
Unfortunately for commerce and industry, from 1947 onwards, the Government of India and the State Governments have been harsh, suspicious and intolerant. Obsessed by the fact this infant was prone to be greedy and grasping and at times difficult and cussed, they have had recourse often to primitive methods of correction, which were long ago abandoned by wise parents and progressive pedagogues. This is all the more surprising because they have behaved quite differently with the other elements of society, and though, in their case, because of their own lack of mental and moral equipment, they might not have been as effectively helpful as they might have been if they had been more enlightened, the desire and the willingness to understand and to help has always been there. It is quite possible that the business community has been more recalcitrant and less accommodating to the demands of corporate life than the others, but there is very little evidence to this effect. In any case, the very obvious difference in the attitudes of society in general and the Governments in particular, was enough to turn even an angel into a rebel.

Could it be that the Government of India have been more unfortunate, if not exactly more unwise, in their selection of successive ministers who were put in charge of commerce and industry? Except in the matter of finance and external affairs, the choice of ministers has, in most cases, not been of a very happy nature. Food and Agriculture, Railways, Labour, Health, Defence, Production and Supply and other equally important subjects have all suffered, grievously at times, from misfits having been pushed into these Ministries. In a democracy, perhaps, a little of this is inevitable. Often enough, as in the case of Mr. V. V. Giri, the prevailing prejudice is so heavy that a Minister without a very strong pull with the Prime Minister and the Party caucus, even though well-meaning and competent, has to beat his wings in a vacuum without making any headway.

But the right choice of a Minister for a difficult post like that of Finance, Food or Commerce and Industry does help inasmuch as he does not allow things to deteriorate to any large extent. Mr. C. D. Deshmukh may have made mistakes, even serious ones at times; he may have felt it necessary to yield on occasions to superior political combinations even against his own convictions, but it cannot be gainsaid that by sheer ability and shrewdness, aided by tact and finesse when necessary, he has kept the ship on an even keel even in a sea which has been far from calm in many a crisis. Similarly, the silent but powerful Mr. Kidwai could soon make his presence at the Ministry of Food and Agriculture felt and produce results, after a succession of failures by his predecessors, even though his methods might have often been unorthodox and his success in a measure due as much to luck as to effort.

Superstitious folk would be inclined to believe that some sort of a blight must have settled in the beginning on the Ministry of Commerce and Industry, because even highly competent men like the late Dr. Shyama Prasad Mookherjee and Mr Neogy did not succeed in putting the relations between the Government and the business community on a foundation of mutual understanding. The position deteriorated rapidly in the time of Mr. Hare Krishna Mahatab and did not show any improvement even after he was dropped, when the new Government was formed after the general election and Mr. T. T. Krishnamachari was put in charge of it. But blight or no blight, these two ministers have to be held responsible for the complete lack of harmony and the growing estrangement between the authorities and the industrialists. I still believe that more bad blood has been created by an arrogantly patronising tone and inaptitude resulting from want of tact and consideration on the part of those speaking for the Government with industry than from the pursuit of wrong economic policies.

In any case, I see signs of a dawning realisation at New Delhi of the gravity of the situation. It is felt that the sullen and desperate mood to which the business community has been driven by constant nagging and cold shouldering will react badly not only on the shattered economy of the country but on the fortunes of the party in power. The rising tide of unemployment has frightened and even shaken the leaders of the Party. They see that in any steps which they devise for arresting these turbulent waters threatening to engulf them, the willing co-operation of this community would be very necessary. I understand that a new approach of reconciliation and of extending an invitation to it for co-operation, with an assurance of more considerate treatment, has been decided upon and a new man has also been selected to inaugurate this change.

It is not my habit to start or circulate rumours. There are good reasons to believe that some important changes in the Cabinet have already been decided upon. These will possibly be announced at an early date. Similarly, decisions with regard to modifications in certain policies, especially economic policies, have been taken. In this connection, Mr. Rafi Ahmed Kidwai's recent visit to Bombay and his interviews with some of the top leaders of the business community have a great significance for the future. Mr. Kidwai is the illusive Scarlet Pimpernel of the Congress Party. His capacity for quick, purposeful and effective working behind the scenes is truly remarkable and the Prime Minister has been known to have put this quality of Mr. Kidwai not infrequently to good use, when it was not possible for him to show his own hand. That he was on a delicate mission to Bombay, when he ostensibly came to discuss measures regarding decontrol of wheat with the State Supply Minister at Poona, is known to many. It is, perhaps, not as widely known that he has secured promises of support, co-operation and good advice and guidance whenever necessary from eminent business leaders in his reported new job of Minister for Commerce and Industries. It is quite possible that he may have wanted to feel the ground before agreeing to take on this new and onerous task.

I am inclined to believe that Mr. Kidwai's taking over this key Ministry at this critical stage will be welcomed by the business community in the country. He has an intensely practical outlook and is not either easily carried away by set doctrinaire views acquired in a vacuum by many of his Party colleagues or deflected from his goal by pressure from stubborn and powerful Chief Ministers from some of the major States in the Union. Being a subtle diplomat and an experienced negotiator, he believes in the principle of give and take. Though intent on getting what he wants, he is a man of the world to his finger tips and knows that, while it is good to aim at getting the whole loaf, it is better to take half a loaf than to have no bread at all. For a politician, Mr. Kidwai is an unusually silent man and so he makes a good listener. People who go to him with complaints and difficulties get a patient hearing and not an irritating lecture on the duty of every citizen to make sacrifices in the interest of the country, as is the irritating habit of some of our Ministers.

Whatever one might think of his relations with some of his colleagues in the Government and his methods of settling his differences with them, the business community looks upon him as one who has an open mind and who honestly tries to understand and appreciate the difficulties of those he has to deal with. There is no doubt that, if anyone in the Government to-day can obtain willing co-operation from the industrialists in the national effort and restore confidence amongst them, which has been badly and rudely shaken, it is Mr. Kidwai. New Delhi reports are not very explicit about the new assignment for Mr. T. T. Krishnamachari, but it is believed that his ultimate destination is the Reserve Bank of India.—

PARLIAMENT ADJOURNS AFTER BRIEF SESSION

SOME CHANGES IN O.G.L. ANNOUNCED

(From A Special Correspondent)

NEW DELHI, 22nd *September*

THE autumn session of Parliament has ended after a brief duration of about six weeks. During this period, it was largely concerned with the disposal of the two important Bills, namely, the Andhra State Bill and the Estate Duty Bill. The Finance Minister showed considerable skill in piloting this new measure of taxation which is considered "as a milestone on the road to social democracy." The revenue from this measure may not be commensurate with the tremendous capital requirements needed for the development of the country, but as a step in the direction of reducing inequalities in the distribution of wealth, its role in the realm of direct taxation is indisputable. During the passage of this measure, the Finance Minister displayed a receptive and open mind and, in consequence, as many as 52 amendments to the Bill were accepted by the Government.

DELHI LETTER

Unemployment Problem

In the present stage of India's development, it is but natural that economic problems have been focussing the attention of Parliament to a greater extent. Thus, during this session members were successful in drawing the Government's attention to the serious and growing unemployment problem, as also in getting a declaration from the Finance Minister that efforts would be made to revise the Five-year Plan from the angle of providing more employment to the educated unemployed. The Commerce and Industry Minister hinted that the Government would interfere and nationalise, if necessary, the automobile industry with a view to safeguarding the strategic and transport needs of the country, in case the industry did not make any genuine effort to be self-sufficient in the manufacture of spare parts. His answers to various interpellations and the tenor of his speeches in Parliament at times indicated that the Minister was not satisfied with the role of the private sector of industry in accelerating the pace of industrialisation of the country. This was the main reason as to why he did not want to slow down the Government's industrial programme. In the course of the question hour, the Prime Minister made an unequivocal declaration that Government would not tolerate the slow down tactics of labour in the industrial or in any other sphere. This statement is expected to have a salutary effect on the recalcitrant labour in the country.

Parliament was able to discuss a number of problems of topical interest on account of one day allotment in the week for private members' business. It was this new privilege that was responsible for some interesting discussion on the unemployment problem, etc. Besides the Andhra State and the Estate Duty Bills, Parliament was able to pass the Collection of Statistics Bill and the Central Silk Board Bill. During the question hour, members were able to elicit information from the Government on a number of subjects. Total number of questions put were placed at the high figure of 5,000, and of this about 2,000 questions were answered.

Agricultural Ministers' Conference

The State Agriculture Ministers' Conference which is scheduled to take place this week, is meeting under a different atmosphere. During the last few years, the Food and Agriculture Ministers of different States used to utilise this Conference only for making exeggerated demands on the Centre in regard to their food deficit quota, with the result that many other items on the agenda used to be relegated to the background. In view of the improved supply position of foodgrains and better prospects thereof in the coming months, the food deficit has no longer become their headache, and hence these State Ministers are now in a position to tackle their problems in a calmer atmosphere.

The agenda for this Conference is a lengthy one and is generally concerned with the improvement of agricultural production more or less on a permanent basis. For instance, the programme of minor irrigation projects is expected to be intensified. The State Ministers will be asked to carry out a thorough investigation of the minor irrigation potential in their respective States and to determine the order of priority based on this survey for their implementation. Most productive schemes among them are to be given first preference in this respect. In order to minimise the cost of the execution, it is proposed that State Governments should enlist the co-operation of farmers likely to be benefited by these schemes and that these farmers should contribute to the works either by way of manual labour or resources or both. Attention is expected to be paid to the acceleration of the tube well schemes in the States of Punjab, P.E.P.S.U., the U.P. and Bihar.

Training of Village Workers

The agenda includes the ambitious scheme for the intensification of training of the village workers for the speeding up of the agricultural development of the country on sure foundations. This programme is expected to be implemented with the assistance of the National Extension Service which will carry out the work by means of increasing the number of agricultural schools and colleges. The State Directors of Agriculture who are meeting to-day and to-morrow, will be discussing certain problems such as the role of agriculture departments in the formation of the National Extension Service, the building up of key personnel for State agriculture departments, soil conservation programmes, supply of seeds, fertilisers, etc., encouragement of co-operative farming, assessment of the results of the Japanese method of cultivation of rice, etc. These apart, these Conferences are likely to consider the development of animal husbandry, fisheries, etc. Besides, the marketing of agricultural products on co-operative basis is also likely to receive some attention.

Changes in Import Policy

The latest changes in the Government of India's import policy indicate that economic conditions in the world have been becoming more and more normal. It is because of these that the Government has adopted a relatively long-term policy in extending the duration of the operation of the Open General Licence system. Thus out of the five O.G.Ls., three have been reissued without any marked change and are valid until the end of September, 1954. Formerly, O.G.Ls. were generally issued on six-monthly basis. Again, the improvement in the industrial production in the country and the better availability of goods in important exporting countries have made the Government introduce quota system in respect of a number of goods. In other words, the difficulty of obtaining some scarce and strategic goods is reported to be gradually disappearing, and the Government does not want to import more goods and certain spare parts than are absolutely necessary. Further, the present policy denotes a certain amount of restriction rather than liberalisation, which is in consonance with its desire to check the spread of unemployment.

Thus two O.G.Ls. relating to Pakistan and Persian Gulf Sheikhdoms and Portuguese possessions have been reissued without change while another two O.G.Ls. for imports from soft currency areas have been merged into one licence. Even here the Government's policy is characterised by either allowing certain raw materials more for purposes of export or for increasing the production of manufactured goods. In the former category, mention may be made of seedlac, while some chemicals such as sulphate of potash, etc., belong to the latter category. About 17 items have been taken away from the O.G.L. list of imports from all countries of the world (excluding South Africa) and among them are spare parts for diesel engines, mechanical pumps and tractors, certain chemicals, scientific instruments, wrought copper and unwrought alloys of brass, bronze and similar alloys, strontium carbonate and nitrate, potassium carbonate, hosiery needles, scientific instruments and microscopes and accessories. For some of them, the quota has been fixed at 100 per cent., while, in respect of others, it has been reduced to 75 per cent. In regard to hacksaw blades, the quota has been fixed at 50 per cent. and for dobby harness plastic cords, it is still lower at 33⅓ per cent. Iron and steel buffers for locomotives, wagons and carriages, whether for railways or tramways, and iron and steel coated and uncoated electrodes and certain textile mill stores, iron and steel chains are to be allowed under a quota system. It may be mentioned that the validity of the open general licence relating to imports from Pakistan has been extended by one month.

Delay in Publication of Statistics

At the time of the discussion of the Collection of Statistics Bill, some members of Parliament stressed the necessity of the Government expediting the publication of books containing statistical information which is of considerable importance to the trade and commercial communities of the country. For instance, the timely release of India's foreign trade statistics or customs and excise revenue statements of the Central Government are very necessary to enable them to assess the trend of trade and budgetary position and prospects. In respect of these, there has not only been no improvement in the reduction of the time lag, but there has been an actual deterioration in the time schedule. It may be noted that there is more than four months' time lag in the issue of the sea and land-borne trade statistics, while in respect of the customs revenue statement, the time lag is nearly six months! A few years ago, the former used to be issued within a duration of less than two months, while in regard to the latter, the public used to get the required information within six weeks. In the absence of the latter, it will be very difficult to forecast the trend of budgetary position of the Government since the customs revenue forms the bulk of Government revenue. It may be mentioned that in important foreign countries, Governments have been able to issue the requisite information within two to four weeks. Here is an instance where the Commerce and Industry Minister can gear up the administration, especially the slow-moving machinery of the office of the Director General of Commercial Intelligence and Statistics, Calcutta, in order to expedite the issue of these vital publications in time. If it takes time to print and bring out the present volumes in size, it is not impossible to publish a small booklet containing important information without any time lag for the benefit of the commercial public. The Government of India which has been anxious to emulate the example of Western industrial nations in the matter of building up industries, must try to follow them at least in small things like the bringing out of statistical publications in time. Otherwise, these books are of historical interest only.

Customs and Excise Revenue

According to the latest customs and excise revenue statement for March, the total customs revenue at Rs. 174.95 crores for 1952-53, compares with the record figure of Rs. 232.03 crores for the previous year. The revised budget figure is Rs. 177 crores. While the revised figure in respect of export duties has turned out to be practically correct, that in regard to import duties has fallen short by Rs. 3 crores. The return from the excise revenue has aggregated Rs. 81.41 crores as against the revised estimate of Rs. 80 crores and the original estimate of Rs. 86 crores. For the current year the revenue from customs has been estimated at Rs. 170 crores and that from excise Rs. 94 crores.

Steel Industry

With the proximity of the date of arrival of German technicians for the establishment of the new steel factory, especially for determining the location thereof, the prospective State Governments which have been anxious to get this factory located within their jurisdiction, are bestirring themselves. Orissa has long been in the run, while Madhya Pradesh has joined the fray with all ardour, its trump card being strategic reasons such as the dispersal of vital factories, economy in transport, etc. Now, Bihar, which has already got within its territory the biggest steel plant of the country, namely, the Tatas, has begun to urge the claims of Sindri. Its reasons for the location of the new plant in Sindri are: the lowest cost for the assembly of raw materials as compared with other sites, excellent drainage system, nearness to coal and coking coal areas, as also to iron ore area, better transport facilities, co-ordination with the Tatas, possibility of setting up a modern coal-tar distillation plant, availability of technical personnel and skilled labour.

