Since the rate of sugar consumption seems to have increased, the need for stepping up production of sugar in the coming season cannot be stressed too strongly. Such could be done by ensuring to the factories adequate supplies of cane, by controlling the competitive capacity of *gur* producers. For, without any control over *gur* and with prohibition providing a lucrative outlet for *gur*, namely, illicit liquor distillation, the price of this commodity will continue to rule high. So long as this state of affairs continues, the *gur* producer will be in a position to compete effectively with sugar factories for cane supplies by offering high prices for cane. The cupidity of the *gur* producer has already increased to such an extent that he is anxious to crush cane even before it is ripe for crushing. He is eager to get cane at any cost. At this rate, one need not be surprised if sugar production suffers a further fall in the ensuing season.

UTILISATION OF FUELS

U. N. REPORT

DETAILED and sustained study of the efficient use of solid fuel is of great importance. It is common knowledge that, during the period of fuel shortage, economy in the utilisation of fuel is essential. But, even in a period of abundance, its utility cannot be minimised, for it serves to reduce the cost of the article manufactured, in the production costs of which the cost of coal is a major item. Efficient use of fuel is of greater importance to countries in Asia and the Far East (excluding China), for they are either extremely deficient in fuel or do not possess any reserves at all. Efficient utilisation enables coal producers to cope more successfully with competitors from other sources of energy and this promotes stability of production both as to quality and to quantity. Efficient utilisation of fuel is, therefore, in the interest of producers and consumers alike. In this connection, the report, just made available, by the U.N. Economic Commission for Europe, on the results achieved by certain European countries in the field of efficient utilisation of fuel, will be read with interest.

The report, entitled *Results Achieved by Certain European Countries in the field of Fuel Advisory Services and Technical Training* gives an analysis of the activities in the field of promoting efficient utilisation of fuel in Belgium, Denmark, the Netherlands, Poland, Sweden and the U.K., prepared by the Sub-Committee on Economic and Technical Problems. It also gives the recommendations of the Coal Committee which examined the report of the Sub-Committee at its 25th Session held on 29th August, 1952, to promote greater fuel efficiency.

Results Not Satisfactory

The report discloses that, although most of the countries are conscious of the need to promote greater efficiency of fuel, the efforts towards its realisation are not satisfactory. It is true that fuel advisory services, private or/and public, exist in almost every country. But the advisory services of private organisation are, in general, framed to supervise the observance of safety regulations governing thermal plants. It is only incidentally that they have come to deal with the thermal efficiency of plants and the training of boiler staff. It is, however, gratifying to note that many countries are endeavouring, at present, to extend the activities of private organisations, which are promoting efficient use of fuel, in the absence of compulsory thermal control. The functions of the official advisory service organisations are identical with those of private organisations, but they are often made responsible for co-ordinating and directing the private organisations' activities, even in the absence of compulsory thermal control, as in the case of the U.K. and West Germany. France and Italy have introduced compulsory thermal control for all plants with a capacity equal to a certain minimum figure.

The significance of training of boiler staff is recognised in all countries in Europe, but they do not all employ the same means to ensure it. In Italy, for example, it is stated that each boiler house is to be placed under the supervision of a certified stoker by law and that the trade of stokers has received an official code, which is not the case in other countries. The courses in training of boiler staff are usually arranged by specialised private or public organisations or institutions, but the results of the training provided are not always satisfactory. The courses are generally of three kinds: (a) technical training courses for newly engaged or unexperienced staff; (b) practical lessons in firing to fill gaps in training or to initiate staff into new methods of firing; and (c) advanced training courses. For training of thermal engineers, separate courses are usually arranged in technical schools or specialised training institutions. Some countries have taken steps in the direction of arranging a special course on the use, construction and maintenance of measuring and control instruments.

After a consideration of the report at its 25th Session held on 29th August, 1952, the Coal Committee recommended a number of measures designed to promote more efficient use of fuels. They are:

(1) It is desirable to create, as early as possible, fuel advisory services enjoying the support of Government authorities, where they do not exist. They should serve all types of consumers;

(2) thermal centres primarily designed to solve particular thermal problems should be established. They should advise manufacturers in regard to improvement of their plants and more efficient utilisation of the plants; and

(3) certain special measures such as a stamp showing that the apparatus has passed the official

(*Continued on page 423*)

PROBLEMS OF SOUTH INDIAN PLANTATION INDUSTRY

NO REASON FOR UNDUE PESSIMISM

THE Governor of Madras, Mr. Sri Prakasa, declared open on Monday, the 24th instant, at "Glenview," Coonoor, the Diamond Jubilee Conference of the United Planters' Association of Southern India, before a large and distinguished gathering of planters and Government officials.

Addressing the Conference, Col. G. A. R. Spain, the President of the Association, recalled the names of those who, sixty years ago, took a prominent part in laying the foundations of the Association. He also referred to the recent publication of a valuable history of the Association as a souvenir marking the Diamond Jubilee.

Looking back over the past year, Col. Spain said, one could not but see that the plantation industry, and more particularly the tea industry, had been under heavy fire for most of the time. He could see no reason, however, to paint a gloomy picture of the industry, just because Government or certain people in it thought it necessary "to push us around a little bit in order to make us, as they put it, to 'behave ourselves,' and co-operate with them in certain schemes and ideals which we, or many of us, rightly or wrongly do not consider to be entirely in the best interests of the industry or the country." Continuing, Col. Spain said:

"I feel that, perhaps, as an industry, we tend to look on every action of Government which concerns us as suspect without giving due consideration to the motives which actuate it. Some of us are at times, perhaps, prone to overlook the interests of the Republic as a whole in giving consideration to our own local industrial interests. I cannot believe that any reasonable man, be he realist or un-realist, would wish to see this great industry, the largest, or second largest, dollar earner in the country, damaged or in any way deterred from carrying on its efficient and thoroughly organised affairs for the benefit of the country. The Republic is young and its leaders are, to some extent, idealists whose ideals are, perhaps at times, liable to over-ride their economic knowledge. It is this attitude which I feel needs counteracting at high levels in Delhi and elsewhere by some form of representation which we are even now endeavouring to set up and which, if evolved, would, we trust, be of as much assistance to Government as it would be to ourselves. I can only hope that, if and when we are able to organise this representation, Government officials and other leaders at high level will give consideration to its presence and obtain its views from time to time."

Outlook Better

Proceeding, Col. Spain said:

"It has usually been the practice in these presidential addresses to stress all the troubles and difficulties of the industry. Perhaps, this is necessary and desirable. I would, however, for a change, look on the bright side of the picture and try and think that the future is a little more hopeful than some of us may consider it to be. Last year, at this time, so far as tea was concerned, the fear of a slump hung heavy over us. Prices were down in many cases to a low which left little, if any, hope of profit. Estates were closing down for economic reasons and the pessimists among us pictured the end. To-day, prices have improved to an extent which makes it possible for us to carry on with reasonable hope of profits in most cases. We should be happy about it, though certainly not complacent. No industry can, I agree, afford to be complacent or over-optimistic about the future, but there is no reason why that should be translated into undue pessimism."

Referring to the Rajaram Rao Report on Tea, Col. Spain said that, whilst it was in a way disappointing to planters, and probably to Government also, he did not think there was anything seriously unreasonable in it. The Report had recommended the deferred payment of excise duty, exemption from advance payment of income-tax, and contained a proposal that the Plantation Labour Act should not be implemented for the present. It was, on the whole, a non-committal report which pleased no one. On the other hand, there was little, if anything, objectionable in it from the industry's point of view. Alluding to labour legislation, Col. Spain remarked:

"The Factories' Act, the Maternity Benefit Act and such legislation all brought their crops of protests when they were implemented. The arrival of Labour Unions was considered by some to be the death-knell of the industry. Such legislation is progressive and essential in a democratic world and it seems to me that, unless you want Autocracy or Communism, it has got to be accepted and accepted with a smile. At the same time, we should guide it, so that idealism will not run away with economic development and smother it. This does not mean that we must sit by meekly and offer no criticism and voice no protest if we are faced with proposals which we consider will endanger our industry or which impose unequal sacrifice upon or unfair restrictions on the right of private enterprise to a fair return for its contribution to the material well-being. How we are to make such protests or representations most effectively in the future is one of the problems which have been exercising our minds in recent months."

Commenting on the recent legislation affecting tea, coffee and rubber, Col. Spain said that the Tea Act of 1953 contained many sweeping provisions and he hoped that it would be implemented with intelligence, sympathy and restraint. "We are assured by the Minister who piloted the Bill that this will be so, so long as 'we behave ourselves'." The Act has, of course, been drawn up with the idea of assisting and not hampering the industry. As I have said before, no one can possibly wish to disrupt the second biggest dollar-earner in the country."

As regards the Coffee and Rubber Bills, Col. Spain said that it was likely that these would come up during the present session of Parliament but that these interests were now fully alerted to the necessity for getting their view-points represented at Delhi before the Bills took final shape.

No Vested Interests

Continuing, Col. Spain said: "There still seems to be an opinion obtaining at high levels that this industry is all big business and predominantly foreign business. What appears to be forgotten is that this industry, in the South at any rate, is not controlled by so-called vested interests at all and least of all by foreign interests. Sterling companies in the South represent just under 20 per cent. of the total plantation acreage. Rupee companies represent a little more than 26 per cent. but less than 2 per cent. is under the control of U.K. or non-Indian citizens. The small Indian grower and owner planter account for 49 per cent. of the total plantation area. Small non-Indian proprietors, like myself, own 4½ per cent. We are not and do not feel foreigners as legally foreigners; we have most of us spent the majority of our lives and earnings in this country. It should be realised that the U.P.A.S.I. represents these small men's views as much or more than those of the big companies: that on all Committees and Councils of the U.P.A.S.I., representatives of the small men are present."

Coffee Industry's Problems

Addressing the Annual General Meeting of the U.P.A.S.I. Coffee Section on Saturday, 29th August, 1953, the Chairman, Mr. W. W. Kilgour, referred to the fact that the Association represented the interests of the 34,000 coffee growers of India. Of this number, 33,000 have each only 25 acres or less, while those owning 200 acres or more are only 300 in number.

After tracing the history of the coffee industry since the seventeenth century, Mr. Kilgour stated that the highlights of progress during the last ten years under the Indian Coffee Market Expansion Act of 1942 were: Increase in coffee acreage—30 per cent.; increase in coffee production —48 per cent.; increase in workers employed—67 per cent. and increase in Indian consumption—about 100 per cent. Central excise duty was first levied in 1944 and since then Government's revenues have benefited to the extent of about Rs. 67 crores. In December, 1952, the Central Government notified the Coffee Market Expansion (Amendment) Bill and this was introduced without prior consultation with the Indian Coffee Board or the industry itself.

"I have tried to show," Mr. Kilgour continued, "what has been achieved, what is being done and what is planned under the 1952 Act and we must now put the question, "Will the new Act serve the needs of the industry and the country as well as the old one?" He was sure that the answer to this question would be an emphatic "No." The industry had now appealed to the Government to give up the proposal to do away with elected representatives on the Coffee Board. "We submit that the elected representatives, who incidentally have always been a minority, have been the backbone of the Board and that the progress and stability which the Board has been able to give to the coffee industry has been largely due to the initiative, experience and time which these elected members have been able to devote to the good of the industry. Much of the technical and agricultural research carried on has been possible, because recognised leaders of the industry have been associated with the Board." Mr. Kilgour also criticised the proposal to eliminate consultation between Government and the Board on points of major importance. He hoped that the Coffee Market Expansion (Amendment) Bill of 1952 would be referred to a Select Committee and that this Committee, conscious of the importance of their task, would give a fair and patient hearing to their representations.

Proceeding, Mr. Kilgour appealed to the Central Government to arrange for an immediate enquiry into the coffee industry by the Tariff Commission, such an enquiry to embrace the past history and the possibility of its future development, as well as the present actual costs.

Tea Section

Mr. J. B. Soutar, Chairman, Tea Section, U.P.A.S.I., addressing the members of the section at its seventeenth annual general meeting held at Coonoor on the 29th inst., emphasised the need for devoting more thought to the problem of creating a more favourable climate for the presentation of the tea industry's view when such became necessary. He considered that it was difficult to find a satisfactory solution to this problem but felt that a solution must be found. He hoped that the organisation to be set up under the Tea Bill would provide for a proper appreciation of the industry's point of view.

Although the Tea Section of the U.P.A.S.I. had failed to get the terms of the Tea Bill amended to the extent desired by it, Mr. Soutar thought that the measure need not be regarded as a penal one. He saw no harm in Government having potential powers of control over a wide range of activities of the industry, for the proper conduct of the industry was essential to the interests of the country and the Government could not afford to be without powers of control. But he said:

"What is all-important is that that power should be used in a properly informed and well directed manner, and, that is where we must obtain the confidence of Government in the *bona fides* of the representations which we make on any point of issue. In this we have a heavy responsibility, in that we must put it over that any case which we, as employers, have to make will be presented into account a larger context than that of our own immediate interests."

Commenting on the precarious state of affairs in respect of marketing of South Indian tea in the country, Mr. Soutar observed:

"The local market for tea is not expanding as it should. We have let our friends in coffee steal a tremendous march on us, as far as the popularisation of the sale of our product in India is concerned. The present position is that we are selling our teas in India at or below the cost of production, and there is no doubt that, if a large measure of self restraint was not exercised by the bigger interests in throwing away tea of below a certain standard, tea would become a glut on the local market, and very considerable losses would be sustained on account of all our local sales. I am no advocate on the principle of the policy of restriction, which is at best a negative approach. The solution to our problem is to advertise our wares, and here the Central Tea Board carries a heavy responsibility which, with all respect, I submit, it is not fulfilling in South India."

Mr. Soutar, therefore, urged that the planters must do all in their power to impress on the Board the urgent necessity of getting the organisation which it had built up to work on behalf of South Indian tea too. He pointed out that he knew nothing of the efforts which the Tea Board was making in North India. But the fact was that transport facilities made it impossible for selling South Indian tea in Northern India and felt that South Indian tea should have a live campaign of advertising to sell the tea in its own area.

In the absence of an expanding market there was need, Mr. Soutar said, for taking other measures. As the industry was opposed to any scheme of quantitative restrictions, it had asked its members to set to themselves a certain standard of quality below which they would not sell tea in India. This scheme was a vital one.

As far as the export markets were concerned, Mr. Soutar thought that most planters entertained a certain amount of cautious optimism. In this connection, he observed:

"Prices are such as to enable us to obtain a reasonable return for the tea we sell, and long may that happy state of affairs continue. We do not want booms, and we had sufficient experience of slump conditions last year to last us for a very long time. I have read the opinion stated that we raised far too much fuss over the slump, that it should have been treated merely as a temporary recession, and so on. With this opinion, I most emphatically disagree."

Continuing, he said that they could not have afforded to carry on much longer, had those poor prices persisted in the face of labour changes forming a very high proportion of the production costs, coupled with higher export and excise duties. The attitude of the Government appeared to be that it was not prepared to do anything until it was proved by companies going into liquidation that slump conditions existed. In this connection, he said that the industry which tried to represent to the Government the seriousness of the case was acting in all good faith.

TRANSPORT OF COMMODITIES BY RAILWAYS

NEW PROCEDURE ANNOUNCED

THE new procedure devised by the Railway Board for securing, among other things, steady movement of traffic hitherto classified as non-preferential, is welcome. The procedure, which came into effect on the 17th August, 1953, provides for daily or weekly quotas of wagons for transport of non-preferential traffic with a view to ensuring an equitable distribution of the available rail transport capacity among the goods belonging to this class of traffic. Quotas which have been prescribed for a large number of individual commodities vary in size from one railway zone to another. This is because they have been fixed on the basis of the economic needs of the areas concerned. A gratifying feature of the new procedure is its flexibility, which gives discretion to the railways to subdivide the commodity quotas according to districts, divisions or regions as they deem equitable. From time to time, the railways also may ask the Railway Board for revision of any commodity quota.

Under the procedure, which was in force prior to 17th August, 1953, there were the preferential traffic categories and all goods not falling within these were treated as non-preferential traffic. The present procedure has abolished non-preferential traffic and regrouped all traffic under five categories, namely, 'A', 'B', 'C', 'D' and 'E'. The first four of these categories include some of the former ten preferential traffic categories, while all other traffic has been grouped under the fifth category 'E'.

The alphabetical order indicates relative priorities. Thus, top priority is given to defence needs covering category 'A'. Then comes category 'B' covering only foodgrains moved on Government account on a programmed basis. This is followed by category 'C', which covers Government-sponsored sugar movement. Other items included in this category are coal, salt, traffic in connection with anti-locust campaigns, traffic sponsored by the Central or State Governments, military traffic not included in category 'A' and Railway and Posts and Telegraphs Department stores. Category 'D,' the next in order, covers movement of raw materials to and finished products from the textile, cement and iron and steel industries, perishable traffic, livestock, traffic for movement over the Assam Rail Link route and via Sakrigali-Manihari, Bhagalpur and Mokameh transhipments and other traffic which may be accorded preferential treatment, under special *ad hoc* orders issued by the Railway Board. Category 'E', the last in the list of priorities, covers the remaining items of traffic. Rail transport for traffic of this category will be provided after the requirements of the first four categories have been met in full. It is made clear that all programmed traffic in the first four categories on Government or other account will have to receive prior approval of individual railways or the Railway Board. The Railway Board may also fix quotas for certain special types of traffic.

Wagon Position

While the new procedure assures steady movement of traffic according to priorities, it does not, however, increase the volume of traffic handled. That depends mainly on the number of additional wagons that will be available from time to time. Even in this regard, the railways have been making encouraging progress. The wagon procurement during the first two years of the Five-year Plan period was 73 per cent. higher than the normal replacement required. In the second year of the Plan nearly three times as many wagons went on line as during the first year. Throughout the first two years of the Five-year Plan, the Indian railways managed to put on the line, on an average, one new goods wagon every hour to replenish their severely overworked wagon fleet. This happened day and night, including Sundays and holidays. It is stated that about 5,000 wagons constituted the average normal annual replacement requirements during 1951-52 and 1952-53. But, as against this, as many as 17,336 wagons were put on the line during the period under relew. The number of wagons, put on line, would have been higher had all the 21,792 wagons ordered for delivery during the two-year period ended 1952-53 been received, the actual receipts were only 17,366 wagons.

Incidentally, it may be noted that every week during the two-year period 1951-52 and 1952-53, 16 new passenger coaches, on an average, were placed in service to help reduce overcrowding. New passenger coaches placed on service were 28 per cent. higher than normal average replacement requirements. Thus as against normal replacement of 650 new passenger coaches per annum, the number of coaches put on the line aggregated 1,666 during the two years ended March, 1952. But actual orders placed by the Railway Board, as in the case of wagons, were larger. For 1951-52, for instance, 1,002 coaches were ordered. But only 771 were supplied in time to be put in service. For the following year, 14,000 coaches were ordered, but only 895 were delivered in time.

The new wagons and coaches, which were actually put into use during 1951-52 and 1952-53, cost the railways Rs. 40 crores. The expenditure in 1952-53 was Rs. 25.6 crores, as against Rs. 14.33 crores in 1951-52, an increase of 79 per cent. This new rolling stock represented both the entire manufacturing capacity within the country and imports permitted by available financial resources. Although most of this new stock was acquired on replacement account, a large number of the theoretically replaced and over-aged coaches and wagons have had to be retained in service to deal with the high levels of traffic, even though these were neither economical nor capable of giving normal performance. The same position continues even to-day.

It is understood that the local capacity of the indigenous manufacture was used only upto 50 per cent., owing to lack of plates, etc., and the high price of imported plates. It is high time that the indigenous manufacture of plates is stimulated so as to cope with demand. The imported plates, according to the concerned interests, should be made available to wagon manufacturers at the same prices as that of the Indian plates, the difference between the price of imported plates and that of the locally manufactured plates being met from the Steel Equalisation Fund. It is also held that the Tata Iron and Steel Company should be encouraged, and helped if necessary, to increase its production of wheels and axles. Meanwhile, we are told the wagon manufacturers are reluctant to engage additional labour to work on extra shift for fear of difficulties in retrenching them subsequently when their services are not wanted. This position could be relieved, it is stated, provided the Government were to guarantee the manufacturers orders for wagons sufficient to work an extra shift for a period of ten years.

MINERAL PRODUCTION IN INDIA

The aggregate value of minerals, excluding petroleum, produced in India during 1950 was Rs. 83 crores, as against Rs. 74 crores in the previous year, according to *The Mineral Production of the Indian Union During the Year* 1950, just published by the Geological Survey of India. The large increase in the total value was mainly accounted for by mica, manganese ore, gold and building materials, of which the first two commanded a good export market. The total value of metals obtained from ores in 1950 was Rs. 45.7 crores, as against Rs. 45.8 crores in the previous year. Some of the minerals, such as ilmenite, kyanite, mica, rutile and sillimanite are hardly used in India and are almost wholly exported, while some others like apatite, asbestos, china-clay, coal, copper ore, felspar, gold, graphite, gypsum, iron ore, lead ore, ochre and salt are almost entirely consumed in India. In between these two groups, there are certain minerals like bauxite, barytes, chromite, magnesite, saltpetre, steatite which are partly exported and partly utilised in India.

The total number of persons employed daily in 1950 in raising those minerals was 544,073, as compared with 518,952 in the previous year. About 96 per cent. of the total labour were employed in the mining of coal, mica, manganese ore, gold, iron ore and in the manufacture of salt. The total number of mineral concessions granted in 1950 was 655, of which 169 were prospecting licences, 358 were mining leases and 128 quarry leases. The total number of concessions terminated during the year was 95.

ACCOUNTING SYSTEM FOR RIVER VALLEY PROJECTS

Answering an interpellation in the House of the People, Mr. C. D. Deshmukh, Finance Minister, said the other day that the advice of the Comptroller and Auditor-General had been sought on the question of modification in the system of accounting for river valley projects and his advice was awaited. There was a wholetime Financial Adviser attached to the D.V.C., who was nominated by the Central Government, he added. Referring to the Hirakud Project, the Finance Minister said that the financial advice, which normally would have had to be given by the Ministry of Finance at headquarters, was now being tendered locally by a Joint Secretary of the Ministry, when he attended meetings of the Hirakud Central Board. Safeguards, however, were constantly being taken to avoid recurrence of mistakes which occurred in the past. Proceeding, he averred that the Rao Committee had made recommendations regarding the powers and status of the Financial Adviser to the D.V.C. and the Government had not yet arrived at any decision on the report. The Public Accounts Committee had recommended the separation of the post of Financial Adviser from the Chief Accounts Officer some time in March last. That recommendation had been accepted in principle by the Government. The Comptroller and Auditor-General had visited the Hirakud Project and made an on-the-spot study. The Government was awaiting his report. In regard to the separation of the office of the Financial Adviser from that of Accounts, details were being worked out in consultation with the Comptroller and Auditor-General.

MANUFACTURE OF RADIOS

The possibility of establishing co-operation between the Radio and Electrical Manufacturing Co., Ltd. (Remco) and the contemplated Bharat Electronics Factory at Bangalore is being explored. Remco has been successfully manufacturing radios and radio components with the assistance of the International General Electric Company of New York, and, house service watt-hour meters, in collaboration with the Tokyo Shibaura Electric Co., Ltd. It is also manufacturing extruded plastic wires, power cables and high-frequency and microphone cables. It is urged that Remco, by virtue of its being practically a Government concern, should be treated as a nucleus for the proposed electronics factory, in view of its having the necessary plant and equipment, technical personnel and experience of radio manufacture over the last five years. Failing this, it is suggested, the capacity of Remco should be fully utilised, in the interest of the nation, so as to avoid duplication of manufacture.

ANTI-CORROSION FLUIDS

Two remarkable anti-corrosion fluids, already well known to most of the great industrial enterprises in Britain, are attracting widespread attention from overseas visitors to trade fairs and agricultural shows in England. The first formula, a dismantling fluid or rust-remover, loosens corroded parts in a few minutes by breaking rust down and removing it completely; it saves valuable time in stripping and dismantling because the rate of penetration is exceptionally high. The second formula, a protective fluid that prevents corrosion produces a tough, flexible, transparent film which allows for expansion coefficiency under varying temperatures. Neither fluid contains acids; both can be used safely on ferrous or non-ferrous metals, and they do not injure the hands of the operator.

EARTH-MOVING EQUIPMENT FOR INDIA

A British firm has received a contract from the United States Government's General Services Administration in Washington for the supply of earth-moving equipment to India. The contract, which covers the supply of 16 heavy-duty diesel motor graders and spare parts for them, is valued at approximately £60,000, for which payment will be made in dollars. The equipment has been ordered by the General Services Administration against requirements by the Government of India under the Indo-U.S. Technical Co-operation Agreements, and is intended for use on such civil projects as roads and airfields in India. This contract has been secured by the British firm against the keenest competition from American manufacturers, and shipment is expected to be completed within three months.

Reports from Patna disclose that a high level conference will be held in New Delhi to consider the findings of experts who are at present carrying on any investigation in the Kosi area with regard to the feasibility of erecting a permanent detention dam at Belka. The estimated cost of the dam has risen from Rs. 28 crores to Rs. 48 crores. There seems to be no difference of opinion among experts regarding the construction of Kosi barrage, which can be taken up independently of the dam.

ASIATIC
GOVERNMENT
SECURITY LIFE AND
GENERAL ASSURANCE
COMPANY, LIMITED
(Incorporated in India in 1913)

★

Founded in 1913, the **Asiatic Government Security Life and General Assurance Co., Ltd.,** has a record of over 40 years of service in the life insurance field.

Fortified by the close association with the **Prithvi Insurance Co., Ltd.,** which has existed ever since 1949, we have entered into a new period of development and expansion in all fields of insurance activities.

We are now fully equipped to handle all classes of general insurance business including fire, marine, motor, personal accident, workmen's compensation, burglary, fidelity guarantee, etc., in addition to life insurance and it is our policy to provide complete satisfaction to all our constituents.

INCREASE IN MOTOR INSURERS' LOSS RATIOS

REDUCING REPAIR COSTS OF DAMAGED VEHICLES

IT is the sad experience of general insurers, both in this country and abroad, that their motor department has begun to record a larger loss ratio in recent years. In the West, this is attributed to the inexperience of some drivers who have been too hastily trained during the war, and the spirit of adventure gained during the period of active service. By and large, the increase in loss ratio must, however, be put down to the higher repair costs rather than to the frequency of accidents, as such. So far as India is concerned, the problem is far more complicated by reason of the additional handicap imposed by the nationalisation of road transport in certain important centres, for it has deprived the insurers of a source of premium income. But the basic problem remains the same—the problem of the high cost of *effecting repairs to damaged vehicles.*

The problem of this high loss ratio cannot, therefore, be solved, unless means are found to bring down the cost of repairs. Having failed to find an effective solution to the problem, the insurers took recourse to the only alternative that seemed feasible to them, namely, to increase the comprehensive premium rates with effect from the beginning of the year. Maybe, it is uncharitable to call it a counsel of despair, for it has been done in many other countries of the world. But the insurers will themselves readily admit that it is not a very happy solution of the problem. It is not an effective solution either, for the repair bills for damaged insured vehicles, which the insurers are called upon to pay, continue to increase. The whole problem is now agitating the minds of insurers. For, there are very few insurers indeed who are fortunate in their claims experience. And, even they will welcome any attempt to resolve the problem of repair costs. In this connection, it is interesting to note that Mr. V. Gopalan, Manager of the Prithvi Insurance Company, Ltd., Madras, has very ably analysed, in the course of a note addressed to us, the implications of the repair costs. Although he does not certainly aim at a ready-made solution capable of automatic and easy application, his conclusions do point to the lines on which a satisfactory solution can be found. Such a solution lies, according to him, in fruitful co-operation between repairers and insurers.

General insurers are, as Mr. Gopalan says in effect, in a very unenviable position. They pay the motor trade quite a substantial amount in respect of repair works; but enjoy no preference. There is no authority anywhere to which any customer of the motor trade can turn in the event of a suspected excessive charge being made against him for work completed. If the victim is the motor owner, there is, at least, this remedy, that he may decide not to go to the same workshop again; but the insurance companies cannot possibly do that, since, at some time or other, they may have to seek the same workshop. Mr. Gopalan, therefore, argues that if there were close co-operation between the motor trade and insurance interests, there would be no need for offices to employ independent surveyors to assess damages. He adds:

"The practical difficulty with regard to the surveyor is that he must be an independent auto engineer, who should not be interested in any workshop. When it is the case that no two insurance executives can agree on the acquisition cost of insurance business, it is too much to expect of two engineers to agree as to how much a repair could cost. Further, by employment of an intermediary between the insurance company and the automobile trade and, perhaps, the insured, we shall only be adding to our troubles. In some cases, in a particular place, where there may be only one workshop, capable of doing that job, it is certain that the surveyor may be compelled, at one time or other, to give up insurance survey work. He will be lucky if he does not get a stigma on his honesty."

Some repairers are encouraged to quote high rates, because the owner of the vehicle *knows that they alone are capable of putting* the car back into a roadworthy condition. The insurer cannot always remove the damaged car from one repairer, who quotes excessive rates, to another, who may quote more moderate rates, because he may thereby lose his reputation with the public and with the repairer who loses the business. Even the repairer, who gains the new business, may not entertain a high regard for the company, for he thinks that, if some other repairer would only quote a little less, the company would not hesitate to deflect its business to him.

Insurers do certainly scrutinise repair bills and demand reduction, whenever they find that the bills err on the high side. This is not done because they "grumble" when claims arise. In fact, they owe it to themselves and the insured public to do that. Legitimate and genuine claims, as Mr. Gopalan points out, are settled without question. There are also reasonable workshops who "are prepared to rectify mistakes or overcharge and offer a reduction." He adds:

"It is likely that, due to the depression in the sale of new cars, attempts are made to make up for such loss of income in the repair section. If this is so, it would be better achieved by moderate rates and larger number of jobs. The motor trade, if it desires, could successfully resist any attempt on the part of the owner to make them charge excessively on work done on accident damage, that is, to include charges on non-accident repairs. One is staggered at the phraseology used while perusing an estimate of a repair bill. (Perhaps the automobile trade or the public will have the same opinion about an insurance policy.) Sometimes, it happens that a single item detailing various work done runs into a large amount. A request for a review of that item generally used to result in a reduction. This position has been negatived now by the adoption by most of the repairers of the system of splitting up one item under various heads with separate charges."

Mr. Gopalan makes at least three concrete suggestions which, when implemented, will make the insurers' position more comfortable than now. In the first place, he wants the automobile trade to publish their repair cost rates. He asks why they should not be published, considering that the insurers, on their part, make no secret of their premium tables or of their obligations. The insurers, as he says, have a right to "expect at least a guidance table of normal rates charged by workshops." Secondly, there are certain items of work, such as repainting a car, in which the automobile trade could show "substantial reduction" in their bills. Thirdly, the automobile trade can assist the insurers by offering technical advice on the damaged parts of the vehicle, that is, on such questions as whether the damage was caused by accident or by any neglect by the owner. They could also give the insurers facilities, such as trade discount, which would enable them to cut down their low rates. On this aspect of the insurers' problem, Mr. Gopalan says:

"If a vehicle of a particular make is entrusted with a repairer other than the dealer of that make, the problem of obtaining spare parts becomes difficult. This is particularly noticeable in Madras mofussil. The availability however, of non-genuine parts of almost all makes solves the problem to some extent. But the difficulty arises when the owner insists on genuine parts to which, of course, he is entitled. It should be reasonably expected that a vehicle, in the event of an accident, will be required to be put in the same condition as it was at the time of the accident. But the insurance company always is made to pay the full value for the new part irrespective of the fact that the damaged parts have been worn out. *The contention that, but for the accident, the replacement* of the part will not be necessary may be true. The motor trade alone is competent to say whether or not a particular part, which has to be replaced on account of the accident, had still life left in it sufficiently long so as not to warrant replacement and the replacement is necessary only on account of the accident. They could offer a solution by a recommendation in the estimate that the replacement of a particular part is necessary on account of the accident or otherwise and on whether any portion of the cost is to be recovered from the owner. I am glad to say some repairers render this assistance also to companies.

"Insurance companies attract a higher scale of repair cost than is charged to individual owners. As compared to bills on uninsured repair jobs and insured repair jobs, the latter is definitely more. The insurance company enjoys, at the hands of some repairers, a discount of 10 per cent. of labour charges of repair bills. Their bills are subjected to a sizable increase and then suffers a cut of 10 per cent. In the matter of spare parts also, we suffer a disadvantage. A trade discount is given to a dealer for spare parts. As far as the trade is concerned a sale is a sale whether it is to a dealer or sent to their repair department for repair work. It is but fair that this discount should be allowed to insurance companies also. Even if they were to buy a part from another dealer, the discount earned by them on that purchase should be passed on to the insurance company, since even the wages of the worker getting the part from another dealer are charged to the repair job. There is also greater check regarding the rates of spare parts inasmuch as there exists a spare parts price list for every make and any unreasonable charge could always be brought to the notice of the manufacturer."

It should be clear that the implementation of the above suggestions presupposes mutual understanding between the insurers and the motor trade. Both these parties are vitally concerned in the matter of repair cost; the honest repairer is concerned in getting regular customers, and all insurers, in prompt settlement of the claims to the satisfaction of the claimants. It is, therefore, to be hoped that efforts will be made to arrive at such understanding. Any failure to tackle the problem of the high cost of repairs would lead to a further increase in premium rates, which would be unwise. Or, it might lead, as Mr. Gopalan rightly warns, to a "very severe and stricter selection of risks" which will result in "loss and inconvenience" to all the interests concerned.

What is NEWALLS 85% Magnesia?
It is a blended mixture of not less than 85%, by weight, of Pure Hydrated Carbonate of Magnesia. The balance is made up of high quality Asbestos fibre.
Why is NEWALLS 85% Magnesia so efficient?
Because millions of crystals in each cubic inch trap an infinite number of 'dead' air spaces. These reduce heat transmission most effectively.
Why is NEWALLS 85% Magnesia cheaper?
Because its covering capacity is very high (one ton applied evenly 1" thick over a flat surface will cover 2,200 sq. ft.) and because its higher efficiency results in a higher saving of heat. And heat costs money!

NEW CONCEPTS OF FULL EMPLOYMENT

AN INTEGRATED APPROACH REQUIRED

(Contributed)

THE problem of unemployment, which like the poor has always been with us, has recently hit the headlines. Many solutions are offered, but nearly all are intensification of what has been tried before, without success. That such unemployment should coincide with the Five-year Plan and Community Projects, which aim at increasing employment and production, is an interrogation on the ideas and methods inherited from the past which are the basis of our planning. The fact is that, by a lazy habit of the mind, ideas basic to foreign rule are applied as axioms in the entirely new context of independence and democracy. In economics, the circumstances, physical and psychological, of the country are the only reliable premises for realistic conclusions. Unfortunately, our economic theories belong to foreign contexts, of highly industrialised and generally rationalised people. Most of our economic concepts, therefore, are unreal and fallacious. Not till our economics becomes a science of using our own resources, for our objectives, in our own way, is there hope of changing the present climate of depression and unemployment. A beginning may be made by examining fallacious concepts.

On the concept of employment, there is not only ignorance but also neglect. Employment is conventionally divided into three sectors, primary, industrial and tertiary. The figures (*Eastern Economist*) of income from these sectors are as below:

(In million rupees)

	1948-49	1949-50	1950-51	1951-52
Income from agriculture and allied occupations ..	39,540	39,608	42,723	42,129
Income from large and small industry	13,813	13,762	13,760	15,429
Income from tertiary activity	15,325	18,370	20,509	18,366

It will be observed that, first, the income from the primary sector (agriculture), notwithstanding that it is thinly spread, is, far and away, the largest, and, secondly, the income of the other sectors generally fluctuates with the income in agriculture. The size and position of agriculture in the economy are of cardinal importance in the problem of unemployment. Unless agriculture is prosperous and fully employs the population dependent on it, the other activities of the country cannot improve, whatever small gains may be shown by intensive and disproportionate attention to them. We owe it to the Fiscal Commission that, in 1950, it drew attention to the staggering proportions of unemployment in agriculture, there being work for only 3½ months in the year, in unirrigated areas, and for about six months in irrigated areas. A further analysis would disclose first that the greater part of the unemployment is due to the default of the cultivators themselves, secondly, that some of it is forced by the pattern of living, and, thirdly, that some of it arises from the economics of working and living and is waiting for changes in both. The avoidable unemployment arises from failure to cultivate all the land available, and by the best methods possible. It is estimated that, on an average, our agriculture is only 60 per cent. efficient, the outturn being reduced by neglect, obsolete methods, and lack of irrigation, fertilisers and implements. The recent crop competitions and the Japanese method of cultivation have shown that outturn can be increased even in several multiples. The first problem, therefore, is to make the cultivator do whatever is within his power, such assistance as is necessary being given by Government.

Agriculturists' Way of Life

There are two schools of opinion on the methods of changing the agriculturist's way of life and work. One school believes that the cultivator can be convinced, through the extension system, of ways, which will reduce his present loss from unsuitable and inadequate practices. The other school points to the failure for more than 20 years of rural development activities, and the disappointment now arising from Community Projects, and suggests more compulsive methods. On the theory that the land is on trust with the cultivator and he must not neglect it to the point of starving the population of food, and the country of foreign exchange, this school advocates a policy of pressure. For a simple economic drill, within the understanding and means of the cultivators, the pressure proposed is twofold. First, for those who accept the drill, priority in all State services like irrigation, seed, fertilisers and loans, and secondly, for those who fail to do what is in their power, loss of present favourable rates of rent, and even of heritable rights in land. It is argued that these penalties will remain largely threats, as compliance will follow, from a few examples. This approach deserves to be considered, when there is more definite evidence that the present methods have failed, because we must increase the productivity of the land to feed the people and to maintain our foreign trade in commercial crops. There is no reason also why those in possession of land should not be fully employed.

Talk of Free Labour Unrealistic

The second class of unemployment, that which is unavoidable, represented by the large class of landless, can be liquidated by undertaking numerous works of common utility like roads, drains, reservoirs, public buildings in which our villages are deficient to the point that they are worlds apart from towns, a disparity fraught with difficulties for the present and dangers for the future. Reclamation of culturable land, which is more than a third of the cultivated land, will also employ the landless. The question is first of finance and second of organisation. Finance will be considered later. In respect of organisation, it is being increasingly realised that official agencies are not only slow, but are not able to obtain labour, supposedly for public purposes, at even double the rates paid by private employers. The idea that free labour will be tendered overlooks that this labour belongs exactly to the classes, which have little else and stand to gain least from community improvement. It will be more realistic to aim at getting it cheap, instead of free labour, specially during the off seasons. This will require the employment of contractors, individuals or associations at a proportion of the standard rates, say, 60 per cent. the P.W.D. rates. When labour realises it can get rates related to the supply and demand, it will accept them in preference to unemployment for long periods as at present. Any objection to such labour, overlooks that it adds not only to the economics of the village, but of the individual whose period of employment may increase two or threefold.

The third class of employment in the secondary and tertiary sectors will follow from the general improvement in the income of the village. Schools, shops, houses, workshops, places of entertainment will spring up, offering all-round employment. The process is a quick one, as the growth of townships round enterprises of Government and industrialists, abundantly proves. Government may stimulate it by liberal loans on the security of the assets created, houses and enterprises, the only test being that the way of life is enriched and employment is extended. It may be added that it is by providing amenities for pleasure and comfort that incentives to work, now sadly lacking, will be created in villages. One fact that tends to be forgotten is that, unless people learn to spend, they do not care to earn.

If the economics of the rural sector are stepped up, those of the urban sector which is smaller, and is dependent for the greater part of its buying and selling on the villages, must improve. The growing unemployment to-day in industries is due to the contracting market arising from prices which the greater part of the population cannot pay. If the income of this population rises, the features of industrial stagnation, and closure of marginal factories, should end without special measures to keep alive what is now compelled to die. This is a very important fact, which is overlooked by those who think that unemployment can be solved by investment in cottage industries. The question is of markets and, if cottage industry production is increased without raising purchasing power, the result may well be to depress even the existing level of prices. It also tends to be forgotten that, while the industrial worker is maintained by a chain of other workers and, therefore, adds to the employment, the cottage worker is largely self-sufficient. On the other hand, increase in purchasing power will by itself stimulate supplies and services from all directions.

New Concepts for Industries

Not that new concepts are not required for industries. The labour legislation bodily adopted from countries, in which the majority of the population is industrial, has to be reviewed in the context that only a small fraction, 2.4 millions, are in organised industries and cannot be specially treated at the expense of the general population. Organised labour may have better wages and conditions, to set standards to the remaining labour, but these standards should not be so high that others cannot at all reach them, while industry which should grow to absorb an increasing number is reduced to a struggle for existence. If profits are made by industry, they belong not only to the few workers employed in it, but to the entire community which should have the benefit of lower prices and of increasing production and employment. If the rich are to be relieved of excess profit, it should be by taxation for the benefit of the entire community. To this extent, the disparity in conditions of organised and unorganised labour deserves to be arrested by revision of labour legislation, which may be redesigned to reward effort, and not to the mere accident of being in factories and in organised unions. Employers cannot present this view, partly because, in a sellers' market, they could be in conspiracy with their employees to get high prices from consumers, and partly because organised labour is now a political force. After about 12 years, the position is now changing and the consumers have begun to revolt against their exploitation by a few workers and fewer employers. There is a spreading strike against buying which is touching both employers and employees, who will have to adjust their mutual relations, if they are to last together. In this connection, another concept requires revision, that of protection from foreign competition. The recent policy in respect of automobiles is a welcome development, because it sets a period for import of what can be made in the country, so that an assurance is available for programmes of manufacturers. Similarly for all items, which can be manufactured in the country, an immutable date line banning imports can be fixed, which will naturally compel foreign enterprises to domicile themselves in the country.

Problem of Finance

For all this development, money is required, and the lack of it has been considered a reason for the poverty of our plans. That there should be many wrong concepts about money is inevitable, because money is only a medium, the character of which is bound by both context and time. Theories tend to relate value to volume of money, but volume itself is affected by the velocity in circulation of money. In India, a great part of the currency tends to be hoarded, by millions of villagers, who have learnt the "liquidity preference" of money, its capacity to be useful any time, anywhere. Secondly, the spending habits of the people are few and slow. Against this is the fact that, in a country of small incomes, people spend nearly all that they receive, so that in towns, little money is impounded in savings. This is responsible for the volatile character of our economics, fluctuations in large public spending, being immediately reflected in the condition of trade and industry. For all these reasons, it is difficult to calculate the velocity and to relate the volume of money to its value. The figures below show how the General Index of prices is totally unrelated to the currency in circulation:

Year	General index	Currency (Rs. crores)
1947-48	308.2	1,027
1948-49	376.2	1,231
1949-50	385.4	1,123
1950-51	409.7	1,163
1951-52	434.0	1,189
1952-53	380.6	1,114
June, 1953	405.4	1,139

It comes as a surprise that, with a decrease in the notes in circulation, there has been an increase in prices. Since last year, with the notes in circulation nearly the same, the prices have risen by nearly 60 points, between 15 and 20 per cent. This should dispose of the theory widely held both by experts and the public that the price level can be controlled by the volume of money. The price level during the last one year has risen simply because of the food policy, particularly the elimination of food subsidies. In fact, from the beginning of the war, a close relation between food policies and prices, with cost of living can be established. It can, therefore, be concluded that there is no danger of inflation by increasing the currency in circulation, provided food prices are prevented from rising.

Sources of Money for Government

The sources of money for Government are taxes, loans, and created currency. For taxes, there is a limit, not only because they are unpopular, but also because they discourage enterprise, their incidence being indiscriminate and particularly harsh on new and experimental types. Loans are useful as a means of reducing excessive spending power, but to the extent they impound, for purposes of the Government, money available for productive investment, they are inappropriate to times of slump like the present. That there has been a quick response to the loans is, paradoxically, evidence of distress and despair in more remunerative investment. There is a general loss of confidence in trade and industry side by side with unwillingness to spend along the usual lines. Both these tendencies will be aggravated to the extent money in circulation has been reduced. Unless the Rs. 28 crores recently collected as loans by the various State Governments are immediately employed in productive undertakings, the economic position is likely to become worse. A tighter market for money will not only prevent new enterprises but may compel existing enterprises to reduce their scope. This aspect does not appear to have been considered by enthusiasts and the only thing now to be done is return the loan to circulation quickly or to replace an equal amount of money through the currency system.

Opposition to Created Money is Much Less Now

The opposition to created money, since Mr. Lobo Prabhu pressed for it a year ago, is now much less. Dr. Bernstein of the World Monetary Fund has approved of it in the form of a loan from the Reserve Bank to the Government, on the ground that an expanding economy requires corresponding finance. Since the last quarter of 1951, currency has fallen from Rs. 1,247 crores to Rs. 1,092 crores, while industrial production has increased from an index of 109.6 to 129.3. There has been a 12 per cent. decrease, instead of an equal increase, which means that industrial production has lost in terms of price advantage about 25 per cent. of its market. The effect on agricultural prices was a similar fall of 25 per cent. until the end of food subsidies provided a spurt from a new direction. It would, therefore, appear that a 25 per cent. increase in currency is necessary to restore the climate, which changed with the policy initiated in 1951. But this may not be enough, if the aim is to secure full employment, in our villages and cities. The currency required, according to the Keynesian doctrine which most countries have accepted in practice, has to be equated to the manpower to be engaged in productive tasks. The actual quantum of currency has, therefore, to be determined on the plans for full employment. This currency has to be obtained by use of the printing press. No doubt people are afraid of money without a gold or silver cover. They forget, however, that, except in the U.S., this cover is only notional, and that even the U.S. has been increasing its currency out of all previous proportions. The real backing for money is the capacity of the country to produce goods and this depends on full employment. Money needed for this is only a means, and *its warranty is the strength of the administration and its capacity to use its resources economically.* France, Italy and Japan have rebuilt themselves on a currency which had only the backing of the State. Our capacity to back our paper money is not less. No one can seriously condemn a monetary policy to secure full employment, because any other policy implies that money is an end in itself. Since November, 1951, the measures to increase the value of money by reducing currency and credit have engendered a kind of economic anæmia, which is responsible for the present phase of unemployment. Money is the servant and not the master of the economy and, in this view, it should not be short for the work to be done. It must be created to the full extent it can employ the people.

What About Inflation?

Will this not cause inflation? It has already been shown that the volume of currency is not related to the cost of living. At the same time, the injection of an unusual quantum of money in advance of the production it will activate, may increase the pressure of money on the goods and services available with some inflationary effect. This has to be checked, at least in the beginning, from both the commodity and the money ends. From the commodity end, though it is impossible to think of returning to the controls now happily given up, it is necessary to maintain the price line for essential articles. The simplest and also the easiest method is to declare a ceiling price, and to buy up all stocks at that price, whenever prices turn higher. The liability to surrender stocks, which should be enforced without let or hindrance, and even on information to be rewarded, will sufficiently warn the producers and traders of the necessity of keeping within the price line. Food, cloth, sugar, cement, iron, if subjected inexorably to the fixed price line, will in their turn influence the general market. This form of control which acts more by influence than by actual interference is most economical of the administration necessary. It is based on an unmistakable understanding that hoarding at prices above those fixed will be detected and penalised with loss of prices paid above those fixed. It does not interfere with natural incentives and arrangements, so necessary to ensure full production and free distribution, the price line being effective, like the law of gravity, only against those who ignore it. Planning, like stable finance, certainly requires control of prices, but this control should have the majesty of a natural law, which automatically punishes infringement and is, therefore, quietly and generally respected.

Development Currency

At the money end, the simplest form of control is to earmark part of the new issue as encashable only against articles, which are not in short supply, and are necessary in the general interests of the country. Mr. Lobo Prabhu had designated this kind of money as "Development Currency," the ordinary notes being overprinted "Development" with the year, say, five years ahead, when they will be exchangeable against ordinary currency. While it has been admitted that this currency, if kept for redemption against ordinary currency will be a form of compulsory savings and that it will not increase the pressure against articles in short supply, and may increase the consumption of items nationally and personally desirable, like handloom cloth, soap, fertilisers, the main objection has been that it will be exchanged at a discount and may depreciate the value of the whole currency. It is true that, if the currency is kept for redemption, it will, like all other Government scrip, carry a discount, but if it is exchangeable in respect of many items of expenditure, it will be sufficiently in demand to narrow the discount margin. There need be no fear that it will depreciate ordinary currency, because the effect of its selling at a discount is exactly the reverse, ordinary currency gaining a new value. No other objection than that the idea is new, remains, but this ignores the use of similar currency ideas in other countries, for plans of reconstruction. If this currency had been available since it was first proposed, neither the 20 per cent. inflation in prices or the unemployment we are witnessing may have occurred. By being earmarked, this currency is by its nature, anti-inflationary, while, at the same time, it stimulates the production of desirable items. The purchasing power it represents may have obviated expenditure on famine which, paradoxically, was due not to food but employment deficiencies.

How considerably should Government increase the total volume of currency? In the current year, the Planning Commission has made Rs. 3 crores available for local development works, and was reported to consider a further allocation of Rs. 50 crores chiefly for small-scale and cottage industries. This sum is pitifully small, considering the aggregate of unemployment. It is true that public expenditure has a 'multiplier' effect, and those engaged by Government engage others to satisfy the wants in which they can indulge on new wages. Keynes calculates that the multiplier effect is four times the Government investment. Even so, more must be done, and quickly if the labour now idle is not cumulatively to add to itself and to reduce the national income. There is a 'divisor' effect, the reverse of the multiplier effect. Once unemployment starts in some lines, it represents a reduction of demand in other lines, so that every unemployed man begins unemployment of others, in a process which may be tidal in its full effect. There is, therefore, no time to be lost in finding money to revive employment.

The Scheme in Brief

The scheme may be that, for approved objectives, which for the time being may be the same as for local development works, plans may be drawn up for all villages, at a cost, 60 per cent. of the standard P.W.D. rates. These works may be offered to any individuals or associations to be paid for, half in ordinary and half in development currency. If it is argued that such contracts will not be attractive, the fact is forgotten that our villages are teeming with men and women without work for the greater part of the year, who will be glad to have half a loaf instead of none. It may be left to the contractor to find his labour and he will do it. Because the method is a natural one, combining the self-interest of the contractor with employment of idle labour for public purposes, it will be quicker, and better in execution. In so far as it avoids official intervention which the villager always suspects and frequently exploits, the work will have its money worth together with the advantage of cheap, instead of free, labour. Any reluctance in the beginning will wear out as labour learns it will not be paid more than is justified by the law of supply and demand.

In urban areas, too, for certain public works, the same method can be allowed. Otherwise, the increase in the purchasing power of the rural areas will be immediately reflected on the industrial and tertiary sectors. Development Currency will also be effective to stimulate industries, including construction of factories and houses which now lack financial support.

To summarise, the strategy is, first, to employ labour fully to increase the productivity of agriculture, secondly, to employ the landless, through contractors, on works of common utility, and, thirdly, to find money for this through the printing press. The first two are both possible and necessary to step up the economics of the country, and so long as money is used for this purpose, it will never lose its value, merely by reason of its volume. Now is the time for decision, as the population which is increasing and the unemployment which is mounting will make the start more difficult, the longer it is delayed. If what is proposed is logically sound, it should not be deferred merely because it is new. On the other hand, something new, which is also definite, will convince the people, more than the old ideas which have proved ineffective.

This long chain of new concepts, may, at first sight, create apprehensions, but each by itself and all together will be found rooted in our economics as they exist in fact, and not in books only. So far, we have floundered, ringing changes on old ideas. We cannot afford to remain in our mistakes, by merely repeating petty corrections. The approach has to be an integrated one, based on the real and precise capacity of our human and natural resources. The Five-year Plan, if it is to be revised, must be built up from below, on the total employment of the people, with as much money, as is necessary, subject only to its value being maintained by controls which operate automatically. The science of success is minimum of effort for maximum of effect, and this depends on a realistic understanding of ends and means.—*All Rights Reserved.*

PROMOTION OF INTERNATIONAL TRADE

G.A.T.T'S CONTRIBUTION IN 1952

THERE is a section of commercial public opinion in India which still feels that the General Agreement on Tariffs and Trade (G.A.T.T.) has been a failure. It considers that the G.A.T.T. has not served the purpose of liberalising trade restrictions although this organisation has been in operation for well over five years. It has sought to justify this opinion by saying that India has not been able materially to improve its export trade. It also holds the view that, as India has to establish new industries by offering high level of tariff protection, the Agreement may come in India's way of industrialisation. There may be some force in these arguments, but the negative attitude they represent hardly finds any substantial evidence in its favour in the proceedings of the Seventh Session of the Contracting Parties in October-November, 1952. On the contrary, these proceedings bear ample testimony to prove how the G.A.T.T. has been able, albeit slowly, to contribute not only to the expansion of international trade but to the purpose of promoting the restoration of international economic equilibrium. In view of the difference of opinion on the utility of the G.A.T.T., a brief outline of the work done by the Contracting Parties, at the session mentioned above, will be of help in getting a clearer picture of the G.A.T.T. and its work.

At the outset, it must be said that the G.A.T.T. is a complicated international agreement. The complexity springs from the fact that a large number of countries, each with its own economic problems, is a party to it. And each participating country has its own views as to the obligations to be discharged under the Agreement. The settlement of such differences requires an effective and objective procedure for hearing them and giving the right kind of interpretations. Such procedures are laid down by the Contracting Parties (acting collectively). The differences are, in the first instance, to be settled through a consultation procedure; where direct consultations fail, the case will be brought before the Contracting Parties. The settlement of a number of such cases so far indicates a great future for the G.A.T.T.

Differences Examined

In 1952, a number of differences was examined by the Contracting Parties. One such case related to the complaints against the system of purchase tax on textiles, clothing and footwear in the U.K. This tax constituted a violation of the Agreement, in that it was applied to imported articles of kinds which, when produced domestically, were exempt. This charge of discrimination in favour of domestic products was not contested by the U.K. Government. After investigation, the tax system was revised by the U.K. in order to bring the administration of the tax in full conformity with the provisions of the G.A.T.T. In another case, the U.S. and Canada complained against restrictions imposed by Belgium on imports requiring payment in dollars. On the intervention of the G.A.T.T., the restrictions were modified. Yet another complaint reviewed by the Contracting Parties concerned the imposition of quantitative restrictions on imports of dairy products by the U.S. Government. Section 104 of the Defence Production Act required the United States Administration, in certain circumstances, to place restrictions upon importation for which there was no justification under the Agreement. This caused damage to the trade in dairy products between the U.S. on the one side, and the Netherlands, Canada, Denmark, France, Italy, and New Zealand on the other. As any retaliatory measures adopted by the later countries would tend to reduce trade, which was contrary to the objectives of the Agreement, the U.S. raised no objection and agreed not to renew the section 104 on its expiration at the end of June, 1953. A further instance of the G.A.T.T's assistance in the removal of restrictions on trade between different countries is provided by the way in which the dispute between India and Pakistan, arising from the imposition of discriminatory duties on jute export to India, was settled. As readers are aware of this incident, there is no need to refer to it here once again in detail. These are only a few instances and those interested in the subject can find many more in G.A.T.T's *Report** for 1952, published last month.

**International Trade*, 1952: Published by G.A.T.T., Geneva. Price: $1.50 (U.S.)

The reduction of customs tariffs is stipulated in the preamble to the General Agreement, as one of the principal means of attaining the Agreement's objectives. Several plans to bring about further reduction received careful scrutiny during 1952. Preparatory enquiries were also carried out on the existing level of tariffs. New methods of reduction were also explained. As an alternative to lowering tariffs by "reciprocal and mutually advantageous arrangements," some Governments envisaged uniform percentage reduction by all countries willing to participate.

Low Tariff Countries

The difficulties experienced by "low tariff" countries and the G.A.T.T's search for new techniques to help them out of their troubles provide an interesting example of its contribution to the expansion of world trade. Some countries had bound themselves to "low tariffs" at the Geneva and the Annecy negotiations. These countries found very little to offer by way of tariff reductions in subsequent negotiations for obtaining reciprocal concessions from the "high tariff" countries. These latter countries, on their part, were not prepared to make further reductions merely in return for a rebinding of old rates. In this case, the application of the principle of reciprocity in reducing tariff became impossible. The need for finding other techniques was considered imperative for restoring international equilibrium. The Contracting Parties considered two suggestions. One was a Benelux proposal aiming at reducing the disparity in the customs tariffs of Europe and the other was a French proposal requiring world-wide reduction of the incidence of tariffs by 30 per cent. in three annual stages of 10 per cent. each.

French Plan

The French Plan calls for a reduction in the incidence of the duties in several sectors of a customs tariff rather than of each rate of duty. The proposal envisages the division of tariffs into a small number of sections corresponding to the main branches of the economic activity to each of which the reduction formula would be applied. However, an obligation to reduce the weighted incidences by an agreed percentage gives no guarantee that exceptionally h'gh and prohibitive duties will be lowered; hence certain aspects of the Benelux proposal directed specifically to secure the reduction of high duties have been incorporated in the French plan. The plan is under review and is expected to be taken up at the Eighth Session of the G.A.T.T. countries scheduled to take place next month.

Apart from the reduction of tariffs, which result from ordinary techniques of negotiations, the G.A.T.T. envisages the reduction of duties between countries through arrangements for customs unions and free trade areas. The Contracting Parties have the responsibility to see that such arrangements are designed to achieve their objectives within a reasonable time and also to review them annually wherever necessary. Many customs unions and free trade areas have been projected in various parts of the world. Thus, there are agreements between Southern Rhodesia and South Africa. A customs union has been prepared for the British colonies in the Caribbean Sea. The Governments of Chile and Argentina are negotiating a treaty of customs union. In Europe, there is a proposal for a customs community in which Benelux would join France, Italy and Germany. These contemplated schemes have to be referred to the Contracting Parties for examination, in order to ensure that the arrangements could be expected to lead, within a reasonable time, to a genuine commercial union affording the full benefits of a one-market economy to the participating countries. This process of regional integration is a long and arduous task on account of innumerable barriers created by differences, following various stages of economic development of the country concerned, divergence in wage legislations and system of tax, etc. In view of these divergencies and differences, the G.A.T.T. encourages efforts on the part of the nations to form unions in such a way as to make them advance, over a broad front, towards restoration of multilateral trade. Its contribution towards the formation of the European Coal Steel Community is by no means a small one.

The work done by the Contracting Parties in connection with simplification of customs formalities and administrative barriers and drawing up a code of standard practices for administration, by Governments, of imports and export restrictions and exchange controls provides another instance of the utility of the G.A.T.T. to its member-countries.

A substantial part of the work of the Contracting Parties arises from the continued use of quantitative restrictions to safeguard balance of payments position and monetary reserves and from the discriminatory application of these restrictions. The policies covering such restrictions run counter to the objectives of the G.A.T.T. The elimination of the discriminatory policies is one of the principal aims of the Contracting Parties. But the Agreement recognises the necessity for the continuance of these practices during the post-war years of transition by Governments which suffer disequilibrium in their external financial situation. As many as 23 countries are still resorting to these provisions of the Agreement. The practice of discrimination, however, is subject to annual review by the G.A.T.T. The Contracting Parties are required to consult with a Government which substantially intensifies its restrictions and they may also invite a contracting party to enter into consultation with them. Five such consultations were held in 1952 with France, the U.K., Australia, Ceylon and Pakistan. The consultations helped avoidance of unnecessary damage to the commercial and economic interests of the other Contracting Parties. It would appear that these consultations have resulted in the achievement of greater harmony of views and purpose. They have helped in laying the foundation for co-ordinated action on a broad front.

Outlook for 1953

The G.A.T.T. considers that the outlook for the relaxation of restrictions and the reduction of discrimination is somewhat more promising in 1953 than in the past. For the year opened with high hopes that the improvements witnessed in 1952 would be carried forward progressively. The series of international consultations started at the end of 1952 for restoring currency convertibility by Britain and Commonwealth countries is taken as a hopeful sign of progress towards relaxing restrictions on trade this year. But the G.A.T.T. is aware that the restoration of currency convertibility and freer trade are twin objectives, neither being attainable without the other, and sees innumerable difficulties in the way of achieving the goal. It, therefore, says that "it would be unwise to expect far-reaching results to be achieved in 1953," and adds that a period of concentrated effort will be required for the liquidation of the post-war controls on exchange and trade.

SAGO IN SALEM

The sago industry has developed considerably in the Salem District of Madras. The number of factories has risen from 45 in 1950 to 109 now. The industry employs about 10,000 workers. An equal number is also engaged in the cultivation and harvesting of the raw product, tapioca.

The sago industry is practised as a cottage industry, producing wholesome food in the form of sago and flour used in bakeries and fine starch needed by the textile industry. The sago and starch manufacturing factories are concentrated in Rosipuram, Namagiripet and Salem.

The sago industry was granted protection in 1950. With a view to enquiring into the question of continuing the protection Mr. C. Ramasubban, Member, Tariff Commission, visited several factories in the district last week. At a meeting of the Sago and Tapioca Products Exporters' Association held at Shevapet, Mr. Ramasubban reminded the industry how it had not fulfilled the expectation of the Tariff Commission. He felt sorry to find that the industry had not still implemented the recommendation made by the Tariff Board in its 1950 Report suggesting to send some of its workers to Singapore, Penang, etc., with a view to studying the working of the manufacture of sago in those countries and introducing the process in India. The Board had also suggested that a foreign export might be got for reducing appreciably the cost of production. He noticed further that the Board's recommendation to improve the method of cultivation of tapioca through their own farms had not also been heeded by the industry. He emphasised the need for improving the quality both of the raw material and of the manufactured articles. He advised them to consider the consumers' interests supreme and try to cater to their tastes. The spokesman of the industry pleaded for the continuation of protection to the industry for some more years. The industry in the South is given concessional rate for the transport of tapioca by rail. However, the fact that it has not endeavoured to rise to the expectation of the Commission is, indeed deplorable.

EMPLOYMENT OF CHILDREN IN ASIA

I.L.O. URGES MEASURES AGAINST EXPLOITATION

THE 12-day session of the Asian Regional Conference will commence in Tokyo (Japan) on 14th September, 1953. One of the important subjects that is on the agenda of the Conference relates to the prohibition of child labour. The International Labour Organisation has brought out a report on this subject. After drawing the attention of the Asian Governments to the catastrophic effects of child labour, in disguised or undisguised form, on the development of the personality of the child, the report has suggested a number of measures for the protection of children against exploitation.

Few will deny that a nation which does not provide for the protection of children against exploitation deserves no existence and that employment of children at a premature age is a serious crime. But very few have tried to probe into the causes of child labour and help the creation of conditions that will make employment of children difficult, if not impossible. Apparently, this is due to the difficulty in eradicating the chief cause of child labour, which is the general economic poverty of the countries concerned. The large size of average families in undeveloped and underdeveloped regions is itself a direct cause of poverty. This bigness is a factor that aggravates the problem of child labour. The larger the family, the greater is the need for income and so even the children are compelled by circumstances to earn. Thus, this problem is a problem of a vicious circle which has to be tackled from all sides.

There is a feeling that, by enacting laws to abolish child labour, everything will have been accomplished. But such a feeling is only voluntary deception. Laws by themselves are of no utility, unless they are supplemented by measures which help rehabilitate those children who are in no way better than orphans. Further, there are usually many loopholes in the law through which the spirit of the law can be evaded. Moreover, success of measures prohibiting child labour cannot be assured unless they are tackled by enlightened public co-operation.

Increase in Juvenile Delinquency

Child labour is a commonplace occurrence in Asia in industry, agriculture and trade alike. Young persons of premature age are often found working in hovels which are detrimental to the development of their personality. Children are often pledged by parents for two bare meals for agricultural labour and for employment in hotels and households. And this, coupled with long hours of work and hopeless hygienic conditions in workplaces, among others, explain the cause for increasing juvenile delinquency and mendicancy in most of the Asian countries.

At a time when the pace of growth of population is alarmingly upward, while employment opportunities are shrinking, the problem of protecting young people against exploitation assumes greater importance. According to the I.L.O. report, seven Asian countries will have a total population of 720 million persons by 1970, a rise of about 150 million, or 25 per cent. more than the present figure. In view of this alarming increase, the recommendations made by the I.L.O. to protect young workers are appropriate. The main recommendation relates to the fixation of the minimum age of admission to employment at the same level for all occupations so as to prevent children excluded from one branch of work, because they have not reached the prescribed age, entering other occupations which may be less suitable for them, but for which the age of admission is fixed at a lower level. It has, therefore, urged that consideration be given by Asian countries to the possibility of eventually fixing the general age for admission to employment at 14 years, wherever practicable and where school facilities are/or can be made available. A 12-year age limit is proposed as an interim measure in occupations where it is not possible to reach the goal of a 14-year age in the immediate future. Other recommendations of the I.L.O. include the following:—

(1) Free compulsory education, wherever possible upto the age of 14;

(2) maximum use of existing school facilities through double shifts, evening classes, open-air schools, mobile units, instruction to children on estates, etc;

(3) vocational part-time instruction to employed children where full-time education is not immediately feasible;

(4) closer relation between the school and community;

(5) co-ordination of efforts and programmes to arouse public opinion to the urgency of acquiring education;

(6) greatest possible use of technical education and vocational training facilities, on-the-job training, etc.;

(7) financial and other help to encourage children and young persons to continue their education;

(8) special attention to employment opportunities and placement of young persons, vocational guidance, and eradication of abusive practices in the placement of young persons;

(9) desirability of ensuring that any raising of the compulsory school-leaving age shall be accompanied by a parallel raising of the minimum working age; and

(10) medical examination of children under a specified age, especially in occupations involving strain or risk to health to determine fitness for employment and, when birth registration is lacking, to determine age.

In so far as India is concerned, its Constitution clearly recognises that child labour should be protected against exploitation and against moral and material abandonment. The Constitution prohibits employment of children below the age of 14 in any factory or mine or in other hazardous employment. It has also made it clear that the State shall, in particular, so direct its policy as to protect children from being exploited or entered into avocations, unsuited to their age. But there is as yet no all-India legislation covering minimum age restrictions for all types of employment.

Factories Act

Legislation relating to the prohibition of employment of children in factories in India dates as far back as 1933, when the Children (Pledging of Labour) Act was enacted to eradicate the practice of pledging children in factories following the recommendations of the Royal Commission on Labour in India. Then came the Employment of Children Act, 1938. The Act, as amended in 1939, prohibited the employment of children under 12 years of age in workshops engaged in about 10 processes, namely, bidi making, carpet weaving, cement manufacture, manufacture of matches, mica cutting and splitting, shellac manufacture, tanning of leather and cleaning of wool. The Act was further amended by the Factories Act, 1948, which increased the minimum age for employment of children from 12 to 14. Certain minor changes were also introduced in the Act by the Repealing and Amending Act of 1949. The Act was further modified in 1951, to give effect to provisions of International Labour Convention No. 90, concerning employment of young persons in industry for night work, which had been ratified by India. The amendment prohibits the employment of children under 15 years of age in any occupation connected with the transport of passenger goods or mails by railways or connected with a port authority within the limits of any port. It also prohibits the employment of young persons between 15 and 17 years of age during night in railways and ports.

Employment of children is not confined to factories alone but also to mines and plantations. The Indian Mines Act, 1923, as amended on various occasions, the most important amending Act being in 1935, prohibits employment in mines of children under 15 years of age. The Tea Districts Emigrant Labour Act, 1932, prohibited children below 10 years of age from proceeding to Assam unless accompanied by parents or adult relatives on whom the child was dependent. The Labour Investigation Committee (1946), however, recommended the enactment of a separate Plantation Labour Code. This recommendation was again put forward by the Tripartite Industrial Committee for plantations which the Government set up in 1947. Accordingly, the Plantation Labour Act, 1951, was enacted. It prohibits the employment of children under 12 years and night work for women and children between 7 p.m. and 6 a.m. Besides these, there is also a provision for State Governments to regulate minimum age with reference to dangerous occupations and non-industrial employment.

It will thus be seen that the Government of India is not found wanting in its efforts to provide for measures against exploitation of child labour. But these are not enough. It is true that it has achieved the political objective of enacting such measures. But still child labour is common in disguised forms even in prohibited industries, let alone in those not covered by law. The problem of abolishing child labour is a part of the general question of improving the standard of living of the substrata of the population. It is not merely the responsibility of the Governments but also of those fortunate few who are well placed in society. The whole problem needs vision on the part of those in the higher strata of society to look beyond the requirements of self and their families and try to lift the children of the slums to a position of honour and dignity.

INDUSTRIAL DISPUTES IN JUNE

Provisional statistics of industrial disputes for the month of June, 1953, show an increase in the number of work stoppages and the number of workers involved; but a slight decrease in time-loss, as compared with the previous month. There were 98 disputes during the month involving 80,137 workers which accounted for a time-loss of 252,059 man-days. The average duration of disputes during the month came down from 7.2 days in May to 3.1 days. Eight of the disputes resulted in lock-outs affecting 4,064,607 workers and accounted for a time-loss of 73,932 man-days. Four of these were in West Bengal, three in Madras and one was in Uttar Pradesh. Apart from strikes and lockouts, there were nine work stoppages not connected with industrial disputes. These involved 15,006 workers and resulted in a time-loss of 21,932 man-days. Five of these were in Bombay, three in Madhya Pradesh and one in West Bengal.

Eighty-four disputes ended during the month, of which 55 lasted for not more than five days each. Wages, allowances and bonus were the main points of dispute in 27 cases, while grievances relating to personnel alone constituted the subject matter of 31 disputes. Nineteen disputes ended in complete or partial success to the workers and in 41 disputes they were unsuccessful. The results of the rest of the disputes were either indefinite or not known. Among the industries, the largest time-loss was recorded in the jute mill industry. The time-loss in this industry increased from 21,300 man-days in May to 50,080 in June. Other industries which showed increased time-loss during the month were "other textiles," the engineering, chemicals and dyes, plantations and miscellaneous industries. Cotton textiles which suffered very heavily during May showed considerable improvement during the month as indicated by the fact that the time-loss decreased from 85,489 to 30,027 man-days. A decrease in the time-loss was also recorded in iron and steel, wood, stone and glass, paper and printing, skins and hides, mines, transport and the ports group of industries.

I.L.O. MANUAL FOR DRIVERS AND MOTOR MECHANICS

A simplified manual of instructions for motor drivers and mechanics in Asia is being prepared by the International Labour Organisation at the request of the Highway Sub-Committee of the United Nations Economic Commission for Asia. The manual will be fully illustrated and will carry a simple text which can be translated into all Asian laguages. It is being prepared by Mr. J. H. Hartzenbusch, Motor Maintenance Expert at the I.L.O.'s Asian Field Office at Bangalore.

Mr. Hartzenbusch, who has had more than 20 years' experience in automobile maintenance and repair in Asian countries, believes that 70 per cent. of motor vehicles in Asia are sent prematurely to the junk heap due to lack of proper care. "It is not a question of normal wear and tear but of innocent neglect, because the drivers and motor mechanics do not know any better," he says. Asian transport organisations in general complain that an excessively large percentage of their vehicles have to be laid up periodically for repair or breakdown on the road. It is hoped that the instructions now under preparation, if followed, will help prolong the life and improve the performance of motor vehicles.

I.L.O. ASIAN MARITIME CONFERENCE

The International Labour Organisation has proposed a 10-day Asian Maritime Conference at Nuwara Eliya in Ceylon commencing from 5th October, 1953, to consider matters relating to Asian seafarers. The Conference will examine the report of the Director-General which contains a survey of maritime developments in Asia, the general conditions of Asian seafarers, and the position in regard to the ratification of maritime conventions by the countries of Asia. It will consider the methods of recruitment and engagement of Asian seafarers and also examine the welfare facilities for Asian seafarers in Asian ports.

The delegation from each country shall, as a rule, be composed of two Government delegates and one delegate, each representing shipowners and seafarers and such number of advisers as may be considered necessary. In accordance with the terms of the constitution of the International Labour Organisation, the shipowners' and seafarers' representatives will be nominated in consultation with the most representative of their respective organisations.

Four Regional Tripartite Committees, representing the Government, employers and labour, have been constituted by the Government of Bombay with a view to facilitating the task of Factory Inspectorate and to ensuring smooth administration of the Factories Act. These committees will advise the Government and the Factory Inspectorate in the matter of standards of compliance with the provisions of the Factories Act, particularly those relating to health, safety and welfare of the workers, and on the measures to be taken to remove the difficulties, if any, experienced by the employers in conforming with its provisions.

COCHIN MALABAR ESTATES' RECORD EARNINGS

DIVIDEND RAISED—FINANCES SATISFACTORY

THE year ended 28th February, 1953, has proved to be yet another period of record performance for the Cochin Malabar Estates Ltd. (Managing Agents and Secretaries: Messrs. Peirce Leslie & Co., Ltd., Kozhikode, Malabar). The Directors' report and audited accounts of the Company for that year show that the crop harvested during the year is a record in the Company's history and that the profit is the highest ever earned. It is noteworthy that this excellent result has been achieved, despite a rise in the cost of production. The benefit of the record results has been passed on to the shareholders, to some extent, in that the dividend has been stepped up from 20 per cent. paid for the previous year to 25 per cent.

The crop harvested during the year amounts to 16,60,334 lbs., an increase of 1,19,538 lbs. over that in the previous year. This is evidently due to reasonable weather conditions and the incentive provided by the Government of India in granting an increased price of Rs. 138 per 100 lbs. (as against Rs. 128) with effect from 28th October, 1952, for raising production. The trading profit for the year under review, which is also a record in the history of the Company, amounts to Rs. 9.99 lakhs, surpassing the previous highest of Rs. 8.53 lakhs earned in 1951-52 by Rs. 1.46 lakhs. The net profit (after providing for depreciation and taxation) at Rs. 7.85 lakhs, shows an increase of Rs. 1.39 lakhs over the previous year. The general reserve has received another sizable contribution of Rs. 3.70 lakhs, as against Rs. 4 lakhs provided last year.

The following comparative table of the Company's results for the past four years shows the marked progress the Company has made since 1950.

	Year ended February			
	1953	1952	1951	1950
Crop harvested (in lbs.)	16,60,334	15,40,796	14,20,632	14,41,582
Cost of production per lb.	As. 12·05	As. 10·95	As. 10·39	As. 10·03
Average price realised per lb.	21·26	19·12	15·13	12·52
	Rs.	Rs.	Rs.	Rs.
Sale proceeds	16,52,067	11,24,497	10,21,708	6,90,823
Closing stocks	5,80,938	7,48,093	3,03,447	4,83,958
Expenditure on estates and replanting	12,51,051	10,54,189	9,22,117	9,03,665
Trading profit	9,99,825	8,53,316	5,05,809	2,76,713
Other expenses	71,952	70,500	44,678	31,168
Managing Agents' commission and remuneration	40,922	30,284	29,657	27,403
Depreciation	57,960	44,397	39,236	38,886
Taxation	49,100	64,050		
Net profit	7,84,915	6,45,879	3,93,189	1,80,337
To general reserve	3,70,066	4,00,000		1,00,000
Dividends—				
7% preference	7,931	7,931	7,931	7,931
Ordinary	4,49,547 (25%)	3,58,837 (20%)†	2,15,302 (20%)†	1,07,651 (10%)
Carry forward	1,13,371	1,55,200	2,76,099	1,06,133

† On the increased capital of Rs. 17.94 lakhs, raised by the capitalisation of Rs. 7.18 lakhs standing to the credit of the capital reserve.

It will be observed that the cost of production during the year had gone up by As. 1.1 per lb. which was more than the increase recorded in the previous two years. However, this rise in cost was more than offset by the increase of As. 2.14 per lb. in average price realised, consequent on the upward revision of statutory prices of rubber made in October, 1952, referred to earlier. The average price realised would have been higher still but for the fact that the benefit of the enhanced prices was available to the Company for only four months of the year under review. The sizable increase in crop harvested and the rise in average price realised has resulted in a rise of Rs. 5.28 lakhs in sale proceeds. This has been offset to the extent of only Rs. 1.97 lakhs in expenditure on estates and replanting. It is gratifying to note that the Company's trading profit has progressively gone up by Rs. 7.22 lakhs in the course of the last three years. This is surely due to the successful efforts of the management in bringing more area under cultivation and, at the same time, in keeping the existing areas in good condition.

The Company's financial position is quite satisfactory, as will be noted from the following synopsis of its balance-sheet.

Liabilities	Rs.	Assets	Rs.
Capital	19,07,486	Gross block	27,79,106
Reserve and surplus	14,28,753	*Less*—Depreciation	2,34,656
Provision for taxation	63,819	Net block	25,64,450
Liabilities	6,39,667	Stock-in-trade	5,60,938
		Stores, spares, etc.	2,74,501
		Debts deposits and advances	65,247
		Cash	5,94,589
Total	40,59,725	Rs.	40,59,725

It will be noted that the reserve and surplus stand at nearly 75 per cent. of the paid-up capital, even after the capitalisation of a sum of Rs. 7.18 lakhs out of the amounts standing to the credit of the general reserve and premium on shares, in March, 1952. There was an addition of Rs. 3.25 lakhs to the capital expenditure during the year, a considerable part of which represents expenditure on buildings, machinery and development. These additional expenditures which the Company has been making year after year, are essential to safeguard the future profit-earning capacity of the properties. The profit for the year under review clearly shows that this policy of capital expenditure has begun to yield the desired results. The current assets, at Rs. 14.96 lakhs, covers the current liabilities, at Rs. 7.23 lakhs, by a wide margin of Rs. 7.73 lakhs.

The Company's Rs. 3 paid-up ordinary shares are currently being quoted at Rs. 7-2, at which rate and, on the basis of the latest dividend, the yield works out to 10.5 per cent. per annum.

METTUR CHEMICAL GOES OFF DIVIDEND LIST AGAIN

After a welcome break of a year, the shareholders of the Mettur Chemical and Industrial Corporation Ltd. (Managing Agents: Messrs. Seshashayee Bros. Ltd., Mettur Dam R.S.) have, once again, had to go without any dividend for the year ended 31st March, 1953. The ordinary shareholders had received for the previous year a small dividend of 3½ per cent., after having experienced two barren years. Last year, the preference shareholders had received their return (6 per cent., tax free), along with the arrears for the preceding two years. During the year under review, the results of working of the Company were considerably affected by the abnormal conditions that prevailed during the year, over none of which the management had any control. The year's working resulted in a small loss of Rs. 23,911, after providing for adequate depreciation, as against a profit of Rs. 4.66 lakhs for the previous year. After adjusting the previous year's surplus of Rs. 21,842 brought in against this loss, there is still a deficit of Rs. 2,069. Consequently, the Directors have had to let even the preference dividend fall in arrears.

As stated above, several adverse factors, combined together to affect the Company's working during the year. The failure of the monsoon in the Madras State for the fifth successive year was a big factor. Consequently, power supply to the Company was restricted throughout the year in varying degrees, ranging from 15 per cent. to 75 per cent. Another handicap was that even the meagre supply of power utilised was charged at under the ordinary high tension tariff which considerably raised the cost of production. On power supply alone, the Company had to pay Rs. 1 lakh more than the normal bill. "As a result of the 'paralysing' power cuts," observe the Directors, in their report to the shareholders, "our keen expectations to reach peak economic production (of caustic soda and chlorine) during the year and the benefits derivable under the expansion scheme could not be realised."

The free licensing of imports of bleaching powder during the major part of the year unfavourably affected the Company's production, though the position improved during the first quarter of 1953, following a drastic revision of the import policy. Conditions were far from favourable to maintain continuous production of *vanaspati*, owing to the sustained increase in the price of raw groundnut oil which rose from Rs. 1,200 per ton in April, 1952, to Rs. 1,900 in March, 1953, and further to Rs. 2,150 subsequently. "The selling price of *vanaspati*," the Directors point out, "did not catch up with the successive rises in the price of the main raw material, namely, groundnut oil, due to lack of purchasing power in the market. In view of such conditions, production of *vanaspati* was limited to actual orders and was subject to a minimum price realisation to cover our actual costs."

Reflecting the fall in production of the Company is the decline in (a) sale proceeds from Rs. 78.43 lakhs to Rs. 53.54 lakhs, (b) closing stocks from Rs. 12.16 lakhs to Rs. 3.17 lakhs and (c) expenses from Rs. 73.42 lakhs to Rs. 41.02 lakhs. Managing agents' commission and remuneration is lower at Rs. 17,700, as against Rs. 78,000. The depreciation account has been provided with Rs. 4.36 lakhs, as compared with Rs. 4.73 lakhs set aside last year.

The balance-sheet as on 31st March, 1953, shows that the Company is still in the process of building up the resources and consolidating its position. The reserves amount to Rs. 6.42 lakhs, against a paid-up capital of Rs. 60.49 lakhs. The gross block of the value of Rs. 86.39 lakhs (including additions of the value of Rs. 3.35 lakhs during the year) has been written down to Rs. 57.86 lakhs. Outstanding debentures, after redemption of Rs. 75,000 during the year, amount to Rs. 19.49 lakhs. The current liabilities aggregating Rs. 9.97 lakhs are covered by current assets amounting to Rs. 38.52 lakhs.

The Industrial Finance Corporation of India agreed to advance to the Company a further sum of Rs. 5 lakhs for working capital against a second series of debentures. Pending completion of formalities, a sum of Rs. 2 lakhs was drawn in November, 1952, and the balance of Rs. 3 lakhs in April, 1953. The first instalment of Rs. 75,000 due to the I.F.C. of India on the first series of debentures was repaid in January, 1953.

On the outlook for the Company in the current year, the Directors say: "It is gratifying to report that the monsoon in the current year has been promising and the level in all the lakes supplying hydro-electric power is reassuring. It is not now expected that there will be any power cut during the rest of the financial year 1953-54 and, consequently, the prospects appear to be bright."

SINGARENI COLLIERIES' RESULTS IMPRESSIVE

DIVIDEND WELL MAINTAINED

THE results of working of the Singareni Collieries Co., Ltd., (Secretaries and Agents: Industrial Trust Fund, Government of Hyderabad) for the year ended 31st December, 1952, make pleasant reading. The Company's output of coal during the year under review shows a sizable increase. The gross profit has also recorded a smart rise of Rs. 13.28 lakhs, that is, from Rs. 22.95 lakhs to Rs. 36.23 lakhs. The allocation to the reserves has also been raised, but the dividend to the shareholders has been maintained at the moderate rate of 5 per cent. for the third year in succession.

The Company's output of coal went up from 12.07 lakh tons to 13.75 lakh tons, that is, an increase of 1.68 lakh tons. This increase compares well with that of 44,727 tons recorded in 1951 and 1.17 lakh tons in 1950. The production of 13.75 lakh tons during the year surpasses the target of 13.50 lakh tons fixed under the Company's expansion programme. The Company's expansion scheme has further been reviewed in the light of the recommendations made by the Working Party for the Coal Industry, according to which the Company's output has to be raised to 2,000,000 tons per annum by the end of 1957. In order to reach this target, a new power house is being set up. Deliveries of power plant are expected to be completed soon, the new power house being scheduled to be completed by the middle of 1955.

Along with the increase in output, the wagon supply to the Company also improved, the average number of wagons supplied during the year being 197 per day, as compared with 172 wagons per day in the previous year, an increase of 25 wagons per day on an average. This enabled the Company not only to clear the additional output but also to reduce the Company's stocks from 22,721 tons to 8,073 tons. Despatches during the year amounted to 13.07 lakh tons, as against 11.08 lakh tons in the previous year.

The following comparative table gives a summary of the Company's results for the year under review against the background of those for the previous three years:

(In lakhs of rupees)

	Year ended 31st December			
	1952	1951	1950	1949
Sale proceeds (net)	243·08	240·06	240·80	222·81
Expenses	248·30	217·12	215·15	193·52
Gross profit	30·23	22·95	25·65	29·33
Depreciation	21·95	16·21	14·22	22·14
Taxation	6·20	1·75	7·00	3·00
Net profit	8·08	4·99	4·43	4·19
To reserves	3·50	1·50	0·75	1·26
,, bonus	1·00	0·60	0·52	0·10
,, dividend	3·16	3·16	3·16	2·84
	(5%)	(5%)	(5%)	(4½%)
Carry forward	0·66	0·24	0·51	0·62

The addition of Rs. 3.50 lakhs to the reserves from out of the profit for the year under review consists of Rs. 2 lakhs to the workmen's compensation fund created during the year and Rs. 1.50 lakhs to the general reserve (same as in the previous year). The Directors decided to discontinue the workmen's compensation insurance policies and create a workmen's compensation fund, "in the interests of economy and efficiency."

The Company's reserves and surplus aggregate Rs. 13.91 lakhs, against a paid-up capital of Rs. 63.21 lakhs. The debenture liability has been reduced by Rs. 1.21 lakhs to Rs. 13.20 lakhs, by the redemption of 2,420 debentures of Rs. 50 each in September, 1952. The provision for taxation amounts to Rs. 10.73 lakhs. The current liabilities (excluding employees' provident fund Rs. 25.46 lakhs) amount to Rs. 126.15 lakhs. These include Rs. 7.09 lakhs being the loan taken from the Hyderabad State Bank on cash credit secured by second mortgage debentures and Rs. 69.26 lakhs due to the Hyderabad Government secured by a general hypothecation of all movable assets of the Company. The gross block of the value of Rs. 324.73 lakhs has been provided with a depreciation fund of Rs. 226.35 lakhs. The current assets aggregate Rs 154.29 lakhs and amply cover the current liabilities, including provision for taxation, by a margin of Rs. 17.41 lakhs.

Points From The Chair

Nationalisation of Insurance Companies

"IT is true that industry may find private and institutional savings inadequate under our present taxation but Government ownership does not do anything to ease this deficiency, nor can a Government ever acquire that vast mass of knowledge accumulated in this multifarious experience of its producing and trading citizens, though this fact may be neglected by doctrinaires either through ignorance or well-meaning intellectual arrogance. Nationalisation of public utilities may be carried through without great harm, but nationalisation of industries and insurance would be definitely hampering success in the task which it is vital to accomplish successfully."

M. B. MEHTA,
Vulcan Insurance Company Ltd.

Outlook for Rubber

"For the current year, we are faced with an increased cost of production and lower rubber prices. The profit balance at present levels can be only very meagre. The future price of synthetic rubber in the U.S.A. has yet to be determined in the event of the Government-owned plants being acquired by private industry, as provided for in a recent Bill laid before Congress, and we should be prepared for a period of keen competition ahead of us. This Company should be among those in a position to compete successfully with the man-made product, given a realistic wages level."

CHARLES H. WRIGHT,
Java Rubber Plantations Ltd.

Improved Productive Efficiency

"It seems apparent that the country generally has lived out the Utopian atmosphere that optimistically surrounded schemes for higher living with lessening work. We cannot survive by the interchange of services, and it is only by our trading throughout the world that we can maintain our present standard. This means more work, and if necessary, longer hours with interest and conscientiousness taking the place of the "couldn't-care-less" attitude. It means master and man joining together with understanding and a common cause. I believe, I speak for all employers in saying that we are not out to exploit but to encourage earning capacity and productivity, acknowledging all generous-mindedness in like manner. Any man who retards the achieving of this desired relationship strikes at the roots of recovery. The future, broadly speaking, offers prosperity and stability, but it is only enterprise, ability and industry that will reap a just reward."

RONALD HAMPTON,
Union Steel and Manufacturing Co., Ltd.

Competition in Business

"There is little doubt that business will soon become more competitive. I have also stated before that our fortunes are linked largely with those engaged in the engineering, shipbuilding, aircraft and armament industries, and allied business; for this reason, you will observe my difficulty in making any long-term forecast. The maintenance of prosperity in the industries mentioned is necessary for the primary well-being of this Company, and such prosperity largely depends upon the general volume of export trade. We have in these islands, engineers, chemists and scientists, second to none in the world, and there is no reason why their labours should not result in the creation of new industries to serve the export markets. The highest standard of efficiency in the administration of business is required and those responsible for their direction are aware of this. In relation to the workers, it will be essential for them to realise that they will have to be as industrious as their counterparts in the countries with which the United Kingdom is in competition. It will be necessary for them to take pride in their work, so that the highest quality of production is attained. They will also require to recognise simple economic facts, untrammelled by bias, class warfare and political opportunism. On such footing, there is cause for inspiration."

C. A. G. HEWSON,
Ozalid Company Limited.

Detention of Vessels

"During the year under review, the Governments of India and Pakistan both introduced a system of passports which resulted in a considerable hold-up of vessels at border check-points and has adversely affected the number of passengers carried by your Company. Detentions at frontier points for customs examinations have also added enormously to the turnround time of vessels, and I am glad to say that the United Nations Organisation has also drawn attention to these delays and that they, in consultation with the respective Governments, are now considering how they can be overcome. I have every hope that the Company's will be satisfactory and will enable the Company's vessels to proceed without the existing delays. Various trade agreements between India and Pakistan were concluded during the year under review, and the agreement, which was due to expire on the 30th June last, has been extended to 30th September, 1953, pending the completion of negotiations for a new agreement. The existing agreement covers only a limited range of goods and it is greatly to be hoped that the new one will cover a much wider field. . . . I am pleased to advise that our relations with the Governments of India and Pakistan continue to be on a friendly basis. It is satisfactory that meetings are taking place in a friendly atmosphere between the leaders of the two countries, and I hope that, as a result, a settlement of outstanding disputes will be achieved, as it is only under the influence of friendly relationship between India and Pakistan that we can look for an era of satisfactory trading."

A. L. B. TUCKER,
India General Navigation and Railway Co., Ltd.

Notices

HASTINGS MILL LIMITED

NOTICE

THE ANNUAL ORDINARY GENERAL MEETING of the Shareholders will be held at the Registered Office of the Company, 14, Netaji Subhas Road, Calcutta, on Monday the 7th September, 1953, at 3-30 p.m., for the purpose of receiving the Directors' and Auditors' Reports, passing the Accounts for the year ended 31st March, 1953, declaring dividends, electing Directors, appointing Auditors and transacting such other business as may be brought forward before the meeting.

21, NETAJI SUBHAS ROAD,
CALCUTTA 1, *25th August*, 1953.

U.K. COAL BOARD TO HAVE CENTRAL ENGINEERING ESTABLISHMENT

The National Coal Board of the United Kingdom is to set up a central engineering establishment. It will have two main functions, namely, the development of new machinery and equipment, and the testing of machinery, ropes, new materials, and the like. So far as development is concerned, the establishment is intended primarily to act as a link between the Coal Board's research organisation and the manufacturers of mining machinery and equipment. It will thus supplement the development work, which is, and always has been, a function of those manufacturers who serve the coal industry. The testing work will be concerned not only with special tests of machinery, ropes, and so on, but also with the development of improved methods for the routine testing of equipment and materials used in mining.

FALL IN COMMODITY PRICES AFFECTS JARDINE HENDERSON

LOTHIAN JUTE MAINTAINS DIVIDEND

Jardine Henderson, Ltd.

THE directors of the above Company (Managing Director: Mr. G. M. Mackinlay, Calcutta) submit the audited accounts of the Company for the year ended 31st March, 1953.

The profit and loss account shows a balance of profit of Rs. 29,80,528 (Rs. 60,22,906) to which has to be added the balance brought forward from the previous year, of Rs. 5,86,448 (Rs. 5,88,652) making a total of Rs. 35,66,976 (Rs. 66,11,558). Out of this sum there has been provided for taxation Rs. 12,00,000 (Rs. 24,45,000) and transferred to general reserve account Rs. 2,00,000 (Rs. 7,50,000) leaving a balance available for disposal of Rs. 21,66,976 (Rs. 27,89,261).

The directors on the 28th August, 1952, declared an interim dividend in respect of the year ended 31st March, 1953, on the preference shares at the rate of 2½ (2½) per cent, which dividend was paid on the 6th October, 1952, absorbing, less Indian income-tax thereon, Rs. 1,01,407 (Rs. 1,01,407), and on the 26th February, 1953, declared a second interim dividend at the rate of 2½ (2½) per cent. in respect of the above year which dividend was paid on the 6th April, 1953 absorbing less Indian income-tax thereon, Rs. 1,01,406 (Rs. 1,01,406).

The directors now recommend the payment of a dividend on the ordinary shares of the Company at the rate of 7½ (10) per cent. without any deduction for income-tax paid by the Company, absorbing Rs. 15,00,000 (Rs. 20,00,000), leaving a balance at the credit of profit and loss account of Rs. 4,64,163 (Rs. 5,86,448) to be carried forward to the next account.

As foreshadowed in the directors' report for the year ended 31st March, 1952, the year's profits were adversely affected by the fall in the price levels of the commodities, in which the Company is principally interested, which became noticeable at the beginning of 1952. Jute goods were more freely available and this led to greatly increased competition among shippers with a consequent reduction in profit margins. The more stringent money conditions ruling throughout the year, coupled with the increased availability of supplies, generally retarded sales by the Company's subsidiary and associated Companies, as a result of which this Company's income suffered. Conditions in the tea industry were particularly difficult and inevitably commission earnings from tea companies in the agency suffered a sharp reduction, due to the fall in prices and profits experienced by the tea companies. It is gratifying to record that there has been a substantial improvement in tea prices since the beginning of 1953, but clearly the losses sustained by some of the Companies will not be made good for some years.

Shareholders were advised in a circular letter dated 30th October, 1952, that the Company had been appointed with effect from 1st January, 1953, as agents in Calcutta of the Imperial Tea Co., Ltd., the Halem Tea Co., Ltd., the British Assam Tea Co., Ltd., and the Behubor Co., Ltd., and that the approval of the shareholders of the Gingia Tea Co., Ltd., was being sought to a similar appointment; which approval was duly obtained. McLeod, Russel & Co., Ltd., London, are secretaries or managing agents of all of these Companies and towards the close of this Company's financial year, on the 5th March, 1953, the Company completed the purchase of the entire share capital of McLeod, Russel & Co., Ltd. No income has yet accrued from this investment which is, however, expected to prove a satisfactory one to the Company.

Accounts in brief are as under:—

Lothian Jute Mills Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st May, 1953.

After providing Rs. 1,92,000 (Rs. 4,20,000) for taxation, transferring Rs. 1,00,000 (Rs. 2,00,000) to general reserve there is a balance of Rs. 2,49,044 (Rs. 2,42,142) at the credit of profit and loss account, from which the directors recommend payment of dividends on preference shares at Rs. 3-8 (Rs. 3-8) per share Rs. 35,000 (Rs. 35,000) and on ordinary shares at Rs. 15 (Rs. 15) per share Rs. 1,50,000 (Rs. 1,50,000) leaving Rs. 64,044 (Rs. 57,142) to be carried forward.

During the whole of this accounting period the mills remained leased to Albion Jute Mills Co., Ltd.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	20,00,000	Block ...	15,44,980
Reserves ...	36,51,301	Debts, deposits and advances ...	11,98,918

Liabilities ...	5,54,626	Cash ...	34,81,767
Profit and loss account ...	64,044		
Rs.	79,21,135	Rs.	79,21,135

Kingsley-Golaghat-Assam Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Shaw Wallace & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st December, 1952.

The Company sustained a loss for the year of Rs. 3,47,969 (loss of Rs. 1,73,274), which after deducting the credit balance of Rs. 9,452 (Rs. 10,864) brought forward becomes a debit of Rs. 3,38,517 (debit of Rs. 1,62,410). After crediting provision for taxation no longer required Rs. 8,096 (nil), and E.P.T. post-war refund of Rs. 7,014 (nil) there remained a debit of Rs. 3,23,407 (Rs. 16,148). The directors transferred from general reserve account Rs. 2,85,000 (Rs. 40,000) and from surplus on realisation of fixed assets account Rs. 42,000, leaving a credit balance to be carried forward of Rs. 3,593 (credit of Rs. 9,452).

As indicated in the last report, tea prices dropped sharply early in 1952. This downward trend in prices continued and, throughout the remainder of 1952, the Company's tea was sold at prices well below the cost of production. Prices improved in the early months of this year but as practically the whole of the Company's 1952 crop had been sold by then, this welcome rise in prices did not alleviate to any great extent the heavy loss sustained by the Company during the year.

The total crop harvested during the year was 10,889 maunds which compares with the 1951 total of 11,064 maunds. The total crop was sold on the Calcutta auctions and the average sale price for the year was Re. 1-5-11 per lb. compared with the 1951 average on a Calcutta basis of Re. 1-9-4 per lb. The area under tea remains at 1,166 acres. The gardens are in good order. Buildings and machinery were well maintained.

Estimates for season 1953.—All possible measures have been taken to keep expenditure to the minimum consistent with the efficient running of the Estates, and the estimates for season 1953 provide for the production of a crop of 10,000 maunds at a total cost, on revenue account, of Rs. 12,07,798.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	4,80,000	Block ...	5,25,000
Reserves ...	80,000	Stock of tea	5,65,322
Liabilities ...	9,13,693	Stores ...	2,04,151
Profit and loss account ...	3,593	Debts, deposits and advances ...	1,19,842
		Cash ...	62,971
Rs.	14,77,286	Rs.	14,77,286

Hoograjuli (Assam) Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December, 1952.

After providing Rs. 25,528 (Rs. 19,441) for depreciation, the season's working resulted in a profit of Rs. 29,255 (profit of Rs. 1,56,592). After bringing in the balance from last year, charging managing agents' minimum commission, providing Rs. 5,000 (Rs. 46,000) for taxation and transferring Rs. 20,000 (Rs. 35,000) to general reserve, there remains a balance of Rs. 57,061 (Rs. 1,18,806) at credit of profit and loss account. From this the directors recommend the payment of a dividend of Re. 1-8 (Rs. 3) per share, leaving a balance of Rs. 27,061 (Rs. 58,806) to be carried forward.

A total crop of 5,242 maunds was secured and sold at an average price of Re. 1-8-6 per lb. This compares with a crop of 5,945 maunds secured in season 1951, which sold at an average price of Re 1-10-1 per lb. Weather conditions during the latter part of season 1952 were unfavourable for leaf growth.

Current market rates are higher than was the case when the major part of the 1932 crop was sold and there is reason to anticipate that the results for season 1953 will show an improvement. Estimates for the present season have been framed for a regulated crop of 5,200 maunds to cost Rs. 4,82,249.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	2,00,000	Block ...	4,77,727
Reserves ...	6,50,000	Stock-in-trade	4,38,853
Provision for taxation ...	10,884	Stores ...	1,41,040
Liabilities ...	4,34,067	Debts, deposits and advances ...	1,47,200
Profit and loss account ...	27,060	Investments	77,028
		Cash ...	40,157
Rs.	13,22,011	Rs.	13,22,011

Ananda (Assam) Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December, 1952.

After providing Rs. 34,976 (Rs. 31,971) for depreciation, the season's working resulted in a profit of Rs. 39,738 (loss of Rs. 24,776). After bringing in the balance from last year and charging managing agents' commission, there remains a balance of Rs. 40,222 (credit of Rs. 25,196) at credit of profit and loss account. From this the directors recommend the payment of a dividend of As. 12 (As. 12) per share, leaving a balance of Rs. 19,484 (Rs. 4,458) to be carried forward.

A crop of 4,971 maunds was secured and sold at an average price of Re. 1-10-11 per lb. This compares with a crop of 5,272 maunds secured in season 1951, which sold at an average price of Re. 1-11-5 per lb. Despatches of tea were delayed owing to floods in the vicinity of the garden with fortunate results for the Company, as the major part of the 1952 crop was sold during the present year, when tea prices had risen above the low level previously ruling.

Estimates for the current season have been framed for a regulated crop of 4,600 maunds to cost Rs. 4,68,997.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	2,76,500	Block ...	4,78,392
Reserves ...	4,21,500	Stock-in-trade	5,08,356
Provision for taxation ...	7,036	Stores ...	97,135
Liabilities ...	5,26,274	Debts, deposits and advances ...	1,14,355
Profit and loss account ...	19,484	Investments	1,118
		Cash ...	51,438
Rs.	12,50,794	Rs.	12,50,794

Sonai River Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Davenport & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December, 1952.

During 1952 the tea industry generally in North East India suffered the most serious crisis within experience, the district of Cachar probably the most severely of all, with sale prices greatly below production costs. As a result, the financial position of the Company deteriorated to such an extent that by the end of the year it was found impossible to keep the Company's estate in production any longer and orders were given to close it at the end of the year, in accordance with circular letters addressed to shareholders on the 12th September, 1952 and 11th February, 1953. The following figures illustrate the adverse conditions that prevailed during the season:

Total net average sale price including proceeds of export rights sold was As. 13.59 as compared with As. 19.91 in 1951. Total working cost per pound of tea produced was As. 26.19 as compared with As. 23.59 in 1951.

An attempt was made to improve the standard of manufacture by finer plucking but with common Cachar tea selling at As. 11 to As. 12 a pound, during the height of the season, this had little effect other than to contribute to the reduction in crop from 485,920 pounds of tea in 1951 to 408,480 pounds, despite the application of additional manures; and this in turn is reflected in the increased production costs shown above.

In accordance with arrangements made and initiated before the onset of the crisis referred to above, work on the factory renovation was completed and the estate now has a reasonably good timber-built factory. It was, however, found necessary to cancel the order for a new main oil engine and to divert elsewhere two new rolling tables, leaving the estate deficient in motive power and in rolling facilities, and these matters will require urgent attention as soon as conditions permit.

The revenue loss for the year is Rs. 3,11,330 (loss of Rs. 99,443); to this have to be added interest charges, reserve for staff expenses and the proportionate cost of assets written off; and there have to be deducted the proceeds of machinery sold and refund of excess profits tax. Allowing for these and the sundry other adjustments shown, there is a final loss for the year of Rs. 3,27,994 (loss of Rs. 1,18,410) and a final debit balance on this account of Rs. 3,98,558 (debit of Rs. 70,564) which is carried forward to 1953.

Having regard to the heavy loss sustained on the season's working, the managing agents have offered to forego one half of their commission on tea sales, which has been accepted. During the year, the Company incurred a substantial debt to the managing agents for expenses paid on its behalf, and this has since been secured by the execution of a mortgage creating a second charge on the Company's property in favour of the managing agents.

Estimates for 1953 are based on a crop of 5,500 maunds of tea at a cost of Rs. 3,99,320. As shareholders were advised in our circular of the 26th March, 1953, it was found possible to reopen the estate from the middle of March, 1953, on acceptance by the labour force of revised Minimum Wages promulgated by the Government of Assam, and by the Company's Bankers of estimates of expenditure based thereon. It is evident that these estimates which give a cost of As. 14.53 for the current year, allow for the barest essentials and that if the estate is to be maintained in reasonable condition and is to continue to produce satisfactory crops, expenditure on a materially increased scale will be required in future, irrespective of any adjustment of labour earnings.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	5,00,000	Block ...	7,26,400

		Debts, deposits and advances ...	85,585
		Investments	2,616
		Cash ...	9,460
		Profit and loss account ...	3,98,558
Rs.	14,44,951	Rs.	14,44,951

Namburnadi Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Shaw Wallace & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December, 1952.

The Company sustained a loss for the year of Rs. 1,83,094 (loss of Rs. 1,25,620) which after deducting the credit balance of Rs. 4,000 (Rs. 12,615) brought forward, there was a debit of Rs. 1,79,094 (debit of Rs. 1,13,005). The directors transferred from general reserve account Rs. 80,000 (Rs. 1,00,000) leaving a debit balance to be carried forward of Rs. 99,094 (debit of Rs. 4,000).

Due to unfavourable climatic conditions the crop for 1952 showed a heavy decline of 879 maunds compared with the previous season, with the result that a loss was sustained on the season's working notwithstanding an improvement in the average price obtained for the Company's teas.

The total crop harvested during the year was 3,676 maunds as compared with 4,555 maunds in 1951. The total crop was sold in the Calcutta auctions and the average sale price for the year was Re. 1-10-1 per lb. compared with the 1951 average on a Calcutta basis of Re. 1-5-6 per lb. The acreage under tea remains unchanged at 810 acres. The garden is in good order. Buildings and machinery were well maintained.

Estimates for season 1953.—All possible measures have been taken to keep expenditure to the minimum consistent with the efficient running of the garden, and the estimates for season 1953 provide for the production of a crop of 4,000 maunds at a total cost, on revenue account, of Rs. 5,16,600.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	5,35,000	Block ...	6,08,000
Liabilities ...	5,34,454	Stock of tea	1,99,102
		Stores, etc. ...	87,026
		Debts, deposits and advances ...	71,162
		Cash ...	5,070
		Profit and loss account ...	99,094
Rs.	10,69,454	Rs.	10,69,454

National Tobacco Co. of India Ltd.

The directors of the above Company (Managing Agents: Messrs. B. N. Elias & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December, 1952.

The profit and loss account after providing Rs. 5,69,615 (Rs.5,34,889) as depreciation shows a profit of Rs. 6,40,598 (profit of Rs. 25,13,680), to which has to be added the balance brought forward from the previous year after payment of dividends on the first and second preference shares and on ordinary shares for the year ended 31st December, 1951 Rs. 8,86,347 (Rs. 7,87,157) making a total of Rs. 15,26,945 (Rs. 33,01,107). Out of this sum the directors have provided for taxation Rs. 2,75,000 (Rs. 12,00,000) leaving a balance available of Rs. 12,51,945 (Rs. 21,01,107). The directors recommend the distribution of this sum as follows:—

A dividend on the 25,000 5 per cent. tax free, first preference shares for the year 1952 absorbing Rs. 1,25,000 (Rs. 1,25,000); and a dividend on the 19,980, 4½ per cent. tax free, second preference shares for the year 1952 absorbing Rs. 89,910 (Rs. 89,910), leaving a balance to the credit of profit and loss account of Rs. 10,37,035 (after payment of a dividend of 5 per cent. on ordinary shares absorbing a sum of Rs. 3,99,850) to be carried forward to the next account.

In spite of the decrease in the total demand for cigarettes due to the general recession, the volume of sales has been maintained. However, the distribution of consumption in the various price categories has been considerably altered on account of this fall in the purchasing power of the public and Government's duty policy, and smoking this is the main reason for the smaller profit during the year under review.

Operating costs have increased due to introduction of the Minimum Wages Act, which came into effect in the latter part of 1951, and the awards made by the Industrial Tribunals. The Company has also spent a considerable sum on quarters and canteens in South India besides construction of godowns. The export of unmanufactured tobacco has been maintained at a satisfactory level. The incidence of customs and excise duties, remains very high and it should be increasingly obvious to the Government that these have defeated their own object. The imposition of sales taxes by a number of States adds its burden to the other difficulties.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	1,24,95,000	Block ...	69,83,583

QUESTION HOUR IN PARLIAMENT

Sales Tax Levy

COMMENTS of the State Governments have been invited on certain issues arising out of the Supreme Court's interpretation of Article 286 of the Constitution in its judgment on certain cases regarding levy of sales tax. On receipt of such comments, a meeting of the Officials Committee, appointed by the Finance Ministers' Conference of October, 1952, to work out measures with regard to levy of sales tax on export, import and inter-State trade will be convened and the various issues concerning the Finance Ministers' Conference Agreement will also be considered further at that meeting. It will be recalled that the Officials Committee met in November 1952 and submitted an interim report to the Government. But it could not come to any definite conclusions in the absence of an authoritative interpretation of Article 286 by the Supreme Court.

• • • •

Small Savings Scheme

The Women's Savings Week which was observed at a few places in March, 1953, has resulted in a collection of Rs. 42 lakhs. In view of the encouraging results of that work, it has been decided to put the women's savings campaign on a more regular footing. The Non-official Central Advisory Committee constituted recently will assist in guiding and co-ordinating this work and advising the Government and the various women's and other social organisations in the country. The first meeting of the Committee, which was held on the 3rd inst., has proposed to start an intensive campaign under the ægis of the Committee from October next. It is proposed to select 100 organisations of various types for the first year as authorised agents to mobilise small savings. These organisations will not get any grant but will be entitled to the usual commission of 1¼ per cent. on the sale of the 12-Year National Savings Certificates.

—Deputy Minister for Finance

Coffee Seed Export

The Government of India will not consider the question of allowing export of coffee seed unless prices dropped. So far as the present scarcity of coffee seed in the market is concerned, it may be due to the fact that there is some difficulty in regard to its movement and also that the trade is not playing its part in regard to arrangements for distribution. The Government is a third party in the scheme of coffee distribution. All it can do is to suggest various methods of distribution to the Coffee Board. The price of coffee in June-July approximated with the price fixed by the Marketing Committee of the Coffee Board. The price was certainly higher than the ruling price in the previous seasons.

—Minister for Commerce and Industry

Wheat Agreement

The annual quota for India under the three-year International Wheat Agreement commencing from 1st August is one million metric tons. If the open market prices decline below 2.03 dollars a bushel, the minimum price fixed in the agreement, India will buy from the open market. If India gets wheat from Russia cheaper, it will buy. The price of wheat has been reduced twice, recently, from Rs. 18-8 to Rs. 17-8 and then to Rs. 16-8 per maund.

—Food Minister

New Railway Lines

Slightly over 57 miles of new railway lines were opened in India during January-June, 1953. The new lines are: (i) Diggi-Tordi Sagar, 13 miles, opened on 12th May; (ii) Shoranur-Angadipuram, 17.50 miles, opened on 16th April; and (iii) Vasad-Kathana, 26.60 miles, opened on 6th June, 1953.

• • • •

Loans to Shipping Companies

The Government of India has granted loans ranging from Rs. 3 lakhs to Rs. 42 lakhs to eight shipping companies for the purchase of ships to be operated in the coastal trade of the country. The period of repayment of the loan in the case of each company varies from 4 years to 10 years. In some cases the rate of interest is 4 per cent., while in others it is 4½ per cent. The reservation of the coastal trade for Indian shipping had already been effected. The total profit earned by all Indian shipping companies both on coastal as well as on overseas trade was of the order of Rs. 250 lakhs during 1951-52.

• • • •

Port Improvement

The Central Government has decided to advance loans to the State Governments to enable them to make improvements at their ports. The improvements will include the construction, repairs and substitution of jetties, provision of workshop and dredging equipment, provision of facilities for the handling of passenger and goods traffic and of navigational aids. The allotment to different States has not yet been decided.

—Deputy Minister for Railways and Transport

Export of Sindri Fertilisers

It is not the Government's policy to export the Sindri fertilisers as the demand in the country is big enough. As a special case, however, the Government has agreed to supply 15,000 tons to East Bengal, as part of the trade agreement. As a sort of gesture, the Government has given about 100 tons to an agricultural demonstration farm in Ceylon at the suggestion of the Indian High Commissioner there. Whether India will be able to export in bulk and if so in what quantity and at what price are matters to be considered later on by the Government.

—Minister for Production

MONEY DISTINCTLY EASY

(From Our Own Correspondent)

BOMBAY, 26th *August*

The short-term money market was distinctly easy this week. With the approach of the last rettlement day in I.C.C. August on the 25th inst., whatever little demand was there for advances against cotton tapered off. Trade demand was conspicuous by its absence and transactions in foreign bills were almost negligible. At the same time, the supply of floating funds also increased. Banks, in fact, scrambled for remunerative outlet for these funds. But the intervening holidays were hardly conducive to making their bids effective. Consequently, the inter-bank call money among big Indian banks and Exchange banks sank further from 1¾-1½ per cent. respectively last week to 1 per cent., which was more or less the commonest rate, although for renewals it was sometimes slightly high at 1¼ per cent. Among the smaller Indian banks the call rate stood unchanged at 2½ per cent., though stray deals were reported done at 2¼ per cent. Short-term deposits from one, to two months fetched 2 per cent. and funds of three months' duration 2¼ per cent. The rate was 2½ per cent. for deposits of longer duration. House money at call was quoted at 2 per cent.

The week's three months' Central Treasury Bill tenders at Rs. 2.02 crores were just Rs. 33 lakhs more than those tendered a week ago. This increase is in conformity with the trend of the short-term money market described above. But what is not is the rate of Treasury Bills. Thus the average rate of accepted tender, which had risen from Rs. 2-6-3 per cent. to Rs. 2-6-5 per cent. last week, however, rose further to Rs. 2-6-8 per cent. this week. This may appear strange but it is not inexplicable. It only means that bidding for these Bills is not yet keen and that the chief bidder is still able to have his say. It remains to be seen whether, in the coming weeks, the Bills will become popular with all the banks. In view of the bank holidays on Tuesday and Wednesday next week, no offers for Treasury Bills have been invited for that week. Tenders for another Rs. 1.5 crores worth of three months' Treasury Bills have, however, been invited on 7th September next.

The Scheduled Banks' consolidated return for the week ended 14th August, reveals a sharp drop of Rs. 7.5 crores in demand deposits, while time deposits have risen by Rs. 2.55 crores. A small increase of Rs. 16.21 lakhs is noticed in borrowings from banks. Borrowings from the Reserve Bank have gone down by as much as Rs. 1.97 crores and from the Imperial Bank by Rs. 1.04 crores. On the assets side, advances have been simultaneously marked down by Rs. 5.4 crores. Bills purchased and discounted too are lower but by Rs. 2.23 crores. Investments, however, are better by Rs. 4 crores. while total cash stood depleted to the extent of Rs. 5.5 crores.

The statement of affairs of the Reserve Bank of India for the week ended 21st August, 1953, as compared with that for the previous week, reveals a substantial fall of Rs. 7.8 crores in notes in circulation. This is more than offset by an increase of Rs. 8.61 crores in the total notes held in the Banking Department. The net increase of Rs. 77.23 lakhs in the total investment is covered by a corresponding increase in rupee coin. In the Banking Department, deposits of the Central Government have risen by nearly Rs. 15 crores. There has also been a rise of Rs. 2.6 crores in deposits of other Governments and of Rs. 3.13 crores in those of others. But a marked fall of Rs. 11.05 crores is revealed in other liabilities. The assets side reveals an increase of Rs. 8.61 crores in cash balances. But balances held abroad have receded by Rs. 1.59 crores.

The Gilt-edged market was a little active this week. Enquiries were in evidence over a broad front especially in short and medium-dated loans. There were buyers in 2½ per cent. 1954 at Rs. 98-10 but no business worth mentioning took place, the scrip being in short supply. A few parcels of 2½ per cent. 1960, however, changed hands at Rs. 93-8. 2½ per cent. 1962 had buyers at Rs. 91-9-6 with no sellers. Among the 3 per cent. loans, 1957 met with some support at Rs. 98-9, as against Rs. 98-8, a week ago. 1958 was unchanged at Rs. 98-1, while enquiries were witnessed for 1959-61 loan at Rs. 96-1-6. Some deals were reported done in both 1963-65 loan and 1964 loan at Rs. 92-6-6. No business was possible in 1970-75 at Rs. 86-7. But a fairly large turnover was reported in 3½ per cent. 1961 National Bonds at Rs. 98-5. Among State loans 4 per cent. 1964 Bombay loan rose by As. 2 to Rs. 100-4. The Madhya Pradesh 3 per cent. 1955 and 1956 loans had buyers at Rs. 99 and Rs. 98-8, respectively.

In the foreign exchange section, there was no change in the rupee U.S. dollar rate. In New York, the spot sterling experienced a fractional recision from $2.81-11/16—$2.81-13/16 to $2.81-7/16—$2.81-9/16. The forward rate for three months stood unchanged, on balance, at $2.80-7/8—$2.81. The rate for six months, however, receded by 1/16 from $2.80-3/8—$2.80-1/2 to $2.80-5/16—$2.80-7/16.

PRICE RESISTANCE FOR KIPS

(From Our Own Correspondent)

MADRAS, 24th *August*

There has been no change in the U.K. demand for kips, due to importers' price resistance. Shippers are not keen to follow buyers' limits, both ends being adamant over prices. Demand for lower grades has continued in tanned cow hides, cow calf and buff calf.

In the tanned skins section, prices of tanned goat are slightly easy for common qualities and steady for better tannages, while those for sheep are firm for lining and gloving types. The results of the tanned skins auctions in London which are due to commence to-day, are awaited with interest.

BULLION QUIETLY STEADY

(From Our Own Correspondent)

BOMBAY, 26th *August*

After remaining hesitant during the first three days of the week under review, owing to the absence of any fresh developments, the bullion market picked up strength yesterday. The announcement of Estate Duty rates induced renewed short covering and fresh bull support. The rates of duty contemplated being considered heavy, the bulls expected a rise in the demand for bullion, especially for gold, in future. Similarly, the operators, who had previously gone short on expectations of low rates of Estate Duty, decided to cover their open position. The twin effect of these factors was the advance in quotations for both gold and silver. To-day, however, the market turned somewhat quiet on scattered realising transactions. A part of the gains registered on the previous days was lost. The undertone of the market, however, was quietly steady. The badla charges were Re. 1-6 in favour of bulls in gold and As. 4 in favour of bears in silver.

Business in gold for forward delivery (*Shravan*) terminated yesterday at Rs. 86-14. The quantity of gold tendered against the delivery was said to be small. An important syndicate, which had sold 50,000 tolas, it is reported, was not in a position to give delivery. It had, therefore, to pay heavy price of Re. 1-6 to carry forward its sales to the next settlement. Gold for forward delivery (*Bhadrapad*) opened the week lower at Rs. 86-2, as against Rs. 86-4-6, and, after moving between Rs. 86-2 and Rs. 86-4, advanced to Rs. 83-15 to-day. The closing rate, however, was slightly lower, by As. 2, at Rs. 86-13.

Ready gold commenced at Rs. 87-9 and, after an initial marking down to Rs. 87-1, recovered to Rs. 88-6 before closing at Rs. 88-1. The floating stocks are estimated at 20,000 tolas. The daily average arrivals and offtake were even at 4,000 tolas.

Silver for forward delivery (26th August) opened at Rs. 152-1 and gradually rose to Rs. 152-15 on Tuesday. A part of the improvement was lost towards the close of to-day, when, on account of profit-taking, the business in this settlement terminated at Rs. 152-8. *Bhadrapad* delivery opened at Rs. 152-4. It steadily rose to Rs. 153-4 yesterday, but closed lower at Rs. 152-2 to-day.

Ready silver, which opened at Rs. 152-5, gained As. 15 during the week to record a high of Rs. 153-4 to-day. However, a reaction set in towards the close and the rate finished lower at Rs. 152-9. The floating stocks of silver are estimated at 2,000 bars. The daily average offtake was 15 bars, while arrivals were 10 bars.

The following comparative table shows the trend of the market during the week under review:

	26-8-53	Highest	Lowest	19-8-53
GOLD	Rs. a.	Rs. a.	Rs. a.	Rs. a.
Ready (.99 fine Mint)	88 1	88 7	87 1	87 11

DEMAND FOR TEA STRONG

(Messrs. Forbes, Ewart and Figgis Ltd.)

COCHIN, 22nd *August*

The offerings in sale no. 17, which was held on Tuesday, 18th August, 1953, amounted to 1,340,000 lbs. Quality amongst the medium, good medium and high-grown teas showed some improvement and there were some attractive bright liquoring teas on offer.

The sale opened to a good general demand, although common and low medium teas showed a slightly easier tendency. Medium and good medium descriptions were well supported; prices were often dearer by an anna to As. 2. Best Liquoring teas met with good demand and prices tended to be dearer, following quality. The demand for black Middle East type fannings with style continued but at lower rates. Whole leaf grades met with more competition and were occasionally dearer.

The following were the quotations:

	Rs. a. p.
Low-grown Travancore B.O.P. ...	1 9 9
Medium Travancore B.O.P.	1 12 0
Anamallais B.O.P.	1 13 6
Best liquoring *Nilgiri* B.O.P.	2 4 0
Clean black leaf O.P.	2 2 6

London Market.—The market was quiet. Demand irregular. Colours or useful types, however, were fully firm.

Colombo Market.—*Less demand.* Low-growns declined by ten cents, mediums by five cents and high-grown Dimbula types by 10 to 15 cents. Uvas irregular generally lower on quality.

Calcutta Market—Export.—The market opened on a quieter tone. *Less* general demand. Commons and medium Assams, excepting good liquoring ones, easier by half an anna to one anna. C.T.C. and whole leaf grades weaker. Commonest strongest feature.

Dust.—Fair general demand at lower rates. Commons and medium Assams easier by half an anna to one anna. Best C.T.C. and Middle East types steady.

Export Quota.—The market has eased to 15½ pies, at which figure business has been done.

Forthcoming Auctions.—Sale No. 18 will be held on Tuesday, 1st September, 1953.

As we go to Press, Messrs. Forbes, Ewart and Figgis Ltd. wire as follows:

"*Dust Sale Q.*—125,000 lbs. Strong general demand. All types fully dearer by an anna."

OUTLOOK FOR COTTON CROP

(From Our Own Correspondent)

BOMBAY, 26th *August*

The August Contract has expired. It has not been a painless death and even during its brief but hectic life, it has caused a lot of ups and downs and anxieties amongst those related to the cotton trade. Trading in this contract was cleverly manipulated by a determined and resourceful group, but this has to be accepted once the need for forward trading in any important commodity is recognised. The E.I.C.A. authorities, however, could not but have felt a little uneasy about the frequent flights of this contract from the real position in the cotton trade as a whole. This contract had the distinction of unusually high deliveries offered against sales in it. The rejected lots from these deliveries augmented the supply in the ready market. Some mills took advantage of this new source of supply and succeeded in replenishing their stocks from it. From the phenomenal quantity of cotton bales actually tendered in this contract, it is a good matter of speculation as to what would have happened in the market, if the longs had not been in a position to obtain temporary financial accommodation for their heavy commitments.

All attention is now naturally concentrated on the new crop. Present estimates regarding its size are very optimistic. There is already talk of self-sufficiency and the target of four million bales being realised during the coming season. The heavy rains do not appear to have done any appreciable damage anywhere, to the standing crop and the more or less clear weather this week is regarded as very helpful. All the same, caution is necessary because the end of the season even for the short-staple early varieties is not in sight and the *tag-end of the monsoon* is disproportionately significant so far as the yield is concerned. This year, the pattern of the crop is also likely to change inasmuch as the ratio between the short-staple and medium varieties will be greater which *means less imports* and less exports. There is now a move to persuade the authorities to halt the movement towards replacing the former with greater sowings of the latter and thus work out a new balance in this respect. This question, along with some other important ones, will come up for consideration before the Indian Central Cotton Committee at its meeting this week in Bombay. Before this question could be finally settled, however, the authorities will have to take note of the future pattern of cloth production in the country and the changing needs of the textile industry for various types of cotton.

The spot section of the market has been kept fairly busy during the week. It is expected that now the question of tendering cotton against forward sales has been settled, this activity is likely to increase in the coming weeks. On the other hand, there are fears that cloth production in the coming months may go down in view of modest offtake, though export enquiries have shown some improvement. The size of the new crop also will go to prevent the mills from being in a hurry to make purchases and the behaviour of the February contract with its present bearish tone will go to help this attitude. There is hardly any demand for exports, but transactions in imported cottons are on the increase. Inter-trade transactions also are not numerous at this stage.

During the week under review, which was interrupted by two holidays, namely, 20th inst. on account of the Board election and 24th inst. on account of Cocoanut Day, there was restricted trading. I.C.C. August 1953 opened at Rs. 735 and fluctuated between Rs. 735 and Rs. 730 before it expired on 25th inst. at Rs. 731. I.C.C. February opened the week at Rs. 659 but gradually declined, on quiet spot advices, to Rs. 633½ to-day, although it recovered by a rupee towards the close of the session. The following is the trend of prices in the forward market during the week ended to-day:

	Opening	*High*	*Low*	*Closing*
I.C.C. February	Rs. 659	659½	633½	635
I.C.C. August ...	Rs. 735	735	730	731

The following are the latest quotations for the Sewri cotton market:—

Bengal *Deshi* Rs. 600; Berar *Jarilla* Rs. 750; Khandesh Rs. 840; Vijay Rs. 880; Oomra *Deshi* Rs. 765; Moglai Rs. 665.

At Karachi, while the field of enquiries from abroad has broadened to a certain extent, actual business put through is not satisfactory. The U.K., for instance, is a willing buyer but both the R.C.C. there and the private buyers, who have opted out, consider the prices quoted unattractive. The complaint is heard from other countries on the Continent, while Japan is still sitting on the fence. In spite of this, the rates, both in the spot and forward markets, have remained very steady. Even the lower trend in the New York prices has not induced Karachi to bring its quotations in line with the world markets. The latest available quotations from the Karachi market are: Spot Punjab *Deshi* Rs. 66; 4F Punjab R.G. Rs. 55 to Rs. 55-8; S.G. Rs. 59 to Rs. 59-8; L.S.S. Punjab R.G. Rs. 58 to Rs. 58-8; S.G. Rs. 62 to Rs. 62-8; N.T. R.G. Rs. 62; S.G. Rs. 63-8; 289F Punjab R.G. Rs. 66; S.G. Rs. 70. New crop all October-November, Sindeesi Rs. 69; Punjab *Deshi* Rs. 67; N.T. R.G. Rs. 65-8 to Rs. 66; S.G. Rs. 69 to Rs. 69-8; 289F R.G. Rs. 69; S.G. Rs. 74.

At Alexandria, on the other hand, India, the U.K., France and even the U.S.A. have been buyers of moderate quantities. The demand is mainly for Ashmouni, though Karnak and Giza 30 are also in the picture. The crop position in Egypt is very satisfactory and the yields for all varieties are expected to be higher this year.

Trends at New York and in other American cotton markets have been fairly quiet and the range of fluctuations has suddenly narrowed down. Now that October delivery is approaching nearer there is some liquidation from time to time in this contract. The prices, on the whole, are expected to keep around the loan level for the present till some more definite trend emerges as a result of export demand or improvement in the internal textile trade.

The following are the latest quotations from New York, as compared with those ruling a week and a fortnight ago:

(In cents per lb.)

	25-8-53	18-8-53	11-8-53
Spot	33.80	33.70	33.85
October	33.54	33.43	33.59
December	33.84	33.60	33.80
March	34.00	33.79	33.93
May	33.96	33.76	33.91

ART SILK YARN LISTLESS

(From Our Own Correspondent)

BOMBAY, 26th *August*

Conditions in the art silk yarn market were listless during the week under review. Operators, were somewhat inclined to restrict their dealings, awaiting the developments in yarn markets in Japan and on the Continent. Consequently, the turnover was small and price variations were very narrow. The undertone of the market, however, remained fairly steady.

In the forward section, 150D August delivery contract improved from Rs. 773 to Rs. 776 on the 22nd inst. After receding to Rs. 770 yesterday, it recovered to close at Rs. 773. September contract spurted by Rs. 4 to Rs. 778 on Saturday. There was a recession yesterday, when the value went down to Rs. 772. To-day, however, it was better at Rs. 776. In the ready section, 120 Italy and 150 Italy were fully steady at Rs. 4-1 and Rs. 4-2, respectively. 150 Japan and 120 Japan were a shade lower, the former at Rs. 4-0-1/2 and the latter at Rs. 4-1.

The table below gives the prices of art silk yarn quoted to-day, as compared with those on the 19th and 12th inst:

	26-8-53	19-8-53	12-8-53
	Rs. a.	Rs. a.	Rs. a.
150D August(per case of 200 lbs.) ..	773 0	773 0	794 0
150D September	776 0	774 0	792 0
120 Japan (per lb.)	4 1	4 1½	4 2½
150 Japan	4 0½	4 1½	4 2½
120 Italy	4 1	4 1	4 3
150 Italy	4 2	3 14	4 1½

Report of poor arrivals of imported art silk yarn in recent weeks would appear to have had no effect on the market. The quantity of yarn actually imported into Bombay Port during the month of July, 1953, for instance, was not more than 1.71 million lbs., as against 2.56 million lbs. and 4.62 million lbs. in the previous two months, respectively. This is due to the renewed weakness in the staple fibre yarn section. Large imports of staple fibre and restoration of power cut have resulted in a distinct improvement in yarn production in the local and South Indian mills. The arrivals of staple fibre yarn into the market have been quite large. The decline in cotton yarn prices, following the delay in the Government of India's announcement of export policy, has also been responsible for the art silk yarn values not registering a rise despite depletion of stocks.

In the staple fibre yarn section, 2/40s yarn September contract staged a further decline this week to Rs. 648, as against Rs. 657 last week, although, towards the close, it was slightly better at Rs. 653. As already stated, imports of staple fibre have been larger in recent weeks. During July, 1953, as much as 2.61 million lbs. of fibre were imported into Bombay Port, as compared with 0.96 million lbs. in the previous month.

CASTORSEEDS BEARISH

(From Our Own Correspondent)

BOMBAY, 26th *August*

The notable event during the week under review was the Centre's announcement last Saturday of a change in its policy governing import of coconut oil and copra. The change provides for import of coconut oil upto two-thirds of quota licences for July-December, as against half prior to 22nd inst. The main object is to make available more supplies of coconut oil, with a view to bringing down the prices of edible oils and oilseeds by easening the tight supply position in them. This change in the Centre's policy did not, however, have the desired effect, as the groundnut section continued to rule steady, following bull grip on the stocks. The castorseeds section, however, ruled bearish, consequent on discouraging overseas advices. The linseed section was slightly easy, on selling pressure by certain bulls. The quotations, on balance, showed minor variations in groundnuts, while castorseeds and linseed disclosed losses over the week.

Speculative elements were highly active in the groundnut section. There was a conscious and calculated effort to maintain, if not raise, the prices of ready transactions with a view to getting the maximum prices for squaring up August settlement. Bold ready, after varying between Rs. 49 and Rs. 50, declined to close steady at Rs. 49. August-September delivery was done at Rs. 46-8, as against Rs. 45-8. December-January delivery, however, lost As. 6 to Rs. 31-6. Khandesh quality fluctuated between Rs. 50 and Rs. 51-8. Groundnut oil ready gained As. 8 to Rs. 27-12, while railway receipts were enquired at Rs. 26-8. August, September and October deliveries were done at Rs. 26-4, Rs. 25 and Rs. 21, respectively, as against Rs. 26, Rs. 24-5 and Rs. 20-11.

In the linseed section, Bold ready lost As. 4 to Rs. 29-4. August-September and October-November deliveries changed hands at Rs. 29-4 and Rs. 28-6, as compared with Rs. 29-8 and Rs. 28-12, respectively. February-March contracts declined from Rs. 26 to Rs. 24-12. Linseed oil ready was steady at Rs. 16-4.

There was a virtual absence of enquiries for castor oil from world markets. Castor oil Commercial at £141 per ton in the U.K. and the Continent was discouraging to Indian exporters. Chinese castorseeds was quoted at £60 per ton on the Continent and British East African castorseeds at £60 10s. per ton. Consequently castorseeds in India presented a bearish appearance. September delivery lost Rs. 7-6 to Rs. 140-14, the highest and the lowest touched during the week being Rs. 148-4 and Rs. 139-4. May delivery fluctuated between Rs. 125 and Rs. 132-12 before closing at Rs. 126-12. In the ready section, Madras suffered As. 12 to Rs. 29-12 and F.A.Q. Rs. 2-8 to Rs. 27-4. Castor Oil I Pressures were quoted at Rs. 17, as against Rs. 17-6 and Commercials at Rs. 16-4, as compared with Rs. 16-12. B.S.S. was lower by As. 6 at Rs. 17-4.

India has so far exported 24,500 tons of castor oil. With the recent quota of 5,500 tons, the total exports for the year so far announced is 30,000 tons. As the crop for the year is estimated at 50,000 tons of oil and the local requirements at 15,000 tons India will have at the end of the year, a net balance of 5,000 tons and a carry-over stock of another 5,000 tons of oil.

The following table shows the prices of oilseeds and oil on the 26th inst., as compared with those at the end of the previous two weeks.

	26-8-53	19-8-53	12-8-53
	Rs. a.	Rs. a.	Rs. a.

SUGAR EASY

(From Our Own Correspondent)

BOMBAY, 26th *August*

Following reports of the early arrival of imported sugar—the first consignment of about 7,500 tons is expected in about three weeks' time—the forward section of the Bombay sugar market ruled easy during the week under review. Larger arrivals of sugar into the market and the consequent improvement in stock position, also imparted weakness to the market. The selling pressure that ensued, as a consequence, led to a break in sugar prices. Thus, the quotation for *Bhadrapad* delivery, which had touched as high as Rs. 92-10 on the 17th inst., receded to Rs. 86-10 per bag to-day. Business in Shrapun contract terminated at Rs. 89 per bag. There is reported to be little possibility of the *Bhadrapad* delivery staging a recovery, unless, of course, imported sugar arrives late or actual deliveries of sugar are delayed or the quantity offered to trade is negligible.

The spot section moved in sympathy with the forward section and experienced an all-round fall in values. Small, medium and large grain sugars are to-day quoted at Rs. 89, Rs. 90 to Rs. 91-8 and Rs. 94 to Rs. 97 per bag, as against last week's quotations of Rs. 92, Rs. 93 and Rs. 99, respectively.

Arrivals of sugar into the Bombay market during the week ended to-day amounted to 18,000 bags, as against 6,000 bags last week. The stocks with spot trade are estimated at 24,000 bags. Demand for sugar is normal.

The attention of the sugar trade is now focussed on imported sugar. Particulars relating to the time of arrival, the date of delivery and the quantity that will be allocated to the trade are being eagerly awaited. As for the long-range future, however, the sugar trade is looking forward to changes in the Government of India's sugar policy for the ensuing (1953-54) season. Considerable interest is evinced in the forthcoming deliberations of the meeting of the Governments, sugar industry, trade, cane-growers, and *gur* and *khandasari* interests. This conference is scheduled to be held in New Delhi on Wednesday, 2nd September, 1953. The meeting has been convened primarily to determine the question of fixing the cane price, but it is expected to discuss the overall policy regarding sugar and its substitutes also.

What final decisions will be taken at the aforesaid meeting is anybody's guess. So far as the Government of India is concerned, it is eager to step up sugar production, with a view to meeting the increased consumption, estimated at 1.5 million tons. Here crops up the question of coaxing the sugar millowners or the cane producers by means of the three available alternatives, namely, control, dual price policy and complete decontrol with or without imports. Past lessons have taught us that control will not bring about higher production, inasmuch as it takes away all incentives. The dual price policy results in dislocation of normal trade and heavy cost to consumer, although it may be expected to ensure increase in production. In the circumstances, the only sensible course would be to effect complete decontrol of sugar. This will induce millers to minimise their output in view of the increased consumption. The trade will also lend its support to such a policy, as that will mean continuance of their trading operations.

Maximisation of sugar output, however, depends on adequate supplies of cane at economic price. The cane producers argue that a rise of As. 3 per maund in the cane prices will induce them to offer larger supplies to sugar factories, instead of diverting them to other purposes. After all, they say that the rise in cane prices means an additional cost of only Rs. 8 crores, which will remain in the country itself and which will help save foreign exchange which otherwise will be frittered away on importing sugar. This argument is, however, not accepted by the sugar millowners in the North, who point out that, by virtue of their contributing more than 80 per cent. to the country's requirements of sugar, they get much less than their confreres in the South who enjoy many natural advantages and who will benefit more by having no imports at all.

A section of the sugar trade favours complete decontrol of sugar and sugarcane in the ensuing season. In its opinion, no minimum price should be fixed for cane. "This," to quote one report, "is a *via media* solution for the Government's desire to lower cane prices, on the one hand, and the cane growers' demand for higher price, on the other."

PEPPER SLIGHTLY BETTER

(Messrs. Parekh and Co.)

BOMBAY, 26th *August*

Busines in Malabar black pepper in all primary centres during the week was thin owing to the intervening holidays. Alleppey was nominally quoting to sell at prices ranging from Rs. 2,300 to Rs. 2,400, while at Cochin some business in garbled for ready delivery was reported done at prices ranging from Rs. 410 to Rs. 430 per cwt. exgodown. The spot position in New York being tight, particularly, because of the detention of Sarawak due to arrivals of mouldy pepper, there were enquiries for shipments per named steamers during August and early September at fairly good premium, and this proved a much wanted support to the otherwise weak market. The exporters in India are reported to have done a fair sized switching and replacement with a good margin. Export to U.S.A. during August is estimated to be about 400 tons. Total export from November, 1952, to August, 1953, is estimated to be about 9,200 tons as against 11,315 tons during the same period last year. The export of black pepper from India during the year is about 2,000 tons less than last year, and unless New Delhi reduces the export duty, no improvement in our exports seems to be possible under the present conditions in the other producing countries.

In the local market, there is a lot of short position both in the delivery and A.S.T.A. business. The dealers do not seem to be in mood to go further short unless they find change in the selling attitude of growers. Sarawak is reported to be sellers in New York at $0.80 for August shipment and $0.75 for September shipment. Lampong does not seem to be so anxious as to sell at the present low prices.

In the A.S.T.A. section, the market after touching the lowest at $0.94 for September shipment has improved to $1.01 under pressure of short covering. October shipment changed hands at prices ranging from $0.87 to $0.93. In the delivery section, prices after going down to Rs. 1,730 for September, Rs. 1,630 for October and Rs. 1,430 for December, have improved to Rs. 1,800, Rs. 1,690 and Rs. 1,470 respectively with small turnover.

Following are to-day's nominal quotations: Ready Rs. 270/300 per cwt. and September Rs. 1,810, October Rs. 1,670 and December Rs. 1,470 per candy of 5½ cwts.

JUTE PRICES FALL FURTHER

(From Our Own Correspondent)

CALCUTTA, 25th *August*

A further fall in the prices of jute goods was a distressing feature this week, and was the direct result of speculators' activity. Actual business with overseas buyers being poor, prices could not stop moving down. It was unfortunate that the speculators were anxious to hammer prices down drastically by selling at a time when the market was devoid of buying support. This week's record proves that wide fluctuations in prices, especially downwards are caused by the speculative elements. The trade allegation that the Kotni market is doing business that has been banned is an important matter which the newly appointed Jute Commission could usefully investigate. The Commission could go a step further, and recommend whether a futures market for jute goods is necessary. It is noted that trading in burlap futures is going to start in New York as from 9th September.

The fact that stocks with mills are increasing and that business for export continues poor, has revived discussions, among trade circles, on the question of export duties, the maintenance of which at the current rates, it is stated, puts down the volume of business. Unfortunately, this question is not included in the terms of reference to the Commission, but market circles rightly feel that an enquiry into the problems of the jute industry would not be complete without hearing the grievances of the trade. For certain, the Commission would be faced with this important question of export duties at the different stages of its enquiry, and it would have to pronounce its views on the matter. The trade and the industry have felt, for some time now, that the export duties place the Indian quotations at a disadvantage compared to the offers of the Continental producers.

Again this week, advices from New York were not encouraging and affected sentiment. A point to note is that American consumption has tended to be higher than purchases, and it is evident that stocks are running down. Market circles have, therefore, averred that sooner or later American stockists have to appear on the market to replenish their stocks. But they have withstood from the market as they know that they can locate supplies at any time they want. Ready 40" 10 *oz.* hessian was therefore pulled down to Rs. 44-8 from Rs. 45-1; however, the closure on Saturday was at Rs. 44-11 on account of local covering. To-day the rate reached Rs. 45. The October-December position declined to Rs. 44-9 from Rs. 45. The fact

STOCK & SHARE QUOTATIONS

Abbreviations:—D=Deferred shares. P.O.=Preferred Ordinary shares. Y=Accounts published yearly. H=Accounts published half-yearly. P=Company has Preference shares. T=Company has Debentures. N=Nominal quotation. x.d.=Ex-Dividend. c.d.=Cum. Dividend. i=Interim Dividend. f=Dividend for first half of the year.

Shares:—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery, and all other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends.—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year, they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly, dividends shown are for their financial year. Where, however, the accounts are closed half-yearly, dividends are shown separately for the respective half-years.

* Including bonus. x Sales and amount written off. (k) Investments.

(1) Made up of an interim dividend of Re. 1-12 per share on 1,20,000 shares and final dividend of Re. 1-10 per share on 2,40,000 shares of which 1,20,000 shares are bonus shares.

* The following explanatory notes relate to the abbreviations and marks shown on page 424 in the debentures section:—

§§ Option to repay on six months' notice, on any interest date after 31st December, 1951, at 102 per cent. Also redeemable out of a cumulative sinking fund of 1½ per cent. per annum (commencing in 1938) by drawings at 102 per cent. or by purchase at or 102 per cent.

(a) Option of repayment at any time at 3 per cent. premium.

(b) Bearer bonds of Rs. 1,000 each repayable at par.

(c) Bearer bonds of Rs. 1,000 each repayable on 31st July, 1959.

(d) Bearer bonds of Rs. 1,000 each with option of redemption in whole or in part at par on 30th June 1952 on any subsequent interest date at one month's notice.

(e) Returnable on or after 31st July, 1950, at Rs. 102-8 or at par after 31st July, 1955 on six months' notice in each case.

(f) Bearer bonds of Rs. 1,000 each with option of redeeming on 3 months' notice at ½ per cent. premium after 1st March, 1954, but before 1st March, 1957, and 1 per cent. permium on or after 1st March 1957.

(g) Option of redemption on or after 1st July, 1949, at par.

(h) Option of repayjent at any time at par at any time on or after 30th June 1947 on six months' notice.

MARKET GOSSIP

(Concluded from page 383)

a German combine was chosen. India has had very little experience of working with German firms. There is, after all, some truth in the saying that it is better to let in a devil which is known than one unknown. It is arguable that the level of German technology in the manufacture of steel is in many ways superior to that of the Western countries. But what will happen to the agreement in the event of a world war again? Will Germany be able to deliver the goods? The vulnerability of Germany to a war in Europe should be obvious to anyone who knows something about the present world situation.

• • • •

Secondly, how was the fee of Rs. 2.1 crores arrived at? With twice the capacity of the projected Government plant, the Tata Iron and Steel Co., Ltd., is able to show a net profit (before Managing Agents' commission) of only Rs. 3.55 crores. How does the Government hope to make a profit large enough to permit the payment of a fee of Rs. 2.1 crores, and still leave a sufficient margin for a reasonable return on the capital invested? Could not the whole project be executed at a cheaper cost by entrusting it to the private enterprise in the country already engaged in the job of producing steel? It may be noted here that, as against a fee of Rs. 2.1 crores payable to the German firms, Tatas have been earning a managing agency commission of only about Rs. 46 lakhs per annum in the past three years. Now that the entire agreement has been signed, nothing would have been lost by publishing its text for discussion. Surely, it is a little intriguing, to say the least, that an agreement on a project involving Rs. 72 crores, was concluded without prior consultation with expert opinion. It is also a pity that no attempt was made by the Minister to show why the Government preferred to run the project itself, without giving the existing steel interests a chance to explain whether they could produce the same quantity of steel at less cost. After all, the Government has not shown hitherto any marked superiority over private enterprise in the art of managing commercial undertakings.

• • • •

It is reliably understood that the amount of compensation receivable by the shareholders of Air-India Ltd. and Air-India International Ltd. will be a little more than earlier estimates, as the valuation of stores taken over by the Government points to a higher figure. It is felt that Air-India Ltd. may get about Rs. 105 and Air-India International a little over Rs. 125 per share.

• • • •

While equities are soft, Gilt-edgeds are steady to firm, due to a slight revival of demand and scarcity of floating stocks. In fact, the behaviour of this section has been so encouraging during the past few days that to-day the Reserve Bank has found it possible to raise its selling rate for 3½ per cent. National Plan bonds by a further anna to Rs. 98-6.

MARKET REPORTS

(Concluded from page 413)

that mills were reluctant to sell at these rates prevented prices from falling further. The loss in B. twills was more pronounced than in hessian. B. twills touched a new low of Rs. 99 on Thursday, but on Saturday in sympathy with hessian partially recovered to Rs. 99-14. The rate was better at Rs. 100-8 yesterday. There were enquiries for specialities but all could not be finalised to business in view of the lack of clarification from the Government as to the exact type of specialities which carry no export duty.

Trading in loose jute futures was continued in the Calcutta Jute Exchange, and quotations bore a close relationship to those prevailing in the raw jute market. The fluctuation was also narrow, September delivery northern bottoms quoting a high of Rs. 28-5-6 and a low of Rs. 27-8. Mills were in no mood to support the market. Quotations for new crop were adversely affected. Assam upper old crop middles and bottoms were lower at Rs. 28-8 and Rs. 25-8, respectively, as against new crops Rs. 31 and Rs. 28.

FURTHER RISE IN SUGAR PRICES

(From Our Own Correspondent)

HAPUR, 24th August

The Union Food Minister frankly admitted, in the House of the People this week, that there had been an increase in the consumption of sugar in the country recently by 50 per cent., and to cover up the deficiency, the country had to import sugar. The first consignment of imported sugar is expected to reach India before 15th September. One steamer carrying approximately 10,000 tons is due in Bombay shortly and another carrying the same quantity will soon reach Madras. These supplies are principally from Cuba, Mexico and Indonesia. The landed cost of foreign sugar will be about Rs. 26 per maund.

Sugar markets in India are very steady and there has been a general rise in prices. Acute shortage of stocks are reported from Bombay, Calcutta and Madras. The shortage is likely to persist till consignments of imported sugar arrive at the Ports. Informed observers expect that, as a result of the arrivals of imported sugar, the present disparity in prices in different centres would vanish. The Government of India is likely to sell imported sugar to the State Governments at Rs. 29 per maund. If the State Governments do not accept the allotments, the Centre will sell it to wholesalers at Rs. 30 per maund.

