at £140 per ton for Commercial quality and £150 per ton for B.S.S. were, however, better. Among futures, September contract which opened at Rs. 150-12, declined to as low as Rs. 146-8, before closing at Rs. 148-4. May delivery lost Rs. 1-8 to Rs. 132, the highest and the lowest touched during the week being Rs. 133-8 and Rs. 130-4. In the spot section, Madras quality dropped As. 12 to Rs. 29-12. Castor oil B.S.S. changed hands at Rs 17-10, as against Rs. 17-14 and First Pressure at Rs. 17-6, as compared with Rs. 17-10. Commercial quality eased from Rs. 17 to Rs. 16-12.

In the groundnut section, Saurashtra interests were free sellers in forward contracts on expectation of a bumper crop. Hopes of a reduction in duty on exports of groundnut and groundnut oil from Saurashtra to other parts in India affected adversely August-September and December-January deliveries. These declined from Rs. 46-4 and Rs. 33-6 to Rs. 45-8 and Rs. 31-12, respectively. The supply situation against spot transactions continued to be tight. Bold F.A.Q. gained, therefore, Re. 1 to Rs. 49 and Khandesh quality As. 4 to Rs. 50. Among oils, groundnut oil ready was quoted at about Rs. 27-4 and railway receipts at Rs. 26-8. September, October and November contracts were done at Rs. 24-5, Rs. 20-11 and Rs. 18, as against Rs. 24-8, Rs. 21-8 and Rs. 19-4, respectively.

There was very little activity in the linseed section. Bold ready declined from Rs. 30-2 to Rs. 29-8. August-September and October-November deliveries changed hands at Rs. 29-8 and Rs. 28-12, as against Rs. 30-2 and Rs. 29-8, respectively. February-March deliveries were lower by Re. 1-4 at Rs. 26. Linseed oil eased from Rs. 17-4 to Rs. 16-4.

The following table shows the prices of oilseeds and oil on the 19th inst., as compared with those at the end of the previous two weeks.

	19-8-53	12-8-53	5-8-53

SUGAR WEAK

(From Our Own Correspondent)

BOMBAY, 19th August

The release of a special quota of 20,000 tons of sugar from the 1952-53 season's production to factories in the Deccan and South India, announced by the Union Food Ministry on Friday last, though belated, is to be welcomed. This action, which, incidentally, is in line with the suggestion advanced in these columns, has gone a long way towards easing the acute shortage of sugar supplies in Southern India. Consequently, the price of sugar in the Bombay market, which was very firm owing to post-monsoon demand and limited stocks, has tended to decline. The ex-mill price of sugar produced by Deccan factories, which had at one time shot up to Rs. 92 per bag, has come down to Rs. 88. The chances of a rise in prices are not bright now, considering that the time of the arrival of imported sugar is drawing nearer and that another release is due by the end of this month. Nevertheless, market observers point out that, if past lessons were to be any guide for the future, the Government should soon make up its mind on two important points. These are:

(1) Further issue of a normal, or at least 50 per cent. of the normal, release should be granted to the South Indian factories. This will act as a deterrent to any undue rise in prices pending actual deliveries of imported sugar to the trade in Bombay. If this is not done, the purpose for which the present release has been made, namely, checking the upward tendency in sugar prices, may not be fulfilled.

(2) The Government of India must make advance allocations of sugar imported from abroad between the State Governments and the trade. While announcing its policy, the Government had stated that imported sugar will be initially offered to the State Governments and then only to the trade. This means that trade will get imported sugar only after the requirements of State Governments are known. The efficiency of State Governments is well known. The least said about it the better. The State Governments may take their own time to make up their minds, but any delay on their part will neutralise the effects of imported sugar on prices. It is, therefore, desirable for the Government to release promptly some of the imported sugar for distribution through the trade. Tender forms for the trade have already been issued, but what is more important is an announcement of the quantity that will be offered to the trade.

The forward section of the Bombay sugar market remained firm till the 17th inst., due mainly to tight stock position and good local demand. A small syndicate of bulls succeeded in boosting up prices of *Shravan* delivery. The *Bhadrapad* delivery also moved up in sympathy. Consequently, the *budla* charges was pushed up to Rs. 4 per bag. Report of the special release of sugar for the Deccan Mills, however, unnerved the bull syndicate which began unloading its previous purchases. This brought about a decline in prices. *Bhadrapad* delivery opened the week at Rs. 88-4 and, after rising to Rs. 92-10 on the 17th inst., reacted to close at Rs. 87-6 (selling) to-day. The undertone of the market at present is weak.

The spot section was jittery during the week under review. Prior to the announcement of the *ad hoc* release of 20,000 tons of sugar from the South Indian mills, Bombay had witnessed a virtual sugar famine. Sugar prices had risen very high, small grain being quoted at Rs. 94, medium grain at Rs. 96-8 and bold grain at Rs. 101-103 per bag. Soon after the release, the spot market collapsed, on distress selling which persists even at the time of writing. To-day spot prices for the aforesaid varieties of sugar (sellers) are Rs. 92, Rs. 93 and Rs. 99, respectively.

Arrivals of sugar into Bombay market during the week amounted to 6,000 bags. The estimated stocks with the spot trade is 14,000 bags, which include wet sugar. The demand has been normal.

MIDDLE EAST TYPE TEAS FIRM

(Messrs. Forbes, Ewart and Figgis, Ltd.)

COCHIN, 15th August

The total offerings in dust sale 'P' which was held on Tuesday, 11th August amounted to approximately 170,000 lbs. There was a good general demand for all teas, although milled dusts were easier by half to one anna. Good liquoring dusts and grainy black Middle East types sold well at prices which were fully firm to occasionally dearer.

London Market.—Good demand; dearer tendency.

Colombo Market.—Strong general demand. Low-growns and mediums slightly dearer. Poorer liquoring high-growns five to ten cents lower. UVAS dearer on quality, particularly best flavoury sorts advanced substantially.

Calcutta Market.—Export.—Good general demand. Commons firm. Whole leaf grades and good liquoring sorts strongest feature. Flavoury Darjeelings well supported. Thin liquoring Assam B.P. neglected.

Dust.—Good general demand. Commons and medium Assams firm to occasionally dearer. Middle East types strongest feature.

Export Quota.—The market eased further during the week and transactions were done at 16 pies. There are buyers to-day at 16 pies and sellers at 17 pies.

Forthcoming Auctions.—Dust Sale 'Q' will be held on Tuesday, 25th August, 1953.

As we go to press, Messrs. Forbes, Ewart and Figgis, Ltd., wire:

"*Sale* 17:—13,40,000 lbs. Good general demand. Common and low medium easier to buy. Medium and good medium strong to dearer. Best liquoring dearer with improved quality. Black leaf middle East types still wanted at lower rates. Well made orange pekoes dearer."

GOOD BUSINESS IN KIPS

(From Our Own Correspondent)

MADRAS, 17th August

Despite the holiday mood of the U.K. dressers, trading in kips in the hides and skins market has been fair-sized. Arrivals have met with ready demand and prices have ruled unchanged. Tanners expect the U.K. curriers to enhance their limits this week by a penny on tanned cow hides and by two pence on cow calf and buff calf. Demand for tanned buff hides has continued to be firm, due to enquiries from the U.K. and the U.S.A.

In the next London tanned skins public auctions, due to commence on the 24th inst., 500,000 tanned goat and 300,000 tanned sheep will be available for sale. In view of the large quantities on offer, prices of tanned goat skins are easier and of sheep unchanged. Clearance of stocks in the Madras market has been good.

HIDES EASY

(From Our Own Correspondent)

KANPUR, 17th August

Easier conditions prevailed in the Kanpur hides and skins market during the week under review. Trading was dull throughout. Arrivals were very poor. Both buyers and sellers were somewhat reserved and activity was very limited. Prices in the skins section sagged, as a result of decreased demand. The following are the closing quotations:

Wet salted cow, 1st grade superior Rs. 380, and inferior Rs. 260 per score; 2nd grade superior Rs. 260 and inferior Rs. 180 per score; wet salted buff, 1st grade 1 lb. 10 ozs. and 2nd grade 2 lbs. 6 ozs. per rupee; goat, 1st grade Rs. 250 and 2nd grade Rs. 210 per 100 pieces; and sheep Rs. 290 per 100 pieces.

TRADING IN LOOSE JUTE RESUMED

(From Our Own Correspondent)

CALCUTTA, 18th August

As arrivals of new crop jute began to increase, prices of old crop showed a fractional decline. Although mills continued buying, sellers were anxious to do more business, as they expected that the downward trend would continue. Naturally, therefore, mills became reserved, adding to the anxiety of the stockists of old crop. However, all that are largely available of the old crop are *bimli* and *jungli* varieties which mills can afford to buy at any time, since, for these poor types, there is no question of shortage arising at any time during the season. An important event of this week is the resumption of trading in loose jute in the Calcutta jute market, which had remained closed for a few years. It is expected that activities of speculators would consequently increase and that prices of jute would fluctuate more widely. In the market, while lower Assams middles and bottoms old crop declined from Rs. 31 and Rs. 28 to Rs. 30-8 and Rs. 27-8, respectively, the rates for the new crop were maintained at Rs. 32-8 and Rs. 29-8. Similarly, northern middles and bottoms old were lower at Rs. 30-8 and Rs. 27-8, while new crop varieties were held at Rs. 32-8 and Rs. 29-8, respectively. Assam upper middles old were priced at Rs. 29-8 and bottoms at Rs. 26-8, as against Rs. 32 and Rs. 29 for the respective new crop. Latest quotations for other varieties (with rates for the respective new crop given in brackets) are: Daisee bottoms old Rs. 28 (Rs. 30) and middles Rs. 33. Murshidabad bottoms old Rs. 24-8 (Rs. 26-8) and middles new (Rs. 29-8). Western old bottoms Rs. 24, *Jungli* old bottoms Rs. 23-8. Orissa old middles Rs. 31 (Rs. 32-8) and bottoms Rs. 28 (Rs. 29-8). Uttar Pradesh old bottoms Rs. 24. Bihar old *mesta* bottoms Rs. 22. *Binti* f.a.q. old Rs. 24. Pakistani district old bottoms were quoted at Rs. 26-8, while middles old were offered at Rs. 31 and new at Rs. 35. In the *pucca* bales section, ready first marks were priced at Rs. 155 a bale.

Prices of jute goods fluctuated narrowly and, although there were enquiries from overseas, business that actually took place was insignificant. Among the principal enquirers were buyers on behalf of the U.S. and the U.K. Conditions yesterday were particularly bad, as the range of decline was very pronounced. The abnormal increase in production during July, figures for which were available this week, was a factor which quietened the sentiment of buyers and chilled the enthusiasm of stockists. Production of hessians rose by 3,600 tons to 33,500 tons and sacking goods were higher at 40,500 tons, as against 38,100 tons. Ready hessian 40" 10 oz. was offered yesterday at Rs. 45-6, at which rate the loss for the week came to As. 11. Eight oz. 40"was offered at Rs. 36 f.a.s. and at

STOCK & SHARE QUOTATIONS

Abbreviations:—D=Deferred shares. P.O.=Preferred Ordinary shares. Y=Accounts published yearly. H=Accounts published half-yearly. P=Company has Preference shares. T=Company has Debentures. N=Nominal quotation. x.d.=Ex-Dividend. c.d.=Cum. Dividend. i=Interim Dividend. f=Dividend for first half of the year.

Shares:—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery, and all other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends.—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year, they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly, dividends shown are for their financial year. Where, however, the accounts are closed half-yearly, dividends are shown separately for the respective half-years.

* Including bonus. x Sales and amount written off. (k) Investments.

(j) Made up of an interim dividend of Re. 1-12 per share on 1,20,000 shares and final dividend of Re. 1-10 per share on 2,40,000 shares of which 1,20,000 shares are bonus shares.

* The following explanatory notes relate to the abbreviations and marks shown on page 380 in the debentures section:—

§§ Option to repay on six months' notice, on any interest date after 31st December, 1951, at 102 per cent. Also redeemable out of a cumulative sinking fund of 1½ per cent. per annum (commencing in 1938) by drawings at 102 per cent. or by purchase at or 102 per cent.

(a) Option of repayment at any time at 3 per cent. premium.

(b) Bearer bonds of Rs. 1,000 each repayable at par.

(c) Bearer bonds of Rs. 1,000 each repayable on 31st July, 1959.

(d) Bearer bonds of Rs. 1,000 each with option of redemption in whole or in part at par on 30th June, 1952 or on any subsequent interest date at one month's notice.

(e) Returnable on or after 31st July, 1950, at Rs. 102-8 or at par after 31st July, 1955 on six months' notice in each case.

(f) Bearer bonds of Rs. 1,000 each with option of redeeming on 3 months' notice at ½ per cent. premium after 1st March, 1954, but before 1st March, 1957, and 1 per cent. permium on or after 1st March 1957.

(g) Option of redemption on or after 1st July, 1949, at par.

(h) Option of repayjent at any time at par at any time on or after 30th June 1947 on six months' notice.

MARKET GOSSIP

(Concluded from page 339)

goods, such as citrus fruits, wool, rayon yarn and cocoa, besides boilers, cranes and cargo ships (upto 5,000 tons). Some observers, however, see in this agreement a political motive, for they note that Russia has not been willing to buy the same goods from Italy, although that country is willing to sell them. It would appear that the U.K. too has received some Russian enquiries; these enquiries, it is stated, cover trawlers and cargo ships. Russians are also trying to arrange barter deals with the U.K.—plywood against textiles. Hitherto, only two barter transactions, covering the exchange of wool textiles for Soviet matches and of British herrings for Russian salmon and crabs, involving a total of about £3 million, have been concluded. Now Russia has offered to Britain also, such strategic materials as chrome and manganese.

• • • •

India too has received trade enquiries from Russia. It may be recalled that Mr. Rafi Ahmed Kidwai, Union Minister for Food and Agriculture, stated recently that Russia had approached India, as early as in March, 1953, for a barter agreement with the offer of wheat against Indian commodities. He did not throw any further light on the Government's attitude towards the agreement, nor on other aspects, such as prices. He, however, disclosed that the Government was considering the offer, and was engaged in an examination of the quota of commodities which it could exchange against Russian wheat.

• • • •

That these agreements, whether already concluded or under way, indicate a certain change in the Russian attitude towards trade with non-Communist countries cannot be denied. But it is too early yet to say whether they will pave the way for a much larger flow of trade between Russia and the democratic countries, for Russia's economic policy has always been inspired by political considerations. One thing, however, is clear. Russia is now consumer-minded, and is making an all-out effort to please the common man.

MARKET REPORTS

(Concluded from page 369)

Rs. 42-12 f.o.b. Prices in New York were almost stationary, and the unexpected indifference of American buyers to buy for replenishing depleted stocks was also a factor which pulled the prices towards the lower level. Market circles were not, therefore, surprised to hear that burlap consumed in the United States during July was as low as 56 million yards.

The sacking market also remained quiet, ready B. twills receding from Rs. 104-6 to Rs. 103. Export business was below anticipations and stockists were paying attention for sales against internal consumption. The Madhya Pradesh Government bought a small quantity of B. twills, while the Burmese Government was willing to accept more for its requirement. Stockists stated that the unexpected increase in hessian output showed that mills continued to attempt to transfer more looms to hessian. The increase in output of sacking, that is 2,400 tons, should be deducted from 3,600 tons which represent the increase in stocks with mills as at the end of July, 1953. This gives a balance of 1,200 tons and indicates the exact nature of demand, as compared to that in the previous month.

SUGAR STEADY

(From Our Own Correspondent)

HAPUR, 17th August

Crystal sugar markets remained steady. Bombay, Calcutta and Madras ports complained of very tight supply position. The Government of India has released a special quota of 20,000 tons of sugar from the 1952-53 production of factories in South India for sale in the free markets. The Government has completed negotiations to buy 100,000 tons of sugar for imports into India. This will reach Indian ports by the end of September, 1953.

The West Bengal Government is planning to reduce the price of sugar in the State. One of the proposals now under consideration, envisages retail sale of the commodity on a limited scale through selected shops at a fixed price. Another proposal suggests that the Government will supply sugar to trade at Rs. 27 per maund and the latter will arrange for its sale to consumers at As. 12-6 per *seer*. The Delhi State Government has taken steps to check rise in price of sugar in the free market by securing an allocation of 1,000 tons from the Centre to be sold at ration shops at As. 12-3 per *seer*.

The U.P. Government has banned future trading in sugar. Arrears of over Rs. 3 crores of cane cess and sugarcane price are due to the cane growers and the State Government from 66 sugar mills in the State, the amount of cess due being Rs. 1.54 crores upto 30th June, 1953. It is reported that the State would take necessary steps to realise the same.

With a view to recommending sugarcane price for next crushing season to the Government of India, a high level conference is being held at Ranchi. It is reliably learned that the U.P. Government is likely to ask to retain the present price of sugarcane, that is, Re. 1-5. With regard to the policy of regulating sugar supplies also, the U.P. Government is expected to urge the maintenance of the existing arrangement.

The latest free sale quoations (per maund) are: Delhi Rs. 31 to Rs. 32-8, Hapur Rs. 32-8, Bhatinda Rs. 30-8, Ludhiana Rs. 30-4 to Rs. 31-4, Mogha Rs. 31-8, Amritsar Rs. 31-8 and Meerut Rs. 31-8 to Rs. 29-12.

Gur markets remained steady, with slight rise in prices. There was good demand from importing areas, particularly Gujerat and West Bengal. There were active despatches too, but market arrivals were nil. Sugarcane crop in Uttar Pradesh has suffered wide damage by floods and insects in the main growing areas.

Reports from *gur mandies* in the South indicate that new *gur* arrivals have begun to increase in Baramati (Poona), where Sholapur and Kolaba districts remained active buyers. Local stock was put at 90,000 rounds. Quotations were: new *gur* Rs. 22 to Rs. 26 and old yellow Rs. 25-8 to Rs. 26. Srirampur Kopergaon stock accumulations aggregate over 625,000 rounds. The undertone continued steady with moderate enquiry from Khandesh and Colaba. Prices quoted are Rs. 22 to Rs. 25-4. Kohlapur remained quietly steady, the price being Rs. 25 to Rs. 27-8. At Ankapalli, *gur* was quoted at Rs. 21 to Rs. 21-8 received good enquiry from Madras and Berar. Northern India *gur* market quotations are: Delhi Rs. 21-8 to Rs. 22-8; Hapur Rs. 20-8; Bhatinda Rs. 21 to Rs. 22; Ludhiana Rs. 17 to Rs. 19-4 and *mogha* Rs. 14 to Rs. 22-8; Amritsar Rs. 18; Meerut: *pansera* Rs. 18-12 and *khurpapar* Rs. 20-4 to Rs. 20-12.

EXCESSIVE RAIN AFFECTS FOOD CROPS

(From Our Own Correspondent)

HAPUR, 17th August

It is now confirmed that excessive rains and raging waters of a record number of rivers in spate recently inundating vast tracts of land have left a frightful tale of destruction, hunger and distress in many parts of Northern India. The worst affected States are Bihar, Uttar Pradesh and Assam where standing crops have been swept away, food stocks destroyed and lakhs of people left without any immediate means of livelihood. More than 10,000 square miles of land are reported to have been devastated in Bihar, causing damage to 400,000 tons of foodgrains. Nearly 500,000 acres of paddy went under water beyond any hope of salvage. In U.P., about 5,000 villages spread over 1,000 square miles, were completely submerged. The worst affected districts were Gorakhpur, Basti, the Terais, and the areas adjoining the Ganges. In Assam six out of the seven districts in the State were affected by recent floods. Excessive damage to standing crops was reported from several places along the banks of the river Ravi in the Punjab.

During the fortnight ended 31st July, 1953, about half a dozen locust swarms entered India from across its western border. As a result of widespread rainfall, egg laying by locusts and emergence of hoppers have been on an extensive scale. The most highly infested tracts include both the desert and cultivated areas of Rajasthan, the South-western districts of Punjab and PEPSU. Breeding of locusts has also been reported in Delhi, Western U.P. and Ajmer, and it is expected that, during the current month, it will be on a more extensive scale.

The Indian Food Minister supplied to the House of the People the following crop produce estimates.

(In million tons)

	1952-53	1951-52
Rice	23.4	20.7
Wheat	6.38	5.7
Jowar	6.0	5.9
Bajra	2.9	2.2
Maize	2.6	2.0
Barley	2.17	2.13

In Uttar Pradesh, the year ending 15th August, 1953 is, according to an official record, significant for radical modifications in State Government's policy in respect of foodgrains control. The main reasons which induced the Government to modify the food policy were a persistent public demand for relaxation of controls and existence of good stocks in Government godowns.

Foodgrains markets remained fairly steady during the week. Arrivals were poor, due to rains, while offtake was good. The Government has been despatching wheat and coarse grains to scarcity affected districts in the east U.P. and in the hills. Some wheat on trade account was also despatched from Hapur and other *mandies* in the Meerut food region. Acute shortage of grain continued. It is revealed that the State Government has replenished the regions comprising flood-affected districts with coarse foodgrains aggregating 11,400 tons. A further quantity of 4,800 tons has been allotted for distribution in this area. The State Government has requested the Government of India to supply them wheat at subsidised rates for distribution in the flood-affected areas.

The latest quotations (per maund) in the Hapur market are: Wheat Rs. 17 to Rs. 18-4, gram Rs. 16-12, barley Rs. 12-8, *bejhar* Rs. 13, maize Rs. 13-4, *jowar* Rs. 12 to Rs. 13, *guwar* Rs. 13-8, rice Rs. 35 to Rs. 24; peas: green Rs. 15 and white Rs. 16 to Rs. 19, *arhar* Rs. 14-8, urd Rs. 21 to Rs. 24, *moong* Rs. 21-8 to Rs. 22-8, and *masoor* Rs. 18 to Rs. 20.