PAKISTAN NOTES

NEW IMPORT POLICY ANNOUNCED

RESTRICTIONS TO CONTINUE

THE Government of Pakistan's import policy for the current half-year, announced a few days ago, belies the earlier expectation of liberalisation of imports. Thus, the new policy envisages the continuance of the ban on the open general licence for exports. Again, the number of items in the import schedule has been reduced from 215 to 184. Even among these items, only 33 are essential consumer goods, the remaining items being mainly for industrial and agricultural purposes. Among the items, the imports of which have been prohibited, are woollen fabrics, spices, bidi leaves, cosmetics, cigarettes, blades, cycles and watches.

Restrictions on the import of goods and commodities, barring, however, drugs and medicines, from the dollar area have been continued, the total number of items permitted from the area being 40. Imports of aeroplanes and unmanufactured tobacco are allowed only from this area. The items of imports from Japan include cotton fabrics, iron and steel, and metals. Importable from France under the trade agreement recently signed are 109 items. Italy figures only in the case of cotton twist and yarn.

The foregoing brief account clearly indicates that the restricted import policy of the previous half-year has been carried a stage further. This clearly serves to emphasise, once again, the fact that the balance of payments position is none too happy, despite the improvement in the foreign trade position in the early months of this year. This is due to a marked shrinkage in receipts from exports, thanks to the emergence of a buyers' market the world over. The average monthly rate of foreign exchange earnings during the year ended June, 1953, were Rs. 12.5 crores, as against Rs. 20.0 crores in 1951-52.

The drastic cut in imports on private account will surely lead to an all-round rise in prices of goods in Pakistan. Indeed, to quote one report: "With the exception of cloth which was the only item not on the import list during January-June, 1953, but which has now been included, the new import policy presages rigorous times for the people till the end of the year." While imports on private account are being curtailed, those on Government account, especially of defence equipment and stores, are reported to be very heavy. The balance of payments position is, therefore, bound to deteriorate further. Already, the foreign assets of Pakistan have been depleted; these amounted to Rs. 81.23 crores as on 14th August, 1953, as against Rs. 150.52 crores in the beginning of last year.

Return to Normalcy

Government spokesmen, however, have all along sought to dispel the fear that Pakistan is heading towards such an eventuality. It was only recently, that is on the eve of his departure for Washington to attend the meetings of the I.M.F. and the World Bank, that the Finance Minister of Pakistan, Mr. Mohammed Ali, declared that Pakistan had turned the corner (economically speaking). This view is shared by a section of economic opinion, which believes that Pakistan is returning to normalcy. For instance, in the course of an article contributed to the *Financial Times*, Sir Percival Griffiths observes as follows:

"Pakistan can and will become self-sufficient in coarse cotton textiles and in food, clothing the great majority of her people from domestic production by 1955. In food production, too, progress is being made, though, here, the difficulties are perhaps greater. In years when the monsoon is poor, waters from the Indus group of rivers will be insufficient for Pakistan's irrigation needs, unless great new storage schemes are undertaken and the waters satisfactorily allocated by the World Bank between India and Pakistan. Nevertheless, it is not unduly optimistic to believe that, by 1956 at the latest, in a normal year, Pakistan will be able to feed herself, while, in a good year, she may even, once again, be able to export cereals. By 1955 or 1956, then, we can expect a substantial improvement in Pakistan's foreign exchange position.

"... As regards internal finance, the budgetary position has been distinctly improved, first by the resolute pruning of expenditure, both civil and military, and, secondly, by the sale proceeds of American wheat. The drastic reduction of the areas under jute and the general contraction of trade will affect revenue adversely, but, on a long-term view, this should be more than offset by the many development schemes in progress both in the public and in the private sectors of the economy. The marked progress in the expansion of Chittagong Port this year, the fact that the Chandrakona Paper Mills will shortly be operating and the starting of Sui gas are all encouraging features."

Nevertheless, Sir Percival points out that this does not mean that Pakistan is by any means out of its financial difficulties. He, therefore, warns that, until Pakistan can feed itself and until it can balance its payments without cutting imports too drastically, there will be continuing cause for vigilance and even anxiety.

Supply of Essential Goods

As already noted, the cut in imports on private account may lead to a rise in commodity prices. The latest decision of the Pakistan Government to control the distribution of essential commodities has, therefore, come not a day too soon. The Government has promulgated the Essential Commodities Control of Distribution Order, 1953, with a view to maintaining supplies of certain essential goods and to securing their equitable distribution and availability at fair prices. The order prohibited export or transport of any scheduled article to or from East Bengal, except on a written permit from the Controller-General of Prices and Supplies. It also authorises the Controller-General to regulate the movement of any scheduled article anywhere in Pakistan by movement permits.

Trade With Canada

Pakistan's exports to Canada during the first four months of 1953 were two and a half times larger than those in the corresponding months last year. Trade with Canada during April, 1953, was the highest in the last 18 months. Pakistan's main exports to Canada are, among others, tea, jute, wool, sports goods, especially skis, rackets, badminton shuttlecocks, regalia and badges, brass band instruments. More recently, Pakistan has explored good prospects for cotton in Canada. Canada's main exports to Pakistan include wheat, agricultural implements, automobile parts, manufactures of iron, motor vehicles, radio wireless apparatus, aluminium, copper wire, aircraft parts, electrical goods, etc.

Pakistan's trade with Canada and all other dollar countries is receiving the special consideration of the Department of Trade Promotion and Commercial Intelligence, which, among other things, maintains a close and constructive liaison with Pakistan's trade representatives in foreign countries.

Exchange of Enclaves

An Indo-Pakistan Conference on matters relating to the two Bengals and the exchange of Cooch Behar enclaves is to be held at Calcutta, according to a recent report from Karachi. The Conference is in furtherance of the agreement arrived at between the Prime Ministers of the two countries at the latter's meeting held at Karachi in July last. The Pakistan delegation to the Calcutta Conference will be led by Mr. J. A. Rahim, Foreign Secretary to the Government of Pakistan.

Notice

THE FORT WILLIAM JUTE CO., LTD.

NOTICE

THE HALF-YEARLY ORDINARY GENERAL Meeting of the Company will be held at the Registered office, No. 14, Netaji Subhas Road, Calcutta, on Monday the 5th October, 1953, at 3 p.m., for the purpose of receiving the Directors' Report and Auditors' Report, passing the Accounts for the half-year ended 31st March, 1953, electing Directors, appointing Auditors and transacting such other business as may be brought forward before the meeting.

The Share Transfer Registers of the Company will be closed from 28th September to 5th October, 1953, both days inclusive.

By Order of Board,

R. N. BANGUR,
Managing Agents.

CALCUTTA, *15th September, 1953.*

BANK RATE SURPRISE

WHAT DOES IT SIGNIFY?

(From Our Own Correspondent)

LONDON, *19th September*

THE markets in London have not yet made up their mind whether the unexpected reduction in the Bank rate from 4 per cent. to 3½ per cent. represents merely a technical adjustment which was all that the Bank spokesman claimed for it, a sign of the Government's increased confidence in the commercial future, or the first step in preparation against the oft-feared recession.

LONDON LETTER

Those who hold the last view point to all the signs of recession which have been developing in America this year. There the value of stocks has fallen more than 15 per cent. over the year and it is accompanied by a steady fall in farm prices, equipment, ond even industrial goods. But, on the whole, the stock market has been tempted to regard the move as a sign of confidence and has paid so far little regard to the real technical changes. As a result, business on the Stock Exchange this week has been higher than any day since before the Budget, and some Gilt-edged stocks have advanced by over 3 points. Industrials have also shared in the general rise and, even by the close of business on Thursday, the index had risen 1½ points.

The official explanation of the change is that it is to bring the two "bank rates" into line. The official Bank rate was first raised from its post-war level of 2 per cent. to 2½ per cent. in November, 1951, and then to 4 per cent. in March, 1952. At the same time, in order to prevent an excessive cost to the Treasury, a special rate was introduced at which the Bank made 7-day loans and this rate was kept ½ per cent. below the official Bank rate. Now the special rate disappears, or, rather, is merged in the new official Bank rate of 3½ per cent. The Treasury thus ceases to have a special advantage over first-class commercial borrowers, but it is natural that the markets look at the move (which, after all, could easily have been made the other way by raising the special rate up to the official rate) as one benefiting the commercial bill and, therefore, as a sign of confidence and strength in the money market.

Significance

The bankers' deposit rate normally runs 2 per cent. below the Bank rate but the banks have decided not to cut their deposit rates by the full ½ per cent. in the Bank rate but only by ¼ per cent. in recognition that only part of the normal effect of a drop in Bank rate will this time be felt. It remains true that, although the price of Government short-term paper remains unchanged, the cost of financing trade is reduced. Equally, it is unlikely that there will be a reaction in the present jump in Gilt-edged long-term rates back to the level of earlier this week. They can certainly be expected to fall back somewhat since the rise in prices has been out of all proportion to the fall in the long-term rate of interest; but the ½ per cent. drop in the official rate is almost certain to mean that the long-term rate will find a level at least this much lower than it has been recently.

The freeing of commercial bill rates (to levels five-eighths per cent. below those ruling previously) will probably be accompanied by some reduction in commercial loan rates, although a great volume of business and, of course, personal loans are made by the banks at rates which, indeed, have no relation to the Bank rate. The price of raising long-term capital may be somewhat reduced and all this is likely to give a fillip to investment, but it is already being made clear that the official view is that there is no warrant for a general easing in the tighter credit policy which the banks have adopted over the past 18 months.

The balance of payments position, although sound—and it is noteworthy that there has been no special strain on dollars this autumn, the exchange rate remaining absolutely at parity—has no spectacular margin of safety and the gold reserves, although continuing to rise, are still at a low level in relation to the annual turnover of this country's overseas trade and in relation to its sterling debts.—*All Rights Reserved.*

REDUCTION OF BANK RATE IN BRITAIN

NO FUNDAMENTAL CHANGE IN MONETARY POLICY

THE first reactions to the cut in the British Bank rate were recorded in the "Market Gossip" columns of our last issue. It is now proposed to cover this development in a detailed manner, as it has evoked considerable interest among banks and business men in this country. The Bank of England announced the reduction of the Bank rate from 4 per cent. to 3½ per cent. on the 17th inst. The former rate was in vogue since 11th March, 1952, when it was increased from 2½ per cent. This was the second increase by the Conservative Government. The first increase took place on 8th November, 1951, that is, soon after the Conservative Party assumed power.

The present reduction represents the first downward movement in the Bank rate since October, 1939, when the rate was lowered from 3 to 2 per cent. The lower rate persisted for nearly 12 years thereafter. The table below shows at a glance the trend of changes in the Bank rate in the U.K. during the last quarter of a century:

Changes in the U.K. Bank Rate

Date	*Rate* Per cent.	*Date*	*Rate* Per cent.
1927		1931	
21st April ..	5-4½	21st September ..	6
1929		1932	
7th February ..	5½	18th February ..	5
26th September ..	6½	10th March ..	4
31st October ..	6	17th March ..	3½
21st November ..	5½	21st April ..	3
12th December ..	5	12th May ..	2½
1930		30th June ..	2
6th February ..	4½	1939	
6th March ..	4	24th August ..	4
20th March ..	3½	28th September..	3
1st May ..	3	26th October ..	2
1931		1951	
14th May ..	2½	8th November..	2½
23rd July ..	3½	1952	
30th July ..	4½	11th March ..	4
		1953	
		17th September..	3½

For some months past, it was being felt by many in Britain that the next change in the Bank rate would be in a downward direction. It was this feeling that was responsible for the buoyancy of the London Gilt-edged market all these days. For, during this year, three other countries had preceded the U.K. by reducing their rates of interest. Thus, in March 1953, Austria cut its rates by ½ per cent. to 5 per cent. In the following April, Holland followed, with a cut of ½ per cent. in June; the German rate was brought down from 4 to 3½ per cent. In fact, the lead towards the declining trend had been given in 1952 itself by Belgium and Germany which had reduced their rates from 3½ per cent. and 4½ per cent. to 3 per cent. and 4 per cent. Thus, for more than a year now, the tendency in Europe has been towards softening the interest rates a little. Now that Britain and France have joined this movement, the general level of European Bank rates may be said to have been established at a distinctly lower level than that a year ago. The table below giving an international comparison of Bank rates ruling at present in most of the important countries will be read with interest:

Country	*Rate of interest* Per cent.	*Country*	*Rate of interest* Per cent.
Switzerland ..	1½	France	3½
U.S.*	2	Germany	3½
Canada	2	India	3½
Portugal	2½	Italy	4
Holland	2½	South Africa ..	4
Norway	2½	Denmark ..	5
Belgium	3	Austria	5
Sweden	3	Finland	5½
Spain	3.2	Japan	5.8
U.K.	3½		

* Federal Reserve Bank of New York discount rate.

In marked contrast with the trend in Europe are the interest rates in America which have been hardening. The U.S. provides the only important instance of an increase in Bank rate anywhere in the world over the past year. In January, 1953, the Federal Reserve Bank of New York discount rate was raised from 1½ per cent. to 2 per cent. However, even in the U.S., the trend of open market rates of interest in recent months has been downward, following considerable relaxation in credit restrictions, as, for instance, a lowering of reserve requirements.

The change in the U.K. Bank rate announced last week has been interpreted by a spokesman of the Bank of England as only a technical adjustment. Care has been taken by the Bank authorities to lay stress on the fact that the change does not involve any change in the tighter money policy, that is, making borrowing difficult—which the Government has been pursuing since March last. The Bank of England's directive to commercial banks to exercise restraint in their lendings still continues. The change has been made, we are told, to watch certain technical developments that have taken place since the rate was last raised. In other words, it is a move to bring the Bank rate in line with the market rates. The present reduction in the rate has been welcomed by the city as another step forward towards freedom and flexibility of interest rates.

The developments since the Bank rate was raised and the need felt for a change in the Bank rate in England have been clearly stated by "Lynceus" of the *Economist*, London. He observes: "The increase in the Bank rate to four per cent. in March, 1952, was made at a time, when sterling was under desperate pressure, when gold and dollars were oozing out of the reserves at a rate which would have emptied them in a matter of months. That increase in the Bank rate, in conjunction with other measures as import cuts, had the desired effect. It checked inflation, it revived confidence in sterling, it shifted the balance of payments in favour of the sterling area. Success of that policy was there for all to see in the impressive recovery of sterling exchange and of gold and dollar reserves that has taken place over the past year. If 4 per cent. was the right level for the Bank rate in the desperate circumstances of March, 1952, it had clearly ceased to be the right level in the much more cheerful circumstances of the summer and autumn of 1953."

While thus the 4 per cent. Bank rate did achieve its aim of curbing inflation, another series of events in recent months indicated that the level was not in line with the changes in the economic climate. As already stated, in most countries in Europe discount rates showed a tendency to decline. Secondly, commodity prices registered a steady downward movement. The sellers' market gave place to a buyers' market. Slackness in business conditions, too, appeared in the economy of most countries. There was growing competition in export markets and the cost of existing bank accommodation based on relatively high Bank rate of 4 per cent. exerted itself heavily on export trade and industries. In the circumstances, continuation of the Bank rate at the high level would have accelerated the deflationary conditions. Shrewd observers, therefore, pointed out the need for a reduction in the rate.