The Government of India is now consulting the State Governments in the matter of fixing the minimum price of sugarcane for the coming season. The price, according to the Food Minister, would be lower. The Bihar and U.P. Joint Sugar Control Board, which met earlier this week, has, however, expressed a different opinion. The consensus of opinion expressed in the meeting was that the price of cane should be fixed at a higher level than that in the current season. The sugar factories have protested against the suggestion of fixing a higher sugarcane price. It is emphasised that an increase in the price of cane cannot normally be accommodated within the existing cost price pattern of the sugar industry. For the price of sugar, will also have to be increased. The fiscal burden on the sugar industry has doubled since 1946-47 (the Central excise duty, the cane cess and co-operative societies commission now come to Rs. 6-0-10 on every maund of sugar). It is, therefore, pointed out that the peasant's desire for a higher cane price, with the sugar price remaining unchanged, can only be at the expense of the inroads which the various taxes are making into the earnings of the sugar industry. The latest sugar quotations (per maund) are:

Ambala Rs. 31-14-6, Amritsar Rs. 31-14, Delhi Rs. 32-4, Jullundur Rs. 30-14, Agra Rs. 31-3, Hapur Rs. 30-14, Kanpur Rs. 31, Mathura Rs. 31-4, Meerut Rs. 30-14, Muzaffarnagar Rs. 30-11, Patna Rs. 31-4, Calcutta Rs. 31-8-6, Gauhati Rs. 33-8, Madras Rs. 33-7-8 and Bombay Rs. 34-7.

Average prices for sugar and *gur* (per maund) for the month of July, 1953, were as follows:

	Sugar Rs. a.	*Gur* Rs. a.
Ambala	31 14	18 8
Amritsar	32 10	19 11
Delhi	31 14	22 0
Jullundur	31 0	20 11
Agra	31 4	19 0
Hapur	31 2	19 4
Kanpur	30 9	20 0
Mathura	31 8	17 9
Meerut	31 0	19 8
Muzaffarnagar	30 15	19 12½
Calcutta	31 4	21 10
Gauhati	33 10	24 0
Madras	33 2	23 12
Bombay	32 10	23 5
Bhavanagar	32 10	20 10
Nagpur	33 2	23 9
Indore	30 9	23 7

The *gur* market remained quiet to steady during the week under review. Stocks in the exporting *mandies* of west U.P. are not getting depleted, as there are no arrivals, while exports to needy areas continue. Hapur despatched several wagon-loads for Gujrat. The enquiry tended to fall at higher prices. Sugarcane crop is now progressing satisfactorily.

WHEAT POSITION COMFORTABLE

(From Our Own Correspondent)

HAPUR, 25th August

The Indian Food Minister made an important pronouncement this week. He said that controls on all foodgrains except rice would be lifted throughout the country shortly but that some sort of control on rice would, however, continue for some time. Mr. Kidwai said that the Government of India had so much of wheat stocks that they did not know what to do with them or how to dispose of them. The present position is that the Central and State Governments hold stocks of nearly a million tons and the offtake from these stocks is extremely low. All States have been given the option to remove restrictions on the movement of grain within their territories and the next step will be to remove inter-State restrictions.

In U.P., the condition in areas affected by floods is fast returning to normal. The loss to the crops has not yet been assessed. The State Government has been rushing foodgrains to the affected areas out of the stocks held by them. Trade stocks are not generally affected and, consequently, prices have not moved upwards. The Central Government, it is learnt, has offered to supply wheat to U.P. at Rs. 14 a maund for distribution in the flood-affected eastern districts. This represents a concession of more than Rs. 2 a maund, as compared with the normal price of wheat from the Central pool.

The following are the wholesale and retail prices of wheat in the important markets in the State. Shamli Rs. 17-8, Hapur Rs. 17, Chandosi Rs. 17-6, Kasganj Rs. 17, Gonda Rs. 17-8, Sitapur Rs. 19-8. The Government rate of wheat in Lucknow, Kanpur, Banaras, Allahabad and Agra markets was 2 srs. and 2 ch. per rupee. Other grain quotations in the Hapur market are: gram Rs. 16-10, barley Rs. 12, bejhar Rs. 12-12, maize Rs. 13, to Rs. 13-8, juwar Rs. 12, guwar Rs. 12-4, rice Rs. 24 to Rs. 35, peas green Rs. 14-12, peas white Rs. 16 to Rs. 18-8, arhar Rs. 14-2, urd Rs. 21 to Rs. 24, and moong Rs. 22.

The Punjab Government, it is learnt, has asked the Government of India's permission to lift the control on the procurement and distribution of rice in the State.

"For Commerce, though the child of Agriculture, fosters his parent Who else must sweat and toil and gain but scanty fare."
William Blake

VOL. LXXXVII. No. 2221 BOMBAY, 5 SEPTEMBER, 1953 PRICE Rs. 1/8

DOLLAR-STERLING RELATIONS

THE move for convertibility of currencies and relaxation of trade restrictions had received a perceptible setback in recent months. The proposals of the Commonwealth Economic Conference seemed to have failed to impress the U.S., despite the elucidation given by Mr. Anthony Eden, the British Foreign Secretary, and Mr. R. A. Butler, Chancellor of the Exchequer, to the American Administration in March last. Nothing concrete emanated from these talks. The Continental powers such as France, Italy, the Netherlands and Belgium were also not very enthusiastic about them. It, therefore, looked as though convertibility and freer trade would remain only as distant economic ideals, almost incapable of realisation. The report of Mr. Lewis W. Douglas, Adviser to President Eisenhower and a former U.S. Ambassador to Britain, on Dollar-Sterling Relations, however, serves to revive the waning faith in the movement. This report and the warm support it has received at the hands of Mr. Eisenhower are a refreshing indication of the existence of liberal elements in the U.S. which are alive to the necessity of altering their country's foreign economic policy, with a view to ensuring unity among the free nations.

The Douglas Report, the full text of which is yet to be received, endorses the Commonwealth's broad aims for achieving freer trade and convertibility as set forth in the *communique* issued after the conference of Commonwealth Ministers in December last. Mr. Douglas, according to Press summaries of his report, admits without reservation that the U.S. "can no longer pursue protectionist policies of a debtor nation and hope to escape from Government intervention, restrictionism, State planning and discrimination against American products in the international markets." Looking bravely and realistically at the trade policies of his country, Mr. Douglas candidly remarks: "For 30 years, the barriers that we have erected against imports into the U.S. have been incompatible with, and have operated against, the re-establishment of international economic and financial health and equilibrium." Then, Mr. Douglas goes on to sound a note of warning to his countrymen that if the recent steps by Britain towards greater economic freedom were allowed to fail, it would be "the final failure of an economic system of which the market place is the central feature." While not denying that Britain and sterling area countries have yet to do a lot more to strengthen the value of their currencies, he asks the Americans to remember that, during the past year and a half, these countries, especially Britain, have taken a variety of steps as part of their plan to return to a freer economy based on "trade, not aid." The U.S. so far has scarcely done anything to facilitate convertibility of currencies on these lines. It has, of course, continued to provide aid, albeit on a smaller scale, but what the non-dollar, developed countries want is the removal of trade barriers which will enable them to earn more dollars.

The realistic manner in which Mr. Douglas deals with the whole problem will be further evident from the following extract from his report:

"It is doubtful whether the world can recover a high degree of economic freedom or whether American exports—so important to large segments of our country—can enter foreign makets without benefit of continued American subventions and subsidies, unless sterling makes further progress towards its own emancipation. If further progress is not made towards the removal of restrictions on trade and a more unfettered exchange of currencies, it is quite likely that, in spite of international political institutions that have been erected or that may be erected in the future, the unity of the free world will remain precarious and fragile."

In order to impart confidence to the non-dollar countries in the intentions of the U.S., Mr. Douglas urges the American Administration to make a prompt announcement that it is determined to work towards "a progressive, vigorous and consistent relaxation of our foreign trade legislation." Instead of implementing this advice straightway, President Eisenhower has merely turned over the report to the 17-man Foreign Economic Policy Commission as a piece of evidence to be carefully considered by it. This action has had a sobering effect on the initial hopes that the U.S. would act quickly. Apart from the delay that usually takes place when such a procedure is followed, London observers feel that nothing may come out of this Commission, as it is dominated by the protectionists of the old school. Of the seventeen members, ten are Congressional members, the majority of whom is said to belong to the protectionist bloc. Of the remaining seven members chosen from outside the Congress, six are not likely to constitute "an effective counter-weight" to the protectionists. The liberal internationalists are thus said to be in a hopeless minority. It is not known how far this reading of U.S. politics will prove correct. But it is to be hoped that the Douglas Report will serve as an eye-opener to the Congressmen belonging to the protectionist school. If it does, Mr. Douglas will have made a great contribution to the development of world trade and the maintenance of unity among the free countries.

Apart from the plea for liberalisation of the U.S. tariff restrictions, the Douglas Report contains four specific suggestions. These are:

(1) An increase of private investment of dollars in foreign countries.

(2) A definition of terms by the International Bank upon which investment of private funds abroad might be made with reasonable immunity against most of the political changes.

(3) Consideration by American banking houses of participation in sterling loans made by London banks with some sort of a British guarantee of a rate of exchange.

(4) Development of measures to abate violent fluctuations in the prices and volumes of the major raw materials entering international trade.

Detailed comment on the above suggestions must await the arrival of the full text of the report. It can, however, be stated that, as phrased above, they are more or less in line with the reported proposals of the Commonwealth countries. It must be obvious to anyone that the implementation of the first suggestion is not entirely within the powers of the U.S. Administration. It will depend mostly upon the willingness of private enterprise in that country to invest in overseas countries and the readiness of the countries needing foreign capital to provide the necessary climate. It is true that the U.S. Government can provide certain incentives to private capital to move out and that the World Bank can provide the guarantees as proposed in the second suggestion. But the fact remains that at present, American capital is extremely reluctant to go outside the U.S., as chances for profitable investment at home are still good and as the risk involved in investing in foreign countries is great. There is also the fact that, in some of the underdeveloped areas, powerful indigenous capital is very jealous of entry of foreign capital and wants all sorts of restrictions to be placed upon such capital. The atmosphere, therefore, is not favourable for U.S. private capital to flow out. Mr. Douglas himself seems to be aware of this. Hence his suggestion for association of American banks with British banks in providing finance for development through the Commonwealth Development Corporation. This may prove to be a good stopgap arrangement, until conditions for the flow of private investment become more favourable.

Not for the first time has the proposal for ironing out peaks and abysses in prices of raw materials and the volume of such goods entering world trade been put forward. But, according to Press reports, there is a variation in the technique advocated by Mr. Douglas. Instead of commending inter-Governmental commodity agreements, he seems to favour what is described as "tracyclical commodity buying," by co-ordination between Governments. Under his scheme, "purchases by Government agencies may be diminished when the business community is building up inventory, and increased when the business commu-

nity is liquidating inventory, thereby using Government purchases, to the extent they are necessary for other reasons for the purpose of mitigating the effects of cyclical movements in the critical materials." One merit of this suggestion is that it provides for non-interference by Governments in the activities of private enterprise engaged in trade. Another is that it avoids arrangements of a type analogous to cartels which are taboo under the constitution of not only the U.S. but also of several other free countries.

The U.S. offers better prospects for imports of raw materials than for manufactured goods in which it is almost self-sufficient. There should, therefore, be not much difficulty for that country to agree to a scheme for stabilising the prices of raw materials. There are, however, some economists of international repute, as, for instance, Sir Arthur Coupland, who hold the view that such a scheme will meet with insuperable practical difficulties when it comes to be implemented. They, therefore, feel that the best alternative will be to raise the price of gold. But, significantly enough, the Douglas plan makes no reference to this issue. It may be argued that, since this is a delicate issue and cannot be mentioned in a report of such semi-official nature without giving rise to wild speculation in the free markets of the world in gold, silence means approval. That, however, remains to be seen.

One of the two basic conditions mentioned by the debtor countries for venturing into convertibility of their currencies is freer U.S. tariff policies to allow the earning of more dollars. This condition has been repeated so often that it has become axiomatic. But that does not necessarily mean that the fulfilment of this condition by the U.S., even in a liberal manner, will automatically solve the problem. As pointed out by us on an earlier occasion, the U.S. has such a vast productive capacity and its efficiency is so high that it may not offer any vast markets for imports of manufactured goods. And even this limited market will be available only to those producers whose efficiency is high. This point must be borne in mind if disappointment is to be avoided in future.

Another point that is being repeated so often without realising its limitations is the comparison of the U.S. as a creditor nation with the U.K. when it was a creditor country, implying thereby that the U.S. must follow the same policy of free trade which the U.K. practised as a creditor country. Such a comparison is patently wrong, for the internal economic structure of the U.S. and its political status are by no means comparable with those of Imperial Britain. There are obvious limits up to which the U.S. can afford to reduce its tariff walls. In short, improvement in export trade with the U.S. will provide only a limited solution. For the rest, the solution lies in (a) the economic development of underdeveloped areas and (b) the re-opening of trade between Western and Eastern Europe, as well as between China and Japan. The former, namely, the economic development of underdeveloped countries, will provide an opportunity for the U.S. to invest its export surplus by way of aid either directly or through the U.N. bodies. This, in turn, will offer an outlet for the manufactured goods of Western Europe. The latter, namely, the resumption of trade with Communist countries, will reduce the dependence of Western Europe and Japan on the dollar area for the sale of their goods or for the supply of food and some of the raw materials required by them. Again, if Japan were to resume its trade with China, it would not find it necessary, as it does now, to enter into keen competition for the limited markets in South-East Asia and the Middle East.

ECONOMICS OF DEVELOPMENT

THE post-war years have brought the importance of the improvement of living conditions in the backward regions to the forefront of international economic discussions. If the inter-war years were concerned with the political progress of the backward regions under the tutelage of one or more of the Western powers, the emphasis has now shifted to economic progress of these regions. At no other period in world history has there been so universal an agreement on the need for economic progress of the world as a whole or so concerted an effort at such progress as in recent years. The Point Four Programme, Colombo Plan, Technical Assistance Programme, World Bank Loans and Foreign Aid by the U.S. are only a few of the many forms in which the new international economic philosophy is being implemented. That all this effort is being made by the "free" world, and not, as may be commonly expected, by the countries which have harped unceasingly on the inequality of classes and countries, demonstrates the essential worth of the "democratic" ideals.

The task of economic development of the backward regions calls for the highest levels of economic statesmanship. But it would be wrong to underestimate the rigorous discipline which it imposes on the regions which have still to be developed. The way to economic prosperity is, after all, not strewn with roses. Nor does progress depend entirely on the helping hand, the sympathetic guide. The industrially advanced countries, which have realised the importance of universal economic progress, can only point the way and lend some assistance. But, ultimately, all effort at progress must come from within the backward countries themselves. What then are the problems which are implicit in this movement? What intractable issues do they face? What economic thorns and obstacles hamper their march towards prosperity? These questions have been engaging the attention of many economic thinkers. By far the most effective contributions to the new study, which may well be called the "Economics of Development," have come from the Western thinkers themselves. Among their contributions, the pamphlet, *Developed and Underdeveloped Countries in International Economics*, published by the Bureau of Business and Economic Research, University of Maryland, U.S., will take a high place. The pamphlet does not attempt to give a ready-made solution; no economist will probably be so foolhardy as to do that. But it does attempt, within a small compass of six pages, at a general summing up of some of the chief problems involved in the development of the economically backward regions.

The first question that presents itself for the enquiring student of this new study is to define what precisely is meant by an "undeveloped country." After all, there is no country which is cent per cent undeveloped. A number of criteria for measuring "underdevelopment," as the authors point out, has been proposed, ranging from population per square mile to the ratio of imports to exports. After examining some of these definitions, the authors give a definition of their own, according to which an underdeveloped country is an area which, relative to other areas, has low *per capita* real income and low *per capita* capital employment. Even this definition is not perfect, for a well-balanced and self-sufficient economy would tend to show smaller *per capita* income and smaller *per capita* amount of capital in use than a new agricultural, highly specialised industrial country. Even so, it may be taken as a workable definition.

What is the nature of the problems that present themselves when such a country seeks to improve its economy? The backward country is engaged in the production of primary commodities. The pamphlet examines the argument that in international trade between manufacturing areas and primary producing countries, the gains in trade revert to the exporter of manufactures. Broadly speaking, the pamphlet seems to accept the pith of this argument, for it recognises that productivity per worker tends to be considerably smaller in primary than in manufactured products. The relative place of the machine is held sufficient to account for many differentials between the primary countries and industrial areas. Industrial countries have an additional advantage, in that the prices of their products are less susceptible to violent fluctuations. This aspect needs to be corrected by concerted effort, which in turn, points to the need for "combining agriculture and manufacture as one means of smoothing price fluctuations." These fluctuations can also be corrected by commodity agreements, and export control. But there are difficulties. Export control reduces opportunities for earning foreign exchange. If all producing countries act in concert to prevent an oversupply, they are accused of establishing monopolies or cartels.

By and large, industrialisation of these regions is an effective corrective to the state of abject dependence on foreign countries. A host of problems presents itself to a country which is in its initial stages of industrial development. There is shortage of investment capital. There is no knowing which industries will be useful for the country to concentrate upon. It is difficult to know whether it is producing efficiently or not. Also, it will be compelled to export more of its primary commodities in order to pay for its imports of machinery and equipment. There is a tendency to export more when the times are good and little incentive to take counter-cyclical measures to correct booms and depressions. But these defects are not confined to the economic administration in underdeveloped countries only. Even manufacturing countries have their "contrariness." In this connection, the pamphlet asks two pertinent questions: (1) Why does a manufacturing country subsidise products for export, when these products are produced more cheaply elsewhere? (2) Why do manufacturing countries export some primary products in competition with non-manufacturing countries? There are only two justifications for such a policy. They are: the countries want to be assured of productive competence in an emergency, particularly war, and they want to assure themselves of employment in the particular fields. These arguments, according to the pamphlet, may have weight at national levels. Nevertheless, it must be clear that such practices do impede development elsewhere.

Undeveloped countries seek to promote industrialisation through the protectionist device. One of the regrettable losses in the transition from an agricultural to a manufacturing community, according to the pamphlet, is the sacrifice of consumers' interest in favour of producers. The authors are sharply critical of the use of tariff walls, and of the "infant industry" argument by which they are defended. Some infants, they point out, never "mature." The U.S. too has "some infants with long beards." Protectionism involves many problems. (1) By what criteria will the authorities select the industries to be protected, and the period of time? (2) What is to prevent the stifling of initiative and efficiency in protected industries? (3) When does an infant mature? (4) How can the resulting higher cost to other industries and to the general economy be prevented? In view of these and other difficulties, the authors prefer subsidies to tariffs. Subsidies provide an opportunity to assess costs specifically and permit the development of a more natural market. As regards quantitative restrictions on imports and tariffs, they prefer the latter since the former stifles all "competitive incentive" and also prevents importation of some commodities, either of special qualities or produced at very low cost.

Foreign investment, as all underdeveloped countries are slowly beginning to realise, plays an important part in economic development. The authors note with regret that in most countries foreign capital is not available currently in sufficient quantity to provide the needed impetus to new developments, and that the U.S. is the only country which is in a position to make large outlays. Another current trend is that individual investors are receding to the background, their place being taken up by institutional investors, the Governments of the investing countries and international agencies. The authors have laid down certain criteria for making the loans or aids from these bodies more effective: (1) In the aid extended by technically advanced countries, care should be taken not to duplicate equipment, thereby merely providing a replica of their economies. (2) All "tied" loans should be eliminated. (3) It is better to avoid intermediary "brokerage" service by a third nation. (4) Multilateral agreements are to be preferred to bilateral agreements. (5) Additional specialised agencies for handling loans and supporting economic development should be provided. (6) The U.N. should be assigned more authority over international trade and finance and power of co-ordination of activities of related organisations.

Such, in brief, are the conclusions which emerge from this interesting study. Both the diagnosis of the economic malady that afflicts the backward nations and the lines of treatment are stated with admirable comprehensiveness. This is the more notable, because it has been done within the compass of a small pamphlet. Again, no attempt, it is noteworthy, has been made to underrate the difficulties involved. We would like, once again, to emphasise that there is no royal road to prosperity. Nothing less than a revolution in the mental attitudes of the people towards capital formation, and all the austerity it implies in the initial stages, and the importance of economic efficiency at all levels and spheres of production will bring about economic transformation. The sooner this is realised and corrective measures adopted the speedier will be the pace of development.

OUTLOOK FOR T.I.S.CO. BRIGHT

ANOTHER INDO-GERMAN DEAL—MR. RUIA ON COTTON

THURSDAY, 5 P.M.

THERE have been no new developments on the Stock Exchanges since last week. The Bombay Stock Exchange opened to-day on a steady note, after a spell of holidays since Friday last, and finished in a listless manner. Price movements were narrow and the turnover small. The only development worth mentioning was a slight improvement in the value of Indian Irons, due to profit-taking by bears, induced by Mr. Nehru's statement in Parliament, reiterating the Government's determination to end the strike at Burnpur at an early date. The Government has been interesting itself in this matter for some months now, but it could do nothing to prevent the closure of the plants. It is not known how it is going to settle the dispute quickly now.

MARKET GOSSIP

• • • •

The short-term money market witnessed some demand for funds to-day, and the inter-bank call rate spurted from 1 per cent. to 1½ per cent.; it is said that there were some borrowers who were even prepared to pay 1¾ per cent. This demand was due, in the first place, to the heavy withdrawal of funds by the Tata Iron and Steel Co., Ltd., to pay its dividend through its bankers and, secondly, to the forthcoming Bombay Municipal Loan. It is felt that a good part of these funds will come back to the market in a week and that it may, therefore, be easy again. According to some well-informed sources, however, this easiness may prove to be a short-lived affair, for a sizable demand for bank credit may arise in case the Government of India were to decontrol wheat, as was announced by the Food Minister a few weeks ago. It would appear that the Government is contemplating sale of a part of its wheat stocks to the trade as the first move to decontrol wheat. This operation may later on be followed by the sale of imported sugar to private trade for direct distribution to consumers. Again, in a few weeks' time, the new season's agricultural crops may start moving. As the size of these crops is expected to be bigger than last year and their movement may commence a little earlier than usual owing to timely rains, the slack season for the money market may prove to be a short one this year.

• • • •

Mr. J. R. D. Tata's speech at the forty-sixth annual general meeting of the Tata Iron and Steel Co., Ltd., is an interesting one for those who are concerned more with the general economic problems and less about investment in the shares of the Company. His stress on the population aspect of the economic problem is apt and forceful. It is an aspect which has not received much attention in the discourse on unemployment during the past few weeks. By a mere coincidence, our columnist "Rover" too, emphasises the same point in his contribution this week. Equally relevant are Mr. Tata's remarks on the Government's tendency to depart from the concept of mixed economy. We propose to deal with Mr. Tata's carefully studied observations on the general economic problems at some length next week. But a brief reference may be made here to the points in his speech that are of interest to the share market.

• • • •

There is not much in Mr. Tata's speech or even in his replies to the questions from shareholders that is of interest to the market. From this point of view, the meeting was a dull one even though it lasted, as in the past, well-nigh four hours. Broadly speaking, the conclusion that can be drawn from Mr. Tata's remarks is that the outlook for the Company is not bearish. On the contrary, there is sufficient reason to take a slightly bullish view of the future, other things remaining the same. It seems that the Company will be able to maintain the present level of dividend in the coming year, even though the price of the capital to be remunerated may be a little higher consequent on the conversion of the deferred shares. The relationship with the Company's labour is peaceful and harmonious. It is true that, as a result of the revision in the scheme for profit-sharing bonus, the Company will have to pay a little more than hitherto. But this is expected to be compensated by contentment among the workers. The latter have agreed to do their best to raise their productivity. Many a shareholder accused the Chairman of indulging in a policy of appeasement of workers, but Mr. Tata tactfully replied, by drawing their attention to the fact that, during the last 25 years, there was no strike in the Company's works. He, however, conceded that the Company had bought this peace at a high price. He revealed that the work that was being put in by the labour at Jamshedpur to-day was equal to only two or three hours of hard work, though they were being handsomely paid on the basis of eight hours per shift.

• • • •

Although production of steel is likely to be somewhat lower until 1955, as a result of modifications to the plant under the modernisation and expansion programme, the profits of the Company are not likely to be affected, as the Tariff Commission has, in estimating costs and fixing prices, taken into account that fall. The Chairman said that this year the production of saleable steel might be about only 760,000 tons, as against 790,000 tons produced in 1952-53. Market men will do well to bear in mind this point, because some of the speculators may try to play up any shortfall that may be seen in the monthly production figures, in the coming months.

• • • •

There is no need whatever to fear that the proposed erection of steel plant by the Government of India, in co-operation with two German combines, will adversely affect the fortunes of the Company. The demand for steel in this country will continue to be more than the supply, even after the Government's scheme fructifies. In this connection, the figures given by Mr. Tata will be read with interest. Citing the Planning Commission as his authority, Mr. Tata revealed that, as against the present estimated demand of 2.3 million tons, the production at present was only about 1 million tons. By 1956, the output was expected to rise to 1.75 million tons, but, at the same time, the demand also was expected to increase to 2.8 million tons. Thus, the supply would fall short of the demand by over a million tons even by 1956. As against this, the Government contemplated to put up a factory of only 500,000 tons capacity and it would take several years for the project to be completed. The only manner in which this project was likely to affect this Company, as well as the I.I.S.Co., was that their strip mill plants might become obsolete, requiring their closure, as the Government intended to start a modern strip mill to produce flat rolls. But that would not seriously affect the existing companies. Some idea of the low rate at which the Company is selling steel will be evident from the fact, revealed by Mr. Tata, that, whereas it is getting only Rs. 350 per ton, imported steel costs, including the duty, Rs. 732 per ton. The price that the consumer pays now is Rs. 479 per ton, as the imported steel is being heavily subsidised at the expense of domestic producers.

• • • •

The problem of unemployment continues to engage the attention of the responsible members of the Cabinet. A number of suggestions have been made in recent weeks by various bodies, eminent economists and leaders of industry to combat this menace. The Planning Commission and the Commerce and Industry Ministry have taken note of the fact that the investment programme under the Five-year Plan, both under the Government and private sectors, has been lagging behind. They are of the view that this factor should not only be rectified but further measures should also be taken to expand it to an appreciable extent in order to absorb more unemployed people. In the meanwhile, Prof. D. R. Gadgil has, in the course of a lecture at the Delhi University, come out with a new slogan which connotes the reversal of the Keynesian doctrine to some extent. It may be mentioned here that the late Dr. Keynes used to say that "in the long run we are all dead," meaning thereby that it is often necessary for human beings to think in terms of fairly short-term goals when deciding on their policies. 'In view of the peculiar economic problems facing the country at present, according to the learned professor, if we take care of the "long-term," the "short-term" will take care of itself. Prof. Gadgil is of the view that the present situation is but part of a cycle. He has characterised the present unemployment situation as "technological unemployment." He thinks that the progress of technique in one sphere creates unemployment in another, as it is no longer possible to continue production in the sphere with a lower level of technique. He has, therefore, pleaded for greater investment in order to increase the *tempo* of the economy activity in the country.

• • • •

In the meanwhile, the Ministry of Commerce and Industry, under the leadership of Mr. T. T. Krishnamachari, has been trying to evolve a plan to set up an industrial development corporation with a capital of Rs. 500 crores. It is not known as to how far this Ministry can take the initiative in this respect, since the Production Ministry is concerned with the exclusive function of looking after the State-owned industries. The Industrial Finance Corporation is now under the charge of the Finance Ministry. A huge corporation with high technical and managerial personnel to look after it is, indeed, a grand idea. To a large extent its scope and functions are akin to those of leading industrial banks of Germany. For instance, the proposed corporation can take the initiative in regard to the establishment of new industries and run such industries for a few years. It can have the option of selling such industries to private enterprise after some time. Anyway, the whole scheme may take some more time before it takes concrete shape, since many other Ministries, including the Planning, Production, Finance and Commerce and Industry Ministries are concerned with it.

• • • •

Indo-German economic co-operation is getting closer. Close on the heels of an agreement with the German firm, Krupps, for the establishment of a steel factory, the Government of India is now trying to implement the proposal to set up a heavy electrical machinery industry in the country. The German firm concerned, in this connection, is the famous firm of Siemens, whose experts have already arrived in the country to examine the whole scheme afresh. It will be remembered that, a few years ago, American and British interests conducted a similar survey, but the scheme could not be pushed through, in view of the financial stringency of the Government of India at that time. If Siemens enter into an agreement with the Government, it is believed that the agreement will be similar to the one which the Government has had with Krupps. In this connection, the correspondent of the *Financial Times* writes:

"Earlier reports have been prepared by Associated Electrical Industries (India), a subsidiary of Associated Electrical Industries and Westinghouse Electrical International Company and International General Electrical Company of the U.S. No firm decision on these reports, however, has so far been taken. It is believed that Siemens is prepared in principle to participate financially and technically in the project. Its representatives have been invited here to survey prevailing conditions. The Government's share of expenditure on this account is not expected to exceed Rs. 5,00,000 during the current financial year. A committee, which was appointed early in 1948 to examine the need for such a plant, recommended that it should be planned immediately as a Government project in collaboration with foreign manufacturers of international repute. After extensive surveys, A.E.I., International G.E.C. and Westinghouse, submitted their reports towards the end of 1949. They covered a scheme for the production of heavy power plant of an aggregate capacity of 300,000 kw. per year. Following consideration of the three project reports, the exploratory committee recommended the establishment of a factory for the manufacture of 175,000 kw. of plant per year. Only Westinghouse showed willingness to participate financially in the project and for its affiliated company, Westinghouse International Development Company, to undertake the erection and technical management of the factory for an initial period of ten years. Accordingly, the exploratory committee recommended that the erection of the plant should be entrusted to Westinghouse and suggested further negotiations to settle questions of financial participation and other details. Financial stringency then prevailing, however, prevented further consideration of the project. The scheme was revived in August, 1952, as plans for hydro-electric development had made considerable headway and large-scale railway electrification was becoming a necessity. In addition, demand for a heavy electrical power plant was bound to increase by the end of the first Five-year Plan. The intention now is to provide a sum of Rs. 70 million (£5.25 million) for the project out of the lumpsum provision of Rs. 500 million in the Five-year Plan for basic industries and transport."

• • • •

There has been a notable change from an absolute sellers' market, which cotton enjoyed during the past decade, to a market where, even if the buyers cannot dictate the prices, the sellers can no longer hope to have their own way entirely. The fact is that cotton buyers are becoming more sensitive to prices and quality, which only reflects the emergence of similar conditions in the cotton textile markets all the world over. It is, therefore, hardly surprising that the Indian cotton interests should be reluctant to accept the need for continued retention of the controls which were instituted at a time when cotton was admittedly scarce. Mr. Madanmohan R. Ruia, President of the Coton Buyers' Association, was understandably anxious to see that the control on cotton was lifted. Speaking at the annual meeting of the Association, held this week, Mr. Ruia reiterated the demand he made last year for the decontrol of cotton. He said that the situation had so drastically changed in the sphere of both the textile industry and the cotton trade that the need for decontrol has become more urgent than it ever was. The prevalence of buyers' market conditions, the recession in domestic and foreign textile markets and the easier access which the mills have to world supplies of cotton were the factors which made him think that the decontrol of cotton would not lead to any rise in the price of indigenous cotton, nor disturb the general structure of textile prices in the country.

• • • •

But Mr. Ruia obviously recognises that the decontrol of cotton will not, by itself, solve all problems in the sphere of the cotton trade and the textile industry. He rightly urged that India should make a sustained and determined effort at improving the Indian cotton economy, so that the country could rise above the present subsistence level. Appropriately enough, he questioned the adequacy of the target of 40 lakh bales, fixed for cotton production by the Planning Commission. He said that the country should have a higher target—60 lakh bales, to be reached in the course of the next five years. He did well too to emphasise that this target could be reached if the farmers were taken into confidence and educated by intelligent propaganda designed to interest them in the cultivation of more cotton. He also urged that, along with the drive for increased production of cotton, systematic efforts should be made to raise the level of consumption of cloth in the country. This is a point which deserves particular emphasis, for the prosperity of the cotton farmers is inextricably linked with the prosperity of the mill industry, which, in its turn, depends upon the increase in the consumption of cloth.

• • • •

Mr. Ruia made two notable suggestions in regard to cotton export policy. He said that the Government should, after assessing the exportable surplus, make an early announcement of the quota for export. It may be mentioned, in this connection, that the Government's failure in the past to announce quotas promptly enough cost the country dear, for it led to loss of markets and less of opportunities to earn better prices. It must, however, be said to the credit of the Government that in the 1952-53 season, it effected some welcome improvements in its export policy. Even so, there is need to bear in mind the consideration that a sound export policy announced promptly and implemented without delay, will greatly assist the exporters. Secondly, he urged the need for keeping the question of export duty under constant review, so that it could be adjusted, from time to time, in order to enhance the competitive capacity of Indian cotton in foreign markets. He also suggested that official assistance should be given for

EQUITIES RULE DULL

NARROW FLUCTUATION IN PRICES

(From Our Own Correspondents)

BOMBAY, *3rd September*

THE Stock Exchange has passed through a very dull week. Trading was interrupted by continuous holidays, from 29th August to the 2nd inst. Also, there was no important event which could inspire operators to enlarge their dealings. The trading on Friday, which was the last day of settlement, was mostly of a squaring-up nature; it was featureless to-day too. The turnover of business during this brief period of two days was, therefore, extremely small, with fluctuation in prices confined to narrow limits.

The steel section, the leader of the market, lacked support, as traders preferred to await the outcome of the annual meeting of the Tata Iron and Steel Co., Ltd. that was held to-day. Towards the close of the week, however, steel shares received enquiries from professional traders who were induced by expectation of an early intervention of the Government in the settlement of the labour dispute at the Burnpur Works of the I.I.S.Co. Tata Deferreds opened the week fully steady at Rs. 1,957-8, but receded to Rs. 1,947-8 to-day for want of support. There was a slight recovery at the close, when a good part of the previous loss was made up. The closing quotation, at Rs. 1,952-8, however, was lower by five points than that a week before. Tata Ordinaries after receding from Rs. 338-4 to Rs. 337-8, recovered to finish at Rs. 338-12, the net gain over the week being As. 8. Indian Irons were neglected at Rs. 22-0½ on Friday, as against Rs. 22-4 last week. The loss was fully made up to-day when the quotation touched Rs. 22-7-6, although it was a shade lower at Rs. 22-6-6 at the close.

The textile section presented a mixed trend. Thus, a few scrips were involved in unloading operations by prominent parties and suffered losses, while a few others registered improvement, on bear covering induced by reports of a revival of domestic demand for cloth. Ahmedabad Advances, Bradburys and Podars dropped Re. 1-4 each to Rs. 138-12, Rs. 820 and Rs. 125, respectively. B.R. Cottons lost a rupee to Rs. 48. Central Indias and Swadeshis shed a like amount to close at Rs 158-8 and Rs. 247, respectively. Standards declined by As. 10 to Rs. 309-6. Tata Mills and Elphinstones were lower, each by As. 8, the former at Rs. 41 and the latter at Rs. 38. Kohinoors fell by As. 4 to Rs. 167. Morarjees, however, rallied 5 points to Rs. 185. Vishnus also had good enquiries and advanced by Rs. 3-6 to Rs. 151-14. Centurys provided a bright spot, in view of the proximity of dividend payment on the 8th inst., and hardened by Rs. 3 to Rs. 271-12. Swans moved up from Rs. 460 to Rs. 462-8 and Finlays from Rs. 322 to Rs. 323-8. Gokaks improved by As. 10 to Rs. 228, following announcement of an interim dividend of Rs. 5 per share for the year ending December, 1953. Bombay Dyeings were better at Rs. 378-2, as against Rs. 377-8. Simplex were As. 4 higher at Rs. 167.

In the banking section, business continued to be at a low ebb, but prices were fully maintained. Central new shares rose by Re. 1-8 to Rs. 68 and old shares were higher by As. 4 at Rs. 64-4. Imperial Fully Paids were steady at Rs. 1,827-8, Barodas at Rs. 110 *ex-div.*, Bank of Indias at Rs. 154-12, and Union Commercial at Rs. 36-4.

Insurance scrips were dull during the week under review. New Indias were taken up to Rs. 40-8, as against Rs. 40-4. Other shares were fully steady. Vulcans were done at Rs. 11-2 *ex-div.*, as against Rs. 11-15. Indian Mercantiles, however, receded by As. 2 to Rs. 38.

In the electric section, Tata Powers met with selling pressure and were marked down by As. 10 to Rs. 1,415. Bombay Suburbans receded by As. 10 to Rs. 142-8. Ahmedabad Electrics were active at Rs. 113-2, as against Rs. 112-3, in view of the proximity of dividend payment on the 10th inst. Tata Hydros gained As. 8 to Rs. 142-8. Andhra Valleys were unaltered at Rs. 1,352-8 *ex-div.*, as also Amalgamateds at Rs. 11.

Selective buying enquiry was the feature of trading in the miscellaneous section. Walchandnagars moved up by Rs. 2-8 to Rs. 148-12. Associated Cements gathered As. 12 to Rs. 168-12. Tata Chemicals were a shade higher at Rs. 9-12. National Rayons were subjected to selling pressure and declined from Rs. 112 to Rs. 107-8. For want of support, *Wimcos* reacted from Rs. 237-8 to Rs. 235. Bombay Burmahs also lost a similar amount to Rs. 348-2. Belapurs were placed As. 8 lower at Rs. 239, Tata Oils and Killick Industries declined by As. 4 each to Rs. 30-4 and Rs. 155, respectively.

Among mining and miscellaneous shares, Alcock Ashdowns were sought As. 10 higher at Rs. 302-8. Indian Coppers were a shade better at Rs. 2-13-9. The Directors of the Company have maintained the dividend at 2½ per cent. for the year ended December, 1952. Shivrajpurs were fully steady at Rs. 58-8 and Larsen and Toubros at Rs. 10-14 *ex-div.* Premier Constructions, on the other hand, fell by As. 4 to Rs. 84-12.

Transport company shares were steady. Scindias were half an anna higher at Rs. 13-8. India Steamships were transacted at Rs. 6-12, same as last week.

• • • •

Calcutta Stock Exchange

CALCUTTA, *1st September*

Although turnover remained restricted, conditions on the Calcutta Stock Exchange were somewhat better during the week under review. The introduction in Parliament of a Bill fixing the different rates of Estate Duty has removed one uncertainty. The rates have not been a subject of undue criticism in the market, and how and to what extent they would affect investment is being discussed. Parliament may modify the rates, and market circles hope that the plea of the Indian Chamber of Commerce, Calcutta, to raise the two exemption limits to Rs. 1 lakh and Rs. 1½ lakhs, as against Rs. 50,000 and Rs. 75,000, respectively, would succeed. The situation in Burnpur has not improved, but Indian Irons made an impressive recovery, on expectations of an early settlement at the Works. The strike threat and the lockout have brought matters to an edge. A settlement, whereby the Works can return to normal production, must be the outcome. It was mainly on this expectation that buyers were interested in offers of the speculative counters, resulting in improvement in prices.

The market's leading section, namely, jutes, could only remain idle, in view of the fall in the prices for jute goods. Naturally, offers in this section could not be absorbed and transactions were limited to the more popular counters coming at attractively lower rates. Coals were quiet, and the news that India's negotiations with Egypt for the supply of 100,000 tons of coals have failed cautioned buyers. Expansion of India's overseas market for coal is difficult, in view of the stiff competition from other coal-producing countries. In fact, exports are declining. Japan does not want as much coal as she had originally desired. The market remained closed yesterday.

For reasons already stated, Indian Irons, which had improved from Rs. 22-2 to Rs. 22-9, faced rough weather to-day and declined to Rs. 22-1. After being lower at Rs. 22-4, Jessops were taken at Rs. 22-10, with Marshalls coming to business at Rs. 5-1. Kumardhubis changed hands at Rs. 7-4, as against Rs. 7-1 earlier in the week, while Burn & Cos., after being lower at Rs. 278, recovered to Rs. 281 to-day in transactions of small lots. Indian Standard Wagons were, however, a shade better at Rs. 88, while Braithwaites were unchanged at Rs. 11-2.

Features were provided in the miscellaneous section which generally remained steady. Interest in F. & C. Oslers has not yet subsided and, over the week-end, this counter reached a high of Rs. 7-10. To-day's realisation was, however, only Rs. 7-7. Titaghur Papers recovered from Rs. 24-10 to Rs. 35-4. Rallis were enquired at Rs. 68-12, while Indian Cables gathered moderate strength at Rs. 18-7. Indian Coppers interested buyers at the fractionally improved rate of Rs. 2-14. B.I. Corporations changed hands at Rs. 8-6, while Rohtas Industries, at Rs. 8, tended to be fractionally better. Martin Burns recorded a rate of Rs. 17-13, Angelo Bros. Rs. 17, Jardine Hendersons Rs. 130, and Sone Valley Cements Rs. 6-11.

Jutes were featureless. Howrahs opened at Rs. 22-15 and, after being traded at rates up to Rs. 23-2 over the week-end, shaded to the opening level to-day. Fort Glosters declined further to Rs. 387 and Gourepores lost five points to Rs. 265. Nuddeas were unchanged at Rs. 43-8, while Kamarhattis were a shade better at Rs. 180-8. Presidencies were supported at Rs. 4-8 and Agarparas were enquired at Rs. 17-2.

Coals were subjected only to small changes mainly in the downward direction. Thus, Karanpuras lost Rs. 2 to Rs. 80 and Standards declined from Rs. 20-12 to Rs. 20-8. Barrakurs were quiet at Rs. 8-11, while Bengals were better at Rs. 509. Equitables were bid at Rs. 33-13 and Dhemo Mains at Rs. 8-12. East Indians were easy to-day at Rs. 22-12. In transactions earlier, South Karanpuras moved from Rs. 9-7 to Rs. 9-10.

Only a small number of transactions was recorded in the tea section. These were at lower rates. Thus, Tezpores were lower by a rupee at Rs. 14-4 and Jutlibaris by As. 8 at Rs. 9-8. Ledos realised Rs. 7-2. In the sugar section, Champarans were unchanged at Rs. 24-4, while Belsunds were earlier raised to Rs. 7-14 from the previous rate of Rs. 7-8.

Madras Stock Exchange

MADRAS, *3rd September*

Trading on the Madras Stock Exchange this week was chiefly confined to rubber and textile scrips. Textile shares particularly seemed to shake off their lethargy and forged ahead on expectation of an improvement in export demand for cloth and yarn in the next few weeks. In the rubber section, the increase in dividend of Malankara Rubber and Produce Co., Ltd., from 35 per cent. to 55 per cent., had a heartening effect on the sentiment of operators. Rubbers also, as a consequence, fared better, with values of some popular counters recording sizable gains. But for the activity in these, the rest of the market may be said to have presented generally a discouraging appearance. Teas came in for some selling pressure. The passing over of the dividend of Chembra Peak Estates again this year (31-3-1953) also dampened the enthusiasm of operators. Besides, export enquiries for tea leaf were not as brisk as expected. Coffee and miscellaneous scrips ruled colourless in the absence of any favourable development. Banks presented no better trend. As a result, business done in these scrips was negligible and prices disclosed minor losses over the week.

In the textile section, Metturs shot up from Rs. 194 to Rs. 198 and Dhanalakshmis from Rs. 180 to Rs. 182. S. K. Rajendras put on Re. 1 and finished at Rs. 44. Maduras gained As. 8 to Rs. 37-6. Mysore Spuns were higher by As. 3 at Rs. 3-6. Saradas, however, lost Rs. 5 to Rs. 66 and Rangavilas As. 8 to Rs. 49-8 *cum-div.* Buckinghams were done at Rs. 121 *ex-div.*, as against Rs. 122-8 *cum-div.* Premiers were enquired at Rs. 83 *ex-div.*, as compared with Rs. 91 *cum-div.* Business in Cannanores was done at Rs. 92 *cum-div.* The Directors have maintained the dividend of 12 per cent. for the year ended 31st March, 1953.

Among plantings, rubbers were well supported. Malankaras were higher by Rs. 9 at Rs. 116 *cum-div.* The Company proposes to issue one bonus share for every share held by means of capitalising a sum of Rs. 4.5 lakhs. After the bonus issue, the Directors propose to break up the Rs. 30 paid-up shares into three shares of Rs. 10 paid-up each. Kailas improved by two annas and a half to Rs. 3-11 and Pullangodes by an anna and a quarter to Rs. 2-9½. Thirumbadis rallied an anna and finished at Rs. 2-15. T.R.Ts. (tea and rubber) were higher by a similar amount at Rs. 7-6½.

Tea scrips ruled quietly easy. Chembras declined by As. 6 to Rs. 2-4½ and Kalasas by an anna to Rs. 12-6. Waterfalls were slightly lower at Rs. 3-2. Emerald Valleys, however, gained As. 3 to Rs. 4-4.

Coffee shares were generally dull. Coffee Lands were unchanged at Rs. 10-8. Consolidated Coffees at Rs. 18-8 and Mysore Coffees at As. 8½. Puthuthottams were slightly better at Rs. 3-9½ Stanes Amalgamateds (tea and coffee) were higher by an anna at Rs. 9.

Miscellaneous scrips lacked enterprise. Binnys were done at Rs. 110 *ex-div.*, as against Rs. 114 *cum-div.*, and General Papers at Rs. 7-6 *ex-div.*, as compared with Rs. 8-4 *cum-div.* Andhra Cements 'A' lost As. 8 to Rs. 99-8. Mettur Chemicals, however, gained As. 5 to Rs. 4-1. Nundydroogs put on a similar amount to Rs. 4-5.

Among banks, Bank of Mysores was done at Rs. 276 *ex-div.*, as against Rs. 284 *cum-div.* Indian Banks, Rs. 100 paid-ups, gained Re. 1 to Rs. 102. Andhra Banks, Rs. 100 paid-ups, were quiet at Rs. 103 and Travancores at Rs. 11-4.

HEAVY CHEMICALS LTD.

There is no doubt that there is a great future for the heavy chemicals industry in the country, considering that its products have a gradually expanding market. It is, therefore, gratifying to note that the new company, Heavy Chemicals Ltd., has been formed, with a view to manufacturing high-test hypochlorite, in addition to caustic soda, titanium tetrachloride, titanium dioxide and ferric chloride. The Company's factory will be located at Milavittan, Tuticorin, where the foundation-stone for the factory's buildings will be laid by the Rajpramukh of Mysore on 6th September. This site has been chosen, in view of the easy availability of raw materials near the factory site and the close proximity of the railway line and port facilities at Tuticorin. The necessary power will be supplied by the Papanasam hydro-electric grid. It is these facilities which make the new venture an attractive commercial proposition.

The project for the manufacture of heavy chemicals has been split into two stages. During the initial stage, the factory is being designed to produce 5 tons of electrolytic caustic soda per day, and the entire by-product, chlorine, will be utilised for the manufacture of high-test hypochlorite—a highly concentrated bleaching powder. In the second stage, the capacity of the caustic soda plant will be stepped up to 10 tons per day and the surplus chlorine will be utilised for processing ilmenite to produce titanium tetrachloride, titanium dioxide and ferric chloride.

The whole enterprise is a product of Indo-Swiss co-operation, the plant for the factory is being supplied by Messrs. Krebs/De Roll S.A., Zurich, Switzerland, who, along with the Directors and friends of the Company, are providing Rs. 35 lakhs of the total issue capital of Rs. 50 lakhs; the balance of the capital, namely, Rs. 15 lakhs, is now offered for public subscription.

NEWS IN BRIEF

THE Rajasthan Government has drawn up a five-year plan for road building which is estimated to cost Rs. 4 crores. It provides for construction of *1,223 miles of metalled roads, 286 miles of gravelled roads*, 56 miles of fair-weather roads and asphalt surfacing of 222 miles of road.

It is learned that two new Postal circles, Rajasthan and Andhra, will be created from 1st October next. The Rajasthan circle will include Madhya Bharat and Bhopal with its headquarters at Jaipur. These circles will be under the charge of the Director of Postal Services.

The Government of Hyderabad has appointed a Committee of officials under the chairmanship of Mr. Devi Singh Chauhan, Minister for Rural Reconstruction, to review the work done by the marketing department and suggest ways and means for improving the working of regulated markets.

The Government of India has, with the concurrence of the Federal Council of Switzerland, decided to raise the Legation of India in Switzerland to the status of an Embassy and to appoint Mr. Yesdezard Dinshah Gandevia, till now Envoy Extraordinary and Minister Plenipotentiary, as Ambassador Extraordinary and Plenipotentiary of India in Switzerland.

The Government of Travancore has constituted an advisory committee on the Norwegian-aided fisheries' development project in the State. The Committee includes Dr. D'Lund, Mr. M. Krishtensen and Mr. P. Bog, fisheries experts from Norway. The State Director of Fisheries will be the convenor of the Committee. A ten square mile area near Quilon with a population of 12,000 has been selected for the project.

The Bhopal Abolition of *Jagirs* and Land Reforms Bill, adopted by the State Legislature on 6th August, 1953 and now awaiting the assent of the President, is tentatively fixed to be enforced in the State on 2nd October. With the enforcement of the Bill, all the *Jagirs* in the State will be taken over by the Government. Payment of compensation has been fixed on a sliding scale.

The Government of India has constituted a Technical Committee, consisting of Mr. C. A. Cornelius, Manager, Telephone Workshops, Bombay, as the Chairman, and two other members from the Ordnance and the Ministry of Railways, respectively, to examine the question of classification of industrial employees of the Posts and Telegraphs Workshops and advise the Government on measures to be taken to remove anomalies. The headquarters of the Committee will be situated at Calcutta.

In pursuance of its policy of encouraging cottage industries, the Government of Bombay has directed that products of cottage industries should be obtained for all Government buildings, including Ministers' houses, inspection bungalows, circuit houses, residential buildings, etc., which are to be furnished by the Public Works Department, at the time of initial furnishing or replacement. However, where the difference in cost between cottage industries' products and others is considerable, preference to cottage industries products will be limited to 25 per cent. in prices.

It will be possible for the servants of the Government of Bombay, in future, to get advances from the General Provident Fund and the Contributory Provident Fund for house-building purposes, i.e., for the purchase or construction of a house, including the cost of a site. Such an advance from the Provident Fund is permissible not more than three years before the Government servant concerned is due to reach the age of superannuation. These advances will be recoverable in equal monthly instalments of not less than one-sixtieth each of the amount of advance, with three additional instalments for interest at the rate prescribed in the relevant provident fund rules.

About 2,500 workers of the Tata Chemicals Limited of Mithapur (Saurashtra) are expected to get an increase in wages and other benefits approximately amounting to Rs. 2 lakhs annually as a result of an agreement arrived at between the management and the workers in Bombay, last week. According to Mr. J. D. Choksi, Director, Tata Chemicals Limited, the agreement, which was reached between representatives of the I.N.T.U.C. led Tata Chemicals' Khamgar Sangh and of the management, covers all outstanding issues including minimum wages, increase in basic wages and dearness allowance.

The locust invasion in Rajasthan during the current year has been the worst during the last 80 years. The movement which started in the middle of May this year continues. No less than 277 reports of swarm movements have been received from the cultivated area of Rajasthan. The total of swarm movements during 1951 and 1952 were 139 and 15, respectively. Hoppers emergence, which roughly started during the third week of July, is likely to continue till early September. Nearly 1,220 villages in 10 districts of the State are infested by locust eggs. Jaipur, Nagour, Alwar and Jodhpur are the worst infested districts.

The Government of Mysore has ratified the agreement entered into at Bhadravati on 17th August relating to demands of labour between the Labour Association of the Mysore Iron and Steel Works at Bhadravati and Mr. H. Siddaveerappa, Home and Industries Minister. According to the agreement, there will be an industrial truce for three years. The labourers of the Mysore Iron and Steel Works will get a bonus of three months' pay for the year 1952-53 and they will get dearness allowance at the rate now being paid to Government employees at Bangalore. A service gratuity scheme is also to be sanctioned.

A tool-room equipped with some of the most modern machine tools supplied by British factories was opened by Mr. G. H. Middleton, acting High Commissioner for the United Kingdom in India, at the Indian Institute of Technology at Kharagpur, to-day. The equipment which includes jig borer, milling, shaping, sawing and grinding machines, lathes, lapping machines and precision measurement instruments has been provided by the British Government under the Technical Co-operation Scheme of the Colombo Plan. The total value of equipment is estimated at Rs. 4,70,000. Another Rs. 1,00,000 worth of equipment has been made available by the U.N.E.S.C.O. for this tool-room. The tool-room at Kharagpur is intended to serve two important objects. The machines will be used first to service large student-workshops, already established at the Indian Institute of Technology, and, secondly, to produce laboratory and scientific equipment needed for technical education and research work, prototypes of machinery and production tooling.

From Abroad

South Africa signed two loan agreements, aggregating $60 million, with the International Bank for Reconstruction and Development on 28th August, 1953.

The leading cotton spinners in the U.S. are expected to effect cut in prices of mercerised yarn. This move is the result of poor demand for all types of mercerised yarn and the consequent accumulation of stocks.

New textile fibres made from cotton have been unveiled by the Institute of Textile Technology in the U.S. The new basic fibre (T-7) is produced by treating ordinary cotton fibre, yarn or fabric in a solution which contains acrylonitrile. The process results, among other things, in permanent resistance of the end product to micro-organism attack, such as mildew and bacteria.

The United States is to give Iran about $23 million worth of economic and technical aid in the coming year. The economic aid will be about $10 million, the rest being technical aid for the development of agriculture and implementation of industrial and welfare programmes. In addition, Iran will continue to receive U.S. military aid which amounts to about $20 million.

Export controls on 70 steel mill products have been relaxed in the U.S. These products include those of carbon, steel or iron, with the exception of alloy nails. About 50 of these items have been removed from the Office of International Trade's (O.I.T.) positive list of commodities and may be exported to all countries, excepting Hong Kong, Macao and U.S.S.R. and its satellites, under the general licence without prior application to the O.I.T.

With a view to assisting the export trade, the Government of Denmark has decided to release Kr. 75 million (£3.9 million) of Denmark's Kroner quota in the World Bank to be loaned to countries which would otherwise have no possibility of financing imports of Danish goods. Two limits, however, have been imposed. First, the entire amount should not be loaned by the Bank at short notice and must be spread over two years or more. Secondly, the money should be loaned mostly to the so-called "third countries." The borrowing countries can spend the money at their own discretion and the Bank is at liberty to choose which countries are to receive the loans.

British shipyards completed 18 new merchant vessels, aggregating 110,579 tons, in July this year, according to Lloyd's List. It was the highest output for the month since 1949 and was well up to the average of recent months. With deliveries in each of the last five months exceeding the 100,000-ton mark, completions both as regards the number of ships and their total tonnage, are now running ahead of the 1952 and 1951 totals. Tanker tonnage was responsible for a large portion of the completions in July. The July total of six tankers, of 68,328 tons gross, brought completions of this type of vessel this year to 34 of 412,916 tons. Among other vessels to finish their fitting-out were two cargo liners of 15,460 tons, three tramps of 16,371 tons and three colliers of 7,875 tons.

The fourth session of the Building, Civil Engineering and Public Works Committee of the International Labour Organisation will be held in Geneva from 26th October to 7th November, 1953. The Committee will examine the General Report which deals, *inter alia*, with (a) action taken in the various countries regarding the conclusions arrived at previous sessions of the Committee, (b) steps taken by the Office to follow up the studies and enquiries proposed by the Committee, and (c) recent events and developments in the construction industry. It will also examine the method of facilitating the progressive application of the principle of a guaranteed wage, including methods of eliminating temporary stoppages or fluctuations in plant operations and in employment. The Committee will discuss factors affecting productivity in the construction industry. India is a member of this Committee.

PERSONAL

MR. T. Swaminathan, I.C.S., Textile Commissioner to the Government of India, left for Tokyo to study the recent developments in the Japanese textile industry.

Mr. J. Rameshwar Rao, formerly First Secretary in the Office of the Indian High Commissioner at Nairobi, has been appointed Indian Commissioner to the Gold Coast and Nigeria with his headquarters at Accra (Gold Coast).

Mr. Carl Campbell, a marketing specialist, U.S. Department of Agriculture, will be visiting India, Pakistan and Japan, next month, with a view to exploring the possibility of arranging U.S. cotton exports to these countries.

Mr. A. V. Thomas has been elected Chairman of the United Planters' Association, Coonoor, for 1953-54. Mr. J. B. Soutar, Mr. M. S. Calderwood and Mr. N. B. Athrey have been elected Chairmen of the Tea, Rubber and Coffee sections of the Association, respectively.

Lt.-Col. Jaswant Singh and Dr. C. V. Ramchandani, Additional Directors-General of Health Services, will represent India at the sixth session of the WH.O. Regional Committee for South-East Asia which is scheduled to be held at Bangkok from the 16th to 19th inst.

Mr. S. Y. Iyer, Accountant, Caltex (India) Limited, left Bombay for the United States, under Caltex (India) Limited's Technical Training Programme of imparting advanced technical experience to Indian employees to qualify them for positions of greater responsibility.

Mr. Mikhail Alexeevich Menshitkov has been appointed Russian Ambassador to India *vice* Mr. Ivan Alexandrovich I. A. Benedictov, who has been recalled by the Soviet Government to take charge of his previous post of Minister for Agriculture.

Dr. A. Basch, Chief of the South Asian division of the World Bank, who arrived here from Colombo on 29th August, 1953, left for New Delhi on Wednesday last. Dr. Basch is expected to stay in India for three weeks, with a view to reviewing the overall economic and financial position of the country.

Dr. B. V. Narayanaswamy Naidu, Member, Tariff Commission, has been appointed Chairman of the Forward Markets Commission. Mr. T. Swaminathan, I.C.S., Textile Commissioner to the Government of India, has been appointed a part-time member. Mr. M. A. Mulky, Assistant Economic Adviser to the Central Commerce Ministry, will be the Secretary to the Commission.

"COMMERCE" 1928

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, *8th September*

Trade Disputes

There can be no two opinions about the fact that the placing of such a measure as the Trade Disputes Bill on the Statute Book will prove a big step forward in labour legislation in India. But the Bill has a long and difficult way to go before it reaches the Statute Book, and we shall not be surprised to find it considerably modified by the time it reaches its journey's end. But it is most important to remember that the Bill, as drafted, is directed, principally, against illegal strikes, the definition of illegal strikes for the purposes of the Bill limits them to public utility services, railways, postal department, telegraphs, telephones, any industry which supplies light or water, and any system of public conservancy. But also included in the Bill are proposals for constituting courts of enquiry and conciliation boards, whose job it will be to bring about a settlement of disputes. In the event of failure to secure a settlement, a full report of the findings and recommendations will be submitted to the appointing authority, the local Government or the Governor-General-in-Council, the latter in case the employer is the head of a department under the control of the Governor-General-in-Council or a railway company. Necessary powers will be given to the court of enquiry to conduct its investigation. The Bill also provides for dealing with interfering outsiders bent on mischief-making. In the main, however, the provisions are for illegal strikes and does not appeal to us as a remedy of the strike evil outside of public utility services, so that, in its draft form, while it contemplates the functioning of courts of enquiry and conciliation boards generally, its special provision for dealing with offenders is limited to strikes in public utility services.

There is another Bill before the Legislative Assembly with the object of amending the Indian Penal Code in its reference to labour dispute. This is another instance of callous manner in which politicians mess about aimlessly, if not maliciously, with industrial matters. Mr. Joshi's Bill seeks to give immunity to any two or more persons who claim to be interested in a trade dispute but who have no connection with registered trade unions. It does not matter who the persons are. They may, as Lord Loreburn said, in the case of Conway *vs.* Wade (1909), A.C. 506, be intruders intervening as mere mischief-makers, actuated by personal, sectarian or political motives, who stir up strife which has not been previously thought of by any of the employers or workmen concerned and where the dispute only exists in the mind of the intruder as a possible result of his intervention.

This Week's Survey

BRITISH LABOUR ON NATIONALISATION

NOW that the British Labour Party is in opposition, one would think that the Party would be more vocal in its demand for nationalisation. Actually, second thoughts on the subject have induced a revision of its attitude towards the subject. The General Council of the Trade Union Congress says, in a report to be submitted to the meeting of the Congress this month, that public opinion is not "strongly prepared" for the transfer of "further industries to public ownership." This indicates a welcome change in the Council's attitude. It would, however, be wrong to think that the entire Party shares this view, for there is still a section which continues to believe that further doses of nationalisation alone will strengthen the country's economy. The Council itself has not lost its faith in nationalisation. Only, it emphasises that any extension of this principle must bear relation to the country's economic position and attract wide support. Even so, the Council is convinced that water supply should be brought under State ownership, and that the area of publicly owned lands should be enlarged.

The Council has rejected, after consideration, the case for the nationalisation of specific industries, such as aircraft, banking and insurance. It would be unwise, according to the Council, to commit itself, at this stage, to measures for "public ownership or further measures of public control in the aircraft industry." Referring to banking and insurance, the Council says that the arguments for nationalisation are not "weighty enough to counter-balance adverse repercussions at home and abroad which might be caused by further Government intervention in this sector." But it finds that there is need for "public control"—the word "nationalisation" is not used here—over the chemical industry, because of its monopolistic structure and its importance to the economy. The next Labour Government, according to the Council, should institute an inquiry into the industry before a final decision is taken on the nature and extent of control over the industry. For the shipbuilding and marine engineering industries a development council is regarded as "more appropriate" than State ownership.

MALABAR'S ECONOMY

The annual meeting of the Cochin Chamber of Commerce provides an opportunity for the President of the Chamber to review Malabar's economy. Like his predecessors in that office, Mr. H. U. Buechi, President of the Chamber for this year, made a rapid and comprehensive survey of this south-western region which is growing in importance and economic status. Plantation products such as pepper, tea, rubber, cashewnuts, and the coir industry are, as is well known, the mainstay of this region's economy. He deplored that pepper growers did not realise the need for meeting the challenge from the pepper producers in other countries who were willing to sell pepper at "whatever price they can get for it." In lemongrass oil, another Malabar product, competition from Central America "continues to be severe."

The effect of the last year's depression was less severe for the tea industry in the South than for its counterpart in North India, because the former produces high grade teas which are less susceptible to setbacks in tea export. He stated that the changes made in the excise duty resulted in some confusion inasmuch as the arbitrary selection of 60 lbs. package for qualifying for the reduction in the duty "encourages" the sale of loose tea with all its attendant risk of adulteration. Rubber had not fared well, for the supply in 1952—the output of 19,863 tons plus imports of 3,000 tons—exceeded the consumption estimated at 21,061 tons. He warned that the position was likely to worsen in the current year, as the Indian rubber output was expected to improve further, whereas the demand had not increased. Trade in cashewnut, India's dollar earner, was expected to be bright. He revealed that the current year's consumption of cashewnut in the U.S., according to present indications, would be higher than last year.

There has been much truth and some untruth in the Parliamentary discussions about the coir yarn industry. It is, therefore, instructive to know what the chief of the leading commercial body in Malabar, the region that is vitally interested in this industry, has to say about it. From the point of view of the industry, he described the year 1952 as a "period of adjustment to more normal trading conditions." Since August, 1952, when prices reached their lowest level since 1949, prices have improved; they are now 15-20 per cent. higher than a year ago. Although exports of coir yarn are 12 per cent. below the record level, touched in 1952-53, they are 20 per cent. above last year's levels. Exports of coir mats and mattings are only 5 per cent. below the 1950-51 record levels and are 37 per cent. above the 1951-52 level. He added: "Unemployment in the districts has been greatly relieved and a further slight increase in production would probably be absorbed without difficulty." Judged by any standard, this would certainly be regarded as an improvement. He rightly deplored that many statements were made which were based on insufficient knowledge.

There is a tendency in this country to cry "wolf" at the slightest signs of a trade recession; this tendency betrays a deplorable lack of confidence. It must, however, be pointed out that Mr. Buechi, on his part, did not suggest that all was well with the industry. For he said: "Rationalisation in the methods of production of coir and coir manufactures will have to be introduced to consolidate the position of this important export industry of the Malabar coast." In his view, "sufficient opportunity" had not been given to all interests to study the "Coir Bill" since the rules to be made thereunder had not been published. The Government will, perhaps, do well to bear this criterion in mind, and consult all the interests concerned by giving them an opportunity to know the Bill in all its aspects, so that it could have the benefit of informed criticism. Also, the Bill, which will have, as Mr. Buechi said, "long-term repercussions" on the trade, needs to be revised in the light of the improvement that has recently taken place in the sphere of the coir industry.

PLANTATION LABOUR

Three important points relating to labour relations in plantations were stressed by Mr. C. F. Clark, acting President of the Southern India Estate Labour Relations Organisation, in the course of his address at its annual general meeting, held at Coonoor (Nilgiris) last week. First, there should be effective control and regulation over labour and their trade unions, so as to provide for the development of trade unionism on healthy lines. Secondly, improvement in workers' living conditions cannot be had without an increase in the per capita output of work. In this connection, he condemned the Plantation Labour Act as a hasty piece of legislation. Finally, the Appellate Tribunals should be retained.

The demand for effective control and regulation over labour and trade unions is justifiable, because it will help keep the trade unions free from outside interference and political and partisan influence which has led to exorbitant labour demands, which cannot be met by the industry concerned. So far as healthy development of trade unionism is concerned, there are no two opinions. Dealing with this aspect, Mr. Clark pertinently observed: "It is my belief that, until such time as there is a single union for staff, and one for labour, free from any political bias and until affairs of these unions are conducted by our workers without the interference of outsiders, there can be little likelihood of any co-operation between managements and unions."

That the living conditions of workers cannot be improved, unless the plantation industry earns enough profits to pay for all their members, is a plain fact. It is easy to over-emphasise the need for redistribution of incomes. But, even if the so-called profits of the industry are redistributed for the benefit of every worker, it will not, as pointed out by Mr. Clark, increase the per capita income by anything like one anna per day. How then are their living conditions to be improved? Answering this question, Mr. Clark said: "The only way India can achieve lasting improvement in living conditions is by the present sacrifice to increase capital equipment and by the present and the future determination to work and earn the improved living conditions by increasing the per capita output of work."

So long as labour and industrial tribunals exist, and voluntary negotiations do not displace them, there is a need for retaining appellate tribunals in order to ensure uniformity of decisions in respect of labour disputes. Adverting to the decisions of industrial tribunals, Mr. Clark said that, even if these were assisted by assessors, there must be the right of appeal to an appellate tribunal. It was only the Appellate Tribunal which could make a final decision on questions of law and which could ensure that their evidence was appreciated properly. He pointed out that the findings of the Appellate Tribunal had, because of the authority behind their rulings, helped very considerably in avoiding disputes. To do away with this Tribunal would cause indecision and uncertainty. There is no doubt that, in its absence, different industrial tribunals, as he foresaw, would make varied decisions on identical or nearly identical problems.

BURNPUR LABOUR DISPUTE

The labour dispute in the factories of the Indian Iron and Steel Company and the Indian Standard Wagons Company has taken an awkward turn. The lockout declared on 24th August has adversely affected the earnings of no less than 14,000 workers. The situation has gone out of the control of the labour leaders themselves, thanks to the absence of any understanding between the rival leaders. Mr. Michael John, President of the I.N.T.U.C., and also of the Asansol Iron and Steel Workers' Union, has been advising labour to withdraw the strike, while Mr. C. I. Vyas, Chairman of the Action Committee, an illegal body, has decided to continue it until the demand for the recognition of the Action Committee leadership is accepted.

The tragedy of the situation is that the trouble at Burnpur did not originate from any disregard by the management, of any labour demand such as increase in wages, bonus and the like. It is the result of power politics, pure and simple. The sound trade union, which has been in existence since 1946, when it was organised by the late Prof. Abdul Bari, is no longer there. The workers have fallen a victim to the machinations of a few political personalities who, in order to achieve their selfish ends, have been trying to disrupt all organised and established trade union movement. The so-called leaders of the Action Committee have stood in the way of all attempts at reaching a settlement. By holding certain key positions in the factories, they have, succeeded by coercion, intimidation and hooliganism in making it impossible for willing and production-minded workers to do normal work.

The struggle for leadership of the Union, which began six months ago through go-slow tactics, and culminated with the lockout of the workers, has resulted in no small loss to the nation, not to speak of the shareholders and workers. India has lost more than 100,000 tons of iron and steel, which is vital to the success of the Five-year Plan. This has led to a flourishing black market in steel sheets and sections. The workers themselves have lost no less than Rs. 25 lakhs, even at a conservative estimate, in terms of wages and production bonuses. India's credit as a borrower from the World Bank is likely to be impaired to no small extent. Finally, to make up the shortage of steel, India has to import its requirements, which involves a considerable loss of foreign exchange.

It is common knowledge that neither the State Government nor the Government of India nor any other agency has succeeded in convincing the strikers of their folly. Unfortunately, it would appear that the governing party of West Bengal is itself of divided opinion regarding the dispute, some favouring Mr. John, the constitutionally elected leader of the Workers' Union, and others Mr. Vyas, who has no locus standi at all. This is certainly a preposterous situation. And this clearly explains the lack of determined and strong measures on the part of the State Government to effect a settlement. The vacillation by the West Bengal Government has encouraged the Communist and other leftist parties to exploit the situation to their advantage.

It is high time that inter-trade union jealousies, which are now causing serious injury to the country's economy, were promptly put an end to. The trade union leaders must understand their rights and responsibilities to the workers and not try to make capital use of their ignorance for their selfish ends. The State and the Central Governments should take determined and firm steps towards putting an end to this impasse. The Burnpur plants are valuable assets of the nation. There can be no greater disservice to the nation than to render them idle, or to bring them to a state at which they would be unworkable without incurring heavy expenditure.

REACTIONS TO TWO-POINT SALES TAX

Ever since its publication a fortnight ago, the Bill to amend the Bombay Sales Tax Act, 1953, has been engaging the serious attention of the business community. The latest to make its pronouncement on it is the Indian Merchants' Chamber, Bombay. In a memorandum to the Government, the Chamber has advanced some cogent reasons for modifying the Bill in some important directions. The points raised by it are of vital interest not only to the business community but also to the economy of the Bombay State itself.

The Chamber has endorsed the view expressed by us in a leading article two weeks ago that the scheme and structure of the tax are so complicated that the Government's objective of giving further facilities to trade and industry in the State and of securing uniformity in the tax system will not be realised. The Bill does not satisfy, asserts the Chamber pertinently, the test of simplicity. It will, therefore, act harshly on a large number of dealers with no organisational set-up to follow the implications of the Bill. Again, the so-called two-point scheme, which is intended to substitute the multi-point scheme, is something more than a two-point system in that the sales tax of 3 pies in the first stage, the general sales tax of six pies and special sales tax are to be levied on as many as 54 items. The worst feature of the Bill is that it does not adequately recognise the special position of the Bombay State as a distributing centre of all-India importance. Although the new scheme is a little better than the present multi-point scheme, it still contains certain features which will divert the trade to certain other States. Thus, so long as exports outside the State are not made completely free from liability to sales tax at the first stage (that is, at 3 pies), elimination of some of the stages in the normal handling of trade and intermediaries is unavoidable. In effect, it will encourage the purchasers outside the State to deal with the manufacturer or the importer directly and thus result in elimination of middlemen in the State. In other words, it will divert handling of trade from Bombay to centres in other States. The articles liable to special levy should be really luxury articles and not articles of common consumption which should be exempted as the cumulative incidence of sales tax on them will be as high as 21 pies in the rupee.

After pointing out these defects in the Bill, the Chamber makes certain suggestions for revising it. It emphasises the need for giving greater consideration to the importance of evolving a scheme which will be simple in application and easy to understand. With a view to avoiding the diversion of handling trade from Bombay, the Government is requested to exempt goods sold outside Bombay from the tax in the first stage also, in the same manner as it is proposed to exempt them from the tax in the last stage. As the proposal to reduce the turnover limit to liability to sales tax from Rs. 30,000 to Rs. 15,000 would cause hardship to a number of small traders, the Chamber suggests that the limit should be the same as it is at present. It is further stated that there is no point in the proposal which seeks to prescribe a limit of Rs. 50,000 for eligibility for the grant of licence to manufacturers whose purchases of raw materials are exempted from sales tax. As the small manufacturers below a turnover limit of Rs. 50,000 also need such exemption, the Chamber rightly contends that this limit on monetary turnover is meaningless and will penalise the small industries. The Chamber has also pleaded forcefully the need for exempting from the tax the essentials of life listed under the Central Act, even though constitutionally, the Bombay Government may have powers to continue this tax. What is required to be followed is the spirit underlying the exemptions under the Central Act. Further, the Chamber has protested—justifiably, of course—against the inclusion of some of the articles of daily necessities such as betel leaves, betel nuts, matches, pepper, tamarind, chillies, etc., in the list of goods subject to the levy. These goods are now exempt from it.

OFF THE RECORD

(By "ROVER")

AS day follows another day, I am getting confirmed in my view that we are gradually but steadily becoming a nation of smug prudes. This is not the same as being a nation of puritans. There is a rugged strength and singleness of purpose, a suggestion of integrity and sincerity about a genuine puritan. He may be uncouth; he might even be forbidding. His vision may be narrow and circumscribed. He does create unnecessary tensions and perpetually tries to reduce life to a stagnant pool, from a free flowing river which it often is and always ought to be. But he is neither a humbug nor a fraud.

When a puritan deteriorates and loses his soul and his strength, when he succumbs inwardly, guiltily and self-consciously to softness and sentiment in some form or other, he transforms himself into what I call a smug prude. Instead of openly assailing facts, which are unpleasant and unpalatable to him, he just refuses to face these facts and tries to cover them up by a veil of silence. A prude holds fast to his belief that he can dismiss an ugly fact out of existence by refusing to talk about it.

Our long campaign for independence imposed upon us a certain degree of puritanism. It was partly a necessity for developing our strength and power of resistance and partly a half-hearted and grudging tribute to the only effective leadership which was available in the country. After independence, it was inevitable that a new set of political, social and economic problems should be posed before the country. A new outlook, more healthy and more normal in the sense of being more suited to our national character, growth and history, became a necessity for solving these problems. With the passing away of Gandhiji, real puritanism, which had sprung up spontaneously from his very nature, disappeared from the country's leadership. What remained was a soulless form, acquired and donned by lesser men, who lacked innate strength.

Years ago, in the formative stages of their character and career, these second-rank leaders had accepted this puritanism as they had accepted khadi, to receive and reflect the light and leadership of the saint which they could not evolve from their own natures. A few, like the Prime Minister, endowed with inner strength, had created a new synthesis by accepting and absorbing Gandhiji's tenets only to the extent they did not go to disintegrate their own nature. For the rest, the dead form of puritanism remained merely as a borrowed garment to cover the nakedness of their own souls. This limp and lifeless puritanism soon putrefied itself, as it always does, into irritating smugness and exasperating prudishness. When Gandhiji saw a cesspool, he honestly tried to clean it; most of his followers to-day, barring a few exceptions, try to look the other way and hasten to leave its vicinity to escape the stink.

We have a number of problems facing the country to-day. But the problem of all problems, one which cuts across all these problems, is the emergence of unemployment on a vast scale, with all its implications of poverty, demoralisation and instability. A mere glance at the newspapers for a week would convince one of the enormity and urgency of this problem. Hardly a day passes when some leader or other does not dilate upon it and make his own suggestions for curing this deep-seated disease in the body politic. A thousand remedies have been suggested and more are being put forth by those who look upon themselves in the role of physicians. Some of these have merit, inasmuch as they can alleviate the pain for a period of time. Others are childish, arising from prejudices which go with every political ideology and look upon the patient in the light of an interesting case on which they could try and test their skill. Some others are silly and a few are dangerous, because they would kill the patient or drive him insane. There are even fantastic suggestions which amount to giving the patient a new body.

It seems to me that there is a conspiracy not to trace the disease to the prime conditions which gave rise to it. Everyone appears to be busy emphasising one or another of the conditions and causes which worked to aggravate it and which brought the distemper to the fore. To one whose mind is not muddled with cramping prejudices, which are often accepted as logical conclusions and convictions, to one who is free from preconceived theories about economics or politics, to one used to rely on his commonsense and observation, the close and intimate relation between the size of population and the opportunities for unemployment at a given time or stage of economic development is patent and obvious. A small part of unemployment which results from maladjustments can be diminished by taking steps to remedy these defects. But the volume of unemployment to-day, which is increasing from year to year, cannot be reduced to a reasonable and bearable stage by merely tinkering with the machinery of production or distribution.

The basic fact is that a given volume of production can maintain only a certain number of people in average comfort. It might maintain a few more with some reduction in the standard of living. It might maintain still more in a state of poverty, distress, squalor and disease. Another equally basic fact, not so much of economics as of life itself, is that there are limits to the rate of seeking and bringing about increase in the production of wealth. These are conditioned by the available resources and the skill, industry and character of the people concerned. As it is, most of us are living a life of chill penury, semi-starvation, filth and disease. A better distribution of the wealth that we annually produce, a system of distribution, which is more in conformity with the most advanced ideas of social justice, would possibly improve these conditions slightly. But even if this could be effected overnight by a miracle, we would still be a hungry people, ill housed, scantily clothed, poorly educated and diseased. We will still have a long leeway to make up by way of improving and expanding our productive capacity to provide a bare minimum of living standards for the number of people we have at present. This in itself is a gigantic task and, if we could achieve it in a generation or two, it would be a glorious achievement for us.

But, if in the years when we shall be engaged in rebuilding our economy, if the number of people to be fed and housed and clothed and educated and kept employed keeps increasing even at a rate no higher than the pace of our economic development, we shall have the same low standard of life in 1980, as we have to-day. If it increases at a rate higher than the development, which with our obvious limitations we can secure during the next twenty-five years, the plight of our people during the interval, as well as at the end of this period, will be even greater than it is to-day. It is little use kidding ourselves by saying that we shall achieve immediately a rate of wealth production which will far outstrip the normal rise in population even if it is allowed to go unchecked as at present. This idle day-dreaming will take us nowhere. We have to recognise our limitations of capital, machinery, training and a host of other things which are necessary for rapid economic development.

Without a check on the increase of population, our best efforts would not go to reduce our poverty and starvation. In fact, we shall be worse off materially in almost every aspect at the end of even the most successful implementation of not one but five Five-year Plans, in spite of the tremendous effort and sacrifice which this will demand. Have we a right to ask for this endurance and endeavour, over a prolonged period, from people who are already unhappy, if after they have given these, they are to find themselves steeped only in more miseries? And, what is more pertinent, will the enthusiasm which alone can lead people to make this sacrifice and give the requisite degree of co-operation be there, if they find that, year after year, the degree of their deprivation increases instead of diminishing and that their children will have to face even a harder life than they are required to-day? It is not as if we need more men to work our industries and agriculture. We have millions to-day for whom we have no work. Why then add to these numbers to make the task of the next generation even harder than ours?

Any country which cannot maintain its population at a reasonable standard of living and decency is overpopulated. No amount of sentimentalising or sophistry can cloud the truth of this self-evident axiom. There is little sense and less logic in the fatuous talk about the country being potentially capable of maintaining the huge population of to-day. When you have turned these so-much-talked-of potentialities into actualities, you would be polite welcome to raise the population to any astronomical figure. As our economy stands now and as it is likely to figure out a generation hence on the most optimistic of estimates, it just cannot stand the increasing pressure of the excess of births over deaths, without a disaster in the near future both to the economy and to a large mass of the people themselves. An overpopulated country owes it to itself and to the future generations to take all possible steps within its power to check further increase. It is more essential to have planned parenthood than to have planned production of wealth, because the latter cannot have any meaning and significance except on the basis of the former. And this planning for restricting the size of families within accepted limits will have to be undertaken on a country-wide and official basis. It cannot be left to the good sense of every citizen, partly because, barring a few emancipated souls, the average citizen is as much a victim of the social taboo which surrounds this subject as his more enlightened rulers and partly because neither the necessary information nor the means are within his reach.

The problem of overpopulation has always been with us for the last seventy years. In spite of a fairly rapid pace of development in every sphere of life, education, medical relief, communications, housing, food, clothing, etc., the increase in population has outpaced this national effort. Large-scale unemployment has merely brought it to the fore. But, as there is no work for earning their living for a large number of people, there are not enough schools for all the children, enough maternity homes for all the expectant mothers, enough hospitals even for those seriously ill or enough houses for all to live in. This fact of too many babies being born every day, cuts across almost every phase of our national life. It should have been noticed, studied and ways and means found to restore a workable balance between the number of children born and the creation of conditions which would enable them it live a normal life. Even if our foreign rulers did not think it prudent to interfere with something which they regarded as delicate, our own Government should have recognised this menace and taken early steps to remove this root of poverty, ignorance and disease. But the prudes posing as pseudo-puritans, though they did not hesitate to invade the individual citizen's life in its most personal and private recesses, were all for letting the citizens breed unwisely and indiscreetly. There is little hope for the future, unless the prurient minds of these self-styled protectors of our morals and religions are fumigated and little sunshine and open air let into them to disinfect them.—*All Rights Reserved.*

AMERICAN LETTER

GREAT POPULAR SYMPATHY FOR INDIA

ECONOMIC TRENDS DO NOT POINT TO ANY SLUMP

(From Our Own Correspondent)

NEW YORK, 26th August

THE controversy over whether or not India should be included in the Korean peace talks continues at this writing. It may be added, in passing, that this is strictly a diplomatic issue and the British Foreign Office is working hard to compromise it. The main point is, however, so far as India is concerned, that there is little popular grasp here over this burning question. Publicity of Indian Army personnel moving into the neutralised zone of Korea has been widespread in this country and it was very favourably received and there is great sympathy here with Indian aims, philosophies and aspirations by the man in the street who is more impressed by Mrs. Eleanor Roosevelt's writings on India than by the *pronunciamentos* of John Foster Dulles, Secretary of State of the United States, or by whatever is said in the United Nations.

It is too involved for the average person to understand why Great Britain wants India to participate and Washington opposes it. The confusion is all part and parcel of the confusion over the armistice which means neither peace nor victory, over the tales of horror related by released prisoners of war, over the announcement by the Kremlin that Moscow has the hydrogen bomb and over the general uncertainty of the situation, indicating peace one day and war the next. In other words, despite official statements to the contrary, great popular sympathy exists in the United States for the role India and her Prime Minister Nehru have played in bringing about an end to the shooting on the Korean peninsula.

Most financial and business markets showed remarkable calmness in the face of dramatic events. Stocks have been declining in the last few days, but the end of August always signals the end of the summer rally and a traditional reaction sets in during the so-called "Indian summer."

The death of Senator Robert A. Taft was a severe blow to the Administration. Before his death, he was able to hold together the various factions of the Republican Party in the Congress, attract conservative Democrats and, thus, roll up an impressive legislative record. Senator Taft provided experienced political leadership for a new Administration, which from the President down is staffed with business men who have no or little political experience. At this point, no successor to Mr. Taft has appeared on the horizon and President Eisenhower's future plans may have tough legislative sledding. That is the appraisal of keen observers.

The American economy as a whole continues in its previous state of flexible stability. One of the softest spots is the New York wholesale apparel industry where business is as bad as it was two years ago. There is no or little explanation why retail stores do not order more dresses and coats. At the same time, savings of all categories continue to rise to record levels; industrial activity, employment and incomes are also at highly satisfactory levels. Securities' yields have dropped somewhat, with bond prices recovering, and complaints over the new free market policy of the Treasury have been reduced to a whisper.

Softness of farm and commodity prices, weakness in metals and bulging automobile showrooms and car-lots are other grounds for concern, although the car situation has improved somewhat in recent days to the point where dealers report selling one used car for every new one. The newly freed markets, generally, have responded well to the new policies, although some abusive advantages seem to have been taken in several parts of the country with the expiration of Federal rent control which, in turn, has resulted in a marginal increase in the cost of living.

In fact, with the necessity of further deficit financing, increase in rents, higher transit fares in many communities, to mention only a few factors, inflationary forces in the United States economy are by no means dead. Within the concept of the "sound dollar policy," they are offset by greater economy in Government, already accomplished by reduction in expenditures and proposed by ex-President Herbert Hoover's new reorganisation group as well as by lower commodity prices.

To be prepared against the possibility of an economic downturn, however improbable it may appear at this time, it is nevertheless cheering news that an anti-recession blue-print is now being worked out under the direction of Dr. Arthur F. Burns, Chairman of the President's Board of Economic Advisers. The plan is expected to be ready by the end of the year.

Meanwhile, another board of business men is being appointed from various regions of the country who are to report on conditions in their areas directly to the White House. Such reports, presumably, would be well ahead of usual Governmental statistical procedure.

So far, nothing spectacular seems to have been proposed in the unlikely event of a business downturn but the obvious, such as easing of fiscal policy; a national public works programme, badly needed rebuilding of highways and, perhaps, lowering of taxes—all stimulants, if necessary. Rehabilitation of Korea, aside from its political effect, comes under the same general heading.

Current statistics are excellent. Personal incomes have continued their steady climb for four consecutive months. In June, they reached a new high at the seasonally adjusted annual rate of $285,900 million. Despite a rising volume of consumer credit, delinquency ratios have been declining in various categories, while there has been some increased slowness of collections and of prompt and discount payments among commercial accounts. The reductions, however, are fractional.

Nearly all industrial surveys made at the end of the Korean fighting seem agreed that little immediate effect on the economy can be expected. Some excutives speak of a temporary adjustment period which America would take in its stride but which may be rather tough in spots —yet not sufficiently so to upset the overall picture.

If any generalisations can be made at all, it would seem that whatever adjustments are in the offing, will be selective, as the stock market has been for some time, and they are unlikely to upset the flexible stability of the economy as a whole.—*All Rights Reserved.*

(Concluded from next column)

Congress. Moreover, it would help the British Government and the Commonwealth Governments in their cautious moves towards greater trade and currency freedom. But quite clearly Mr. Douglas does not expect that the British will make any dash for convertibility on the 1947 model, and anyone who had entertained such hopes (or fears) must accept that now that the President's own adviser has said what British economists and exporters have said for years, the ball is positively in the American court. Let the President declare for liberalisation and begin helping the sterling world by more investment dollars and by steady buying of tin, wool and cocoa, and the British Government can address itself to the next step it could itself take. But are the Americans yet ready even for a statement of good intentions in their trade policies?—*All Rights Reserved.*

CONVERTIBILITY OF STERLING

AN AMERICAN'S PLEA TO THE U.S.

(From Our Own Correspondent)

LONDON, 29th August

AFTER the British Chancellor's visit to Washington last March, President Eisenhower asked the former Ambassador to the United Kingdom, Mr. Lewis Douglas, to report to him on the trade and currency relationship of the United States to the sterling area. The President wanted to know what was at the bottom of the convertibility issue and Mr. Douglas' study is a refreshing piece of liberalism in foreign trade thinking. Mr. Douglas points out the desirability of sterling—the currency in which the largest share of the world's trade is done—being made convertible as early as possible and then goes on to attack the insularity of America who should "begin as soon as possible to remove from its own policies the impediment to freer trade and currencies." We have never before had, from the American side, such a confession as it were, that United States trade policy was responsible for the imbalance between $ and £ and the chief stumbling block to sterling convertibility.

LONDON LETTER

America, Mr. Douglas declares, pursues "trade policies . . . more appropriate to a debtor than to a creditor country" by protecting her markets and subsidising services which foreign enterprise could render better. He wants an end to the protectionist policies, something done to remove violent fluctuations in the United States' demand for staple products of the sterling area, and a bigger American entry into private overseas investment. As a start, he asks for "a prompt announcement that it is the determined policy of this country to work towards simplification of our Customs practices and a progressive, vigorous and consistent relaxation of our restrictive foreign trade legislation." He is realistic enough to appreciate that this would not bring about convertibility overnight, but has taken care to point out that it can produce the climate in which convertibility could be considered with confidence.

The report makes practical proposals on the two other issues: the need to increase overseas investment, probably only possible at present through Government agencies or by United States banks participating in loans made by British banks; and the need to stabilise raw material demand—using Government purchases as a buffer to take up the slack caused by a fall in private buying. All these are measures which do not require any legislation, and, therefore, need not be subject to the long Congressional delays bound to attend any move to liberalise American import policy.

The note of urgency on the need to act before the ideas of freedom fade away again and the world lapses into acceptance of the permanence of restrictionism, is a most encouraging feature of the study. The President and the American financial world could act now to sow the seed of liberalisation and thus enormously help when the time came to put measures to

(Continued in previous column)

MENACE OF GROWING UNEMPLOYMENT

NEED FOR EARLY SHORT-TERM SOLUTION

(By DR. JOHN MATTHAI)

NO period since the end of the war has presented economic trends so difficult to determine and to interpret as the past 12 months. Although the level of purchasing power and, consequently, the demand for goods is lower, and although industrial and agricultural production has not merely been maintained but has increased, the price movement is showing an upward trend. Rising prices and increased production would presume better employment, but instead, unemployment is increasing. In spite of the fact that the volume of money has dwindled, there has been a good response to Government loans, particularly of the State Governments. I have no authentic explanation to offer for these apparently contradictory movements. My object in this talk* is to urge the need for exploring the subject and examine if the contradictions can be resolved and the conflicting trends fitted into an intelligible pattern. There is, otherwise, the danger of fanciful hypotheses and half-baked remedies clouding public opinion and making confusion worse confounded.

Supply of Money

Let me first take the supply of money on which purchasing power depends and indicate some of the more important factors which have led to its curtailment:

(1) This is largely the result of the deflationary measures adopted towards the end of 1951, consisting of the increase in the bank rate, the curtailment of open market operations and the selective restriction of bank credit. In spite of the Reserve Bank agreeing to discount usance bills, there are still large pockets in business and industry in which money supply is constricted.

(2) On account of the fall in the prices of export commodities, as compared with imports, the terms of trade have moved adversely to India.

(3) Agricultural incomes have declined since last year, the resulting situation having been only slightly altered by the recent rise in prices. Further, the general relaxation of the control of foodgrains has reduced the black-market income of the trader.

(4) The unemployment which has resulted from various causes has led to a corresponding reduction in purchasing power.

The extent to which these factors have affected the availability of money and of incomes is evidenced by the rise in interest rates, the fall in demand deposits (as distinct from time deposits) of scheduled banks, the fall in railway passenger earnings, the drop in the current receipts of Central excise revenue and so on.

State Loans

If money is scarce, how is it that there has been such a satisfactory response to the recent State loans? The following facts provide some explanation:

(1) There has been undoubtedly a good deal of official propaganda as in the case of war loans during the British regime. But the theory of official pressure is somewhat overdone because, unless there are spare funds, even official pressure cannot produce results. As compared with the war period, official propaganda must have worked under more difficult conditions, because then there was a current flow of inflated income which has now ceased;

(2) the existence of compulsory provident and other funds which are held by Government provide an increasing source from which loan can be fed;

(3) the slow rate at which funds intended for capital expenditure are absorbed results in unspent balances in the hands of public authorities such as municipalities and local boards;

(4) the cessation of speculative transactions which has followed the slump in 1952 and the fall in the quantum of import trade have reduced the outlet for bank advances. Banks, therefore, are in a better position to invest in Government loans; and

(5) the attractive terms offered by the State Governments have provided a strong incentive to banks and other financial institutions for investing the funds thus released in Government loans.

Level of Prices

I turn next to the level of prices. If purchasing power is lower, it must be presumed that the effective demand for goods is weaker. Moreover, the estimated production of foodgrains in 1952-53 shows a substantial increase, and there are also large stocks of foodgrains imported from the U.S.A. under the wheat loan. If the demand is less and the supplies are greater, how does it happen that prices of foodstuffs have risen?

(1) There is, first of all, the purely adventitious circumstance that food subsidies have been substantially curtailed since the beginning of 1952—a circumstance which has little to do with the economic law of demand and supply;

(2) the relaxation of control, as happens generally, leads to a rise in open market prices. At the same time, it leads also to a fall in black-market prices. Setting one against the other, it is a fair presumption that the average price paid by the consumer is not greater but probably less; and

(3) our wholesale index number is apt to present a distorted picture of price movements and it is likely that the recent upward movement in food prices, as shown by the index number, exaggerates the increase which has taken place. The index for rice, for example, is mostly determined by the free market quotation at Patna, with the result that local circumstances, such as a temporary interruption of railway transport, may affect these quotations and vitiate the general picture. Similarly, substantial reductions in the pool price of wheat and in the open market prices, which are reported to be below the prices in fair price shops, are not reflected in the price index for wheat.

If the increase in prices is to this extent illusory, the growth of unemployment becomes less difficult to explain. But there is still the anomaly that unemployment is growing while industrial and agricultural production has improved or is at least maintained.

Unemployment

Broadly, the position is that, except during the war, unemployment has been steadily increasing, because economic activity has failed to keep pace with the increase of population. Assuming an increase in population of 4 million per annum, there is need for providing additional employment for 2.2 million adults, men and women, if at least the status quo is to be maintained. Even if the Planning Commission's optimistic assumptions of additional employment are fulfilled and even if the greater part of the adult women population is left out of account in planning gainful employment, we are still left with the prospect of ever-increasing unemployment—a serious matter in a country in which every adult is a voting citizen.

Although we have been responsible for our own affairs practically since the war, we have overlooked the potential menace of growing unemployment. The persistence of inflation since the war, with the deceptive stimulus it provides for economic activity, and the momentary pressure of other urgent problems diverting public attention, have made us inappreciative of its implications.

We have been more appreciative of food scarcity and have bent our energies mainly to remedying it. But food, even if available, must be bought. This does not happen, unless there is sufficient employment that yields income. What we are apt to forget in our planning is that a community to be economically viable must not merely produce but be able to market what it produces. In the suggestions so frequently made about cottage industries and co-operative production, for instance, the difficulties of marketing do not seem to receive sufficient consideration. There is no more important and difficult problem in economic planning. When Roosevelt planned his New Deal and Keynes built the philosophy of his General Theory, this was the problem to which both devoted their main thought.

Mass unemployment, either as under-employment or as disguised unemployment, has been with us as far back as we can remember. What is it that has suddenly brought the problem to the fore? The spurious economic activity which war-time inflation created has ceased or is languishing. This is another way of saying that the seller's market is giving way to a buyer's market. The inflationary boom which started with World War II in the final stages of its long-drawn subsidence, received a fresh impetus from the Korean war which also has now ceased.

Neither of these has so far affected production. The reason is not that current demand is keeping pace in India but rather that the cessation of the boom has made the position regarding raw materials and capital equipment easier, because of lessened world demand. The gradual cessation of the boom has not so far affected production which still has some past arrears of demand to feed it, but it has definitely affected trade in both volume and turnover. It is in the sphere of trade that the reason for the present decline in employment opportunities should be principally sought.

We have no definite information regarding the extent to which unemployment has increased, but some indication is provided by the Employment Exchange statistics. These show that (1) the number of new registrations was higher in 1952 than at any time before, (2) on the other hand, the number of placements has gone down by half, since the beginning of 1952, the absorption in private employment being down by three-fourths, and (3) the number of applications at the same time has gone up by nearly half. The Employment Exchange figures relate entirely to people in search of clerical and unskilled jobs in cities and throw a disturbing light on unemployment as a social problem affecting the educated middle-class population.

Retrenchment

What has brought the problem with almost dramatic suddenness to public consciousness is, therefore, (1) its emergence in sharp contrast with the inflationary boom conditions of the immediate past and (2) its heavy impact on a section of the population so politically conscious and mentally alert as the urban middle class.

Several circumstances may be mentioned which have led to this increase in urban unemployment:

(1) the total value of foreign trade in 1952-53, as compared with the previous year, after allowing for the fall in prices, points to a substantial reduction in the volume of commercial activity in internal as well as external trade;

(2) although industrial employment has been generally maintained in the large organized industries, there has been curtailed activity in specific industries; for example, in tea, jute, mica and shellac, on account of weak foreign demand, and in the automobile industry and small-scale engineering industries because of slack internal demand; and

(3) the growing volume of welfare legislation has so increased labour costs with no corresponding increase in output that it constitutes a strong factor operating against additional employment and in favour of retrenchment.

There are also other causes which in varying degrees have worked in the same direction; e.g., decontrol has led to retrenchment in Government offices of persons for whom no alternative employment is available; small dealers have been displaced from business, as a result of the multi-point sales tax in States like Bombay; considerable unemployment has resulted in cities from the enforcement of prohibition; heavy taxation of motor vehicles has led to a large reduction of lorry traffic; low purchasing power has reduced employment among people catering for public entertainment—in Bombay alone a fall of 20 per cent. being anticipated in the entertainment tax receipts in 1953-54, as compared with 1951-52, with no change in the rate of tax.

Remedies

Remedies for unemployment have been proposed recently by the Planning Commission and by leaders of business and political opinion. Most of the remedies suggested, however, valuable in their own way, view the problem as a long-term one affecting the entire range of Indian economy. Regarded in this way, unemployment will not find an effective solution, unless we are prepared for a comprehensive recasting of the structure and the underlying assumptions of our economy. However, much some of us may be dissuaded by ideas based on past experience from facing this task, I have little doubt that the logic of events will leave us no choice in the end. The sooner, therefore, our thinking is geared to the wider objective of business conceived as a form of national service par excellence with all that it implies, the better for the country and the interests concerned.

Meanwhile, if the recent increase in unemployment is looked upon as a short-term problem calling for immediate remedy at the point where its impact has been abnormally heavy and sharp, a solution might usefully be considered on such lines as these:

(1) the committee now engaged in investigating the unutilised capacity of engineering and allied industries must expedite its task, including in it not merely an estimate of existing surplus capacity but also how far, with such adaptation and expansion as can be readily carried out, it can meet further requirements,

(2) the Government should arrange immediately for a properly-phased programme of purchases in India over the next few years of engineering stores and the simpler forms of mechanical equipment required by the railways and by the Defence and Production Ministries,

(3) except where imperative considerations of foreign exchange are involved, imports should be regulated by Customs tariffs fixed at adequate rates rather than by import quotas;

(4) an examination should be made of segments of the public sector where the pace of development might be worked down, so that monetary and physical resources may be released for employment in the private sector;

(5) credit restrictions should be relaxed and means devised for channelling credit into industries which can provide employment;

(6) a reasonble system of compensation should be instituted for workers displaced, as a result of unavoidable retrenchment.

The present position is difficult enough. But more difficult times may be ahead, if the Korean settlement leads to an intensification of Japanese competition in export markets, and if a recession occurs in the U.S.A. On the latter, opinion is divided, the general trend being still optimistic. But the existence of large dealers' stocks, the huge expansion of instalment credit, the curtailment of construction activity and the fall in agricultural prices, are symptoms which cannot be disregarded.

INVESTMENT WITHOUT INFLATION

DEVELOPMENT OF EFFECTIVE CAPITAL MARKET ESSENTIAL

INDIA, like all other undeveloped countries, attaches great importance to achieving a large volume of investment, with a view to raising the living standard of the people. It is, therefore, in need of a very large volume of capital in order to undertake the desired investments. An extent of the country's needs is visualised in the Five-year Plan. The Plan envisages, as readers are aware, a total expenditure of Rs. 2,069 crores against which the available resources (including the foreign aid of Rs. 156 crores) is placed at Rs. 1,414 crores. The gap of Rs. 655 crores is sought to be covered by means of additional borrowing and taxation to the tune of Rs. 365 crores and through deficit financing to the extent of Rs. 290 crores. If the amount to be raised by additional taxation and borrowing fails to close the relative gap, the door is left open for a further measure of deficit financing over and above the amount of Rs. 290 crores. This uncovered balance (Rs. 655 crores) in the Plan has given rise to a controversy regarding the advisability of the country resorting to deficit financing.

The issues involved in undertaking large investments for financing capital expansion programme are, however, not peculiar either to India or to other underdeveloped countries alone. Similar issues have faced even the industrially advanced countries. They too are in need of capital and are continuously applying their minds to the various means of obtaining it. This is in increasing evidence in Europe. In this context, an interesting article, entitled "Investment without Inflation" by Mr. Per Jacobsson, appearing in the July issue of the *Quarterly Review* of Skandinaviska Banken, Stockholm, dealing with the various issues of raising capital for investment makes useful reading. A summary of the article is, therefore, given below.

Limited Availability of Capital

The author of the article referred to above sets out with the warning that the underdeveloped countries are prone to over-estimate the amount of capital which they hope to obtain from industrialised countries in the West. This tendency is attributed to an exaggerated idea of the importance of the aid furnished to Western Europe through the Marshall Plan. How this belief is not quite true is pointed out by quoting the President of the World Bank who said early this year that "European countries themselves have financed 90 per cent. of their reconstruction out of their own scurces." In view of this, the author emphasises the fact that, "while it is probable that certain amounts will continue to be made available through grants-in-aid, the overseas countries will have to obtain the bulk of the funds they need from domestic savings, supplemented by loans issued abroad and direct investments by foreign firms."

Then the writer proceeds to consider the question of the availability of capital resources for investment abroad, by reviewing the position in some of the leading industrial countries. Thus, Switzerland, with a high rate of domestic savings and relatively limited opportunities for investment at home, is in a position to allow foreign loans to be issued on its market, but the amounts involved are very limited. Again, the U.S. too, has a plentiful supply of domestic savings, but it has also great opportunities for investment at home. It has, therefore, no great urge to place money abroad. And the U.K. which had, in 1952, a surplus on the current account of its balance of payments, has commitments under the Colombo Plan and in other ways with its own Commonwealth. It is true that some countries of Western Europe may soon resume capital exports, but the amounts will necessarily be limited for some years to come.

Pointing out thus that few countries have large capital resources available for investment abroad, the writer of the article under review proceeds to emphasise the fact that, in order to develop their own resources, the countries planning for large investments must concentrate, first of all, on measures for stimulating domestic savings. But here he utters a warning against taking recourse to bank credit. "One sometimes hears it said," he says, "that the overseas countries, with their great need of capital, cannot be expected to apply a severe monetary policy and that they will, therefore, very likely continue to use somewhat inflationary methods." To such of the countries which propose to finance development through bank credit, the writer conveys a warning quoting two authorities. One is Professor Eric Lindabl of Sweden who has served as a U.N. expert in Chile. This eminent economist declared: "In many countries, inflation might be said to have proved beneficial to employment and, perhaps, also to capital formation, since large business profits had made it possible for many firms to achieve a high level of self-sufficiency. But, if inflation were allowed to continue, the effects would be different—as had been shown by the experience of Chile in which country the rate of capital formation was lower than would have been the case had there been no inflation." The other authority quoted by the writer is the Bank for International Settlements which in its latest Annual Report observes that it has been the experience of countries outside Europe that, in the long run, inflationary deficit financing defeats its own object. Pursuing the point further, the writer observes that there is reason to believe that inflation has already had a sufficient run to make people aware of the actual dangers involved. The disorganisation and distrust engendered by inflationary financing tends, he says, to diminish the flow of savings available and in that way, to reduce the volume of investments. Moreover, many of the investments undertaken in a period of inflation are apt to be of a wasteful character so that there is also a loss on that score, he adds.

Idea of Deficit Financing

The writer then traces the origin of the idea of deficit financing to the belief that a progressive community requires a constantly increasing volume of credit and that there is a certain amount of room for credit expansion which may have to be rendered effective by an official investment policy. This belief ignores, he says, three things:—

(1) the idea of deficit financing was applied by the late Dr. Keynes to a world in the grip of depression. It is often forgotten that the methods applicable to depression would not be suitable to conditions of the post-1945 boom. These latter conditions may instead call for methods based on classical principles. Dr Keynes himself wrote shortly before his death that he found himself "moved" not for the first time to remind contemporary economists that the classical teaching embodied some permanent truths of great significance which the modern economists were able to overlook, because we appreciate them with other doctrines which we cannot *now* accept without much qualification;

(2) it is not always sufficiently realised that the amounts which need to be added each year to the note circulation and the volume of demand deposits in order to ensure relatively stable prices are not very large. Accordingly, such an expansion cannot be counted upon to provide very much of the new capital needed;

(3) normally, the required expansion in the volume of money is brought about by transactions relating to the balance of payments or by internal credit operations, that is, by the lending of the commercial banks to private business. It is possible, of course, that the credit volume may increase by Government obtaining loans from banks. In that case, the Government spends the newly-created purchasing power and those firms and individuals who do not participate in such Government spending as recipients of money and who need credit for carrying on their activity, are deprived of it. As these firms would still borrow, the total of new money finally injected into the economy will be excessive. Where this is taken into account, it becomes clear that the amounts which the Government can safely obtain from the banking system by virtue of the necessary annual increase in the money volume are so small that it is best to leave them out of account. There are no untapped sources of capital available in the banking system.

Domestic Savings

Thus pointing out that the additional expansion in the money volume would extend the banks' lending capacity only to a limited extent, the writer, next refers to the question of banks lending activity based on genuine savings, namely, deposits placed with them by the public. Here again, there is the danger of using current deposits for financing medium and long-term projects. In recent years, however, German banks are known to have financed such projects without any adverse effect on Germany's monetary reserves. The reason for this is that the banks have received sufficient amounts of genuine savings from the public to provide a backing for their medium and long-term credit. Although such lending is non-inflationary in character, it is being realised in Germany that the channelling of a very considerable part of the country's savings through the banking system can prove perilous in times of crisis. The German authorities are, therefore, anxious to develop the capital markets. An important step, in this direction, was taken in May, this year, when it was decided to issue 5 per cent. mortgage bonds at 93, instead of at 99, as decided early. "The Germans have had such bitter experience of the effects of acute banking crisis (in 1931) that they," warns the author, "ought certainly to do everything possible to avoid the repetition of the mistakes made in the past."

The writer, therefore, advocates the need for developing wide and effective capital markets with flexible rates of interest as an indispensable part of the credit machinery. He observes:

"Without such markets it becomes very difficult to 'unload' the bank credits by which the construction of houses and other capital assets has been pre-financed and, in general, to avoid an excessive amount of medium and long-term lending by the commercial banks. The great advantage of the capital markets is that they are fed by genuine savings and that, therefore, the funds obtained through them are of a non-inflationary character so long as the central banks avoid giving artificial support to the bond market. The acceptance of a flexible rate is in some respects of greater importance in the long-term market than in the short-term market, since the provision of newly-created money for the financing of long-term investment is bound to lead to an over-large increase in the volume of monetary purchasing power."

Rate of Saving

The writer considers that there is no danger of an undue reduction in the volume of investment, if the interest rates were to increase, especially as investment opportunities will be plentiful. On the contrary in such circumstances, it will be necessary, he says, to ensure that the volume of investment is not greater than is warranted by the flow of genuine savings. In more than one country, he observes, the raising of the official discount rate has led to an acceleration in the rate of saving and has thus also made possible an increase in the volume of investments. Proceeding he observes:

"It is not always sufficiently realised that investments ostensibly financed by credit expansion are often in fact covered by drafts on the monetary reserves. When new purchasing power is created and used to pay wages, etc., there will be an increase in demand for consumer and other goods, and when there is already full employment, the extra demand will lead to larger imports, and, at the same time, will tend to reduce the volume of exports. Experience has proved that restrictions on foreign exchange and trade are powerless to prevent an inflationary increase in purchasing power from giving rise to a balance-of-payments deficit which, unless covered

THE CANNANORE SPINNING AND WEAVING MILLS, LTD.

CANNANORE

THE SEVENTH ANNUAL REPORT OF THE DIRECTORS TO THE SHAREHOLDERS

LADIES AND GENTLEMEN,

Your Directors have pleasure in submitting herewith the Seventh Annual Report, the audited Balance Sheet and the Profit and Loss Account for the year ended 31st March 1953.

During the year ended 31st March, 1953, after allowing for all expenses and providing for depreciation on buildings and machineries to the extent of Rs. 3,14,974-7-6, but without providing for initial and additional depreciation allowed by the Government of India for new industries, the net Profit of the year amounts to Rs. 3,84,769-0-3. This amount together with Rs. 2,837-10-8, profit carried forward from last year's account makes available for appropriation a sum of .. .. Rs. 3,87,606 10 11

	Rs.	a.	p.
Your Directors have made the following appropriations as shown below—			
Raw Material Fluctuation Reserve	1,25,000	0	0
Balance Rs.	2,62,606	10	11
Your Directors recommend 12 per cent. dividend on the paid-up share Capital (with tax) .. .. Rs.	1,79,908	0	0
and to pay a bonus of 3 months' earned basic wages to workers and 4 months' basic salary to staff, and to carry forward the balance to next year's account.			

The difficulties regarding cut in power supply were experienced during this year also but your Directors are pleased to inform you that your mills did not suffer much on this account as a Generator Set of 180 kw., referred to in the last report, was commissioned.

To supplement the increased power cut another Generator Set of 250 kw. was purchased at a cost of Rs. 81,975-4-6. In spite of the cut in supply of electricity our Company has kept up a decent level of profits.

The addition of 3,200 spindles and necessary preparatory machines referred to in the last report under the expansion scheme, could not be finalised as necessary import licence was not granted by the Government.

During the year under review the following additions have been made to the mills:

	Rs.	a.	p.	Rs.	a.	p.
Leasehold land and improvement	19,652	2	0			
Plant and Machinery	2,93,640	12	9			
Electrical Equipments	21,730	12	4			
Buildings	1,03,611	4	1			
Well and Water works	24,901	4	6			
Furniture and Fixtures	3,591	3	4			
				4,67,127	7	0

The relationship between the Management and labour had been cordial throughout and the Directors extend their thanks to the Staff and workers for their co-operation.

Directors.—The following Directors retire by rotation and they are eligible for re-election. They offer themselves for the same: (1) Jb. K. T. Packer Haji, (2) Sri. P. Raman Chettiar, (3) Sri. T. Gopalan, (4) Sri. K. P. Chandu.

Auditors.—Messrs. Sankaran and Raman, the Auditors, are to retire. They are eligible for re-election. You are requested to elect the Auditors and fix their remuneration.

By Order of the Board,
A. K. KUNHI MAYAN HAJEE,
Chairman.

CANNANORE, 10*th August*, 1953.

BALANCE SHEET AS AT 31st MARCH 1953.

REPORT OF THE AUDITORS TO THE SHAREHOLDERS

We have audited the Balance Sheet of the Cannanore Spinning and Weaving Mills, Ltd., as at 31st March 1953, as set forth above and the Profit and Loss Account for the year ended that date and have obtained all the information and explanations we have required.

In our opinion, such Balance Sheet and Profit and Loss Account are drawn up in conformity with the law and the Balance Sheet exhibits a true and correct view of the state of the Company's affairs on that date according to the best of our information and the explanations given to us and as shown by the books of the Company. We are further of the opinion that books of account have been kept by the Company for the period under report as required by Section 130 of the Indian Companies Act.

WOOL IN WORLD ECONOMY

CHANCES OF COMPETITION FROM SYNTHETIC FIBRES EXAGGERATED

THE rapid pace at which developments have been taking place in the sphere of synthetic fibres of late have aroused much concern among wool interests over the future of raw wool and wool textile trade. A section of wool interests points out that the growing supply of man-made fibres—rayon and nylon in particular—have made great inroads into wool markets for apparel and decoration. In fact, the section fears that competition from such fibres is a serious threat to wool textile activity. These fears are, however, considered to be rather exaggerated. This, at any rate, is the view often expressed by the International Wool Secretariat (I.W.S.). The Secretariat's slogan is: "There is no substitute for wool."

Raw wool possesses certain unique qualities which are conspicuous by their absence in synthetic fibres. It is no wonder, therefore, that the demand for wool has considerably increased in recent years. The aggregate world demand for wool during the current (1953-54) season, for instance, is estimated at as high as 2,600 million lbs. (clean), which compares favourably with 2,472 million lbs. per annum in 1947-49 (average) and 2,058 million lbs. per annum 1934-38 (average). Indeed, the world wool trade at present is characterised by a feeling of confidence. Business seems to be on a more stable basis than the trade had seen for a long time. The following extracts from the I.W.S.'s latest publication, namely, the Annual Review for 1952-53, entitled *Wool in the World To-day*, bears eloquent testimony to this:

"... throughout the post-war era, with the exception of a period in 1951-52, there was considerable pressure on wool supplies, a clear indication of the fibre's popularity. Of this, the recent recovery in the textile industry has given further evidence. First, after more than 18 months of an almost continuous fall in output, employment and prices, wool values have recovered more rapidly than other natural fibres. Secondly, the use of non-wool materials in the wool textile industry, which increased appreciably in 1950-51, has not recovered to the same extent as wool. Consequently, the proportion of wool to total fibres used is now higher than it has been for two years. As on other occasions, the prophets of gloom have been proved wrong and both wool growers and wool textile manufacturers may look confidently ahead to the ever-increasing use and usefulness of wool."

Growing Demand for Wool

The remarkable recovery in wool and wool textile industry and trade in recent months also clearly indicates the growing demand for raw wool. Referring to the conditions in the year 1952, the I.W.S. observes:

"... the year (1952) was not half-spent before the industry started to slough its despondency. On the primary markets, prices levelled out, held firm, rose a little. Above all, they kept steady. In the mills, the level of employment climbed; output rose. Consumption of virgin wool in the main textile manufacturing countries showed a steady increase. And the fact that this was largely at the expense of other materials used in the industry reflected not only the more competitive level of raw wool prices but also something far more significant—the great attractiveness of the natural fibre."

Wool is one of the world's staple commodities. Its use in manufacture is widely diffused throughout the world. Nearly 50 per cent. of the countries depends for raw wool upon the surplus of the five primary producing countries —Australia, Argentina, New Zealand, Union of South Africa and Uruguay. Thus, the world's two leading consuming countries now use imported wool for 84 per cent. of their requirements, as compared with 73 per cent. in the pre-war period.

It is a matter for speculation whether this degree of regional specialisation between wool-growing and wool textile manufacturing will remain unchanged, for secondary industries have grown rapidly in what were traditionally regarded as agricultural economies. Consumption of raw wool in the wool textile industries of the five surplus countries has risen 115 per cent. between pre-war (1934-38 average) and 1950 and there is every indication that the trend, at any rate in the British Commonwealth, is still rising. The Soviet Union and the United States are big wool producers too; but the needs of their textile industries leave no exportable surplus. The United States, ranking fourth as a wool producer, provides only about one-third of its apparel wool requirements and is entirely depended on carpet wool imports.

Of the total world output of wool, amounting to 2,435 million lbs. in 1952-53, wool of the apparel type accounts for about 80 per cent.; of this, nearly 40 per cent. is merino wool. The chief producers of merino wool are Australia, the Union of South Africa and the U.S., their shares during the 1950-51 season being 63 per cent., 15 per cent. and 13 per cent., respectively. Carpet wool is produced mainly in Argentina, the U.S.S.R. and the countries of Asia, Africa (except the Union) and the Balkans. The major portion of carpet wool traded in the world market comes from Argentina, India and Pakistan.

World Trade in Wool

The world trade in raw wool has recently grown substantially, as will be evident from the following table giving exports from the five main surplus countries:

(Million lbs. actual weight)

	1934-38 (average)	1947-49 (average)	1950-51-1951-52 (average)
Australia	806	1,055	958.5
New Zealand	269	404	357.0
Union of S. Africa	229	215	205.5
Argentina	249	337	136.0
Uruguay	95	127	101.5

These increases in the volume of exports are reflected in the mill and *per capita* consumption of virgin wool in the different countries, as will be seen from the figures given below:

	Mill consumption (Million lbs.)		*Per capita consumption* (In lbs.)	
	1934-38 (average)	1950-52 (average)	1938	1950
World	2,058	2,407	0.9	1.1
U.S.A.	330	539	2.27	4.4
United Kingdom	435	430	6.07	6.6
France	232	227	4.87	5.7
Germany	140	124	3.1*	3.3*
Italy	57	116	0.33	2.0
Japan	108	84	0.9	0.7
Argentina	86	71	3.1	4.4
Australia	35	63	7.7	11.7
Belgium	60	65	4.37†	4.0†
Netherlands	10	29	1.7	4.5
Canada	20	28	3.7	4.8
India			0.13	0.04
Pakistan				0.02

* German Federal Republic.
† Belgium and Luxembourg.

There is, of course, much inequality in wool consumption by the population of different countries, due to variety of climate, habits and difference in income.

The economies of the main wool surplus countries are, in varying degrees, dependent upon the wool trade. Earnings from exports account for almost the entire wool incomes, as is indicated in the following table (figures relate to the year 1950-51):

	Value of wool production as % of national income	*Value of wool export as % of*	
		National income	*Total exports*
Australia	23.8	20.1	64.0
New Zealand	23.3	12.5	44.0
Union of S. Africa	8.1	8.0	31.0

A reference may now be made to the trend of raw wool prices in the world market. Since the recent world war, the prices have not been out of line with those of other raw materials, as the following table shows:

(Base: 1934-38=100)

	1946	1948	1950	1951	1952
Basic raw materials	195	305	498	563	473
Raw wool	172	299	673	869	490
Cotton	203	395	571	812	626
Rayon staple	105	124	141	189	202
Silk	N.A.	228	392	537	550
Jute	236	504	665	1,128	804
Rubber	230	176	453	694	393
Copper	182	310	414	511	601
Lead	230	491	549	835	700
Zinc	239	443	660	950	828

N.A.=Not available.

Until 1950, compared with pre-war, the average raw wool price index did not rise appreciably more than that of most basic industrial raw materials. Indeed, it had increased less than some, as, for instance, jute, cotton, lead and zinc.

Prospects

Prospects for world wool export trade depend largely on the growth of demand for woollen goods, which, in turn, is influenced by a score of factors. True, the development of wool textile industries in the deficit areas may lead to some substitution of domestic production for imports. As the I.W.S. pertinently remarks, "it cannot be expected that the demand for woollen goods, in future, will be so bright as in the years from 1946 to 1951. For the post-war boom is over; war inflated incomes have largely vanished; wardrobes have been replenished. And, in a politically insecure world, heavy taxation for defence is likely to continue to make inroads "into consumers' spendable incomes." Nevertheless, the I.W.S. strikes an optimistic note about the future. Says the Secretariat:" ... in the world as a whole, real additional incomes are steadily rising, due to technological advancement and the development of backward areas. At the same time, there is a tendency for wealth to be more evenly distributed. Thus, it is reasonable to anticipate a fairly steady demand for wool goods. The International Wool Secretariat will pay its part in helping to maintain that demand."

RATED CAPACITY OF COTTON MILLS

The Textile Commissioner to the Government of India is reported to have asked all the cotton mills in the country to submit certain details about their equipment for purposes of competing the rated capacity of the cotton textile industry. The need for such competition has arisen from the wide divergence in the existing estimates of rated capacity of the industry. Emphasising this need, the Planning Commission, in the final version of the Five-year Plan, has made the following observations:

"... it is desirable to undertake a survey of the rated capacity of a few of the important industries and the cotton textile industry is one of them. The rated capacity is a complex technical concept which should take into account the design of the plant, number of shifts per day, in the case of plants adopting patch or discontinuous processes and the number of working days per annum. In calculating the rated capacity, one has also to take into account, the balance between different sections in a given unit and the age of the plant and its conditions."

The Textile Commissioner's latest move, referred to at the outset, is a sequel to this recommendations. He has asked the cotton mills to furnish information regarding, among other things, (1) number of spindles and looms in their mills and the average production in different counts, (2) number of spindles and looms remaining idle, and (3) total capacity of the plant if all the idle spindles and looms are put to work. The mills have been particularly asked to take into account the "actual working conditions in the mills, especially the efficiency of the workers." With a view to maintaining uniformity, the mills, it is suggested, should take the working results of the months of June and July, 1953 and work out the rated capacity on the basis of 305 working days per annum. The information should reach the Textile Commissioner's office "preferably within a month's time."

A correct and accurate estimate of the rated capacity of the cotton mills will enable the Government to adjust the production programme and pattern of development accordingly. It will also help facilitate the study relating to productivity rationalisation, quality control, etc. Another distinct advantage is that it will assist the task of bringing about a co-ordination between the mill and the handloom sectors of the cotton textile industry.

WOOL EXPORTS FROM AUSTRALIA

The 1952-53 season was a most favourable one for Australia's wool export trade, in that it witnessed a distinct improvement in exports. Thus, the quantity of wool actually shipped from Australia during the year under review was as much as 983 million lbs. (greasy basis) which, as compared with the previous year, was higher by 159 million lbs., representing an increase of 18 per cent. Larger volume of exports, coupled with the rise in the world level of wool prices, resulted in a perceptible improvement in earnings from exports by over 24 per cent., the actual figure being £A336.58 million, as against £A278.48 million.

INCREASE IN CLOTH EXPORT TRADE

ATTRACTIVE OFFER MADE FOR 130-YEAR-OLD TEXTILE FIRM

(From A Special Correspondent)

MANCHESTER, *25th August*

MANCHESTER LETTER

AFTER so many disappointing months of export returns for cotton goods this year few traders in Lancashire expected that July would provide any substantial improvement, but in actual fact shipments of cloth from the U.K. were the highest in any month since March, 1952. The yardage exported was 66,958,000 valued at £7,930,329. This represented an increase of nearly 30 per cent. on the June figure.

For the first seven months of this year cloth exports aggregated 409,459,000 square yards, against 433,318,000 yards in the same period of 1952. A feature of last month's shipments was the sharp rise in the quantity of goods sent to Australia from 8,752,000 to over 14,000,000 square yards. This followed the easing of import restrictions and raised hopes that a further improvement in sales will be effected later in the year.

Chief buyers of Lancashire cloth so far this year have been (in square yards, with 1952 comparisons): West Africa 80,202,000 (102,526,000); South Africa 53,557,000 (32,659,000) and Australia 47,350,000 (54,575,000).

Little change occurred in the quantity of yarn exported in July, the total of 3,210,200 lbs. being barely 50,000 lbs. higher than in June. The average for the year, however, was fully maintained.

For the seven months cotton yarn exports amounted to 23,031,700 lbs. valued at £9,343,071 against 21,764,100 lbs. worth £11,329,028 in 1952. Leading markets have been (with 1952 comparisons): Australia 3,009,300 (1,823,200) lbs; Irish Republic 2,928,700 (1,864,500) lbs. and Canada 2,555,200 (1,108,200) lbs.

Exports of cotton goods in July earned £11,833,254, the highest monthly total this year, but imports cost less than £1,000,000 for the first time for several years. Arrivals of foreign grey cloth, at 4,130,000 square yards, were the lowest since December. Again, more than half the supplies came from Japan. For the seven months imports totalled 45,507,000 square yards against 109,081,000 square yards last year.

Still More Spindles

World trade in cotton goods between nations tends to decline, but the quantity of installed machinery shows further expansion. The latest statistics issued by the International Cotton Federation disclose an increase of 1,377,000 in the number of cotton spindles in place in all countries in the year ended January, 1953, which was a period of pronounced depression in nearly every textile producing area.

The world's spindleage now stands at 129,246,000, of which Europe contains 72,195,000, North America 25,505,000 and Asia 25,634,000 spindles. In spite of its steady contraction, the Lancashire industry still retains the largest quantity of machinery in place, having 27,232,000 spindles at its disposal against 23,082,000 spindles in the United States and 11,427,000 spindles in India.

A feature of these returns is that Lancashire now possesses more spinning machinery using rayon staple fibre than any other country. Spindles on spun rayon output jumped by more than 500,000 in six months to a total of 1,831,000. Other countries well engaged on synthetic fibre production are Germany with 1,420,000 spindles and the United States 1,366,000 spindles. On the other hand, due to shift work, the United States used 83,362 tons of rayon staple in the period and Germany 41,357 tons against Lancashire's 28,702 tons.

The usual enquiry made by the International Federation on the number of spindle-hours worked during the six months again puts Lancashire at the bottom of the list. British spindles worked 872.65 spindle-hours compared with 2,543.17 in the United States, 1,872.24 in Japan and the peak of 3,379.58 spindle-hours in Egypt's mills.

Mule Spinning

A new "health charter" for the 20,000 workers in Lancashire's mule spinning industry will come into effect in 1954. Under the charter all workers in mule spinning will be medically examined every six months and a special lubricating oil will be used for the mule spindles which, it is believed, will virtually banish the occupational disease of "spinners' cancer."

Mr. Charles Schofield, General Secretary of the Operative Spinners' Amalgamation, said that 10th August was the closing date for objections to the Minister of Labour on the draft regulations which he has already announced. "Six months after the order is made the new regulations can be expected to operate," said Mr. Schofield.

Union leaders believe they will mark a historic turning point in the long campaign against industrial disease in mule spinning.

Labour's View on Cotton

Government control over sections of the cotton industry is urged in a textile policy "blue-print" compiled for leaders of Lancashire's 280,000 mill workers by Mr. Harold Wilson, M.P., former President of the Board of Trade in the Labour Government.

The document will be considered by the Legislative Council of the United Textile Factory Workers' Association—the central assembly of cotton unions—at a meeting in Manchester on 31st August.

The document, it is believed, does not recommend any outright nationalisation of the cotton industry at an early date, but calls for Government controls compelling greater modernisation and efficiency.

State-sponsored buying of Lancashire's raw material is advocated and the minimum price scheme operated by the Yarn Spinners' Association is criticised.

Anglo-Nigerian Trade

Mr. A. C. Nwapa, Nigerian Minister of Commerce and Industry, said at the start of a three-day visit to Lancashire last week that he would be having discussions with a leading textile machinery company at Oldham on the subject of establishing a cotton manufacturing industry in Nigeria. The talks would only be exploratory at this stage and certain difficulties, including transport, would have to be overcome. Nigeria, he said, had only two mills and these were operating on an experimental basis.

In recent months, Nigeria has been the leading customer for Lancashire textiles, shipments in the first half of this year totalling more than 43,000,000 yards. Referring to recent price levels of Lancashire textiles, Mr. Nwapa said he had received complaints from Nigerian importers that since the beginning of the month "they had been going up instead of down."

It had been suggested to him in Nigeria that he should go out to Japan "if Lancashire does not treat Nigeria kindly over prices." Under Nigeria's import licensing scheme more Japanese textiles had recently been allowed into Nigeria but the effect so far on the pattern of trade had not been staggering because of the stocks which had been built up. One type of Japanese woven cloth being admitted was offered at a price with which Lancashire could not compete.

Rylands Take-over

Speculation over the possibility that groups of British stores were bidding for Rylands and Sons, Ltd., the 130-year-old Manchester textile manufacturing and warehouse firm, ended last week when it was announced that Mr. C. F. Loos, a Belgian financier, had offered £4,000,000 for the £2,000,000 ordinary stock of the Company.

Mr. Loos is President of the Board of S.A. Papeteries de Genval, of Genval, Belgium, and is also a Director of Thomas Witter & Co., Ltd., a linoleum firm which is allied to Rylands.

The offer of £2 for each £1 stock unit of Rylands is conditional upon acceptance not later than 21st September by holders of 90 per cent. of the stock, or a lower percentage agreed by the purchaser not later than 5th October.

Advice from Sir Edward Rhodes, Chairman of Rylands, and his Directors is to accept the bid. They say they will accept themselves other than their qualification stock. "We are satisfied that Mr. Loos is well able to carry out his offer," declared Sir Edward.

Raw Cotton Imports

Imports into the United Kingdom last week amounted to 10,796 bales, the chief arrivals being Sudan 3,800 bales, American 2,726 bales, East African 1,431 bales and West African 1,346 bales.—*All Rights Reserved.*

Russia has made an offer of 2,000 to 3,000 tons of cotton to the Liverpool Cotton Association. But British textile circles have not been impressed by the terms of the offer, particularly because the varieties are described by names of Russian types. It should appear that the Association's authorities have asked Russia to forward samples of the cotton offered.

MONSOON MEETING OF INDIAN CENTRAL COTTON COMMITTEE

PRESIDENT REVIEWS RESEARCH SCHEMES

THE Indian Central Cotton Committee is generally concerned, at its monsoon meetings, with cotton research and cotton development schemes. At this year's meeting, too, held last week in Bombay, under the chairmanship of Mr. M. R. Bhide, I.C.S., President of the Committee, the various research and extension schemes were first examined by different sectional committees and later reviewed by the parent Committee. Among the subjects which figured prominently in the discussions, mention must be made of the need for accelerating the production of extra-long staple cotton, the removal of tolerance clause in respect of Jarilla and 4F in the Indian Cotton Contract of the East India Cotton Association and the question of rationalisation of the production of different varieties of cotton.

Mr. Bhide reviewed, in the course of his speech at the meeting of the Committee, the research schemes in the sphere of cotton cultivation. In the E. Punjab, the "outstanding achievement" is the isolation of LL.29 and 216F/14, the two improved strains which bid fair to outyield the existing strains, L.S. and 320F. In Rajasthan, American strains are being developed; strains 216F and M.49-398 have been found to be superior to Indore 1. Two improved Deshi strains, D.46-5 and D.48-154, have surpassed Jarilla in yield and ginning properties in Madhya Bharat and are on a par with Jarilla in fibre properties. Attempts are being made in that State to distribute seeds of these strains on a large-scale in the current season. A similar attempt is being made in Hyderabad State in respect of the strain 11-45-2204 derived from Gaorani 12. In Madhya Pradesh, Buri 0394 is gaining in popularity. Referring to the work in Bombay and Madras, Mr. Bhide said:

"In Bombay, Kalyan of North Gujerat, Vijay of Middle Gujerat, Vijalpa of South Gujerat, Virnar of Khandesh, Jayadhar and Laxmi of Karnatak are reported to be growing in popularity and have more or less established themselves. Work is also in progress for obtaining types superior to these, under the different breeding schemes in operation in the State. Several seed distribution schemes, whose object is to bring the results of research to the door of the cultivator, have also been in operation, and in order to encourage the cotton growers in the maintenance and extension of these improved varieties, the State authorities appear to be launching a new system of self-supporting schemes. There is also an attempt by the Surat workers to grow a hybrid cotton, similar to that we have heard in maize. It is stated that the quality of this hybrid cotton bids fair to be on a par with Egyptian cotton. It is an innovation whose progress is well worth watching with interest.

"In the State of Madras, work is in progress for the isolation of very high quality American cottons. We have had before, the Madras Uganda 1, which is similar to East Africans and the latest strain is said to be Madras Uganda 2, which is even superior to the previous sister strain. Unfortunately, the State has been having continued drought for the past five or six years. We do hope that the conditions this year would be more favourable and the experiments would bear better results."

Target for Cotton

Proceeding, Mr. Bhide referred to the target of 39 lakh bales, set for the year 1952-53 by the Government on the recommendation of the Committee. This target could not be achieved, because seasonal conditions were unfavourable. Although some increase in cotton output was registered in the Punjab, P.E.P.S.U., Rajasthan, Madhya Bharat, Saurashtra, Bombay and Bhopal, there was a shortfall as compared with the previous year of about 4½ lakh bales in Madhya Pradesh, Madras, Hyderabad and Mysore. He estimated the output for the 1953-54 season at about 36.4 lakh bales. This is in consonance with the respectable trade estimaters.

Mr. Bhide next referred to the programme of work for 1953-54 and observed that the Cotton Extension scheme had been continued in all the States. The Government of India, he said, has sanctioned to all the States financial assistance to the extent of Rs. 9.5 lakhs as outright grant for the staff and Rs. 36.7 lakhs as loans for the purpose of the distribution of improved seed. Referring to the prospects for the 1953-54 season, he said:

"The monsoon has started well and cotton sowings are over except in the Bombay-Karnatak and parts of Hyderabad, Mysore and Madras States. The weather conditions on the whole have so far been favourable for the cotton crop and if they continue to remain so during the next few months, we can expect a production of about 40 lakh bales, if not 42 lakh bales, being the target fixed for 1953-54."

Earlier, the Agricultural Research Sub-Committee of the Indian Central Cotton Committee split into four sectional sub-committees which examined in detail the progress reports of schemes financed by the Committee, proposals for new schemes and extension of the old schemes. The Cotton Forecast Sub-Committee approved the report of the crop estimating survey in Bombay, Madhya Pradesh and Mysore, stressed the need for exercising adequate supervision over the experiments. It recommended for approval similar surveys in the Punjab, Hyderabad and Madhya Bharat, to be financed by the Committee for a period of five years. Suggestions were made for improving the accuracy of crop forecasts.

Proposals for the development of the production and utilisation of ramie fibre were considered by the Technological Research Sub-Committee, which decided to refer the matter to the Central Government. It approved the programme of work of the Committee's Technological Laboratory. The Agricultural Research Sub-Committee considered the question of inviting Dr. S. C. Harland, a geneticist and botanist of international repute, to visit India for six months to review the cotton research work in this country and to give advice on the future course of investigations to be undertaken in the different cotton-growing States.

New Schemes

The reports of the sub-committees were later approved by the parent body. Among the new schemes, which received the Committee's approval, one relates to the study of agronomy of long-staple American cotton in Madhya Pradesh and another for the cultivation of an early variety of cotton suitable as an off-season crop in the paddy areas of the Madras State. An important subject considered was the resolution moved by the Vice-President of the Committee recommending the removal of the tolerance clause in respect of Jarilla and 4F in the Indian Cotton Contract of the East India Cotton Association. It was decided that the views of the State Governments, Mill-owners' Associations, Market Committees, etc., should be obtained and placed before the Committee.

The question of rationalisation of the production of different varieties of cotton received the attention of the Committee. It was suggested that a stage has been reached when the Committee should take positive steps to increase the production of short-staple cotton to meet the requirements of the mill industry as well as for export. Here the question is a choice between producing a surplus short-staple variety for export and increasing the production of medium- and long-staple cotton so as to reduce the dependence of this country on imported cotton. The Committee did well to reject the former alternative in favour of the latter. Mr. Bhide rightly emphasised the need for accelerating the production of extra long-staple cotton in order to replace at least a part of the foreign cotton at present being imported to meet the mills' requirements. On the general aspect of rationalisation of the production of different varieties of cotton, the view was expressed that its consideration would be premature until data for a few years under a decontrolled economy were available.

During the cotton year 1952-53, which closed on 31st August, 1953, Pakistan's cotton exports aggregated 16½ lakh bales. The season closed with a carry-over of 1½ lakh bales. During the year, Japan was Pakistan's biggest buyer, lifting 7 lakh bales. Prominent cotton merchants believe that the prospects for the new crop are not bad. They estimate that out of the new crop of 15 lakh bales, Japan may lift as much as 5 lakh bales.

THIS IS AN ANNOUNCEMENT—NOT A PROSPECTUS

Consent of the Central Government has been obtained to this issue by an order of which a complete copy is open to public inspection at the Head Office of the Company. It must be distinctly understood that in giving this consent, the Government of India do not take any responsibility for the financial soundness of any schemes or for the correctness of any of the statements made or opinions expressed with regard to them.

HEAVY CHEMICALS LIMITED

Works:
MILAVITTAN,
TUTICORIN.

Registered Office:
CATHOLIC CENTRE,
2, Armenian Street, MADRAS—1.

WE ARE GLAD TO ANNOUNCE THE LAYING OF THE FOUNDATION OF THE WORKS AT MILAVITTAN BY THE RAJPRAMUKH OF MYSORE ON THE 6th SEPTEMBER, 1953

OBJECTS

Heavy Chemicals Ltd. has been formed generally for the purposes specified in the Memorandum of Association and in particular for the manufacture of:

Caustic Soda - High Test Hypochlorite - Titanium Tetrachloride - Titanium Dioxide and Ferric Chloride.

CAPITAL

Authorised	**Rs. 1 Crore**
Divided into	
70,000 Ordinary Shares of Rs. 100/- each	**Rs. 70 Lakhs**
30,000 Preference Shares of Rs. 100/- each	**Rs. 30 Lakhs**
Issued	**Rs. 50 Lakhs**
Divided into	
35,000 Ordinary Shares of Rs. 100/- each	**Rs. 35 Lakhs**
15,000 Preference Shares of Rs. 100/- each	**Rs. 15 Lakhs**

Out of the Issued Capital of Rs. 50 Lakhs, a sum of Rs. 35 Lakhs has already been provided for by the Directors and their friends and the suppliers of the plant, Messrs. Krebs/DeRoll, S.A., Zurich, Switzerland, and the balance of Rs. 15 Lakhs is now available for public subscription.

INTERNATIONAL SUGAR AGREEMENT

EXPORT QUOTAS TO BE LINKED TO PRICES

AFTER prolonged deliberations lasting over six weeks, the International Sugar Conference at London has succeeded in evolving a world marketing scheme for sugar. A five-year world commodity agreement on sugar was signed by delegates from 51 countries on 24th August last. The agreement is modelled more or less on the lines of the one signed in 1937. It seeks, for instance, to stabilise prices, prevent accumulation of huge surpluses, maintain steady supplies in the "free" market, and give those countries that depend on it a share of any expansion in world consumption of sugar.

The new agreement is, as is only to be expected, based on the principle of compromise between the two vital interests in the world sugar trade. Thus, the importers are given insurance against repetition of shortages and high prices by exporters undertaking an obligation to carry certain stocks of sugar. Similarly, exporters are given some guarantee against excessively low prices "which could bring disaster to sugar producers in their areas and, in turn, affect markets for other commodities." In other words, the agreement aims at assuring supplies of sugar to importing countries and markets for sugar to exporting countries both at equitable and stable prices.

The two other objectives that the agreement seeks to fulfil are: to maintain the purchasing power in world markets of countries largely dependent upon production and export of sugar by providing adequate returns to producers and to raise consumption of sugar throughout the world. The participating countries have agreed to adopt suitable measures to fulfil their obligations, with a view to achieving these objectives. The participating importing countries have agreed not to permit imports from non-participating countries in excess of those imported in any of the calendar years 1951, 1952 and 1953.

Basic Export Quotas

The agreement will become fully operative on 1st January, 1954, and will terminate at the end of five years, that is, on 31st December, 1958. The basic export quotas fixed for each of the first three calendar years (1954, 1955 and 1956) amount to 5.39 million metric tons. The individual export quotas are as follows:

(In thousand tons)

Cuba	2,250
Dominican Republic	600
China (Jalwan)	600
Peru	280
Czechoslovakia	275
Indonesia	250
Poland	220
U.S.S.R.	200
Brazil	175
East Germany	150
Mexico	75
Denmark	70
Belgium (including Belgian Congo)	50
Haiti	45
Hungary	40
Netherlands	40
Philippines	25
Yugoslavia	20
France	20
Colombia	5
Total	5,390

The quotas allotted to Czechoslovakia and Poland do not include exports to the U.S.S.R. which are outside the agreement. Although Costa Rica, Ecuador and Nicaragua have not been allotted any basic tonnages, each may export up to 5,000 tons (raw value) per annum. The foregoing list does not include the U.K., Australia and South Africa, the sugar trade of which is guided primarily by the Commonwealth Sugar Pact. These countries, however, have undertaken to limit net exports under this Pact to 2,413,783 tons during each of the years 1954 and 1955 and to 2,490,018 tons in 1956. This limitation will leave available to the "free" market a share in the Commonwealth market.

Changes in Quotas

The aforesaid export quotas, it must be pointed out, are not rigid, inasmuch as they will be varied according to the ruling market price for sugar *vis-a-vis* the maximum and minimum levels laid down, namely, 4.35 cents and 3.25 cents per lb. f.a.s. Cuba. Accordingly, if the average daily spot price were to fall below the minimum for 15 consecutive market days, the International Sugar Council, to be established shortly to administer the agreement, would reduce the export quota in order to stabilise the price. But, if no agreement is reached on the actual quantity to be cut within ten days, the aggregate basic tonnages themselves will be cut by 5 per cent. A similar procedure for varying the quotas has been laid down to enforce the maximum price. In this case, the export quotas will be raised by mutual agreement; if no such agreement is reached within the specified time, the export quotas will be automatically raised by the Council by 7.5 per cent.

Adjustment of Output

Those exporting countries, the basic quotas of which exceed 75,000 tons, should not export more than 80 per cent. of their initial quotas during the first eight months of any year, unless the Council were to raise the percentage. They should also adjust production to meet their domestic needs and the permitted exports, on the one hand, and maintain maximum stocks, on the other. The maximum stocks have been fixed "at 20 per cent. of the annual output on a fixed date each year immediately preceding the start of the new sugar crop." The Cuban stabilisation reserve is, however, not to be considered as part of the stocks available for the "free" market.

The agreement has also made provision for dealing with subsidies on sugar which operate directly or indirectly either to increase exports or to reduce imports. Before the beginning of each quota year the Council will call for estimates from exporting countries with regard to the net import requirements of the "free" market. The fixation of initial "free" market export quotas will be done at least 30 days prior to the commencement of each quota year.

During the third year of the agreement, the Council will review the working in the light of the then prevailing circumstances and report its findings. Any participating country which desires to withdraw can do so.

For more than one reason, the new sugar agreement assumes special significance. By far the most important reason is that this is the first time since the establishment of the United Nations that the Communist world has joined hands with the free countries in the task of preventing wide fluctuations in the prices of an important commodity like sugar. What is more, the technique of the agreement is more advanced than that of the International Wheat Agreement which seeks merely to control the world market by fixing prices within which countries agree to buy and sell given quantities. Thus, it seeks to control supplies in such a way that the "free" market itself will not vary for long outside an agreed price range.

Success of the Agreement

Considering the need for preventing wide fluctuations in prices of sugar, which are detrimental to the long-term interests of both producers and consumers, the working of the new world agreement on sugar will surely be watched with keen interest. How far and to what extent the agreement will impart stability to world sugar markets is anybody's guess. Much depends on the price levels in the "free" sugar market. This in itself is a welcome feature, in that it introduces flexibility to the working of the agreement. But the mechanism of the agreement depends on the faithful implementation of a long series of undertakings by each Government. This implies, to quote the *Financial Times*, "that every one will always act quickly, according to reason, and without undue disturbance either from natural forces or monetary difficulties. Though there is provision for these things on paper, the real success of the agreement will depend on the Council's ability to establish its prestige and to mobilise the collective will of its members. Only experience will show whether it can do so."

SUGAR PRODUCTION AND STOCKS

The production and despatches of sugar for the current (1952-53) season amounted to 1,317,629 tons and 1,221,469 tons, as against the corresponding figures of 1,486,686 tons and 879,483 tons during the previous season.

The opening stock, production, despatches and closing stocks of sugar during the fortnight ended 31st July, 1953, were 600,065 tons, *nil*, 72,598 tons and 527,469 tons, respectively. The figures for the corresponding fortnight of the previous season were 766,294 tons, 2,812 tons, 59,291 tons and 709,715 tons. Figures for the current fortnight relate to 124 factories representing 91.55 per cent. of the total cane-crushing capacity, while those for the previous year relate to 127 factories representing 92.55 per cent. of the total cane-crushing capacity.

WAGES OF COLLIERY LABOUR

IS THERE NEED FOR REVISION?

THE chief problem facing the industrial tribunal, to be set up shortly by the Government of India for settling labour disputes in collieries, is the revision of the wage structure. While employees are demanding an upward revision, employers are complaining that it is not possible for them to maintain even the present wage levels without substantial aid to the industry either in the form of restoration of the so-called voluntary price-cut of 1949 or in some other way. The problem is a very complex one, no doubt, but it requires to be satisfactorily settled, inasmuch as the maintenance of healthy labour relations in the collieries is of prime importance to ensure smooth progress of the nation.

The coal industry has a wage-price structure, following the 1947 Conciliation Board Award. The implication of this is that a change in the wage cannot be had, without a corresponding change in the selling price also. Upward revision of wage levels, therefore, will have to be accompanied by an increase in the price of coal. It may be argued that the increase can be met out of profits. But, unfortunately, the profit margins of the coal industry are by no means large enough to permit that course. An analysis of the balance-sheets of several representative companies discloses that profits are equal to no more than 2½ per cent. of the aggregate working fund.

Ability to Pay

It is common knowledge that wages, turnover and prices are interrelated to each other. The price charged to the consumer should be within his capacity to pay. It should also provide for expansion of consumption, as the output of the industry increases. And wages should be related to productivity which determines the collective output. Ultimately, it is the "ability to pay" theory that determines the structure of wages. Moreover, there is a limit even to the increase in wage levels. After a certain limit which ensures a living wage and after providing for adequate return on capital, any accumulation of profits should be returned to consumers in the shape of lower prices. But, in a period of price-controls, it is difficult to tamper with the wage structure in utter disregard to its effects on the statutorily fixed selling prices.

All these do not mean that we are advocating a policy of wage freeze. We are only emphasising the need for restraint, which should not be confused with the wage freeze. It is important that extravagant unjustifiable claims which the industry cannot sustain should not be advanced. It is true that the term "justifiable claim" is a notoriously elastic phrase, which varies according to one's interpretations. What is a "justifiable claim" in the eyes of trade unions may not be so in the eyes of employers' organisations. Again, who is to decide what are "justifiable claims"? "A tribunal", may be the answer. But a decision by a tribunal may not lead to friendly relations between employers and employees, as witness the bank disputes in India.