DEMAND FOR TEA POOR

(From Our Own Correspondent)

CALCUTTA, 18th August

Mixed conditions were in evidence during yesterday's export sale, the quantity offered being 44,400 chests. Demand was low and, while the majority of the varieties on offer accounted for a decline in prices, Darjeelings were steady and realised higher prices. Prices of thin liquoring medium Assam B.O.Ps. were As. 2 lower as compared with the previous rates. Pekoes were quiet, but orange pekoes possessing stylish leaf appearance were held firm. Prices for commons and low mediums declined by half an anna, while those of best liquoring C.

CONTROL OVER PUBLIC EXPENDITURE

THE persistence with which the Estimates Committees, the Public Accounts Committees and the Audit Officers assail the Government departments for over-spending, and spending without proper accounts and without prior sanction, has again brought to the fore the question of the adequacy of Parliamentary control over public expenditure. Whether all these allegations are justified or not is, of course, a different matter. But the fact that they are made, and continue to be made with increasing frequency, certainly does not enhance the Government's reputation for the efficient conduct of the business of national book-keeping. All this raises the old problem of the creation of independent audit, which will ensure that the moneys spent are spent on purposes for which Parliament has authorised the expenditure, and that there is no leakage. Indeed, the whole question assumes a new significance, in view, of the growing size of Governmental expenditure, both revenue and capital. That the Public Accounts Committee—its report, submitted to Parliament in December last, has been made available to the Press only now, should raise this issue once again, is a tribute to its awareness of the importance of the problem.

Parliamentary supremacy over public expenditure is, of course, implicit in the whole Constitution. Specific references to it occur in Articles 114 and 266. While the former lays down, among the restrictions, that no money shall be withdrawn from the Consolidated Fund of India, except under appropriations made by law passed in accordance with the provisions of the Article, the latter reiterates the same principle in respect of States. Before these constitutional provisions are satisfactorily implemented, certain changes in the administrative machinery, which now performs the accounting and audit services for the Central and State Governments, are necessary. For, this machinery, as the Public Accounts Committee points out, has become "outmoded" and has outlived its necessity.

Under the existing fiscal system, there are some 300 treasuries in the country, one in each district, each treasury having one or more sub-treasuries. Receipts and disbursements take place in the treasuries in respect of transactions connected with both the Union Government and the State Governments. This practice is different from the practice in the U.K. where all public payments are made through the Bank of England. The reason for the departure is that the country is geographically too vast to permit the use of a single institution. The treasury work is also done by the Imperial Bank of India. The Reserve Bank utilises the Imperial Bank as its agents for purposes of treasury work in places where it has no branches of its own. The initial responsibility for the control of expenditure rests on the various departmental controlling authorities. This method, as the Comptroller and Auditor-General remarks in his note submitted to the Public Accounts Committee, has "never worked satisfactorily"; it "completely broke down" during and after the war.

Two features of the present system call for special notice. In the first place, the accounts of the State Governments are maintained by the Comptroller and Auditor-General. This is being done under the transitional provisions of the Constitution. Ultimately, the States must be asked to take over the entire responsibility for the maintenance of accounts; under Entry No. 76 of List I of the Seventh Schedule, it is only the "audit of the accounts of the Union and of the States" that is a Union subject. Secondly—and this is a vital issue—the same agency is responsible for the maintenance of the accounts as well as the audit. Except in certain States, the compilation of accounts and their audit has been entrusted to the same agency, the Indian Audit Department. The Simon Commission described this "anomalous combination" of duties as a "relic" of the highly centralised system of administration which obtained in India before 1920. The system has, however, continued to survive to this day; the excuse for not effecting a change in the system is that it is economical.

In the U.K., the control over expenditure is exercised in three ways. In the first place, each Ministry has got its own Accounting Officer who passes all bills payable by the Minister and issues "payable orders" on the Paymaster-General. The Officer ensures that the payable orders do not exceed the voted grant. Generally speaking, there is no direct connection between the individual departments and the Bank of England where all payments are concentrated, for between them stands the Paymaster-General. Secondly, there is the machinery of control provided by the Estimates Committee and the Public Accounts Committee. The Estimates Committee supervises the estimates, submitted by the different departments, before they reach the House of Commons. It must be remembered that the Treasury itself will have done this work, so that the Committee's work is more in the nature of a revision. Out of a sense of what might well be called "economic chivalry," a convention has been established whereby the Chairman of this Committee is a member of the Opposition. The actual expenditure is subject to the scrutiny of the Public Accounts Committee. Spending authorities are careful to see that they do not incur the wrath of this Committee. Thirdly, there is the important—in fact, all-important—officer, the Comptroller and Auditor-General, whose office was created as far back as in 1866. His position and importance are substantially the same as that of his counterpart in the Indian Constitution. He examines and audits all public accounts before he submits his report to Parliament.

India has copied all the forms of British financial practice but missed the essential spirit. It has the Estimates Committee, the Public Accounts Committee and the Comptroller and Auditor-General. But the fundamental principle that accounts should be separated from audit has been ignored. It is unnecessary to labour the obvious importance of this distinction. The question is analogous to the question of the separation of the judiciary from the executive. It is absurd to assign both these functions to the same agency. The Conference of the Commonwealth Auditors-General, held in the U.K. in October, 1951, it may be noted here, came to the unanimous conclusion that an Auditor-General should not make payments nor keep accounts. In his note, submitted to the Public Accounts Committee, the Comptroller and Auditor-General says:

"If a satisfactory system of Exchequer control is to be introduced in India, I consider that we will have to resort, as the first step to the system, of having separate Accounts Officers to each of the Ministries and major spending departments, as in the U.K. with whom all payments will be centralised in respect of such Ministry or Department. A corollary to this will be that the State Governments will have to take over the maintenance of the Accounts, which, under the transitional provisions of the Constitution, is at present the responsibility of the Comptroller and Auditor-General. The present position of making the same agency responsible for the maintenance of Accounts and also the Audit of the Accounts compiled by itself is not only anomalous but highly improper and defective."

The Sub-Committee of the Public Accounts Committee, which examined the question of Exchequer control over public expenditure, is in substantial agreement with the aforesaid views of the Auditor-General. It emphasises that the existing arrangements are "wholly inconsistent with the various responsibilities of the spending departments, namely, effective control over their responsibilities to Parliament to keep within the budget grants and appropriations." The reform of this practice, it states, is "urgently needed." It is also convinced that there are no "insuperable obstacles" in the way of the introduction of this reform. The Public Accounts Committee has also "endorsed" its Sub-Committee's views, and has urged that the reform should be carried through with the "least possible delay."

In a sense, the reform now suggested is by no means a new experiment. In 1924, the Government of India tried the experiment of separating accounts from audit in the U.P., N.W.F.P., the Railways and certain departments of the Central Government. The separation of audit from accounts had been effected earlier in the Defence Department. But the experiment was abandoned in the U.P. and other places in 1930-31 as part of the drive for economy; in Defence and Railways, however, the system of separated accounts continued. Some idea of the small sums that were saved through these economy measures can be had from the fact that the U.P. Government hoped to save about Rs. 3½ lakhs by combining audit and accounts. Even so, the Secretary of State regretted the abandonment of the experiment. In sanctioning it, he

wanted the Government of India to make it clear that the change did not "indicate the Government's disapproval of the principle of separation."

There is some irony in the fact that the reform, which was tried but abandoned on considerations of economy, is now invoked precisely on the ground that it is conducive to economy in public expenditure. It is now realised that to postpone the reform on "economy considerations" is to take a wrong view of the whole issue. The Sub-Committee rightly holds that "false considerations of economy" should not be allowed to hold up this essential reform. If it is nevertheless felt that the adoption of the reform will mean some additional expenditure by the States, the Comptroller has suggested that it would be "even worthwhile to give them some financial aid, if necessary, for a limited period." It is unlikely that the reform will entail considerably more expenditure than is being incurred at present. The Comptroller hopes to be able to provide a considerable part of the accounts organisation, required by the Union and the State Governments, from his present organisation, retaining for himself a comparatively small portion for purposes of audit functions. There will, however, be a shift of the burden from the Centre to the States. There may be some additional expenditure too. But the resulting improvement in financial and audit control, as the Comptroller pertinently points out, will "more than compensate for the extra cost." Important as the whole issue of the separation of audit from accounts is to the future of public economy and financial propriety, it is necessary to add that the creation of an independent audit will not, by itself, produce results of any substance. **Financial rectitude is,** in essence, a mental attitude. It can spring only from a consciousness that public money is a sacred trust, and that it is a crime to spend it wrongly. Unless this attitude permeates all ranks of the administrative service, it is futile to expect spectacular improvements through mere changes in the administrative set-up, however wholesome these changes may be.

The Comptroller raises some difficult issues of constitutional importance in respect of Governmental participation in public or private limited companies or corporations. He regards this Government-sponsored "Private Ltd." companies as a "fraud" on the Indian Companies Act, inasmuch as the Consolidated Fund cannot be used to start such concerns; the President or his nominee is not a person who can become a shareholder. As these officers can have no personal financial interest in the company, their "joining together" cannot constitute a company. Further, Government concerns cannot be turned into private companies by executive action. The Government should have, according to him, the backing of suitable Parliamentary enactment for the setting up of such corporations. This seems to be a valid objection. The Government will, perhaps, do well to get the necessary Parliamentary sanction for starting and owning such corporations.

There is another important issue that the Comptroller has raised. He holds that the Comptroller and Auditor-General should have the "automatic" right to audit such concerns. Since auditors are appointed by the Board of Directors, he cannot exercise that right. Even if this difficulty were sought to be overcome by making the Comptroller and Auditor-General the auditor for the company, it would still be something of an anomaly, since he is responsible to Parliament and not to the Board. Also, Parliament cannot watch the financial operations of these companies through the Public Accounts Committee. In support of his stand, he cites the American constitutional provisions under which the Congress has to pass specific legislation in order to permit the Government to set up companies or corporations.

Similar issues have engaged the attention of a Select Committee of the U.K. Parliament, to which a reference was made by us last week. The question over there is the adequacy of Parliamentary control over nationalised undertakings. The accounts of these nationalised industries are now being audited by commercial accountants. No nice constitutional issues have been raised, as has been done by the Auditor-General in India. But the Committee has been primarily concerned with the question of ensuring that, while Parliament exercises its control over the State-owned industries no attempt is made to interfere with the spirit of enterprise, and initiative of the managements. The Committee has suggested the setting up of a committee to examine the working of the nationalised industries, which could call from the commercial auditors such information as may be of use to the Committee or of interest to Parliament. For a detailed exposition of the Committee's suggestion, the readers' attention is invited to our London Letter published on page 388 of this issue. There is no reason why such a procedure should not be adopted in this country in respect of State-owned commercial undertakings. This should ensure both the necessary degree of freedom for these enterprises and their adequate control by Parliament.

PROSPECTS FOR FOOD DECONTROL

HAPPILY, one of India's worst economic problems, namely, the chronic deficit in foodgrains, seems to be well under control. Although the country has not yet gained self-sufficiency in foodgrains, the supply position and the trend of prices, both in India and abroad, are such as to enable the removal of controls on cereals, with the exception of rice. Thanks to the unwinding of the vicious circle which gathered momentum since May, 1952, when State after State began relaxation of controls on foodgrains, the country has made large strides in improving its food supply position. This is fully reflected in the progressive cuts in imports of foodgrains since then. In 1952, imports amounted, according to the Union Food Minister, Mr. Rafi Ahmed Kidwai, to 3.9 million tons, as against the targeted figure of 4.9 million tons. Again in 1953 it was scheduled to import 2.9 million tons, but now it has been found that the country needs no more than 2.1 million tons. Actual imports upto 19th August, 1953, were no more than 1,733,350 tons. For the next year, the Food Minister is hopeful that not a ton in excess of one million tons and that too all of wheat—a quantity for which India is committed under the International Wheat Agreement—will need to be purchased from abroad. It would be a significant development if this hope were to materialise, for it would mean that, for the first time since the outbreak of the Second World War, India will hold off from the world market in rice.

The progressive reduction in imports has been the outcome of a complete transformation in the psychology of the people of the country, brought about by gradual relaxation of control on foodgrains. Free movement of grains within the State borders, decontrol of prices of coarse grains, gradual reduction in the number of people under statutory rationing provided opportunities for producers to sell, for the first time, their foodgrains in the free market. For traders, the relaxation meant the restoration of private trade in foodgrains. The consumer in the non-rationed areas was able to pick up foodgrains of his own choice in the free market.

While thus a change-over in the psychology of the people has taken place, conditions for growing more food crops have also been favourable in the past one year. The prospect of realising, in the free market, prices higher than those paid by the Government for grains procured by it, encouraged the cultivation of food crops. There was a considerable switch over from cash crops to food crops. Consequently, there has been a record production of cereals in 1952-53, which is 12 per cent. higher than that in 1951-52. Wheat production at 6.76 million tons this year is the highest since 1945-46. Again, the rice harvested at 23.4 million tons is another notable record. New records have also been established by maize and barley at 2.6 million tons and 2.66 million tons, respectively. In the circumstances, it is not surprising that the Government has been able not only to effect cuts in imports but also to command sufficient supplies for building up reserves. Thus Mr. Kidwai said in Bombay, a few days ago: "The Government of India has so much of wheat stocks that they do not know what to do with them or how to dispose of them. The imported rice has not been used by the Government so far this year. It is kept under storage." This position is in marked contrast with what was obtaining early in 1952, when the State Governments' demands on the Centre aggregated as much as 7 million tons which was later reduced to about 5 million tons.

In the light of the heartening food situation as noted above, it is only pertinent to think of doing away with the remaining food controls. Mr. Rafi Ahmed Kidwai, who is noted for his staunch opposition to all controls for the sake of controls, is, therefore, justified in proposing to re-examine the Government's food policy. During his brief visit to the City, early this week, he is reported to have said that "for all practical purposes, the food problem has ended," and added that controls on all foodgrains except rice, would be lifted throughout the country shortly. He stated clearly that he envisaged the complete decontrol of wheat.

An examination of the position of wheat warrants such a step. As already stated, wheat production has registered, in 1952-53, a rise of 12 per cent. over that in the previous year. Although it is rather early to estimate the size of the crop in the coming season, what with reports of flood damages in several parts of the country, it would appear, according to the Food Minister, that the output of wheat in the next year will be somewhat better than in 1952-53. There is, at present, control of wheat in the industrial cities of Bombay State and the City of Calcutta. Talks have already been initiated with the Ministers concerned in Bombay and West Bengal for decontrolling the cereal in these centres. Bombay is deficit in wheat to the extent of 7 to 8 lakh tons a year, and has two months' stocks on hand at present. Again, in Gujerat, wheat prices are showing a downward trend and the State is expected to have a good wheat crop this year. If wheat is decontrolled, as stated by Mr. Kidwai, prices are, therefore, likely to go down. World prices of wheat too are declining on account of a bumper crop. Besides, if stocks in the State are exhausted, the Centre is prepared to sell wheat at Rs. 17 per maund (which is Rs. 3 less than the price at which the State is selling at present). This assurance will have a salutary effect on prices. Further, the necessity of having to purchase next year, under the World Wheat Pact, one million tons will act as a safeguard against any undue upward trend in prices in the event of decontrol. The Government will not, therefore, be taking any serious risk if it removes control on wheat.

The same, however, cannot be said of rice. It is true that there has been an impressive improvement in the rice position. The crop has been very good this season. The East Punjab, which provided 125,000 tons this year, has promised to supply 250,000 tons next year. Likewise, rice production has also increased in Madhya Pradesh and Orissa. Procurement of rice has been exceptionally good, in that 1.17 million tons have been lifted through State purchases. The demand on the Centre for the supply of this cereal is on the downgrade. It amounted to 1.1 million tons in 1952, out of which 800,000 tons represented imported rice. This year only 200,000 tons have been imported and it is expected to make up even this balance from internal procurement next year. In spite of this improved situation, however, rice cannot be decontrolled simultaneously with wheat. For the prices in the free market are still high, and it is likely that some States may switch over to rice from other foodgrains and thus cause an upward trend in their prices also. Besides, unlike wheat, prices of rice in world markets are also high. Burma, for instance, is prepared to sell only at Rs. 30 per maund, as against Rs. 22-8 in India. If, however, world prices were to become lower than the domestic prices, India can certainly decontrol rice with the assistance of cheap rice imports. Till then, the country will do well to exercise a certain amount of control on rice.

The trend of food prices in the past one year, it may be seen, does not favour decontrol of foodgrains. The group index for food articles under the index number of wholesale prices (base 1939=100) as on 1st August, 1953, stood at 406.4. This is 38.6 points higher than the figure a year before. But this rise is largely due to the rise in the prices of food articles other than cereals. If the index number of cereals alone is taken, it will be seen that it has gone up only a little, from 463 to 478, that is, by 3.2 per cent. This increase is nothing as compared with the relief which the people have had from the large measure of relaxation of control already made in several parts of the country. Further, the rise in prices in recent months is attributable to seasonal shortage, particularly in the shape of *kharif* cereals and to some extent to transport difficulties, owing to setting in of rains, or farmers being busy with agricultural operations. While there is, of course, need to keep a watch over the trend of food prices, the chances are that further extension of decontrol will not lead to any worsening of the situation. For the monsoons have been kind. Rainfall has been very good and the next crops, both rabi and *kharif*, are expected to be bumper ones, even after making allowances for the adverse effects of floods in some areas. Again, there is every possibility of the minor and the major irrigation schemes, coupled with the community projects and the new cultivation methods, yielding good dividends in the shape of increased supply of foodgrains, in the coming years. There are thus sufficient grounds for embarking on a further relaxation of controls on foodgrains without fear of any untoward results.

INCIDENCE OF ESTATE DUTY HEAVY

I.I.S.CO. LOCK-OUT—GOVERNMENT STEEL PROJECT

THURSDAY, 5 P.M.

MARKET GOSSIP

AS was announced in Parliament a fortnight ago, the Finance Minister, Mr. C. D. Deshmukh, has announced the rates of Estate Duty. A Bill prescribing the rates was introduced in Parliament on Monday last. The exemption limits are the same as those recommended by the Select Committee in its report, submitted to the House on 31st March, 1953. They are Rs. 50,000 in the case of an interest in property belonging to a joint-Hindu family and Rs. 75,000 in other cases. Those who thought that the Government would change its mind and raise the exemption limits even after the considered verdict of the majority of the Select Committee of Parliament will naturally be disappointed. That, however, does not mean that the demand for higher exemption limits was not justified. On the contrary, it was quite a legitimate demand, considering that the State in this country provides scarcely any social security benefits, except to a small percentage of industrial labour. An individual has to provide for all the essential needs and comforts of his dependents. It is, therefore, but right that the State should not start collecting an Estate Duty even on such small savings as Rs. 75,000, which, in terms of the pre-war purchasing power of money, is equal to about Rs. 19,000 only. The proper thing would have been to fix the exemption limit higher and to lower it in subsequent years when a substantial improvement in the purchasing power of the rupee takes place. But, as the Government is out to collect as much revenue as possible, it is not in a mood to listen to any plea for any tax relief, however justified it may be.

• • • •

The provision of two exemption limits seems to have given rise to some confusion in the minds of laymen. The proper way of looking at it is to regard the exemption limit of Rs. 75,000 as the normal limit. The limit of Rs. 50,000 is a concession to the joint-Hindu family system. This limit is in respect of coparcenary interest of each person belonging to a Hindu undivided family. The members of this section of population do not represent the norm. They really are the exception. The norm is represented by others, namely, the Hindus under *Dayabhaga*, Muslims, Parsis, Christians and so on. That there has been a steady fall in the number of Hindu undivided families will be evident from the fact that the number of assessees for the purposes of income-tax under that system was 65,750 in 1951-52, as against 70,872 in 1940-41, whereas, during this period, the number of assessees charged on an individual basis rose from 268,579 to 547,539. It has been estimated that the number of Hindu undivided families which are likely to pay Estate Duty is about 35,000 only. But it is a safe guess that some of the biggest Estate Duty payers must be within this group.

• • • •

So much for the exemption limits. Now to refer to the rates of Estate Duty. On the next page, the incidence of this Duty, as now proposed, is analysed by Dr. Rustom C. Cooper, a well-known Chartered Accountant. It is, therefore, needless to go over the same ground here. But for purposes of record and to facilitate an easy understanding of our comments, we give below the classification of slabs and the rate of tax for each slab :

Value of estate	*Rates of duty* Per cent.
On the first Rs. 75,000 of the principal value of the estate ...	*Nil*
On the next Rs. 25,000	5
" " " Rs. 50,000	7½
" " " Rs. 50,000	10
" " " Rs. 1,00,000	12½
" " " Rs. 2,00,000	15
" " " Rs. 5,00,000	20
" " " Rs. 10,00,000	25
" " " Rs. 10,00,000	30
" " " Rs. 20,00,000	35
On the balance of the principal value of the estate	40

The foregoing rates are lower than those that were rumoured about in the share markets a few days ago. But that does not mean they are reasonable on the whole. The incidence on the first two or three slabs may be said to be "not unduly high." A person who leaves behind Rs. 1,00,000 will have to pay only Rs. 1,250. On Rs. 1,50,000, the Duty will be Rs. 5,000 and on Rs. 2,00,000 Rs. 10,000. Percentage-wise, the rate on these three slabs works out to 1.25, 3.3 and 5, respectively. Considering that the court fees payable for obtaining probate, letters of administration, or a succession certificate in respect of any property on which Estate Duty is leviable are allowed to be deducted from the amount of Estate Duty payable, subject to a maximum of one-sixth of such Duty, these rates cannot be regarded as very heavy. But the same thing cannot be said about the rates over Rs. 2,00,000. Indeed, from this level onwards the provisions of the Bill offend the principle of gradualness in the matter of both the slabs and the rates of levy. As the Indian Merchants' Chamber pertinently points out, the stepping up of the slabs, instead of being gradual and progressive, is sudden and steep. This is particularly so in the case of property the value of which exceeds Rs. 5 lakhs, the amount of duty payable on Rs. 5 lakhs itself being as much as Rs. 52,500. For an underdeveloped country like India, the economic progress of which depends on the availability of risk capital, the proposed rates of Estate Duty on the upper slabs are, doubtless prohibitively heavy. It will aggravate the inherent tendency to evade taxation. It will certainly lead to more corruption and demoralisation among the tax collecting authorities, more so because the assessees are at the mercy of the tax collector, there being only inadequate provision for appeal to the Court.