Two Rates of Interest

Since November, 1951, there have been two rates with the Bank of England, one the rate at which the Bank advances money to the market against Treasury Bills for a short period of seven days and the other at which the Bank discounts trade bills. The difference between the two rates was deliberately kept at ½ per cent. It may be noted that the Bank rate is the minimum rate at which the Bank of England discounts approved bills of exchange. The Special rate is the rate at which the Bank lends to the money market against Treasury Bills. The Special rate was introduced in November, 1951, when the Bank agreed to lend against Treasury Bills for a period of seven days at ½ per cent. below the Bank rate. The difference between the two rates was maintained when the Bank rate was raised to 4 per cent. in March last, while the rate against Treasury Bills continued to remain at 3½ per cent. For all practical purposes, although the Special rate tended to be effective, for the past few months neither of the rates had been effective, as the authorities gave the market assistance when required without placing it into the Bank. The present reduction in the Bank rate to the level of the Special rate bridges the gap. In this context, the remarks of the *Financial Times*, London, are worth noting. It writes:

"When Mr. Butler raised the Bank rate from 2 per cent. to 2½ per cent., the rate at which Treasury Bills were discounted by the Bank of England was left at 2 per cent. The significance of Mr. Butler's first move towards dearer money was that he made the 2 per cent. rate effective for the money market where before it had been meaningless. When the Bank rate was raised to 4 per cent. in the 1952 budget, the rate at which the Bank of England would rediscount Treasury Bills was again kept at ½ per cent. below the Bank rate. Except for those money rates which are specifically related to the Bank rate, this has in fact been the effective rate ever since then. What the Bank of England has now done is to bring these two rates together. The Bank rate and the rate at which Treasury Bills are rediscounted will now be the same. The significance of this is that any further changes in the Bank rate, either up or down, will have immediate and real effects right through the whole structure of money rates. The authorities have taken up a position, in other words, from which they can operate, if they should so wish, with the maximum effect next time."

Commenting on the change, the *Economist* observes as follows:

"The technical aspects, however, are certainly of high importance. Since commercial bank lending rates are related to Bank rate proper, the existence of the Bank's Special rate had the effect of producing a wide spread between rates charged to commercial borrowers and those charged in the Government on Treasury Bills. The resultant anomaly was even more clearly shown in the margin between the 3 per cent. rate for first class commercial bills and the 2½ per cent. rate that has been general for Treasury Bills. But the narrowing of these gaps in order to make the Bank rate more effective could have been secured either by reducing Bank rate or by raising the Special rate. To satisfy the purely technical objective of promoting a more flexible and more normal market, the Bank had to impart either an upward or downward twist to at least part of the whole rate structure. It has chosen the latter, and thereby brings about automatically a reduction in the rates charged for the majority of bank advances—excluding those to personal and business borrowers whose loans are running at rates that, though technically based on Bank rate, are subject to high minimum charges. The very fact that there was this impact upon advances rates has caused some softening of rates elsewhere. But since the Bank's move was not a simple cut of ½ per cent. in its own rates, the clearing banks seem to have decided to reduce by only ¼ per cent. the rates that are under their own control. Deposit allowances are apparently to be fixed at 1½ per cent. instead of 2 per cent. and rates charged for call loans against Treasury Bills are likely to move similarly. The commercial bill rate will, of course, fall more sharply, and may be allowed to become a flexible, instead of a pegged, rate. But, in either case, the unnatural margin over the Treasury Bill rate will be narrowed.

"All this, in short, is an important contribution to normality in the rate structure, and will undoubtedly increase the Bank's freedom for manœuvre. But it is idle to pretend that it is wholly technical, and does not betoken a feeling of greater confidence. The stock markets, however, seem in their first response to have put too much emphasis upon the confidence ingredient and too little upon the technical. Gilt-edged prices were marked up immediately and, despite the uncertainties about the technical implications, they climbed even faster. At the close on Thursday, the whole list had been lifted substantially, with the gains in the longer dated and irredeemable stocks ranging up to 1-7/8."

One important effect of the reduction in the Bank rate in the U.K., as will be seen from the above quotation, is the lowering of the lending rates by clearing banks. Thus for loans against Treasury Bills—that is, the call money rate—banks will in future charge 1½ per cent. instead of 2 per cent. and for loans against short-

HOW RESTRICTIVE ARE U.S. TARIFFS AND QUOTAS?

FINDINGS OF DR. HOWARD S. PIQUET

IN the controversy over the issue of "Trade, not Aid" in the United States, broad assertions have been made ranging all the way from dire prediction of doom if tariffs and quotas are retained to doom if they are removed. A pioneering study by Dr. Howard S. Piquet of the Legislative Reference Service, Library of Congress and a leading authority on international trade and economics, now provides factual data by which economists can measure the magnitude of the effects of a temporary suspension of all tariff duties and import quotas. The study, entitled *Aid, Trade and the Tariff*, is published by the Thomas Y. Crowell Company, New York City.

Using 1951 as a base year, Dr. Piquet examines in detail more than 220 commodities covering 80 per cent. by value of all dutiable imports. In each case, he analyses the extent and the kind of impact each commodity would have on the American market if it could be imported freely, and then he outlines the types of adjustments necessary to absorb these impacts.

His overall conclusion is that the U.S. tariffs and quotas, in general, are not as restrictive as generally thought. Among his findings are:

1. A yearly increase of $800 million or at most $1,800 million of foreign goods would be all that could be expected to enter the United States if tariff duties were temporarily suspended but existing import quotas were maintained. And this increase would be likely to develop only over a period of two or three years during which overseas suppliers would be adjusting themselves to the new market situation.

2. Even in the event that all quotas were temporarily suspended at the same time, imports would rise only $1,200 million or at the most $2,600 million.

3. Of the $3,800 million of dutiable goods coming into the United States in a typical year, only $1,500 million would represent commodities which, with no tariff barriers, would probably flow into the country in large enough volume to account for as much as 10 per cent. of total domestic consumption of the individual items.

For the purpose of study, it was assumed that suspension of import barriers would be for the duration of the dollar-gap emergency only, and that all duties would be suspended simultaneously.

Effect on Individual Industries

According to the study, individual industries would be affected in very different ways by the suspension of tariffs. Worst hit by increased competition from imports would probably be manufacturers of earthenware and china, hand-blown glassware, toys and dolls, clocks, optical instruments, leather goods, selected textiles, canned tuna fish, scissors, knives with folding blades, and other miscellaneous items. Import duty rates on these items now range from 14 per cent. to 184 per cent. At these levels, imports of most of these products normally amount to less than 10 per cent. of domestic production. If tariffs were suspended, imports would be likely, in time, to account for 10 per cent. to 90 per cent. of total domestic consumption.

Dr. Piquet's study explains that of the $10,800 million of merchandise imported into the United States in 1951, appoximately $6,000 million entered free of duty. Broadly speaking, raw materials that are not produced in the United States are admitted into the country free of duty, whereas most foreign products that compete with products made or grown in the United States are subject to duty.

It is pointed out that suspension of tariffs obviously could have no direct effect upon imports that are not dutiable—e.g., coffee, natural rubber, newsprint, paper base stocks, unmanufactured copper, cocoa, tin, vegetable fibres, undressed furs, and fertiliser materials. Of the $4,800 million of dutiable imports entering the United States in 1951, slightly more than one-half consisted of finished and semi-finished manufactured products, over one-third consisted of agricultural products, and the remainder (slightly over 10 per cent.) chiefly of mineral products.

The increase in imports, following tariff (but not quota) suspension, would range from a minimum of approximately $800 million to a maximum of $1,800 million which would represent an increase of 8 per cent. to 17 per cent. in total imports. In terms of dutiable imports alone, the increase would represent an 18 per cent. to 38 per cent. expansion. Or, taking the median between the minimum and maximum estimates, dutiable imports would be larger than they were by 28 per cent. in the absence of tariffs, and all imports (dutiable and free together) would be 13 per cent. larger.

More than 40 per cent. of the dutiable imports covered by the analysis would not be noticeably affected by tariff suspension, Dr. Piquet says. Included in this group are such large imports as petroleum, cut diamonds, burlap, lumber, nickel and lead. Tariffs are relatively unimportant to the trade in these commodities. With regard to the other 60 per cent. (aggregating slightly more than $2,000 million), the study estimated that, on the basis of conditions prevailing in 1951, tariff suspension might make possible a rise in annual volume of between $674 million and $1,400 million.

Commodity Groups

Commodity groups likely to register the most significant increases percentage-wise probably would be in the *textile* group, including such items as coarse linen, towelling and hemmed linen handkerchiefs (from the United Kingdom), linoleum (the United Kingdom and the Netherlands), cotton hosiery (France and the United Kingdom), woollens and worsteds (United Kingdom), and apparel wool (largely from Australia); in the *machinery and vehicle* group, including hosiery knitting machines (United Kingdom), bicycles (United Kingdom and Germany), and sewing machines (Japan, Germany and Italy); and in the *miscellaneous* group, including clocks (France, Switzerland, and Germany), optical instruments (Japan, Germany, and France), and toys and dolls (Japan, United Kingdom, and Germany). The commodity groups showing the smallest overall percentage increases in imports would be *wood and paper products, vegetable food products and beverages*, and *metals and manufactures*. Among the individual commodities which would show the largest percentage increases in imports (100 per cent. to 300 per cent. or more), are earthenware and chinaware, hand-blown glassware, leather gloves, leather handbags, fur-felt hats, clay tile, clocks, canned tuna fish, linen towels, hemmed linen handkerchiefs, scissors and shears, and knives with folding blades.

For the most part, the study said, the commodities in the above group, are subject to relatively high duties, and the volume of imports is small as compared with domestic production. In other words, they are probably significantly restricted by the U.S. tariff.

The Other End of the Scale

At the other end of the scale, out of the $3,800 million of dutiable imports analysed in this study, there are:

$1,800 million consisting either of products that are not produced at all in the United States or of imports which would not increase significantly in the event of tariff suspension—e.g., quebracho tanning extract, handmade oriental rugs, hardwood lumber, and synthetic rubber.

$58 million consisting of import specialities, that is, imports which supply 90 per cent. or more of domestic consumption of like products—e.g., castor beans, edible olive oil, and mica.

$104 million including imports that probably would account for less than 1 per cent. of domestic consumption—e.g., live poultry, cotton yarn, linoleum and paints.

$405 million accounting for between 1 per cent. and 10 per cent. of consumption—e.g., pecans, potatoes, canned tuna fish, plywood and shoes.

Thus, in the aggregate, about $2,400 million of the $3,800 million of dutiable imports analysed consists of items that appear not to be highly competitive with domestic production. At least, the total displacement by such imports would be small.

The other $1,400 million consists of imports that, in the event of tariff suspension, probably would account for between 10 per cent. and 90 per cent. of the domestic consumption of like products. It is in this area in which claims of injury would seem to be the most likely to prevail.

The quotas in effect in 1951 applied to imports of wheat, wheat flour, sugar, long-staple cotton, short-staple cotton, linseed oil, butter, rice and rice products, peanuts, flaxseed, cheese, and live cattle and dressed beef. If, however, these quotas were to be lifted, imports would increase probably by as much as $358 million to $833 million. Imports of the products subject to quota would thus increase by 67 per cent. to 156 per cent. by virtue of quota suspension alone. In terms of *dollar volume* alone, Dr. Piquet says, the most significant increases probably would be in imports of sugar, butter, and live cattle and dressed beef. In terms of *percentages*, the most important increases probably would be of butter, Roquefort and bluemould cheese, cheddar cheese, peanuts, and either flaxseed or linseed oil.

Tariffs and Quotas

Thus, suspension of tariffs might result in an 8 per cent. to 17 per cent. increase in total imports. And if quotas also were to be suspended, the increase would be stepped up to 11 per cent. to 25 per cent. In terms of volume, the increase attributable to quotas would range from $358 million to $833 million. The study points out that it is important to note that the quotas now in effect apply only to agricultural commodities, or simple agricultural manufactures; they do not apply to other manufactured goods.

The study also says that imports of cattle and beef, wheat and wheat flour, cheddar cheese, rice and rice products, and short-staple cotton, even after suspension of quotas, in all probability would be equal to less than 10 per cent. of the domestic consumption of each commodity.

The significant items, Dr. Piquet says, are the competitive commodities—meaning by "competitive" any product the imports of which (after suspension of import restrictions) would account for between 10 per cent. and 90 per cent. of domestic consumption of that product.

Such commodities now subject to quota restriction are sugar, butter, all cheese other than cheddar, flaxseed and linseed oil, peanuts, and long-staple cotton. Imports, which amounted to $435 million in 1951, would probably show a 72 per cent. to 172 per cent. increase (minimum increase $315 million, maximum $748 million) if quotas were to be suspended. Thus, suspension of quotas on these few agricultural products would account for almost as great an increase in imports as would the suspension of tariffs on all "competitive" agricultural imports.

Difference Between 19th and 20th Centuries

On the "Trade, not Aid" issue, Dr. Piquet observes that, although suspension of American trade barriers would certainly reduce the dollar gap in U.S. trade with the rest of the world, it would by no means be permanently or completely eliminated. He indicates that the tendency of other countries to suffer periodic dollar shortages arises less from artificial impediments to trade with the United States than from profound and apparently irreversible changes in the world economy over the past 50 years.

Dr. Piquet points out that policy prescriptions based on an idealised picture of the freely

COTTON TEXTILE PRODUCTION CONTROL

COMMODITY CONTROLS COMMITTEE URGES RELAXATION

THE observations of the Commodity Controls Committee in so far as cotton textiles are concerned are not of much significance. This is so for two important reasons. First, with the abolition of controls on prices and distribution of cotton textiles, the views of the Committee on it are only of academic importance. Secondly, the Committee has failed to make any specific recommendation regarding production control, barring the general and vague statement that control over production should be progressively lifted and it need be retained only to such an extent as may be required to protect the handloom industry and to ensure that the consumer gets durable cloth. Even the Government of India's decision on this recommendation is very vague, as witness the remarks that the "Government have already relaxed the control over production to a considerable extent and they note the recommendation of the Committee on the subject."

It is, indeed, unfortunate that both the Commodity Controls Committee and the Government have not recognised the need for the immediate withdrawal of at least those controls on production which have nothing to do with the handlooms. Not only has production control not achieved any significant result but, actually, it has acted as a damper on the mills which are compelled to produce, in several cases, unwanted varieties of cloth for which there is no demand. It is no wonder, therefore, that reports of accumulations of cloth have been pouring in from different centres in the past many weeks. Again, the restrictions on the manufacture of *dhotis* by mills has led to a sharp rise in the prices, to the extent of as much as 20 to 30 per cent. It has not succeeded in alleviating the distress of the handloom weaver either.

The chief consideration which has weighed with the Committee in not suggesting removal of production control is that such control is required to protect the consumers' interest against mills "which do not themselves adhere to high standards." Views more or less similar to these have also been expressed by the Working Party on the Cotton Textiles Industry (1952). Thus observes the Party: "... unless the industry as a whole is in a position to put its house in order and adopt measures which will expose erring members and mete suitable punishments to such, if necessary, by claiming powers from the Government for such reform measures being adopted by them, it will be difficult to get out of the era of controls which many of them desire."