The solution to the problem lies in mutual agreement between employers and employees. The employees must be made to feel that they are not merely wage earners but collaborators in the industrial concern. The human relationship should be the foundation of the industrial concern, which is a real working community. Labour should realise the fundamental law of nature, under which wages cannot always be increased at the expense of profits. To quote Mr. Lincoln Evan, Chairman of the U.K. Economic Committee: "We know that wage levels do affect prices and we are only misleading our people by encouraging them to believe that all increases we demand can be met out of profits, because that is simply not true. Let us be honest about it. Broadly, the position is that we all pay for each others' wages and so it goes on."

That is the real truth and the trade union leaders, who have urged for an upward revision of the wage structure, should take note of it. It is true they have got power behind them but it is not for getting intoxicated. The trade union leaders have a responsibility not only to the workers they represent but also to the shareholders who have invested their savings in coal companies and consumers of coal in general. It is to be hoped that they will not make things worse by inciting the workers to put forward unjustifiable demands that may make the working of even the tribunal difficult, if not impossible.

PLYWOOD AND TEA CHEST INDUSTRY

PROTECTION TO CONTINUE FOR FOUR MORE YEARS

THE decision of the Government of India to continue protection for four more years to the plywood and tea chest industry seems to be well justified. Although the industry has made notable progress during the past six years of protection, it is still not out of the wood. The cost of production of plywood tea chests continues to be high, as compared with that of imported panels. The size of most of the factories is below the economic unit. The average installed capacity of a plywood factory in India is 2.6 million sq. ft. per annum, while the capacity of some of the modern factories elsewhere in the world is of the order of 100 to 200 million sq. ft. per annum. The smallness of the unit has made it difficult to introduce economy measures such as mechanisation of various processes, utilisation of waste veneer and the control of quality by well equipped laboratories and supervision by technically qualified personnel during the various stages of production. The distribution of limited resources of timber amongst the large number of factories, each working much less than its capacity, has become difficult and yet some units have been added to the approved list in recent years.

As regards the measure of protection, the Government has continued the existing duty of 31½ per cent. *ad valorem* for a further period of 4 years, with effect from 1st January, 1954. According to the Tariff Commission, this measure will ensure the industry the necessary sense of security and will enable it to incur the capital expenditure required for modernisation and expansion with a view to making the industry an economic one.

The Government of India has decided to frame its import policy for the future, as in the past, in the light of prevailing conditions of internal production, demand and availability of foreign exchange. The import policy for 1953 has already been announced. No imports were licensed during January-June, 1953, and only a small quota has been allotted for July-December, 1953, to meet the requirements of superior packing for high-grade tea. This decision is virtually in line with the recommendations of the Tariff Commission, which has observed that no imports should be allowed in 1953 and that, if in subsequent years, the tea position improved and the whole of the required number of tea chests were not available from indigenous manufacture, a small quantity of tea chests could be imported to cover the gap.

Imports

The recommendations of the Tariff Commission to ban imports is justified on the ground that the stock of tea chests at the end of December was 4,100,000 and a further quantity of 3,600,000 was expected to be manufactured by the approved factories in 1953, thus making a total of 7,700,000 chests. As against this, the demand is estimated at only 5,000,000 tea chests for the year 1953. This leaves a substantial surplus of the order of 2,700,000.

The present annual installed capacity of tea chests is 8,200,000 of which 13.5 per cent. is located in Assam, 40.6 per cent. in West Bengal, 32.3 per cent. in South India and the balance of 13.6 per cent. in the other States. The actual production in 1952 was 4,835,135 chests as against 2,317,092 in 1950. It is, however, expected to decline in 1953 to 3,600,000 chests due to the closing down of certain factories and slowing down of production in others owing to the existence of heavy stocks.

The Tariff Commission's examination is stated to have revealed a considerable improvement in the quality of indigenous tea chests since the last Tariff enquiry in 1950. The general opinion of importers is that the quality of plywood manufactured by well-equipped factories has shown definite improvement in recent years. A large bulk of indigenous products has been in conformity with the specifications laid down by the Indian Standards Institution. Nevertheless, the consensus of opinion among tea producers is that the quality of Indian tea chests is still not as high as it should be. The manufacturers of chests should, therefore, continue to pay attention to improving the quality of their product. It is true that the U.N. plywood expert, Dr. Otto Kraemer, who attended the public enquiry, expressed general satisfaction about the quality of the indigenous product, but he stressed that, in order to maintain a standard quality and also to rationalise production, the manufacturers of plywood for tea chests should concentrate on limited species of timber which are best suited for making tea chests. The Tariff Commission, therefore, has suggested that the Tea Chest Committee should collect data regarding actual experience of consumers about the panels manufactured with the different species of timber at present in use and make recommendations for revision of the present schedule of the species of timber given in the tentative specifications of the I.S.I. The Tariff Commission has also recommended stricter inspection by Government inspectors, prior to grant of approval to new factories. It is gratifying to note that the Government has accepted their recommendations.

Apart from the question of quality, it is common knowledge that a chest with 12 battens is more durable than one with 8 battens and that, in the case of 8-batten-type chests, sufficient nails, rivets and staples should be used. Metal strips and wooden battens, it is suggested, should be of Indian Standard Specification. The general opinion at the enquiry was that a tea chest should ordinarily contain 115 lbs. only, but in no case more than 120 lbs. and that stuffing them with 140 lbs. should be given up altogether. This view has been accepted by the Tariff Commission. The Government has invited the attention of the tea industry to this aspect.

Supply of Raw Materials

The plywood industry is finding it difficult to get its raw materials in sufficient quantity and at reasonable prices. The main varieties of timber used by the Malabar Plywood Factories are pali and vilapine. The general complaint is that timber of only smaller girth and poor quality is available and that also not in the required quantities. It is felt that a co-ordinated policy should be adopted for all the States of South India in which the plywood industry is located so that softwood species suitable for the manufacture of plywood are set apart for the exclusive use of the industry. The South Indian Manufacturers' Association has complained against the Government's policy of auctioning such softwood timber along with forest timbers instead of reserving it for the plywood industry. It was recommended by the Tariff Board in 1947, and reiterated in 1950, that species of timber suitable for the plywood industry should be earmarked for it. Recently, however, the Forest Department of the Government of Madras called a conference at which an agreement was reached whereby private extractions by the plywood industry of certain species of peelable timber will be permitted. This will ease the situation considerably, but will not solve the problems of the South Indian plywood factories either in respect of quantity or quality of their raw material. The attitude of other State Governments, too, is not helpful. The West Bengal Forest Department, for instance, is not allotting birchwood to plywood factories for the manufacture of tea chests. This wood is considered to be the best plywood timber in India. These birch trees are available in the Himalayas in the Kurseong Division and hence it is not possible to extract the said timber in log form. It was, therefore, represented at the enquiry, that, in order to enable a factory to make veneers out of this timber, a peeling unit has to be installed at the site of the Himalayas. If this unit is to work economically, the factory must be assured of the supply of birch coupes for a sufficiently long period. The Tariff Commission has, therefore, suggested that the West Bengal Forest Department should consider the possibility of allotting such birchwood coupes only to plywood factories on the basis of three-year contracts.

The cost of timber forms about 50 per cent. of the cost of a tea chest and as such the price of timber should be reduced to enable the industry to reduce the cost of tea chest. The plywood manufacturers have been saying that the price of timber supplied to Calcutta factories by the Government from the Andamans is high. There seems to be some force in this contention, for, the Tariff Commission has drawn the attention of State Governments to the desirability of bringing down the price of timber. It is to be hoped that the State Governments concerned will take due note of the Commission's suggestion in regard to both the supply of timber and its prices to the tea chest manufacturers and implement them at an early date. By doing so, they will be ensuring the economic working of this industry and thereby the maintenance of employment.

(Concluded from next column)

would have been higher still, had not the Pakistan Government imposed an additional export duty and a licence fee on jute exported to India to the extent of Rs. 3-4 (P) or Rs. 5 (I) per maund. Now that these discriminatory levies have been removed, one can look forward to increased supplies of Pakistani jute. In the past, various impediments had been placed by the Pakistani customs authorities on the flow of jute to India from that country. The improvement in the political relationship between the two countries noticeable in recent months and the desire to have a new trade agreement should help the removal of these impediments. The resulting liberal supplies of good quality jute from Pakistan will enable the mills in this country to manufacture goods which can easily compete with Continental mills in world markets.

CONSUMPTION OF RAW JUTE BY U.K.

The increase in the British consumption of raw jute is reflected in the improved imports for the first-half of this year at 581,050 bales, costing £8,314,152, as compared with 361,970 (£10,448,939) bought in the same period last year. Dundee mills are working to full capacity and often two shifts because, despite irregularity in Calcutta goods prices, manufacturers in most Dundee centres are doing good business. Certain types of hessian are in short supply and intending buyers have to turn to imported goods for immediate supply. But Dundee goods, admittedly superior in quality to the imported ones, are generally preferred when available. Rumour is afloat that the jute control is to end soon. If there is any truth in it, manufacturers fear Dundee would be unable to compete with Calcutta goods should the latter be permitted to enter U.K. free of import duty. There is a wide margin of differences between ruling prices of Calcutta goods and those of Dundee.

JUTE SUPPLY IN 1953-54

POSITION FAIRLY COMFORTABLE

THE optimistic forecast about jute production for 1953-54, made a fortnight ago by the Department of Trade Promotion and Commercial Intelligence, Government of Pakistan, provides an occasion for discussing the prospects of jute supplies in the current season which started on 1st July last. The *Jute Survey* for the month of July, issued by the Department, places the jute crop of Pakistan (preliminary estimate) at 3.5 million bales, as compared with the actual of 6.82 million bales in 1952-53. This preliminary estimate, it may be noted, is less than the quantity which the Pakistan Government had provisionally estimated. Owing to heavy carry-over of raw jute, the Government had decided, in November last, to reduce production of raw jute to only 4.2 million bales for the current season. Again, in February, 1953, the Government banned cultivation of *mesta*, an inferior quality of jute, and curtailed acreage under jute in 13 sub-divisions to two annas of the basic average. The object of these restricted measures was to see to it that the reduced production, together with the carry-over from 1952-53 season, was to stabilise the prices of jute at a level which would be fairly remunerative to the Pakistan grower. How far this hope will be realised remains to be seen.

On the basis of preliminary estimates about the size of the crop in Pakistan of 3.5 million bales, as mentioned above, the *Survey* places the total availability of jute in Pakistan during the 1953-54 season at 6.3 million bales, including carry-over of 2.8 million bales at the end of the 1952-53 season. The same official *Survey* place the Indian crop for 1953-54 at 3.0 million bales and estimates the total world supply of jute during the 1953-54 season, at 9.3 million bales as against this, the world demand is estimated at 100 million bales.

Jute circles in India, however, have not taken these estimates seriously, because the past experience has shown that Pakistan official estimates are invariably very much lower than actuals. It may be noted here that estimates made by well-established raw jute traders were represented in Pakistan, place the jute crop in that country at about 4 million bales. They place the carry-over crop at about 2.8 million bales. The total availability of jute, in Pakistan, in the season is thus put at about 6.8 million bales.

Indian Crop

Apart from placing the Pakistan crop at a higher figure, the Indian trade estimates put the domestic crop too at a figure higher than that visualised by Pakistan officials. The Indian crop, which was first expected to be as low as 3 million bales, was subsequently revised to 3.5 million bales. Trade circles are confident that the Indian jute crop during the 1953-54 season will not be less than 3.5 million bales, if not more. This compares with 4.7 million bales, for 1952-53, as stated by Dr. P. S. Deshmukh, Minister for Agriculture, during question hour in Parliament on the 24th ultimo. The decline in the current season's crop is attributed to low prices of jute in the last season which discouraged cultivators to take to jute crop. As the carry-over at the end of 1952-53 is estimated at about 1.5 million bales, the total supplies in India may be taken to be 5 million bales. On this basis, the total world supply of jute during the 1953-54 season may be (Pakistan 6.8 million bales and Indian crop 5.0 million bales) of the order of 11.8 million bales, that is, an increase of 2.5 million bales over the estimates of Pakistan officials.

Whatever the size of the crop, trade circles seem to agree that world supply of the raw jute in 1953-54 will be considerably less than that during the 1952-53 season. Consequently, it is felt that there will be no burdensome surplus of jute to depress prices and that there will be no distress to be experienced by the jute grower both in India and Pakistan. Besides, a certain amount of satisfaction is felt at not only the lower crop but also the improvement in the quality of Indian jute assisted by timely and adequate rainfall this season. In India, yields are expected to be higher than what they were in the previous years. This improvement in the weather has encouraged some to expect the Indian crop to be even higher than the 3.5 million bales referred to above.

In so far as the Indian jute mills are concerned, they have very little to worry about supply of raw jute this season. Not only the domestic crop but also a fairly large quantity of Pakistan jute can be expected to be at their disposal. In the eleven months of the 1952-53 season, Indian purchases of Pakistan jute aggregated 1.3 million bales. This quantity

HOUSING FOR WORKERS IN ASIA

PROBLEM TO BE DISCUSSED BY I.L.O ASIAN REGIONAL CONFERENCE

THE subject of housing for workers in Asian countries is on the agenda of the 12-day I.L.O. Asian Regional Conference scheduled to commence on the 14th inst. at Tokyo. The International Labour Organisation has prepared a comprehensive report on this subject, with a view to facilitating scientific discussion. The report is based on information supplied by the various member-Governments in answer to a questionnaire. It has widely made use of reports and blue prints issued in Asian countries on housing workers.

The full text of the report is not yet available, but from a Press summary issued by the I.L.O. we find that the various obstacles which are in the way of solving housing shortage constitute one of the subjects covered by the report. These obstacles are *inter alia*, the limited capacity of the construction and construction materials' industries, competition for the limited supply of available materials from other types of urgent developmental projects, the discouraging outlook for investment in rental housing, natural disasters such as typhoons and earthquakes, the high cost of housing which cannot be met by the low purchasing power of the population and the lack of skilled and semi-skilled labour.

The problem of housing acquires great importance in the face of increasing population and the rapid disintegration of the joint family system of living, resulting in a multiplication of independent family units. The need to divert essential housing materials like cement and steel from housing to national development projects such as dams and hydro-electric stations has aggravated the situation.

The shortage of building materials such as steel and cement emphasises the need for a search for substitute materials such as treated timber and bamboo and the efforts to make better use of traditional materials such as cowdung and molasses. This explains the utility of building research in the Asian region. Research, it is needless to add, may help bring down costs of buildings. It is gratifying to note that most of the countries in Asia, including Australia, Burma, Malaya, India and Indonesia, are experimenting with treated timber as a substitute for steel. In Malaya, research has indicated many possible uses for timber that had previously been regarded as useless, merely because it was untried. In the Philippines, preservatives are being developed to protect wood from fungi, termites and other borers. India too is finding new uses for the ubiquitous bamboo and has developed bamboo wall boards and cellular wall panels. Much excellent research in Asia is being conducted with the aid of the Food and Agricultural Organisation. The F.A.O. has shown that treated timber has a life of between 18 and 20 years, as against two and three years for untreated timber.

Cement

Although cement is temporarily in short supply, Asian countries have not slackened long-term research in its uses for housing. Promising results have been held out by experiments carried out in India in the development of foam concrete blocks utilising fine pulverised rock. In Pakistan, new methods of roofing construction utilising flat slabs of concrete have been developed. Experiments with a domed type of concrete cement roofing have also been conducted in Pakistan. If successful, they should reduce the cost of roofing by about 40 per cent. In Singapore, pre-cast artisan quarters have been constructed on very light concrete rafts, sitting immediately on the ground.

India has carried out a considerable amount of laboratory work on "low cost poor man's plasters." These plasters take into account the traditional habits and materials. A stabilised plaster developed is compounded from such ingredients as fresh cowdung, linseed, straw, sunnhemp, fibre wastes and molasses. Plasters such as these are expected to help tide over the periods during which the bulk of the country's cement is being channelised into giant irrigation and hydro-electric projects. In the Philippines, private firms are experimenting with grass asphalt blocks, asbestos clay tiles, coconut husk products, bagasse boards and sawdust bricks.

There is also a search for lost knowledge. The Sub-Committee on National Housing of the Indian Planning Commission has made the interesting suggestion that a great deal might be achieved in housing research if attemps are made to rediscover old specifications and methods of production as well as develop new ones. Research, for example, might be directed towards rediscovering the secret colour technique of the Ajanta caves, the timber ribs of the Karla caves and the freedom from rust of the iron pillar at Delhi. In fact, some Indian blacksmiths are smelting rustless iron.

Can young Asian scientists wrest from the ruins of the past the secret of their continents' former architectural greatness? Can they rediscover the technique of the artisan who, a thousand years ago, laid together the stones of Angkor Vat? The answer lies in the building laboratories and training centres which Asian countries are setting up. The romance of the past can, certainly, be an inspiration for the future.

Part of Overall National Planning

The I.L.O. report has stressed that the housing of workers must be viewed as an integral part of overall national planning. It quotes, approvingly, from the report of the Madras Provincial Town Planning Enquiry Committee which said that "the ideal of town and country planning is that of shaping and developing an ideal village, town or city which shall secure a life for the citizens healthy, convenient, prosperous and wholesome to the fullest extent that is humanly practicable." The I.L.O. report lays down certain fundamental principles in which national housing programmes for workers might be based and recommends the following measures for expanding and improving short-life housing, which can provide the most immediate solution to the workers' housing problem throughout Asia:

"First of all, it is necessary to develop new and powerful incentives to stimulate workers to improve their housing conditions, as, for instance, land reform, home ownership, the provision of well-planned community layouts, and the provision of grants-in-aid by Governments and employers and to reinforce these new incentives by a simultaneous improvement. Secondly, Governments will need to take specific steps to ensure that minimum standards for the construction and maintenance of short-life housing and community facilities are observed. Thirdly, effective mobilisation of unused resources for short-life housing also requires the development, on a national scale, of Government departments or other authorities competent (1) to advise on improvements in housing design, neighbourhood planning, and utilisation of local materials, (2) to distribute monetary aid and direct assistance such as materials, building components, building tools or equipment to process building materials, (3) to provide training in required skills, and (4) to assist in organising and carrying out of self-help projects. Finally, the implementation of a policy of urban decentralisation will facilitate the improvement of housing conditions by lessening overcrowding and by extending the scope for short-life housing."

DEVELOPMENT OF SHIPPING

CENTRE MUST PROVIDE LIBERAL AID

LAUNCHING the s.s. *Bharatratna*, an 8,000-ton cargo ship, at Visakhapatnam, last week, Mr. C. R. Srinivasan, Chairman, Bharat Line Ltd., dealt with the Government of India's policy of assistance to shipbuilding and shipping. While commending the Centre's policy which provides for subsidies and loans, he felt that what had been done so far was not enough for placing the shipbuilding industry on solid foundations. He mentioned the following points in support of his contention:

The cost of shipbuilding in India is very high due, among others, to the need for importing a good part of mechanical equipment from abroad, in the absence of ancillary and auxiliary industries to manufacture them in the country. The imports, accounting as they do for 40 per cent. of the parts of a ship, include electric fittings, copper pipes and steam fittings together with all prime and auxiliary machineries.

The Government of India has accepted the principle to charge the ships built at the shipyard a price equivalent as nearly as possible to the cost of construction in the U.K. and to pay the difference between the actual cost of construction and the U.K. parity price as subsidy. But the main trouble is the determination of the U.K. parity price, as foreign shipyards cannot be expected to quote a price unless they have a reasonable prospect of getting orders. A building subsidy, however, as pointed out by Mr. Srinivasan, can only be a short-term measure and the use of public funds for the purpose can be justified only if it serves a long-term end. It is, therefore, essential that the Visakhapatnam shipbuilding yard must be made an economic proposition as early as possible. And to do so, it will be necessary to expand the yard and help the development of auxiliary industries.

The Central Government has offered to lend money to shipbuilding companies to acquire ships. So far, the Centre, according to a statement made by the Deputy Minister for Railways and Transport, has granted loans, ranging from Rs. 3 lakhs to Rs. 42 lakhs, to eight shipping companies for the purchase of ships to be operated in the coastal trade of the country. The period of repayment of the loan varies from company to company from four years to 10 years. In some cases, the rate of interest is 4 per cent., while in others it is 4½ per cent.

The shipping companies feel that the terms of loan should be more liberal. Mr. Srinivasan, too, subscribes to this view. This is necessary, according to him, if India is to reach even the Planning Commission's modest target of 600,000 gross registered tons by 1957, not to mention the goal of 2,000,000 tons considered necessary by the Shipping Policy Committee in 1947. The present size of Indian shipping is no more than 400,000 gross registered tons. The Hindustan shipyard is expected to build only 100,000 gross registered tons between now and 1957. The balance, namely, 100,000 tons, is to be obtained from abroad and that too only from the second-hand tonnage market.

Few of the existing shipping companies possess adequate reserves of their own for expanding their tonnage. The cost of a ship of 5,000 tons built in the Hindustan shipyard is Rs. 60 lakhs, including the subsidy from the Government. At this rate, it will require Rs. 12 crores to buy the 100,000 tons of shipping from the yard. The rest of the 100,000 tons needed to reach the target will cost over Rs. 7 crores, that is, for 20 ships at the rate of Rs. 36 lakhs per ship of 5,000 gross registered tons. Thus, the shipping companies will require in all more than Rs. 19 crores, if they are to play the full part envisaged in the Plan.

Where is the capital of this magnitude to come from? The companies have not adequate resources. The only source left open is the Government, as will be seen from the following extract of Mr. C. R. Srinivasan's speech:

"Looking at it from the point of view of shipping companies, I have no doubt that every company is anxious and willing to serve the national economy to the utmost extent possible. If this natural desire is to be reflected in effective action, it would be wise to take note of the limitations under which they are operating. They have not large funds at their disposal to cover the expanding needs of their service. In fact, the funds they have may be used to better advantage by buying in the second-hand market. Yet the Scindias have elected to support the shipyard by reason of their association and the Bharat Lines have come forward to place orders, out of a lively sense of responsibility to the State. But if these orders are to continue in a steady flow, easier and better terms should be offered to the shipping companies."

INSURERS' LIABILITY IN RESPECT OF ILLITERATE POLICYHOLDERS

SIGNIFICANCE OF MADRAS HIGH COURT'S JUDGMENT

AN interesting judgment of far-reaching implications to the business of life assurance was delivered by their Lordships Mack and Krishnaswami Naidu, J.J., in a case in which the Oriental Government Security Life Assurance Company, Ltd., figured as the defendants and the wife of a deceased policyholder of the Company as the plaintiff. The case was filed by the wife for the recovery of Rs. 52,750 on a with-profit endowment policy for Rs. 50,000 for 25 years, taken by her husband in July, 1945.

Briefly stated, the facts of the case are that the policyholder had assigned the policy to his wife and paid the first and second premia before he died in a nursing home after an accident which necessitated an operation in his thigh. After the death, his widow claimed the insurance amount. The Company did not pass the claim on the ground that the assured had given false and inaccurate answers to some questions on the proposal form, and in his personal statement before the Company's doctor to the effect that he had no previous ailment or sickness and that he had never consulted a medical practitioner. The widow thereupon filed a suit in the court of the Additional Subordinate Judge, Coimbatore, for the recovery of the amount. The Subordinate Judge upheld the contention of the defendant company. Against this judgment, she preferred an appeal to the Madras High Court.

Their Lordships reversed the decision of the lower Court and gave a decree as prayed for in the suit, with costs, for Rs. 52,750 and interest at 6 per cent. from 16th August, 1946, the date on which the necessary proofs were supplied to the Company by the widow. In the course of their judgment, their Lordships subjected the evidence in the case to a critical scrutiny. They stated that they had no evidence whatsoever from any person who had put any one of the questions noted in the form to the assured, who was ignorant of English. There was no evidence as to the person who put the questions or who interpreted them or who typed the answers. With not a single one of the witnesses examined, the defence of the insurance company exposed itself, they pointed out, to the criticism that it failed to furnish strict legal proof that the assured, in fact, had given negative answers to the questions regarding his illness and other related matters. Having obtained this contract of insurance from a man now dead, the Company had "sought to enforce the contract literally taking it by itself to the exclusion of other contemporaneous circumstances."

Proceeding, their Lordships observed that the Company had sought to repudiate the contract solely on the testimony of a single doctor that some negative answers to some questions, which were really difficult to answer in the limited space provided in the form, were false and inaccurate. Their Lordships felt that the mere signature on these forms and the binding declaration in English of an insured person who does not understand English, is not enough to prove his knowledge of what he is signing and to bind him literally and irrevocably to such a contract. They added:

"It is an elementary law of justice that a person cannot be bound in law by his signature to a document which he does not understand. In the case of illiterate persons, it is, in our opinion, necessary that the person who interprets the form to them, and records their answers, must be examined before they can be bound by the consequence of their marks or answers. The legal principle or theory about the binding nature of the contract, if pushed to the extreme logical sequence, may, more often than not, result in grave injustice, as in the present case, if not in absurdity. It is true that hard cases must not be allowed to make bad law. But, on the contrary, good law should not be permitted, by misapplication, to be pushed to such literal technical extremes as in the defence of the present action and degeneration into a mechanical machinery which results in injustice without regard to the human background, facts and circumstances."

Two aspects of this judgment deserve the notice of all insurers in the country. The first relates to the learned Judges' observations about the need for properly interpreting the proposal forms to the English-ignorant prospects. In a country like India, where education itself is not widespread and where it is only a small minority that can claim adequate knowledge of the English language, it is necessary that utmost care must be taken to explain the meaning and significance of the questions in the proposal form and of the answers that they may give. The insurers will also do well to examine whether it will not be better to have independent witnesses at the time these forms are filled in, so that they may have some positive evidence in order to prove that the questions were explained to the prospect and the importance of giving correct answers to them impressed upon him. Insurers will do equally well to examine whether the time has not arrived when they can adopt proposal forms in Indian languages, so that they may be understood by a larger section of the insuring public.

The second aspect relates to what may be called the format of the proposal form. Their Lordships made, as already stated, a brief reference to the "limited space" available in the form for answering some of the questions. It seems necessary to rectify this defect. Many questions in the proposal forms, issued by Indian insurers, are much too complicated to be answered within the limited space provided against the questions. This applies to the question relating to family history. It applies particularly to two other questions which figure in the proposal forms of nearly all insurers. These questions are: whether the prospect has had any illness, considered by him to be important or not; on what occasions and for what diseases or injuries the prospect has sought medical advice or treatment. These questions are invariably to be found in all proposal forms. It is true that they are important questions from the insurer's point of view. It is also necessary that they must be answered candidly by the prospects. But the question is whether it is possible to compress all the information, he would like to give or must give, within the small space allotted to these questions. That apart, the temptation to dismiss the questions by negative answers is too great to be resisted, especially when the agent is in a hurry to complete the forms. Great care must, therefore, be taken by persons who want to insure their lives not to fall a victim to such pressure tactics. They must take their own time to study the questions and give the correct answers always, remembering that, if the claim were to fall due in the event of their death, they would not be there to counter the insurers' claim. The insurers also must take care to see that the prospect is not penalised by additional burdens for stating candidly the minor illness or illnesses from which he may have suffered before taking a policy.

INDIAN TRADE AND GENERAL INSURANCE COMPANY, LTD.

That a well-managed enterprise can make rapid headway even in an overcrowded business field is evident from the remarkable progress of the Indian Trade and General Insurance Company, Ltd. (General Manager: Mr. T. M. Sturgess), which has grown from strength to strength during the last nine years of its existence. Between 1944, when the Company was first founded, and 1952, the latest year for which the accounts are now presented, the Company's net premium income has increased from Rs. 2.80 lakhs to Rs. 40.53 lakhs. Over the same period, reserves and funds have expanded from Rs. 1.47 lakhs and Rs. 25.45 lakhs to Rs. 28.12 lakhs and Rs. 53.13 lakhs. All along, the one important concern of the Directors was to strengthen the finances of the Company. They, therefore, paid no dividend at all. It is only now that a dividend of Re. 1-8 per share of Rs. 40 each has been proposed by the Directors.

The progress which the Company has made during the nine years ended 1952 in premium income and in its reserves, funds and assets positions will be clear from the following table:

(In lakhs of rupees)

Year	Net premium income	Reserves	Funds	Total assets
1944	2.81	1.47	25.45	26.69
1945	4.89	2.72	29.26	29.83
1946	8.18	4.92	29.59	33.87
1947	12.07	7.47	31.89	39.70
1948	15.84	10.43	34.55	45.47
1949	21.13	14.04	38.15	50.75
1950	24.66	15.50	39.66	56.66
1951	29.60	19.31	43.92	64.03
1952	40.53	28.12	53.13	77.92

The net premium income of the Company established a new record during 1952 when it was Rs. 40.53 lakhs, as compared with Rs. 29.59 lakhs in the previous year. The Company has been writing a larger volume of business abroad than it does in India. This factor has stood the Company in good stead, for the slight decline in the volume of its Indian business has been more than made good by its foreign portfolio. Although the Company's premium income from Indian business declined slightly from Rs. 18.34 lakhs to Rs. 18.21 lakhs, the income from its foreign business improved from Rs. 11.25 lakhs to Rs. 22.33 lakhs. The Company writes a large volume of business in all the three departments—fire, marine and miscellaneous—but it is the fire department that continues to be its mainstay. The premium income for the fire department improved from Rs. 13.56 lakhs in 1951 to Rs. 22.61 lakhs. In the miscellaneous and marine departments too, the income moved up but only at a small pace. In the former, it rose from Rs. 7.66 lakhs in 1951 to Rs. 8.02 lakhs and in the latter from Rs. 8.37 lakhs to Rs. 9.90 lakhs. The following table shows the results of the working of the Company during the four years ended 1952:

(In lakhs of rupees)

	1952	1951	1950	1949
Net premium—				
Fire	22.61	13.57	8.32	9.37
Marine	9.90	8.37	9.54	6.08
Miscellaneous	8.02	7.66	7.75	5.67
Net claims paid and outstanding—				
Fire	7.23 (32%)	3.82 (28.2%)	3.22 (38.6%)	2.66 (29.4%)
Marine	6.96 (70.4%)	6.32 (73.7%)	3.66 (42.7%)	2.75 (45.3%)
Miscellaneous ..	4.12 (51.4%)	3.92 (51.2%)	2.25 (29%)	1.34 (24.2%)
Commissions and expenses of management—				
Fire	46%	46.6%	61.9%	52.8%
Marine	16.8%	19.5%	32.8%	22.9%
Miscellaneous ..	41.3%	40.8%	56.6%	50%
Funds—				
Fire	11.31	6.78	3.95	4.22
Marine	8.22	6.28	5.66	4.96
Miscellaneous ..	4.01	3.83	3.49	2.65

The Company's claims experience reveals a mixed pattern, as a reference to the table above will confirm. In the fire department, the loss ratio has gone up slightly from 28.2 per cent. to 32.0 per cent. and in the miscellaneous department from 51.2 per cent. to 51.4 per cent. It is in the marine sector that the loss ratio, though a little better than in the previous year, was still as heavy as 70.4 per cent., as against 42.7 per cent. in 1950.

The working of the fire and miscellaneous departments resulted in a profit of Rs. 64,195 and Rs. 45,669 respectively, as against Rs. 37,559 and Rs. 22,340 in 1951. The working of the marine department, however, resulted in a loss of Rs. 51,287; the loss in the previous year was Rs. 19,971. After crediting the profit and loss account with the income from interest and dividends, the profits made from the fire and miscellaneous sections, and making the necessary adjustment for the loss in the marine section and a provision of Rs. 37,000 for bad and doubtful debts, there is a balance of Rs. 99,809. This sum, together with the amount brought in from the previous year (Rs. 11,077), makes in all Rs. 1.11 lakhs. Out of this sum, Rs. 10,000 has been transferred to the reserve for taxation, leaving a balance of Rs. 1.01 lakhs. The Directors have recommended the payment of a dividend at the rate of Rs. 1-8 per share (Rs. 40 paid-up) which will absorb Rs. 90,000, leaving a balance of Rs. 10,886 to be carried forward to the current year's accounts.

The financial position of the Company is sound. Apart from a capital of Rs. 24 lakhs, the Company has reserves and funds to the tune of Rs. 28.12 lakhs, inclusive of the fire fund at Rs. 11.31 lakhs, marine fund at Rs. 8.22 lakhs and miscellaneous fund at Rs. 4.01 lakhs.

For the attention of

Far-sighted Industrialists

YOUR OFFICE

You must be among the lucky exceptions if your office organisation provides all the service you require for the proper running of your affairs. Generally, far too many men are still employed in the soulless and unsatisfying work of transferring repeatedly bits of information from one sheet of paper to another, for someone else to work out, in time, information of little but historical value. Methods are deep in a series of long-established ruts, while up-to-date facts and figures, which the modern business man urgently and constantly requires for guidance on important decisions, are virtually unobtainable.

If you are not among the lucky exceptions, you must have wished many times to have your office procedure analysed, unnecessary effort eliminated, your real needs in the way of facts and figures set down, and then a scheme prepared and implemented to provide them quickly and accurately, with a minimum of effort and expense. Then only, you feel, you would be in full control of your business, and as an important by-product, your staff, employed on more interesting and responsible work, are likely to co-operate better than in the past.

INDO-PAKISTAN TRADE AGREEMENT

PLEA FOR REVISION ON COMPREHENSIVE BASIS

A NUMBER of suggestions for expanding the trade between India and Pakistan has been made by the Bharat Chamber of Commerce, Calcutta, in the course of its memorandum on the renewal of the Indo-Pakistan Trade Agreement submitted last week to the Secretary, Ministry of Commerce, Government of India. The memorandum has not come a day too late. It is timed well, now that the representatives of India and Pakistan are to meet shortly to negotiate for the continuation of the Agreement which is to expire at the end of the current month. More than that, the suggestions made by the Chamber are based on the actual experience of the country in recent years. They, therefore, deserve to be borne in mind by the officials concerned.

At present, the trade between the two countries is hampered by impediments in the way of settling the financial accounts between the two countries. These impediments fall under two heads. One is the fixation of "verified price" by the Pakistan customs authorities of goods purchased by Pakistanis at an agreed price from India. The customs officials in Pakistan arbitrarily put a value on the goods for the purpose of assessment of the duty. This assessment value is taken as the "verified price" by banks in Pakistan which refuse to make the payments to the Indian exporter except at what is termed as the "verified price." This price is invariably lower than the price at which the buyer agrees to pay the Indian exporter who thus becomes the ultimate sufferer.

Another handicap arises from the operational complexities of foreign exchange regulations in Pakistan. These regulations cause difficulties in obtaining payments from Pakistan, although formal transfer of funds in respect of current transactions is permitted. Unless proper arrangements are made in regard to payment and transport facilities, customs duties and regulations, no comprehensive agreement on merchandise trade will yield satisfactory results. The Bharat Chamber has, therefore, done well in insisting on the Government of India to have specific provisions in regard to operational facilities incorporated in any new agreement to be signed by the two countries.

The Chamber emphasises that the current Indo-Pakistan Trade Agreement is wholly unsuited for trade between the countries which in pre-Partition days, was complementary in character. The special relationship between the countries is recognised in the G.A.T.T. which envisages that, in the special circumstances, the two countries may enter into special arrangement including even the introduction of preferential duties on goods exchanged between them. The Chamber observes that this principle was at least partially followed in the Trade Agreements of 1950 and 1951. The current Agreement, which paid little attention to this salutary principle, is considered to be a complete reversal of the principle. It, therefore, suggests that the basis of the coming agreement should be at least the Agreement of 1951.

Being an association of trading interests in the Eastern State of India, the Chamber has naturally stressed the importance of augmenting the trade between West Bengal and East Pakistan. The fortunes of the small and medium-sized industries of the eastern part of India are largely dependent on the Pakistan market. The bulk of the trade between India and East Pakistan is through land frontiers. This trade is vital to the economies of the States of Assam, West Bengal, Bihar and Tripura. In 1951-52, out of the total exports, valued at Rs. 22.8 crores, to East Pakistan, Rs. 20 crores went through the land routes. It is otherwise in the case of India's trade with West Pakistan. For, out of the total exports, valued at Rs. 22.5 crores, to Western Pakistan, the bulk, or Rs. 16.1 crores worth of goods to be precise, went through sea and air routes. In view of the economic importance of the trade, the Government is urged to make all efforts to secure as much freedom as possible for trade between India and Pakistan, especially on the eastern border.

The Chamber has further suggested that a special schedule should be framed in respect of the items of goods which India or West Bengal should be permitted to re-export to Pakistan. The territories in East Bengal are within the hinterland of the Port of Calcutta and customarily the requirements of the markets in East Bengal were being imported through this port before the partition. As this trade has been dislocated since Independence, it is suggested that measures should be taken to restore the trade. The deterioration in this re-export trade would appear to have been pronounced in 1952-53, when such amounted to Rs. 20.18 lakhs only, as against Rs. 56.75 lakhs in 1951-52. The goods involved generally came from the U.K., the U.S.A., Hong Kong, Switzerland, etc. For encouraging the re-export trade, as also for enlarging the volume of trade between the two countries, it is considered that there should be some sort of agreement between the two countries for making suitable adjustments in their import-export policies. This will prevent, it is said, the dealer in one country taking advantage over the dealer in the other. An instance given by the Chamber is revealing. Through the device of issuing import licences, the Government of Pakistan has, sometimes, given the monopoly to certain agents. These agents are stated to have approached the holders of export licences in India to sell out their licences on small margins, so that they themselves could make the purchases direct from the mills and factories in India. The exporters in India have thus been compelled to come to terms with such monopoly importers in Pakistan. The new agreement should see to it that no such unfair practices become possible.

It is also found that Pakistan's share in the total exports of India has steadily fallen From 16.9 per cent. in 1948-49, it gradually declined to 8.4 per cent. in 1949-50, and still further to 4.9 per cent. in 1950-51. It no doubt improved to 6.1 per cent. in 1951-52 but only to recede again, roughly to 5.6 per cent. in 1952-53. There is need, therefore, not only to arrest the decline but also to improve and enlarge the exports, so that proper balance may be restored in the trade between the two countries. And all this trade, the Chamber avers, should be carried on on the basis of as *free a trade through private channels* as may be possible in the present circumstances. Besides, the Agreement should be at least for three years and not for one year as at present. For long-period agreements help minimise uncertainty and impart a certain amount of stability to the trade.

The Chamber has advocated the inclusion of a number of items in the schedule to the present Agreement. These include glass and porcelain crockery, hurricane lanterns, globes and glass tumblers, electric fittings and bulbs, cycles and accessories, ceiling fans, stationery goods, imitation *jari* goods, sanitary requisites, cosmetics, buckets and other household utensils made of steel, brass and bell-metal, fishing nets and twines, hosiery goods, coal-tar paints, cotton-waste blankets, boots and shoes, chillies, dates, biscuits, salt, small tools and appliances, candles, steel re-rolled rods, matches and coir and coir yarn. The Chamber has also pleaded for special efforts by the Government of India for securing markets for Indian sugar, tea chests, electric motors of Indian origin, coal-tar products, cement, and cotton textiles.

(*Concluded from next column*)

does, and (iv) garnet paper and sand-paper of indigenous manufacture do not last as long as the imported variety. The inferiority of the indigenous product is partly due to the fact that it is glue-bonded, while the imported material is resin-bonded. Resin is heat resisting and gives the cloth and bonds longer use, as the grain particles do not fall off by generation of heat. Climatic changes too, it is stated, affect emery cloth. Whatever the reasons, these deficiencies are of a serious nature and, unless they are quickly elliminated, the industry will not have justified the protection given to it. We do not think that the industry will have any incentive to improve its quality so long as it enjoys the shelter given by the ban on imports. Now that the balance of payments position is better, the Tariff Commission will do well to deprecate this additional protection to the industry.

Closely allied to the question of quality is that of raw materials used by the industry. These raw materials are broadly classified under four heads: (a) natural abrasive minerals such as emery, garnet, corundum, flint, quartz, etc.; (b) synthetic abrasive minerals such as silicon carbode, aluminium oxide grain; (c) backing materials such as hide, glue, technical gelatine and synthetic resin glue. Of these, all the natural abrasive minerals are available in the country except emery of the required quality. Among others, some of them have to be imported. The problem before the Commission now is to assess the extent to which the various raw materials of both foreign and indigenous origin are required and their respective costs.

INDIAN ABRASIVE INDUSTRY

TARIFF COMMISSION REVIEWS CLAIM FOR ASSISTANCE

THE Indian abrasive industry has enjoyed protection for well over six years. In addition, it has obtained the advantage of a somewhat sheltered home market during the last two or three years, owing to import restrictions necessitated by balance of payments considerations. Protection was first granted to the industry in 1947. Since then, on review of the industry's position at successive stages, protection has been continued and is due to expire on 31st December. At present, abrasives made of paper is subject to a protective duty of 37.8 per cent. *ad valorem* standard and a preferential duty (for U.K. and British Colonies) of 25.2 per cent. *ad valorem*. Coated abrasive emery cloth enjoys a protective duty of 36.75 per cent. *ad valorem* standard. This scheme of protection covers abrasive papers, emery cloth, abrasive rolls, coils, discs, belts, shapes, tapes made of paper, cloth or a combination of both. These are essential stores extensively used by many industries, especially by engineering works, automobile works, leather factories and railway workshops.

Now that protection to the abrasive industry is due to expire, as stated above, at the end of the current year, the industry has put forward claims for the continuance of protection. An enquiry into these claims was opened by Mr. M. D. Bhat, Chairman, Tariff Commission, at Bombay, on 27th August last. These claims, as was pointed out by Mr. Bhat in his exhaustive analysis of the industry's problems, fall into three or four forms: (1) continuance of protective duties at least, at the same, if not at enhanced, rates; (2) ban on imported abrasives, except when these cannot be supplied by indigenous industry; (3) continuance of the existing rebate of import duty on imports of certain raw materials such as resin and technical gelatine; and (4) technical assistance in the form of facilities for technical training abroad or technical collaboration with foreign manufacturers. A consideration of these general claims is complicated by the fact that one of the producers has boldly come forward to say that, as the cost of production is relatively low in India, and as the industry is making decent profits, it needs no protection, particularly as the normal revenue duty is sufficiently high. It is gratifying to find that there are still some industrialists in this country who are prepared to give up protection when they do not need it. It is to be hoped that the Commission will subject the claim for protection from the other sections of the industry to a searching scrutiny. This necessarily involves a careful assessment of the c.i.f. and landed price of the imported product and also of the estimated ex-works prices of the indigenous product. The data furnished by importers regarding the former being inadequate, the Commission has to go into the question quite thoroughly before arriving at the final decision.

The Chairman of the Commission seems to be convinced that the fairly long period of protection enjoyed by the abrasive industry has resulted in an appreciable measure of its development. This is reflected in the output figures furnished by him. The production of abrasive paper and cloth amounted to 25,820 reams and 61,750 yards respectively in 1946. In 1950, when the production figures were reduced to expression in terms of reams, production was 30,662 reams of abrasive paper and cloth, exclusive of the production of assorted sizes of abrasives which were estimated to be equivalent to another 628 reams. In 1932, the former rose to 55,060 reams and the latter to 3,000 reams.

As against the present output, the data furnished regarding indigenous demand reveal a good deal of divergence. This variation ranges from 70,000 to 80,000 reams to as much as 350,000 reams per year, as estimated by different agencies. These estimates will have to be examined by the Commission before reaching final agreed figures in respect of current and future demand for (1) coated abrasives of all types and (2) coated abrasives of principal types, separately. Similarly, there appears to be discrepancies, as pointed out by Mr. Bhat, in the figures relating to rated capacity furnished by certain units to the Ministry of Commerce and Industry and to the Tariff Commission. These figures too will have to be verified.

One of the principal issues which determine assistance to an industry is the question of quality of the product manufactured. The quality of abrasives produced in India is considered to be satisfactory in many respects. But there still appear to be certain deficiencies. These, according to Mr. Bhat, are: (i) the backing provided is not of the proper type and strength, and very often gets torn off; (ii) the bonding between abrasives and the backing is poor, and, therefore, the abrasive is dislodged and flung off while in motion; (iii) the emery used does not possess the same abrasive property as the imported product

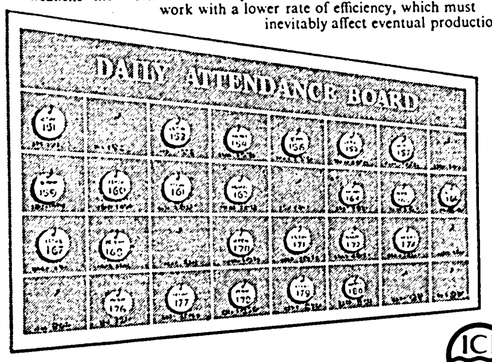
absenteeism in your establishment

The problem of maintaining labour efficiency in any industrial establishment is closely allied to the attendance rate which obtains. This attendance, again, is directly tied to the general health level of the labour employed, and in the vast majority of cases, absenteeism is directly attributable to sickness.

Malaria is today the biggest single cause of sickness, and, therefore, of absenteeism in India. Apart from the scattered days of absence, it must be stressed that Malaria is a disease which debilitates and weakens the worker with every recurrent attack, so that he returns to work with a lower rate of efficiency, which must inevitably affect eventual production.



'Paludrine' prevents Malaria

No employer of labour today can afford to ignore the concrete proof offered by the consistent use of 'Paludrine' the world over by employers of labour, in order to reduce absenteeism caused by sickness. Give your workers a regular dose of 'Paludrine' and prove to yourself that it can, in your establishment, directly reduce absenteeism, raise health standards and benefit your business in terms of production and profit. Apart from this, labour is not slow to appreciate such benefits when they are made available, and goodwill too is built on such operations.

We shall be happy to co-operate with you in implementing a scheme for 'Paludrine' Protection in your establishment. Special rates are available for bulk purchases. Please write today to the nearest office of :—

BRITAIN'S ECONOMY GAINS IN ELASTICITY

MOVEMENT TOWARDS GREATER FREEDOM

(By PAUL BAREAU)

DURING the past 18 months, Britain's economy has taken some deep draughts of freedom—and looks a great deal the better for it. To those who live in the United Kingdom the process may have lost some of its sharp outlines, because it has been gradual and continuous; but to the overseas visitor who goes to Britain this summer after an absence of two or three years, the change in climate—*economic* climate, that is—will appear very remarkable. From having an essentially controlled economy, the people of Britain are now operating in an atmosphere of such freedom as has not been enjoyed by them for 14 years.

Before I enumerate the most important of these steps to freedom and survey what remains of the area of controls, let me make it quite clear that this move to economic freedom has not been due to a sudden and dramatic discovery of its virtues. It has, certainly, involved major policy decisions which have been influenced by the change in the political complexion of the Government; but the existence of controls between 1939 and 1951 and their rapid diminution since then are to be explained by something far more fundamental than the political labels attaching to the governing parties.

Without labouring what should be an obvious point, let me say that, in World War II, a controlled economy was part of the recipe for victory. Shipping control had to be applied by a nation which depended for its life on overseas supplies; import controls and bulk contracts were necessary to keep imports down to bare essentials; exchange control had to be introduced to save precious gold and overseas currencies; rationing had to be introduced to make certain that a large enough proportion of the national resources were kept intact for the war effort. All this and the rest of the paraphernalia of economic controls were essential in the prosecution of a total war, and were unquestionably part of the effort which tipped the scales in Britain's favour.

Similarly in the post-war period, when an immense task of reconstruction and rehabilitation had to be tackled with much reduced resources, there could be no question of a sudden dash for freedom, of the kind of "return to normalcy" which after World War I led to the economic and political insanity of having over 2,000,000 unemployed within two years of the armistice—at a time when the labour of every man in Britain was desperately needed to make good the damage that had been sustained between 1914 and 1918. But it can be argued that, after World War II, Britain leaned towards the other extreme and clung overlong to physical controls of the price-fixing, rationing character.

If that be so, ample atonement has been made in the past year and a half. The basic decision that has made all other steps to economic freedom possible was the abandonment of artificially cheap money and the restoration of credit discipline. "Control the volume of money and credit and economic freedom cannot be abused"—that good precept has been applied. The second basic decision has been to allow the price system to work, first, by cutting cost-of-living subsidies and thus re-creating a more realistic structure of prices, and, secondly, by abolishing price controls over all but minor segments of the economy.

All this was done in a belated recognition of the fact that the worst enemy of monetary stability is the attempt to veil the reality of inflation behind a facade of price controls and subsidies. A free economic system will only operate if the people are allowed to spend their free income as they like and in a manner undistorted by price controls or rationing. The move towards such freedom over the past year and a half has been the greatest victory for economic freedom in Britain.

Rationing is fast disappearing. The most recent achievements under this head are the abandonment of rationing of eggs, sweets, ham, feeding-stuffs—and there are more to come, notably sugar, which has been definitely promised for later in the year. This will leave the field of rationing occupied solely by meat and fats, and even on their score fervent hopes of complete decontrol are held.

That performance has also applied to the bulk trading in foodstuffs. Little by little, this is being handed over by the State to private enterprise. Dealings in coffee, tea, sugar, grains, feeding-stuffs, once the sole monopoly of Government departments, have been or are being handed over to private trade. That is also occurring in other commodities including tin, lead, zinc, copper, aluminium and cotton. In fact, very little will soon be left of the immense empire of monopolistic import trading that was once held by the Ministries of Food, Supply and Materials. The time is approaching when the dismantling of a large part of this administrative apparatus will be possible—with a considerable reduction not only of the officials concerned, but in the men in commerce and industry who have been kept busy filling the forms.

What, then, remains of the elaborate system of physical controls through which Britain's economy was operated during and after the war? First, there is exchange control, which prevents a Briton exporting capital, spending as much as he likes abroad, and compels him to remit to the authorities the overseas currencies he may earn in trade.

The operation of this control has been made much easier, and significant steps have been taken in re-creating a free foreign exchange market in Britain. But while the reserves of gold and dollars are as inadequate as they are to-day, this restriction on payments into and out of Britain must remain. The objective, however, is to ease them as fast as possible and to move towards the convertibility of sterling.

In the same category must be classed the controls on certain imports that need licences. They have been eased; but the size of the reserves makes it necessary to restrict those imports that cost the currencies of which Britain is in dire need—dollars. Britain hopes for the day when her earnings of dollars through exports to the United States will be sufficient to dismember what remains of these discriminatory restrictions on imports from the dollar world. There are still restrictions on certain building projects, but their main intent is to economise the use of scarce materials, such as certain types of steel that are urgently needed for the defence and export industries. There are also restrictions on exports of strategic materials to Communist countries—a matter of obvious wisdom and precaution. Looking at what has been done in dismantling controls and at what remains, it can surely be claimed that Britain's economy has gained enormously in elasticity in the last few months, and that a good case can be made for retaining what remains of these controls.—*Exclusive to "Commerce."*

DEVELOPMENT OF BRITISH GUIANA

REPORT OF WORLD BANK

SINCE India has chosen to remain in the sterling area, economic developments in any part of the area arouse considerable interest in this country. The interest is greater, when such developments take place in the British colonies, for these colonies play a vital role in the sterling area's export trade with the dollar countries, especially the U.S. The latest report of the World Bank Mission, which recently visited British Guiana (South America) at the request of the Government of that colony to advise on the formulation of a general expansion plan for economic development, therefore, assumes special significance.

The World Bank Mission, in its report, has drawn up a five-year development programme aimed at increasing the Colony's national income by 20 per cent. and the per capita income by 6 per cent. A factor which has largely influenced the Mission's recommendations is the rapid growth of population at a rate of 2.8 per cent. per annum. The development programme calls for a Government expenditure of $38.5 million over the five-year period ended 1958, to be met partly from Government revenues and partly from loan issues. Priority has been accorded to agriculture. This is only to be expected, considering the fact that agriculture is the chief economic activity in British Guiana. Thus, agriculture (including processing of agricultural products) contributes 38 per cent. to the total national income and accounts for two-thirds of exports and 40 per cent. of the labour force employed. The programme aims at raising the output of the principal food crops and achieving a better dietary balance through higher production of meat and fish. These targets are to be attained by means of extending and improving small-scale farming. The implementation of these existing Government projects for land reclamation, designed to bring under cultivation 67,000 more acres, is also included. In this connection, specific recommendations have been made, covering land settlement and tenure, agricultural credit, processing and marketing, and research and extension services.

Next in importance to agriculture come transport and communications. The development plan envisages improvement in the existing roads and construction of modern trunk highways with feeder roads on the coast and in the interior. It also envisages rehabilitation and modernisation of railways, improvement of intercoastal ferry and shipping services, establishment of a modern telecommunications service, and expansion of internal air and postal services. For the development of forests, measures have been suggested for raising output of lumber and wood products and for undertaking a programme for the long-range exploitation of forestry areas.

About 80 per cent. of the Colony's industrial production is based on local raw materials. Although there is little prospect of any spectacular growth of industry in the near future, the World Bank Mission feels that there are opportunities for expanding the existing industries and establishing new ones. It suggests a system of industrial credits for encouraging such development. The specific proposals that the Mission has made cover setting up of more rice mills, a milk pasteurisation plant, an ice factory, a fish-meat factory, an abattoir, among others.

In the rural sector, the need for rural and urban housing and for additional primary schools has been stressed. The Mission has also included in its programme funds for continued geological, hydrographic, aerial and soil surveys which are essential for the future development of the Colony's resources. The World Bank Mission has suggested that the administrative machinery for the planning and execution of the development programme should have two parts: (a) An Economic Council with a Secretariat under the administration of the Development Secretary, and (b) a Credit Corporation. The latter body is to administer all public loans to private enterprise in agriculture, industry, forestry, fisheries and housing construction.

The development programme, as suggested by the World Bank Mission, should doubtless form the basis for the progress of the economy of British Guiana as a whole. Commendable progress has already been achieved in many fields, thanks largely to the active assistance rendered by the British Government. This is indicated by the rapid strides made in fiscal and public administration, education and public health. Surely, the degree to which the economic problems outlined in the World Bank Mission's report is met "will be a crucial test for both the Government and the people" of British Guiana.

Notices

NATIONAL MACHINERY MANUFACTURERS LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Fifth Ordinary General Meeting of National Machinery Manufacturers Ltd., will be held at Sir Vithaldas Chambers, 16, Apollo Street, Fort, Bombay, on Wednesday, 23rd September, 1953, at 4-30 p.m. (S.T.), to transact the following business:

1. To receive and adopt the Directors' Report and Audited Profit and Loss Account and Balance Sheet for the year ended 31st December, 1952.
2. To elect Directors in place of Messrs. K. M. D. Thackersey, Kasturbhai Lalbhai and D. M. Khatau who retire by rotation and who, being eligible, offer themselves for re-election.
3. To elect a Director in place of Mr. N. Mafatlal who retires under Article 134 of the Articles of Association and who, being eligible, offers himself for re-election.
4. To appoint Auditors for the current year and fix their remuneration.

The Share Transfer Books of the Company will be closed from 10th September, 1953, to 25th September, 1953, both days inclusive.

By Order of the Board,
M. M. PANICKER,
Secretary.

THANA, *26th August*, 1953.

THE TITAGHUR PAPER MILLS COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT THE One Hundred and Forty-first Half-yearly Ordinary General Meeting of Shareholders will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, at 3-00 p.m. on Wednesday, 30th September, 1953, for the following purposes:—

THE KARANPURA COLLIERIES LIMITED

NOTICE IS HEREBY GIVEN THAT THE Thirty-fifth Ordinary General Meeting of the Shareholders of the KARANPURA COLLIERIES LIMITED, will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, on Thursday the 24th September, 1953, at 10-45 a.m., for the purpose of receiving the Directors' Report, passing the Audited Accounts for the year ended 28th February, 1953, declaring the arrears of dividend on the 5½ per cent. Cumulative (Taxable) Preference Shares for the period 23rd October, 1946, to 28th February, 1949, electing Directors and Auditors and for transacting any other Ordinary business of the Company.

The Share Transfer Registers of the Company will be closed from the 10th to 24th September, 1953, both days inclusive.

By Order of the Board,
BIRD & CO., LTD.,
Managing Agents.

CALCUTTA, *27th August*, 1953.

THE KARANPURA COLLIERIES LIMITED

THE BOARD OF DIRECTORS HAS DECIDED to recommend to the forthcoming General Meeting of the Shareholders, the payment of arrears of dividend on the 5½ per cent. Cumulative (Taxable) Preference Shares for the period 23rd October, 1946, to 28th February, 1949.

By Order of the Board,
BIRD & CO., LIMITED,
Managing Agents.

CALCUTTA.

The Textile Commissioner says, in a Press note, issued this week, that applications are made to the licensing authorities under the Cotton Control Order, 1950, for renewal of the licences granted under clause 9 of that order after the expiration of the validity period of those licences. The Textile Commissioner desires to emphasise that any business carried on or any cotton stored by a person after the expiration of the period of licence is a contravention, punishable by law. Any application for renewal after the date of expiry will not be held sufficient to condone the contravention. Such applications must, he adds, be made always before the date of the expiration. The licensing authorities are entitled to refuse renewals of the licences, if the applications for the same are made after the date of the expiry of the licences.

RESULTS OF MYSORE PAPER MILLS SATISFACTORY

DIVIDEND WELL MAINTAINED

FOR the Mysore Paper Mills Ltd. (Secretary: Mr. C. V. Ramachandra Rao, Bangalore City), the year ended March, 1953, has turned out to be another satisfactory one. The Company's trading profit for the year under review, according to the audited statement of accounts, amounted to Rs. 18.55 lakhs, which compares favourably with Rs. 15.01 lakhs for the previous year. The improvement reflects, in the main, the substantial reduction in the consumption of expensive wood-pulp, rendered possible by the rise in the output of pulp from indigenous raw materials. Moreover, the measures taken for enhancing the operational efficiency also went a long way towards not only reducing the manufacturing expenses, but also neutralising the effect of increase in prices of raw materials, chemicals and spare parts. Although the profit is higher, the Directors have not raised the dividend, probably because of the need to provide a larger sum for depreciation on fixed assets. Thus, the return to shareholders has been maintained at 10 per cent. (made up of a dividend of 6¼ per cent. and a bonus of 3¾ per cent.). It will be conceded by all fair-minded shareholders that a return of 10 per cent. is a decent one.

The trading profit of the Company, as already noted, shows a rise of Rs. 3.54 lakhs to Rs. 18.55 lakhs, though receipts by sales (net) show a fall from Rs. 65.56 lakhs to Rs. 64.14 lakhs. Some idea of the reduction in costs can be had from the fact that the value of raw materials and stores consumed in 1952-53 was only Rs. 22.94 lakhs, as against Rs. 25.70 lakhs in 1951-52. There was a saving of nearly a lakh of rupees in salaries, wages, etc., which aggregated Rs. 25.65 lakhs, as compared with Rs. 26.52 lakhs. Larger provision has been made for depreciation on fixed assets, the sum actually earmarked being Rs. 6.09 lakhs (this represents the full amount admissible under the Income-tax Act), as against Rs. 3.82 lakhs. In view of the higher profit, the provision for taxation is higher by Rs. 30,000 at Rs. 5.30 lakhs. After these two essential provisions, the net profit works out to a slightly lower figure of Rs. 5.05 lakhs, as against Rs. 5.16 lakhs for 1951-52. Out of this amount, a sum of Rs. 2 lakhs has been added to the rehabilitation reserve fund and of Rs. 50,000 to the general reserve. These transfers are the same as those a year ago. The 10 per cent. return to shareholders takes up Rs. 2.50 lakhs. The sum carried forward to the accounts of 1953-54 is Rs. 57,212, which is a rise of Rs. 4,897 over the sum brought in.

Financial Position

That the financial position of the Company is quite satisfactory will be evident from the following synopsis of the Company's latest balance-sheet:

Liabilities	Rs.	Assets	Rs.
Capital	25,00,000	Gross block	68,41,588
Reserves and surplus ..	16,07,512	*Less*—Depreciation ..	39,54,440
Provision for taxation.	5,65,840		
Liabilities*	39,57,375	Net block	28,87,148
		Work in progress ..	7,54,245
		Stock-in-trade ..	2,62,015
		Stores, spares, etc.	20,62,897
		Debts, deposits and advances	31,22,864
		Investments	72,700
		Cash	4,26,358
Total Rs.	86,27,727	Total Rs.	86,27,727

* Includes a loan of Rs. 15 lakhs from the Industrial Finance Corporation.

The position in respect of reserves and surplus is very comfortable, such together being equal to over 64 per cent. of the paid-up capital. The gross block has been written down by about 32.7 per cent. The current liabilities, including provision for taxation, are only a little over half of the current assets.

The implementation of the expansion programme of the Company is well under way. An indication of this is provided by the fact that, more than half of the estimated cost of this programme (Rs. 65 lakhs), Rs. 37.04 lakhs, to be precise, has already been expended. This clearly shows that the Directors are making earnest efforts to expand the Company's output, with a view to meeting the increasing demand for paper. The expansion scheme is being financed with the help of the Industrial Finance Corporation which has given the Company a loan of Rs. 50 lakhs. During the year, the Company had taken Rs. 15 lakhs out of this loan. The Company's expansion programme, it may be noted, envisages an increase in its annual rated capacity from 4,000 tons to 8,000 tons by the end of 1954.

The Rs. 10 paid-up ordinary shares of the Company are now being quoted at about Rs. 14-14 ex-div., at which rate and on the basis of a return of Re. 1 per share, the yield works out to a little over 7 per cent. free of income-tax

CANNANORE SPINNING AND WEAVING MILLS LTD.

The notable rise in the profit of the Cannanore Spinning and Weaving Mills Ltd. (Managing Agents: The Malabar Industrial Syndicate, Cannanore), witnessed in the year ended 31st March, 1952, could not be maintained in the following year, that is, the year ended 31st March, 1953. In fact, the results of the Company for the year show a setback in the profit. Thus, in distinct contrast to an increase of Rs. 2.18 lakhs to Rs. 8.55 lakhs during 1951-52, the gross profit for the year under review, at Rs. 5.94 lakhs, records a marked fall of Rs. 2.61 lakhs or about 30 per cent. After providing a somewhat smaller sum of Rs. 3.15 lakhs, as against Rs. 3.20 lakhs, for depreciation, the net profit (subject to taxation) works out to Rs. 2.65 lakhs, which is Rs. 2.11 lakhs lower than that for the previous year. It must be added here that the Directors have not provided for initial and additional depreciation.

As a result of lower profit, no addition is proposed to be made to the general reserve. Last year, it may be noted, a sum of Rs. 1.25 lakhs had been added to this account. Larger provision, however, has been made for raw material fluctuation reserve, the sum earmarked being Rs. 1.25 lakhs, as against Rs. 1.20 lakhs. But the real addition to this reserve is only Rs. 5,000, because the Directors have withdrawn the entire sum of Rs. 1.20 lakhs transferred last year and credited it to the profit and loss account for 1952-53. It is inexplicable as to why the Directors have done so. The dividend to shareholders is proposed to be maintained at the handsome rate of 12 per cent. per annum. This absorbs Rs. 1.80 lakhs. After paying a bonus of three months' earned basic wages to workers and four months' basic salary to staff, the balance (subject to taxes) is to be carried forward to the next year's accounts.

The contraction in the Company's earnings is not surprising, considering the change-over from a sellers' to a buyers' market in cotton textiles. Not only were exports at a low ebb, but the internal offtake also was not encouraging. There was a sharp fall in the value of raw material. Besides, the Company's production was, to some extent, adversely affected by cut in power supply. In order to minimise the loss, the Company installed a generator set of 180 kw. Another set of 250 kw. has been purchased at a cost of Rs. 81,975. Considering all these adverse factors, the results of the Company for the year 1952-53 must be said to be quite satisfactory.

The following table shows at a glance the salient features of the Company's results for the year under review, as compared with those for 1951-52:

(In lakhs of rupees)

	Year ended 31st March	
	1953	1952
Sales and closing stocks	57.90	64.64
Expenses†	51.71	56.15
Gross profit	5.94	8.55
Managing Agents' commission	0.35	0.60
Depreciation	3.15	3.20
Net profit (subject to taxation)	2.65	4.75
From raw material fluctuation reserve ..	1.20	Nil
To raw material fluctuation reserve ..	1.25	1.20
To general reserve	Nil	1.25
To dividend	1.80 (12%)	1.80 (12%)

† Include purchases of cotton and stores, as also value of closing stock brought in from previous year.

The following synopsis of the latest balance-sheet of the Company will give one an idea of its finances:

Liabilities	Rs.	Assets	Rs.
Capital	14,00,200	Gross block	42,85,151
Reserves	3,50,000	*Less*—Depreciation ..	15,38,023
Provision for taxation.	1,500		
Liabilities	30,46,607	Net block	27,27,128
		Stocks	15,31,877
		Stores, spares, etc. ..	2,57,472
		Debts, deposits and advances	8,56,909
		Investments	6,000
		Cash	17,850
Total Rs.	48,97,236	Total Rs.	48,97,236

MEGNA AND INDIA JUTE MILLS

The difficult trading conditions under which Indian jute companies have been operating are reflected in the financial results of the India Jute Company, Ltd., and the Megna Mills Company, Ltd., for the half-year ended 30th March, 1953. For the gross profits earned by these two Companies, which are managed by Messrs. Mackinnon, Mackenzie & Co., Ltd., Calcutta, during the half-year under review, have been generally lower than those for either of the two preceding half-years. The results for the three half-years show that, in both cases, their gross profits have successively declined. Thus the gross profit of the India Jute, which stood at Rs. 9.60 lakhs for the half-year ended 31st March, 1952, declined to Rs. 5.68 lakhs in the following half-year and still further to Rs. 5.10 lakhs in the half-year under report. Similarly, the gross profit of the Megna Mills declined during the three six-month periods from Rs. 11.55 lakhs to Rs. 10.07 lakhs and then to Rs. 5.54 lakhs. The figures reveal that the fall during the accounting period under review, has been more pronounced in the case of the Megna Mills than in the case of the India Jute. The position would have deteriorated further, but for the reduction in the export duty on sackings from Rs. 175 to Rs. 80 per ton, with effect from 1st March, 1953. The Directors, in their report to shareholders, observe that the reduction helped to prevent further deterioration of the market but did not stimulate demand for jute goods. The removal of discriminatory treatment by Pakistan in the matter of raw jute exports to India and the abolition of export duty on twines, announced on 16th July last, should, however, considerably help improve the results for the current half-year.

The continuous decline in gross profits is attributable to several handicaps suffered by the Companies in common with the other units in the industry. Although the export duty on hessian was halved on 18th February, 1952, from Rs. 1,500 to Rs. 750 per ton, and still further to Rs. 375 per ton in May, 1952, there was no significant benefit to the industry, because prices of jute goods continued to sag. The demand for jute goods was generally low and particularly poor in the case of hessian twines, one of the important products made by both the Companies. During the half-year under review, Dundee was short of hessian yarn, but the Companies could not take advantage of it, as the export duty of Rs. 175 per ton drove Dundee to the Continental mills. The demand thus being poor, the Companies had to close down a part of their machinery and restrict production. Business in sacking remained unprofitable throughout.

Despite the fall in the profits, both the Companies have decided to maintain the dividend at the nominal level of 5 per cent. per annum, a rate which is being repeated since the half-year ended 30th September, 1951, for which half-year it was only at 2½ per cent. per annum. Even this dividend would not have been possible but for the Managing Agents waiving a sizable part of the commission due to them, as will be shown presently.

The following table brings out the main features of India Jute's results for the half-year under review as compared with those of the preceding half years:

India Jute Co., Ltd.

(In lakhs of rupees)

	For the half-year ended			
	31-3-1953	30-9-1952	31-3-1952	30-9-51
Sale proceeds ..	103.97	157.93	220.90	253.43
Stocks of manufactured goods	8.12	4.73	20.03	27.74
Expenses	97.25	138.09	203.70	275.77

	(5% p.a.)	(5% p.a.)	(5% p.a.)	(2½% p.a.)
Carry forward	0.55	0.74	1.43	0.33

Out of the commission of Rs. 2.70 lakhs due to them, the Managing Agents have waived Rs. 75,000 in order to assist the finances of the Company.

In the case of the Megna Mills also, the Managing Agents have waived a sum of Rs. 75,000 out of the commission of Rs. 2.95 lakhs due to them. The following table shows at a glance the particulars of the Company's results for the half-year under review against the background of those for the three preceding half-years:

Megna Mills Co., Ltd.

(In lakhs of rupees)

	For the half-year ended			
	30-1-1953	30-9-1952	31-3-1952	30-9-1951
Sale proceeds ..	112.00	176.03	237.89	252.01

To other provisions ..	0.32	0.10	0.16	0.18
Dividend	2.04	2.04	2.04	1.02
	(5% p.a.)	(5% p.a.)	(5% p.a.)	(2½% p.a.)
Carry forward	0.23	1.18	1.02	0.29

The ordinary shares of India Jute (Rs. 125 each) are at present quoted at Rs. 120. At this rate the latest dividend gives a yield of 5.2 per cent. The Rs. 100 ordinary shares of Megna Mills are quoted at about Rs. 91 per share. The yield calculated on the basis of the latest dividend works out to 5.5 per cent. per annum.

AMERICAN CAPITALISM

American capitalism, through group ownership of corporations, differs from the Communist and Fascist economic systems, as well as from the old-style capitalism's control by comparatively few wealthy individuals. About 6,500,000 persons, through investment of their savings in stock, share in the ownership of U.S. business and industry. These American "capitalists" represent a cross-section of the United States—farmers, workers, teachers, business and professional men. United States insurance companies, for example, have invested $29,000 million in commercial enterprises. This represents the individual contributions of 86 million American insurance policy holders.

Approximately 4,000,000 firms and corporations contribute to the nation's economic life. Business organisations have become bigger, but there are more businesses and more owners. A 1952 report of the National City Bank of New York City showed that assets of the 100 largest U.S. manufacturing corporations aggregated more than $60,000 million. Owners of these companies actually outnumbered their employees. And this report did not include the American Telephone and Telegraph Company, which has more than a million owners, or the Metropolitan Life Insurance Company with over $10,000 million in assets and more than 33 million policyholders.

DIVIDEND LEVEL OF ORISSA MINERALS STEPPED UP

SIX-FOLD INCREASE IN GROSS PROFIT

IN the stock markets, it is always pleasant to turn to a scrip which has steadily appreciated in value. One of these is the shares of the Orissa Minerals Development Company, Ltd. (Managing Agents: Bird & Co., Ltd., Calcutta) which have moved up, over a period of 12 months, by 11 points to Rs. 35-12. That this scrip merits the attention which it has received from the investors will be evident from the fact that, during the six months ended 31st December, 1952, the latest period for which the Directors' report and statement of accounts are available, the sale proceeds of the Company at Rs. 72.30 lakhs have, as compared with the previous half-year, more than doubled, while the gross profit at Rs. 24.01 lakhs shows nearly a sixfold increase. The shareholders participate in this prosperity by way of an increase in dividend from 30 per cent. (per annum) for half-year ended 30th June, 1952, to 40 per cent. (per annum) for the half-year under review. This 35-year old company, as the Directors point out, with justifiable pride, holds a "unique position" in Orissa, where it is one of the few pioneer companies to prospect and develop iron ore and manganese ore. It holds long-term mining leases for exploiting properties, covering an area of 50 square miles in the Keonjhar District (Orissa), E.I.R., which have deposits of manganese ore, manganese dioxide and iron ore.

The improvement in trading profit is agreeably surprising, for the Directors had struck a cautious note in their previous reports emphasising the growing competition in the market for manganese ore and manganese dioxide, especially the lower grade ores. No difficulty, we are told at the time the report for the half-year ended 30th June, 1952, was presented, was being experienced in respect of the highest grades for manganese ore, and manganese dioxide and iron ore, though there were indications of "lessening demand" and of "severe competition" in these two commodities. Apparently, these conditions, did not turn out to be so serious as to affect the fortunes of the Company.

The following table compares the raisings and despatches of iron ore, manganese and manganese dioxide during the four half-years ended 31st December, 1952:—

(In tons)

For half-year ended	Raisings	Despatches
Iron ore—		
31-12-1952	2,14,378	1,58,490
30-6-1952	3,09,359	2,85,693
31-12-1951	4,30,264	4,27,433
30-6-1951	2,62,787	2,83,986
Manganese ore—		
31-12-1952	25,909	23,979
30-6-1952	..	12,491
31-12-1951	..	2,214
30-6-1951	..	1,705
Manganese dioxide—		
31-12-1952	1,977	4,475
30-6-1952	..	1,527
31-12-1951	..	609
30-6-1951	..	1,194

The table above shows that, while despatches of manganese ore and manganese dioxide have improved, those of iron ore have fallen. The Directors attribute this decline to "reductions in the requirements of the indigenous steel works." Exports of iron ore also declined from 51,013 tons to 33,060 tons. This reduction, we are told, is due to restrictions on wagons imposed by the railways.

It is gratifying to note that, while the sale proceeds have improved from Rs. 34.81 lakhs during the half-year ended 30th June, 1952, to Rs. 72.31 lakhs in the following half-year, expenditure has recorded a less proportionate increase from Rs. 30.54 lakhs to Rs. 48.29 lakhs. The trading profit, therefore, has recorded a sharp rise. It must, however, be added here that this increase in turnover and profit is due partly to the improvement in sales and partly to the fact that the Company has taken over the export work, which was formerly done by the subsidiary company, the Eastern Shipping Syndicate. The Company's share of the profit from the Syndicate in the half-year under review was, therefore, only Rs. 9,118, as against Rs. 9.43 lakhs in the previous half-year. The profit, which would normally have occurred in the accounts of this Syndicate, is now reflected in the parent Company's profit and loss account.

The following table gives a bird's-eye view of the progress of the Company over the four half-years ended 31st December, 1952:—

(In lakhs of rupees)

	For half-year ended			
	31-12-52	30-6-52	31-12-51	30-6-51
Sale proceeds	72 30	34 81	45 07	32 83
Expenditure	48 29	30 54	40 79	30 13
Gross profit	24 01	4 27	4 27	2 70
Other income	0 33	9 81	2 03	1 77
Provision for :				
Managing Agents' commission	2 82	1 26	0 50	0 37
Depreciation	0 84	1 23	0 50	0 50
Taxation	10 00	5 53	2 60	1 51
Net profit	10 85	5 91	1 94	1 83
Transfer to :				
General reserve	2 90	1 00	..	0 10
Mechanisation reserve	2 00	1 50	0 75	0 75
Building reserve	2 50	1 00	0 25	0 20
Other reserves	0 50	0 50		
Dividend	2 00	1 50	0 75	0 50
	(20%)	(15%)	(7½%)	(5%)
Carry forward	1 23	0 74	0 45	0 37

It will be seen from the table above that the net profit, after meeting depreciation, Managing Agents' commission and providing for taxation, is considerably higher at Rs. 10.85 lakhs, as against Rs. 5.91 lakhs in the previous half-year and only Rs. 1.94 lakhs in the corresponding half-year in 1951. The Directors have wisely decided to conserve the major portion of the profit. Thus out of the total net profit of Rs. 10.85 lakhs, no less than Rs. 7.90 lakhs have been ploughed back, the dividend absorbing only Rs. 2 lakhs or less than 20 per cent. of the profit. That all the appropriations to the various reserves, as well as the enhanced dividend, have been fully earned is evident from the fact that the amount carried forward is about Rs. 50,000 more than the sum brought in.

The financial position of the Company is strong and excellent, as will be seen from the following summary of the latest balance-sheet as at 31st December, 1952:—

Liabilities	Rs.	Assets	Rs.
Capital ..	10,00,000	Gross block ..	32,94,109
Reserves and surpluses ..	26,97,421	*Less*—Depreciation ..	19,37,654
Liabilities ..	59,25,221	Net block ..	13,56,455
		Work-in-progress ..	49,138
		Stores ..	4,08,011
		Stock-in-trade	9,88,115
		Debts, deposits and advances ..	33,80,324
		Investments	31,41,509
		Cash ..	2,99,090
Total Rs.	96,22,642	Total Rs.	96,22,642

The salient features of the Company's finances are: The paid-up capital is relatively small as compared with its earnings so that its dividend-paying capacity is high. This is, of course, the result of large reserves held by the Company, reflecting the judicious financial policy of the management. Liabilities are covered by current assets by a wide margin. The fixed assets seem to have been adequately depreciated. The liquidity of current assets is of a high degree; apart from the comfortable cash position, the investments include Rs. 16.16 lakhs in Gilt-edged securities and Rs. 10 lakhs in fixed deposits in the banks. The break-up value of the shares works out to Rs. 36.97 per share of Rs. 10 each which must be regarded as quite satisfactory, even after making allowance for the fact that the Company's fixed assets are of a wasting nature.

In assessing the prospects for the Company, one must bear in mind the Directors' observations that, although the demand for manganese ore, manganese dioxide and iron ore has continued to be "good" during the half-year under review, there are "very definite" indications of growing competition from other parts of the world and that such "increasing competition will bring about a reduction in the prices obtainable." Among the ores, which the Company mines, there is a good demand for iron ore for export. But the Directors warn that "it is problematical whether this will continue indefinitely, particularly the demand from Europe." So far as manganese ore is concerned, India enjoys the distinction of being one of the few countries which are well endowed by nature with ample reserves of this ore. But this is a strategic commodity. With the decline in re-armament activity, its prices might conceivably decline. Also, Russia is now arranging a series of barter deals with important European countries trying to exchange its manganese ore, among other commodities, for textile and other consumer goods. These deals, when they are concluded, might mean a slight decline in the demand for the Indian ore. Even so, it should be possible to find remunerative markets for high grade ores of all varieties which the Company mines successfully every year. The Rs. 10 paid-up ordinary shares of the Company are being quoted at Rs. 35-12 at the time of writing, to give a yield of 11 per cent. per annum, free of income-tax.

Points From The Chair

Outlook for Dictaphones

"WE have been enjoying for some time a sellers' market and, since the beginning of the present year it has been brought home to us that we are no longer enjoying this condition but our objective has not changed and our objective is the business of rendering a service to individuals, corporations, institutions and Governments who, through the use of Dictaphone dictating machines, can double their capacity to get things done. This friend of mine, when I gave him the interpretation of our business, said: 'Well, I have greater respect for you now—more than I would have had if you had told me your business was making dictating machines.' Ours is a human relations activity and I say to you that a sound business engagement is the result of vision, enterprise and service, and those factors are the products of the heart and not of the market-place. Industry has been influenced by individuals who believed that they could go and buy loyalty, buy brilliancy, buy this, that. But enduring business enterprise is not built up that way. You cannot purchase it. You cannot pick a successful organisation out of a hat. A good organisation depends on the product, an understandable operating programme, an organisation that believes, and the spiritual qualities which we must cherish and preserve."

C. KING WOODBRIDGE,
Dictaphone Company Ltd.

Detention of Vessels

"During the year under review, the Governments of India and Pakistan both introduced a system of passports, which resulted in a considerable hold-up of vessels at border check points, and has adversely affected the number of passengers carried by your Company. Detentions at frontier points for Customs examinations have also added enormously to the turn-round time of vessels, and I am glad to say that the United Nations Organisation has also drawn attention to these delays and that they, in consultation with the respective Governments, are now considering how they can be overcome. I have every hope that the outcome will be satisfactory and will enable the Company's vessels to proceed without the existing delays. Various trade agreements between India and Pakistan were concluded during the year under review, and the agreement, which was due to expire on the 30th June last has been extended to 30th September, 1953, pending the completion of negotiations for a new agreement. The existing agreement covers only a limited range of goods and it is greatly to be hoped that the new one will cover a much wider field. I am pleased to advise that our relations with the Governments of India and Pakistan continue to be on a friendly basis. It is satisfactory that meetings are taking place in a friendly atmosphere between the leaders of the two Countries, and I hope that as a result a settlement of outstanding disputes will be achieved, as it is only under the influence of friendly relationships between India and Pakistan that we can look for an era of satisfactory trading."

A. L. B. TUCKER,
India General Navigation and Railway Co., Ltd.

Competition in Business

"Any consideration of the immediate prospects of the group must have regard to the changed atmosphere of trading. The decline in new business, which was evident in the closing months of the year, has continued and, with the working-off of the backlog of orders, has particularly affected the production level of those departments manufacturing our gunmetal valves and iron cocks. There is also no doubt that a more competitive period lies ahead in the home and overseas markets. The keener conditions, which have been existing since the end of 1952, are affecting profit margins and shareholders must, therefore, expect that it will be increasingly difficult to maintain the past high level of earnings of the group. It is important that the advantage of the much freer availability of our raw materials at prices competitive with world prices must not be jeopardised by any further increase in wages which are not accompanied by increased effort or output and by increases in the cost of services, particularly those for fuel and transport."

N. P. NEWMAN,
Newman, Hender & Co., Ltd.

Conditions in Building Industry

"Stockholders have no doubt noted the sound financial position which is essential to the Board's policy of losing no favourable opportunity of adding to the Company's reserves of ballast-bearing lands. It must be explained that the securing of adequate land replacement is an ever present problem, but it has become more difficult to make the longer-term provisions since the Town and Country Planning Act of 1947. This Act not unreasonably gives the right to various authorities to object to the development of land in any manner which might adversely affect their several interests, and, as a consequence, development of land for ballast extraction becomes restricted or subject to many conditions which now include reinstatement for some useful purpose."

H. W. WILKINSON,
Thames Grit and Aggregates, Ltd.

PROFITS OF MYSORE SPINNING LOWER

MCLEOD GROUP TEA COMPANIES REPORT SET-BACK IN RESULTS

Mysore Spinning and Manufacturing Co., Ltd.

THE directors of the above Company (Managing Agents: Messrs. N. Sirur & Co., Ltd., Bombay) submit the audited accounts of the Company for the year ended 28th February, 1953.

The result of the Company's operations during the year shows a profit of Rs. 6,51,512 (Rs. 8,20,434) which with Rs. 38,347 (Rs. 33,801) brought forward from the previous year's account and with Rs. 4,527 (nil) being surplus of provision made for bonus to staff in the years 1941 to 1945 written back makes a total of Rs. 6,74,417 (Rs. 8,54,235). From this sum the directors have declared an ad-interim dividend of Rs. 3 (Rs. 4 including Re. 1 bonus) per share on 39,736 ordinary shares, absorbing Rs. 1,19,208 (Rs. 1,58,944), and an ad-interim dividend of Re. 1-2 (Re. 1-2) per share (less income-tax) on 14,901 4½ per cent. cumulative preference shares, absorbing Rs. 16,764 (Rs. 16,764). The directors have allocated to provision for taxation Rs. 92,600 (Rs. 2,35,000), reserve fund Rs. 9,332 (nil) and machinery rehabilitation reserve fund Rs. 1,00,000 (Rs. 1,50,000), leaving a balance of Rs. 3,37,113 (Rs. 2,93,527). The directors propose to dispose of this amount as under:—

Payment of a final dividend of Rs. 3 (Rs. 3) per share and a bonus of Rs. 4 (Rs. 3) per share for the year on 39,736 ordinary shares of Rs. 50 each, (making a total of Rs. 10 (Rs. 10) per ordinary share for the year or 20 (20) per cent. per annum) Rs. 2,78,152 (Rs. 2,38,416) and a final dividend of Re. 1-2 (Re. 1-2) per share (less income-tax) on 14,901 4½ per cent. cumulative preference shares Rs. 16,764 (Rs. 16,764) leaving to be carried forward to next year's account Rs. 42,197 (Rs. 38,347).

A sum of Rs. 1,15,667 has been transferred from labour colony fund to reserve fund. This sum represents the cost of labour quarters constructed since the creation of the labour colony fund in 1943-44 upto the close of the year under report.

The fall in the profits during the year under report is due mainly to the sudden slump which set in about March, 1952. After the bulk of the cotton quotas had been purchased at ceiling rates the prices of the raw material declined precipitously and Government at once slashed down the prices of yarn and cloth with the result that for quite a long time goods manufactured out of high priced cottons had to be sold at considerable losses. It was only when Government, realising the gravity of the situation, relaxed the export controls on cloth that the mills could sell some of their manufactures at better margins in the overseas markets.

The Mill property and stocks are insured for the sum of Rs. 3,16,04,015 (Rs. 3,06,05,590) and the profits and standing charges for Rs. 40,00,000 (Rs. 45,00,000) for 24 months' benefit, that is Rs. 20,00,000 (Rs. 22,50,000) annually.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	22,36,660	Block ...	33,78,659
Reserves ...	66,50,092	Stock-in-trade	65,39,592
Provision for taxation ..	2,94,388	Stores, spare parts, etc.	14,84,625
Liabilities ...	70,75,127	Debts, deposits and advances ...	17,35,664
Profit and loss account ..	3,37,113	Investments	33,50,700
		Cash ...	1,03,950
Rs.	1,65,93,280	Rs.	1,65,93,280

Sungma Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. McLeod & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st December, 1952.

The season's working resulted in a loss, before providing for depreciation, of Rs. 3,04,072 (profit of Rs. 38,327) to which was added adjustments in respect of seasons 1948 and 1951 Rs. 25,000 (credit of Rs. 2,564) and depreciation for 1952 Rs. 21,428 (Rs. 26,605) making a total of Rs. 3,50,500 (Rs. 13,377). From this amount was deducted provision for taxation over provided in previous years now written back Rs. 7,476 (nil) and balance of profit brought forward from 1951 Rs. 19,301 (Rs. 5,924) leaving a balance at debit of profit and loss account to be carried forward to 1953 of Rs. 3,23,732 (credit of Rs. 19,301).

The saleable crop from Sungma and Turzum Estates weighed out at 3,868 (5,124) maunds against an estimate of 5,300 (5,300) maunds and was disposed of at an average price of As. 27.65 (As. 32.47) per lb. The estimate for season 1953 provides for a saleable crop of 4,590 maunds at an all-in cost of Rs. 6,23,217.

The results were disappointing. The huge drop in crop due mainly to unfavourable climatic conditions and a fall of nearly As. 5 per lb. in the average prices realised as compared with the previous season have contributed to this result.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	6,25,000	Block ...	9,59,793
Reserves ...	5,74,510	Stock of tea	1,48,212
Liabilities ...	8,24,268	Stores, etc. ...	4,71,540
		Debts, deposits and advances ...	1,17,383
		Investments	2,818
		Cash ...	300
		Profit and loss account ...	3,23,732
Rs.	20,23,778	Rs.	20,23,778

Baghmari Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. McLeod & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st December, 1952.

The season's working resulted in a loss, before providing for depreciation, of Rs. 79,334 (loss of Rs. 6,819) to which amount was added adjustments in respect of season 1951 Rs. 10,219 (Rs. 10,680), depreciation for 1952 Rs. 81,910 (Rs. 78,792), and loss brought forward from 1951 Rs. 89,152 (profit of Rs. 5,857) making a total of Rs. 2,60,615 (Rs. 89,152), from this sum was deducted provision for taxation over provided in previous years now written back Rs. 1,705 (nil) leaving a balance at debit of profit and loss account to be carried forward to 1953 of Rs. 2,58,910 (debit of Rs. 89,152).

The saleable crop weighed out at 9,946 (7,861) maunds against an estimate of 10,000 (9,850) maunds and was disposed of at an average price of As. 20.16 (As. 24.21) per lb. The estimate for season 1953 provides for a saleable crop of 9,000 maunds at an all-in cost of Rs. 8,84,890. The substantial drop in the market value of the tea has resulted in a heavy loss being incurred.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	5,50,000	Block ...	10,66,743
Reserves ...	7,21,416	Stock of tea	4,56,027
Liabilities ...	11,10,939	Stores, etc.	4,50,135
		Debts, deposits and advances ...	1,44,204
		Investments	1,107
		Cash ...	25,229
		Profit and loss account ...	2,58,910
Rs.	23,82,355	Rs.	23,82,355

Ranicherra Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. McLeod & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st December, 1952.

The season's working resulted in a loss, before providing for depreciation, of Rs. 4,41,193 (profit of Rs. 1,12,254) to which was added depreciation for the year 1952 Rs. 1,69,475 (Rs. 73,332) making a total of Rs. 610,668 (Rs. 24,599). From this amount was deducted adjustments in respect of season 1951 Rs. 13,006 (Rs. 19,042), claim on lorry Rs. 2,948 (nil) and balance of profit brought forward from 1951 Rs. 20,652 (Rs. 5,803), leaving a balance at debit of profit and loss account to be carried forward to 1953 Rs. 5,74,064 (credit of Rs. 20,652 after making provision for reserves).

The saleable crop weighed out at 12,851 (13,829) maunds against an estimate of 14,435 maunds and was disposed of at an average price of As. 17.74 (As. 24.90) per lb. The estimate for season 1953 provides for a saleable crop of 12,210 maunds at an all-in cost of Rs. 10,65,324.

The results are disappointing. The substantial drop in crop due mainly to unfavourable climatic conditions and a fall of over As. 7 per lb. in the average prices realised, as compared with the previous season, have contributed to this result.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	7,65,000	Block ...	11,31,793
Reserves ...	4,43,433	Stock of tea	5,23,881
Provision for taxation ...	9,184	Stores, etc. ...	4,43,406
Liabilities ...	16,99,892	Debts, deposits and advances ...	2,35,019
		Investments	2,113
		Cash ...	6,938
		Profit and loss account ...	5,74,064
Rs.	29,17,514	Rs.	29,17,514

Margaret's Hope Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. McLeod & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st December, 1952.

The season's working resulted in a profit, before providing for depreciation, of Rs. 1,715 (Rs. 84,575) to which was added adjustments in respect of season 1951 Rs. 4,345 (debit Rs. 5,711) and balance of profit brought forward from 1951 Rs. 17,311 (Rs. 1,271) making a total of Rs. 23,371 (Rs. 65,932). From this amount was deducted depreciation for the year 1952 Rs. 20,082 (Rs. 21,927) leaving a balance at credit of profit and loss account of Rs. 3,289 (Rs. 44,005) to be carried forward to 1953.

The saleable crop weighed out at 4,893 (4,117) maunds against an estimate of 4,960 (4,960) maunds and was disposed of at an average price of As. 30.12 (As. 35.40) per lb.

The estimate for season 1953 provides for a saleable crop of 4,960 maunds at an all-in cost of Rs. 6,04,347.

The results were not satisfactory. The huge drop in the prices realised in 1952, as compared with the previous season, has adversely affected the trading results.

Tirribannah Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. McLeod & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st December, 1952.

The season's working resulted in a loss, before providing for depreciation of Rs. 1,35,159 (profit of Rs. 82,002) to which was added adjustments in respect of season 1951 Rs. 5,239 (Rs. 3,993) and depreciation for the year 1952 Rs. 42,457 (Rs. 81,239) making a total of Rs. 1,82,855 (credit of Rs. 42,478). From this sum was deducted the balance of profit brought forward from 1951 of Rs. 11,494 (credit of Rs. 9,804) leaving a balance at debit of profit and loss account to be carried forward to 1952 Rs. 1,71,361 (credit of Rs. 11,494 after payment of ordinary and preference dividends and transfer to general reserve).

The saleable crop weighed out at 6,182 (6,580) maunds against an estimate of 7,500 (7,300) maunds and was disposed of at an average price of As. 18.72 (As. 25.30) per lb.

The estimate for season 1953 provides for a saleable crop of 6,250 maunds at an all-in cost of Rs. 5,50,595.

The results were not satisfactory. The substantial drop in crop due mainly to unfavourable climatic conditions and a fall of over As. 6 per lb. in the average prices realised, as compared with the previous season, have contributed to this result.

Accounts in brief were as under:—

Bhagalpur Electric Supply Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Octavius Steel & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December, 1952.

The revenue account shows a profit on the year's working of Rs. 1,85,249 (Rs. 1,82,918) after deducting arrears of depreciation Rs. 9,330 (Rs. 9,353), bonus to staff Rs. 10,600 (Rs. 11,278), contribution to Vallabhbhai Patel national memorial fund Rs. 181 (nil), provision for gratuity to resident engineer Rs. 3,000 (nil), provision for taxation Rs. 35,600 (Rs. 52,500), reserve for deferred taxation Rs. 22,000 (Rs. 23,000) and appropriations under the Electricity (Supply) Act, 1948 Rs. 11,564 (Rs. 26,660) there is a net profit for the year of Rs. 92,954 (Rs. 57,604). This profit added to the credit balance of Rs. 15,879 (Rs. 14,476) brought forward from the previous year and an excess profits tax post-war refund of Rs. 860 (nil) results in a credit balance on profit and loss account of Rs. 1,09,694 (Rs. 72,079) which the directors recommend be disposed of as follows:—

Payment of a dividend of As. 8 (As. 10) per share for 1952 without any deduction of income-tax payable by the Company Rs. 36,960 (Rs. 46,200), transfer to general reserve Rs. 30,000 (Rs. 10,000) and carry forward Rs. 42,734 (Rs. 15,879).

A continuous supply of electricity was maintained throughout the year, and an increase of approximately 10 per cent. in the number of units sold was recorded as compared with the previous year. The number of units of electricity sold during the year was 35,41,862, as compared with 32,03,745 in 1951 and 27,62,334 in 1950.

The number of consumers connected to the Company's system at the close of the year was 2,984 with a connected load of 3,551 kw., as compared with 2,756 with a connected load of 3,250 kw. at the close of the previous year.

The directors report, that the order for a new 720 kw. generating set required to meet the additional demand on the Company's system, and mention of which was made in the last report, has been cancelled. This step had reluctantly to be taken as the necessary finance for the purchase of the unit was not forthcoming, the reason being that the restrictive nature of the Elecricity (Supply) Act, 1948, made it impossible for the Company to offer terms sufficiently attractive to interest prospective investors. No further substantial expansion of the undertaking can consequently be expected unless and until the above Act is so amended as to enable a fresh appeal to be made under more favourable circumstances. Meanwhile the directors have recommended a dividend of As. 8 per share for 1952 as compared with the 1951 dividend of As. 10 per share in order that, as far as possible, funds may be conserved for the purchase of new equipment.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	5,91,485	Block ...	8,96,640
Reserves ...	4,95,184	Stores ...	3,34,931
Provision for taxation ...	83,979	Debts, deposits and advances ...	2,87,879
Liabilities ...	3,25,926	Investments	19,095
Profit and loss account ...	1,09,693	Cash ...	67,722
Rs.	16,06,267	Rs.	16,06,267

India General Navigation and Railway Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Kilburn & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December, 1952.

The result of the year's working, after providing for all revenue expenditure and depreciation, is a profit of £126,124, compared with a profit of £20,344 for the previous year. Including the balance of £9,761 (£4,791) brought forward from 1951, and a credit of £33,310 in respect of over-provisions made in previous years, the amount available in the appropriation account is £169,195 (£25,135), from which the following transfers have been made to fleet reserve £100,000 (nil) and contingency reserve £29,942 (nil). The directors recommended the following dividends:—

On the cumulative preference stock 6 (12) per cent. (Net) £8,053 (£15,374 for two years 1950 and 1951) and on the ordinary stock 5 (nil) per cent. (Net) £18,028 (nil) leaving to be carried forward £13,172 (£9,761).

As an interim-dividend of 3 per cent. was paid on the preference stock in April last, there will remain 3 per cent. to be distributed on that stock. No interim-dividend was paid in respect of the ordinary stock. The transfer, of £29,942 to contingency reserve is to meet a loss which has arisen in a settlement of railway through traffic transactions dating back over several years and which will be adjusted during the current year. With regard to depreciation, the directors have followed the procedure of the past two years and so far as the fleet is concerned, the provision made has generally been allocated to the more modern and expensive units. Depreciation at the normal rates has been provided in respect of the immovable block and motor vehicles. In view of the continued very high cost of replacements to the fleet, the Board deem it prudent to transfer the sum of £100,000 to the fleet reserve. Owing to losses carried forward from previous years no further provision for taxation is necessary.

As advised in the last report, the second of the powerful tugs went into commission during the year, together with five of the deep sea barges, leaving one barge, which is at present under construction, to complete this portion of the rebuilding programme. The directors are pleased to advise that these vessels are proving most useful additions to the fleet.

During the latter part of the year 1951, an Expert Working Group on Inland Water Transport, associated with the Economic Commission for Asia and the Far East, under the auspices of the United Nations Organisation, toured the Asian, European and American Continents to examine I.W.T. operations. Representatives of the Company accompanied this Commission.

The Company has during February of this year carried out extensive Towing Trials with the object of obtaining up-to-date data as to the best methods of towage and craft design. These trials were attended by representatives of the Governments of India and Pakistan, together with those of other Governments interested in I.W.T. problems, and of Messrs. William Denny & Bros., Ltd., of Dumbarton, Scotland, who have designed and built many of the vessels in your Fleet. I am pleased to say that these trials were most successful and have provided all concerned with much valuable information.

With regard to prospects for the current year, the directors regret that, having regard to the difficulties which have already been referred and to the economic depression which at present overshadows both India and Pakistan, earnings to date have shown a most serious decline and it is feared a loss on the year's workings is inevitable.

The chief items of carriage by the Company are jute and tea. With regard to the former, the crop for the current year is estimated to be considerably less than for the previous year, which also applies to the tea crop. As is generally known, the tea industry passed through a crisis last year, with the result that gardens are purchasing only the absolute minimum of stores, etc., and this policy, of course, very materially reduces the upward carriage of your Company. There has, however, been a considerable improvement in the tea market since the beginning of the year and when more funds become available from the sale of the new crop we may expect increased traffic to the tea gardens. In the meantime the managements, both in India and Pakistan, are taking steps to curtail expenditure wherever possible.

The cost of coal, which is controlled by Government, is of course a serious matter for the Company and will, I trust, be substantially reduced.

In conclusion, the directors would like to convey to the managements and to the staff in both India and Pakistan their appreciation of and thanks for the valuable services throughout the past year.

Accounts in brief are as under:—

BOMBAY STEAM NAVIGATION CO., (1953) LTD. (First Director: Mr. Shantikumar N. Morarjee.) Business: To Purchase, Charter, Hire, Build or Otherwise Acquire, Steam and Other Ships for purpose of Transporting Passengers, Mails, Troops, etc. Authorised capital: Rs. 50,00,000. Private company. Address: "Scindia House," Dougall Road, Ballard Pier, Fort, Bombay.

VERMA AND RANADE LTD. (First Director: Mr. S. Y. Ranade.) Business: Builders, Contractors, Electricians, Merchants, Manufacturers of Bricks, etc. Authorised capital: Rs. 5,00,000. Private company. Address: "Janmabhoomi Chambers," Fort Street, Bombay, 1.

QUESTION HOUR IN PARLIAMENT

Cases of Concealed Income

SO far as the cases disposed of by the Income-tax Investigation Commission from 1st January, 1952, are concerned, the highest amounts of concealment in the case of an individual, a firm and a company are Rs. 16,05,540, Rs. 89,96,722 and Rs. 59,74,714, respectively. Figures of individual cases of concealment in respect of voluntary disclosures and concealments found out by Income-tax officers in the course of normal assessment are not available. The collection of this information will involve a very large amount of time and labour not likely to be commensurate with the result aimed at.

—*Finance Minister*

Locust Control

It is estimated that the Government of India will spend about Rs. 9 lakhs on the Locust Warning Organisation and Rs. 14 lakhs on the co-ordinated locust control scheme in scheduled desert breeding areas of Rajasthan, Saurashtra, Bombay, Kutch and P.E.P.S.U., during the current financial year. The latter amount will be subsequently recovered from the beneficiary States on an agreed basis. The vulnerable States have their own anti-locust organisations to fight the locust menace in their respective cultivated areas. They also contribute towards the co-ordinated anti-locust scheme sponsored by the Central Government.

—*Deputy Food Minister*

Loans for Fertiliser Purchase

The Government of India has advanced a sum of Rs. 480.87 lakhs as short-term loans to States for the purchase and distribution of fertilisers during 1953-54.

• • • •

Tubewells in U.P.

The Five-year Plan of U.P. originally provided for the construction of only 1,000 tubewells. But, on subsequent representation of the U.P. Government, the number was increased to 2,000 tubewells, subject to T.C.A. assistance being made available. The programme for the construction of 1,275 tubewells under the T.C.A. projects and of 260 tubewells under the State scheme has already been approved by the Government of India and it is scheduled to be completed within the period of the Five-year Plan. The construction of the remaining 465 tubewells will depend upon further programmes being taken up under foreign aid during the Plan period.

—*Food and Agriculture Minister*

Unemployment in India

The report of the National Sample Survey on unemployment in India is expected to be available by February 1954. The Planning Commission has instituted enquiries through the National Sample Survey. A preliminary survey into unemployment in 18 towns excluding the four cities of Bombay, Calcutta, Madras and Delhi will start by the end of September. A sample enquiry into unemployment in Delhi, based on the live register of employment exchanges, will begin in a few days. An intensive enquiry on employment has already begun, in the Calcutta area, on the basis of 4,000 households. A proposal is also under examination for a study of the unemployment problem in Travancore-Cochin. One of the items on which information is sought through the Sample Survey is the expected income of the individual and his actual income. This will give some idea about the extent of unemployment. The survey is confined to urban areas as unemployment is more there than in rural areas. For immediate relief to the unemployed, the National Extension Service will provide employment to about 84,000 persons, while the rural teaching programme will absorb another 80,000. The cottage industries and other development projects will also provide additional employment.

—*Deputy Minister for Planning*

Foreign Investments in India

Foreign residents sold or liquidated business in India to the extent of about Rs. 15.84 crores during July, 1947, to March, 1953, while during the same period foreign investments in India amounted to about Rs. 8.26 crores. Of the business liquidated by foreign residents, manufacturing industries accounted for Rs. 117 lakhs, trading concerns for Rs. 98 lakhs, electricity supply utilities for Rs. 503 lakhs, mining and transport for Rs. 18 lakhs each, plantations for Rs. 265 lakhs, engineering for Rs. 20 lakhs and managing agencies for Rs. 531 lakhs. Of the Rs. 8.26 crores invested in India, Rs. 6.93 crores were from the United Kingdom, Rs. 7.87 lakhs from the United States, Rs. 16 lakhs from Canada, Rs. 66 lakhs from Switzerland and about Rs. 42 lakhs from other countries.

• • • •

Unauthorised Imports

The value of properties confiscated by the Customs authorities for unauthorised imports during 1952-53 was approximately Rs. 1,69,27,000. The amount of fines recovered in lieu of confiscation was about Rs. 37,38,000. In addition, personal penalties amounting to nearly Rs. 1,50,000 were recovered. The amount realised from the sale of confiscated goods was roughly Rs. 30,54,000.

• • • •

Corporations Assessed for Income-tax

The number of State trading firms and corporations under the Government of India that had paid, or had been assessed for income-tax for 1952-53 was only two. The total amount of capital invested by the Government of India in the two corporations is Rs. 2,46,70,000. Interest is not payable on share capital and no interest has been charged from the two corporations in question on the capital invested in them.

—*Deputy Minister for Finance*

MONEY LISTLESS

(From Our Own Correspondent)

BOMBAY, 2nd *September*

The short-term money market presented a holiday atmosphere during the week under review. The banks and the principal markets remained closed on the 1st and the 2nd inst., owing to *Janmashtami* and Parsi New Year, respectively. There were, therefore, no new developments in the market. The trend was distinctly easy. The supply of floating funds increased while borrowers were scarce. The call money rate among Exchange banks and big Indian banks remained unaltered at 1 per cent. The rate for renewals too was unchanged at 1¼ per cent. The call rate among small Indian banks moved between 2¼ per cent. and 2 per cent. There were few bidders for short-term deposits from 1 to 2 months, the rate for which continued to stand at 2 per cent. Three months' money was on offer at 2¼ per cent. The quotation for house money was 2 per cent. Owing to the bank holidays, there was no sale of treasury bills. As reported last week, tenders for Rs. 1.5 crores worth of these bills have been invited on 7th September next.

The consolidated statement of the position of Scheduled banks for the week ended 21st August, 1953, reveals a marked improvement of Rs. 5.32 crores in demand deposits, as against a sharp drop of Rs. 7.5 crores in the previous week. Time deposits which had risen by Rs. 21.21 lakhs a week before have, on the contrary, declined by Rs. 1.58 crores. Borrowings from banks were better by Rs. 19.72 lakhs, while those from the Reserve Bank registered a fall of Rs. 34 lakhs. A fall of Rs. 47 lakhs is also seen in the borrowings from the Imperial Bank. On the assets side, advances have declined further, this time by Rs. 2.64 crores, as against Rs. 5.4 crores in the previous week. Inland bills purchased and discounted too have fallen but by Rs. 1.44 crores only. A minor rise of Rs. 40 lakhs is seen in investments. But cash on hand and the balances with the Reserve Bank have together gone up by Rs. 4.34 crores.

With broadened enquiries for short-dated loans, the Gilt-edged market was comparatively more active this week. Most of the loans have registered an increase of one anna in their quotations on balance. On some buying but mostly on bear covering, 3 per cent. 1986 Conversion loan improved by As. 5 to Rs. 82-4. The demand for the loan has increased in view of the approaching date of interest payment on the 16th inst. Among other 3 per cent. loans, 1958 and 1959-61 have risen by an anna to Rs. 98-2 and Rs. 96-2 respectively. 1963-65 and 1964 loans are up by a like amount to Rs. 92-7. 3½ per cent. 1961 National Plan Bonds were unchanged at Rs. 98-6.

In the foreign exchange section, the rupee-U.S. dollar rate moved up during the week by As. 4 to Rs. 476¼ per $100. In New York, spot sterling was quoted lower at $2.81-1/16—2.81-3/16 as against $2.81-7/16—2.81-9/16 a week ago. The forward rate for three months was also lower at $2.80¼—2.80⅜ as compared with $2.80⅞—2.81. The rate for six months too registered a recession from $2.80-5/16—2.80-7/16 to $2.80-2.80⅛.

TEA PRICES IMPROVE

(Messrs. Forbes, Ewart and Figgis Ltd.)

COCHIN, 29*th August*

The total offerings in dust sale 'Q,' which was held on Tuesday, 25th August, 1953, amounted to 125,000 lbs. There was strong general demand and prices were albeit irregularly, an anna dearer for all types. Demand for better liquoring dusts was better.

London Market.—More general demand for common tea. Prices from a farthing to half penny higher.

Colombo Market.—Strong demand for low-grown. Mediums firm to dealer. Dimbula Dickoya kinds 10 to 15 cents dearer. Uva sorts lower, following quality except best.

Calcutta Market—Export.—Market generally half an anna to one anna easier, but good demand at lower prices.

Dust: Market opened easier but strengthened towards the end of sale, except for C.T.Cs. which closed lower by As. 4.

Export Quota.—During the week under review, it was learned that the Tea Licensing Committee had been authorised by the Government to increase the release of export quota from 115 per cent. to 122½ per cent. of the standard exports. The market reacted sharply to this news and the price fell to 11¼ pies (sellers).

Forthcoming Auctions.—Dust sale 'R' will be held on Tuesday, 8th September, 1953.

As we go to Press, Messrs. Forbes, Ewart and Figgis Ltd. wire as follows:

Sale 18. 1,175,000 lbs. Strong general demand. Common sorts steady. Medium and good medium types suitable for blenders half an anna to one anna dearer. Best liquoring dearer with improving quality, whole leaf weaker."

HIDES WEAK

(From Our Own Correspondent)

KANPUR, 31*st August*

The hides and skins market showed improved tendency in the initial sessions of the week under review. But due to severe shortage of supply, the market turned weak towards the close. Sellers were eager to lighten their commitments, while buyers showed little interest. There was little activity in the skins section, although prices reacted appreciably, owing to poor demand from Madras dealers.

The closing quotations are:—wet salted cow 1st grade superior Rs. 370 and inferior Rs. 260; 2nd grade superior Rs. 260 and inferior Rs. 180 per score; wet salted buffalo hides 1st grade 1 lb. 10 ozs. and 2nd grade 2 lbs. 6 ozs. per rupee; goat skins 1st grade Rs. 250 and 2nd grade Rs. 210 per 100 pieces; sheep skins Rs. 280 per 100 pieces.

SPURT IN SILVER

(From Our Own Correspondent)

BOMBAY, 2nd *September*

The bullion market displayed a firm trend during the week under review. The firmness was more pronounced in the silver than in the gold section. This was due to renewed speculative support, induced by encouraging demand for ready silver and expectation of still larger offtake in the coming weeks. Improvement in prices in other markets and firm advices from up-country centres fanned the bullish fervour further. Short-sellers were, therefore, eager to cover their outstandings, while the bulls lent renewed support. The value of silver staged a swift rise and gold followed the white metal.

Silver for forward delivery (*Bhadrapad*), which was as low as Rs. 152-8 last week, registered a rapid advance to touch Rs. 158-5 to-day, the highest for the past nine weeks. At this level, however, profit-taking set in and the quotation slided down to close at Rs. 157-11.

Ready silver (.999) opened the week at Rs. 155-13 and, after advancing by Rs. 4-12 to Rs. 160-9, finished lower at Rs. 159-15. The daily average offtake was 18 bars, while arrivals were 14 bars.

Gold for forward delivery (*Bhadrapad*) was fully steady at Rs. 86-15 on the opening day, as against Rs. 86-13 last week. On renewed support extended by professional traders, the yellow metal spurted to Rs. 88-4 on the 29th inst. The improvement could not, however, be sustained to-day, when, on account of scattered selling pressure which was, however, well absorbed, the quotation declined to finish at Rs. 87-7.

Ready gold, after rising from Rs. 87-15 to Rs. 82-12 on Saturday, reacted to Rs. 87-12 to-day. Towards the close, however, it was slightly better at Rs. 87-13. The daily average arrivals and offtake were even at about 4,000 tolas.

Business in the *Aswayuj* delivery contract is expected to commence on Tuesday next. A decision to this effect is to be taken by the Bombay Bullion Association at its meeting convened on the 4th inst.

The following comparative table shows the trend of the market during the week under review:

	2-9-53	Highest	Lowest	26-8-53
GOLD	Rs. a.	Rs. a.	Rs. a.	Rs. a.
Ready (.99 fine Mint)	87 13	88 12	87 9	88 1
Forward	87 7	88 4	86 12	86 13
Sovereign	58 0	58 4	58 0	58 4
SILVER				
Ready (.999 fine Mint)	159 15	160 9	155 11	156 11
Forward	157 11	158 5	153 3	152 15
London Ready ..	74*d.*	—	—	74*d.*
London Forward ..	74*d.*	—	—	74*d.*
New York Ready ..	85½*c.*	—	—	85½*c.*

METALS LIVELY

(From Our Own Correspondent)

CALCUTTA, 1*st September*

The feature of trading in the metal market during the week under review was the return to liveliness, although the turnover was low as usual. Quicksilver, after remaining dull for the past several weeks, was in moderate demand, following the reported finalisation of a fairly large export business, in both Calcutta and Bombay. Consequently, the price shot up to Rs. 500 per flask of 75 lbs., as against Rs. 456. In fact, ready supplies have become difficult to be located, although, in the country as a whole, there are plentiful stocks which would more than meet industrial requirements for about five more years.

Better advices from Singapore and smart recovery of the settlement price in London made the local quotation for tin improve from Rs. 405 to Rs. 413. This improvement merely reflected market trends abroad; it was thus not a result of an increase in turnover. Attention is naturally given to official reaction in the United States to the holding of an International Tin Conference in November next, and America is known to hold the opinion that ratification of any tin agreement would depend upon its foreign economic policy.

Copper was steady and electrolytic material gained from Rs. 165 to Rs. 167. Demand was poor, as consumers were interested only in getting their day-to-day requirements. The fire-refined copper ingots were traded at Rs. 150 per cwt. Lead was better at Rs. 68, as against the opening quotation of Rs. 67. The improvement of Re. 1 was due to the delay in arrivals of some incoming shipments, yet on the high seas. Electrolytic zinc was quiet at Rs. 55.

DEMAND FOR HIDES POOR

(From Our Own Correspondent)

MADRAS, 31*st August*

The conditions in the market for cow hides remained unchanged during the week under review. Due, however, chiefly to holidays, the clearance was smaller. The U.K. demand was primarily for lower grades, fifths in all weights and lightweight inferiors. For better grades, the U.K. enquiry was very patchy. There was good demand for 12/13 lbs. buffaloes from the U.K., but other weights were very difficult to sell. Lack of demand for both cow calf and buff calf from the U.K. persisted.

Tanned goat skins in the London auctions declined by 6*d.* to 1*s.* per lb., but prices this side remained unchanged. There was again, a large clearance of sheep skins during the past week, although prices did not register any change. The quality of arrivals of both tanned goat and sheep in the local market continued to be very poor. Raw prices remained firm.

COTTON EASY

(From Our Own Correspondent)

BOMBAY, 2nd *September*

For the cotton trade, the meeting of the Indian Central Cotton Committee, last week, in Bombay, had special significance from several points of view. In the first place, it went a long way to confirm the general opinion that the country was quantitatively approaching self-sufficiency in cotton. Mr. M. R. Bhide who presided over the meeting, in his capacity as Vice-President of the Indian Council of Agricultural Research, stated that the monsoon continued to be favourable and if it persists till the end, a production of 4.0 million bales, if not 4.2 million bales, which was the target fixed for 1953-54, could confidently be expected. Apart from making Indian cotton cheaper, this would reduce the quantum of imports to a certain extent and save foreign exchange for the country. In addition, a greater proportion of Indian cotton used in our total cloth production, even without reduction in price, would go to lower the price of cloth. This would make it more easily saleable both within and without the country and would aso help in reducing the cost of living.

The increase in overall production of cotton though naturally welcome to all interests, the growers, the trade and the textile industry, has caused some anxiety amongst that section of the trade which is interested in the export trade of this commodity. The increase in production is accompanied by a change in the proportion which short-staple cotton bears to the medium-staple varieties. The effort of the Committee has been directed naturally towards an extension of the area under better varieties and there has been a significant shift of area under this crop from short-staple varieties to medium-staple cotton. Any reduction in the quantity of the former, means a reduction in the quantity of exports.

The shippers therefore raised a cry for a rationalisation and revision of the production pattern. The only plea they could advance for arresting the present shift was that the country would earn less foreign exchange if there was less of exportable cotton available. Quite a lot of noise was created by this section of the trade about this development. But the Committee very wisely decided that the time for any such reversion in its policy had not arrived, because we had not yet reached the self-sufficiency point with regard to our requirements from medium- and long-staple varieties and that in any case, it would be more in the interests of the country's economy to increase the production of long and extra long-staple cotton, to minimise the imports of these costly varieties. In this connection, the Chairman made a welcome announcement that the Bombay State authorities were trying to grow a new hybrid cotton, which could replace the use of Egyptian cotton.

The optimistic crop outlook had a heavily depressing effect on the forward market. Last week, the quotation for February contract was pushed down to Rs. 633, almost a hundred rupees below the level at which the August contract expired last week. Since then, there has been a modest revival, but the sentiment continues to be bearish. It is expected the trading in May and August contracts will be allowed as soon as the negotiations between the E.I.C.A. and the Textile Commissioner with regard to the reversion of the schedule of tenderable varieties are believed to have advanced appreciably. Before the holidays, activity in the spot market had increased, especially with regard to imported cottons.

The forward section of the cotton market remained closed on 31st August and 1st September, on account of *Gokul Ashtami*. The spot market remained closed on these two days and also on 2nd September on account of Parsi New Year. In the forward section, I.C.C. February opened the week at Rs. 636 and moved up to touch a high of Rs. 640½. But the profit-taking at this level, coupled with some selling pressure induced by good prospects for new crop, depressed the contract to Rs. 632½ on 29th August. But it recovered, on good support at low levels, to Rs. 638 on 2nd inst. before it reacted to Rs. 634 towards the close of the trading session.

The following is the trend of prices in the forward market during the week ended to-day:

	Opening	*High*	*Low*	*Closing*
I.C.C. Feb. ...	Rs. 636	640½	632½	634

In the spot market, the prices remained practically unchanged over the week.

Though trading activity at Karachi still continues to be more or less at a standstill, so far as the export trade is concerned, the market on the whole is in a very complacent mood about the result of the season's working. The total quantity of cotton shipped during 1952-53 amounted to 16.5 lakhs, which is a record since partition. The carry-over is only 1.5 lakh bales which in view of the smaller crop expected this year is not likely to depress the prices of the new crop. Japan purchased about seven lakh bales and Karachi's expectations are that it will take about a third of the new crop. Apart from Japan, other buyers of this cotton are still holding off as the present quotations on parity are regarded as higher and a scramble for cotton is out of the question. The latest available quotations from Karachi are:

Punjab Deshi Rs. 68; L.S.S. Punjab R.G. Rs. 58½ to Rs. 59; S.G. Rs. 63; N.T. R.G. Rs. 62 to Rs. 63; S.G. Rs. 66 to Rs. 67; 289F Punjab R.G. Rs. 65½; S.G. Rs. 69½; Sindessi new crop Oct.-Nov. Rs. 68½; N.T. R.G. Rs. 67½; S.G. Rs. 71; 289F Punjab R.G. Rs. 70½N; S.G. Rs. 75½N.

At Alexandria also, the tempo of trading is low in keeping with other world markets, but it is definitely higher than at Karachi. What is more, there are already signs of a revival of interest from abroad, though it is confined primarily to medium grades. India has put through some good business although the difficulty regarding payment for the previous purchase of about 30,000 bags has not been resolved. Now that the Cotton Import Advisory Committee has recommended full payment in sterling for this cotton, this phase might come to an end at an early date.

At New York, the same listless conditions as in the last two weeks persisted. As usual, the fluctuations have been narrow and the volume of trading considerably reduced. But as the prices are getting stabilised around the present levels and there is no likelihood of a further fall of any magnitude, it is believed there that the consuming countries will now gradually begin to cover their requirements for the next few months. This is likely to be the case also because it has now been made authoritatively clear that there will be no subsidy for exports at any time during the season.

The following are the latest quotations from New York, as compared with those ruling a week and a fortnight ago:

(In cents per lb.)

	31-8-53	25-8-53	18-8-53
Spot	33.75	33.80	33.70
October	33.33	33.54	33.43
December	33.60	33.84	33.60
March	33.86	34.00	33.79
May	33.86	33.96	33.76

ART SILK YARN LOOKS UP

(From Our Own Correspondent)

BOMBAY, 2nd *September*

The week under review was a very short one for the art silk yarn market, the number of sessions being limited to only three. For the market remained closed on Monday and Tuesday, on account of *Gokul Ashtami*, and to-day, on account of Parsi New Year. During this brief period, the market exhibited active conditions with values moving upwards on the changes in the import policy announced by the Government. The market was also assisted by good enquiries in the ready section in sympathy with the improvement in the rayon market.

The Government of India has extended the restriction of 5 per cent. and 20 per cent. on imports of 150D and 120D bright finishes, respectively, to all yarns of bright finish, such as double yarn, crepe and voile yarns, twisted yarn, acetate, bemberg, and spun-dyed rayon yarn. Further, the restriction applies to licences granted to both established importers and actual users.

The latest decision of the Government to tighten restrictions on imports of art silk yarn has been criticised by the traders. The decision, it is said, is most unjust, inasmuch as it ignores the fact that bright acetate, bemberg and spun-dyed rayon yarn are not at all produced in the country and as such the consumers of these varieties are entirely depending on imports. If, however, the Government wanted to restrict imports of art silk yarn, it could have been done, it is pointed out, by banning imports of third and fourth quality yarn of bright finishes.

In the forward section, 150D September delivery contract rose by 9 points to close at Rs. 785 on the 29th inst. August contract terminated at Rs. 781. Business in this contract was commenced at Rs. 775 on 1st July, 1953. The highest level touched was Rs. 817 on 30th July and the lowest was Rs. 765 on 9th July. The net gain over the period of the contract was Rs. 6. In the ready section, 150 Italy and 120 Japan gained an anna each to Rs. 3-15 and Rs. 4-1½, respectively. 150 Japan was higher by half an anna at Rs. 4-1½. 120 Italy was fully steady at Rs. 4-2.

The table below gives the prices of art silk yarn quoted on 29th August, as compared with those on 26th and 19th August, 1953:

	29-8-53	26-8-53	19-8-53
	Rs. a.	Rs. a.	Rs. a.
150D August (per case of 200 lbs.) ..	781 0	773 0	773 0
150D September	785 0	776 0	774 0
120 Japan (per lb.)	4 1½	4 1	4 1½
150 Japan	4 1½	4 0½	4 1½
120 Italy	4 2	4 1	4 1
150 Italy	3 15	4 2	3 14

Trading in the staple fibre yarn section closely followed the pattern of the art silk yarn market. The low levels of prices prevailing in the last few weeks attracted some support and resulted in a substantial recovery in values. Staple fibre yarn 240s September contract rallied 21 points to Rs. 674. As compared with the opening quotation of Rs. 730 on 1st August, 1953, however, it was still lower by as much as Rs. 56.

GROUNDNUTS FIRM

(From Our Own Correspondent)

BOMBAY, 2nd *September*

The oilseeds market put on a cheerful appearance this week. The groundnut section ruled virtually firm. Caught in the tightened grip of bulls, who sought to push up values with a view to exacting the maximum profit from the maturing August-September contracts, groundnuts forged ahead to further fresh levels. In sympathy with groundnuts, the linseed section also looked up. Further, squaring up business transactions in the outstanding contracts too contributed to the upward trend to some extent in these two sections. But, on continued tussle between bulls and bears, the castorseeds section swung either way. The *kardi* and *niger* seed sections met with broadened enquiries. As a result, the market witnessed sizable business, and prices, on balance, disclosed considerable gains in all the sections.

The technical position of stocks in groundnuts is very much encouraging to bulls. Saurashtra interests, who had been aggressively selling recently, have withdrawn from markets and shorts are at their wits end to cover up their commitments. Bold F.A.Q., which opened at Rs. 50-8, as against Rs. 49, improved to Rs. 52 on 29th inst. But, when the market opened to-day, after remaining closed for two days, the rate declined, on profit-taking to Rs. 51-4. August-September delivery improved from Rs. 46-8 to Rs. 48-4, and December-January from Rs. 31-6 to Rs. 31-14. Khandesh quality gained Rs. 2-4 to Rs. 52-4. Khandesh quality October was done at Rs. 39, as against Rs. 37. Groundnut oil ready advanced from Rs. 27-12 to Rs. 28 and Railway Receipts from Rs. 26-8 to Rs. 27. September, October and November deliveries changed hands at Rs. 28-12, Rs. 21-12 and Rs. 18-9, as against Rs. 25, Rs. 21 and Rs. 18, respectively.

The present high prices will not persist for a long time. For, within a few weeks, new crop from Khandesh, Davangere and other areas will begin to move. Already, new crop has appeared on the Pollachi Market.

In the linseed section, Bold steady registered a gain of As. 8 to Rs. 29-12. August-September deliveries declined by As. 14 and finished at Rs. 30-2. October-November and February-March deliveries were enquired at Rs. 28-12 and Rs. 24-14, as against Rs. 28-6 and Rs. 24-1, respectively. Linseed oil ready lost As. 4 to Rs. 16.

Among castorseeds futures, September-delivery opened at Rs. 140-10, as against Rs. 140-14. It fluctuated between Rs. 145-10 and Rs. 139-12, before closing at Rs. 145-4. May delivery changed hands at Rs. 126-8, as against Rs. 126-12, the highest and the lowest touched being Rs. 127-8 and Rs. 125-8. In the spots, F.A.Q. rallied Re. 1-8 to Rs. 28-12, while Madras quality lost As. 4 to Rs. 28-12. Castoroil B.S.S. improved by As. 2 to Rs. 17-6. First pressures put on a similar amount to Rs. 17-2, while commercials were steady at Rs. 16-4.

Among other seeds, *kardi* bold was higher by As. 12 at Rs. 26. August-September delivery rose by As. 10 to Rs. 25, while October-November, delivery eased from Rs. 24 to Rs. 23-14. *Niger* F.A.Q. and Madras were done at Rs. 37 and Rs. 36-8, as against Rs. 34-4 and Rs. 35, respectively.

The following table shows the prices of oilseeds and oil on the 2nd inst., as compared with those at the end of the previous two weeks.

	2-9-53	26-8-53	19-8-53
	Rs. a.	Rs. a.	Rs. a.
Groundnuts—			
Bold Ready New (per cwt.)	51 4	49 0	49 0

SUGAR STEADY

(From Our Own Correspondent)

BOMBAY, 2nd *September*

The reported move on the part of the Government of India to sell the imported sugar at a price higher than that of indigenous sugar was responsible for the steady undertone of the Bombay sugar market during the week under review. There was an all-round rise in sugar prices. Thus, in the forward section, *Bhadrapad* delivery registered a handsome improvement of Re. 1-11 to Rs. 88-4 per bag over the week; at one time, it was still higher at Rs. 88-8. The improvement might have been more marked but for the Union Food Minister's announcement in Parliament yesterday that the Government intended to import 200,000 tons of sugar, instead of 100,000 tons as contemplated a few weeks ago. In the spot section, the prices of small, medium and large grain sugar advanced by Rs. 2-8, Re. 1-8 to Rs. 3 and Re. 1 to Rs. 91-8, Rs. 93 and Rs. 95 to Rs. 97 per bag, respectively. The Bombay Government's sale of sugar at Rs. 85-4 per bag (wholesale) would appear to have had no tangible effect on the prices of sugar in the spot market.

The week under review witnessed a fall in arrivals of sugar into the Bombay market, the actual arrivals being 13,000 bags, as against 18,000 bags in the previous week. Consequent on poor arrivals and larger offtake, the stocks with spot trade are estimated a little lower at 23,000 bags, as against 24,000 bags a week before.

The steady to firm undertone of the Bombay sugar market, as noted above, despite reports that imported sugar will be arriving in a couple of weeks' time, may appear somewhat strange. But the reasons for such a state of affairs are not far to seek. The chief factor is the reported decision of the Government of India to sell sugar at a higher price, namely, As. 13 per *seer*, as against the price of As. 12-9 for indigenous sugar. The Government, it is reported, has decided to arrange for the sale of imported sugar through the Bombay Sugar Merchants' Association at As. 13 per *seer*, which works out to Rs. 89-6 per bag. Formerly, it may be noted, the Government had invited tenders from traders and consumers. The tenderers and traders in the up-country sugar markets are naturally baffled by the sudden change in the Government's policy. Pending the developments in regard to the distribution of imported sugar, the up-country markets are buying on a hand-to-mouth basis and are keeping their stocks at a low level.

It is not unusual to witness different sugar interests laying blame at the doors of one another for the high prices of sugar. The consumers, for instance, blame the trade for profiteering and hoarding; the trade blames the industry for malpractices; the industry accuses the Government of high taxes; and the Government points the accusing finger at the industry and trade for non-co-operation. Each interest is trying to strengthen its case with its own facts and figures except, of course, consumers who appear baffled.

The previous season's bumper sugar production had greatly worried the Central Food Ministry and the industry. This had resulted in a bearish tendency in the spot sugar market early in the year. It was generally thought that the sugar stocks were far in excess of the country's requirements. But movement in our prices and offtake in sugar told a different story. If only the sugar industry had visualised such a high level of consumption, as is now in evidence, it would have stepped up the output accordingly. Learning from experience, everybody is emphasising the need for maximising sugar output. The present fight in New Delhi is the fight to secure as large a profit as possible at the cost of the consumer. It is rumoured that a minimum price of sugarcane will be fixed at the present level of Rs. 1-5 per maund. It is also reported that a tentative programme is being drawn up to import sugar to meet any unfavourable situation during the ensuing (1953-54) season.

* * * *

In our sugar report last week, the quotation for *Bhadrapad* delivery as on 17th August, 1953 was inadvertently mentioned as Rs. 92-10, which was the quotation for *Shravan* delivery. It should have been Rs. 88-10. Another inadvertent mistake that had crept in the same report in the sentence reading "complete decontrol of sugar would enable millers to 'minimise' their output. Instead of the word 'minimise' the word 'maximise' should have been there.

JUTE GOODS EASY

(From Our Own Correspondent)

CALCUTTA, 1*st September*

Jute markets were again easy this week and prices of jute goods were hammered to lower levels. Demand from overseas buyers was negligible, and nervous holders unloaded some of their stocks in a declining market. Genuine buyers kept off the market in the expectation that the situation demanded a further drop in prices. Buyers for the United States were stated to be biding for time, and trade circles feel that it would be better if New Delhi could make some announcement on the question of export duties. If the duties are to be maintained at current rates despite trade demand for their revision, if not total abolition, New Delhi has to say so, so that buyers can know the current position. If, however, the Government were to see eye to eye with the trade and the industry and abolished or revised the duties, it would be a good thing, as the prevailing dullness in the market can be driven away, and mills can be relieved of a good portion of their stocks. The crux of the whole matter is that a decision has to be made soon before business diverts itself from this country to the Continent. The subject of export duties has not been referred to the Jute Commission, and, therefore, a revision in the duties would not prejudice the work of the Commission but would be welcomed by the trade and industry.

If this report has reverted to the subject of the export duties this week, it is only on account of the steep drop in prices which make production uneconomic. The time for levying export duties has gone, and in recent months we have witnessed revisions and abolitions. No doubt, the duties on jute goods had also been revised, but the time lag between the trade demand and action in New Dehi had caused diversion of business from this country and reduced the country's foreign exchange earnings. Market circles, therefore, feel that a realistic approach to this matter is needed in New Delhi.

Opening at Rs. 44-10, ready 40" 10 oz. hessian gradually fell to, and closed for the week-end at, Rs. 43-10, the October-December position slipping to Rs. 43-8 from Rs. 44-3. Earlier in the week, there was some covering demand, but for which prices would have moved down to further lower levels. B. twills at Rs. 97-12 lost as much as Rs. 2-8 and forward positions registered a similar trend. Owing to their anxiety, weak holders were willing to discount rates, and, in fact, cabled some offers to overseas buyers. This prevented any business coming in, as buyers were fully aware of the market trend and expected the continuation of the downward movement. Another factor which added to the dullness in sacking goods was the unwillingness of the authorities to grant licences to some exporters on the information that the goods involved were meant for re-sale. On account of Janmashtami the market was closed yesterday.

The raw jute market was idle, and in view of the conditions in the goods market mills were reluctant to increase their stocks of the raw material. However, quotations were not affected as stockists were confident that mills would soon have to replenish their stocks. Arrivals of the new crop were on the increase and stockists did not hesitate to accept all that came in their way.

FOODGRAIN PRICES RECEDE

(From Our Own Correspondent)

HAPUR, 1*st September*

The Indian Food Minister's references to the overall foodgrain supply position in the country and the fall in the international prices of wheat have reacted bearishly on all foodgrain markets in India and have encouraged the State Governments to relax controls further. Floods in recent weeks are reported to have done quite extensive damage to standing crops in some States, but this is more than counterbalanced by improved harvest prospects elsewhere.

The food position in Uttar Pradesh is quite satisfactory. There was substantial increase in *rabi* production last year, grain yield being higher by 20.7 per cent. and wheat by 10.5 per cent. than last year's figures. *Kharif* crops this year are generally good and prospects of *rabi* sowings are excellent. The State Government has decided to deration a dozen more towns in the State from 1st October next. The entire State would now be de-

STOCK & SHARE QUOTATIONS

Abbreviations:—D=Deferred shares. P.O.=Preferred Ordinary shares. Y=Accounts published yearly. H=Accounts published half-yearly. P=Company has Pre. quotation. x.d.=Ex-Dividend. c.d.=Cum. Dividend. i=Interim Dividend. f=Dividend for first half of the year.

Shares:—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents all other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends.—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year, they represent the proportionate dividend for that period. In their accounts yearly, dividends shown are for their financial year. Where, however, the accounts are closed half-yearly, dividends are shown separately for the respective half-years.

* Including bonus. x Sales and amount written off. (k) Investments.

(l) Made up of an interim dividend of Re. 1-12 per share on 1,20,000 shares and final dividend of Re. 1-10 per share on 2,40,000 shares of which 1,20,000 shares are bonus shares.

* The following explanatory notes relate to the abbreviations and marks shown on page 468 in the debentures section:—

(a) Option to repay on six months' notice, on any interest date after 31st December, 1951, at 102 per cent. Also redeemable out of a cumulative sinking fund of 1½ per cent. per annum (commencing in 1938) by drawings at 102 per cent. or by purchase at or 102 per cent.

(c) Option of repayment at any time at 3 per cent. premium.

(b) Bearer bonds of Rs. 1,000 each repayable at par.

(c) Bearer bonds of Rs. 1,000 each repayable on 31st July, 1959.

(d) Bearer bonds of Rs. 1,000 each with option of redemption in whole or in part at par on 30th June, 1953 or on any subsequent interest date at one month's notice.

(e) Returnable on or after 31st July, 1950, at Rs. 102-8 or at par after 31st July, 1955 on six months' notice in each case.

(f) Bearer bonds of Rs. 1,000 each with option of redeeming on 3 months' notice at ½ per cent. premium after 1st March, 1954, but before 1st March, 1957, and 1 per cent. premium on or after 1st March 1957.

(g) Option of redemption on or after 1st July, 1949, at par.

(h) Option of repayjent at any time at par at any time on or after 30th June 1947 on six months' notice.

MARKET GOSSIP

(Concluded from page 427)

facilitating transport of cotton from up-country centres to Bombay, in order to enable the shippers to fulfil their export commitments. Finally, he argued that, since it was necessary in the interests of the country's foreign exchange requirements to increase their exportable surplus of Bengal Deshi cotton, the Government should specifically encourage the cultivation of the cotton in areas where no better staple varieties could be raised. This question deserves to be examined in all its aspects, before a final decision is taken. There is much to be said for increasing the exportable surplus of cotton. But it is also arguable that nothing should be done to interfere with the present trend towards increasing the supply of superior varieties, for a portion of which the country continues to be dependent on overseas exporters.

• • • •

Mr. Ruia's reference to the change in the character of the world cotton trade gains additional importance in the light of the fact that, even in the U.K. which is an entirely cotton importing country, more and more spinners are leaving the fold of the Raw Cotton Commission, in order to make their own private arrangements for the importation of cotton. From 1st September this year, a new buying season has opened for individuals and firms interested in the use of cotton. The Ministry of Materials has estimated that, during this season, the proportion of purchases through individual merchant firms will amount to about 50 per cent. of supplies. A large number of the spinning combines, it is stated, have increased their private purchases. It may be mentioned, in this connection, that it is now over a year since the monopoly of the Commission was broken as a result of the freedom given to spinners to choose between public and private buying of their raw materials. The spinners' response to this freedom shows that the majority of them prefer private arrangements.

• • • •

The significance of the "progressive prosperity" movement, launched by the internationally known *Cotton Trade Journal* of the U.S., was explained by Mr. Francis G. Hickman, the Editor of the *Journal*, at a meeting organised by the Cotton Buyers' Association, Bombay. Mr. Hickman pointed out that the movement aimed at the dissemination of the technical know-how among cotton farmers for cutting down costs of production and for increasing the yield of cotton. The movement was intended to improve the position of the cotton trade by avoiding the evil effects of periodical depressions which follow temporary periods of prosperity. Giving his impressions of his recent world tour, Mr. Hickman said that he found that the textile industry, particularly in Europe, was in a somewhat depressed state. Mills were, therefore, becoming quality-minded, so far as their cotton purchases were concerned. Accordingly, it was essential that the cotton farmers should devote more and more attention to the quality of cotton. Measures, he said, should be taken to eliminate the evil of "mixing." Mr. Madanmohan R. Ruia, President of the Association, who welcomed Mr. Hickman, paid a tribute to the services rendered by him in publicising in the U.S. the great harm that had been done by the exports of damaged cotton by that country. He said: "Cotton is an international commodity, and we, in the cotton trade in this country, rightly belong to the world cotton fraternity." He claimed that in no other sphere was there such "close understanding and co-operation" as in the sphere of the cotton trade. He added that he was happy to note the *Cotton Trade Journal* was continuing "its efforts to maintain the cohesion in the world cotton trade."

BANKING

(Concluded from page 434)

by loans or grants from abroad, will cause a reduction in the monetary reserves. As is pointed out in this year's Annual Report of the Bank for International Settlements (already referred to above), "investment which is financed by inflation will soon be found to be no investment at all in the proper sense of the word, since it eats up already existing assets (monetary reserves, etc., as fast as, or even faster than it brings forth new productive assets."

IMPERIAL BANK'S EXPANSION PROGRAMME

A fair measure of progress would appear to have been achieved by the Imperial Bank of India in implementing its first phase of the expansion programme in India last year. Upto 30th June last, the Bank actually opened 26 branches and converted eight of its Treasury Pay Offices into full branches. This achievement is not very unfavourable, as it falls short of the original programme only slightly, in that it was intended to open 30 new branches and convert 13 Treasury Pay Offices by June this year. Giving this information, the Chairman of the Bank, in his speech at the latest annual meeting held at Madras on the 28th ultimo, stated that the second phase of the programme covering the three-year period ending June, 1956, would be the subject of discussion with the Reserve Bank of India shortly.

It may be noted here that, following certain recommendations of the Rural Banking Enquiry Committee, the Imperial Bank of India, in consultation with the Reserve Bank of India, had decided to open about 30 new branches before the end of June, 1953, and to convert some of its existing Treasury Pay Offices into full branches within the same period. It was anticipated that the number of such pay offices to be converted would be 13, thus bringing the total number of branches to be opened in India to 43, as compared with the total of 16 offices closed in Pakistan. The closure of offices in Pakistan was partly in consequence of the termination of the agency arrangements and partly of insufficient business at many of the centres where the National Bank of Pakistan also was permitted to operate. Last year, as a result, 16 branches of the Imperial Bank were closed down in Pakistan. Now the Bank is functioning in Pakistan at only nine centres, namely, Chittagong, Dacca, Hyderabad (Sind), Karachi, Lahore, Lyallpur, Mirpurkhas, Mymensing and Naraingunge.

The Chairman, in his address referred to above, touched on the new monetary policy inaugurated by the Reserve Bank of India towards the close of 1951. He said that the process of transition and adjustment to this policy was further consolidated during the year ended June, 1953. He observed that, during the period, commodity prices in this country were comparatively free from the sharp fluctuations witnessed in the previous year. Food position also showed improvement. Money supply declined, with a reduction in the volume of bank credit and a sizable diminution in bank advances. Deposits of Scheduled banks were, on the whole, fairly well maintained. There was, besides, a general increase in interest rate on deposits resulting in a change in their composition with a switch-over from demand to time deposits.

MARKET REPORTS

(Concluded from page 457)

controlled, with the exception of the hilly and flood-affected eastern districts and the principal cities of Lucknow, Banaras, Allahabad, Kanpur and Agra. The present system of food controls in U.P consists of fair price shops where wheat is sold by the Government at cost price. Free market in wheat and other grains is allowed at the same time. During recent weeks, the offtake from these shops has been meagre even in the principal cities and there seemed to be no point in maintaining the system, except in scarcity regions and in five premier cities as a precautionary measure.

With the popularity amongst the cultivators of the Japanese method, the paddy production in Uttar Pradesh may be expected to record a substantial increase in the State. Paddy cultivation in the Japanese way is on trial on an intensive scale in the 29 districts. The reports of the progress of the campaign for some districts have shown that the new method not only envisages good results but is also catching the imagination of the cultivators.

Restrictions on the price, purchase and movement of wheat and wheat products within the State of P.E.P.S.U. have been removed. These restrictions were imposed by the State Government during the year 1949 and 1951.

The wheat position is so satisfactory in the Punjab that the State Government has agreed to the request of the Himachal Pradesh for the supply of another 2,000 tons of wheat. Punjab's present wheat stocks aggregate about 35,000 tons. Last month also, the Punjab Government gave Himachal Pradesh 2,000 tons of wheat. The Government has exempted the Moga and Talwandi grain markets from the Punjab Grain Export Order to a certain limit. Both these markets will export 6,000 tons of grain.

The food situation in Madhya Bharat is satisfactory, except in some scarcity districts. The Government of India has allotted to the State 10,000 tons of foreign wheat, of which more than 3,000 tons have already ar

A POLITICAL DEBATE ON AN ECONOMIC PROBLEM

LAST week's debate in Parliament on the problem of unemployment, an economic one, pure and simple, turned out, as might have been anticipated by those familiar with the antics of the non-official sponsors of the resolution on the subject, to be a full-fledged political debate. The occasion was availed of by every member of the opposition to give free expression to his pet political thoughts. And where unemployment was touched at all, it was more by accident than design. The result was that no fresh light was shed on the problem, and no practical guidance given either to the Government or the country. This is deplorable, in all conscience. Only, it is less deplorable than the fact that, when the speakers deviated from the main theme, they permitted themselves to make statements which had little relevance and scarcely any truth.

The non-official resolution on unemployment urged the Government to set apart at least Rs. 50 crores for the purpose of opening free kitchens, to reduce the prices of food, clothing and other essential commodities by 30 per cent., to buy unsold stocks of cottage industries, to undertake a programme of national housing, irrigation works, road construction, and railway development, of construction of schools and hospitals, to redistribute land, and to confiscate British capital and to stop competition from foreign-owned domiciled companies. Judged as a piece of political polemics, this resolution would take pride of place as an excellent electioneering manifesto for the extremist political party which sponsored it. But nobody in Parliament stopped to ask how the Government was to get the money for implementing these grandiose schemes recommended by the resolution, or to question the relevance—quite apart from the legal, political and economic justice—of the suggestion for the confiscation of British capital. How little the opposition members themselves had studied the implications of the resolution is clear from the fact that no speaker made the slightest reference to the suggestions in the resolution; all members converted the debate into an occasion for a general discussion on unemployment. Apparently, they were convinced that these suggestions deserved no better treatment than studied neglect.

Among those who indulged in what is well described by that Parliamentary jargon "terminological inexactitudes," Mr. Kripalani seemed to take the front rank. This is a pity, for his long association with the party in power and his erstwhile connections with the leaders who now run the Government do entitle him to be heard with respect. He said that "foreign interests were to-day more fully entrenched in the country's industry and commerce than was the case under foreign rule," and added that "our banking and insurance is mostly in the hands of foreigners." Now both these statements are palpably absurd. There has actually been a flight of foreign capital in recent years. According to a modest estimate, between July, 1947 and March, 1953, foreign residents sold or liquidated their businesses in India to the tune of Rs. 15.84 crores, whereas foreign investments during the same period were only Rs. 8.26 crores. Since then, there have been some notable additions to foreign investment. But the facts bear no resemblance to the lurid picture painted by Mr. Kripalani. Again, foreign banks do only a small fraction of internal banking business and, so far as foreign exchange banking is concerned, the share of Indian banks has been rapidly expanding in recent years. Again, foreign insurers transact only 10 per cent. of the total insurance business in this country, leaving 90 per cent. of the field to domestic companies. The truth is that India is not getting as much foreign capital as it needs; it has to be coaxed, before it can come into the country which is not so plentifully supplied with this commodity that it can indulge in the luxury of refusing it, if it comes from abroad.

It was left to Mr. C. D. Deshmukh, Finance Minister, and Mr. B. R. Bhagat, his Parliamentary Secretary, to attempt a more rational explanation of the problem and to indicate the Government's measures to tackle it. Mr. Bhagat said that both unemployment and underemployment were increasing, because employment opportunities did not keep pace with annual additions to the labour force, thanks to the increase in population. The problem of unemployment, he said, was most acute in respect of persons seeking clerical jobs and among semi-skilled and unskilled labour. Unskilled workers accounted for 2.3 lakhs, or 50 per cent. of the total number of persons on the live register of the Employment Exchanges. He also announced that the National Sample Survey (Ministry of Finance) was undertaking an enquiry into the magnitude of the problem in Calcutta and certain other towns. The Survey will also study the problem of unemployment in the Travancore-Cochin State which has important rural aspects and the employment potentialities in the larger irrigation and power projects. Mr. Deshmukh drew attention to the Rs. 14.7-crore scheme for giving employment to 84,000 teachers, to which a reference has already been made in *Commerce*.

These diagnostic attempts are welcome; at least, they will serve to correct many erroneous and exaggerated views on the problem. But a lasting remedy—apart from palliatives, such as the 84,000-teacher scheme—must take into account some basic facts about the situation. It is necessary, for instance, to recognise that the problem could not have arisen in its present acute form, if private enterprise had been permitted a less fettered field, if States had been prevented from dissipating their resources on costly and unnecessary social and moral reforms, and if fissiparous tendencies, such as the movement for linguistic division, had been curbed. Again, if the State had co-operated with the Centre in regard to taxation and labour laws, there would have been less distress in the sphere of trade and industry than there is now.

Except those who believe, on purely political considerations, in a completely regimented State-dominated economy, all will concede the need for providing special stimulus to the private sector which offers, by and large, the largest field of employment opportunities. Dr. Matthai, whose clear analysis of the problem of unemployment was published in our last issue, rightly urges the need for an examination of the "segments of public sector where the pace of development might be worked down, so that monetary and physical resources may be released for employment in the private sector." In this connection, the World Bank has made a few notable observations. Among the forms of "misdirection" of financial resources in underdeveloped countries, to which the World Bank has drawn pointed attention in its latest report, mention must be made of the "use of public funds for purposes that private investors, given proper incentives, would have been willing to pursue." The Bank finds it difficult to justify the diversion by the Government of an underdeveloped country of its own (Government's) "financial and technical resources into enterprises for which private capital and management are available, since that will lessen the resources available for providing basic services and utilities that generally lie outside the scope

of private initiative." It is only necessary to recall the genesis and the effects of the nationalisation of road transport, air transport, of the starting of State-owned machine tool factory, and of the proposed steel plant in this country, in order to realise the full force and significance of the aforesaid observations of the World Bank. None of these measures could be justified in the context of the limited availability of capital resources in the country and the need for their effective and efficient utilisation. All these measures leave not only less money in the hands of the Government to embark upon more essential schemes, which might enlarge the scope of employment, but also result in the loss of potential sources of savings that would be available for further investment in future.