• • • •

It is difficult to provide concrete proof for sustaining the remark that the imposition of Estate Duty on the lines indicated above will retard the economic progress of the country. Such proof can be had only over a period of time. The imposition of Estate Duty will discourage thrift, and result in dissipation of resources. Quite a good part of the savings will come to be held in liquid assets, with a view to evading the Duty. Thus, the capital required for development purposes will tend to diminish. At any rate, it is obvious that the volume of such resources will be less than if there is no Estate Duty at all. No authentic estimate of the amount that will be raised by the levy is available. But, according to the Finance Minister, the yield from it "will not form a negligible addition to the resources of the State." Considering that all this will be obtained mostly from those who provide the risk capital, the Estate Duty will mean a substantial reduction in the ever-shrinking pool of resources from which private enterprise draws its requirements of capital. Further, it may affect the flow of foreign capital, unless agreements with foreign countries for avoidance of double taxation relief are promptly entered into.

• • • •

In these circumstances, and especially in the context of the Five-year Plan, the introduction of Estate Duty is untimely, though it is justifiable in principle. The least that the authorities should do now is to introduce the element of gradualness and moderation in respect of the incidence of the Duty by suitably revising the structure of the rates and slabs. It may be added here that, in most of the Western countries where Estate Duty was first introduced, the incidence was kept at a comparatively low level in the initial years. In the U.K., for instance, when Estate Duty was first introduced in 1894, the maximum rate was 8 per cent. and that rate was applicable only to an estate where the value exceeded the limit of £1 million. Gradation in the slabs and the rates of levy in respect of estates of lower value also indicated an element of gradualness. It was only after the levy had been in force for over 25 years that the maximum rate in that country was increased to 40 per cent. and that too on value of estates over £2 million.

STATISTICAL TABLES

Readers' attention is invited to the change in our statistical information pages relating to joint-stock companies, the shares of which are quoted on the Stock Exchanges. The pages have been remodelled to make the information clearer and more comprehensive. Three main features have been incorporated. First, the depreciation figures have been shown separately, and not added to the reserves as was being done formerly. Secondly, the dividends are expressed in absolute figures and not as percentage of the paid-up value of shares. This change will enable readers to calculate the yield percentages more easily. Thirdly, the dividends for the companies, which close their accounts half-yearly, are shown separately in respect of each half-year; these were being clubbed together formerly.—ED.

• • • •

The publication of the rates of Estate Duty has had no perceptible effect on the Stock Exchange values either way. It is true that, immediately after the rates were announced, there was a slight spurt in some of the leading counters, but that was due to the fact that the incidence of this taxation is not so heavy as was feared a few days ago. It was, for instance, rumoured that the rate of duty on Rs. 10 lakhs and over would be as high as 50 per cent. The long-range implications of this tax to the share market cannot but be bearish, for two reasons. In the first place, those who have to pay Estate Duty will have to sell a part of their investments in shares and debentures. Secondly, the volume of savings available for investment will be less. Now that the Government has intimated the Princes that they cannot, henceforth, be exempted from payment of income-tax and super-tax, the coming months may witness an increase in the liquidation of equities and fixed-yield industrials. Even to-day some of the Princes are large holders of Stock Exchange investments.

• • • •

Over the week, the list of equities quoted on the Bombay Stock Exchange reveals more losses than gains. The losses, of course, are only fractional, but it is indicative of the lack of confidence in industrial shares. A feeling of uneasiness pervades the textile section. The fall in the value of these shares may have been sizable but for the technical position of the market. Of the few shares that have recorded some gains during the week, Tata Deferreds stand out prominently. That is due to the amicable manner in which the workers' demand for a larger bonus has been settled. The Company has entered into a four-year agreement with the workers on this question. This has engendered the feeling that the chances of friction with the workers of the Company have been minimised for a fairly long period.

• • • •

The labour situation in the works of the Indian Iron and Steel Co., Ltd., at Burnpur has deteriorated. A lock-out has been declared and all but key workers have been dismissed. Coke ovens have been kept burning but the blast furnaces have been sealed. In the context of the country's need for more production of steel and pig iron and the distress caused by growing unemployment, the lock-out is regrettable; but it became inevitable due to the intransigence of a section of the workers who have allowed themselves to be exploited by political agitators. It is well to remember, in this connection, that the dispute has not arisen over any demand for either higher emoluments or more amenities. It has arisen over the control of leadership of the workers' union. It would have been a perfectly legitimate contention, had the claim been sought to be enforced by constitutional means, for which there is adequate provision in the country's labour laws. But those who are now fighting for obtaining the control over the union resorted to coercion and force. It is this that is the root of the trouble. The key to its quick solution is entirely in the hands of those who started it.

• • • •

The declaration of a lock-out in the Burnpur Works had a perceptible effect on the value of Indian Irons. They dropped to as low a level as Rs. 21-12 on Tuesday, as against Rs. 22-8 towards the close of the past week. At the time of writing, they are a little steady at Rs. 22-4. A year ago these shares were being quoted at Rs. 20-12 and one time, in the course of the past one year, they were as high as Rs. 28-7. It was not long ago that some were talking it up to Rs. 40 and Rs. 50. Well, the depreciation in the value of these shares should be an eye opener to those who invest in a scrip without paying adequate attention to the yield aspect. Even at the current level, it cannot be said that this scrip is standing at a realistic level, considering that the yield on the basis of the last dividend, the repetition of which this year and, perhaps, even in the next year, is highly doubtful, is less than 5 per cent. It is true that the prospect of capital appreciation is an important factor that decides the market value of a share. But prudence demands that, if a scrip does not offer a fairly high rate of yield to cover such unforeseeable contingencies as strikes, it should not be touched even with a pair of tongs. Anyone who ignores this is not a judicious investor.

• • • •

The much awaited statement on the Government-sponsored new steel project was made by Mr. K. C. Reddy, Minister for Production, in the House of the People, this week. The agreement between the Government of India and the German steel firms, Krupps and Demag (signed on 15th August), provides for technical and financial participation of these firms in the construction of a new steel plant with an initial capacity of half a million tons of ingots, capable of expansion to a capacity of one million tons. He revealed that the capital cost of the project is estimated at Rs. 71.25 crores. The German participants will contribute about Rs. 9.5 crores, the exact amount depending on the value of the plant that they may supply. The Government proposes to apply to the World Bank for a loan of about Rs. 20 crores towards the capital cost. The German investment will be for a period of ten years, with option to either side to continue the association for a further period of ten years.

• • • •

The German combine will be appointed technical consultants and will receive a fixed fee of about Rs. 2.10 crores which works out to about 3 per cent. of the estimated cost. No royalties are payable and no bonus shares will be issued. The management of the Company will be vested in a Board, in which the Government and the combine will have representation proportionate to their respective investments. The Chairman and the Managing Director will be nominated by the Government. The German combine will recommend a team of technical experts for the efficient working of the plant. The number of Germans will be kept down to the minimum, commensurate with the requirements of efficiency. Indians will receive, meanwhile, specialised training for the progressive replacement of German nationals.

• • • •

Global tenders for supplies of plants, etc., will be invited; quality, price and delivery date will be the determining factors in the selection of suppliers. The German participants expect that the plant could be commissioned within a period of four years after the preliminary details have been settled. A representative team is expected in India in September to discuss and settle the constitution of the Company and to make specific recommendations on the location of the plant and other questions. The selection of the site will be decided by considerations of the economics of production and distribution of steel. The Government feels that there is need for yet another steel unit. To this end, necessary planning and other action will be initiated.

• • • •

Such, in brief, is the Minister's statement. It does throw some light on the project, but not enough to enable the public to understand all the implications. In the first place, it is not clear why

UNIMPRESSIVE TRADING IN SHARES

TATA DEFERREDS LOOK UP

(From Our Own Correspondents)

BOMBAY, 27*th August*

WITH the exception of Tata Steel shares, trading on the Stock Exchange was dull and unimpressive during the week under review. This was the result of cautious attitude on the part of the operators who lacked enthusiasm in the absence of any fresh incentives Sentiment was adversely affected by the weakness in cotton futures. Advices from Calcutta were also generally bearish. Operators viewed with concern the deterioration in the labour situation in the I.I.S.Co. Works at Burnpur, leading to declaration of lockout by the management of the Company with effect from Monday last. The easiness in the textile section, following reports of cloth accumulations with several mills, thanks to slackness in demand, also acted as a damper on operators. Although the announcement of the Estate Duty rates had no perceptible effect on the market, operators were rather inquisitive to know whether any changes in the rates would be effected by Parliament during the consideration of the Bill. So far as the rates now proposed were concerned, operators were somewhat divided in their opinion. While some felt that the rates were not so heavy as was expected earlier, others felt that they would affect prospects of attracting capital towards large-scale industrial development.

The outstanding feature of the market was the lively display provided by Tata Steel scrips. Technical considerations and fears of higher backwardation charges induced short covering and Tata Deferreds tended to look up. There was also investment support inspired by several encouraging reports, such as satisfactory settlement of bonus to T.I.S.Co. workers, expectation of a further rise in despatches from the Works and news of good export trade in scrap and pig iron of late. Tata Deferreds, which were marked down to Rs. 1,933 on Tuesday from Rs. 1,952-8 last week, recovered to touch as high as Rs. 1,967-8 yesterday. Profit-taking, however, set in and the quotation slided down to Rs. 1,957-8 at the close to-day. Tata Ordinaries rose from Rs. 338-4 to Rs. 339-12 but the rate reverted to Rs. 338-4. Indian Irons were subjected to heavy selling pressure, the lowest level for the past several weeks at Rs. 21-11-6 was seen on Tuesday. A slight recovery was in evidence during the subsequent sessions, following bear-covering induced by rumours of Government intervention to bring about settlement between management and workers of the I.I.S.Co. The closing rate to-day, therefore, stood higher at Rs. 22-4.

Textile shares provided a weak spot. Reports of renewed efforts of some mills to dispose of their stocks by reducing prices diverted operators' attention away from this section. Buyers being scarce thus, prices receded all round. Khatau Mills were the worst to suffer, having lost Rs. 5 to Rs. 178-12. Finlays were down by Rs. 3 to Rs. 322 and Simplex by Rs. 2-12 to Rs. 166-12. The fall would have been steeper but for the announcement of the issue of bonus shares. Vishnus came down from Rs. 160 to Rs. 148-8. Bombay Dyeings, Centurys and Morarjees shed Re. 1-4 each to Rs. 377-8, Rs. 268-12 and Rs. 180, respectively. Kohinoors lost a rupee to Rs. 294-8. Central India's were lower by a like amount at Rs. 159-8. Swan Mills, however, met with special buying support and rallied Rs. 7-8 to Rs. 460. Bradburys also elicited support and gathered Rs. 3-12 to Rs. 821-4. Gokaks too staged a rise of Re. 1-8 to Rs. 227-8 and Standards of Re. 1-4 to Rs. 310.

Turnover of business in the banking section was at a low ebb, with the undertone remaining quietly steady. Imperial Fully Paids advanced by Rs. 2-8 to Rs. 1,827-8. Barodas gained As. 4 to Rs. 111-8. Centrals were done at Rs. 64 *ex-div.*, as against Rs. 65-4 *cum-div.* and their new shares at Rs. 66-8 *ex-div.*, as against Rs. 68 *cum-div.* Indias changed hands As. 4 lower at Rs. 154-12. United Commercials continued to be quiet at Rs. 36-4.

The insurance section was devoid of any features, although Vulcans picked up As. 2 to Rs. 11-15. New Indias remained steady at Rs. 40-4. Similarly, British Indias were unchanged at Rs. 13-12 *ex-div.* and Empires at Rs. 627-8. Orientals, however, failed to evoke support and was placed Rs. 50 lower at Rs. 6,825 *ex-div.* Jupiters lost an anna to Rs. 6-10.

Business in electric shares was dull. Ahmedabad Electrics improved by As. 4 to Rs. 112-3. Bombay Suburban Electrics were fully maintained at Rs. 121-14 *ex-div.* Surat Electrics at Rs. 123-12 and Poona Electrics at Rs. 125 *ex-div.* Tata Hydro Ordinaries were steady at Rs. 142 *ex-right*. Andhra Valleys were done at Rs. 1,352-8 *ex-right*, as against Rs. 1,452-8. Tata Power Ordinaries, however, gave way from Rs. 1,435 to Rs. 1,425 for want of support.

The miscellaneous section presented an irregular trend. Bombay-Burmahs drifted lower, old and new shares dropping Re. 1-4 and Rs. 2-8 to Rs. 350-10 and Rs. 127-8, respectively. National Rayons were easy at Rs. 112, as against Rs. 115-8. Wimcos declined by As. 10 to Rs. 237-8. Associated Cements shed As. 8 to Rs. 168. Walchandnagars, on the other hand, had buyers Rs. 2-8 higher at Rs. 146-4. Belapurs had enquiries and gathered a rupee to Rs. 239-8. Killick Industries were better by As. 12 at Rs. 155-4 and Tata Oils by As. 4 at Rs. 30-8. B.I.Cs. were a shade higher at Rs. 8-6.

In the mining and engineering section, Alcock Ashdowns were down by As. 10 at Rs. 301-14. Premier Constructions and Shivrajpurs were transacted, each As. 8 lower, at Rs. 85 and Rs. 56-8, respectively. Indian Coppers were a shade lower at Rs. 2-12-3. Larsen and Toubros, however, were steady at Rs. 10-10 and Josts Engineerings at Rs. 90.

Among shares of transport companies, Scindias and Indian Steamships were slightly easy, the former at Rs. 13-7-6 and the latter at Rs. 6-12-6.

• • • •

Calcutta Stock Exchange

CALCUTTA, 25*th August*

The Stock Exchange continued to be in doldrums during the week under review, as there was no event which could check the downward trend in prices. The Nehru-Ali accord on Kashmir is no doubt a good ground for optimism, but the desideratum for immediate liveliness on the Exchange is the return of normal working in the Burnpur works of the Indian Iron and Steel Co., Ltd. The situation there has taken a turn for the worse, with the strike notice served by the labourers and with a lockout declared by the management. It is a tragedy that, while India is seeking a loan from the World Bank for the setting up of a third steel plant, for which negotiations have been completed with two German firms, much production is lost in Burnpur. It would be a good thing for the future of industrial progress in this country, if some sort of enquiry were made eliciting information as to whether labour in Burnpur followed all paths of negotiations before deciding on direct tactics, such as go-slow and strike threat. Nobody would dispute labour's right to strike for the ventilation of its grievances, but such strike should be the last weapon in its hands, for the country should not be made to lose by way of a fall in production. The loss in steel output is all the more serious to engineering industries, especially when India is short of steel.

Market circles have followed, with the keenest interest, the Government of India's plans to expand educational facilities in the rural areas, as the employment that the implementation of schemes would offer to the educated unemployed would be a good thing for the consumer goods industries. Poor demand for jute goods from overseas buyers depressed sentiment in jute shares. The bad weather which the cloth export market is facing was also a factor which encouraged operators to delay entering into commitments. Activity was, therefore, reduced to good counters coming now at lower levels. The week was short of two sessions, on account of holidays.

Jute shares were easy. Fort Glosters were marked down from Rs. 427 to Rs. 398. Speculative Howrahs were done at Rs. 22-13, while Kinnisons were unchanged at Rs. 188. Agarparas came to business at Rs. 17-3, Nuddeas at Rs. 43-8 and Naihattis at Rs. 125. Indias realised to-day Rs. 123 *cum-div.*

In the engineering section, Indian Irons opened at Rs. 23 and, reflecting the bad state of affairs in Burnpur, receded to Rs. 22-2 over the week-end. News of the lockout further depressed the counters, and to-day a low of Rs. 21-14 was recorded. Bartias were bought at Rs. 10-6, Marshalls coming to business at Rs. 5. Braithwaites were done at Rs. 11-1, and Texmacos at Rs. 6-2.

The miscellaneous section also was affected by the general dullness. F. & C. Oslers, however, proved an exception and continued to attract interest and, after realising Rs. 7-5, declined to Rs. 7-3. Rallis were fractionally better at Rs. 67, while Ganges Ropes eased from Rs. 176 to Rs. 174-8.

• • • •

Madras Stock Exchange

MADRAS, 25*th August*

The performance of the Madras Stock Exchange was disappointing during the week under report. Operators were disinclined to enter into commitments as they awaited the announcement of the rates of Estate Duty in Parliament. The bright sentiment noticed in the textile section in the last few weeks was no longer there, as operators seemed to entertain fears regarding possibilities of heavy accumulation of stocks with mills. Trading in textile shares was, therefore, uninteresting. Plantings were colourless with teas, rubbers, and coffees disclosing very little activity. Miscellaneous and banking scrips proved no exception to the generally dull conditions, though some negligible business was done in some selective scrips. The turnover on the Exchange was poor and price movements were confined to a very narrow range. The undertone was quiet.

In the textile section, Loyals shot up by Rs. 3 to Rs. 20 and P. Andavars 'A' by Re. 1-8 to Rs. 64-8. P. Andavars 'B' and Radhakrishnas gained Re. 1 each and finished at Rs. 89 and Rs. 158-8, respectively. Rajalakshmis, however, declined from Rs. 85 to Rs. 82. Lakshmis 'A' lost Rs. 2 to Rs. 40. Coimbatore Pioneers and Lakshmis (Rs. 50 paid-up) suffered Re. 1 each and finished at Rs. 117 and Rs. 82, respectively. Coimbatore Spinnings eased from Rs. 43 to Rs. 42-8. Bangalore Woollens changed hands at Rs. 257-8, *ex-div.* as against Rs. 267-8 *cum-div.*

The planting scrips were conspicuously dull during the week under review. There was virtually no activity in the coffee scrips. Thus, Coffee Lands were unchanged at Rs. 10-8 and Consolidated Coffees at Rs. 18-8. Puthuthotams and Mysore Coffees were dull at Rs. 3-8½ and As. 8½, respectively. Teas also lacked support. The only bright spot was Highland Produce which put on As. 2 to Rs. 10-10. Periakaramalais lost As. 6 to Rs. 28 *cum-right* and Udayagiries As. 4 to Rs. 4-6. Chembras were fractionally lower at Rs. 2-10½. Rubbers, however, were a bit better with Thirumbadis, Pullangodes and Be Bes being slightly higher at Rs. 2-14, Rs. 2-8½ and Rs. 2-0-8, respectively.

Among miscellaneous scrips, Andhra Cements 'A' were higher by Re. 1 at Rs. 100 and 'B' by an anna and a half at Rs. 10. Mysore Gold gained As. 3 to Rs. 2-5 and Dalmia Cements As. 2 to Rs. 6-8. Aluminium Industries were done at Rs. 11 *ex-div.*, as against Rs. 11-10 *cum-div.* and Mysore Papers at Rs. 13-14 *ex-div.*, as against Rs. 14-12 *cum-div.* Mysore Stonewares sustained a loss of As. 3 to Rs. 9-1 and Prithvi Insurance Company As. 4 to Rs. 8-6.

In the banking section, Bank of Mysore gained Rs. 4 to Rs. 284 *cum-div.* and Indian Bank (Rs. 100 paid-up) Re. 1 to Rs. 181. Indo-Commercial 'C' eased from Rs. 36 to Rs. 35 and Indian Overseas, Rs. 90 to Rs. 89-8.

RATES OF ESTATE DUTY

(By Dr. RUSTOM C. COOPER)

THE proposed rates of Estate Duty appear, on the whole, to be quite reasonable, ranging as they do from 0.31 per cent. in case of estates amounting to Rs. 80,000 to 32.03 per cent. in case of estates valued at Rs. 75 lakhs and 34.02 per cent. in case of estates valued at Rs. 1 crore. The statement below will give one an idea of the amount of Estate Duty payable and the percentage of Estate Duty to the value of the estate at each stage from Rs. 75,000 to Rs. 1 crore.

The proposed rates of Estate Duty are not likely to hit severely middle-class persons leaving property in the neighbourhood of Rs. 1 lakh. They will have to pay at about 1.25 per cent. of the total estate. On the other hand, a person leaving in the neighbourhood of Rs. 5 lakhs, will pay at about 10.5 per cent.

Although persons leaving small estates will not be called upon to pay Estate Duty at unduly high rates, it will be noticed, that, if the rates are considered with reference to the distribution of the estate, they will be found inequitable. For instance, if Mr. A leaves behind only Rs. 75,000 and one son, he will not pay any Estate Duty and leave behind the whole amount to his legal heir. Whereas Mr. B who leaves Rs. 2,25,000 and three sons, will have to pay Rs. 13,125 as Estate Duty and each of his three sons will get only Rs. 70,625. Similarly, if Mr. A leaves behind only one son and a sum of Rs. 1,00,000 his legal heir will receive a net sum of Rs. 98,750. However, if Mr. B has four sons and leaves behind Rs. 4 lakhs, each heir will receive only Rs. 90,625 net.

The progression of the rates of the proposed Estate Duty could be gauged from the fact that, whereas a person leaving Rs. 1 lakh pays only at the rate of 1.25 per cent., a person leaving Rs. 10 lakhs will pay at 15.25 per cent., a person leaving Rs. 20 lakhs will pay at 20.1 per cent., a person leaving Rs. 50 lakhs will pay at 28.95 per cent. and a person leaving Rs. 1 crore will pay at 34.02 per cent.

Generally speaking, it cannot be said that the proposed rates are such as to kill all incentive for private enterprise.