These observations are valid only in a sellers' market when supplies available are not adequate to meet the requirements in full. But the point is whether these conditions exist now. The reply to the poser is an emphatic "no." As readers are aware, sellers' market for cotton textiles has completely disappeared and buyers' market has come to be established on a permanent basis, not merely in India but the world over. These are days when consumers' sovereignty is being exercised to the utmost. If, therefore, the cotton textile industry is to put its house in order, it is imperative that the industry should be completely decontrolled. It is only when that the mills will be able to make alterations in their production programmes, with a view to producing the type of cloth which suits them best, on the one hand, and to meeting the changes that may take place in the market from time to time.

That the production control on cotton textiles has outlived its utility is beyond dispute. If any justification were necessary for the complete abolition of this control, it would be found in the fact that the supply position in respect of cloth is quite comfortable and bids fair to be so even in future, thanks to the ready availability of raw materials. The quantity of cloth produced during the first seven months of this year amounted to as much as 2,889 million yards, giving a monthly average of 413 million yards, which compares very favourably with 2,588 million yards, or a monthly average of 384 million yards, in the same period last year. Considering the several favourable factors such as availability of adequate supplies of raw cotton, improved labour situation and better transport facilities, one can legitimately expect the production for the year to aggregate 4,956 million yards (as against 4,608 million yards in 1952)—a level which overtakes the war-time record of 4,850 million yards for undivided India. This figure, it will be interesting to note, is higher than the Planning Commission's target of 4,700 million yards for 1955-56 by 256 million yards.

While production has thus been rising, absorption of cloth has been lagging behind. Demand for exports to overseas markets is low. Internal offtake also has not shown any spectacular improvement. In the circumstances, the Government would be acting wisely if it were to withdraw the production control, thereby leaving it to the mills to produce whatever cloth they think the market can absorb. Indeed, if it tarries any longer, it will be carrying the moral obligation to support the prices of cloth and yarn.

To revert to the report of the Commodity Controls Committee. The Committee has failed to make any specific observations on the question of controls on exports of cotton textiles with a view to ensuring quality. It has merely reiterated the objectives of the Cotton Textile (Export Control) Order, 1949. The only statement that it has made is: "In the event of the supply of cloth and yarn not being sufficient to meet the internal demand, restrictions on export could be imposed. But, in that event all that is necessary is to take action under the export control regulations.

The Committee, however, has put forward an important suggestion relating to the removal of restrictions on the entry of cloth imposed by certain State Governments. In the opinion of the Committee, these restrictions are a retrograde step, as they are against the spirit of the Essential Supplies (Temporary Powers) Act, the main object of which is to make cloth available to the public in plentiful supply and at cheap prices. It is gratifying to note that the Government of India has recognised this aspect. It has already drawn the attention of the States to the undesirability of restricting the movement of cotton textiles into or out of their respective areas.

The other important recommendations of the Committee are that (a) the Government Contractors (Disposal of Cotton Textiles, Unused Materials and Rejected Stores) Order, 1949, should be withdrawn and (b) the returns required to be submitted by the mills should be reduced as far as possible and simplified. The Government of India has accepted the former recommendation, which is only as it should be, in view of the fact that there is no price and distribution control on textiles at present. With regard to the returns, the Government has not announced its decision. The cotton mills have very often complained against the numerous and detailed returns to be submitted to the Government. Indeed, it is said that the returns are so innumerable that the mills have to maintain a full-fledged department for preparing and submitting them. Now that controls have been removed, there is vast scope for reducing the number of returns and, as the Committee has rightly emphasised, only the very important returns should be asked for. Another point to be mentioned here is that the State Governments also call for returns. In this connection, the Committee has made an important suggestion. According to it, a meeting of all the authorities who receive returns from the textile industry, whether the Central Government or State Governments, should be called by the Ministry concerned at an early date and an attempt made to see whether the purpose can be served by copies of certain returns being supplied to more than one authority. Where the number of returns cannot be reduced by making copies of the same returns, unless there are overwhelmingly strong reasons, returns should not be called for more frequently than once a month.

EXPORTS OF CLOTH

The Government of India has extended the period of the free licensing of cotton textiles up to the end of June, 1954. Accordingly, the licences for exports of cotton piecegoods and manufactures other than cotton waste blankets, which are due to expire on 31st December next, will remain valid for a further period of six months. The licensing procedure and other conditions will, however, remain the same.

The above decision of the Government is a sequel to the surfeit of cloth supplies, consequent on the steady and perceptible improvement in output in the past few months. But the extension of the shipment period, in itself, will not lead to any significant rise in exports. True, exports of cloth in recent months have shown a slight improvement, the quantity actually shipped during the month of August, 1953, being 62.7 million yards, as against 56 million yards in July and 52 million yards in June. The aggregate exports for the first eight months of the year amounted to 435 million yards, which compares favourably with 379 million yards in the same period last year. The following table gives the trend of exports during these eight months, as compared with the corresponding period of 1952:

(In million yards)

	1953	1952
January	43.4	30.7
February	28.6	29.4
March	53.9	22.4
April	63.6	26.0
May	64.5	49.4
June	52.1	68.9
July	56.0	69.4
August	62.7	82.6
Total	434.8	378.8

The improvement in cloth exports noted above, it is, however, stated, has been due mainly to the delay in the shipment of cloth in previous months in expectation of the abolition of export duty and partly to the eagerness of Burmese importers to get into their country as much cloth as possible before the end of this month when the Burma Government's Imperial Preference policy ends.

U.S. COTTON INTERESTS PROPOSE WORLD CONFERENCE

MANPOWER STILL INADEQUATE

(From Our Special Correspondent)

MANCHESTER, 15th September

MANCHESTER LETTER

LANCASHIRE textile exporters with interests in the Indian market were told at Manchester this week (Monday) that prospects for increasing shipments of cotton goods were not encouraging until India's living standards improved. This warning was given by Mr. E. A. Midgley, United Kingdom Trade Commissioner at New Delhi, who paid a two-day visit to the Manchester Chamber of Commerce for talks on trade openings. "India's bread-and-butter needs for textiles," he said, "can be more than met by her own cotton industry."

Proceeding, Mr. Midgley observed: "Our future prospects in India lie in assisting her industrialisation and development programme with capital goods rather than in sending her more consumer goods. The sooner she completes her programme and raises the standard of living, the sooner she will become an attractive market for consumer goods of all sorts, including textiles."

New International Talks?

A full year has elapsed since the delegates of the main cotton exporting nations of the world met at Buxton to consider their mutual problems and to draw up some estimate of the overseas trade which they considered their respective industries were capable of securing during the next few years. Despite the fact that it is already clear that these forecasts are well beyond the grasp of any of the countries so far as 1953 is concerned, there is already talk in some quarters of another conference on similar lines.

This time the initiative comes from the United States, where it has been unofficially proposed that a gathering of the world's cotton leaders should take place at Memphis, in the heart of the cotton-growing area. This is, to some extent, significant, because the sponsors of the movement are men whose life is largely devoted to the production of the raw material and who obviously wish to see increased consumption of cotton as opposed to synthetic fibres.

There is a body of opinion which is by no means in favour of these frequent assemblies of industrialists, believing that less talk and more action is called for. Certainly, there has been a spate of conferences, both regional and international, since the war, and although a good deal of interesting data has been exchanged, it is questionable whether the results have fully justified the hopes expressed by the participants.

At any rate, the suggestion from the United States has not met with unanimous approval among traders in that country. The sponsors of a meeting between American cotton leaders and delegations from Lancashire, Western Europe, India and Japan have been told that the basic problem is as much the price of American cotton as anything else. Although a sudden reduction in support level prices in the United States would cause untold hardship, not only among farmers but in the textile industries of the world, the view is hardening that lower values are necessary if cotton as a fibre is to compete with its rivals.

Labour Outlook

In view of the importance of the subject, it is odd that not one of the sessions at the forthcoming Cotton Board Conference next month is being devoted to the recruitment of labour for the industry. This is a vital factor at the present stage of development and a ventilation of views might well have produced some individual ideas which could be followed up centrally or locally by the trade.

Comparisons between production this year and last year obviously favour the existing level of output, but set against the figures for 1951, the quantity of yarn and cloth now being produced is still well short of the post-war peaks then achieved. With a labour force so drastically reduced, this is not surprising and every effort is required to induce more entrants into the industry.

The following table shows the manpower situation in the various branches, from the post-war high point to the lowest level of the slump, together with the current position:

	Nov., 1951	Aug., 1952	Aug., 1953
Spinning ...	124,630	101,530	109,410
Doubling ...	32,240	23,870	25,510
Waste spinning	7,330	6,610	6,960
Weaving ...	156,680	130,620	137,500
Total ...	320,880	262,630	279,380

Recent reports indicate that more mills are reviving the "housewives' shifts" which were a feature of the trade two or three years back. The spinning section has gained about 1,000 part-timers this year, but a similar movement has not yet occurred in the weaving sheds. The necessity for securing more workers to reduce the length of time taken to complete contracts needs no emphasis to merchants who are constantly being harassed by customers to expedite supplies. The situation in the finishing section is even less encouraging than in the producing branches.

Quality Trade

The future of the British cotton industry in export markets lies in quality goods, says Mr. Charles Schofield, Secretary of the Operative Spinners' Amalgamation, in his quarterly reports submitted to members this week. According to him, the falling off in overseas trade cannot be regarded with complacency, as, without a substantial Commonwealth and foreign trade, the cotton industry will become merely a very nominal section in the country's economy. "It is, therefore, imperative," to quote him, "that the production and marketing of better types of goods, such as manufactures which have not as yet been produced in other countries, should be kept to the forefront." In his opinion, "bread-and-butter" lines should not be neglected, although it is in this category where international trade is diminishing and competition becoming increasingly intense. The development of overseas trade in high quality goods was adversely affected by the continuation of purchase tax for far less attention is being given to the marketing of goods carrying tax.

Manpower Gain

More full-time operatives were recruited to Lancashire spinning mills in the second week of August than in any week over the past nine months. Cotton Board figures of recruitment and production show that the mills gained 395 more workers than they lost during the week. Only twice in the last four years has the week's recruitment gain been exceeded.

Holidays curtailed output of cotton and rayon yarn to 12,910,000 lbs. which compared with 17,080,000 lbs. in the previous week and 9,120,000 lbs. in the corresponding week of 1952.

Cloth Output

Lancashire weavers produced sufficient cotton and rayon cloth each week in the five weeks ended 1st August to stretch from Britain to Australia and back. Despite holidays, the mills turned out a weekly average of 35,450,000 yards—an impovement of more than 8,000,000 yards a week on the same period last year. As compared with the previous month, however, output showed a drop of 15,000,000 yards a week. Recruitment of full-time operatives to the weaving sheds during the period aggregated 125 and there was slight gain in the number of part-time workers.

New Mill Deal?

Another big Lancashire textile company—the Soudan Mill Co., Ltd., of Middleton, near Manchester—is involved in a take-over bid by an unnamed buyer, it was revealed this week. Mr. W. Wallace Brierley, the Chairman, said that a "conditional offer" had been received for the purchase of the whole of the share capital of the Company and that the offer was one which "very definitely interests" the Directors, who were proceeding further with the negotiations.

Negotiations might take some time, but, in the meantime, the Directors urged stockholders to retain their interest in the Company. "It is the intention of the prospective purchaser to continue working the Company's mills," said Mr. Brierley.

Issued capital of the Soudan Mill is nearly £240,000. The Company operates more than 100,000 mule spindles and 60,000 ring spindles, spinning both cotton and rayon yarns.—*All Rights Reserved.*

Widespread changes were announced in the selling rates for Lancashire spinners, issued by the Raw Cotton Commission. The cover symbol ATNY was reduced by 12 points to 30.09d. per pound for December delivery and by 14 points to 30.58d. per pound for March delivery. Index prices for actual cotton were revised irregularly, all American types being reduced 10 points, with the exception of African BP, which was unchanged. Egyptian qualities were generally advanced in price, following revisions in differentials in the Alexandria market. Karnak types were unchanged, but Giza qualities were raised by one farthing per pound. The two higher grades of Uppers cotton were increased ½d. per pound and third grade by ¼d. Among Sudan varieties, Tokar and certain KL types were raised ¼d. Peruvian cotton remained unchanged. Representative prices included American 15/16-inch middling 31.85d. per pound. Egyptian Karnak type KOMK 43.45d. and Ashmouni type SWAN 34.20d.

RATIONALISATION OF COTTON PRODUCTION

SHOULD MORE EMPHASIS BE LAID ON SHORT-STAPLE VARIETIES?

A SUBJECT which has recently engaged the attention of cotton interests in the country is the rationalisation of the production of cotton. India, as is well known, is well supplied in respect of short-staple varieties, moderately supplied in respect of medium-staple varieties and very inadequately supplied in respect of long-staple varieties. Considerable research and extension work has been done with commendable results in the sphere of medium-staple varieties. Research workers continue to devote their attention towards the production of long-staple varieties, though the results are not as satisfactory as one might expect. This has led to the controversy whether it was not time that the whole problem was examined anew, and some shift in emphasis was made in research and extension work, so that short-staple varieties, for which there is good demand in foreign markets, got more attention than they have received in the past.

In order to view the whole subject of the rationalisation of the production of cotton in its correct perspective it is essential that one should consider the pattern of yarn production in India, the output of the different varieties of cotton used in the manufacture of different counts of yarn, and follow up this enquiry by an analysis of the deficiency or surplus of the varieties of cotton that are grown in the country. The pattern of yarn production, it is noteworthy, does not show any significant change since the pre-war years, as the following table shows:

	1938-39	5 years ending 1952
	%	%
1-10s	10.50	7.50
11-20s	42.30	50.00
21-30s	26.20	20.00
31-40s	12.00	12.50
Above 40s	8.75	7.00
Waste	1.25	1.20
	100.00	100.00

The following table gives the actual quantity of yarn of different counts spun during the three years ended 1951-52:

(In bales of 400 lbs. each)

	1948-49	1949-50	1950-51	1951-52
1s to 10s	377,202 (10.0)	301,023 (9.0)	208,016 (7.0)	229,309 (7.0)
11s to 20s	2,039,287 (55.0)	1,646,421 (51.0)	1,344,562 (46.0)	1,560,570 (47.0)
21s to 30s	892,537 (16.0)	806,635 (15.0)	437,148 (12.0)	619,703 (18.0)
31s to 40s	382,241 (9.0)	429,275 (13.0)	580,853 (20.0)	536,048 (16.0)
Above 40s	267,845 (7.0)	313,772 (10.0)	296,578 (10.0)	316,576 (9.0)
Waste, etc.	39,379 (3.0)	23,646 (2.0)	33,553 (5.0)	49,404 (3.0)
Total ..	3,698,291 (100.0)	3,225,842 (100.0)	2,904,710 (100.0)	3,312,610 (100.0)

N.B.—Figures in brackets show percentages.