The World Bank Report, illuminating as it is, has nevertheless ignored a form of "misdirection of financial resources," which is peculiar to this country, namely, the prop given, at the expense of the consumer and the taxpayer, to uneconomic units and uneconomic means of production. This form finds expression in the Government's extreme solicitude for the handloom industry—the mill industry has to be penalised for that—and in its anxiety to prevent the expansion of efficient units in an industry. All this raises a whole host of economic issues which have an immediate relevance to the problem of unemployment. How far is it correct to pamper inefficient units on the specious plea that they provide employment? In other words, is it right to stigmatise, stifle and finally destroy all incentive to promote efficiency on the ground that the development of efficient units is detrimental to the interests of the workers in the inefficient units or that some sort of protection must be given to indigenous capital against foreign capital? Is it desirable—apart from the question whether such measures can succeed at all, in the long run—to keep alive economic anachronisms through artificial aids? These are not academic questions. On the right answer to them will depend the future economic progress of this country. That far too much stress—more than what is necessary—and at least, some misguided emphasis, may be laid on employment, to the exclusion of efficiency, is clear from one revealing piece of statistical information which Mr. Bhagat gave in Parliament. He revealed that, although as many as 24 textile mills had closed down totally or partially during the period May, 1951—July, 1953, the number of workers employed by the industry as a whole rose by 28,000 to 819,000. If a conclusion may be hazarded, it is that the closure of uneconomic units does not necessarily lead to a decline in total employment.

But the whole issue is bound up with the larger question of what kind of economy the country should choose. Great store is being set by the policy of resuscitating village industries and handicrafts. At the same time, large-scale industries, such as steel plants—no steel industry can survive, if there are no large-scale industries to absorb the steel output—and machine tool factories, are being started. Textile mills are exhorted to produce for export, but they are being penalised for producing goods at low cost, and for competing with the handloom industry. It is time these and other contradictions in the Government's economic policy were resolved. The country should either choose the path chosen by all countries which have industrialised themselves, so that it may attain newer and higher levels of prosperity and living standards, or apply the reverse gear and go back to the earlier era of a self-sufficient village economy, with all its implications of a sub-standard existence. Abraham Lincoln once said that no nation could exist half-free and half-slave. His modern economic counterpart might well claim that no nation can have an economy, of which one-half is medieval and the other half modern. The choice must be made, and the sooner it is done the better. If it is higher level of productivity, and the vigorous use of science and equipment, then it is necessary to pay the price—a certain transitional stage of economic disequilibrium. To beat a hasty retreat in the face of this disequilibrium is hardly the way in which a nation, with a forward-looking mind, will behave. And yet, this is precisely what is being done now, or, at least, what many are asking the Government to do. It is being urged, on the one hand, to give preference to cottage industries, and, on the other, to revise the Five-year Plan in a manner which will result in a slowing down of the progress of those parts of the Plan such as the large irrigation, power, and industrial projects which are designed to remove the basic defects in the country's economy. If the Government yields to these demands, it will be an end of all hopes of economic progress.

THE NEW STATE-OWNED STEEL PROJECT

THE Government of India's move to establish a steel plant, in collaboration with two world-renowned German steel makers, has received less attention than it deserves. Even Mr. J. R. D. Tata refrained from saying anything on this project in his speech at the last annual meeting of the Tata Iron and Steel Co., Ltd., though it was undoubtedly a fitting occasion for him to take the public into his confidence on the implications of the Government's action, which he, being an expert on the subject, must be fully aware of. On the next page, we publish the reactions of Mr. Padamji P. Ginwala, Adviser to the Indian Iron and Steel Co., Ltd., Calcutta, who has raised certain pertinent issues of great public importance.

The first issue which Mr. Ginwala has raised is a constitutional one. It is surprising that not a single member of Parliament raised it, when Mr. K. C. Reddy gave a few details of the deal. It will be interesting to know what the Auditor-General of India will have to say on it. The sum involved in the deal is not small; it is as much as Rs. 72 crores. Even supposing the Government has powers to lock-up such large resources without the specific sanction of Parliament, did the Government consult any expert opinion before signing the agreement? Did it consult, for instance, the Tatas or the Martin Burns who are competent people to advise it on such a highly intricate business and whose stake in the industry is large? We have reasons to feel that it did not. It would appear that, only a few days ago, that is, several days after the agreement was signed, the Government invited Mr. Jehangir J. Ghandi, Special Director of the Tata Iron and Steel Co., Ltd., for consultations. It is not yet known what his reactions are. But, surely, this consultation should have preceded the conclusion of the agreement. As it is, the whole thing has now become a *fait accompli*.

The least that the Government can and should do now is to associate expert opinion in the country with the implementation of the agreement. This is very necessary, because one of the anomalous features of the agreement is that the German "collaborators," to use the expression of Mr. Reddy, are not merely technical consultants but also the tenderers for plant and machinery. One need only to refer to the remarks of Mr. Ginwala to appreciate what this means. In raising this point, it is not our intention, nor that of Mr. Ginwala, we are sure, to cast any aspersions on the integrity of the German companies concerned. But it is our duty to draw the attention of the public to this strange feature of the agreement. The provision for global tenders will become meaningless, unless the Government rectifies this anomaly. And one way of doing it is to have on the executive committee or the board that will be in charge of the implementation of the project an expert or two of our own, having intimate knowledge of the steel industry.

Another defect in the Government's move is that it has still not made up its mind on many vital issues of policy, on which a decision should have been taken already. How is the project, for instance, going to be administered? Is the Government going to have a corporation similar to the one in the case of the Sindri Fertilisers? Or is it going to have a sort of public company, with provision for indigenous investors also to participate in it? Whatever form it may take, Parliament should demand a suitable form of control, inasmuch as huge sums of public money are involved and as its powers of supervision over such big projects are greatly restricted. It is high time Parliament paid some thought to the important issues of principles raised by the Auditor-General in his report to the Sub-Committee of the Public Accounts Committee, which are quite relevant in this context and to which a reference was made in these columns two weeks ago. Incidentally, Mr. Ginwala raises a very relevant point when he questions the equity character of the capital which the German collaborators have agreed to contribute. It is a misnomer to call it equity capital, as the Germans have been given the option to take back, after ten years, the Rs. 9 crores they are putting in, irrespective of whether or not the project makes a profit or loss. Supposing in the first 10 years the project suffers a loss, will it be equity to return the capital invested by the Germans rupee for rupee? If this is the nature of the financial assistance, then it is better to call it a loan.

The Government has not yet decided the area where the factory is to be located. Is it going to be in Madhya Pradesh or in Orissa? It is stated that this question will be decided after the German technicians make a survey of both the States. Mr. Ginwala correctly contends that it is for the Government of India to decide the locality, leaving the question of the exact site in that locality to be chosen by the Germans. There is, however, one plausible explanation as to why the Government is still unwilling to make up its mind, even though it has had the benefit of advice from several experts, both Indian and foreign. And that is that it does not want to displease either of the two States competing for the honour of housing the new steel plant. It may, therefore, prefer the German technicians to arbitrate on this dispute This may be a good political expedient, but it amounts to the Centre shirking its responsibility.

No light has been thrown by the Government on the extent to which the agreement provides for the utilisation of domestic resources in the manufacture of the plant and machinery to be installed in the factory. It is needless to add that provision should be made for the maximum utilisation of domestic materials and skill. For this will mean not only an expansion in employment opportunities but also a chance for Indians to learn the technique of plant manufacture. Expert opinion holds that the Indian engineering industry is to-day capable of carrying out quite a large portion of the work involved. If adequate provision has not already been made for employing these sources, the agreement must be suitably revised. It may be mentioned here that, when Russia first launched on establishment of heavy industries in cooperation with foreign technical assistance, it made it a condition for the manufacture of the bulk of the plants in the domestic factories. This procedure might have cost the Russians much more than what it would have, had they imported all the capital goods involved from the countries that provided the technical assistance but it gave them valuable experience which was useful later in expanding their industries.

When the project is completed, the capital cost will turn out to be very much larger than the present estimates. The sum of Rs. 72 crores mentioned by the Government does not, we presume, include the capital that will be required for installing refractories, for opening up the mines and for housing the workers. The latter alone may easily cost anything between Rs. 12 and Rs. 15 crores, if the labour is to be given the same amenities as are provided by the Tatas, as indeed, they will have to be. Even on a conservative estimate, the total capital expenditure will easily be more than Rs. 100 crores. The whole project could have been completed at a much lower cost had the Government gone ahead with it five years ago. Some idea of the saving which the country would have had in capital expenditure alone, if it had done so, can be had from the fact that the cost of a 500,000 to 600,000-ton capacity plant estimated by the two foreign firms (U.S. and British) in 1948 was only Rs. 50 crores, as against the present estimate of about Rs. 72 crores. Further, lower capital expenditure means lower cost of production per ton of steel. Thus, the delay in implementing this project has meant needlessly higher prices for consumers of steel for several years to come.

A reference may be made, in passing, to another implication of the proposed project to consumers of steel and the existing producers of this metal. As the cost of production of steel by the Government's plant will be higher than that of either the T.I.S.CO. or the I.I.S.CO., the present system of control on prices, that is, a uniform price for consumers and differential prices for producers, can be expected to continue for as long a time as one can foresee. It is also possible that the existence of Government-owned units and private-owned units in the same sector may result in certain complications which may ultimately lead to nationalisation of the private-owned units, unless, of course, by that time the country has the good fortune to have a Government which recognises the virtues of private enterprise, in which case, the State-owned units may be turned over to private ownership. The way in which the existing steel producers are getting themselves indebted to the Government by borrowing large sums from it is also likely to tempt the future Government to take over their ownership, as has happened ere now in the case of the companies that were engaged in civil aviation. No one can say that such a thing will happen, but, at the same time, none can ignore the straws in the wind and turn a blind eye to the possibilities in the future.

REACTIONS OF MR. PADAMJI GINWALA TO INDO-GERMAN STEEL AGREEMENT

MAIN FEATURES OF NEW SUGAR POLICY

THURSDAY, 5 P.M.

A CRITICAL but constructive analysis of the Government of India's recent agreement with two German concerns for the establishment of a steel plant was made by Mr. Padamji P. Ginwala, in the course of an exclusive interview to *Commerce* before he left for Europe yesterday. The importance of the project to the economy of the nation is obvious and, if it is to be successful, it must be planned and executed with the largest measure of efficiency possible. We, therefore, make no apology for devoting the major portion of these columns this week to the observations of Mr. Ginwala, who is an acknowledged authority on iron and steel industry. Mr. Ginwala has been connected with this industry for several years in his capacity as an adviser to, and executive director of, the iron and steel companies under the management of Messrs. Martin Burn Ltd., Calcutta. As the Chairman of the Iron and Steel (Major) Panel, appointed by the Planning and Development Ministry, Government of India, in 1945, he has made a significant contribution to the preparation of the plan for the development of the iron and steel industry. He is, therefore, competent to express an opinion on the Government's plans for establishing a steel plant and his views deserve to be given careful consideration by the authorities concerned.

MARKET GOSSIP

• • • •

In the course of his brief interview to this journal, Mr. Ginwala first questioned the manner in which the deal was concluded with the German concerns and the country firmly committed to it without the sanction of Parliament. He observed:

"About the first week of August, 1953, Mr. K. C. Reddy, Production Minister, made in answer to some questions in Parliament, a very candid and praiseworthy confession that, though since 1947 no less than 49 project reports had been prepared by various consulting engineers, committees and experts, no progress had been made towards the erection of a new Government-sponsored iron and steel plant. On 17th of August, it was announced in the Press that Mr. A. K. Chanda, Secretary to the Production Ministry, had signed at Bonn, on Independence Day, an agreement with a German combine, consisting of the world-famous steel plants and armament manufacturers, Krupps and Demaag, for the construction of an iron and steel plant, with their technical and financial cooperation. On 24th of August, Mr. K. C. Reddy disclosed in Parliament some of the terms of this agreement. This is, indeed, very good news as far as it goes. But there are various principles involved in the manner of signing and announcing this agreement which have been honoured more in their breach than in their observance, about which both Parliament and the public have the right and duty to complain. Whilst Parliament is actually in session, an agreement of first-rate national importance, involving an estimated expenditure of some Rs. 72 crores and a heavy burden on our meagre financial resources, is not only negotiated, but concluded, without first informing it of its terms and conditions and obtaining formally its general approval. No one can reasonably question that the rules of diplomacy demand that, whilst negotiations are being actually carried on, on any important public matter, no disclosure or discussion of them is permissible. But, except in an authoritarian State, both Parliament and the public cannot be by-passed in this way when Parliament is in session; nor is it in accordance with any democratic rule that both of them should be presented with a *fait accompli*, leaving them no other alternative than acquiescence in what might, on examination, prove contrary to the national interest. Many transactions in the past have been concluded by the Executive Government in this way, without taking either Parliament or the public into their confidence. Now and again, it has been reported that important deals were put through and carried out by the executive officers of the Government, without the consent or even the knowledge of their Ministers. Parliament should have sufficient self-respect and sense of its own responsibilities to prevent this flouting of its rights and authority by its Ministers or their executive officers. If Parliament does not wake up in defence of its own rights and privileges, parliamentary government in India deserves to be proclaimed a failure and our democracy no more than an idea on blotted paper."

• • • •

Deploring the meagre information provided by the Production Minister on the terms of the agreement, Mr. Ginwala remarked:

"Even at this late stage, why was the entire agreement not laid on the table of the House, instead of the Minister mentioning to it a few of what he called its principal terms? No one who has any knowledge of the development of the iron and steel industry can dispute the claim of Krupps and Demaag as two of the most outstanding manufacturers in the world not only of all forms of steel and armament, but of the plant, machinery and equipment for their production. No better technical advice can be found elsewhere, provided the advisers were themselves not so vitally interested in selling to their clients their own machinery, especially to those who have little knowledge of the industry and are unable to judge for themselves the price or value of what they were purchasing. What good will the invitation of global tenders do, if the consultants themselves are among the tenderers and are in a position to decide in their own favour?"

• • • •

Mr. Ginwala then referred to the reported provisions of the agreement relating to the participation of German firms in the capital structure of the project and made the following interesting comments:

"It has been stated, outside Parliament, that the financial contribution of the Combine is to be on 'equity basis.' It is certainly a new form of equity investment which can be withdrawn by the investor after a certain period. Investment of equity capital always implies a certain amount of business risk. What risks are our collaborators taking and, in the meanwhile, what return do they expect and how is it secured until the withdrawal of their contribution? It will be a simpler and more straightforward description of the transaction to call it a contract between the Government of India and Technical Consultants, who are also manufacturers of plant and machinery, for the construction of a major steel works at an estimated cost of about Rs. 72 crores which, there is no doubt, will be exceeded, than to exalt it into one of genuine financial partnership."

• • • •

Alluding to the problem of finding the remainder of the capital required for the project, he posed the following queries:

"It is not disclosed how and in what form the estimated capital of over Rs. 65 crores to be supplied by us is to be found within four years after the details have been settled. is it going to be equity, preference, or debenture capital or consist of negotiable bonds, or a combination of all these? Are the Government sure that the International Bank will be willing to supply Rs. 20 crores for financing a purely business project of this kind sponsored almost wholly by the Government in association with a foreign firm? This Bank normally helps to finance public utility projects wholly owned and controlled by Governments, or offers loans guaranteed by member-Governments to key industries run entirely by private agencies. If it adheres to this normal practice, as it well may, the chances of the Government securing its financial help appear to be rather remote."

• • • •

It has been stated by the authorities that "the German collaborators expect that the plant can be commissioned within four years after preliminary details have been settled." Commenting on this, Mr. Ginwala described it as "optimism *in excelsis*." And he gave a convincing explanation: "If a plant of this magnitude can be built and brought into operation on a virgin site, with undeveloped sources of some important raw and auxiliary processed materials, adequate but distant engineering facilities and the doubtful reliability of labour within at least seven years," he added, "we shall have good reason to congratulate ourselves and our experts." In conclusion, he said:

"There are many other important points which would need very careful consideration. In a short interview, I cannot very well deal with them. But there are two of these which I would like to mention. Each one of the two German collaborators has special patented processes for the manufacture of pig iron or ingot steel. It has been claimed that they are a great departure from the orthodox methods and they have been a success either in Germany or elsewhere. I hope that no attempt will be made to introduce these processes, for they may not be suitable for our raw materials or to meet our requirements. It is better for a country, which has limited finances, to follow the beaten track which the rest of the world is doing. The second point that I wish to emphasise is that the Government are going to leave the selection of the site to the experts. There is a distinction between a site and a locality which must be borne in mind. It is for the Government, as a matter of policy, to select the locality on larger national considerations and not as a pure and simple question of economics which, in my judgment, at any rate, are about even as between all localities outside Bihar. After the Government has selected the locality or the State, they must direct the experts to select the best site for the location of the plant, having regard to the state of communications, proximity of raw materials, cost of distribution, etc."

• • • •

A distinctly quiet trend has come to prevail in the share market. Although it has been in a holiday mood for the second week in succession—the market has had only one session since last week-end and that, too, on Tuesday—the kerb rates reveal a further, albeit slight, drop in values. Contrary to earlier expectations that, after the Tata Iron and Steel shares become ex-dividend, they would go up, these shares have taken a downward turn. If the intrinsic merits of the shares were the determining factor, as they would ultimately be, the falling trend cannot persist for long. But in markets, where speculation has become the mainstay, intrinsic factors do not always assert themselves. At present, the trend of the market is being influenced by two factors. One is the continuation of the lockout-cum-strike at the works of the I.I.S.CO. which is having a depressing effect on the Calcutta market. The other factor is the weakness of the cotton market, where I.C.C. February delivery has slumped by Rs. 14 over the week to Rs. 620 and May delivery by about Rs. 10 to Rs. 621. Since the bulls in the Deferreds are said to be bulls in cotton also, the operators feel that they cannot have the same strong hold over the share market as they would have had, if cotton had been firm. Discouraging reports from the cloth market and the downward trend in jute and jute manufactures have also imparted an easier feeling to the Stock Exchanges. In bullion, the upward trend witnessed last week has suffered a distinct reverse, though, over the week, the prices of both gold and silver show no perceptible change.

• • • •

It is only the oilseeds market which has struck a discordant note this week, in that it has been ruling strong. In the ready section, groundnuts have gone up by Rs. 2 to Rs. 34. Similarly, castorseeds ready have risen by Rs. 3-8 to Rs. 33, and forward by as much as Rs. 20 to Rs. 168. Prices of groundnut oil also have shot up by Rs. 3-8 to Rs. 31-8. The strength of this market is the result of a squeeze on bears in the face of limited supplies, which is evident, to a large extent, from the big discounts at which new crop positions are standing. In the case of groundnuts and castorseeds these discounts are as much as Rs. 20 and Rs. 42, respectively. But, to some extent, these heavy discounts are due to large short sales, the effect of which may well be higher prices, especially if the crop turns out to be less than anticipated by the bears.

• • • •

No official announcement has yet been made of the outcome of last week's conference at New Delhi on sugar. This conference was attended by the representatives of State Governments, producers of sugar and merchants. Delay in announcement does not mean that no decisions were reached. On the contrary, we reliably understand that a series of decisions was taken on the price of sugarcane, fair price of sugar, temporary excise duty, sugarcane cess, imports of sugar, etc. In spite of Mr. Kidwai's announcement in Parliament only a week ago that there would be no increase in the price of cane, he had to agree, so we are told by a reliable source, to a higher price. The delay in the official announcement of the results of the Conference is due it is said to the need for securing the consent of an important State Government which is said to be quite unhappy with the decision of the Centre not to go the whole hog with it in the matter of the minimum price for cane, According to our information, the following are the salient features of the sugar policy for the coming season as has been accepted by the Conference:

(1) The sugarcane producer to be paid Re. 1-8 per maund, provided the State Governments agree to reduce their cane cess by an anna. If they do not, then the sugarcane price will be fixed at Re. 1-7 per maund. In any case, a rise of As. 2 per maund in the cost of cane to the factories is certain.

(2) The existing extra excise duty of Re. 1 per cwt. will not be levied on sugar produced during the ensuing (1953-54) season.

(3) There will be no control on sugar. But control on existing lines will be maintained on stocks of sugar with millers.

(4) The Government's idea of fair price for sugar at Rs. 27 per maund ex-mill will be applicable to sugar produced in the 1953-54 season. This idea of fair price will, however, be only theoretical and will operate only in the event of the Government deciding to requisition sugar stocks from the mills.

(5) Further imports will be made to meet any unfavourable development in the supply of sugar in the country.

• • • •

It will be seen from the foregoing that the conference has hit at a compromise. Every interest involved has surrendered something but got something in return, the only exceptions being the State Governments and the consumer. The canegrowers do not get all that they wanted, but they get a tangible gain of As. 2 per maund. The State Governments, however, have to lose a part of their revenue by way of cane cess. The Centre is ready to give up the additional excise duty, but it will more than make up this loss through import duty and a large profit on the sale of imported sugar. The total gain to the Centre in this manner will be no less than Rs. 15 crores. Making an allowance for the loss of revenue by way of the extra excise duty, it can hope to net in a clear profit of Rs. 12 crores at least. So far as the sugar factories are concerned, they have been guaranteed a protected market by the Centre agreeing to sell the imported sugar at Rs. 5 above the ex-dock price. This is in striking contrast to the threat of dumping cheap foreign sugar which Mr. Kidwai held out to the factories some time ago. The change in the attitude of the Government ensures them a price at which they get a handsome margin of profit. Only, the poor consumer has been left high and dry, in the sense that the hope of sugar at lower prices held out by the Government will remain unfulfilled. He can, however, have the satisfaction that he is assured of a regular and plentiful supply.

• • • •

An important provision in the Bombay Government's Bill, introduced in the Legislative Assembly this week, to amend the Payment of Wages Act, 1938, relates to compulsory saving, by workers, of bonus in excess of a certain prescribed minimum. The Bill provides that, when the "amount of bonus payable to an employee exceeds one-fourth of his earnings, exclusive of dearness allowance, for the year of bonus, such excess shall be paid or invested in the manner prescribed." What is proposed is that such excess should be credited to the workers' provident fund. Thus, the whole proposal is aimed at making the workers save something for the nation. There is no reason why a worker should not contribute to national prosperity in which he is a partner, especially when that contribution is taken purely in the form of a loan, returnable at a later date. If it is universally recognised that the State has a right over adventitious income, whether excess profit or capi-

TRADING IN SHARES FEATURELESS

TURNOVER SMALL

(From Our Own Correspondents)

BOMBAY, 10*th September*

DULL and featureless conditions characterised trading on the Bombay Stock Exchange during the week under review. Owing to intervention of holidays, enthusiasm for trading was lacking and operators exercised extreme caution. Turnover of business was, therefore, greatly restricted, with values moving within a narrow range. The undertone of the market was a shade easy.

Bearish reports, such as slump in Wall Street and easy conditions in the local cotton market, imparted weakness to trading in shares. Lack of encouraging advices from Calcutta was another unhelpful factor. Textiles were particularly subdued, thanks to reports of accumulation of large stocks of cloth in Ahmedabad and other centres. Steels also were generally subdued, although, in the beginning, there was some buying support induced by the note of mild optimism struck by the Tata Iron and Steel Company Chairman at the Company's annual meeting last week and by reports about serious efforts by a group of workers to end the lock-out in the Burnpur Works.

Tata Deferreds and Ordinaries, which were listed ex-dividend on Thursday last, recorded a handsome improvement to Rs. 1,850 *ex-div.* and Rs. 319 *ex-div.*, respectively, on Friday. The closing rates for these scrips last week were Rs. 1,952-8 *cum-div.* and Rs. 338-12 *cum-div.* The improvement, however, was not maintained during the subsequent sessions and the values receded to Rs. 1,832-8 and Rs. 317, respectively, early on Tuesday (the last day of the week). Towards the close, however, they stood a shade better at Rs. 1,835 and Rs. 317-8. Indian Irons opened the week fully steady at Rs. 22-11-6. After fluctuating between Rs. 22-13 and Rs. 22-10, they finished the week higher at Rs. 22-11, as against Rs. 22-6-8 a week ago.

In the textile section, activity was at a low ebb and prices were distinctly downwards, although certain counters recorded sizable gains on selective support. Thus, Minerva Mills lacked support and were marked down by as much as Rs 9-8 to Rs. 91. Svadeshis suffered a loss of Rs. 5-8 to Rs. 241-8. Bombay Dyeings receded by Rs. 4-3 to Rs. 373-12. Vishnus lost a like amount to close at Rs. 147-8. Kohinoors dropped Rs. 3-8 to Rs. 290-12 and Standards Rs. 3-2 to Rs. 306-4. Central Indias and Gokaks finished lower by Rs. 2-8 each, the former at Rs. 156 and the latter at Rs. 225-8. New Greats shed Rs. 2 to Rs. 148. Western Indias, on the other hand, met with special buying support, in view of the proximity of dividend payment on the 14th inst., and spurted by Rs. 50 to Rs. 3,550. Simplex also elecited support and advanced by Rs. 5 to Rs. 172. The extraordinary general meeting of the Simplex Mills Co., Ltd., held in Bombay on Friday last, passed a resolution to capitalise the sum of Rs. 10.5 lakhs, being part of the machinery renewal reserve account of Rs. 37 lakhs. Phœnix hardened from Rs. 116-4 to Rs. 120. B. R. Cottons and Indore Malwas put on Re. 1-4 each to Rs. 49-4 and Rs. 93-12, respectively. Khataus were fully steady at Rs. 178, Finlays at Rs. 323-8 and Ahmedabad Advances at Rs. 138-12. Centurys were quoted at Rs. 260 *ex-div.*, as against Rs. 271-12 *cum-div.*

Business in bank shares was on a restricted scale, but prices were fully steady. Imperial Fully Paids gathered Rs. 2-8 to Rs. 1,830, while Partly Paids were unchanged at Rs. 440. Bank of Indias gained As. 12 to Rs. 155-8. Union Banks were a shade higher at Rs. 6-6-6. Barodas were steady at Rs. 110 and United Commercials at Rs. 36-4. Central new and old shares, however, were neglected at Rs. 67-8 and Rs. 63-12, as against Rs. 68 and Rs. 64-4, respectively.

The miscellaneous section displayed distinct weakness. Bombay Burmahs were marked down by Rs. 6-4 to Rs. 341-14. Walchandnagars suffered a loss of Rs. 2-8 to 146-4. Wimcos fell from Rs. 235 to Rs. 233-12. Belapurs declined by Re. 1-8 to Rs. 237-8. Dharamsi Morarji Chemicals, however, were placed higher at Rs. 45 *ex-div.*, as against Rs. 43 *cum-div.* National Rayons registered a notable recovery from Rs. 107-8 to Rs. 111-12. British India Corporations evoked special buying enquiry and gathered As. 6 to Rs. 8-12-6. Associated Cements were fully steady at Rs. 68-12. Tata Chemicals and Killick Industries were unchanged at Rs. 30-4 and Rs. 155, respectively.

Mining and engineering shares lacked support. Alcock Ashdowns receded by Rs. 2-8 to Rs. 300. Premier Constructions lost As. 12 to Rs. 84. Shivrajpurs were transacted As. 8 lower at Rs. 56.

Transport company shares were cheerful and tended to look up. India Steamships were bid As. 8 higher at Rs. 7-4, on rumours of higher dividend. Scindias went up by As. 2 to Rs. 13-10.

• • • •

Calcutta Stock Exchange

CALCUTTA, 8*th September*

There was a further improvement in the general conditions on the Calcutta Stock Exchange during the week. Although the improvement did not result in a striking increase in the volume of transactions, revived interest in selected counters brought about some limited gains. The interest shown in the speculative Indian Irons was not truly justified by the news from Burnpur; but market circles became jubilant earlier in the week, as a result of the Prime Minister's criticism in Parliament, of the go-slow policy of the workers in no uncertain terms. Thereafter, hopes that a settlement would be reached by the Government's intervention and that normal production would soon be resumed, were held. These hopes are slowly disappearing, and yet, if fractional recovery is registered even now, it is due to the assumption that everybody concerned would see to it that one of India's major industrial undertakings, that is in Burnpur, would not be allowed to remain closed for long. Sympathy for the management who remained remarkably patient during all these months of "go-slow" is readily given, and it is to be hoped that Burnpur will soon be sending out tons of steel which alone will prevent the closure of the numerous engineering industries dependent on I.I.S.Co. steel.

Particular interest was evinced in the shares of the Begg Sutherland group of companies. The market noted with satisfaction the able reply which the Minister for Food and Agriculture gave in Parliament to the demand for raising prices of sugarcane. However, Mr. Kidwai soon followed up by saying that, if sugar consumption continued high, imports would have to take place next year also. Later rumours that sugarcane prices are to be raised and that the excise duty on sugar is to be reduced to the extent of the increase in cane prices have been carefully watched. That the mills are producing as much sugar as the country needs is the view of mills which are critical of the distributive arrangements made by the Government. The Company Law Amendment Bill introduced in Parliament last Wednesday has pleased the middle class investors in whose interest sufficient safeguards in the Bill are provided.

Sectionwise, selected features were provided in the miscellaneous section. B.I. Corporations advanced to Rs. 8-14 from Rs. 8-6, although the rate to-day was Rs. 8-12. Indian Cables at Rs. 19-1 showed further improvement. Titaghur Papers were steady at Rs. 35-8, while F. & C. Oslers sagged to Rs. 6-15 from Rs. 7-7. India Steamships were in moderate demand, and in transactions were raised to Rs. 7-5 from Rs. 6-12. Metal Boxes came to business at Rs. 18-8, Rallis realising Rs. 67-4.

In the engineering section, Indian Irons recovered some lost ground, the price improving to Rs. 22-15 from Rs. 22-10. At this stage, profit-taking intervened and the rate fell to Rs. 22-11. Burn & Cos. were better at Rs. 282, while Texmacos were unchanged at Rs. 5-14. Jessops put on As. 2 at Rs. 22-12, and earlier Braithwaites realised Rs. 11-3.

Sugar shares were held steady. Balrampores featured with a rise to Rs. 8-11 from Rs. 7-8, and Champarans jumped to Rs. 26-8 from Rs. 24-4. From Rs. 34-12, Cawnpores fetched prices up to Rs. 36-12, but were to-day quoted at Rs. 36-7.

In the absence of good news from the jute goods market, jutes continued to be lifeless. There were, however, a few features on interested buying which paved the way for a partial recovery of the counters concerned. Fort Glosters were sought at Rs. 382 and Anglo-Indias met with business at Rs. 197. Speculative Howrahs were better at Rs. 23-4 as against Rs. 22-10 earlier, while Indias were extremely quiet at Rs. 119. Pelvederes changed hands at Rs. 200 and Nuddeas met with business at Rs. 43-8. Nationals were wanted to-day at Rs. 23-6 and Orients at Rs. 170.

A sparkle of interest was in evidence for selected tea shares during the sessions, to-day and yesterday. This contributed to an increase only in the number of transactions, and not in prices. Thus East Indias recovered to Rs. 16-4 from Rs. 15-4 earlier. Hasimaras were better at Rs. 24, as compared to the earlier level. Seajulls were, however, lower at Rs. 15-8, Dimakusis being unchanged at Rs. 31.

• • • •

Madras Stock Exchange

MADRAS, 10*th September*

No marked change was noticeable in the behaviour of the Madras Stock Exchange this week. It repeated last week's performance. Thus, the upward trend witnessed then in the textile section persisted this week also. On reports of good export demand for cloth, as indicated by record shipments of cloth last month, many popular counters met with support and registered further gains. Rubbers were again active, while tea and coffee scrips were colourless. Miscellaneous scrips were no exception to the generally dull conditions, with some activity confined to certain selective scrips. As a result, trading on the Stock Exchange remained restricted and the list on balance revealed a sprinkling of both losses and gains.

On expectations of better cloth sales, textile scrips came in for considerable enquiry. Coimbatore Cotton as a result shot up from Rs. 150 to Rs. 157 and Buckinghams from Rs. 121 to Rs. 124. Bangalore Woollens improved by Rs. 2-8 and finished the week at Rs. 260. Maduras were higher by As. 14 at Rs. 33-4 and Metturs by As. 8 at Rs. 198-8. Mysore Spuns rallied As. 7 to Rs. 5-13.

Among plantings, rubbers fared better. Malankaras gained Re. 1-8 to Rs. 117-8 *cum-div.* Peninsulars were higher by As. 3 at Rs. 8-13 and Rajagiris by As. 2 at Rs. 11-11. Pullangodes improved by an anna and a half at Rs. 2-11. Athimattam (rubber and coffee) was higher by As. 2½ at As. 13½.

Equities in the tea section ruled cheerless. Kalasas lost As. 7 to Rs. 11-15. Chembras were fractionally lower at Rs. 2-4. But for these, most of the rest of the scrips were virtually unchanged. Thus, Emerald Valleys were done quite at Rs. 4-4 and Periakaramalais at Rs. 7 *ex-right*. Waterfalls were dull at Rs. 3-2. Kalpettas (tea and rubber), however, put on Re. 1 to Rs. 19-4.

Coffee scrips were not in favour. Consolidated Coffees lost an anna to Rs. 18-7, while Nil. Neerugundis gained an anna and a half to Rs. 3-10½. Shevroys were fractionally higher at Re. 1-3½. Mysore Coffees, however, were unchanged at As. 8½.

Among miscellaneous shares, Mettur Chemicals disclosed a gain of As. 3 to Rs. 4-4 and Indian Steel Rolling Mills As. 2 to Rs. 11. South Arcot Electrics shot up by Rs. 2 and closed at Rs. 93. But Indian Cements lost As. 6 to Rs. 16-10 and Bruntons As. 2 to Rs. 3. India Sugars were down by As. 8 at Rs. 21-8. Parrys were lower by an anna at Rs. 4-13. Mysore Chemicals and Fertilisers were done at Rs. 8-2 *cum-div.*, as against Rs. 8-3. The Directors have declared a dividend of 6¼ per cent., free of income-tax, for the year ended 31st March, 1953. The dividend during the previous year was 9 per cent., free of income-tax.

Notice

BAGALKOT CEMENT CO., LTD.

75, APOLLO STREET, FORT, BOMBAY 1.

NOTICE

THE FOURTH ORDINARY GENERAL MEETING of the Shareholders of Bagalkot Cement Company, Limited, will be held on Wednesday the 23rd September, 1953, at 5 p.m., at the Offices of Kilachand Devchand & Co., Ltd., 45-47, Apollo Street, Fort, Bombay, to transact the following business:

1. To receive and adopt the Directors' Report and Audited Statements of Accounts for the year ended 31st December, 1952.
2. To elect Directors.
3. To appoint Auditors for the current year and fix their remuneration.
4. To sanction distribution of dividend guaranteed by the Government of Bombay.

The Share Transfer Books of the Company will be closed from Saturday, the 5th September, 1953, to Wednesday the 23rd September, 1953, both days inclusive.

By Order of the Directors,

TENDULKAR INDUSTRIES LTD.,
Managing Agents.

BOMBAY, 12*th August*, 1953.

NEWS IN BRIEF

THE damage as a result of the recent floods in Bihar is estimated to amount to Rs. 21.03 crores.

The Indian Union Communications Ministry will be taking over the Posts and Telegraphs Department of Jammu and Kashmir State on Tuesday next.

The gross traffic receipts of the Indian Railways during 1952-53 amounted to Rs. 270.6 crores and the total expenditure aggregated Rs. 223.4 crores.

An average of 16 new locomotives every month, of which three are made in India, have been acquired by Indian railways during the 40 months ended 31st July, 1953.

The Tariff Commission has prepared a questionnaire for producers, importers and consumers in connection with its enquiry into the continuance of protection to the pickers industry.

An industrial and handicrafts exhibition will be held under the auspices of the Cottage Industries Department of the U.P. Government in Mussoorie for a month commencing from the 20th inst., as part of the Mussoorie festival or tourist *mela*. The exhibition will include Government handicrafts, a sericulture scheme from Dehra Dun and a Government wool scheme.

A Bill seeking to amend the Factories Act, in order to give effect to the I.L.O. Convention prohibiting employment of women and young persons during night, was introduced in the Council of States on the 3rd inst. The amending Bill also seeks to effect changes in respect of annual leave and to remove some practical difficulties experienced in the working of the Act.

About 40 million lbs. of tobacco are stated to be lying unsold with the growers and traders in Andhra area. It is suggested that the extension of the market yards system to the whole of the producing area, the installation of the tobacco re-drying plant, a re-examination of the number of tobacco grades and the sending of delegations abroad to explore the possibilities of finding new markets for medium and low-grade Indian tobacco will go a long way towards helping the growers.

With a view to promoting fundamental research in universities and other educational centres, the Government of India has decided to set apart a small sum for giving grants-in-aid to individual research workers who have been experiencing difficulties in the furtherance of their work in science subjects, such as physics, mathematics and biology and technology. The grants will be made available for the purchase of special apparatus or for its construction, consumables, stores, books, etc.

The Commodity Controls Committee has suggested that the Constitution should be suitably amended so as to give Parliament the necessary legislative powers to enact a single permanent and consolidated law conferring upon the Central Government the reserve power of control over any commodity at any time. The Committee is of the view that, for balanced progress in the economic field, the Government must retain the power of overall guidance and control and that controls on all essential commodities should be regulated on an all-India basis.

An average of 3,679 wagons loaded with coal left the Indian collieries every day during the month of July, 1953. The loading was 74 wagons per day above the minimum movement target guaranteed by the Indian Railways, and six wagons per day more than during the previous month. Of the total wagons despatched, 82 per cent. was from coalfields in West Bengal and Bihar, the balance being from coalfields in Vindhya Pradesh, Orissa, Madhya Pradesh and Hyderabad. The total despatches of coal during the month amounted to 2,404,497 tons.

The Madras Government has refused to lend the British-owned Madras Electric Tramways Company Rs. 300,000 to enable it to resume city tram service, which has remained suspended since 12th April, 1953. The loan is stated to have been refused on the ground that it would create a bad precedent and might lead to similar requests for financial assistance from other undertakings. The State Government is considering the cancellation of the Company's licence. Under the Tramways Act, the Company can suspend its service for a continuous period of three months only. The period expired on 12th July.

Details regarding the position in respect of sugar supplies in the country during the current (1952-53) sugar season was laid recently on the table of the House of the People by the Central Food and Agriculture Minister. The total supply of sugar available during the season amounts to 1,797,000 tons, as against the estimated offtake of 1,638,000 tons. The quantity of sugar actually released for internal consumption up to 25th August, 1953, was 1,548,000 tons. Of this, the quantity despatched from the factories to consuming centres during the period 1st November, 1952, to 31st May, 1953, was 917,000 tons. The closing stocks of sugar with the factories as at the end of May, 1953, aggregated 873,000 tons.

The officers of the West Bengal Government have returned from Canada after completing arrangements for the supply, under the Colombo Plan, of about Rs. 1 crore worth of hydro-electric equipment from that country for the Mayurakshi Reservoir Project. The equipment contracted for consists mainly of turbines, generators, transformers, etc., for the power house to be built at the Masanjore Dam. The goods, which will be supplied at the lowest world prices, are expected to be received in Calcutta over a period of 18 months. Under the terms of the contract, the installation of the equipment at the dam will be carried out by engineers of the manufacturing firms. This will be supervised jointly by engineers of the supply agency and of the State Government.

It is learned that Mr. A. N. Khosla, Chairman of the Technical Consultants for the Bhakra Dam has submitted his final recommendations on the Bhakra design and construction policies of the Bhakra Control Board. In his report, Mr. Khosla is understood to have confirmed his earlier recommendation for the elimination of the tunnel outlet works and the tunnel spillway from the design of the 680-foot-high Bhakra Dam. This change, along with a few others, besides being "an improvement in design," is expected to result in a saving of over Rs. 3 crores in the construction of the Rs. 152-crore Bhakra Project. Mr. Khosla is also reported to have re-affirmed his faith in the talent and competence of the Indian engineers for design and construction purposes. He has not recommended further employment of foreign experts in the construction of the Bhakra Dam. He has partly disagreed with some of the recommendations of the foreign experts regarding the concreting details of the Bhakra Dam.

From Abroad

Iran will use the U.S. aid of $45 million (about £16,107,100) to develop agriculture and industry, as well as for the construction of houses to the poor.

A penicillin manufacturing plant is proposed to be opened in Pakistan with the help of some international organisations. The installation of a D.D.T. manufacturing plant at Naushera (N.W.F.P.) is making satisfactory progress.

Uranium ores of high grade have been discovered at Bruce Mines, Ontario, 40 miles east of Sault Ste. Marie. Uranium deposits in granite, of a type prevailing in the Athabasca uranium area of Western Canada, have also been found in Cape Breton Island.

A trade pact between Russia and Iran was signed at Teheran on the 4th inst. The pact seeks almost to double the barter trade between the two countries. It provides for the exchange of a wide variety of manufactured goods from Russia and raw materials from Iran.

The next British Industries Fair will open on 3rd May, 1954. Apart from the 9,000 firms which exhibited this year, a further 21,000 manufacturers throughout Britain are being invited to take part. If even a small proportion of these latter accept, the 1954 Fair is likely to be one of the biggest trade fairs in history.

Hungary has extended economic and technical help to North Korea. The aid includes supply of engineering goods, factory equipment, agricultural implements and consumer goods. Hungary is also offering technical aid for the reconstruction of towns and villages and the restoration of war-damaged factories.

It is impossible to bring about sterling convertibility until the sterling area countries are allowed to earn more dollars. This is the view of Mr. Sidney Holland, Prime Minister of New Zealand. According to him, no official advice has yet been received concerning the reported proposal of the U.S. Government to provide a $5,000 million fund to help make sterling convertible into other chief currencies of the world.

The U.S. Administration is giving serious consideration to proposals that will effect immediate liberalisation of the "Buy American" Act restrictions on Government purchases of foreign goods. The proposals now being examined, if accepted, will establish uniform "Buy American" Act policies for all Government agencies, including the Defence and Interior Departments.

The execution of the Pakistan Government's programme of diesel electric traction on the railways has been carried a stage further, with the arrival of nine broad-gauge express passenger diesel electric locomotives from the U.S.A. The locomotives (of 1,600 horse-power each) have been manufactured by the American Locomotive Company, New York. They have cost the Pakistan Government Rs. 71,00,982 f.o.r. Karachi.

The Economic Deliberation Council of Japan has submitted to the Government a plan for national economic self-sufficiency by 1957-58. The plan calls for an expenditure of 1,278,500 million yen (about £1,278.5 million), of which 250,200 million yen are earmarked for expanding exports and 1,028,300 million yen for promoting stability and economy in domestic finances.

The output of steel in the U.K. averaged 276,600 tons per week in July, 1953, the highest rate ever recorded in July, as compared with 273,800 tons per week in July, 1952 and 276,300 tons per week in July, 1950, the previous record. The production of steel in the first seven months of the year averaged 338,100 tons per week, as compared with 303,000 tons last year, an increase of 16 per cent. Pig iron production averaged 202,400 tons, as against 201,600 tons in July, 1952.

Import of jute into Egypt is now limited to sacks for packing of rice and onions subject to certain other restrictions. Importers of sacks for rice will have to purchase from the Agricultural and Credit Bank a quantity of sacks equivalent to three times that imported. Importers of sacks for onions will have to follow the same procedure, but the amount of sacks (or hessians) to be purchased from the Bank will be double that to be imported.

PERSONAL

MR. Eugene Black will continue to serve as the President of the International Bank for Reconstruction and Development for another term of five years ending 30th June, 1959.

Dr. P. S. Lokanathan, Executive Secretary, Economic Commission for Asia and the Far East, has been elected Chairman of the Working Party to study the question of financing the economic development of Asian countries.

Mr. Richard M. Lyman, Director of the I.L.O.'s Asian Field Office at Bangalore, left for Tokyo to attend the I.L.O.'s Asian Regional Conference which is to be held there from the 14th to 26th inst. After attending the Conference, Mr. Lyman will proceed on home leave to the U.S.A. and will return to Bangalore early next year.

Mr. C. M. Kothari, one of the partners of Messrs. Kothari and Sons, Madras, has been nominated by the Government of India as a Director of the Tea Council of America to represent Indian tea producers. Mr. Kothari will be leaving for the U.S. next week to attend a meeting of the Tea Council and the International Tea Convention at White Sulphur Springs (West Virginia).

Mr. Hirday Nath Kunzru, M.P., has been appointed Chairman of the Committee constituted by the Government of India to enquire into the prevalence of corruption in Indian railways. The other members of the Committee are Mr. Shah Nawaz Khan, Dr. W. S. Barlingay, Mr. K. S. Hegde, Mr. K. L. More, Dr. A. Krishnaswami, Mr. K. Raghuramiah, Mr. P. S. Rajgopal Naidu, Mr. Ram Subhag Singh, Mr. S. C. Samanta, Mr. Sarangadhar Das and Mr. M. D. Upadhyaya.

Mr. Abid Ali, Union Deputy Minister for Labour, will lead the Indian Delegation to the second Asian Regional Labour Conference to be held at Tokyo from the 14th to 26th inst. Mr. R. Maulik, Chairman of the Indian Mining Association, will be the employers' delegate and Mr. Khandubhai K. Desai, M.P., the workers' delegate. Mr. P. Chentsal Rao, Deputy Secretary, All-India Organisation of Industrial Employers, and Mr. S. R. Vasavada of the Textile Labour Association, will be the advisers to the employers' and the workers' delegates, respectively.

SIR RODERICK CHISHOLM

Sir Roderick Chisholm, who has just retired from his position as Managing Director of the Imperial Bank of India and sailed for the U.K. last week, can look back with pride over three decades of most useful service in the field of Indian banking. Having joined the Imperial Bank as early as 1920, his career has broadly synchronised with the growth of the Bank, and, indirectly, of Indian banking itself. But the position, which he has just relinquished, was the one which called, both at the time he occupied it (1945), and in subsequent years, for extraordinary financial and banking acumen, for these years witnessed not only the aftermath of war, but of the partition of the country, and the devaluation of the Indian rupee in 1951. It is a tribute to Sir Roderick's powers of financial judgment—a quality of which no man can have too much—that the Bank's position remains unshaken by the vicissitudes of the post-war period. Above all, the Bank had to adjust itself to the new political and economic conditions in the country. Sir Roderick was again found equal to this task. We wish him many years of happy retirement.

Sir Roderick is succeeded by Mr. S. K. Handoo, who, as a member of the Bank's staff and as Deputy Managing Director of the Bank since 1950, has already acquired considerable experience in handling banking problems. We wish him success in his new and more responsible position.

"COMMERCE" 1928

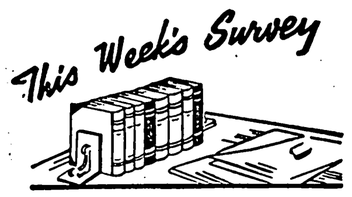
FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, 15*th September*

Captains of Agriculture

If reliable leaders are necessary in industrial enterprise, they are even more necessary in agriculture. Agriculture, whether in Europe, the Americas, or Asia, can never again be wholly reliant upon the cheap peasant labour, which, in the past, has been the backbone of the industry. True, in countries like India and China, where the population is still at a very low level of education and where about 70 to 90 per cent. of the population work on the land and are of the peasant class and are under-educated, it is possible to farm economically on the old methods, but, as these communities receive higher education, they will naturally demand better wages. India certainly does supply food for Europe, but, at the present time, China does not grow sufficient to feed her intense population and cannot afford to buy from other countries. As the food production in the world is not keeping pace with the increase in population, there is the hope of a more prosperous agriculture in intensive food production, and this can be accomplished by improved technical skill in farming. This point was made by the Geneva Economic Conference, and only after a general investigation of the agricultural methods employed in most parts of the world.

Industry is exploiting every new invention and method of increased production and economic efficiency; agriculture must do the same. While it is extremely important for agriculture that industry should be prosperous, on the other hand, it is necessary for industry that agriculture should be flourishing, as the consequent increased purchasing power would reflect and stimulate industrial output and would tend to keep prices down.



RETURN ON GROSS BLOCK

WHAT should be the adequate return on gross block employed by industries? This is a subject on which a great deal of discussion has taken place. It is a subject which comes up perpetually when the Tariff Commission is asked to fix prices for commodities. When the Commission examined the case for the increase in the retention prices of steel produced by the Tata Iron and Steel Company, Ltd., it recommended an increase of 2 per cent., that is, from 8 per cent. to 10 per cent. in the rate of return on the Company's gross block. The Government, it may be recalled, turned down this demand on the ground that it was making a "special loan on favourable terms" to the Company. The Company got, therefore, an increase of only Rs. 47 per ton as against an increase of about Rs. 67 which it might have got if the Commission's recommendation had been accepted.

Mr. J. R. D. Tata, Chairman of the Company, made some notable observations on this issue at the last annual meeting of the Company. He said that the Company was "grateful" to the Government for the loan on favourable terms. But he rightly argued that the acceptance of the increase in the rate of return on gross block, recommended by the Commission, would "not have been inconsistent with the grant of the proposed advance, as the Government could have directed that it be used either to reduce the total amount of their loan or to accelerate its repayment." The main arguments by which the demand for an increase in the rate of return on gross block was supported were that the 8 per cent. return was not adequate to attract fresh investment for the industry or to build up sufficient reserves for the purpose of modernisation and expansion. The Commission too was convinced of these arguments. In allowing the 2 per cent. increase, it made it clear that the additional amount should be set apart for the specific purpose of modernisation and expansion. The Company had readily agreed to abide by this condition.

The Government's rejection of the Commission's recommendation is, therefore, regrettable. The whole issue about the rate of return on gross block deserves to be considered without reference to the grant of the loan to T.I.S.CO., by which the Government has justified the rejection of the Commission's recommendation of an increase in this rate. A critical examination of this issue was, as our readers must have noticed, made by Mr. Padamji Ginwala in the course of an excellent series of thought-provoking articles he wrote for *Commerce* in recent weeks. In effect, he argued that the 8 per cent. return, which the Government has now accepted, is a piece of economic anachronism. The rate had been accepted as correct by the previous Tariff Boards in the thirties. It might have held good in those fortunate days when the rate of taxation for companies stood at an attractively low rate of As. 2½ in the rupee. It cannot certainly hold good now when the rate is As. 7 in the rupee. Again, the managing agency commission was formerly treated as a charge to be added to expenses. But now it has to come out of the 8 per cent. return. Again, in those days, there was nothing like profit-sharing bonus which is in vogue now. This item of expenditure too has to come out of the 8 per cent. return. Really speaking, profit-sharing bonus has to be treated as part of the wage bill inasmuch as it has come to be regarded by the industrial courts, the Government and the labour unions as part of the remuneration payable to workers. Mr. Ginwala calculated that in most industries, the profit-sharing bonus and managing agency commission account for 1½ to 2 per cent. and the tax (As. 7 in the rupee) for approximately another 3 per cent., leaving a net return of 3.5 per cent. to 3 per cent. He went on to pose the question whether this rate of return would be sufficient to attract risk capital when the Government itself was paying 3½ per cent. and the World Bank was charging 4½ to 4¾ per cent. Mr. Tata struck the same note when he emphasised that the Government "must surely be aware that they cannot possibly attract risk capital, either Indian or foreign, to this industry on the basis of a net return of 3½ per cent." He, therefore, hoped that the Government would "reconsider" the position it has taken up on this question. The inadequacy of the 8 per cent. return should be evident to those who have followed Mr. Ginwala's well-reasoned arguments. In fact, those who know that the return is related to the historical cost of the block and not to its replacement value, which is several times the original cost, will readily concede the case even for a larger increase in the rate of return than the mere 2 per cent., now demanded by the management of T.I.S.CO.

G. A. T. T.

Great significance is attached by Britain and other countries to the forthcoming meeting of the contracting parties to the General Agreement on Tariffs and Trade (G.A.T.T.), scheduled to commence at Geneva on Thursday next, in view of the fact that the return of the buyers' market the world over has made all countries more than ever eager to safeguard their position in the world markets. The forthcoming session is also important, because it will deal with the question of the admission of Japan into the Organisation. Since Japan has turned out, once again, to be a major competitor in world trade, the attitude of some of the contracting parties to the admission of this country into the G.A.T.T. may be stiffer than it was before.

There is as yet no clear and common approach to the question of Japanese entry into the G.A.T.T. In the U.K., for instance, although the question has been discussed by the Government for some time past, its exact views are still not known. The Government is believed to favour freer trade and payments, although it has been compelled to take into account the Lancashire textile industry's fears of growing Japanese competition. West Germany seems to have taken a friendly view. Belgium and Holland are expected to support Japanese admission subject, however, to certain conditions. The U.S. Government's attitude will be based on the principle of compromise. The two countries which are strongly opposed to the Japanese admission are stated to be Australia and France. It remains to be seen whether these and other countries will change their attitude towards the Japanese entry into the G.A.T.T., now that Japan is reported to have modified its original approach and is asking only for a provisional associate membership of the Organisation. This form of membership, it is stated, confers temporary rights to most-favoured-nation treatment.

Another important item on the agenda of the Geneva meeting of the G.A.T.T. is the one relating to the extension of negotiated tariff schedules beyond 31st December next. This issue, as readers are aware, has evoked particular attention in the past few days. There is a school of thought in the U.K. and the Commonwealth countries which has put forward a vigorous plea for withdrawal from the G.A.T.T. The plea is evidently based on the anxiety to enjoy special privileges in the sphere of world trade. This anxiety is understandable, but it should not be carried so far as to scrap the G.A.T.T. altogether. For it is high time that the free countries realised the fact that courageous steps are needed if we are to achieve convertibility of currencies and extensive liberalisation of trade. Certainly, the G.A.T.T. is the most effective instrument for preventing the revival of tariff warfare among nations which had been responsible for high prices and restricted markets in the past. There is, therefore, the imperative need not only for extending the period of the present tariff schedules but also for enlarging the scope of the schedules so as to cover a wider field of world trade. The need for this is particularly urgent in the present context, when the U.S. is trying to define its own position towards the G.A.T.T. It is scarcely necessary to point out, in this connection, that the most outstanding achievement of the G.A.T.T. in the past six years has been the progressive reduction in U.S. tariff barriers through international negotiation. Some in the U.K. are critical of the utility of the G.A.T.T. But there are many who feel, as the *Economist* rightly does, that the tariff concessions given by the U.S. are, in the present circumstances, more valuable than those given by any other country. Further, any demand for withdrawal from the G.A.T.T. will be inconsistent with the plea for an all-round reduction in the U.S. tariff barriers.

The British Government is reported to have decided not to raise, at the Geneva Conference, the issue of the future of Imperial Preference and its relationship to the G.A.T.T. The British delegates to the Conference will, we are told, only confine themselves to seeking (1) certain specific adjustments in the rules of the G.A.T.T. organisation which will permit the U.K. to give greater protection to domestic agriculture, without being forced, at the same time, to impose duties on food imports coming from the Commonwealth, and (2) more flexibility in Colonial tariffs. Alluding to this, the Foreign Editor of the *Financial Times* observes as follows:

"The immediate need which the British delegate will press at the forthcoming Geneva conference is for more freedom to organise the protection of certain branches of British agriculture as and when this is judged to be in the national interest. At the moment, this task is performed through the unsatisfactory method of import quota restrictions. Apart from the difficulties which this method causes for any long-term plan for the encouragement of domestic producers, who continue to feel insecure without the support of a tariff, it makes British import policy appear arbitrary and unpredictable to foreign suppliers of foodstuffs for the British market, particularly the exporters of fruit and vegetables from the Continent of Europe. It is, in fact, the organisation of a better system of control over importing horticultural produce that Britain is chiefly concerned to secure at Geneva."

The question of revising the G.A.T.T. in such a way as to provide for restoration of freedom to Imperial commercial policy has found increasing support not so much in the U.K. as in Australia. It was only a few days ago that Mr. R. G. Menzies, Prime Minister of Australia, declared that his Government had been far from satisfied with the operation of the G.A.T.T. and that his country's delegation to the Geneva conference would press for a comprehensive review of the Agreement. The Australian initiative, it must, however, be emphasised, is prompted more by its own domestic conditions than by the need for the establishment of a closer commercial tie-up among Commonwealth countries through the revision of the G.A.T.T. For the tariff wall in Australia is already high and trade and industry in that country are urging the Government to raise the tariffs still further. Since the beginning of this year, no fewer than 30 applications for increased tariff protection have been referred to the Tariff Board for enquiry. Among these, seven cover textiles, seven chemicals, four paper and wood products, and the rest miscellaneous engineering and electrical goods. There is an even stranger aspect than this. Some of the most important applications have, in fact, come from the Australian subsidiaries of British companies. If Australia were really eager to bring about a closer commercial tie-up among the Commonwealth countries, it would do well to effect a downward revision in tariffs, which are at present very high, thereby allowing a freer flow of imports from other Commonwealth countries.

TOWN AND COUNTRY PLANNING

The All-India Institute of Town Planners finalised a draft legislation on town and country planning, at its annual conference, held in Secunderabad last week. The full text of it is not yet available. But from Press reports, it is clear that the legislation, which is designed to arrest haphazard growth of towns and rural centres, provides a model for planned development of urban and rural areas. According to it, the State Governments are to be solely responsible for planning and regulation of towns and urban areas in their jurisdiction. The role of the Central Government will be confined to social welfare activities such as industrial housing and re-development of urban areas. Further, in cases where problems arise in which two or more States are concerned, the Centre will have to advise, co-ordinate and even direct as to the most desirable form of agreement among the States concerned. In drawing up the legislation, we are told that developments abroad, especially in the U.K. and the U.S., have been taken note of and adapted to Indian conditions.

The need for model legislation for town and country planning is a long-felt one. Town and country planning has suffered through want of adequate legal powers to control use of land and construction of buildings, though it must be admitted that neither the State Governments nor the local authorities have shown a full appreciation of the situation or utilised such powers, as they already have, to promote proper development. It is true that, in some States, legislation on town planning has been enacted or is contemplated. But there is need for a certain uniform policy. This explains why the Planning Commission recommended that "there should be a National Town and Country Planning Act which would provide for zoning and use of land, control of ribbon development, location of industries in areas considered suitable, clearance of slums, carrying out of civic and diagnostic surveys and preparation of master plans." The draft legislation, which the Institute has prepared in response to the suggestion made by the Planning Commission, is expected to meet the requirements of a model legislation for the States.

Latterly, regional planning has become even more important in view of the implementation of the several river valley schemes and community development projects. Such regional planning should take into account the population, agricultural conditions, industries and communications of a region, with a view to securing a balance of population in the particular area between villages, market towns and industrial centres. Such plans will help at integrating agriculture and industry in rural areas and will provide for dispersal of industries from the existing centres, development of cottage and small-scale industries and services such as medical aid, education and recreation facilities. It is not known whether the Institute's model legislation provides for regional planning on these lines.

One of the obstacles in the way of town and country planning is lack of trained personnel. It is gratifying to note that the Government of India is aware of this problem, for it has accorded sanction to the opening of a school of town and regional planning in Delhi, at the instance of the Institute, as a combined enterprise of the Institute and the Government.

INDIA AND BURMESE RICE

India's inability to buy high-priced Burmese rice is reported to have been interpreted by a responsible official of the Burmese Government as being the cause for scuttling the projected Indo-Burmese barter deal. The Food Minister of the Government of India, Mr. Rafi Ahmed Kidwai, has been accused by the unnamed Burmese official as the villain of the piece. He is said to have observed that the recent trade talks between India and Burma had every chance of success but for the Indian Minister's intransigence. Allegations such as these, if allowed to go uncontroverted, are likely to affect the existing friendly relations between the two countries. In the circumstances, those who referred to these allegations in Parliament this week must be said to have contributed something towards removing any misgivings that may exist in the public mind regarding the real cause for the breakdown of the Indo-Burmese trade talks. For it gave a timely opportunity to the Food Minister to make a detailed statement in the House on the recent Indo-Burmese trade talks.

India has been threatened by Burma that it would buy its needs from, and sell its rice to, countries other than India, if India failed to buy its rice. There is no need for such a threat for India is prepared to buy Burmese rice, provided such is offered at a price which suits this country. During the negotiations with the Burmese representatives, it was pointed out, we are told by the Food Minister, that India was prepared to buy this year one million tons of rice if the price was about Rs. 16 a maund, landed in India, and this position, it is learned, still holds good. Burma should take note of the fact that, owing to an improvement in its domestic producion of rice, India is not in dire need of having to buy rice at any price. If Burma has a large surplus of rice to dispose of, then it should snatch the offer of Mr. Kidwai. The willingness of the Government of India to permit imports of as much as a million tons of rice from Burma, provided it is cheaper than the domestically grown rice, is an indication of its desire to restore the pre-war pattern of trade with Burma. The door is thus open to our neighbouring country. Only, it must realise that the days when it can dictate its own price are over.

As regards satisfying the requirements of Burma, there is little cause for that country to feel disappointed. For, to quote Mr. Kidwai, "whatever they wanted we gave them and that at a price which compared favourably with the prevailing rates in other countries." Here then is another instance of India's anxiety to maintain friendly relations with Burma. Asked about the barter deal suggested by Burma, the Minister added that, after the Mission made its purchases, it offered some rice in barter. As the rice was not wanted the barter deal was dropped. Mr. Kidwai admitted the fact that rice was the principal crop of Burma and was treated as a money crop and, therefore, it was open to Burma to fix a price which would suit it. But then it cannot expect India to pay a price which does not suit its economy.

OFF THE RECORD

(By "ROVER")

IF Mr. J. R. D. Tata were a less tactful, less conciliatory and more outspoken man, he would have given expression to his feeling of frustration and bitterness differently and more pointedly at the annual general meeting of the Tata Iron and Steel Company last week, while addressing the shareholders of this Company. Even as it is, it did not need much reading between the lines on my part, in spite of the restraint, admirable in the circumstances, to which he must have subjected himself while drafting this speech, to see that here was a desperately disappointed and disillusioned man, struggling hard to remain polite, patient and reasonable, in the face of continued provocation.

It is the kind of feeling which only a man of breeding and refinement, unhappily married to a selfish, self-willed and spoilt woman, who is unscrupulous enough to bring all those feminine weapons into play, which drive honourable and sensitive men crazy or reduce them to a state of helplessness and abject surrender, alone can understand. Society is ever ready to believe the worst about a man, when the accusation of disloyalty, neglect and cruelty comes from a tearful but scheming wife, posing as an injured innocent. To-day, the public in India is equally ready to join in holding the business community guilty of greed, corruption and anti-national attitude and to uphold the Government in treating it with suspicion and contempt. In the eyes of the Government, nothing that a business man or an industrialist does could possibly be right. Gross and erring as he is, as his place is indispensable at present, he has to be tolerated as a necessary evil, but kept in his place by constant snubbing and watchful surveillance.

In such a set-up, tied hand and foot by official and public opinion, there is nothing for the unfortunate industrialist but to grin and bear it or if it be altogether beyond his power of endurance to grin, he should bear it with a wry face reconciling himself to the fact that this would be entered as sullenness against him. Perhaps, Mr. Tata was well aware of the futility of any protest on his part against the Government for such treatment of the fraternity to which he belongs. All the same, it is to his credit that, instead of just caving in, he chose to put up a well-reasoned, dignified and restrained yet bold case for the consideration of the public and the Government. What was more significant about this speech was its freedom from rancour or a sense of despair, to which a lesser man would have easily succumbed in the circumstances. There was not a single note of petulance or a hint of retiring in a corner to nurse his grievances.

Judging by the way things have been drifting possibly towards an ultimate and open breach and disaster, it was time that somebody brought forward the whole issue of the place of business and industry both in the concept of a mixed economy and in the new Indian polity, *vis-a-vis* the Government and other elements in society for a clear definition. It is not a question of obtaining, usurping or maintaining rights and privileges for a specified community, but getting its assignment and functions properly demarcated to enable it to fill the bill properly. Industry must know what is expected of it and allowed enough freedom within the limits of the social and economic structure accepted for the time being by the country. Unless this is done, it could neither plan or function properly.

As clearly set forth by Mr. Tata on this occasion, the business community's stand is not against the accepted policy of a mixed economy or for a return to *laissez faire* conditions. Used to working under conditions of comparatively greater freedom within its own sphere of operation since its inception, Private enterprise, besides accepting the new conditions, has given during the last six years sufficient proof of its readiness to co-operate by increasing investment and production. In fact, the new concept has met with varying degrees of resistance from almost every class of the people such as landlords, agriculturists, workers, the general run of consumers and politicians. Only the private sector of industry has gone on doggedly and patiently to fall in line with Government policies, even when some of these proved to be extremely irksome or almost unworkable. It is a strange irony of fate that the more it has bent itself in submission to the will of the Government on small issues and great, the more it has been trampled upon and kicked about while those who resisted it in utter disregard of the interest of the nation as a whole, by staging strikes and holding up production or diverting land deliberately to more paying commercial crops from foodgrains, when people were dying for want of food, were patted on the back and pampered at every turn.

Year after year, Governments, State and Central, apart from taxing commerce and industry to an extent, which, but for past savings and reserves, would have paralysed them, kept on adding one weapon after another to be used against erring units on the slightest suspicion of mismanagement or inefficient management. But it did not think it necessary to take any active steps against erring unions, when they, by their untional activities, robbed the country of millions of yards of cloth, when cloth was strictly rationed, or one lakh tons of steel, even though industrial expansion is held up for want of enough steel in the country and though steel is being imported at almost double the price of home-made steel. If anti-national behaviour on the part of any section or society is to be unreservedly condemned, there should be legislation in other spheres to match the Industries (Regulation and Control) Act or the revised version of the Indian Companies Act introduced in Parliament last month.

After seven months of 'go-slow' tactics resulting in the ultimate closure of one of the most important units of steel production in the country, all that the Government did was to express disapproval. Instead, if production had been consistently falling in any unit through some mistaken policy of the management, the same Government would have come down on it with a heavy hand. As a result of Government policies, a kind of subconscious 'go-slow' policy on the part of the workers has been in operation for some time in almost every factory and farm, as a result of which the country has been losing crores of rupees worth of agricultural and industrial produce every year. In view of all this, it is not surprising that the private sector of industry should feel discouraged and disillusioned and wonder, at times, whether subordinating self-interest in the interest of the nation as a whole is not exclusively the duty of business men, with other elements in society allowed to seek more power or profit at the cost of the nation.

What I have said above should not be taken as a defence of lapses on the part of individual black sheep amongst the business community. Apart from mistakes and serious errors of judgment leading to disasters, there have been enough scandals involving moral turpitude on the part of those in the party in power and amongst the Governments themselves, to discourage one from judging and condemning a whole class for the sins of some of its constituents. Judging by the record of the last six crucial years, it is the business community as a whole which emerges with credit not only for keeping the wheels of industry running in spite of physical and psychological obstruction, but for more loyal co-operation in the national effort to rebuild society on a new pattern. The position to-day would have been vastly different and far more critical, if industry had taken it into its head to behave more or less on the same irresponsible and selfish lines, as most of the other important sections of society.

A wise Government, a Government free from class prejudice, one with some sense of proportion and fair play, would appreciate this record and create an atmosphere which would encourage the private sector to put forth its best effort in the service of the country, instead of treating it with cold contempt. If there were someone with imagination enough and with a degree of requisite detachment in the Government of India, he would listen to what amounts to almost the last desperate plea of this sadly battered community, put forth through one of its most respected spokesmen possessing an unblemished past, and re-examine the attitude of his Government in the light of what Mr. Tata said last week. If this re-examination leads to a revision of the present relations existing between the Government and industry which resemble those between the police and potential criminals the response from the latter would be immediate and the results in terms of expansion and production truly amazing. What is wanted is trust and mutual confidence, with a proper appreciation of each other's difficulties and limitations and not suspicion. The Government can exact implicit obedience from this community, because of the authority it wields and because of the heavy loss involved for industry in case of defiance or recalcitrance; in fact, the Government are getting this obedience from it even to-day. But abject surrender cannot bring even half the tribute, which confidence and willing co-operation can obtain.

All that industry asks for to-day is a clarification of the position with regard to the declared policy of running a mixed economy. Such a reassurance has become necessary, because of the wide gulf dividing the policy announced by the Government and its day-to-day behaviour as well as its general attitude as exemplified in the case of the nationalisation of the air transport industry and the threat uttered by the Central Minister for Commerce and Industry with regard to the automobile industry last week. How is the private sector to function side by side with the public sector, if it is denied a voice or even consultation in matters vitally affecting it or the economy as a whole or if Government policies which result in, if not deliberately aim at, "discouraging creative enterprise and initiative, inhibiting savings and destroying the confidence of the investors." The automobile industry would need additional capital on a large scale to secure a progressively greater manufacture of parts as directed by the Government. Would it be able to obtain it from investors with this threat of nationalisation hanging on its head?

It is such intemperate, indiscreet and arrogant utterances of men like Mr. Krishnamachari and Mr. N. V. Gadgil, who cannot open their mouth without giving voice to some threat or other to the comparatively docile business community, which is really responsible for creating a doubt amongst those so threatened, as to whether it is not, after all, the intention of those in power to have a "wholly State-dominated economy, where the industrial class is temporarily tolerated and permitted to survive pending further developments," but destined ultimately, as a class, to extermination. The Government and the country can liquidate this class if they so desire, but they will soon discover that they will be the poorer for it in the present context of things, with the State's proved incompetence for running even the few experiments it has undertaken. And, in any case, we that is, the country and the Governments, cannot in this case expect the condemned business community to go on functioning naturally in the interval and to provide a halter gratis for hanging it, when the time comes for carrying out the sentence.—*All Rights Reserved.*

PAKISTAN NOTES

FURTHER TALKS ON EVACUEE PROPERTY

EARNINGS FROM EXPORTS RECEDE

A CONFERENCE of the representatives of the Governments of India and Pakistan is scheduled to be held at New Delhi next week to examine the issues relating to an agreement on the question of evacuee property in both the countries. The conference will follow up the series of discussions held at Karachi during the period 27th July to 13th August, 1953. The deliberations of the conference and the agreement that will be reached will be watched with great interest. For, the dispute over the evacuee property issue has all along been one of the major hurdles in the way of harmonious economic relations between India and Pakistan. Certainly, the successful outcome of the Indo-Pakistan conference of co-operative officials of the two Punjabs, recently held at Lahore, augurs well for the future of Indo-Pakistan relations. According to Press reports, the Lahore meeting had 52 items on the agenda. Most of the decisions relating to the settlement of evacuee claims and exchange of records were arrived at unanimously. A cordial atmosphere prevailed during the discussions.

Meanwhile, the Government of India has conveyed to the Pakistan Government its formal decision to confirm the agreement reached at the recent Karachi conference on evacuee property. The agreed items include refund of cash security deposits of contractors, personal and household goods, payment of compensation for movable property allotted or acquired by Governments for rehabilitating refugees and restoring the seized articles. Another question on which agreement was reached relates to steps for facilitating transfer of court deposits, deposits of minors and others under the guardianship of courts, and deposits of wards under the Court of Wards Act. The desirability of expediting the verification of claims by employees of State Governments and local bodies regarding pensions and provident fund through the Central Claims Organisation was also recognised.

Balance of Payments

The distinct improvement in Pakistan's balance of payments position, witnessed during the first quarter of this year, seems to have been arrested in the subsequent quarter. There has been a marked reduction in the surplus in the balance of payments, which, during the three months ended June, 1953, amounted to only Rs. 1.5 crores, as against Rs. 5.46 crores in the previous quarter. The reduction in the surplus has occurred despite an appreciable fall in payments for imports, from Rs. 41.27 crores to Rs. 34.60 crores. There was a shrinkage in the receipts from exports, the actual figure for the quarter under review being Rs. 36.10 crores, which is Rs. 10.40 crores lower than that three months before.

The aggregate deficit for the foreign exchange year 1952-53 was, however, lower, being Rs. 41.4 crores, as against Rs. 46.3 crores in the previous year, thanks to the slight improvement in the balance of payments during the January-June, 1953 period. Payments for imports were considerably less, due to drastic cut in imports on private account. They amounted to Rs. 192.7 crores, as compared with Rs. 287.9 crores. Receipts from exports aggregated Rs. 152.2 crores, as against Rs. 240.6 crores in 1951-52.

The relatively better foreign exchange position noted in the final half of this year reflect only the seasonal favourable trade balance —the January-June period is a busy season for Pakistan's export trade—and partly also the effect of the Government's rigid import policy. For the foreign assets of Pakistan still stand at a low level; these amounted to Rs. 81.23 crores as on 14th August, 1953, as against Rs. 150.52 crores in the beginning of last year. Indeed, to quote one report: "Pakistan's balance of payments position remains delicate. Prospect of a liberal import policy in the future have diminished and consumers fear another rise in prices of goods."

Be that as it may, the marked fall in the receipts from exports during the year under review, as noted above, has been accounted for mainly by the appreciable decline in the value of raw cotton exports. Thus, 1.5 million bales of cotton exported during 1952-53 earned for Pakistan only Rs. 64.81 crores, while a lesser quantity of 1.1 million bales earned as much as Rs. 80.96 crores in the previous year.

Pakistan's balance of payments with the dollar area during 1952-53 shows an improvement of Rs. 15 crores, the actual deficit declining from Rs. 25.87 crores to Rs. 10.95 crores. This fall in deficit was due partly to larger dollar earnings, on account of heavier purchases of jute and wool by the U.S., and partly to reduced expenditure. The deficit with the U.K. was to the extent of Rs. 50 crores. India, Japan and the U.K. were among Pakistan's ten major suppliers and customers. Pakistan's imports from India stood at Rs. 12.56 crores, while exports to India were worth Rs. 14.50 crores.

National Plan

The National Planning Board, recently set up by the Government of Pakistan, is expected to submit an interim report by March or April next year. An indication of this was given by Dr. Zahid Hussain, the Board's Chairman, the other day. "Our best endeavour," Dr. Zahid Hussain is reported to have said, "would be to complete the Plan by December, 1954." The Pakistan Government has already taken steps to obtain the services of foreign experts and arangements are being made for acquiring the services of experts within the country.

Jute Policy

Reports from Karachi aver that there will not be any major change in the Pakistan Government's jute policy for the next season. Pakistan, it is maintained in official circles, will be able to sell its estimated jute crop of 3 million bales, together with the previous year's carry-over of 2.5 million bales, before the season is out. Raw jute output during the coming season is estimated lower, owing to decreased sowing. Most cultivators have reduced their acreage and changed over to food production, thanks to extremely low level of prices for raw jute.

According to the Chairman of the Pakistan Jute Board, however, jute prices in East Bengal are tending to move up and export prices are also claimed to be higher. Importers of Pakistan raw jute in Britain, it is stated, are not buying "in a big way." Last year, they bought about 300,000 bales. Since 1st July, 1953, licences for the export of 300,000 bales to India have been issued. The quantity of exports to other overseas countries, for which licences have been given, amounts to 300,000 bales.

Development of Telecommunications

In the development of the telecommunication system in Pakistan, the U.K. has played a notable part. As early as in 1951, the U.K. Government provided an expert under the Colombo Plan to Pakistan to advise the latter on the question of modernising training facilities in the telecommunication services. In his report, the expert recommended the setting up of three regional centres in both wings of Pakistan. The Pakistan Government accepted the recommendation and requested the U.K. Government to provide equipment for the centres (at a cost of £27,000). The request has been conceded. Besides equipment and services of an expert, the U.K. Government has offered to provide demonstrators, instructors and financial assistance to run these centres.

Cotton for Canada

Efforts are being made to develop a regular market for Pakistan cotton in Canada. Several leading cotton importers in Canada, it is reported, have evinced keen interest in Pakistan cotton and some have already made contracts with Karachi traders. Pakistan can sell about 100,000 bales of cotton per annum. The success of the efforts to promote Pakistan's cotton exports to Canada, however, depend on three essential factors. First, Pakistan should export only those varieties which are required by Canadian mills. Secondly, the existing ginning standard should be improved. Finally, cotton prices should be maintained at slightly competitive levels.

(Concluded from next column)

commodity arrangements do not work, unless there is goodwill behind them and it sets out a framework in which, given the goodwill of the exporting and importing countries, a fair amount of order can be brought into sugar marketing without penalising consumers by making them pay too high prices for sugar, yet ensuring a proper return and absence of wild price fluctuations to the producers.—*All Rights Reserved.*

AGREEMENT ON SUGAR

TERMS CONSIDERED SENSIBLE

(From Our Own Correspondent)

LONDON, 5th *September*

WHEN the Minister of Food opened, in mid-July, an International Conference on sugar convened in London by the United Nations, could not have suspected that the Conference was going to meet with such signal success, at least on paper, in a way that singles it out from most post-war international conferences as well as attempts at commodity agreements. In the event, agreement has been reached between 51 countries—subject, of course, to ratification which may be an important qualification—and these embrace the Iron Curtain countries as well as the followers of the U.S.A. The terms of the Agreement, moreover, are sensibly arrived at, inasmuch as the quantities to enter the free market are set at reasonable levels and the price ranges permitted are wide enough to cover the likely fluctuations. The Conference has not attempted to do too much and for that reason it is the more likely to succeed.

LONDON LETTER

Its objects were to secure supplies of sugar to importing countries and markets for sugar to exporting countries at equable and stable prices, to increase the consumption of sugar throughout the world and to maintain purchasing power in world markets of those countries whose economies are largely dependent on sugar exports.

The British view at the Conference was that sugar supplies had been increasing to such an extent that they were likely to become out of hand in relation to demand. There was the added complication that the increased supplies could only be purchased for dollars, and recently, if the United Kingdom had not bought up the Cuban sugar surplus and Cuba had not at the same time agreed to limit her production, a severe crisis might already have hit all the exporting countries outside the Commonwealth.

The producers agreed to limit export quotas over the next five years beginning in January, but wanted to set a limit as high as 7 million tons. Over the past season, the commercial trade in sugar has been no higher than 4½ million tons, but, with the United Kingdom derationing later this month, this figure would rise to 5 million tons. The exporters finally agreed to be satisfied with quotas of 5.4 million tons which are divided roughly as follows:—

(Million tons)

Cuba	2.25
Central and South America ...	1.15
The Far East	0.9
Eastern Europe	0.9
Western Europe	0.18

In addition, the Colonial Empire, Australia and South Africa will limit their exports to just under 2½ million tons, and the Eastern European countries may also ship outside the figures shown to the U.S.S.R.

The price limits within which these quotas are to be observed range from 3.25 to 4.35 cents per lb. free alongside steamer Cuban port. During the course of the Conference, actual prices rose at one point to 3.7 cents and then fell back to under 3.4 cents. Since between now and the end of the year, at least the exporting countries are free to unload their surpluses before the Agreement comes into force, it is possible that the bottom price set by the Conference may be passed. But that does not necessarily mean that the price is likely to bump along the bottom once the Agreement comes into operation. In any event, the Agreement provides that, if free market prices do fall below the established figure, export quotas will be cut automatically by at least 5 per cent. and more by agreement. Similarly, if the price rises above the ceiling, quotas will be increased automatically by 7½ per cent., or more by agreement. Furthermore, exporters will be required to maintain stocks equivalent to 20 per cent. of their annual production to insure against deficits. If, in spite of all these provisions, the Agreement does not work satisfactorily, it will be reconsidered in three years' time. Russia and the Soviet bloc countries, however, will not observe those Articles of the Agreement which limit production and stocks on the ground that they have "full-scale planned economies."

This Agreement may be termed "an agreement to agree." It recognises that international

(Continued in previous column)

WORLD BANK COMPLETES SIX YEARS OF LENDING OPERATIONS

TOTAL LOANS AMOUNT TO $1,591 MILLION

ALTHOUGH the International Bank for Reconstruction and Development was founded in 1946, it is only six years now since it started its operations. From a survey of its activities during this period, it can be said, without fear of contradiction, that the Bank has achieved a fair measure of success in discharging its functions laid down by its founders, and has proved itself as an effective instrument of international co-operation. The functions of the Bank include, among others, the mobilisation of world savings for making capital available at reasonable rates of interest, over long periods, for projects calculated to raise the productivity of the borrowing country. Expansion of investment to provide capital for both reconstruction and development of the war-ravaged countries is another task entrusted to it by its founders. The Bank has also to organise mobilisation of economic resources in underdeveloped countries for raising the standard of living of the masses. The Bank's Annual Report for the year ended 30th June, 1953, presented to the Board of Governors at their eighth session held in Washington this week, provides enough evidence of the good work that it has done in the past six or seven years.

The year under review witnessed an increase in the number of the Bank's members. The number of countries to which loans were granted also rose. Resources available for lending were also augmented. Disbursements on new and existing loans were, in fact, the largest for any year since the Bank's development began. The net earnings from the Bank's operations also showed improvement, and, therefore, there was an increase in net accretions to both the general and special reserves, constituted under the Articles of the Bank.

As in previous years, the accommodation provided by the Bank covered a variety of projects—agriculture, electric power, transportation, communications, industry and general development. And what is more, being alive to the criticism that the Bank has been devoting less attention to backward regions, the Bank continued to bestow increased attention to the needs of underdeveloped countries.

With the admission of Germany, Japan and Jordan during the year, the membership of the Bank rose to 54, and, along with it, the total subscribed capital to $9,036 million.

Total Loans Granted

The table below gives an idea of the trend of lending by the Bank during each of the last three years:

	1952-53	1951-52	1950-51
No. of loans	10	19	21
No. of countries	9	16	11
	(In million dollars)		
Loans sanctioned during the year ...	178.6	298.6	207.1
Progressive total of loans sanctioned	1,591	1,412	1,114
Disbursement during the year ...	226.8	184.8	77.6
Total disbursements to date ...	1,103	876.5	691.7

It will be seen from the above table that, during the year under review, the World Bank made only 10 loans to 9 countries, whereas, in the preceding year, 19 loans were granted to 16 countries. Similarly, in line with the number of loans, the value of loans also shows a decrease, from $298.6 million to $178.6 million. This brings the total of the Bank's loans to $1,591 million shared by 29 countries, as compared with $1,412 million to 27 countries, in the preceding year. The decline in the loans sanctioned during the year under review does not necessarily mean that the Bank was unwilling to extend credit where it was needed. Two explanations seem to hold good for this trend. First, with the recovery made by the countries directly affected by the last war and with some of the countries passing through a period of slump in the earlier months of the year, the demand for accommodation from the Bank must have been less. Secondly, with the pressing demands of many countries for financing their approved development programmes having already been met, fresh demands can only come along with new development schemes drawn and presented to the Bank. The approval of these new schemes by the Bank will necessarily take some time. Hence in a particular year, the loans granted may be somewhat lower than in the previous year.

Two of the ten loans issued during the year under review were made in support of a broad range of economic projects. Agriculture, basic industries and transport benefited from a loan to Australia. In Yugoslavia, the Bank supported a group of projects calculated to improve the country's balance of payments. The Bank gave loans to specific key industries such as iron and steel in India, wood products industries in Finland and for a fertiliser plant in Iceland.

The table below gives a synopsis of the Bank loans classified by purpose and area as on 30th June, 1950:

(In millions of United States dollars, net of cancellations and refundings)

Purpose	Total	Area				
		Asia and Middle East	Africa	Australasia	Europe	Western Hemisphere
Grand total	**1,660**	**187**	**132**	**150**	**734**	**357**
Reconstruction Loans—						
Total (France, the Netherlands, Denmark, Luxembourg) ...	497	..	..	..	497	..
Other Loans—						
Total	1,063	187	132	150	237	357
Electric power (machinery, equipment and construction materials)	404	28	58	30	35	253
Transportation	242	72	34	39	35	62
Railroads: locomotives, rolling stock, rails, shop and station equipment	150	63	31	16	3	37
Shipping: vessels and marine equipment	12	..	..	..	12	..
Airlines: planes and equipment	14	..	..	7	7	..
Roads: building machinery and equipment ...	46	5	2	16	..	23
Ports: docks, loading and dredging machinery and harbour craft	20	4	1	..	13	2
Communications (telephone and telegraph equipment and supplies)	26	2	..	..	..	24
Agriculture and Forestry	150	51	..	54	28	17
Mechanization: general farm machinery and equipment.	59	..	..	44	2	13
Irrigation and flood control: construction equipment and materials	60	41	..	5	13	1
Land improvement: machinery, construction equipment and materials	19	10	..	5	2	2
Grain storage: construction materials	5	..	..	4	1	..
Timber production: machinery and vehicles ...	7	..	..	7	..	..
Industry	149	32	..	27	90	..
Manufacturing machinery	126	32	..	20	74	..
Mining equipment	23	..	..	7	16	..
General Development	92	2	40	..	49	1
Development banks	12	2	..	..	9	1
General development plans	80	..	40	..	40	..

It will be seen that the share of Asia and the Middle East is only $187 million, representing only 17.5 per cent. of the total of $1,063 million granted to all the five regions namely, (*a*) Asia and Middle East, (*b*) Africa, (*c*) Australia, (*d*) Europe and (*e*) Western Hemisphere. It is true that, a year ago, the share of this region was even less at 14.6 per cent. of the total. Nevertheless, it must be said that the assistance rendered by the Bank to this area still constitutes only a fraction of its needs.

During the year under review, the total disbursements amounted to a sum equivalent of $226.8 million. This sum, which covers new and existing loans, was the highest reached since the Bank commenced its development lending operations. Total disbursements to-date amounts to $1,103 million, of which $1,014.5 million is repayable in U.S. dollars. A notable feature of the disbursements during the year was that a substantial portion of such was spent outside the U.S. This was due to an improvement in the supply position of goods outside the U.S. particularly in Europe. This has enabled the European countries to benefit from the Bank's policy of encouraging the purchase of materials and equipment from whatever source could offer the terms most favourable to the borrower. The following table shows the geographical distribution of loan expenditures to the end of 1952-53: (Dollars in millions)

Area of expenditure	*Total to 30-6-1952*		*Fiscal year 1952-53*		*Cumulative total to 30-6-1953*	
	$	%	$	%	$	%
United States ...	626.2	71.4	144.1	63.5	770.8	69.8
Canada ...	61.7	7.0	9.7	4.3	71.4	6.5
Europe ...	125.0	14.3	68.2	30.1	193.2	17.5
Latin America ...	58.4	6.7	2.6	1.1	61.0	5.5
Africa ...	2.5	0.3	1.8	0.8	4.3	0.4
Near East ...	2.5	0.3	..	..	2.5	0.2
Far East ...	0.2	..	0.4	0.2	0.6	0.1
Total ...	876.5	100.0	226.8	100.0	1,103.0	100.0

In spite of difficulties in the world money markets, further progress was made by the Bank in broadening the sources of supply for funds required by it. The bond market in the U.S. was seriously affected by the return to freer money market conditions and by a sharp rise in yields on the United States Treasury and other high grade bonds. Despite the hardship caused by these conditions, the Bank was able to sell new bond issues worth $71.6 million. In October, 1952, the Bank issued 19-year 3½ per cent. bonds worth $60 million at 98. Nearly $20 million of this was subscribed by investors outside the U.S. In November, 1952, the Bank floated in Switzerland 3½ per cent. Ten-year Bank Bonds at 98½. The bonds amounted to 50 million Swiss francs or approximately $11.6 million. The Bank further added to its resources by selling $13.6 million of securities from its portfolio. The Bank's resources of non-dollar funds were increased by further releases of the capital subscriptions paid in by members in their own currencies. The equivalent of $26.6 million was released in this way. In addition, the U.K. agreed to make available, subject to consultation £60 ($168 million) for disbursements by the Bank for projects in Commonwealth countries of the sterling area over a six-year period. The gross available funds thus, on the whole, amounted to $1,584 million, as against $1,454 million a year before. Out of these available resources, as much as $1,103 million have already been distributed. This leaves a balance of $481 million available for disbursements.

The net income resulting from the Bank's operations during the year was $18.5 million which was added to the supplementary reserves. This reserve stood at $76.5 million at the end of the year. The special reserve rose to $37.2 million making the Bank's total reserve from operations $113.7 million.

In addition to loan operations, the Bank has been active in helping its members to assess their economic resources and to prepare programmes of development. The general survey mission remains the Bank's main way of performing services of this kind and the reports prepared by it are being used as a basis for further action by Governments.

Loans to India

India has now become one of the chief beneficiaries of the World Bank. It has so far obtained loans aggregating $109.8 million. The Bank gave three loans to India in 1949-50, amounting to in all $62.5 million which was finally reduced to $58.8 million at India's own request. Again, during the year under review two more loans were granted. One of these, for a sum of $31.5 million, was granted to the Indian Iron and Steel Co., Ltd., Calcutta, and the other of $19.5 million for further development of the Damodar River Valley.

The loan to the Indian Iron and Steel Company (I.I.S.Co.), made in December, 1952, and amounting to $31.5 million, resulted from recommendations made by a Bank mission that went to India under the leadership of the Chairman of the First Boston Corporation to examine means of increasing iron and steel production. Although the proceeds of other loans have been paid through intermediate agencies to private manufacturers, this is the Bank's first loan in the manufacturing field to be made directly to a private concern. It will be used to finance imported equipment and services which I.I.S.Co. needs to carry out a five-year project to increase its annual productive capacity from 350,000 tons to 700,000 tons of finished steel, and from 160,000 to 400,000 tons of iron for sale to foundries. When this project is completed, India's finished steel capacity will be about one-third higher than in 1952, and her foundry iron capacity will be doubled.

The Bank's $19.5 million loan of January, 1953, is for key projects in the Plan for the development of the Damodar River Valley, an important agricultural and industrial area west of Calcutta. This loan will help to finance the construction of two storage dams, two hydro-electric plants, and a barrage and irrigation system. The hydro-electric plants will have a combined capacity of 100,000 kilowatts. The irrigation system will supply water to a million acres and should make it possible to increase the production of foodgrains by 400,000 tons a year.

The Bank is studying an application for a loan to the power companies in the Tata group for the construction of a thermal-electric generating plant on Trombay Island near Bombay.

TRAINING COLLEGE FOR BANK EMPLOYEES

SOME THOUGHTS ON PROPOSED SCHEME

DURING the last 12 years or so, on account of the stimulus provided by the Second World War, banking in India has expanded rather rapidly, as shown by a considerable increase in the number of joint-stock banks and their branches. Consequently, many of the banks have been feeling the handicap of a shortage of trained personnel. This handicap can be removed only by making proper arrangements for the adequate training of employees of banks holding clerical and supervisory posts. Such training alone would enable the public to obtain satisfactory services from banks.

In Britain, the big banks have been running their own training institutions, with great benefit to themselves and to the public. Their training schemes are divided into three stages, namely, post-entry training for new entrants of ages between 17 and 23 years, intermediate training for potential security clerks and chief clerks of ages between 24 and 30 years and training for management for potential managers of ages above 30 years. There are similar training institutions in other Western countries also. In India, one big bank has been running its own training school at Calcutta at considerable cost. A few other big banks in India have made arrangements in their own head offices for providing some practical training to men selected for supervisory posts. One big bank sends such men for training to its London office. The bigger banks in India possess adequate resources and facilities for giving proper training to their employees. But most of the medium-sized and smaller banks do not possess such resources and facilities. Many of them function in the mofussil, away from the big centres, and have to carry on with employees who have not received proper training in modern banking methods and procedure. Hence, the experience of the public has been that the services rendered by many of such banks are generally not as efficient as they should and can be. It is, therefore, necessary to remove this defect from the banking structure in India as early as possible. The Reserve Bank, as the friend and mentor of the commercial banks, has been keenly alive to this need for some time.

The Indian Institute of Bankers has been rendering useful service to banks for a number of years by conducting its Associate Examination in two parts for the benefit of bank employees. But, beyond arranging for the delivery of a few lectures every year at three or four centres to help the bank employees preparing for its examinations, it has not been able to provide any practical training for them. The Reserve Bank, therefore, has now taken up the question very actively.

Need Explained

It is necessary to provide practical training to persons holding clerical, as well as supervisory, posts in banks. One banker has expressed the opinion that making provision for the practical training of bank clerks is, perhaps, even more necessary than making similar provision for supervisors. But the difficulty with regard to the former is that, as bank clerks are spread in large numbers all over the country, it is not possible to provide for their practical training by establishing training institutions for them at one or two centres. The only way to provide such training seems to be to hold evening classes for them at several centres in India and to induce experienced local bankers to impart training at such classes in a spirit of national service. The Reserve Bank seems to be fully alive to this need and will probably deal with it a little later. For the present, however, it has decided to sponsor a scheme for establishing a training college for only the supervisory staff of banks. Such a training college for the supervisory staffs of co-operative banking institutions and co-operative organisations existing in the country has been functioning successfully at Poona for the last two years.

The success of the scheme will depend upon full co-operation from all banks—the Imperial Bank, the Exchange Banks, the big Indian banks and also the medium-sized and smaller Indian banks. A committee, consisting of the representatives of all the above banking interests and a couple of experts in banking education, has been established to give effect to the scheme and the Governor of the Reserve Bank has made it known that the Reserve Bank will meet the entire expenses of establishing and running the scheme. This is a wise decision, because the Reserve Bank, with its enormous annual profits, can afford to spend, annually, a lakh and a half or a couple of lakhs of rupees on the running of the college, without feeling the expense. Further, the expense will be in the interests of the nation, as it will promote the development of commercial banking in India on sound lines.

Bombay to Have the College

It is proposed to establish the college in Bombay, because Bombay would be the most suitable centre for the purpose. As the headquarters of the Reserve Bank are located in Bombay, the Bank will be able to supervise the working of the college effectively. Moreover, several departments of the Reserve Bank, such as those of Banking Operations, Banking Development, Exchange Control, Agricultural Credit and Research and Statistics, are located in Bombay. They will not only be able to give guidance to the college in Bombay, but will also be able to spare officers for giving periodical lectures on banking subjects pertaining to their departments, to the trainees in the college. The head offices of some of the bigger banks are located in Bombay and they too will be able to give guidance and evening lectures to the college. Furthermore, Bombay will be more convenient than Calcutta to the trainees coming from the South, while it will be as convenient as Calcutta to those coming from the North. Finally, the Sydenham College of Commerce and the School of Economics of the University of Bombay will be able to help the proposed college, especially as regards the more theoretical aspects of the training.

Trainees will receive the greatest benefit from the college, if it can be made residential. They can then lead a corporate life, discuss problems among themselves and with their teachers, out of regular college hours and engage themselves in sports, recreation, etc. But, on account of the prevailing scarcity of accommodation in Bombay, it will be difficult to secure a building, which can house the college as well as the students, especially in Bombay City or the near suburbs.

For the successful functioning of the college, it is necessary to have, as its Principal, a person who has had not only considerable experience in practical banking in high posts for several years, but also experience of imparting banking knowledge to others. It would not be difficult to find a person in India possessing the former qualifications but it would be very difficult to find one in India possessing both the qualifications. For the first two years of the college, therefore, it is proposed to secure the services, under the Colombo Plan, of two English bankers who have had experience of running training colleges in England. One of them will act as the Principal of the college. A senior Indian banker, possessing sufficient experience in practical banking in high executive posts, will be associated with these two English bankers, as a Professor, and will become the Principal of the college, when the latter retire from it. It will be difficult for any Indian bank to spare the services of one of its senior officers for the purpose, but one of them should come forward and offer to do so in the larger interests of the banking system of the country. It is expected that the work done by the above members of the teaching staff will be supplemented by occasional lectures from senior officers of the Reserve Bank and other banks in Bombay.

Intensive Courses Planned

Intensive courses of study of the practical aspects of commercial banking will be conducted at the proposed college with the help of forms, documents, registers and other books, which are usually maintained in modern banking institutions conducting business on sound lines. A "model (dummy) bank" will also be attached to the college for the purpose of explaining the working of all departments of a modern bank. The main emphasis in this training will be on the practical aspects, although the training will have to include theoretical aspects also, as, in a subject like the law and practice of banking, theory cannot be separated from practice. Each batch of trainees will receive training for a period of about four months. On the completion of a course, the trainees should be subjected to a test and, on passing it, should be given a certificate by the college. In the absence of a test and a certificate, the trainees may not do their best to benefit fully from the course. An eminent educationist and an experienced banker from outside should be associated with the college authorities in the conduct of the test.

The success of the college would depend upon the readiness with which commercial banks, particularly the medium-sized and the smaller ones which, as mentioned above, lack the requisite resources and facilities for giving proper training to their employees, would be able to spare officers, year after year, to receive training at the college and to bear the expenses involved, namely, salaries and travelling, lodging and boarding expenses. If the college is run on sound lines, even those big banks, which have their own training arrangements at present, will find it advantageous to send their officers to the college for training and to bear the expenses mentioned above. Medium-sized banks also can afford the expenses, but some of the smaller banks may not be able to do so. If the Reserve Bank finds a few deserving cases among the latter, it should subsidise them for the purpose. If the number of applicants for admission to the college exceeds the number of seats available in it, the selection of trainees should be left to the college authorities, who will consider not only the suitability of the applicants, but also the need of the banks which they represent, for trained personnel.

Under the supervision of the Reserve Bank and with the co-operation of commercial banks, the college may be expected to prove a success, as similar institutions have done in England and several other Western countries.

Lloyds Bank Limited — Incorporated in England

BRITISH BANKERS' ASSOCIATION

Mr. A. W. Tuke, Chairman of Barclay's Bank Ltd., was elected President of the British Bankers' Association for the coming year at its latest annual general meeting. Lord Aldenham, the Chairman of the Westminster Bank Ltd, Mr. A. P. Anderson, General Manager of the British Linen Bank and Mr. R. N. Drake, Chief Manager of the Mercantile Bank of India Ltd., were elected Vice-Presidents. Mr. Drake was some time ago the Manager of the Mercantile Bank of India Ltd., Bombay, and many of the Bank's other branches in the Far East and possesses a sound knowledge of economic and financial conditions in India and the Far East.

WORLD BANK LOANS

The International Bank for Reconstruction and Development made four loans to two countries on the 4th inst. Two of the loans amounting to $3.95 million were granted to Nicaragua. Of this, a sum of $3.5 million is for highway construction and the balance for electric power. The loans are for a period of 10 years and bear interest at 4½ per cent. including 1 per cent. commission. Amortisation payments will begin on 15th March, 1957.

The recipient of the other two loans is Iceland. One of the loans will be in European currencies equivalent to $1.35 million for carrying forward a programme of agricultural development. The other loan, amounting to $252,000, is intended for the construction of a building to house radio transmitter equipment serving North Atlantic air traffic. The loans are for a period of 12 months and bear interest at 4½ per cent. including the statutory commission of 1 per cent. Amortisation payment will begin on 15th July, 1954.

DEVELOPING UNDERDEVELOPED ECONOMIES

WORLD BANK MAKES SOME NOTABLE OBSERVATIONS

[The growing interest which the International Bank for Reconstruction and Development has been taking in the development of underdeveloped areas for the past one or two years is fully reflected in the prominence given by the Bank in its eighth annual report to a discussion of the problems relating to the development of these areas. A whole chapter has been devoted to this subject. As the subject is of topical interest to this country, a verbatim reproduction of the chapter is given on this page. The observations of the Bank deserve to be carefully read and pondered by all politicians, especially members of Parliament and legislatures of the various States, as well as by the administrators, in whose hands the destiny of this nation lies now.—ED.]

THE Bank is now beginning its eighth year of work. Since 1946, it has had opportunities to observe the process of economic development in many countries and on almost every level of effort, from village to Cabinet council. Bank officers, staff and consultants have visited all the Bank's 54 member-countries and many overseas dependencies as well. Their business has been carried out for a wide variety of purposes: to make broad economic assessments; to consult on major policies affecting development; to study individual projects and examine the possibility of making loans for them; to assist in dealing with problems of management, engineering and finance arising in the course of project execution; to help in the mobilisation of local capital; and to gain knowledge of or consult upon many other problems of concern to the Bank and its members.

Many observations by the Bank confirm the widely held belief that the resources of most underdeveloped areas are adequate, if effectively used, to support a substantially higher level of production and income. There are many and complex reasons why these areas have not been more developed. Many cultures, for instance, have placed a low value on material advance and, indeed, some have regarded it as incompatible with more desirable objectives of society and of the individual. The character of government has not always been of a sort to create popular incentives; certain forms of social and economic organisation have offered obstructions. In part, the reasons have been physical. Climate and topography have imposed limits on economic growth; distances from centres of technological innovation and capital resources, especially in the past, have been hindrances.

Capital Alone Not Sufficient

Capital equipment can now readily be sent to most parts of the world; technical skills can be imported. Both the tools and the knowledge needed for development are within reach. But this does not mean, as is too often assumed, that the chief requirement is to finance imports of foreign equipment and to attract foreign technicians. The availability of capital for these purposes cannot, by itself, be expected to remove some of the most important obstacles to economic growth.

To a greater or lesser extent, these obstacles to growth exist everywhere. In one country or another, they include: the lack of traditions of political responsibility; the weakness of economic initiative; low standards of education and training; and insufficient understanding that economic progress requires patience, effort and self-denial. The consequences may be lack of confidence between a Government and its people and frequent changes in Government policies and personnel; unsound economic and financial policies, dictated by political pressures and often leading to prolonged periods of inflation; a reluctance of important groups to accept necessary economic and social changes; waste of public funds on non-productive activities; and weak administration in Government and business. These factors discourage domestic savings, and deter foreign investment.

An Example

The interdependence of each aspect of society in the development process is reflected in the fact that, in countries now described as "developed," the era of technological change and rapid economic growth was preceded and accompanied by other changes of great importance. These included the evolution of new ideas concerning man, society and the physical world, and the evolution of new political and economic institutions that made it possible to apply capital productively and share the benefits of technology among large numbers of people. Not only the printing press and the steam engine, but the school house and the joint venture corporation have their chapters in the still unfolding story of economic development.

The institutions that can promote economic growth cover an extremely wide range. Among a great many developments in this field, the remainder of this chapter is confined to one: the establishment, in an increasing number of underdeveloped countries, of institutions to weigh Government policy and guide Government investment in economic development. This is a comparatively new phenomenon. It has been selected for comment because the Bank believes that, in the underdeveloped countries in which much of its work is now centered, organisational innovations of this kind can enhance the effectiveness with which existing resources are used.

Place of Governmental Programming Units

One of the universal findings of the Bank's missions has been that underdeveloped countries have much to gain from a better direction and balance of investment. The misdirection of financial resources has taken many forms: the investment of money in commodity speculation or idle land; the construction of factories in the absence of markets; the building of a few monumental projects at the cost of more modest but more pervasive programmes; the use of public funds for purposes that private investors, given proper incentives, would have been willing to pursue; the lack of foresight that has led to the building of hospitals and universities without adequate concern for the availability of trained doctors, nurses or teachers.

The policies of Government are no less important in underdeveloped countries than they are elsewhere. The level of Government spending, the tax structure, tariff and monetary policies, among other things, influence the total amount of investment, the sources from which it comes, and the purposes to which it is put. The Government's own share of investment in an underdeveloped country, moreover, commonly amounts to between one-quarter and one-third of the total; it is not only important in itself, but may have a direct effect on what enterprises are possible and profitable in the private sector.

The fact that financial and technical resources are limited in underdeveloped countries makes the most effective use of these resources a pressing necessity. It lays on Government a responsibility to develop its own policies and investments so that they will help to stimulate the economy as a whole to greater productivity, increased savings and investment and, as a result, higher living standards.

Controls

This does not imply a detailed blueprinting of the economy or even of the Government's role in it. Still less does it imply close and coercive economic controls which are more likely to breed new controls than new production. Nor, finally, does it justify the Government's diversion of its own financial and technical resources into enterprises for which private capital and management are available, since that will lessen the resources available for providing basic services and utilities that generally lie outside the scope of private initiative.

But a stringency of financial and technical resources does mean that the Government should exercise its influence consciously and consistently, rather than inadvertently and sometimes at cross-purposes with itself. A useful instrument in this regard is a broad development programme which looks ahead for a period of years, sets out major goals in production and investment, and provides a guide to Government decisions on policy, on approximate magnitudes of public investment in different sectors of the economy, and on the choice and timing of individual projects.

The formulation and carrying out of a development programme of this kind tries to satisfy five objectives: (a) to review the total of Government investment, so that it will neither unduly restrict private investment nor exceed total capital resources and so produce inflation or other unhealthy results; (b) to co-ordinate development planning within the Government, so that projects in one sector will be supported by whatever complementary investment is needed elsewhere; (c) to establish priorities among development objectives and plans to insure the best and most timely use of the finance, manpower and other resources available; (d) to give encouragement by policies and specific measures to the most useful private activities; and (e) to keep fiscal and economic policies consistent with the long-run objectives of economic growth.

Functions

An increasing number of underdeveloped countries have brought some or all of these functions together in a governmental programming unit. Among the units recently established, some with Bank advice, are a National Bank for Development in Brazil, a National Ministry of Planning and an Economic and Social Board in Burma, a Planning Committee of the Cabinet in Ceylon, a National Planning Council in Colombia, a Planning Commission in India, a Development Board in Iraq, a National Economic Council in Nicaragua and a Planning Bureau in Surinam.

In the main, these units have assumed the same essential duties, as a comparison of the Indian Planning Commission and the Colombian Planning Council will suggest. At the time of its formal establishment in 1950, the Indian Commission was instructed

(a) to make an assessment of the material, capital and human resources of the country, including technical personnel, and investigate the possibility of increasing resources that are found to be deficient in relation to the nation's needs;

(b) to formulate a plan for the most effective and balanced use of the country's resources;

(c) on a determination of priorities, to define the stages in which the plan should be carried out and propose the allocation of resources for the due completion of each stage;

(d) to appraise from time to time the progress achieved in the execution of each stage of the plan and recommend the adjustments of policy and measures that the appraisal may show to be necessary; and

(e) to make such interim recommendations as appear to be appropriate on consideration of prevailing economic conditions, current policies, measures and development programmes.

In the case of Colombia, something in the nature of an approved development programme existed in 1951, in the form of recommendations made by a citizens' development committee on the basis of proposals presented by a Bank general survey mission in 1950. Along the lines of the mission's proposals, a National Planning Council was created in 1951, and began work in April, 1952. Among its functions are

(a) to study variations in the structure of the national accounts, in order to obtain a continuing picture of the development of the economy;

(b) to study and co-ordinate investment projects, indicating the priority which these projects should have in the light of the resources and needs of the country;

(c) to study the co-ordination of the different programmes prepared in the Government, to avoid possible conflicts and inconsistencies among efforts in various fields; and

(d) to serve as a consultative body to the President of the Republic in economic and financial matters.

One other function is commonly included in the work of programming units. The effective use of resources for development embraces the subject of how external assistance is to be used. The Nicaraguan Economic Council, the Colom-

THE CANARA INDUSTRIAL & BANKING SYNDICATE LIMITED

Bombay Office: Homji Street, Fort, BOMBAY

bian Planning Council and the Planning Committee in Ceylon, for instance, serve as screens through which Government requests for foreign loans or other financial assistance to development must pass. In these and other cases, this screening also applies to technical assistance from abroad.

The Bank's general survey missions have repeatedly stressed the importance of keeping the public informed as a means of spreading understanding and enlisting the wide support vital to the success of any development programme. In some countries, this kind of education is the task of State Ministries of Information; in other countries, it is not performed at all. In Nicaragua, where there is no Ministry of Information, the Economic Council has established as part of its own secretariat a small office "to bring to the attention of the public the progress of economic development."

Organisation

The organisation of programming bodies is not uniform among the Governments that have them, and the organisational recommendations of the Bank's general survey missions have differed from one country to another. There has been common agreement, however, on the standards to be met.

The programming unit must be situated on an influential level of Government, and it particularly must have the right, express or implicit, to state its views on development expenditures before commitments for these expenditures are accepted. Several units meet this standard by having direct access to the Prime Minister or the Chief Executive of the Government. The National Planning Council of Colombia is attached to the Office of the President, as is the National Economic Council of Nicaragua. The Prime Minister is the Chairman of the Economic and Social Board of Burma, the Planning Committee of Ceylon, the Planning Commission of India and the Development Board of Iraq.

The programming body cannot function objectively if at the same time it is charged with executive responsibility for carrying out projects in some particular sector of the economy. Generally speaking, Governments have tried to achieve impartiality in the planning body either by making it a forum in which the differing views of responsible executives can be reconciled, or by composing it of persons who have no operating responsibilities. In the Ceylon Planning Committee and the Nicaraguan Economic Council, for instance, the programming group is composed of all the ministers concerned with economic matters, so that all may have their views represented. The Nicaraguan Council's membership includes the Minister of Economy (as Chairman), the Ministers of Finance, Agriculture, and Public Works, the principal Secretary of the President, and the General Managers of both the Central Bank and the newly created Development Institute; other ministers participate from time to time as matters arise which directly concern them. In the case of the Indian Planning Commission the members, apart from the Chairman, have no other responsibilities in the Government.

In any case, the programming body needs to be supported by a secretariat competent to bring it a balanced judgment on the separate plans of the ministries and departments. It is impossible to generalise on the size and composition of this staff. The secretariat of the Colombian Planning Council is small, and is able to rely to a considerable extent on research and staff services of the Central Bank. The secretariat of the Indian Planning Commission is rather extensive and is divided into the following sections: resource and economic surveys; finance; industry; trade and communication; food and agriculture; resource development; employment and social services. Several programming units regularly have the advice of Advisory Councils composed of private persons drawn from industrial, agricultural and trade groups.

Some Points of Emphasis

A feature to be emphasised is that the basic process entrusted to these units is programming, and not planning in a detailed sense. Planning, in terms of concrete projects and specific policies, remains the work of other ministries and agencies. The programming unit stimulates planning and fact-gathering where they need to be done; it views plans and policies objectively, measuring them against one another and against the resources available; and it recommends whatever modifications of substance and timing are necessary to bring them together into a coherent whole.

The Bank's general survey missions have frequently stressed that it is an important task of these units to keep informed of progress, and to recommend changes that may be required by circumstance. While the goals themselves may stand, it is only realistic to anticipate that they may be advanced or deferred by events impossible to foresee. The timing and amount of investment may be influenced by unexpected difficulties in the construction of a basic project, by unexpectedly rapid development in some sectors, by changes of price levels and costs, by fluctuations in the amount of local and foreign capital available, and by many other factors. Any long-term development programme therefore needs to be kept continuously under review and to be subjected to periodic modification.

It is implicit in the functions of the programming body that it provides a prod to action. In the past, some Governments have made the mistake of supposing that they had fulfilled their responsibility by drawing up a programme, and have left promising plans to exist only on paper. But programmes are not a substitute for action; and the existence of a programming unit empowered to review and to report to those in final authority can do much to see that plans are put into effect.

It is also obvious that the establishment of a programming institution is not in itself a panacea. Little purpose can be served by this type of body unless a favourable climate is provided by appropriate fiscal and monetary policies and by other steps to expand investment resources and to steer them into the most productive courses. Nevertheless, in any community where resources are limited and the calls upon them are particularly urgent, a programming institution can help to lift development projects out of the arena of day-to-day stringencies and short-term needs. It can also bring more clearly into view, at a time when self-denial will inevitably be called for, the gains to be won by steady pursuit of basic economic improvements.

STERLING AREA GOLD AND DOLLAR RESERVES

During August, the sterling area had a gold and dollar surplus of $13,000,000. The gold and dollar reserves stood, therefore, at $2,469 million at 31st August, 1953, according to an announcement issued by the British Treasury. The surplus arose after taking account of (a) receipts from the U.S.A. during the month of $19,000,000 as defence aid, (b) payment to the European Payments Union of $6,000,000 representing that part of the July deficit of $4,000,000 which was settled in gold or dollars, and (c) payment to Canada of $39,000,000 under the interest-free loan of 1942.

On the provisional figures for the month, the U.K. had a deficit in August with E.P.U. of £10,600,000, which will fall to be settled in September, if no country uses the existing resources of sterling, as to £5,300,000 in gold or dollars and £5,300,000 by an increase of the debit to the Union.

Commenting on the above figures, a Treasury spokesman said that, although there was an increase of only $13,000,000 in the reserves during August, as compared with a rise of $89,000,000 in July, a good deal of the decline could be accounted for by the payment of $39,000,000 to Canada during August, by the lower amount of U.S. aid receipts—$19,000,000 against $36,000,000—and by the transfer of $6,000,000 to E.P.U. compared with a receipt of $2,000,000 from E.P.U. in July.

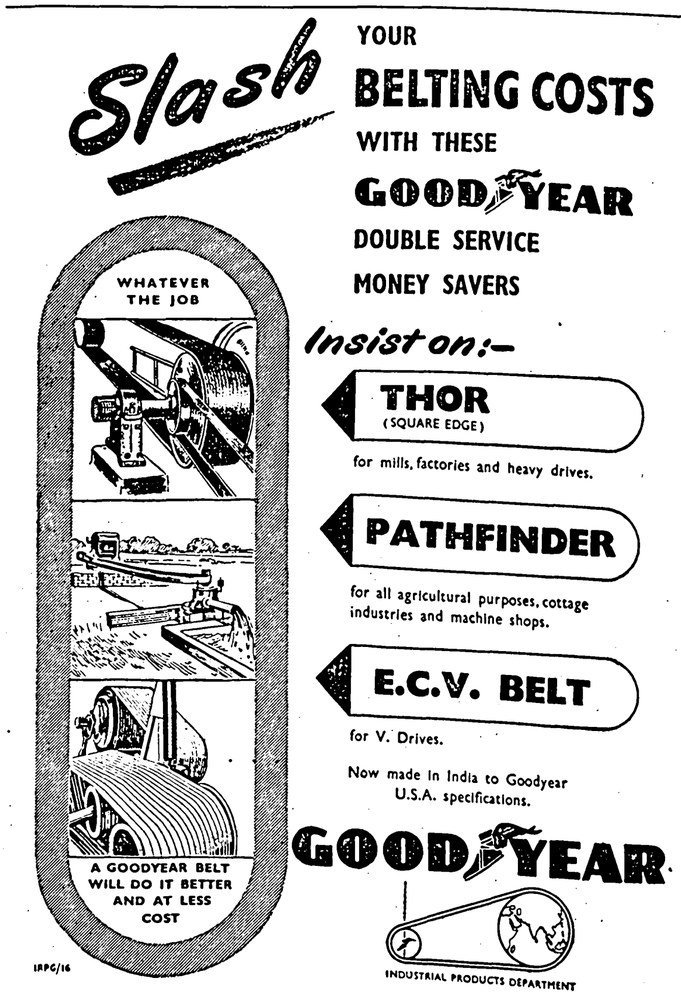
FINANCE CORPORATION FOR ASSAM

An industrial finance corporation for Assam will be set up, with an authorised capital of Rs. 2 crores and paid-up capital of Rs. 1 crore to be divided into shares of Rs. 100 each. The paid-up capital will be distributed as follows: Assam Government Rs. 25 lakhs, Reserve Bank of India Rs. 20 lakhs, Scheduled banks, insurance companies, etc., Rs. 30 lakhs, and other parties Rs. 25 lakhs.

The establishment of this Corporation was approved by the State Assembly last week.

Moving the official motion, the Finance Minister, Mr. Motiram Bora, emphasised the need for a finance corporation which could provide long-term loans at cheaper rates of interest to small-scale industries and help in the expansion and development of medium-sized industries in the State. The Finance Minister drew pointed attention to the fact that unemployment in the country was on the increase and he thought the Corporation would be immensely useful in fighting that menace.

The Finance Minister added that the Assam Co-operative Apex Bank would finance the co-operative credit societies and agricultural development schemes.



NEW PROCEDURE FOR DETERMINING COTTON PRICES

MILLS FACE MANPOWER SHORTAGE

(From A Special Correspondent)

MANCHESTER, 1st September

MANCHESTER LETTER

A NEW and—on the face of it—more complicated procedure for establishing prices for raw cotton has now been issued by the Raw Cotton Commission and will continue in force for those Lancashire spinners who are still obtaining their supplies from this organisation. The revised schedules, operative from the beginning of September, provide users with no less than 34 index prices, plus differentials, applicable to the various growths of cotton sold by the Commission. Cover is based on a single quotation for all growths.

The obvious intention of the Commission, as previously expressed, is to keep its price levels in strict uniformity with replacement costs by altering quotations more frequently than in the past. To this end United States cotton is given nine index prices, ranging from high grade good staple to low grade short staple cotton. Based on these indexes are differentials according to type and length of staple.

A similar procedure is being adopted in the case of other growths, Egyptian qualities having nine index prices—three for Karnak, three for Giza and three for Ashmouni and Zagora—and Sudan varieties having seven index prices. Among other growths, two prices are quoted for Pakistan and for Peruvian.

In the initial stages of the new season the Commission is selling cotton for September delivery on "ex stock" terms only. This involves, in the case of 15/16" staples and above in American, an addition of 20 points and in the case of Karnak, Ashmouni and Giza an addition of 25 points. October quotations vary according to individual descriptions and qualities but for November/December delivery American and Egyptian cotton will generally be available at a forward discount.

One Cover Symbol

The index prices are those quoted by the merchanting section of the Commission as actual selling rates for spinners, but the new separate cover section of the organisation is to maintain its identity by the introduction of a new standard symbol, known as ATNY, on which cover transactions will be based. As all major overseas markets are now linked to New York, this cover quotation will itself move similarly.

The notional figure for this symbol is not strictly comparable with the old American quotation, as it does not include certain allowances for charges formerly calculated and thus shows a small discount on the previous quotation. The actual cost of cotton is but little altered and yarn quotations show only minor variations on the previous rates ruling.

This complicated change in procedure is bound to create a certain amount of confusion in the market in its initial stages. Spinners and manufacturers have spent some time checking their current price lists against the proposed range of values put out as an explanatory schedule by the Commission. The symbol price, in any case, is liable to daily fluctuations in the future, and yarn quotations will vary accordingly.

The aim of the Commission in safeguarding itself against increasingly heavy losses is understandable. In the past the need to maintain large stocks for the benefit of its customers has handicapped the organisation, and there is a natural wish to avoid a repetition of recent financial disasters caused by falling world values.

Overseas Display

Yet another venture aimed at publicising Lancashire cotton goods has this week been undertaken by the Cotton Board. For the first time an exhibition of suitable wares has been taken to Scandinavia and a display given at the Swedish capital of Stockholm.

Fifteen of the leading houses of Manchester and district have combined to assist the Board's Colour, Design and Style Centre in putting "British cottons" on the map at the Stockholm Fair, exhibiting 300 fabrics including a collection of 100 dress materials and more than this number of shirtings and pyjama cloths, velvets and corduroys and other men's fabrics. In addition, furnishings have also been on show.

To maintain interest in the display, models from London have been flown over to show the latest fashion products from Lancashire designed by the leading exponents of this art.

Rebuilding Manpower

From whatever angle conditions in the trade are viewed at the moment, the importance of the labour force needs no particular emphasis. Early last year it was freely commented that the worst feature of the depression was the appalling waste of labour, which reached alarming proportions as mill after mill was forced to adopt short-time working or close indefinitely. The revival was quicker in its intensity than many people then visualised but all the pessimistic forebodings about the loss of manpower have unfortunately been realised.

Compared with the position in the final quarter of 1951, when the post-war peak in manpower for spinning and weaving was reached, the industry is still some 40,000 operatives short of the number then on the books of employers. About 20,000 workers have been regained but the others have clearly drifted into other employment or have forsaken the mills in favour of retirement. Many married women who were prevailed upon to resume their old employment or take on part-time work during the prosperous years have obviously gone back home.

It is now a question whether they will continue to resist the blandishments of those who would again offer inducements for them to return to their spindles or looms. Numerous vacancies are being advertised locally and through employment exchanges, but the response from the potential labour supply is not altogether encouraging. On the other hand, the end of the summer term has brought school-leavers into the spinning trade, according to the latest figures issued by the Cotton Board, and in the last two weeks of July spinning manpower rose by 624, largely as a result of this development.

It is not without significance that the number of unfilled jobs in the cotton trade notified to the employment exchanges has been steadily rising from below 2,500 vacancies in November last year to more than 6,000 in July. Throughout this period the exchanges have continued to place workers in various departments of the mills but the number thus found employment has by no means equalled the notified vacancies.

More Shift Work

"More and more" weaving mills in the Lancashire cotton industry are introducing "Housewives' shifts" in the evening to ease an acute shortage of full-time workers, Mr. Lewis Wright, newly-elected General Secretary of the 90,000—strong Weavers' Amalgamation—the cotton industry's biggest trade union—said in Manchester.

Millowners were making application to the union for permission to operate the shifts—normally of four hours' duration from 5-30 to 9-30 p.m. "Subject to certain conditions we are giving our approval," said Mr. Wright.

Two more weaving mills had been in touch with the union in recent days about launching housewives' shifts. The shifts are generally staffed by married women with family commitments which prevent them from putting in a full day's work at the mill.

Union Bosses Supported

Leaders of Lancashire's 280,000 cotton workers announced in Manchester this week that they would back the T.U.C. policy of putting forward union chiefs for Government denationalisation boards.

It was the first statement of policy by the "Cotton Workers' Parliament"—the Legislative Council of the United Textile Factory Workers' Association—since the appointment of Sir Andrew Naesmith, now retired as Weavers' Amalgamation Secretary, to part-time membership of the Government's Steel Board.

Appointment of Sir Andrew—with two other union chiefs—to the Steel Board caused a storm in union circles. There will be more criticism at next week's T.U.C. at Douglas.

Mr. Harold Bradley, Legislative Council Secretary, said after the meeting that it was the Council's view that trade union representatives who were selected and able to serve on Government bodies should do so irrespective of the nature and political colour of the Government of the day.—*All Rights Reserved.*

AID TO HANDLOOM INDUSTRY

BOMBAY URGES RESERVATION OF MARKETS

IT is, indeed, regrettable that, when the various sectors of the cotton textile industry are being subjected to a comprehensive and impartial enquiry by the special committee appointed by the Government of India last year, the Bombay Legislature should have hastily decided to recommend to the Centre reservation of certain fields of cotton textile production exclusively for handlooms. The Bombay Legislative Assembly unanimously passed a resolution on the 31st inst., urging the Government of India to reserve the manufacture of bordered *dhotis* and coloured *saris* of 40 counts and below to the handloom industry. This demand is somewhat milder than the one adopted by the Madras Legislative Assembly in November last, emphasising the need for reserving the market for all bordered *dhotis* and coloured *saris* for the handlooms. Nevertheless, the resolution is not only untimely but also drastic and will, if implemented, adversely affect the mill sector, without, at the same time, giving any worthwhile relief to handloom weavers. We thought that, as the Bombay State's stake in the cotton mill industry is large, larger than any of the other States, the legislators of this State would not blindly imitate Madras. But we now find that we were sadly mistaken. Evidently, our M.L.As did not realise, when they voted for the resolution, its implications to the economy of their State. They seem to have been carried away by their devotion to cottage industries so much that they were not fully conscious that they were cutting the ground under their feet.

The aforesaid decision of the Bombay Legislative Assembly has, naturally enough, caused considerable concern among the millowners. They rightly feel that sufficient thought has not been given to the serious consequences of such a step. *Dhotis* and *saris* constitute an important element in mill production. Thus, out of the total 4,599 million yards of cloth manufactured in mills in 1952, these varieties accounted for as much as 1,332 million yards, representing over 28.8 per cent. The cotton mills in Bombay State account for 65 per cent. of the country's entire cotton textiles production. In 1952, these mills produced 3,027 million yards of piecegoods, *dhotis* and *saris* alone accounting for 755 million yards. As we pointed out only three weeks ago, in the matter of *dhotis*, both the industry and the consumers are already suffering from a serious hardship. With effect from December last, the Government of India has enforced a cut of 40 per cent. on the manufacture of *dhotis* by mills. "This reservation," to quote a leading millowner of Bombay, "has, far from benefiting the handlooms, created an artificial scarcity of mill *dhotis* which are being sold at an exorbitant premium. The fact that the Union Government has felt constrained to relax this restriction in the case of several mills in Bengal is a tacit admission that reservation of fields of production is not a panacea to the ills of the handloom industry."

Serious Consequences

In view of all this, further restrictions on *dhoti* and *sari* production will only aggrevate the prevailing scarcity conditions, thereby causing undue suffering, particularly to the agricultural and working class population. If the recommendation of the Bombay Legislative Assembly were enforced, mills would have to change-over to the production of *dhotis* and *saris* of over 40 counts. This will necessitate imports of larger quantities of foreign cotton. Otherwise, thousands of looms, on which these varieties are being produced, will either be compelled to remain idle or be switched over to the manufacture of other varieties for which there is no market. Should this happen, there would be a serious fall in production of mill cloth and, consequently, an increase in unemployment among workers.

The need of the hour is more cloth for the consumer at economic prices. The Bombay Legislative Assembly's move seriously militates against this goal without bringing any tangible advantage to the handloom weaver whose cloth being admittedly more expensive than the mill product, is not within the reach of the ordinary consumer. Thus, the reservation of markets for handlooms at the expense of the more economic units is not the way to improve the conditions of the handloom weavers. The correct way is, as we have ere now stressed, to find out the root causes of their economic difficulties and evolve suitable measures for removing them. One of the difficulties is the lack of proper organisation. The need for this has arisen from the fact that the weavers are innumerable and scattered all over. The Bombay Government's plan for encouraging the formation of handloom co-operative societies with a loan of Rs. 20 lakhs has, therefore, come not a day too soon.

The salient features of the Plan, as outlined by Mr. M. P. Patil, Bombay's Minister for Co-operation, in the course of a Press conference at Poona recently, are as follows:

The co-operative societies will be given loans upto Rs. 100 per loom for supplying yarn to over 60,000 weavers who have already become members of the societies. The rest will be induced to join them, and if necessary, loans will be given for contribution to the share capital of the weavers' co-operative societies. Yarn will be purchased by the society from wholesale co-operative societies and supplied to the weavers. The cloth will be taken over by the societies and the weavers will be paid wages on the basis of As. 10 for a day's work. The goods will be sold at market rates. Any profits earned will be shared equally by the societies and the weavers. Special staff will be appointed to assist the societies in the maintenance of accounts and to help them market their goods. Supervisors will be appointed at the rate of one for 250 looms. The entire operations in regard to the organisation of the co-operative societies are to be controlled by a district committee consisting of the Collector as chairman and representatives of the co-operative societies and the Co-operative Department. It will be the function of the control committee to assist the societies and to form new ones where it is necessary to do so. It will sanction advances to societies and also arrange to purchase yarn wholesale and distribute it to the societies. It will also direct production by restricting it to the varieties of cloth which are in demand and can be sold easily.

In the meantime, the Government of Bombay has increased the price preference for handloom cloth *vis-a-vis* other varieties from 15 per cent. to 20 per cent. The value of handloom cloth purchased by the Government during 1952-53 was Rs. 4.41 lakhs, as against Rs. 4.13 lakhs in the previous year. Incidentally, it may be noted that, during the last seven years, there has been a rise of 33 per cent. in the number of handlooms in the State, the actual number at present being 197,751. The value of yarn distributed to the handlooms has also increased, from Rs. 8 crores in 1948 to Rs. 12 crores in 1951.

In the past 12 months, there has been no scarcity of yarn, thanks to increased production by mills. This, however, has not helped the handloom industry, the demand for the product of which has suffered a marked decline. It is this factor which has caused unemployment and distress in the industry. Stocks are reported to have accumulated with several handloom co-operative societies and dealers, and weavers are unable to obtain yarn on credit and sell their finished products. The Bombay Government has, therefore, done the right thing in concentrating its efforts on the formation of weavers' co-operative societies for the joint purchase of yarn and marketing of the finished goods. The Government has recommended to the Centre nine schemes, costing Rs. 68 lakhs, for improving the lot of weavers. The schemes cover, among others, opening of sales depots in the districts, provision of mobile vans in order to push up sales of handloom cloth, granting of subsidies on sales of handloom cloth, establishment of dye-houses, and installation of bleaching, finishing and calendering plants for cloth. But, as against the demand of Rs. 68 lakhs, the Bombay Government is expected to receive a grant of Rs. 40 lakhs only from the Centre from the handloom cess.

IMPORTS OF COTTON PIECEGOODS INTO PAKISTAN

The Government of Pakistan, according to a recent report from Karachi, has decided to issue licences for the import of Japanese cotton piecegoods worth Rs. 3.5 crores during the current shipping period ending December, 1953. The aggregate value of cotton piecegoods that Pakistan will be importing during the coming year is estimated at Rs. 15 crores. Piecegoods imports during 1952-53, it may be noted, were extremely low, the actual value of such being only Rs. 9 crores, as against Rs. 37 crores in 1951-52. Similarly, imports of cotton yarn fell from Rs. 25 crores to Rs. 6 crores. The chief factor responsible for the marked decline in imports was the restricted import policy.

To prospective and existing industrial undertakings requiring expert organizing skill, technical advice and financial assistance, the J. K. Commercial Corporation Ltd., offer their services as Managing or Selling Agents.

COTTON IN PAKISTAN DURING 1952-53 SEASON

IMPRESSIVE RISE IN EXPORTS

IN retrospect, the Pakistan Government may congratulate itself on its success at accomplishing the difficult task of promoting exports of cotton during the 1952-53 season, in which the offtake aggregated 1.65 million bales, as compared with 1.246 million bales in the previous season. This is a notable achievement considering that the Government was faced early in the season by a very large crop, estimated at 1.90 million bales, as against 1.57 million bales in the previous season (1951-52), and by a very low level of export demand. But it must be remembered that this successful achievement of a high level of exports has rendered possible only through a sizable fall in prices, and reduction in export duties. It must also be remembered that the Pakistan Cotton Board suffered an estimated loss of over Rs. 5 crores in an effort to dispose of the burdensome surplus of cotton which it had to acquire in its attempt to sustain prices.

Even before the 1952-53 season commenced, the Government had announced that it would be willing to permit exports at prices which were 10 per cent. below its purchase prices. Normally, this would have led to a spurt in demand. But so sluggish was the foreign demand that even this announcement failed to bring import orders from abroad. In September 1952, when the Government made its policy announcement for the 1952-53 season, it abolished the export duty on Comilla and Deshi cotton and reduced the duty on other varieties from Rs. 180 to Rs. 90 per bale. Despite these concessions, prices failed to improve. Between September, 1952 and December, 1952, the prices actually slumped, N.T. S.G. alone falling by Rs. 30 to Rs. 70 per maund. The Government was compelled, in December, 1952, to announce further concessions in export duty in respect of the old (1951-52) crop. Indeed, for the first time in post-war years, Pakistan cotton began to be available at a discount under the American growths.

The opening of the current calendar year witnessed a serious debacle in the Karachi cotton market, thanks to continued poor demand for Pakistan cotton. N.T. R.G., for instance, slumped to Rs. 58 per maund. Towards the end of January, 1953, the Government fixed floor prices for export at Rs. 56 for 4F R.G., Rs. 53 for LSS N.T. R.G., Rs. 61 for 289F, R.G. (with a premium of Rs. 3 for saw-ginned varieties). It was not until April, when a trade agreement was concluded with Japan, that any real sign of recovery took place. Under this agreement, Japan agreed to buy before March 1954, 650,000 bales of Pakistan cotton, on the condition that Pakistan will import 80 million square yards of Japanese cloth. Japan's allocation of foreign exchange to its importers for purposes of buying Pakistan cotton was as under:

2nd quarter of 1953 150,000 bales; 3rd quarter of 1953 100,000 bales; 4th quarter of 1953 275,000 bales; and 1st quarter of 1954 125,000 bales.

The conclusion of this agreement was followed by a spurt in prices. A factor, which assisted this spurt, was that the U.K. and Hongkong also began to evince keen interest in Pakistan cotton. There was some demand from China too. Australia placed raw cotton from non-dollar countries in the O.G.L. with effect from 1st April, 1953. This too was interpreted as a bullish factor for Pakistan cotton. The net effect of these measures was that, in May alone, there was an improvement of Rs. 30 to Rs. 40 per candy in the Karachi market. This improvement was well maintained in June also, when there were enquiries from Australia, France and China. There was, however, a slight setback in July, for it was feared that Japan might not be able to lift cotton in accordance with this agreement pending certain clarification about Pakistan's import policy for cloth, with which its own cotton purchases were tied. Since then, all these issues have apparently been settled to the mutual satisfaction of the parties to the agreement, for Japan has emerged as the single largest customer for Pakistan cotton in the 1952-53 season, its share being of the order of 700,000 bales out of Pakistan's total exports of about 1,650,000 bales.

The Pakistan Government has lifted the ban on forward trading in cotton for the 1953-54 crop with effect from 8th August, 1953. Forward trading in new crop commenced in the Karachi market on 10th August, with N.T. R.G. being quoted at Rs. 72 per maund. But trading in the new crop is of a restricted nature, in view of the fact that the old crop is available at a discount of Rs. 5 to Rs. 6.

That Japan, which took 700,000 bales, was the chief customer for Pakistan cotton during the 1952-53 season has already been mentioned. The other leading importer was the U.K. which absorbed 135,000 bales. All other European countries together took 400,000 bales. Although the quantity of cotton exported in the 1952-53 season was greater than that in the preceding season by a little over 400,000 bales, the amount of foreign exchange which it fetched was lower at Rs. 70 crores, as against Rs. 77 crores in the previous season. This will give one an idea of the extent to which the value of Pakistan cotton was deflated during the season just ended by the return of the buyers' market.

MILLS' CONSUMPTION OF COTTON

A notable feature of the mills' consumption of cotton in recent months is that the mills are not only consuming more cotton than they did a year ago but are utilising a relatively larger proportion of Indian cotton. During the nine months ended May, 1953, Indian mills consumed 3,316,308 bales of cotton, as compared with 2,979,714 bales in the corresponding period of 1951-52. Out of the total of 3,316,808 bales consumed by mills, Indian cotton accounted for 2,682,727 bales, as against only 2,171,108 bales in the same period of the 1951-52 season, and foreign cotton for 634,081 bales, as against 808,606 bales. Thus there was nearly an increase of 23 per cent. in the consumption of Indian cotton, whereas there was a fall of about 22 per cent. in the consumption of foreign cotton.

A glance at the table below reveals that, among the Indian varieties of cotton, Jarillas continue to be the most widely used variety, the consumption of this variety improving from 797,341 bales to 1,149,675 bales. Among the foreign growths consumed by the mills, Americans are the most important. Even so, the consumption of this variety declined from 468,052 bales to 321,021 bales. It is noteworthy that there are no significant variations in the consumption of Egyptian and East African cottons which accounted for 130,738 bales and 136,540 bales, respectively.

The following table gives the chief varieties of cotton consumed by Indian mills:

Consumption of Cotton

(In bales)

	From 1st Sept. 1952 to 31st May 1953	From 1st Sept. 1951 to 31st May 1952
Total consumption of Indian cotton:	2,682,727	2,171,108
Of which:		
Bengal Deshi	128,937	88,240
Oomras short staple	24,355	15,713
Jarilla	1,149,675	797,341
Gaorani 6 and 12	144,901	77,681
Buri	74,450	71,196
Broach Vijay	221,827	204,410
Surti	99,194	79,410
Wagad	72,419	167,813
Farm	90,420	118,306
Jayadhar	130,181	120,387
Cambodia	83,243	126,869
Karunganni	71,098	74,118
Total consumption of foreign cotton	634,081	808,606
Of which:		
Egyptians	130,768	130,113
East Africans	136,540	136,137
U.S.A.	321,021	468,052
Grand Total (Indian and Foreign).	3,316,808	2,979,714

The mills had, as on 31st May, 1953, cotton stocks estimated at 1,548,487 bales, as compared with 1,789,097 bales on the same date last year. The composition of these stocks was as follows:

(In bales)

	As on 31-5-1953	As on 31-5-1952
Indian cotton	1,305,438	1,365,441
Foreign cotton	243,049	423,656
	1,548,487	1,789,097

It will be seen from the figures above that the mills' stocks, as at the end of May, 1953, had been more heavily depleted than at the end of the same month in the previous year. The availability period of these stocks, on the basis of the consumption during the nine-month period under review, was 4.1/5 months, as against 5.2/5 months in the previous year.

DEBATE ON SUGAR IN PARLIAMENT

NO RISE IN CANE PRICES, SAYS MR. KIDWAI

ONCE again, the problems relating to sugar and sugarcane came up for discussion on the floors of both the House of the People and the Council of States last week. This is not surprising considering the changes that have taken place in the Indian sugar trade during the last few months. Despite the Government of India's decision to import sugar, prices continue to rule high and scarcity of supplies is being felt in several parts of the country. The trend of debate in the two Houses, however, could not but conform to the same old set pattern, namely, the members pointing to the series of omissions and commissions on the part of the Government and the Government spokesmen defending the official policies. Most of the members who participated in the debate seemed to ignore the fundamental factor that a solution to all the ills of the sugar industry lies, not in palliatives or short-term remedies, but in devising ways and means of stabilising the industry as a whole, including the agricultural side of it.

Replying to the questions on sugar prices, Mr. Rafi Ahmed Kidwai, the Union Food and Agriculture Minister, maintained that the Government had no reason to believe that the recent increase in the price of sugar was due to hoarding. He felt that it was due chiefly to increased consumption. In support of this contention of his, Mr. Kidwai said that the amount of money advanced by the banks against sugar stocks during the current (1952-53) season was not more than the normal. Proceeding, he said: "If all the released sugar had been hoarded, with the approach of the next season and the prospect of import of two lakh tons, the hoarders would have come out into the market, as many other things were coming out, and prices would have gone down. The fact that there had been no such reaction is another proof that there is no hoarding."

These observations are correct only to some extent. For it must be admitted that the rise in sugar prices in the early months of the year was due as much to the short production of *gur* and *khandsari* and the consequent rise in their prices, leading to an enlarged demand for sugar, as to the speculative activity indulged in by a section of the sugar industry and trade. The speculative activity was, in turn, the direct effect of the bullish twist which the Government gave to the sugar market, first, by allowing exports of sugar and, secondly, by holding up releases of sugar from the factories. Thanks to the bullish twist, a section of the sugar traders (and also of the industry) enlarged their commitments in the hope of realising higher prices. It is true that, in order to bring down prices, the Government moved increased quantities of sugar to important markets by allotting more wagons and giving sugar from the special stocks held by factories at the statutory ex-factory price of Rs. 27 per maund to State Governments and other agencies for distribution through fair price or ration shops. When it found that all this was not sufficient, it decided to import sugar. But the mischief had already been done.

Inasmuch as all these steps were belated, and, what is worse, were not properly implemented, they could not, and have not still been able to, bring down the prices of sugar. Once prices are pushed up and the wholesale and retail merchants are compelled to take delivery of sugar at higher prices, prices cannot easily go down, for by then several vested interests will have come into existence which will not let prices decline. After all, there is something to be said in favour of the old adage, "A stitch in time saves nine." If the Government had promptly nipped the trouble in the bud, things would not have been so bad as it has been in recent weeks. It is, therefore, amazing that Mr. Kidwai should have stated that hoarding was not responsible for the rise in prices. His own colleague, Dr. Punjab Rao Deshmukh, Minister for Agriculture, however, was correct when he admitted that one of the reasons for the rise in sugar prices could be attributed to "speculative activity and all-round hoarding tendency in sugar, due to a feeling that, after reserving a carry-over of three lakh tons, the quantity available would not be enough to meet the demands." Even in the beginning of the season, the Government should have completely decontrolled the industry or released the major portion of the stocks with the factories. The circumstances at that time were quite propitious for such a course. Thus, the stocks of sugar with the mills were plentiful—the closing stocks as at the end of October, 1952, amounted to as much as 467,000 tons—and prices of sugar were at a comparatively low level.

As regards sugarcane prices, several members put forward a vigorous plea for an upward revision of the statutory prices, as, in their opinion, the present minimum of Re. 1-5 per maund was too low. Evidently, in their anxiety to better the lot of the cane-grower, the members did not care to find out how the income from cultivation of cane compares with the alternative crops which the agriculturist can grow. As Mr. Kidwai pertinently remarked, there is no compulsion on the cultivator to grow sugarcane. In Uttar Pradesh, the largest cane-growing area in the country, for instance, the agriculturist can grow, as an alternative to cane, two crops—wheat for some period and *jowar* for the other period. It has been calculated that the income from these two is less by Rs. 70 per acre, as compared with even the reduced price for cane. The contention that the minimum price of Re. 1-5 per maund is too low does not, therefore, hold water. It is indeed gratifying to note that the Food and Agriculture Minister simply dismissed the plea for an upward revision in cane prices, by categorically declaring that the Government would not raise the minimum price for the coming season.

Moreover, the price fixed for the cane is only the minimum price. The restrictions which had previously been imposed on the cane cultivator, such as those on the manufacture and movement of *gur*, no longer exist now. If the grower can get a higher price by producing *gur*, he is free to do so and force the millowners to offer higher prices. It is interesting to note, in this connection, that, whereas prices of *gur* have gone up by 96 per cent. since the beginning of the season, those of white sugar have risen by only 8 per cent. This means that the *gur* was in a highly competitive position *vis-a-vis* white sugar in regard to purchases of cane.

It is not, however, so much the question of fixing a higher or a lower minimum price for sugarcane as the one relating to the basis on which such a price should be fixed that is important. There are now no two opinions on the present policy of the Government in regard to fixation of prices. That it is defective for two reasons is generally admitted. First, it does not provide any incentive to the agriculturist to improve the quality of cane, that is cane which gives higher yield of sugar per acre. Secondly, to the extent it has compelled the factories to crush whatever cane is made available, the policy has been responsible for the poor recovery of sugar and, consequently, higher cost of sugar manufacture. If, therefore, the cost of sugar production is to be reduced, it is imperative that a more rational basis for fixing cane prices should be adopted. It is refreshing to find that Mr. Kidwai is now realistic enough not only to appreciate this point of view but also to advocate it to the House. Thus, requesting, the House to take into consideration the difference in recovery in different areas, he pointed out that, in the Punjab, the recovery was less. Yet, the cane-growers there got Re. 1-5 per maund. In South India, the recovery was high. But there, too, they got the same price. Proceeding, he remarked: "I have been trying for the last one and a half years to find out a formula which will pay the cane-grower a price in proportion to the recovery. That will be the most satisfactory formula."

Although Mr. Kidwai is fully convinced that the introduction of the method of basing sugarcane prices on sucrose content is the most satisfactory formula, he is chary of trying it, because he "cannot trust the millowners not to take advantage of it." This fear of Mr. Kidwai is, to say the least, clearly exaggerated. For the chief impediment in the way of this scheme is the absence of suitable organisation for conducting the chemical analysis of cane in every region. This is not such a difficult proposition for those areas where, as in the Deccan, sugarcane is grown on large farms on scientific basis. This will enable testing the sucrose content of cane by the sampling method. The real difficulty in applying the method of payment on the basis of sucrose content to the two major sugar-producing States, the U.P. and Bihar, arises, because there sugarcane cultivation is done in thousands of small farms scattered all over. Consequently, the quality of cane supplied by these farms is liable to wide variation, even though they may be situated in a particular region. For instance, a farmer tilling a five-acre piece of land may be enterprising and painstaking in growing good cane. Naturally, the quality of cane grown in his farm will be better than the cane grown in a neighbouring field cultivated by an indifferent and less skilful farmer. There will thus be no uniformity in the quality of cane coming from small farms. And it will be very difficult to test the cane supplied in small quantities, in order to find out what the sucrose content is and to fix the price on that basis. The impediment, however, can be eliminated, to a considerable extent, provided the State Governments encourage co-operative farming on scientific lines and bring about consolidation of agricultural holdings. The U.P. Government has already made a beginning in this direction. And Mr. Kidwai would be giving a fillip to that welcome movement, if he were to take early steps to implement the scheme of fixing sugarcane prices on the basis of quality, instead of on quantity.

SUGAR IMPORTS

The Government of India has completed arrangements for the purchase of another 130,000 tons of foreign sugar. This was disclosed by Mr. Rafi Ahmed Kidwai, the Union Minister for Food and Agriculture, while replying to a question in the House of the People the other day. According to Mr. Kidwai, the sugar so far contracted for import includes 9,000 tons of Mexican refined sugar at Rs. 26.57 per maund (ex-Indian Port), 10,000 tons of British refined sugar at Rs. 26-15-6 and 30,000 tons of Java refined sugar at Rs. 25-11-6. In addition, the purchase of 12,000 tons of Mexican refined sugar at Rs. 23-14-3 has been arranged through the Indian Supply Mission. A further quantity of 20,000 tons of British refined sugar is being secured at Rs. 25-12-10 for delivery in October-November, 1953 and 20,000 tons at Rs. 25-3-6 (October-December). About 30,000 tons of Cuban sugar have also been purchased at Rs. 25-8-1 (October-November). It may be noted that 6,300 tons of sugar have already been imported from Java. Answering supplementaries, Mr. Kidwai revealed that a distributing agency had been formed in West Bengal to handle the sale of imported sugar. This, it is said, is a limited company and it has undertaken to sell sugar at a uniform rate of As. 12-9 per *seer* throughout the State. The price will remain steady. In other port towns, associations are being formed, but arrangements have still not been completed. The distributing agencies will be private agencies. The distribution has been arranged at a fixed price.