The following table shows the incidence of the Duty at various stages upto Rs. 1 crore:

Value of estate Rs.	*E.D. payable* Rs.	*Percentage E.D. to Estate left*
75,000 ...	*Nil*	*Nil*
80,000 ...	250	0.31
85,000 ...	500	0.59
90,000 ...	750	0.83
1,00,000 ...	1,250	1.25
1,25,000 ...	1,875	1.50
1,50,000 ...	5,000	3.30
2,00,000 ...	10,000	5.00
2,50,000 ...	16,250	6.50
3,00,000 ...	22,500	7.50
4,00,000 ...	37,500	9.40
5,00,000 ...	52,500	10.50
10,00,000 ...	1,52,500	15.25
15,00,000 ...	2,77,500	18.50
20,00,000 ...	4,02,500	20.10
30,00,000 ...	7,02,500	23.40
40,00,000 ...	10,52,500	26.30
50,00,000 ...	14,02,500	28.05
75,00,000 ...	24,02,500	32.03
1,00,00,000 ...	34,02,500	34.02

NEWS IN BRIEF

THE final report of the National Income Committee is expected to be completed shortly.

The cost of power to be produced by the D.V.C. is estimated at 0.44 anna per unit.

The Central Government has given a loan of Rs. 7 crores to the Punjab Government this year for its Bhakra-Nangal project.

Out of 480 ships which brought 38.6 lakh tons of foodgrains to India from abroad in 1952, the number of Indian ships was 54 with a total consignment of 3.22 lakh tons of foodgrains.

The total concealed income discovered by the Income-tax Investigation Commission and through voluntary disclosures, during the first quarter of the current financial year, is Rs. 2.93 crores.

Nearly 4,500 *gram sewaks* or village level workers are to be trained every year for absorption into the National Extension Service, which will reach one-fourth of the Indian rural population by 1955-56.

All except less than one per cent. of the claims filed by displaced persons for their properties in West Pakistan has been verified. Until a fresh law is enacted, the small number of unverified claims will have to remain pending.

The first of the six soil conservation research stations, to be started under the Five-year Plan, has been established at Sahibnagar in Hyderabad State. About 1,500 acres of eroded land belonging to the State has been placed at the disposal of this research station.

An extension of the Radio Telephone Service between India and Nairobi has now been made available also to Kampala, Mombassa and Dar-es-Salaam. The charge per unit call of three minutes is Rs. 40 and for every additional unit Rs. 13-5. The report charge will be Rs. 2-11.

In response to representations made to it, the Government of India has decided to consider, on an *ad hoc* basis, requests for the grant of exemption from customs duty leviable on research materials such as sera, vaccines, drugs, etc., supplied free of cost to approved Government research institutions for research purposes.

The Central Government has now brought into force all the chapters of the Forward Contracts (Regulation) Act, 1952, in the whole of India, except in the State of Jammu and Kashmir, with effect from 24th August, 1953. It will be recalled that the Act was placed on the Statute Book on 26th December, 1952. Chapter I of the Act came into force the same day.

The Railway Board has decided that a traffic survey should be carried out by the Western Railway for a metre-gauge railway line from Raniwara to Bhiladi. The line will be 43.6 miles in length, and would connect the Kandla-Deesa line with Raniwara. When completed, it would join the metre-gauge system in Jodhpur with the metre-gauge systems in Saurashtra and Kutch.

The dispute between the management of the Mysore Iron and Steel Works at Bhadravati and the workers which threatened to develop into a strike of about 6,000 workers has been settled. According to the agreement arrived at, the workers will get a bonus of three months' pay for the year ended March, 1953. They will also get dearness allowance at the rate paid to Government servants in Bangalore City with effect from August, 1953.

The Government of India has accepted the main recommendation of the Tariff Commission that protection to the wood screw industry should be continued for a period of four years ending 31st December, 1957. As regards the quantum of protection, it has decided, however, in consultation with the Tariff Commission, that the rate of protective duty should be fixed at 31½ per cent. *ad valorem* or five annas per gross, whichever is higher. The Government has also accepted the other ancillary recommendations of the Commission.

According to the policy announced for the import of cocoanut oil for July-December, 1953, established importers could utilise only half the face value of the licences for import in the form of cocoanut oil, the other half being utilised for the import of copra or cocoanut kernel. With a view to making larger supplies of cocoanut oil available in the country immediately, it has now been decided that quota licences issued or to be issued for cocoanut oil for the July-December, 1953 period may be utilised for the import of the oil upto two-thirds of the face value of the licences, the remaining one-third being utilised for the import of copra or cocoanut kernel only.

The Stores Purchase Committee, with Mr. S. N. Buragohain, Deputy Minister of Works, Housing and Supply, Government of India and Chairman of the Committee, presiding, has been taking evidence of some non-officials and members of Parliament in New Delhi. The Committee, which had issued a *questionnaire* some time ago, has received replies from 13 State Governments, 47 trade associations, 12 non-officials, including members of Parliament, and 17 Government departments and Government-aided organisations. The Committee proposes to visit Calcutta, Bombay, Madras and Kanpur shortly to enable representatives of trade associations, non-officials and officials of the Central Government in these centres to appear before it. The evidence of officials in New Delhi may be heard by the Committee between its visits to these centres.

An increase of 106,651 broadcast receiver licences over the total for the corresponding month of last year is disclosed by the returns for the month of May 1953, available now. In May this year, the licences in force were 660,781, as against 554,130 in the corresponding month last year. Under the existing licensing system, all licences expire on 31st December and delay on the part of the licence-holders to have their licences renewed causes a fall in the following month, January, the figure thereafter steadily rising each month. Thus the total of broadcast receiver licences in force in December 1951 was 635,026 but, in January 1952, it fell to 473,759. Thereafter it steadily increased and crossed the previous December's total in August 1952, when it was 652,389 and further improved to a total of 694,560 in December, 1952, showing an increase of 59,534 over the total for the corresponding month of the previous year. Similarly, a steady increase is shown by the figures of the first five months of the current year which are: January 587,169; February, 611,872; March, 633,415; April, 648,748; and May 660,781.

From Abroad

The Philippine Sugar Association has estimated the 1953-54 Philippine sugar crop at 1,325,498 short tons.

More than 1,000,000 American children receive social security benefits and a total of 5,600,000 Americans are receiving old-age and survivors' benefits.

The Egyptian Cabinet has approved a project for the construction of two pipelines to supply Cairo with heavy fuel oil from Suez at an estimated cost of £2 million (Egyptian).

An eight-man Japanese trade mission, led by Mr. Inagaki, President of the Japanese Trade Association, is now in Rangoon, negotiating a long-term trade agreement with Burma.

Malayan tin output in July, 1953 was 4,705 tons, as against 4,262 tons in the previous month. This represents production of tin concentrates in terms of metal converted at 75.5 per cent.

The aggregate income payments in the U.S. amounted to $295 billion in 1952, as compared with $243 billion in 1951, an increase by 5 per cent. The national *per capita* income at $1,639 is four per cent. more than in 1951.

The International Materials Conference (I.M.C.) stated early this week that further allocations of nickel was unnecessary. The Conference's Manganese-Nickel-Cobalt Committee announced that it had decided not to recommend a plan of distribution for nickel for the fourth quarter of 1953.

A conference of the Transport Ministers of the Organisation for European Economic Council countries and of Spain and Yugoslavia will be held in October in Brussels, for the purpose of setting on a permanent basis the European Conference of Transport Ministers. The Ministers will have before them the report of the Conference on European Inland Transport which took place recently.

The Senate Banking Committee will begin hearings on 15th September on a proposed programme to encourage U.S. investment abroad and thereby foster world trade. A spokesman of the Committee revealed that the group would investigate methods of increasing U.S. international trade through the Export-Import Bank, the World Bank and other organisations and devices which would facilitate the investment of U.S. capital abroad.

Ceylon's external assets fell by Rs. 151.8 million (about £11.4 million) in the first six months of this year. Between January and June, assets fell from Rs. 836.9 million (£62.8 million) to Rs. 685.1 million (£51.4 million). The country's money supply increased by Rs. 3.1 million in June, reversing the downward trend since February. The increase was due to the expansion of commercial bank credit both to the private sector and the Government and to a rise in the domestic assets of the Central Bank. In June, there was a trade deficit of Rs. 22.9 million, which brought the cumulative deficit for the first six months to Rs. 31.3 million.

The U.S. Commerce Department reports that the armistice in Korea has had "little immediate effect" on business activity in the United States. The Department's monthly report on economic activity, issued last week, said business this summer was the best on record, with private and public demand for goods continuing strong. Industrial activity continued high, with steel and automobile production in July at near-record rates. New construction expenditures, for the month aggregated almost $3,300 million. Manufacturers' sales in June remained above $26,000 million for the third successive month. Personal income continued to rise at a moderate rate and was accompanied by a corresponding increase in consumer buying. Increases in wages and salaries in non-agricultural employment more than offset declines in farm income. Employment during July reached 63,100,000, with unemployment at the lowest for any July since World War II.

PERSONAL

MR. B. K. Banerjee, Section Sales Manager, Caltex (India) Ltd., Calcutta, has left for the U.S. under the Caltex Technical Training Programme.

Senhor Marcos de Sousa Dantas has been nominated President of the Bank of Brazil, replacing the acting President General Anapio Gomes. Senhor Sousa Dantas was the Exchange Director of the Bank before.

Mr. Motiram D. Advani, till recently an Assistant Commissioner of Income-tax, has been appointed by the Government of India as Public Relations Officer in the Income-tax Department, Bombay City.

Mr. P. A. Dunbar, technical engineer, Bombay branch office, Standard-Vaccum Oil Company, left Bombay this week for the United States for advanced training technical industrial lubrication engineering. He is the 25th Indian member of the staff of the Company sent to the U.S. for advanced training in petroleum marketing.

Mr. Raghunath Rao, Assistant Director-General of the International Labour Organisation, left Geneva to-day on a ten weeks' mission to Ceylon, Japan and India in connection with the forthcoming I.L.O. meetings and also for consultations regarding the Organisation's technical assistance programme in Asia.

Mr. Clarence Randall, Chairman of the Inland Steel Corporation, and Vice-Chairman of the International Relations Committee of the National Association of Manufacturers, has been chosen by President Eisenhower to head a new study commission set up by Congress to re-examine U.S. foreign economic policies.

Prof. C. N. Vakil, Director, University School of Economics and Sociology, Bombay, who has been invited by the U.S. Government to visit the U.S., as a Leader-Specialist, left Bombay on Wednesday last. Prof. Vakil proposes to study the problem of investment of foreign capital in India. During his three months stay in the U.S., he will contact industrialists and others interested in the problem, as well as officials and economic experts on the subject. Prof. Vakil is now attending the round table conference on economic progress convened by the International Economic Association, now in session at Santa Margherita, North Italy.

Mr. B. Rama Rau, Governor, Reserve Bank of India, and Mr. K. G. Ambegaokar, Secretary to the Government of India in the Ministry of Finance, Department of Economic Affairs, left for Washington to-day to attend the eighth annual general meeting of the Board of Governors of the International Monetary Fund and the International Bank for Reconstruction and Development, scheduled to be held there from 9th to 12th September. Mr. K. G. Ambegaokar was recently appointed as India's alternate Governor on the International Bank for Reconstruction and Development. Mr. B. Rama Rau is India's alternate Governor on the International Monetary Fund. Mr. C. D. Deshmukh, Union Finance Minister, is India's Governor both on the Fund and the Bank.

Mr. N. D. Gulhati, Chief Engineer and ex-officio Joint Secretary, Ministry of Irrigation and Power, Government of India, will lead the Indian delegation to the meeting of the Indus Basin Working Party which is scheduled to begin in Washington on 8th September. The other members of the delegation are Mr. K. R. Sud, Chief Engineer and Secretary to the Punjab Government, and the following representatives of the Central Ministry of Irrigation and Power: Mr. D. D. Jaini, Consultant; Dr. J. K. Malhotra, Officer on Special Duty; Mr. Barkat Ram, Executive Engineer; Mr. M. L. Madan, Research Officer; Mr. K. L. Ahuja, Assistant Engineer; Mr. Mahendra Prasad and Mr. Haveli Ram. Gen. R. A. Wheeler, Dr. Harry Bashore and Mr. Neil Bass are expected to participate in the meeting on behalf of the World Bank.

"COMMERCE" 1928

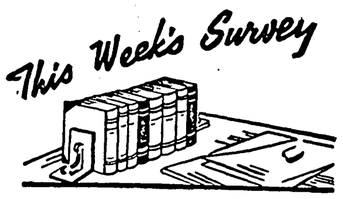
FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, 1*st September*

The Strike Epidemic

India is in the throes of a strike epidemic of unprecedented extent and virulence. The 128 separate disputes, reported in 1926, represented, in point both of days lost and work-people involved, a smaller number than in any of the six years during which regular statistics have been compiled. This comparatively peaceful state continued up to 1927, only about 25 strikes, some of them of an exceedingly petty nature, being recorded during the first quarter of last year. And a notable and very satisfactory feature of all these disputes was their almost entire freedom from acts of sabotage and violence.

Unfortunately, the improvement has not been maintained. It is true that the total number of disputes for the whole 12 months of 1927 was only one more than in the earlier period and that the actual number of work-people involved was slightly smaller. On the other hand, the number of days lost was practically double the 1926 total, and the current year has not only witnessed a recrudescence of the trouble but upon more extended lines and in a far graver form. The situation has developed with bewildering rapidity since the end of March, but the figures for the first quarter of 1928—the latest available—are sufficiency impressive. Between 1st January and 31st March, 1928, 58 disputes occurred, the number of men involved being 83,750 and days lost 1,005,000—the latter figure being practically the equivalent of that returned for the whole 12 months of the two previous years. We blame the politicians for the deplorable conditions thus disclosed.



U.P.A.S.I. (1893—1953)

THE Diamond Jubilee of the United Planters' Association of Southern India, celebrated at Coonoor on the 24th inst., marks the completion of 60 years of useful service by this august body. To commemorate this important occasion, the Association has published a souvenir volume, entitled *UPASI 1893-1953*, providing an excellent record of the general activities of the Association. Edited by Mr. S. G. Spur, beautifully printed and got up, the volume makes fascinating reading of the trials and tribulations of the pioneer planters whose aggregate contribution to the economic development of the Western mountain districts of South India is of immeasurable value. The story of the U.P.A.S.I., as told by Mr. W. Wilson Mayne, is an informative account. It tells, in simple language, the progress of the plantation industry in the South, in general, and of the Association in particular. It is followed by several articles on some of the important plantation areas in the South as well as on labour, political relations and sport, all contributed by veteran planters. Of these mention must be made of the article on political relations by Sir Frederic James who takes a critical view of the Government's controls on industry. This commemoration volume is undoubtedly a valuable document that should go to enhance the literature on the economic history of South India.

Starting its career in humble circumstances, the U.P.A.S.I. has had to struggle its way through stress and strain. Its path was not strewn with roses. At every stage, it had to contend with innumerable problems peculiar to plantation estates in forest areas separated by hills and vales. Spread over 500 miles of wild jungle country, the plantations were not easily accessible in the early days, the bullock cart being the only means of transport. The then Government with its economic policies not suited particularly to the development of the country, was quite unhelpful to the pioneers to make rapid progress possible. Labour supply position was far from satisfactory and planters had no legal means of recovering advances made to workers who failed to carry out their contracts. Malaria, too, added its share to the difficulties. Besides these general problems of planters, the Association had to grapple with its own problems. Lack of finances to conduct its affairs, thin attendance at meetings, rivalry between coffee and tea interests and prejudices and predilections of the early pioneers, all created by no means small botheration to those who were in charge of the institution.

The pioneers' struggle to overcome the troubles noted above is fully reflected in the Association's proceedings in its early days. The period was characterised by its attempts at finding means to make labour fulfil its contracts, fight against a low rate of exchange for the rupee, crusade against malaria, plead for a sheltered port at Cochin, and persistent agitation for the development of roads and railways in the plantation districts. The Association's activities gradually expanded to cover wider areas not only under coffee and tea but also rubber, followed by cardamom and other plantation crops. The tasks which fell upon the U.P.A.S.I. steadily increased. Famines, trade depressions, growth of labour legislation in the various States, establishment of the Central Coffee and Rubber Boards, the creation of the Central Tea Board with its two organs, namely, the Indian Tea Market Expansion Board and the Indian Tea Licensing Committee, placed new burdens and called for specialised services from the U.P.A.S.I.

Demands of the last war were more onerous, but the UPASI stood up to them. Says the *UPASI* 1893-1953: "It recommended applications for allocations of iron and steel, machinery imports, lease-lend lorries and cement and assisted members in securing supplies of a great variety of other estate requirements. It distributed quinine supplies and vegetable seeds and operated an informal rationing scheme for the allocation of lease-lend supplies of sulphate of ammonia. It harried the Government over food supplies for estates and protested against a variety of legislative proposals which bore hard on the industry."

Prior to independence, the U.P.A.S.I. had to deal with five separate administrations—the Governments of Mysore, Madras, Travancore, Cochin and Coorg—besides the Government of India. The former Indian State administrations were largely autonomous and, being sensitive of their internal sovereignty, pursued their own independent policies, often not quite helpful to the development of plantations. The U.P.A.S.I. had to keep in touch with these administrations in order to enlighten them on the industry's special problems with a view to getting their policies suitably adjusted. The measure of success achieved by the U.P.A.S.I. in this respect has undoubtedly been very substantial. Since independence, conditions have changed. Responsible Governments have been set up in the Indian States. Travancore and Cochin have been merged. There are now Ministers in Coorg. The Government of India has come more powerful. There is a general bias against industry, which is passing more and more under the control of the Centre. This is particularly so in the case of the tea, coffee and rubber industries, for the control of which Central legislation has been enacted. These tendencies have only increased the responsibilities of the U.P.A.S.I. to safeguard the interests of its members.

The foregoing is but a brief synopsis of the glowing record of the service done by the U.P.A.S.I. in the development of the plantation industry in the South. The review is by no means complete as under its ægis, sport, entertainment, and other social activities too are conducted. The influence exerted by the Association covers almost every project of public activity which has contributed to the prosperity of South India. The planting industry in the South, which has grown and developed under the protective wings of the U.P.A.S.I., may well feel proud of this institution which has now become a vigorous and youthful sexagenary institution.

EXPANDING FACILITIES FOR EDUCATION

The Central Government's scheme for expansion of facilities for education, disclosed this week, is a step in the right direction. For, while its immediate purpose is to provide employment for the educated unemployed, it is expected, in course of time, to improve the quality of manpower and social climate needed for planned development of the nation in a democratic set-up. The scheme seeks to encourage the teachers to take their share in all local development activities and in running village co-operatives and the *panchayats* in the national expansion and community project areas. A gratifying feature of the scheme is that it provides for expansion of social education also, though it is confined for the present only to cities. The concept of social education is a new one and includes, in addition to literacy, health, recreation, home life of the adults and their economic status and citizenship training. In other words, social education is a comprehensive programme of community uplift through community action.

The scheme provides for employment of 80,000 teachers, 30,000 during 1953-54 and the rest during 1954-55, and also for a large number of social workers during the same periods. The State Governments, to which the scheme has been referred, have been requested to send their concrete proposals by 10th September, as the problem of educated unemployment needs immediate attention and emergency measures.

The scheme provides for financial assistance to the States for a period of three years, on condition that the teachers employed under the scheme will continue to be maintained by the State Governments permanently out of their own resources after the period of assistance is over. For each new teacher, the Centre will contribute 75 per cent. of the salary in the first year, 50 per cent. in the second year and 25 per cent. in the third year, the remainder being the States' contribution. In the case of new schools, the Centre will also give some financial assistance in the first year for equipment. As a rule, new schools will start as one-teacher schools. In the beginning, it will be left to the people concerned either to provide buildings or to carry on the schools under such improvised conditions as may be possible. In order to train the selected men for their jobs, the scheme provides for a short orientation course extending to a month or six weeks, during which period salaries will be paid to the trainees. The whole position will be reviewed in the last half of 1954-55.

So far as social education is concerned, the Centre will assist to the extent of 50 per cent. of the salaries or honoraria to teachers and of contingencies, the latter subject to a certain maximum. The Union Government has intimated the States that they will be prepared to assist in the establishment of 3,000 centres during 1953-54 and of another 5,000 in 1954-55.

It is to be hoped that the State Governments will implement the scheme which, despite its strictly limited scope, may be expected to provide a partial solution to the problem of unemployment among educated men. But, the real success of the experiment will depend upon the quality of teachers and social workers selected for implementing the scheme. There is a woeful lack of general and technical knowledge among the educated, and marked deterioration even in their character, thanks to the fall in the educational standards of the high schools and universities which have been pawns in the hands of political and/or caste-ridden self-seekers. It is, therefore, imperative that the selection of candidates for the scheme should be based on considerations of efficiency, character and willingness to serve national interests.

MONEY GOES DOWN THE MAHANADI

Although the work on the Rs. 44-crore Hirakud Dam Project commenced in 1948, it has been included as part of India's Five-year Plan which lays considerable emphasis on multi-purpose projects as a means of augmenting the country's power and agricultural output. The project is designed to construct a dam across the Mahanadi, which flows through Orissa. Mahanadi literally means "Great River." Judging by the significant disclosures of the Sub-Committee of the Public Accounts Committee which investigated the financial administration of the Project, the river bids fair to earn yet another epithet by becoming a byword for extravagance. Although the Report of the Sub-Committee was presented to Parliament as early as in March, 1953, and brief references to it appeared in the daily Press then, it was only this week that the full text of the report was made available to the Press. Hence, the reference to the report this week. So startling are the revelations of grave financial irregularities and so damaging are the allegations made against the financial integrity of the authorities, that it looks as though it would require the services of a Hercules to set Hirakud matters right. The Central Government must bear the responsibility for the irregularities, for it is acting as the agent of the Orissa Government for purposes of the construction of the Project. Neither the Central Water and Power Commission, the agency which has undertaken the completion of the Project before it is handed over to the Orissa Government, nor the Ministry of Irrigation and Power, nor the Hirakud authorities come out well from the Sub-Committee's critical scrutiny of their roles in the Project.