The following table gives the production of yarn by counts in the five calendar years ended 1952:

(In bales of 400 lbs. each)

Calendar year	*Upto 6s*	6-10s	10-20s	20-40s	*Above 40s*	*Total*
1948	402,647*	2,032,743	928,290	255,360	3,619,040 (1,447)
1949 .. 122,690	216,365	1,772,450	978,423	311,965	3,397,903 (1,359)
1950 .. 101,370	132,945	1,416,845	982,052	302,333	2,935,550 (1,174)
1951 .. 109,002	125,754	1,562,980	1,129,586	332,330	3,250,652 (1,3041)
1952 .. 114,930	203,652	1,843,516	1,243,622	212,058	3,622,778 (1,448)
Average for 5 years.. 111,998	216,272	1,726,706	1,051,595	243,410	3,366,983 (1,346)

* Includes 6s also.
N.B.—Figures in brackets denote yarn output in million lbs.

Since 1952, India's yarn output is running close to the Planning Commission's target of 1,600 million lbs. or 40 lakh bales of 400 lbs. each. On the basis of the production trends in recent years, it is possible to make a tentative estimate of the composition of the Commission's target of 40 lakh bales (1,600 million pounds) in terms of the different counts of yarn. The following table gives the probable count-wise composition of the target:

Yarn Production

	In million lbs.	*In lakhs of bales of 400 lbs. each*	*Percentage of Total*
Upto 6s	40	1.00	2.50
6-10s	80	2.00	5.00
11-20s	860	21.50	53.25
21-30s	320	8.00	20.00
31-40s	200	5.00	12.50
Above 40s	80	2.00	5.00
Waste yarn	20	0.50	1.25
Total ..	1,600	40.00	100.00

Having examined the probable composition of the targeted production of cotton yarn, it is now necessary to investigate the supply position of Indian cotton varieties which go into the making of the different counts of yarn. It is, of course, difficult to classify too rigidly the cotton varieties that can be used in the manufacture of different counts of yarn. To mention only one complicating factor, the early pickings give a better yarn than the later pickings. The relationship between the variety of cotton used and the kind of yarn spun will also depend on the mechanical equipment in the mills. Again, a mill may, for reasons of better quality, spin down a given variety of cotton.

Despite these limitations, certain broad classifications can be made of the cotton varieties that are suitable for the spinning of the different ranges of yarn-counts. The following gives such a tentative classification:

Upto 6s: Bengals.

6s to 10s: Oomra Deshi, Mungari, Mathia, Lower Dhollerah.

11s to 20s: Jarillas, H-420, 197/3, L.S.S., Dhollerah, Kalyan, Western (lower quality), Coconada, Tinnevelly, Karunganni.

21s to 30s: Gaorani, Buri, Broach, Vijay, Surti, Jayadhar, Laxmi, Western Farm, Cambodia, 216F.

31s to 40s: Rajapalayam, Californiam, East African, Peruvian, Tanguis.

Above 40s: Sudan, Egyptian, Peruvian Pima.

Waste yarn: Soft waste, Egyptian strippings.

Now it is necessary to find out what quantities of the different varieties of cotton are needed in order to enable the mills to reach the probable targets for the various counts of yarn, and also to estimate the surplus of deficiency in these varieties. The following table gives the adequacy or otherwise of the supply of the varieties of cotton needed to produce different ranges of counts of cotton yarn:

(In lakhs of bales of 400 lbs. each)

	Yarn target 1955-56	*Cotton required*	*Cotton grown**	*Surplus or deficit*
Upto 6s	1.00	1.20	3.00	+1.80
6s to 10s	2.00	2.40	1.50	—0.90
11s to 20s	21.50	25.08	16.50	—8.58
21s to 30s	8.00	9.33	14.50	+5.17
31s to 40s	5.00	5.83	0.50	—5.33
Above 40s	2.00	2.30	..	—2.30
Waste	0.50	..	..	..
Total ..	40.00	46.14	36.00	—10.14

* On the basis of 1951-52 output.

The table above reflects the estimates made by a certain section of expert opinion on cotton. It will be seen from the table that this section estimates that the country would need 46.14 lakh bales of cotton for producing 40 lakh bales or 1,600 million lbs. of yarn, and that, of the cotton so required, all the cotton needed for producing yarn 31s and above will have to be imported, except for some 50,000 bales of 216F and Rajapalayam, grown in India. It estimates the deficiency to be met from foreign sources, in respect of cotton for yarn 30s and above, at about 8.63 lakh bales of 400 lbs. each. For the remaining counts, it estimates the country's cotton requirements at 37.51 lakh bales which could be produced within the country. This section feels that, although there is a surplus suitable for spinning yarn upto 6s counts, namely, Bengal Deshi, it is necessary to encourage its production both because the consumption of this variety is likely to go up and the country should be in a position to export 3 to 4 lakh bales of this cotton. Hence, it urges the need for encouraging the cultivation of this variety and for the concentration of research on increase in the yield of this cotton consistent with the maintenance of its quality. It also feels that Rajasthan, certain areas in Madhya Bharat and Uttar Pradesh may be encouraged to promote the cultivation of Bengal Deshi.

The actual position in regard to the production and consumption of Bengal Deshi is as follows:

(In bales of 400 lbs.)

	Production (official)	*Mill consumption*
1942-43	687,000*	191,919
1943-44	921,000*	167,697
1944-45	562,000*	154,313
1945-46	498,000*	142,639
1946-47	475,000*	118,754
1947-48	237,000	140,393
1948-49	217,000	169,927
1949-50	420,000	147,227
1950-51	437,000	110,338
1951-52	416,000	123,838
1952-53	325,000	172,000

* Undivided India.

There are three other conclusions to which this section attaches special significance. In the first place, it recognises that there is a shortage of 90,000 bales in respect of cotton suitable for spinning 6s to 10s, but it feels confident that by preventing the mixing of Oomra Deshi, which is eminently suited for the production of 10s yarn, with Jarilla, which is grown in the Oomra Deshi tracts, it should be possible to find the quantity of Oomra Deshi and make up the deficiency in the supply of this cotton without recourse to any further expansion of acreage under Oomra Deshi. Secondly, the shortage of cotton in respect of the manufacture of yarn 11s to 20s (*vide* table above) can be made up—at least, partially—by the cultivation of improved seeds, such as 197/3, H-420 in the Jarilla districts and Kalyan in North Gujerat and Saurashtra. Thirdly, it feels that, as regards cotton suitable for spinning 20s to 30s, the surplus that is revealed in the table above is not a real surplus for three reasons: (1) The table is worked out on the basis of the estimated production of yarn 20s to 30s counts. This pattern may change. (2) The quality of some varieties of cotton that are used in the production of the group of yarn counts may be adversely affected by bad weather conditions, so that they become unfit for the manufacture of the counts-group for which they are intended. (3) Some mills may, and actually do, spin down these varieties, in order to obtain better lea strength and superior marketability. For these reasons, it urges that nothing should be done either to discourage their cultivation or to replace them by varieties, such as Jarilla, H-420, which are used for 18s to 20s.

In fine, this section holds that there is both scope and need for increasing the cultivation of Bengal Deshi. It holds that any artificial diversion of Deshi areas to the cultivation of staple varieties is not in the interest of this country. The need for increasing the production of these varieties arises not only from the imperative necessity to increase the exportable surplus of the variety of cotton to about 3 to 5 lakh bales but also from the fact that larger quantities of this variety are needed for such non-mill purposes as the making of *rajais*, padding jackets, etc. Accordingly, it holds that it would be worthwhile to examine the whole question of planning the production of different types of cotton in the country, and to see whether it was not time that the emphasis was shifted from extra long-staple cotton to short-staple cotton.

There is, however, another section of expert opinion which feels that these arguments are not based on very reliable statistical data. It questions the validity of the conclusion that there is a deficit of 8.58 lakh bales in respect of cotton suitable for 11s to 20s counts or that there is a surplus of 5.17 lakh bales of cotton suitable for counts 21s to 30s (*vide* table above). It holds that these estimates of both the deficit and the surplus are on the high side. This section estimates the production of raw cotton suitable for spinning 11s to 20s at 20,08,000 bales and the output of cotton suitable for spinning 21s to 30s at 11,30,000 bales, as against the requirements of 9,33,000 bales. Thus, it places the cotton deficit (for yarn of 11s to 20s group) at only 5.0 lakh bales and the surplus (for yarn of 21s to 30s) at only 1.97 lakh bales. These data are based on the following estimates of the output of different varieties:

(In bales of 392 lbs. each)

For spinning 11s to 20s:

Jarilla (including 197-3, H-420, Malvi) 15,56,000; L.S.S. 1,26,000; Dhollera-Kalyan 171,000; Western (lower quality) 43,000; Coconadas 12,000; Tinnevelly/Karunganni 100,000. Total: 20,08,000.

For spinning 21s to 30s:

Gaorani 2,48,000; Buri 1,05,000; Broach Vijay 1,94,000; Surti 94,000; Jayadhar/Lakshmi 162,000; Western Farm 158,000; Cambodia 1,48,000; 216F 21,000. Total 11,30,000.

This section also contends that although the present production of cotton suitable for the manufacture of 30s and above may be only 50,000 bales, it points out that the production of these varieties is likely to go up in the coming three or four years. The varieties which are used in this range of yarn counts are: Rajapalayam, P.A. 320F, Buri 0394 and MV1 and MV2. Under the seed distribution and multiplication schemes, already in progress, this section places estimates of the area under these varieties and of their targeted production as follows:

Varieties	*Target bred*	*Target date*	*Estimated output* (In bales of 392 lbs.)
	(In acres)		
P.A. 216 F.	85,000	1954-55	40,000
P.A. 320 F.	3,50,000	1958-59	1,75,000
Buri, 0394	2,00,000	1953-54	40,000
M.V. 1) (Rajapalayam) ..	2,50,000	1957-58	1,00,000
M.V. 2)			

If the targets for the production of different varieties, as shown in the table above, are reached, there would be less dependence, according to this section of expert opinion, on foreign varieties. On this basis, this section holds that the country would have to depend on foreign sources of cotton supply for the manufacture of counts 30s and above only to the extent of 5.08 lakh bales, and not to the extent of 8.03 lakh bales, as suggested by the other section of expert opinion. Finally, it argues that it would be too hazardous, technically speaking, to venture any rigid estimate about shortages or surpluses in the cotton supply of individual varieties since actual experience shows that the average count spun from each variety varies from mill to mill.

Difference in Emphasis

Such, in brief, are the points of view of those who urge the extension of the cultivation of short-staple varieties and of those who would like to see that the present trend towards maximising the output of long-staple cotton continued. It would, however, appear that those who urge the production of short-staple cotton do not favour the complete abandonment of all attempts at growing long-staple cotton or at devoting time and resources to experiments on production of extra long-staple. Nor are those who urge the continued concentration of research work on long-staple cotton averse to the improvement of the yield and quality of short-staple cotton. Thus, the difference in their respective points of view seems to be only a difference in emphasis—the emphasis on short- or long-staple cotton. The participants in either side of the controversy would not, perhaps, relish the idea that the whole question should be presented in the form of a cut-and-dried alternative of either short-staple cotton or long-staple cotton. Perhaps, the advocates of short-staple varieties would not, on second thoughts, decry the value of giving encouragement to long-staple varieties in the form of research, etc., merely because it has not yielded so far spectacular results. After all, research implies patient investigation. Impatience is the very negation of research.

There is also a certain amount of confusion in this controversy. To talk in terms of only short-staple and long-staple cottons is to indulge in vague generalities. The classification of the varieties should be clearly stated. There are, for instance, five broad varieties. Short-staple, short-medium staple, medium-staple, medium-long-staple, long-staple and extra-long-staple. What is the contention now? Does it refer only to the question whether or not India should have more short-staple cotton? Or does it also include the question whether India should concentrate more on the production of varieties up to medium-long-staple than on extra-long-staple? Unless the issues are presented in a more precise form than has been done in the preceding paragraphs, there is not much use in discussing them at any great length.

Price Pattern

There is, however, one consideration which seems to have been overlooked by either side to the dispute. For one thing, those who urge that the cultivation of long-staple cotton should continue to receive priority, seem to ignore the decided advantage which the country would derive through some increase in the cultivation of short-staple cotton. Now, the present shortage of short-staple varieties gives them an artificially high price which is out of parity with the prices of better-stapled varieties. This distorts the normal pattern of prices between the various varieties and this could be corrected only through the larger production of short-staple varieties. And it is only when this is corrected that there would be real incentive to produce better staple cottons. From this point of view, a notable suggestion, which deserves the attention of the Central and State Governments, is the creation of separate regions, each region being reserved for the growing of one distinct variety of cotton better suited for that region, as in the Surat and Broach tracts of the Bombay State. This would certainly go a long way towards the growing of pure cottons and curbing the evil of spurious mixing.

But the argument for an increase in the production of short-staple varieties, it is necessary to point out, also cuts the other way. Those, who urge the cultivation of larger quantities of short-staple cottons, base their argument on the ground that India has no clear advantage over its rivals in the foreign textile markets in respect of better varieties of cloth produced out of finer cottons. They argue that India should concentrate its attention on yarn upto 16s and on cloth produced from this yarn, for India's competitive genius lies in coarse and medium varieties. But there is an assured demand not only for coarse and medium, but also for fine medium counts cloth both in the high-income groups of countries in the world and in the low-income groups adjoining either side of India. In order to ensure the production of these varieties of cloth in adequate quantities, it is, therefore, necessary to give a fillip to the production of not only short- and medium-staples but also medium-long and long-staples cottons. There can be no difference of opinion with this line of argument. Accordingly, the Indian Central Cotton Committee and, through it, the Governments should pay more attention than they do at present to the need for producing better varieties of cotton required for spinning and weaving all counts from, say, 11s to 30s which constitute the bulk of the mills' production. They should also endeavour to attain self-sufficiency in those varieties which will replace U.S. cotton or Pakistan cotton. There is no question of concentrating on one of these to the exclusive neglect of the other. Both the objectives must be achieved simultaneously and no impediments should be allowed to stand in the way.

The stress on the need for growing more and better varieties of 11s to 30s cotton should not, however, be carried to such an extent as to say that India should grow more of Deshi (Bengals) varieties of cotton. There is, of course, a case for raising the present level of output of these varieties to some extent, perhaps by a lakh or a lakh-and-a-half bales. But to raise the output of these varieties to a level which will necessitate India making an effort to push their sales in foreign countries is to ask for trouble. Let no one forget the days when Bengals and other equivalent varieties were reduced to the state of orphans. In the first place, India will have to take special measures for pushing the sale of these varieties in foreign markets. Secondly, a large excess in the supply of these varieties would lead to their export to Japan which, with its special equipment and undoubted genius in the mixing of short-staple cotton, would be able to put these varieties to greater advantage than this country. This would naturally result in India inviting unnecessary competition from the Japanese mills in overseas countries. In other words, large exports of *Deshi* cotton will result in lower exports of coarse cloth by Indian mills. This is not a mere question of mills *versus* cotton exporters. That it is something more than that will be evident to all those to whom the relative advantages of exporting manufactured goods as compared with exports of raw materials are obvious.

Better Varieties

There is also another point to be mentioned in this connection. Wherever better varieties of cotton can be grown, even if it involves some effort on the part of the farmer, only the better varieties should be grown, for it means more money for the farmer which he badly needs. By and large, the Indian farmer is conservative and easy-going. He will naturally take to short-staple cottons, unless he is compelled and prodded to grow better varieties. In these circumstances, great care should be taken in permitting an increase in the output of short-staple cotton. This, however, does not mean that no effort at all should be made in the direction of evolving better varieties of short-staple cotton.