THE PUNJAB NATIONAL BANK LTD.

ECONOMIC DEVELOPMENT OF BURMA

BUDGET REVEALS HEAVY DEFICIT

FOR a small country like Burma with a population of about 17 to 18 million and with revenue resources not exceeding Rs. 80 crores, the overall deficit of Rs. 33.11 crores revealed in the budget estimates for 1953-54 is indeed considerable. Revenue surplus and capital receipts are together estimated at Rs. 16.87 crores, as against the capital expenditure of Rs. 54.98 crores. This huge deficit on capital account does not, however, mean that the financial position of the Burmese Government is very shaky, since the whole of the deficit is to be met from accumulated reserves "without any need to resort to borrowing from abroad." Emphasising this very aspect, in the course of his budget speech, the Finance Minister of Burma, U Tin, made the following significant remarks:

> "It would indeed be tragic and would almost amount to an act of criminal negligence, if, instead of utilising these reserves for productive enterprises, we were to lie back and feel smug and complacent about them. The huge deficit on capital account is, therefore, not a deficit in the ordinary sense, but a real investment for prosperity and better standards of living. Emphasis . . is laid on our industrial development and rehabilitation of ports, waterways, railways and highways. Irrigation has also been given high priority for the promotion of agriculture, and a heavy programme of public works, as well as residential building construction has been drawn up and provided for."

The foregoing brief extract from the Finance Minister's speech clearly indicates the Government's keen anxiety to achieve a rapid rate of economic development. This is only to be expected, considering that the standard of living of the masses is at a deplorably low level as compared with the other South-East Asian countries, let alone the economically advanced countries of the West. Destruction during the Second World War severely affected the productive capacity of Burma. Much of the loss was made good during the early post-war years, but the insurrection of 1948 brought further widespread destruction and disruption of economic activity.

Gross Domestic Production

The gross domestic output in 1950-51, for instance, was less than 70 per cent. of that in 1938-39, as the following table shows:

(Millions of *Kyats*)

	1938-39	1946-47	1947-48	1948-49	1949-50	1950-51

Source: * *Burma—Review of Commercial Conditions.*

The year 1953-54 is expected to witness the post-war peak in economic activity in Burma. The target for gross production is fixed at Rs. 520 crores, which represents a rise of 12 per cent. as compared with 1952-53. The bulk of this production, amounting to Rs. 392.5 crores, represents goods and services that will be made available for consumption in both private and public sectors. About Rs. 20 crores will be accumulated as net investment abroad. Of the remaining Rs. 107.5 crores, Rs. 56.4 crores will be allocated to capital formation in the private sector and Rs. 51.1 crores in the public sector. This gross capital formation, which represents 24.5 per cent. of the country's total production, compares favourably with 22 per cent. in 1952-53 and 23 per cent. in 1938-39. The extent to which the target now set will be realised will, of course, depend less on economic factors such as the availability of resources (financial and material), than on the Government's ability to organise suitable administrative machinery necessary for carrying it out, not to speak of the availability of technical and managerial personnel.

Out of the public capital, about 64 per cent. will be spent on production enterprises. The pattern of expenditure is Rs. 4 crores for power production, Rs. 3.5 crores for marine development, Rs. 3.1 crores for industries, Rs. 3 crores for agriculture, Rs. 1.13 crores for irrigation and Rs. 1 crore for mining.

Despite the notable increase in domestic production envisaged in the development programme, the Government fears the possibility of several bottlenecks creating inflation in certain specific sectors of the economy. It has accordingly contemplated measures to counteract such a tendency, as, for example, considerable liberalisation of imports. It has already announced its decision to end preferential tariff rates from 1st October next, replacing it by a single rate tariff allowing for stiffer competition among the importing countries.

Rice

The Burmese economy is largely dependent on the production of rice, which has been hit badly by insurgent activities. The quantity of rice produced in 1951-52 was not more than 5 million tons, as against 7.8 million tons in 1938-39. Nearly two-thirds of the country's total cultivated area of 18.81 million acres are devoted to the cultivation of rice. The other important agricultural crops are pulses, sesamum, groundnuts and cotton. Millets, wheat and tobacco are also grown extensively.

Next to rice, Burma's chief export product is teak. Forests cover about 58 per cent. of the area of Burma. They yield about ten species of well-known hardwoods, but, of these, teak is only important for export. The annual export of teak from 1934-40 averaged about 450,000 tons; all other hardwoods averaged 82,500 tons. The annual consumption of timber in Burma for housing in 1934-40 averaged about 300,000 tons, the consumption of wood for fuel being about 20 times that amount. About 1,700,000 tons of bamboo are used annually for housing. The industry came to a standstill during the war and about half the elephants used were lost. Recovery was hindered by the insurrections and the amount of teak available for export is very much less than in pre-war years. The timber trade is mainly in the hands of the State Timber Board, which operates a number of large saw mills and markets about 70 per cent. of the whole production.

Mineral Resources

Burma is well endowed with mineral resources, the exports of which in 1939-40 accounted for about 38 per cent. of the total value of export trade. As a result of the damage during the war and the insurrection which broke out in 1948, the mineral exports are at present little more than 2 per cent. of the total exports. The aggregate output of petroleum during 1951 was a bare 708,000 barrels, as against 6,494,000 barrels in 1939. The two other mineral products, the outputs of which have suffered steep falls, are lead and zinc, the quantities actually produced in 1951 being 6,200 tons and 500 tons, as against 77,200 tons and 59,300 tons, respectively, in 1939. Although deposits of lignite coal of low calorific power are widespread in Burma, they have not been exploited on commercial scale. One of the richest seams so far discovered is at Kalewa on the Upper Chindwin and plans for the working of this deposit are now under consideration.

82 YEARS IN SERVICE!

...and India's oldest Life Insurance Institution grows stronger and firmer every year.

The **BOMBAY MUTUAL**
LIFE ASSURANCE SOCIETY LTD.,
Hornby Road, Bombay, 1.

EVERY POLICYHOLDER A SHAREHOLDER

The manufacturing industry in Burma is in an initial stage of development and consists mainly of small-scale firms employing crude methods. Productivity is low and the fact that costs are not excessive is due to the low wages paid. The only modern factory is the Government-run cotton spinning and weaving factory.

Transport

River transport is an important and essential feature of Burma's economy. The main river routes consists of the Irrawaddy river from the delta to Bhamo (about 1,000 miles) and the Chindwin, a branch of the Irrawaddy, from Pakokku to Homalin (about 400 miles). The Irrawaddy is connected to Rangoon by the 22-mile long Twante Canal. The railway system suffered considerable loss during war years. The track mileage was reduced from 2,059 in 1939-40 to 1,510 in 1946-47. The number of locomotives passenger coaches and freight cars also declined from 206, 718 and 8,317 to 101, 225 and 4,815, respectively.

Reconstruction after the war was interrupted by the insurrection, and, in mid-1950, service was confined to a few isolated segments; since then service has been restored on most of the major lines, but it is still continually harassed by the mining of trains, destruction of bridges, burning of stations, etc. No recent details of freight and passengers carried are available, but they are considerably below pre-war figures. Although the gauge, one metre, is the same as that of the railways of Siam and Malaya, there is no connection between them; the war-time Burma-Siamese railway has been abandoned. There are about 6,000 miles of surfaced road in Burma, most of which are in a bad state of repair, and about 6,000 miles of unsurfaced road which cannot be used in the rainy season. As a result of the disruption of the country's surface transport by the insurrections, internal aviation is very important. In mid-1950, surface transport between most of the important towns in Burma was impracticable and air travel is still the only convenient and speedy form of passenger travel within Burma. The Union of Burma Airways, a Government corporation, has the exclusive monopoly of all internal routes and serves 18 cities in Burma. It also operates routes to Bangkok, Chittagong and Calcutta. An up-to-date international airport, which has been recently completed at Mingaladon on the outskirts of Rangoon, is served by six foreign airlines. Rangoon is by far the most important Burmese port; in the 1930's, it handled an annual tonnage (exports and imports) of about 5 million; this had fallen in 1950 to about 1,400,000 tons, but was 1,998,590 tons in 1952. Akyab, Bassein and Moulmein have some importance as rice shipping ports, whilst in normal times substantial volumes of mineral ores are shipped from Tavoy and Mergui. There are regular shipping services to India and the United Kingdom.

Foreign Trade

The foreign trade of Burma is below normal at present, because parts of the territory are still either in insurgent hands or at the mercy of insurgent raids. The output of exportable products has, therefore, considerably suffered. It has no petroleum and very little minerals to export, its teak exports are small and, above all, it has only about one-third of the amount of rice available for export that it had in pre-war years. This has severely reduced the foreign exchange available for imports and the purchasing power of its inhabitants. How Burma's export trade has shrunk in recent years will be clearly evident from the figures given below:

	1938-39	1946-47	1947-48	1948-49	1949-50	1950-51
Rice and rice products (thousand tons) ..	3,329	921	1,254	1,193	1,129	1,368

PROBLEMS FACING INDIAN COFFEE INDUSTRY

ENQUIRY BY TARIFF COMMISSION URGED

THE Annual General Meeting of the Coffee and Minor Products Section of the United Planters' Association, held on 29th August, 1953, adopted a resolution requesting the Government of India to institute an enquiry into the affairs of the coffee industry with special reference to the following matters:

(i) whether the industry is established and conducted on sound lines;

(ii) whether the fullest use is being made of the natural and economic advantages enjoyed by the industry;

(iii) the true cost of producing coffee with special relation to (a) ascertaining a fair average cost of production, (b) the necessity for rehabilitating a large proportion of the present stand of old coffee, (c) the necessity for building up reserves, (d) how the industry can meet the cost of recent and projected labour legislation and (e) what should be a fair return on the capital employed in the industry, not only to meet the present and estimated future demands on it but also to encourage its expansion;

(iv) how coffee can best be marketed in India, so that it may flow freely and cheaply to the consumer; and

(v) how best to take advantage of the world shortage of coffee and the high prices obtainable outside India.

The demand for such an enquiry is a step in the right direction. For, in recent years, the industry has been subjected to a good deal of criticism at the hands of the Government of India and the consumers for the high prices of coffee. The relations between the Coffee Board and the Government of India have also deteriorated, each accusing the other for the high prices. Many of the criticisms against the industry are unwarranted and appear to be the result of deep-rooted prejudice. It is, therefore, natural that the industry should be anxious to have its honour vindicated by an impartial body like the Tariff Commission. It is to be hoped that, in fairness to the industry, the Government will accede to its demand and refer the points raised by it to the Tariff Commission.

Regulation of Coffee Prices

The United Planters' Association is very much concerned at the policy of the Government of India regarding regulation of coffee prices. It is in favour of allowing exports of coffee to some extent for two reasons. First, there is some surplus in the country. Secondly, a part of the high profit earned in export markets could be utilised for subsidising internal prices. Mr. W. W. Kilgour, the retiring Chairman of the Coffee Section, pointed out, in his address at the annual meeting of the Association, that, on 1st August, 1953, the stocks available with the Coffee Board were 14,700 tons, which were twice the amount on the same date the previous year. Again, as against 15,820 tons offered for sale during January to July, 1953, only 9,698 tons were absorbed. The sales, however, were in line with those in the previous year. Thus, he declared that there was a clear case for permitting exports of the surplus coffee. The Government of India, however, is against exports. It is of the considered opinion that exports will only aggravate the situation by arresting and reversing the recent downward trend in prices of coffee.

The quantity which coffee interests would like to export is not very large. It constitutes only a very small proportion of India's production. The revised estimate of coffee crop for 1952-53 places it at 22,000 tons, as against the earlier estimate of 21,000 tons; some actually expect it to turn out to be 22,700 tons. As against this, the Indian consumption is normally put at 18,500 tons. On this basis, there is a surplus of 3,500 tons to 4,200 tons. Out of this, the coffee interests say that it would be sufficient if they are allowed to export 2,000 tons only.

How far the aforesaid claims of the industry are correct is hard to say. If there is so much stock as is contended by the planters, why not withdraw all controls on the coffee industry and leave it alone? The demand for coffee has been steadily expanding and the supply seems to be less than what the country could absorb if prices were reasonable. Decontrol will show, after some months, whether there is a real surplus of coffee or not. If it proves, by way of a sharp fall in prices, and heavy accumulation of stocks, that there is a surplus, then a small quantity could be allowed for export.

If the Government is not in favour of decontrol, the best course will be to refer the industry to the Tariff Commission. The present form of control is not conducive to the growth of the coffee industry and without an expansion in output there can be no sustained fall in the prices of coffee seeds. The return to the grower at the current level of coffee prices, according to the producers, is insufficient to earn the minimum return necessary to meet even the current costs of production, let alone the hazards of agriculture and the incentive for rehabilitation and expansion. In fine, under the present system of control, the future of the coffee industry in India and the welfare of workers employed by the industry and their families are at stake.

• • • •

It is learned that a joint conference of the representatives of the Coorg, Mysore, Travancore-Cochin and Madras Governments and the representatives of the plantation industry in these four States will be convened to meet on 16th September at Madras. It is stated that the conference will aim at presenting to the Government of India a clear picture of the needs of the planting industry. Though the main emphasis is on coffee industry, the agenda of the conference is said to be so broadbased as to include other plantation industries also. The conference is expected to make recommendations in regard to coffee marketing policy, fixation of price on the basis of a correct appreciation of the cost of production, need for enquiry into the coffee industry by the Tariff Board, etc.

APPLICATION OF GAMMEXENE

The research department of the India Coffee Board is conducting experiments for reducing the cost of application of Gammexene, among others. The use of Gammexene in the fight against the white stem borer of coffee, one of the deadliest diseases affecting coffee plantations, has been found to be very expensive. It is said to cost not less than Rs. 20 per acre, which might be considered uneconomic and probably beyond the financial capacity of the small-scale estate owners. It is held that a substantial use of Gammexene can be made if it is possible to reduce the cost by 70 per cent. The application of Gammexene differs in different zones greatly and the major flights of beetle responsible for this disease which cuts into the economy of plantations occur late in December. The entomologists of Mysore and Madras have been asked to help the research organisation of the India Coffee Board in their work.

PLANTATIONS OWNED BY FOREIGNERS

During question hour in Parliament, Mr. Rafi Ahmed Kidwai, Union Food Minister, disclosed that foreigners owned 39 coffee plantations in India, covering an area of 9,659 acres, valued at Rs. 123.39 lakhs. The number of tea plantations owned by foreigners in North-east India was 342. They covered an area of 421,551 acres. The value of the estates was not available. Proceeding, he said that the number of rubber estates owned by foreign interests was 35. Eighteen parties owned these estates covering an area of 27,970 acres, valued at Rs. 5 crores.

FIRST RAW JUTE FORECAST

The first official raw jute forecast for the 1953-54 season has just been released from New Delhi. According to the Directorate of Statistics, Ministry of Food and Agriculture, the area sown, in the Indian Union, to raw jute is estimated at 1,269,000 acres, as against 1,757,000 acres in the corresponding estimate of last year. This shows a decline of 488,000 acres or 27.8 per cent. The decline in acreage during the current season has been shared, it is stated, by all the jute-growing States, specially Bihar and West Bengal, and is attributed partly to unfavourable conditions at sowing time and partly to low prices of jute in the past season.

The information given in this estimate relates to the period generally up to the middle of July 1953. Till then the condition of the crop was reported to be generally satisfactory; but subsequent reports indicate damage to the crop by excessive rains and floods in Bihar and the U.P. and by insect pest, etc., in the U.P. and Bengal.

The estimate does not give the complete area sown to this crop. The area reported in the final estimate is generally higher than that in this estimate. Calculated on the basis of an average yield of 2.6 bales of raw jute per acre, the yield on the acreage of 1,269,000 acres may be put at 3,299,000 bales. But, as the extent of damage to the crop is not known and as the final estimate generally shows a higher acreage, this season's crop may be expected to be not less than 3.5 million bales, as compared with the actuals of 4.7 million bales for the 1952-53 season.

U.S. CONSUMPTION OF BURLAP

INDIA'S SHARE IN TOTAL OFFTAKE FALLS

THE U.S. consumption of burlap during July, 1953, was 56 million yards, which is three million yards lower than in June, 1953. The total estimated consumption of burlap in the U.S.A. for the seven months of the current year, that is January to July, 1953 at 442 million yards, shows an increase of 27 million yards over that in the corresponding period of last year when such amounted to 415 million yards.

The table below shows the U.S. burlap consumption in each of the seven months of 1953, as compared with that in the corresponding months of last year:

(In million yards)

	1953	1952
January	73	48
February	58	55
March	69	57
April	68	58
May	59	64
June	59	61
July	56	72
Total ...	442	415

Stocks of burlap in the U.S. at the end of July amounted to 195 million yards. These compare with 210 million yards in June, 1953 and are the lowest since March, 1953, when they stood at 208 million yards.

The latest month for which figures relating to U.S. imports of burlap are available is May, 1953. In that month, the U.S. imported 15,300 tons of burlap. This compares with 17,600 tons in April and 18,600 tons in March this year. Of the total imports for May, purchases from India accounted for as much as 11,000 tons, as against 13,900 tons and 14,500 tons in the preceding two months, respectively. The balance of 3,600 tons was received from Belgium (1,100 tons), West Germany (700 tons), France (1,100 tons), Italy (100 tons), the Netherlands (200 tons), U.K. (200 tons), Australia (200 tons), and from others (100 tons).

Burlap Imports

The total burlap imported by the U.S. during the five months ended May, 1953 aggregated 90,900 tons. This represented an increase of nearly 15,000 tons over the quantity of burlap imported in the same period in 1952. Of this total, despatches from India amounted to 70,200 tons as against 62,600 tons in the same period last year. Expressed in terms of percentage, India accounted for nearly 70 per cent. of the total in the five-month period under review, as against 81.5 per cent. in the same period of the previous year. The decline in India's share in the total U.S. offtake of burlap is due to increased despatches from a number of continental countries. The bulk of the increase is accounted for by France which sold during the period as much as 6,200 tons as compared with only 900 tons a year before. Belgium's share of the U.S. burlap trade rose from 3,100 tons to 4,700 tons. Germany's share, however, remained unchanged at 4,500 tons. Among others which increased their burlap sales to the U.S. were the Netherlands, the U.K., Australia and a few others. These figures clearly show how the continental countries have been slowly elbowing their way into the U.S. market for burlap formerly served by India. It is, however, possible that figures for subsequent months of the current year may reveal improvement in the U.S. offtake of Indian jute goods. This is because owing to the abolition of the discriminatory licence fee and export duty on East Bengal jute exports to India by the Pakistan Government, India now is in line with the continental countries, in regard to the purchases of raw jute from Pakistan and is thus in a better position to compete with the Continent in the U.S. markets in goods manufactured from Pakistani jute. Secondly, the Government of India has abolished the export duty on jute specialities and miscellaneous jute manufactures other than cloth and bags. These specialities include jute mesh, jute carpet yarn, paper lined hessian, jute tarpaulins, jute rope, and jute mattings. Following this step, Indian jute mills should be able to regain their markets for these goods in the U.S.

The Government of Pakistan has decided to lift the price control on exports of jute. It is reported that this is a part of the Government's jute policy for the current year due to be announced shortly.

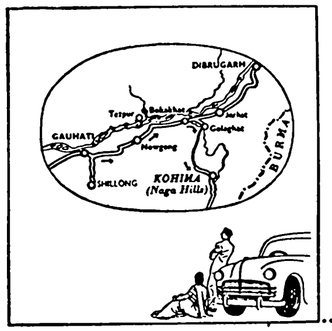
spring dances of nagas

Each year during the spring festival, tiny villages nestling among the Naga Hills in Assam resound with the beating of drums and the singing of traditional tribal chants. Decked in full war-paint, Naga menfolk run through a rich repertory of dances, mostly martial in character. Slender Naga maidens, liberally adorned with bead necklaces, brass bangles, and amulets, dance before the village chief's house, swaying hand in hand for hours on end to the accompaniment of charming melodies.



Kohima, administrative headquarters of the Naga Hills area gives ready access to the entire region. It is linked by road with Gauhati through Nowgong and Bokakhat. The stretch between Golaghat and Kohima is motorable in the dry season. Kohima has an inspection bungalow, and petrol is also available here.

A visit to the colourful Naga Hills is a pleasure brought within the reach of all by the safety and comfort of road travel assured by John Boyd Dunlop's invention of the pneumatic tyre.

1082-A

EXPANSION OF WEST EUROPEAN STEEL INDUSTRY

WILL LOANS BE FLOATED IN U.K.?

THE latest reports from Luxemburg disclose two new important developments relating to the European Coal and Steel Pool. The most important of them relates to the possibility of raising loans in the London market for financing the expansion of the European coal and steel industries. It is stated that the High Authority of the European Coal and Steel Pool considers London as a possible source of finance and the U.K. engineering industry as the possible supplier of the necessary equipment. Next to Britain, Sweden is considered to be the best outside market for floating loans.

There is no possibility of floating loans in the United States. For, loans through commercial channels in the U.S. market is considered to be expensive. Moreover, as the High Authority has no sources of dollars, the currency risks of such transactions are expected to be considerable. Partial dollar finance through U.S. Government agencies has, however, been recommended by President Eisenhower, but the amount of such aid is not predictable as yet. Whatever may be the amount, the High Authority will no doubt avail itself of such an offer. The High Authority is expected to be the actual borrower and, naturally, it will assume the obligations regarding repayment and interest. It will re-lend the money to private companies belonging to the Pool.

In addition, loans will be floated in the capital markets of the six pool countries themselves. These sources of finance are actively being considered for projects such as workers' housing requirements. As the capital markets on the Continent are, however, tight, the loans that will be floated there will be short-term ones for financing small schemes.

Plans for Increasing Production

The West European countries have ambitious plans for increasing the productive capacity of their iron and steel industry. Production of crude steel in 1952 and the targets of production for 1956 of some of the European countries are as follows:

(In millions of tons)

	1952	1956
U.K.	16.12	20.00
West Germany	15.65	20.00
France	10.89	17.00
Saar	2.77	—
Belgium	5.01	5.70
Luxemburg	2.95	3.40
Italy	3.48	4.00

No reliable estimate of the capital needed for reaching these targets is available. It is, however, stated by some that about $660 million will be needed for investment in the steel industry in 1953 alone, as against an estimated $574 million in 1952. These are gross assessment figures, including replacements. About half of it may come out of sales revenue (more than half in the case of Germany and rather less than half in the case of France). It is, however, feared that, with the recent downward trend in steel prices, the amount of sales revenue available for investment will diminish sizably.

The question of raising a loan in the U.K. is expected to help to usher in the much desired closer association between the High Authority and the U.K. It is presumed that a large part of the loan raised in the U.K. will have to be spent in that country itself and that in the absence of convertibility of the pound, the question of lending sterling for purchase of equipment payable in dollars does not arise.

Cartels

Another important development relates to the measure taken by the High Authority to fight against suspected European coal and steel cartels. According to a decision of the High Authority taken some weeks ago, all joint-selling, joint-buying and similar organisations in the six countries of the European Coal and Steel Pool, which have not applied for official recognition of their status by the High Authority, have been declared illegal, with effect from 31st August. The Schuman Plan Treaty allows the continuation of such bodies to be licensed, provided they are not culpable of monopoly or other restrictive practices.

Already, applications of a number of associations for continuation of licences have been refused on the ground that their Articles do not conform to the requisite pattern. A large number of other applications are still being considered. The applicants are permitted to continue their activities until the decision of the High Authority is given. The decision may be either acceptance or rejection or qualified acceptance, subject to the amendment of the Articles of the associations concerned. Associations illegalised by the decision of the High Authority cannot sue the Authority in any of the courts of the six member-nations. It is felt that this development does not directly affect secret national and international cartels, which are believed to be now influencing the maintenance of coal and steel prices. It only affects the national and local associations, which are capable of exercising disciplinary action over their members' prices and marketing arrangements.

TUNGABHADRA PROJECT

Clarifying the attitude of the Government of Mysore towards the Tungabhadra Project, Mr. K. Hanumanthaiah, Chief Minister, Mysore, declared, while addressing the Tirupathi Forum, Tirupathi, last week, that, so far as the benefits of the project were concerned, they must be jointly and equitably enjoyed by all the people concerned, subject to an agreement at a conference of the Andhra, Hyderabad and Mysore Governments. If they failed to come to an agreement, the Centre would arbitrate. The Andhra Bill envisaged that the benefits accruing from the project must be subject to an agreement between the Governments concerned. So also the liabilities. He, however, made it clear that liability of the Governments should be in proportion to the benefits enjoyed.

Dealing with the legal aspects of the question, Mr. Hanumanthaiah said that the reservoir was situated in that portion of Bellary taluka which would be added on to Mysore State. About 60 miles of channel would go to Mysore territory and 120 miles of channel to Andhra State. Each State was a legal entity and, therefore, there could not be any extra-territorial jurisdiction. Accordingly, the ownership of property concerned should rest with the respective Governments as per definition of Transfer of Properties Act. The Andhra Bill itself had defined the boundaries and the land so defined included everything appertaining to it. Whatever be the property, the right of its ownership would vest in the States in which it is situated.

EXPORTS OF IRON AND MANGANESE ORES

The Government of India has announced its policy regarding exports of iron and manganese ores. According to it, it has decided, as an interim measure, not to alter the existing procedure for the grant of export licences for the export of these ores from ports other than Calcutta and Madras. Exports from the ports of Calcutta and Madras will, however, be allowed for the time being on the basis of past performance of the shippers and the eligible shippers will be granted export allocations equal to 25 per cent. of their best exports during any of the three financial years ended March, 1953. The quotas allotted to individual shippers will be valid for shipment during the period 16th October to 31st December, 1953. Shippers who are able to ship their allotment in full before 31st December, 1953, can apply for additional allotment to the respective Export Trade Control Officers. The Government of India has also proposed to consider the question of giving mine-owners, who are not eligible to receive export allotments, as established exporters, but would like to enter the export trade, an opportunity to export these ores. With effect from 16th October, 1953, railway wagon allotments will be made only to holders of export allotments. The railways will register indents in accordance with the usual procedure and make allotments *pro rata* in order of registration.

NEW MULTI-PURPOSE PROJECTS

PROGRESS OF INVESTIGATIONS AND SURVEYS

PROGRESS towards the implementation of the five new projects, namely, Koyna, Rihand, Krishna, Chambal (Stage I) and Kosi (Stage I) included in the Five-year Plan, has been encouraging. According to Mr. Jaisukhlal Hathi, Deputy Minister for Irrigation and Power, surveys regarding Koyna and Rihand projects have been completed. Detailed investigations in respect of the remaining three projects are nearing completion. The progress of investigations and surveys in regard to Chambal, Kosi and Krishna projects are as follows:

Under the Chambal project, which is designed to provide, when completed, irrigation facilities for 1,200,000 acres in Madhya Bharat and Rajasthan and generate 80,000 kw., excavation of foundations at the Gandhi Sagar dam site has been taken on hand; about 1.5 million cubic feet of earthwork had been excavated by the end of June, 1953. Field investigation in connection with Kotah barrage (Rajasthan), which is the next item of work to be taken up for construction, is nearing completion. Survey of alignment and preliminary estimates for the main canal has been completed. Surveys of the distributaries are nearing completion. Work on Kotah barrage and the canal system is expected to commence next month. Other phases of investigation such as revenue, agricultural and soil are under way. The aggregate cost of the project is estimated at Rs. 33.75 crores.

The investigations on the Rs. 66-crore Kosi project, which will provide irrigation facilities to 2,620,000 acres in Bihar and Nepal, besides generating 40,000 kw., were started in 1946. Contour maps for the entire area are being prepared by the Geological Survey of India. Geological excavations at Barahakshetra and Belka dam sites and investigation of construction materials, as also hydro-meteorogical and seismological observations, have been carried out.

These surveys now being conducted by the Survey of India will require another three years or so to complete. It will also be necessary to continue the hydro-meteorological, seismological, groundwater, silt and discharge observations year after year. Investigations, on an emergency basis, are being vigorously continued by the Central Water and Power Commission, with a view to mapping the areas, which are often subject of floods, and to evaluate in detail the extent of damages and losses caused by floods and of the concrete benefits (with a rough estimate of their monetary value) that would flow from the preventive measures proposed. This work is expected to be completed within the next few months.

Krishna

The scope of the Krishna project, which is intended to serve Andhra and Hyderabad, is not yet defined. However, almost all the field investigations in regard to Nandikonda dam has been completed. The project report and proposals are under examination. Field work on the Nandikonda right bank canal on the Madras side is nearly completed and the designs and estimates are getting ready. Final proposals are expected to be available by October, 1953. Investigation on the Nandikonda canal on the Hyderabad side is completed. Proposals for Pennar dam are under examination by the Chief Engineer, whose report will be submitted for consideration to the Government of Madras shortly. Field investigations relating to Pulichintala dam and canal system are nearing completion. The entire investigations are expected to be completed by September 1954.

The aggregate cost of all the five projects will be over Rs. 200 crores, out of which it is expected that it might be possible to spend Rs. 40 crores on them during the period of the Plan. The financial and technical responsibility of the Central Government and of the State Governments concerned (and of the Government of Nepal relating to Kosi project) with regard to these projects and the programme of their construction will be settled before work is commenced on any project. The following table gives the area which will be served and the benefits that are expected to be derived by the construction of these projects:

Name of the project	Area served	Total estimated cost	Ultimate benefits	
			Irrigation	Power (installed
		(Rs. lakhs)	('000 acres)	('000 kw.)
Kosi (Stage 1) ..	Bihar and Nepal	66.00	2,620	40*
Koyna (Stage 1)..	Bombay	33.00	..	240
Krishna (scope not yet defined).	Madras and Hyderabad ..	N.A.	N.A.	N.A.
Chambal (Stage 1)	Madhya Bharat and Rajasthan	33.75	1,200	80
Rihand	Uttar Pradesh..	35.000	..	240

* Also flood control. N.A.—Not available.

TIN IMPORTS BY U.S.

Imports of tin into the United States were valued at $42 million in the first quarter of 1953, as compared with the 1952 quarterly average of $38 million. Ore imports from Indonesia aggregated 1,468 long tons, valued at $6.15 million, an increase of 35 per cent. in volume and 40 per cent. in value. Tin imports from Malaya, at an estimated value of $31 million, remained at about the same level as the quarterly average in 1952. The Malayan Tin Bureau, industry association in Washington has pointed out that the current level of American economic activity, particularly in such tin-consuming industries as automobiles and trucks, rail-road equipment, aircraft, air-conditioning, and radio and television, indicates a rising level of tin consumption in the U.S.

EFFECT OF HIGHER BANK RATE ON INSURERS

ANALYSIS OF VALUATION REPORTS

MANY Indian insurers felt genuinely perturbed when the Government decided to end, in November, 1951, the cheap money policy it had, unwisely in the opinion of some, pursued for a number of years. When the Bank rate was increased from 3 to 3½ per cent. towards the close of 1951, it had been widely predicted that insurers would be badly hit by the change. No doubt, the fall in the value of Government securities, which followed the upward revision of the Bank rate, made the valuation of assets, a large part of which is held in Government securities, a somewhat difficult proposition. Insurers were compelled to value these assets at the market price, which was and still is below their face value. They knew that they would generally hold the securities till the date of maturity when they would be able to get the face value. The loss was thus only a paper loss. But still, as is well known, nearly all insurers have had to set apart sizable sums by way of provision for depreciation of investments.

Despite the unfavourable effect of the increase in Bank rate, insurers have not suffered any serious setback. This is because they are able to earn a larger yield on their current investments. An analysis of insurers' valuation reports shows that many insurers have actually improved their position. At any rate, the fears that were once entertained about the Bank rate have proved wrong. This fact has been brought out in an interesting analysis of the valuation reports of Indian insurers, made by Mr. K. R. Srinivasan, Actuary, Oriental Government Security Life Assurance Company, Ltd., in his address at the last meeting of the Actuarial Society of India.

Mr. Srinivasan has analysed the valuation reports under three headings: (1) Rate of interest, (2) surplus disclosed, (3) allocation of surplus. Under the first heading, he has investigated whether the rate of interest assumed in the insurers' latest valuation report, was the same as, or higher than, or lower than the rate of interest in their previous valuation. He has compared, under the second heading, the surpluses disclosed in the 1951 valuation with the magnitude of the surplus disclosed in the previous valuation. Under the third heading, he has investigated the allocation of surplus of the insurers. The following tables give the results of the analysis:

Results of 1951 Valuation

Rate of Interest

		No. of Insurers
Same as the rate used for preceding valuation		22
Higher than the rate used for preceding valuation—		
By ½ per cent.	4	
By 1 per cent.	9	19
By 1½ per cent.	5	
Lower than the rate used for preceding valuation ..		4
Total ..		44

Surplus

		No. of Insurers
Larger surplus than at previous valuation ..	29	
Smaller deficit than at previous valuation ..	5	39
Previous valuation deficit—1951 valuation surplus ..	5	
Smaller surplus than at previous valuation ..	..	5
Total ..		44

Allocation of Surplus

		No. of Insurers
Higher rate of bonus distributed than at preceding valuation	12	
Preceding valuation surplus not distributed: bonus declared at 1951 valuation ..	11	29
Preceding valuation deficit; 1951 valuation surplus not distributed	5	
Same rate of bonus distributed as at preceding valuation	8	
Both valuations surplus; but not distributed ..	5	13
Both valuations deficit	5	
Lower rate of bonus distributed than at preceding valuation	2	
Bonus declared at preceding valuation; 1951 valuation surplus not distributed ..	1	3
Total ..		44

It will be clear from the first table that quite a few of the insurers, if not the majority of them, have been able to adopt a higher rate of interest in their valuation. The second table reveals a welcome trend, in that it shows that 29 companies out of 44 were able to disclose a larger surplus than in the previous valuation. Also, five companies could show a smaller deficit and five others succeeded in converting the deficit in their previous valuation into a surplus. An equally welcome trend is the distribution of larger bonuses. Among the insurers whose valuation reports are analysed, 12 insurers, as a reference to the third table shows, were able to declare a higher bonus, and 11 others, who had passed over the bonus in the previous valuation, declared a bonus in their 1951 valuation. Commenting on these results, Mr. Srinivasan says:

"The broad picture which emerges from the above is that, of the 44 insurers, 29 showed better results at the 1951 valuation than the preceding one judged by the amount of surplus or deficit and it was only five insurers whose 1951 valuation disclosed a smaller surplus than the previous valuation. Judging by bonus distribution or surplus carried forward or to a reserve, the 1951 results were better than those in the preceding valuation in the case of 28 insurers, same or similar in the case of 13 insurers and worse in the case of only three. If a general conclusion can be hazarded, it is that these insurers have on the whole emerged successfully from the ordeal and that the fears entertained in certain quarters that they would not be able to do so have been happily belied."

This is certainly an encouraging conclusion. Indeed, when the time comes round for the analysis of the valuation reports, published in 1952 and 1953, Mr. Srinivasan's conclusion is bound to be strengthened by additional evidence. Lest anyone should state that this heartening conclusion does not fully take into account the temporary hardship caused to insurers by the need to provide for depreciation of their investments, it seems necessary to add that such provisions have undoubtedly gone to strengthen the secret reserves of the companies, which may normally be expected to keep the securities till the date of maturity.

EXPENSE RATIO UNDER INSURANCE ACT

RISE IN COSTS EXPLAINED

(By V. E. RAYMOND)

THE Insurance (Amendment) Act, 1950, was the logical outcome of the ever-rising cost of Indian insurance. An urge to display in the annual reports, figures depicting a larger volume of completed new business year after year had fired the insurers' imagination. And since a bigger and bigger volume of completed new business each year does go a long way in making a company more and better known, it can readily be realised how attention was concentrated mainly on bigger annual business to the exclusion of other equally important considerations. Unfortunately, however, this period coincided with the immediate post-World War II period, when the aftermath of that war in the nature of higher living costs, etc., was both predominant and unfamiliar, leaving in its wake a truncated insurance market, particularly the life insurance market, where what may be termed as selling at high pressure necessarily became the order of the day.

This high pressure selling was further exaggerated by the ever-present force of competition. In addition to the higher costs incurred on this count, insurers had to contend with rising costs all round them not of their own making. It was inevitable, therefore, that the authorities, and to some extent insurers themselves, should step in to arrest this procedure. The result was the relevant clauses in the Insurance (Amendment) Act, 1950, restricting expenses of management in life and general insurance business alike.

The Amended Act has now laid down certain limits, expressed as percentages of premiums received, which the expenses of management of the insurer shall not exceed. These limits, extended perhaps to a very minor extent for particular insurers or for a particular year, are definite barriers which an insurer will transgress only at his own peril. Definite remedial action is prescribed for the transgressor.

There can be no gainsaying the fact that Indian insurance will generally tend to show a better overall picture when the limitations and restrictions now statutorily imposed have had sufficient time to imprint their effects upon the industry concerned. From this point of view the restrictions need certainly to be welcomed. But in assessing who is an extravagant insurer and who is not, there would certainly appear to be room for genuine doubt as to whether and at all times strict justice will be done in naming the offender. Thus, for instance, in a speech at the ordinary general meeting of one of the leading insurers of this country held recently, the chairman commented upon the considerable increase in the number and amounts of policy loans taken during the course of the year. This necessarily involves increased clerical work, supervision, etc. Similarly, applications for paid-up policies and surrender of policies have also increased, involving likewise increased clerical labour, postage, etc.

It is quite possible that for similar reasons, an insurer's salary bill increases with a consequent increase in his expense ratio; and if such conditions or reasons are multiplied under

(Continued in previous column)

(Concluded from next column)

two or three heads of expense the total difference to his expense ratio may be appreciable. There is no insurer in India to-day who is not experiencing a higher salary bill, or providing more perquisites for its staff than was done in years gone by, or is not surrounded by increased costs in every direction. Assuredly, in assessing the extravagant insurer, all these considerations, minor if one chooses to call them so, must receive due recognition.

But more important than this is the fact that the insurer himself is the person most competent to know and to explain the reasons for his non-compliance, if any involved, with the clauses of the Insurance Act as strictly interpreted. In an argument on this vital issue, vital to all insurers in India alike, the standpoint of the insurer as against the views of a body of persons, however competent, must not only receive due recognition but even preference, provided there is no *mala fides* on his part. Insurance, and life insurance in particular, is not a business in which alterations can be given effect to overnight. The long-term point of view is intrinsic in the very business every insurer transacts, and that consideration must necessarily play an important role in his business. It must, therefore, take some time for such a business to absorb new measures, and for the effect of such measures to become apparent.

The responsibility to be borne by those in authority in this matter is, therefore, a grave one. Both the insurer and the Controller of Insurance are called upon to play their parts wisely and well, each owing obligations to the other, and both owing obligations to the policyholder who, after all, is the person most affected, in a country where insurance is yet in its infancy and has plenty of scope for development.

INDIAN TRADE AND GENERAL INSURANCE COMPANY, LIMITED

LALA KARAM CHAND THAPAR'S STATEMENT

IN his statement, accompanying the report and accounts of the Indian Trade and General Insurance Company, Ltd., for the year ended 31st December, 1952, the Managing Director of the Company, Lala Karam Chand Thapar, has taken strong exception to the practice, adopted by some insurers, of extending credit to their clients. He has condemned it on the ground that it is the function of banks and not of insurance offices to provide credit. He, however, recognises that the "Code of Conduct" now in force has gone some way towards correcting this evil. He has urged all executives to abide strictly by the "Code."

The following is the full text of Lala Karam Chand Thapar's statement:—

"In reviewing the progress of the Company during 1952, it is essential to give at least a brief outline of the economic background that prevailed in India during the period and to make the point that from the very nature of our business, the insurance industry in India, as elsewhere, is particularly sensitive to financial and economic changes. In the early part of the year there was an abrupt fall in world values of all Indian commodities; whilst jute suffered the most severely, our other staple exports such as tea, cotton, oilseeds, hides and skins, mica and shellac, etc., also experienced a very substantial drop in values, and it was only towards the close of the year that commodities showed signs of settling down at lower price levels; the year was, therefore, one of general depression and financial stringency and with this background in mind I think we may congratulate ourselves on the results disclosed in the accounts now submitted.

"In an earlier statement to shareholders I mentioned that we were reinsuring our fire account rather more heavily abroad in return for overseas business, and that the full benefit of this policy would later be reflected in our figures. I am happy to say, as you will see from the accounts, that my prediction was fully warranted and the policy then adopted has enabled us to stabilise our business by giving us that very much wider spread of risk which is so essential to a balanced account.

"Our total net premium income in all departments amounted to Rs. 40,53,261 as against Rs. 29,59,873 in 1951.

Net Premium Income

"To the net premium income of Rs. 40,53,261 must be added interest and dividends (less income-tax) amounting to Rs. 1,45,222 and miscellaneous receipts of Rs. 7,841; the total income of the Company thus amounted to Rs. 42,06,324. Claims paid and outstanding take Rs. 18,32,304, commissions, expenses of management and foreign taxes Rs. 14,21,891, Company's contribution to provident and pension fund and bonus to staff total Rs. 63,794 and depreciation, bad debts and other debits account for a further Rs. 87,311, leaving a balance of Rs. 8,01,024 to which must be added the balance carried forward from the previous year, amounting to Rs. 11,077, making a total credit balance of Rs. 8,12,101. Out of this balance an amount of Rs. 6,64,215 is placed to reserve for unexpired liabilities in all departments, and after reserving Rs. 37,000 for bad and doubtful debts and Rs. 10,000 for income-tax, there is an available balance at the end of the year of Rs. 1,00,886.

"I may be excused for emphasising with some pride that this profit has been achieved after placing to various reserves, out of revenue, a further sum of over Rs. 7,00,000; reserves standing in our balance-sheet at the close of the year, including reserves for unexpired liabilities, now exceed Rs. 28,00,000 or substantially more than our paid-up capital of Rs. 24,00,000. I may add here that, following normal practice, full provision has been made for claims intimated but not settled at the end of 1952.

"It has throughout been the policy of your Directors to build up reserves. The funds of our Company now amount to over Rs. 53,00,000, whilst the book value of our investments is in excess of Rs. 38,00,000, and our total balance-sheet assets fall a little short of Rs. 78,00,000. I hope that shareholders will agree that the conservation of the Company's resources by your directors has been more than justified by results.

"The question of payment of a dividend to shareholders has received the serious consideration of your Directors and they feel that the stage has now been reached when they can safely recommend a modest dividend of Re. 1-8 per share, tax-free, which will absorb Rs. 90,000. This dividend is more than covered by the interest on our investments which, after deduction of income-tax, amounted to Rs. 1,45,222. Your Directors feel that this modest maiden dividend is one which the Company can maintain, if not improve upon, in the future.

"Our foreign treaty income in 1952 amounted to over Rs. 18,50,000 and accounted for almost half of our total net premium for the year; this emphasises the international character of our business and the advantages accruing to the industry and the country through the complete freedom we enjoy to exchange our reinsurances to the best advantage in the world markets.

Expenses of Management

"Our 1951 accounts disclosed a substantial and most welcome reduction in the cost of our business compared with previous years and you will, I am sure, be pleased to see that this favourable trend has continued during 1952, management expenses, commissions, depreciation and foreign taxes work out at 37.9 per cent. of net premium income as against 40.26 per cent. in 1951.

"Whilst plans that your Directors have in view for the future expansion of your Company's business, both at home and abroad, cannot be implemented without expenditure on a larger scale than hitherto, you may rest assured that your Directors will continue to keep a watchful eye on all outgoings.

"Our overall claims ratio at 45.2 per cent. of net premiums showed some improvement on the 1951 ratio of 47.52 per cent., and can be considered as satisfactory.

"The report accompanying our 1952 accounts deals with the revenue and balance-sheet position and I have little to add except to record satisfaction at the results disclosed.

"The substantial increase in net premium income in our fire account, mainly due to the increase in our foreign treaty business, has brought in its wake a very heavy financing charge, the increase in reserves required to maintain them at 50 per cent. of the premium being as much as Rs. 4,52,372 or 20 per cent. of the net premium income for the year; it is more than satisfactory to record that in spite of this it has still been possible to make a transfer to profit and loss.

Marine Account

"As regards our marine account, which shows a loss of Rs. 51,287, I would emphasise that this is not an underwriting loss; in the circumstances obtaining in the marine market to-day your Directors have thought it prudent to further strengthen the marine fund to a figure equivalent to 83 per cent. of our income as against 75 per cent. in 1951; this necessitated the transfer of a further Rs. 1,94,099 to the fund and it is this strengthening of the reserve position which has brought out this small loss.

"Ever since the decision was taken to abolish the combined marine surcharges on marine cargo risks in 1949, competition has forced basic rates the world over down to a level which is definitely uneconomic and the tendency to-day is to use the war risk rate to subsidise inadequate marine rates; to make matters worse these rates in many cases include risks which are not marine or transportation risks at all, and the increasing practice of granting all risks cover in a buyers' market is quickly reflected in the claims figures.

"With the drop in values of all commodities and the operation of import and export restrictions taken together with current competitive rates, it would be foolish to expect to maintain, let alone increase, our present income with a reasonable prospect of maintaining a profitable account.

"If companies are underwriting for profit and not for premium they must squarely face up to reduced incomes in their marine departments for some time to come.

"The results of our miscellaneous account show no great variation from that of previous years, both the claims and cost ratios being practically the same; the larger profit disclosed is due almost entirely to the smaller financing charge required to maintain the reserve at 50 per cent. of the premium.

"Motor rates were enhanced at the beginning of the year but it is doubtful whether the benefits of these increased rates will be reflected in the accounts in the immediate future.

Insurance Act

"One of the unfortunate features of the Insurance Act is that the quantum of management expenses is based on the gross direct premium in India: this is without any doubt responsible for the severe and in many cases unhealthy competition for direct business quite irrespective of the quality of the business. Our direct Indian premium is particularly susceptible to economic ups and downs and it is unfortunately impossible to adjust management expenses from year to year to fall in line with wholesale prices or any other yardstick adopted for measuring prosperity or recession. As a result some companies find themselves between the 'devil' of expense ratio and the 'deep sea' of increasing claims. Government are alive to the position and have the matter under review; it is to be hoped that some other formula on which to base the quantum of expenses may soon be devised which, while equitable to all, will avoid such undesirable consequences as exist to-day.

"Another result of this unbridled competition for direct business is the facility of almost unrestricted credit extended by some offices and principal agents to agents and insured parties; as a consequence it is not surprising that a belief is growing in certain circles that payment of insurance premiums may with impunity be endlessly postponed or, better still, under one pretext or another, evaded altogether. After all, it is the function of banks and not insurance offices to provide credit.

Code of Conduct

"The 'Code of Coduct' now in force for general insurers has gone some way towards correcting this undesirable trend, and it is obviously the duty of all executives to abide strictly by the 'Code', in this important respect and eradicate this evil feature of our business once and for all.

"Insurance may aptly be described as the lubricating oil without which the complicated credit machinery of industry and trade would quickly grind itself to a standstill—we have an essential function to perform and a dignified part to play in building up the economy of our country and this should always be borne well in mind by those in executive control of our insurance offices.

"Sir Purshotamdas Thakurdas in his recent speech at the annual general meeting of the Oriental Government Security Life Assurance Company, Ltd., has referred in well-measured terms to foreign insurance companies indulging in methods calculated to hamper the growth of national institutions. Whilst Sir Purshotamdas may have had life assurance chiefly in mind, the same can be said with equal or greater force of general business.

Foreign Insurers

"Instances are not lacking of foreign insurers who have recently established themselves in India without connections or background and who can only hope to build up a portfolio by buying business with complete disregard to the provisions of the Insurance Act, and to the detriment of general insurance as a whole and national institutions in particular. Such companies will do well to pay attention to this timely warning which, if unheeded, can only lead to corrective measures at the very highest level.

"In spite of some of the difficulties with which we are beset, I have no hesitation whatever in expressing my confidence in the future of Indian insurance and there is no doubt in my mind that this important national industry will continue to grow in strength from day to day and play its full part in strengthening the national economy.

"I cannot conclude this statement without asking you to join with me in thanking our General Manager, Mr. Sturgess, and his able group of officers and staff for the good work they have put in, without which I should not now be in the position to place before you this satisfactory picture of the Company's progress.

"At the same time I would like to thank all our old friends, principal agents, agents and clients, both here and abroad, for their continuous and encouraging support."

TATA IRON AND STEEL COMPANY, LIMITED

MR. J. R. D. TATA'S ADDRESS AT ANNUAL GENERAL MEETING

GOVERNMENT ASKED TO CLARIFY ITS INDUSTRIAL POLICY AGAIN

THE time has come for the Government to clarify its position and to state whether its ultimate goal is, in fact, a mixed economy in which both the public and State sectors are permitted to function efficiently or a State monopoly of all industrial enterprise. This demand was made by Mr. J. R. D. Tata, Chairman, the Tata Iron and Steel Company, Ltd., in the course of his address at the Forty-sixth Annual General Meeting of the Company held at Bombay on the 3rd inst. He said that the State must, where necessary, exercise a reasonable, but not paralysing, degree of supervision over industry and business. A mixed economy could only function, Mr. Tata said, if there was within the community a balance of forces with free enterprise operating as one of the autonomous forces pulling its weight alongside State enterprise, trade unions and other elements in society. Referring to unemployment, one of the most disturbing symptoms of our economic *malaise*, Mr. Tata urged the Government to undertake a continuous and scientific study of the problem of population which was closely connected with that of unemployment.

The following is the full text of the speech delivered by Mr. Tata on the occasion:

"LADIES AND GENTLEMEN,

"I am sure you will wish me, at the outset, to say a few words about Dr. Matthai whose appointment to the Taxation Enquiry Commission has necessitated his resignation from the Boards of the Steel Company and Tata Industries and whose services, for the second time in seven years, we have lent to the State for an important national purpose. I should like, on your behalf and mine, to express our gratification at his selection as Chairman of the Commission and pay tribute to him for his public spirit in undertaking this heavy task at considerable personal sacrifice to himself.

"Dr. Matthai has contributed much to the fields of economics, industry and administration to which he has brought a degree of realism and clear thinking somewhat rare these days.

"On the Matthai Commission rests a heavy responsibility, as its findings and recommendations will have considerable influence on the fiscal and taxation policies for many years to come. Those of us who have known Dr. Matthai for many years can have no doubt that the task will be accomplished with wisdom and a deep knowledge of the subject. On your behalf and mine, I wish him and his colleagues all success in their difficult assignment.

"On the resignation of Dr. Matthai, your Directors appointed Mr. J. D. Choksi as Vice-Chairman of the Company. Mr. Choksi, who has been a Director of the Company for many years and is a senior Director of Tata Industries, is well known to you all. I am sure you will approve of his appointment.

World Scene

"Since we last met a year ago, important developments have taken place on the world's political and economic scene. Perhaps the most significant is the apparent change which has taken place in Soviet policy, since the death of Marshal Stalin. While it is too early to judge what the real reasons for the new trend are, how long it will last and where it will ultimately lead, it can no longer be doubted that it has eased international tension both in Europe and the Far East, and brought hopes of better days to millions of peace-hungry people. Business and industry, in particular, should unreservedly welcome it, for there are few more untrue and yet more studiously fostered theories than that capitalism thrives on war or preparations for war. In actual fact, war and its aftermath of economic chaos, more than any other factor in this century, have been responsible for the decline or disappearance of capitalism, and, along with it, of democracy in large parts of the world. While business and industry may derive temporary stimulus from war orders, in the long run, they can flourish only under conditions of peace and stability in which the people have an inducement to save and to build for the future.

"Particularly in poor and relatively backward countries like our own, the vital need for economic and social development is totally irreconcilable with the diversion to defence of an unduly large part of available resources. We have, therefore, everything to gain from a lasting peace throughout the world in general, and from the peaceful settlement of all outstanding problems in our own neighbourhood, in particular. The resulting release of additional funds for nation-building purposes would, over a period of years, make a substantial difference to the economic health of the nation.

"In the meantime, the economic situation in the country, as it has evolved during the last year, shows little cause for complacency. Although agricultural and industrial production was somewhat better in 1952 than in the previous year, the volume of trade, particularly foreign trade, showed a substantial fall. Bank advances fell by nearly Rs. 70 crores, while the volume of money with the public decreased by Rs. 37 crores over and above the reduction of Rs. 173 crores in 1951-52, representing a total decrease of Rs. 210 crores for the two years. Taking all factors together, it seems evident that money income, i.e., the purchasing power of the people, has been reduced.

Unemployment

"One of the most disturbing symptoms of our economic *malaise* is the increasing unemployment reported from various parts of the country in recent months. Economists and financial experts have been at some pains to explain to us the reasons for this sudden aggravation of a longstanding problem. I wonder at the almost complete absence of any reference in any quarter to the growth of our population, as one of the causes of this alarming trend, if not the major cause.

Population

"When addressing you two years ago, I referred to this formidable problem and made a special plea that as a first step Government should constitute a high-power commission to investigate it in all its aspects. Nothing has been done, and I feel I must once again use my small voice to sound the alarm at the gathering shadows which threaten to overwhelm us.

"Our population is increasing at the rate of nearly five million a year. Even if we sought only to maintain the existing population on its present low standard, we would have to find work each year for an additional two and a half million men and women. As the land is already overburdened with man-power, employment would have to be found for them outside agriculture, i.e., in industry and services. Even assuming a much smaller capital expenditure per industrial worker than in Western countries and a high proportion of employment in small-scale industries and services, requiring little or no capital equipment, the financial and other requirements would be well beyond our present means.

"But if it were possible, for the next twenty-five or fifty years, to keep our population static or at least to reduce the rate of its growth, which, I am convinced, is not beyond the medical, scientific and administrative possibilities of the day, the whole picture would change and every successive advance in our economic output would result in some improvement in the living standards of our people. I, therefore, plead once again that early steps be taken to undertake a continuous and scientific study of this vital problem in its biological, economic and social aspects, for it is only on the basis of established facts and possibilities that subsequent action can be taken, if found necessary and practicable.

"I do not, for a moment, suggest that in the negative task of controlling the growth of our population lies a universal remedy for our economic ills. But such control is necessary to enable constructive work to bear fruit. Real progress could be achieved only if, simultaneously, we continued to make every effort to increase the productivity of our country. I am not sure, however, that even, on this positive side of our task, we are proceeding in the best possible way.

Mixed Economy

"Our Government have adopted the concept of a mixed economy for the country, a concept which has found broad public acceptance and in which business and industry are anxious to co-operate. A mixed economy, however, implies the co-existence of State enterprise and free enterprise, and cannot mean a wholly State-dominated economy where the industrial class is temporarily tolerated and permitted to survive, pending further developments. A mixed economy can only function, if there is within the community, a balance of forces, with free enterprise operating as one of the autonomous forces pulling its weight alongside State enterprise, trade unions and other elements in society.

"I am led to make these observations, because I have noted a tendency on the part of Government, perhaps not deliberate, to deny to free enterprise a voice, or even consultation, in matters vitally affecting it or the economy as a whole. The manner in which, for instance, the Indian air transport industry was recently nationalised, and the terms on which this was done, would seem to indicate that Government see no reason to carry with them the industrial sector and its representatives or even to give them a hearing before making up its mind. May I suggest that the time has come for Government to clarify their position and to state whether their ultimate goal is, in fact, a mixed economy, in which both sectors are permitted to function efficiently, or a State monopoly of all industrial enterprise?

"In contrast with conditions in our own country, a clear reversal of trend is taking place in most other free countries of the world after many years' experience of State ownership and rigid control of all economic activities. The truth is beginning to dawn, elsewhere at least, that State socialism in action, as distinct from theory, is hardy the economic and social panacea claimed by its advocates and that it does not lead to a classless society but to a dangerous concentration of all economic power into a few bureaucratic hands, which, while acceptable in a totalitarian State, is irreconcilable with real democracy.

Not A Plea for Laissez Faire

"This is not a plea for a return to the old-time *laissez faire* in economic matters. The interest of the nation as a whole must prevail over the interests of the few. The State must, where necessary, exercise a reasonable, but not a paralysing, degree of supervision over industry and business. It should also take a positive part in production in such fields as are best suited to its organisation and methods, within the limit of its resources and subject to a realistic assessment of priorities. But it should not lose sight of the primary objective, which is to expand production and employment. That object cannot be achieved by discouraging creative enterprise and initiative, inhibiting savings and destroying the confidence of the investor. I earnestly believe that realistic and well-thought-out policies, free from doctrinaire considerations, and aimed at encouraging production, fostering savings, recognising honest and efficient management, while deterring anti-social activities, would go a long way towards energising free enterprise. They would also help to instil in the private sector a sense of trusteeship as advocated by Mahatma Gandhi and would put squarely upon it the responsibility for placing national above sectional and personal interests. Such policies in respect of the private sector, combined with State enterprise in appropriate fields, assistance to small-scale and cottage industries and to the co-operative movement, land and social reforms and measures to control the growth of our population, would, in my humble judgment, provide the right kind of programme to revolutionise the economic activity of the country and to make a real success of the concept of a mixed economy.

Accounts

"Coming to our own affairs, I need say little more about the operations and profits of the Company during the year under review than that they were mainly characterised by a small reduction in production and despatches on the one hand, and a continued upward trend in costs on the other, the largest single item being, as usual, in respect of payments to employees. As, however, most of the workers at Jamshedpur have now reached the top of the incremental scales introduced in 1947-48, I hope we may look forward, for a period, to some measure of stabilisation in the total amount of wages paid and in the labour costs per ton.

"Production until 1955 is likely to be somewhat lower than in 1952-53, as a result of modifications to the plant under the modernisation and expansion programme. As this expected reduction has been taken into account by the Tariff Commission in estimating costs and fixing prices, the profits of the Company are not likely to be affected thereby.

"The shareholders will note from the balance-sheet that, for the first time in many years, the trend towards higher stock figures has been reversed in respect of raw materials. Since the close of the year under review, increased despatches, particularly of old stocks, have further reduced our inventories. We hope gradually to reduce also our stocks of stores and spare parts as a result of the overhaul of our stores facilities and procedures which is now approaching completion. As against this, our heavy programme of capital expenditure and the consequent creation of entirely new plant and equipment will tend to add to our stocks, to some extent, but by careful control and planning helped by quicker deliveries resulting from an improved international situation, we hope to maintain our total stocks at a reasonable figure.

Tariff Commission Enquiry

"The findings and recommendations of the Tariff Commission and the orders passed by Government on the subject have been described at some length in the Directors' report. I shall, therefore, confine my remarks to only one point of special importance to us, namely, the Government of India's rejection of the Commission's recommendation for a 2 per cent. increase in the return on the gross block, subject to such increase being taken to reserve for the specific purpose of modernisation and expansion. We have, during the last few years, repeatedly represented to the Tariff Commission and to Government that a gross return of 8 per cent. on capital expenditure, leaving a net return of about 3½ per cent., was totally inadequate to build up sufficient reserves or to attract fresh investment in the industry for financing the modernisation and expansion of the plant. We were, therefore, gratified to find that the Commission had accepted the Company's strong case on this point and recommended an increase which though small would have enabled us to set aside, and ultimately plough back into the industry, an additional Rs. 50 lakhs or so per year. Government, however, rejected this recommendation on the ground that they had already agreed to advance to the Company a loan of Rs. 10 crores, towards the financial requirements of the expansion programme.

"While it is true that Government have agreed to make such an advance to the Company on favourable terms and subject to repayment only out of a future increase in return, for which we are grateful, I feel that acceptance of the small increase recommended by the Tariff Commission would not have been inconsistent with the grant of the proposed advance, as Government could have directed that it be used either to reduce the total amount of their loan or to accelerate its repayment. Government must surely be aware that they cannot possibly attract risk capital, either Indian or foreign, to this industry on the basis of a net return of 3½ per cent. Considering that the lack of capital has, since the war, been the main obstacle to the creation of the additional steel capacity so badly wanted by the country, I hope that Government will find it possible to reconsider the position they have taken up on this issue.

Profit-sharing Bonus

"The profit-sharing bonus scheme agreement between the Company and the Tata Workers' Union at Jamshedpur, which was in force since 1948, expired last year. The Union expressed a desire to enter into a new agreement on similar lines for a period of years but with a higher percentage of the profits. In view of the impending Tariff Commission enquiry into steel prices, at which labour costs and our plea for the inclusion of the profit-sharing bonus as an item of cost were likely to be discussed, negotiations were postponed and could only be resumed recently after the publication of the Commission's report and Government's orders thereon.

"We have now entered into a fresh profit-sharing agreement with the Tata Workers' Union on terms similar to those of the previous agreement but with the percentage of net profits payable to labour increased from 27½ per cent. to 30 per cent. As there was no agreement in force for the year 1952-53, an *ad hoc* settlement for that year has been made whereby a sum of Rs. 106.50 lakhs will be distributed as against the sum of Rs. 98.53 lakhs provided in the accounts. The additional amount will be a charge on the profits of the current financial year.

"In the course of the protracted negotiations with Mr. Michael John, the President of the Union and President, this year, of the I.N.T.U.C., we pointed out that there was no case for any appreciable increase in the profit-sharing bonus, and that any such increase would come out of the shareholders' modest net return on their investment. We emphasised the very large increase in the total emoluments of labour which the Company had granted in various forms in the last few years, resulting in a substantial increase in their real earnings, without any corresponding return to the Company in the form of greater efficiency or output *per capita*. At the same time, we accepted the contention of the Union representatives that peace had been maintained in the industry.

"We discussed, at length, the means by which labour output could be increased and agreed that the existing incentive schemes should be modified so as to lay greater emphasis on productivity. We had also a helpful discussion regarding the ways and means by which efficiency could be increased and discipline promoted. We hope that, as a result, a better understanding will prevail in the future between the Company and the Union on these important issues, and that in the course of time worthwhile results will be achieved.

Output Per Worker

"We must, however, face the fact that today the prospects in India of a substantial increase in output *per capita* are not very promising. While in industrially more advanced countries management, unions and Government are all agreed on the benefits of high labour productivity, and all three co-operate towards its achievement, we are faced here with a continuing reluctance to learn from the experience of a century of industrialisation in Europe and America and to accept the fact that increased productivity does not lead to unemployment, but, through increased purchasing power, to enlarged opportunities for employment. In spite of a continuous reduction in the number of men employed per unit of production, as a result of mechanisation and greater efficiency, total employment in Europe and America is to-day at a higher level than ever before.

"If, in their anxiety to deal with the present unemployment in the country our political and labour leaders adopt policies which frustrate attempts at improving efficiency and output *per capita* in industry, such policies will jeopardise any chance that India may have of rapid economic progress, destroy her competitive position in world markets and, as a result, ultimately lead to still greater unemployment.

Deferred Share Conversion Scheme

"I hope this is the last annual general meeting at which I shall have to discuss the deferred share conversion scheme and that the

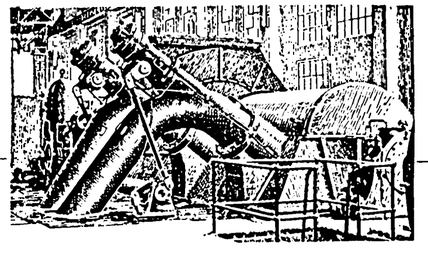
Complete hydro-electric schemes



The ENGLISH ELECTRIC Company designs, manufactures and installs complete hydro-electric generating plant ranging from the main turbines and alternators to the smallest auxiliaries, including the transformers and switchgear.

'ENGLISH ELECTRIC' hydro-electric plant of all types and sizes has been installed in all parts of the world under widely diverse conditions.

The illustration shows the turbine end of one of the 21,000 h.p. double runner twin jet impulse water turbines. These operate under a 940 ft. head at 428 r.p.m., and drive 16,750 kVA 11,000 volts 50 cycles alternators at the Tarraleah Power Station in Tasmania.

scheme will have been put through well before we meet again next year.

"The long-drawn-out mediation proceedings, which began early in 1951, were completed in May this year with the publication of Mr. Motilal Setalvad's award. In accordance with their previous undertaking, the Directors have accepted the ratio recommended by the Mediator. The legal and other formalities required to put through the scheme are in hand, and the special meetings of the two classes of shareholders will be held early in November.

"In pursuance of the decision of the Directors and the Managing Agents to remain entirely neutral in the mediation proceedings, an attitude which they rigorously maintained throughout, I do not propose to express any view at all on the recommendation of the Mediator which, as I have said, has been accepted by the Directors and embodied in the scheme. Our neutrality, however, applied only to the mediation proceedings and not to the conversion scheme itself to which we are wholly committed and which we consider to be more than ever in the Company's interests. I deem it my duty, therefore, to draw the attention of the shareholders to the activities of a small minority of deferred shareholders, who are making every effort to defeat the conversion scheme.

"It was mainly at the instance of this very group that your Directors agreed to refer the conversion ratio to the advice of an independent mediator. I leave it to you to judge the propriety of the action of these same shareholders in now seeking to reject the opinion of such a distinguished and obviously impartial person as the Attorney-General of India merely on the ground that his recommendation falls short of their demand. I trust that the majority of the deferred shareholders who have their own interests and those of the Company at heart will not be misled by the propaganda of the opponents to the scheme.

"I hope every deferred shareholder, who is in favour of the scheme, will realise the necessity of being present at the special meetings and casting his vote, as the voting requirements under section 153 of the Indian Companies' Act are such that every vote which is not cast is in effect equivalent to a vote against the scheme.

Before leaving the subject, I may mention two other points concerning the scheme which I believe are of special interest to shareholders.

"The first one refers to the proposed issue of bonus shares to be made simultaneously and, in effect, as part and parcel of the conversion scheme. I have, on numerous occasions, mentioned the Directors' desire to make available to the shareholders, in the form of bonus shares, a part of the reserves accumulated from undistributed profits in past years, as soon as the disappearance of the deferred shares made such an issue practicable. Your Directors decided that, subject to the approval of the Government of India, this proposal should be implemented simultaneously with the conversion of the deferred shares, and that it should consist of the issue of one new ordinary share for every ordinary share held after conversion. The conversion scheme together with the bonus issue will involve the capitalisation of about Rs. 6.87 crores out of the Rs. 11 crores in the reserve fund, and will bring up the total issued capital of the Company to Rs. 17.33 crores, of which Rs. 7.69 crores will be preference capital and Rs. 9.64 crores equity capital. I hope that this added feature of the conversion scheme will meet with your approval.

Issue of New Capital

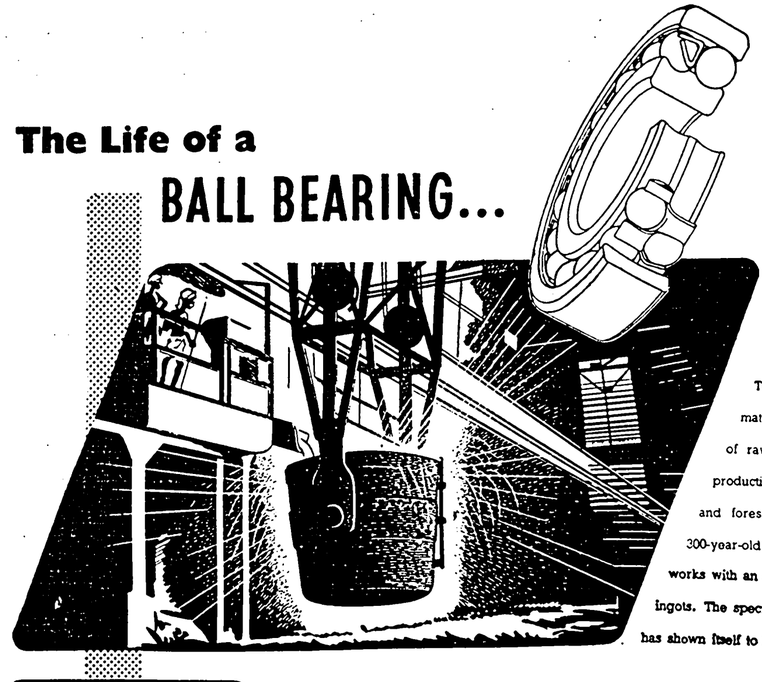
"The second point refers to an assurance sought by the shareholders and given by me first in 1950 and again in 1951, that the Directors would not seek to raise fresh capital in the near future and until the investment market improved. Two years have passed since then and in response to the request of some shareholders, I willingly renew my previous assurance. I hope that this will satisfy those shareholders who still harbour fears on the subject, but I also hope that it will not be interpreted as meaning that we shall never need to raise fresh capital. If the Company is to continue to hold its position in the industry and to play its full part in the economic development of the country, it must continue to expand in the future, as it has in the past, whenever the opportunity arises. To the extent that we can finance such expansion out of internal savings and borrowings, we shall do so, but if, in view of the enormous cost of iron and steel making plant, we have to seek funds beyond our own savings, some issue of capital may prove necessary. However, no decision to issue fresh capital will be taken without consulting the shareholders.

Educational Grants

"In my speeches of the last two years, I have mentioned the decision of the Managing Agents to forgo a part of their commission with a view to placing it at the disposal of the Company for providing engineering and other educational facilities in the areas in which the Company's main operations are carried on. In pursuance of this decision, the Managing Agents waived a sum of Rs. 7½ lakhs for each of the last two years and Rs. 5 lakhs this year, bringing the total to the figure of Rs. 20 lakhs, subject to tax, which they originally had in mind. Out of the funds so made available, the Board have already sanctioned grants of Rs. 4 lakhs for a college in Chaibassa, a little under a lakh spread over the next five years for engineering scholarships to Bihari students, Rs. 6 lakhs to the Bihar Institute of Technology at Sindri, and Rs. 3 lakhs for setting up a Polytechnic Institute in Hirakud, Orissa. These grants and proposals are in addition to the maintenance of a Chair in Geology in the Patna University at a cost of Rs. 18,000 per annum.

"Before closing, I believe you will wish me, on your behalf, to place on record our sorrow at the death of Mr. Jagmohandas Kapadia whom we all miss at this meeting to-day. As Secretary of the Bombay Shareholders' Association and as an expert in company law and accounting, Mr. Kapadia applied his great abilities and devoted much of his time and energy to safeguarding the interests of the investor and to promoting sound and honest management. In him the investing public have lost a stout-hearted champion. His place will be hard to fill.

"As usual, I have much pleasure in placing on record our appreciation of the good work put in by the management and all employees at Jamshedpur and elsewhere during the year. In our skilled workers, our supervisory staff and our top management, we have a fine team of men who constitute an invaluable asset not only to your Company but to the country as a whole. The continued success of the Company's operations is safe in their hands and we extend our thanks and good wishes to them."



The Life of a
BALL BEARING...
. . . and the material used

The life of a ball bearing depends mainly on the material from which it is made. To ensure the supply of raw material and obtain control over the steel production, SKF acquired Hofors Bruk with its mines and forests, in 1916. Under SKF's management this 300-year-old works has developed into a modern steel works with an annual output exceeding 150,000 tons of steel ingots. The special ball-bearing steel produced at Hofors Bruk has shown itself to be unequalled.

REGULATION OF WAGES IN ASIAN COUNTRIES

ARE WESTERN STANDARDS APPLICABLE?

THE problems relating to wage policy in Asian countries are scheduled to be discussed at the I.L.O. Asian Regional Conference, which will commence its 12-day session at Tokyo next week. As usual, the I.L.O. has prepared a report for submission to the Conference, with a view to facilitating a scientific discussion of the subject. The text of this report is not yet available to the public. But, according to a Press *communique*, issued by the New Delhi office of the I.L.O., it deals with the various issues relating to effective utilisation of surplus labour, fixation of minimum wages, maintenance of balance between workers' effective demand and supply of essential consumer goods, among others.

The problem of regulating wage levels is of great importance to Asian countries. The ever-growing pressure of labour supply in the face of inelasticity of employment opportunities, makes it difficult to prescribe, let alone enforce conditions as to wage levels. The tremendous problems of restoring and maintaining balance of payments difficulties and the absence of organised labour, especially in the agricultural sector, has aggravated the situation. Small wonder, therefore, that, even to-day, the law of supply and demand determines the level of wages in most sectors of the Asian economies. And, as supply exceeds the demand for labour, the level of wages received by workers is often below the minimum subsistence wage.

From what has been stated above, one should not rush to the conclusion that employers in Asia are exploiting the excess supply of labour. In organised fields of industrial and industrial-cum-agricultural employment, workers are getting a level of wages which is higher than the capacity of employers to pay and that warranted by the productivity of workers themselves. This has been so because of the effectiveness of labour unions which have grown in strength in several parts of Asia. The effects of such a situation on the general employment level is restrictive, for it has a depressing influence on fresh investment and the opening up of new avenues of employment. Thus, Asia presents the strange spectacle of a vast field of unemployment and underemployment punctuated by oases of well-paid employment.

Not an Isolated Problem

Wage regulation cannot be isolated from a general economic development programme. Land reform, training programmes, labour service organisation, improved credit facilities, co-operative farming, public works in respect of villages and communications may be necessary accompaniments to the achievement of a desired level of minimum wages.

If wage regulation is to be effective, it must result in an improvement in wage levels and working conditions where they are low and poor and prevent a deterioration in the existing wage levels, as a result of changes in general economic conditions. Are present conditions favourable for such a reform? He will be a bold man who replies in the affirmative. The least that can be done is to prevent a deterioration in the conditions of those who are employed in industries and plantations, provided the workers do a full day's work and show higher productivity. A general all-round improvement in employment at minimum economic wages will be possible only if a general economic development programme is undertaken. But this is easily said than done.

It is not possible to apply Western standards of wage levels to Asian countries. Although few will deny that full employment and living wage should be the basic objectives of social and economic policy, none can dare say that they are capable of realisation in the near future. The pressure of population is alarming, while there is a chronic shortage of capital resources for investment. It is not the question of living wage that is at stake but the bare subsistence wage itself. The first objective of planners in these countries is one of providing greater opportunities for employment. There is a necessity, therefore, to keep wages at low levels.

The need of the hour is to ensure that the total output rose as fast as possible and that the demand for capital conflicted as little as possible with the demand for consumer goods and to bring about a proper balance between workers' effective demands and the supply of consumer goods. In the initial stages of economic development, when employment will be increasing faster than the supply of essential consumer goods, Governments will have to place some restraint on workers' demands.

It is well known that, in the present economic and political situation, the standard of living of the individual workers and of the masses can only be raised in proportion to the increase in productivity. This recognition gives wage policy a new goal. "It demands," as Dr. Franz Spiegelhalter Koln puts it, "the abandonment of the backward looking attitude, which has security as its only aim, and of the concept of sharing out, which only shares out the poverty that exists without remedying it." A proper wage policy for the underdeveloped areas, therefore, would be one which provides "a spontaneous incentive to increased productivity."

Protection for Worker

The object of wage regulation is to protect the worker. This protection may take the form of providing that wages are a first charge on the enterprise. It may include prohibition of payment of wages in other than legal tender, or prohibition of other restrictions as to the place or the manner in which wages may be expended. It may be aimed at preventing deductions by way of discount or interest charges on wages advanced to the worker; this may also apply to debts contracted by a worker in shops or stores situated on the property of the employer. Regulations may also provide for payment of wages during rest days or even during illness. Provision may also be made for overtime payments. The most important function of wage regulation, however, is to ensure that the worker is paid at least a minimum wage which will guarantee subsistence or that he is paid wages equivalent to the value in the market of the net product of work done.

Wage regulation can be achieved by various methods but the two common ones are collective bargaining and State intervention. A careful examination of the conditions in Asian countries disclose that wage regulation through some kind of State intervention is desirable, especially in regard to agricultural workers, who are generally unorganised and therefore exposed to exploitation. Another reason for such intervention is the high rural birth rates and lack of opportunities for alternative employment, which tend to create a buyers' market in respect of labour so that agricultural wage rates compare unfavourably with those in other occupations.

As the payment of agricultural wages in kind is customary in Asian countries and as finance and trade facilities are not developed sufficiently in many parts of Asia, provision should be made for the regulation of payments in kind also. These payments should correspond both in quality and quantity to the actual needs of the worker and his family. When expressed in terms of a cash equivalent, such payments should conform to the prices prevailing in the locality. In considering adequacy of wage payments as a whole, account should be taken of allowances in the form of meals, lodging, wood, clothes and tools, with a view to eventual creation of conditions, under which wages may be effectively regulated by collective bargaining, instead of by minimum wage-fixing machinery. Measures should be taken to safeguard the freedom of association of employers and workers and to encourage the growth of workers' and employers' organisations in rural areas.

It will not be possible to have a single wage policy for the whole of Asia. For conditions differ from country to country in accordance with the density of population and the rate of economic development. The policy should, therefore, be expressed only in terms of broad principles. Further, it should be sufficiently flexible so as to adapt it to changing circumstances. The task is not easy. It requires not only the will but also the power to execute it.

As far as India is concerned, the advent of independence and the establishment of popular responsible Government have naturally been accompanied by an increasingly sympathetic approach by Government to the problem of labour, an acuter realisation by the Government of its responsibility for promoting measures designed to ensure social justice and rising living standards of workers, and a new insistence on the recognition of labour not as a junior partner in industry entitled merely to a living wage, but as an equal partner with capital in the field of production entitled to an equitable share in the outturn of industry. There can be no better evidence of this new spirit which pervades Governmental labour policies in India to-day than the guarantees under the fundamental rights and the directives of State policy embodied in the Constitution.

The real achievements in the sphere of wage legislation in India have been the progressive extension of the provisions of the Payment of Wages Act, 1936, and the adoption of the Minimum Wages Act, 1948. The Payment of Wages Act, however, seeks only to ensure the regular payment of wages and to prevent the exploitation of wage earners by arbitrary deductions and fines. It does little to help the worker with no bargaining power to secure a living wage. This gap has been filled by the Minimum Wages Act, which may rightly be described as a new landmark in Indian labour legislation. The Act provides for the statutory fixation of minimum rates of wages in a number of employments, including plantations and agriculture.

STEPS TO RAISE PRODUCTIVITY

Mr. Alan W. Baker, a British consultant engineer, who was a member of the five-man team of production engineering experts sent recently by the International Labour Organisation to India, has expressed the view that a solution of the country's vast and complicated problems must be sought through increasing the productivity of its resources in men and materials. The experts, who stayed in India for eight months, worked in two groups—one in the engineering industry in Calcutta, and the other in the cotton textile industry at Ahmedabad and Bombay. Mr. Baker was a member of the engineering group. The mission's task was to demonstrate how productivity could be raised by the application, in selected factories, of modern techniques of work, study and plant organisation and, in appropriate cases, by the introduction of a system of payment by results.

On the conclusion of his mission, Mr. Baker said, he was confident that the team had demonstrated that productivity in India could be increased greatly without in any way reducing employment and without additional capital equipment. He emphasised that the team's operations were to be regarded as a pilot project, designed to show what could be achieved by present-day techniques for the organisation of operations and plants. He said: "The problems that India has to face are immense and complicated and they will take a long time to solve. But we have been able to show how the output, can be increased measurably with the present resources and that can be regarded as a contribution to helping India surmount her difficulties. If India is to maintain the living standards of her people, production and productivity must be increased". Mr. Baker said that the mission had found support for its programme from the Government, from managements and from workers. He disclosed that earlier there had been some suspicion among the workers that measures to increase productivity might result in the loss of jobs, but, as soon as these fears were set at rest, the workers co-operated completely.

An important part of the team's work was the training of individuals, selected by managements and the unions, in the fundamentals of modern methods of work study and procedures for the improvement of efficiency and productivity. As this training proceeded, the responsibility for carrying out work studies and suggesting improvements was entrusted to the trainees. As a result of studies of lay-out, work methods, products and machines, the engineering group was able to bring about spectacular increases in productivity, ranging up to more than 200 per cent. in certain operations.

EMPLOYMENT SITUATION IN JULY

The overall employment situation in India continued to be unsatisfactory during July, 1953. The total number of unemployed persons, who registered themselves at the employment exchanges during the month, was 136,333, as compared with 123,883 during the previous month, thus bringing the number of the live register at the end of the month to 493,408, nearly 19,500 higher than at the end of the previous month. 14,487 persons were placed in employment and the number of vacancies available to the exchanges during the month was 18,714, as against 21,398 during the previous month.

Under the training schemes of the Ministry of Labour, 7,775 persons, including 9 women and 1,893 displaced persons, were receiving training at the different training institutes and centres at the end of July 1953. There were also 212 instructor trainees at the Central Training Institute, Koni-Bilaspur. In addition, under the apprenticeship training scheme for displaced persons, 572 apprentice-trainees were undergoing practical training in production work in Uttar Pradesh and West Bengal at the end of the month.

DEVELOPMENT OF PLASTICS INDUSTRY

POSSIBILITIES OF EXPLOITING INDIGENOUS MATERIALS

FEW industries in India have grown so fast in recent years as the plastic industry. The reason for its rapid growth lies in the variety of uses to which plastic materials can be put. The demand for plastics is now based not merely on their being substitutes for scarce materials such as metal, wood and fibre, but on their suitability for special industrial purposes. It has also some special characteristics as, for instance, chemical resistance, non-inflammability, lightness in weight, dimensional stability over wide ranges in temperature, good insulation and other electrical properties. This is not all. Plastics can also be moulded into a variety of forms. They can be cast in liquid form, expanded to light sponges, both flexible and rigid; pressed to hard board; extruded to unlimited lengths of rod, tube or profile; calendered to continuous flexible sheet, and moulded to any number of intricated shapes with accurate dimensions. Plastics also bring some economic advantages. They render mass production . easier, maintenance costs lower, and handling of materials in certain respects very convenient. All these advantages have been possible on account of extensive application of scientific knowledge to production.

Recognising the importance of science thus to the industry, considerable attention is being devoted in the various research institutes of the country to discover how best the Indian plastics industry can be developed with the help of indigenous raw materials. An idea of what is being done in this direction is provided in an interesting article on "Plastics—Progress in India," by Mr. S. L. Kapur, National Chemical Laboratory, Poona, contributed to the August issue of the *Journal of Scientific and Industrial Research*. Those engaged in the manufacture of plastic goods will find in this article material of much practical benefit to them, especially in regard to research.

We are told that research is being carried on, in the Poona Laboratory, the Indian Lac Research Institute, Ranchi (I.L.R.I.), the Forest Research Institute, Dehra Dun (F.R.I.), Indian Institute of Sugar Technology, Kanpur, and a few others. Organisations connected with the development of the plastics industry in India are the Research Committees on Plastics, Oils Chemicals and Cellulose, Council of Scientific and Industrial Research (C.S.I.R), Defence and Development wings of the Government of India, the Indian Standards Institution and the All-India Manufacturers' Association in Plastics, Paints and Chemicals.

In recent years, India has also made some progress towards the establishment of plastics industry. There are about 80 organised factories and several cottage-scale establishments, with a capital investment of Rs. 6 crores. The industry provides employment for about 10,000 workers. It depends on imported moulding powders, the consumption of which is estimated at 8,000 tons, comprising 5,000 tons of thermo-plastics and 3,000 tons of thermo-setting. A few firms have started manufacturing general purpose phenolic moulding powders from imported phenol and formaldehyde. The present annual production of moulding powders is about 250 tons. The installed capacity for alkyd resins is about 800 tons a year, but the actual output is only 100 tons. Polystyrene moulding powders, of which 2,500 tons are consumed annually, have found favour, by reason of their low price, and are used in the making of accessories for electrical goods, radios, automobiles, toilet requisites and other articles of novelty and utility.

A sound heavy chemicals industry is one of the essential requirements of a modern plastics industry. India does not possess an integrated basic chemicals industry and its petroleum resources are meagre. Developments in the field of plastics industry have, therefore, been restricted to the utilisation of agricultural products and natural resins. Other raw materials available in the country are benzene, alcohol and cellulose.

The coke ovens in operation in the country are estimated to produce 4.5 million gallons of benzene, but only 2.7 million gallons are actually recovered. Coal-tar distillation has not received sufficient attention and very little phenol is recovered, although about 140 tons of phenol can be recovered annually from 90,000 tons of available coal-tar. The present annual demand by the plastics industry for phenol is of the order of 50 tons.

Ethylene is the key chemical for the preparation of several plastics, such as vinyl chloride, vinyl acetate, vinylidine chloride and styrene. It can be manufactured by the catalytic dehydration of ethyl alcohol. About 400,000 tons of molasses are obtained annually as a by-product of the sugar industry, and this could yield about 280 million gallons of alcohol. Chlorine, another important raw material utilised by the plastics industry, is also freely available, and, at present, about 800 tons of chlorine produced in the country are not being utilised.

Acetylene is employed in the synthesis of basic chemicals required in the manufacture of plastics and elastomers. The starting material for acetylene is calcium carbide which can be manufactured from lime and coal by an electro-thermal process. The development of multi-purpose hydro-electric projects, and the availability of large quantities of superior grades of coal and lime in the country should make the manufacture of calcium carbide economical.

Cellulose, the starting material in the manufacture of cellulose plastics, can be obtained from agricultural and forest produce. The cultivation of cotton rich in linters, compulsory delinting of all grades of cotton and use of low grade cotton waste and cotton dust from textile mills should augment, it is stated, the supplies of cellulose. The manufacture of cellulose acetate at Hyderabad and of cellulose nitrate at the cordite factory at Aravankadu, Nilgiris, is stated to be under consideration.

Other potential sources of plastics and plasticizers are vegetable oils, proteins from oilcakes, animal protein from horns, hoofs and slaughter-house waste, lignin from saw-dust and sulphate black liquor, monohydric phenols from wood-tar effluents, and shellac. The establishment of oil refineries now under way would provide, we are told, a wide range of raw materials for the plastics industry in India. Investigations at the Indian Lac Research Institute, Ranchi, have shown that jute-stick flour could be processed and successfully used as a filler in phenolic moulding powders. Jute and cotton tuft can be used as fillers in shellac moulding compositions.

A few manufacturers in India have been using cashew nut shell liquid in conjunction with phenol in the manufacture of phenol formaldehyde moulding powders. A new application of phenolic constituents of cashew nut liquid and bhilawan shell liquid is in preparation of ion-exchange resins. The possibilities of producing these resins at economic prices are being considered by the National Chemical Laboratory. India produces 14,000 tons of cashew nut shell liquid annually.

The Tata group of industries has been exploring the possibilities of developing moulding compositions from oilcakes and saw-dust. The process consists of an autoclaving mixture of oilcakes and saw-dust at high pressures for general hours. Compositions suitable for the production of articles by compression moulding are obtained.

The Poona Laboratory has undertaken the work of using tobacco seed oil (annual production 5,000 tons) in surface coating compositions. Investigations have shown that *kamala* seed oil is better than tung oil in formulations of wrinkle finishes on surfaces. The oil has been processed into products which give decorative and protective finishes on air drying.

Apart from what is stated above, the article referred to above contains a mass of information regarding the possibilities of developing the indigenous resources for the benefit of the plastics industry. While space considerations preclude us from going through these details, we cannot but resist the temptation to quote here the conclusions of the writer of the article. He remarks: "The full possibilities of using plastics in this country, both in the production of utility articles and in industry, have yet to be explored. The demand for both raw material and fabricated plastics, therefore, is bound to grow with the rapid industrialisation of the country and with the completion of the hydro-electric projects under way. The production of moulding compositions in the country would also lead to the growth of new industries. The exploitation of existing and potential resources for the production of a wide range of articles, therefore, merits the attention of both the Government and the industry."

(Concluded from next column)

ous chemical manufacturers have discovered a whole series of synthetic detergent substances and are engaged in solving the intricate problems connected with producing them at a cost which will make them saleable. The soap industry has applied its knowledge of washing problems to putting the new substances to practical use in preparations of domestic and other washing products that meet the users' needs. If the soap manufacturer loses efficiency, the chemical manufacturer can step into the breach and *vice versa*. Consequently, the detergents industry has made the soap industry as a whole more dynamic. It has created new and fundamental problems which require re-examination in the methods of their production. This may well lead to greater possibilities of expansion.

In 1952, the various blended powders accounted for as much as 43 per cent. of the sales by weight of all domestic detergents in the U.S., as compared with 22 per cent. in Great Britain and 23 per cent. in Holland, excluding toilet soaps. World sales of detergents in that year amounted to one million tons (excluding the Soviet Union). Of this, North America accounted for 800,000 tons and Europe 300,000. This compares with world sales of soap estimated at rather more than 5 million tons. The synthetic products thus constitute a major technological development which has considerable impact upon the world market not only for soap but also for the vegetable oils from which soap is derived.

SYNTHETIC DETERGENTS INDUSTRY

POTENTIAL COMPETITOR TO SOAP IN WORLD MARKETS

SYNTHETIC detergents are synthetically produced chemical substances, with cleansing properties similar to soap. But, unlike soap, these detergents do not produce scum in nard water. They are better at removing grease but relatively ineffective in cleaning soiled fabrics. The well-known powders sold for household purposes are thus a blend of synthetic detergents and certain types of phosphates and other chemicals, which makes them useful for the whole range of domestic washing purposes.

Synthetic detergents industry is yet to develop in India and backward countries. This is because the purchasing power of the people in these regions is very low. Washing habits too are quite different from those in the West, in that people generally wash clothes in rivers, tanks, or wells, instead of in tubs or bowls, as in the West. Consequently, soaps or washing powders are in little use and those engaged in the manufacture of synthetic detergents have yet to discover an effective and cheap detergent which is within the meagre means of the masses. Sir Geoffrey Heyworth, Chairman of Unilever Ltd., a concern which carries on a considerable part of the world trade in substitutes for soap, observed, in the course of his review of the position of the synthetic detergents industry last June, that consumption of detergents in underdeveloped countries can be expected to increase as the standard of living improves in them.

The new blended synthetic detergents have achieved a wide acceptance in North America and Europe. The main reason for their popularity is that they do not form insoluble precipitates with the salts responsible for the hardness of water in contrast to soap which forms an insoluble scum tending to adhere to the washing materials and make a lot of rinsing necessary. There is, however, one disadvantage of the blended synthetic products. It is that the detergents are somewhat more expensive to produce than corresponding soap products. In the United States, a packet of a blended synthetic product now costs some 7 per cent. more than a soap product. In certain other countries the differential is a little higher. In Canada and some European countries, the detergents are costlier than soaps by about 12 per cent. to 15 per cent.

The chief consideration which seems to have weighed most with these Western countries in developing the synthetic detergent industry is that it tends to lessen the traditional dependence of the soap industry on oils and fats and thus helps to ease the scarcity of oils and fats which prevailed for some years after the war. It is pointed out that, had synthetic detergents never been discovered, the world consumption of soap would have been commensurately greater. Whether this view is correct cannot be proved. But Sir Geoffrey opines that most of the consumption, of blended synthetic detergents has been for purposes for which soap would previously have been used. And, if this demand had had to be met entirely by soap, it would have required an additional world production of oils and fats of about half a million tons. It is possible that the derationing of margarine—which is now complete everywhere except in Britain, Finland, Israel and Austria—might have taken longer and so might the derationing of soap. Blended synthetic products have eased, he points out, the post-war problem of meeting the world demand for oils and fats at a more reasonable level of prices.

There is also another reason for the development of the detergents industry in that it has created a demand for important new chemicals. "Up to date, a very large number of different materials," remarks Sir Geoffrey, "have been evolved, all of which broadly possess the same detergent characteristics, but which differ in chemical composition and in behaviour in use. Some of them are produced from natural vegetable or animal oils and fats. Others are derived from a petroleum base. Thus they are manufactured wherever the chemical and petroleum industries have assumed important dimensions." With their new interest in the production of materials for the manufacture of blended washing products, the chemical industries have become potential competitors to the original soap industry, and soap manufacturers have the opportunity to extend into chemical manufacture. Pioneering work is being done on parallel lines by a number of separate industries. Vari-

(Continued in previous column)

SALES TAX LEVY

C. R. OPPOSES CENTRALISATION

MR. C. Rajagopalachari, Chief Minister, Madras, has raised his influential voice against the demand for uniformity and centralisation of sales tax. Speaking at the South Indian Chamber of Commerce, he opposed the demand for uniformity on the ground that the revenue requirements of various States and the volume of trade in the States were different; sales tax rates would necessarily have to be different. Also, uniformity meant taxation at the minimum rate. This was because the rate would have to be such as could be borne by all States, irrespective of whether they were rich or poor. He argued that the consideration that the economic conditions differed in different parts of the country was one reason why this source of revenue had been allotted to the States. He thought that uniformity and centralisation went together. If business men preferred uniformity, it was because they knew they could be free from the tyranny of the legislature nearer to them, whereas the distant Central legislature could be "approached in different ways and from different angles." So far as the States were concerned, this demand, if granted, would mean that they would not be able to increase the tax burden from time to time. He also opposed the demand for centralisation of sales tax, which he thought was part of the demand, made by a certain section of Indian opinion, for the country being governed as a unitary State. He said: "A big country like India, governed by one unitary Government, would lead to a new state of affairs. No local opinion could exercise any great weight on that Government. The machinery for co-ordinating the wishes of the people would necessarily be weak and the Centre would very soon come to be considered as a "tyrannical Government."

The Madras Chief Minister was certainly correct when he said that uniformity in sales tax would lead to uniformity at a low level of tax rates. To this extent, it would result in a loss of revenue for the richer States which could afford to tax the people at higher rates. But the need for uniformity has been advocated not because the people want to be centrally governed but because the present tax system interferes with the free exchange of goods between States. The crop of litigation, which has grown as a result of the sales tax laws in different States, shows how detrimental the present system has been to the smooth flow of inter-State and foreign trade. Mr. Rajagopalachari threw no light on the way in which these problems could be overcome without going the whole hog of centralisation. Business men are not concerned whether it is the Centre that collects the tax or the State that does it. They advocate centralisation because they feel that it is the only way to end the present confusion. But, if it could be ended through mutual understanding among the States, or by some other method, they would welcome it. It is not that they love the Centre more; their demand is the result of the confusion and complications created by the State Governments in their anxiety to mulct the consumers as much as they can by way of sales tax. Mr. Rajagopalachari recognised this aspect of the sales tax controversy when he said, in reply to the demand for replacing the multi-point sales tax with single-point sales tax, that it would be good if the Government invented a tax system that reduced the "harassment to the people" without reducing the revenues of the Government.

PROTECTION TO WOOD SCREW INDUSTRY

The Tariff Commission has submitted its report on the continuance of protection to the wood screw industry. Its recommendations on the basis of an enquiry undertaken by it are as follows: (i) protection at the present rate of duty, namely 31½ per cent. *ad valorem* should be continued for a period of four years i.e., upto 31st December, 1957; (ii) so long as the policy of licensing imports has to be continued for balance of payments considerations, the desirability of maintaining and expanding indigenous production of wood screws should be kept in view and the quantum of imports regulated accordingly; (iii) the Government should sympathetically consider the possibility of granting licences for imports of wood screws on the basis of quantity and not value of the best years' imports; (iv) the Government should ask the indigenous producers of steel wire to produce wire of the requisite specifications and supply it to the wood screw industry.

As regards recommendation (i) the Government has agreed that the protection should be continued for a further period of four years but as regards the quantum of protection, the Government has decided, in consultation with the Tariff Commission, that the rate of protective duty should be fixed at 31½ per cent. *ad valorem* or As. 5 per gross, whichever is higher.

INDUSTRIAL FINANCE CORPORATION OF INDIA
KEELING ROAD, NEW DELHI

NOTIFICATION

IN PURSUANCE OF REGULATION 34 OF the General Regulations of the Corporation, it is hereby NOTIFIED for the information of the Shareholders of the Corporation that the following valid nominations of candidates for election as Directors on the Board of Directors of the Corporation are received, namely:—

(i) Nomination for election of one Director representing shareholders referred to in clause (c) of Section 10 of the Industrial Finance Corporation Act, 1948 (Act XV of 1948), in favour of Sir S. V. Ramamurty, I.C.S. (Retired), "Venkata Vilas," Graemes Road, Cathedral P.O., Madras.

(ii) Nomination for election of one Auditor under Section 34 of the Industrial Finance Corporation Act, 1948, in favour of M/s. S. B. Billimoria & Co., 113, Mahatma Gandhi Road, Fort, Bombay.

As the number of valid nominations so received is equal to the number of vacancies to be filled in, the above candidates validly nominated are in accordance with the said Regulation deemed to be elected at the Fifth Annual General Meeting of the Shareholders of the Corporation convened for the purpose on Saturday, the 19th September 1953, at 4.00 p.m. (Standard Time), in the hall of the Constitution Club, Curzon Road, New Delhi.

2. It is further Notified that the following valid nominations of candidates for election as a Director representing Shareholders referred to in Clause (d) of Section 10 of the Industrial Finance Corporation Act are received, namely:—

(1) Mr. S. C. Roy,
C/o Aryasthan Insurance Co., Ltd.,
15, Chittaranjan Avenue,
Calcutta-13.

(2) Mr. C. M. Srinivasan,
General Secretary,
Indian Mutual Life Association Ltd.,
No. 10 Mount Road, Madras.

Election of one Director representing Shareholders referred to in Clause (d) of the said Section will take place at the meeting referred to above.

3. No nomination has been received for election as a Director representing Shareholders referred to in Clause (e) of Section 10 of the Industrial Finance Corporation Act.

V. R. SONALKER,
Managing Director.

DATED, *7th September*, 1953.

THE SVADESHI MILLS COMPANY LIMITED

NOTICE

BY ADVERTISEMENT IN NEWSPAPERS in November, 1952, and also in the Directors' Report for the year ended 31st December, 1952, shareholders were informed that the date for conversion of fractional certificates into whole Ordinary shares had been extended to the 30th September, 1953.

The Directors have decided to further extend the date by which such fractional certificates should be presented for conversion into Ordinary shares to the 30th September, 1954.

By Order of the Board of Directors,
TATA INDUSTRIES LTD.,
Managing Agents,
T. V. BADDELEY,
Director.

BOMBAY, *3rd September*, 1953.

MARTIN BURN LIMITED

CONVERTIBLE NOTES

NOTICE IS HEREBY GIVEN THAT Interest for the half-year ending 30th September, 1953, will be paid on or after that date to those holders of Convertible Notes whose names appear on the Company's Register on the 30th September, 1953, or in accordance with their instructions.

T. LESLIE MARTIN,
Managing Director.

12, MISSION ROW,
CALCUTTA, *7th September*, 1953.

THE PRAGA TOOLS CORPORATION LIMITED

NOTICE

THE NINTH ANNUAL GENERAL MEETING of The Praga Tools Corporation Limited will be held at the Registered Office of the Company at 17, Saifabad, Hyderabad Deccan, on Wednesday the 30th September, 1953, at 11 a.m., to transact the following business:—

1. To receive and adopt the Directors' Report, Audited Balance Sheet and Manufacturing, Trading and Profit and Loss Account for the period, 1st January, 1952 to 31st December, 1952.
2. To elect a Director in place of the Financial Secretary, Government of Hyderabad (Mr. C. Damodar Reddy) who retires by rotation in accordance with Article 109 of the Articles of Association of the Company and being eligible offers himself for re-election.
3. To elect a Director in place of Mr. M. R. Patny who retires by rotation in accordance with Article 109 of the Articles of Association of the Company and being eligible offers himself for re-election.
4. To elect a Director in place of the co-opted Director, Mr. Vadilal M. Parekh, who retires in accordance with Article 99 of the Articles of Association of the Company and being eligible offers himself for re-election.
5. To appoint Auditors for the current year and to fix their remuneration.

The Transfer Books of the Company will be closed from Wednesday the 23rd September, 1953, to Wednesday the 30th September, 1953 (both days inclusive).

By Order of the Board,
For THE PRAGA TOOLS CORPORATION LIMITED,
THE UNITED INDUSTRIAL CORPORATION LTD.,
S. M. HOSAIN,
Director,
Representatives of the Managing Agents,
(THE INDUSTRIAL TRUST FUND).

HYDERABAD DECCAN, *20th August*, 1953.

THE BARNAGORE JUTE FACTORY COMPANY, LIMITED
(Incorporated in England)
The Liability of Shareholders is Limited

DIVIDENDS

THE FOLLOWING FINAL DIVIDENDS have been recommended for the year ended 31st March, 1953, payable on the 14th October, 1953:—

(1) On the Preference Shares 2½ per cent. (Two Shillings and six pence per Share) less U.K. Income Tax of nine shillings in the £ Sterling.

(2) On the Ordinary Shares 17½ per cent. (Seventeen Shillings and six pence per Share) less U.K. Income Tax of nine shillings in the £ Sterling.

Payment of any Dividend declared will be made only to those members whose names are registered in the Books of the Company on the 30th September, 1953, or to their Mandatees.

Dividend Warrants to Shareholders on the Calcutta Register will be made payable in Calcutta.

No applications for Warrants will be necessary. Claims on behalf of holders of Shares on blank transfer will not be entertained.

The Share Transfer Books will be closed from the 17th September, 1953, to 30th September, 1953, both days inclusive.

By Order of the Board,
JARDINE HENDERSON, LIMITED,
D. FORDWOOD,
Secretary,
Agents.

4, CLIVE ROW,
CALCUTTA, *3rd September*, 1953.

MARTIN BURN LIMITED

NOTICE IS HEREBY GIVEN THAT THE Board of Directors of this Company has sanctioned payment of the Dividend on the Preference Share Capital of the Company at the rate of 5 per cent. per annum for the half-year ending 30th September, 1953. The Preference Share Registers will be closed from the 23rd September to the 30th September, 1953, both days inclusive. Payment will be made on or after 8th October, 1953, to those Preference Shareholders whose names appear on the Company's Register on the 30th September, 1953, or in accordance with their instructions.

T. LESLIE MARTIN,
Managing Director.

12, MISSION ROW,
CALCUTTA, *7th September*, 1953.

THE BOMBAY STATE CO-OPERATIVE BANK LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Forty-second Ordinary General Meeting of the Bank will be held at the Registered Office of the Bank, 9, Bakehouse Lane, Fort, Bombay, on Saturday the 26th September, 1953, at 2 p.m. (S.T.), to transact the following business:—

1. To adopt the Report of the Directors and the Audited Statement of Accounts of the Bank for the year ending 30th June, 1953.
2. To declare a Dividend.
3. To elect Directors.
4. To appoint Auditors and to fix their remuneration.

By Order of the Board,
V. M. THAKORE,
General Manager.

BOMBAY, *11th September*, 1953.

The Transfer Books of the Bank will be closed from 14th September, 1953, to 26th September, 1953, both days inclusive.

The Dividend when declared will be payable at the Bombay Office on and after Monday the 12th October, 1953, to those shareholders whose names stand on the Register on 11th September, 1953.

GILLANDERS ARBUTHNOT AND COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT THE Preference Share Register of Members of the Company will be closed from the 17th September to the 1st October, 1953, both days inclusive, for payment on the latter date of an Interim Preferential Dividend on account of the year ending 31st March, 1954, on the Preference Shares of the Company at Rs. 2-8 per share less income-tax.

As Dividend Warrants are sent only to Registered Shareholders or to their Mandatees, shares on blank transfers should be submitted with completed transfer deeds for registration before the Preference Share Register of Members is closed.

By Order of the Board,
A. J. ELKINS,
Managing Director.

BIRLA JUTE REPORTS SIZABLE DROP IN SALES

DIVIDEND, HOWEVER, MAINTAINED

THE setback which the premier export industry in the country, namely, the jute industry, suffered in 1952 through fall in the foreign offtake of jute goods is reflected in the annual reports of more than one jute mill company. The latest report of the Birla Jute Manufacturing Co., Ltd. (Managing Agents: Messrs. Birla Brothers, Ltd., Calcutta), that for the year ended 31st March, 1953, proves no exception to this general trend, for it shows, when compared with the previous year, a sizable decline in gross profit from Rs. 71.91 lakhs to Rs. 49.89 lakhs. If the return to the shareholders has nevertheless been maintained at 30 per cent., it is because no allocation has been made in the reserve fund which received Rs. 20 lakhs in the previous year, though a new fund, the dividend equalisation fund, has been created with a maiden transfer of Rs. 5 lakhs.

The salient features of the Company's results for the last four years are compared in the following table:

(In lakhs of rupees)

	For the year ended 31st August			
	1953	1952	1951	1950
Sales	325.76	600.34	374.43	456.45
Stock	4.37	7.51	23.42	8.16
Expenses	274.60	514.77	320.37	397.12
Gross profit	49.89	71.91	71.85	61.95
Other income	3.49	3.53	2.11	2.31
Other expenses	1.47	1.86	1.99	1.85
Managing Agents' remuneration	6.82	12.55	7.73	9.60
Provision for—				
Depreciation	7.00	7.00	15.00	10.00
Taxation	23.00	24.75	21.50	17.50
Net profit	15.09	29.25	27.73	25.41
To reserves	5.00	20.00	20.00	15.00
Dividend—				
7½% pref.	1.31	1.31	1.33	1.33
Ordinary	9.13	9.13	9.13	7.60
	(30%)	(30%)	(30%)	(25%)
Carry forward	1.03	1.53	2.66	6.25

Two features of the above table deserve notice. In the first place, expenses have fallen just as precipitately as sales—both by about 46 per cent. This is presumably because raw jute purchases were judiciously made by taking into account the prices for the manufactured goods. Also, this is due to the fact that the item 'salaries and wages' has been suitably pruned from Rs. 65.84 lakhs to Rs. 59.93 lakhs. It is noteworthy that the ratio of gross profit to turnover has improved from 12.0 per cent. to 15.3 per cent. But the profit per loom—the Company's factory has 1,373 looms—has fallen from Rs. 5,237 in the year ended 31st March, 1952 to Rs. 3,634 in the year under review. This serves to bring out the significance of the cryptic remark, made by the Directors, that the general recession in prices of jute and finished goods continued throughout the period covered by their latest report.

Despite the steep fall in gross profit, it is noteworthy that the transfer to depreciation has been maintained at Rs. 7 lakhs. Taxation absorbs slightly less at Rs. 23 lakhs. Net profit at Rs. 15.09 lakhs, however, shows a fall of nearly 50 per cent. The scheme of allocation reveals, as already stated, a prominent lapse in that no transfer to the general reserve fund has been made. The Directors are, perhaps, justified in suspending the policy of reserve accumulation in order to maintain the established rate of dividend; in view of the fact that the total reserves of the Company have reached the impressive total of Rs. 264 lakhs, as against a paid-up capital of Rs. 55.10 lakhs. As already mentioned, the Directors have, however, created a new fund, the dividend equalisation fund, with an initial transfer of Rs. 5 lakhs. The payment of 7½ per cent. preference dividend absorbs Rs. 1.31 lakhs, and 30 per cent. ordinary dividend Rs. 9.13 lakhs, leaving Rs. 1.03 lakhs to be carried into current year's account, as against Rs. 1.38 lakhs brought in.

The financial position of the Company continues to be strong. The gross block of Rs. 306.31 lakhs has been written down to Rs. 183.18 lakhs. Investments aggregate Rs. 83.62 lakhs, of which Rs. 79.43 lakhs are in shares and debentures. The Company has a good liquid position in that the cash in hand and with bankers amount to Rs. 14.37 lakhs. On the liabilities side, it is noteworthy that the Company's reserves and surplus aggregate Rs. 265.10 lakhs. The current liabilities, amounting to Rs. 69.77 lakhs, are more than adequately covered by current assets amounting to Rs. 206.80 lakhs.

The Company's management had started a subsidiary company, called the "Bharat Overseas Corporation" in New York, with a view to making direct shipments of the mill's products to hard currency areas. It would appear that, after the formation of the concern, no business "could be done on these lines" since marketing conditions had changed. But the management continues to be resourceful. It has decided to start a small factory for producing calcium carbide. Referring to this enterprise, the Directors observe:

"This is an entirely new industry for India and there should be ample scope for its development. Almost all the machinery has been purchased while the buildings are under construction. It is expected that the factory will go into production about the end of this year."

The Company's Rs. 10 shares are being quoted in the neighbourhood of Rs. 34½ x.d. On this basis, the yield works out to about 7 per cent. This is an attractive yield, considering that the Company is still thinking in terms of many-sided expansion of its activities.

(Concluded from next column)

Of this, a sum of Rs. 2.50 lakhs has been transferred to reserves. Dividends on ordinary shares at Rs. 6 per shares and on preference shares at Rs. 3.8 per share, being the same as in the previous half-year absorb Rs. 1.31 lakhs, leaving thereby a balance of Rs. 84,000 to be carried forward.

The finances of both the companies are sound. Both have reserves which exceed their capital. The current liabilities of both are relatively small as compared with their turnover and well covered by current assets. Fixed assets of both have been provided with adequate depreciation. The net block is almost at par with the paid-up capital of the Cheviot, whereas, in the case of the Orient, it is about Rs. 2½ lakhs under the capital. The liquid assets of both the companies are, however, small, almost the entire reserves being utilised as working capital. Accordingly, they will have to rely on borrowings, if they decide to embark on modernisation of their machinery.

The following synopsis of their latest balance-sheets will provide a broad picture of their financial strength:

	As at 31st May, 1953	
LIABILITIES	*Cheviot* Rs.	*Orient* Rs.
Capital	25,95,000	24,91,000
Surplus and reserves ...	29,23,291	27,61,685
Current liabilities ...	8,13,176	6,68,821
ASSETS		
Gross block	79,79,086	70,68,289
Less—depreciation ...	54,30,736	48,27,892
Net block	25,48,350	22,40,397
Book debts	43,753	92,737
Stocks	34,87,263	31,97,774
Advances	1,78,146	1,42,257
Investments	66,325	1,16,856
Cash	7,630	1,31,485
Total ... Rs.	63,31,467	59,21,506

The Rs. 100 fully paid-up ordinary share of the Orient Jute is quoted currently at Rs. 166. At this rate and on the basis of the latest dividend the yield works out to 7.2 per cent. per annum. The ordinary shares of Rs. 100 paid up of the Cheviot Mills are quoted at Rs. 212 each, which on the basis of the dividend at Rs. 6 per share for the half-year, fetches a yield of 5.6 per cent. per annum.

PROFESSION OF ACCOUNTANCY

The Government of India has for some time past been receiving enquiries as to the status of the members of the Society of Incorporated Accountants and Auditors of India, Delhi, in the matter of practising the profession of accountancy in the country. The Government wish to make it clear that the Institute of Chartered Accountants of India, constituted under the Chartered Accountants Act, 1949, is the only statutory body, the members of which, viz., the Chartered Accountants, are entitled to be appointed throughout India as auditors of companies under section 144 of the Indian Companies Act or to undertake any audit work required to be done by chartered accountants under the law. The only other class of accountants entitled to be appointed as auditors of companies under the Indian Companies Act are the restricted State auditors under the Restricted Auditors' Certificates (Part B States) Rules, 1951.

The Society of Incorporated Accountants and Auditors of India is not recognised either by the Government of India or by the Institute of Chartered Accountants of India and its members are not eligible to be appointed as auditors of companies under the Companies Act or to undertake any other audit work required by law to be done only by chartered accountants. Nor are they eligible to practise as income-tax practitioners under section 61(2) of the Income-tax Act, 1922.

ORIENT AND CHEVIOT JUTE MILLS

EARNINGS IMPROVE

THE half-year ended 31st May, 1953, has been a little more favourable than the preceding two half-years for both the Orient Jute Mills Co., Ltd. and the Cheviot Mills Co., Ltd., under the management of Messrs. Andrew Yule & Co., Ltd., Calcutta. In fact, there has been a steady improvement in the financial results of the two companies since the half-year ended 31st May, 1952, when both suffered heavy losses. In that half-year, the Orient Jute reported a trading loss of Rs. 4.82 lakhs and the Cheviot of Rs. 2.95 lakhs. This feature was common to most other units of the industry, owing to difficult trading conditions created by declining prices, slackness in demand for jute goods, accumulation of stocks and cut in production. The improvement in the conditions noticed since the second half of 1952 and early this year is fully reflected in the financial results of the two companies under review. Thus, the Orient's gross profit, which amounted to Rs. 1.54 lakhs for the half-year ended 30th November, 1952, has risen by more than three times to Rs. 4.88 lakhs for the half-year under review. In the case of the Cheviot, the improvement is even more spectacular, having risen from a mere Rs. 17,000 for the half-year ended 30th November, 1952 to as much as Rs. 5.54 lakhs for the six months under review.

Orient Jute

The following comparative table giving the salient features of the Orient Jute's results for the four half-years provides an idea of its progress:

(In lakhs of rupees)

	31-5-53	30-11-52	31-5-52	30-11-51
Sales	40.00	52.29	76.47	74.90

	p.a.	p.a.	p.a.	p.a.
Carry forward	1.06	0.81	0.03	0.89

Orient Jute's gross profit at Rs. 4.88 lakhs for the half-year under review is higher by Rs. 3.34 lakhs over that of the preceding year. The net profit, after making a higher provision for depreciation and Managing Agents' commission of Rs. 40,000 and Rs. 37,000 respectively, and for taxation at Rs. 28,000, amounts to Rs. 4.23 lakhs, as against Rs. 1.05 lakhs for the previous half-year. With the sum of Rs. 81,000 brought in from the preceding year, the Directors have been able not only to maintain the dividends but also to set aside a sum of Rs. 2.50 lakhs for reserves. Dividend at Rs. 6 per share of Rs. 100 each for the half-year absorbs Rs. 1.49 lakhs. The balance of Rs. 1.06 lakhs as against Rs. 81,000 brought in has been carried forward to the accounts for the next half-year.

Cheviot Mills

The table below shows at a glance the progress of the Cheviot Mills in the last four half-years.

(In lakhs of rupees)

	31-5-53	30-11-52	31-5-52	30-11-51
Sales	42.74	57.81	75.63	74.00

Preference dividend	0.85	0.85	0.85	0.85
Dividend on ordinary shares.	0.96	0.96	0.96	1.91
	(12½%	(12½%	(12½%	(24%
Carry forward	p.a.)	p.a.)	p.a.)	p.a.)
	0.84	0.46	0.50	1.95

The Company's gross profit for the half-year under review amounts to Rs. 5.54 lakhs, which, year, shows a spectacular rise of Rs. 5.37 lakhs. Of this, the Managing Agents' commission absorbs Rs. 36,000, as against Rs. 25,000 and taxation Rs. 21,000, the net profit being substantially higher at Rs. 4.19 lakhs, as against Rs. 58,000 for the preceding half-year. With Rs. 46,000 brought in from the previous account and Rs. 29,000 being other income, the sum available for distribution amounts to Rs. 4.65 lakhs.

(Continued in previous column)

JUPITER GENERAL INSURANCE COMPANY, LIMITED

ADMINISTRATOR'S REPORT FOR 1952

IN his statement on the working of the Jupiter General Insurance Company, Ltd., Bombay, issued along with the report and accounts for the year ended 31st December, 1952, Mr. R. Varadachari, the Company's Administrator, says that he is convinced that the practice of allowing reserves only to the extent of 100 per cent. in marine and 50 per cent. in the fire and miscellaneous departments, followed by the Indian income-tax authorities, is detrimental to the interests of Indian insurance. Referring to the Company's progress in the period that followed the suspension of the original management, he points out that the fact that the Company emerged successfully from the "ordeal" is really a "tribute to its own inherent strength and organisation."

The following is the full text of Mr. Varadachari's statement:

"The revenue accounts and the balance-sheet annexed to this note along with the auditors' report relate to the year ended 31st December, 1952, i.e., the 33rd year of this Company. The proceedings started by the police against certain former Directors and officers are going on in the Magistrate's Court. I have taken steps to notify our clients and constituents that the alleged offences relate to 1949 and 1950 and that the management of their period have been divested completely of their powers from the 11th July, 1951, and have nothing to do with the present working of the Company.

"The accounts of the year have been closed with a net profit of Rs. 3,92,137 in the general department and an addition of Rs. 24,53,686 to the life fund. This result must be considered satisfactory considering the circumstances in which the Company's business was carried on. If the year 1951 was an unhappy and critical one for the Company, the year 1952 was a trying one. In the Indian market 'Jupiter' has no tied business, which many other companies of similar standing have. In the beginning of the year there were some indications that the trade had realised the alarming proportions to which rebating and other attendant evils had attained and were attempting to take some steps to reduce the evil, but there was an unfortunate retrogression in the latter half of the year with the result that there was a scramble for business at any price and obviously 'Jupiter' could not enter into this race.

London Market

In regard to the London reinsurance market, the police action and the proceedings against the ex-Directors in the Magistrate's Court have had the most disastrous effects and most of the English companies gave notice of cancellation of their reinsurance treaties which took effect from the 1st January, 1952, so that during the whole of 1952, there was practically no 'reciprocal' business from the London market and, in addition, there was an actual outgo of nearly Rs. 4.25 lakhs which 'Jupiter' had to give to these companies as consideration for the withdrawal of the unexpired portfolios in accordance with the usual terms of the treaties. In view of the seriousness of this position, I undertook a visit to London in August, 1952, and with the help of our London Agents, Messrs. B. W. Noble Ltd., established personal contacts with the executives of companies with whom 'Jupiter' had previously treaty relations. The result of the visit may be summarised in the words of Messrs B. W. Noble, Ltd., in their letter dated 15-10-1952:—

"'Quite apart from the assurance and confidence we gained from many discussions with Mr. Varadachari regarding the present position of the 'Jupiter,' an abundance of goodwill has been created by his visit. Already as a result of our being able to introduce Mr. Varadachari to the many important British companies who are reinsurers of the fire business of the 'Jupiter,' the majority of such companies have freed a share of their reinsurance business to cede as reciprocity for the 'Jupiter' as an earnest of their desire to assist the 'Jupiter' under its present regime to regain the position it formerly held in the Indian insurance market. There can be no doubt that the visit of Mr. Varadachari was well timed and the information he was able to give first-hand to the British insurers of the 'Jupiter' dispelled any remaining misgivings which may have existed in the minds of the executives of such reinsurers.'

Good Results in 1953

"The seemingly adverse result of the year, as compared with the previous year, was due entirely to the cancellation of the treaties which followed the happenings, within the 'Jupiter' resulting in a temporary loss for one year of reciprocity and the withdrawal of unexpired portfolios relating thereto. There is every reason to hope that the restoration of the treaties will show good results in 1953.

"The total premium during the year amounted to Rs. 77.60 lakhs as against Rs. 88.77 lakhs in the year 1951. The fall of Rs. 11.17 lakhs is almost wholly due to the reduction in the premium in the fire account. While many companies have recorded an increase in the fire department, there has been a fall under this head in the case of 'Jupiter,' but the reasons for this have been explained in the previous paragraph. The indications are that the fall has been arrested in the year 1953. The marine, miscellaneous and life departments have kept up the previous figures more or less.

"An analysis of the detailed figures shows that the fire premiums amounted to Rs. 18.90 lakhs as against Rs. 28.33 lakhs in the previous year. The account closed with a profit of Rs. 2,43,445 as against Rs. 5,86,327 in 1951. The reserve has been kept at Rs. 10.50 lakhs. The cost of management was pretty high during the year but this was due to the fact that it was considered inadvisable from the business point of view to cut down the staff though the premiums fell down temporarily during the year.

"In the marine department the net premium amounted to Rs. 4,47,591 as against Rs. 4,75,230 in the previous year. The profit of this department was Rs. 1,11,616 as against Rs. 81,920 in 1951. The reserve has been kept at Rs. 7,75,000.

Miscellaneous Department

"In the miscellaneous department the net premium was Rs. 14,85,372 as against Rs. 15,81,890 in the previous year. The account closed with a loss of Rs. 79,636 as against a profit of Rs. 32,456 in the year 1951. The reserve has been kept at Rs. 7,45,000.

"It is well known that this department has not been profitable all over the world, but in the case of the 'Jupiter' particularly the unfortunate result is almost entirely due to the disastrous nature of the business done for a short period in Trinidad. For some reason or other which it is not possible to gather from the records, the previous management opened a chief agency in Trinidad in September, 1950. Soon after I took over, I found that it was impossible to control this agency and that it was doing business in an unprofitable manner. I, therefore, took immediate steps to close that agency, but within the short time that it was in existence huge claims and litigation in Courts have arisen. With the help of our London Agents I have now appointed a Chartered Accountant of Trinidad to take charge of our office and wind-up the agency.

Life Department

"The records show that the first life policy was written on 21st May, 1928, and the year 1953 may be said to be the silver jubilee year of this department. The new business completed during the year 1952 amounted to Rs. 1,06,40,350 covering 3,480 policies as against Rs. 1,08,63,050 covering 3,223 policies in the previous year, the annual premium receivable being Rs. 5,70,761 as against Rs. 5,91,716 in 1951. Every effort was made to bring down the cost of this department and actually the renewal expense ratio during the year works out to 15.2 per cent. as against 17.8 per cent. in 1951 and 24.4 per cent. in 1950. The expense ratio has come within the limits prescribed by the statute. The life fund increased in the year by Rs. 24,53,686. The actuarial valuation of the assets and liabilities of the Company as at the end of 1952 is going on. The gross interest earned on the mean life fund during the year was 3.7 per cent. while the net yield was 3.1 per cent. as against 3.5 per cent. and 2.9 per cent. respectively in the previous year.

"Including the balance brought forward from last year the total available profit amounts to Rs. 6,55,010 out of which Rs. 2,50,000 is allocated as taxation reserve and the balance of Rs. 4,05,010 is carried forward. The first charge on the profit is the dividend due to the preference shareholders for the last three years. It is, however, not possible to consider any dividend for the ordinary shareholders at the moment. Prudence requires that it is in a year like this that the powerful backing of strong reserves is essential. As will be noticed from the revenue accounts, the total of the departmental reserves has been reduced from Rs. 33.50 lakhs of last year to Rs. 25.70 lakhs because there has been a reduction in the premium, but, if as we hope, the business of the Company improves during 1953, the necessity for strengthening the reserves will be all the greater. It is rather unfortunate that the Income-tax Department insists upon allowing only a reserve of 100 per cent. under marine and 50 per cent. under fire and miscellaneous. But I am quite convinced from my experience of income-tax administration for a long time and of insurance for the last two years that this rule-of-thumb method is not appropriate to all companies and that it is acting detrimentally to the interests of Indian insurance in not encouraging the creation of adequate reserves to meet any emergencies. Though the figures are the same as those usually adopted by the English income-tax authorities, the practice is not the same in the two countries. For instance, in the case of marine accounts, the practice in the U.K. is to allow the companies to close the accounts of the department not for the fixed period of 12 months called the 'accounting year' in India, but for a period of two years and allow a reserve of 100 per cent. As settlement of marine claims takes a long time, this acts as a cushion and a reserve of 100 per cent. is probably considered adequate in such circumstances. But even in the case of fire, the U.K. authorities consider any special circumstances that may be put forward.

Rule-of-thumb Method

Apart from this, it should be remembered that the English insurance companies are giants with a long history of over 100 years and have huge funds at their disposal which could stand any catastrophic losses. It is, therefore, inappropriate to judge the comparatively new insurance companies of India on the same standard and apply a rule-of-thumb method. In continental countries it is the Government departments which insist upon strong reserves being maintained by the companies. After a careful consideration of all the relevant factors and discussion with our auditors I have provided reserves which I consider to be adequate though they exceed the limits of the Income-tax Department, but at the same time it is necessary to keep something more as a stand-by in case of sudden necessity and it is for this reason that the balance in the profit and loss appropriation account has been carried forward. I do hope that the necessity to touch this may not arise at all and if the business improves and the reinstatement of the treaties produces satisfactory results there is every reason to hope that 'Jupiter' would be in a position to pay the usual dividend to its shareholders in future years. It is really unfortunate that for the last three years the ordinary shareholders have not received any dividend, but it is entirely due to causes which arose within the 'Jupiter' itself between the years 1949 to 1951 and not from any extraneous causes. That the Company emerged from the ordeal successfully is really a tribute to its inherent strength and good organisation.

Capital Reconstruction

"It will be noticed from the balance-sheet that the Company has two classes of shares, preference and ordinary, with different face values and different proportions of paid-up amounts. This contravenes the provisions of section 6A(1) of the Insurance Act, 1938, and with a view to bringing the capital structure in conformity with the provisions of this section, a scheme of reconstruction was prepared and circulated to the shareholders. A meeting of the shareholders was held by me on the 7th February, 1953, and their opinions taken and submitted to the Controller of Insurance. He has sanctioned the scheme with certain modifications to take effect from 31st May, 1953. The share capital will in future consist of 200,000 ordinary shares of Rs. 100 each. The necessary steps to implement this order are being taken.

"From 11th July, 1951, up to date, the amount collected by me out of the investments made by the previous managements in both the

Chembra Peak Estates Ltd.

THE directors of the above Company (Managing Agents and Secretaries: Messrs. Peirce, Leslie & Co., Ltd., Kozhikode, Malabar) submitted the audited accounts of the Company for the year ended 31st March, 1953.

The 1948 new clearing comprising 24.23 acres of robusta coffee has been brought into bearing and is included under the mature coffee area.

The accounts showed a loss of Rs. 2,30,243 (profit of Rs. 2,44,904) from which was deducted the credit balance brought forward from last year of Rs. 1,53,541 (credit of Rs. 57,637) leaving a loss of Rs. 76,702 (Rs. 1,53,541 after provision for tax and transfer to general reserve) which was carried forward.

The year's working resulted in a loss of Rs. 2,30,243 on account of the large shortfall in tea crop and the drastic slump which affected tea prices for the greater part of the year. In view of the heavy loss incurred, no dividend was paid for the year. For the year 1951-52 also, no dividend was paid.

The directors and the managing agents and secretaries, Messrs. Peirce, Leslie & Co., Ltd., have decided, in view of the Company's financial position, to forego the following amounts due to them for the year, the managing agents their commission amounting to Rs. 18,580, and the directors their fees amounting to Rs. 3,600.

The Company's general reserve remained unchanged at Rs. 5,50,000 (Rs. 5,50,000) and staff pension fund reserve Rs. 50,000 (Rs. 50,000). The additions of Rs. 49,969 represent expenditure on Assistant Manager's bungalow, labour quarters, water supply and on coffee drying ground. The additions of Rs. 15,419 represent expenditure on new coffee clearings.

A total crop of 5,29,079 lbs. of tea was harvested as compared with the previous season's crop of 8,15,890 lbs. The shortage of crop was mainly due to unfavourable weather conditions. The cost of production was As. 31.00 (As. 18.40) per lb. and the average price realised As. 20.45 (As. 24.89) per lb. The unsold stock has been valued at prices since realised As. 24.79 per lb.

The Company was allotted 6,07,799 (6,11,312) lbs. export quota for season 1952-53, being 86.50 per cent. of the best crop basis and the surplus quota was sold at market rates. The crop estimate for 1953-54 is put at 8,00,000 (7,05,000) lbs. to be harvested at an f.o.b. cost of As. 21.25 (As. 22.72) per lb.

A total crop of tons 108-19-2-5 (42-12-0-1) was delivered to the Coffee Board and has been valued at Rs. 2-4 (Rs. 2-4) per point or Rs. 119.29 (Rs. 120.61) per cwt. The 1953-54 coffee crop is estimated provisionally on blossom at 55 (88) tons.

A great amount of money was spent on the Estate during the past year, on weeding and cultivation in particular, and it was most disappointing that this expenditure produced no tangible results. But that was not the fault of the management, and climatic conditions were very much unfavourable. It was most unfortunate that this expenditure should have been incurred at a time when prices were so low, but work had to be found for the large labour force, and the quality of work done was excellent and should bear fruit in the coming years.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	9,33,400	Block ...	12,93,981
Reserves ...	5,51,477	Stock-in-trade	2,83,825

Sijua (Jherriah) Electric Supply Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Bird & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st December, 1952.

The profit and loss account, including the credit balance of Rs. 37,987 (Rs. 13,816) brought forward from the previous year and a sum of Rs. 19,366 (Rs. 35,650) written back from tariffs and dividend control reserve in accordance with Clause II(2) of the sixth schedule to the Electricity (Supply) Act, 1948, and after allowing for sundry charges, depreciation, taxation, etc., placing Rs. 27,712 (Rs. 26,567) to reserve for contingencies and Rs. 33,000 (Rs. 20,000) to reserve for new plant, showed a credit balance of Rs. 1,70,858 (Rs. 1,63,987), which the directors disposed of as follows:—

In paying a dividend on the ordinary shares at the rate of 7½ (7½) per cent. per annum without any deduction for income-tax paid by the Company Rs. 1,26,000 (Rs. 1,26,000) and in carrying forward Rs. 44,858 (Rs. 37,987).

In March, 1952, power from the D.V.C. supply at Sindri became available and though it proved somewhat costly, the Company was at least enabled during the monsoon of this year to fulfil all the calls made on it and as a result the units sold were considerably greater than ever before. The total number of units sold in 1952 was 78,879,406 (as against 72,413,091 in 1951). In 1952. 19.86 million units were supplied by the D.V.C.

Accounts in brief were as under:—

Teen Ali Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Octavius Steel & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st December, 1952.

A crop of 7,969 maunds was manufactured and disposed of for sale in Calcutta for export 7,205 maunds and for sale in Calcutta for internal consumption 764 maunds. The average price per lb. realised was Re. 1-9-11 as compared with Re. 1-11-3 per lb. obtained for the previous season's crop of 7,096 maunds. The Company's export quota for season 1952 was 3,952 maunds.

No extensions were put out during the year and the area under cultivation remains unchanged at 512.71 acres as at 31st December, 1952.

The revenue account showed a profit of Rs. 1,26,422 (Rs. 2,02,018) and after deducting from this pension to retired manager Rs. 2,000 (Rs. 2,000), staff commission and bonus Rs. 7,323 (Rs. 12,056), managing agents' commission on profits Rs. 2,441 (Rs. 4,019), reserve for taxation Rs. 17,000 (Rs. 50,000), depreciation Rs. 52,456 (Rs. 36,218), loss on sale of investments Rs. 4,022 (*nil*), and provision for sales tax Rs. 11,800 (*nil*), there was a balance of Rs. 29,380 (Rs. 97,366). To this amount was added interest on investments (net) Rs. 2,583 (Rs. 2,588), sale of machinery, Rs. 9,000 (*nil*), forfeited dividends Rs. 775 (Rs. 419) and excess provision for taxation—written back Rs. 12,000 (Rs. 10,000) leaving a net profit for the year of Rs. 53,738 (Rs. 1,10,373). After adding to this the credit balance of Rs. 32,961 (Rs. 27,462) brought forward from the previous year and transferring Rs. 30,000 (*nil*) from dividend equalisation reserve account, there was a credit balance of Rs. 1,16,699 (Rs. 1,37,835) on profit and loss account. The directors disposed of this amount by paying a dividend of 10 (17½) per cent. for season 1932 without any deduction for income-tax paid by the Company Rs. 30,000 (Rs. 52,500), by placing to reserve account Rs. 25,000 (Rs. 50,000) and in carrying forward Rs. 61,699 (Rs. 35,335).

The estimates for season 1953 are as follows:

Garden	Crop	Expenditure: Garden	Expenditure: Calcutta	Total
	Mds.	Rs.	Rs.	Rs.
Teen Ali	7,017	5,77,395	1,43,639	7,21,034*

* Excluding capital expenditure estimated to amount to Rs. 24,600.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	3,00,000	Block ...	8,37,270
Reserves ...	6,55,000	Stock of tea	4,38,457
Provision for taxation ...	67,642	Stores, etc.	2,09,197
Liabilities ...	5,37,917	Debts, deposits and advances ...	1,07,348
Profit and loss account ...	61,699	Investments	1,000
		Cash ...	28,986
Rs.	16,22,258	Rs.	16,22,258

Banarhat Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December, 1952.

After providing Rs. 1,91,431 (Rs. 1,53,787) for depreciation, the season's working resulted in a profit of Rs. 4,40,544 (Rs. 11,79,455). After bringing in the balance from last year, and the excess profits tax refund, charging managing agents' commission, providing Rs. 1,11,000 (Rs. 3,20,000) for taxation and transferring Rs. 1,00,000 (Rs. 1,00,000) to general reserve, there remains a balance of Rs. 5,05,074 (Rs. 8,35,848) at credit of profit and loss account. From this the directors recommend payment of the preference dividend of Rs. 6-8 (Rs. 6-8) per share, absorbing Rs. 26,000 (Rs. 26,000) and a dividend on the ordinary shares of Rs. 17-8 (Rs. 10 interim plus Rs. 25 final) per share, absorbing Rs. 2,62,500 (Rs. 5,25,000), leaving a balance of Rs. 2,16,574 (Rs. 2,84,848) to be carried forward.

A total crop of 35,850 maunds was secured and sold at an average price of Re. 1-8-2 per lb. This compares with a crop of 42,601 maunds secured in season 1951, which sold at an average price of Re. 1-10-11 per lb. Weather conditions were not as favourable as in the previous season.

Current market rates are considerably higher than was the case when the major part of the 1952 crop was sold and there is reason to anticipate that the results for season 1953 will show an improvement. Estimates for the present season have been framed for a regulated crop of 36,900 (40,500) maunds to cost Rs. 31,62,728 (Rs. 44,07,120).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	19,00,000	Block ...	18,80,695
Reserves ...	16,75,000	Stock-in-trade	20,07,918
Provision for taxation ...	35,144	Stores ...	7,16,698
Liabilities ...	20,32,761	Debts, deposits and advances ...	9,45,987
Profit and loss account ...	2,16,574	Investments	5,412
		Cash ...	3,02,769
Rs.	58,59,479	Rs.	58,59,479

Choonabhutti Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December, 1952.

After providing Rs. 65,325 (Rs. 52,928) for depreciation, the season's working resulted in a loss of Rs. 38,815 (profit of Rs. 4,00,683). Setting against this an excess profits tax refund and the balance brought forward from the previous year there becomes, after charging managing agents' minimum commission, a credit balance of Rs. 58,942 (credit of Rs. 90,853 after paying dividends), which sum the directors recommend should be carried forward. There has however also been brought to profit and loss account the sum of Rs. 73,000, being tax provision of previous accounting periods now ascertained to be surplus, and the directors recommend payment out of this surplus of the preference dividend of Rs. 6-8 (Rs. 6-8) per share, absorbing Rs. 13,000 (Rs. 13,000), and a dividend on the ordinary shares of Rs. 10 (Rs. 7-8 interim plus Rs. 22-8 final) per share, absorbing Rs. 60,000 (Rs. 1,80,000).

A total crop of 10,450 maunds was secured and sold at an average price of Re. 1-6-2 per lb. This compares with a crop of 13,249 maunds secured in season 1951, which sold at an average price of Re. 1-9-4 per lb. The shortfall in crop, as compared with the previous season, was due to the unfavourable weather conditions that prevailed during the latter part of the year.

Current market rates are considerably higher than was the case when the major part of the 1952 crop was sold and there is reason to anticipate that the results for season 1953 will show an improvement. Estimates for the present season have been framed for a regulated crop of 12,400 maunds to cost Rs. 10,10,542.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	8,00,000	Block ...	6,36,657
Reserves ...	5,75,000	Stock-in-trade	5,84,174
Provision for taxation ...	1,06,775	Stores ...	2,27,778
Liabilities ...	4,83,880	Debts, deposits and advances ...	2,10,550
Profit and loss account ...	58,942	Investments	2,08,968
		Cash ...	1,56,470
Rs.	20,24,597	Rs.	20,24,597

Basmatia Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December, 1952.

After providing Rs. 26,939 (Rs. 17,788) for depreciation, the season's working resulted in a profit of Rs. 1,80,079 (Rs. 2,04,990). After bringing in the balance from last year, charging secretaries and agents' and directors' commissions, providing Rs. 48,000 (Rs. 55,000) for taxation and transferring Rs. 25,000 (nil) to general reserve, there remains a balance of Rs. 1,31,629 (Rs. 1,29,989) at credit of profit and loss account. From this the directors recommend the payment of a dividend of Rs. 2 (Rs. 2-8) per share, absorbing Rs. 68,000 (Rs. 85,000) and leaving a balance of Rs. 63,629 (Rs. 44,989) to be carried forward.

A crop of 6,508 maunds was secured and sold at an average price of Re. 1-10-1 per lb. This compares with a crop of 6,723 maunds secured in season 1951, which sold at an average price of Re. 1-12-0 per lb.

A satisfactory tea seed crop was secured, but sales were below normal owing to the depressed state of the tea industry at the time of the seed harvest.

Estimates for the current season have been framed for a regulated crop of 5,900 maunds to cost Rs. 5,84,873. The 1953 crop is being manufactured in the new factory, which is now complete.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	3,40,000	Block ...	7,19,561
Reserves ...	7,36,034	Stock-in-trade	4,37,147

QUESTION HOUR IN PARLIAMENT

Locomotive Manufacture in India

DURING the period 1st April, 1950 to 31st July, 1953, 76 broad-gauge and 44 metre-gauge locomotives were manufactured in India and 213 broad-gauge, 265 metre-gauge and 47 narrow-gauge locomotives were received from abroad. The existing average imported price of a broad-gauge 'W.G.' locomotive, which is the only type at present manufactured at the Chittaranjan Locomotive Workshop, is approximately Rs. 5.35 lakhs, which is also the cost charged to the railways for a locomotive manufactured at Chittaranjan, excluding expenditure on the development of the factory. The imported price of a metre-gauge 'Y.G.' locomotive is about Rs. 3.5 lakhs, while the T.E.L.C.O. price for a similar locomotive, in the development stage, is expected to be about Rs. 4 lakhs.

• • • •

Railways Run Ferry Services

The Indian railways run six ferry services for passengers between (1) Dhanushkodi in India and Talaimannar Pier in Ceylon, (2) Sakrigali Ghat and Manihari Ghat, (3) Amingaon and Pandu, (4) Barari Ghat and Mahadeopur Ghat, (5) Mokameh Ghat and Somaria Ghat, (6) Paleza Ghat and Dighat Ghat and Mahendru Ghat. Ever since its inauguration in 1914, the ferry service between Dhanushkodi and Talaimannar Pier has been working at a loss except during the war years from 1942-43 to 1945-46 and during 1948-49. The ferry between Sakrigali Ghat and Manihari Ghat is worked at a profit. Regarding the other ferry services, no separate profit and loss account is maintained.

—Deputy Minister for Railways and Transport

Central Committee for Land Reforms

The Central Committee for Land Reforms, which consists of the Chairman and the members of the Planning Commission and the Union Minister of Food and Agriculture and the Minister of Agriculture, was set up with the object of ensuring the implementation of the land reforms programme contained in the Five-year Plan. The Committee's work is of a continuing character, since it considers, amongst other things, land reform proposals from State Governments as and when they are received. The Committee began to function in May, 1953, and has since met four times. Representatives of State Governments are, as a rule, invited to attend meetings of the Committee when their proposals are under consideration.

—Deputy Minister for Irrigation and Power

Foreign Insurers

Foreign insurers in India received in 1951 Rs. 11.68 crores as insurance premia, as compared with Rs. 12.15 crores in 1950. These figures take into account reinsurance ceded and accepted. Indian insurers received from foreign countries Rs. 8.73 crores in 1951, as against Rs. 7.70 crores in 1950.

—Finance Minister

Levy of Sales Tax

Consequent on the Supreme Court's judgment, several State Governments had issued notices to dealers outside their States asking them to apply sales tax, with retrospective effect from 26th January 1950, on commodities sold by the dealers to parties within the States. The Government of India felt that such a retrospective levy might be causing some hardship as the dealers themselves had not collected such tax during the period. The Centre had, therefore, advised the State Governments not to give effect to their notice but to send their comments to the Centre. In reply, the West Bengal Government has informed the Centre that they had issued no such notice, while Hyderabad and Saurashtra have agreed to the proposal of the Centre. Other States have stated that the matter was receiving their attention.

• • • •

Article 286 of the Constitution of India does not provide for complete exemption for inter-State trade from sales tax, and a way has to be found for the States to exercise their legal rights where they so desire without avoidable inconvenience and hardship to the trade.

—Deputy Finance Minister

Oil Refineries in India

The entire petroleum industry in the world is a monopolistic business and, so long as we are not able to change this sorry state of affairs, we have to put up with it. The prices at which the production of the refineries being established in India will be sold will not be related to the cost of production in any particular area but fixed internationally. Under the agreement, the companies will be permited to establish prices at a level not higher than that at which equivalent imported products can be made available for sale. The companies have also been assured exemption from sections 15 to 18 of the Industries (Development and Regulation) Act. After the establishment of the refineries, the position will in no respect be disadvantageous to India, as compared with the present position, when India is dependent almost wholly on imported products. The oil refinery companies have also been assured of some concessions in import duties.

Imports of Rice from Burma

The Government of India has informed the Government of Burma that India does not require any more rice during the remaining period of 1953 and that in December, 1953, it will give it an indication of its requirements for 1954. The internal rice position in India is fairly satisfactory. In view of the low prices of indigenous rice in the Indian markets, it is very difficult for the Government of India to purchase rice from Burma at the rates demanded by it. India can buy one million tons of rice annually if the price is about Rs. 16 per maund landed in India.

—Food Minister

W. T. HENLEY'S TELEGRAPH WORKS CO., LTD.

SIR JOHN DALTON'S ADDRESS AT ANNUAL MEETING

THE Annual General Meeting of W. T. Henley's Telegraph Works Company, Limited, was held on 19th June, 1953, at Dorchester Hotel, Park Lane, London, W., Sir John Dalton, A.M.I.E.E., F.C.I.S., the Chairman, presiding. In the course of his speech the chairman said:

"The balance in our trading account for the year 1952 is £1,364,135, which is within £5,000, of the balance in 1951.

"I am glad to report that the plant in all our factories has been well maintained and we are continuing to equip our factories with the most modern type of machinery in order to ensure lowest possible cost and highest possible quality of product.

"Our factory at Birtley, County Durham, is, in my opinion, the finest and most modern cable factory in the country. Installation of new plant in this nine-acre works continued during the year and a substantial increase was shown in tonnage of cable despatched.

Change in Business Outlook

"There is no doubt that 1952 saw a change in the business outlook. It witnessed the end of a long period of booming trade conditions in most overseas markets, and at home a slackening of activity in many industries which broadened, as the year advanced, into something of a trade recession. In other words, our companies, together with most other companies, faced a somewhat sudden change to conditions of acute competition. As an example of the attitude taken up by your Company in these changed circumstances, you may have noticed that we tendered for and obtained a contract in America a few weeks ago for the Seattle City Light Department against tenders from both British and American cable makers. We were nearly £20,000 under the nearest American bid.

"Henleys continue to enjoy the confidence of the Government departments, the nationalised industries, the shipbuilding and other great industries and of similar organisations in countries overseas. Indeed, our products are in demand in no less than 60 overseas countries.

Exports

"Exports represent an important part of our business but, during 1952, we were handicapped both by copper rationing and by restrictions upon imports imposed in our principal overseas markets. Nevertheless, our export sales increased in relation to 1951 by approximately 10 per cent. Noteworthy contracts were received from the Government of Madras and the Government of Pakistan.

"The tax reliefs, outlined in the Chancellor's Budget, may be expected to act as an incentive to industrial modernisation and re-equipment and, coupled with the modified rearmament programme, should help to arrest the downward trends in economic activity."

The reports and accounts were unanimously adopted and the final dividend of 8 per cent. which, together with the interim dividend of 5 per cent. already paid, becomes equivalent to 10½ per cent. on the ordinary stock issued at the end of the year, namely, £4,875,000.

INCOME-TAX FOR THE LAYMAN

The Central Board of Revenue, Union Ministry of Finance, has brought out a new booklet entitled *Income-tax for the Layman*, explaining the basic features of the income-tax law and administration in India.

As its name implies, the booklet is intended for the ordinary taxpayer who has no time to study the complicated legislation on the subject. The provisions of the Indian Income-tax Act and the Finance Act are explained in simple language and illustrated by numerous worked-out examples.

Some of the special features of the booklet are the provisions in regard to the exemptions and reliefs to which the assessees are entitled and the procedure for claiming refunds. A statement of the tax payable on different ranges of income is also given to enable the assessees to know, at a glance, the amount of tax payable on their total incomes. A separate chapter has been devoted to non-residents, explaining their rights and obligations under the Act. The rules and forms relating to the registration of firms and the rates of depreciation admissible under the Income-tax Act are reproduced in the form of appendices for the convenience of the assessees.

MONEY IN DEMAND

(From Our Own Correspondent)

BOMBAY, *9th September*

Conditions in the short-term money market hardened further this week in favour of lenders. Funds were in short supply, while demand broadened. The market seems to have been depleted of funds, on account of transfer of surplus cash to Calcutta prior to the holidays. It is stated that some lenders did so, as call money there fetched as much as 2¼ per cent. as against 1 per cent. here early last week. Some of the big Indian banks, therefore, had to go to the Reserve Bank for accommodation, while others bid at higher rates for call money in order to procure overnight funds, as their advances remained locked up in commodities. The most representative rate for inter-bank call money was 2 per cent. while a few stray deals were done even at 2½ per cent. Though the Exchange banks also felt the need for funds, they were unwilling to offer more than 2 per cent. In fact, some of them preferred to sell sterling to accommodate their clients. Among the small Indian banks, inter-bank call rate stood at 2½ per cent. The rates for short-term deposits were unchanged, with three months' deposits fetching 2 to 2½ per cent. Four to eight months' were absorbed at 2½ per cent. and nine to 12 months' 2½ per cent. House money was quoted at 2½ per cent.