There has been a lamentable lack of planning and utter disregard of financial propriety in the construction of the Project. It is difficult to single out any individual instance from the multiplicity of instances of reckless indifference to financial rectitude cited by the Sub-Committee. During the period between April, 1948, and November, 1952, nearly 4,424 works were begun, of which 3,516 were commenced without obtaining "sanctioned detailed estimates." In money terms, this means that a sum of Rs. 7.31 crores was spent without obtaining sanction to detailed estimates. At the time of the enquiry, expenditure to the tune of Rs. 4¼ crores still remained to be regularised. The Sub-Committee rightly contends the practice of sanctioning expenditure, after it is incurred, is a "meaningless ritual," which does not achieve the object of "securing financial control." It is also rightly indignant that, even after a lapse of nearly three years since the project was undertaken, the "volume of irregular expenditure" has been allowed to grow "out of all proportion." This is really a bald summary of the actual state of affairs. Behind these figures lie a sorry tale—nay, tales—of official ineptitude and extravagance.

Why were such large sums spent without obtaining prior sanction? The Sub-Committee attributes the financial irregularity to the fact that the "finalised designs of the major works had not been prepared and approved by C.W. & P.C. well in time." Indeed, it is this absence of forethought which explains a great part of the administrative irregularity that has occurred in Hirakud. In 1948, about Rs. 5 crores worth of stores were brought to Hirakud without making prior arrangements for storage so that they had all to be "dumped in the open," where proper control and check could not be exercised. No system of adequate accounting was adopted. The stores accounts continue to be in a chaotic state. The Sub-Committee says: "The present position is so unsatisfactory that it will take many months to set right the accounts and to verify whether all the balances that ought to be there are there."

That the taxpayer has had to pay a very heavy price indeed for all this carelessness and inefficiency of the Government will be clear from three instances. The first relates to the construction of a subsidiary reservoir. After spending Rs. 1.40 crores over the reservoir, it was found necessary to abandon the entire project on technical considerations. If these considerations, which, in fact, had been emphasised by a technical committee, had been allowed to influence judgment, the entire expenditure might have been saved. The second relates to the expenditure of Rs. 60 lakhs on an "unfinished bridge over a non-existent canal." In this case, it was found that the actual expenditure exceeded the initial estimate by Rs. 18 lakhs. The Sub-Committee regrets that, although a "period of 2½ years has elapsed since the bridge was completed, the engineering authorities have not yet finalised the accounts of the bridge nor regularised the excessive expenditure." The third relates to the purchase of sleepers and of bullocks from the Punjab. The deal appears extremely shady, to say the least, particularly because the concerned officers were shielded by the authorities with a loyalty that is worthy of a better cause. The Sub-Committee noticed "grave irregularities in the purchase of sleepers." Four wagon-loads which, according to records, were despatched, never reached their destination. Although earth-moving machinery and tractors were available at Hirakud, a brain wave occurred to an engineer who thought that bullocks from the Punjab could do the job better. A part of the contract for sending the bullocks to Hirakud was given to a relation of one of the officers concerned. But it was later found that the poor animals were unequal to the task. And the entire idea of the use of bullocks and buffaloes was abandoned, resulting, therefore, in "infructuous expenditure." After this, no comment is called for.

The Sub-Committee puts the whole matter mildly, indeed, when it says the "grand spirit with which the Project was originally conceived is not reflected in the manner of its execution." Notwithstanding the "short-circuiting" of procedural rules, the progress of the Project is "far behind the schedule." The Sub-Committee rejects the C.W. and P.C.'s plea that it "was not aware of what was going on." It emphasises the need to implement the suggestion for the appointment of a Chief Accounts Officer to function under a Joint Financial Adviser, which was reiterated at a high level conference as far back as 1948. Finally, it recommends the appointment of an Administrator for this Project, who, in consultation with a Financial Officer of adequate status and powers, could be relied upon to take correct decisions.

From what Mr. Gulzarilal Nanda, Minister for Planning, stated in Parliament, last March, when there was a brief debate on the Sub-Committee's report, it would appear that the Government has accepted these recommendations, especially those relating to the bifurcation of the functions of the Financial Adviser and the Chief Accounts Officer. He also announced that the Government was considering other details relating to the exercise of financial control over the Project. The Government will do well to state the measures it has adopted, if only to allay public apprehensions about the future of this important national enterprise.

(Concluded from third column)

from February, 1954, will be levied at the rate of Rs. 120 per acre for lands under sugarcane. This increase has come surprisingly when the price of sugarcane has been officially reduced by 25 per cent.

But even more surprising than this staggering increase in the canal water rates is the wanton increase every time in the rate for lifting water at a great height from rivers and *nallas* flowing through the canal areas. The charge is for water going to waste and for which the Irrigation Department is not required to incur any expenditure. It is the cultivators who have to undergo heavy capital outlay and running charges for lifting water. For those growing sugarcane or plantains with the help of such water, the charge is raised from Rs. 45 to Rs. 60 for heights upto 45 feet, and from Rs. 30 to Rs. 40 where the water has to be lifted for more than 45 feet. It is in the interest of agricultural production to encourage lift irrigation, especially as we have in this State very limited irrigation facilities. It would be natural to expect any Government not only to allow free use of such water for agricultural purposes but to give some subsidy to those proposing to do so. Such an insane irrigation policy on the part of any Government can but point to only one conclusion: the financial plight of the Government must, indeed, be very desperate.

—*All Rights Reserved.*

OFF THE RECORD

(By "ROVER")

I WONDER how far the business community in the State of Bombay, which has scored a kind of Pyrrhic victory over the State Government, in general, and the Finance Minister, in particular, by forcing their hands to abandon the multi-point sales tax in favour of a two-point levy, feels about the proposed change in the structure of this tax. On balance, perhaps, it has something on the credit side, inasmuch as the inter-trade transactions have been freed from this shackle. I have, however, a feeling that the general run of business men are likely to get themselves lost in the complexities of accounting which this new system would force them to adopt with regard to the innumerable transactions which they have to enter into. At the same time, I have a feeling that a certain class of traders with a sporting trend of mind, who delight more in evading taxes than in earning more legitimate profits, will find new and fresh openings for exercising their skill under this new version of the tax. The bureaucracy in Bombay believed that, under their multi-point tax rules, traders had to run straight, however crooked their nature. How mistaken it was can easily be seen by the large number of transactions entered into daily in the name of firms and individuals which only existed in the books of traders.

Tax evasion is detestable, from whatever angle you view it. But that is no reason why the authorities should, in drafting their tax measures, concentrate all their attention on sealing up all the loopholes and crevices in order to defeat the efforts of a comparatively few unscrupulous persons, to the extent of making things uncomfortably and even expensively hard for a large class of law-abiding citizens. This is a new feature of almost all our laws, rules and regulations and, in certain things, this tendency is being carried to absurd proportions. Every man, from the official point of view, may be a potential murderer or, worse still, one likely to commit an offence against Prohibition, but it would hardly do to put each one of us in chains or detail a constable to keep an eye on every individual's movement. The checks and counter-checks provided in the new Bill to prevent evasion are not merely irritating for honest traders, but likely to prove ineffective, considering the amount of detailed work that will devolve on the inspecting and assessing staff, however much it is enlarged.

A yearly turnover of Rs. 15,000 for a trader to-day is very common. Few of these would have the legal acumen to follow the implications of the intricate provisions of the new Bill. In thousands of small establishments, it would be difficult for them to maintain, without the aid of trained accountants, their sales records and accounts in a manner which would be intelligible to the assessors. It would be still more difficult for them, even if they did succeed in keeping their books in conformity with the sales tax requirements, to present them in a consolidated form for assessment under various categories, without the aid of sales tax experts. This would result in the small trader being gradually eliminated and squeezed out of his gainful employment. I wonder why a Government, which professes so much sympathy and love for small and cottage industries, should choose to be so hard on the small trader.

The whole trend of modern legislation, so far as it affects trade and commerce, with its insistence on licences and permits for this and that, maintenance of voluminous registers and records and submission of periodical returns, is gradually to render one, two or three-men establishments in towns and villages very difficult to run and I have little doubt that this fact has been, to a certain extent, responsible for increasing unemployment among the moderately educated middle class. It takes statesmanship and long views to foresee the many long-range effects of laws on the social structure and the standard of life of the masses. Unfortunately, many of our law-makers are not equipped intellectually for understanding all the implications of their activities and those who are, are so heavily burdened that they have not the requisite time to think them out. Mass production, be it of consumer goods or laws, can never secure artistry or quality.

Another idea which has come to me in trying to study the new Sales Tax Bill is that, in a set-up like ours, it always pays to agitate and to organise. Commerce and industry are, by their nature, better organised than the numerically much stronger class of consumers. The multi-point sales tax in operation to-day was far more ruinous for the consumers than for the trade. For the trade, after all, it was more a question of obstacles in the normal exchange of goods than an actual financial burden. The tax in most cases was paid by the consumer. It was he who had to pay more for his purchases. With his rigidly limited resources, it was the consumer who had to reduce his standard of living, or go without certain things, because he was made to pay more for certain others. So-called luxuries, even an occasional one, had receded to regions beyond his reach.

The business community carried on its agitation against this heavy impost in the name of the consumers and only incidentally mentioned its own grievances. But, when the time came for revising this measure, possibly because of a heavy fall in the revenue estimated from this source, the common man's friend, Dr. Jivraj Mehta, did not think of reducing his burden, but tried to placate only the more vocal business man and removed some of his hardships. In fact, he took jolly good care to see that the consumer did not cheat him of his pound of flesh by resorting direct to the manufacturers or the importers for his supplies. Few in fact would have been in a position to do so and he could very well have afforded to lose the small amount of tax involved in an infinitesimally small number of such transactions between the producer and the consumer. In his greed and in his dire need for funds, he even lost sight of the fact that, in the modern conception of a Welfare State, such direct relations are to be favoured and encouraged.

When it comes to extracting cash from harassed housewives out for their daily shopping, even the much vaunted welfare must go by the board. To my mind, this is one of the ugliest features of the revised sales tax proposals of the Finance Minister of the State of Bombay. Perhaps, he would like me to be thankful to him for not asking me to pay his sales tax, even in those cases where I may chance to produce some goods for my own consumption. I am sorry that, in my wrath against him, I have indiscreetly mentioned this likely source of additional revenue. He is not beyond profiting by this suggestion and proposing an amendment, when the Bill is being considered by the State Legislature, to the effect that all those not purchasing their requirements in the open market and trying to produce them in their own backyards or homesteads will be taken and treated as tax-evaders!

A Tax-crazy Government

I have come across, this week, an instance of tax-craziness which has taken hold of the Government of Bombay, to which, if I had not seen it in the form of an official notification issued by a very responsible officer of this Government, I would have refused to lend any credence. When the whole country is talking about increasing irrigation facilities and bringing more land under irrigation, to improve the standard of life in the rural areas, this Government of the people, by the people and for the people, has quietly gone and increased the irrigation rates in the Deccan Canal areas by as much as 33 per cent., by an executive fiat, besides having imposed, at the same time, a stiff irrigation cess in these areas. As this increase has been effected by an official communication, naturally enough, the authorities do not condescend to explain why a fresh increase in the rates has become necessary.

Early in 1946, about seven years ago, the irrigation charge for the sugarcane crop, for instance, was Rs. 45 per acre. From the 15th of February in that year, it was suddenly raised by 33 per cent. to Rs. 60 per acre. Five years hence, i.e., from 1951, this rate was increased by another slab of 33 per cent. and fixed at Rs. 80. This was certainly breath-taking for the agriculturists, but even before they could get their breath back, in the following year, the rate was stepped up to Rs. 90 from the 15th of February, 1952. 1953 was a year of grace. But to make up for this undue leniency shown to an undeserving class of cultivators, who fattened themselves on officially supplied water, the Superintending Engineer of the Deccan Irrigation Circle has ruled that this charge

(Continued in first column)

TREND OF U.K. FOREIGN TRADE

PROSPECTS OF IMPROVEMENT IN BALANCE OF PAYMENTS BETTER

(From Our Own Correspondent)

LONDON, *22nd August*

THE latest figures issued by the Board of Trade for the first half of the year, together with the July trade figures just published, show a rather better prospect for the British balance of payments than had appeared likely a little earlier in the year. The total adverse balance, that is, the difference between imports calculated on a c.i.f. basis and exports on a f.o.b. basis for the first half-year was £384 million. For the first half of 1952, the figure was £450 million. On the other hand, for the second half of 1952, the figure was £300 million. This visible trade balance has, therefore, shown some fairly rapid fluctuations from a monthly rate of £75 million in the first half of 1952, £50 million in the second half-year rising slightly to £54 million monthly in the first quarter of 1953 and then steeply to £74 million monthly in the second quarter of 1953 —a monthly average for the first half of this year of £64 million. For the month of July, a steep rise in exports has again reduced the adverse visible balance to £50 million.

LONDON LETTER

But a breakdown of this country's external trade between the sterling and non-sterling areas shows a much more favourable picture than do the overall figures. The following table breaks down imports and exports according to their origin and destination:

Trade Figures for the first half of 1953.

(In £ million)

	Non-sterling	*Sterling*	*Total*
Imports c.i.f. ...	900	792	1,692
Exports f.o.b. ...	702	606	1,308
Adverse balance ...	198	186	384
Adverse balance first half 1952 ..	445	15	450

The improvement, as compared with the first half of last year, is very apparent, for the adverse balance then consisted almost entirely of a deficit with the non-sterling world which cost gold and dollars. Now the deficit is almost evenly shared between the non-sterling and sterling areas, so that that part of the deficit which hurts has been more than halved. The change has been due to a heavy reduction in imports from the non-sterling area, coupled with only a slight reduction in exports. Indeed, exports to the dollar and O.E.E.C. countries have been *increased*, although this improvement has been swallowed up by a sharp reduction in exports to the countries which the British Treasury calls the "three-nons," that is. non-dollar, non-O.E.E.C., non-sterling.

Trade with Sterling Area

The trade with the sterling area has been subject to special fluctuations, imports having increased sharply as a result of heavy shipments of wool and cocoa, while exports have been reduced largely through the restrictions imposed by Australia on such things as consumer goods and motor cars. These restrictions have already been substantially lifted and their further removal is anticipated, so that exports to the sterling area should go on improving. There will no doubt also be an improvement to those areas which have increased their exports to the United Kingdom, and, on this showing, the figures for the second half of this year should be even better.

If the imports shown in the table above are adjusted to allow for freight and insurance, the total deficit for the first half-year of £384 million is reduced to £214 million or, say, an annual rate of £400 million. After allowance is made for invisibles and the expected slice of U.S. defence aid, this should certainly give the Chancellor the £100 million surplus which he expects by the end of the year—if not more.

The monthly export figures have been remarkably stable—those for the first quarter averaging £208 million for the U.K. products only, with re-exports at £10 million, and for the second quarter averaging £210 million for the U.K., products with re-exports at £8 million. The increase in the July figure to £234 million, with re-exports at £9 million is largely due to the larger number of working days, although there is a net improvement.

Nevertheless, there is a certain amount of uneasiness as to whether the level of exports can be maintained, let alone increased. The Treasury, for instance, in a bulletin to industry, has pointed out how German and U.S. competition in engineering exports has stiffened. Furthermore, imports may resume their upward movements, although, against this, there is the very strong possibility of continued price reduction. But, the trade picture as a whole at present does not give any cause for despondency, neither does it show much prospect of a large surplus for overseas investment.

Control of State Industry

LONDON, *17th August*

Ever since the Socialist Government nationalised some of the major industries in the country, the problem of Parliamentary control over the Government's assets asserted itself—transport, coal-mining, gas and electricity, not to mention the steel industry now being denationalised, are all basic industries the output and costs of which affect the whole economy. There could be no question that the nation through its Members of Parliament has the right of full information as to what these vast monopolies were doing. Yet the very process of setting up special Boards for each industry removed the latter from direct Parliamentary control and Members of Parliament found to their dismay that, while before nationalisation, they could have asked questions about the coal mines of the Minister of Fuel and Power, the same questions would now be answered by the Minister saying that it was none of his business and was a matter for the Board. Parliament had, therefore, to wait until the publication of the annual report of each industry, which might follow a year or more later, before being able to debate any matter concerning the industry.

This situation was obviously so unsatisfactory that a Select Committee was appointed in the autumn of last year to consider the whole question of parliamentary information and control over the nationalised industries. That Select Committee has now reported and recommended that a Standing Committee of the House of Commons should be set up as the liaison between the nationalised industries and the House. Presumably members seeking information about any nationalised industry would put their questions to the Standing Committee which would at any time be able to call for the information.

Different Points of View

Evidence was given to the Committee both by Ministers and industrialists, including the Chairmen of the nationalised undertakings, and two sharply differentiated points of view emerged. On the one hand, several industrialists and Mr. Herbert Morrison, the former Socialist Minister principally responsible for nationalisation, argued that to have a Standing Committee able to ask questions of the leaders of the nationalised undertakings at any time would weaken initiative and remove the advantages which a Board now has over a Government Department. The Government still carries on commercial activities through Government Departments such as the Ministry of Food and these activities are open to daily questions in the House and Ministers feel themselves responsible for and answerable for any actions of their departments—actions, which, at the time they are taken in the light of all the circumstances then prevailing, seem obvious and sensible, but which may, a month or two later, be harder to justify. But there is nothing easier than being wise after the event, and questioners in the House are always in that happy position. It is agreed, therefore, that if a Standing Committee can question the actions of a Board at any time, the Chairman of that Board will always feel that any decision he takes he must be able to answer for, perhaps, months later.

Role of Standing Committee

On the other hand, the supporters of the idea of a Standing Committee recognised that there was a problem and that it was not possible to leave things exactly where they were, with Parliament frustrated of any information or feeling of any share in control over these vast national assets. They recognised that everything would depend upon the approach of the Standing Committee to its work, but, since such a committee would meet in private with no publicity given to its activities other than such reports as it might wish to issue from time to time, there would be little attempt at making political capital out of the information which it could yield and it would use its powers of enquiry in a helpful rather than in a combative manner. The Report favouring the Standing Committee suggests that the Boards would be able to regard the Committee "not as an enemy or a critic but as a confidant and a protection against irresponsible pressure as well as a guardian of public interest." It also states specifically that the Committee should avoid any powers of enquiry into matters of detailed administration, including matters such as wage rates and negotiations with trade unions, and should confine itself to broad questions of policy. Clearly, everything will, in fact, depend upon the extent to which a Standing Committee would abide by its own self-denying ordinances. If it approaches its task in a pure spirit of helpfulness and a recognition that real responsibility for the industry rests on the Board and its Chairman and not on the Committee, and that, therefore, the former must be given the benefit of the doubt where conflicting judgments might prevail, the problem of parliamentary information and sense of ultimate control could be solved happily; but no doubt more will be heard of the pros and cons of the proposal in Parliament before the proposed Committee can be set up.—*All Rights Reserved.*

WORK STUDY INSTITUTE AT BIRMINGHAM

Britain's first residential Institute for Engineering Production Studies has been set up at Edgbaston, Birmingham. The new Institute, which forms part of Birmingham University, has been established with an endowment of £54,000 from Joseph Lucas Ltd., which also endowed the University's Department of Engineering Production.

The Institute is designed to help senior industrial executives to step up production in their factories. This will be done at the Institute by high-pressure study of the work and efficiency methods of industrialists coming from all over the country. In charge of the Institute is Professor T. U. Mathew, Lucas Professor of Engineering Production at Birmingham University. Although a few similar institutes exist in America, this is the first of its kind in Britain. In addition to about six fortnightly courses a year, the Institute will be used for executive conferences and round-table discussions.

PAKISTAN NOTES

INDO-PAKISTAN RELATIONS

WORLD BANK MISSION COMPLETES TOUR

NOW that an agreement over Kashmir has been reached between the Prime Ministers of India and Pakistan, many observers in both countries look forward to the early settlement of the several outstanding economic disputes between the two countries. Mr. C. D. Deshmukh, Indian Finance Minister, and Mr. Mohammad Ali, Pakistan Finance Minister, are expected to meet in New Delhi towards the last week of September next to discuss the issues relating to finance. It is expected that the evacuee property question will also be discussed between the representatives of the two Governments. Their talks are in furtherance of the discussions recently held in Karachi.

Another conference will be held in Calcutta in about three weeks' time to work out the necessary details for the implementation of the agreement in principle reached at Karachi on the exchange of the Cooch Behar and East Bengal enclaves. It will also deal with travel and trade problems relating particularly to Assam, West Bengal and East Pakistan.

After completing its one-month tour of Pakistan, the World Bank Mission left for the U.K. on Saturday last. During its stay in the country, the Mission visited all the Provinces and surveyed the economic conditions in order to ascertain Pakistan's needs and its requirements from the World Bank. Details regarding these are not available. It is, however, gathered that Mr. Mohammad Ali, Finance Minister of Pakistan, will be visiting Washington shortly to discuss the matter with the World Bank. Incidentally, it may be noted that Pakistan has so far received two loans aggregating $30.50 million.

Development of Steel Industry

With the signing of the agreement for the development of the iron and steel industry between the Pakistan Industrial Development Corporation and the well-known steel manufacturing firm of Krupps in Germany recently, a new chapter in the industrial history of Pakistan has been opened. Under the agreement, Krupps will undertake a survey and investigate prospecting, mining and quarrying in both the wings of Pakistan. Engineers of the firm are expected to arrive in Karachi some time next month.