There is yet another factor which serves greatly to detract from the value of the present controversy. The whole discussion centres round the rationalisation of cotton production. Now the word "rationalisation" belongs, as is well known, to industrial terminology. How far is it appropriate to apply it to the agricultural sphere? It is not possible to rationalise cotton production in the same manner as the production of textiles or any other industrial commodity can be rationalised. This is so for two reasons. In the first place, there is the unpredictable factor, the weather. Secondly, there is the impact of price-trends. Nothing can prevent a cotton farmer from switching over to groundnut, if cotton is less remunerative than oilseeds. In actual practice, it might be found that many a dream of ambitious cotton planners would be shattered by the merest touch of price realities.

Over 53,000 tons of Government-held stocks of South Brazilian cotton were sold in Sao Paulo during August, 1953. There have been, it is stated, regular and continuous offers from all usual customers for this cotton. The total stocks of unsold cotton, as on 1st September, 1953, are estimated at 270,000 tons, excluding about 50,000 tons of N. Brazilian cotton.

JUTE STOCKS IN AUGUST

POSITION STILL UNSATISFACTORY

THE stock position of jute goods with Indian jute mills, as at the end of August, 1953, is as unsatisfactory as it was in the previous month-end. It is true that, as compared with the stocks at the end of July, it shows a fall of 3,300 tons, but it is still about 10,000 tons higher than the stocks at the end of the same month a year before. At the end of August, the overall stocks stood at as high as 133,483 tons, as compared with 136,807 tons in July, 1953 and 93,894 tons in August, 1952. One of the explanations for the large volume of stocks in the month under review is that the mills had to retain the stocks, because the ships which were intended to leave Calcutta during the month postponed their departure for September. It is, therefore, held that the overall stocks at the end of September will be considerably lower. The declining trend is expected to continue in October also as that month is always a short working month on account of *Puja* holidays.

But one has also to bear in mind that the heavy stocks with mills are also due to a sharp fall in the volume of exports of jute of all descriptions. The latest figures disclose that, during the first eight months of the current calendar year, namely, January-August, 1953, the total exports of jute goods amounted, it is reported, to 450,000 tons. Calculated on the basis of these exports, the total for the whole year may not far exceed 600,000 tons, as against 700,000 tons and 800,000 tons in the financial years 1952-53 and 1951-52 respectively.

The following comparative table shows the position of stocks of the various types of jute goods in each of the three months ended August, 1953 as also in August, 1952.

	As on 31-8-53	*As on* 31-7-53	*As on* 30-6-53	*As on* 31-8-52
Civil				
Hessians	41,475	44,403	44,909	34,598
Sackings ...	88,970	89,218	84,580	53,119
Others ...	1,834	1,681	2,382	1,249
Total ...	1,32,279	1,35,302	1,31,871	88,966
Government				
Hessians	517	537	697	1,651
Sackings ...	684	933	1,122	3,277
Others ...	3	35	150	—
Total ..	1,204	1,505	1,969	4,928
Grand total	1,33,483	1,36,807	1,33,840	93,894

It will be seen from the above figures that stocks of hessians have receded from 44,940 tons to 41,992 tons during the month, while those of sackings have gone down from 90,151 tons to 89,654 tons. The reduction is thus mainly in hessians which are down by 3,000 tons, whereas sackings have gone down by nearly 500 tons. The heavy stocks in sackings underline the need for measures which would stimulate their sales. This can be done by the abolition of export duty on sackings, which at Rs. 175 per ton is not only higher than the duty on hessians which was reduced last week to Rs. 120 per ton, but also acts as a check on the free flow of sackings abroad.

The output of jute goods in August, 1953, as compared with that in the previous month, is lower by more than 10,000 tons. It has declined from 78,353 tons in July to 68,138 tons in the month under review. The consumption of raw jute, on the basis of this production, during the month may be placed at 395,200 bales as against 454,447 bales in the preceding month. Together with the output in August, the total production for the two months' of the current season, namely, 1953-54, amounts to 146,491 tons, absorbing as much as 849,647 bales of raw jute.

The table below gives, at a glance, the output of the three categories of jute goods, namely, hessians, sackings and others at the end of August, 1953, as compared with that in the preceding two months and also in August, 1952.

	August 1953	*July* 1953	*June* 1953	*August* 1952
Civil				
Hessians ...	30,055	33,485	29,662	24,046
Sackings ...	34,671	39,964	37,831	46,578

Grand total ...	68,138	78,353	72,807	74,291

SUGARCANE CESS IN STATES

PROPER UTILISATION OF PROCEEDS URGED

AN important aspect of the sugar policy of the State Governments which has evoked bitter criticism for a considerable time now, in the Press and on the platform, relates to the cess on sugarcane. Apart from the economic justification for this levy, the State Governments have laid themselves open to the universal complaint of continuing to spend only a negligible portion of the total cess collected on cane development work, in spite of the Tariff Board's (1950) specific recommendation that the cess proceeds should be utilised exclusively on such work. Even the Central Government spokesmen frankly admit this, as witness the Union Food and Agriculture Minister, Mr. Rafi Ahmed Kidwai's remark, in the Council of States last week, that "all States, except Bihar, are using the sugarcane cess for general budgeting purposes and not for the development of sugarcane exclusively."

This is not the first time that Mr. Kidwai is making such observations, for he had done so on more than one occasion in the past. Even his predecessor, Mr. K. M. Munshi, had emphasised it. Why then, one will naturally ask, has the Government of India not chosen to exercise pressure on the State Governments to devote the revenue raised by way of cess exclusively for sugarcane development work? In fact, the same question was posed by one of the members in the Council. The only reply that Mr. Kidwai could give was: "I wish I had that power. The matter is exclusively within the jurisdiction of the States."

We can appreciate the helplessness of the Food and Agriculture Minister but not the logic of his arguments. The Centre may have no constitutional powers, but it certainly has moral powers. If Mr. Kidwai has been successful in inducing the State Governments to revise their policies in several other spheres of agricultural economy, we do not see any reason why he will fail in this case. Surely, he knows how to make the State Governments behave. All that he has to do is to try and persuade them to utilise the cess properly.

Explanation Not Convincing

The explanation given by the State Governments is that, though the direct expenditure on cane development is only a fraction of the total collection of cess, a large amount of money is being spent for extending facilities of communications and irrigation in different parts which have an indirect bearing upon cane development. We are far from satisfied with this explanation, for the expenditure on the latter is met by other taxes, such as irrigation cess, road tax, etc.

That this issue is of vital importance will be evident from the fact that not much progress has been achieved in the sphere of sugarcane cultivation. The sugarcane cess was imposed for the first time in 1938-39 by the U.P. and Bihar Governments for the specific purpose of raising funds for cane development work. This was later followed by other State Governments. The amount so far collected by all the State Governments by way of cane cess amounts to Rs. 30 to Rs. 40 crores. The Governments of the two States of Uttar Pradesh and Bihar alone account for nearly Rs. 30 crores, according to the estimate of the Indian Sugar Mills Association. But the sum actually spent on cane development work is negligible. It is no wonder, therefore, that cane development work has not achieved any notable success. On the contrary, the average yield (all-India) of sugarcane per acre has not only not registered an improvement but has actually declined. Thus, the figure for 1952-53 was 378 maunds per acre, as against 390 maunds in 1937-38, that is, the year when there was no sugarcane cess at all. The recovery percentage of cane, however, has shown an increase, but only from 9.50 in 1937-38 to 10.01 in 1952-53.

An aspect of the sugarcane cess which merits the immediate and the most careful consideration of the State Governments is that which relates to the rate of cess. Nowhere in the world is such a heavy cess, representing as much as 15 per cent. of the cost of cane, being collected for the development of cane. It is one of the accepted canons of taxation that raw materials should be exempted from tax, though a small cess may be imposed on such raw materials for the purpose of improving its yield or quality or marketing. To quote the significant words of the Tariff Board:

"The levy of a tax on a raw material is, as a rule, wrong in principle and it is particularly objectionable when imposed on the raw material of an industry (sugar industry) which has been nursed by the consumers all over the country for a period of 18 years and for which they have made a heavy sacrifice during all these years."

Since, however, the sugarcane cess has become a part of the structure of State taxation, the Government may not give up this source of revenue altogether. But one can, as we pointed out only recently, legitimately ask for at least a reduction in the rate to a level which will be sufficient to meet the requirements of the cane development programme.

DISTRIBUTION OF IMPORTED SUGAR

The procedure governing the distribution of imported sugar in the various States was explained by the Union Food and Agriculture Minister in the House of the People the other day. The salient features of the procedure are as follows:

In order to ensure supplies of imported sugar to consumers at a reasonable price, as large a quantity of sugar as possible will be sold through the agencies of the State Governments. If however, the State Governments fail to take over the entire quantity for controlled distribution, the balance will be sold to co-operative societies and merchants, first preference being given to the former.

The Bombay and Madras Governments have not agreed to take over any quantity of imported sugar for controlled distribution. Tenders have, therefore, been invited by the Regional Director (Food) from co-operative societies and merchants. Allotments have already been made upto a maximum quantity of 250 tons to each concern out of the quantity which has landed at these ports in the past week. The 7,500 tons of sugar landed at Bombay has been allotted to about 120 merchants, while the 7,300 tons landed at Madras has been allotted to 12 co-operative societies and 170 merchants. The price at which sugar is allotted is fixed at Rs. 30 per maund ex-dock, which is based on a fair average ex-factory price of Rs. 27 for U.P. sugar. There will be no control on the sale of sugar acquired by the tenderers.

The Government of West Bengal has agreed to take 20,000 tons in the first instance, at Rs. 29-4 per maund (ex-dock Calcutta). It has made arrangements with the local Sugar Merchants' Association, which has formed a company, known as Sugar Distributors Ltd., for handling, storing and making retail sale of imported (and also indigenous) sugar at a fixed price of As. 12-6 per *seer*.

The Travancore-Cochin Government has agreed to take over the entire 3,000 tons landed from the first ship at Cochin Port at Rs. 30 per maund (ex-dock). The arrangements for the sale and the rate at which sugar will be sold have not yet been finalised.

SOUTH BIHAR SUGAR MILLS

Apropos the move to transfer the South Bihar Sugar Mills to Bombay State, to which a reference was made in these columns last week, further details were provided by Mr. Rafi Ahmed Kidwai, Union Food Minister, in his written statement laid on the table of the House of the People on the 18th inst. According to this statement, the South Bihar Sugar Mills, Bihta (Bihar) applied in March, 1953, for permission to shift the factory to Bombay State. Messrs. Karnatak Sugar and Cellulose Works, Bombay, which had entered into an agreement for the purchase of the Bihta factory, also applied in June for the grant of a licence for the establishment of a new sugar factory in Bombay State, with a crushing capapcity of 1,200 tons of cane per day by shifting the Bihta factory. The Licensing Committee, set up under the Industries (Development and Regulation) Act, 1951, considered the application of Messrs. Karnatak Sugar and Cellulose Works. The representative of the Bihar Government objected to the shifting of the factory on the ground that the State Government had taken certain measures to rehabilitate the Bihta factory by offering loans to enable the management to make advances to cultivators for seed and manure, for providing facilities for transport of cane, improvement of roads, and sinking of tube-wells for irrigation. The contention of the factory, however, is that, with all the facilities, it will not be possible to develop cane in that area to the extent necessary to give them a full crush. Considering the fact that, at its present site, the working of the factory is uneconomic and that there are good prospects for this factory to increase its production to three times at the new site where the factory will have its own cane farm of about 8,000 acres, the Licensing Committee recommended the shifting of the factory to Bombay area. The recommendation of the Licensing Committee is under consideration of the Government, particularly with reference to representations received from the State Government against the shifting of the factory.

SUGAR PRODUCTION AND STOCKS

The opening stock, production, despatches and closing stocks of sugar during the fortnight ended 15th August, 1953, amounted to 529,751 tons, nil, 56,969 tons and 472,782 tons, respectively. The figures for the corresponding fortnight of the previous season were 690,910 tons, 3,333 tons, 42,899 tons and 651,544 tons. Figures for the current fortnight relate to 125 factories representing 92.93 per cent. of the total cane crushing capacity, while those for the previous year relate to 129 factories representing 90.17 per cent. of the total cane crushing capacity.

CONTROLS ON COAL

RECOMMENDATIONS OF COMMODITY CONTROLS COMMITTEE

THE Government of India has expressed satisfaction with the recommendations of the Commodity Controls Committee in regard to coal. The Committee, the recommendations of which were placed on the floor of Parliament recently, has stressed the need for continuing the existing controls on coal in respect of price, distribution and production. On the question of price, the Committee has thrown cold water on the suggestion made in certain circles that the present fixed prices may be treated as the ceiling. So far as distribution control is concerned, the Committee has urged its retention, as long as wagon shortage in relation to demand persists. Thus, the recommendations of the Committee are in keeping with measures the Government has already taken in the recent past.

A critical analysis of the report of the Committee reveals that its recommendations with regard to retention of price control is beyond dispute. Equally so is its opposition to the suggestion that fixed prices may be treated as ceiling prices. For, if the control is removed, or even if fixed prices are treated as ceiling prices, there will be lowering of prices for coal and cut-throat competition, which was a feature of the pre-war days. Development work of the coal mines will thereby be affected. Besides, the marginal mines will be forced to close down and, once they are closed, it will be difficult and expensive to reopen them. There is also the human factor to be taken into consideration. Competition of the type referred to will ultimately lead to heavy unemployment and suffering of workers engaged in this industry. The closure of marginal units will not be in the interest of the nation, especially in the context of expected steady rise in demand with the progress of the Five-year Plan.

Should distribution control be retained? This question is a highly contentious one. The Commodity Controls Committee, too, has not expressed any categorical opinion. It states: "Even among the industry itself opinion is divided. While one section of the industry was in favour of the removal of distribution control, with some priority over control of wagons, which were limited in number, the other section wanted distribution control to continue mainly on the ground that the transport system still presented difficulties." Representives of the consumers are also of divided opinion. Some feel that, as production of coal is increasing, controls on distribution should go, but others refer to wagon shortage and other transport difficulties and consequently, favour retention of distribution control.

Allocation of Coal and Wagons

The present method of allocation of coal and wagons has again come in for criticism at the hands of the representatives of industry as well as consumers. It is pointed out, for example, that some lower grade coal is being forced on consumers who need better grades. As the ash content of high grade coal is about 15 per cent., as against 35 per cent., or even more, in low grade coal, it is stated that much of the shortage of wagons can be met by distributing only high grade coal. But the production of high grade coal constitutes as much as 80 per cent. of the total output. Consequently, the charge that too much wagon capacity is being wasted is not based on facts. That apart, it is held that, in the present circumstances, the existing system of distribution control is aimed at utilising the better and lower grades of coal and the available transport facilities to the best advantage.

The object of production control is to conserve certain types of coal, the reserves of which are limited, as, for instance, metallurgical coal. Actually, under the Coal Mines (Conservation and Safety) Act, passed in 1952, the Government is empowered to take action for conservation of metallurgical coal. The control exercised under the Colliery Control Order is, therefore, a sort of negative one. So, for all practical purposes, this means, in the opinion of the Committee, that the coal industry is not subject to any production control. Actually the necessity for this type of control, it says, does not arise, as production is increasing. It is true that there has been slight reduction in the rate of production in recent months. But that is not expected to continue for long.