Tenders for three months' Treasury Bills at Rs. 1.77 crore, were just Rs. 22 lakhs lower than those offered in the previous bid a fortnight ago. This, in a way, reflects the diminishing supply of funds in the market. The average rate of accepted tenders was, however, one pie lower at Rs. 2-6-7 per cent. per annum. Tenders for another Rs. 1.5 crore worth of Treasury Bills have been invited for the next week.

The statement of affairs of the Reserve Bank of India for the week ended 4th September, 1953, discloses a sharp expansion of Rs. 8.57 crores in notes in circulation. This has been more than offset by notes held in the Banking Department which has receded by Rs. 8.90 crores. The net fall in total notes issued has been covered by a suitable adjustment in rupee coin. In the Banking Department, deposits of the Central Government have declined to the extent of Rs. 6.56 crores. Deposits of other Governments have also declined, but only by Rs. 4.04 crores, while those of other banks have risen by Rs. 2.26 crores. The assets side reveals a sharp drop of Rs. 9 crores in cash balances, while balances held abroad have improved by Rs. 1 crore.

The Scheduled Banks' consolidated return for the week ended 28th August last reveals a minor drop of Rs. 28 lakhs in demand deposits, but a rise of Rs. 2.79 crores in time deposits. A small increase of Rs. 36 lakh is seen in borrowings from banks. Borrowings from the Reserve Benk are fractionally lower by Rs. 8 lakhs, and those from the Imperial Bank by as much as Rs. 43 lakhs. On the assets side, advances show a recession of Rs. 1.97 crores. Similarly, bills purchased and discounted are lower by Rs. 1.48 crores. Investments, however, are better by Rs. 3.32 crores. Cash balances, too, are higher by Rs. 2.34 crores.

The Gilt-edged market continued to present cheerful conditions. Enquiries were witnessed for most of the short and medium dated loans. The turnover, however, was not considerable, owing to the intervention of several holidays during the week under report. Small business was done in 2½ per cent. 1954 loan at Rs. 98-10. 2½ per cent. 1955 loan changed hands in small lots at Rs. 98-6. Deals were reported done at Rs. 98-7 in 3 per cent. 1957. Among other 3 per cent. loans, 1958 were bid at Rs. 98-2. 1959-61 had sellers at Rs. 96-0-6. Both 1963-65 and 1964 were wanted at Rs. 92-8 and Rs. 92-7-6, but no sellers. 1966-68 were in demand at Rs. 90, but sellers wanted Rs. 90-0-6. 1970-75 remained unchanged at Rs. 86-8. 3 per cent. Conversion loan, which had gone up to Rs. 82-4-6, were on offer at Rs. 82-2. The National Plan Bonds remained unchanged, with the Reserve Bank freely selling at Rs. 98-6. Among the State loans, Bombay 4 per cent. 1963 loan had good enquiries at Rs. 100-7. Some transactions were put through in 4 per cent. 1963 Madras loan at Rs. 99-10. The new Bombay Municipal Loan, 4 per cent. 1963, issued last week, were done at Rs. 99-11, as against the issue price of Rs. 99-4.

In the foreign exchange section, the rupee-dollar rate moved up by a further As. 4 to Rs. 476¼ per 100 dollars, in sympathy with the weakness of sterling in overseas markets. In New York, spot sterling receded from $2.81-1/16—2.81-3/16 to $2.80-11/16—2.80-13/16. In the forward section, three months' sterling stood at $2.80¾—2.80¼ as against $2.80¼—2.80⅜ a week ago.

STRONG DEMAND FOR TEA

(From Our Own Correspondent)

CALCUTTA, *8th September*

The feature during yesterday's export auction in tea was the strong demand which pushed up prices for almost all varieties. Offerings aggregated 52,700 packages. Support was given to medium broken pekoes, which were steady. Common brokens, low mediums and mediums gained half an anna to an anna and commonest types were higher by an anna. Whole leaf grades were bought at prices which were occasionally raised above valuations. The weak spots of the market, however, were provided by medium B.O.Ps, the prices of which eased slightly. A fall in quality made good Assams quiet. Flavoury Darjeelings were an insignificant quantity. Quotations were: Best C.T.C. Assam B.P. Rs. 2-4, clean black pekoe Re. 1-12-6 to Re. 1-13, medium Assam B.P. Re. 1-12, and clean common B.P. Re. 1-11.

Black leafy varieties suitable for export were a strong feature and realised prices half an anna above brokers' valuations during last week's auction for domestic consumption when dusts offered amounted to 11,114 packages. Dooars and mediums were quiet, and C.T.C. Assams were lower by As. 2 than the previous rates. Quality offered showed a decline. Nevertheless, there was moderate demand.

BULLION PRICES RECEDE

(From Our Own Correspondent)

BOMBAY, *9th September*

After remaining fully steady in the earlier sessions of the week under review, the bullion market developed a substantial degree of weakness during the subsequent sessions. The initial steadiness was the result of poor offerings and scattered professional support induced by favourable rains and brighter outlook for agricultural crops. Bullion prices, as a consequence, staged an impressive rise. This was particularly marked in silver. The closing price of Rs. 158-11 on Friday being Rs. 5 higher than the previous clearing rate, a special clearing was enforced in silver on that day. Clearing rates for silver and gold were fixed at Rs. 158-8 and Rs. 87-4, respectively.

At higher levels, however, profit-taking set in and values of both the white and yellow metals suffered a fall. Weak advices from cotton markets, heavy arrivals of silver and reports of a move on the part of the Bullion Association to amend the bye-laws to make the contract more favourable to the bears, imparted further weakness to the market. Not only were the previous gains completely lost, but the closing rates yesterday stood very much lower than those on Wednesday last. The market remained closed to-day, on account of a Jain holiday.

The proposal for amending the bye-laws of the Bombay Bullion Association, with a view to restricting the penalty for non-delivery, was discussed by the Bullion Board at a meeting held yesterday. No final decision, however, was taken. Further discussions will be held at a meeting on Friday next.

Silver for forward (*Bhadrapad*) delivery opened the week at Rs. 157-11. After advancing to Rs. 158-11 on Friday, it receded to Rs. 156-10 before closing slightly higher at Rs. 156-11 yesterday.

Ready silver (.996) improved from Rs. 157-11 to Rs. 159 on Saturday. Yesterday, however, it was easy at Rs. 156-11. The daily average offtake was 25 bars and the floating stocks are estimated at 1,800 bars.

Gold for forward delivery (*Bhadrapad*) opened the week at Rs. 87-7. For want of support, it reacted to Rs. 87-3 at the close on that day itself. There was a slight improvement on the following day. On Monday, reaction again set in and the quotation slided down to Rs. 86-13 yesterday; at one time, it was still lower at Rs. 86-12.

Ready gold recorded a rise from Rs. 87-11 to Rs. 88 on the 8th inst. Thereafter, it receded gradually to finish the week at Rs. 87-7. The daily average arrivals were larger than the offtake, being 3,000 tolas, as against 4,000 tolas. The floating stocks are estimated at 20,000 tolas.

The following comparative table shows the trend of the market during the week under review:

	8-9-53	Highest	Lowest	2-9-53
GOLD	Rs. a.	Rs. a.	Rs. a.	Rs. a.
Ready (.99 fine Mint)	87 7	88 0	87 3	87 13

BRADFORD WOOL FIRM

(Messrs. J. Hardacre and Co.)

BOMBAY, *8th September*

The first wool sales of the new season opened at Sydney yesterday. Most descriptions were par to 5 per cent. dearer than those at the close of last season. Subsequently, however, some irregularity and weakness appeared. One view of this is that it is not unusual at the beginning of a season for wool prices to discard a little of the opening premium which is forced by urgent need and by test orders from firms who wish to ascertain actual replacement costs at the earliest possible moment. At any rate, though this present phase may only turn out to be one of adjustment, the market in Bradford has shown some weakness. Top-makers have reduced their quotations from the more or less protective levels of last week. It will be noted that cross-breds are virtually unchanged; the offerings at Sydney consisted almost entirely of the fine faulty descriptions, and these can have very little bearing on the cross-bred market.

The U.S. came into the market at the close of the Sydney sale, and it is rumoured that Japan will be operating at Brisbane next week. This was a feature of sales at this centre all through last season. The opening sales at Cape Town were very firm, France being the principal operator.

To-day's quotations (in pence per lb. c.i.f. Bombay) for Bradford oilcombed tops are given below:

48's carded (Oct.-Nov., 1953)	88½
58's super (Oct.-Nov., 1953)	126
60's super (Nov., 1953)	149
64's super (Nov., 1953)	165
70's super (Nov., 1953)	188
Fibro (3D. 4") (Nov., 1953)	42½
46/48's scoured clothing wool (Nov., 1953)	78

The undertone of the Bradford market is firm.

FORWARD COTTON EASY

(From Our Own Correspondent)

BOMBAY, *9th September*

After the interest evoked in the matter of the total quantitative production of cotton at the end of the current season, this interest is now gradually shifting from the volume of the crop to its quality. Subject to the remaining part of the monsoon proving as satisfactory as the rest of the season, a good crop is now assured which will be short of four million bales. The change in the pattern of this crop with a greater ratio of medium-staple cotton than the previous year's and its repercussions on exports and imports and the productive cost of cotton textiles in India were referred to in the last week's report. The trade has now been struck by another aspect of this year's crop, as the weather conditions on the whole have been very satisfactory, if not ideal. It is expected that within each defined variety, the quality of cotton itself will be much better this year than during the last two or three years. What is meant to convey is that Surti or Vijay cotton will be better than the Surti or Vijay cotton of the previous year. Price for price, this general improvement in the quality of the bulk of the cotton in each defined style will go further to reduce the productive cost for cloth by assuring a better supply to the mills.

In spite of its being a week punctuated by a number of holidays, there have been heavy fluctuations in the forward market. The bearish feeling generated by crop expectations gathered further strength during the week and gave rise to what might almost be called a landslide. February delivery has already gone below the Rs. 625 mark (yesterday it had touched Rs. 621), and though a technical improvement is not unlikely, sentiment in the market still continues to be bearish. Perhaps the fact of a good crop and a good supply position has been a little overemphasised and a section of the trade as also of the textile industry might come to make purchases at the present levels and to lend the sorely needed strength to the market.

Trading in May delivery, which was allowed late last week, was more or less at par with February prices at the commencement, which goes to show the strength of the bearish feeling in the market. However, commonsense prevailed and the difference between the two deliveries widened in further transactions in favour of May to Rs. 6 though even this is very low considering the expenses of carrying cotton for three months. But once again this difference has been reduced. This pattern of trading in these two deliveries is likely to undergo a considerable change during this month and the volumes of straddle business beyond the normal range might develop in the course of this trading. Operators would be well advised to keep an eye on this difference between the February and May prices rather than on the actual price of either delivery itself.

In the spot section, considering the number of holidays and the holiday feeling in general, the activity widened with consumer interest centred on certain desirable new crop varieties, especially for early delivery contracts. The premia paid on these have been on the upgrade, though sooner or later these will have to go down in view of the fact that the all-round quality this year for each variety will be superior. Interest in imported cotton also is growing apace, in view of the fact that barring Karachi, which has no practical interest for the Indian market, cotton prices elsewhere are at fairly attractive levels.

I.C.C. February opened the week at Rs. 628 and fluctuated between Rs. 634½ and Rs. 618½ before it finished the week at Rs. 620. Trading in I.C.C. May commenced on 5th September. Although it opened at Rs. 635½, it soon yielded ground, induced by better crop prospects, to touch a low of Rs. 620, though it closed a shade higher at Rs. 621½.

The following is the trend of prices in the forward market during the week ended to-day:

	Op.	*H.*	*L.*	*Cl.*
I.C.C. Feb. (Rs.) ...	628	634½	618½	620
I.C.C. May (Rs.) ...	635½	636½	620	621½

The following are the latest quotations from the spot market:

Bengal *Deshi* Rs. 560; Berar *jarillas* Rs. 710; Vijay Rs. 870; Oomra *Deshi* Rs. 630; Mogiai Rs. 615.

At Karachi, there has been a very slight stiffening of prices as a result of some interest shown by the U.K., France and Italy. However, this interest has not materialised into firm sales and the volume of business for export is very small. In the view of the world supply position this year, Karachi will have to make up its mind sooner or later to bring its prices down to world parity, especially if it wants to maintain its continental clientele. It is likely to find that Japan, though a good customer for its cotton, will be a shrewd bargainer and will not agree to pay prices higher on parity, unless it derives corresponding advantages in other directions. The course of negotiations will not run as smooth as Karachi expects and unless it wants to be left with a good volume of unsold cotton at the end of the season on its hand, it will have to keep its continental trade going. Recent rains appear to have done some damage to the cotton crop and this is likely to reduce yields. The volume of new crop cotton which was expected definitely to be lower this year might be lowered still further because of this seasonal development. On the whole, dull conditions are likely to persist in this market for the time being.

The following are the latest available quotations from the Karachi market:

Punjab *Deshi* Rs. 68; 4F Punjab R.G. Rs. 54-3/16; S.G. Rs. 58½; L.S.S. Punjab R.G. Rs. 58; S.G. Rs. 62; N.T.R.G. Rs. 61½; S.G. Rs 65½; 289F Punjab R.G. Rs. 64; S.G. Rs. 69; New crop Sind *Deshi* Oct.-Nov. Rs. 68½; Punjab *Deshi* Rs. 68; 4F Punjab R.G. Rs. 64½; S.G. Rs. 69¾ to Rs. 70½; 289F Punjab R.G. Rs. 70; S.G. Rs. 75.

At Alexandria, there are no developments either with regard to the volume of trading or prices. The condition of the crop is reported to be satisfactory and progress excellent with the result that the small premium which was being paid by private buyers in upcountry centres over the prices fixed by the Cotton Commission is gradually disappearing. Foreign interest is still centred more on Ashmouni than on the longer staple varieties in which sales till the end of August for supply from the new crop amounted to a little over 60,000 bales, which constitutes more than half of the total quantity of sales effected so far. The proportion of Karnak and Giza in this total constitutes about less than 20 per cent. each, though when Indian and the U.S.A. interest on a larger scale materialises, this ratio is likely to change as the longer staple varieties are more favoured by these countries.

With an estimated increase of 554,000 bales in the official estimates in the U.S. cotton crop announced yesterday, prices in the New York market had a further small setback. But for the fact that cotton now stands near the loan level, the effect of this official forecast would have been more bearish. It is, however, likely to have wider repercussions in the world markets as the season advances.

The following are the latest available quotations from New York, as compared with those a week and fortnight before:

	8-9-53	31-8-53	25-8-53
Spot	33.75	33.75	33.80
October	33.30	33.33	33.54
December	33.52	33.53	33.80
March	33.81	33.86	34.00
May	33.82	33.86	33.96

ART SILK YARN FULLY STEADY

(From Our Own Correspondent)

BOMBAY, *9th September*

The art silk yarn market passed through yet another short week, the number of sessions being limited to only three. For the market remained closed on the 5th inst., and to-day. This brief period witnessed a further broadening of activity. Operators showed greater inclination to enlarge their commitments, induced by encouraging reports from consuming centres and depletion of floating stocks. The values of art silk yarn forged ahead. The improvement was, however, short-lived, as, yesterday, profit-taking wiped out a portion of the earlier gains. Nevertheless, the closing rates were higher than those at the end of last week and the undertone of the market was fully steady.

Now that the Government of India has, as reported last week, extended its policy of restriction on imports of art silk yarn to include all varieties, trade circles feel that the market would experience a shortage of supplies in the coming weeks. This, coupled with the revival of sales in rayon fabric markets leading to a larger demand for yarn, will, it is feared, bring about a sharp rise in prices of art silk yarn. It is, therefore, urged that the Government of India should retrieve its decision and thereby enable the rayon goods manufacturing units to supply handloom weavers adequate quantities of art silk yarn at low prices.

In the forward section, 150 September delivery contract rallied 12 points to Rs. 797 on Friday, but reacted to finish lower at Rs. 792 yesterday, the net gain over the week being Rs. 7. Business in October contract commenced at Rs. 790 on the 3rd inst. After improving to Rs. 800 the following day, it slided down to Rs. 798 yesterday. In the ready section, 120 Japan and 120 Italy gathered an anna and a half each to Rs. 4-3. 120 Italy and 150 Italy were higher, each by an anna, the former at Rs. 4-3 and the latter at Rs. 40.

The table below gives the prices of art silk yarn quoted yesterday, as compared with those on 29th and 26th August, 1953:

	8-9-53	29-8-53	26-8-53
	Rs. a.	Rs. a.	Rs. a.
150D August (per case of 200 lbs.) ..	—	781 0	775 0
150D September ,, ,, ..	792 0	785 0	776 0
150 October ,, ,, ..	798 0	—	—
120 Japan (per lb.)	4 3	4 1½	4 1
150 Japan ,, ...	4 3	4 1½	4 0½
120 Italy ,, ...	4 3	4 2	4 1
150 Italy ,, ...	4 0	3 15	4 2

The staple fibre yarn section displayed a firm trend during the week under review. The chief bullish factor which imparted strength to the section was a rumour regarding the possibilities of a revision of the Government's import policy in such a way as to cover only yarns of counts 80s and above—single and folded. Another helpful factor was the expectation that the Yarn Merchants' Association, Bombay, would not interfere with free trading. The rumours about the Association fixing floor prices for staple fibre yarn were also discounted by traders. The buying support that ensued, as a consequence, lifted up the values, which persisted till the close yesterday. Thus, staple fibre yarn 2/40s September contract firmed up from Rs. 674 to Rs. 697.

GROUNDNUTS FIRM

(From Our Own Correspondent)

BOMBAY, *9th September*

The oilseeds market remained closed on the 5th inst. and to-day. In the remaining days of the week, the market presented a mixed trend. Ready deliveries in the groundnut section soared up to new high levels on bull squeeze, occasioned by scarcity of floating stocks in groundnuts. But forward deliveries in the new crop lacked buyers, consequent on reports regarding prospects of a bumper crop this season. The linseed section also displayed a similar trend in sympathy with groundnuts. There was a bear-bull tussle in September delivery in castorseeds, with the result prices experienced wide fluctuations. May delivery, however, presented a generally easy trend. But spot in castorseeds improved on covering by bears.

In the groundnuts section, Bold F.A.Q. shot up from Rs. 51-4 to Rs. 53-8. August-September delivery was done higher by Re. 1-4 at Rs. 49-8, while December-January delivery ruled quiet at Rs. 31-14. Khandesh quality, however, advanced from Rs. 52-4 to Rs. 53-8. Groundnut oil ready rallied Rs. 3 to Rs. 31, and railway receipts, Rs. 2-4 to Rs. 30. September delivery was done at Rs. 26-14, as against Rs. 25-12. October delivery lost Rs. 2 to Rs. 22-12. But, November delivery gained As. 5 to Rs. 18-14.

Linseed Bold ready firmed up from Rs. 29-12 to Rs. 30-8. August-September delivery gained As. 2 to Rs. 30-4, while October-November delivery lost As. 12 to Rs. 28. February-March delivery changed hands at Rs. 24-4, as against Rs. 24-14. Linseed oil, however, was higher by As. 3 at Rs. 16-3.

Among castorseeds futures, September delivery, which opened at Rs. 142-4, as against Rs. 145-4, fluctuated between Rs. 154-12 and Rs. 148, before closing at Rs. 154-8. May delivery, on the contrary, sustained a loss of Re. 1-14 to Rs. 124-10, the lowest touched during the week. The highest touched was Rs. 126-14. Of the spots, Madras quality improved from Rs. 28-12 to Rs. 31. F.A.Q. rallied Re. 1-12 to Rs. 30-8. Castor oil B.S.S. was up by As. 6 at Rs 17-12 and I Pressure by As. 4 at Rs. 17-6. Commercial quality, however, was unchanged at Rs. 16-4. It is reported that total tenders delivered in castorseeds September so far is 3,700 candies.

Among other seeds, *kardi* Bold ready disclosed a gain of As. 4 to Rs. 26-4. August-September delivery was quiet at Rs. 25, while October-November delivery lost As. 2 to Rs. 23-12. Niger F.A.Q. was down by Re. 1 at Rs. 36, while Madras ready gained As. 4 to Rs. 36-12.

The following table shows the prices of oilseeds and oil on the 9th inst., as compared with those at the end of the previous two weeks.

	8-9-53	2-9-53	26-8-53
	Rs. a.	Rs. a.	Rs. a.
Groundnuts—

LINSEED LOOKS UP

(Messrs. A Bradley & Co.)

CALCUTTA, *7th September*

Linseed prices ruled firm during the week under review. Although activity was on a limited scale, the undertone was steady. Local sellers showed little interest, owing to firm conditions ruling at the producing centres. Moderate interest was shown by crushers at lower prices and small ready lots changed hands at prevailing prices. The oil section was firm, following improved demand from *vanaspati* buyers and better undertone in groundnut oil. Activity was reported on a slightly larger scale.

Latest quotations are: Ready Rs. 21 and September-October Rs. 21 per maund.

SUGAR EASY

(From Our Own Correspondent)

BOMBAY, *9th September*

With commendable speed and practical realism, the Central Food Ministry has retrieved its earlier erroneous decision to hand over the imported sugar to the Bombay Sugar Merchants' Association for sale in the market. The Ministry has now reverted to the original idea of distributing the sugar to the diverse group of consumers and traders on the basis of tenders. Tenders up to 2,500 bags of sugar have already been accepted in full for British refined sugar, which is expected to arrive at the Bombay harbour on the 17th inst., and the tenderers have been asked to make full payment of the balance by to-morrow. With regard to further tenders for 8,000 to 10,000 bags of sugar, tenderers have been given a slightly larger allotment. The Food Ministry has also invited tenders for Mexican sugar (packed in cotton cloth) at Rs. 50 per maund. This decision has been greatly welcomed by the trade. The earlier decision, it will be recalled, entailed an avoidable addition of a few vested interests as middlemen, which would have resulted in higher prices for consumers had it been accepted.

The Government of India released, on the 5th inst., 100,000 tons of sugar for sale in the free market, with a view to meeting the heavy demand, pending arrivals and deliveries of imported sugar. This release is out of the 240,000 tons of unreleased stocks with the mills. This is a welcome step, indeed, and is, incidentally, in accordance with the suggestion put forward in these columns two weeks ago.

The acceptance of tenders for British refined sugar, invitation of tenders for Mexican sugar, release of 100,000 tons for sale in free market and the announcement of the Government's decision to purchase a further 100,000 tons of sugar abroad have all combined together in not only checking the rising prices but also bringing about a downward trend in both the spot and forward prices. Forward sales in British refined sugar have already commenced, the rate actually quoted at present being Rs. 86 per bag ex-godown. The forward section of the Bombay sugar market, which had firmed up to Rs. 87-14 on the 3rd inst., receded to Rs. 86-12. Owing, however to the tight stock position and to rumours of the late arrival—by a week—of British refined sugar, the price is quoted higher at Rs. 88-4 per bag to-day. The prices of sugar in the spot section have also declined. Thus, small, medium and large grain sugar are quoted at Rs. 89, Rs. 91 and Rs. 95, as against Rs. 91-8, Rs. 93 and Rs. 95 to Rs. 97, respectively, in the previous week. The demand is good.

There was a further fall in arrivals of sugar into the Bombay market during the week under review. The quantity that actually arrived was 11,000 bags, as against 13,000 bags last week and 18,000 bags two weeks before. The stocks with the spot trade are estimated at 20,000 bags, which include wet sugar also.

SUGAR PRICES MAINTAINED

(From Our Own Correspondent)

HAPUR, *8th September*

Crystal sugar markets remained steady during the week under review. This was particularly so at the ports of Bombay, Madras and Calcutta, despite the recent announcement that substantial quantity of imported sugar would reach these ports before the end of this month. Prices of sugar advanced at Madras, due to better demand and low stocks. Bombay remained extremely steady under the pressure of pre-festival demands, owing to insufficient arrivals, the Deccan sugar mills being conspicuously absent, in spite of their getting special quota. They are withholding sales in anticipation of higher prices in mofusil centres. The stock position at the ports is thus very tight and there are growing apprehensions that imported sugar, when received, may not be sold at cheaper rates. The Government of India has released a further quantity of 100,000 tons of sugar for free sale this week. In North Indian markets, offers are still reserved, while there is good enquiry from importing areas.

The latest sugar quotations (per maund) are: Ambala Rs. 31-15-9, Amritsar Rs. 32-4, Delhi Rs. 32-6, Jullundur Rs. 31-2, Agra Rs. 31-2, Hapur Rs. 31-4, Kanpur Rs. 31, Mathura Rs. 30-14, Meerut Rs. 30-14, Muzaffarnagar Rs. 31-4, Patna Rs. 31-4, Calcutta Rs. 31-12, Madras Rs. 34-12, Bombay Rs. 33-12, Bhavnagar Rs. 33-6, Nagpur Rs. 32-15-6 and Indore Rs. 30-11.

The *gur* markets remained quiet to steady. There was moderate export enquiry in the market and a few wagon-loads were sent to Gujar and West Bengal. As there was short production last year, due to extensive crop damage in West U.P. districts, very little *gur* stock is now left here and in the adjoining areas. In view of the very attractive prices, it is anticipated that the *gur* manufacturing season will start early this year.

Gur advices from South Indian *mandies* report fairly steady conditions. New *gur* arrivals at Baramati were fairly satisfactory and found good buyers from Hyderabad, Gujrat and Bombay districts. The undertone remained steady. The railway booking condition also remained satisfactory. Ankapalli was steady with moderate demand. Kolhapur, Shrirampur and Kopergaon remained quiet with only poor offtake. The current *gur* quotations (per lb.) are:

Baramati: new yellow Rs. 25 to Rs. 25-8 and old *kesari* Rs. 22-12 to Rs. 23-8; Ankapalli Rs. 21-4 to Rs. 21-8; Amritsar Rs. 18-8 to Rs. 19; Ambala Rs. 18-8; Delhi Rs. 22; Jullundur Rs. 22 to Rs. 19; Agra Rs. 22 to Rs. 16; Hapur Rs. 20 to Rs. 17; Kanpur Rs. 22 to Rs. 19; Mathura Rs. 18-12 to Rs. 16; Meerut Rs. 21 to Rs. 19; and Muzaffarnagar Rs. 22 to Rs. 19; Calcutta Rs. 21 to Rs. 23-8; Madras Rs. 23 to Rs. 27; and Bombay Rs. 23 to Rs. 28.

JUTE GOODS RECOVER AT CLOSE

(From Our Own Correspondent)

CALCUTTA, *8th September*

Although over the week-end and yesterday there was a small recovery on account of bear covering, generally easy conditions invaded the jute goods market during the week, and prices lost on balance visibly. Overseas enquiries were very poor, and total sales of this week, which were mainly for internal consumption, were only an insignificant quantity and did not mean anything to mills which have huge stocks of hessian and sacking goods. Mills were, therefore, cautious and showed no pronounced anxiety to sell in this declining market; but the behaviour of other stockists and speculators was different. They were bent upon selling as much as they could in a market where buyers were not interested to increase commitments and where shippers were silent. This tendency on the part of the sellers of the above description made prices drop further.

Although only little business was done, specialities, especially paper-lined hessian, came in for special attention as the announcement which abolished the export duty on specialities as from 16th July has been clarified by the Central Board of Revenue to the satisfaction of the trade. As has already been stated in these columns, the Customs authorities here had felt that, in view of the wording of the earlier announcement, the duty on paper-lined hessian had not been withdrawn. Following this interpretation, export business in this particular variety of specialities came to a standstill. The matter was referred to the Government, and the Board has now announced that, as from 16th July, the duty payable on all jute goods, excepting standard cloth and standard bags (hessian and sacking), and such as light weight jute mesh and paper-lined jute bags stands withdrawn. It is expected that paper-lined hessian being very useful to foreign consumers will be exported in greater quantities. Production of specialities is at present low, and if exports increase more mills could produce goods coming under this description. This would be a welcome diversion for mills, if the present easiness in hessian and sacking prices continued.

STOCK & SHARE QUOTATIONS

Abbreviations:—D=Deferred shares. P.O.=Preferred Ordinary shares. Y=Accounts published yearly. H=Accounts published half-yearly. P=Company has Preference shares. T=Company has Debentures. N=Nominal quotation. x.d.=Ex-Dividend. c.d.=Cum. Dividend. i=Interim Dividend. f=Dividend for first half of the year.

Shares:—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery, and all other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends.—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year, they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly, dividends shown are for their financial year. Where, however, the accounts are closed half-yearly, dividends are shown separately for the respective half-years.

* Including bonus. x Sales and amount written off. (k) Investments.

(f) Made up of an interim dividend of Re. 1-12 per share on 1,20,000 shares and final dividend of Re. 1-10 per share on 2,40,000 shares of which 1,20,000 shares are bonus shares.

* The following explanatory notes relate to the abbreviations and marks shown on page 516 in the debentures section:—

H Option to repay on six months' notice, on any interest date after 31st December, 1951, at 102 per cent. Also redeemable out of a cumulative sinking fund of 1½ per cent. per annum (commencing in 1938) by drawings at 102 per cent. or by purchase at or 102 per cent.

(a) Option of repayment at any time at 3 per cent. premium.

(b) Bearer bonds of Rs. 1,000 each repayable at par.

(c) Bearer bonds of Rs. 1,000 each repayable on 31st July, 1959.

(d) Bearer bonds of Rs. 1,000 each with option of redemption in whole or in part at par on 30th June, 1952 or on any subsequent interest date at one month's notice.

(e) Returnable on or after 31st July, 1950, at Rs. 102-8 or at par after 31st July, 1955 on six months' notice in each case.

(f) Bearer bonds of Rs. 1,000 each with option of redeeming on 3 months' notice at ¼ per cent. premium after 1st March, 1954, but before 1st March, 1957, and 1 per cent. premium on or after 1st March 1957.

(g) Option of redemption on or after 1st July, 1949, at par.

(h) Option of repayject at any time at par at any time on or after 30th June 1947 on six months' notice.

MARKET GOSSIP

(Concluded from page 471)

tal gains, then it is not arguable that it should also have a right over a similar income in the shape of bonus. And in this country, where the avenues for squandering additional income are many, thanks to gambling dens, and the habit of saving is not so widespread, there is a great deal to be said in favour of enforcing a limited form of compulsory saving.

• • • •

The proposal is, therefore, unexceptionable. But it would be wrong to claim, as the Bombay Labour Minister did, a great deal in its favour, considering that the Bill contemplates the compulsory saving of bonus only in excess of three months' wages. Now that profit-margins are everywhere shrinking, it is unlikely that many establishments will be able to distribute more than three months' wages as bonus. The textile industry, the largest source of factory employment, is likely to distribute only two months' wages as bonus, or a little more than that. If the minimum had been prescribed, as was originally contemplated, at two months' wages, then the proposal might possibly have fulfilled its objective to some extent. As industrial profits now stand, the Bill is likely to remain a dead letter or of limited value only. It was, therefore, somewhat amusing to see the Minister singing the Bill's praises with such warmth, and even more amusing to see the labour spokesman holding out vociferous threats at the Government for having brought forward this measure. Both are counting the chickens before they are hatched.

• • • •

The second estimate (8th September, 1953) of the U.S. cotton crop, released by the Department of Agriculture this week, places the 1953-54 crop at 15,159,000 bales, as against the August estimate of 14,603,000 bales, and 15,136,000 bales in the 1952-53 season. The average output during the last 10 years has been 12,215,000 bales. The Department estimated that 23,737,000 acres of the 24,618,000 acres in cultivation on 1st July will be harvested this year with yield averaging 306.6 pounds of lint per acre. Last year, the yield per acre was only 282.7 pounds. The average yield during the last 10 years has been 271.4 pounds per acre. Be that as it may, the latest estimate of the 1953-54 crop is 554,000 bales above the earlier (August) estimate. It may be recalled that the August estimate of 14,603,000 bales was some half a million bales below the trade ideas of the new crop. The latest estimate is, therefore, very much above the original private estimates of the crop. It is now becoming increasingly clear that the U.S. will have a large surplus to find a market for in the 1953-54 season. The carry-over, as on 1st August, 1953, is placed well above five million bales. Thus, the total supply in the current season will aggregate over 20 million bales. If domestic mills absorb 9½ million bales, there will be an exportable surplus of over 10½ million bales. This is a very large surplus. Indeed, some traders doubt whether even three million bales out of this exportable surplus can be disposed of. Small wonder then, that the New York market has shown a tendency to decline. A severe slump, however, is ruled out, thanks to the price support programme and the possibility of U.S. farmers agreeing to a cut in acreage for next year, as they have already done in the case of wheat. The following table gives the trend of prices in the New York market in recent weeks:

(Cents per lb.)

	Before August estimate	After August estimate	Before September estimate	Current
Spot	34.05	33.80	33.75	33.75
October ...	33.73	33.62	33.35	33.31
December ...	33.91	33.73	33.59	33.52
March	34.14	33.84	33.87	33.81
May	34.15	33.83	33.90	33.82

It will be noted that, though the trend has been downward, there has been no appreciable fall in prices after the announcement of the second crop estimate.

• • • •

Next to the U.S. Pakistan is a leading exporter of cotton. It is, however, too early to estimate the exportable surplus in that country. Pakistan commenced its 1952-53 season with a carry-over of about 5 lakh bales, which, together with the season's crop of 19 lakh bales, made an over-all supply of nearly 24 lakh bales. Domestic consumption is placed at between 3 and 4 lakh bales, while foreign offtake has accounted for 16½ lakh bales. This leaves a carry-over of about 3 lakh bales at the beginning of the current season. The 1953-54 crop is estimated at about 15 lakh bales. Thus, the over-all supply in Pakistan is likely to be of the order of 18 lakh bales. Domestic consumption may be expected to absorb a little more than it did in the 1952-53 season, thanks to the increase in the spindles installed. If the mills and other consumers take about 4 lakh bales, the exportable surplus will then be of the order of 14 lakh bales. This may not be a large surplus for a country which exported 16½ lakh bales in the 1952-53 season. But there are two factors which must be remembered. In the first place, the actual crop may turn out to be higher than the present estimate of 15 lakh bales. In that case, exportable surplus will increase. Secondly, foreign offtake will depend on the level of world textile activity, and on the extent to which Pakistan's prices are competitive *vis-a-vis* other suppliers'.

MARKET REPORTS

(Concluded from page 505)

Ready 40" 10 oz. hessian opened easy at Rs. 43-4 last Wednesday. Shippers were in no mood to buy despite offers at discounted rates, and weak holders under the fear of the continuation of the declining trend, preferred to convert into cash as much of their possessions as they could at the lower rates rather than wait indefinitely and block their investment. Thus bears were aided. The attempt of mills to secure business for the January-March and the October-December positions had little effect on the shy buyers. Towards the end of the day, however, local covering brought in a ripple of activity and quotations for both hessian and sacking registered fractional gains. On Thursday, however, conditions took a turn for the worse and 40" 10 oz. hessian lost to Rs. 42-13 while B. twills were thrashed down to Rs. 94-12 from an overnight rate of Rs. 96-2. Scattered sales were recorded, but buyers for moderate quantities kept out of the market. Prices were further affected on Friday, and the two constructions were hammered down to Rs. 42 and Rs. 93-6 respectively. There was, however, moderate activity and prices were subjected to wide fluctuations in the downward direction by bears and bulls. On Saturday, 40" 10 oz. hessian recovered to Rs. 42-6 and B. twills to Rs. 94-12 following bear-covering. Even these rates were considered too low by mills who did not make offers. The rates have since further improved to Rs. 42-8 and Rs. 95 respectively.

The raw jute market was extremely quiet, as mills considered that in view of the decline in the prices of jute goods, the time was not appropriate for making purchases of raw jute. Some business was done earlier in special Pakistani cuttings at Rs. 80 a bale. Sellers were anxious to do business, although arrivals of the new crop were small. A quantity of 25,000 maunds of locally supervised northern jute bottoms changed hands at Rs. 27-8 a maund. New crop Assam bottoms were quoted at Rs. 26-8 and middles at Rs. 29-8. Pakistani new crop middles and bottoms were priced at Rs. 32 and Rs. 28-8 respectively.

PEPPER STEADY TO FIRM

(Messrs. Parekh and Co.)

BOMBAY, 8th September

During the earlier part of the week, the session under review was once again short owing to intervening holidays. The pepper market ruled steady to firm in view of the improved enquiries from New York for shipment by nearby steamers. Some business for shipments by steamers sailing during the first week of September was done at as high as $1.06. Locally, whole September shipment was traded in at $1.04, while October shipment changed hands at $0.97. In the latter part, however, the market ruled quiet in sympathy with New York, where trading proved a quiet pre-holiday affair owing to the approaching "Labour Day" holiday. Knowledgeable sources among the trade expect a general improvement in the pepper trade, during the coming months because of the following reasons, among others:

(1) Pressure from Sarawak appears to be receding, though slowly, nearly half of the total production of Sarawak black having been exported;

(2) Sources close to Lampong have revised their estimate of Lampong black to about 3,500 tons, owing to a partial failure of the crop in the Island. Lampong crop being thus smaller than earlier expectations, there is no selling pressure from that source, even though the harvesting of the main crop will be ending very soon;

(3) development of autumn demand both in the U.S.A. and on the Continent; and

(4) selling policy of the Indian grow

ESTATE DUTY BILL

THE debate on the Estate Duty Bill, which was adopted by the House of the People on Tuesday this week, was, indeed, a marathon performance. The House considered 387 amendments, of which 52 were accepted. It hammered at the Bill for no less than 92½ hours. All this was well worth doing, for an important measure, such as the Estate Duty Bill, ought to receive expert and close legislative supervision. So strong was the opposition in the initial stages of the debate that it looked as though the Bill would not receive the consent of the House during its current session. If, however, this expectation did not materialise, it was because of the Finance Minister's keen sense of humour, by which he allayed some of the minor fears, and of his unfailing courtesy to the point of view of the Opposition. He did not, of course, make any major concessions. But he was good enough to meet, at least, some of the legitimate objections which had been raised in Parliament. In fine, the country owes it to his powers of gentle persuasion that the Bill was carried through without generating the ill-will which a few less well-informed but more vociferous men might have earned for the measure.

If the Bill has finally ceased to frighten at least most of the people whom it will affect, it is because Mr. Deshmukh laboured hard to show that the Duty would not weigh as heavily as was formerly feared. He accepted an amendment which raises the exemption limit for non-Hindu undivided families, namely, those governed by laws other than Mitakshara, Marumakkathayam and Aliyasanthana, from Rs. 75,000 to Rs. 1 lakh, though the limit for others has been kept unchanged at Rs. 50,000. Also, he did well to emphasise that the Bill contemplates the slab system of rates and not the step system, so that the total duty, likely to become payable on an estate, will be less than in countries with a step system. Mr. Deshmukh claimed that the incidence of the Duty would be lighter in this country than in many other countries which have a similar legislation and he gave the following figures in support of his contention.

Value of estate	India %	U.K. %	Australia %	Ceylon %	Pakistan %
Rs. 1.5 lakhs	2.5	6.0	3.0	5.0	6.0
Rs. 2.0 lakhs	4.38	8.0	5.2	7.0	6.0
Rs. 3.0 lakhs	7.08	15.0	7.1	8.0	8.0
Rs. 5.0 lakhs	10.25	24.0	10.3	10.0	12.0
Rs. 20.0 lakhs	20.0	50.0	26.1	16.0	30.0

Mr. Deshmukh's contention is only partly true, in that, as he himself is aware, a comparison of the aforesaid type is not on all fours. For conditions in one country are not similar to those in another. Again, it cannot be said that the incidence of the Duty is what the country can afford to bear having regard to its need for risk capital. What most people were worried about was that the proposed rates of Duty might be progressively raised in the coming years to meet the revenue requirements of the Government. It is, however, gratifying to find that Mr. Deshmukh made certain guarded observations which could be interpreted to mean that the rates are not likely to be raised for some years. His actual words deserve to be quoted here. He said:

"Now this does not contain any threat to anybody. It does not mean that the very next year, we shall try to see how we can raise them, because, if that was the intention, then we should not have given up this separate Finance Bill and included the rates here. I myself anticipate—and this is purely a factual anticipation—that it will be some years before we feel ourselves competent to deal with this question of rates with all the administrative experience at our back, and may be, at that time, we shall be in a position to evolve a far more satisfactory pattern than it is to-day. In any case, whatever pattern we evolve must appear as satisfactory in the circumstances which are going to prevail at that time. Therefore, it is fruitless to try and see what one could do in the future. All that I am convinced about is this: if we are to try to introduce any steep gradation in these rates, as, for instance, merely copy out figures from the U.K. and put 60 per cent. or something like that, I think evasion would be practised on a far larger and far more extensive scale."

It will be observed from the above quotation that Mr. Deshmukh has tried to be as non-committal as possible. But there is at least one significant observation, namely, his warning that any attempt at steep gradation in these rates would lead to evasion on an extensive scale. Earlier, Mr. Deshmukh further granted that, though the proposed rates would not, in his opinion, impede capital formation, there was a point beyond which "incentive is bound to be destroyed." He made this remark, it must be added here, in reply to those who argued that the rates of the Duty announced by him were unduly generous.

Are the former Princes liable to pay Estate Duty? Mr. Deshmukh could not throw much light on this question. This is because the Princes' privy purse and property rights are governed by certain constitutional provisions, by treaties entered into between the Central Government and the Princes concerned. It would be too hazardous, legally and constitutionally speaking, for a Finance Minister to forecast the effect which the Bill would have on the Princes. Although some of these matters are likely to figure in law suits in the Supreme Court, Mr. Deshmukh made out two points which, in his judgment, appeared to set forth their correct position. So far as the Princes' privy purse was concerned, he declared that, as it was subject to revision, it did not constitute a "property" which the Government contemplated for the purposes of this legislation. So far as the "purely private property" of the Princes was concerned, he said that, to his knowledge, there was nothing in the Constitution or the Bill which would save it from the levy of Estate Duty.

An important amendment, which was accepted by the Government and which does not seem to have received much attention, is that which relates to the exemption of insurance policies taken out for the purpose of paying the Duty. In the Bill, it had been clearly stated that no Estate Duty was payable in respect of the moneys payable under one or more policies of insurance, effected by the deceased on his life for the purpose of paying Estate Duty or assigned to the Government for the purpose, to the extent of the amount of the duty payable. In amending the Bill, the Government has whittled down this relief by fixing a limit to such exemption; the limit is fixed at Rs. 50,000. Surely, there is a great deal to be said for encouraging the honest taxpayer who is willing, even when he is alive, to provide, through insurance or otherwise, for the payment of the duty on his death. But, if the Government felt that it was giving away too large a revenue by this exemption, it could at least have prescribed a more generous limit than the Rs. 50,000, at which level it has sought to limit the exemption. So far as insurance companies are concerned, the amendment means a loss, as the incentive to insurance in the original clause has been considerably reduced.

If the Finance Minister was then somewhat ungenerous in his attitude towards those who are both wise and conscientious enough to provide for the payment of the Duty, he was at least more considerate in his treatment of agricultural property. Thus, an amendment to

clause 34 provides that, where any property passing on the death of any persons consists wholly or in part of agricultural land, and the principal value of the estate does not exceed Rs. 2 lakhs, there shall be allowed by way of rebate:

(a) In the case of an estate which consists wholly of agricultural land, a sum representing one-fourth of the estate duty payable; and

(b) in the case of an estate which consists in part only of agricultural land, a sum representing one-fourth of the Estate Duty payable on that part of the estate which consists of agricultural land, the duty on such part being a sum which bears to the total amount of Estate Duty the same proportion as the value of the agricultural land bears to the value of the estate.

The purpose of this concession is clear. Inasmuch as quite a large portion of investments of people of moderate means is generally in agricultural property and as it is very necessary to ensure a steady flow of capital investment in agriculture in order to enhance the productivity of land, this concession is quite welcome.

The position of gifts under the Bill, naturally enough, evoked considerable interest in Parliament. Gifts, which "shall not have been *bona fide* made two years or more before the death of the deceased," are deemed to pass on the death, provided that, in the case of gifts made for public charitable purposes, the period is fixed at six months. This time limit does not govern the case of gifts made in consideration of marriage of daughters, provided that such gifts do not exceed Rs. 5,000. Many members insisted that the period should be shortened or the time limit removed altogether. Mr. Deshmukh contended that experience in all countries had shown that gifts shortly before death were a familiar method of evading the Duty. In some countries, there was, therefore, a tax on gifts. He recalled that, in Britain, where the period originally prescribed was one year, the Government was compelled through "bitter experience" to revise it upwards to five years. The use of the expression "*bona fide*" in the context of gifts has led to considerable misgivings among the people. Many are afraid that this vague term may be so interpreted by the Estate Duty Collector as to harass the assessee. Mr. Deshmukh, therefore, did well in referring to this criticism. Explaining what was meant by "*bona fide* gifts," Mr. Deshmukh said that this expression had to be interpreted to mean that there must be no "secret arrangement or reservations." The intention was to provide that the transaction should be "real and genuine."

He regretted—and that rightly in our opinion—that donations to *Bhoodan Yagna*—that is, the movement for voluntary land gifts, initiated by Acharya Vinoba Bhave—could not be exempted from the time limit prescribed by the Statute, because the exact legal position of these lands and the rights of ownership had not been settled. The *Bhoodan Yagna* is a vague form of charity. One does not know how the lands given away by the donors have been or will be dealt with. Are the lands being given to the really needy? Is no favouritism being shown in the distribution of such lands? Is this movement in the larger interests of the nation? Will it, for instance, result in better productivity? Will it not aggravate the evil of fragmentation of lands? Until, therefore, it is clearly established that donations to *Bhoodan Yagna* are a form of charity that will be conducive to the economic growth of the country and/or that it will surely bring about a better social order, or that it is a form of charity which stands out in refreshing contrast to others, there is no justification for giving them special treatment.

Yet another issue which figured prominently in the debate, was the question of setting up an independent appellate authority to which an appeal could be preferred, if a party was dissatisfied with the decision of the taxing authority. The position now is that an appeal can be made to the Court when a question of law is involved. But, if there is a difference of opinion on matters relating to the facts of the case, the decision of the Central Board of Revenue is final. The opposition to this arrangement springs from the fear that the Central Board of Revenue will not interfere with and that the Board might even actively support and confirm the decisions taken by its subordinate officers. In this respect, Mr. Deshmukh's defence of the existing position, to say the least, was not very convincing. It is true that, from the purely administrative point of view, there is a great deal to be said for avoiding the delays inevitable in references to law courts. But that is not so important as the necessity for ensuring that justice will always be done. And how can one be sure of this, so long as the prosecutor and the judge belong to the same interest?

Mr. Deshmukh was afraid that, if appeals were allowed to an outside authority, it might lead to "confusion and lack of uniformity." This is an inconvenience which must be endured in order to see that no room is provided for an assessee to feel that he has been done an injustice. It is, however, gratifying to note that Mr. Deshmukh was not dogmatic on this question, for he asked that a "trial" be given to this method. Equally gratifying was his decision to move an amendment to the effect that the rules made by the Central Board of Revenue under its rule-making powers would be specifically subject to the approval of the Central Government and that the rules would also be laid before both the Houses of Parliament. Nevertheless, all this does not completely meet the demand for an independent appellate authority. If the ends of justice are to be served, the courts must be allowed to be the final authority on these matters. It is, however, to be hoped that, if the trial asked for by Mr. Deshmukh shows—as the experience of the working of the income-tax law has shown—the need for an independent appellate authority, no attempt will be made to resist the demand for such an authority on the ground that it would interfere with the smooth functioning of the administrative machinery.

Now that the House of the People has adopted the Estate Duty Bill in its entirety, it is well that the controversy over the appropriateness of the Duty in the Indian context should end. Even so, it is difficult to withhold a few comments, if only as a guidance to the future. Many official amendments, it is somewhat deplorable, were moved during the course of the debate. The amendments relating to the rates, the exemption limits, the share transfers, the re-definition of gifts were all introduced by the Government in the course of the debate. An amendment relating to public charitable purposes was introduced but withdrawn. Another clause—not of much significance, it is true—was deleted, because the Finance Minister himself could neither give nor obtain from his legal advisers any explanation for its presence in the Bill; it had been copied, as all the rest of the Bill has been, from the English Statute. However ably it might be argued that these changes were the result of careful after-thoughts on the part of the Government, or of a desire to accommodate the opposition, it would be difficult not to get the impression that adequate thought was not given to the Bill in the beginning. It is to be hoped that, in future, the Government will keep official amendments to any Bill that it may move to a minimum, and that whatever changes are deemed necessary will be made before the Bill is brought before Parliament. This will save the Government and Parliament much time, and, at least, some unjust criticism.

Again, the Finance Minister could give a no more satisfactory explanation for the rigour of the Bill's language than that the New Zealand Bill was equally complicated; he forgot that the New Zealanders use their own language in their Acts. The fact remains that, despite all the changes which have been made, the Bill remains a more complicated and verbose measure than any that received Parliamentary assent. It would be surprising if the administration of the new levy did not give rise to difficulties through imperfect understanding of the measure by the administrators. If the explanation is that the language had to be made rigorous in order to give no scope for evasion, it seems necessary to point out that to create confusion is scarcely the way to prevent evasion.

TAX RELIEFS IN AUSTRALIA

TAXPAYERS in Australia have every reason to feel gratified at the budget for the financial year 1953-54, presented by the Federal Treasurer, Sir Arthur Fadden, in the House of Representatives on Wednesday last week. For the budget, besides revealing a surplus—surplus budgets are unusual in these days of inflation—contains a series of tax concessions (worth about £A118.4 million), with a view to promoting higher levels of all-round productivity. Thus, the budget provides for a substantial reduction in company taxation and income-tax cuts averaging 12½ per cent. for salary and wage earners. The tax on public companies has been reduced from 7*s.* in the £ to 6*s.* for incomes up to £5,000 and from 9*s.* to 7*s.* for incomes above £5,000. Similarly, tax on private companies has been reduced from 5*s.* to 4*s.* for incomes upto £5,000 and from 7*s.* to 6*s.* for incomes above £5,000. Under the new income-tax, Australians at all ranges of income will, it is claimed, be paying "substantially lower" amount than their confreres in the U.K. and New Zealand.

Another important tax concession is that goods subject to sales tax varying from 20 to 50 per cent. will, in future, be taxed only at 16⅔ per cent. or less. A few essential goods, such as matches, are to be exempted from sales tax altogether. The other concessions proposed include abolition of entertainment tax and differential rates of tax on income from property, reduction in customs and excise duty on spirits by 21*s.* per gallon, increase of the exemption limit for pay-roll tax from £1,040 to £4,160 per annum, extension of the retention allowance of 10 per cent. to property income received by private companies, and enhancement of exemption limits for estate duty.

The foregoing tax concessions clearly indicate the anxiety of the Australian Government to give the utmost possible encouragement to individual effort, business enterprise, and individual and collective saving. To quote Sir Arthur Fadden: "We must now press on with the greatest tasks of developing our resources, expanding our industries, increasing our population and building up our national standards of life. . . so far as it is in the power of the Government to give this stimulus, this budget should provide it." This is, indeed, an admirable piece of economic judgment which the Governments—Central and State—in India will do well to emulate. As readers are aware, the Governments have not only failed to provide sufficient incentive to private enterprise by way of tax reliefs but also exhibited their eagerness to het in as much revenue as possible, even utterly disregarding, in some cases, the very canons on which taxation is based. Cess on sugarcane, additional excise on mill-made cloth and high rates of sales tax are instances in point.

Be that as it may, the chief factor which has rendered it possible for the Australian Government to give tax reliefs has been the substantial recovery in the country's economy from the difficulties of the year 1951-52, thanks to the firm conditions in the world wool market. The national income of Australia during 1952-53 was higher by £A300 million than that in the previous year. Again, the trading deficit of £A378 million was converted into a surplus of £A353 million. As a result, Australia's internal reserves rose to £A548 million, as against £A362 million, and export income amounted to as much as £A871 million, the second highest figure ever reached. What is more, the pressure of inflation has been reduced, if not altogether overcome, and the drastic import cuts will be relaxed to the extent of 10 per cent., with effect from 1st October next.

In view of all these, the Australian Federal Treasurer struck a note of optimism and declared: "Australia's export earnings are relatively high and our overseas reserves have been built up again; so, we can obtain all essential things we require from abroad. We have had an extraordinarily fortunate run of seasons, which for the time being, look like continuing." It is, however, difficult fully to share this optimism, for much depends on whether the favourable trends in Australian economy will continue, what with the present increased cost of industrial production and the consequent necessity to impose high tariff walls. As has been aptly remarked by a contemporary, Australian products are vulnerable to foreign competition even in the home market. The real value of the tax concessions proposed in the budget will, therefore, be gauged only by their results in improving productivity and lowering prices, thereby augmenting national earnings. Unless there are higher production and higher savings, the purpose of the budget will be defeated, the tax reliefs leading merely to renewed import restrictions.

BANK RATE IN BRITAIN REDUCED

INDIA MAY NOT FOLLOW SUIT

THURSDAY, 5 P.M.

THE week under review was a dull and drab one till the time was up for writing the notes for this column. But in the nick of time came news of two important developments which have transformed the week into an eventful one. First came the announcement that the British Bank rate had been reduced from 4 per cent. to 3½ per cent., with effect from to-day. Then came the news that the management of the Indian Iron and Steel Co., Ltd., and the Indian Standard Wagon Co., Ltd., has lifted the 24-day old lock-out. From the point of view of the share markets, both the developments should have a favourable psychological effect. The management of the I.I.S.Co., and Standard Wagon will have decided to lift the lock-out only after making sure that the majority of workers will resume work at the normal pace. This event, therefore, should, other things remaining the same, arrest the demoralising effect the Burnpur strike was having on the share markets all these days. The other event, namely, the lowering of the Bank of England rate, provides a strong support to the view that the peak of higher interest rates has passed. This means that, eventually, lower yields on the Gilt-edged and equities but higher prices for them will come to prevail, provided, of course, other things remain the same.

MARKET GOSSIP

• • • •

It was on 12th March, 1952, that the Bank of England raised its discount rate from 2½ per cent. to 4 per cent. Thus, after an interval of a little over 18 months, it has lowered the rate to 3½ per cent. The reduction, it will be noted, has been at a smaller rate than the increase. Why has Britain chosen to do so? Does the fact that it has done this a week after the I.M.F. meeting and two days after Mr. Butler had a secret meeting with President Eisenhower's Economic Adviser, Dr. Gabriel Hauge, signify anything? It is beyond our ken to say definitely whether there is any connection between the two. A guess, however, can be hazarded. Britain now seems to realise that U.S. co-operation for convertibility of currencies is still a long way off. There was, of course, quite a lot of talk on convertibility at the annual meetings of the I.M.F. and the World Bank, held at Washington last week. Both the babes of Bretton Woods commented favourably on the Commonwealth proposals and the British ideas on freer trade and payments were strongly supported. Others who spoke also stressed the urgent need to break down trade barriers and eliminate artificial restrictions. But the crux of the problem is the U.S. attitude. When will the U.S. respond to Mr. Butler's idea of "trade, not aid." The U.S. representatives have made it clear that their Government cannot make any move in this direction until the Commission on Foreign Economic Policy reports its findings. This means no action by the U.S. till about the middle of next year. But, evidently, Britain does not want to wait till then, with its fingers crossed. It must be anxious to push on with its export drive by taking time by the forelock. The reduction in the Bank rate is, perhaps, a step in that direction.

• • • •

It is common knowledge to economists that a country generally reduces its Bank rate when it is faced with possibilities of an economic recession. Britain raised its Bank rate, with a view to fighting inflation and correcting the deficit in its balance of payments position. Now, both these objectives have been achieved. Inflation is well under control and the balance of payments deficit has been converted into a surplus, with gold and dollar reserves having steadily advanced to a fairly comfortable level. Further, the terms of trade also have been running in favour of Britain for the past several months. Why then keep the Bank rate at as high a level as 4 per cent? Indeed, a position has been reached by Britain when the 4 per cent. Bank rate could easily be a disadvantage. The British banks and discount houses have been losing a part of their finance business to other markets, with the result that Britain has been suffering a sizable cut in its invisible export trade. Following the high level of industrial production and keen competition in export markets, particularly from Germany and Japan, a higher Bank rate may prove a handicap to British exporters. It will be recalled that, six weeks ago, the restrictions on acceptance credits were relaxed by the Bank of England with a view to stimulating exports. The reduction in Bank rate is probably the next logical step in that direction. British exporters will now be able to finance their business at cheaper rates of interest. It may be noted here that some of the Continental countries, as well as Commonwealth countries, lowered their Bank rates some time ago. Britain has now followed them.

• • • •

The question that is now being discussed in market circles here is whether India will follow the footsteps of Britain and lower its Bank rate. One reason why this question is at all raised is that India raised its Bank rate in November, 1951, soon after Britain did so. But that is no argument at all. What happened two years ago was purely a coincidence. Those who are not impressed with this explanation will do well to recall that, when Britain raised its Bank rate again, in March, 1952, from 2½ per cent. to 4 per cent., India made no change. Some say that the Reserve Bank's decision to-day to suspend the sale of 3½ per cent. 1961 National Plan Bonds which it was freely selling all these days cannot also be a pure coincidence. That, however, amounts to reading too much into the Bank's action. Our enquiries reveal that the Reserve Bank stopped selling this loan, because during the last two or three days, a few institutional investors turned out to be sellers and the Bank did not want to add to these sales, lest such should depress the market.

• • • •

There is, of course, no reason why the Reserve Bank should reduce the Bank rate. In the first place, India did not push up its Bank rate as high as was done by Britain. Secondly, the persent Bank rate is not in any way an impediment to the expansion of business. A mere reduction of ½ per cent. in the Bank rate may not give any perceptible stimulus to genuine economic activity, which is suffering from a series of disincentives unconnected with the Bank rate. On the contrary, it may prove a stumbling block to economic development by strengthening the hands of speculators who still dominate the scene. Thirdly, the effective Bank rate in India has been 3 per cent. ever since the first quarter of 1952, when the so-called Bill market scheme was ushered in. The commercial banks have been borrowing most of their requirements from the Reserve Bank at this rate. And, fourthly, so long as the Treasury Bill rate is less than 2½ per cent., the banks can raise funds at that rate by rediscounting their Treasury Bill holdings. Conditions are thus different from those in Britain.

• • • •

The lowering of the Bank rate in Britain may have some indirect benefits to India. The sterling loans held by the Reserve Bank of India will appreciate in value, thereby offsetting a part of the depreciation suffered when the Bank rate was reduced. Importers of British goods may get credit at London at a somewhat lower rate of interest. Competition for short-term funds in India from the Exchange Banks may not be as keen as it was at one time this, as well as last, year. This effect would, of course, be much more perceptible had the British Bank rate been reduced at least to 3 per cent. Even the Indian life insurers may get some relief in competition with the British insurers in this country, inasmuch as the effective yield on the latter's total investments will go down. Finally, there may be a sentimental rise in the value of the Gilt-edged securities. The British Government's action may induce confidence among investors, confidence born of the belief that there may be no further rise in interest rates. If this belief gains ground, the 4 per cent. loans and the long-dated loans offering a little less than 4 per cent. return will be the largest beneficiaries.

• • • •

Since the above was written, France, too, has reduced its Bank rate, but details are lacking. The Bank of England described the change in its rate as a "technical adjustment" made to ensure that the Bank rate did not get out of touch with market rates.

• • • •

Although the management of the I.I.S.Co. has lifted the lock-out, the Action Committee, which is defying the lawful union of the Works at Burnpur, has not called off the strike. It therefore, remains to be seen what turn the new situation at Burnpur will take. The Action Committee may try to give trouble by resorting to picketing. But nothing may come out of it, if the workers have learned a lesson. Nevertheless, it is better to wait and see, instead of rushing to take a view of these scrips. The technical position of these shares is also a little confused, in that, as against heavy short-sales, a few parties have bought some lakhs of the shares, evidently in anticipation of an early end of the lock-out. A tussle may well develop between the bulls and the bears, the outcome of which is difficult to predict. Further, all the other sections of the stock market, as well as the commodity and bullion markets are depicting a downward trend. A change in the British Bank rate cannot have anything but a slightly sympathetic effect on shares. A distinct and a sustained change in the trend of the markets can be expected only if the Government of India's economic policy undergoes a change in favour of private enterprise. Will there be any real change of heart in the near future? Mr. Kidwai was in Bombay this week holding secret discussions with top-ranking business leaders for solving the unemployment problem. It remains to be seen whether any good will come out of it.

• • • •

For the past several days, the pound sterling has been ruling weak in terms of the U.S. and the Canadian dollar. The sterling has fallen well below its parity with the U.S. dollar for the first time during the past 10 months, the net depreciation over the week being over one cent. The spot sterling, which stood at $2.80.11/16—$2.80.13/16 a week ago, touched a low of $2.79½—$2.79¾, that is, ¼ cent below the parity rate on Tuesday this week. Since then, there has been a fractional rise to $2.79¾—$2.80. But, as compared with the rates that prevailed towards the close of August, they show a perceptible fall. On 31st August, for instance, spot sterling was being quoted at $2.81¼—$2.81½. The forward rates, too, have declined more or less to the same extent, which means that the market expects sterling to be still cheaper during the next three to six months. The Canadian dollar has also been ruling strong; at one time, the spot rate on Montreal was as low as $2.73¾—the worst level for the pound since the end of March, 1953. There has been a slight recovery since then, but, on balance, there has been a loss of 0.25 cent. It may be noted here that on 31st August, 1953, the spot rate on Montreal stood as high as $2.77¾. This means that, during the past fortnight, the pound has weakened by 2 cents in terms of the Canadian dollar. In consonance with these movements, the Indian rupee, too, has been marked down a little.

• • • •

The decline in the value of the pound, as noted above, has not led to any feeling of pessimism in London City circles. They regard it purely as a seasonal development. Traditionally, sterling-dollar exchange rate moves against Britain as autumn approaches, for heavy American staple imports such as wheat and cotton commence at this time of the year and exchange has to be fixed by the importers not only in Britain but also in other parts of the sterling area. Again during the past 14 years, these commodities were being imported into Britain by the Government and were, therefore, paid direct from dollar reserves at the Bank of England. With the freeing of wheat and partial freeing of cotton, private importers are once again buying their dollars in the open market. This is the chief factor for the substantial fall in the pound.

• • • •

There are, of course, other causes, too. One is that, in the past, the dollar rate had moved up to a high level because Japan bought a substantial amount of sterling by selling dollars. This support to the pound now seems to have disappeared. Another reason is said to be the relaxation of the restrictions on acceptance credits six weeks before. This has led to importers from Britain not buying sterling immediately; they have now more time to settle their import bills than about a month and a half ago. Yet another reason is that, when everything was bright, some had oversold dollars against sterling. They are now believed to be covering these sales. The conclusion of London money market circles is that the setback sufferred by sterling in the past two weeks is only of a temporary nature and that there is nothing tragic about it. It is pointed out that, even at the present rate, the pound is nearly 9 cents above the lower limit, notwithstanding the fact that a large part of the import trade has now been turned over to private trade and that import restrictions have been considerably relaxed. If only the Bank of England had taken it into its head not to let the pound fall, it could have easily done so. But the fact that it did not do so is an indication of its confidence in the inherent strength of the pound sterling. Moreover, there is no justification for the Bank to intervene now, because the pound is still well above the lower limit of $2.78 per £. After all, the present policy of the British Government is to let the foreign exchange market function as freely as possible within the upper and lower limits of $2.82 and $2.78.

• • • •

We invite readers' attention to the very interesting discussion of the problem of power resources in underdeveloped countries by Mr. Eugene R. Black, the Chief of the World Bank, which appears elsewhere in this issue. We concur wholeheartedly with the views expressed there about the imperative necessity to provide adequate incentive to those who are engaged in power production. The gist of Mr. Black's argument is that, if power is made cheap by charging rates that do not provide an economic return, the power undertakings will be denied the ability to raise not only the finance needed for expansion but even the funds to maintain their existing plants in good order. If cheap power is obtained at the sacrifice of all hopes of building up more power, it would certainly cost the country dear in the long run.

• • • •

And yet, this is precisely what is happening in this country where private electrical undertakings are prevented from earning sufficient profit that will permit them to expand their power resources. The profit level is controlled by a reference to the capital base on which they are not allowed to earn more than 5 per cent. This restriction does impose a severe strain on these undertakings which find that they cannot possibly attract, on the terms that they can afford to offer, risk capital to this essential enterprise on anything like the scale on which such capital has to be attracted, if power output has to be augmented. It is a pity that this antediluvian restriction is still allowed to mar the statute book and that no attempt is being made by the Government to rectify the error. Since the time this limit was imposed, there has been a steep increase in the cost of electrical equipment, an upward revision of the Bank rate and a general re-alignment of all interest rates at higher levels. And yet, the Government expects these undertakings to perform the economic miracle of borrowing at a high rate in order to earn a very meagre and inadequate return. The least that the Government should do is to increase the 5 per cent. limit to 6 per cent. and also allow a certain additional return to the undertakings on the understanding that such return would be used only for purposes of development and expansion. Those who argue that it would lead to cost-inflation in the industrial sphere generally ignore the fact that electricity charges form a comparatively minor element in the total cost of manufacture. In any case, the community must pay for development; for the alternative may well be that it will have to do without such development.

• • • •

The Pakistan Government's decision to impose an export duty of Rs. 60 per bale on short-staple cottons has naturally enough been followed by a decline in the prices of these cottons. Sind Deshi, for instance, has declined by nearly Rs. 10 to Rs. 11 per maund, as compared with the prices which were ruling before the announcement of the Government's decision (9th inst.). New crop Sind Deshi is now quoted at Rs. 59, as against Rs. 68 before the duty was reimposed. But the point about the decline in the prices of these cottons is that the decline is roughly equivalent to the duty itself; the duty works out to about Rs. 12

SHARES RULE EASY

TEXTILES DEPRESSED

(From Our Own Correspondents)

BOMBAY, *17th September*

THE Bombay Stock Exchange presented distinctly easy conditions during the week under review, under heavy unloading by those operators who had lost heavily in the cotton market, on account of steady fall in the values of cotton for some time past. Share values were marked down considerably. Besides, discouraging reports of cloth accumulations with trade in many centres, particularly Ahmedabad and Indore, induced liquidation in textile shares The sentiment was also adversely affected by rumours of a cut in cloth prices by one of the leading cotton mills in India. Again, renewed reports regarding slump in Wall Street caused nervousness among traders who feared possibilities of a similar slump in India. There were also other unhelpful factors such as slow progress of the Five-year Plan, lower output of steel at Tata Iron and Steel Works and reports of additional steel plant construction by the Government. The cumulative effect of all these factors was lack of confidence in shares. The undertone of the market was, therefore, easy, although, towards the close to-day, the sentiment of operators appeared to be slightly better.

With the exception of Indian Irons, steel shares lacked support and staged a retreat. Tata Deferreds, the leader of the market, were marked down to Rs. 1,797-8 yesterday, as against Rs. 1,835 last week. The lower level evoked some support and the scrip recorded a partial recovery to close better at Rs. 1,811-4. The net loss over the week amounted to Rs. 23-12. Ordinaries receded from Rs. 317-8 to Rs. 311-12 yesterday, but retrieved its position and finished at Rs. 313-12 to-day, the net loss being Rs. 3-12. Indian Irons, however, proved an exception and elicited good buying enquiries, on expectations of an improvement in the labour situation at Burnpur Works. After business hours, it was reported that the management had decided to withdraw lock-out orders. Two prominent bull operators were stated to have held large stocks of the scrips, amounting to as much as 700,000. To-day's closing quotation for this scrip was higher by As. 4 at Rs. 22-15, although, at one time yesterday, it had gone up to Rs. 23.

Textile shares were the worst sufferers this week. Bradburys slumped by Rs. 32-8 to Rs. 680. Central Indias dropped Rs. 9 to Rs. 147. Colabas receded by Rs. 6-8 to Rs. 62-8. Standards shed Rs. 6-4 to Rs. 300. Bombay Dyeings lost five points to Rs. 353-12 and Kohinoors four points to Rs. 286-12. Despite the increase in dividend from Rs. 5 to Rs. 6 for the year ended December, 1952, announced by the Directors of the Indore Malwa United Mills Ltd., the shares of this Company suffered a loss of Rs. 4-6 to Rs. 89-6. Phœnix and Podars fell, by Rs. 3-12 each, to Rs. 116-14 and Rs 121-4, respectively. Centurys were lower by Rs. 3-8 at Rs. 256-8 and New Greats by Rs. 3 at Rs. 145. Gokaks, Tata Mills, New Unions and Swadeshis were all neglected at Rs. 223-8, Rs. 39-1., Rs. 24 and Rs. 240, respectively. The corresponding quotations last week were Rs. 225-8, Rs. 11-8. Rs. 25-12 and Rs. 241-8. Apollo Mills, on the other hand, were a shade better at Rs. 2-8-6, although the dividend for the year 1952 was reduced from As. 5 to As. 4 per share. Simplex were transacted at Rs. 128-8 *ex-right*, as against Rs. 172, and Finlays at Rs. 248 *ex-right*, as against Rs. 323-8. Ahmedabad Advances were fully steady at Rs. 135-12.

Bank shares were subjected to selling pressure and suffered losses. Imperial Fully Paids declined by Rs. 2-8 to Rs. 1,827-8. Bank of Indias and Central Bank new shares lost As. 8 each to Rs. 155 and Rs. 67 respectively. United Commercials were lower by As. 4 at Rs. 36. Union Banks were unimpressive at Rs. 6-6. Central Bank old shares, however, were unaltered at Rs. 63-12.

The miscellaneous section also displayed easiness in sympathy with the general trend of the market. Bombay Burmah olds dived down to Rs. 327-8, thereby losing Rs. 14-6, and new shares slipped by Rs. 5-10 to Rs. 121-14. Wimcos sagged from Rs. 234-2 to Rs. 228-8. Belapurs fell by Re 1-8 to Rs. 236 and A. C. Cs by Re. 1-4 to Rs. 167-8. National Rayons and Killick Industries were lower by As. 12 each at Rs. 111 and Rs. 154-4, respectively. Tata Chemicals lost As. 6-6 to Rs. 8-5-6 and Tata Oils As. 4 to Rs. 30 *ex-div.* British India Corporations fetched Rs. 8-8-6, as against Rs. 8-12-6.

Weakness was in evidence in the mining and engineering section too. Alcock Ashdowns dropped Rs. 3-2 to Rs. 296-14. Shivarajpurs eased by Re. 1-8 to Rs. 54-8 and Premier Constructions by Re. 1 to Rs. 83. Bombay Burma Petroleums were a shade lower at Re. 1-4-9. Indian Coppers, however, evoked some buying support and slightly improved to Rs. 2-14-3.

Electric company shares also participated in the downward trend. Tata Powers and Andhra Electrics receded by Rs. 12-8 each to Rs. 1,398-12 and Rs. 1,330 *ex-right*, respectively. Ahmedabad Electrics fetched Rs. 11-9, as against Rs. 13-2. Bombay Suburbans declined by As. 15 to Rs. 119-1 and Tata Hydros by As. 12 to Rs. 141-12.

Among transport group shares, Scindia Steams lost As. 4-6 to Rs. 13-5-6. India Steamships, however, was fully steady at Rs. 7-4.

• • • •

Calcutta Stock Exchange

CALCUTTA, *15th September*

Conditions on the Calcutta Stock Exchange improved further during the week under review, with a small increase in the number of transactions. The raising of the exemption limit of Death Duty for non-*Mitakshara* property from Rs. 75,000 to Rs. 1 lakh was noted with enthusiasm. Tea shares provided striking features and were consistently sought for throughout the week. The strong demand for tea in the auctions, at both Calcutta and London, and the improvement in prices were factors which changed the idea of operators with regard to tea shares. Larger volume of business at hardening rates was in refreshing contrast to the trend in recent weeks and imparted general strength to the market. Sugar shares were also counters of special interest to operators. Although Indian Irons fluctuated within narrow limits in either direction, the counters were generally steady. The labour situation in Burnpur has improved, and it is expected that, before long, the remaining workers would be back on their jobs and thus pave the way for the resumption of 100 per cent. production.

Notwithstanding such improved sentiment, jute shares—these are of great importance to the Calcutta market—remained idle. This could not have been otherwise, in view of the unsatisfactory prices obtained for jute goods. Market circles feel that only the abolition of the export duties on jute goods will reduce stocks with mills and drive away the dullness now prevailing in jute counters. The trend to-day was definitely better, following New Delhi's announcement reducing the export duty on hessian from Rs. 275 to Rs. 120 per ton with effect from to-day. Gains were also registered.

Sectionwise, teas were cynosures, for reasons already stated, which resulted in a remarkable increase in business. Gains were widespread. Some of the more important and impressive gains of the week are indicated in the following table:

	Opening or previous rate	*Highest Realisation*	*Gain*
	Rs.	Rs.	Rs.
Banarhat	290	312	22
Hantapara	145	165	20
Patrakola	106	119	13
Choonabhutti	220	228	8
Central Cachar	53	58	5
Killcott	10½	13½	3
Jayabirpara	18½	21½	2½
East Indian	16½	19½	2½
Teloijan	9½	10¹¹	1⅛
New Chumta	17	18½	1½
Hasimara	25½	26¹	1½
Nambhurnadi	5½	7	1½
Hattikhira	9½	10½	1½
Dhekakhat	10½	11	½
Tea Ali	20	20½	½

Next to teas, sugar shares occupied the attention of operators. The high levels touched last week were well maintained. Thus, Cawnpores were put through at Rs. 36-8 and Ramnugger Canes at Rs. 18-4. Dharbangas were strongly held at Rs. 8-1. Dyer Meakin Breweries at Rs. 5-15 added an anna. Balrampores were wanted at Rs 8-14. Champarans were, however, a shade lower at Rs. 25-8.

The improved conditions in Burnpur were cheered in the market, and Indian Standard Wagons spurted from Rs. 88 to Rs. 104-8. Indian Irons were in the limelight, and although the rate did not move farther than Rs. 22-15 for the major part of the week, the counters were nevertheless steady. To-day's rate was slightly better at Rs. 23. During August, 1953, the production of pig iron in the Indian Iron and Steel Company, Ltd. was lower at 20,230 tons, as against 21,150 tons in July. Steel ingots amounted to 7,710 tons (8,370 tons), and semis and finished steel to 4,190 tons (4,570 tons). The figures for July showed a great fall, which was further affected in August by labour trouble. Jessops were unchanged at Rs 22-11, Kumardhubis were done to-day at Rs. 7-7. Indian Galvanisings improved from Rs. 12 to Rs. 12-12.

The miscellaneous section provided selected features. India Steamships, at Rs. 7-5, carried the improvement recorded last week. Dunlop Rubbers were better at Rs. 28-2, as against Rs. 27-8, while Indian Cables eased from Rs. 19-1 to Rs. 18-14. B.I. Corporations recorded business at Rs. 8-10 earlier, while Jardine Hendersons were lower at Rs. 117. Martin Burns were sought at Rs. 17-12, F. & C. Oslers at Rs. 7-5, and Rohtas Industries at Rs. 7-6. An easing tendency was in evidence in Ganges Ropes at Rs. 168 and Indian Wood Products at Rs. 30, as against Rs. 171 and Rs. 30-8, respectively.

The jute section remained dull, practically throughout the week, but to-day, conditions were better, on hopes that exports of hessian would increase, following the reduction in hessian duty. Market circles aver that this is a prelude to the total abolition of the duty and that a similar treatment should be given to sacking. Howrahs opened at Rs. 23-2 and, after sagging to Rs. 22-15, reached the opening level. Fort Glosters were quiet at Rs. 380, Reliances at Rs. 15-1 and Waverley at Rs. 5-2. Nuddeas eased from Rs. 44-4 to Rs. 43-12. Anglo-Indias were to-day better at Rs. 207, as against Rs. 197 previously.

In an otherwise featureless coal section, New Beerbhooms were fractionally better at Rs. 18-4 and South Karanpuras advanced from Rs. 9-15 to Rs 10-5. East Indias were transacted at Rs. 22-15 and Equitables were unchanged at Rs. 36. Kalpaharis realised Rs. 41-2, Unions Rs. 23-2, and Burrakurs Rs. 9-3. Bengals changed hands at Rs. 508

Madras Stock Exchange

MADRAS, *15th September*

The Madras Stock Exchange ruled a shade better this week. Activity in the market was a little more broad-based than what it was a week ago. Textiles continued to evoke selective support on favourable export enquiries. In plantings, the upward trend witnessed in rubbers for some time past persisted this week also Teas, however, lacked vigour, despite the higher prices fetched for quality teas at recent auctions in Calcutta and London. Coffee scrips were quiet on lack of demand and continued accumulation of stocks. But miscellaneous and banking scrips came in for considerable enquiry. Consequently, business done in the market was sizable and prices generally disclosed fair gains.

In the textile section, Bangalore Woollens staged a sharp rise of Rs. 10 to Rs. 270. Cannanores gained Rs. 2 to Rs. 94 *cum-div.* and Sri Krishna Rajendras Re. 1-4 to Rs. 45-8. Radhakrishnas 'B' were As. 8 higher at Rs. 78-8. Cambodias put on As. 5 to Rs. 11-9. Maduras revealed a fractional rise at Rs. 38-6. But Malabar Spinnings and Coimbatore Spinnings reported a loss of Rs. 2 each to Rs. 140 and Rs. 40, respectively. Rajalakshmis were lower by Re. 1 at Rs. 81. Lakshmis, Rs. 50 paid-ups, were done at Rs. 80, as against Rs. 81.

Among Plantings, Rubbers were well supported. Malankaras rallied As. 8 to Rs. 118 *cum-div.*, and Travancore Rubbers As. 7 to Rs. 12-14. Peninsulars improved by As. 5 to Rs. 9-2. Thamaraparys and Teekoys gathered As. 4 each to Rs. 14 and Rs. 6-14, respectively. Rajagiris advanced by As. 2 and finished at Rs. 11-13. Thirumbadis and Mercaras were better at Rs. 3 and Rs. 3-1, respectively. Cochin Malabars were fractionally lower at Rs. 6-6½. Nilambur rubbers were unchanged at Rs. 9-2 *cum-div.* The Directors have maintained the dividend of 10 per cent. for the year ended 31st December, 1952.

Tea scrips presented a dull appearance. But for Highland Produces, which recorded a gain of As. 6 to Rs. 11, almost the rest of the scrips were either easy or unchanged. Thus, Peermades lost As. 8 to Rs. 26-8. Ouchterlonys and Kalasas were slightly lower at Rs. 4-1 and Rs. 11-14½, respectively. Haileyburias were done at Rs. 12-8 *ex-div.*, as against Rs. 13-8 *cum-div.*

Coffee scrips were colourless. Consolidated Coffees gained an anna to Rs. 18-8, while Coffee Lands were unchanged at Rs. 10-8. Kadur Coffees and Puthuthotams were quiet at Re. 1-7 and Rs. 3-9, respectively. But Neelamalais (tea and coffee) gained As. 2 to Rs. 3-15, whereas Stanes Amalgamateds (tea and coffee) lost an anna to Rs. 3-1.

In the miscellaneous section, Binnys improved by Re. 1-8 to close at Rs. 111-8 and Andhra Cements 'A' by Re. 1 to finish at Rs. 100-8. Berhampur Electrics advanced from Rs. 5 to Rs. 5-8 and Cochin State Electrics from Rs. 9-3 to Rs. 9-7. Mettur Chemicals hardened by As. 4 and closed at Rs. 4-8. Spencers showed a gain of As. 8 to Rs. 14-4 and Mysore Papers of As. 3 to Rs. 14-1. South India Salts, however, lost Re. 1 to Rs. 2 and Mysore Stonewares As. 5 to Rs. 8-12. India Sugars eased from Rs. 21-8 to Rs. 21-4 and Jeypores from Rs. 13 to Rs. 12-14.

In the banking section, Andhra Banks, Rs. 100 paid-ups, shot up from Rs. 103 to Rs. 110 and Rs. 50 paid-ups Re. 1 to Rs. 55. Bank of Mysore improved by Rs. 4 to Rs. 280. Imperial Banks (Rs. 500 paid-ups), however, lost Rs. 5 to Rs. 1,830. Indian Banks, Rs. 100 paid-ups, were done at Rs. 181-4 *cum-div.*, as against Rs. 182.

INDO-GERMAN STEEL PROJECT

In the issue of *Commerce* dated 29th August, (*vide* page 423), we discussed the financial implications of the Indo-German steel project and asked as to how the Government could hope to make a profit large enough to permit the payment of a fee of Rs. 2.1 crores to the German participants and still leave a sufficient margin for a reasonable return on the capital invested. We are now authoritatively informed that this criticism is not warranted by the facts of the agreement between the Government and the German combine, since the fee of Rs. 2.1 crores is an overall figure, and not a recurring commitment by the Government, annual or otherwise. This, however, was not quite clear from the Production Minister's first statement in Parliament on 24th August, 1953.

NEWS IN BRIEF

THE House of the People unanimously passed the Estate Duty Bill on 15th September, 1953.

The Government of India has decided to abolish the contract system in all railway collieries and has already done so in nine of them.

Air-India International will increase the frequency of the Bombay-Nairobi run from six to eight flights from 3rd October.

An all-India Mill Cloth Exhibition will open next Monday at Ahmedabad. About 200 textile mills of India are expected to display the specimens of cloth manufactured by them.

The Bill to amend the Bombay Sales Tax Act, 1953, which proposes to levy sales tax at the first and the last stages only instead of at multi-points, has been referred to a fifteen-member Select Committee.

The Government of India has lifted, with effect from 9th September, all controls which it was exercising, under the Supply and Prices of Goods Act, 1950, on tanning materials, casein and, tannery wool.

The Bombay High Court has declared the Bombay Labour Welfare Fund Act, 1953, and the Rules made thereunder, to be valid. The Act and the Rules were challenged by the Bombay Dyeing and Manufacturing Co., Ltd.

The Government of Hyderabad introduced in the State Legislative Assembly on 10th September, a Bill to consolidate and amend the Debt Conciliation Act. The Bill is modelled on the analogous legislation in Bombay.

The Government of India has permitted the Indian Airlines Corporation to recommence its service on the Bangalore-Mangalore sector from 1st October. It has also permitted a bi-weekly service on the Hyderabad-Poona and Poona-Bombay sector from 3rd October.

So far, the Government of India has sanctioned a sum of Rs. 34,55,775 for the construction of 1,802 tenements under the revised subsidised industrial housing scheme for 1953-54 to various State Governments, industry, employers and workers' housing co-operatives.

The Madras Government has given time upto 23rd September to the Madras Electric Tramway Co., Ltd., to resume tram service in the city. If the Company fails to do so by that time, the Madras Government will have the option to cancel the licence granted to it under the Indian Tramway Act.

The experiments carried out at the Central Laboratories for Scientific and Industrial Research, Hyderabad, have shown that aca-catechin, a crystalline product obtained from the ethyl acetate extract of katha, is highly efficient in preventing vegetable oils turning rancid. Katha, a mixture of several catechins, is obtained from the heartwood of *Acacia catechu*, which grows in abundance in India and which has now become a flourishing industry.

Investigations initiated at the Central Building Research Institute, Roorkee, to find out a profitable use for the coal ash discharged from the boilers of the Sindri Fertilisers and Chemicals Ltd. have disclosed that the ash can be used as an aggregate in light-weight concrete in building construction for non-load bearing beams not directly exposed to outside atmosphere. Nearly 300 to 400 tons of coal ash are discharged from the factory daily.

A six-day conference of the Ministers for Agriculture in the States and at the Centre will commence in New Delhi on the 24th inst. The agenda before the conference covers, among others, matters relating to ceilings on holdings of land, resumption of land by landlords for personal cultivation, fixation of minimum size of holdings and acquisition of land by tenants. According to a New Delhi report, a note on some aspects of the Chinese agricultural economy has already been circulated among the Ministers for their guidance.

A seven-member "Exploratory Trade Mission" from the Indian Council of Foreign Trade will shortly leave on a seven-day visit to Egypt. The Mission will study the possibility of developing Indo-Egyptian trade in the light of the trade agreement signed between the two countries in July this year. The Mission will be led by Mr. Murarji J. Vaidya, President of the Council. The members of the party represent various trades and industries, including engineering, pharmaceuticals, spices, coal and machine tools.

The Government of India has revised its import policy so as to allow established importers of coconut oil to import palm oil in lieu of coconut oil to the extent of one-third of the face value of the licence. This revision is stated to have been made to enable small soap factories to obtain their requirements of palm oil from imported stocks, as the import of palm oil on its own quota of 100 per cent. is inadequate. Till now, established importers of coconut oil could utilise not more than two-thirds of the face value of the licence for the import of coconut oil, the balance being utilised for copra and coconut kernel.

The Government of India has decided to permit the export of an additional quantity of raw wool, besides the 9 million lbs. already licensed for export. It will be recalled that the Government of India announced on 30th March that exports of raw wool would be licensed freely upto a ceiling of 9 million lbs. The quantity was licensed in full by 9th July, 1952 and further licensing was stopped by public notice at the ports on 14th July, 1953. It has now been decided to give export licences on application to actual shippers upto 20 per cent. of shipments effected by them during January-June 1953.

The Tamil Chamber of Commerce has addressed a memorandum to the Ministry of Commerce and Industry, Government of India, urging that the restrictions on the export of iron and manganese ores from Madras Port imposed by the Central Government by its notification dated 2nd September should be removed. Such restrictions have been imposed only in respect of the Madras and Calcutta ports. There is no congestion, according to the Chamber, in the Madras Port in regard to such traffic, while there is congestion in Bombay and Visakhapatnam. Further, Madras Port is developing good export traffic in ores. The restriction, the Chamber has stated, will adversely affect Indian export trade in minerals, especially now when competition from Russia and the Philippines is increasing.

A Bill seeking to extend protection, among others, to the power and distribution transformers industry was introduced in the House of the People this week. Protection to the extent of 10 per cent. *ad valorem* is proposed to be given to this industry till 31st December, 1955. The Bill also seeks to continue protection in respect of glucose till the end of 1954, hydro-quinine industry till the end of 1955 and plywood and battens for tea chests and iron or steel wood-screws till the end of 1957. Protection originally granted to these industries is due to expire on 31st December, 1953. Other objects of the Bill include discontinuance of protection to the dry battery industry from 1st January, 1954 and ratification of enhancement of customs duty on body panels, including turret tops and sides, for passenger cars, announced earlier.

From Abroad

Twenty oil-fired locomotives are to be manufactured for Egypt at the M.A.V.G. factory in Hungary during the last quarter of this year.

Trading in burlap futures commenced in New York on the 9th inst. under the auspices of Commodities Exchange Inc.

A representative of a Japanese tanker company has signed an agreement with the Iranian Government for the exchange of Japanese tankers for Iranian oil.

The representatives of nine Commonwealth countries held at London last week preliminary discussions on the various problems relating to the *forthcoming* session of the G.A.T.T.

The U.S. Government proposes to ask the private welfare organisations and universities to take a bigger share in the running of the multi-million dollar Point-Four aid programme for underdeveloped countries.

The Tokyo Appeal Court has rejected the Anglo-Iranian Oil Company's appeal against a lower court ruling rejecting the Company's application for an interim order impounding Iranian nationalised oil imports into Japan.

An order from the Bonneville Power Administration of Oregon (U.S.A.) for a 250,000-k.v.a. three-phase transformer bank for service on the Administration's 230-volt system has been received by a British electrical firm. The value of this contract is about $650,000.

Five Hollywood experts have been engaged by the Pakistan Government to help raise the technical and artistic standards of the Pakistan film industry in a six-month training plan under the U.N. Technical Aid Programme.

The U.S. is expected to provide about £450 million economic aid to Western Europe during the fiscal year ending June, 1954. The recent allocation of £45 million, given as an emergency aid to Iran, will be used to supply commodities which Iran cannot import in most circumstances.

An agreement for the acquisition of 50,000 tons of fertilisers and distribution in Pakistan has been signed between the Governments of Pakistan and the U.S. under the T.C.A. Programme. The project is estimated to cost the Pakistan Government over Rs. 30 lakhs, while the U.S. Government will incur an expenditure of $3.1 million. The proceeds from the sale of fertilisers will be used for Pakistan's agricultural and economic development.

The Pakistan Government has accepted the offer made by the U.K. under the technical co-operation scheme of the Colombo Plan to provide 35 mm. and 16 mm. editing equipment of advertising films and publications. This equipment will facilitate the training of Pakistani staff in this specialised branch of film industry. The cost of the equipment is estimated at £2,600.

The new plant that is being set up at Milan (Italy) for the manufacture of acetate yarns and staple fibres is expected to commence operations in about three weeks' time. The plant is a joint Anglo-Italian venture, with an aggregate capital of 1,000 million lire (£578,000), subscribed in equal parts by the Snia Viscosa of Italy and Courtaulds Ltd. of England. The capacity of the plant is 4.4 million lbs. per annum. The total world output of acetate yarn, it may be noted, amounted to 478 million lbs. in 1952, as against 151 million lbs. in 1938.

PERSONAL

MR. J. R. D. Tata, Chairman of Tata Sons Ltd., left for London *en route* to Montreal to attend the meeting of the International Air-Transport Association to be held at Montreal next month.

Mrs. Vijayalakshmi Pandit, leader of the Indian delegation to the U.N. General Assembly, has been elected President of the Assembly for the current session.

Mr. Barret Eldridge, District and Sales Manager of Pan American Airways, who arrived in Bombay last week, is on an inspection tour of India.

Mr. G. V. Mavlankar, Speaker of the House of the People, returned from the U.K. on Saturday last, after attending the meeting of the Commonwealth Council of Parliamentary Associations and the Commonwealth Speakers' Conference.

Mr. Everett Franciss Drumright, American Consul-General in Bombay, left for the U.S. on home leave and for consultations with the home Government. Mr. R. Smith Simpson, American Consul, will be in charge of the Consulate-General during Mr. Drumright's absence.

Mr. D. N. Shroff, President of the Silk and Art Silk Mills' Association and Vice-President of the International Silk Association, will lead a nine-man Indian delegation to the International Silk Congress scheduled to commence its six-day session at Milan (Italy) on the 28th inst.

Mr. Abid Ali, Union Deputy Minister for Labour and leader of the Indian delegation to the I.L.O. Asian Regional Conference now in session at Tokyo, has been elected Vice-President of the Conference. Mr. Khandubhai K. Desai, a member of the delegation, has been elected leader of the workers' group and Vice-Chairman of the Selections Committee.

Mr. D. P. Karmarkar, Union Minister for Commerce and leader of the Indian delegation to the meeting of the contracting parties to the G.A.T.T., now in session at Geneva, left on Saturday last. Mr. L. R. S. Singh, Minister (Commercial) at the Indian High Commission in London, will be the alternate leader and Mr. S. Sen, Consul-General in Geneva, member. Messrs. G. L. Bansal, M.P. and Secretary, Federation of Indian Chambers of Commerce and Industry, A. K. Chakravarty, Assistant Secretary, Central Commerce and Industry Ministry, Mr. B. K. Kochar, Commercial Attache, Indian Embassy in Bonn, and V. Kesavan, Second Secretary (Commercial) Indian Embassy in Brussels, are the four advisers to the Indian delegation.

"COMMERCE" 1928

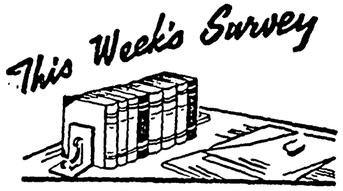
FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, 22nd *September*

Workmen's Compensation

In these days of widespread labour unrest, it is reassuring to refer to the Annual Report on the Working of the Workmen's Compensation Act which was placed on the Indian Statute Book in 1923. The Act has barely been three years in operation in India, and yet, judging by the reports recently published in *Commerce*, the measure seems to have conferred immense benefit on the Indian workmen. As the Act gains in popularity, the Commissioners' work in all Provinces is increasing. A comparative statement, furnished with the report of the Bengal Commissioner for 1927, of the total number of applications filed, compensation deposited and court fees realised shows that, besides the applications formally filed, the Bengal Commissioner—whose post has, by the way, been made permanent—had to deal with a number of informal applications both from workmen and from employers. In some of these, the claims were amicably settled, the Commissioner playing the part of a good Samaritan—that is, an arbitrator. In Bengal, the working of the Act during the year under review was on the whole satisfactory and shows that it is growing in popularity, though there is still much to be desired in this respect. The Act may now be said to be fairly well known to the workers in the jute industry.

The Bengal Jute Workers' Association continued, during the year, to assist its members to obtain compensation, both by agreement and by application to the Commissioner where agreement could not be reached. During the year under report, Mr. Lethbridge, the Commissioner, visited various jute mills on either side of the Hooghly in connection with the local trial of contested claims. This, it is hoped, had its effect in spreading knowledge of the Act amongst jute workers. The larger concerns generally assisted their workmen in recovering compensation. The Calcutta Claims Bureau, representing the majority of insurance companies, settled numerous *bona fide* claims without litigation, and dealt with these and with contested claims with its usual promptness and care. But the coalfield workers still appear to be generally ignorant of their rights under the Act and, naturally, the paucity of claims from the Raneegunge coalfield still continues. This is probably due, amongst other causes, to the absence of any trade union to represent their interests.



MR. T. T. KRISHNAMACHARI ON UNEMPLOYMENT

MR. T. T. Krishnamachari, Minister for Commerce and Industry, rightly emphasised that it was only through rapid industrialisation that the country could tackle the problem of urban and rural employment. Speaking in the course of a debate on unemployment in the Council of States, he pointed out that the problem could be tackled only if, in the next four or five years, about 30 or 40 industrial units were set up in the interior, and small townships created around these units. He pointed out that the country's economy was still sound. Industrial production had increased. In 1950, it had increased by 5.2 per cent. over the 1946 level, in 1951 by 17.2 per cent., in 1952 by 28.5 per cent. and in the first quarter of 1953 by 32.6 per cent. There had been an increase of five million tons in the production of foodgrains. The cost of living had increased only by two per cent. between 1950 and 1952, as compared with 19 per cent. in the U.K., and 31 per cent. in France.

The Commerce and Industry Minister paid a tribute to the Government's monetary policy which, he said, was responsible for keeping the living costs under check. He was not prepared to accept the plea that the Government should restrict its expenditure in the public sector. But he admitted that the Government felt that the situation demanded a revision of the Five-year Plan. Finally, he doubted the wisdom of carrying the policy of supporting village industries too far. He urged moderation in the policy, saying that while the reservation for handlooms had not helped Madras, it had pushed up the prices of cloth in Rajasthan, West Bengal, Orissa, U.P. and the Punjab.

The Minister has certainly said as much as he could possibly say in the course of a short speech in the course of a general debate. His speech must serve to correct the exaggerated emphasis that is being placed on the problem of unemployment itself, the wrong inferences that are drawn about the state of Indian economy, and the high expectations that are raised by some people who believe that the revival of village industries would effectively exorcise the ghost of unemployment. His emphasis on rapid industrialisation is to be welcomed.

Many will, however, wish that there was more convincing evidence of the Government's desire to see that the private sector made an adequate contribution towards the industrialisation of the country. Unfortunately, there is sufficient evidence to make one doubt whether the Government is really earnest about letting the private sector play its full part. How else can one interpret—to take only a recent instance—the Commerce and Industry Minister's threat of nationalisation of the automobile industry? How else, again, is one to interpret the Minister's oft-repeated threats against the plantation industry? Indeed, the manner in which the many restrictions on this industry, as on several others, is conceived and supervised shows that the Government is more anxious to control, if not to acquire, the fields in which private enterprise is engaged than to help the private sector start something new. It is a policy of negation, not of constructive enterprise.

JAIPUR OCTROI TROUBLE

Following the withdrawal of the *hartal*, which had been undertaken by the people of Jaipur, against the imposition of octroi in that city, the Government of Rajasthan has decided to appoint a committee to report on the question of this levy. Pending the receipt of the recommendations of the Committee, the personnel of which is yet to be announced, the Government of Rajasthan has suspended the realisation of octroi.

It will be recalled that octroi was imposed, for the first time, on 1st September, by the Municipal Council, at the instance of the Government of Rajasthan. But the Jaipur Municipal Council decided to suspend the imposition and to reconsider the question on 3rd September, following the resentment among the public, especially business interests, at the imposition of this duty. The Government of Rajasthan superseded the Council with effect from 4th September and appointed Mr. R. D. Thapar as the Administrator. Subsequently, on the 5th September, it revised the schedule so as to exempt certain articles from the levy and to reduce the rates on others.

A study of the conditions of the Jaipur Municipality discloses that its finances have been deplorable; indeed, they have deteriorated to such an extent that it has not been regularly disbursing even the salaries of its employees. Further, the Council has a huge sum, exceeding Rs. 20 lakhs, outstanding against it on account of electricity and water. It is because of this state of affairs that the Government of Rajasthan induced the Municipality to impose house-tax and octroi. There is no reason why these taxes should not be imposed, especially when they are being levied by a number of local bodies throughout the other parts of the country. And there appears to be no reason why the business community should start an agitation against such a simple and legitimate form of taxation. If the incidence is heavy, as is contended, the proper thing to do would be to ask for a reduction in the rates and not indulge in unconstitutional methods, demanding suspension of the duty.

It is true that there are certain allegations against the Government to the effect that the deplorable state of the municipal finances was due to the Government not honouring its commitments. It is, for instance, stated that the compensation paid to the Municipality in respect of duties levied by the Government on *gur* and sugar is disproportionately low. But these are issues which should be settled between the Council and the Government. It is indeed preposterous that the Jaipur Municipal Council members should have lent their support to the *hartal*, as they are reported to have done. The Municipal Councillors are the city fathers and it is their duty to see that the resources needed to finance their work are obtained through legitimate channels and the Municipality is made self-supporting. After all, the imposition of octroi was a long overdue measure and as such it did not deserve the opposition it had evoked, much less the fierce form this opposition assumed. It is to be hoped that, on second thoughts, better sense will prevail among business men in Jaipur and that they will reconcile themselves to the necessity to pay what has come to be universally regarded as a legitimate form of local taxation. The fact that they were free from it all these days is no excuse for revolting against its imposition. And above all, like laymen, they should not resort to methods of protest which are undemocratic, however adamant the Government of the day may be. What else is a *hartal* if it does not tantamount to an illegal strike?

F. A. O. REPORT ON FOOD

If there is one thing which has struck all observers of the world economic scene as by far the most significant development in recent years, it is the increase in food and agricultural production which has been reported from all parts of the world. To people in many parts of the world, who have learned through bitter experience to regard food shortage as a well-nigh permanent aspect of world economy, this improvement is, indeed, a very welcome development. This improvement now finds statistical support in the report of the U.N. Food and Agricultural Organisation (F.A.O.), entitled "The State of Food and Agriculture, 1953," which points out that the world's food output in 1953 caught up, for the first time since World War II, with the growth in world population. Many countries have contributed to this improvement. There was a record rice crop in the Far East. But the demand for imports is also high, thanks to crop failure in Pakistan. Agricultural output in Oceania was about 10 per cent. higher in 1952-53 than in the previous year. North America recorded increased supplies. Agricultural output in North-Western Europe rose by 2 per cent. in 1952-53 and in Latin America by 9 per cent.

This is, however, an overall picture; also it refers only to the year 1952-53. It would, however, be folly to overlook several dark spots in this picture. And it is to these spots that the report makes pointed references. Although the total agricultural production in Asia and the Far East has regained its pre-war level, it is still 15 to 20 per cent. below the pre-war *per capita* level, thanks to the increase in population. In other words, though the world total production of food may have caught up with the growth in world population, the rise in production in Asia and the Far East has not been keeping pace with the expansion in population. The report warns, therefore, that this region, with nearly half the world's population, remains the crux of the problem. In his foreword to the Report, Mr. Norris Dodd, Director-General of the F.A.O., warns that nearly 70 per cent. of the world's population lives in the less developed regions and that it would require an additional supply of food equal to the 1952-53 production of food in North America and Oceania combined before the people in the underdeveloped countries can raise their average diet to the present average for the world as a whole. Food stocks, as is well known, are accumulating in many parts of the world. This might give one an erroneous impression that they are in excess of the world's demand. But Mr. Dodd emphasises the fact that these stocks "shrink into insignificance" when compared with the "real human needs" of the deficit countries.

What then is the real solution for the problem of food deficit in underdeveloped countries? The answer is that there is no simple solution. A basic improvement in the countries' food supply, as Mr. Dodd says, must come primarily from a "steady improvement in their own production." He lays special emphasis on two points:

(1) Until the productivity of agriculture per man and per hectare in the underdeveloped countries can be raised substantially there is no possible way of alleviating the grinding poverty of their rural populations.

(2) If allowance is made for qualifying as calorie content, the average diets per person in North America, Western Europe, Australia and New Zealand are two to three times those of most underdeveloped regions whether measured in money values, original calories or the agricultural resources needed to produce them.

The Report says that so far as agricultural production is concerned, "the prospects for 1953-54 are "favourable," though it warns that one or two years of bad weather could "seriously alter" the world food position. The main problem for the immediate future is the problem of markets. If defence expenditures were reduced, the question is whether industrial activity would maintain itself at a level at which it could provide a market for the expanding volume of food and agricultural raw materials. This is, indeed, a serious problem.

MAJOR CHANGE IN FOOD POLICY

In the past few days, events on the food front have moved with dramatic speed. On the 10th inst., the Bombay Government announced the removal of restrictions on the quantum of foreign wheat which ration-card holders can buy in all the 45 fully rationed cities; this relaxation, which will not apply to "local wheat," will come into effect from the 21st inst. The controls on the movement of wheat between urban and rural areas, as also on the price of this wheat will, however, continue. Two days after this decision, that is, on the 12th inst., the Central Government gave permission to flour mills for exporting wheat flour in order to enable them to recapture their pre-war markets for flour in Burma and South-East Asian countries. Wheat will be released to the mills from the Central food stocks on condition that the mills replace the stocks by importing an equivalent quantity of wheat within six months from the date of export. Again on the following day, the Government came out with a major change in its food policy by permitting private trade to have a share in the imports of rice from the soft currency areas for sale in non-rationed areas. And on the 14th inst., it passed on to private trade the import of three more food items, namely, self-raising flour, maize and barley. There will be no control on price, sale and distribution of these three items. Control on movement of self-raising flour from one State to another will be withdrawn, while that of the other two, namely, imported maize and barley, will be subject to the permit system.

The developments noted above indicate a revolutionary but welcome change in the food policy of the Government which has been in force for one full decade now. For the first time since the pre-war period, exports have been permitted in a cereal product such as wheat flour. Again, for the first time, non-Government agencies have been permitted to enter, albeit on a limited scale, the field of foreign trade in foodgrains. These changes mark a big stride in the country's march towards complete decontrol of foodgrains, and are in accordance with the Government's accepted policy of gradual decontrol. Besides, they are justified by the world supply position of wheat and rice and the large stocks of wheat which the country is said to possess.

The decision to pass on to the trade the import of an increasing number of food items is welcome for two reasons. One is that it will facilitate imports of superior quality of foodgrains at cheaper rates and avoids wastage on account of bad storage—a common occurrence under State control. The other is that it will provide a few fresh avenues for employment. The flour mills, for instance, can now expand their activity, in order to cater to the needs of the nearby export markets. The trading concerns participating in the export and import trade of food items may also be in a position to employ some more people. It is true that there will be some retrenchment of staff employed by the Government in its rationing departments, but it seems to us that the net result of these changes will be an increase in employment opportunities.

UNEMPLOYMENT IN WEST BENGAL

Perhaps West Bengal is the first State to formulate a programme for tackling unemployment in the State in accordance with the 11-point programme of the Planning Commission communicated to the States early in August. The scheme has been submitted to the Government of India for approval and grants. The programme consists of nine tiers as follows:

1. Appointment of 30,000 persons during the next three years for undertaking the task of teaching and doing social work in rural areas;
2. housing scheme at a cost of Rs. 1.5 crores, giving employment to about 3,900 people;
3. development of small-scale industries at a cost of Rs. 75 lakhs;
4. establishment of a coke-oven gas plant costing Rs. 9 crores;
5. Calcutta sewage disposal scheme costing Rs. 3.2 crores at the beginning;
6. land reclamation scheme in the Salt Lake area, east of Calcutta, at an expenditure of Rs. 7.50 crores;
7. transmission and supply of surplus electric energy from the D.V.C. to rural areas at an expenditure of Rs. 3.75 crores. The State Government has approached the Government of India for permission to lay down the transmission line;
8. increase in the number of Calcutta's transport vehicles by issuing 700 more licences. This would employ roughly about 1,200 more people; and
9. implementation of the Ganga barrage scheme which will reclaim large tracts of land in Murshidabad, Malda and Nadia, connecting at the same time the middle and southern portions of the State.

It is true that the programme cannot solve the problem of unemployment completely. But it will certainly help arrest the rising trend witnessed in recent months, provided it is efficiently implemented. The success of even this limited scheme for tackling unemployment, however, will require an atmosphere of quiet and peace in that State. Unfortunately, Bengal has been disturbed by industrial unrest for some time now. The Burnpur labour trouble has accentuated the evil of unemployment. It has already made, or is likely to make, the position of industries dependent on the Indian Iron and Steel Company's products for their raw materials requirements somewhat difficult. It will be evident from this incident that the Government's efforts alone are not enough to solve the problem of unemployment in that State. It calls for all-round co-operation and effort which, it is to be hoped, will be forthcoming, if only because Bengal has, in the past, suffered relatively more than other States, thanks to famine and Partition. The people of West Bengal must realise that, if they show scant regard for law and order and indulge in strikes, they will be paving the way for utter chaos which will make their position even more miserable than now.

(Concluded from third column)

about the volume of unemployment, as so many obstacles in the efforts for expanding the scope for employment. Did it ever occur to the soap manufacturers that a Government which could prevent one firm from importing machinery likely to displace some human labour, might also, when urged by the cottage industry section of the soap industry, ban the making of washing soap or even some inferior varieties of toilet soap in factories on the plea of providing more employment? I cannot help feeling that by this successful but cheap and foolish manœuvring to block the progress of a single foreign soap manufacturing concern, the private sector of industry as a whole has not won a victory but has actually lost an important battle in the war in which it is engaged, without a single shot being fired by either side.—*All Rights Reserved.*

OFF THE RECORD

(By "ROVER")

ANONYMITY confers an advantage at times on those whom it otherwise buries. I have gradually grown up, as a result of life's inevitable buffetings, to a realisation that things in retrospect do not matter as much as we fondly but wrongly imagined when we were in the midst of them. Besides, I have not been gifted with that kink in my nature, which compels a fellow to be perpetually at war with himself and so always in a state of war with all around him, except sycophants. Beginning in all such men as a mild and modest urge to reform their own erring selves, this spark is fanned into a roaring fire by their selflessness and misplaced zeal to reform others. Consumed by this devastating conflagration within them, which leaves them no peace or a trace of their former amiability and reasonableness, they step out to spread this fire by setting the little world around them ablaze.

There is nothing more suspect in the eyes of these crazy crusaders than ease and comfort, rest and peace, joy and good cheer. If a thing is pleasant, it needs must harbour evil in some fold of its womb; if a man appears happy, he cannot but be wallowing in sin. Strangely lacking in the knowledge of the positive contents of virtue and goodness, they see evil in things and not in men and women. Take away those little things which seem to bring joy or pleasure, rob people of those aids to ease and comfort and you would have destroyed all evil and established a reign of virtue. Deny them tea or coffee, cigarettes, wines and spirits, dancing and racing and you would have turned your contemporaries into models of virtue.

These kill-joys are firmly convinced that their good intentions would justify any means they employ. They, therefore, easily become, in course of time, unpleasantly insolent, bellicose and belligerent, in their search for more power and authority, for the solely benevolent purpose of coercing their fellow men into a dull and uniform pattern of priggishness, which they mistakenly regard as righteousness. Blinded by the glare of their mission, these modern Messiahs fail to notice that, as a rule, in trying to dig out a grain or two of evil, which, if ignored, would lose a greater part of its attraction, they create deep, dark and foul voids and chasms of hypocrisy and hatred.

I have purposely been at great pains to clear my position, because I am going to be a little unpleasant myself. It is necessary for me to explain that what I am going to write this week is not conceived in any such crusading spirit of chastening and chastising those amongst the business community, who have succumbed to the lure of ease and comfort and so clamour for an extreme form of protection from what they call foreign competition within the frontiers of our own country. Being a timid and peace-loving man, I do not fancy myself as cast into the shape of a valiant fighter for any of the lost causes. Having an average respect and affection for those amongst whom my lot is cast and wanting to live in amiable harmony with them, I am not moved by a desire to rub them up the wrong way, much less to exacerbate them into a state of hostility either towards me or to the idea which I want to put forth for their consideration.

Besides, I do not mind admitting that, were it not for the protection which anonymity affords to me from the wrath or displeasure of those few who flatter me by reading this column, I doubt if I would have chosen to criticise what is to-day a fairly popular attitude towards this extreme and unhealthy form of *swadeshi* which our soap manufacturers are preaching to-day. My only desire is to draw their attention and the attention of the whole of the business community to certain unreasonable aspects and implications of this attitude and some of the undesirable consequences, which are likely to follow from it, to the detriment not only of this or that industry but of industry in general. It is not pleasant to uphold unpopular causes and I do so only because I feel a little disturbed not about the future of the few foreign industrial units in the country possessing endless resources and are quite capable of fighting their own battles, but about that of our own expansion and development which are still to be achieved.

Having thus made my long *apologia* and in the process of doing it, having got rid of a few of my own pet irritations caused by some of our dangerously and menacingly well-meaning, smug and self-appointed saviours, I confess that I do not quite see eye to eye with those, whom I otherwise respect and admire, moaning loudly about the efforts of the one prosperous foreign firm engaged in making soap to reduce its cost of manufacture and, incidentally, to increase its production, by proposing to import plant and machinery for modernisation. It is not as if I do not appreciate the ambition of our own industrialists not to leave the responsibility to outsiders for helping our countrymen to keep their persons and clothes as reasonably clean as our unhelpful climate would allow. But, much as I value cleanliness and much more though I value this enthusiasm of such renowned firms as the Tatas, Godrej and the Sarabhais for securing a wholly home-made and *swadeshi* brand of cleanliness in preference to that resulting from unwelcome foreign aid, I rather like, looking to the comparative emptiness of my wallet, to be clean at as little cost as possible.

My attitude regarding the price and quality of soap might quite conceivably not have been so callous and mercenary, if I was asked to choose between imported soap of good quality at cheaper rates and somewhat dearer soap of passable quality made within the country. My love for *swadeshi* would have definitely made me plump for soap made in India, even if it cost me an anna or two more per cake and was not quite as good as that dumped by designing persons from abroad. But I am not subtle enough to distinguish between one brand and another of this useful commodity, both made within the country, with Indian labour, from indigenous materials and under identical conditions, one made by a firm owned by foreign capital and the other by Indian. One is as much *swadeshi* for me as the other and quality for quality, if one be cheaper than the other, that which costs me less naturally gets my patronage.

On the contrary, when I hear our own manufacturers complain, in a manner which is not very dignified, about this competition at home which is killing them, I am led to suspect that either they are inordinately inefficient, even though long established, or that they want to secure a clear field for fleecing me more by making things more difficult for this other unit, which wants to provide me with soap at a still lower cost by modernising its plant. I am almost glad that this one British unit is there, because its presence, incidentally, safeguards my interests as a consumer and stands as a permanent reminder to our own manufacturers that good soap could be made and sold cheaper. Conditions in some other more important industries, such as cotton and jute, textiles and sugar, are similar if not worse. There are a number of well-established foreign-owned concerns working cheek by jowl with Indian units in these fields. Though the sugar industry is of a comparatively recent origin and has to contend against its cottage industry counterpart as in soap, there is no complaint from the Indian sector about ruinous competition from that controlled by outsiders or manufacturers of *khandsari* and *gur*, even though the latter do not pay the heavy excise duty and cane-cess, amounting to about sixteen to twenty per cent. of the selling price of mill-made sugar.

Curiously enough, the indigenous soap manufacturers have succeeded in getting the application of this competing firm for import of modernisation plant rejected by the Government. They must be feeling satisfied with their victory, because Lever Brothers would not now be able to increase their output. But I hope industrialists as a class are not so blind as to fail to see that this temporary victory has been won at a tremendous cost to the future of Indian industry as a whole. They must also have noticed that Mr. Karmarkar, the Central Minister for Commerce, did not at all seem happy about this decision and the confession that this application from Lever Brothers was being rejected by his Ministry was virtually dragged out of him under a volley of supplementaries. I wonder if they also noticed that this concession was extracted by them from an unwilling Government with the help of the Communist Party in Parliament. And, finally, be it noted that the Government yielded in this instance not on the issue of increased competition which the Indian-owned units would have to meet with. Reluctantly and under heavy pressure, the authorities gave in because of their fear that this modernisation plant might throw a few more men out of work, when unemployment in the country had already reached a critical stage.

Industry must be aware that the greatest fight ahead of it in the near future is over this question of modernisation and rationalisation. There is no future for it, either in the home markets or abroad, unless it can bring down the cost of manufacture substantially. The only way in which it can do so is by rationalising its technique and modernising its present obsolete plants. Organised labour would strenuously resist any effort on its part to do so. The Government is more likely to support labour in this struggle than industry, especially as unemployment on a large scale is bound to remain with us for long years to come. By its short-sighted opposition to the effort of Lever Brothers to modernise its plant, for a temporary advantage which a section of the soap industry in the country might win as a result of this opposition, industry as a whole in the country has conceded in advance and in principle the correctness of the irrational stand workers are bound to take against its efforts at improving technical processes in the factories.

In a blind fit of temporary jealousy and out of a desire to put impediments in the path of a successful rival concern, the soap manufacturers have, in fact, caused more damage to industry than what I have so far hinted at. They cannot be unaware of the fact that there is a strong and influential section in the Congress Party, which is dead against all large-scale industries on principle. Their concept of the national economy stops short at cottage and small-scale industries. They regard machines and mechanised industry as the Devil's own contraption designed to demoralise humanity. Not infrequently, the Government has to yield to the pressure from this section, even though it has not the same faith in the spinning wheel, the handloom, the bullock-cart and the *ghani* as the more orthodox Gandhians. By raising this hue and cry against the import of modernisation plant by a more go-ahead unit than themselves, they have strengthened the hands of the reactionaries and made it easier for the hard-pressed Government to make more and more concessions to them.

These concessions could only be of the nature of additional levies on machine-manufactured goods for subsidising the products of the corresponding cottage industries and reservation of certain fields of production in favour of them. If improved machinery could be looked upon as a potential menace to employment, the presence and use of any machinery, even obsolete and inefficient machinery, could also come to be accepted by the Government and the country, already gone panicky

GOVERNMENT DECIDES TO REVISE FIVE-YEAR PLAN

TASK BEFORE ANDHRA STATE

(From A Special Correspondent)

NEW DELHI, 14*th September*

THE Government of India's emphasis has now begun to shift from agriculture to industry. The sponsors of the Five-year Plan doubtless devoted greater attention to the improvement of the production of food and commercial crops, especially in the early stages of the Plan, in view of the scarcity of foodgrains and the difficulties of obtaining adequate quantities of raw jute and raw cotton at that time. Now that the supply position of these has recorded a remarkable improvement not only in India but also all the world over, it is felt in Government circles that the time is now opportune for the intensification of its efforts at speedier industrialisation of the country, especially in the public sector.

DELHI LETTER

Some other factors that have been helping the Government to veer round to this view are the better availability of capital goods in western countries with the termination of the Korean war and shorter delivery period therefor, favourable balance of payments position due to reduction in the value of food, raw cotton and raw jute imports, accumulation of sterling balances and, above all, the necessity to embark on a bold and imaginative plan to fight the growing unemployment in the country. The increase in the *tempo* of industrialisation will be commensurate more or less with the trend of commodity prices in the country and the Government's ability to keep down the inflationary potential. In other words, the Government will be inclined to take up a bolder programme, if there were to be a stable price level and the prices of foodgrains and other essential articles were to be brought down at reasonable levels so that the poorer sections of people might not find it difficult to purchase these commodities.

Industrialisation

These factors are doubtless responsible for the forthright assertion of Mr. T. T. Krishnamachari, Commerce and Industry Minister, Government of India, in the Council of States this week that "only industrialisation could tackle the problem of urban as well as rural unemployment." While the demarcation of sectors between cottage and large-scale industries might serve some purpose so long as it was not carried too far, the Minister remarked that the only solution to unemployment would be to establish in the next four or five years about 30 or 40 industrial units, not in Calcutta, Bombay or Bihar, but right in the middle of the country in various places and create townships round them. The Commerce and Industry Minister made some more policy statements in Parliament at the time of the discussion of the unemployment problem. He pointed out that the foreigners had an important place in the field of manufacturing, but in the trading sector he desired that they should gradually vacate their hold in favour of Indians. Despite the Government's desire to encourage well-established and reputed foreign manufacturing concerns in the industrial field with a view to increasing the competitive capacity and the productive efficiency of indigenous concerns, in actual practice Government's actions would appear to be not in conformity with its declaration. For instance, this week, Mr. D. P. Karmarkar, Minister for Commerce, unequivocally declared that permission to a leading foreign soap manufacturing concern for the importation of plant and machinery for modernisation would be refused. This sort of treatment is, to say the least, not conducive to the inflow of foreign capital.

Mr. T. T. Krishnamachari, Commerce and Industry Minister, indulged in some plain speaking in Parliament this week, where some members were vehement in criticising the Government's import policy from time to time. The Minister pointed out that in order to export, India had to import something from other countries. The Government was not able to export sports goods to France though there was a market for it, simply because it was not willing to permit imports of French perfumery into India, he said. On these luxury items, the Exchequer got almost equivalent value by way of customs duties. This mopped up the surplus money and kept under check inflationary potential to some extent.

Commodity Controls Committee

The Government of India's reaction to the recommendations of the Commodity Controls Committee has, on the whole, been favourable. In fact, the Government feels happy to note that by and large the Committee has endorsed the existing policy of the Government regarding controls. The Committee's conclusions are in accord with Government's views on the subject. According to the Committee, the Government must, in the last analysis, retain the powers of overall guidance and control; and controls on all essential commodities should be on an all-India basis. The Government agrees with the Committee that legislation in respect of the above can only be undertaken if the Constitution is amended to confer upon Parliament the necessary legislative powers. The Government proposes to examine the alternative to the amendment of the Constitution, which is to confer legislative powers on Parliament in respect of foodstuffs, cattle fodder, raw cotton, cottonseed and other agricultural products by making an appropriate new entry in the concurrent list. The Government does not propose to extend the life of the Supply and Prices of Goods Act, 1950, beyond 15th February, 1954, when it is due to lapse. In the meantime, with immediate effect, the controls exercised under this Act on casein tanning materials and tannery wool will be lifted. The question whether controls on non-ferrous metals, caustic soda, soda ash and sulphur which are being exercised under this Act should be abolished or continued under the Industries (Development and Regulation) Act is under examination. Regarding the withdrawal of the Drugs (Control) Act, 1950, the Government is now consulting the State Governments on this point. It has also agreed in principle to the Committee's recommendations regarding the futures contracts. The Government is also in agreement with the principles underlying the Committee's recommendations in regard to the penal provisions of the control laws.

Flood Control

The recent devastating floods in Assam, Bihar, Uttar Pradesh and Andhra have begun to command the attention of the Government of India. The Kosi floods in Bihar have now become a regular annual feature, as also those of the Brahmaputra in Assam. In order to prevent the floods in these rivers, the Government is desirous of adopting the necessary river taming methods. For this purpose, some engineers are expected to visit China where this type of work is reported to have kept up at a high level, especially in the famous Yellow River. Perhaps, at the time of the Second Five-year Plan, the Government will lay considerable emphasis on this aspect of work in river projects. The Government is also reported to have decided to create a pool of heavy machinery needed in work on projects such as earth-moving and dredging equipment. This will curtail machinery needs of these projects and facilitate the speedier working of these projects in an economical manner.

Andhra State

With the passing of the Andhra State Bill by the House of the People and the Council of States, Andhra State will be ushered in on 1st October, according to the original schedule. The creation of a new State is considered as a great experiment and the Andhra statesmen will have to work assiduously and patiently to build up this State on solid foundations. The economic potentialities of this State are considerable, particularly its agricultural wealth. Since this State is being watered by the two important rivers of the country, the Godavari and the Krishna, with their innumerable tributaries, the scope for big and small-scale irrigation projects is large. There are already a number of large-scale irrigation projects which await implementation, prominent among them being the Nandikonta, the Ramapadasagar, the Krishna-Pennar, the Pulichintala and the Vamsadhara projects. The total cost of these works is estimated at between Rs. 300 and Rs. 350 crores and it will take nearly 15 to 20 years to complete all these schemes. Generous help from the Centre will be necessary for the implementation of these projects. On their completion Andhra will become the granary of the South. Besides foodgrains, the State can grow more cotton, tobacco, sugarcane, etc. These apart, the mineral resources of the State are stated to be satisfactory, particularly in regard to manganese, coal, cement, building stones, etc. By methodical and patient work, the State can be made to rank as an important economic unit of the Indian Union.

Notice

THE SIMPLEX MILLS COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT THE Transfer Books of the Company will be closed from the 5th October, 1953, to the 12th October, 1953, both days inclusive.

Shareholders are requested to notify immediately any change in address to the undersigned.

AMERICAN LETTER

MISGIVINGS ABOUT ECONOMIC STABILITY

ADMINISTRATION APPOINTS TROUBLE-SPOTTER

(From Our Own Correspondent)

NEW YORK, 10*th September*

MOST of the news in the last two weeks, of significance to the American economy or to world trade, emanated abroad. The accent was more on the Far East which is receiving more attention in Washington these days than on Europe where the re-election of Chancellor Adenauer's coalition parties in Western Germany heralded another period of close co-operation with the Western powers. In the Orient, the Korean question is still the big issue. Both sides now accuse one another of withholding prisoners of war and final settlement seems just as insoluble as a few months ago. Indeed, the pessimists in the United States assert the difficulties will be so great that no peace conference will even be held. Others assert that, if a conference is actually held, the only thing it can ratify is the military line of demarcation. Somewhat disturbing to American ears were the remarks by John Foster Dulles, Secretary of State, that United Nations forces would cross the Yalu River and attack bases of the enemy in Manchuria if the Korean war should be revived. Also, that the United States would not stand by idly if Communist China were to join the war in Indo-China. In the Middle East, the deposition of Premier Mussadiq of Iran who was succeeded by Major General Zahedi was considered here as a distinct setback for the Communist forces and the Washington Administration was quick in authorising immediate financial help to keep the new Government in power at Teheran.

The question so far as Iran is concerned, is that of oil, of course. Under the Mussadiq regime, numerous attempts had been made to bring about an agreement with the national Anglo-Iranian Oil Company regarding compensation to Britain and reopening of the Abadan refinery. The previous output of this installation, the largest of its kind in the world, has since been made up by increased production in other parts of the world. Therefore, the prospects of having Abadan get back into production have been viewed with alarm here from time to time for fear of overproduction. The best information is that, if an agreement were signed with London to-morrow, it would probably take anywhere from six months to one year to get refinery operations back to par. If that happens, Abadan output would be about 6 per cent. of world production. Since the latter increases, normally, between 6 and 8 per cent. a year, nothing but a temporary dislocation is to be expected.

Ever since disturbing reports have been received about declining friendships for the United States from as widely divergent places as Europe, Latin America and recently from the Far East, it has become evident that the Eisenhower Administration desires to shape and bring about a more friendly foreign trade policy. The nub of the problem is that "trade not aid" is a fine slogan, but it remains just that, unless the world is enabled to buy here. The question is particularly acute now, when American aid in various forms has been cut sharply, but trade is unable to take up the resultant vacuum.

In this connection, Lewis Douglas, former Ambassador to the Court of St. James, submitted a special report to President Eisenhower, urging that the United States declare immediately a policy of lower customs and tariff barriers, even before the new 17-man Foreign Economic Policy Commission makes its report. Mr. Douglas, who now serves as special deputy to the Secretary of State, suggests that this would help particularly the position of British Commonwealth nations whose economic health is of major national interest to the United States.

Campaign for Lower Tariffs

In the meantime, a group of business men have formed a committee to arouse public awareness of this problem. The group plans a campaign for lower tariffs and it is patterned after the Committee for the Marshall Plan which helped sell the idea prior to adoption of this foreign aid legislation in 1948.

I.M.F. ON WORLD MONETARY TRENDS

INFLATIONARY MEANS OF DEVELOPMENT DEPRECATED

A REFRESHING feature of the latest Annual Report of the International Monetary Fund (I.M.F.), submitted to the annual meeting of the Board of Governors held in Washington last week, is the note of optimism on the world payments situation. This is in distinct contrast to the somewhat depressing note on the continuing imbalance in world trade struck by the Fund in the previous report. Substantial progress, says the Fund, has been made in the direction of general payments balance; indeed, the improvement in the world's balance of payments with the dollar area during the year 1952-53 appears to have certain elements of permanence which were absent in 1950. Nevertheless, the Fund warns against complacency, as witness its remark that the world cannot rest content with its present position. This is particularly so, because, in course of time, some of the temporary elements which have contributed to this progress will cease to operate. It is, therefore, important to avoid retrogression from the present position.

The Fund's analysis of the world payments situation during the year under review may be summarised as follows:

(1) Despite the downward trend in world trade that became evident early in 1952, the world payments position for the year as a whole showed a much better balance than in 1951.

(2) The widespread payments crisis at the beginning of 1952 affected particularly the raw material exporting countries.

(3) The most significant statistical evidence of the improvement in the world payments position in 1952 is the balance of payments of the rest of the world with the United States.

(4) The supply position outside the dollar areas has also improved on the whole, as a result, in part, of the abatement of inflationary pressures.

(5) It would be rash to take it for granted that the battle against inflation has now been won. It is significant that, in many parts of Europe, the inflationary impact of rising defence expenditures was kept in check throughout 1952.

(6) In 1952, as in 1951, the overall inflationary tendencies were, as a rule, stronger in the raw material producing countries than in the industrial nations.

World Trade With U.S.

The Fund refers, in particular, to what is called the "residual dollar problem", and points out that the U.S. balance of payments surplus disappeared in the second half of 1952 when the country had a small deficit with the rest of the world. Such a welcome change was brought about by an effective control of inflation, although it must be admitted that, even to-day, inflation has by no means ceased to be a problem. Proceeding, the Fund is of the opinion that, in order to prevent any deterioration in the present position, it is of the utmost importance that a high level of employment is maintained in the U.S. and that proper monetary and fiscal policies are enforced in Europe.

The Fund is cautiously optimistic about the attainment and maintenance of a rough balance of payments between the U.S. and the rest of the world. But it warns against its precarious character. Thus, the Fund observes:

"For many countries, the balance would be disturbed by any considerable weakening of the prices of their staple exports. The possibility of a decline in United States' activity has also caused concern. It should not be assumed that an easing of political tensions, which permitted a substantial reduction of defence expenditure, would necessarily be followed by any serious contraction of economic activity as a whole in the United States. The U.S. economy has shown a degree of adaptability sufficient to take full advantage of the opportunities for the higher real levels of production and consumption that relaxation of rearmament pressures would permit. The maintenance of high levels of production and employment is a major objective of public policy in the United States. The greater the success of U.S. policy in maintaining domestic stability, the better the prospects for continued progress towards the establishment of a stable multilateral international trading system."

Convertibility Aims

In the considered opinion of the Fund, the improvement in the general payments position in recent months, as noted above, has been, in a large measure, the result of the return to "active monetary policies." It commends the renewed efforts of several countries to achieve convertibility of currencies, but stresses the fact that convertibility is not an end in itself. To quote the Fund's own words:

"The view that convertibility is an attractive ideal which cannot, however, be realised in a remote and indefinite future, has increasingly given way to the conclusion that progress towards the establishment of convertibility and progress towards the elimination of the dollar shortage should proceed side by side. However, convertibility is not an end in itself. It is only desirable, because it makes possible greater flexibility in international payments, and the benefits of the international division of labour, based on unhindered multilateral trading. It would be valueless if progress towards convertibility by any country was achieved at the cost of imposing new restrictions on trade. The renewed determination with which many countries are endeavouring to move towards convertibility is a most encouraging development. The I.M.F. itself must do everything to support the efforts that are being made, and to take advantage of the recent progress which has occurred towards a better balance of payments of the rest of the world with the dollar area."

Important Measures

The Fund lays special emphasis, in this connection, on two important factors. First, the determined efforts of some countries to achieve convertibility of currencies deserve the utmost encouragement. Secondly, the uncertainty of the timing of decisive steps does not mean that countries cannot, in the meantime, take less far-reaching measures which have immediate value. These include, among others, (a) domestic financial and economic stability, (b) larger dollar earnings, (c) education and ultimate elimination of exchange restrictions and discriminatory trade restrictions, and (d) restoration of international capital markets. The Fund wants serious attention to be paid to the last-mentioned measure. For, according to it, capital imports may be a necessary condition for the elimination of inflationary pressures in the underdeveloped countries. At the same time, many underdeveloped countries are recognising that they have a responsibility for ensuring the maintenance of conditions which will make foreign investors feel assured of reasonable security for their investments and the earnings expected to flow from them. In this connection, the Fund makes the following points:

It would be entirely appropriate that, to the extent that an increased flow of capital—particularly long-term capital—from the U.S. to the rest of world can be developed, the U.S. should have a corresponding current account surplus. If the U.S. current account were balanced, the existing disparity between the rate of capital accumulation in the U.S. and in other countries would be accentuated. And any further widening of the gap between the productive capacity in the U.S. and in the rest of the world would place severe strains on many other countries in their efforts to maintain international equilibrium. For no group of countries do these considerations have more direct relevance than for the less-developed raw material-producing countries. Rapid development through diversified industrialisation has come to be accepted as an important objective of economic policy in many of these countries, chiefly because it seems to be the most satisfactory way to increase real incomes. Implementation of broadly-based development programmes should be regarded by both the underdeveloped and the more highly industrialised countries as something which would raise the general level of real income of very large sections of the world's population. At the same time this would be an important element in any general programme for establishing a stable world economic order based upon expanding multilateral trade and general currency convertibility.

During the last few years, it has been increasingly recognised in many underdeveloped areas that development programmes, in which inflation plays a large part, are likely to produce a disappointing result. Even if productive capacity is thereby expanding, the benefits gained may be more than counterbalanced by the unfavourable effects of inflation. One of the undesirable distortions in the structure of production that inflationary financing is likely to produce is an undue contraction of production of the traditional staple foods and raw materials. Such contractions are not only contrary to the interests of the underdeveloped countries themselves. They may also check the progress towards the more stable pattern of world trade that would be possible if these goods could either be substituted for some of the dollar imports of the rest of the world, exported directly to the dollar area, or substituted for goods now being imported from the dollar area into raw material-producing countries. Avoidance of inflationary developments is in the interests of the underdeveloped countries, but that such avoidance should be made easier is also in the interests of the rest of the world. If adequate capital imports should not be available, the expansion of the economies of underdeveloped countries would be unduly curtailed. And, since, in many of those countries, an effort could be made to fill the gap by inflationary finance, capital imports might be a necessary condition for the elimination of inflationary pressures there.

(Concluded from next column)

£220m., £409m., £317m., £26m., £156m., £71m. and finally £80m. All these are attempts to measure the same thing. "You pays your money and you takes your choice"—anywhere between £26m. and £409m. This may speak volumes for the intellectual integrity of our Government statisticians, but not for the validity of this particular figure.

"One other complaint: This latest edition of the Blue Book, though it is entitled "National Income and Expenditure," falls, for the first time, to give a figure of national income. This failure is due to inability or unwillingness to give a figure for depreciation of assets in this country, a deduction which must be made from the gross national product in order to arrive at a true figure of national income. In previous issues, the Inland Revenue figures of depreciation had been used for this purpose. Their inadequacy and arbitrariness have now been recognised by our statisticians, who, however, have not had the courage to provide a more realistic estimate. And so the one basic figure which the searcher after truth would expect to find in these hundred pages of tables and footnotes, is not there."

THE WEALTH OF BRITAIN

CAPITAL FORMATION UP

(From Our Own Correspondent)

LONDON, 10*th September*

THREE things stand out from the report just issued by the Government statisticians on National Income and Expenditure. First, in terms of money, this country's wealth has gone up over the last seven years by leaps and bounds; secondly, in terms of real resources, the increase has been very much less; and thirdly, most of the true increase has had to be devoted to financing exports. A corollary of the last is that far too little money has been available for reinvestment in industry.

LONDON LETTER

Money income in 1946 was under £900 million. In 1952, it was £13,653 million, but two-thirds of this increase was due to a rise in prices. If a comparison is made in terms of 1948 prices, taking 1948 as the first fairly stable post-war year, then the total quantity of goods and services in this country was £9,636 million in 1946 and this had increased to £11,117 million by 1952—an increase of 15 per cent. If we add to this the additional imports, the total increase becomes £1,868 million, but, of this latter figure, £1,181 million went to additional exports. Consumers, for instance, increased their total share of the national product by little more than £500 million or some 7½ per cent.

It has been noticed with gratification that year by year manufacturing output was rising steeply. Agriculture, distribution and other industries, however, lagged far behind, so that the total increase in national production has only been of the order of 12 to 15 per cent. and, as shown above, a great part of this has had to be deflected to exports. Some calculations, indeed, put the net increase in the consumers' true resources at only 5 per cent.

At 1948 prices, capital formation took as much as £540 million more in 1952 than in 1946; a theoretical increase of 60 per cent. But, when allowance is made for depreciation, there is a suspicion that the net increase in annual investment is almost nominal. This statement, however, disguises the truth that investment in farming in this country has undoubtedly increased enormously, although this process began during the war, and the nationalised corporations have also been large investors. On the other hand, many small industries have probably, on balance, not made adequate allowance for depreciation.

The State takes a smaller share of national income now than it did in 1946 and the drop in terms of 1948 is put at £400 million, but, of the £2,258 million that Public Authorities absorb, half goes to defence, 30 per cent. to social services, 10 per cent. to various Government services and public services such as roads, etc., and 10 per cent. to administration.

The most hopeful feature in the whole study is now that as the terms of trade are moving in this country's favour, a smaller proportion of the national wealth will have to go to exports and a greater proportion will be available either for more capital formation or more consumption. But, meanwhile, the Report will help the consumer to understand why, in spite of increases in the output of industry of the order of 5 per cent. per annum and in spite of the publicised large increases of money national income, he finds himself very little better off to-day than he was six years ago.—*All Rights Reserved.*

HIT OR MISS ESTIMATES

Commenting on the report, referred to above, Mr Oscar Hobson, the talented City Editor of the *News Chronicle*, observes as follows:

"The fact which has drawn most attention and also most applause is its revelation that last year personal savings in Britain amounted to £502 million, more than twice any previous post-war figure. Before we start patting ourselves collectively on the back for this performance, let us look a little more closely at this figure of personal savings. It is arrived at by a process of deduction. The Government statisticians estimate that gross personal incomes last year amounted to £12,628 million.

After meeting the calls on that income, consumer expenditure (including indirect taxation) £10,478m., direct taxation £1,168m., National Insurance contributions £476m., etc., there remains £502m. for personal savings, including provision for depreciation. This residual figure is very much of a hit-or-miss affair. When the Government issued its preliminary estimate of 1952 national income last April it estimated this item of savings at £341m., so that in less than six months second thoughts and amendments of other figures have already caused an upward revision of 47 per cent.

One cannot accuse the Central Statistical Office boys of not trying to get their sums right—they are always prepared to go back and revise earlier guesses. Take, for example, the figure of personal savings for the year 1948. This is how it has appeared in successive editions of the National Income report since that for 1948:

(Continued in previous column)

RESULTS OF INDUSTRIAL FINANCE CORPORATION

GUARANTEED INTEREST PAID WITHOUT STATE AID

INDUSTRIAL concerns in India seem to have not taken full advantage of the long-term credit facilities provided by the Industrial Finance Corporation of India during the year ended 30th June, 1953. Although the number of applications rose from 54 to 74 and the amount of loan sought from Rs. 7.3 crores to Rs. 8.25 crores, the actual number of applications sanctioned and the loans granted thereon declined from 33 and Rs. 4.45 crores to 14 and Rs. 1.43 crores respectively. The number of rejections, too, was high at 30, as against 19 in the preceding year. Besides, the number of applications under consideration at the end of the year, too, remained very high at 41 for loans amounting to Rs. 5.22 crores, as compared with 17 applications for Rs. 2.02 crores in the preceding year. The reasons for this state of affairs is explained by the Directors of the Corporation in their report for the year ended 30th June, 1953, thus: "Though the number of applications was larger than in previous years, the proposals were often not well thought out, and some of the applicants did not show keenness in pursuing their applications. Schemes for expansion and modernisation normally require greater scrutiny than simple proposals for putting up a new factory. For this reason, more time had to be devoted on the consideration of the applications."

Another feature of the Corporation's working in 1952-53 was the widening of the gap between the actual commitments for the loans sanctioned and the amount availed of by industrial concerns. The loans sanctioned by the Corporation since its inception to 30th June, 1953, aggregated Rs. 15.48 crores. Of this, a sum of Rs. 2.31 crores was not at all availed of by the industrial concerns. In the preceding year, out of a total loan of Rs. 14.05 crores granted, a sum of Rs. 1.5 crores was declined by concerns to which the loans had been granted. This growing tendency on the part of applicants to decline the amounts sanctioned constitutes a problem to the Corporation. Several causes appear to be responsible for this not entirely adverse tendency. To mention some of them. On account of changes in economic conditions, some companies have not availed themselves of the loans sanctioned to them. Two concerns, for instance, which had been granted loans aggregating Rs. 55 lakhs, declined to use the loan on the ground that their financial position had improved since they submitted their applications. Another company reduced its demand by Rs. 23 lakhs because of the uncertainty of getting its raw materials at an economic price. Two other companies decided to reduce their borrowings from the Corporation, while a few others were not given the loans sanctioned, because they did not fulfil some of the conditions.

Non-utilisation of Loans

The failure to utilise the loan amounts granted, as stated above, will involve the Corporation in undergoing a loss on that account. It has to be remembered that the Corporation has to secure the needed funds by borrowing at a particular rate of interest. It has to keep these funds invested in Government securities fetching a lower rate of interest till the borrower concerns actually draw them out. And, if the extent of non-utilisation of these loans goes on increasing, there will be a corresponding rise in the loss suffered by the Corporation. The Corporation has not been levying a commitment charge on the loans declined or balance of the loan not utilised, as the World Bank is doing. It may be noted that commercial banks too levy a special charge on certain types of accommodation arranged for but not availed of.

Owing to the prevalence of the tendency noted above, the difference between the loans sanctioned and the loans outstanding will widen progressively. During the year under review, however, the difference was not as large as that of the previous year, as will be evident from the table below:

(In crores of rupees)

As at	Loans sanctioned	Loans outstanding
30th June, 1949	3.42	1.33
30th June, 1950	7.19	3.42
30th June, 1951	9.58	5.66
30th June, 1952	14.03	7.25
30th June, 1953	15.47	9.87*

* Includes expenses incurred for running a company the management of which has been taken over by the Corporation.

It will be seen from the above table that the difference between loans sanctioned and those outstanding which stood at Rs. 3.92 crores as at the end of June, 1951, and widened to as much as Rs. 6.78 crores at the end of June, 1952, shrank to Rs. 5.68 crores. This shrinkage is due to the fact that the figure includes the amount spent by the Corporation on the management of a company taken over by it.

Profits Improve

It is, however, gratifying to note that, for the first time since its inception, the accounts of the Corporation show a profit which is large enough to pay the whole of the guaranteed dividend of 2½ per cent. on its paid-up capital of Rs. 5 crores, without assistance from the Government by way of subvention. The profit before taxation for the year ended 30th June, 1953, aggregated Rs. 23.17 lakhs as against Rs. 9.26 lakhs in the preceding year. This improvement in the results of working has enabled the Corporation not only to set aside a sum of Rs. 11.25 lakhs for payment of the guaranteed dividend but also to transfer to the reserve fund a sum of Rs. 2.5 lakhs after providing Rs. 9.42 lakhs for taxation. This marks a turning point in the history of the Corporation, as it has reached a stage when it is financially independent of Government assistance in the form of subvention. In the preceding four years, it may be noted here, the Corporation had received an aggregate amount of Rs. 26.9 lakhs as subvention.

The total amount of bonds outstanding at the end of the year under review remained at Rs. 5.80 crores. Arrangements are, however, stated to have been made for the sale of further bonds of the face value of Rs. 2 crores. The Directors observe that, with the rising cost of borrowing, the Corporation was compelled to raise its rate of interest on its loans to 6½ per cent. with a rebate of ½ per cent. for prompt payment of interest and instalments of principal on the due dates.

The Corporation continued, as usual, to render financial assistance to various types of industries. The types of industries and the amount of accommodation sanctioned to each of them during the year, as compared with those of the previous year, together with the aggregate figures up to the end of 1952-53 are as follows:

(In lakhs of rupees)

Type of industry	Amount sanctioned during year ended 30-6-53	Amount sanctioned upto year ended 30-6-52	Total
Textile machinery	..	64.00	64.00
Mechanical engineering	5.00	68.00	73.00
Electrical engineering	12.00	1,14.50	1,26.50
Cotton textiles	65.00	2,04.75	2,69.75
Woollen textiles	..	35.00	35.00
Rayon industry	..	50.00	50.00
Chemicals	11.75	1,86.00	1,97.75
Cement	..	90.00	90.00
Ceramics and glass	..	..	..
Oil mills	..	1,19.00	1,19.00
Electric power	3.50	2.50	6.00
Metallurgical industry (non-ferrous metals)	25.00	17.50	42.50
Iron and steel (light engineering)	..	35.00	35.00
Aluminium	17.50	50.50	68.00
Sugar industry	..	50.00	50.00
Mining	..	1,15.00	1,15.00
Paper industry	..	80.00	80.00
Automobile and tractor industry	..	74.00	74.00
Unclassified	..	50.00	50.00
	3.50	47.70	51.20
Total	1,43.25	14,03.45	15,46.70

N.B.—The above figures include loans aggregating Rs. 2.31 crore made available but not utilised by borrowers.

It will be noted from the foregoing table that the textile industry stands foremost among the borrowers from the Corporation, accounting, as it does, for nearly a fifth of the total amount sanctioned. The chemicals industry continues to hold the second place, while electric and ceramic and glass industries have stolen a march over the sugar industry, which has moved down from the third to the fifth place. It may be noted also that, as many as 11 types of industries which received loans in 1951-52 did not receive any assistance during the year under review.

The following table shows the State-wise distribution of the loans and the aggregate amount sanctioned as at the end of June, 1953, as compared with those at the end of the previous year.

(Rs. in lakhs)

	Up to 30th June, 1953		Up to 30th June, 1952	
	No. of units	Amount	No. of units	Amount
		Rs.		Rs.
Assam	..	..	..	..
Bombay	27	427.5	29	415.00
Bihar	5	83.0	7	83.00
Madhya Pradesh	3	89.75	4	29.75
Punjab	4	27.50	4	20.00
Madras	6	126.50	6	121.50
Orissa	2	59.00	2	59.00
U.P.	7	54.70	9	54.70
West Bengal	17	301.75	16	250.00
Rajasthan	2	60.00	2	60.00
Saurashtra	8	140.00	4	140.00
Madhya Bharat	1	8.50	1	8.50
Travancore-Cochin	9	65.50	8	65.50
Mysore	7	98.00	5	71.00
Hyderabad	2	60.00	1	40.00
	98	1,546.70	94	1,403.45

Most of the borrowers have, it is gratifying to note, been paying interest and the instalments of principal on the due dates. In a few cases, however, extension of time has been allowed.

During the period under review the Indian Finance Corporation Act, 1948, was amended with a view to extending the scope of the Corporation's activities considerably. As an account of these provisions were covered in these columns when the Bill was under consideration of Parliament last year, there is no need to refer to them once again here. However, the debate gave rise to a series of criticisms on the working of the Corporation. The Corporation, therefore, requested the Government to appoint a committee to enquire into the points raised in the course of the debate. The Government readily complied with this request by appointing a committee, with some members of Parliament on it. We are told that the Committee has already submitted its report to the Government, but the latter has not so far published it.

CHEQUES IN HINDI

The order of the U.P. Government directing local Boards in the State not to issue cheques in Hindi was the subject matter of a short notice question in the House of the People this week. Replying to the question, Mr. C. D. Deshmukh, Finance Minister, stated that though Hindi was the State language of U.P., audit was a Union subject under the Constitution and Union work was to be carried on in English for a period of 15 years from the commencement of the Constitution. The Centre was specially concerned with the method of the working of the Accounts and Audit Departments. A large portion of its personnel was not conversant with Hindi. Many of the terms in the fundamental rules, in the subsidiary rules, and in the code were technical and they had yet to be translated. Once the translation had been prepared and the terms had become familiar to the subordinate staff, Mr. Deshmukh added, the Government could gradually replace English by Hindi, which was the common objective of all.