There are some iron ore deposits in the valley of the Panj Kora River, especially in Baraul and Laspur-Jandawall Hills, and also among the hills south-east of Bannu (N.W.F.P). Brown hematite of low grade is found in the limestone and sandstone beds in some parts of Sind Kohistan. A deposit of hematite, containing at least a million tons of high grade ore, is located near Abbottabad (Hazaar). Large boulders of magnetite have been noted in the Indus Valley, but the source from which they have been derived has not yet been traced. It is believed to be in the Tribal territory, in the Marden district. A large deposit, containing at least 40 million tons of high grade magnetite, is found near Drosh in Chitral. Owing to the absence of fuel for smelting and their general inaccessibility, these deposits are not considered as of importance at present.

In the meantime, the Pakistan Government is finalising a scheme for the utilisation of steel scrap. The project, which is expected to be completed in about three years' time, will cost about Rs. 10 crores.

Textile Training Centre

The U.K. Government has, under the technical co-operation scheme of the Colombo Plan, offered Pakistan equipment and books worth £137,000 for a textile training centre proposed to be set up at Lyallpur. It will provide the services of experts for training Pakistan's personnel. The U.K. will also provide a teaching wing where instructions in theory and practice will be given, in addition to a small operational plant on which students can gain experience and learn correct technological methods.

Hides and Skins

Hides and skins constitute one of the major foreign exchange earners for Pakistan. The total value of exports during 1948-49, for instance, was Rs. 4.85 crores, representing about 27 per cent. of the total export receipts. Out of an aggregate output of 13 million pieces, as many as 10 million pieces are exported annually. The prosperity of the hides and skins sector of Pakistan's economy is, therefore, closely bound up with the changes in the world markets. Efforts are, however, being made to reduce this extreme dependence by raising the domestic consumption of hides and skins. It may be noted, in this connection, that the Government of Pakistan has granted tariff protection to the leather industry.

That the efforts at developing the indigenous leather industry have been met with success will be evident from the fact that supplies of hides and skins are being diverted from the export trade to domestic consumption. An indication of this is provided in the fall in exports in recent years. The earnings for export of hides and skins during 1952-53 amounted to Rs. 2.26 crores. Export of cow and buffalo and sheep skins are on world open general licence. Goat skins are on O.G.L. for American account area and subject to quotas for the rest of the world. There is already a long-term scheme for promoting exports of hides and skins sponsored by the Commerce Ministry.

• • • •

A scheme for the construction of a railway line between Muzaffargarh and Dera Nawab Sahib in Bahawalpur State is reported to have been finalised by the Government of Pakistan. The cost of the scheme is estimated at Rs. 2.75 crores. The implementation of the scheme is reported to commence by the end of this year. The new line will cover at least 100 rail miles and will divert most of the traffic from Thal to Karachi and Quetta which is now passing through Multan. It is further reported that the Pakistan Government is surveying the possibilities of the construction of a railway line linking Quetta with the Kalat coal mines.

• • • •

The last seven of the 43 sluice gates for the Kotri barrage, in Sind, which are nearing completion at an engineering works in Ipswich (Suffolk), are expected to be ready for shipment to Pakistan in a few weeks' time. Three more of the 60-foot span gates are at present being shipped from Ipswich; the other 33 sluice gates and two gates and a lifting bridge for the navigation lock at the site of the barrage have already been delivered to Pakistan, together with virtually all the mechanism for all the gates. The whole of the water-control equipment for the barrage is expected to be in Pakistan by the end of the year.

The sluice gates for the Kotri barrage, which will irrigate 1,600,000 acres of the Sind desert, are being built by a British firm which has constructed a large number of the giant sluice gates that are controlling waters in many parts of the world.

URBAN CO-OPERATIVE BANKING

PROGRESS IN RECENT YEARS QUITE SATISFACTORY

DR. Jivraj Mehta, Minister for Finance, Government of Bombay, could not have chosen a more fitting occasion than the Conference of Urban Co-operative Banks in Maharashtra, to review the progress of urban co-operative banks in India in general and in the Bombay State in particular. Inaugurating the Conference at Sangli last week, Dr. Mehta pointed out how urban Co-operative banks had registered satisfactory progress in recent years. The figures furnished by Dr. Mehta are very encouraging and augur well for the future of Co-operative banks in India.

It may be noted that urban Co-operative banks are intended to function in areas where Joint-stock banks cannot ordinarily take much interest in developing banking business. They supply small loans needed by people of moderate means like grocers, artisans, factory workers, street hawkers, motor and *ghurry* drivers, carpenters, blacksmiths, clerical personnel, small shopkeepers, etc. Serving these small men is by no means an easy task, because the cost of financing and recovering small loans is high. Again, the urban Co-operative banks, serving as they do, extensive areas, spread out to numerous towns and cities, may not, under ordinary circumstances, have full and intimate knowledge of the standing and resources of persons of moderate means which is a prerequisite of sound banking practice. They have, therefore, to endeavour to secure greater knowledge of their clientele and thus have to qualify themselves to serve the needs of the middle and lower classes of society. For the average middle class man whose needs extend from Rs. 50 to Rs. 5,000, the urban Co-operative bank has come to be felt as the most suitable source of cheap credit.

Considered in the light of these handicaps suffered by urban Co-operative banks, the progress made by these banks becomes all the more impressive. Dr. Mehta's comparative figures are revealing in this context. A significant feature of these figures is that, while the progress of Joint-stock banking has receded, that of urban Co-operative banking has been heartening. Thus, the number of Joint-stock banks in India declined from 648 in 1946 to 534 in 1952. This is partly due to amalgamation in some cases and to closure in certain others owing to uneconomic operations. However, their owned resources in the shape of paid-up-capital and reserves increased from Rs. 66 crores to Rs. 74 crores, but their deposits went down from Rs. 1,168 crores to Rs. 957 crores. The case of Co-operative banks, on the other hand, showed a different trend. Their growth has been consistently progressive. Thus the number of Co-operative banks rose from 285 in 1946 to 445 in 1952. During this period, their paid-up capital and reserves nearly doubled, that is, from Rs. 11 crores to Rs. 21 crores. A similar spectacular increase was noticed in their deposits which rose from Rs. 58 crores to Rs. 106 crores. Commenting on this notable progress, Dr. Mehta observed:

"It is true that, in the case of large Joint-stock banks, the setback in their progress is, to some extent, due to the reduction of business done in offices located in Pakistan. At the same time, even if relative progress of Joint-stock banks and Co-operative banks were compared between the years 1950 and 1952, it appears that, while in the case of Joint-stock banks, their share capital and reserves have declined by 4 per cent., and deposits by 5 per cent., the share capital and reserves of Co-operative banks have increased by 25 per cent. and their deposits by 10 per cent."

The steady progress made by Co-operative banking, as noted above, indicates that this type of banking has come to stay and will continue to prosper in the future set-up of the mixed economy envisaged for this country, a point forcefully emphasised by Dr. Mehta in his speech.

Progress in Bombay State

While painting the picture of development of urban Co-operative banking in India in an optimistic manner, Dr. Mehta was not unconscious of its drawbacks. This is evident from his references to the lopsided progress of the urban Co-operative banking movement which is confined, in the main, to two States, namely, Bombay and Madras only. In Bombay State, it is gratifying to note that the movement has made impressive progress within the past few years. Only such urban credit societies which actually undertake the business of banking as defined in section 277(F) of the Indian Companies Act, that is, the work of accepting deposits of money in current account or otherwise subject to withdrawal by cheques, draft or order and which have a paid-up share capital of not less than Rs. 20,000 are permitted to call themselves urban banks. Excluding the urban banks in merged areas, there was, we are told, a 60 per cent. increase in the number of urban Co-operative banks in the Bombay State between 1946-47 and 1952-53.

Apart from the general increase in the number of banks, there has been improvement in other directions as well. The following table, culled from Dr. Mehta's speech, is revealing:

	1949-50	1950-51	1951-52
No. of banks	170	178	184
No. of members (thousands) ..	186	207	220
Owned capital (in lakhs of Rs.) ..	233	260	287
Working capital (in lakhs of Rs.) ..	1,395	1,580	1,688
Owned capital as per cent. of working capital	16.5	16.4	18.2
Deposits (in lakhs of Rs.)	1,109	1,201	1,195
Overdues as percentage of outstanding loans	8.3	8.5	10.8 (Rs. 77 lakhs)
Cost of management as percentage of working capital	1.9	1.8	1.8
Net profits as percentage of working capital	1.11	1.23	1.27

Observing on the progress of urban Co-operative banking indicated in the table above, Dr. Mehta said:

"By reason of an extensive clientele, prospects of earnings and manner of investment, Joint-stock banks only expand their operations to the extent of 10 times their owned resources. Because Co-operative banks have to deal with people of moderate means, the ratio of owned capital to working capital is higher. The proportion kept in Bombay State is satisfactory from this point of view. One of the dissatisfactory trends of urban Co-operative banking in the pre-war years was the size of overdues in relation to outstanding loans. In 1938-39, 30 per cent. of the outstandings were overdues. During the war years this proportion declined from year to year until 1949-50 when it went down a little over 8 per cent. Recently, there has been some reversal of these trends. In 1951-52 overdues have again increased to nearly 11 per cent. I am sure this conference will direct its attention to what should be the reasonable size of such overdues. In spite of these overdues, the trend of profits is satisfactory, and so is the economy in the establishment expenses."

Dr. Mehta referred also to another interesting feature, namely, the increasing advantage taken by non-members of the facilities provided by urban Co-operative banks. Nearly 40 per cent. of the deposits are of non-members. Their deposits increased from Rs. 5.47 crores in 1950-51 to Rs. 5.63 crores in 1951-52. But the deposits of members declined from Rs. 6.53 crores to Rs. 6.31 crores. The loans are given to the people of moderate means against immovable property, gold and silver, and Gilt-edged security. Dr. Mehta, however, felt that loan facilities should be given to clients not so much on the backing of their immovable property as against their capacity to earn and repay the loans. He suggested that urban credit institutions should try to attract into their fold people who have a certain earning capacity, with a view to developing themselves on sounder lines.

The Bombay Finance Minister drew the attention of the conference to the amendment of Rule 27 of the Bombay Co-operative Societies Rules, 1927 by the Government of Bombay. This amendment provides that, urban banks, either in A or B class, having a paid-up share capital of not less than Rs. 50,000 and reserve fund of not less than Rs. 50,000 and having at least 10 years standing, may invest a portion of their surplus funds in the shares or debentures of any institution registered under the Indian Companies Act as may be approved by the Co-operative Bankers' Association subject to the fulfilment of certain conditions. This amendment was made, he said, with a view to increasing the earning capacity of the banks by suitable means. He, however, reminded them of the need for caution in venturing on such investments and stressed the importance of "the laws of safe-liquidity in banking enterprise."

The Conference, presided over by Mr. P. P. J. Chinmulgund, Registrar of Co-operative Societies, was attended by about 200 delegates from Maharashtra, Gujerat, Karnatak and Bombay City. Tracing the progress of urban Co-operative banks in the State, Mr. Chinmulgund conveyed a warning against the tendency of overtrading on the part of some banks. He said that it was in their own interest to keep their lending within the prescribed limit of 50 per cent. of the working capital or 60 per cent. of deposit liabilities, whichever was less. He proposed the starting of a federation or a supervising union Maharashtra region and to undertake audit and other common services.

COLLEGE FOR TRAINING BANK STAFF

The Indian Institute of Bankers is becoming increasingly popular among banking employees in India. Its twenty-sixth annual meeting, held in Bombay last week, marks one more year of progress. The essay competitions conducted by the Institute have been the target of many a budding bank employee who considers winning a prize in the competition as a means of gaining recognition of merit. The lectures organised by the Council of the Institute and the professional topics discussed in the quarterly *Journal* of the Institute have been found to be a valuable media for disseminating knowledge of banking. The Institute's examinations are being treated as passport for professional advancement by bank employees not only in the Indian Union but in Pakistan, Ceylon and Burma also. The Institute has not ceased its endeavours to enlarge the sphere of its service to the profession. The latest of such efforts is its willingness to co-operate with the Reserve Bank in its move for providing training facilities for the staff of banks.

The details of this move were unfolded at the annual meeting of the Institute referred to above, by its President, Mr. B. Rama Rau, Governor of the Reserve Bank of India, in whose absence the speech was read by Mr. H. C. MacColl, Manager of the Chartered Bank of India, Australia and China. According to Mr. Rama Rau, the Reserve Bank, which is closely interested in the question of providing training facilities, has already drawn up a tentative scheme for the establishment of a staff training college. The college will be run on the lines of similar institutions in the U.K., Australia, etc., where, we are told, banking operations are explained and suitably demonstrated to candidates drawn from the supervisory staff of banks with the aid of forms, documents and registers. To the proposed training college in India, a model dummy bank will also be attached. The training given will be complementary to the examinations conducted by the Institute. An encouraging feature is that, when circulated to all Scheduled banks, the scheme received a good response from them. What is more, the Reserve Bank of India, as the sponsoring institution, has agreed to bear all the recurring and non-recurring expenses of the college. A committee, consisting of representatives of banks, the Institute and experts in the field, has been, it is stated, set up to finalise the scheme. This Committee recently held its first meeting, and it is believed that, before long, the Staff Training College will be set up.

This move on the part of the Reserve Bank of India is, indeed, a commendable one. When started it will fulfil a long-felt need. There is dearth of trained staff in the country, particularly persons equipped with the technique of handling foreign exchange transactions connected with foreign trade. This Staff Training College should pay particular attention to this aspect of the curriculum, as more and more Indian banks are opening branches in overseas countries.

AN AMERICAN VIEW OF EMPLOYMENT POLICY

PRIVATE ENTERPRISE, NOT GOVERNMENT, MAKES JOBS

[Political leaders, Government spokesmen and professional economists, not to speak of the lay public, continue to be sorely exercised by the growing spectre of unemployment in our midst, the tendency for far too many men to chase the all too infrequent vacant places. The phrase, "full employment," that ambitious slogan of the war years, is receding to the background; the Government would be content if serious unemployment were avoided. Why is no success being achieved on this front? In a leading article on the vexed question, published a few weeks ago, we stated that the Government could, "by providing incentives for capital formation and by prompt and sympathetic attention to industry's ills" bring about industrial expansion which would, in turn, create "wider opportunities for employment." In other words, the Government would be ignoring its serious limitations if it thought that it could take upon itself the task of providing employment. It is the job of private enterprise, to provide jobs. And it can do that, provided it is allowed to play its full part. This view is borne out in the following article, reproduced from the July issue of the Guaranty Survey. It is true that, in this article, the problem of employment is presented only against the American economic background. But the conclusions of the authority are capable of wider application. He emphasises the need for creating a climate in which business is given the "strongest possible incentive to maintain and create employment opportunities." The "great inhibitors of employment," according to the author, are "heavy and burdensome taxes, high and inflexible labour costs, restrictions in managerial discretion, excessive restraints and regulations on business financing, threats to currency stability and antagonism towards profit-making."—ED.]

FOR many years the Annual Reports of the National Bureau of Economic Research have been objects of keen interest to economists, business men, and other close observers of current affairs. This year's report has attracted even more than the usual attention because its author, Dr. Arthur F. Burns, has since become Chairman of the Council of Economic Advisers and thus a key figure in the administration of the Employment Act. Moreover, the report deals with "Business Cycle Research and the Needs of Our Times," a subject directly related to the duties which Dr. Burns will be called upon to perform as the President's chief economic adviser. Presumably, therefore, the report contains important clues to the philosophy that will guide the Administration in observing the statutory mandate to "promote maximum employment, production, and purchasing power."

Role of Government

It is reassuring to note that Dr. Burns takes a modest view of the role which Government can effectively play in what he calls "contracyclical" action. His report opens with a candid acknowledgement that "the gift of prophecy has never loomed large in the endowment of economists, whether lay or professional." He recalls General Eisenhower's campaign statement that "never again shall we allow a depression in the United States" and comments that "this declaration of governmental responsibility goes well beyond the Employment Act." He remarks that in 1940, after seven years of Federal attempts "to engineer recovery and to reconstruct economic society," eight million workers were still unemployed. He recognises that the "principal outward symbols" of the "extensive experiments" in contracyclical action that have been undertaken since 1929 have been "a persistent tendency toward easy money and a persistent difficulty in attaining budgetary balance."

Although Dr. Burns believes that contracyclical action has become a political necessity and that such action can reasonably be expected to moderate the amplitude and abbreviate the duration of business contractions, he sees no adequate grounds for believing "that business cycles will soon disappear, or that the Government will resist inflation with as much tenacity as depression, or that deep but brief contractions such as occurred in 1920-21 and 1937-38 will never again take place."

Obstacles to Success

His doubts on this score arise from two main sources. First, experience with contracyclical action is limited and the "art" of practising it imperfectly understood. Second, there are practical obstacles to the effective use of such knowledge as exists, because "considerations of economic stability neither are nor can be the sole concern of public policy." These obstacles to complete success, he believes, are likely to continue.

Most significant of all, prehaps, is Dr. Burns' emphasis upon the need to control booms, rather than rely too largely upon measures to check down-swings. In support of this view he cites National Bureau studies tending to "reinforce the judgment, long entertained by observers of economic conditions, that the causes of varying degrees of severity of business contractions are to be sought primarily in the developments that precede them."

All in all, these views seem to augur well for as sane an administration of the Employment Act as statutory requirements and political necessities permit. They reflect a healthy scepticism and an awareness of economic realities that should work against a repetition of the fiscal profligacy and misguided experimentation of the 1930's, the naïve faith in "continuing full employment" through "Federal investment and expenditure" that prompted the original Full Employment Bill, and the dread of even minor business fluctuations that led to the adoption during the early post-war years of what Dr. Edwin G. Nourse, former Chairman of the C.E.A., aptly termed "inflation as a way of life."

Those who opposed the Full Employment Bill did so on two main grounds: they feared that it would be inflationary and that it would tend to destroy our free-enterprise system. They recognised that the only really potent instrument by which a Government of limited powers can endeavour to maintain continuing full employment is a highly inflationary instrument, namely, the expenditure of unlimited amounts of borrowed money. They had no faith in the "compensatory" principle by which borrowings in dull times were to be matched by repayments in good times, so that the budget would be balanced "over the cycle."

Authoritarian Measures

The opponents of the Bill recognised also that employment opportunities in a system of private enterprise are created by private employers, and the number of such opportunities existing at any time depends upon a large and complex set of conditions over which no one in a free society has control. As soon as, and to the extent that, such control is undertaken, the society ceases to be free. To insure continuing full employment, a Government must have control over the conditions that determine the volume of employment. A Government struggling to make good a full-employment commitment must find itself impelled toward authoritarian measures.

These fears were allayed to a large extent by the greatly modified form in which the Bill finally passed. All references to full employment, governmental guarantees and assurances, and Federal investment and expenditure were eliminated. "Maximum employment, production, and purchasing power," rather than "continuing full employment," became the objective, and this was to be sought by "all practicable means consistent with (the Government's) needs and obligations and other essential considerations of national policy." The mandate was confined to general terms and hedged with numerous qualifications and restrictions. Specific measures were left to the discretion of Congress and the Administration.

Fear of Regimentation

Despite these salutary changes, the risk remained (and still remains) that the Federal Government, subject as it necessarily is to political pressure, would attempt the impossible and in so doing would run upon the very rocks which the law in its modified form was intended to avoid. The consistently high employment that has prevailed during the seven years since the Act was passed has prevented the question from being put to a real test. Even under these exceptionally favourable conditions, however, experience has tended to confirm the fears of those who predicted that the employment commitment, partial as it was, would work toward currency inflation and economic regimentation.

The post-war years brought an upsurge in prices, but no "compensatory" Treasury surplus was achieved or seriously attempted. The demand for tax relief arose, but Federal expenditures for non-military purposes mounted to new all-time highs. The volume of debt expanded, but the Council of Economic Advisers continued to insist that low interest rates are always desirable. When rearmament demands were superimposed upon an already inflationary situation, prices, wages, and strategic materials were placed under Governmental controls, but the need for economy in public works and other non-military spending received little more than lip service. Inflation was deplored, but the possibility of reduced employment was dreaded even more.

Against such a background, it is encouraging to find the new C.E.A. Chairman stressing the statutory and practical limits to the Government's capacity and obligation to assume responsibility for the volume of employment. If this philosophy of moderation is made the basis of official policy, and is adhered to in the face of the political pressure that is sure to be brought against it, the harmful potentialities of the Employment Act will be minimised and its constructive aims promoted.

Free Markets

The outstanding need at the moment is to allow free markets to exert their normal restraining influence on business expansion. At present this policy is, for the most part, being followed, despite the strong criticism that has been levelled against it in some quarters. Business stability implies moderation in the upswing as well as in the downswing. Excessive booms beget excessive reactions.

A continuing need is to understand the current economic situation as thoroughly as possible. The Employment Act has set up a mechanism for this purpose, and it appears that the mechanism is to be expanded. Reports from Washington indicate not only that the three-member Council of Economic Advisers is to be revived but also that its studies are to be supplemented and to some extent implemented by a new Advisory Board on Economic Growth and Stability, consisting mainly of Cabinet members or their deputies, and concerned primarily with better co-ordination of Governmental plans and policies as these may affect taxes, interest rates, and other factors in the economic situation.

Another continuing need, and the most important one of all, is a political climate in which business is given the strongest possible incentives to maintain and create employment opportunities. This is the heart of any effective employment policy. Private enterprise, not Government, makes jobs. A serious decline in business activity creates an employment vacuum which is much too large for Government to fill without harming the currency, the private-enterprise system, or both. It is idle to say, as was so often said during the last depression, "If business will not create jobs, the Government will." Any such commitment is prompted by emotion, not reason, for it is a promise that cannot be kept.

Timing of Public Works

To a very limited extent, needed but postponable public works can be so timed as to moderate fluctuations in employment. To-day's needs include roads, schools, hospitals, and other projects aggregating many billions of dollars. Such projects can be helpful, but they cannot go far toward solving the employment problem. They are too slow and cumbersome to be timed with precision. They can provide only certain types of jobs, and these may or may not be the types needed in a particular instance. And the total volume of such projects is far too small to fill more than a small part of the gap created by a general business recession of substantial proportions.