The total production and despatches of sugar during the current (1952-53) season amounted to 1,317,629 tons and 1,281,849 tons respectively, as against the corresponding figures of 1,487,715 tons and 927,790 tons during the previous season.

ANNUAL MEETING OF BOMBAY GAS CO., LTD.

MR. K. D. JALAN PLEADS FOR RECOGNITION OF IMPORTANCE OF GAS INDUSTRY

NEED FOR RAISING THE PRICE OF GAS

THE failure of the Planning Commission to make any reference to the gas industry while formulating plans for the development of industries was deplored by Mr. K. D. Jalan, Chairman of the Bombay Gas Co., Ltd., in the course of his speech at the Annual General Meeting of the Company held in Bombay on 21st September, 1953. He, however, expressed the hope that the Commission would, in the course of its review, consider the importance of this industry in the national economy and make suitable recommendations. The development of the gas industry needed fresh capital and Mr. Jalan felt that investors would not come forth, if they were not allowed a reasonable return. The present price of gas, according to him, did not provide such a return and he, therefore, reiterated his plea, made in previous years, for an upward revision of the price of gas.

The following is the full text of Mr. Jalan's speech:

"GENTLEMEN,

"The year under review 1952 showed at its close considerable improvement in the economic situation of the country and the conditions were reassuring after passing through a phase of troubled waters earlier caused by a steep and precipitous decline in prices. The year 1953 has witnessed the continuation of the trends started earlier. The possibility of armistice which appeared to be obscured by so many political factors has been turned into reality and the repatriation of prisoners of war and an agreement with regard to the future of Korea will open an important chapter of the world history. Though there might be a number of slips between the cup and the lip, I sincerely hope that the Korean problem will be finally solved—a solution in which India will have played a decisive role.

Decline in Prices

"I have made a reference to the Korean war, for its beginning and end have been or are likely to be reflected in a change in the pattern of world economy. At a time when the post-war economic development was just taking a turn that would have had something but a stabilising effect, the post-Korean boom reversed the situation, gave a spur to the production policies of all the countries and checked the depressionist forces from gathering momentum. Prices reached their peak during this period, but the determined efforts of the State policies in India and elsewhere resulted in checking the upward trend of the inflationary spiral which was causing much concern. The decline in prices of primary commodities has created many economic and political problems for India, a country which mainly subsists on agricultural economy. The price index for industrial raw materials which stood at 494.2 on 24th June, 1950, and reached 699.8 in April 1951, touched 382.8 in March, 1952, and stood at 484.6 on 22nd August, 1953, lower by 9.6 points compared with the pre-Korean level. The price index for manufactures stood on the same date at 370.4, as compared with the pre-Korean level of 346.9. Apart from this feature, the improvement has been noticeable on many sides. The food situation has considerably eased and recourse to decontrol, despite the declared apprehensions, has been amply justified. It is estimated that India will not import more than one million tons of foodgrains in the next year. Production of the essential raw materials for two of our main industries, viz., cotton and jute, has shown a considerable increase. Industrial production as a whole has substantially improved. The general index has risen to 141.2 in April this year, against 117.2 in 1951 and 128.9 in 1952. One sector, which has reasons for causing alarm, is our engineering industry where the production has shown a fall.

Central and State Loans

"An important event worth attention was the success of the recent loans issued by the Central and State Governments which were subscribed as soon as they were floated. The public subscriptions amounted to 43.5 crores of rupees in the case of National Plan Bonds 1961. This may not only help the successful flotation of another loan during the current year but reduce the extent of deficit financing as shown in the ways and means position disclosed in the last budget, a possibility which may have mixed reception owing to the fact that this would draw from the public a considerable amount which might have otherwise been spent on consumption and investment which is urgently needed to solve the unemployment problem in the country to which I will make a reference later.

"This, in any case, does not mean that capital formation is proceeding at a satisfactory pace and that there exists the necessary congenial climate for expansion of savings and investment. Capital formation is essential for the economic development of the country, as it provides the necessary base for economic progress. That various factors operating in the adverse direction have been responsible for the very poor formation of capital, is admitted at all hands, and I find a measure of satisfaction in the fact that a Taxation Enquiry Commission with very wide terms of reference and scope is at work to consider and suggest measures for changes in the tax structure of the country. I have no doubt that, with Dr. John Matthai as its Chairman, with his brilliant academic career and vast experience not only in trade and industry but also of the finances of the country as a whole, the Commission will be able to make recommendations, implementation of which will help the growth of capital and thereby provide the means for the economic development of the country.

Growing Unemployment

"An alarming feature of our economy to-day is the growing unemployment which has taken a serious turn recently. That unemployment and under-employment are chronic in this country cannot be disputed by anyone who has even a basic knowledge of the state of our country's economic development and the trends of our population growth. In the last few months, however, increasing attention has been drawn to this problem. The Planning Commission admitted the awareness of this question in the First Five-year Plan, and it appeared to them strange that underdeveloped economy, in which there was shortage of goods and services, should at the same time have insufficient employment opportunities resulting in a surplus labour force. With an annual increase of about 4.2 million persons in the population of the country and about 1.8 million in the labour force, unemployment presents a serious threat to the social and economic structure of the country.

"The First Five-year Plan expects the total employment of about 5.2 million people as a result of the increased economic activities during the period of the Plan. In the absence of any reliable estimate with regard to the magnitude of the problem, it appears to me difficult to indicate what contribution this additional employment will make towards the solution of the problem, but it is clear that it will hardly absorb 50 per cent. of the addition to the active labour force during the period of the Plan itself. Another important and potentially dangerous aspect of the situation is the unemployment of educated persons, whose number has been steeply rising during the past few months according to the live register of the Employment Exchanges. With an increase in the number of persons getting secondary and university education, the number of educated employment seekers is likely to continue to show a disproportionate increase without corresponding employment opportunities. Solution of this problem calls for a dynamic policy for fuller utilisation of our resources which alone can put a check on the deteriorating situation.

"I must emphasise that no one-sided development of our economy will help us in providing adequate employment opportunities for our labour force. Only an all-round development of the different sectors of our economy—agriculture, cottage, small, medium and large-scale industries, communications, social services and tertiary sectors—can provide a sound foundation for any policy that might ultimately lead to full employment. At present the distribution of the population amongst the various occupational groups is very uneven and shows primary dependence upon agriculture. While this pattern is not likely to substantially change in a short period, gradual adjustment with a view to provide an increased proportion of the total labour force in the industrial sector can only provide a lasting solution, as this will in its turn create more employment opportunities in the other sectors, production of raw materials, communications, social services and tertiary sectors.

Five-year Plan

"The First Five-year Plan, of which we are running in the third year, has left the industrial development of the country practically to the private sector. The important role that the private enterprise is expected to play has been fully recognised and it is for the private enterprise to formulate policies for the development of the country's economy in its own spheres. The days of *laissez faire* are gone and if private enterprise is to function, it can only do so by establishing its aliveness to the economic needs of the country and making an effective contribution to its development. There is great scope for private enterprise, there are greater opportunities for it now perhaps than ever before to play an effective and useful role in the development of the country's economic resources. The *entrepreneurs* must sit down and decide how this can be done. It is their charge and they must show that they are capable of discharging the responsibility that the nation has placed upon their shoulders.

"There is no easy road to industrial progress. What is needed is that we must create a cycle where production is increased and the increased production gives rise to purchasing power and newer demands and raises the consumption level. Production and consumption are complementary. I have no ready formula to offer and I do not plead for narrow economic nationalism, but it is only by developing our internal resources and improving the standard of living of the nationals of the country that we can effectively contribute to the formulation and execution of international economic policies.

"One way of finding what we immediately need is by scrutinising our imports during the past few years and then finding out which of the items can be manufactured in our own country and what steps are needed to produce them. Industrial production is interdependent and for the production of one item we need many others, the production of which will need further many, creating new demand and new employment opportunities. Production thus gathers momentum as new needs are created. There might not be any active demand for some items to-day due to lack of purchasing power, but once the production of additional goods creates the purchasing power and pumps it into the hands of the consumers, new demand is created. What may not be needed to-day may form an essential demand to-morrow. A cycle is thus started. A psychology is thus created. And it is in this dynamic aspect of industrial production that our hope for the future lies.

Obstacles to Private Industry

"Private enterprise in India is capable of discharging its duties fully, but to enable it to play the role assigned to it, it is necessary that obstacles by way of unstable economic policy and deterrent action on the part of the State should not be placed and whatever exists should be removed. Taxation is a problem which I need not deal with at length, as the trade and industry has been urging relief in this respect and as the matter is under examination by a body of experts. What I would suggest is that the Commission's final report is likely to take a long time and, therefore, it should make interim recommendations so that capital formation could grow in the meantime and help its investment in industrial development which is so urgently needed. Another instance is the nationalisation of air transport on terms which can by no means be considered reasonable and left a bad taste with the private enterprise and is likely to have serious repercussions on the psychology of the investor and the *entrepreneur*. It is not in these circumstances that private enterprise can do its job; having been assigned the important role of industrial development, it has certainly the right to ask that uncertainties be not created to mar its zeal. What is required is a helpful attitude and not the use of a sword of Damocles as a constant threat hanging over the head. This will only discourage initiative and enterprise and destroy confidence, qualities so essential for the economic progress of the country. A more positive policy aiming at increase in savings, production and investment designed to create confidence and initiative will only be able to achieve the objective.

"While on this question of industrial development I would like to lay particular stress on the development of engineering industry in the country. Unfortunately, some of the industries that were established during the war period under the stimulus provided by the war demand or in the post-war period, have been passing through a phase of great difficulties and to-day we find them in a situation where a substantial part of their production capacity is idle. The engineering industry forms the basic foundation for the industrial development of a nation. The pattern of economic development of all industrial countries shows that the development of engineering industries has played an important role in their economy. If we allow this important sector of our industry to decay, it will not only be unfortunate in the sense that the resources employed therein will be kept idle, but the general industrial development of the country will also be retarded. It is a matter of satisfaction that an agreement has been reached with German manufacturers to set up a steel plant in India and when it goes into production, it will provide the steel needed for the development of our engineering industries. With the prospect of solution of steel shortage it is now necessary to see in what way this section can be developed and if necessary, in the intervening period, with the improved balance of payments position steel could be imported.

Development of Indian Engineering Industries

"Our imports of engineering goods to-day amount in value to about 150 crores of rupees. We have a number of well-equipped and under-equipped engineering factories where perhaps many of the items could be manufactured, if a co-ordinated programme of development were chalked out. The main difficulty with these factories is lack of orders. They hardly know the details of all the requirements in India, which would enable them to assess their own capacity for their manufacture here. In order to see that these factories could be fed by orders to the maximum possible extent, action is needed on the following lines, viz:

1. "First, there should be an immediate survey of the equipment in the various engineering factories all over the country to find out as to what items could be manufactured with the available plant and machinery. Advice of leading experts and engineers in the country and also of foreign experts should be taken to investigate what new lines of production can be undertaken by them with minor adjustments and/or additions in their existing equipment. I know, of course, that an Engineering Capacity Committee recently appointed by the Central Government is now at work, but it is necessary to widen the scope of its terms of reference by asking it not only to assess the capacity and the difficulties in the way of fully utilising it, but also to examine the present and future needs of the country for engineering materials and the possibilities of their manufacture itemwise by the existing units, if it is to serve a more useful purpose.

2. "Secondly, the Government of India should publish the details of all the imports made by them against their requirements during the first three years with the fullest details with regard to quantity, prices, specifications and, if possible, with drawings. The exact nature of the imported items must be stated. This should be available to the industry as a priced publication. It will enable them to find out the items which they can manufacture with their own equipment or to think of going into new lines of production even by installing new equipment where the volume of demand justifies it on economic grounds.

3. "Thirdly, it would considerably help matters if permanent exhibitions could be set up in places like Bombay, Delhi and Calcutta, where representatives of industry could get information with regard to the Government requirements and where such items as are imported by the Government in good quantities could be placed for inspection by the indigenous manufacturers. The initial expenses involved in this may be high, but the benefits that the engineering industries will derive out of these facilities in their working and the encouragement they will get for their expansion and development will more than repay the initial cost.

"Steps in these directions, together with the directives to all Government and semi-Government bodies not to place any orders for engineering materials of imported origin without certification by a high-powered committee of the non-availability of such materials from the indigenous sources, will not only develop the industry, but open new employment opportunities so badly needed to relieve the unemployment situation.

Gas Industry Neglected

"The First Five-year Plan in its final form was approved by the Parliament in December last. I am sorry to say that it has neglected an important industry while formulating plans for the development of industries in the public as well as private sectors. The gas industry, which is non-existent except in the cities of Bombay and Calcutta, has been completely ignored by the Commission. Gas, known as the fuel-on-tap, is the most convenient form of providing domestic heat, as it produces neither smoke nor dust, is clean, hygienic and avoids disfiguring of buildings. Prevention of smoke by the use of gas in place of coal, charcoal and firewood helps in improving the conditions of overcrowded cities and thus helps to improve the standard of living. Apart from these aspects, manufacture of gas from coal not only helps us in checking the depletion of our coal reserves owing to the fact that it shows the highest thermal efficiency, but it is essential for the development of social services like medical establishment, light engineering and chemical industries, pottery kilns, refractories, batteries, laundries, newspapers, and provides important by-products. I would not like to enumerate the various other advantages of gas here, but you will agree that its development is important from the point of view of national economy, and it is only regrettable that the Commission took no notice of these considerations while formulating the Plan. I only hope that it will, in the course of its review, consider the importance of this industry and make suitable recommendations for its development in the urban and industrial areas.

"Coming to the affairs of the Company, as you must have noted from the Directors' report, which has been in your hands together with the balance-sheet and the accounts for the year ended 31st December, 1952, and which I propose to take as read, the Company has not been able to show satisfactory financial results for the year under review as compared with the previous year.

"There has been an increase in the expenditure to the tune of Rs. 4,37,000 of which increase in coal freight alone accounts for Rs. 2,70,000. It has been balanced to some extent by economy in expenditure under 'distribution' to the extent of Rs. 57,000, and Rs. 80,000 under other heads and an increase in the revenue from gas and the by-products amounting to Rs. 1,20,000. Then again the total receipts have been considerably lower than those expected owing to the workers' strike in September.

Demand for Gas Improving

"The sales of gas during the year amounted to 1193,853,200 cubic feet or an overall increase of 0.7 per cent. over the previous year's figures, in spite of a loss in output of 39,400,000 cubic feet during the strike period. The demand for gas is steadily increasing, as is evident from the waiting applications which rose during the year by 1,003 to a new total of 9,299. Despite the fact that provision of new connections is becoming more and more restricted, the sales of gas are increasing and the consumption per consumer rising. In fact, due to overloading of the production plant, restrictions upon new connections had to be applied and towards the end of the year it was decided to withhold all new connections except in exceptional instances.

"In the field of public lighting the good relationship, which has existed between the Company and the Lighting Department of the Bombay Municipal Corporation, has been fully maintained and has led to an equitable share of such new and improvement lighting schemes as have been authorised being given to us.