MR. BLACK ON SOME ASPECTS OF WORLD ECONOMIC SITUATION

FINANCE FOR POWER DEVELOPMENT

MR. Eugene R. Black, President of the International Bank for Reconstruction and Development devoted a large part of his address to the eighth annual meeting of the Bank, held at Washington on 9th September, 1953, to some of the problems of the underdeveloped countries. He stressed, in particular, the need for the Governments of these countries following a realistic policy in the matter of fixing the tariff rates for consumers of electric power, so that the difficulty of raising finance for implementing the power projects could be minimised. He urged them not to ignore the necessity for providing an economic return in their anxiety to keep the charges at a low level for political reasons. Mr. Black referred also to the role which the U.S. should follow, as the largest creditor nation, in solving the economic ills of the world and the obligations of the rest of the world to drive back the inflationary tide and to remove other major obstacles to progress.

The following are extracts of the salient features of Mr. Black's address:

The bulk of our investment operations has been in the field of public utilities, especially of electric power, and we are constantly encountering the importance of power, even where we are financing projects outside the immediate power field. The authorities and the industrialists, and, indeed, the community at large, in our underdeveloped member-countries, are highly "power-conscious." The slogan almost everywhere is "Cheap power, and more of it." I certainly share the view that, if plans for general economic development are to go forward at the desired pace, an expansion of power facilities is essential. The technical advances which have made it possible to produce electricity at a central point and to distribute it over wide areas have given the world the most economical and convenient source of heat, light and power yet known to man. There is an ever-growing tendency towards the substitution of electricity for other forms of energy. With the expansion of industry and agriculture and the rise in the standard of living, the demand for power is ever-increasing; and as availabilities of power increase, new demands are created. Consequently, in a developing country, there is likely to be a legitimate need for a steady increase in power supplies over the foreseeable future, for purposes necessary to orderly economic progress. But, in most places, there are stubborn factors which operate in such a way that the supply tends always to lag behind the demand.

The approach to a power expansion policy of a nation deserves, I think, more serious study and more careful planning than have sometimes been given to it. For example, there are the alternatives of hydro-power and thermal power. Technical considerations aside, the choice between the two must be carefully weighed. Hydro sources may provide power at cheaper costs of production, but the amount of the capital investment may present a serious financial problem. Thermal sources, on the other hand, may necessitate the use of scarce foreign exchange for the importation of needed fuel. But—given even the most prudently planned expansion programme—acute problems arise in the field of finance.

In 1950, some 20 countries, with a population of about 500 million, had an average annual per capita consumption of electricity of about 500 kilowatt hours. These countries, with less than one-third of the world's population (excluding Russia and China), used over 90 per cent. of the world's electric power. In the rest of the world (again excluding Russia and China), with a population of over eleven hundred million, per capita use averaged only 50 kilowatt hours per year. To visualise what this low level of consumption means, imagine each family of five confined to the use of one moderate-sized lamp, and no power at all for industrial or any other purposes. Even if, over the next ten years, the present low per capita consumption in the less developed countries were to be no more than doubled, an investment of as much as ten billion dollars would probably be needed, of which more than half would have to be spent on imports.

Beyond Normal Operating Revenues

The funds for expansion should come, to some extent, from re-invested earnings of the undertakings themselves. But, usually, the demand for expansion is on a scale certainly greater than could be financed on a cash basis out of normal operating revenues. Permanent investment of this kind should properly be financed on a long-term basis. But here a serious obstacle presents itself. In most of the underdeveloped countries, a capital market does not exist to which recourse can be had for funds for power development in the manner that has become routine in North America and in Western Europe.

In my opinion, the mobilisation of investment funds for the expansion of power services in our underdeveloped member-countries presents a financial problem of the most urgent importance and of the greatest complexity. The development of a capital market that will be receptive to offerings of bonds or shares of power undertakings will be a slow process at best. In the meantime, the only alternative sources of the needed investment funds are the Government, or the consumers themselves. But, in a developing country, the simultaneous claims on Government funds for public investment are heavy and pressing: it seems to be a prudent policy to conserve those funds for necessary projects which are not themselves direct revenue-producers. I, therefore, see considerable merit in the view that, to the maximum possible extent, those who are the users of power should contribute more than they have done in the past towards providing the funds for expansion. I do not believe that such an approach would impose an unduly heavy burden; the cost of power within any likely limits, can only be a small factor in the production costs of industry or in the domestic budget.

If the needed flow of funds is to be induced, novel and ingenious financing techniques will have to be adopted to meet conditions where orthodox financial institutions or mechanisms or investment habits are, so far, in their infancy. For example, I think it is worth considering the possibility of imposing a "construction funds surcharge" on the basic rates, which would be paid by the consumer in cash, but in return for which he would be entitled to receive an equivalent in stock or debentures of the undertaking.

A Regrettable Trend

It is, I think, regrettable that, at some times in some countries, the rates charged to the consumer for power are fixed by the authorities more with reference to the political factors of the times than with proper regard to the economic necessities of particular situations. When this happens, every sound financial and business consideration runs the risk of being sacrificed in what is believed to be the cause of cheap power. But, if power can be made cheap only by charging rates that do not provide an economic return, the power undertakings are denied the ability to raise not only funds to finance needed expansion, but even the funds to maintain their existing plants in good order. In such circumstances, a community in the long run must be a heavy loser. All these considerations that I have mentioned apply with equal force whether the industry is Government-owned or privately-owned, and whether the private segment is in domestic ownership or in foreign ownership. The economic facts of life are no respecters either of Governments or of persons.—(Italics ours—Ed.)

In one of our member-countries, where the Bank has financed power development on a substantial scale, the problems of future financing have recently become pressing. The authorities in that country have agreed with the Bank that a joint study should be undertaken of the power expansion programme and of the measures required to finance development, both in the private and in the Government sector. I hope that conclusions and recommendations will emerge that will evoke wide interest.

Less Hazardous

Looking at the international investment picture as a whole, it can be said, without undue complacency, that the flow of funds across national borders is now a somewhat less hazardous operation than it was in the first post-war years. But world economic conditions remain, in a variety of ways, unfavourable to the international movement of capital. It should be the concern of all of us to see how these conditions can be improved in the coming years. There is, I think, too much of a tendency to single out some one among the many factors that impede the world's economic progress and to attribute all the world's difficulties to that one factor alone. I am sure that this approach is too narrow to provide a correct appreciation of the economic problems facing the world.

It is true, for instance, that, without great effort and a growing hospitality towards foreign capital in the underdeveloped regions, economic progress in these regions will continue to be slow and unsatisfactory. But it is also true that the extent to which production will increase in the underdeveloped regions will depend, in large part, on conditions and policies elsewhere. Especially, it will depend on whether the more advanced countries will continue to provide a satisfactory market for the products of these regions and supply to them the funds needed for their development. Similarly, it is true that there must be an increase in European industrial efficiency if European countries are to restore a satisfactory balance in their external accounts and raise the living standards of their people. But it is also true that an increase in efficiency will not solve the payments problem of European countries, unless Europe is given the opportunity to sell its goods in the markets which supply its primary products. This means that European difficulties cannot be solved by increased efficiency alone. There must also be an expansion of trade between Europe and other regions which does not depend only on European policies. Moreover, the Bank's experience in recent years has convinced us that an increase in European efficiency may itself partly depend upon increased availability of capital from the Western Hemisphere. Finally, while it is true that the liberalisation of United States imports is an essential condition for the elimination of the dollar shortage and the expansion of international investment, it is equally true that liberalisation alone will not restore balance in the world economy. There is also urgent need for the rest of the world to drive back the inflationary tide and to remove other major obstacles to progress.

Role of the U.S.

It will, therefore, require the joint efforts of all of us to deal effectively with the difficulties still facing the world. But the United States, because of its towering position, has no doubt special responsibilities in this field and must play a leading part in every effort to improve world economic conditions. The United States can hardly reconcile her position as the giant of the world economy with the fear of foreign competition, which is implied, and is, indeed, expressed, in the maintenance of high trade barriers and other restrictions against foreign goods. The consequence of these restrictions is to deprive foreign countries of the opportunity of earning dollars with which to purchase American goods and to service American capital. These barriers make the world, including the United States, poorer than it would be if foreign products had easier access to the American market. In this context, I should like to stress my opinion that the recent improvement in the world payments position has certainly not removed the need for a more liberal United States policy on foreign trade. The improvement was not achieved without severe restrictions upon the imports of the non-dollar world and upon American exports. Many markets have, ever since the war, been hedged round with quotas and similar restrictions. These restrictions were sharply increased last year in response to the payments crisis. Balance was restored largely as a result of the fall in imports from hard currency areas. A considerably higher level of buying from hard currency areas could be expected if a more stable payments position permitted the abandonment of these restrictions.

World Balance Precarious

The world balance recently achieved is, in fact, precarious. Merely to refrain from reversing the downward trend in United States import tariffs over the last two decades would not be enough to put international trade on an even keel. Fresh action is required if a durable contribution is to be made by the United States to the post-war dollar shortage and to the avoidance of the periodic crises which this has induced in many parts of the free world. A further reduction in the obstacles to imports into the United States could make this durable contribution.

But I do not need to labour this point. The case for a more liberal import policy has already been argued not only in the world at large but also within the United States. Two important official reports to the United States Government during the present year have strongly advocated this policy. It is my hope that due attention will be paid to these reports by the Commission which is shortly to begin a thorough study of the whole question of the future foreign economic policy of the United States. Prominent United States industrialists, also, have recommended the lowering of tariffs, and have expressed their confidence in the ability of their enterprises to stand up to the full force of foreign competition. A step in the direc-

WORLD COTTON SPINDLEAGE

PACE OF EXPANSION RETARDED

IF any proof is wanted to prove that the buyers' market in cotton textiles has come to be well established the world over, it is provided by the slow pace of expansion in the world cotton spinning capacity during the half-year ended January, 1953, which is in distinct contrast to the hectic activity witnessed in the preceding half-yearly periods. The number of spindles installed during the six months under review was a bare 186,000, as against as many as 1.39 million and 1.87 million in the two preceding half-years, respectively. The aggregate number of spindles in the world as at 31st January, 1953, according to *International Cotton Statistics*, published by the International Federation of Master Cotton Spinners' and Manufacturers' Associations, Manchester, was 129.25 million, as against 129.06 million on 31st July, 1952, and 127.87 million on 31st January, 1952.

The slow pace of expansion in cotton spindles installed would have been even more marked but for the efforts of the underdeveloped countries in Asia, Africa and South America to expand the size of their cotton textile industry, with a view to reducing their dependence on foreign imports, on the one hand, and to providing more employment opportunities to the people, on the other. The number of spindles in the countries of Asia and Oceania at the close of the six months under review, for instance, was substantially higher at 25.63 million, as against 24.67 million six months before. Similarly, the number of spindles in Africa and South America rose from 812,000 and 4,928,000 to 885,000 and 5,027,000, respectively. The countries of Europe and North America, however, witnessed a downward trend in spindleage, the number actually installed being 72.20 million and 25.51 million, as against 72.99 million and 25.66 million, respectively.

Trend of Expansion

The following table indicates the trend of expansion in spindleage in the several important cotton textile producing countries in the world during the six months ended January, 1953, as compared with the two previous corresponding periods.

(In millions)

	Aug., 1951 to Jan., 1952	Feb., 1952 to July, 1952	Aug., 1952 to Jan., 1953
U.K.	27.93	27.98	27.23
U.S.A.	23.12	23.23	23.08
India	11.24	11.24	11.43
U.S.S.R.	9.90	9.90	9.90
France	8.11	8.06	7.96
W. Germany	..	6.24	6.28
Japan	6.49	6.95	7.46
Italy	5.74	5.72	5.78
China	4.10	4.10	4.10
Brazil	3.23	3.25	3.33
Czechoslovakia	2.39	2.33	2.33
Spain	2.21	2.23	2.23
Belgium	1.86	1.85	1.83
Pakistan	0.84	0.43	0.63
Other countries	14.08	15.60	15.63
Total	127.06	129.06	129.25

The above table reveals that the U.K., the U.S., France, and Belgium did not witness any addition to the spindleage. On the contrary, there was a fall in the number of spindles actually in existence. This indicates that the spindles which had been worn out were not replaced but scrapped, following slackness in the export demand for cloth and appreciable decline in prices. This has been particularly so in the case of the U.K. To quote a recent publication of the I.L.O.: "In considering the future prospects of the U.K. cotton textile industry, one should bear in mind that, as a result of textile developments in other countries, there has been a movement of resources in the U.K. away from textiles and other light industries towards industries such as engineering, vehicles and chemicals."

Spindleage in Japan

Japan, on the other hand, witnessed a further expansion in the spindleage, although the pace was rather slow; the number of spindles added during the six months under review was not more than 49,000 which was more or less the same as in the previous six months. The number of spindles at the end of January, 1953, was 7.46 million, which is equal to about 60.7 per cent. of Japan's pre-war capacity of 12.28 million spindles. The cotton spinning firms in Japan it may be noted here, are reported to have concentrated their efforts more on modernising the equipment, in order to improve the technical efficiency and the quality of textile output, than on enlarging the size of the industry as such.

India is another country the cotton spindleage of which recorded a rise, albeit negligible, from 11.24 million to 11.43 million; in the previous half-year, it may be noted, there were no additions to the spindleage at all. The number of spindles exceeds the Planning Commission's target for 1955-56 by 140,000. The rate of expansion in spindleage would have been more marked but for the Government of India's decision not to give permission for the establishment of new composite mills during the period of the Five-year Plan, in accordance with the specific recommendations of the Planning Commission. Among the other countries which too witnessed an increase in the number of spindles, are Pakistan, Italy, Brazil and West Germany.

The expansion in world cotton spindleage is shared by ring spindles, spindles spinning Egyptian cotton and spindles spinning staple fibre. The number of these as at 31st January, 1953, was 108.38 million, 20.40 million and 6.34 million, as against 107.43 million, 20.25 million and 6.12 million, respectively, six months before. The number of mule spindles, however, continued to register a fall, the exact recession being 80,000 to 20.87 million. In the previous six months, the recession was to the extent of 34,000 spindles.

Pattern of Spindleage

An idea of the distribution of the different kinds of spindles in different countries as at the end of January, 1953, can be had from the following statement:

(In thousands)

	Ring spindles	Mule spindles	Spindles spinning Egyptian cotton	Spindles spinning rayon staple fibre
U.K.	10,824	16,948	12,006	1,851
U.S.A.	23,062	..	1,500	1,366
India	11,192	245	1,128	223
U.S.S.R.	8,700	1,200	45	..
France	6,932	1,032	1,265	263
W. Germany	6,079	200	630	1,420
Japan	7,460	..	321	8
Italy	5,729	52	1,450	400
China	4,100	..	250	..
Brazil	3,328	..	..	25
Czechoslovakia	1,930	400	450	..
Spain	2,081	145	340	100
Belgium	1,783	50	..	..
Pakistan	624	5	..	..

It will be seen from the above figures that the bulk of the spindles in the majority of countries consists of ring spindles. The U.S., Japan, China and Brazil do not have any mule spindles at all. In other countries, the proportion of mule spindles to the total is negligible. It is only in the U.K. that the number of mule spindles is larger than that of ring spindles. Vigorous efforts are, however, being made to replace mule spindles by ring spindles.

Cotton Consumption

The expansion in the world cotton spindleage during the six months under review was accompanied by a rise in world consumption of cotton, which was in distinct contrast to the trend in the previous half-years. Thus, the quantity of cotton actually consumed during the period July, 1952 to January, 1953, amounted to 17.37 million bales (of 500 lbs. each), as against 16.25 million bales and 16.41 million bales in the two previous half-years, respectively. The increase was in evidence in all the varieties of cotton, except in the American varieties, the consumption of which showed a decline. The following table gives an analysis of these totals according to the principal growths of cotton:

(In million bales of 500 lbs. each)

	Six months ended		
	January 1952	July 1952	January 1953
American	7.11	6.87	6.69
East India and Pakistan	2.12	2.14	2.62
Egyptian	0.55	0.46	0.55
Sundries	6.63	6.78	7.51
Total	16.41	16.25	17.37

The rise in world consumption of cotton, as noted above, was mainly accounted for by India, the quantity actually consumed during the six months ended January, 1953, being as much as 2.18 million bales, as compared with 1.96 million bales in the preceding half-year. Consequently, the production of yarn was substantially higher at 764 million lbs., as against 701 million lbs. Japan also accounted for larger cotton consumption, the figure for the period under review being 953,000 bales, as against 868,000 bales. Despite the reduction in the number of spindles, consumption of cotton in the U.S. and the U.K. was higher, being 4.75 million bales and 758,000 bales, as against 4.43 million and 674,000 bales, respectively. The cotton spinning mills in the U.S.S.R. also consumed more cotton, the exact quantity being 1.61 million bales, as against 1.59 million bales. In contrast with this general trend, cotton consumption in France during the period under review was lower at 553,000 bales, as against 597,000 bales. Among the other countries which accounted for lower consumption are Czechoslovakia, Mexico and Argentina.

TRAINING TEXTILE TECHNICIANS

In these days of growing competition for textile markets—domestic and overseas—the need for maintaining a high level of efficiency of manufacture, with a view to producing quality goods at a low price, can scarcely be emphasised. It is here that the technicians play a vital role. It is, therefore, but natural that considerable importance is being attached to the need for maintaining a steady flow of trained technicians into the various sectors of the textile industry—cotton, wool, silk, rayon and jute. Special mention must be made, in this connection, of the efforts of Imperial Chemical Industries (India) Ltd. to meet this need. Through their several apprentice courses, some of which are run in collaboration with State Governments and well-known textile institutes and colleges, I.C.I. has been rendering valuable assistance by providing facilities in dyeing, printing and other textile chemical processes. Since the first apprentice school was started in 1940, over 1,000 students are said to have been trained.

The I.C.I. provides for a three-month course in dyeing. Theoretical and practical training is given in the processing and dyeing of cotton as also of other important textile yarns and fabrics. At the end of each three-month course, examinations are held and successful students are given certificates. The best student receives a well-known textbook on dyeing as a prize. About 60 to 70 students pass out of this school every year. In the case of printing courses, lack of accommodation has prevented I.C.I. (India) from taking more than four apprentices at a time. Each batch of students is given six weeks' training in the printing of all textile fabrics by machine, screen and block. In the screen printing section, apprentices can also learn full details of screen manufacture and factory arrangement. It may be mentioned, in this connection, that the present size of the screen printing industry in India is due, *in no small measure*, to I.C.I. demonstration work. The photographic method of screen making, introduced and popularised by I.C.I., has led to a considerable improvement in the quality of Indian screen prints, many of which are now being exported.

Among the other schemes worked out by I.C.I. is the one undertaken jointly with the Bombay Government under the latter's Technical Education Scheme. Since the pre-war years, two Government-sponsored apprentices have been accepted every year for a four-year course in the I.C.I. Laboratory in conjunction with lectures at the Victoria Jubilee Technical Institute, Bombay. Each Government apprentice receives a stipend. On completion of their courses, many of them are absorbed in the I.C.I. organisation. The Government Textile Institute, Kanpur, the Kala-Bhawan Technical Institute, Baroda, and the Government Institute of Dyeing and Calico Printing, Ludhiana, each send two apprentices to the I.C.I. Research Laboratories every year, for attending courses over periods varying between a month and a year. Stipends are given to these students also.

Apart from these apprentice courses, a stream of visitors from mills and bazaar customers throughout India come to the I.C.I. Technical Service Laboratories to seek advice on problems relating to the application of dyes, chemicals and auxiliary products in every branch of textile manufacture.

Since these I.C.I. apprentice courses were started, over 1,000 students have been trained in various ways. Many of these men are now occupying important technical positions in textile mills all over India.

REVIVING LIVERPOOL COTTON MARKET

MILLS' SEARCH FOR WORKERS

(By A Special Correspondent)

MANCHESTER, *8th September*

SINCE the Hopkins Committee Report on the future of cotton buying recommended that a way must be found to avoid public money being risked in providing cover for spinners, trade leaders in Lancashire have not been idle. Several meetings between the parties most immediately affected have taken place and a summary of the progress made has been presented to Government officials.

MANCHESTER LETTER

It is understood that Mr. Thorneycroft, President of the Board of Trade, is anxious to make an official statement on the position soon after Parliament reassembles. To enable his staff to draw up details, a deputation from the Liverpool and Manchester Cotton Associations and the Master Spinners' Federation visited London last week. There they were asked to answer ten questions on the basis of the current scheme and its effectiveness in certain circumstances.

There are a good many uncertainties which must remain unresolved until actual experience of trading conditions is once more gained, but the authorities are very naturally anxious to avoid taking any action which might cause trouble later on. The currency problem is the biggest stumbling block and although at present the outlook is relatively clear, the possibility of more unsettled conditions in the future cannot be disregarded. However keen the Government is to resuscitate the Liverpool market, it must bear in mind the overall economic health of the nation. Should a new dollar crisis arise it is important that there should be no drain on the precious currency.

In the early stages of drawing up the basis for the re-establishment of a futures market, much depends on the type of contract which the sponsors have in mind. Liverpool interests clearly lean towards the introduction of a purely American contract in the first place as this would be the easiest method of conducting their affairs. As time went on other contracts would be added, they argue, and a gradual reversion to pre-war conditions could be effected. In the years since 1939, however, conditions have vastly altered and some traders are not entirely happy about the establishment of a contract tenderable against a growth of cotton, which accounted for imports of only 350,000 bales out of nearly 1,350,000 bales last season.

In particular, there is anxiety among those who have worked so hard to build up the British Commonwealth as a producer of raw cotton. Pressure is being exerted in certain quarters for Empire cotton to be tenderable against the American contract and the leaders of the Empire Cotton Growing Corporation have not been left out of the discussions which have been in progress during the past few weeks.

It has not been an easy week for traders in Manchester, harassed as many have been by the new system of price changes, which have caused revisions in yarn quotations nearly every day. Despite the warnings which had been sent out beforehand, the comprehensive nature of the adjustments from the beginning of September resulted in much discussion and not a few arguments.

Merchants and manufacturers particularly were puzzled at the apparent anomaly of cheaper cotton rates without a compensating fall in yarn prices. The explanation—that the former symbol was not strictly comparable to the new cover base ATNY—took some time to sink in.

Fortunately, at the moment, variations in quotations in the New York market are relatively narrow, and the changes announced by the Raw Cotton Commission have been within a range of 10 points. Spinners received due guidance from the Yarn Association to enable them to make swift adjustments to prices in line with the cover symbol revisions, and the appropriate formula is already well established.

One feature of the new trading conditions—cover at the current day's price ending at 3.30 p.m.—caused a stir among spinners at the outset. Some contended that it would restrict the hours of trading, as there would be reluctance to accept business late in the afternoon not knowing the cotton price which would be quoted on the morrow.

Among the larger firms, however, the opinion gained ground during the week that opportunities of arranging transactions should not be lost for this reason. Orders have already been booked at one day's price, while cover has had to wait until the next day—possibly at a different rate. The view is generally held that gains and losses made in this way will even themselves out over the months.

Cotton Board Meeting

Sir Oliver Franks, former British Ambassador to the United States, is to be a speaker at this year's Cotton Board Conference, to be held at Harrogate from 16th to 18th October. Sir Oliver, who is now Deputy Chairman of Lloyds Bank, has accepted an invitation to speak on the general economic outlook.

Other speakers at the conference will include the Hon. A. D. Campbell and Mr. J. F. Simpson, leaders of two recent Lancashire cotton missions to East and West Africa respectively.

A novel feature of this year's conference will be a special exhibit in the Annexe to the Royal Hall, Harrogate, showing some results of research on spinning and weaving.

Employment in Mills

A further decrease in unemployment in the Lancashire cotton industry is recorded in Ministry of Labour returns for August, issued in Manchester.

The out-of-work figure in cotton spinning and weaving—now down to its lowest level since December, 1951—is 2,400 of which 800 are only temporarily stopped.

The biggest hunt for workers for 19 months is on in the Lancashire mill towns. With more orders for yarn and cloth flowing in than at any time since before the slump set in, many mills are finding they have nowhere near enough operatives to achieve speedy deliveries.

Employment exchanges throughout the cotton textile belt report a total of over 6,000 vacancies for textile workers in the principal mill towns. The spinning section of the industry requires another 4,300 operatives, roughly 1,500 more workers are needed in the weaving sheds and the finishing section is searching for close on 500 workers to bring it up to strength.

"The demand for labour in cotton is greater now than at any time since February, 1952," according to a Ministry spokesman. Industry leaders say orders are being lost because labour shortages prevent deliveries quick enough to satisfy prospective customers. "With more manpower to staff idle looms and spindles we could expedite commitments much more swiftly," a spokesman for a big group of Lancashire mills said to-day.

But more workers are going back to the mills every week, Cotton Board figures show. Many of them are former operatives who switched to "safer" industries when the recession reached its worst. Others are housewives joining the evening shifts which are being resumed at many mills.

So far this year nearly 1,000 part-time workers alone have been recruited to the spinning section of the industry.

Training Mill Officials

A clear indication of career prospects to encourage youths to train for supervisory posts in the cotton industry has been demanded by the Textile Officials' Association in a report to members issued from the Association's Manchester headquarters.

Warning that a time was coming when there would be a general shortage of supervisors in the cotton industry, Mr. Stirling T. Marron, Association General Secretary, said: "What chance have we of obtaining the services of either the grammar or secondary schoolboy as trainees to take up the supervisory and technical posts? If there is no accepted scheme in our industry then we have nothing in the shop-window to sell."

Neither education authorities nor his own Association were in a position to give advice about commencing wages and conditions, future prospects and the further educational facilities offered by the companies.—*All Rights Reserved.*

German firms are to re-enter the forthcoming Textile Machinery Exhibition which is scheduled to be held in Manchester on 14th October, 1953. There will be 19 German firms and altogether more than one-fifth of the 264 exhibitors will come from overseas. Swiss manufacturers will also be strongly represented, together with important contingents from France and the U.S. The Exhibition will be 60 per cent. greater than its predecessor in 1949. There will be something new displayed for every section of the industry. Spinners of man-made fibres will be shown an entirely new blending line and card for spun-rayons and synthetics, which work on an entirely new principle. Short processing of the man-made fibres will also be seen and the cotton spinners will be able to see two new developments of blowing-room machinery For the woollen industry, a new large package ring frame and a new automatic hopper feeder will be shown. In the weaving section, there will be several entirely new models among a selection representative of British, American and Continental manufactures. The main features of the dyeing and finishing section will be the new materials used in machine construction and the developments which have taken place in recent years in the automatic control of drives and processing conditions.

COTTON EXPORTS IN 1952-53 SEASON

EARLY DECISION FOR CURRENT YEAR URGED

THE total export of Indian cotton during the 1952-53 cotton year, that is, the year ended 31st August, 1953, aggregated 327,213 bales as against 186,691 bales in the previous year. The export quota allotted for the season, it might be mentioned, was 250,000 bales, as compared with 352,000 bales in the previous season. If actual exports have exceeded the allotted quota, it is because a portion of the previous season's unutilised quota had been brought into the 1952-53 season. The 1952-53 season's export quota of 250,000 bales consisted of 150,000 bales of Bengal *Deshi*, 50,000 bales of C.P. I and C.P. II *Deshi* and 50,000 bales of Dholleras and Mathias. The Government, however, permitted, in February this year, the conversion of unutilised quotas of Mathias, Kalagins, Dholleras, C.I. and C.P. I and C.P. II and Oomra *Deshi* and Bengal *Deshi* to the extent of 50 per cent. of such quotas. It is not known what quantity of exportable cotton has been converted in the manner permitted by the Government.

The overall exports of cotton at 327,213 bales is certainly encouraging, though this level could not have been reached without the timely help which the Government gave in November last year in the shape of a reduction in the export duty on Bengal *Deshi* cotton from Rs. 200 to Rs. 125 per bale of 400 lbs. and of the abolition of the duty on Assam/Comilla cotton.

Japan and the Continental countries were the chief importers of Indian cotton during the 1952-53 season, their offtake being 155,597 and 105,424 bales, respectively, as against 117,073 and 44,070 bales in the previous season. The U.K. was a customer of relatively minor importance, its share in India's total exports being a mere 16,250 bales. The following are the destinations of India's exports of cotton during the 1952-53 season and the 1951-52 season:

(In bales of 400 lbs.)

	1952-53	1951-52
U.K.	16,250	8,408
Continent	105,424	44,070
China	318	750
Japan	155,597	117,073
U.S.	43,138	14,754
Other countries	6,486	1,636
Total ...	327,213	186,691

The Government's export policy for the 1953-54 season has not been announced yet. It might be recalled that the entire export quota for the 1952-53 season was announced in October, 1952, in the course of two announcements. Trade interests are now anxious that the quotas should be announced early enough this season. In a communication addressed to the Ministry of Commerce and Industry, Government of India, the East India Cotton Association has urged that the Government should announce immediately its policy regarding exports of short-staple cottons for the 1953-54 season, since the Bengal crop will begin moving in October and foreign enquiries are already being received by Indian exporters. The Association has further pointed out that, in view of the "generally low prices" of cotton and the satisfactory character of the new crop, an early announcement of the export policy is "imperative in the interest of the cotton grower and cotton marketing."

Allied to this question of the early announcement of export policy—the Government's failure to announce promptly its cotton policy lost many a good market in the 1951-52 season—is the question of the proper level of export duty on cotton. The Government is certainly entitled to see that in the interests of both its revenue and the need for maintaining the level of Bengal Deshi prices at reasonably low levels so as not to exceed the prices of better varieties, an adequate level of export duties is imposed on cotton. Only, the Government should not carry its "revenue" considerations too far, since it is bound to interfere with exports and defeat the very purpose for which these duties are meant. From this point of view, there is a large body of opinion which now feels that the Government should effect a cut in the present scale of export duties which, it is felt, are not in conformity with the declining trend of cotton prices in the world. It is further felt that the Government should exploit the natural conditions which give this country a certain monopoly character in respect of short-staple varieties, so as to augment the production of these varieties.

PAKISTAN'S EXPORT POLICY

The Pakistan Government has announced its cotton export policy for the 1953-54 season. The only significant change in the policy, as compared with that for the 1952-53 season, is that an export duty at the rate of Rs. 60 per bale has been imposed on short-staple Deshi cottons, namely, Bengals and Comillas. There is no other change in the export policy. Thus, the export duty of Rs. 90 per bale on other cottons continues unchanged. Also, cotton continues to be on the Open General Licence list for export; export sales of individual shippers will not, therefore, be restricted by quotas. Again, the minimum prices for export sales are the same as were fixed for the 1952-53 season. It may be recalled that, in January, 1952, the Government announced a schedule of prices below which export sales would not be permitted. By this schedule, the Government fixed the export price for N.T. and L.S.S. R.G. at Rs. 38 per maund, for 4F R.G. at Rs. 56 per maund and 289F R.G. at Rs. 61 per maund; the premium for saw-ginned varieties was fixed uniformly at Rs. 3 per maund.

PAKISTAN'S COTTON EXPORTS

Reviewing the 1952-53 cotton season in Pakistan last week, we stated that Japan was the most important customer for Pakistan cotton in that season. The break-up of Pakistani cotton export trade shows that Japan bought in 1952-53 more than twice the quantity of cotton it took in the previous season; it accounted for over 700,000 bales out of the total export trade of 1.64 million bales. Next to Japan, the Continental countries absorbed the largest quantity of Pakistan cotton, their share amounting to 419,596 bales, as against 286,223 bales in the previous season. The following are the countries which participated in Pakistan's export trade in the 1952-53 and 1951-52 season:

	1952-53	1951-52
U.K.	138,907	86,827
Continent	419,596	286,223
China	183,347	517,616
Japan	700,655	299,068
U.S.A.	12,170	1,261
Australia	34,745	11,759
Asiatic ports	16,373	2,167
Indian ports	100	975
E. Pakistan	37,570	27,125
Other foreign ports ...	97,289	8,786
Total ...	1,640,752	1,241,807

EGYPTIAN COTTON

A preliminary estimate of the Egyptian cotton crop for the 1953-54 season places it at 990,670 bales of 730 lbs. each as against the 1952-53 commercial crop of 1.34 million bales. The composition of the estimated 1953-54 crop and of the 1952-53 crop is as follows:

(In bales of 730 lbs. each)

	Estimate 1953-54	1952-53 commercial crop
Karnak	315,600	580,900
Menouf	13,800	22,800
Giza 30	266,100	175,200
Zagora	34,000	34,500
Ashmouni	357,000	499,700
Dandera	3,900	4,500
Others	270	23,100
Total ...	990,670	1,340,200

COTTON PRICES

There is sufficient evidence in nearly all markets to prove that the "Korean" boom has become history and that price trends no longer suggest the repetition of the kind of activity that followed the Korean hostilities. Cotton is no exception to this trend. Even in India, which enjoys a comparatively sheltered market, so far as cotton is concerned, the prices of cotton are less than 50 per cent. of the levels touched in the 1950-51 season and much below the prices seen in the 1951-52 season. The following table, which we reproduce from the monthly report of the well-known firm, Messrs. Volkart Brothers, shows the trend of prices in the 1951-52 and 1952-53 seasons and the high levels touched in the 1950-51 and 1951-52 seasons.

(Rs. per candy of 784 lbs.)

DISPERSAL OF SUGAR FACTORIES

BIHAR'S OPPOSITION UNJUSTIFIED

WHEN Mr. Rafi Ahmed Kidwai, the Union Minister for Food and Agriculture, stated, while replying to a debate on sugar in the Council of States the other day, that sugar production could be increased only by a redistribution of the existing sugar factories, he was only emphasising a worn-out but very pertinent point. As readers are aware, a serious defect in the development of the sugar industry in India is the location of the majority of sugar factories in areas which are quite unsuited to the cultivation of good quality cane. Thus, out of a total number of 159 sugar factories, as many as 102 are situated in the two States of Uttar Pradesh and Bihar which compare very unfavourably with the Bombay Deccan and South India as regards sugarcane cultivation. It is a long accepted fact that this defect must be eliminated in course of time by encouraging the dispersal of factories from Bihar and U.P. to the Deccan and South India. It has also been incorporated in the industrial policy of the Government of India. And when this was done, the U.P. and Bihar Governments, if our memory serves us right, did not oppose it. The present decision of the Government of Bihar to oppose the scheme for the dispersal of the sugar units to areas which are more suitable for cane development is, therefore, ununderstandable and graceless.

It may be noted here that one of the sugar mills in South Bihar (South Bihar Sugar Mills Ltd.) wants to shift to the Deccan and has completed all arrangements to do so. But the Bihar Government will not let it move out. A few days ago, the Bihar Industries Minister, Mr. M. P. Sinha, rushed to New Delhi to register a strong protest to the Government of India against its policy of dispersal of sugar factories from his State. The outcome of this visit is not yet known. Last week, the opposition members in the Bihar Legislative Assembly criticised the Government of India's policy and said that it was like the "mad project of Mohammad Tughlak." The Assembly also passed a special resolution recommending to the State Government to request the Central Government not to shift the South Bihar Sugar Mills outside the State, as it would entail hardship to lakhs of cultivators.

No Moral Justification

The South Bihar Sugar Mills Ltd., which is under the management of Messrs. N. K. Jain & Co., Ltd., owns a factory at Bihta on the Eastern Railway in the Patna District, with a crushing capacity of 1,300 tons of cane per day. It has been suffering a loss for several years, the total debit balance at the end of 1951 being no less than Rs. 14.94 lakhs. The Company has paid no dividend for the past 10 years, its Rs. 10 paid-up ordinary shares now being nominally quoted at Re. 1-8 per share on the Calcutta Stock Exchange. The Bihar Government, which is now anxious to prevent the migration of this factory to a more suitable area, has done scarcely anything to enable the factory to get sufficient supply of good quality cane at economic price. It is difficult to understand as to what moral justification this Government now has to thwart the attempts of the Company to recoup its energy by moving to a healthy climate.

One of the reasons advanced against the shifting of the aforesaid factory is that it would entail hardship to lakhs of cultivators. This line of reasoning is misleading, for there is nothing to prevent these cultivators from growing foodgrains, in which this country is still deficient and which still fetch a handsome price. In fact, the farmers in this area would appear to have already diverted their land to rice and that seems to have been the main cause of the Company's uneconomic working in recent years. As regards the factory workers, some other alternative source of employment must be found for them. There is no reason why precious capital should be wasted in an area where sugar production has become uneconomic for several reasons. Nobody in the Bihar Legislative Assembly, who voted for the resolution referred to above, seems to have cared to ask as to how long the shareholders of the Company should suffer without a return on their capital. If the Bihar Government is anxious to retain sugar factories in areas which are unsuitable for them solely for the sake of providing employment to people, it must aid such factories by giving special concessions and by providing suitable facilities for the supply of raw material. But any such assistance will be justified only if there are no other profitable means of providing employment for people in those areas. Otherwise, it would amount to throwing away good money after bad. Before rendering any such aid, therefore, the Bihar Government must make sure on this point by having an expert examination.

That apart, there is the larger issue of the dispersal of sugar factories in general. As the States of Bihar and Uttar Pradesh are in the sub-tropical region, the scope for intensive development of sugarcane is limited. Thus, not only is the yield of cane per acre very low but the quality also is poor, as compared with the regions in the tropical region. It is no wonder, therefore, that, notwithstanding the conscious and determined drive by the authorities, the importance of these two States in the sphere of sugarcane cultivation is gradually receding, as will be clear from the figures given below:

	Percentage of area to total cane area		Percentage of production to total cane output	
	1931-32	1952-53	1931-32	1952-53
U.P.	62.6	60.3	62.1	60.4
Bihar	11.2	8.2	9.6	4.5
Madras	6.6	6.0	9.1	13.3
Bombay	2.6	4.2	5.0	8.7
Hyderabad	1.4	2.1	1.4	3.4

Cane Cultivation

It will be seen from the above table that, during the last 11 years, the U.P. and Bihar have lost their share of the area under cane and, consequently, also of cane production, which is in distinct contrast to the trend in Bombay, Hyderabad and Madras. What is more, while the extent of fall in cane production in U.P. and Bihar is more than proportionate to the reduction in the area under cane, the reverse has been the case with the other States. This comparison clearly shows that the average yield of cane per acre in U.P. and Bihar has gone down, while that in other States has increased. With regard to recovery percentage of sugar also, the States of Uttar Pradesh and Bihar compare unfavourably with other States. The percentage of recovery of sugar in cane grown in these two States during 1952-53 was as low as 9.78 and 10.10, respectively, whereas it was 11.59 in Bombay, 11.37 in Mysore and 10.48 in Hyderabad. These statistics confirm the well-known fact that the tropical conditions of South India are more suitable for cane development than the sub-tropical climate of North India.

In view of these factors, one would naturally ask: How then could the sugar factories in the U.P. and Bihar be assured of adequate supplies of high quality cane at reasonable prices? The answer to this poser cannot but be in the negative. In fact, it is this factor which has primarily been responsible for the high cost of sugar production in these States *vis-a-vis* that elsewhere. It is not, therefore, surprising that several factories are either idle or working below capacity. During the 1952-53 season, for instance, five factories in the U.P. and three in Bihar did not work at all.

The foregoing account lends admirable support to the view of Mr. Kidwai, referred to at the outset. It is precisely these considerations that provided the grounds for the Planning Commission's recommendations on this question. In its development programme for the sugar industry, the Commission has specifically emphasised the need for shifting some of the factories at present located in areas where sufficient cane supplies are not available to areas which are assured of adequate supplies of the right quality cane or which are suitable for growing cane.

Few would dispute the reasoning behind this suggestion. For it is an economic truism that an industry should be located in a region which is best suited for it in the matter of availability of plentiful raw material supplies, transport facilities and proximity to consuming markets. It is unfortunate that, in the past, development of the sugar industry should have taken place without due regard for the essential principles of location. If the Indian sugar industry is to be set on a sound footing, it is imperative that the defects in the location of the industry are removed as early as possible by the process of dispersal. It is, therefore, high time that the Government of India appointed, as recommended by the Planning Commission, an expert committee to examine carefully all the factories which are not working or which are working below capacity, due to paucity of cane supplies, with a view to determining which of the factories should be shifted from their existing location.

While implementing the suggestion for the dispersal of factories, special care, it must be stressed, should be taken to ensure that the factories will make arrangements to have their own sugarcane farms, as is the case now with the factories in the Deccan, or, alternatively, be assured of adequate cane supplies from the surrounding areas. Unless this is done, the hope of these factories securing adequate supplies of cane and producing maximum quantity of sugar at economic prices will not be fulfilled.

Facilities for Transfer

In conclusion, it must be said that, if the dispersal of factories is to gain momentum—so far only one factory seems to have volunteered to move itself out of the sub-tropical region—the State Governments in the tropical region, namely, Bombay, Hyderabad, Andhra, Mysore and Madras, must make it worthwhile for the factories to shift from the North. At present, the policy of these Governments, especially that of Bombay, is scarcely conducive to the establishment of more sugar factories. In fact, they are subjecting the sugar industry to so many impediments such as the high rate of irrigation taxes, irksome control over utilisation of molasses, profiteering in the sale of manure, prohibitively high rates of sales tax, etc., that the natural advantages offered by the Deccan and South India have been nearly, if not more than, offset. The State Governments should revise their policy in these respects and also take energetic measures for increasing the irrigation facilities. The Governments concerned will do well to remember that the establishment of new sugar mills in their States will be in their own interest. Besides providing additional tax revenue to the exchequer, these new units will not only provide employment to the people but also go a long way towards reducing their dependence on far-off States for supplies of sugar.

• • • •

Since writing the above, the Union Food and Agriculture Minister, Mr. R. A. Kidwai, has stated that a proposal for the shifting of the aforesaid sugar factory in Bihar to Bombay State is under the Government's consideration. Replying to a question in the House of the People on Monday last, the Minister said:

"The particular factory has been working for the last seven years at one-third its capacity, due to difficulties of getting sugarcane in competition with other manufacturers. The application of the factory for a licence to shift to Bombay State was considered by the Licensing Committee set up under the Industries (Development and Regulation) Act. The Bihar Government representative has opposed it on the ground that the Government has taken certain measures to rehabilitate the factory by loans. The factory, however, contends that, even with all the facilities, it will not be possible to develop cane in the area to the extent necessary for a full crush. The Licensing Committee recommended the shifting of the factory to the Bombay area. This recommendation, with particular reference to the representations received from the Bihar Government is now under the consideration of the Central Government."

SUGARCANE PRICE

The Government of India's policy regarding sugarcane prices was subjected to strong criticisms in the Bihar Legislative Assembly last week, when the latter took up for consideration a non-official motion on fixation of cane price for the ensuing (1953-54) sugar season. Most of the criticisms advanced by the Opposition were based on the ground that the price of Re. 1-5 per maund of sugarcane fixed for the current season was too low and had hit the cane growers hard. The Government of Bihar also would appear to feel likewise, as note the remark of the Industries Minister, Mr. Mahesh Prasad Sinha, that, "if the price of cane is not raised this year, the sugar industry would be adversely affected." Nevertheless, the Minister conceded that there were certain other factors which the Centre had to take into account while fixing the cane price. The Centre, for example, compared the per-acre yield of cane in Bihar with that in Bombay, Madras and Uttar Pradesh. It had also to bear in mind the competitive price of sugar in the world market.

Proceeding, Mr. Sinha observed that, although he did not hold any brief for the Centre, he had to take notice of the basic facts of the case. In U.P., he said, only one-fourth of the cane grown went to the mills and the growers there relied more on the *gur* industry than on sugar mills. Naturally, U.P. did not have the same problem to face as Bihar where three-fourths of the cane grown was supplied to mills and only one-fourth found its way to the *gur* industry.

COAL MINERS' BONUS SCHEME

IS IT BASED ON SCIENTIFIC LINES?

RECENTLY, we discussed in this column the chief question to be answered by the industrial tribunal to be set up shortly, namely, whether there is need for an upward revision of the wage structure of colliery labour. This week, we propose to discuss the next important problem; what should be the basis for payment of bonus and whether the bonus scheme, as prevailing now, needs revision? The present scheme, which is based on attendance and not on production and provides for payment of bonus on a quarterly instead on an annual basis, has come in for a good deal of criticism both by colliery owners and labour.

It will be recalled that, under the Conciliation Board Award, 1947, the original intention was that bonus should be a production bonus, the first two months' bonus being dependent on attendance and the third month's being directly linked to production. Owing to varying factors affecting production from colliery to colliery, it was, however, decided to link the entire bonus to attendance purely as a temporary measure. Further, although it was originally intended that bonus should be payable annually, the industry was prevailed upon to agree to pay every quarter.

Labour has been complaining that the bonus scheme has failed to supplement the low level of wages even to some extent which, it is now stated, was its aim. It alleges that the percentage of workers getting bonus is low. It contends that, as bonus is paid on total earnings and that as earnings are conditioned by the supply of tubs and wagons, factors which are not within its control, the bonus system has yielded very little benefit.

Colliery owners have been complaining that, while the bonus scheme has exceeded all expectations in enhancing the attractiveness of work in the collieries, it is doubtful whether it has achieved any great success in increasing the productivity of the labour force, which is the main aim of the scheme. According to the Indian Mining Association, it has resulted only in "more wages for less work." The linking of bonus to attendance has put a premium on inefficiency. Further, the payment on a quarterly basis, instead of on an annual basis, has prevented the realisation of the object of stabilising the labour force.

Thus, it is clear that the bonus scheme has satisfied neither the employer nor the worker. A dispassionate study of the problem discloses that the scheme is not based on scientific lines. The most glaring defect in the scheme is that it has virtually destroyed the relationship between achievement and remuneration. In other words, the worker gets his wage and a share in profit, irrespective of his efforts. The scheme provides no incentive to the worker to increase his productivity.

Productivity of Labour

It is common knowledge that profits made by industry depend on several factors, besides the efforts of labour. An undertaking in which labour has performed its full part may fail to make any profits for other reasons, while large profits may be made by another undertaking where labour fails to play its part in full. The productivity of labour is dependent, among other things, on the nature of equipment, efficiency of organisation and supervision. Profits depend not merely on productivity of workers but also on favourable trading conditions, monopolistic position, and the like. Consequently, profit-sharing unrelated to productivity gives a share in the hotch-potch of fluctuating elements, which include risk and trade fluctuation profits, friction and accidental profits, domination and differential profits, etc., all of which are of a short-term nature.

Certainly, this is not the state of affairs which profit-sharing, as an instrument for stimulating economic activity, is sought to achieve. While, on the one hand, it seeks to make up the difference between the low wage paid and a fair living wage, on the other, it aims at increasing productivity by providing incentive for harder work. Profit-sharing correlated to productivity gives rise to additional productivity. It is after all profits resulting from increasing productivity that is everlasting. All others are "risk profits." Division of risk profits between capital and labour is only of incidental nature. As such, profit-sharing, which is a part of wage policy, should push the productive idea forward in such a way as to guarantee in advance the intimate coupling together of individual effort and remuneration, which alone can provide spontaneous incentive to increased productivity. This will guarantee stabilisation and regular attendance of the labour force also.

How is the collective share of labour to be determined and how is that share to be distributed among workers? This is, indeed, a complex problem. It is this task that is to be faced by the tribunal. It is to be hoped that it will succeed in arriving at a formula which will be conducive to productivity and expanding economy.

TRANSPORT OF COAL BY RAILWAYS IN 1952

The Indian railways during 1952 carried a total of 33.20 million tons of coal out of 33.76 million tons, which were available for despatch at pitheads, or just over 98.3 per cent. of the total. This is indicated by an analysis of coal loading statistics for the past year which has now become available. The balance of 1.7 per cent., or about 156,000 tons, which was not carried, consisted mainly of inferior quality and rejected coal and shale.

The total coal raisings in India during 1952 slightly exceeded 36.30 million tons, as compared with 34.43 million tons during 1951. Consumption at the collieries themselves aggregated 2.53 million tons in 1952, as against 2.47 million tons in the previous year. The gross quantity available for despatch in 1952 was 33.76 million tons, as compared with 31.96 million tons in 1951, an increase of 1.80 million tons. The railway despatches from pitheads were proportionately heavier in 1952 than in the previous year. While only 31.05 million tons were carried in 1951, the quantity lifted in the following year was 33.2 million tons, an increase of 2.15 million tons.

GIRIDIH COALS

Investigations recently conducted at the Fuel Research Institute, Jealgora, on the Giridih coals to provide data and information for the proposed coke oven battery of the State railway collieries have disclosed that Giridih coals are particularly suitable for the production of high class coke, as they possess good coking properties and their ash and phosphorus contents are low. The Lower and Upper Karharbaree seam coals have given satisfactory cokes of low ash acceptable for metallurgical uses. The Upper Karharbaree seam, which has so far not been worked, is thus a valuable source of coking coal for the projected coke plant. These seams can also be washed and carbonised to produce low ash coke for special metallurgical uses. The Bhadua seam, however, gives comparatively poor coke with high ash on straight carbonisation. Washing improves the coking characteristics and metallurgical coke can be obtained by coking washed coal or blends of it with suitable proportions of Lower and Upper Karharbaree seams.

(*Concluded from next column*)

on 19th August that exports would not be allowed, unless the prices come down. At the foot of this page are given the sales averages realised at the Board auctions since January, 1953, as compared with the corresponding months of 1951 and 1952.

Current prices are below the basic price based on the cost of production and the shortfall can be made up only by the higher prices which will be realised on exports. The question may be asked, would the market rise if the Government announces its intention to export? The position is quite simple. The Board works on actual figures of coffee received and sold and in stock. Its figures are available to the entire trade. If sufficient stock is retained to cover the remaining four months and, in addition, a buffer stock of 1,500 tons, the trade would understand the situation and would take no chances since the Board can visit great loss on them if it chose to push its reserve stocks into the market.

The present difficulty, therefore, arises solely from the Government's reluctance to dispose by export of an excess stock which has no possibility of being utilised in the internal market before the next crop arrives. Anxiety is being expressed by those concerned as to how the godown accommodation will stand up to the monsoon carry-over of surplus coffee plus the arrangement for storing the 1953-54 crop which may yet turn out to be a record.

COFFEE SITUATION

CASE FOR PERMITTING EXPORTS

(From A Correspondent)

THE Indian Coffee Board holds an unusually large stock of coffee, according to the figures available up to the end of July, 1953. With 14,798 tons, it is 6,000 tons more than the stock held on the same date a year previously. Normally, the new crop begins to arrive in October in the Palnis, with increasing arrivals in November and December from all districts. Enough coffee from the next crop for the internal market should be available from January onwards.

The amount of coffee released from January, 1953, through to July averages 1,371 tons per month. During this period, there have been heavy withdrawals, as the coffee exposed for sale by the Board was not taken up by the wholesale and retail trade or the co-operative societies. If the same quantity of coffee were released in the last five months of the year, as found to be the actual demand during the period January-July, the amount of coffee required would be 6,655 tons. This would leave 8,143 tons in stock with the Board. Allowing a carry-over of 1,500 tons into next season, there would still remain 6,643 tons. Actually, the quantity will be considerably in excess of 7,000 tons, for only 600 tons were sold in the August Pool auction against an expectation of 1,000 to 1,200 tons.

Part of this stock has been shifted, at extra cost to the Board, from the monsoon-affected west coast to Coimbatore, inland. This coffee is bound to have suffered some moisture damage resulting in a loss in its value in the export market. If a decision to export is still further delayed, a much greater deterioration will have taken place, resulting in greater loss. As it is, the large stock which will be left over at the close of the monsoon must suffer a weight loss of approximately 3 per cent. in the succeeding dry months. This is an absolute loss with no gain to either the producers or consumers.

Authoritative circles have accused the trade of standing aloof with the intention of defeating the Government policy of bringing down prices. Actually, the trade is in a difficult situation. Government have not indicated how far it intends to bring down prices, but it has the power to order a reduction at any time whether such a step can be justified or not. Faced with this uncertainty, the trade would be running an unnecessary business risk by buying any more coffee than it can immediately sell. This explains the reluctance of the trade to enter the market in normal strength.

Payment to Growers

So long as large stocks of coffee remain unsold, the Board will find it impossible to pay the growers whose coffee it holds. The borrowing power of the Board has been raised to Rs. 2 crores recently, but, at that time, the large accumulation of stocks was not contemplated and payments to growers cannot be maintained within the limits of the Coffee Board's borrowing powers, which would have to be doubled. This additional credit is not readily obtainable and the charges only add to the cost of the coffee; yet the grower has to be paid for his produce. Under the Coffee Market Expansion Act, 1947, the coffee growers have to hand over their crop to the Board, an obligation which is not laid on the producers of any other product in India. This lays a corresponding obligation on the Board to maintain payments which it cannot do at present as large stocks remain unsold.

Apart from the loss in value, due to deterioration in quality and the loss in weight, the financing charges—the cost of warehousing the large stock, etc.—will absorb some Rs. 4.2 lakhs for six months. The total loss inclusive of deterioration and driage involved in a six months' delay in disposal of stocks might well amount to over Rs. 20 lakhs.

The Hon'ble Minister for Commerce and Industry, without waiting for the findings of the Cost Accountant sent to enquire into the cost of production of coffee, stated in Parliament

(*Continued in previous column*)

EXPORT DUTY ON HESSIAN

FURTHER REDUCTION ANNOUNCED

THE Government of India has announced a reduction in the export duty on hessians from the existing rate of Rs. 275 per ton to Rs. 120 per ton. A Press Note issued by the Finance Ministry on the 14th inst., said: "In accordance with their policy of keeping under constant review all export duties, the Government of India have examined the effect of the present duties on hessian (cloth and bags). They consider that the present rate of duty is retarding the export trade, and in order to improve their competitive position in foreign markets, they have decided to reduce, with effect from 15th September, 1953, the export duty on such goods from Rs. 275 per ton of 2,240 lbs. to Rs. 120 per ton." This reduction, of course, follows the minor concession shown by the Government in the abolition of export duty on certain specialities given effect to as from the 16th July last.

The reduction, though welcome, is both belated and parsimonious. It is now fifteen months since the Government last reduced the duty on hessians from Rs. 750 to Rs. 275 per ton. Events in the field of exports since then revealed that the reduction brought no appreciable relief to the mills. For stocks at the end of each month continued to be high and no large demand for jute goods developed, even though prices steadily showed a downward trend. The industry went on, all these months, appealing to Government to abolish the export duties. Instead the Government has now preferred to bring it down to Rs. 120 from Rs. 275. Even this reduced duty is not likely to bring any appreciable results. For the way in which prices have been declining in the commodity markets in the world suggests that the reduction is not adequate enough to attract more orders. The least that the Government should have done was to bring it down at least to the pre-war rate of Rs. 32 per ton, although the long suffering to which the industry was subject since devaluation in 1949, warranted total abolition of the duties. It is needless to add here that the opportunities for expanding sales of jute goods by mills which such an action would have provided, would, in turn, have brightened the prospects for providing more employment to the unemployed in the jute industry.

In Retrospect

As we have referred to the deleterious effect of the export duties on jute goods in these columns, time and again, we do not propose to deal with it once again here. It will, however, not be inappropriate to record the changes in these duties which have taken place since the pre-war years.

Variations in Export Duties

(Rs. per ton)

	Hessians	Sackings
Pre-war	32	20
November, 1946 ...	80	50
28th September, 1949	250	50
21st October, 1950 ...	750	50
20th November, 1950	1,500	150
30th March, 1951 ...	1,500	350
20th February, 1952	750	350
7th May, 1952 ...	275	175
15th September, 1953	120	175

It will be seen from the above table that the duty on exports of sackings is allowed to be retained at Rs. 175 per ton, while that on hessians is kept at considerably lower level. This is quite contrary to the practice prevailing hitherto, namely, of keeping the duty on sackings below that on hessians. It is to be hoped that the Government will revise also the duties on sackings, so that they may be in line with the practice followed till now.

That both hessians and sackings need strong stimulus to expand their sales is evident from the steady deterioration in the value of both hessians and sackings. Owing to some improvement in the offtake of these goods by the U.S., Argentina and Australia, they managed to stand at fairly high levels during June and July this year. Thus, B. Twills were at their highest for the year so far at Rs. 105-4 per 100 bags on 1st June last. Hessians 40"×10 oz. touched the peak at Rs. 47-2 per 100 yards on 25th June. In sympathy with the firmness in jute goods, during this period, raw jute, Assam bottoms, which had reached a high of Rs. 30 per maund towards the close of May, continued to remain steady throughout this period at between Rs. 26 and Rs. 28-8 per maund. But since July, the markets have sustained a setback which has continued except in the middle of August, till almost the close of last week, that is, on the 11th inst., when B. Twills were quoted at Rs. 90-10 and hessians Rs. 40-6. Raw jute prices, too, could not but decline, as mills were reluctant to buy, in view of the unremunerative rates prevailing in the goods section. Raw jute, Assam bottoms, stood, therefore, at as low as Rs. 24-8 (6th September) as against Rs. 30 three months ago. Since then, however, there has been some improvement in both the sections of the market owing to short-covering occasioned by reported buying from the U.K. Thus, on the 14th inst., B. Twills were in demand at Rs. 94-4 per 100 bags and hessians at Rs. 41-14 per 100 yards. Raw jute also rallied to be quoted at Rs. 25-8. The current levels are considered to be unremunerative to both the mills and the jute grower. It remains to be seen as to what extent the present reduction in the duty on exports of hessian will bring relief to both.

PAKISTAN'S JUTE POLICY

The Government of Pakistan has announced its jute policy for the 1953-54 season. The fact that there will be no possibility of a glut in jute supplies in the current season would appear to have prompted the Government not only to remove control on internal prices of jute but also to withdraw the price-support scheme which was in existence during the past three seasons. The decision must have come as a great relief to the Pakistan Jute Board, as its experience of administering the price-support policy during its operation was none too happy. Following the introduction of this policy in October, 1949, the Jute Board found itself so entangled in a labyrinth of legal enactments and orders and financial difficulties, that till now it found no way to extricate itself from them. The measures taken by the Government included fixation of minimum prices for raw jute, ban on exports of jute, control on freight and baling charges, and preparation of a list of merchants to handle the trade. In fact, at one time, the Pakistan Government even sent troops to the Indo-Pakistan border to put an end to the smuggling in jute from East Bengal. In spite of all these measures, it is difficult to say whether the price-support policy brought any appreciable benefit to the jute grower. Profiting by this experience perhaps the Government of Pakistan came to the conclusion that the ultimate solution to the jute problem lay in imposing a drastic cut in the area to be cultivated under jute. It, accordingly, gave effect to this decision last season. In the result, this season's crop is stated to be just enough to meet the requirements of the world.

Simultaneously with the abolition of minimum prices for internal jute, the Government has withdrawn the minimum export prices also. This aspect of the jute policy, too, remained no more than a dead letter, as Pakistani jute could be had at prices in India at below the rates. The new jute policy, however, envisages that the State Bank of Pakistan should continue to exercise the usual check on export prices in consultation with the Jute Board in the light of market trends.

The export duty on long jute cuttings and jabbi will remain unchanged under the new policy. But an export duty of Rs. 5 per bale of 400 lbs. would be levied on cut-rope. Jute exports during the 1953-54 season will continue to be on the O.G.L. for countries in the American account area and Argentina. For other countries, export licences will be issued by the Jute Board. Jute in the border areas will be purchased by co-operative societies, but the price at which these purchases will be made is not known.

The total exports of jute from Pakistan during the 1952-53 season amounted to 5.3 million bales, valued at Rs. 57 crores, as compared with the exports in the 1951-52 season at 4.88 million bales, valued at Rs. 99 crores. It will be noted that, in the 1952-53 season, although the quantum was higher, the value earned registered a sharp decline. This reflects the extent to which the value of raw jute had shrunk during the last season, as compared with the boom year, 1951-52.

Pakistan's jute exports to dollar countries improved from 1.71 lakh bales in 1951-52 to 5.54 lakh bales in 1952-53.

The carry-over of raw jute at the end of the 1952-53 season was estimated to be as low as 2.8 million bales.

As regards India's imports of Pakistan jute, the latest figures available relate only to the 11 months of the season 1952-53. During this period India imported 1.3 million bales, as against 1.6 million bales in 1951-52. Exports to the U.K. in the same period, last season, amounted to 800,000 bales as compared with 500,000 bales in 1951-52. This shows that, during the season, India purchased less jute from Pakistan, while the U.K.'s purchases of Pakistani jute improved considerably. The reason for the lower Indian offtake was the imposition of discriminatory levies on jute exported to India which was removed later at the intervention of the G.A.T.T.

TREND OF TEA SALES

QUALITY TEAS FETCH BETTER PRICES

THE prices fetched by tea in the latest Calcutta, as well as London, auctions are encouraging. The decline witnessed in prices in the last two sales in August in Calcutta has given way to a steady improvement. Clean Common B.P., for instance, which was quoted at Re. 1-11-3 in sale No. 8, has improved to about Re. 1-13 in sale No. 13. Prices in London auction on 7th September for best qualities were higher by about 2d. per lb.

The following comparative table gives the quantity offered for export and dust teas sold upto the end of August and the average price realised for tea auctions, held at Calcutta, as given by Messrs. J. Thomas & Co., Ltd., Calcutta, in their latest monthly report:

	1953-54		1952-53	
	Export (Packages)	Average Rs. a. p.	Export (Packages)	Average Rs. a. p.
Assam	132,945	2 0 3	180,055	1 13 7
Darjeeling ..	31,353	2 10 6	40,574	2 0 0
Dooars	109,765	1 12 0	107,529	1 2 8
Cachar, etc. ..	67,641	1 11 0	57,155	0 14 9
Total ..	331,744	1 14 9	345,303	1 8 6
Dust	125,112	1 10 7	104,111	1 6 6

It will be evident from the foregoing table that, while sales for export declined by 14 per cent., sales of dust tea rose by 20 per cent. Until the last sale in the month of August, the Calcutta market was about an anna per lb. above the price at London for Clean Commons, Low Mediums and teas in general. The reason for this was undoubtedly the strong demand which came from buyers for Indian consumption. By the time of the last sale in August, both markets were quoting almost the same rates for these types of tea. This was due not to any decline in demand in Calcutta but to the fact that the supply of tea for sale in Calcutta was more than that in London. Another feature of the market was the steady and sustained support given to B.O.P.'s and O.F.'s suitable for Eire. Prices for these fell only when quality showed a seasonal decline, but there was always a keen demand for these descriptions. Wholly leaf grades, especially stylish O. Pekoes, were also strongly competed for and, throughout the month, Turkey was a steady buyer.

Discriminating Demand

Looking at the overall position of tea, the supply and demand was, according to Messrs. J. Thomas & Co., Ltd., more evenly balanced during August than at any time for some time past. Although all the tea markets were generally firm, demand was discriminating. This is, a warning to producers, in that any falling away from the present standard of plucking better quality tea leaves will result in glutting the markets once again with unwanted teas, thereby courting the disastrous effects of the previous seasons.

The stocks of tea at London and Provincial Bonded Warehouses on 28th August, 1953, were 91,347,804 lbs., as against 110,728,485 lbs., a decline of 19,380,681 lbs. The exports of North Indian tea to various overseas countries from 1st April to 22nd August, 1953, as compared with those in the corresponding period in the previous year, disclose a substantial increase. Thus, they amounted to 92,390,434 lbs., as against 89,159,533 lbs., an increase of 3,230,901 lbs. Exports from Calcutta Port to the U.K. were 67,752,086 lbs., as compared with 55,203,370 lbs., and to other places 23,583,251 lbs., as compared with 33,351,773 lbs. Exports from Bombay Port were 1,055,097 lbs., as against 604,390 lbs.

Continued efforts are being made to popularise the tea-drinking habit in overseas countries. It is stated that the Government of India will shortly set up a tea council in Canada in collaboration with that Dominion's trade interests. Mr. C. M. Kothari, a Director of the Government of India's Tea Council of America, is expected to explore the possibility of reaching an agreement between the Government of India and the Canadian tea interests in this regard. The Government of India has also proposed the formation of an Indo-Ceylon Tea Promotion Council, which is now being considered by the Ceylon Commerce Minister. If the proposed Indo-Ceylon Tea Council were to meet with success, Indonesia and Pakistan are likely to be invited to join it.

The Deputy Commissioners of Cachar, Sibsagar and Lakhimpur districts have been directed by the Government of Assam to take over closed tea gardens in their respective zones for the purpose of rehabilitation of the jobless tea garden workers.

DEVELOPMENT OF IRON AND STEEL INDUSTRY IN E.C.A.F.E. REGION

JAPANESE OPERATIONAL TECHNIQUES FAVOURED

THE Iron and Steel Sub-Committee of the Economic Commission for Asia and the Far East (E.C.A.F.E.), which concluded its fifth session at Bangkok, a few days ago, called for increased production of iron and steel in the E.C.A.F.E. region. The session, which was attended by exports from Burma, China, France, India, Indonesia, Japan, Laos, the Netherlands, Thailand, the U.S.S.R., the U.K., and the U.S., and observers from the International Chamber of Commerce, considered proposals for the improvement of Asian production methods. It considered that many of Japan's operational techniques could be usefully practised in the countries of the E.C.A.F.E. region, especially those relating to exploitation of iron ores, charcoal blast furnaces, sintering, coal-washing, utilisation of non-coking coals, electric smelting, electric furnaces, open-hearth furnaces, use of oxygen in steel making, etc.

In view of the lack of coking coal in many Asian countries, the experts drew the attention of the Governments concerned to the possibility of producing charcoal pig iron and expressed satisfaction at the successful utilisation of charcoal blast furnaces in Japan, Brazil and Sweden. They disclosed that the possibilities for the manufacture of charcoal pig iron existed particularly in Burma, Indonesia and Thailand. They further observed that the use of pyrite cinder could be introduced with advantage in some countries as raw materials. The experts felt that the manufacture of pig iron by electric smelting could be adopted by countries where power is cheap, as compared with coke, or coal is not available or has to be imported. (Such furnaces already exist in India and Japan and are being considered by Burma and Indonesia.) They further expressed the view that the electric arc furnace of steel-making was suitable for Burma, Taiwan and Indonesia.

Expansion Programmes

The importance of these recommendations needs no emphasis. For establishment and expansion of the iron and steel industry, where resources permit, is the first essential step in any programme of rapid economic development of the nations. In fact, an index of a nation's economic advancement, be it in agriculture or industry, is provided by the consumption of iron and steel. It is a pity that, although the E.C.A.F.E. region contains more than half the world's population, production of iron and steel there accounts for not more than 3 per cent. of world output. There can be no doubt that, with effective utilisation of resources, production of iron and steel can be increased to well above its present low level. It is, however, gratifying to note that the various countries of the region have plans for establishing or expanding iron and steel industry. They are as follows:

(1) India is proceeding ahead with its plans to increase its output of iron and steel by a million tons;

(2) Japan has a comprehensive modernisation programme;

(3) The Philippines expect to commence operation of its new iron and steel plant early next year;

(4) Thailand has plans under active consideration for a moderate sized blast furnace, steel plant and mills, in addition to its existing facilities;

(5) Burma is placing orders for equipment and machinery abroad to put up a hand-operated steel mill;

(6) China has plans for installing additional blast furnaces, coke ovens, electric furnaces and rolling mills;

(7) Indonesia is anxious to install a steel plant and is putting up a mill of small capacity to roll scrap in Java;

(8) Pakistan has schemes to utilise scrap and rehabilitate its re-rolling industry; and

(9) Viet Nam and Korea are awaiting more settled conditions to complete plans for the utilisation of their large iron ore resources.

Japan is an outstanding example of what can be achieved by a country with the necessary will and initiative, in spite of serious handicaps due to lack of suitable raw materials. It is true that the Sub-Committee has recommended that Japan's operational techniques can be usefully practised by the other countries of the E.C.A.F.E. region. That does not mean that every Japanese method and technique can be applied wholesale to any particular country or that they are the only models for the countries of the region. Nevertheless, having regard to the conditions of the countries of the region, one is justified in hoping that the more important techniques followed by Japan may be suitably introduced, with adaptation wherever necessary, to suit the peculiarities of each country belonging to the region.

The Sub-Committee's suggestion for the use of pyrite cinder as raw material in certain countries is believed to be appropriate. For, under sintering, one can, it is said, utilise waste materials such as ore fines, flue dust and coke breeze. Sintering and ore beneficiation will have the further advantage, according to some experts, of "improving the burden" and this will benefit countries suffering from lack of coking coal. There are proposals for the installation of sintering plants in India and Taiwan.

The Sub-Committee also underlined the importance and benefits of coal-washing and recommended it wherever practicable. (India has already installed two washing plants and it is proposed to erect some more plants.) For, it will help reduce the ash content of coal, thereby improving its grade. It may be noted, in passing, that Japan has offered co-operation with other countries of the region to push to a successful conclusion tests and experiments in the utilisation of non-coking coal, especially by the manufacture and use of semi-coke, *bojuntan* and other similar processes. The Sub-Committee was of the view that the reserves of scrap in countries like Burma or Indonesia were large enough to support a small industry for 20 to 30 years, even though the recurring yearly supply of scrap might not be of any considerable magnitude. It was further of the opinion that there was good scope for the manufacture of wire products in these countries. In Taiwan and Thailand, there were stated to be possibilities for the establishment or expansion of small rolling mills for the manufacture of ordinary commercial quality products.

EXPLOITATION OF MINERALS IN RAJASTHAN

The second meeting of the Rajasthan Mineral Advisory Council, which was held at Jaipur last week, stressed the need for reorganising exploitation of minerals in Rajasthan on a scientific basis, as a lot of precious mineral deposits were being wasted due to crude handling. Mr. Raj Bahadur, Deputy Minister for Communications, highlighted the importance of providing sufficient power, necessary communication and transport facilities for the development of mining enterprise in that State.

Mining in Rajasthan accounts for as much as 17 per cent. of the aggregate mineral output of India. It is thus one of the bigger producers of minerals in India. It is the sole supplier of marble in India, its quarries at Makrana in the Jodhpur Division being well known. It is the second biggest supplier of mica in India. The average production of mica is about 22,015 cwts. per year. Rajasthan is supplying vast quantities of gypsum to the Sindri Fertiliser Factory. The average tonnage of gypsum mined in the State is 334,676 tons per year. Besides these, the State possesses deposits of lead, zinc, maganese, tungsten, emerald, Fuller's earth, glass sand, soapstone clays, kyanite, limestone, sandstone, quartzites, kankar, asbestos, calcite, sodium sulphate, salt, saltpetre, solenite, felspar, beryl, ochres, gypsum and bentonite. The State is also stated to possess considerable deposits of copper, lignite and oil the economic possibilities of which are yet to be investigated.

The State Government has an ambitious programme for mineral development, but not the funds for implementing it. The development scheme envisages opening of a mining technological institute and laboratory, besides building an efficient system for providing technical assistance to mining companies and the establishment of tungsten-ore-dressing mills, among others. At present, the State Government has been operating, as an experimental measure, four mines, namely, a lignite colliery at Palana, wolfram mines at Degana, limestone quarry at Naila and slab-stone quarry at Bhankri. (During the last two years, these enterprises have resulted in a net income of Rs. 2½ lakhs to the State.) Besides, the State Government has been providing technical assistance to the mining industry through inspections of the mineral deposits and by conducting field surveys of minerals.

The possibilities of setting up a zinc smelter plant at Zawar in Udaipur Division is under the consideration of a zinc committee appointed by the Government of India. A private company has formulated a scheme for setting up a plant to produce 50 to 100 tons of sulphur, and about 400 tons of cement, per day, as a subsidiary industry to gypsum. A plant is being set up to produce 30 tons of Plaster of Paris at Bikaner by the commercial concern which is now working gypsum mines.

BENGAL—BASIN OIL EXPLORATION

Mr. R. T. Burton, General Manager of Standard-Vacuum Oil Company, said the other day that some of the recent reports on the Company's exploration activities in the Bengal Basin area did not portray an accurate picture of the present situation. Optimistic reports concerning the presence of petroleum deposits in the area, as well as those giving out the opposite view, were both premature. Mr. Burton pointed out that the data collected through the magnetometer survey carried out by the Company in 1951-52 were still being studied by geophysicists. Any comment as to the result at this stage would, therefore, be speculative. Moreover, he emphasised, the magnetometer is not an oil-finding instrument but is used only to indicate whether underground rock conditions are favourable for additional oil prospecting.

Even when the survey results are known, they will by no means prove conclusively the presence or absence of petroleum in the Bengal Basin area. At best, they may be interpreted to indicate the approximate thickness of sedimentary rocks below the area surveyed. Any attempt to read more than this into the results could very likely prove to be a costly error of judgment. The interpretations of the results may help to narrow down the area in which further ground investigations may be desired. Mr. Burton went on to say that the aerial magnetometer survey provided much faster coverage than ground magnetometer work. The use of the aerial magnetometer enabled the survey of 73,000 square miles to be carried out within about four months.

If the survey results indicate the presence of favourable underground rock conditions in the Bengal Basin area, much more detailed investigations covering on-the-ground geological and geophysical techniques would be required. If these prove encouraging, actual drilling may be justified. This may involve years of painstaking work and crores of rupees. Mr. Burton concluded by saying that, despite all the advances in exploration technique, actual drilling, which is very costly, still provides the only absolute test for the presence of oil. Even after prolonged and expensive preliminary researches, statistics show that only one test well in ten actually strikes oil and only one well in 40 discovers a major oil field.

ENQUIRY INTO CONDITIONS OF CIVIL AIRLINES' EMPLOYEES

The Indian Airlines Corporation has appointed a three-man services committee, with Mr. W. R. Puranik, a retired Judge of the Nagpur High Court and a retired member of the Union Public Service Commission, as Chairman, to make recommendations regarding rationalisation of pay for different categories of personnel of air companies taken over by the Corporation and the formulation of a suitable wage structure. The Committee will also make recommendations on the following:

(1) The procedure to be followed for bringing existing personnel on the approved new pay scales; (2) the principles to be followed for determining seniority as between personnel of the same rank belonging to different companies doing more or less similar duties; and (3) the formulation of common service conditions in the matter of leave, holidays, T.A rules, insurance facilities, bonus, allowance, provident funds, gratuity, pension schemes and residential accommodation. The members of the Committee are Mr. S. B. Bapat, Ministry of Home Affairs and Mr. G. P. Shahani, Secretary of the Air Transport Licensing Board.

BUILDING EXHIBITION IN THE U.K.

The Building Trades Exhibition, which will open on 18th November at London, will contain nearly 600 stands, which will provide the largest and most representative display of its kind ever seen in the U.K. Prefabrication and pre-stressed concrete will provide the two main features of the exhibition. Every type of machinery and plant used in the building industry will find a place in the display. Many manufacturers will show new or re-designed plant and tools. In addition to the exhibits of the Department of Scientific and Industrial Research and the Building Research Station, plant and equipment developed as the result of close co-operation with those organisations will be displayed by a number of leading manufacturers. The exhibition will close on 2nd December.

NATIONALISATION OF INSURANCE

WILL IT SOLVE PROBLEM OF UNEMPLOYMENT?

IN this country there is a class of politicians who never seem tired of repeating the threat of nationalising banks and insurance companies. Being unable to find any effective remedy for the many economic ills which afflict the country to-day, they imagine that such a remedy lies in the nationalisation of these two institutions. They do not, of course, stop to think what grand purpose they seek to achieve thereby. The latest among the converts to this philosophy is Mr. J. B. Kripalani, who said in Parliament recently—he was speaking on the non-official resolution on unemployment—that, if the Government was "really serious" about solving the problem of unemployment, it should nationalise banks and insurance companies.

It is not, of course, clear how the nationalisation of insurance would go towards providing a solution for unemployment. If anything, State ownership of insurance is bound to lead to a decline in employment, for there would then be only one organisation to cater to the needs of the insuring public. It might be claimed, of course, that the State ownership of private savings will provide the State additional funds with which it can pursue development schemes. This is the specious plea on which certain politicians generally justify the demand for nationalisation. But they overlook the fact that the Government already possesses ample powers of control over the investments of insurance companies. They are required by law to keep a proportion of their investments in Government securities. The rest is distributed among: (1) securities, approved by the Government, such as the obligations of Part B States, Municipal, Port Trust and Improvement Trust securities, (2) loans on policies, agents' balances, deposits, land and house property, and (3) miscellaneous investments. Among these three forms of investment, the first already fulfils the purposes of national development. The second form of investment cannot be disturbed since there will be need for these investments whether insurance service is performed by the State or private enterprise. It is only the third form of investment, namely, the investment in industrial equities that the Government may hope to divert to its own use through nationalisation of insurance.

How much do the advocates of nationalisation of insurance hope to gain by diverting this portion of the insurers' investments to the State's use? In the analysis of the distribution of assets, held by insurers, which Mr. K. A. Pandit, the well-known practising actuary, presented in these columns some time ago (*vide Commerce* dated 9th May, 1953), he estimated that only about Rs. 44 crores out of the insurers' total assets of Rs. 250 crores and another Rs. 4½ crores every year, would be available to the Government for purposes of re-investment through the nationalisation of insurance. This sum would hardly be sufficient to meet the cost of even one of the large-sized multi-purpose projects undertaken by the Government of India. And it must be remembered that the Government will not be able to acquire even this small amount unless it pays compensation to the insurance companies which it takes over. How then can it be contended that the nationalisation of insurance will solve the problem of unemployment?

It might, on the other hand, be truly contended that the ending of the little support that insurers give to the investment market—for nationalisation of insurance will mean nothing more than that—will worsen conditions in this market, with inevitable repercussions on further investment and employment. In fact, nationalisation of insurance, unlike the nationalisation of any other sector of private economic activity, vitally concerns the entire investment field. The entire private sector is concerned in this problem, for insurers help keep alive investment activity to a relatively greater degree than any other form of private enterprise.

Those who urge nationalisation of insurance might suggest that a Government-owned insurance company might itself lend its funds to the private sector. In the first place, this makes nonsense of the claim that the insurance companies should be taken over by the Government in order to obtain funds for investment in the public sector. Secondly, the joint-stock enterprises, which now look up to insurance companies for support, cannot possibly obtain the same favourable terms if all investible funds were owned by a single agency, namely, the Government. It is well to remember that, if these enterprises get support which gives them satisfaction, it is because the insurers are competing among themselves in order to find profitable outlets for their investible funds. If the Government owned these funds, it would be tempted to use its enormous power in order to dictate the price at which it would lend its support to the investment market.

Whichever way the subject is looked at, it becomes abundantly clear that the nationalisation of insurance is hardly a solution for the problem of unemployment. On the other hand, it might conceivably make the problem worse. The suggestion, made by Mr. Kripalani and others of his way of thinking, could, of course, be opposed on other and more important grounds, such as the setback which this essentially personal form of service will suffer when it is taken over by the State, the damage which a wooden and unimaginative bureaucracy can inflict on insurance and the irreparable loss which it will sustain through the withdrawal of private initiative and effort. It would be folly to nationalise insurance on any pretext. But it would be nothing short of a national disaster to do it in the hope that it would provide a solution for unemployment.

BOMBAY MUTUAL LIFE ASSURANCE SOCIETY LTD.

Established as far back as in 1871, the Bombay Mutual Life Assurance Society Ltd. (Manager: Mr. M. V. Sohonie, Bombay) is not only one of the oldest among the Indian insurers but also one of the very well established life offices in the country. During the year 1952, to which the Society's latest report and accounts refer, it was able to show a sizable increase in life business which improved by Rs. 4.33 crores to Rs. 43.14 crores. The Society's new life business, it may be added, was only Rs. 4.23 crores in 1951 and Rs. 4.10 crores in 1950. Of the total business in force, namely, Rs. 43.14 crores, assurances to the extent of Rs. 1.15 crores were reinsured.

Being a well-established office with a good record in the selection of lives, the claims by maturity form the major proportion of the total claims. During 1952, the claims aggregated Rs. 55.91 lakhs, against Rs. 50.96 lakhs in the previous year; of the total claims, claims by maturity accounted for as much as Rs. 35.12 lakhs as compared with Rs. 32.96 lakhs in 1951. These are the claims, as shown in the balance-sheet. But since then, Rs. 10.84 lakhs have been paid.

The income for the year under review improved by Rs. 5 lakhs to Rs. 2.38 crores, of which Rs. 1.96 crores was derived from premiums, the balance representing the income through interest, dividends and rents. The outgo aggregated Rs. 1.18 crores, as against Rs. 1.42 crores. Of the total outgo, the expenses for the year at Rs. 48.23 lakhs were higher by Rs. 3.41 lakhs. This increase in expenses reflects the higher cost of office management, the salaries and other emoluments paid to staff, other than agents, which rose by Rs. 3.15 lakhs to Rs. 19.99 lakhs. The renewal expense ratio was higher at 17.37 per cent. as against 15.56 per cent. in 1951. The mean rate of interest earned during the year was somewhat lower at 3.54 per cent. as against 3.83 per cent. in the previous year.

There has been an impressive increase of Rs. 1.24 crores in the balance-sheet total which now stands at Rs. 13.74 crores. The assets include loans on the Society's policies within their surrender value to the tune of Rs. 1.00 crore, investments (at book value) Rs. 11.10 crores and house property valued at cost Rs. 0.93 crore. Loans on Society's policies have gone up by as much as Rs. 21 lakhs during the year under review. This increase is in line with the general experience of all insurers and indicates that the insured are increasingly turning to their insurers for accommodation. On the liabilities side, the life assurance fund has improved by Rs. 1.19 crores to Rs. 12.68 crores. The book value of the Society's assets in India, at Rs. 13.27 crores, is no doubt higher than their market value by Rs. 35 lakhs. But this difference is more than sufficiently covered by the reserve funds of Rs. 52.45 lakhs which include the investment reserve fund of Rs. 35.60 lakhs and building depreciation fund of Rs. 7.11 lakhs.

(*Concluded from next column*)

No provision has thus been made for payment of dividends on ordinary or preference shares; preference dividends are in arrears for the last three years. The Administrator has recognised that the first charge in the profit is the dividend on preference shares. He says: "It is, however, not possible to consider any dividend for the ordinary shareholders at the moment." He is fully justified in holding the view that prudence requires that, in the critical period through which the Company has passed, it should have the "powerful backing of strong reserves."

RESULTS OF JUPITER

WELCOME DECLINE IN EXPENSE RATIO

THE year 1952, to which the latest report and accounts of the Jupiter General Insurance Company, Ltd. (Administrator: Mr. R. Varadachari, Bombay), refers, is the first complete year under which the Company has been under the guidance of the Administrator. The Company was started in 1919 under excellent auspices, but, during the period 1942-50, there were as many as six changes in the management, the shares having been purchased by one group after another at prices which bore no relation to their market value or their intrinsic merit. These changes culminated with the arrest by the police, early in 1951, of the Chairman and a few others connected with the management for alleged criminal breach of trust and other alleged charges.

The Company, which is a composite office, transacts all the chief varieties of insurance business, namely, life, fire, marine, and miscellaneous business. The total premium income from all these departments declined from Rs. 83.77 lakhs in 1951 to Rs. 77.60 lakhs in the following year. This decline is almost wholly accounted for by the decline in the fire premium income, which was only Rs. 18.90 lakhs, as against Rs. 28.33 lakhs in 1951. In the life department, some notable changes have taken place. The Administrator has taken care to see that expenses are reduced to the minimum and that they are brought within the limit laid down by the relevant provisions of the Insurance Act. Thus, the renewal expense ratio was only 15.2 per cent. in 1952, as against 17.8 per cent. in 1951 and 24.4 per cent. in 1950. Gross interest yield on investments has gone up from 3.5 per cent. to 3.7 per cent. and the net yield from 2.9 per cent. to 3.1 per cent. New business in 1952 aggregated Rs. 106.40 lakhs, as against Rs. 108.63 lakhs in the previous year.

In the fire department, the net premium income has, as already stated, come down from Rs. 28.33 lakhs to Rs. 18.90 lakhs. This is in contrast to the general trend of fire business in the country. But the Jupiter's position was somewhat unfortunate, because the London market cancelled its reinsurance connections with the Company, following the proceedings against the ex-Directors of the Company. Mr. Varadachari undertook a visit to London last year and did much to repair the damage caused by the loss of reinsurance contacts. He now believes—this belief is shared by the London Managers of Jupiter—that the restoration of treaties, which is now taking place, will result in an improvement in the Company's results for 1953. In fact, the indications are, according to the Administrator, that "the fall has been arrested in the year 1953." The working of the fire department resulted in a profit of Rs 2.43 lakhs, as against Rs. 5.87 lakhs in 1951.

The marine department earned a net premium income of Rs. 4.48 lakhs, as compared with Rs. 4.75 lakhs in the previous year. The profit in the department was, however, higher by Rs. 0.30 lakh at Rs. 1.12 lakhs. In the miscellaneous section, the net premium income was somewhat lower at Rs. 14.85 lakhs, as against Rs. 15.82 lakhs. The profit position was, however, somewhat disquieting, for the working of the department resulted in a loss of Rs. 0.80 lakh as against a profit of Rs. 0.32 lakh in 1951. It is true that the miscellaneous section has not been working on a very profitable basis in most countries to-day. But there were special reasons why it was particularly unprofitable in the case of the Jupiter. The unfortunate result of the working of this section was "almost entirely due to the disastrous nature" of the business done for a short period in Trinidad where the previous management had opened a chief agency. The agency has since been closed down.

The credit side of the profit and loss account shows a total of Rs. 8.72 lakhs, inclusive of Rs. 3.55 lakhs being the profit transferred from fire and marine revenue accounts and Rs. 4.17 lakhs being the refund of income-tax relating to past years. The other side of the account shows a total outgo of Rs. 4.80 lakhs, inclusive of Rs. 3.01 lakhs being the loss on sale of investments. The balance for the year is thus Rs. 3.92 lakhs, which, together with Rs. 2.63 lakhs brought in from the previous year, makes in all Rs. 6.55 lakhs. Out of this, a sum of Rs. 2.50 lakhs has been allocated to taxation revenue and the balance of Rs. 4.05 lakhs has been carried forward.

(*Continued in previous column*)

THE BOMBAY MUTUAL LIFE ASSURANCE SOCIETY LTD.

NEED FOR EXEMPTING MUTUAL INSURERS FROM INCOME-TAX

MR. U. S. DESAI'S SPEECH

ADDRESSING the members of the Bombay Mutual Life Assurance Society Ltd. at the Annual General Meeting of the Society, held in Bombay on Monday, 14th September, 1953, Mr. Umakant S. Desai, Chairman of the Society, said that mutual insurers should be accorded, for income-tax purposes, the same status as co-operative insurers, and exempted from income-tax completely.

The following are extracts from Mr. Desai's speech:

New Business

"During the year the new business completed amounted to Rs. 4,32,87,250 as against Rs. 4,23,20,250 in the previous year. This shows an increase of about Rs. 10 lakhs over last year's figures. Considering the situation in which the Society was placed, the increase in business, though small, must be considered satisfactory. Our average sum assured per new policy issued during the year is Rs. 2,571, as against Rs. 2,600 in the previous year."

After referring to the various items regarding income and expenses, investments and organisation, he said:

Exemption From Tax

"In my speech last year, I had pointed out that mutual life companies should be exempted from income-tax completely. The question of taxation of life assurance companies, in general, needs fresh examination. The present basis of taxing a proportion of valuation surplus is theoretically unjustifiable. The appointment by the Government of India of a Commission to enquire into the taxation methods and practices of this country is, therefore, timely and welcome. Under the distinguished chairmanship of Dr. Matthai, it would be natural to hope for a full study of the special problems of life insurance taxation.

"Already, a few basic principles appear to have been accepted by Government. The inequity of taxing policyholders' share of surplus is probably recognised since the Government have now agreed to exempt 80 per cent. of such surplus from taxation, as compared to the previous limit of 50 per cent. In justice, 100 per cent. of such surplus must be tax-exempt. Secondly, the mutual offices have been charged a lower super-tax as compared to proprietary offices. In full justice to the mutual offices, they should be exempted from income-tax completely. The concession made by Government shows that they have appreciated the mutual offices' claims, though only in a small measure.

"To argue, as has been done in some quarters, that the mutual offices and proprietary offices carry on the same business and, therefore, there is no need further to differentiate between them, is to miss completely the essentials of the problem. All taxation of income is based on the status of the assessee. Different statuses, though employed in similar activities, are taxed at different rates. The structure of mutual offices is completely different from that of proprietary offices, and this fact has only to be recognised by the Government. The Government do appear to recognise the co-operative life offices to be different for they have differentiated them in taxation matters. Why should the same awareness be absent towards mutual offices? It would be interesting, in this connection, to quote section 95(1) (*a*) and (*b*) of the Insurance Act, 1938:

"(*a*) 'Mutual insurance company' means an insurer, being a company incorporated under the Indian Companies Act, 1913, or under the Indian Companies Act, 1882, or under the Indian Companies Act, 1866, or under any Act repealed thereby which has no share capital and of which by its constitution only and all policyholders are members, and

"(*b*) 'Co-operative life insurance society' means an insurer being a society registered under the Co-operative Societies Act, 1912, or under an Act of a State Legislature governing the registration of co-operative societies which carries on business of life insurance and which has no share capital on which dividend or bonus is payable and of which by its constitution only original members on whose application, the society is registered and all policyholders are members.

"It will be seen that the structure of these two types of companies is similar. The mutual and the co-operative offices are governed by identical sections of the Act. What is, therefore, applicable to co-operative life insurance companies should apply also to mutual life insurance companies. Indeed, the claim of mutual insurance companies is stronger, in view of the fact that, in their case, only and all policyholders are members, and no other class, e.g., 'original members' exists, as it does in co-operative life insurance companies."

SOME PRINCIPLES OF INDUSTRIAL ARBITRATION

PAYMENT OF BONUS—ACTION AGAINST WORKERS DURING DISPUTE—LAST COME FIRST GO

(By "LIBRA")

IN the sphere of industrial adjudication, the birth of the Labour Appellate Tribunal was never regarded as an unmixed blessing. It was enthusiastically hailed by its admirers and denounced by its critics in no uncertain terms. Now, nearly after three years of its existence, the dust of controversy appears to have settled down to reveal this judicial institution in its proper perspective. There is no doubt that the Labour Appellate Tribunal has brought much needed uniformity in the decisions of the tribunals in all parts of India by laying down broad principles for their guidance and has exercised a steadying influence. The principles which have been enunciated and the precedents created by the decisions of the Appellate Tribunal have given a definite shape to the industrial law of the land and most of the solutions offered on the important problems of the day can now be tested on the touchstone of these decisions.

The principles laid down are no doubt salutary and have served their purpose well, but their practical application often reveals certain shortcomings which need attention. Let us take, for example, the problem of bonus. In its decision in Appeals Nos. 1 and 5 of 1950, the Labour Appellate Tribunal states that "where the industry has capacity to pay and has been so stabilised that its capacity to pay may be counted upon continuously, payment of 'living wage' is desirable; but, where the industry has not that capacity or its capacity varies or is expected to vary from year to year so that the industry cannot afford to pay 'living wages,' bonus must be looked upon as the temporary satisfaction wholly or in part of the needs of the employee." The payment of bonus is thus an attempt to bridge the gap between the actual wages of an employee and the living wage to which he is entitled.

In summarising the concept of living wage, the Committee on Fair Wages has said that "the living wage should enable the male earner to provide for himself and his family not merely the bare essentials of food, clothing and shelter but a measure of frugal comfort, including education for the children, protection against ill-health, requirements of essential social needs and a measure of insurance against the more important misfortunes, including old age."

Why Not Monthly Payment?

Viewed from a practical angle, it is doubtful whether the annual payment of a lump sum as bonus can adequately satisfy the above needs of the worker, and ensure a decent standard of living for him. During the whole year round, he subsists on his inadequate wage and when he cannot make the two ends meet, especially during illness, or when he tries to escape the daily drudgery of his life by indulging in an orgy of social or religious celebrations, he runs into debt and into the clutches of a usurer. His bonus, when it comes, is frittered away in repaying the debt with usurious interest or else he is gulled into investing it in bogus ventures by sharpers who are ever ready to pounce upon ignorant victims. Would it not be better, therefore, to grant bonus monthly instead of annually? The available surplus for the payment of bonus, after deducting prior charges, can, of course, be calculated annually, but the tribunals can direct the payment to each worker in 12 equal monthly instalments. The monthly remuneration of a worker will thus consist of basic wages, dearness allowance and instalment of bonus. This would allow him to adjust his budget properly, for it has been a common experience that the worker spends beyond his income in the hope of the annual windfall of bonus. His standard of living will also be increased. It is quite wrong to imagine that a worker will save the amount granted annually as bonus. The proper way to provide for his future is by way of provident fund, gratuity and other social insurance schemes.

It would be appropriate here to mention an interesting innovation introduced in the grant of bonus by Mr. I. G. Thakore, an Industrial Tribunal of Bombay, in his recent award dated 20th April, 1953 in References (IT) Nos. 128 and 129 of 1952, between Lever Brothers (India) Ltd., Bombay, and allied concerns on the one hand, and the workmen employed in their commercial establishments on the other. In that award, the Tribunal has referred to the recommendation of the Planning Commission that "the payment of bonuses in cash should be restricted and the balance should go towards the worker's savings" and has expressed his considered opinion as follows:

"It may not be possible to insist on the workers' saving any part of their incomes, but I think it is very essential at any rate that some part of the bonus awarded should be compulsorily saved in the present context of our country's economy. Our country has launched upon the Five-year Plan, the success or failure of which ultimately depends upon the country being able to raise the finance required for implementing it. The workers, who are ultimately to benefit from the successful implementation thereof, must also contribute their share to the capital formation."

He has, therefore, directed that two-thirds of the amount awarded as bonus for the year 1951 should be paid to the workers in cash and the balance of one-third of the amount should be held in trust by the Company for those workers and invested in recognised securities which should be realised and the amount together with interest earned thereon should be paid to the workers as per their share some time between 1st and 31st of January, 1957. However, in case of death, disablement, discharge or dismissal, the whole of the bonus is to be paid to the worker concerned or his heirs.

Too Early to Judge

There is no doubt that this award has made an important departure from the usual practice of granting bonus. But it is still too early to say what would be the reaction of trade unions and workers in general to this principle of compulsory saving of a part of the awarded bonus.

It may be recalled that, in 1949, in the award of the Full Bench of the Industrial Court, Bombay, in Reference (IC) No. 7 of 1949, between the Millowners' Association, Bombay, and others *versus* their employees, the Court had expressed the desirability of ordering at least a part of the amount to be paid as bonus, in the form of National Savings Certificates and had recommended that the Legislature should look into the question whether it would be feasible for the Industrial Court to order such a mode of payment. In direct response to this recommendation, the Government of India promulgated the Industrial Tribunals Payment of Bonus (National Savings Certificates) Ordinance, 1949. Section 3(a) of this Ordinance directed that the second instalment of the bonus payable on or before the 30th June, 1949, under the terms of the award in Reference (IC) No. 7 of 1949, to the extent of two-thirds of the amount thereof, should be paid in the form of Post Office National Savings Certificates. These certificates were cashable and the textile workers of Bombay manifested their opposition to such a savings scheme in no uncertain terms by cashing the certificates as soon as they were received by them, which only duplicated the work of the post office staff.

The Government of Bombay has published in the *Gazette of Bombay* of 5th August, 1953, a Bill to amend the Payment of Wages Act, in its application to the State of Bombay. The amendment to section 6 of the Act provides for the payment of bonus, in excess of basic wages for two months (subsequently amended to three months) into the provident fund account of the employed person if he is a subscriber or for its investment in a manner prescribed by Government.

Another Principle

Another principle governing bonus is that "bonus can be paid if there is a surplus after meeting prior or necessary charges." No bonus need be paid if the profits are just sufficient to meet prior charges like depreciation, dividend, replacement and modernisation of machinery. Thus, even though the majority of the concerns in an industry make large profits, the workers in the concerns in the same industry which make losses, are not entitled to any bonus. Some of such workers might be the most efficient in the whole industry and yet their misfortune in joining such losing units would deprive them of such benefit. Certain trade unions have tried to raise the plea of mismanagement on the part of the losing concerns when, in a particular year, the industry as a whole has shown good profit-making capacity.

There was a good deal of strength in the above argument, especially so far as an industry like the cotton textile industry, which was subject to price controls of raw materials as well as the finished product, was concerned. But experience has shown that there is many a slip betwixt moral certainty and legal proof. To bring home a charge of mismanagement or fraud, especially when all the books of accounts are in the control of the other party, is no enviable task. Nor is it possible for the courts to allow a roving or fishing enquiry into all the transactions of a concern. Balance-sheets can be manipulated, especially in the case of concerns which cannot boast of a reputation for integrity, and substantial profits can be turned into sizable losses. It is not necessary to dilate on this aspect of the problem, as it will lead us to the innumerable alleys and by-lanes of malpractices of the managing agency system, which are too well known to need further expatiation. The much vaunted safeguard of auditing of accounts is nullified by the oft-quoted maxim that "auditors are watchdogs and not bloodhounds."

Good in Principle But Bad in Practice

While retrenching surplus employees for trade reasons, an undertaking has to see that those who have joined last go first. This direction of "last come first go," laid down by the Appellate Tribunal, is quite sound in principle. But, in practice, it may happen that the men who joined last are technically more efficient than some of their more senior colleagues. If, owing to adverse circumstances or a sudden trade slump, the management is forced to wield the axe of retrenchment, it would naturally fall on these juniormost employees. It may, of course, be argued that, if the senior employees are utterly inefficient, they could be discharged after charge-sheeting them and proving their inefficiency. It may also be said that workers who were inept in their work ought to have been discharged before their probationary periods were over. Even in the case of general retrenchment, the Labour Appellate Tribunal has allowed the inclusion of senior employees where inefficiency has been proved. But there is a great deal of difference between utter ineptitude and comparative inefficiency. Judged by ordinary standards, both the junior and the senior worker may be efficient, but, if, as between the two, the junior worker is more efficient, then certainly it would be more useful in the interest of production to retain the junior worker. The management, of course, would be the authority most competent to decide the comparative superiority of merits or technical ability as between two workers, subject to the condition that it acts without any ulterior motive. It should be open to an aggrieved worker or a union on his behalf to approach a tribunal with an allegation of unjust discrimination.

During Pendency of Dispute

I shall now come to a question which is of vital importance to managements. During the pendency of an industrial dispute before a tribunal, the management cannot suspend, discharge, or dismiss any worker, or make any change in his service conditions without obtaining prior permission of the Tribunal. An application for obtaining such permission has to be made before the Tribunal under section 33 of the Industrial Disputes Act. The Labour Appellate Tribunal has laid down the principle that such a permission can be granted from the date of the order on the application and not with retrospective effect. In case a concern applies for permission to dismiss a worker who is guilty of a misconduct like theft, assault or any other act subversive of discipline, the management can, of course, suspend the worker until the permission to dismiss him is granted by the Tribunal, but, during the period of such suspension, his wages with dearness allowance will have to be paid.

Normally, the period, from the date of filing an application under section 33 to the date on which an order is made after hearing the parties, varies from 15 days in very urgent cases to about two or three months. Since due notice of hearing is to be given to the parties and hearing might be prolonged to allow evidence to be led on both sides or owing to adjournment granted on reasonable grounds, it cannot be said that, on an average, the time taken to decide such applications is inordinate or excessive. On the contrary, it must be said

FERTILISERS & CHEMICALS, TRAVANCORE LTD.

CHAIRMAN'S SPEECH AT NINTH ANNUAL GENERAL MEETING

FINANCIAL ASSISTANCE FROM GOVERNMENT URGED

THE fear that the prospects for the Fertilisers and Chemicals, Travancore Ltd., were bleak was dispelled by Mr. N. Ranganadhan, the Company's Chairman, in the course of his address at the Ninth Annual General Meeting of the Company, held at Alwaye on 5th September, 1953. The factory, Mr. Ranganadhan declared, was in a position to give a good account of itself if kept supplied with full requirements of raw materials. He, however, expressed concern over the accumulation of large stocks of ammonium sulphate, as a result of high level of production at Sindri and heavy arrivals of imports. He, therefore, urged the Government of India to assist the Company by arranging to lift the stocks as and when produced. Mr. Ranganadhan also wanted the Government to evolve a scheme by which regular offtake of the product at a fair price could be assured. In this connection, he put forward a plea for some sort of subsidy on the product manufactured by the Company till such time as the Company was able to reduce its cost of production by enhancing the plant's capacity. He emphasised, too, the need for financial assistance from world organisations for duplicating the ammonia plant and utilising the ammonia thus produced for the manufacture of additional quantities of ammonium sulphate and new products.

The following is the full text of Mr. Ranganadhan's speech:

"GENTLEMEN,

"It gives me very great pleasure to welcome you to this ninth annual general meeting of the Company and to present to you, formally on behalf of the Board of Directors, their report on the working of the Company for the year 1952. The balance-sheet and profit and loss account have already been circulated to you.

"As you would have seen from the published report, this year's working has shown a net loss of Rs. 15.82 lakhs. Though this figure looks staggering at first sight, the working of the factory was not so dishearfening as one may be tempted to conclude from the loss reported. In spite of the numerous handicaps the Company suffered from during the year under review, which practically kept the plant idle for the first 7½ months, it is encouraging to find that the Company was able to make up for a substantial portion of the loss during the last 4½ months. The fact that 14,622 tons were produced during the 4½ months amply proves that this factory is in a position to give a good account of itself if kept supplied with its full requirements of raw materials.

"I would like to take this opportunity to dispel the fears entertained by some of the shareholders of the Company about the future of this industry. There are, of course, certain handicaps facing this industry, at present, to get over which we require the assistance of the Government of India. I shall deal with them in detail later. I shall first try to answer a question that is sometimes asked and that is: What has the Company done during its few years of its existence?

Return on Investment

"The absence of regular dividends and the very low price at which the shares are now being quoted in the market may lead one to believe that the Company has not justified itself. But it must be remembered that a quick return on investment is not always the criterion by which to judge the success of an enterprise. In an article published recently in the *Eastern Economist* under the caption 'Tatas Dividends—A Provocation to Labour,' the following lines appear:

"'Tatas is the biggest single unit of its kind in the British Commonwealth and one of the biggest in the world, but nobody could have foreseen when the Company was founded with a capital of Rs. 66 lakhs in 1907, and a revenue of Rs. 90,000 that, 44 years later, its capital would be Rs. 10 crores and its revenue Rs. 41 crores. On the contrary, in 1907, the Company's prospects were full of difficulties and risks. The Company failed to pay a dividend in no less than 18 out of its first 28 years, and it averaged only 3 per cent. per annum throughout that period. Indeed, if it had not been for the unforeseen demands made on the Company's production during the 1914-18 war, the statistics suggest that the investor of 1907 might have had to wait until 1935 before he got an anna. To-day, Tatas stands out as a first class investment, yielding a safe 5 per cent. at the current price (the sort of share into which a broker would not hesitate to put the proverbial widow's funds), but, between 1907 and 1935, Tatas could only have been classed as highly speculative. Our courageous investor of 1907, who backed his faith in Tatas unforeseeable future, did not begin to reap his reward until the years following 1936.'

"I do not say our shareholders should wait equally long.

Share of Troubles

"If we were to compare the early histories of other chemical factories, similar in size to ours, it will be seen that our working upto now cannot be considered to be too unsatisfactory. Any factory of the magnitude and complexities of manufacture, such as ours, normally takes a number of years to get stabilised and yield a return to the shareholders. Our share of troubles cannot be considered to be excessive when compared to similar units in countries like Germany and England, which are fully industrialised.

"We have had to compete with ammonium sulphate imported free of duty by the Government of India. While other indigenous products have tariff protection, we get none. The position is aggravated further by our having to pay duty on imported raw materials which go into the production of ammonium sulphate. Representations have been made to the Government of India and the Planning Commission requesting them to give us immediate relief from such disadvantages, which so seriously militate against rapid progress of our industry.

Satisfactory Progress

"In spite of many handicaps, this factory has been able to produce and market over 125,000 tons of sulphate, thereby contributing substantially to the food production drive in the country and effecting, incidentally, a saving in foreign exchange of about Rs. 4 crores.

"We have also paid over Rs. 2½ crores for direct and indirect labour, so far, and continue to disburse about Rs. 4 lakhs every month by way of wages. These are no insignificant contributions to the country's economy.

"A scrutiny of the working of the factory during the last 4½ years, since commencement of commercial production, will show that it has really earned a revenue surplus of over Rs. 99 lakhs. According to the accepted canons of correct accounting, this amount has been utilised towards depreciation for 'whatever indirectly consolidates the position of the Company is to its ultimate benefit.' I can well understand that this procedure may not give some shareholders satisfaction, in that no immediate return has been offered to them. I am sure you will agree that it is imperative we should strengthen and consolidate our financial position before considering the payment of dividend.

Handicaps

"It is both necessary and desirable that shareholders should know the problems that are confronting the Company now, and the steps your Board of Directors and the Managing Agents have taken to solve them.

"Since the commencement of production in Sindri, the supply position of ammonium sulphate in this country has become quite easy, measured in terms of our present meagre consumption. Besides indigenous production, there have also been very large imports of ammonium sulphate by the Government of India under the T.C.A. programme. Even though the Government have now decided not to import further supplies, the quantities they are already committed to are still being received. These arrivals are creating a temporary glut in the market which threaten to slow down absorption of our present production.

"In order to overcome this difficulty, several representations were made to the Ministry of Food and Agriculture, as a result of which they finally agreed to take our production from June, 1953 into the Central Fertiliser Pool. The Governments of Travancore-Cochin and Madras fully supported us in our efforts in this direction. We have not, however, been receiving timely instructions for despatches of current production which is of the order of 4,000 tons per month. Necessary representations have been made in this regard and your Board confidently expects that the Ministry of Food and Agriculture would assist us by arranging to lift the stocks as and when produced.

"This pool arrangement is expected to last only till the end of the year. The Managing Agents have addressed the Ministry of Commerce and Industry, inviting its attention to the factors which render necessary the continuation of the pool. Alternatively, the Ministry has been requested to evolve some other arrangement by which regular offtake of our product at a fair price could be assured.

Financial Assistance

"The factory at Sindri has, because of its size and location, substantial advantages over this factory and is in a position to produce ammonium sulphate at a price cheaper than ours. As such, if the Sindri Factory is permitted full freedom to sell in the South Indian markets without any restriction, it is certain to hamper our sales seriously. For meeting this situation, we have already addressed the Ministry of Commerce and Industry seeking their assistance for a subsidy on our product till such time as we are able, to reduce our cost of production by increasing the plant's capacity. In this connection, a scheme has been submitted to the Government of India seeking their support for financial assistance from world organisations for the duplication of our ammonia plant and for the utilisation of the ammonia thus produced for the manufacture of additional quantities of ammonium sulphate, as also of new products like ammonium phosphate and ammonium chloride. This scheme, when completed, is expected to bring down the cost of ammonium sulphate to an extent that will enable this factory to withstand competition without any subsidy.

Reasonable Price

"The Government of India have also been approached for an assurance that a reasonable price for our product will be fixed after a price investigation has been carried out into our costs of production. This request is based on the principle, followed by the Government of India, of giving assistance to the steel and other industries where units of different capacities and sizes are assured of a reasonable price for their products, with a view to making the maximum use of the total productive capacity available in the country. Our request is all the more just and equitable as the competition we have to meet is from the Sindri Fertiliser Factory, a massive unit established by the Government of India, not as a monopolistic venture, but as a model of corporate endeavour.

"The Ministry of Food and Agriculture is at present doing its utmost in the field of intensive cultivation, which, naturally, should result in the increased consumption of ammonium sulphate and superphosphate. If the application of these fertilisers reach even half the rate at which they are used in countries like Japan, Germany, the U.K. and the U.S.A., there will be need for many more factories in our country to meet the increasing requirements. We may be confident, therefore, that the Government of India will not hesitate to grant us the much needed assistance we have sought of them.

Prospects for 1953

"Now, I may touch on our prospects for 1953. As indicated in the Directors' report, which you received earlier, the raw material position, especially that of sulphur, has considerably eased since September of last year and this is reflected in the production figures for September-October-November-December, 1952. This rate of production could easily have been maintained right from the beginning of this year but for the very severe electricity rationing that was introduced by the Electricity Department, due to extreme drought conditions in this State. The factory was obliged to reduce production to half rate from the 20th January, 1953, and later was compelled to suspend all operations from 12th March to 20th June, 1953. This shut-down resulted in a loss of production to the extent of about 15,000 tons. Since the removal of power restriction, the factory has maintained a very high rate of

TAX MUSINGS

GROSSING UP OF FOREIGN ANNUITIES

AUTHORITIES FOLLOWING WRONG PRACTICE

(By R. K. DALAL, B.Com., F.S.A.A., F.C.A.)

A VERY intriguing point recently cropped up in one of the assessees' cases. An Englishman resident in India had income from dividends from English companies. He was also the recipient of certain annuities, tax on which, under the U.K. Income-tax, was deducted at source.

The Income-tax Officer, in computing total income, held that the income received by the assessee in the U.K. is liable to be taxed gross. He argued that the income is that which accrued and due from the company. The fact that, under the law, portion of the income is retained or deducted as tax, did not, any the less, mean that it was not your income from which tax had been paid at source. *Prima facie*, this seems to be highly plausible. But on a closer scrutiny of the provisions of law one comes to quite the opposite conclusion.

One such case was already before the Bombay High Court *C.I.T.* vs. *Blundell Spencer & Co., Ltd.*, 1952 (21) I.T.R. 28

That an assessee, a non-resident company registered in the U.K. with its head office in London, received dividend in respect of shares held by it in the company which was assessed to income-tax both in the U.K. and in India. The authorities held that, in grossing up the U.K. dividend, they were entitled to take into consideration the tax paid by the company in the U.K.

The Court held that they were not so entitled to take into consideration the tax paid by the company in the U.K. In the course of their judgment, they observed that sections 16(2) and 18(5) of the Income-tax Act constituted self-contained provisions with regard to grossing up of dividend income and with regard to the relief to be given to an assessee in respect of that grossing up. Section 49B dealt with an altogether different matter, namely, a case where a refund was asked for by the assessee.

Section 16(2) can only apply to income-tax paid by a company in India at the rate laid down by the Finance Act and it cannot apply to the tax paid by a company outside India. There is no provision in the Act for adding to the dividend of a shareholder the tax paid by the company outside India.

When the attention of the Income-tax Officer was drawn to this decision reported in 1952 (21) I.T.R. 28, he agreed that the dividend from the U.K. company should not be grossed up; but he still held that, so far as annuities received from companies in the U.K. were concerned, he was entitled to tax the same gross and not *net* as contended by the assessee. He said that the decision in the above case was an authority for taxing the U.K. dividend income *net*, not an authority for taxing net any other payment annually received from which tax is deducted at source in the U.K. The annuity receivable from the company was the assessee's income and not the one after income-tax is deducted. He cited the instance of interest on Government securities under the Income-tax Act. The income that is taxable is the income which accrues and due on these securities. Tax paid is merely a tax deducted at source for purpose of convenience.

The assessee contended that the argument and the analogy of the Income-tax Officer were both fallacious.

Under the charging section what is taxable is income. And what is income? Something which satisfied the concept of incoming. In *Shaw Wallace's* case (6 I.T.C. 178), the Privy Council laid down the following definition of income:—

"Income in this Act connotes a periodical monetary return 'coming in' with some sort of regularity or expected regularity from definite sources. There must be a 'coming in' in order to satisfy 'income'."

Receivability without receipt for the purpose of income-tax is nothing at all. In *Arunachalam Chetty*, 1 I.T.C., 90, it was laid down that to be income it must become a present enforceable right to demand. In other words, "income" can be income only if it was so completely under his control, that, by an act of his will, he could have it actually transferred to his bankers. It is because of this concept of income you find the provisions of section 18 are framed. Take section 18(3). It says:

"The person responsible for paying any income chargeable under the head 'Interest on securities' shall (unless otherwise prescribed in the case of any security of the Central Government) at the time of payment deduct income-tax but not super-tax on the amount of the interest payable at the maximum rate."

This, therefore, provides that the person paying interest on securities shall always deduct tax at the maximum rate.

Then follow sub-sections (4) and (5) which run:

"All sums deducted in accordance with the provisions of this section shall, for the purpose of computing the income of an assessee, be deemed to be income received.

"Any deduction made in accordance with the provision of this section (and any sum by which a dividend has been increased under sub-section (2) of section 16) shall be treated as a payment of income-tax or super-tax on behalf of the person from whose income the deduction was made, or of the owner of the security or of the shareholder, as the case may be, and credit shall be given to him therefor in the assessment, if any, made for the following year under this Act."

These two sub-sections provide that sums deducted under this section, notwithstanding that they are not receivable by the assessee, will be deemed to be income received by the assessee. Now the legal connotation of the word 'deem' is that, whereas it is not in reality so, the statute requires to be treated as if it were, 4 I.T.C. 312 (P.C.) 1947, I.T.R. 311, 319 (F.C.). Hence it becomes crystal clear that tax deducted at source is not an income in its natural factual sense. It does not and cannot satisfy the concept of "coming in" postulated in the above decisions. It was, therefore, found necessary in section 18(4) that sums deducted as tax shall, for the purpose of computing the income of an assessee, be deemed to be income received. Such a fiction of last was not necessary. Therefore, it follows that that part of annuity deducted at source as tax can never be one's income, unless an artificial definition is provided in the Act itself. Section 18(4) creates a fiction for Indian taxes deducted, not for foreign taxes from a foreign income. Foreign income that can only be taxed thus is the income which is receivable or actually received. And in this case what is received by the assessee is the net annuity.

Apart from this, let us refer to the English Income-tax Act. U.K. Finance Act 1927, section 39(2), runs as follows:

"In estimating under the Income-tax Acts the total income of any person, any income which is chargeable with income-tax by way of deduction at the standard rate in force for any year shall be deemed to be income of that year, and any deductions which are allowable on account of sums payable under deduction of income-tax at the standard rate in force for any year out of the property or profits of that person shall be allowed as deductions in respect of that year, notwithstanding that the income or sums, as the case may be, accrued or will accrue in whole or in part before or after that year."

Here also it is distinctly provided that, for the purpose of the total income under the U.K. Income-tax Act, it shall deem as income that portion which is deducted by way of tax. And that is so, because in so grossing up, credit is given to the assessee in his own assessment. But this grossing up in the U.K. is done under a distinct section of the Act providing the necessary fiction of law. Such grossing up is done for the purpose of the U.K. Act only. It cannot follow that the Income-tax Department here can also gross up such annuities for purpose of the tax in India, although there is nothing in section 18(5) which enables it to give credit to the assessee of the U.K. tax paid by him. The observation of the Bombay High Court in *C.I.T.* vs. *Blundell Spencer & Co., Ltd.*, 1952 (21) I.T.R. 28, are specific on the issue. And the argument briefly is that, if you cannot give a credit to a person under section 18(5), you are not entitled to gross it up under section 16(2). The argument of the Bombay High Court would apply thus, *mutatis mutandis*, even for annuities, which, under the provision of the U.K. Act., the assessee is only entitled to receive net after deduction of tax at the standard rate therefrom. The decision in the aforesaid case applies not only to foreign dividends, but also to annuities.

The matter, though it seems to be *prima facie* in favour of the Income-tax Department's view, appears, on a closer scrutiny of the Act, to be entirely in favour of the contention raised by the assessee. The assessee is entitled in law to succeed.—*All Rights Reserved.*

CONSERVATION OF SOIL

CENTRAL BOARD TO BE SET UP

THE Government of India is expected to set up shortly a Central Board, as recommended by the Planning Commission, for the formulation and implementation of policies in the closely allied fields of land utilisation and soil conservation. The Board will organise and initiate research in soil conservation on various types of land put to different kinds of use like forestry, agriculture and grazing. It will also assist the States in the enactment of suitable legislation, providing for the formation of co-operative associations of farmers and delegation of powers to them for the execution of specified improvements on agricultural lands. It is further expected to co-ordinate inter-State soil conservation programmes.

The need for the establishment of such a Central Board is a long-felt one. For large areas in different parts of the country have been desiccated as a result of soil erosion. The areas, the productivity of which is reduced consequent on moderate soil erosion are much larger still. Sheet erosion, which consists of the washing away of fertile top layers of the soil, is the most extensive form of erosion occurring even on moderately sloping land. Gully erosion, which generally starts after sheet erosion, has remained unchecked for some time, thereby rendering large areas useless. The area of this type of erosion is steadily on the increase. In the dry western parts of the country, erosion as a result of wind action and covering of crop-lands by desert sands along the margins of the Rajasthan Desert constitute serious problems.

The most important cause of erosion is the destruction by wind and water of sloping lands, desert margins and other areas susceptible to erosion. Vegetation acts as a protective cover against these forces protecting the soil from being washed or blown away, thereby preserving the hydrographic balance of nature. Forests, for instance, provide an effective protection against erosion on hill slopes. They check floods in rivers.

The destruction of trees and natural grasses in dry areas has similar harmful effects. Trees act as wind-breaks, reducing the forces of the wind and the grasses bind the sandy soils. But, when such protective vegetation is destroyed, the sandy soils, exposed to the full force of the wind, begin to be blown away. Large areas in the marginal zones of the deserts are thus rendered unproductive by the deposition of sand. It is believed that many deserts of the world, including the Thar Desert of India, have increased in area in historical times by this process.

Shifting Cultivation

The causes for the destruction of forests and soil erosion and the nature and severity of the erosion problem vary greatly in different parts of the country. In some areas in the States of Assam, Bihar, Orissa and Madhya Pradesh, shifting cultivation, which is practised by the tribal people living in these areas, is a major cause for the destruction of forests. Unregulated grazing is another cause of destruction of forests and consequent soil erosion over large areas in all parts of the country. In North-western Himalayas, for instance, grazing by cattle, sheep and goats is the most important cause of depletion of the vegetation cover and soil erosion. Similarly, in large parts of peninsular India, the destruction of forests and soil erosion are mainly due to over-grazing. Intensive felling of trees to obtain fuel or timber and clearance of forests for extension of cultivation under the pressure of demand for agricultural land from the increasing population are other important causes of deforestation and soil erosion.

Besides damage caused as a result of the destruction of forests, considerable erosion results from faulty land-use practices by agriculturists on farmlands themselves. Failure to practise such measures as ploughing along the contours on sloping lands, proper crop rotations and, in particular, growing of cover crops are causes of erosion over large areas. Much damage originates also from negligence of fallows, grazing lands or uncultivated waste lands.

Measures for controlling erosion and reducing productivity of eroded lands can be divided into four classes. The first relates to regulation of land use. This includes all measures for securing such alteration in the existing patterns of land use as are necessary to ensure that the different types of lands are used according to their land-use ability, i.e., the use for which, in view of their physical characteristics, they are best suited. Retiring cultivated lands in highly erosive areas from cultivation and bringing them under forests or grazing, restrictions on or closure of grazing in badly eroded forests, or grazing lands, and settlement of shifting cultivators to permanent cultivation are examples of the type of alterations which are needed. Secondly, there should be planned afforestation of forests by scientific forest management. Thirdly, there should be improvement of land-use practices, which include such measures as ploughing along the contours, strip-cropping on sloping lands and the like. Finally, engineering measures such as the construction of bunds and terraces, check dams, channels for drainage of surplus water, gully plugging, etc., should be undertaken.

Steps for the control of erosion and conservation of soil have been taken for a number of years in certain States like Punjab (afforestation in Sivalik hills) and Bombay (bunding and terracing work in Deccan). More recently, soil conservation work has been taken up in several other States also. But there has been no country-wide effort in this direction so far and even in States, where the work has been going on, this has been on a limited scale. The Central Board to be established is expected to perform this work.

(*Continued on page 549*)

EMPIRE OF INDIA LIFE ASSURANCE CO., LTD.

1952—ANOTHER YEAR OF SUCCESSFUL WORKING

PUBLIC CONFIDENCE IN COMPANY REVIVED

THE accounts of the Empire of India Life Assurance Company, Ltd., for the year 1952, together with the report of the Administrator (Mr. R. Varadachari, Bombay) thereon have just been published. The management has been conducted on the most conservative lines, particularly in the matter of investments. Almost all the new investments have been made in first class Government and semi-Government securities and adequate steps have been taken for safeguarding the other investments.

The Administrator has been able to reduce the cost of head office management to a remarkable extent, without affecting the quality of service to the policyholders, namely, from Rs. 22,803 per mensem in 1950 to Rs. 9,853 per mensem in 1953. The overall expense ratio has also been brought down. The rate of interest earned is satisfactory and the mortality experience is very favourable.

The following are extracts from the Administrator's report:

"It is satisfactory to note that the confidence of the general public in the improvement of the financial position of the Company, consequent on its management by an Administrator under Government's auspices (this was the first venture of this kind, so to say), has been growing from day to day. When I took over the Company on the 11th June, 1951, the market quotation for its shares was in the neighbourhood of Rs. 400 per share, but the price improved from time to time and the latest quotation is Rs. 627-8 per share. Another pointer in this direction is the fall in the number and the amount of 'surrenders' by the policyholders of the Company during the year.

Statutory Valuation

"The statutory valuation of the Company's assets and liabilities as at 31st December, 1951, was finished on 23rd September, 1952, and this showed that the Company was intrinsically sound and financially strong. After setting apart reserves amounting to Rs. 119 lakhs to meet all contingencies (which sum very few companies in India would be able to find in a time of stress), the valuation showed a profit of Rs. 76,54,366." Of this, slightly more than Rs. 52 lakhs were allotted to policyholders, providing a bonus of Rs. 10 per thousand per annum on whole life assurances and Rs. 8 per thousand per annum on endowment assurances. Rs. 4,02,093 were allotted to shareholders, increasing the shareholders' fund to Rs. 7,64,392. The Administrator accordingly declared (after obtaining direction from the Controller of Insurance) a dividend of Rs. 20 per share for the year 1951.

Importance of Life Assurance

"Life assurance is a specialised kind of saving; it is not the mere accumulation of money but something more. Field workers usually appeal to prospects by stressing the most compelling motive for any person to go in for life assurance, i.e., the desire to discharge his responsibility to his dependents and to make provision for his old age. For the middle-class man there is no better method of saving than by life assurance policies, because they combine an element of saving plus a cover in the case of early death. The taking of an insurance policy often amounts to the postponement of avoidable expenditure; this not only benefits the policyholder and his family, but it is a matter of national importance at the present day. If the Five-year Plan of the Government of India for increasing the wealth and the prosperity of the country is to be a success, as we all hope, it is most essential that the flow of savings through life insurance should be increased so that a good portion of it could be canalised into investments on national development loans. As the average value of a policy in this Company is only about Rs. 2,200, it is a justifiable inference to say that it is the middle class which provides much of the premium; and this class, which has been very badly hit by the prevailing economic conditions, has every right to expect that the companies which receive their hard-earned savings must render a true and faithful account of their moneys.

"As the policyholders are spread over the whole of India and even outside, it is not a practical proposition to expect them to take any effective steps to control the companies' affairs. It is, therefore, the paramount duty of the management to see that the balances of the premiums received, after meeting all claims and expenses, are invested in absolutely safe investments, always keeping in view the interests of the policyholders. Thus, my most important duty has been the continuous scrutiny, in consultation with our legal advisers, of the investments made in the past in the shape of loans to private parties, debentures of companies, mortgages, etc., and to take steps to call back the loans or to secure them by appropriate action.

Investments

"I have been able to recover nearly Rs. 40 lakhs from various parties and have invested the entire sum in Government securities. In regard to debentures of companies incorporated in India—Rs. 1,08,45,000—they represent the investments in four companies made by the previous management, out of which two blocks amounting to Rs. 60 lakhs are redeemable in July, 1957, and the rest partly in 1959 and partly in 1960. Mr. M. J. Rao, the Deputy Administrator, has been nominated, at my instance, as a trustee on behalf of the debenture-holders in one company and Mr. R. B. Pradhan, the Manager, in the other. In addition, Mr. V. H. Deshpande, F.C.A., partner of Messrs. Batliboi and Purohit, has been nominated, at my request, as the Auditor on behalf of the debenture-holders for these two companies. Steps have also been taken to bring down the total of the debentures within the statutory limit prescribed in section 27A of the Insurance Act, 1938. From the 11th July, 1951, onwards up to date, the investments made by me out of current receipts (including opening balances), after meeting all expenses, in securities of the Government of India and of the various States amount to about Rs. 1,40,00,000 so that the total investments in Government securities made within the last two years amount to over Rs. 1,80,00,000. I have deliberately concentrated only on Government securities of the appropriate type in the interests of the policyholders with a view to having, as far as possible, a better spread of the investments than in the past. As these investments have been made only in dated loans, temporary variations in their values can be regarded with some degree of equanimity.

Progress of New Business

"During the year, 13,199 proposals were received for assurances amounting to Rs. 3,86,23,790. Of these and others awaiting completion at 31st December, 1951, 10,058 proposals resulted in policies for Rs. 2,81,45,900, representing an annual income of Rs. 15,27,096 and Rs. 33,008 by single payments. The new business completed during the year was less than that of the previous year by 6.84 per cent. but this fall gives no cause for alarm. As a matter of fact, the new business in the first six months of 1953 has already shown a decided improvement over the figures for the corresponding period of last year.

Code of Conduct

"Attention is now being focused on getting good quality business, because the investigations about the new business of the last few years show that a good deal of it has gone off the books. The percentage of lapses to the total business in force at the beginning of the year was 5.50 as against 6.03 in 1951 and 9.68 in 1950. Every company's report deplores the terrible percentage of lapses prevailing in India but nothing seems to happen about it and the phenomenon seems to recur year after year in respect of every company! This seems to indicate that there is something inherently wrong in the methods of business. It is to be hoped that the new Code of Conduct prescribed recently will improve the tone of the field organisation and that there will not be the unseemly scramble for companies to snatch away agents and inspectors who are reported to have done well in some other company, whether that report was well-founded or not.

Expenses

"The overall expense ratio in the year was 26.93 per cent. as against 27.43 per cent. in 1951 and 30.31 per cent. in 1950. Every effort is being made to reduce the expense ratio and as a matter of fact the expenses on the pay and allowances of officers in the head office have been cut down ruthlessly, as will be seen from the following statement:

Monthly Average of Pay and Allowances of the Officers in the Head Office

1950	...	...	...	...	Rs. 22,803
1951	...	...	...	...	,, 13,469
1952	...	...	...	...	,, 10,717
1953	...	...	...	...	,, 9,853

Business in Force

"The total number of policies in force as at 31st December, 1952, is 1,36,928 assuring a sum of Rs. 29,60,56,165 inclusive of bonus, of which Rs. 28,70,158 (inclusive of bonus) is reassured. The total number of annuity policies in force is 46 with an annual payment of Rs. 63,239.

Claims

"The claims for the year, inclusive of bonus additions, amounted to Rs. 58,96,062 as against Rs. 61,49,263 in 1951. This reduction was almost entirely due to the fall in the claims by death which amounted to Rs. 15,83,485 as against Rs. 18,31,830 in 1951. The mortality experience of the Company continues to be very satisfactory.

Income and Outgo

"The income for the year amounted to Rs. 1,50,33,393 (after deduction of tax at source) of which Rs. 1,17,10,606 was derived from premiums. The outgo amounted to Rs. 94,61,900. The excess of income over outgo is Rs. 55,71,487.

Rate of Interest

"The rate of interest earned during the year (after deducting income-tax at source but including the refunds obtained) was 3.56 per cent. In the previous year the rate was 3.22 per cent. but no refund of income-tax was given in that year. This result should be considered quite satisfactory when it is remembered that nearly Rs. 92 lakhs of the investments shown in the balance-sheet, i.e., the loans to 12 parties at Delhi and the sum due by the Discount Bank of India Ltd., Bombay, in liquidation, have not earned any interest at all."

FUTURE OF COMMODITY CONTROLS

ENACTMENT OF CENTRAL LAW SUGGESTED

THE Report of the Commoditv Controls Committee and the Government of India's resolution thereon, placed before Parliament on the 9th inst., have come at a time when controls are being relaxed in many spheres of economic activity and when even imports of some foodgrains by private enterprise are proposed to be allowed. It is, therefore, not surprising that the Committee's work has not received much attention. It is, indeed, doubtful whether the Committee has served any useful purpose, except in one respect, namely, the future of the Essential Supplies Act of 1950. Nevertheless, a brief review of the Committee's findings may be recorded here, if only for purposes of record.

The Commodity Controls Committee, it will be recalled, was appointed under the chairmanship of Mr. S. V. Krishnamoorthy Rao, Deputy Chairman of the Council of State, on 24th October, 1952. The other members of the Committee were all officials of different Ministries of the Government of India, and included Mr. H. P. Pai, Joint Secretary, Ministry of Production; Mr. P. A. Gopalakrishnan, Ministry of Food and Agriculture; Mr. L. K. Jha, Ministry of Commerce and Industry and Mr. B. N. Lokur, Ministry of Law. Mr. M. A. Mulky, Assistant Economic Adviser, Government of India, was the Secretary. The Committee's terms of reference were (a) to examine the working of (i) the Essential Supplies (Temporary Powers) Act, 1946, (ii) the Supply and Prices Goods Act, 1950, (iii) the Drugs Control Act, 1950, and other orders and notifications thereunder, (b) to make recommendations for the revision or repeal of any of the said laws with a view to improving the existing system of controls, and (c) to streamline the control orders and notifications.

The findings of the Committee on the effects of commodity controls on the economy reveal the prevalence of divergent views on the subject. One view held mostly by chambers of commerce was that controls had failed in their objectives and that their effects on the general economy were adverse, as they affected production. As regards supply and distribution controls, it was felt that they failed to make available the goods to those who needed them, while disorganising the established trade channels. Lastly, it was held that they brought about black markets, corruption, hoarding and other practices. Contrary to these views were those held by the State Governments. These pointed out that (a) the existence of controls did not hamper production, (b) prices of essential commodities were stabilised at reasonable levels, (c) proper supply and distribution of the commodities were achieved, and (d) but for controls, equitable distribution of the essential commodities would not have been possible. Some trade associations, too, would appear to have subscribed to this view, with, of course, certain important reservations.

Views Non-commital

The Committee's views on controls are, however, non-commital. It says:

"Our approach to the question of controls. . . is not an academic one. We do not debate whether, in theory, controls are good or bad. We recognise that there are times when controls are necessary and equally that, at times, they may be harmful. Once it is conceded that controls do fulfil a useful function under certain conditions it follows that Government must retain the powers to exercise controls whenever the situation so warrants. Equally, once it is recognised that controls, if wrongly applied, could do a good deal of damage, it becomes obvious that the exercise of those powers must be under constant review and their applications adopted to changing conditions with the least loss of time."

Emphasising thus the need for the Government to review, from time to time, the exercise of its powers to control, the Committee proceeds to give another reason why controls of some form or other are necessary; and that is for purpose of planning. "When a country has chosen, as India has," it observes, "the path of planned progress in the economic field, Government must, in the last analysis, retain the power of overall guidance and control. We have in the rest of the report tried to take cognisance of the need to retain a certain reserve of powers, on the one hand, and the need to relax unnecessary controls, on the other." These observations form the basis of the Committee's recommendations regarding the future of controls in India.

The Committee's main recommendation relates to the enactment of "a single permanent and consolidated law conferring upon the Central Government reserve powers to enable the exercise of control over any commodity at any time." The implementation of this law involves the amendment of the Indian Constitution. This can be done in either of two ways. One of them is to transfer entries 26 and 27 of the State list to the concurrent list. These entries relate to "trade and commerce within the State and production, supply and distribution of goods." If this is not possible, the other alternative is to amend the Constitution, conferring legislative powers on Parliament in respect of foodstuffs, cattle fodder, raw cotton, cottonseed and other agricultural products. This can be done, the Committee points out, by inserting a new entry, "33-A," in the concurrent list.

The proposed law should be on the lines of the Essential Supplies (Temporary Powers) Act, 1950. This Act is due to expire on 25th January, 1955. The Committee has advised the Government to take action in regard to legislation before that date. The Government of India has accepted this resolution and proposes to examine the question in consultation with the State Government.

With regard to the continuation of the Supply and Prices of Goods Act, 1950, the Committee has done well in holding the view that there are no strong reasons to continue the Act. Accepting this view, the Government has gone a step further in lifting controls on casein, tanning materials and tannery wool. It has under its consideration the question whether controls on non-ferrous metals, caustic soda, soda ash and sulphur should be abolished under this Act or continued under the Industries (Development and Regulation) Act.

The Committee has recommended the withdrawal of orders and notifications issued under the Drugs (Control) Act, 1950, and the corresponding State laws. As the powers to exercise such controls are necessary, it is, however, proposed to bring the Drugs (Control) Act, 1950, under the single Central Act referred to above. The Central Government is generally in agreement with this suggestion, and is, it is stated, consulting the State Governments in the matter.

Another important recommendation relates to the creation of separate advisory committees for important commodities such as cotton textiles, iron and steel, and coal. With regard to food controls, the Committee feels that, as long as "the overall deficit in foodgrains persists and there are transport difficulties, recurring famines and local scarcities, resulting from national calamities, continuation of the Foodgrains (Licensing and Procurement) Order, 1952, and other supplementary orders are essential. Till then, forward trading in foodgrains should also be prevented. Rationing is required to be confined only to big cities and highly deficit areas. The Committee has also recommended that early action should be taken to set up a machinery for determining the cost and prices of various competing crops, in order to establish inter-State and inter-commodity price parity. This is, perhaps, the only recommendation of the Committee, the implementation of which will meet with several difficulties of a practical nature. But, then, there is sufficient force in the contention that agriculturists must be assured of a fair measure of security against factors over which they have no control. This is being done in several parts of the free world and India cannot long remain without doing something in this direction.

The Committee's recommendations in regard to controls on cotton, coal, and iron and steel are more or less in line with the present policy of the Government. In regard to salt, about which there has been considerable controversy, the Committee has recommended that, where the nominee system is prevailing, the States should allow free imports by traders other than the nominees.

(Concluded from next column)

The advent of the new chemical plant is also notable for another reason. At a time when unemployment is a growing menace, the new concern helps solve the problem, in its own way, by opening opportunities for several hundreds of skilled, unskilled and technical persons to seek a livelihood. And the fact that the venture sets out to do so at a time when the climate for industrial enterprise is not favourable, speaks of the courage and confidence of those who are responsible for sponsoring it. The compliments paid to these enterprising men by His Highness is well deserving. Addressing them, he said: "You are engaged on an enterprise which will be a source of supply of important chemicals needed for many industries. I congratulate Chevalier Roche-Victoria and his associates upon their initiative and efforts in undertaking this enterprise which will not only contribute to increase the economic resources of the country but also help to find valuable employment for a number of people."

CHEMICALS INDUSTRY IN SOUTH INDIA

FOUNDATION FOR NEW UNIT LAID

THE foundation-stone laying ceremony of the new enterprise, Heavy Chemicals Ltd., at Tuticorin, performed by His Highness the Rajapramukh of Mysore, on the 6th inst., marks a step forward by this country towards the development of the heavy chemicals industry. The advent of this new venture is of immense significance to this country for several reasons and, therefore, deserves to be chronicled in these columns.

The establishment of this manufacturing unit at Tuticorin in the extreme south of the peninsula serves to reduce the imbalance that now exists in the location of industries in India. Most industries in the country having clustered in the North, South India has remained neglected. Very few basic industries have been established there. Consequently, the new chemical unit reduces, to some extent, the lacuna in the economic development of the country. Tuticorin has, as was stated by His Highness Sri Jaya Chamaraja Wadiyar Bahadur in the course of his address laying the foundation-stone, a fine port at the head of the Gulf of Mannar in the southernmost part of the country. It provides many natural facilities for the manufacture of caustic soda, chlorine, bleaching powder and other chlorine products. Its common salt and shell-lime have established for many years a reputation for their high purity—an essential prerequisite for a successful alkali industry—and these are made from the inexhaustible resources of the sea and the splendid coral reefs in the gulf.

The new chemical enterprise is specially designed to exploit the natural resources mentioned above. As was pointed out by Mr. J. L. P. Roche-Victoria, a former Minister of Madras State and the chief promoter of the concern, Heavy Chemicals Ltd. was incorporated in 1951, with an authorised capital of Rs. 1 crore, with the object of manufacturing 10 tons of caustic soda per day, and utilising the by-product, chlorine, for processing ilmenite sand for the production of titanium dioxide and ferric chloride. The project will be executed in two stages. During the first stage, it is proposed to manufacture 5 tons of caustic soda per day and the entire chlorine will be utilised in the manufacture of high test hypochlorite. In the next stage the output of caustic soda will be stepped up from 5 tons to 10 tons a day and the surplus chlorine will be utilised for the processing of ilmenite.

Industrial Use of Chlorine

It is perhaps not so well kown as it should be that industrial applications of chlorine are numerous. This fact has found full emphasis in the speech of His Highness. The greater utilisation of chlorine in India yet remains to be developed as it has been in the more advanced countries of the U.S.A., England and Germany. The manufacture of D.D.T. chlorinated solvents, and of dicalcium phosphates is among the chlorine industries for which priority has been accorded in the Five-year Plan.

In the order of priorities for industries defined in the Five-year Plan, the heavy chemicals industry is given a high place. First comes the fuller use of the existing capacity in producer goods and consumption goods industries. Next in importance is the expansion of capacity in producer-and-capital goods industries. It is in this category that heavy chemicals industry is included along with iron and steel, aluminium, cement, fertilisers, textile machinery, machine tools, etc. As these are key industries, their contribution to industrial expansion will by no means be inconsiderable. The chemicals industry, in particular, has a main role in this expansion. It is of fundamental importance not only to the defence industry but also to a number of subsidiary industries such as glass, paper, soaps, textiles, leather, drugs, ceramics and metallurgy. These industries are dependent on imports of heavy chemicals such as soda ash, caustic soda, sulphuric acid, in which India is not self-sufficient. The observations made by His Highness in his speech are revealing in this context. To quote him:

"Under heavy chemicals, the country produces 11,000 tons of caustic soda, while the target to be reached by 1955-56 is fixed at 33,000 tons. The corresponding figures for soda ash are 45,000 and 78,000 tons, for sulphuric acid 99,000 and 192,000 tons. Your Company's output, which will reach a level of 10 tons of caustic soda per day or over 3,000 tons per year, will make a significant contribution towards the implementation of the Plan in this country."

For the attention of
Far-sighted Industrialists
TO MECHANISE?

There comes a time in the experience of all of you when you wonder whether you should mechanise, be it in the office, plantation or at the points where material is frequently handled, either in the stores or the plant. With the recent rapid upward trend of labour costs this question is becoming more and more prevalent and also more pertinent.

Before taking the plunge, involving usually considerable capital expense as well as the problem of disposal of the labour thereby rendered surplus, it is advisable first to examine carefully whether you are employing the best manual methods. If no further economies are possible in this direction, it is then necessary to decide on the mechanical devices best suited to your needs.

The issue clearly requires a thorough and unbiased study of the prevailing conditions and future trends, together with an analysis of comparative costs, including effective maintenance.

NEW PUBLICATIONS

Hungry People And Empty Lands. By S. Chandrasekhar. Publishers: Indian Institute of Population Studies, M. S. University of Baroda, Baroda, India. Price: Rs. 15.

THIS is an essay on population problems and international tensions resulting therefrom. Dr. S. Chandrasekhar has advocated the urgent need for a world population policy. Although the title of the book seems to emphasise emigration as the main plank of world population policy, the book does not exclusively deal with that aspect. The policy he advocates is comprehensive, inasmuch as it envisages a simultaneous attack on the problem from all sides, economic, political and social. He wants (1) the liquidation of colonialism, (2) widespread dissemination of contraceptive knowledge, (3) constitution of an international migration authority that will take into consideration the legitimate needs and the available resources of the people, (4) large-scale and rapid industrialisation and (5) world-wide development of agriculture on scientific methods. The author is not unaware of the fact that such a population policy is easily advocated than realised. But he warns, pertinently enough, that the only alternative to it is a third world war, more catastrophic than any so far, thereby proving, once again, the infallibility of the Malthusian Law of Population.

Dr. Chandrasekhar's thesis is based on his belief that, in many parts of the world, food and natural resources are not only not increasing but there is actually a steady depletion of these resources. He maintains that, no matter what science has achieved and going to achieve, nature is niggardly and the resources of the earth are finite and eventual starvation of a large number of masses is inevitable, unless the Malthusian devil is hooked. He points out how the increase in the differential rates of population in different nations aggravates existing differences in land area, food production and consumption, and how they lead to worsening of international tensions.

A notable feature of the essay is the author's case for planned and selective emigration from over-populated Asian countries to thinly settled nations elsewhere. It is true that this is opposed on the score either that it constitutes a threat to the higher standard of living of the immigrant countries or that it conflicts with the policies that uphold racial or cultural superiority. But such persons, the author holds, are only fighting a losing battle. For, certainly, "poverty anywhere constitutes danger to everywhere" and that, in the eyes of God, "all men are alike." Dr. Chandrasekhar does, however, concede that emigration alone will not solve specific population problems, though it might help alleviate the hunger of the millions.

The author is one of those liberals who believe that "no national world population policy can be complete without universal knowledge of and facilities for the practice of contraception." As birth control has begun to stay in the West, despite the Catholic Church, so should it in the East. For birth control is usually associated with a high standard of living. And surely once people come to enjoy a higher standard of living, they become reluctant to give it up and hence voluntarily try to restrict the size of the family through the use of contraceptives, in order to escape the inevitable logic of reduced rations. He has accordingly stressed the need for initiating the birth control movement in the villages, where a majority of the overpopulated nations in Asia live.

The author is a well-known expert on population problems. This work is the result of his untiring efforts over years and of his discussions with experts and scholars of the world, when he was in charge of the demographic research department in the U.N.E.S.C.O., Paris, during 1948-49. It bears the mark of scholarly study of the problem and deep reflection on possible solutions.

Safety in Coal Mines (Vol. 1). Published by International Labour Office, Geneva. (Indian Branch: New Delhi). Price: Rs. 6

The study contains material which was collected and analysed in connection with the preparation of the *Model Code of Safety Regulations for Underground Work in Coal Mines for the Guidance of Governments and of the Coal-mining Industry*, which was adopted by a Tripartite Technical Conference held at Geneva in September, 1949, and published by the International Labour Office in 1950. Some more recent information has also been included.

The study provides statistical material showing the incidence and chief causes of underground accidents in the coal mines of some of the principal coal-producing countries and also a survey of the law and practice in matters relating to coal-mining safety in a few selected countries. The study, however, takes only underground risks into consideration for this purpose. Besides, coal has been taken to mean bituminous coal and anthracite to the exclusion of lignite. The text of the study is supplemented by appendices, comprising lists of laws and regulations, governmental publications and periodicals on this subject.

An analysis of the study gives a clear picture of the magnitude and nature of the underground risks in coal mines and a description of the various means employed to guard against them. The grouping of the contents into four main divisions, namely, statistics, legislation, inspection and general safety activities, reflects the generally accepted view, which is fully shared by the International Labour Office, that safety in coal-mining, as in other countries, cannot be successfully promoted by legislation alone. There must be means of securing the enforcement of legislation—an inspectorate—besides other safety activities such as scientific research, education, training and propaganda. Moreover, there must be cordial co-operation between Governments, employers, workers and scientists. The study sets out to show the part that each can play in promoting the safety of the men in the mines and thus to provide some guidance to all those who are directly concerned with safety in coal mines, including the miners themselves.

International Social Science Bulletin—The Technique of International Conferences. Published by the U.N.E.S.C.O., 19, Avenue Kleber, Paris 16. Price: $1.

The U.N.E.S.C.O., which has for some time been studying improvements in the present methods of holding conferences, has devoted the current issue of its quarterly *International Social Science Bulletin* to consideration of how international conferences can be used more effectively to help the peoples of the world to live more peacefully and more pleasantly together. On the assumption that partnership in the social sciences is of unusual value in research in this field, the *Bulletin* groups under the general heading, "The Technique of International Conferences," a number of detailed studies of various aspects of the problem contributed by leading experts.

Writing on "The evolution of international conferences," Dr. Scelle asserts that they have "become a characteristic institution of a world society alive to the significance of human rights—the institution which most effectively contributes to the integration of that society." Dr. Chaumont takes up the evolutionary aspects of international organisations and international co-operation, considering research into the extent to which the procedure of international conferences reflect co-operation. "The Strategy of Research on International Conferences" is Dr. Cartwright's subject; and he says that it is "important, feasible and, above all, challenging to the ingenuity and skills of social scientists." Rapid advances, he says, may be confidently expected in the coming years.

The *Bulletin* also continues the practice, established in previous numbers, of presenting information about current activities of the United Nations and its specialised agencies in the field of the social sciences. Dr. Kopelmanas considers the experience of the Economic Commission for Europe in connection with the technique of international conferences. Dr. Lall contributes notes on the sixth session of the U.N. General Assembly, and Dr. Veillet-Lavallee on the F.A.O. Conference. The other articles include one by Mr. H. Kabir of the Ministry of Education, Government of India, on "The Gandhian way," and one by Dr. K. Soddy of the World Federation for Mental Health on "International conferences and international non-Governmental organisations."