The greatest contribution the Government can make, especially at a time of reduced employment, is to refrain from placing obstacles in the path of enterprise. Heavy and burdensome taxes, high and inflexible labour costs, restrictions on managerial discretion, excessive restraints and regulations on business financing, threats to currency stability, antagonism toward profit-making—these are the great inhibitors of employment. A Government that avoids these errors will have gone about as far as public authority can safely go in furthering the aims of the Employment Act.

ASSISTANCE TO HANDLOOM INDUSTRY

GOVERNMENT IMPLEMENTS ALL-INDIA BOARD'S SUGGESTIONS

EDITORIAL comment on the All-India Handloom Board's suggestion for reserving further fields of cotton textile production for the handloom industry, put forward at its recent meeting, was made in this journal only last week. It is now proposed to refer to the other recommendations of the Board and the steps which the Government of India has so far taken to develop the handloom industry. At its meeting, the Board urged the State Governments to organise relief measures of all kinds and provide credit facilities, so as to enable the weavers to keep their looms in production. Further, it emphasised the need for stimulating consumption of handloom cloth in the country. In its opinion, the Government of India should authorise co-operative societies and State depots to grant rebates on sales made by them, such being subsidised by rebates from the cess fund.

The All-India Handloom Board also examined the various schemes, with an aggregate expenditure of Rs. 7 crores, for the development of the handloom industry submitted by the State Governments having within their areas over 80 per cent. of the total number of handlooms in the country. It decided upon the broad principles which should be applied in considering these schemes and for the sanction of grant. These schemes, which are of a diverse nature, may be classified into the following five categories:—

(1) Organisation of a large number of weavers into the co-operative fold;

(2) provision of share and working capital of co-operative societies;

(3) arrangements for stepping up internal sales by opening depots and emporia, and through propaganda vans;

(4) establishment of research centres; and

(5) setting up of co-operative spinning mills, finishing plant, etc.

Co-operative Spinning Mills

Few would dispute the importance of the first four suggestions. It is, however, difficult to appreciate the reasoning behind the State Governments' suggestion for establishing co-operative spinning mills. One can appreciate the suggestion for co-operative finishing plants. But why a spinning plant? Supplies of yarns of various strength are being made freely available to handlooms. The spindleage in existence, if fully utilised, will be quite sufficient to produce the quantity of yarn required by the handlooms. According to one estimate, the cotton mills can supply sufficient yarn to produce the target output of 1,700 million yards on the handlooms. The setting up of new spinning mills on co-operative basis, therefore, will involve wastage of capital resources which could as well be utilised for the development of the handloom industry in other spheres. One has also to take into consideration the limitations that would be set by supplies of cotton. If, however, handlooms were to experience difficulty in getting yarn supplies, such could be solved by bringing about co-ordination of yarn production and supplies to handlooms. We cannot but recall what the Planning Commission itself has said. Says the Commission:

"The last problem of the mill textile industry, and perhaps one of the most important, is the necessity of co-ordinating the activities of this section with that of the handloom section. There are provisions in the Textile Control Orders, according to which even the composite mills could be compelled to supply free yarn to the extent they did in 1949-50 and also for securing 25 per cent. of the yarn output of all new units and extensions. But, so far these provisions have not been applied. In the event of sufficient cotton being available to enable the mill industry to work to capacity and with the incentive provided by the restoration of the 4 per cent. cut, if the spinning units produce sufficient yarn from the cotton, it might not be necessary to have recourse to these measures. The problem of the future development of the industry, discussed earlier, is intimately related to the problems of the supply of yarn to the handloom section. A close and continuous co-ordination between yarn production and supplies to the handloom industry will be necessary in order to utilise the cotton in the best interests of the country."

Be that as it may, the Government of India is reported to have under active consideration the series of recommendations made by the All-India Handloom Board. In fact the Government, it is said has undertaken to implement the recommendations "as far as possible and practicable." It has already given effect to one of the principal recommendations, namely, the one relating to the schemes for the internal marketing of handloom cloth. Thus, the Government has set up a central marketing organisation with regional offices at Madras, Bombay, Calcutta, Nagpur, Gwalior and Banares, and allotted an annual grant of Rs. 4.61 lakhs for the purpose. This body is entrusted with the task of assisting the handloom industry in respect of marketing, organisation, rationalisation, research and publicity. To be precise, the functions of the organisation cover the following:

(1) To study the existing market conditions, explore the possibilities of further development, bring to the notice of the trade channels handloom products produced in the various States, keep the handloom industry informed of the changing fashions and demands, and arrange for the direct transactions between the producing and consuming areas, with a view to minimising the need for middlemen;

(2) to examine the working of co-operative societies, keeping in touch with the alternative forms of organisation of weavers and master weavers;

(3) to collect data regarding the extent of competition between handloom and mill goods, types and quality of fabrics, cost of production, percentage marked and consumed locally and proportion exported to other areas in India and foreign countries, seasonal nature of production and demand, and the handicaps imposed by inequitable railway freight, octroi and local taxes;

(4) to investigate and report on the methods of winding, warping, sizing, beaming, dyeing and weaving employed in the various concentrated handloom centres; and

(5) to give intensive publicity for popularising handloom products, through advertisements, hand-posters, catalogues and journals; slide demonstrations, lectures, sales talks and organisation of showrooms in certain important towns for exhibiting samples and products.

With regard to the expansion of marketing of handloom products, in foreign countries, several schemes are being finalised. It is proposed to appoint four handloom officers in foreign countries to act as liaison between Indian exporters and overseas importers. It is also proposed to open emporia for handloom products in foreign countries under the ægis of the society for the marketing of products from all over India. In the first instance, the Madras Handloom Weavers' Co-operative Society will act as the agent of the Government in the implementation of these schemes.

Other Schemes of Assistance

In the meantime, the Government is going ahead with the various schemes of assistance to the handloom industry. These schemes, it may be noted, are financed from the *Khadi* and Handloom Development Fund created out of the proceeds collected by the levy of an additional excise of 3 pies per yard on mill cloth. Besides giving grant to State Governments, the Centre has sanctioned Rs. 61 lakhs as loan to the *Sarva Seva Sangh*, Sevagram, and other registered societies. This sum represents a part of the Rs. 95 lakhs recommended by the Board. The remaining amount is to be sanctioned as and when required. Another loan of Rs. 30 lakhs has been given to the All-India Spinners' Association for the purchase of cotton during 1952-53 by *khadi*-producing centres; the Association, however, has so far drawn only Rs. 10 lakhs. This loan excludes the grant of Rs. 9 lakhs for allowing a rebate of As. 3 in the rate on all sales of *khadi* and for marketing of *khadi* during 1952-53. The other amount sanctioned by the Centre includes a grant of Rs. 26 lakhs for giving a rebate of As. 3 in the rupee on all sales of *khadi* during 1953-54, a subsidy of Rs. 5 lakhs to those who spin and weave their own yarn, a subsidy of Rs. 3 lakhs to *khadi*-producing centres, and grant of Rs. 2.75 lakhs for distributing implements and accessories at concessional rates to *khadi*-producing centres.

There are, we are told, certain other schemes for which the Government will shortly sanction grants. Among these grants are Rs. 10 lakhs for price reduction on account of inferior quality *khadi* produced at newly set up centres, Rs. 10 lakhs for the existing (old) institutions, Rs. 5 lakhs for *gramodyog* exhibitions, Rs. 3 lakhs for research on cotton growing, looms, etc. Rs. 1 lakh for competitions and awards of prizes to best spinners and weavers of *khadi* and Rs. 72,000 for conducting spinning classes in jails.

SALES TAX ON TEXTILES

Commenting on the Bombay Sales Tax (Amendment) Act, 1953, we observed last week that the Act was too complicated to be readily understood by the common traders. That this was not at all exaggerated will be evident from a reference to the imposition of varying rates of sales tax applicable to different types of textile goods. These goods are classified under as many as four groups for purposes of the new Bill. These groups are:

(1) Goods which bear a special goods tax (Schedule E). In the list are included certain textile fabrics which bear a special goods tax of one anna in the rupee, besides the sales tax of 3 pies at the first stage and the general tax of 6 pies at the last stage. These fabrics are: (*a*) textile fabrics of any kind (except cloth woven on handlooms and coarse and medium cloth woven in mill or on powerloom) sold at rates not less than Re. 1-8, Rs. 3, and Rs. 4, per yard, where the widths are less than 22", 22" or more but less than 42", and 42" or more, respectively, and (*b*) ready-made garments (including handkerchiefs, hosiery and knitted wear) of such description and sold at rates not less than such amounts as may be specified, from time to time, by the State Government. All other types of mill-made cloth (other than handloom cloth and coarse and medium varieties) will be subject to a special goods tax of 3 pies in the rupee.

(2) Goods on which no sales tax will be levied at the first stage (Schedule C). They include (*a*) coarse and medium cloth produced by mills or woven on powerlooms and (*b*) cloth woven on handlooms, other than cloth sold at a rate not exceeding Rs. 2 per yard and other than *khaddar*.

(3) Goods which will be exempted altogether from any sales tax under the Act, provided they are sold by dealers recognised for the purpose by the Collector of Sales Tax (Schedule A). Among these are handloom cloth, the price of which is below Rs. 2 per yard and *khaddar* cloth, cotton yarn and sewing thread.

(4) Goods which will not bear any general sales tax of 6 pies in the rupee but will bear the sales tax of 3 pies at the first stage (Schedule D). This group includes (*a*) artificial silk yarn, (*b*) raw silk and silk yarn, (*c*) staple fibre and staple fibre yarn and (*d*) raw wool, wool tops and woollen yarn (other than knitting yarn).

The foregoing account reveals that, on textiles of superior quality, three different types of sales tax are required to be paid, and these together amount to as much as 21 pies in the rupee, which is a heavy incidence indeed. It is no wonder, therefore, that the textile trade should have expressed its disappointment at the new proposal of the Bombay Government. In a statement issued to the Press, Mr. P. M. Chinai, President of the Silk Merchants' Association, for instance, points out that, under the proposed change in the Sales Tax Act, superior quality textiles will have to bear a higher burden of tax. In his opinion, the incidence of sales tax can be reduced by doing away with the general sales tax in respect of articles which are subject to special sales tax. He alludes, in this connection, to artificial silk goods and woollen goods which would be subject to the maximum sales tax levy. To quote Mr. Chinai: "The general consideration underlying the imposition of a higher rate of tax on any article is that the article is an item of 'luxury.' It is erroneous to consider art silk piecegoods and woollen piecegoods as strictly items of 'luxury', inasmuch as they are required even by the common man. It is, therefore, imperative to reduce the incidence of sales tax on these two items."

Mr. Chinai, however, commends the Bombay Government's move to give relief to (1) dealers at the intermediary stages and (2) manufacturers and processors in respect of goods purchased by them for manufacturing and processing activities, as well as the move to exempt sales made for the purpose of export. But he is critical of the proposal to lower the limit fixed for registration of dealers from Rs. 30,000 to Rs. 15,000 and wants the existing limit to be continued.

EXPORT DUTY ON CLOTH

Once again, the All-India Exporters' Association, Bombay, has urged the Government of India to abolish the export duty on coarse and medium cloth immediately. In a communication addressed to the Union Ministry for Commerce and Industry early this week, the Association has drawn the pointed attention of the Minister to the disquieting effect of the retention of duty on export of cloth, especially of medium counts. There is said to be good demand for these counts in Indonesia, the U.K. and other countries, but the business which India would have otherwise received has been lost, on account of high export prices, thanks to the 10 per cent. export duty. These high export prices, it is pointed out, have enhanced the competitive capacity of Japan in the market for medium cloth. Apart from the price factor, frequent rumours of abolition of duty are also said to have hampered the export trade, for overseas buyers are hesitant to enter into commitments with Indian exporters.

In view of these factors, the Association observes that the delay in the announcement of the policy with regard to export duty is undermining the confidence of overseas importers for negotiating business with India. If, therefore, confidence is to be restored and if exports of cloth are to be promoted, the Government should, it declares, abolish the export duty. After all this levy, it says, is not intended for revenue purposes.

As the need for abolition of the export duty on cloth has been stressed ere now in these columns, it is unnecessary to refer to it at length again. Even at the risk of repetition, it must, however, be emphasised that the time has come when the Government should examine, in a dispassionate manner, this question.

TEXTILE COMPANIES ATTRACT INVESTORS' ATTENTION

STERLING AREA'S COTTON EXPORTS

(By Our Special Correspondent)

MANCHESTER, *18th August*

MANCHESTER LETTER

THE after-effects of the difficult trading period through which the Lancashire cotton industry passed in 1952 were bound to be shown in the financial results which came to hand towards the end of last year. To some extent they are still apparent in the figures now being received but the revival in demand which began nearly a year ago is beginning to throw a rather better light on affairs.

Some companies have clearly weathered the storm better than others and there is no doubt that the reorganisations which took place in the first few months of this year have assisted many in their liability to an excessive tax burden.

Indications have not been lacking during the past few weeks that a new spirit is abroad which has resulted in the attention paid to several textile companies on the Stock Exchanges and elsewhere. A year ago it would have been a very rash individual who contemplated launching out in textiles whether in the productive or distributive sphere. Now, however, there is evidence that some interests are not averse to the idea of extending their field of activity.

Mill deals, which were only too common during the post-war boom, particularly when merchants were anxious to guarantee their cloth supplies and weavers were keen to obtain control of spinning capacity, have lately been rumoured to be on the increase. Several companies have been discussed as likely to be involved in such transactions and it is known that approaches have been made in some directions. Prospective buyers have been on the look-out for mill companies which possess substantial reserves, but existing managements are well aware of their strong financial background and are not ready to sell unless there are particular reasons for doing so.

Big Warehouse Deal

After two months of rumours—and a rise in the "paper" value of the company of £2,000,000—the Directors of Rylands and Sons, Ltd., the Manchester textile warehousing group, have announced that they have received an offer for the ordinary stock. This, they said, was at a price "above the level at which dealings are taking place in the market." Advice from the Chairman, Sir Edward Rhodes, and his Board was that stockholders should not sell their holdings, but await a further official communication from the Company.

Since rumours first began about a deal, the value of the ordinary stock has advanced from below 14*s.* to around 35*s.* Confirmation of the take-over bid raised the price a further 2*s.* 9*d.* Linked with Rylands in merger talk have been several big store groups, notably, Great Universal Stores and Marks and Spencers Ltd.

Cotton Supply

Although supplies of raw cotton grown in such countries as the United States, Egypt and the Indian Union continue to provide the bulk of supplies for world users, the progress made in producing the raw material in agricultural areas of the British Commonwealth has been an interesting development over the past 30 years.

Some indication of the value of cotton exports in the economic battle being waged by the sterling area is given in figures lately released showing the principal exports of commodities and manufactured articles from sterling countries. The table below shows the quantity of cotton shipped abroad from the sterling area during recent years:—

(In million lbs.)

	Sterling area.			Non-sterling area			
Quarterly averages	U.K.	Rest	Total	Dollar area	O.E.E.C. countries	Others	Total
1948 ..	24	39	63	7	34	63	107
1949 ..	30	70	101	7	32	33	73
1950 ..	29	56	85	6	34	56	95
1951 ..	35	38	74	7	39	61	107
1952 ..	35	27	62	3	34	115	153
1953 1st qr.	42	43	86	10	63	107	185

The shift of sterling area trade to other quarters in the past year or two is most noticeable and in the first quarter of 1953 the level of shipments to dollar countries has reached its highest level. Despite the lower trend of total imports of cotton into Britain last year, arrivals from the sterling area showed no change from 1951 and remained in excess of purchases in the three previous years. Shipments in the first quarter this year for use in Lancashire were almost identical with those in 1952.

Price Index System

As the new season's cotton begins to come into circulation, the Raw Cotton Commission has, in past years, been accustomed to introduce varying quotations for forward delivery purchases. These have usually been at a discount and have had the effect of stifling business when current prices have been much higher than those quoted for delivery later in the year. Although slightly less than half of the cotton due to be imported into Britain this season will be on Commission account, there is still a good deal of interest in its published price levels and in particular in the revised system which is scheduled to start in a fortnight's time.

From the beginning of September widespread adjustments in the Commission's price lists will be introduced, the basis being altered to suit the changed circumstances arising from the larger degree of contracting-out. In an endeavour to adjust its quotations even more closely to the changes in prices abroad, there is to be a system of index prices. United States cotton, for example, will be grouped into nine sections according to grade and staple, each of which will have a basic index price. Particular qualities will be quoted at varying points off or on the index price for the group. A similar arrangement will apply to Egyptian descriptions, but the outside growths will not have so many different index prices.

It is probable that price indexes will be changed much more frequently than has latterly been the case for standard symbols, and day-to-day variations may well take place. Traders will again have the task of settling down to a new method of price revisions which may confuse the industry in its early stages. Even so, there will not be the minute-to-minute alterations in values which occurred when the Liverpool futures market was in operation and no doubt it will not be long before effective formulas are drawn up to deal with the fresh set of circumstances.

Jap Goods For Australia

Protests are being made by Lancashire textile exporters about the proposal to allow increased supplies of Japanese goods into Australia, for long regarded as one of Lancashire's chief overseas markets.

The Cotton and Rayon Merchants' Association, Manchester, in a letter to export firms, says it is understood on good authority that the value of the goods to be licensed will be restricted to £9,000,000 and that this will be spread over all classes of goods, including textiles.

Expressing its concern at the effects of this development on United Kingdom exports of cotton and rayon textiles to Australia, the Association says it is maintaining close touch with the Australian Association of British Manufacturers which has already made representations to the Department of Trade and Customs, Canberra.

In these representations the A.A.B.A. states: "It is felt that not only is this revised policy detrimental to United Kingdom trade with Australia but it appears to be a reversal of the policy of not granting import licences for goods of Japanese origin when similar goods are available from sterling sources."

Employment Returns

The changing pattern of activity in British industry is reflected in comparative figures of employment and job vacancies in the North-West now and 12 months ago.

While the numbers out of work have steadily declined, regional vacancies have risen substantially and the present labour requirement of over 40,000 is 10,000 higher than a year ago.

The most marked changes in the state of trade have taken place in the textile and clothing industries. In July, 1952, vacancies in all sections of the cotton and rayon industries aggregated little more than 1,000. With the disappearance of recession conditions, however, the demand for operatives to staff idle machines has rapidly increased and the labour requirement in the mills now exceeds 6,800.

As more firms contrive to expand evening shifts, the Ministry of Labour anticipate a further increase in the demand for workers. A similar recovery in the clothing industry has enlarged the manpower shortage from 3,800 to 6,050.—*All Rights Reserved.*

1952-53 COTTON SEASON REVIEWED

COMFORTABLE SUPPLY POSITION: RESUMPTION OF HEDGE TRADING

THE Indian cotton year now drawing to a close with the approach of 31st August, 1953, will be remembered as a memorable season, for it witnessed not only fairly comfortable cotton supply conditions but also an increase in consumption. Indeed, the comfortable supply position in India is only a part of the encouraging trend in the sphere of world cotton supply. Both in India and the rest of the world, cotton has ceased to be the problem commodity it had been for several years past. The Indian cotton year 1952-53 is also notable for the resumption of forward trading in its commodity, which was suspended nearly four years ago when the price ceilings fixed by the Government became unworkable.

The production of cotton during the 1952-53 season has been variously estimated. The official estimate places it at 3,050,000 bales as against 3,133,000 bales in the 1951-52 season. The following table gives the official version of the quality-wise distribution of Indian cotton.

(In 000 bales)

	1952-53	1951-52
Bengals	421	426
Americans	293	257
Oomras	733	996
Broach	265	125
Surti	118	71
Dholleras	290	190
Others	930	1,068
Total ...	3,050	3,133

The table above should be read with some care, since it is at variance with the trade estimates, which usually place the output at a higher figure. The table is important only from the point of view of the quality-wise distribution of cotton. As a quantitative estimate, it is defective, since experience shows that trade estimates are much nearer the correct figure. These estimates place the 1952-53 crop at between 33.3 lakh bales and 38.2 lakh bales. Even the estimate, given by the cotton branch of the Textile Commissioner's Office, places the commercial crop at 3,460,000 bales. A well-known and leading cotton firm places the crop inclusive of the portion of the crop which goes into village consumption, at 3,630,000 bales. On the basis of this last mentioned figure, the supply and distribution of crop for the 1952-53 season is compared with that in the previous season in the following table:

(In 000 bales of 400 lbs. each)

	1952-53	1951-52
Supply		
Indian cotton—		
Trade and mill stocks on 31-8-1952	1,983	1,494*
Foreign cotton—		
Trade and mill stocks on 31-8-1952	505	325*
Estimated production (including village consumption)	3,630	3,893
Imports of foreign cotton	665	1,264
Total supply ..	6,753	6,976
Distribution		
Indian cotton—		
Estimated exports	345	197
Estimated mill consumption	5,525	5,947
Village consumption	270	270
Foreign cotton—		
Estimated mill consumption	850	1,084
Total disappearance ..	6,990	6,538
Estimated carry-over stocks on 31-8-1953—		
Indian cotton—		
Trade and mill stocks	1,445	1,953†
Foreign cotton—		
Trade and mill stocks	320	505†
Total distribution ..	8,753	8,996‡

* As on 31-8-1952.
† As on 31-8-1953.
‡ Includes an unexplained difference of 20,000 bales.

The comfortable supply position during the 1952-53 season must be attributed primarily to the large carry-over stocks which were brought into this season. Thus the season opened with nearly 24 lakh bales of cotton. In the previous season too, the supply position was comfortable. But such was due to the large crop, estimated at about 39 lakh bales, and large imports of over 12½ lakh bales. The carry-over stocks, which were brought into the 1951-52 season, were comparatively small at about 18 lakh bales. If the extra factory consumption of cotton, conventionally assumed at 2.7 lakh bales, were excluded, the total supply position in the 1952-53 season was somewhat smaller at 64.8 lakhs bales, as compared with 67.2 lakh bales in the 1951-52 season. Despite this, the comfortable position of cotton supplies was felt by the textile industry and the trade to a much greater extent than in the preceding season, in that prices tended to be lower. This was so because (a) in the world markets cotton prices had fallen appreciably, and (b) the cloth market developed buyers' resistance.