A crank with a heated bearing . . .

. . . defended himself vigorously. "I wouldn't refuse to do a good turn for anyone," he protested, "but really, all this work!" The machine shop foreman moved closer and whispered in his gear. "Just between you and me," he murmured, "it's rumoured that you are to be fitted with Tecalemit Automatic Lubrication!" The crank spun round swiftly. "In that case," he said, "I shall grind no more axis!" The machine shop foreman sighed with relief and went to prepare for the arrival of his oil highness—the Tecalemit man.

Tecalemit lubrication systems—fully automatic, semi-automatic or manually operated—feed every bearing with the correct amount of oil or grease at the correct intervals of time, regularly . . . unfailingly . . . efficiently. A Tecalemit engineer will gladly call to discuss your particular lubricating problems with you.

SIZABLE INCREASE IN MALANKARA RUBBER'S PROFIT

DIVIDEND STEPPED UP TO 55 PER CENT.

WITH a total area of 1,661 acres devoted to rubber, besides 30 acres to pepper and 164 acres to coconut, the 42-year old Malankara Rubber and Produce Co., Ltd. (Managing Agents: Messrs. John Sons' Estates and Agencies Ltd., Kottayam), is one of the largest plantation companies in South India, with a predominant interest in the cultivation and sale of rubber. During the year ended March 1953, according to the latest report and accounts, the Company was able to improve its sale proceeds from Rs. 6.63 lakhs to Rs. 10.19 lakhs, thanks to the larger yield of rubber. This has resulted in an increase in gross profit from Rs. 3.59 lakhs to Rs. 6.14 lakhs. The shareholders participate in this prosperity through a handsome dividend of 55 per cent., free of income-tax, as against 35 per cent. they received in the previous year.

The increase in profit is due to the record production of rubber. The rubber produced was 732,130 lbs. as compared to 437,676 lbs. in the previous season. This works out to an increase of 67 per cent. As a result of this improvement, the cost of production declined from 55.15 cents per lb. to 49.47 cents per lb. or by 10 per cent. and the average price obtained was 126.15 cents per lb. Although nature may have played a great part in this improvement, it is difficult to withhold praise for the scientific way in which the problem of productivity was handled by the management. The latter introduced a system of payment by results, and effected other changes in the system of tapping. Referring to these changes, the Directors' report says:

"From the commencement of the year under report, all budded areas also were brought under alternate day tapping and the system of payment by results for tapping has been adopted, as a result of which the output per tapper increased. The large increase in the crop during the season was mainly due to these reasons and the decrease in the cost of production was due to the large income in the crop obtained."

The following table shows the progress of the Company over the three years ended March, 1953:

	For year ended 31st March		
	1953	1952	1951
Rubber crop (lbs.)	7,32,130	4,37,676	4,50,365
Estate cost (cents per lb.) ..	49.47	55.15	43.67
Average sale price (cents per lb.) ..	126.15	119.57	
Coconut crop (No. of nuts) ..	3,26,247	3,18,481	2,65,303
Pepper crop (lbs.)	6,752	6,315	6,304
	(Rs. in lakhs)		
Sales	10.19	6.63	5.42
Stock	1.11	1.06	1.36
Estate expenditure	3.81	2.51	2.04
Gross profit	6.14	3.59	3.23
Provision for—			
Depreciation	0.20	0.11	0.04
Management commission ..	0.30	0.18	0.18
Taxation	1.93	1.14	1.05
Net profit	3.71	2.16	1.94
Transfer to—			
General reserve	1.00	0.25	0.20
Dividend (ordy.)	2.48	1.37	1.35
	(55%)	(35%)	(30%)
Carry forward	0.23	0.34	0.39

It will be seen from the table above that the net profit, after providing for depreciation and taxation at a higher level, amounts to Rs. 3.71 lakhs, as against Rs. 2.16 lakhs. The transfer to general reserve has been stepped up from Rs. 0.25 lakh to Rs. 1 lakh, while the payment of the recommended 55 per cent. dividend will absorb Rs. 2.48 lakhs, leaving Rs. 0.23 lakh to be carried forward as against Rs. 0.34 lakh brought in.

Estates Being Improved

The Company's estate is being continuously improved. During the year under review, capital expenditure incurred through construction of new buildings and installation of new machinery, aggregated Rs. 1.01 lakh, as against Rs. 0.25 lakh in the previous year spent on similar purposes. The gross block is valued at Rs. 12.27 lakhs, of which the cost of land (revalued) aggregates Rs. 8.41 lakhs and the rest represents the value of buildings, furniture and machinery. The gross block has been written down to Rs. 10.12 lakhs. Stocks, as on 31st March, 1953, and at prices since realised, aggregate Rs. 1.11 lakhs. The Company has a strong liquid position, as will be evident from the fact that its cash and deposits with banks and post office amount to Rs. 9.39 lakhs, besides investments in Government securities to the tune of Rs. 0.51 lakh. The Company has also large reserves. Thus, as against a capital of Rs. 4.50 lakhs (in 15,000 shares of Rs. 30 each), the Company's reserves aggregate Rs. 7.44 lakhs.

The following summary of the Company's balance-sheet as at 31st March, 1953, will provide a clear picture of its financial standing:

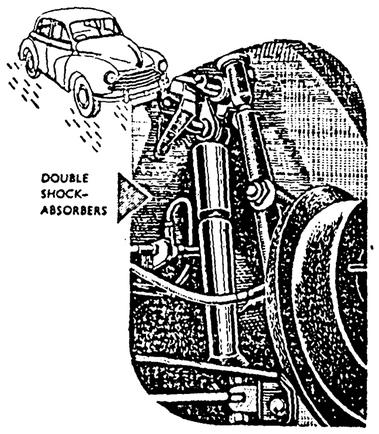
Liabilities	Rs.	Assets	Rs.
Capital ...	4,50,000	Net Block ...	10,11,601
Reserves and surplus ...	10,83,936	Stocks ...	1,10,695
Provision for taxation ...	1,96,487	Debts, deposits and advances ...	29,346
Current liabilities ...	4,12,342	Investments and fixed deposits with banks	4,12,820
		Cash ...	5,78,323
Rs.	21,42,785	Rs.	21,42,785

How comfortable the liquid position of the Company is will be evident from the fact that cash balances alone are sufficient to meet all current liabilities, including those pertaining to the proposed dividend, as well as a good part of the taxation liability. The management, it is stated, proposes (subject to approval of shareholders and sanction of the Central Government) to issue bonus shares for Rs. 4½ lakhs in proportion of 1 share for every one share held, thereby increasing the capital to Rs. 9 lakhs. At the same time, it is proposed to sub-divide each Rs. 30-paid share into three shares of Rs. 10 each. The increase in capital by capitalisation of reserves is justified by its large reserves, though a part of the reserves represents the revaluation of the Company's land, after disposing of a part of it. The sub-division of shares will no doubt increase their marketability. The Company's Rs. 30 paid-up shares are now quoting in the neighbourhood of Rs. 117½ *c.d.*, at which level the yield, on the basis of the current dividend, works out to 15 per cent. per *annum*.

It, however, remains to be seen whether this dividend level can be maintained on the new capital, which will be higher than the present one when the changes, now proposed, are implemented. During the year under review, the improvement in the Company's results was due to the increase in crop through the adoption of the system of payment by results. The Directors have warned that, although this system is being continued, they do not expect to "get the same high crop hereafter." For this reason and also on account of the fact that the estate may suffer a loss of crop of about 40,000 lbs. through the sale of a part of the Company's rubber area, they anticipate a crop for 1953-54 of only 600,000 lbs. of rubber at a cost of 55.72 cents per lb., excluding income-tax and head office expenses, as against 732,130 lbs. produced during 1952-53 at a cost of 49.47 cents per lb. The present high yield on these shares doubtless reflect the possibility of a lower rate of dividend for the coming year. One, however, need not take an unduly pessimistic view, for it should still be possible for the Company to pay a decent dividend to shareholders.

Although the management of the Company has been taken over by Messrs. John Sons' Estates and Agencies Ltd. with effect from 1st April, 1953, the change will not make any difference in the efficiency with which the Company's affairs have been conducted. This is because the services of Mr. P. Kurian John, who, as the Managing Director of the Company since 1927, contributed to the Company's present "strong financial position" are being retained for some time more. He will now function as the Managing Director of the managing agency firm.

Double riding comfort from double shock-absorbers



The ride in a Hindusthan, now fitted with dual shock-absorbers and with improved suspension is vastly different. You could feel the comfort even on rough roads.

Call on your nearest dealer for a test ride. You will also be delighted to get the most attractive purchase terms ever offered to car buyers.

Points From The Chair

Role of Plantations

"INCIDENTALLY, we hear a great deal nowadays of employment and unemployment, but the role of plantations as employers of labour receives scant notice. This Company employs about 1,900 workers. For an expenditure of Rs. 2,069 crores, the Five-year Plan expects to find jobs for only 125,000. And with this difference, also, that the Company not only employs them but houses them and their dependents, ministers to their health, assists them in their recreation and in their religious devotions, and affords schooling facilities for their children and creche feeding for their infants. Is it asking too much that this at least should be set at our credit to help counterbalance the formidable list of iniquities which are sought to be heaped on the other scale?"

W. W. KILGOUR,
Cochin Malabar Estates Ltd.

Insurance and Income-tax

"It is rather unfortunate that the Income-tax Department insists upon allowing only a reserve of 100 per cent. under marine and 50 per cent. under fire and miscellaneous. But I am quite convinced, from my experience of income-tax administration for a long time and of insurance for the last two years, that this rule-of-thumb method is not appropriate to all companies and that it is acting detrimentally to the interests of Indian insurance in not encouraging the creation of adequate reserves to meet any emergencies. Though the figures are the same as those usually adopted by the English income-tax authorities, the practice is not the same in the two countries."

R. VARADACHARI,
Jupiter General Insurance Co., Ltd.

Reasonable Price for Ammonium Sulphate

"The Government of India have also been approached for an assurance that a reasonable price for our product will be fixed after a price investigation has been carried out into our costs of production. This request is based on the principle followed by the Government of India in giving assistance to the steel and other industries where units of different capacities and sizes are assured of a reasonable price for their products with a view to making maximum use of the total productive capacity available in the country. Our request is all the more just and equitable, as the competition we have to meet is from the Sindri fertiliser factory, a massive unit established by the Government of India, not as a monopolistic venture but as a model of corporate endeavour."

N. RANGANADHAN,
Fertilisers and Chemicals, Travancore Ltd.

Importance of Life Assurance

"Life assurance is a specialised kind of saving; it is not the mere accumulation of money but something more. Field workers usually appeal to prospects by stressing the most compelling motive for any person to go in for life assurance, i.e., the desire to discharge his responsibility to his dependents and to make provision for his old age. For the middle-class man, there is no better method of saving than by life assurance policies, because they combine an element of saving plus a cover in the case of early death. The taking of an insurance policy often amounts to the postponement of avoidable expenditure; this not only benefits the policyholder and his family, but it is a matter of national importance at the present day. If the Five-year Plan of the Government of India for increasing the wealth and the prosperity of the country is to be a success, as we all hope, it is most essential that the flow of savings through life insurance should be increased so that a good portion of it could be canalised into investments on National Development Loans."

R. VARADACHARI,
Empire of India Life Assurance Co., Ltd.

Mixed Economy

"Our Government have adopted the concept of a mixed economy for the country, a concept which has found broad public acceptance and in which business and industry are anxious to co-operate. A mixed economy, however, implies the co-existence of State enterprise and free enterprise, and cannot mean a wholly State-dominated economy where the industrial class is temporarily tolerated and permitted to survive, pending further developments. A mixed economy can only function, if there is, within the community, a balance of forces, with free enterprise operating as one of the autonomous forces pulling its weight alongside State enterprise, trade unions and other elements in society. I am led to make these observations, because I have noted a tendency on the part of Government, perhaps not deliberate, to deny to free enterprise a voice, or even consultation, in matters vitally affecting it or the economy as a whole. The manner in which, for instance, the Indian air transport industry was recently nationalised, and the terms on which this was done, would seem to indicate that Government see no reason to carry with them the industrial sector and its representatives or even to give them a hearing before making up its mind. May I suggest that the time has come for Government to clarify their position and to state whether their ultimate goal is, in fact, a mixed economy, in which both sectors are permitted to function efficiently, or a State monopoly of all industrial enterprise?"

J. R. D. TATA,
Tata Iron and Steel Co., Ltd.

(*Concluded from page 540*)

that tribunals are very prompt in disposing of such applications. Managements, however, feel that they are unnecessarily penalised by having to pay the wages of a worker guilty of misconduct during the period of suspension till the date of obtaining permission for his discharge or dismissal from a tribunal. Of course, if the Tribunal finds the worker not guilty of the charge of misconduct then it would be quite proper to direct the payment of his full wages during the period of suspension.

It is for the authorities concerned to seek solutions to the problems to which I have drawn attention in this article. In conclusion, I wish to point out that the object of this article is not to pick holes but to open up avenues of enquiry which may lead to better and more harmonious industrial relations.—*All Rights Reserved.*

(*Concluded from page 542*)

The Planning Commission has recommended that there should be land utilisation and soil conservation boards in each State to prepare and carry out soil conservation plans and that necessary soil conservation legislation should be enacted. It is suggested that each State should carry out a reconnaissance survey for the demarcation of the principal areas affected by erosion and select areas in which soil conservation work will be concentrated during the period of the Plan. A sum of Rs. 2 crores for assisting soil conservation programmes is provided in the Five-year Plan. The proposed Central Board is to examine State programmes and undertake overall co-ordination of soil conservation work by securing inter-State co-operation for soil conservation programmes.

The Central Board's work will be considerably lightened by the action taken already in regard to the desert and semi-desert areas which prevail over large areas in Western India, in Rajasthan and the adjoining areas of Punjab, P.E.P.S.U., U.P., Saurashtra and Cutch. It may be mentioned here that the Desert Afforestation Committee Research Section set up recently at Jodhpur is dealing with the problem of immobilisation of the Rajasthan Desert, under the ægis of the Forest Research Institute, Dehra Dun. As several States are affected by the advance of the desert, and as successful tackling of the problem depends in large measure upon co-ordinated action by the various States concerned, the need for inter-State co-operation in this sphere cannot be over-emphasised. A co-ordinated programme of action alone provides the solution in this regard.

FERTILISERS & CHEMICALS

(*Concluded from page 541*)

production. And it is expected that, by the end of the year, the total tonnage produced will exceed that of any previous year, in spite of the shorter period the factory has worked.

"From information available, it is fairly certain that, in future, we shall not have electricity rationing which had, unfortunately, been a regular feature during the summer months every year since 1948. This altered situation, together with the general improvement in the supply position of raw materials, makes me hope that our production can be maintained at a very high rate from now on and that a brighter future is opening up for this industry.

Labour

"On the subject of labour, I have to say that, though we have had an uneventful time with them during the year, I still feel that it will be conducive to greater harmony, if labour shows a better appreciation of the adverse conditions which we have to contend with and which, in certain other fields, have crippled many ventures.

"I am happy to report that, since the date of the last meeting, considerable progress has been made in the caustic soda project. The erection has been completed and the plant is now in regular production. The construction of the ammonium chloride plant is progressing apace and it is expected to go into production early in 1954.

"Before I conclude, I wish to express our grateful thanks to the Governments of Travancore-Cochin and Madras for their unstinted support and for the help they offered us in overcoming the numerous difficulties that confronted us during the year under review. Also, I should not fail to express our grateful thanks to the Central Government for the assistance they have so far rendered us. Our request to them now is that they will extend to us, in full measure, the help that we have sought from them for surmounting the obstacles which still lie ahead of us and to which I have already referred. I would also like to commend to you the good work done by the Managing Agents and the members of the staff. Their interest and perseverance, in the face of the most trying and disheartening conditions, merit your favourable notice."

Notices

THE APOLLO MILLS, LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Thirty-third Ordinary General Meeting of the Shareholders of the abovenamed Company will be held at the Registered Office of the Company at Delisle Road, Chinchpokli, Bombay, on Wednesday the 30th September 1953 at 4-00 p.m. (S.T.), to transact the following business:—

1. To receive and adopt the Directors' Report and the Audited Statements of Account upto 31st December, 1952.
2. To declare a Dividend.
3. To elect a Director in place of the Director who retires pursuant to Article 106 of the Articles of Association of the Company, but being eligible, offers himself for re-election.
4. To elect two Directors in place of those who retire by rotation, but being eligible, offer themselves for re-election.

CALCUTTA, 8th *September*, 1953.

LOWER PRICES FOR LUBRICANTS AFFECT TIDE WATER OIL

RESULTS OF KARANPURA COLLIERIES SATISFACTORY

Tide Water Oil Co. (India), Ltd.

THE directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 30th April, 1953.

After providing for depreciation and having brought in the balance from the last half-year there is a net loss of Rs. 53,424 (profit of Rs. 52,038 out of which was paid dividend at As. 12 per share, absorbing Rs. 45,000 leaving to be carried forward the balance of Rs. 7,038) which the directors recommend be carried forward.

During this accounting period due to a succession of decreases in the selling prices of lubricants, the results showed a loss and the directors therefore regret they are unable to recommend payment of any dividend.

Turnover was maintained but successive reductions in selling prices of lubricants in this market during the half-year adversely affected the working results.

The qualitative value of the Company's products remains as high as ever and the directors' efforts are therefore directed to reducing the costs connected with putting them on the market and thus meet the new level of selling prices now prevailing.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	6,00,000	Block ...	1,01,093
Reserves ...	8,95,899	Goodwill ...	2,00,000
Provision for taxation ...	13,380	Stocks ...	22,16,913
Liabilities ...	24,34,438	Debts, deposits and advances ...	11,29,472
		Cash ...	2,42,815
		Profit and loss account ...	53,424
Rs.	39,43,717	Rs.	39,43,717

Karanpura Collieries, Ltd.

The directors of the above Company (Managing Agents: Messrs. Bird & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 28th February, 1953.

Raisings and despatches.—110,960 tons were raised in comparison with a figure of 58,056 tons last year. 112,030 tons were despatched during the year as compared with 62,664 tons last year. It will be recalled that the colliery railway siding was opened to traffic in May, 1951.

The directors report satisfactory progress in the development of the mines. This progress would have been more rapid but for a shortage of electric power. Through the kind co-operation of the Chief Mining Engineer, Railway Board, the colliery has been obtaining its electricity supplies from a neighbouring State Railway's power-house. Unfortunately the power-house has not, at all times been able to supply the colliery's full requirements, with a consequent effect on coal production. However, arrangements are in hand to rectify the shortage, and it is hoped that shortly the colliery will be able to raise coal at the rate for which it was designed. Adequate electricity supply for the future is assured, as the colliery will take its current from the Damodar Valley Corporation when the grid system comes into operation in this area. The directors understand that grid supply is expected to become available in the course of 1954.

Plans laid for the development of the property are being followed successfully and a full working year has made it possible for the Company to purchase various items of plant and machinery previously on hire. The supply of wagons at the colliery has been satisfactory overall and the directors trust this will continue. Relationships with the labour have been satisfactory throughout the year.

After providing Rs. 82,306 (Rs. 68,340) for depreciation and Rs. 30,000 (nil) for taxation and special reserve, and writing off the debit balance as at 29th February, 1952 of Rs. 1,35,692 (debit of Rs. 2,05,584), the profit and loss account shows an available balance of Rs. 73,434 (debit balance of Rs. 1,35,692) which the directors propose to dispose of as follows:—

In paying arrears of dividend on the 5½ per cent. cumulative (taxable) preference shares for the period 23rd October, 1946 to 28th February, 1949 Rs. 71,596 (nil) and in carrying forward Rs. 1,838 (debit of Rs. 1,35,692).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	29,81,000	Block ...	23,58,690
Reserves ...	14,250	Work-in-progress ...	53,455
Provision for taxation and special reserve ...	30,000	Stock of coal	13,148
Liabilities ...	4,49,347	Stores and spare plant	1,97,192
Profit and loss account ...	1,838	Debts, deposits and advances ...	8,19,333
		Cash ...	34,617
Rs.	34,76,435	Rs.	34,76,435

Rajgarh Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December, 1952.

After charging depreciation amounting to Rs. 44,389 (Rs. 17,593), the season's working resulted in a loss of Rs. 5,488 (profit of Rs. 48,374). After bringing in the balance from last year and charging managing agents' minimum commission, there remains at the credit of profit and loss account a balance of Rs. 20,602 (Rs. 64,091). The directors recommend that no dividend be declared and that the credit balance Rs. 20,602 (Rs. 29,691 after paying dividend at Re. 1-12 per share, absorbing Rs. 35,000) in the profit and loss account be carried forward.

A total crop of 4,434 maunds was secured and sold in Calcutta and London at an average price of Re. 1-12-5 per lb. Estimates for the current season have been framed for a crop of 4,575 maunds to cost Rs. 4,49,919.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	2,00,000	Block ...	5,01,583
Reserves ...	4,77,500	Stock-in-trade	3,97,208
Provision for taxation ...	30,043	Stores ...	1,13,671
Liabilities ...	4,20,367	Debts, deposits and advances ...	99,394
Profit and loss account ...	20,603	Investments	2,228
		Cash ...	34,429
Rs.	11,48,513	Rs.	11,48,513

Hoolungooree Tea Co., Ltd.

The directors of the above Company (Secretaries: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December, 1952.

After providing Rs. 1,04,146 (Rs. 50,082) for depreciation, the season's working resulted in a loss of Rs. 83,355 (profit of Rs. 1,02,257). After bringing in the balance from last year, crediting Rs. 30,000 (nil) provided for taxation in excess of requirements in past years, and charging secretaries' minimum commission, there remains a balance of Rs. 28,147 (credit of Rs. 1,11,333) at debit of profit and loss account. The directors recommend that no dividend be declared and that the debit balance of Rs. 28,147 (credit of Rs. 35,208 after payment of dividend at Rs. 17-8 per share, absorbing Rs. 76,125) be carried forward.

A total crop of 12,680 maunds was secured and sold at an average price of Re. 1-11-1 per lb. This compares with a crop of 13,625 maunds secured in season 1951, which sold at an average price of Re. 1-12-4 per lb. Weather conditions were not as favourable as in the previous season.

Current market rates are considerably higher than was the case when the major part of the 1952 crop was sold and it is anticipated that the results for 1953 will show an improvement on the previous season. Estimates for the current season have been framed for a regulated crop of 11,900 maunds to cost Rs. 13,75,778.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.

Sarugaon Tea Co., Ltd.

The directors of the above Company (Secretaries: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December, 1952.

After providing Rs. 46,294 (Rs. 54,980) for depreciation, the season's working resulted in a loss of Rs. 1,10,100 (profit of Rs. 89,002). After bringing in the balance from last year and charging secretaries' commission, the balance at debit of profit and loss account amounts to Rs. 1,07,016; however, there has also been brought to profit and loss account the sum of Rs. 35,000 (nil), being tax provision of previous accounting periods now ascertained to be surplus, and the balance at debit of profit and loss account is thus reduced to Rs. 72,016 (credit of Rs. 66,487 after provision for taxation and transfer to general reserve). The directors recommend that no dividend be declared and that the debit balance of Rs. 72,016 (credit of Rs. 23,187 after payment of dividend at Re. 1-4 per share, absorbing Rs. 43,300) be carried forward.

A crop of 1,977 maunds green tea and 5,508 maunds black tea, total 7,485 maunds was secured and has been sold at an average price of Re. 1-5-5 per lb. This compares with a crop of 8,668 maunds of black tea secured in 1951, which sold at an average price of Re. 1-9-10 per lb. The shortfall in the 1952 crop compared to the previous season, was largely due to unfavourable weather conditions in the latter part of the year.

Current market rates are considerably higher than was the case when the major part of the 1952 crop was sold and there is reason to anticipate that the results for season 1953 will show an improvement compared with the previous season. Estimates for the current season have been framed for a crop of 7,600 maunds of black tea to cost Rs. 7,88,120.

Accounts in brief are as under:—

Estrela Batteries Ltd.

The directors of the above Company (Managing Agents: Messrs. Choonilal Manilal Ltd., Bombay) submit the audited accounts of the Company for the year ended 31st March, 1953.

The accounts show that the profit for the year without providing for any depreciation amounts to Rs. 7,729 (Rs. 1,60,081 after providing for depreciation). After adding the balance brought forward from last year of Rs. 4,425 (Rs. 9,344) and the amount transferred from the reserve fund of Rs. 50,000 (nil), there is an available sum of Rs. 62,154 (Rs. 1,69,425). The directors recommend that this amount be disposed of in payment of a dividend of Rs. 2-8 (Rs. 2-8) per share on 20,000, 5 per cent. cumulative preference shares, free of income-tax Rs. 50,000 (Rs. 50,000) leaving to be carried forward Rs. 12,154 (Rs. 4,425 after placing Rs. 40,000 to gratuity reserve fund and payment of dividend on ordinary shares at Rs. 2-8 per share, absorbing Rs. 75,000). The adverse results of the year are mainly due to the following reasons:—

Unprecedented fall in Government demands to the extent of about Rs. 14 lakhs compared with last year and considerable increase in the manufacturing costs. In view of market conditions, the directors deemed it fit to revise the price structure by increasing the trade discount by 7 per cent., which resulted in additional payment of Rs. 3,15,242 to the dealers. The rise in price of various raw materials and increase in labour costs owing to the award of the Industrial Tribunal, Bombay. The strike of the Bombay Gas Co., Ltd., Bombay, compelled the directors to close the factory for about 20 days, causing considerable loss to the Company. The introduction of the Employees' Provident Fund Act, 1952, and the State Insurance Act by the Government has increased

the manufacturing cost to the extent of approximately Rs. 25,000 which means further additional burden on the profit-earning capacity of the Company.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	24,97,680	Block ...	25,30,760

Mozufferpore Electric Supply Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Octavius Steel & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st December, 1952.

The revenue account for the year showed a profit of Rs. 3,887 as compared with the loss of Rs. 43,348 shown in the previous year's account. After making sundry adjustments the net loss for the year was Rs. 11,984 (Rs. 59,149). To this was added the debit balance on profit and loss account of Rs. 1,05,953 (debit of Rs. 47,567) brought forward from the previous year, resulting in a net debit balance of Rs. 1,17,937 (debit of Rs. 1,05,953) which was carried forward.

A continuous supply of electricity was maintained throughout the year, and an increase of approximately 4 per cent. in the number of units sold was recorded as compared with the previous year.

In September, 1952, certain of the Company's rates for the supply of energy were again increased by the introduction of an adjustment based on the cost of fuel oil, and this provision has resulted in a further improvement in the revenue earnings as from that date.

With regard to the Company's application for a loan to the Industrial Finance Corporation of India mentioned in the last report, no satisfactory progress has so far been made.

The total number of units sold during 1952 was 22,20,788 as against 21,27,457 in 1951. The number of consumers connected to the Company's system on 31st December, 1952, was 1,793 representing a connected load of 1,884 kw., as compared with 1,799 representing a connected load of 1,884 kw. at the close of the previous year.

The additional mercury arc rectifier mentioned in the last report has now arrived in the country and it is expected that his equipment will be in commission by about the end of September, this year. No further appreciable expansion of the Company's system can be undertaken at present, as the plant is already loaded to full capacity.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.

Rs.	20,32,380	Rs.	20,32,380

Jaybirpara (Dooars) Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December, 1952.

After providing Rs. 33,309 (Rs. 23,559) for depreciation, the season's working resulted in a loss of Rs. 89,984 (profit of Rs. 1,14,695). After bringing in the balance from last year, crediting excess profit tax post-war refund and debiting managing agents' minimum commission, there remains a balance of Rs. 55,899 (credit of Rs. 28,895 after paying dividend of Re. 1-12 per share absorbing Rs. 61,250, provision for taxation Rs. 35,000 and transfer to general reserve Rs. 10,000), at debit of profit and loss account. The directors recommend that no dividend be declared and that the debit balance in the profit and loss account be carried forward.

A total crop of 7,267 maunds was secured and sold at an average price of Re. 1-7-1 per lb. This compares with a crop of 7,649 maunds secured in season 1951, which sold at an average price of Re. 1-11-0 per lb. The shortfall in the 1952 crop compared to the previous season was largely due to unfavourable weather conditions in the latter part of the year.

Current market rates are considerably higher than was the case when the major part of the 1952 crop was sold and there is reason to anticipate that the results for season 1953 will show an improvement compared with the previous season. Estimates for season 1953 have been framed for a regulated crop of 7,200 maunds to cost Rs. 6,46,165.

Accounts in brief are as under:—

COMPANY REGISTRATIONS

INTERNATIONAL AUTO INDUSTRIES LTD. First Director: Mr. Chimanlal Dahyabhai Nanavati.) Business: Importers, Exporters, Manufacturers and Dealers in Automobiles, Motor Cars, Motor Lorries, etc. Authorised capital: Rs. 25,00,000. Private company. Address: International Building, Mirjapur Cross Lane, Ahmedabad.

PEOPLE'S OWN HOUSING AND INDUSTRIAL CORPORATION LTD. (First Director: Dr. Rameshwar P. Bhatt.) Business: Builders, Contractors, Sanitary Plumbers and Engineers, etc. Authorised capital: Rs. 10,00,000. Private company. Address: 97, Stock Exchange Building, Apollo Street, Fort, Bombay.

VIPIN BROTHERS LTD. (First Director: Mr. Jivanlal Lalloobhai Shah.) Business: Importers, Exporters and Dealers in Merchandise, etc. Authorised capital: Rs. 5,00,000. Private company. Address: 28, Alexandra Road, Opposite Gamdevi Police Station, Bombay 7.

(Concluded from next column)

for the purchase of the *Bharatmitra* which was launched on 26th August, 1953. A further sum of Rs. 9.8 lakhs will be paid when the ship is delivered.

—Minister for Production

Wagon Supply

Since about the middle of August, 1953, wagons have been available in excess of the overall demand for traffic on the broad gauge of the Northern and Eastern Railways and the metre gauge of the Southern Railway. On all the railways, except the North-Eastern Railway, the movement of traffic for the free routes, namely, routes, the line capacity of which is not a limiting factor, is more or less current generally. As regards routes with limited capacity, the movements are subject to limited quotas, though in some of the cases also the demands for general goods are being fully met. Orders with the indigenous industry, regarding wagons, are to the extent of 8,000 a year and the industry has been able to meet that demand.

—Deputy Minister for Railways

QUESTION HOUR IN PARLIAMENT

Profits of Foreign Concerns

DURING the year 1952, a total of Rs. 14.21 crores had been remitted abroad by foreign concerns by way of profit. Of these, Rs. 2.68 crores were to dollar area countries, Rs. 11.13 crores to sterling area countries and Rs. 40 lakhs to non-sterling non-dollar area countries. The figures for 1951 were: dollar area Rs. 2.92 crores, sterling area Rs. 13.74 crores, non-dollar non-sterling area Rs. 1.29 crores (total Rs. 17.95 crores). In 1950, the remittances were: Dollar area Rs. 4.06 crores, sterling area Rs. 16.12 crores and non-sterling non-dollar area Rs. 53 lakhs (total Rs. 20.71 crores).

—Minister for Finance

Double Taxation Relief

The Government of India has at present bilateral agreements (i) for double income-tax relief with Aden and the British Dominions of Kenya, Tanganyika, Uganda, Zanzibar, Gold Coast, Nigeria, Sierra Leone, Gambia and Mauritius, and (ii) for avoidance of double taxation with Pakistan. The question of having agreements for avoidance of double taxation with the Governments of Burma, Ceylon and the United Kingdom and Canada is under consideration. Such agreements give benefit to Indian business concerns doing business in foreign countries, as well as to foreign business concerns doing business in India. Information regarding the total amount of income-tax liable to be lost annually to the Indian Exchequer by such agreements, is not available and its compilation would involve a good deal of time and labour which might not be commensurate with the result aimed at.

—Deputy Finance Minister

Sale of Foreign Firms

During the period, July, 1947 to March, 1953, facilities for remittance abroad of sale proceeds of foreign undertakings in India were granted in 70 cases and the amount remitted was Rs. 14.91 crores. Of these, 68 cases involving Rs. 14.77 crores were accounted for by the U.K. and once each by Ceylon and Australia, the amounts repatriated in the latter cases being Rs. 41,000 and Rs. 14 lakhs, respectively. No particular procedure has been laid down for the sale of foreign undertakings to Indian nationals. Permission of the Government of India is not necessary for the sales. Remittances of sale proceeds, however, are governed by Exchange Control Regulations. The Government has no direct power to regulate such transactions between the parties concerned and, under the existing agreement in regard to sterling balances, capital remittances resulting from such sales are allowed freely to the sterling area. In certain cases, a transaction is liable to be refused approval under section 87BB of the Indian Companies Act.

—Parliamentary Secretary to Finance Minister

Nepa Mills

The Government of India has so far given a loan of Rs. 97.33 lakhs to the Madhya Pradesh Government for the Nepa Mills Project. A Request for a further loan of Rs. 85 lakhs for this project during 1953-54 is under consideration.

• • • •

No Tea Destroyed

No tea fit for human consumption is destroyed in the tea gardens in order to bolster up prices. Tea waste and residue grades unfit for sale are destroyed in order to maintain the quality of tea sold and to prevent adulteration. No tea can be destroyed without first paying duty to the excise authorities. It can be assumed that no tea on which duty has been paid and which can fetch some return will be destroyed unless there is some concerted action on the part of all growers to raise the price. While Government cannot prevent any commodity being destroyed, I have been informed by the excise authorities that no tea fit for human consumption had been destroyed in the tea gardens.

—Minister for Commerce and Industry

Air Ports

There is a proposal to develop the Palam airport in accordance with international standards. In case it is available for development as a civil international airport, the additional cost for developing it would be about Rs. 1 crore. The airport is under the control of the Air Force and it is being utilised both by the civil airlines and by the Indian Air Force. There is no proposal to construct any new airport in its (Safdarjang airport) place. It is possible, however, that, in case Palam is not available for development as an international airport, a new aerodrome might have to be constructed in Delhi to serve the needs of civil aviation.

—Minister for Communications

World Sugar Agreement

India has decided not to join the International Sugar Agreement at present. When the participating countries review the Agreement after three years, the desirability of joining it will be reconsidered.

—Minister for Agriculture

Loans for Shipping Companies

Three ships of aggregate tonnage of 23,000 deadweight, for which keels have been laid by the Hindusthan Shipyard, are under construction now. Two are on the slipway and the third, which was launched on 26th August, 1953, is being fitted up. So far as the programme of expansion of the Yard is concerned, it is still under consideration of the Government. Loans amounting to Rs. 110 lakhs have been sanctioned to Indian shipping companies for the purchase of ships built at the Visakhapatnam Yard. Rs. 26 lakhs to the Great Eastern Shipping Company for the purchase of the *Jagrani*, Rs. 44.5 lakhs to Bharat Lines for the purchase of the *Bharatmitra* and Rs. 29.5 lakhs

(Continued in previous column)

BETTER DEMAND FOR CREDIT EXPECTED

(From Our Own Correspondent)

BOMBAY, *16th September*

The complexion of the short-term money market underwent a perceptible change during the week under review. The slightly firm tendency witnessed last week yielded place to a somewhat irregular trend, in that the demand and supply varied from day to day. Consequently, the inter-bank call rate fluctuated between 2 per cent. and 1½ per cent. The former was doubtless the most representative rate during business hours. But, after clearing hours on some days, call money was available at 1½ per cent. On other days the supply of funds was so short that the market had to go to the Reserve Bank, the lender in the last resort.

The market is taking note of the various developments which are likely to result in a better demand for funds on foreign trade account in the near future. The reduction in the export duty on hessians and the relaxation of the ban on imports and exports of certain food items by private trade are expected to expand the demand for credit. While thus the demand for money is expected to rise shortly, the volume of floating funds in the market is considered to be inadequate to meet the situation. It is pointed out that the surplus funds have shrunk considerably during the past few months following the flotation of new issues by the Central and State Governments and the local bodies. It is said that this week itself the market would have experienced keen stringency but for the supply of inter-bank funds by one of the big banks.

The improvement in the demand for money is also reflected in the slightly higher rates quoted for short-term deposits. The rate for deposits of one month rose from 2 per cent. to 2½ per cent. Two to 6 months' money was keenly sought after at 2½ per cent. House money, however, remained unaltered at 2½ per cent.

Among small banks the inter-bank call money was unchanged at 2½ per cent.

There were no marked changes in the results of Treasury Bills. The amount tendered at Rs. 1.83 crores was just Rs. 6.5 lakhs in excess of that offered last week. The average rate of accepted tenders remained unaltered at Rs. 2-6-7 per cent. per annum. Tenders for another Rs. 1.5 crores worth of Treasury Bills have been invited for the coming week.

A rise of Rs. 1.68 crores in notes in circulation is disclosed by the statement of affairs of the Reserve Bank of India for the week ended 11th September, 1953, as compared with that for the previous week. Notes held in the Banking Department, however, have declined by Rs. 1.19 crores, so that the total notes issued are higher by Rs. 48.97 lakhs. This increase has been covered by suitable adjustment in rupee coin and rupee securities. In the Banking Department, barring deposits of the Central Government which have risen by Rs. 18.75 lakhs, those of other Governments, banks and others have declined, the extent of decline being Rs. 39.12 lakhs, Rs. 1.44 crores and Rs. 16.05 lakhs, respectively. Bills payable are higher by Rs. 6.36 lakhs, and other liabilities by Rs. 27.14 lakhs. On the assets side, cash has dropped by Rs. 1.10 crores. Investments are also lower by Rs. 1.52 crores. Balances held abroad, on the other hand, have improved by Rs. 2.21 crores.

The consolidated returns of the Scheduled Banks for the week ended 4th September, 1953, reveal, as compared with those for the preceding week, a fall of Rs. 46.04 lakhs in demand deposits and of Rs. 86.68 lakhs in time deposits. Inter-bank borrowings of a demand nature have gone up by Rs. 84.41 lakhs, while those of a time nature have declined by Rs. 7 lakhs. Borrowings from the Reserve Bank and the Imperial Bank have advanced by Rs. 52 lakhs and Rs. 1.29 crores, respectively. On the assets side, cash has improved by Rs. 3.39 crores. Investments and advances have also risen, the former by Rs. 1.08 crores and the latter by Rs. 1.49 crores. Money at call and short notice, too, is higher by Rs. 68.52 lakhs. Balances with other banks in current account in India, however, are lower by Rs. 51.22 lakhs. Bills purchased and discounted have fallen by Rs. 93.79 lakhs.

The Gilt-edged market continued to present steady conditions with the short and medium-dated loans in good demand at previous week's rates.

In the foreign exchange section, the rupee-dollar rate moved up further from Rs. 476½ to Rs. 479 in sympathy with the weakness of sterling in overseas markets. To-day, however, the rate receded to Rs. 478½ per 100 dollars. In New York, spot sterling was quoted more than a cent lower at $2.79½-2.79¾ as compared with $2.80.11/16-2.80.13/16 a week ago. In the forward section, too, the quotation for sterling was lower. Thus, three months' sterling declined by as much as 1¾ cents to $2.78¾—2.79 and six months' sterling from $2.79¼—2.79½ to $2.78¾—2.78½.

COW HIDES EASY

(From Our Own Correspondent)

MADRAS, *14th September*

The easier tendency which was in evidence in the cow hides market last week continued during the week under review also. At the beginning of the week, sales of medium-weight cow hides were made to the U.K. on the basis of 45d. per lb. for run fourths and fifths, and sellers were eager to make further sales on this basis. Towards the close of the week, however, U.K. buyers had reduced their limits by one penny per pound. The market for fifths alone and light-weight inferior fifths showed no signs of any reduction in price, as demand for these from the U.K. continued to be good. The demand for 12/13 lbs. buffalo hides from the U.K. continued to be good, but few orders were received for other weights.

The market for tanned goat skins showed an easier trend, as tanners were willing to offer at 3d. to 6d. less per pound than they were a week ago. There was good clearance of tanned sheep in the local market and prices were almost unchanged.

GOLD STEADY, SILVER IRREGULAR

(From Our Own Correspondent)

BOMBAY, *16th September*

While the gold section of the Bullion Exchange remained steady during the week under review, the silver section displayed an irregular trend. In the first two sessions, silver was distinctly bearish, following heavy arrivals and rumours of an amendment to the by-laws of the Bullion Association seeking to restrict the penalty in case of non-delivery at the auctions. On the opening day of the week, a prominent bull operator liquidated about 1,200 bars against his ready stocks. The sentiment, however, improved on Monday, on account of good offtake from mofussil centres, encouraging advices from Calcutta and reports that the Board was not anxious to amend the by-laws. The improvement continued on Tuesday also. Not only were the earlier losses completely erased but the closing quotations on that day were higher than those on the opening day. At higher levels, the usual profit-taking set in and the metal drifted downwards to some extent to-day, though, at the close, it was slightly better again.

Silver for forward (*Bhadrapad*) delivery opened the week at Rs. 157-1 and, after receding to Rs. 155-15 on the 11th inst., recovered to Rs. 158-2 yesterday. It reacted to Rs. 156-9 to-day, but finished higher at Rs. 157-7. *Aswayuj* delivery, business in which commenced to-day, opened at Rs. 157-12. After rising to Rs. 158, it receded to Rs. 156-15. Towards the close, however, it was higher at Rs. 157-13.

Ready silver (.996) dropped from Rs. 157-1 to Rs. 155-15 on Friday, but subsequently recovered to stand at Rs. 158-2 yesterday. After declining again to Rs. 156-14 to-day, it closed a shade higher at Rs. 157. The daily average offtake was 15 bars, the estimated floating stocks being 2,000 bars.

Despite apprehensions about large unauthorised arrivals, the yellow metal remained steady, thanks to paucity of stocks. Gold for forward delivery (*Bhadrapad*) improved during the week from Rs. 87-2 to Rs. 87-5; at one time, it had gone up to Rs. 87-10. *Aswayuj* delivery, after losing As. 5 to Rs. 86-6, recovered to finish at Rs. 86-9½.

Ready gold gathered a gain of As. 6 and reached a high of Rs. 88-3 on the 11th inst. To-day, however, it was lower at Rs. 87-10. The daily average arrivals and offtake were even at 4,000 tolas. The floating stocks are estimated at 20,000 tolas.

The following comparative table shows the trend of the market during the week under review:

	16-9-53	Highest	Lowest	8-9-53

PEPPER FIRM

(Messrs. Parekh & Co.)

BOMBAY, *16th September*

Pepper in all the primary centres during the week showed firm tendency in sympathy with New York who is reported to have paid for shipments by the named steamer during September at as high as $1.11. Tellicherry is quoting Rs. 2,550, while Alleppey is reported to be reserved seller at Rs. 2,400. Dock troubles at Cochin, together with the expected strike of Longshoremen at New York by the end of September, are reported to be some of the reasons for the present improved sentiment at New York. Drying down of aggressive sellings by Sarawak, and unwillingness on the part of Lampong to offer freely created uneasiness among short-sellers at New York where autumn demand from grinders is reported to be developing, though slowly. Favourable weather conditions in pepper-growing districts of Malabar during the months of August and September are reported to have improved some prospect for the better crop result, though it is too early to state anything definitely. Any way, the season this year is expected to be somewhat late than usual. The recent reduction in the export duty on hessians has revived the talk of the imminent reduction in the export levy on pepper, as the present rate of duty is retarding the export trade and in order to improve the competitive position of pepper in foreign markets, there is every possibility that the Indian Government may decide very soon to reduce the present duty, after studying its unfavourable effect on the export of pepper from India during the year. Covering of the short positions by the bears, both in the delivery and A.S.T.A. sections, has improved the local market all round, recent encouraging news from New York having helped the bulls to squeeze the bears, who had held their own ground for the last so many days.

September delivery was traded at as high as Rs. 2,110, while October and December delivery changed hands at Rs. 1,990 and Rs. 1,730 respectively.

In the A.S.T.A. section, September improved from $1.02 to $1.11 and October from $0.97 to $1.06. Some business for November-December was also reported done from $0.94 to $0.95 per lb. c. and f. New York.

Following are to-day's nominal quotations: Ready delivery Rs. 300-320 per cwt; September Rs. 2,060-90, October Rs. 1,950-80 and December Rs. 1,650-80 per candy of 5¼ cwts.

COTTON EASY

(From Our Own Correspondent)

BOMBAY, *16th September*

Forward trading in cotton appears to be completely demoralised for the time being. Every day witnesses new low levels in prices. When it is not the swollen size of the next crop, and reports of favourable weather in cotton growing areas which frighten the market, it is the accumulated stocks in the mills' godowns and the reduced offtake which bring new fears to the minds of the operators. Prices to-day are nearer to the floor level than ever before. This landslide must stop somewhere, because it is certain that the textile industry is in a position to use all the cotton that we can grow in a year especially as the demand for coarse and medium cloth is now greater than that for fine and superfine varieties. To some of the shrewd observers who have seen many such ups and downs in the market, purchases round about Rs. 610 appear to be without any heavy risk and it is likely that good support will be forthcoming round about this level.

This debacle in the forward market has naturally affected the general turnover in the spot market also. Mills are naturally inclined to wait before committing themselves on a large scale for future requirements when prices are on the downgrade. However, sentiment in the spot market is on the whole healthier than at Kalbadevi. Enquiries for popular varieties for immediate requirements are always there and though the buying is selective, prices have not slumped for the type of cotton generally in demand, to the same extent as in the forward market. Mill interest in imported styles also appears to have revived to a certain extent. But this may prove short-lived in view of the consistent weakness of the New York market.

Another important development during the week is the pressure being exerted on the Government of India to announce its export policy for the coming year. What has lent greater support to this demand just at this time is the fact that the Pakistan Government has imposed an export duty of Rs. 60 per bale on *Deshi* and Comilla cotton. This has led to an increase of enquiries from the Continental consumers of such cotton in Bombay. The shippers consider this a good time to confirm sales of whatever quantity of cotton is going to be exported during 1953-54, as prices may not be so attractive and the demand not so great during the latter part of the year. There is also the fear that if it has any difficulty to find buyers for *Deshi* cotton, Karachi might come to reduce or remove the export duty on it. And finally, exportable varieties being of early growh, such cotton will begin to move into the market soon.

All these reasons have led the President of the E.I.C.A. to request Government to announce its policy as well as the quantum for export. The Government is, however, not likely to be in hurry to respond to this call from the trade. It will naturally want that the mills in the country should first be able to secure whatever quantities they want of these cottons at reasonable prices before any export is allowed. The volume of cotton available for purposes of exports this year is likely to be very limited and prices are likely to soar as soon as exports are allowed. This would raise the price for the Indian buyers also, which would be against the Government's policy of reducing cloth prices in general and of discouraging production of short-staple varieties.

After a lot of delay, the issue with regard to the payment for Egyptian cotton which was purchased before the Trade Agreement with Cairo was finally ratified by the two contracting parties has been finally settled in favour of the shippers in Alexandria. The Government here has allowed full payment for this cotton to be made in sterling and directed the Reserve Bank to supply the necessary exchange on production of satisfactory evidence regarding purchase. This will speed up the shipping of the remaining quantity of this cotton.

I.C.C. February opened the week at Rs. 624 as against Rs. 620, at which it closed the previous week. But the reports of good weather in the cotton areas, coupled with scattered profit-taking, again depressed its price which touched a low of Rs. 611 to-day, before it closed slightly higher at Rs. 616½. I.C.C. May shared the same trend. After opening the week at Rs. 627 it fluctuated between Rs. 629 (11th inst.) and Rs. 614 (to-day). At the close of to-day's session it was marked up to Rs. 619½. The following is the trend of prices over the week ended to-day:

	Opening	*High*	*Low*	*Closing*
I.C.C. Feb. ... Rs.	624	625	611	616½
I.C.C. May ... Rs.	627	629	614	619½

The following are the latest available quotations from the Sewri market: Bengal *Deshi* Rs. 560, Berar *Jarilas* Rs. 700, Khandesh Rs. 785, Vijay Rs. 860, Oomra *Deshi* Rs. 610, Moglai Rs. 610.

At Karachi, apart from the announcement regarding the imposition of export duties, there has been no development of note. Export duty on varieties other than Bengals and Comillas will continue at the present level of Rs. 90 per bale. Similarly, minimum prices for export sales announced last January will continue to be in force, which means that licences for export will not be issued for those sales which are at a price lower than Rs. 58 per maund in the case of N.T. and L.S.S., Rs. 56 for 4F and Rs. 61 for 289F R.G. quality, with a premium of Rs. 3 per maund for S.G. cotton. There will be no restriction on the quantity exported by each individual shipper until further notice and cotton will continue to be on the Open General Licence. The reimposition of export duty on *Deshi* and Comillas was naturally followed by a sharp decline in the prices of these two varieties. Japan and Spain are believed to have made some purchases of new crop cotton. But apart from this, enquiries from abroad continue to be slack.

The latest available quotations from the Karachi cotton market are: Old crop Sind *Deshi* Rs. 61; Punjab *Deshi* Rs. 59; 4F R.G. Rs. 54½; S.G. Rs. 59½ L.S.S. R.G. Rs. 57½; S.G. Rs. 62½; N.T. R.G Rs. 63½; S.G. Rs. 69. New crop Sind *Deshi* Rs. 59½; Punjab *Deshi* Rs. 56½; N.T. R.G. Rs. 65 to Rs. 65½; S.G. Rs. 69; 289F Rs. 68; S.G. Rs. 73.

At Alexandria, the market is fairly active with increased enquiries from the Continent. While Ashmouni still rules as a favourite of foreign buyers, Karnak has now begun to appear into the picture. The greater demand for Ashmouni from abroad has led the Government to raise the premia for the higher grades of this variety by about a penny per lb. The total crop this year as estimated by the trade will be about 7.25 to 7.5 million cantars, against 9.78 million cantars during the last season. A good rise over last year's production is expected in Giza 30, while Zagora will be of about the same volume as last year. Ashmouni, Karnak and Menoufi all are likely to register heavy decline.

At New York, the tendency throughout the week under review has been bearish. This is in sympathy with Wall Street, where a fairly heavy landslide in stock values has occurred during the week. In fact, an all-round readjustment of prices seems to be going on in the U.S.A. and cotton prices for the time being will depend not on the intrinsic value of the commodity as such, but on its relation with other markets. Until this process of readjustment has been completed, no improvement in cotton prices in the U.S.A. markets is likely.

The following are the latest available quotations from New York, as compared with those a week and fortnight before:

(In cents per lb.)

	15-9-53	8-9-53	31-8-53
Spot	33.75	33.75	33.75
October	33.11	33.30	33.33
December	33.36	33.52	33.59
March	33.71	33.81	33.86
May	33.81	33.82	33.86

ART SILK YARN EASY

(From Our Own Correspondent)

BOMBAY, *16th September*

Rumours of a downward revision in Japanese rayon yarn prices (to the extent of 6d. per lb.) imparted distinct easiness to the art silk yarn market during the week under review. Weak advices from other commodity markets, particularly cotton, also adversely affected the sentiment of the market. The bearish effect was so perceptible that operators overlooked even the possibility of good export trade in Pakistan, following liberalisation of Pakistan Government's import policy. Operators were eager to reduce their commitments, while buyers were extremely reluctant to make fresh purchases in large quantities. There was, therefore, a sharp break in prices of art silk yarn which persisted till the close to-day. The undertone of the market was easy.

Latest reports from Tokyo indicate that "the Japanese rayon yarn producers are considering clipping their prices to cash in quickly on an opportunity to increase sales to India." This anxiety on the part of Japan has been the result of keen competition offered by Italian producers in the Indian market. The price of Italian yarn at Milan is at present 172 yen per lb. (f.o.b.), as compared with the current Japanese export average of 220 yen. Consequent on this wide price disparity, imports of rayon yarn from Japan in recent months have been relatively smaller than those from Italy. The quantity of yarn imported into Bombay Port from Japan during the month of August, 1953, for instance, was only 2.64 million lbs., while that imported from Italy amounted to as much as 10.35 million lbs. It is stated that, with a view to pushing up sales of Japanese yarn in India, Mr. Kawaguchi, Director-General of the Chemical Fibre Association, who had recently been to India on a business trip, is reported to be urging rayon yarn producers in Japan to lower their export prices.

Art silk yarn (150D) September contract slumped from Rs. 784 to Rs. 758, the lowest level touched in the past nine weeks. At the close, however, it was a shade higher at Rs. 760. October contract was hammered down to Rs. 762, as against Rs. 787 last week, before recovering to Rs. 764 towards the close. In the ready section, 120 Japan, 150 Japan and 150 Italy receded, each by As. 2, to Rs. 4-1, Rs. 4-0½ and Rs. 3-13, respectively. 120 Italy lost an anna and a half to Rs. 4-1.

The staple fibre section began the week with a firm tone, some of the prominent operators having held stocks on expectation of a shortage of supplies in the coming weeks. The firm tendency gave way to selling pressure on Friday, as a result of a break in art silk yarn prices, and prices staged a retreat. The downward trend persisted till the close yesterday. The sentiment of operators imclose yesterday. The sentiment of operators improved considerably to-day and prices advanced to levels which, besides making up the previous losses, stood higher than those a week before.

Staple fibre yarn 2/40s September contract, after rallying 23 points to Rs. 712 on Thursday, receded to Rs. 671 yesterday. Thereafter, it improved to Rs. 694 to-day; at one time, it had touched Rs. 698. Business in October contract was commenced at Rs. 670 on Monday. After hardening to Rs. 690 to-day, it reacted to Rs. 666 at the close. The difference between the quotation for the two contracts was as wide as Rs. 28. For there was selling pressure in October delivery, while operators were reluctant to sell in September delivery, due to shortage of stocks.

The table below gives the prices of art silk yarn and stable fibre yarn quoted to-day, as compared with those on the 7th inst. and 29th August, 1953:

	16-9-53	8-9-53	29-8-53
Art silk yarn	Rs. a.	Rs. a.	Rs. a.
150D September (per case of 200 lbs.)	760 0	792 0	785 0
150 October " "	764 0	796 0	—
120 Japan (per lb.)	4 1	4 3	4 1½
150 Japan "	4 0½	4 3	4 1½
150 Japan "	4 1	4 3	4 2
120 Italy "	3 13	4 0	3 15
150 Italy "			
Staple fibre yarn			
2/40s September (per case of 200 lbs.)	694 0	697 0	674 0
2/40s October " "	666 0	—	—

CASTORSEEDS FIRM

(From Our Own Correspondent)

BOMBAY, *16th September*

The most important event during the week under review was the decision of the Board of the Bombay Oilseeds Exchange to raise the margin of 10 per cent., against tenders of castorseeds, September, 1953, for delivery up-country, to 50 per cent. This decision, which works against bulls, was taken at a time—that is, on the 14th inst.—when castorseeds, September delivery, stood at as high as Rs. 167. However, desirable it may be, the decision now is regretted in certain sections of the market which point out that a similar action was not taken by the Board in May last, when also the rate for castorseeds stood at the same level as on the 14th inst., namely, Rs. 167. If no effort was made by the Board to raise the margin then, it was because, they observe, the bear operators who control the majority of the votes to-day were bulls then and it was not to their interest to raise the margin. These sections feel that, although the measure is unwarranted, it can be justified only if it is made applicable for all contracts in future.

The above decision has, however, not scared the bulls, as expected. For bulls seem prepared to meet the contingency. They have so far absorbed all the tenders which amounted to 8,300 candies upto yesterday. It is expected that they might absorb upto 20,000 candies. This is attributed to the fact that the bulls have firm export commitments. This explains the reason for the firm trend in September delivery which has recorded a gain of Rs. 14-8 to Rs. 169, the highest and the lowest touched during the week being Rs. 171 and Rs. 157. But May contract declined sharply on continued selling pressure. The spread between this contract and September at the close was Rs. 49-12 as against Rs. 29-14 early in the week. May is quoted to-day at Rs. 119-4, as against Rs. 124-10 end of last week. Among spots, F.A.Q. has shot up from Rs. 30-8 to Rs. 33 and Madras Rs. 31 to Rs. 33-8. Castor oil B.S.S. has gained As. 8 to Rs. 18-4, I Pressure As. 6 to Rs. 17-12 and Commercial As. 12 to Rs. 17.

The groundnuts section has been easy, the turnover being small. Prospects for Pollachi crop seem to be excellent. Bold F.A.Q. has declined from Rs. 53-8 to Rs. 51. August-September delivery is lower by Re. 1-8 at Rs. 48 and December-January by As. 6 at Rs. 31-8. Khandesh quality has eased from Rs. 53-8 to Rs. 52 and October delivery from Rs. 39-8 to Rs. 38. Groundnut oil ex-mill is enquired at Rs. 28-8, as against Rs. 31. Railway receipts have lost Re. 1-8 to Rs. 28-8. September and October deliveries are each down by As. 10 at Rs. 26-4 and Rs. 22-2, respectively. November and December deliveries changed hands at Rs. 18-3 and Rs. 17, respectively.

The linseed section is very much depressed on account of lack of buying enquiry and free offerings in new crop for February-March delivery. Bold ready has glided from Rs. 30-8 to Rs. 28-6. August-September delivery is lower by Re. 1-14 at Rs. 28-0, and October-November by Re. 1-4 at Rs. 26-12. February-March is down by Re. 1-4 at Rs. 23. Linseed oil is enquired at Rs. 15-12, as compared with Rs. 16-8.

Among other seeds, *kardi* seeds are easy, while niger seeds are firm. *Kardi* seeds, Bold, have fallen from Rs. 26-4 to Rs. 25-4. August-September and October-November are lower at Rs. 24 and Rs. 22-12, as against Rs. 25-10 and Rs. 23-12 respectively. But *niger* seeds F.A.Q. have gained Re. 1-4 to Rs. 37-4 and Madras Re. 1-8 to Rs. 38-4.

Arrivals of oilseeds in Bombay from 1st January to 10th September this year were as follows, as compared with those in the corresponding period last year.

(*In cwts*)

	1953	1952
Groundnuts	1,657,450	1,800,010
Linseed	104,748	225,210
Castorseeds	588,554	544,956

Arrivals of oil this year upto 5th September as compared with those in the corresponding period in 1952 were as given below:

(*In tons*)

	1953	1952
Groundnut oil	27,826	56,367
Castoroil	11,592	9,552
Linseed oil	1,816	8,161
Coconut oil	12,912	11,772
Palm oil	5,079	—
Cottonseed oil	4,689	1,890

The following table shows the prices of oilseeds and oil on the 16th inst., as compared with those at the end of the previous two weeks.

	16-9-53	8-9-53	2-9-53
Groundnuts—	Rs. a.	Rs. a.	Rs. a.
Bold Ready New (per cwt.)	51 0	53 8	51 4

May 1954	119 4	124 10	126 8
Madras (per cwt.)	33 8	31 0	28 12
Groundnut oil—			
Ex-mill Ready (per quarter).	28 8	31 0	28 0
Castor Oil—			
Commercial (per quarter)..	17 0	16 4	16 4

LINSEED STRONG

(Messrs. A. Bradley & Co.)

CALCUTTA, *14th September*

There has been little change in the linseed market and, whilst firm prices have been maintained, trading has been limited. Sellers have shown very little interest, owing to poor arrivals. Although demand continues from local crushers to be fairly keen, the daily turnover is small. The oil market is well maintained in sympathy with groundnut oil. The turnover has been rather small, with *vanaspati* buyers purchasing for immediate requirements only. Latest quotations are: Ready Rs 21 and September-October Rs. 21 per maund.

SUGAR RECOVERS

(From Our Own Correspondent)

BOMBAY, *16th September*

Developments during the week under review amply illustrate the highly sensitive nature of the sugar market nowadays. The initial drop in spot and forward sugars, as a result of the announcement regarding the purchase of an additional quantity of one lakh tons of sugar abroad, release of one lakh tons and the invitation of tenders for Mexican sugar, soon evaporated into thin air, and the markets speedily shot up to higher levels. This was due to definite reports that the arrival of steamers carrying foreign sugar has been considerably delayed. It is stated, for instance, that Mexican sugar will not be delivered in Bombay before the 30th inst., and that British refined sugar will not be delivered earlier than 10th October, 1953. Thus, although the delivery of foreign sugar has been delayed, the Union Food Ministry has not hesitated to collect the entire balance of the full amount from the tenderers. The latter had to pay this amount as early as on the 10th inst. They were then informed by the Ministry that the s.s. *Volcano* would unload in Bombay on the 17th inst., but, later on, they came to know that the ship had actually left the U.K. shores only on the 8th inst. They wonder as to how the Ministry could be so ignorant as not to know that even the fastest cargo liner cannot complete the voyage within in so short a time as 9 days. Be that as it may, the tenderers have unnecessarily been penalised by making them lose interest on a large sum amounting to over Rs. 1 crore.

The latest reports indicate that a third ship from Java will touch Bombay harbour during the first week of October and that tenders for Java sugar will be invited during the next week.

In substance, therefore, we may reasonably anticipate a glut of imported sugar in Bombay during the first fortnight of October. It is, therefore, to be hoped that reasonable advance allotment of wagons will be made to the Bombay Port Trust (B.P.T.) Railways by the Ministry of Transport to feed the interior markets with imported sugar. It is clear that, without this facility for movement of imported sugar to the important distributing centres in the interior, we might probably witness a curious phenomenon of cheap prices in Bombay, with a wide disparity by way of high ruling prices in the interior. Extremely heavy demand for sugar is usual in the festive month of October. Even the expected further release on the 3rd or the 5th of next month, which, in no event, can be for more than 70,000 tons, will be inadequate to meet the internal demand for sugar throughout the country. It is, therefore, all the more incumbent upon the Food Ministry to arrange a very liberal allotment of wagons to the B.P.T. Railway for transporting the imported sugar from the Bombay Port to the interior centres.

The forward section of the Bombay sugar market witnessed a smart recovery in prices during the week under review. *Bhadrapad* delivery, which had dropped to as low as Rs. 86-12 per bag last week, firmed up to Rs. 90-6 per bag, due to very tight stock position, good demand and definite news that no imported sugar would be delivered at Bombay before the end of the month. With only a week left for the due date for submitting delivery orders for *Bhadrapad* contract, bulls are in a strong position. To-day's quotation for the contract is Rs. 90 per bag. It is believed that this contract will be squared up around the existing level.

Forward sales in British refined sugar were made at a higher price of Rs. 88 per bag ex-godown. To-day, however, the price went down to Rs. 86, on reports that tenders would shortly be invited for Java sugar.

In sympathy with the forward section, the ready section also registered an improvement in prices. The quotations for small, medium and large grain sugars to-day were Rs. 93, Rs. 95 and Rs. 97 to Rs. 98 per bag, as against Rs. 89, Rs. 91 and Rs. 95, respectively, a week before.

Arrivals of sugar into the Bombay market during the week under review were slightly larger than those in the previous week. The quantity that actually arrived was 11,700 bags, as against 11,000 bags last week. The stocks of sugar (including wet sugar) with the spot trade is estimated at 15,000 bags.

JUTE GOODS IMPROVE SLIGHTLY

(From Our Own Correspondent)

CALCUTTA, *15th September*

Prices of jute goods recorded a small improvement during the week, although they did not reach a desirable level from the point of view of the jute industry. The fractional improvement in prices was apparently due to the publication of stock figures as at the end of August, according to which there was an overall reduction of 3,200 tons. Of the decline, the major portion, that is 2,900 tons, was claimed by hessian, the stock at the end of August aggregating 42,000 tons. Sacking goods held by mills amounted to 89,700 tons, accounting for a fall of only 400 tons. The decline in stocks should not be construed to mean that there was any increase in demand, since production of hessian and sacking goods during August amounted to 30,800 and 35,000 tons respectively, falling thereby to the extent of 4,700 and 5,500 tons. These fall in both cases was due to the shorter working month caused by several holidays in August. Whatever the reasons, the decline in stocks had, this week, some effect in the attitude of buyers, resulting in fractional gains in rates.

In fact, export demand for both hessian and sacking has shrunk during recent months, and this is, in spite of the fact that world consumption of jute goods is on the increase and that the war-time substitutes are being conquered by burlap in view of the latter's new cheapness and reliability and after-use as a packaging material. Not only thus

STOCK & SHARE QUOTATIONS

Abbreviations:—D=Deferred shares. P.O.=Preferred Ordinary shares. Y=Accounts published yearly. H=Accounts published half-yearly. P=Company has Preference shares. T=Company has Debentures. N=Nominal quotation. x.d.=Ex-Dividend. c.d.=Cum. Dividend. i=Interim Dividend. f=Dividend for first half of the year.

Shares:—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery, and all other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends.—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year, they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly, dividends shown are for their financial year. Where, however, the accounts are closed half-yearly, dividends are shown separately for the respective half-years.

* Including bonus. ‡ Sales and amount written off. (k) Investments.

(i) Made up of an interim dividend of Rs. 1-12 per share on 1,20,000 shares and final dividend of Rs. 1-10 per share on 2,40,000 shares of which 1,20,000 shares are bonus shares.

* The following explanatory notes relate to the abbreviations and marks shown on page 564 in the debentures section:—

H Option to repay on *six months'* notice, on any interest date after 31st December, 1951, at 102 per cent. Also redeemable out of a cumulative sinking fund of 1½ per cent. per annum (commencing in 1938) by drawings at 102 per cent. or by purchase at or 102 per cent.

(a) Option of repayment at any time at 3 per cent. premium.

(b) Bearer bonds of Rs. 1,000 each repayable at par.

(c) Bearer bonds of Rs. 1,000 each repayable on 31st July, 1959.

(d) Bearer bonds of Rs. 1,000 each with option of redemption in whole or in part at par on 30th June, 1952 or on any subsequent interest date at one month's notice.

(e) Returnable on or after 31st July, 1950, at Rs. 102-8 or at par after 31st July, 1955 on six months' notice in each case.

(f) Bearer bonds of Rs. 1,000 each with option of redeeming on 3 months' notice at ½ per cent. premium after 1st March, 1954, but before 1st March, 1957, and 1 per cent. premium on or after 1st March 1957.

(g) Option of redemption on or after 1st July, 1949, at par.

(h) Option of repayment at any time at par at any time on or after 30th June 1947 on six months' notice.

MARKET GOSSIP

(Concluded from page 519)

a maund. This means that the price for the foreign buyer of Pakistan's short-staple cotton remains practically unchanged, but the domestic producer gets Rs. 12 less than before. Thus, practically the entire incidence of the export duty is borne by the producer. Indian short-staple varieties are cheaper by about 2d. per lb. than the corresponding varieties of Pakistani cotton which are priced at 24-24½d. per lb. Perhaps, this will induce foreign buyers to prefer Indian short-staple varieties to the Pakistani varieties. It is, in fact, reported that foreign enquiries are being received, particularly from Holland. Some interest has also been evinced by the U.S. Whether the exporters are able to avail themselves of these enquiries or not will depend on the Government's early announcement of cotton export policy. Movement of the new crop will start in October-November, and arrivals in Bombay could be expected towards the end of this year. If the Government announces the export policy early enough, it would facilitate the conclusion of firm contracts.

• • • •

In our report on the Government's sugar policy for the 1953-54 season published in these columns last week, two errors have crept in. One is about the gain which the Government is expected to make, as a result of allowing imports of sugar. The other is about the additional excise duty. This is Re. 1 per maund and not per cwt., as was mentioned last week. The total gain to the Government will be about Rs. 5 crores and not Rs. 15 crores. To be more precise, it will be Rs. 4.30 crores, made up of Rs. 2.80 crores by way of import duty and Rs. 1.50 crores by way of trading profit. In short, on a transaction of the value of about Rs. 11 crores—the approximate cost of 2 lakh tons of imported sugar—the Government will get a revenue of Rs. 4.30 crores, a profit of nearly 40 per cent!

AMERICAN LETTER

(Concluded from page 524)

On the domestic scene, the economy drive of the Republican Administration continues amid *pronunciamentos* of the professional economists that a recession is under way. Under the new schedules, the next Federal deficit may be less than $4,000 million, which compares with $9,900 million estimated by the preceding Democratic Administration. In other words, an effective balancing of the Budget may be achieved by the end of the current fiscal year, since the cash Budget deficit may be less than $500 million in the present circumstances.

This has been most encouraging to the financial markets and the U.S. Treasury was able to accomplish its September refinancing with great success. This was underlined by Federal Reserve policy which has established a practical ceiling on interest rates through open market operations which assure the commercial banks of sufficient funds to take of normal credit needs.

This Reserve Bank's policy of flexible support was established in May, after the somewhat disastrous happenings during the preceding weeks when Government securities' prices tumbled in an altogether free market without even a semblance of an official umbrella. The shielding of bank reserve positions is now a matter of official policy. Should the business curve turn down, credit may be made more plentiful and if inflation should rear its ugly head again, restrictive measures may be taken.

Trouble-spotter Appointed

Since Government credit policy in the U.S., which is so important for foreign nations because of its world trade implications, depends almost entirely for its success on accurate knowledge and appraisal of business conditions, the appointment by the White House of Walter Williams, Under Secretary of Commerce, as a special trouble-spotter is being applauded. He will organise a nation-wide network of business men whose task will be to give immediate warning of any economic changes in their areas before they show up in statistics.

Official figures could not be better. Despite the marginal drop in prices paid to farmers, the decline in orders for agricultural machinery and somewhat poor textile business, among the soft spots, employment reached a new record in August of 63,408,000 persons and unemployment dropped to a post-war low of 1,240,000 persons.

Construction activity is officially estimated to be 6 per cent. ahead of 1952 by the time the current year closes. Deposits in mutual savings banks reached a new high of $23,700 million at the end of July and for that month personal incomes rose another $1,800 million to an annual rate of $238,100 million. Figures could not be better—yet, there is that apprehension that things cannot possibly continue that way for ever.—*All Rights Reserved.*

BANKING

(Concluded from page 527)

tion of more liberal trade has indeed already been taken. The customs procedure of the United States has, to some extent, been simplified by a law passed this summer. But must else remains to be done if the flow of international trade is to reflect a growing and dynamic world economy.

Let me conclude by expressing my conviction that, in the years ahead, international investment will play an increasingly important part in the world-wide effort to encourage trade and raise production. Helped by the improvements that have already taken place in the world economy, and by those that could follow from the policies that are being advocated, I believe that private capital would make a large contribution to this investment. A swelling stream of international investment would benefit recipient countries by helping to speed their development and to raise their productivity and their living standards. It would also benefit investing countries. They would find eager new markets for their products and wide new applications for their techniques.

Mandate of the Bank

The Bank has a mandate to keep within the field of productive investment and of projects yielding a sound economic return. But our mandate gives full recognition to the place of the private investor within this field and precludes the Bank from undertaking projects for which private capital is available. Indeed, the Bank's work helps to pave the way for other investment. It penetrates territory unfamiliar to most investors, and helps to lay the basis on which other investment can be built. By the sale of its own bonds and of securities from its portfolio, it also provides a channel through which investors around the world can participate in the development projects which the Bank is supporting. With larger opportunities for international investment in prospect, I am confident that the scope of the Bank's activities will widen and its services to the world economy increase.

MARKET REPORTS

(Concluded from page 553)

are Continental mills able to capture lost ground out are successfully diverting business from this country. All these are possible because the Indian goods are priced higher in view of the export duties. The Indian Jute Mills Association has this week supported the trade demand for the abolition of the duties. It has presented its case to the West Bengal Premier who would be taking up the matter with New Delhi. The mills have pointed out that if Government accepts their suggestion, they will be able to dispose of the huge stocks that have accumulated, increase working hours and provide employment to many.

Last Wednesday the markets opened easy, and the lack of enquiries from abroad invited the bears to depress prices. Mills could not continue reserved definitely, but showed an interest to see things get moving by making offers. These factors resulted in hessian 40" 10 ozs, losing from Rs. 41-12 to Rs. 41-3 and B. twills from Rs. 92-12 to Rs. 91-12. Rumours that Australia would soon be in the market for a sizable quantity of sacking did not have any effect on the market in the absence of their confirmation. Reports of the initial trends of trading in burlap futures, which were resumed in

VOL. LXXXVII. No. 2224 BOMBAY, 26 SEPTEMBER, 1953 PRICE Rs. 1/8

POLITICS IN SUGAR

THE Government of India's sugar policy for the 1953-54 season, announced on Thursday last, clearly underlines the fact that there is considerable politics in sugar. How else are we to explain the increase in the minimum price of sugarcane, despite the categorical announcement made by Mr. Rafi Ahmed Kidwai, in the House of the People a fortnight ago, that the Government would not do so? Apparently, Mr. Kidwai could not have his way, in view of the strong opposition from the U.P. and Bihar Governments. And the latter are interested in a high minimum price, because they do not want to lose the support of the ryots in the elections. The Congress Party in these two States has always counted on the backing of the farmers, and it has been trying to earn their affection by offering a high price for sugarcane, the biggest agricultural crop in this area. It will, therefore, be politically inconvenient for anyone to reduce the minimum price of cane. The sharp reduction made last year from Re. 1-12 per maund to Re. 1-5, coupled with the rise in the price of sugar, had caused a loss in the prestige of the Government with the ryots quite a lot and the Opposition parties made much capital out of it. Now that the price of cane has been raised by As. 2 and that the same price has been assured for the 1954-55 season also, the ruling party can recoup a part of this loss.

The fixation of a minimum price for sugarcane for two consecutive seasons is a departure from the policy that was in vogue hitherto. The official explanation for this is that it has been done in order "to meet the longstanding demand of cane growers and to facilitate planning of cane production with the previous knowledge of the minimum price that will be received when the crop becomes ready for the factories." Whether, economically, this is a perfectly logical thing to do is doubtful. But it is quite logical from the political point of view. The General Elections fall in the 1956-57 season and the Congress Party will scarcely have the courage to reduce the price of cane for that season or even for the preceding season. Thus, for all practical purposes, the minimum price of cane for 1955-56 and 1956-57 also will be Re. 1-7 per maund, if not more. This means that consumers will have no chance of getting cheap sugar for four more years and the Government's promise, made about this time last year, has definitely gone by the board. In fact, they should consider themselves lucky if they do not have to pay more. This is undoubtedly an unpleasant prospect, but one has to pay a price for keeping the Congress in power in U.P. and Bihar, the home of the sugar industry. One can, however, have the satisfaction that sugar is a political commodity not merely in India but also in several countries of the world; it enjoys protection and Governmental patronage in some form or other.

From the economic point of view, the wisdom of the Government in fixing the minimum price of cane for two seasons is questionable. Prices of all agricultural commodities are generally going down everywhere and one does not know what they will be a year or two hence. Viewed against this background, the fixation of a minimum price at a higher level than at present sounds rather unnatural. It also means official favouritism to a section of agriculturists, for no other crop is given such a guarantee. The best course would have been the abolition of price control on sugarcane. This would have provided an incentive to the farmer to grow more and better varieties of cane. The argument that decontrol of sugarcane prices will lead to a lower production of cane is untenable, inasmuch as the demand for sugar and gur in the country is large and is progressively rising in keeping with the trend of population.

The next best course would have been to fix the minimum price of cane at a sufficiently low level which would assure a bare subsistence to growers, as has been done in the case of cotton. This would have provided some scope for competition, without which there can be no improvement in the efficiency of sugarcane production which is at a low ebb at present, especially in U.P. and Bihar. Recent pronouncements of Mr. Kidwai, both in Parliament and outside, shows that he is fully aware of all the defects in the present policy of fixing the minimum price of cane at a level which, in actual practice, turns out to be the maximum. He knows that to pay a uniform price for both good and bad quality cane is not in the long-term interests of the sugar industry. If he still persists in pursuing this unscientific and unsound policy, it means only one thing, namely, lack of courage and power to enforce his convictions. If, on all fundamental economic principles, the Union Government were thus to surrender to State Governments, even when it is sure that its stand is correct, while that of the State Governments is wrong, how could one have confidence in its ability to bring about a sustained economic progress in the country?

The new sugar policy of the Government is defective in a few other respects also. The Government has, of course, done well in discountinuing the additional excise duty of Re. 1 per maund of sugar, for the continuation of which there was no justification at all. This will absorb the effect of the increase in the price of cane on consumers, provided the price of sugar does not go up in the coming months. This is an important qualification, for, in view of the expected shortfall in production in the ensuing season and the absence of price control on sugar, one cannot be sure that prices will not go up. True, the Government has arranged for imports of sugar, but, so long as the present policy of selling such sugar at the port towns at Rs. 30 per maund continues, it may not have any appreciable effect on prices in the interior. Further, there may not be a continuous flow of imports. There may thus be plenty of chances for sugar prices to rule high. Incidentally, in abolishing the additional excise duty, the Central Government is not a net loser, in that it will be making a profit of Rs. 4.30 crores by way of import duty and trading profit on 2 lakh tons of imported sugar, for which it has already placed orders. In effect, therefore, the cheap foreign sugar is being indirectly utilised for the benefit of the cane grower, instead of the consumer.

Although there will be no control on prices and distribution, the Government has decided to retain the control on releases and also to reserve approximately 25 per cent. of the year's production as buffer stock. The Government will make releases from these stocks at controlled prices, if and when the market price of sugar rises unduly. The price fixed for this purpose is Rs. 27 per maund and this will, perhaps, be regarded as the fair ex-factory price. Considering that these very features of Government control, namely, regulation of releases and creation of buffer stock, were mainly responsible for the muddle in the season that is now drawing to a close, the authorities have been ill-advised in continuing them. Evidently, our Government never learns from its past mistakes. The decision not to reimpose the price and distribution controls, despite the existence of some theoretical grounds for doing so, is, however, a mercy for which the public and the industry should really be grateful to the Government.

STATE SPONSORED STEEL PROJECT

IT was only to be expected that Parliament would evince considerable interest in the new Union Government-sponsored steel project. Both the financial interest involved—the project will cost about Rs. 72 crores, as now estimated—and the novelty of the venture—the first biggest industrial enterprise by the Government in a field in which private enterprise has succeeded—do invest the project with a new significance. The fact that it has been before the public attention for several years now has not in any way diminished public interest in this enterprise. But neither the manner in which the news of the conclusion of the agreement was broken to the country through a brief statement nor the way in which public criticism of the agreement has been dealt with by the Government spokesmen shows that the Government is fully alive to all the implications of the step it has now taken.

The issues, which were raised by the public and in Parliament, and all of which were not squarely met by the Production Minister, Mr. K. C. Reddy, were: Why was the particular foreign firm chosen for the purpose of participation in the project? How was the German participant's contribution of Rs. 9½ crores to the Rs. 72-crore project arrived at? Was it wise to entrust the negotiations to an individual member of a Government department? Is it not true that private enterprise could have done the same job of raising steel output at a lower cost? What would be the nature of the set-up for the project? These were only a few of the questions which were posed. By design or otherwise, Mr. Reddy's reply, it is sad to note, did not meet any of these objections.

Mr. Reddy prefaced his remarks by a reference to the shortage of steel in the country, about which much has already been said. The present requirements were, he said, about two million tons of steel, which might increase to about 2.8 million tons in 1957. Production in the country, if the expansion plans of the private units were taken into account, would be about 1.5 million tons. There was, therefore, an "immediate need" to put up a plant of one million tons. The capacity of the proposed plant was 500,000 tons for a capital investment of Rs. 72

crores. If the capacity were increased to one million tons, the capital investment would be much less, say, an addition of Rs. 40 crores or Rs. 45 crores. The Government, he added, would decide the question of location of the factory, after taking into account the reports of the Technical Committee and in consultation with the German firm. Proceeding, he revealed that the representatives of the German firm were coming here at the end of the month when the final agreement would be signed after negotiations on details; the agreement that had been reached was only on "broad heads." Global tenders would be invited for the plant. If the value of the orders with the German firm equalled 20 million dollars, the German investment would be 25 per cent.; upto the second 20 million dollars, it would be 30 per cent. and in excess, it will be 33⅓ per cent. subject to the ceiling of 20 million dollars.

So much for the factual content of Mr. Reddy's statement. The first thing that will strike any impartial observer is as to why the information about the project is given in piecemeal fashion, in driblets as it were. Could not the Government have issued a full statement, say, a white paper, considering that the matter does require much wider publicity than what the Government has given to it? In the absence of such a written statement, the best the Minister should have done was to take Parliament into confidence and place before it full details of the progress of the negotiations conducted so far, both with the particular German firm with which an agreement has been reached and with the firms in other countries which were consulted in the past. This would have allayed public suspicion that the country's interests are not being well served by the present agreement. It is well to remember that all that Mr. Reddy could say by way of reply to the question as to why the particular firm was chosen was that, if there was a single party in the whole world which "had the full know-how" of steel production, it was the Krupps-Demag, and that he could say "categorically" that the agreement was the best the Government could have secured. This is certainly not an adequate reply to the point raised in Parliament. Such assertions will carry the country nowhere. It is not enough that the country should know or learn from Mr. Reddy about the greatness of the Krupps-Demag, but it ought to know why he considers no other concern was better than the German firm or how he considers the agreement best in the interests of the country, even before the details of the agreement have been worked out.

The charge that the conduct of negotiations was left to a single individual was countered by the Production Minister by pointing out that the Government was kept informed of the negotiations, that the Indian Ambassador to Germany was associated with the negotiations and that the Government was satisfied with the "very admirable way" in which the negotiations were carried on. But this assertion, again, does not meet the objections raised. It is not enough that the Government should be able to say that the negotiations were conducted in an "admirable" way or that it kept itself in touch with the progress of negotiations. As the official who negotiated the agreement was not assisted by any technical experts, what the country is anxious to know is whether technical opinion—there is no dearth of such opinion in the country—is equally convinced of the worth of the negotiations or of their result. Finally, it is no aspersion on the ability of any particular individual to conduct negotiations, if Parliament and many outside it feel that, as a matter of principle, no individual should carry so onerous a responsibility.

The question of global tenders for plant, too, has been left unsettled. It is well to remember that the German firm is the technical consultant to the Government-sponsored project and that it will also be one of the tenderers for the plant. Are the two roles mutually compatible? If the examination of the tenders is done with the help of the consultants, how will the Government ensure the impartial scrutiny of tenders? Would firms in other countries at all care to submit tenders under these conditions? If, on the other hand, the German firm is kept out of the business of scrutiny, it will not have fulfilled its role of technical consultants. The Minister says in one breath that the details of the agreement have not been settled, and refers, in another, to the details of the relation between the value of orders with the German firm and the German participation in capital. The text of the agreement, too, has not been laid before Parliament. From all this, it would appear that the agreement—at least the Government's version of it—is in a very nebulous stage. And yet the Minister has no qualms in asserting that it is the best the Government could have secured.

No light was thrown by Mr. Reddy on the administrative set-up of the proposed steel project. Will it be in the form of an official-dominated corporation or a Government-cum-private company? It is not clear whether the Government has taken note of the very serious doubts which the Comptroller and Auditor-General of India has expressed about the legal appropriateness of constituting companies in which the Government is the sole or the predominant shareholder, and also about the constitutional propriety of whittling down Parliamentary control through the creation of separate corporations or companies. Such attempts are being made on the ostensible ground that excessive scrutiny by Parliament would kill the initiative that is needed to make a commercial success of a project. In this connection, Dr. John Matthai made a very notable remark, indeed, when he said early this week, in the course of a discussion on State Transport Corporations that "where a business calls for energy, drive, enterprise, specialised management, etc., the proper solution is not to shelter officialdom from parliamentary scrutiny, but to leave such business in the hands of private enterprise subject to the general control of Government." Proceeding, Dr. Matthai declared that "for Parliament to agree to extend the domain of the executive into untried fields of administration and, in the process, to surrender its own responsibility is bad both for Parliament and the executive."

The Government will have to consider whether, in the light of all that has taken place in the spheres of industrial enterprise to which it is a partner and of the Government-sponsored project, it can ignore the value of this criticism. It should, therefore, decide, without any further delay, as to how the steel project will be administered and what measures it will have to take in order to ensure that efficiency is maintained.

Finally, the Government has not so far met the argument that the private sector in the steel industry could have accomplished the same increase in steel output, as is now visualised by the Government through its project, at less cost. It may be recalled that Mr. J. R. D. Tata stated recently that his company could achieve the same increase at a cost of Rs. 40 crores and that another Indian concern could have done it at a cost of Rs. 60 crores. Thus, the Government project entails a loss of Rs. 12 to Rs. 30 crores. As was pointed out by us on an earlier occasion, if the Government had undertaken the project four years ago or had entrusted the task of increasing production to private enterprise, then the country could have saved even more in terms of capital expenditure. There is, however, no use crying over spilt milk. But the point is whether the country should bear an additional capital expenditure, for no other reason than the desire of the Government to own a steel plant. On what grounds does the Government defend this additional expenditure of capital which is still the scarcest of all commodities in this country? Is not the country being compelled to pay a very heavy price for the fetish of doctrinairism? The country knows it should have more steel. It ought not to matter whether the increase in steel production comes from the private sector or the Government. Indeed, the whole project should be judged only by the standard of economy in the use of capital and economy in operation. The country cannot afford the luxury of the expenditure of a larger capital, if the same result can be achieved with less. It is well to remember that, if the job were left to private enterprise, the latter could not only complete it at less cost but also contribute to the Exchequer by way of taxation on the profit earned by it. In other words, the present arrangement entails a double loss—both excess capitalisation and loss of revenue to the Government.

There are also certain other implications of the project, which deserve scrutiny. It is now a safe bet that the Government-sponsored project will be a high-cost structure. If it is unable to make a reasonable profit, it will be tempted to nationalise the entire steel industry. The existing steel units cannot expand without additional capital. How will the investors respond readily to any demand for funds, if they know that the Government is likely to cast its covetous eyes on the relatively prosperous private units in the steel industry? If the private units are unable to expand their production or are otherwise prevented from making legitimate profits in order to return their borrowings from the Government, they may suffer the same fate as civil aviation. It would be a bad day for private enterprise, if the Government used such means to beat the industry to surrender on the former's terms. But experience in the sphere of civil aviation and the threat that has already been held out to the automobile industry by the present Commerce and Industry Minister do not give anybody the confidence that the Government will not resort to such methods.

GAS INDUSTRY

AS a versatile fuel of high thermal efficiency, gas is entitled to more attention than it has actually received. It is aptly called the "fuel-on-tap"—a term which brings out the convenient form in which this fuel is available. Its use, now a normal feature of domestic life in the West, is confined in this country only to two cities, Bombay and Calcutta. And even in these two cities, its availability is strictly limited. It would, however, be wrong to think that gas is only an additional amenity of the fashionable kitchen. It is capable of much wider application both in non-industrial establishments such as hospitals and laboratories, and in industrial units such as pottery kilns, refractories, and in many other light engineering industries. Small wonder then, that Mr. K. P. Jalan, Chairman of the Bombay Gas Company, Ltd., deplored, when he addressed the annual meeting of the Company this week, that the Planning Commission had "neglected" this industry altogether in its plans for development of industries in the public and private sectors.

This neglect would, perhaps, worry the gas industry less, if it had been allowed the facilities it needs to expand its production. That there is need for such expansion is clear from the fact that the Bombay Gas Company has on its waiting list over 9,000 applicants for new connections. Indeed, if the list is not much larger, it is because most people know that, to expect new connections is to ask for the moon. The Company is, of course, straining its utmost to increase the output of gas; since 1946, it has increased the output by 20.7 per cent. But the increase is insufficient to meet not only the new and unsatisfied demand of fresh applicants but the growing demand of existing consumers.

Why is the Company unable to provide the gas for which there is such a large unsatisfied demand? The answer is: "finance." Increase in production demands mechanical re-equipment and plant expansion which, as Mr. Jalan rightly pointed out, depends on the price of gas and the ability of the Company to give a "reasonable return" on investment. Last year, Mr. Jalan had clearly pointed out how the cost of labour and staff had increased by 286 per cent. over the 1926 level and how the cost of raw materials had gone up by 36.8 per cent. Production, however, had gone up only 171.4 per cent. There is no doubt that any advantage which has accrued to the Company through larger output of gas has been more than offset by increase in the cost of production. And yet, the Company's demand for an increase in the price of gas has not been conceded, so that it still remains where it was in 1926.

The profits of a public utility concern—it is to this class that the gas industry belongs—shou'd doubtless be controlled in the public interest. But there is a danger that this principle could be carried so far as to kill all incentive to expansion. After all, even a public utility concern must attract investors' funds, if it has to expand. No such concern can attract the necessary funds, as Mr. Jalan rightly pointed out, if it is apparent to the investors that they "will be denied the right of being allowed a reasonable return." Last week, we published Mr. Eugene Black's illuminating analysis of the economics of power development in underdeveloped countries, where he has pleaded for special incentives for the investors in this industry. The arguments by which he has supported the demand for special incentives apply as much to the gas industry as to the power industry. The fact is that even a public utility concern has to work in consonance with trends in interest rates. To deny it an adequate return is to smother its progress. It would appear that the Committee which was appointed last year to examine the demand for an increase in gas price has submitted its report to the Government, although neither the report nor the Government's decision thereon has been published, despite the fact that it is long overdue. It is to be hoped that the Government will take a helpful decision on this question. By such decision the Government will enable the Company to increase the gas production and thereby increase the scope for employment in Bombay City.

MR. BARAT ON PROBLEM OF STIMULATING CLOTH OFFTAKE

TAXES ON CONSUMERS NEED TO BE REDUCED

THURSDAY, 5 P.M.

MARKET GOSSIP

THE state of the cloth and yarn markets is disquieting. Despite the approach of the festival season, there are no promising signs of any improvement in the offtake for domestic consumption. Export demand is also slack, after a flutter caused by the shippers to Burma, who wished to stockpile goods in that country before the benefit of low import duties on Indian cotton textiles disappears, as it is scheduled to do, from 1st October, 1953. While the goods are thus not moving out of the market, production has been running at a high level. The result is that stocks have begun to accumulate with the mills and, unless something is done quickly, the position will deteriorate. The Government has always been slow in acting; it has a knack of locking the stable door after the horse has bolted. It is to be hoped that, at least in this case, the Government will not let itself be blamed for procrastination.

• • • •

It is not our desire to cry wolf in drawing the attention of the Government to this aspect of the question. There are enough straws in the wind to judge the position correctly. There is a move among the millowners in Indore and Saurashtra to cut production, in order to prevent accumulation of cloth. Several mills in Ahmedabad have given notice to workers to drop the second or the third shift as the case may be. In Bombay, one mill has decided to close down. In Travancore-Cochin State, the State Government has found it necessary to assume the responsibility for running a mill, as the management decided to close it down for the reason that it was uneconomic to continue production. There are, unfortunately, no reliable statistics of stocks of cloth with the mills. Stocks of cloth with mills in Bombay City and Island alone are placed as high as 150,000 bales. In Ahmedabad, they are said to be anywhere between 125,000 and 150,000 bales. In Indore, the stocks are estimated at 32,000 bales. These figures are for packed bales, but it is believed that loose stocks are considerably high.

• • • •

A Gujerat millowner contends that the stocks at present cannot be regarded as being unduly heavy, as they do not represent more than six or seven weeks' production. But this contention is fallacious. In the first place, the comparison of stocks with production, when the latter is running at a high level, will lead to misleading conclusions. Secondly, it ignores the fact that stocks of cloth with the trade are fairly large. Again, this line of argument is analogous to the contention that, even at the present rate of production, the supply of cloth in the country (including handloom products) is two or three yards below the pre-war per capita consumption. But, in the present state of economic conditions, this statement is meaningless, if it is to be applied as a yardstick for determining whether there is overproduction or underproduction. What is relevant to the point is not merely the availability of cloth but also the capacity of consumers to buy. It is the latter aspect that is more important now, but the pity is that such has not received adequate recognition even in quarters which ought to know better. And, unless this is recognised, it will be difficult to comprehend correct solutions to the problem.

• • • •

What is the correct solution to the problem of liquidating cloth stocks and maintaining production and employment in the industry at high levels? We posed this question to Mr. T. P. Barat, a former Textile Commissioner, Government of India, and at present a Director of the Managing Agency firm of the Bombay Dyeing and Manufacturing Co., Ltd. In an exclusive interview to *Commerce*, he gave the following answer:

"The first essential point to understand is that cloth availability on per capita basis, on which production plans are based, has lost all its significance, in view of the mounting cost of living, which has resulted in the gradual shrinking of purchasing power of the masses. To day, the consumers, after meeting their more important obligations, can set apart only a limited amount of money for purchasing cloth, and they have to accept whatever yardage this amount will buy. Thus, if this amount fetches only 10 yards per capita, the consumption must remain at this level; if it can buy 15 yards, the consumption will increase to that extent. If, therefore, the present problem of cloth accumulation is to be solved, some means should be found to stimulate the offtake of cloth, and, obviously, lowering of the prices is the answer. This is, therefore, the primary question facing the mill industry and the cloth trade, but is it within their power to bring down the cost to a sufficiently low level to gain the desired end? This necessitates a critical examination of the present-day production costs in relation to the prices of cloth charged to consumers, and I propose to do it in as concise a manner as possible. I give below an idea of the increase in the various elements of production costs. Taking base-year 1939 as equal to 100, the index of cost of production has risen as follows:

Wages and salaries	310
Stores, chemicals and dyes ...	350-400
Power and fuel	250
Total manufacturing charges ...	323

"In the above analysis, I have not shown the increase in the cost of raw materials separately, because there is some technical difficulty in taking 1939 as the base-year for cotton. It is, however, possible to take 1942 as the base-year and, on the basis of 1942=100, the increase in the cost of raw material is as follows:

Cotton for coarse cloth	310
Cotton for medium cloth	237

"Briefly speaking, as compared with 1942 price levels, cotton prices in 1952 were 2.5 to 3 times higher, while those of manufacturing charges were twice as much as those ten years before. As against these increases, prices of coarse cloth have gone up by 45 to 50 per cent. and those of medium cloth by about 60 to 65 per cent."

• • • •

It will be seen from the above analysis that, unless manufacturing charges are sufficiently reduced, there is scarcely any scope for reduction in the price of cloth. But can these be reduced? Can the price of cotton, for instance, be lowered? Can the wages of workers be cut? Mr. Barat has his own doubts. He says: "In the case of cottons, their prices have been controlled in parity with other competing foodgrains, and, having regard for agriculturists' interests and the need for expanding cotton production, it is, perhaps, not possible to bring about a steep lowering of the cotton prices, though there may be a little scope for some decrease here and there. In the case of manufacturing charges, the largest rise has been recorded in 'wages and salaries' which to-day form almost 18 to 20 per cent. of the cost of cloth. There has also been a perceptible increase in the cost of electricity, due to the imposition of Government duty, an increase in the transport charges of coal, and a steep rise in the price of fuel oil."

• • • •

In the above quotation, Mr. Barat, of course, does not squarely answer the question whether wages can be cut or other items of manufacturing expenses reduced. That is, perhaps, because the answer is obvious. It is not a practical proposition to talk in terms of reducing wages. The workers will not accept a cut in their wages and any attempt to force it on them will lead to unrest which nobody wants. Labour can doubtless co-operate in bringing down the production costs by working harder and raising their productivity. But this is easily said than done, for neither our workers nor their leaders are as enlightened as their confreres in other parts of the world to realise the truth of this statement. Other manufacturing charges do not depend on the millowners, as these charges are influenced by factors beyond their control, as Mr. Barat has clearly shown.

• • • •

So, what is the alternative? There is the other side to this picture, a glance at which will throw some light on this question. In this connection, Mr. Barat invites the attention of readers to what happens when the mills sell cloth. "In the case of efficient mills," he observes, "the managing agents have been getting 2 to 2.5 pies on the sale of a rupee worth of cloth, while the shareholders have been getting anywhere from 5 to 5.5 pies. Thus, the managing agents and shareholders together realise from a rupee sale of cloth about 7 to 8 pies. For less efficient mills, the figures would be relatively lower. As against this, following are the realisations of the Central and the State Governments on cloth sales:

(a) *Coarse and Medium Cloth*:

"Assuming that the price per yard of coarse and medium cloth is Re. 0-10-0, Governments realise from the consumer on a sale of Re. 1 worth of cloth:

9 pies in the shape of Excise Duty	
6 pies in the shape of Sales Tax	
Total 15 pies	

(b) *Fine Cloth*:

"Assuming that the price of fine cloth is Re. 1 per yard, the Government derive from the consumer:

	Pies
Excise Duty	10-15*
Sales Tax	9
Total	19-24

(c) *Superfine Cloth*:

"Assuming that the price of superfine cloth to be Re. 1 per yard, Government realisations are:

	Pies
Excise Duty	39-45*
Sales Tax	9
Total	48-54

*According to different varieties of cloth.

"In the case of fine and superfine cloth, it has been assumed that there is only a three-point sales tax, that is, from the mills to wholesalers, wholesalers to retailers and retailers to consumers. This seems to be the minimum number of hands through which the cloth must pass.

"The above realisations are not all that Government make on cloth; there are many more, such as import duties on cotton, mill stores, dyes and chemicals, machinery and their parts, etc., etc., as well as sales tax payable on them.

"Even if the managing agents and shareholders make large sacrifices in their share of earnings, that would be a small contribution in lowering the price of cloth to consumers as against various levies, duties and taxes collected by Government at various stages on raw materials and finished products.

"The cotton mill industry was established in the country to clothe India's millions; this is now being used by the Governments to collect revenue for them amounting to crores of rupees, which aggregate to a staggering figure. From the foregoing brief analysis, it is clear that any substantial reduction in the price of cloth to the consumer can take place only if the Governments decide to reduce the manifold duties and impositions on cloth; otherwise, mere talking about cloth accumulation or laborious collection of statistics by the Governments is not going to solve the problem, since whatever may be the production, the offtake will be commensurate with the price level of cloth to the consumer and the purchasing power of the general public."

• • • •

Comment on Mr. Barat's conclusions will be superfluous. It is for the powers-that-be to take note of them, if they are to tackle the problem in a realistic fashion. The Finance Minister, in his statement in the Council of States on Tuesday last, glibly remarked that, without an increase in production, the cost of production could not be brought down. Taken by itself and viewed in isolation, he is right in saying so. But it is not so in actual practice for various reasons. The problem facing the cotton textile industry is an instance to the point. The production of this industry has gone up to a record high level, but that, by itself, cannot; as has been impressively brought out by Mr. Barat, bring down the cost. Something more than an increase in production is necessary. The State, which easily gained a vested interest during the days of a sellers' market, must set an example to others by giving up a good part of its share in the pie. To be plain, as taxes now constitute a substantial part of the cost of cloth to consumers, they must be cut, if the offtake of cloth is to be stimulated.

• • • •

The possibility of a slump in cotton goods has been having a deterrent effect on textile shares on the Stock Exchange. There is hardly any demand for these shares nowadays, even though first class scrips are standing at attractive levels. Some in the market, however, have not lost all hope. They believe that the Government will come to the rescue of the industry sooner or later. It is this belief that has been responsible for some selective buying in textile scrips, such as Century, Finlay, Standard and Svadeshi. How far this optimism is justified remains to be seen. But these optimists—and they are not many—point to two factors in support of their belief. One is the rumour that Mr. Kidwai may take over the portfolio of Commerce and Industry from Mr. T. T. Krishnamachari. They feel that Mr. Kidwai may prove a more amiable Minister in charge of industries and trade than Mr. Krishnamachari. They argue that Mr. Krishnamachari's defect is that he knows too much about the ways of business men to take them at their word. He does not believe in the saying that, where ignorance is bliss, it is folly to be wise. They are of the opinion that Mr. Kidwai will at least patiently listen to business men and appreciate the practical solutions that may be put forward by them. As an instance, they point to Mr. Kidwai's tactful handling of the sugar industry. The Government's sugar policy, they concede, may have been full of contradictions and may not have fully benefited the consumer. But it has not, they aver, done any harm to the sugar industry. On the contrary, by re-adjusting the import policy on sugar recently and by continuing the control on sugar prices and distribution even at a time when there should have been complete decontrol, they recall, Mr. Kidwai saved the sugar industry from a debacle.

• • • •

The other factor on which the aforesaid market men are pinning their hope is the statement of Mr. Deshmukh in the Council of States where he made some significant observations on the problem of unemployment. His reiteration of the Government's faith in mixed economy where both private enterprise and public ownership can co-exist, his remarks on prices indicating his aversion to any sharp fall, his appeal to workers to step up their productivity, his emphasis on the need for allowing even uneconomic units of production to continue with a view to maintaining the level of employment, his belief that economic conditions in the country were favourable for a larger volume of capital investment and, above all, his admission that "it could be argued that the disinflationary policy initiated towards the close of 1951 and continued in 1952 had been carried too far" and that, in the matter of monetary policy, the authorities had to "readjust their steps from time to time"—all these have been interpreted to mean that the Government is now in a more favourable mood than before to give support to industries and to prevent a recession from gathering momentum.

• • • •

Mr. Deshmukh's reference to monetary policy is regarded in market circles as being more significant than the others, though it has not yet received much attention in the Gilt-edged market. It is felt that, during the ensuing traditional busy season, Mr. Deshmukh may begin a retreat from the dear money policy followed since November, 1951. He may then find it very convenient to meet the criticism from some sections of business men that the cost of short-term credit and long-term finance for industries has gone up to unduly high levels. It must, however, be added that any such action will not amount to a return to the cheap money policy pursued during the war years. But it may amount to a move towards stabilisation of interest rates at somewhat lower levels than at present.

• • • •

It is true that, at the moment, there are not many in the share market who take an optimistic

(Continued on page 611)

EQUITIES MOVE NARROWLY

UNDERTONE STEADY

(From Our Own Correspondents)

BOMBAY, 24*th September*

THE Stock Exchange witnessed dull and featureless trading during the week under review. The undertone remained steady, in the absence of any adverse factors to undermine the confidence of operators, and the sentiment was a little better this week. This was due to the psychological effect of the reduction of the Bank rate in England and the support lent to Indian Irons by Calcutta operators during the last few sessions of the week. But the market, as a result did not experience any large-scale operations to lift prices of equities, owing to lack of support to textile shares. The none-too-encouraging position in the cloth trade restrained operators from extending their commitments in textile shares. The volume of trading was, therefore, very much restricted and price movements were narrow.

The complexion of the steel section was largely influenced by Indian Irons. Tata Deferreds opened the week on a steady note at Rs. 1,816-4 and the value did not make much headway due to prevalence of holiday atmosphere. On Monday this week, the shares dipped to a low of Rs. 1,797-8 under pressure induced by the break in silver prices and weaker advices from Calcutta. At the lower level, however, some resistance developed due to revival of support helped by better advices from Calcutta. This brought about a recovery in Deferreds to Rs. 1,820 to-day before closing at Rs. 1,816-4. Tata Ordinaries remained steady and finished the week at Rs. 315-4, as against last week's closing of Rs. 313-12. The withdrawal of the lock-out at Burnpur helped Indian Irons maintain their values round about Rs. 22-15 early in the week, but the unloading of a block of shares by a big operator in Calcutta brought them down to Rs. 22-1½ on Monday. News that a big broker of Calcutta was taking delivery of a huge block of shares, revived speculative support. Besides, rumours were also current that the Company would be compensated by the Government for the loss of production on account of the recent lock-out by giving an increase in retention price. However, there is still uncertainty about the final outcome, as it is not known whether the Company has approached the Government with a claim for compensation. The share value on the Exchange, therefore, gained to Rs. 22-12½ before closing at Rs. 22-10.

Trading in textile shares was uninteresting due to cautious attitude of operators. Barring a mid-week recession due to the weakness of steels, values were nearly held and minor variations were noted on balance. Bombay Dyings, after dropping from Rs. 368-12 to Rs. 362-8, regained to Rs. 367-8 at the close. Kohinoors closed at Rs. 281 *ex-div.* (dividend Rs. 6 per share) as against Rs. 286-12 *cum-div.* last week. Centurys gained but a rupee to Rs. 257-8. Central Indias showed no change on balance at Rs. 147. Indu Ordinaries were steady at Rs. 8-15, Simplex at Rs. 128 and Svadeshis at Rs. 240-8. Standards put on Rs. 2-8 to Rs. 302-8. Finlays provided a notable feature with a sharp rise of Rs. 8 to Rs. 256 due to interested buying. Gokaks added a rupee to Rs. 224-8. Vishnus, on the other hand, receded by Rs. 3-12 to Rs. 142-8. Khataus were quoted at Rs. 170, as against Rs. 178-1. The Directors have maintained the dividend at Rs. 10 per share for the year ended 30th June, 1953.

Bank shares were steady and small improvements were noted in select scrips. Centrals were maintained at Rs. 63-12 and the new shares gained As. 4 to Rs. 67-4. Imperial Fully-paids advanced by Rs. 2-8 to Rs. 1,830 and Contributories by Rs. 6-4 to Rs. 451-4. Bank of Indias rose by a rupee to Rs. 156. Barodas, however, declined by a rupee to Rs. 109. United Commercials were unchanged at Rs. 36.

The persistent support to Ahmedabad Electrics was a notable feature among public utility shares. The Fully paid-up shares closed As. 10 higher at Rs. 112-3 and the new shares were keenly bid to go up by Rs. 2-8 to Rs. 82. Bombay Suburbans experienced strong support to go up by Rs. 2-3 to Rs. 121-4. Tata Hydro Groups, on the contrary, continued to experience selling pressure, as a result of which Andhra Valleys lost Rs. 2-8 to Rs. 1,327-8, Tata Hydros Rs. 2-4 to Rs. 139-3 and Tata Powers Rs. 11-4 to Rs. 1,387-8. But Surat Electrics were done at the self-same rate of Rs. 126-4 and their new shares at Rs. 95. The Company has declared an interim dividend at the rate of 5 per cent. per annum for the half-year ended 30th June, 1953.

Miscellaneous shares were mostly featureless with minor variations in prices over the week. A.C.Cs. were a fraction better at Rs. 168. After reacting from Rs. 236 to Rs. 234-8 on Monday, Belapurs staged a recovery to Rs. 237-8. Bombay Burmahs were quiet at Rs. 326-4. B.I.Cs. were steady at Rs. 8-8½. National Rayons stood round about Rs. 111. Tata Chemicals were done an anna better at Rs. 8-6½ and Tata Oils As. 4 higher at Rs. 30-4. Wimcos were in the limelight with enquiries and the shares rose by Rs. 6-14 to Rs. 235. Walchandnagars had business at Rs. 146-4.

In the transport section, Scindias moved narrowly before closing at Rs. 13-5, with a fractional loss. India Steamships were a shade better at Rs. 7-5½. Bharat Lines were done at Rs. 84.

In the mining and engineering section, Shivrajpurs had a fractional rise to Rs. 54-12. B.B. Petrols were in demand to go up by As. 2½ to Re. 1-7½. Indian Coppers were just steady at Rs. 2-14. Alcock Ashdowns advanced by Re. 1-14 to Rs. 298-12. Premier Constructions experienced no change over the week at Rs. 83.

• • • •

Calcutta Stock Exchange

CALCUTTA, 22*nd September*

After an early rally towards fractionally higher levels, equities on the Calcutta Stock Exchange drifted to dullness and remained quite during the rest of the week under review. Closing levels were generally lower on balance, excepting in teas which remained a bright spot throughout the week. However, the volume of transactions in this section also thinned on account of the easiness in other sections. The striking news of the week for the market was undoubtedly the lifting of the lockout in the works of the Indian Iron and Steel and the Standard Wagon Companies as from Friday last. No doubt, this event had been expected for some time, and the market had already discounted it. Although the entire plant has been put to work, the criterion for market men is how soon production can be brought to a hundred per cent. rate. It would appear that some time has to lapse before certain practical difficulties in the way of restoring full production are solved.

A factor which cautioned operators is the deteriorating change of attitude of the labourer in West Bengal towards his employer, resulting in demands which have little or no relationship with the earnings of the industry for which he is working. Employers' wages bills have already increased during recent years without any corresponding increase in *per capita* production, which, in fact, industrialists argue, has decreased. The opinion that intimidation of employers would only result in the flight of capital from this State to other States with a cooler "climate" is gaining ground. To this extent, operators chose to be cautious and to watch developments before entering into commitments of a long-term nature.

Interest was maintained in the tea section, and buyers outnumbered sellers. Hantaparas added a further gain of Rs. 2 to Rs. 167, and Dhelakhats were steady at Rs. 11-8. Amlackies were bought at Rs. 348, while Hasimaras were fractionally lower at Rs. 27-2. New Dooars jumped to Rs. 311 from Rs. 305, Teloijans changed hands at Rs. 10-12 and Sooms were taken up at Rs. 13-12. A five-anna improvement was recorded in Dibrugarhs at Rs. 8-10 and New Chamtas were supported at Rs. 18-8. Banarhats were firm at Rs. 310.

Jutes were featureless during the week except on last Wednesday. Howrahs were earlier pushed to Rs. 23-6, but thereafter gradually gave way to Rs. 22-14, to-day's closing, however, being at Rs. 23. Orients were wanted at Rs. 173. Deltas eased from Rs. 228 to Rs. 221, and Indias were lower at Rs. 118. Nuddeas were supported at the lower rate of Rs. 44-8, and Presidencies, after being higher at Rs. 5, declined to Rs. 4-14. Anglo-Indias hovered around Rs. 199.

Coals were extremely quiet and the section feelers, Burrakurs, receded from Rs. 9-3 to Rs. 8-13. Bengals were quoted at Rs. 510, but to-day they gave way to Rs. 508. South Karanpuras realised Rs. 10-2. Raneegunges were unchanged at Rs. 7-15, while Khatras Jherriahs were raised from Rs. 38 to Rs. 38-8. Equitables were put through at Rs. 35-15. To-day a somewhat mixed trend was in evidence, for, while New Beerbhooms lost from Rs. 18-4 to Rs. 17-15, Pench Valley were better at Rs. 21-14, as against Rs. 20-6 previously. Talchers showed signs of steadiness and were fractionally better at Rs. 2-9.

In the engineering section, Indian Irons at one time fetched Rs. 23-1, following the lifting of the lock-out at the Burnpur works; subsequently, however, a recession set in for the reason already indicated, the rate moving down to Rs. 22-2 as on date. Indian Standard Wagons were quiet at Rs. 99. Kumardhubis came to business at Rs. 7-8, while Texmacos were unchanged at Rs. 6.

Miscellaneous shares were steady. India Steamships met with moderate enquiries and were strong at Rs. 7-5. Dunlop Rubbers at Rs. 28-5 disclosed a gain of three annas and Titaghur Papers were taken at Rs. 35. Angelo Bros. were steady at Rs. 18, as against a previous rate of Rs. 17. F. & C. Oslers continued to receive enquiries and fluctuated around Rs. 7. Rohtas Industries were better at Rs. 8-12, showing a gain of As. 5. After being higher at Rs. 19, Indian Cables receded to Rs. 18-10. Martin Burns were placed at about Rs. 18 and Metal Boxes at Rs. 18-9. Indian Coppers were wanted at Rs. 2-12 *ex-div.*

• • • •

Madras Stock Exchange

MADRAS, 22*nd September*

The Madras Stock Exchange presented dull conditions this week, in the absence of any driving force. Excepting rubber scrips which ruled steadier, the rest were either easy or unchanged. The improvement in trading conditions in the rubber section was due to continued speculative support, as also to some reports of good offtake of rubber in recent days. Textiles were easy because of continued reports about accumulation of stocks of piecegoods with mills and with traders at consuming centres. Tea and coffee scrips generally lacked vigour, though some selective deals were noted in them. Miscellaneous and Banking scrips were unattractive. As a result, the majority of the shares, excluding rubbers which recorded a somewhat smart rise in values, disclosed minor losses over the week. Business done on the Exchange was limited.

In the textile section, Saradas lost Rs. 5 to Rs. 61. Malabar Spinnings eased from Rs. 140 to Rs. 135. Metturs declined by Rs. 3-3 and closed at Rs. 195. Pankajas sustained a loss of Re. 1 to Rs. 72. Buckinghams were done lower at Rs. 123, as against Rs. 124. Sitarams and Travancore Rayons were fractionally lower at Rs. 36 and Rs. 5, respectively. Dhanalakshmis, however, put on Rs. 3 to Rs. 185. Rajapalayams were higher by As. 8 at Rs. 79 and Maduras by As. 4 at Rs. 58-10. Cannanores were done at Rs. 85 ex-div., as against Rs. 94 *cum-div.*

Among Plantings, rubbers provided the highlight this week also. Malankaras were higher by Re. 1 at Rs. 119 *cum-div.* Vaikundams gained As. 5½ to Rs. 14-5½. Anandams and Be Bes put on an anna each to Rs. 8-13 and Rs. 2-14, respectively. Cochin Malabars and Kallas were fractionally higher at Rs. 6-7 and Rs. 3-11¼, respectively. Thirumbadis were better at Rs. 3-0¼. Periakaramalais, however, lost As. 2 to Rs. 6-14.

Tea scrips came in for selective enquiry. Devons gained Re. 1 to Rs. 16. Emerald Valleys improved by As. 2 to finish at Rs. 4-6. Kalpettas (tea and rubber) improved from Rs. 19-4 to Rs. 19-12. Blue Mountains (tea and rubber) were higher by As. 2 at Rs. 2-14½ and Cottanads (tea and rubber) by an anna at Rs. 10-11. Kalasas were done at Rs. 11-6, cum-div., as against Rs. 11-14½. The Directors have declared a dividend of 10 per cent. for the year ended 31st March, 1953, as against 15 per cent. for the previous year.

Coffee scrips were easy. Consolidated Coffees lost As. 4 to Rs. 18-4 and Coffee Lands As. 2 to Rs. 10-6. Nil Neergundis were lower by As. 4½ at Rs. 3-6. Shevroys were fractionally down at Rs. 1-3½. Mysore Coffees were, however, unchanged at As. 8½.

In the miscellaneous section, E.I.D. 'B' Sugars rallied As. 6 to Rs. 20-14 and India Sugars As. 4 to Rs. 21-8. Mysore Tobaccos and Andhra Cements 'B' gained an anna each to Rs. 9-3 and Rs. 10-1, respectively. Rallis, however, lost Rs. 2 to Rs. 66 and India Cements As. 4 to Rs. 16-6. Parrys declined by an anna and finished at Rs. 4-12.

Banks were dull. Barring Andhra Bank (Rs. 50 paid-ups) which gained Rs. 3 to Rs. 58, the rest were either easy or unchanged. Thus Bank of Mysore was lower by Re. 1 at Rs. 279 and Imperial Banks, (Rs. 500 paid-ups), by Rs. 2-8, at Rs. 1,827-8.

FRENCH BANK RATE REDUCED

The Bank of France reduced its discount rate by ½ per cent. to 3½ per cent. on the same day as the Bank of England, namely, 17th September. The simultaneous announcement of cuts in the Bank rates of the two countries is stated to be purely a coincidence, as there was no concerted action by Britain and France.

The discount rates for 30-day advances on public bills and purchase of public bills have been maintained at 3½ per cent. Similarly, the rate for loans against securities is also kept unchanged at 4½ per cent.

The cost of bank overdrafts ruled so far as *high as* 7½ per cent. Big enterprises in France succeeded in securing short-term funds at 5 to 5½ per cent. by discounting bills but most of them had to pay at least 6½ per cent. for long-term financing on the capital market.

The ½ per cent. cut in the Bank rate is reported to be a compromise between the Board of the Bank of France and the Finance Minister, M. Faura, who is reported to have advocated a cut of as much as 1 per cent. The Bank, however, feared the persistence of inflationary tendencies and insisted that the policy of rather tight and limited credit should be pursued.

GRINDLAYS BANK LTD.

The Directors of Grindlays Bank Ltd., London, propose to open a branch in Salisbury, Southern Rhodesia, towards the end of October.

The Bank was founded 125 years ago by Captain Robert Melville Grindlay for the purpose of providing banking and agency facilities to army officers and officials of the East India Company from whose service he had retired, and subsequently of the Indian Government. These services were continued throughout the nineteenth century and are available to this day. In the early twenties, following the Bank's affiliation with the National Provincial Bank Ltd., one of the "Big Five" London banks, its scope widened and exchange and commercial banking were added to its purely private banking and agency activities. It then became one of the recognised British Exchange Banks with branches in India, Pakistan, Burma and Ceylon. It has recently become closely associated with the National Bank of India Ltd.

The personal nature of the services provided to successive generations in the past has resulted in the Bank having extensive family connections throughout the Commonwealth, including Rhodesia, where it is believed many friends are anxious to welcome them. The Bank considers that the coming of Federation is a propitious time to commence operations. The branch at Salisbury is the first of a series to be opened in the Rhodesias.

NEWS IN BRIEF

A MODEL salt factory will be set up in Trivandrum or Cape Comorin.

Out of 113 Indian ships engaged in coastal and foreign trade, 24 ply in foreign trade.

The Cotton Seed (Control) Order 1952, which expired on the 17th inst., has not been extended by the Government of India.

A Soil Conservation Research Centre will shortly be set up in Ootacamund. The entire cost of the scheme will be met by the Government of India.

The target of production of additional foodgrains in the Indian Union for 1953-54, under the Grow-more-food campaign, is 13.54 lakh tons over that of 1952-53.

The Government of Saurashtra has decided to set up an Industrial Finance Corporation, with a share capital of Rs. 1 crore within the next 2 months.

Following the recommendation of the Planning Commission, the Government of India has sanctioned Rs. 3 crores for minor irrigation projects in the Hyderabad State.

Draft proposals for an agreement on reciprocal double taxation relief between India and Burma are now under preparation and negotiations are expected to begin shortly.

A two-day conference of the National Planning Council will open on 5th October. The Prime Minister will inaugurate the conference and the chief ministers of all States will attend.

The main item on the agenda before the 4-day Tripartite Labour Conference, which will open on 9th October, at Naini Tal, will be payment of bonus to sugar factory workers for the year 1952-53.

The Council of States passed the Estates Duty Bill on the 22nd inst., as it had emerged from the House of the People, without any change. The Bill is now ready for receiving the consent of the President.

The Hyderabad State Assembly has passed the Hyderabad General Sales Tax (Second Amendment) Bill, which provides for the inclusion of accessories of refrigerators and air-conditioning plants in the schedule of items subject to additional tax.

The Government of Bombay has approved, in consultation with the Planning Commission, 1,278 schemes, under the Local Development Programme, costing Rs. 46.50 lakhs. The actual work will start on 2nd October. The projects are expected to be completed by 31st March, 1954.

The Indo-U.K. trade for the first seven months of the year was lower than that in the corresponding period last year. While the import of principal items from the U.K. declined from £71 million to £66.8 million, India's main exports dropped from £69.1 million to £58.2 million.

The Government of India has decided to give partial relief in customs duty on reimportation of various kinds of Indian goods, including cinema films, sent abroad for processing, if such processing cannot be done in India. In genuine cases, relief will be granted on an ad hoc basis, provided that no drawback of duty is admissible at the time of export.

The Government of Rajasthan has drawn up a scheme, under its Five-year Plan, estimated to cost Rs. 5 crores, for extending irrigation facilities to 91 per cent. of its cultivable land, which has been depending entirely on the vagaries of the monsoon. The scheme envisages harnessing of the State's meagre water resources by building new canals, lakes, dams and digging and repairing new wells.

The Saurashtra Legislative Assembly passed, on the 17th inst., a Bill to provide for the prohibition of lease of agricultural lands in the State. The new legislation, which follows the Land Reforms Act of 1951 and the *Barkhali* Abolition Act of the same year, aims not only at establishing direct relationship between the State and the tiller of the soil throughout Saurashtra, but also at solving tenancy problems and preventing the evil of absentee landlordism.

The Government of North Borneo has withdrawn the invitation to India to send 10,000 agriculturists for settlement in the British colony to develop its rice resources. The invitation, made last year, contained proposals for giving settlers permanent land tenure, and local citizenship rights. Diplomatic quarters at Singapore aver that the scheme is put in abeyance, as the Colonial Government is faced with "some local opposition," and also is not in a position to finance even a pilot project.

The second meeting of the Central Board of Trustees of the Employees' Provident Fund will be held at New Delhi on 19th October. The Board will review progress reports, with special reference to the prosecution of defaulting employers, exemption of factories and future programme. The question of exempting the handloom industry on economic grounds will also be considered. Other matters to be discussed relate to the formation of regional committees and the powers to be given to the Central Provident Fund Commissioner and other officers under the scheme.

The Madhya Pradesh Government will introduce a Bill in the current session of the State Assembly for ensuring purity of cotton cultivated in the State. The Bill seeks to empower the State Government to fix the variety of cotton to be cultivated in any area and to prohibit the mixing of any variety of the standard cotton with any other inferior variety. It also prohibits or restricts the import, possession or use of, or trade in, any variety of standard cotton mixed with another variety.

Licences issued during the current half-year for the import of pearls from the soft currency area into India will now be available for the dollar area also. This change in import policy is being made to enable importers to obtain their requirements from Venezuela, which is in the dollar area, and which is one of the chief sources of supply of pearls. Under the existing import policy, licences for pearls (unset) are issued to established importers on a quota of 10 per cent. of half of their best year's import from the soft currency area.

The Government of Bihar has approached the Government of India for approval and financial assistance to its scheme, designed to give an impetus to handloom weaving industry in the State. The salient features of the scheme are: (1) Adoption of improved methods of manufacturing handloom cloth; (2) setting up of a finishing plant and dye works for handloom fabrics; (3) making available yarn to weavers at cheap prices; (4) opening of sales emporia in and outside the State; (5) establishment of handloom research and design centre; (6) ensuring quality of handloom textiles; (7) organisation of weavers' co-operative societies; and (8) marketing of products of handloom industry. There are over 2 lakhs of weavers in Bihar.

Air-India International has drawn up a scheme to operate a new service on the 4,500-mile route between Bombay and Tokyo via Calcutta, Bangkok and Hong Kong in the middle of next year. The proposed service to Tokyo will provide a connection with the airline's London-Bombay service. Later, the airline will operate direct London-Tokyo service, via Bombay and Calcutta. Mr. S. K. Kooka, Traffic Manager of Air-India International, and Mr. A. C. Gazdar, the airline's Operation's Manager, have been deputed by the Corporation to carry out a survey of operational and traffic facilities on the proposed Bombay-Calcutta-Bangkok-Hong Kong-Tokyo route. They are expected to be in Japan and the Far East next month. The Lockheed Super-Constellation aircraft, ordered by the airline from the U.S., is expected to be employed on the Bombay-Tokyo run. The aircraft is expected to arrive in Bombay from the U.S. in April or May, next year. At present, India has a direct air link with Thailand and Malaya.

From Abroad

During the last week of August, the Lancashire spinning mills produced over 91 million lbs. of cotton and rayon yarn, the highest weekly figure for 19 months.

A geological survey of Sylhet to ascertain the possibility of oil in this region has begun. The *preliminary survey* will be completed this winter. Drilling will begin after the report of the survey has been studied.

Eleven jute mills with a total capacity of 6,250 looms will commence production in East Pakistan by the end of 1954, according to Mr. Ghulam Faruque, Chairman of the Pakistan Industrial Development Corporation.

The Governments of Kenya, Uganda and Tanganyika has decided to lift partially the ban on import of textiles from Japan with effect from 1st May, 1954. The ban was imposed last year. From next May, imports of grey unbleached sheetings and woven linen mercerised cloth will be allowed into the East African market.

In the second quarter of this year, foreign nations purchased gold worth $128.2 million from the U.S. This brought U.S. gold sales in the first half of 1953 to $727.3 million. The net sales of gold by the U.S. to foreign nations in the year ended last June aggregated $996.6 million, as compared with $1,670.1 million of net gold purchases by the U.S. in the preceding year.

Business in America had reached a "plateau of prosperity," where it would remain for some months, said Mr. Brenton, President of the American Bankers' Association, which held a four-day convention in Washington this week. According to him, "there may be a little slippage; some industries, like autos, farm machinery and housing, are making readjustments. But it is a very healthy economy and the long-run trend will be up."

The sterling area's economic and financial situation was discussed by Dr Gabriel Hauge, Chief Economic Adviser to President Eisennower, with Mr. Butler, British Chancellor of the Exchequer, at London, last week. They also specifically considered Britain's trading and fiscal problems. The Commonwealth Economic Plan for expanding production and increasing world trade was also examined by Dr. Hauge with Mr. Butler.

There is no fear of cotton being extinguished because of new fibres, according to a Director of the United States National Cotton Council. Cotton could be made more attractive and economical and to hold its position in the textile industry, if it was backed up by adequate research. Cotton accounted for 69.6 per cent. of all textiles used for clothes last year in America. The amount of cotton used in the U.S. rose from 2.800 million lbs. in 1920 to 4,500 million lbs. last year.

The trade agreement between Pakistan and Italy, which came into force on 1st July last, will remain valid for one year. Under the agreement, Pakistan will export to Italy, among others, 40,000 tons raw jute 20,000 tons raw cotton, 5,000 tons chrome ore, 4,000 tons cottonseed, 1,000 tons potassium nitrate, 1,000 tons raw wool and 200 tons turpentine. In return, Pakistan will import about 17 items. Cotton twist and yarns worth £22 million head the list. The trade between the two countries will be conducted through normal trade channels, except where either Government finds it necessary to buy or sell part or the whole of the quantity or value of any commodity or goods specified. All payments and charges will be settled in English pounds sterling. The contracting parties have agreed to grant each other treatment of most favoured nation in matters concerning customs, duties, etc.

PERSONAL

MR. Richard M. Nixon, Vice-President of the U.S., will arrive in New Delhi on 29th November next in the course of his visit to the Far East and South Asia.

Mr. Hugo C. Lane, Vocational and Technical Training Expert, I.L.O's Asian Field Office, Bangalore, has been transerred to the I.L.O. headquarters in Geneva.

Mr. S. C. Roy, a prominent insurance man and industrialist of Calcutta, has been elected a Director of the Industrial Finance Corporation of India to represent insurance companies, investment trusts and other financial institutions.

Dr. B. V. Narayanaswamy Naidu, who has been appointed Chairman of the Forward Markets Commission, assumed charge of his office on the 22nd inst. The office of the Commission is located on the 3rd floor, Hararwala Building, Wittet Road, Ballard Estate, Bombay.

Mr. H. K. Gosh, Officer-in-charge of the lignite project, Neivell, South Arcot District, who has been selected by the E.C.A.F.E. as a member of the party of lignite experts to visit Australia and South-East Asian countries to study the working of such projects, left for Australia early this week.

Mr. A. S. Lall, Indian Consul-General in New York, will lead the Indian delegation to the meeting of the U.S. Tea Council to be held in New York next month. Mr. C. M. Kothari of Messrs. Kothari and Sons, Madras, and Mr. S. H. Davies, Chairman of the Indian Tea Association, Calcutta, who are the other members of the delegation, have already left for the U.S. Messrs. Kothari and Davies will also act as India's Directors on the Council for this meeting.

Mr. George G. Taylor, Jr., a geologist of the U.S. Geological Survey, has been appointed groundwater adviser under the newly established U.S. Foreign Operations Administration, with his headquarters at Calcutta. He will advise Indian geologists on the exploration of untested areas throughout India that hold promise of new groundwater supplies to aid irrigation. He will also serve as adviser on the hydrologic investigation work for additional tube-wells throughout India. Mr. Taylor was formerly ground-water adviser to the Geological Survey of India.

"COMMERCE" 1928

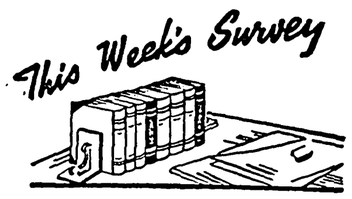
FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, 29*th September*

Two Rival Metals

In our first editorial of last week, the writer drew a somewhat alarming picture of the growing rivalry that exists between tin and aluminium—alarming, not for those who trade in the latter commodity, but from the viewpoint of the holder of tin investments. The trumpet blast of warning is, to some extent, no doubt justified. During the course of the last 12 months, the tin market has displayed some remarkable and alarming features. With no extraordinary decrease in demand and with no outstanding increase of actual or visible supplies, the price of the metal has fallen from £320 to under £220 per ton. A strictly economic explanation of this position appears to be lacking, but it is by no means impossible that aluminium is already having a greater influence on the tin market than is generally supposed.

It is obvious from the trade returns that the potential expansion in the demand for the metal has not kept pace with the potential expansion in output of the first class mines. This, and the steadily increasing consumption of aluminium, is, we have no hesitation in asserting, the prime cause of the decline in tin market values. Against the price advantage which aluminium commands, we are reminded by a writer in the *Financial Times* that tin is nowhere used as a raw metal but only as a component. It probably would not occasion grave industrial concern if the economic price were fixed at £300 or £500 per ton. For, although it enters into a hundred products, it only does so in the most minute quantities. Enormous as is America's canning industry, 22,000 tons per annum suffice for her requirements in this respect. This figure can only be adequately appreciated when it is borne in mind that 40 lbs. of tin are all that is required to produce one ton of tinplates, or that one pound of the metal can be rolled into 18,000 inches of tinfoil. On the other hand, so far as has been discovered to date, pure aluminium does not lend itself to treatment in this way. But, here, a highly significant fact emerges; in Germany and Northern Europe, aluminium is rapidly displacing tinplate in the manufacture of food containers. In many other directions, it has been permanently substituted for tin.



ECONOMIC TRENDS IN ASIA

THE periodic reviews of the economic trends in Asian countries, made by the Economic Commission for Asia and the Far East (E.C.A.F.E.), are always read with considerable interest. And the latest review, that for the six months ended March, 1953, will be read with particular interest, in view of the forthcoming meeting of the Colombo Plan Consultative Committee commencing at New Delhi on Monday next. While one has to wait for a detailed assessment of the progress of the economic development schemes in the different Asian countries during the third year (July, 1952—June, 1953) of the Colombo Plan, one can get a broad indication of the progress which has been made in the economic sphere from the latest E.C.A.F.E. report.

Considering the conscious efforts made by the Asian countries to raise the living standards of the people, it is indeed comforting to be told that the implementation of the expansion schemes has already begun to bear fruit. Thus, the main factors of the Asian economic development during the period under review, according to the E.C.A.F.E. review, were a substantial increase in rice production, a slow but not untroubled advance in industrial output, and an improvement in the balance of trade.

Thanks to the marked advance in rice production, the region's aggregate foodgrain output was higher than the rate of population growth. There was a reduction in wheat output but this was more than made good by the rise in rice production. Consequent on this and also on the rise in imports from outside areas, the *per capita* supply of cereals in the region was larger by over 2 per cent. One should not, however, rush to conclude that all is well on the Asian food front. For it must be remembered that the supply of foodgrains is still below pre-war level. According to one estimate, Asian people receive about 10 per cent. less in cereal supplies per head than before the war, but the E.C.A.F.E. considers the estimate to be exaggerated, since, in its opinion, the improvement in production of foodgrains during the war years in the Asian countries, as, for example, in India, is understated. Whatever may be the differences in estimates, this much must be accepted, namely, if the entire population of the Asian countries is to be adequately fed, the food production should be augmented considerably.

Industrial production, the report points out, also registered some improvement. This was particularly marked in China, due chiefly to the high rate of public investment. The index of industrial production in the mainland, calculated on the basis of the output of 35 major industrial products, increased rapidly in 1952, when it reached 126 per cent. of the pre-1949 peak, as compared with 56 per cent. in 1949. The rate of increase over a number of years was higher for investment goods than for consumer goods; it was particularly high in the iron and steel industry. Industrial production in Taiwan in 1952 was considerably larger than that in 1951 and this increase continued throughout the first quarter of 1953. New plants and equipment were installed, especially in the power, fertiliser and textile industries.

Industrial production in India was generally high. Three favourable factors responsible for such a state of affairs were better raw material supply position, expansion in public investment and relaxation of official controls. There were, however, several industries in which low export demand and uncertainties in markets for particular goods acted as a brake on output.

In Japan also, industries recorded rises in output, albeit small, under the influence of expanding demand. Industries producing consumer goods showed greater expansion than those producing investment goods. Foreign demand, including procurement contracts, declined, but the expanding home market made up for this decline. The increase in domestic demand was due to higher consumer outlays, which rose by 18.5 per cent., and to larger Government purchases of goods and services which expanded by 22.5 per cent. This rise was sufficiently strong to offset the fall in domestic investment in inventories. In the first quarter of 1953, foreign demand declined further, although special procurement contracts were higher. The high level of demand was reflected in reduction of manufacturers' stocks. Another noteworthy feature was the rise in labour productivity, especially in the textile industries. Money costs of production, however, did not fall to the same extent, because of the rise in money wages, and the competitive position of Japanese industries in world markets remains a serious problem. The high price of coal is a particular handicap, and efforts are being made to bring it down by rationalisation of coal extraction. It is also planned to sink 73 new shafts in the course of the next five years.

The output of electric power registered an increase throughout the region, but it could not fully meet the actual requirements for power. For demand continued to outstrip the provision of additional generating capacity. Many of the countries continued to suffer from shortage of electricity and severe curtailment of supply frequently occurred during peak periods of demand, as well as during the period when the flow of water at the hydro sites lessened. Except in the case of mainland China, India, Japan and Malaya, there was no marked rise in the generating capacity. There were many hydro-electric schemes in the region, but few of them had so far been completed; indeed, some of the schemes had to be slowed down, due to general financial stringency. Nor had there been much increase in the production of power from the existing power plants, which, since the termination of World War II, had generally been operated at full capacity.

The fall in the total volume of exports from the region continued from mid-1952 to the spring of 1953, but the rate of decline was much slower than that in the first half of 1952. On the other hand, total imports into the E.C.A.F.E. countries diminished more rapidly than before. The fall in their value was sharper than that of exports. In consequence, the combined balance of trade of the countries of the region improved and the trade deficit became smaller. Price factors, as well as production in export volume, contributed to these changes. The general decline in export prices ceased after the middle of 1952. Export prices recovered in some countries moderately (Pakistan), and in others more substantially (the Philippines and Ceylon), while, in others, export prices continued to decline (Malaya, India and Japan). Moreover, there was no general trend towards an expansion in export volume.

TRANSPORT SERVICES

The two-day session of the National Development Council, which will commence on 6th October, will consider, among others, the role of private enterprise *vs.* State ownership and management in the field of development of road transport. The Planning Commission has already called for statements from State Governments in regard to their development programmes of road transport. These statements, which will be available by early October, will be discussed by the Council in the light of not only the development of agriculture and industry under the Five-year Plan, but also of their scope for providing employment.

The importance of this session needs no emphasis. For it is common knowledge that the entry of State Governments into the field of transport has not resulted in the hoped-for benefits. The policy of gradual nationalisation of the existing undertakings has prevented private enterprise from expanding its activities. Moreover, public management has not achieved the same efficiency as private management. State management has failed to solve the dual problem of productivity and freedom which widens the sphere of the former. Many of the State-owned and State-managed units are facing severe financial troubles. This is mainly due to incompetence or negligence of the management, which has resulted in high costs of operation. After all, the achievements of private enterprise have been due to a nice calculation of expenses and profits involved in every operation and investment. The private enterprise psychology is not just a quest for profit, but it is also a frame of mind, a habit of estimating the exact cost of traditional methods and the possible yield from new methods.

The least that the Governments can do, therefore, is to see that there is no further encroachment of the State in the sphere of transport. We would ask the State Governments to cry a halt to their policy of nationalisation of transport and allow private enterprise to compete with them. This certainly will be a desirable state of mixed economy. Mixed economy does not necessarily mean monopoly of certain fields of production by State enterprise.

The Council will also discuss problems relating to rail transport. Thus, it will examine the desirability of the creation of stockpiles of commodities needed for industrial development by taking advantage of the slack seasons in the demand for wagons. This, it is stated, will prevent the slackening of development programmes of an essential nature in times of wagon shortage. It is also necessary that stocks of other commodities are not allowed to accumulate for want of transport, as it would depress prices in centres of production and create artificial shortage in centres of consumption. It is gratifying to note that this aspect also will be discussed. Another important question which it will discuss is whether goods transport services should be run by the State Governments or by the railways or by private companies or as some sort of joint undertaking by several parties. It is to be hoped that sound decisions will be taken and, what is more, they will be implemented without delay.

FACTORIES ACT

The Bill to amend the Factories Act, 1948, which has been analysed elsewhere in this issue, needs careful examination. For, while it represents an improvement over the Act in some ways, it is not so in all respects. The prohibition of the employment of adolescents, who have not attained the age of 17, in factories during night, is noteworthy. But the proposed amendment to section 71, which seeks to replace clause (b) of sub-section (1) which prohibits employment between 7 p.m. and 6 a.m., by the clause "during night," is regrettable, because "night" for this purpose is defined as a period of at least 12 consecutive hours, which shall include the interval between 10 a.m. and 6 a.m. This gives the impression that a child can, for instance, be employed in a factory upto 10 p.m., against 7 p.m. now, so long as the child is not made to work from 10 p.m. to 10 a.m., which constitutes a period of 12 consecutive hours as defined in the Bill. This will be a retrograde measure. The statement of objects and reasons says that the amendment has been made to give effect to the relevant I.L.O. Convention. Here lies the irony of the situation. Few will deny that the I.L.O. Convention prescribes only minimum conditions and does not ask for reduction of better comforts already existing.

There are also a number of other provisions of doubtful value in the Bill. Thus, clause 13 of the Bill provides for the calculation of the cash equivalent of the concessional sale to workers of foodgrains and other articles for the purpose of computing ordinary rate of wages of individual workers for payment of overtime wages, and states that the calculation should be computed on the basis of maximum quantity of foodgrains and other articles admissible to a "standard family." This is certainly not fair to employers, since it compels employers to treat even bachelor workers as standard families. It is not fair either to employees with families that are larger than a standard family. The wages should be related to circumstances obtaining in each case and should not be tied up to maximum requirements of a standard family. Again, the Bill deems any days of lay-off, maternity leave and the leave earned in previous year to be days on which the worker has worked for the computation of the period of 240 working days, which entitles a worker to earn leave with wages. This again is not fair. It should be made obligatory on the worker to put in a qualifying period of 240 days of actual work, before he becomes entitled to leave with wages. The Bill does not include clerical employees in sub-section (2) of section 64 (which deals with overtime work), as demanded by employers. This creates a very anomalous situation. For it would be extremely difficult for factories to ask clerical employees to prepare musters, returns, pay-sheets, etc., if they are not allowed to work overtime and earn additional remuneration. It is to be hoped that the Government will rectify these flaws in the Bill before it is finally adopted.

TAXATION IN ASIA

Tax systems in many Asian countries should be overhauled and tax administration simplified and improved. Though Asian tax rates are "not unduly low," tax yields are much below those in developed countries—less than 10 per cent. of national income, as against 25 to 40 per cent. Private savings are inadequate to sustain the necessary rate of investment. For some time to come, public finance will have to carry much of the financial burden of Asian economic development. But to do this, increased tax revenue will be required.

These were some of the main conclusions arrived at by a group of 42 financial experts from 17 Asian and non-Asian countries at a six-day conference on the financing of Asian economic development, held in Bangkok from the 7th to 12th inst., under the auspices of the United Nations Economic Commission for Asia and the Far East (E.C.A.F.E.).

Throughout the discussions, considerable emphasis was placed on the "unsatisfactory nature of tax administration and tax enforcement." It was also recognised that an improvement in "tax morale" would raise tax yields. In this connection, it was suggested that village development schemes should be clearly linked with local taxation systems so as to demonstrate to the tax-payer as graphically as possible the benefits of tax payments to him and to his community. Better public information on tax matters would be "extremely desirable" and "relatively inexpensive," it was suggested.

The experts paid particular attention to the possibility of raising the yield of rural taxes. They felt that agriculture was benefiting from the advance in economic development in the form of higher agricultural productivity, higher incomes, and an increase in land values. They, therefore, suggested that efforts should be made to ensure a larger flow of tax payments from agriculture through land taxes, or in some other form of taxation, including the supply of free labour or gifts of land for road building.

Revenue systems in underdeveloped countries of Asia are characterised by the comparatively small proportion of national income which they collect. Generally, there is a heavy dependence on indirect taxes, in contrast to the trends in most advanced countries where taxes on income and wealth form a large part of revenue. The most important of the indirect taxes have been customs duties.

The general opinion concerning income-tax was that no large opportunities were likely to arise in the next few years to "extend income-tax beyond its present limits." However, income-tax yields could be increased substantially by better administration and improved collection. The experts suggested that the Governments must give serious consideration to the question of tax reform and that, with this end in view, statistical data be prepared and studies made.

The experts felt that taxes in most Asian countries were not so high as to discourage foreign capital.

The E.C.A.F.E.'s Working Party of financial experts met at a time when almost all Governments in the region are keenly interested in the question: How to raise revenue to increase the rate of investment and economic development?

The importance of public savings is all the greater because of the inadequacy of private savings and the difficulties in the procurement of foreign capital. While it might be possible to increase public savings, mainly through higher tax yields, prospects for increased private domestic savings and a larger inflow of foreign capital are problematical.

RAILWAY AUDIT REPORT

The latest Audit Report on Railways refers to the year 1950-51 which, it is noteworthy, was the first complete year under the provisions of the new Constitution. Gross traffic receipts during 1950-51 amounted to Rs. 263.01 crores, as against the estimate of Rs. 232.50 crores, and working expenses to Rs. 210.48 crores, as against the estimate of Rs. 181.92 crores. Commenting on the increase in working expenses, the Report points out that it was due largely to the appropriation of Rs. 30 crores to the Depreciation Fund, as against Rs. 15 crores contemplated in the budget. The increased provision was deemed desirable because the "replacement cost had increased fourfold over the pre-war years and bore no relation whatsoever to the original costs." This is indeed a valid criterion for making larger transfers to depreciation. Only, those engaged in the private industrial sector will wonder why, when a similar reason is advanced by them for earning adequate tax relief, the Government does not show any willingness to accept their demand. Surely, what is sauce for the railways must be sauce for private enterprise.

Be that as it may, the Report narrates several instances involving financial irregularities, losses of public money due to fraud or negligence, wasteful or nugatory expenditure. The B.B. & C.I. Railway suffered a loss of Rs. 55,000 in 1950 due to a delay of seven months in introducing increased rates for manganese ore, and the E.I. Railway a loss of Rs. 49,000 because season ticket holders were undercharged for a period of 25 months. The Report narrates an interesting case of fraud in the luggage office of the M.S.M. Railway through grant of free allowance of luggage on time-expired and non-issued tickets. Several other instances of losses, arising from lack of effective control, are mentioned in the Report. The Report emphasises the importance of periodical test-checks in the railways, of the maintenance of check registers and of strict adherence to rules and orders. It is to be hoped that the Railway Administration is gradually becoming alive to the nature of the charges that have been made by the Audit Report, and that suitable steps are being taken to rectify the mistakes which have been pointed out by the Audit officers. When subsequent reports of the Audit Department are released they would show whether any attention has been paid to these objections. They will, therefore, be watched with interest.

OFF THE RECORD

(By "ROVER")

AN adolescent is physically the most awkward and psychologically the most embarrassingly self-conscious of human beings. He is neither sure of himself nor of his surroundings. Oscillating fitfully between the largely make-believe world which happy and healthy children can build around themselves and the world of harsh and often of revoltingly ugly realities, it is difficult for a teenager to find and ascertain his place in this strange world of the grown-ups. With one hand he tries to cling to the familiar ways of childhood, which are fast losing their former fascination, and tries to reach out to the frightening but mysteriously attractive dignity and responsibilities of manhood. After an unhappy spell of uncertain and fluctuating loyalties, aspirations and ambitions, each one of us hits on some mode of adjustment and reconciliation with a not-very-friendly world at varying levels of growth and development, while a few unfortunate ones fail to strike this balance and suffer from arrested growth and maladjustment all their life.

This period of transition and the changes it produces into the mind and body of each individual human being are more pronounced and so more easily noticeable in the case of girls than boys. Being more sensitive and, possibly, because they are required to be more restrained in their expression of the inner conflict and in their movements and having less avenues of escape, girls at this stage appear more out of tune with their world. They are more upset and ill at ease at the prospect of the frightful but at the same time strangely alluring possibilities of fulfilment awaiting them. Our country's economy, and especially that part of it which is conditioned by industry, at its present stage of growth and formation, resembles more a maiden awakening to womanhood than a boy stumbling on gawkily, and in some cases grossly, along his way to manhood. One can see that industry is both bewildered and frightened by what lies ahead. It constantly finds itself out of step at every turn with other more assertive elements of society. It feels alarmed at its growing isolation from the other members of the body politic and unhappy at its growing unpopularity. It gets neither sympathy, understanding nor guidance from the Government, from the workers or from the great body of consumers.

I should like to carry this analogy a little further. Fortunate are the children, who, when they arrive at this awkward and unhappy age, when they are neither care-free, romping kids nor responsible members of society, get special consideration and affectionate guidance from their parents and a helping hand and reassurance from their more grown-up brothers and sisters. The growing pains in their case are minimised and they leave no ugly lesions to torment them from time to time during the rest of their adult life. The transition from childhood to manhood or womanhood is effected at the least cost to themselves and the society, where it is attended by patience and unobtrusive assistance at every dark corner. The others, who are not so lucky and have to make their way alone, often get bruised in spirit and develop some kind of anti-social complex in, desperation and self-defence, if the process of growing up has been more painful than necessary.