The cotton policy of the Government of India underwent a radical change in emphasis during the last two years. Both in the 1951-52 season and in the 1952-53 season, the aim has been to relax restrictions on trade. Although there is still some understandable reluctance to decontrol cotton completely, the Government has been alive to the altered conditions in the sphere of cotton supply. Towards the end of October, the Government announced its cotton policy for the 1952-53 season. Simultaneously it also gave permission for trading in the new crop (1952-53) cotton. Licensing of cotton dealers was retained, though the provisions relating to the eligibility for obtaining licences were considerably relaxed. In its new policy for the 1952-53 season, the Government incorporated its decision (announced earlier, in July 1952) to raise the floor prices of cotton by Rs. 55 per candy. It was also announced that no cotton would be considered superior to the basic quality unless its superior staple and class had been certified by the East India Cotton Association. Several varieties, such as 216F, 320F, Buri 394 and Laxmi of the Reserve Area were brought under price control, though Cambodia and Uganda cottons were allowed to remain outside the scope of cotton control.

Export Policy

In the 1951-52 season, the Government was criticised for the inordinate delay which occurred in announcing cotton export quotas; the first quota for the 1951-52 season was not announced before February, 1952. The Government was, however, more prompt in its export allotments during the 1952-53 season. As early as in October, 1952, the Government had announced export quotas covering a total quantity of 2,50,000 bales. This was besides the quota for 50,000 bales of Bengals given at the tag end of the 1951-52 season. Practically the whole of this quota was carried forward into the season under review, so that the total quantity of cotton available for export was 3,00,000 bales. The first export quota for the season, announced on 6th October, 1952, was for 1,00,000 bales of Bengal Deshi. This was followed by another announcement made on 23rd October, 1952, for an export quota of 1,50,000 bales, made up of Bengal Deshi and Mathias 50,000 bales. The Government also permitted, till June, 1953 (the date was later extended), free export of Assam/Comillas. Foreign demand for Indian cotton was not brisk, despite the early announcement of export policy. This was because the comparable varieties of Pakistan cotton were more attractively priced. In order to correct the competitive disadvantage of the Indian varieties, the Government announced, in the middle of November, the abolition of the export duty on Assam-Comilla cotton and reduction in the export duty on 'Bengal Deshi' cotton from Rs. 200 to Rs. 125 per bale of 400 lbs. In February, this year, the Government permitted the conversion of unutilised quotas of Mathias, Kalagins, Dholleras, C.I., C.P.I., C.P.II and Oomra Deshi cotton into Bengal Deshi to the extent of 50 per cent. of the unutilised quotas. Despite these conversions, the exporters have found it difficult to utilise the export quotas in their entirety. The Government has, therefore, extended the validity of export licences for raw cotton this season upto the end of September, 1953. Actual exports from Bombay to foreign countries, from the commencement of the season upto the 17th August have been returned at 326,637 bales as against 164,240 bales last year. These, of course, include the shipments made during the season against the commitments entered into in the previous season.

Imports of Cotton

Having learnt by the bitter experience of its import policy in the 1951-52 season when imports of cotton arrived in such large quantities and at such high prices that normal financial facilities were found pitifully inadequate to cope with the arrivals, the Government was more circumspect in its import policy in the 1952-53 season. The trade too was chary of importing more than what was strictly needed, because there were large stocks of high priced cotton imported in the preceding season which the mills were finding it difficult to consume. The Government decided, early in October, 1952, to issue licences for the import of a limited quantity (about two lakh bales) of the 1952-53 crop of American cotton stapling 1-1/16" and above to mills, and to importers, nominated by each mill, for the import of such cotton. In November, the Government permitted the trade to import five lakh bales of cotton of not less than 1-1/16" staple from both dollar and sterling areas upto 30th June, 1953. The period of validity for import licences for U.S.A. cotton has since been extended to 31st December, 1953. This quantity included the earlier quota of 2 lakh bales but was exclusive of the outstanding licences of the previous season for U.S. cotton. Importers were allowed, with effect from the beginning of the current year, to import East African cotton freely on their own within the overall restrictions fixed for non-dollar cotton. The Government has also permitted the trade to import freely, during the July-December, 1953 period, cotton stapling 1-1/16" and above from non-dollar areas. The restriction regarding the staple, it must be noted, has virtually ruled out the possibility of importing Pakistan and Brazilian cottons.

From the point of view of import trade in cotton, a notable event was the conclusion of the Indo-Egyptian Trade Agreement in May, 1953. Under this Agreement, India is expected to buy annually, among other articles, 100,000 bales of Egyptian cotton. A somewhat novel feature of the Agreement is that it stipulates that Egypt should accept for its cotton exports 60 per cent. of the value of export in sterling and the balance in Indian rupees. This condition is obviously intended to see that Egypt buys Indian goods at least to the extent of 40 per cent. of the value of its cotton exports.

Consumption

A feature of the mills' consumption of cotton during the season was the increase in the consumption of Indian cotton and the decline in that of foreign cotton. The mills consumed 2,944,881 bales of cotton during the eight months ended April 1953—this is the latest period for which figures are available—as against 2,641,291 bales in the corresponding period of 1951-52. The following table gives the consumption of cotton by mills in India during the eight months ended April, 1953:

(In 000 bales)

Month	Indian Cotton	Foreign Cotton	Total
1952			
September	269,730	89,340	359,070
October	284,539	74,062	358,601
November	315,017	65,779	380,796
December	338,459	60,086	398,565
1953			
January	323,768	65,887	389,655
February	281,509	63,670	345,179
March	288,450	66,926	355,376
April	283,519	74,140	357,659

The mills had as on 30th April, 1953, the latest date for which information is available, 1,565,980 bales of cotton, both foreign and Indian, as against 1,748,256 bales on the corresponding date in 1952. These stocks are sufficient to last the mills for about three months, on the assumption that the current rate of cloth production is maintained.

Cotton in Five-year Plan

In the final version of the Five-year Plan which was published in December, 1952, cotton has been assigned a prominent position. Among the commercial crops, for which targets have been set, cotton has received special attention. The Plan seeks to enlarge the area under cotton to 18·0 million acres before 1955-56 as against the 14.6 million acres in the basic year of the Plan, namely, 1950-51. Again, the target of production is set at 42.2 lakh bales, or an increase of about 12.5 lakh bales over the output in 1950-51. The Plan contemplates an expenditure of Rs. 3.5 crores during the period of the Plan in order to encourage the extension and improvement of the cultivation of cotton. The distribution of the overall target of 42.2 lakh bales among the different cotton-growing States is as follows, the figures in brackets representing the output of cotton in the respective States during 1950-51 (in 000 bales):

Assam 12 (12); Bihar 3 (3); Bombay 1,078 (803); Madhya Pradesh 680 (510); Madras 528 (348); Orissa 2 (2); Punjab 348 (196); Uttar Pradesh 85 (45); Hyderabad 460 (260); P.E.P.S.U. 255 (175); Rajasthan 164 (114); Madhya Bharat 311 (219); Mysore 41 (33), Saurashtra 222 (216); Bhopal 10 (4); Kutch 5 (4); other States 27 (27)—Total 4,229 (2,971).

The production of 42.29 lakh bales in 1955-56 should not prove an unworkable target, considering that the 1953-54 cotton crop itself is placed in the neighbourhood of 40 lakh bales. Much, however, will depend on the course of the weather and the trend of prices of cotton and of the alternative crops, such as groundnut.

Hedge Trading

By far the most outstanding feature of the 1952-53 season is the resumption of hedge trading under the auspices of the East India Cotton Association. In contrast to Pakistan and Egypt, where forward trading suffered a severe setback, India could successfully resume forward trading operations in cotton. With the improvement in the cotton supply position, the men in the trade became interested in the revival of hedge trading. In August, 1952, the East India Cotton Association worked out a scheme for futures trading in cotton, which underwent several modifications before it was finalised in November, 1952. The Government permitted the commencement of trading with effect from 12th December, 1952. The first contracts to receive the Government's sanction were I.C.C. February, 1953 and I.C.C. May, 1953.

The Egyptian Cabinet has, it is stated, approved a proposal for sending to India a "special mission" to study the possibility of widening the Indian market for Egyptian cotton. The study is being undertaken as a part of a nine-point trade expansion programme drawn up by the Egyptian Foreign Office and submitted to the Cabinet. The mission will comprise members of the Egyptian trade organisations, industrial unions and other experts. The outline of this programme has been embodied in a memorandum prepared by the Egyptian Foreign Office. According to this memorandum, Egypt plans to boost its world trade by bartering cotton for wheat and coal. The memorandum suggests that a sub-committee of representatives of the trade and of the Ministries of Finance, Foreign Affairs, Trade, Industry and Agriculture send commercial missions abroad to study economic conditions and keep in touch with commercial and industrial developments.

THE VULCAN INSURANCE COMPANY, LIMITED

FOREIGN BUSINESS HOUSES URGED TO HELP INDIAN INSURERS

MR. MANGALDAS B. MEHTA'S SPEECH

A FERVENT appeal to the foreign business houses to extend their patronage to Indian insurers was made by Mr. Mangaldas B. Mehta, Chairman of the Vulcan Insurance Company, Ltd., at the Thirty-third Annual General Meeting of the Company, held on Wednesday, 19th August, 1953, in Bombay. He hoped that non-Indian business interests would accept the suggestion, made recently by the Union Minister for Commerce and Industry, Mr. T. T. Krishnamachari, to the effect that they should patronise Indian insurance, banking and shipping interests.

The following is a summary of Mr. Mehta's speech:

He felt that, on the whole, our country had turned the corner owing to stabilisation of the economy of our country, commodity prices having settled to reasonable level, increase in industrial production and considerable improvement in the food situation. The problem of unemployment, especially amongst the educated, was acute and he hoped Government would take all necessary and urgent steps in the matter.

Korean War

The Korean War having ended in armistice owing to the untiring efforts of our Prime Minister, he hoped it would achieve permanent peace, devoutly wished for, as a result of the impending political conference, and international tension would ease as a result of the conference of the Big Four to be held early, as suggested by Sir Winston Churchill.

He further said the recent conference between the two Prime Ministers of our country and Pakistan held out high hopes of improvement in Indo-Pak relations. By nature India and Pakistan are parts of one united whole and could develop their resources only after amicable settlement of outstanding differences so that commerce and trade between the two countries could be carried on to their mutual advantage.

The situation in Kashmir took a new turn by change in the Government and he hoped that the Kashmir dispute between India and Pakistan would be amicably settled at the conference between our Prime Minister and the Prime Minister of Pakistan.

Referring to his last year's speech on the taxation policy of the Governments of India and Bombay State, he said it was likely to retard progress and development of trade, commerce and industry, adversely affecting the working of indigenous insurance companies, and he was glad to note that the Government of India has appointed a Taxation Inquiry Commission under the chairmanship of Dr. John Matthai, which is empowered to examine the effects of the level of taxation on income and capital formation, and hoped the persistent demand of general insurance companies for allowing them to build up additional reserves will be satisfactorily dealt with as a result of the recommendations of this Commission.

Estate Duty Bill

Turning to the Estate Duty Bill now on the floor of Parliament, he pointed out some omissions and urged the Government to make provision for appeal to the High Court by an aggrieved person by the decision of the Commissioner in determining estate duty on questions of fact including valuation of properties or establish a Tribunal on the lines of the Income-tax Appellate Tribunal instead of appealing to the Central Board of Revenue which is the supreme authority under the Bill. Some of the provisions of the Estate Duty Bill were practically identical to those of the English Statute of 1894 as amended from time to time and while Government thought fit to embody in the Bill those provisions of the English Statute which are in their interest, they have not seen their way to give adequate protection to persons accountable for payment of estate duty in the matter of valuation of properties. It seemed Government forget the dicta of a famous Judge that not only justice must be done but the people affected by any law should feel that justice is being done. Another vital point which seemed to have been overlooked is that the State Governments under the Constitution are entitled to levy probate better known as succession duty, to any extent. In England, succession and legacy duty have been abolished. Since there is nothing to stop any State Government from levying probate or succession duty, the time may come when nothing would be left in the hands of accountable persons after payment of estate duty and probate or succession duty. Therefore, the Chairman humbly suggested either to withdraw the power of the States to levy probate or succession duty or in any event, allow the deduction of probate or succession duty payable to the States from the amount of estate duty payable to the Central Government. He humbly suggested the following amendments to the Bill: (a) The exemption limit in respect of moneys payable under one or more policies of insurance should be increased to Rs. 25,000 instead of Rs. 5,000. (b) The moneys payable under one or more policies of insurance effected by the deceased on his life, for the purpose of payment of estate duty or assigned to Government, should not be aggregated for determining the rate of estate duty. (c) The estate duty paid by the accountable person in a non-reciprocating country should be allowed to be deducted from the amount of estate duty payable under the Act. (d) The provisions of clause 30 of the Bill regarding quick succession of property should be more liberalised.

Appeal to Business Men

He fervently appealed to those Indian industrialists and business houses, who are still placing their insurances with foreign companies, to extend their patronage wholeheartedly by passing their entire insurance portfolio to Indian companies in order to enable them to play their legitimate role in strengthening the economy of our country. He was glad to note the observations of the Hon'ble Minister of Commerce before the Associated Chambers of Commerce to the effect that foreign business houses in India should extend their patronage to Indian insurance, banking and shipping and he hoped foreign business houses would accept the suggestion and place some part of the insurance business under their control with indigenous insurance companies. He also suggested that foreign insurance companies operating in India should be compelled to effect reinsurances of their general insurance to the extent of one-tenth of the total amount insured under each and every policy issued by them with Indian companies or with the Insurance Companies' Association pool and if necessary it should be made a condition precedent to the grant of certificate to foreign companies operating in India.

He then referred to the loose talk of nationalisation of Indian industries and insurance which is still in the air. It is true that industry may find private and institutional savings inadequate under our present taxation but Government ownership does not do anything to ease this deficiency nor can a Government ever acquire that vast mass of knowledge accumulated in the multifarious experience of its producing and trading citizens though this fact may be neglected by doctrinaires either through ignorance or well-meaning intellectual arrogance. Nationalisation of public utilities may be carried through without great harm but nationalisation of industries and insurance would be definitely hampering success in the task which it is vital to successfully accomplish.

Due to the Insurance Amendment Act of 1950, he was glad to observe, satisfactory results could be observed from the working of several Indian companies during the year 1952. Touching the Code of Conduct, he expressed the hope that with the co-operation of all insurance companies, large and small, a Code of Conduct will be evolved acceptable to all which will place Indian insurance on sound footing and eradicate the evils which have crept into the business of insurance in the past.

Results of Working

Coming to the working of the revenue accounts, the fire department revealed a profit of Rs. 5,49,137 which should be considered satisfactory.

The results of the accident department were not so satisfactory on account of impact of inflation seen most in the motor department entailing great increase in claims. Nevertheless, the department made some profit.

The results of the marine department show a fall in the premium mainly due to cut-throat competition in the rates. After providing reserve for unexpired risks at 100 per cent. of the premium income a sum of Rs. 41,877 has been transferred to profit and loss account.

The income from investments has shown satisfactory increase. After making due provision for depreciation, bad debts etc. a sum of Rs. 6,18,551 is transferred to profit and loss appropriation account subject to taxation.

A catastrophe reserve fund is created by transferring Rs. 2,00,000 for the purpose to meet unforeseen contingencies like earthquakes, cyclones, tornadoes, typhoons and other eventualities like the memorable Bombay Explosion of 1944.

The total premium income of all departments was Rs. 31,79,622 and the total reserves of all departments amounted to Rs. 28,09,968 which is about 89 per cent. of the total premium income, which it is hoped will be considered quite satisfactory.

The Directors' report and the audited revenue and profit and loss accounts were adopted, the retiring Directors were duly re-elected, a dividend at the rate of As. 12 per share free of income-tax was declared and the administrative staff were granted two months' salary as bonus.

SUGAR PRODUCTION IN INDIA

LATEST POSITION REVIEWED

THE current sugar season, that is, the year 1952-53, has practically come to a close and the next season is due to commence in a few weeks' time. It would, however, be premature, and even rash, to prophesy the trend of sugar production in the coming season. For one thing, such will be influenced by several factors, especially the price of sugarcane which is yet to be fixed. There is already speculation as to the policy the Government of India is likely to pursue in the ensuing season. Sugar prospects also depend on the supply and prices of its substitutes, *gur* and *khandsari*. As far as the current sugar season is concerned, the year has turned out to be none too happy. The production of sugar has failed to keep pace with the rate of increase in consumption, with the result that there has been scarcity of supplies in several centres and undue rise in prices. This has compelled the Government of India to import sugar.

The aggregate production of sugar during the current season amounted to 1,317,659 tons, which compares unfavourably with the record output of 1,485,486 tons in 1951-52, or a decline of 12.7 per cent. The following table indicates the State-wise trend of production during the 1952-53 season, as compared with that in the three preceding seasons.

(In thousand tons)

	1949-50	1950-51	1951-52	1952-53
Uttar Pradesh ..	508	592	834	679
Bihar	222	225	224	274
Bombay	111	122	158	137
Madras	59	91	99	81
Hyderabad	20	24	39	42
Mysore	17	2	37	28
Punjab	9	11	20	17
P.E.P.S.U.	2	9	28	14
W. Bengal	3	4	7	8
Madhya Bharat ..	11	9	18	8
Travancore-Cochin ..	2	4	4	4
Orissa	2	3	3	3
Rajasthan	3	2	7	1
Bhopal and Ajmer ..	5	4	4	*Nil*
Total ..	975	1,101	1,485	1,318

It will be seen from the above table, that except Bihar, Hyderabad and West Bengal, the other States have all witnessed a fall in production of sugar during the current season, as compared with the previous season. The fall in output has been due chiefly to the difficulty of mills in getting adequate supplies of sugarcane, thanks to the diversion of cane to the manufacture of *gur*, owing to the high prices fetched by that commodity. This increase in *gur* prices, in turn, is due, as is well known, to the increased demand for *gur* both for direct consumption and for the manufacture of illicit liquor. Another factor responsible for poor sugarcane supplies to factories has been the reduction in the crop itself. Thus, the aggregate yield of cane during 1952-53 is estimated at 50.35 million tons, as against 58.95 million tons in 1951-52.

Cane Consumption by Factories

That the sugar factories generally experienced shortage of cane supplies is borne out by lower consumption of cane by sugar factories. The quantity of cane actually crushed during the season under review amounted to 13.0 million tons, as against 15.5 million tons in the previous season, which represents a fall of over 16 per cent. Reduced cane supplies to the factories meant shorter crushing season for most of the factories. The all-India estimate of the number of working days for sugar factories during 1952-53 was 112, as against 133 in 1951-52. The number of factories with the working duration of season lasting for 140 days or over was only 19, as against 59 in the preceding season. The average duration of season in U.P., Bombay and Madras is estimated at 114 days, 117 days and 94 days, as against 148 days, 148 days and 151 days, respectively. In Bihar, however, the duration was longer at 118 days, as against 99 days. Only two factories were still crushing after 26th May, 1953; in the previous season, as many as 42 factories were found so working.

Out of 157 sugar factories in India, only 134 worked during the season under review; the number in the previous season was 139. The number of working factories in the major sugar-producing States, namely, Uttar Pradesh, and Bihar, was the same as in 1951-52. In Madras, one more factory was working while the number was less by one each in Bombay and Rajasthan and by two in Madhya Bharat. No factories worked in Bhopal and Ajmer.

Improvement in Sugar Recovery

The season under review, however, witnessed an improvement in the recovery percentage of sugar. While the quantity of cane crushed in the factories decreased by over 16 per cent., the sugar produced dropped by 12.7 per cent. only. Accordingly, the all-India figure for percentage recovery during the 1952-53 season was higher at 10.01, as against 9.57 in 1951-52. The table below gives the estimated figures for sugar recovery in the different States during 1952-53, as compared with 1951-52:

	1951-52	1952-53
Punjab	9.41	10.30
Uttar Pradesh	9.27	9.78
Bombay	11.08	11.69
Madras	8.62	9.39
Madhya Bharat	9.31	9.42
Rajasthan	8.50	9.72
Hyderabad	9.68	10.48
Travancore-Cochin	6.58	7.32
Bihar	10.32	10.10
W. Bengal	10.87	10.50
Orissa	9.02	8.80
P.E.P.S.U.	8.68	7.97
Mysore	11.61	11.37
All-India	9.57	10.01

The improvement in sugar recovery in most of the States, as noted above, should not induce one to conclude that the work connected with cane development has been quite satisfactory. For the reason for the higher recovery of sugar per cent. cane is to be attributed largely to the late start of the crushing operations when the sugar content of cane is generally higher. The recovery percentage in India, as is well known, is the lowest, *vis-a-vis* that in the other leading producers of sugar in the world. That it continues to be low clearly points to the need for according top-priority to the programme of intensive cultivation of sugarcane, for that is the only effective way of securing higher yield of quality cane.

Sugar Supplies

Despite the fall in sugar output, the total supply of sugar available during the current season is of the order of 1,779,000 tons, which is an increase of 79,000 tons, as compared with 1951-52. This is due to the huge stock of 461,000 tons brought in from the previous season. Out of the supplies, stocks with the mills as on 15th July, 1953, amounted to 623,689 tons. About 6,432 tons were exported. The balance of over 1,148,000 tons was the quantity despatched for consumption upto 15th July. Assuming that the rate of despatches have been and will be maintained during the subsequent months, the aggregate quantity of sugar released for consumption for the season as a whole may be estimated at more than 1.55 million tons. On this basis, the *per capita* consumption of sugar will be about 9.8 lbs., as against 7.3 lbs. in 1951-52 and 6.5 lbs. in 1952-53.