"The overall situation from the side of demand and consumption is reassuring, but the time is fast approaching when the peak demand for gas will exceed the capacity of the present production and distribution plant, in spite of the fact that the Company has increased its capacity by construction of some retort beds and repairs to the plant, resulting in an increase of gas production by 20.7 per cent. since 1946. The volume of gas to be made and distributed in the peak week, peak day and peak period of each day offers its own problems and the solution can only be found in the provision at an early date of the plant necessary to meet those peaks. I recently visited the U.K. and Germany where I inspected the working of the gas industry and had discussions with the various manufacturers of gas plants. While we have asked some of them to make offers to us for a plant that would suit our needs, the difficulty comes with regard to the provision of finances, the availability of which depends to a certain extent upon the price of gas and its ability to give a reasonable return on the investment. At our last meeting I mentioned that the Government had appointed, on our application, a committee to consider the question of increasing the gas price. The committee, we understand, has submitted its report to Government, but we are not fully aware of its recommendations and the decision of the Government thereon is awaited.

Price of Gas

"The application to the Government for an increase in the price arose out of the increase in the freight rate of coal. It was found that the Company was affected to the extent of nearly Rs. 4,00,000. In addition to this, the increasing price of diesel oil prompted the Company to ask for a compensatory increase in gas price. The first Gas Advisory Committee of 1947 had computed the oil price at Re. 0-6-6 per gallon, whereas in 1952 the price of oil had risen to Re. 1-0-6. The first Advisory Committee, which had given its report in September 1948, based on the accounts of 1946, had recommended Rs. 3 as the price of gas and Re. 0-15-0 as the surcharge which, they stated, should be revised whenever the prices of materials varied. Our application thus covered only the question of increase on account of these two items of increase in the expenditure. It was, however, decided at the first hearing before the Gas Advisory Committee that the price of gas should be reviewed taking into consideration the overall position. It was felt that the expenditure of the Company, which would form the basis for the computation of the price of gas, had shown a rising tendency with the increases in salaries and wages due to the award of the Industrial Tribunal, repairs, etc.—items which are legitimately chargeable to expenditure and that the widening of the scope of the terms of reference would enable the Committee to arrive at a fair rate. It is now sincerely hoped that the Government would see the desirability of giving an increase in the price that would enable the Company to expand its activities and meet the public demand for gas.

Computing Price of Gas

"Ever since the recommendations of the first Gas Advisory Committee appointed in 1947 were given effect to, I have been dealing with the question of gas price at length in my speech at the Annual General Meetings. The appointment of the new Committee last year gave rise to new hopes of getting a fair deal for the investors. While I would not be justified in anticipating the recommendations of the Committee until they are made known to us, I think I will be failing in my duty if I do not tell you that the trend of discussions betwen the representatives of the Company and the Committee towards the end of their deliberations was such as gave us a feeling that some important items of expenditure or provisions essential for the working of an industrial undertaking might be disallowed in computing the price of gas. While I would sincerely hope that our fears are proved unfounded, I cannot help mentioning that the attitude taken in this matter is not only difficult of appreciation but, what is more, is that it might prove a great hindrance in our way in expanding the capacity of the plant. We have often been blamed for stating that without an increase in price no expansion is possible. In making any statement like this I feel our difficulties are not fully realised. Money must be invested if the capacity of the plant is to be increased as is the case with the proposals before us. No funds are available with the Company itself for this purpose and, therefore, investors must come and help. They will not do so until they can get a yield on their investment which might not be in any way inferior to what they could get elsewhere. It is a matter of interest and initiative and these cannot come forth, if it is apparent to the investors that they will be denied the right of being allowed a reasonable return. I, therefore, submit that our requests and statements should not be misunderstood, but the difficulties appreciated. I have earlier laid

CENTRAL ELECTRONICS RESEARCH INSTITUTE

FOUNDATION-STONE LAID AT PILANI

THE foundation-stone of the Central Electronics Engineering Research Institute, the latest in the chain of India's national research institutions, was laid at Pilani by Mr. Jawharlal Nehru, Prime Minister, on Monday last. It will be recalled that Mr. G. D. Birla offered to donate Rs. 21 lakhs, on behalf of the Birla Education Trust, for the purpose of establishing a research institute at Pilani. This offer was considered by the Governing Body of the Council of Scientific and Industrial Research at its meeting held on 14th March, 1951. A Committee was appointed, with Mr. Kasturbhai Lalbhai as Chairman and Dr. S. Bhatnagar, Dr. H. J. Bhabha, Dr. K. S. Krishnan and Dr. J. C. Ghosh as members, to examine and report on the location and financial requirements of the proposed institute.

The Committee considered that the establishment of an institute, which will have as its objectives advanced training and research in electronics, should receive high priority. It accepted Dr. Bhatnagar's recommendation that the institute should be located at Pilani. It considered also a plan for the proposed institute, which envisaged a capital expenditure of Rs. 50 lakhs and annual recurring expenditure of Rs. 6 lakhs. The Committee recommended, in the first stage, a capital expenditure of Rs. 25 lakhs on buildings and equipment and an annual recurring expenditure of Rs. 5 lakhs. It is gratifying to note, in this connection, that the Birla Education Trust has offered Rs. 50,000 per annum towards recurring expenditure. The Governing Body of the Council, at its meeting held on 4th March, 1953, accepted the recommendations of the Committee. It may be noted that the Planning Commission has made provision for a grant of Rs. 29 lakhs towards its establishment in the First Five-year Plan. A local Planning Committee, with the Director, Scientific and Industrial Research, as Chairman, Mr. G. D. Birla, Mr. Lala Shri Ram, Dr. K. S. Krishnan, Dr. D. S. Kothari and Col. S. D. Pande as members, and the Planning Officer as its Secretary, has been constituted to draw up plans and estimates for the Institute.

Objects of the Institute

The objects of the Institute will be to undertake research and development on all aspects of electronics and engineering. Special attention will be devoted to the utilisation of indigenous raw materials in the manufacture of components, development and use of electronic circuits for industry, building of standard electronic instruments for test purposes, investigations on radar and other types of equipment and applications of electronics in metallurgy. The Institute will undertake projects sponsored by industry and close liaison will be maintained between the Institute and industry. The Institute will consist of a number of divisions, namely, (1) electronic circuits; (2) electronic components; (3) electronic instruments; (4) acoustics-audio equipment; (5) ultra-high frequency and very-high frequency equipment; (6) library and information; and (7) workshops, among others.

The importance of research in electronics needs no emphasis. Electronics is a word of recent origin. It is the branch of science and technology dealing with the flow of electric currents in vacuum. To be a little more elaborate, electronics is concerned with the free or controlled movement of electrons in an exhausted or gas-filled container or a tube, as it is generally called. Although in its infancy still, the lusty infant of electronics has already several notable achievements to its credit. Electronic devices are playing an increasingly important part both in war and peace. Their application in the field of communications, particularly wireless broadcasting, is familiar to all. During World War II, spectacular developments were made in the use of electronic devices for military purposes such as radio-location of aircraft and submarines.

Describing peace-time uses of electronics, Dr. Bhatnagar observed, in the course of his address at Pilani:

"Since the termination of the war, it has proved of great service in making civil aviation and commercial navigation safer, improving tele-radio communications, etc. Amongst its other uses may be mentioned particularly the control of industrial operations, a field in which fairly rapid progress has been recorded in the U.K., the U.S. and other industrial countries, with the result that to-day in one shape or another electronic instruments are required in routine testing in all branches of engineering, science, and medicine. In large-scale industry, they have facilitated automatic control, mass production of parts and their quick gauging and checking. They form the basis for timing devices and, with their aid, it is possible to make the whole process of welding automatic. Besides being quicker, electronic control permits uniformity of operation and introduction of refinements. Similarly, with moderately simple electronic circuits, it is possible to control the speed or voltage of motors and generators within wide limits. Servo mechanisms are useful as signals for some relatively small change in external conditions such as speed, course, voltage, size, mechanical pressure or temperature; they also translate the signal into correction of the main equipment to restore standard external conditions. Automatic control of gas has been achieved by their help and they are also employed for regulating many industrial processes or conditions, automatic contour following machines, automatic printing machines and the like. Other developments include new systems of television in which by mixing of three or four primary colours in appropriate proportions it will be possible to televise colour scenes.

Development of Transitors

"One of the most significant advances in the field of electronics during recent times, however, is the development of 'transitors' in which the use of tiny flecks of germanium with spider-like wire legs, bids fair to bring within the realm of possibility wrist radios, portable television sets and straight musical instruments. In many cases these transitor devices are taking over the work of radio tubes. In hearing aids, for instance, it has been possible to eliminate the hum and ping of hot vacuum tubes. By working more quietly, the new devices enable reproduction of loud noises without much distortion. It has been claimed that, with the aid of transitors, it will be possible to reduce the size and weight of our familiar communication devices to a fraction of their present size with striking reductions in power consumption and improvements in reliability and length of life. Some of them may even work on body heat. This 'fabulous midget,' so small that you can hold a hundred in one hand, has opened new avenues in radio, television, radar, robot brains, guided missiles, automatic gun sighters and the whole field of military and aviation electronics."

The contribution of India to development of this comparatively new science of electronics and its widening applications is very little. Thanks to the initiative taken by the Radio Research Committee of the Council of Scientific and Industrial Research, some research has, however, been started in the universities of Calcutta and Banaras and in the National Physical Laboratory of India. Research is being pursued in the Tata Institute of Fundamental Research, Indian Institute of Science and a few other institutions also. Dr. K. S. Krishnan has done some valuable investigations which promises to provide electronics with many industrial uses. Dr. Bhabha has made important contributions by arranging manufacture of many neat electronic devices. At the instance of the Council of Scientific and Industrial Research, investigations were undertaken during the war years to develop processes for the manufacture of radio components utilising indigenous raw materials. Several processes were developed and their commercial possibilities proved by pilot plant trials. A pilot plant for the production of high vacuum tubes was also set up. Commercial production of many radio components, however, has not been started so far and the radio industry is confined in India to the assembly of broadcast receiving sets and radio amplifiers from components, many of them imported. India imported in 1952-53 wireless apparatus and components valued at Rs. 149.91 lakhs, as against Rs. 206.90 lakhs in 1951-52.

ELECTRONICALLY-OPERATED CAR

In experiments looking toward automatic driving over long distances, the Radio Corporation of America has developed an electronically operated car.

It is devised to travel automatically over a specially wired highway. The experimental car can steer itself along a prescribed route, stop when approaching an obstruction, and turn out of its original lane into a second one to pass a slower vehicle. The model car is guided by a series of wires laid on the road surface or by cables embedded in the road. One wire running the length of the primary traffic lane sets up a magnetic field to be picked up by coils on the car, one on each side of the body. When one coil receives a stronger impulse than the other, the electronic control system detects that the car is veering from its proper course and immediately steers it back, until the coil impulses are of equal strength. A transistor circuit tied in with the ground cable warns the car's guidance apparatus of obstructions ahead. Then the apparatus either stops the car immediately or, if the obstruction is another car moving less rapidly in the same direction, automatically steers the car past the slower one. To permit this automatic passing, the highway must have two lanes for traffic in one direction. Each lane has a guidance wire, and diagonal wires at intervals connect the two parallel wires. The automatic car is shunted to the outer lane and back again to the inner one on these diagonal wires to pass a car moving more slowly.

PORTABLE ELEVATOR FOR BUILDING MATERIALS

A portable elevator for raising bricks, tiles or other similar building materials to a height of about 20 feet has been produced by a London company. Although capable of dealing with bricks at the rate of about 1,500 an hour, it is easy to dismantle it into two portable sections, each light enough to be carried about the building site by two men. This low weight makes it possible to mount the elevator on scaffolding, so that two elevators in tandem can be used to raise materials to the third and fourth storeys of a building.

No bolts or pins are needed to fit the elevator, at a convenient angle, to the base unit (which comprises a 1 h.p. petrol engine, a gear unit and a clutch), attachment being made by a clip arrangement which is claimed to be very quick and simple to manipulate. The attachment arrangements between the elevator and the base unit are such that the former may be operated with the discharge end at all levels between 2 ft. 6 ins. and 22 feet above the loading point; the lower limit permits the elevator to be used, if required, as a simple conveyor.

RENEWABLE HEELPIECES

Renewable leather heelpieces which wearers can fit on their shoes in a few seconds and which, it is claimed, will wear three or four times longer than ordinary heelpieces, have been introduced by a British firm. The makers state that these heelpieces cannot come off in wear, owing to the concealed springs inserted in the heel which grip the ball ends of the prongs contained in the heelpiece. Only direct finger pressure easing the prongs from the springs can remove the heelpiece. Many of the disadvantages associated with the replacement of heelpieces by nailing are also said to have been eliminated.

The heelpiece is a precision produced article. The securing parts are made of nylon plastic, with a proved strength far beyond the wearing strain to which they will be subjected. The new heelpieces are being patented throughout the world. Careful standardisation in co-operation with one of the largest heel manufacturers in Britain will enable the purchaser of a pair of shoes fitted with the new heelpieces to buy a pair of renewals to fit the shoes in most countries.

DISCUSSIONS ON TUNGABHADRA PROJECT

The details of the direction to be issued by the President for the completion of the Tungabhadra Project were discussed at a Conference of representatives of the States of Hyderabad, Mysore and Madras with Mr. V. T. Krishnamachari, Deputy Chairman, Planning Commission, and Mr. Jaisukhlal Hathi, Deputy Minister, Irrigation and Power, held in New Delhi on the 19th and 20th inst. The draft could not be finalised, as Mysore State wanted a week's time to consider certain clauses. It was, however, generally agreed to include in the direction a provision for setting up a board, the composition of which would be decided on receipt of the final views of Mysore. The direction will also specify the functions of the board which will extend to the irrigation and power aspects of the project with reference to their completion and maintenance during the period of construction. The direction will come into effect on 1st October when the Andhra State is formed and remain in force till the States concerned agree on some alternative arrangement. It will be issued under Section 66(4) of the Andhra State Act.

NEW PROCESS RECOVERS ZINC FROM DROSS

The dross—or compound of zinc and iron—which forms at the botton of galvanizing pots in which steel is immersed for coating may have as much as 94 per cent. of zinc combined with 6 per cent. iron; normally the zinc is wasted when the dross is withdrawn from the pots, periodically, in order to avoid damage to the coating. Now a method of recovering the zinc from the dross has been devised by the British Iron and Steel Association.

Though the technique is not yet perfected, the Association says 95 lbs. of pure zinc can be recovered from each hundredweight (112 lbs.) of dross. Its low capital cost, simplicity of installation, operation and dismantling combine to make the process attractive.

MACHINE TESTS ACCURACY OF KEYS

What is claimed to be the first machine ever manufactured to test the accuracy of newly cut keys has recently been produced by a small British engineering firm, which, for a quarter of a century, has specialised in the manufacture of key-cutting machines. Although the key-testing machine has been in production for only a few months, orders—including 50 from the United States—have been coming in from many overseas countries.

The machine enables locksmiths to check almost immediately the accuracy of cut keys to within a tolerance of 1/1,000 in. By simply slipping both the master pattern key and the cut key into the machine, all inaccuracies of the latter are shown up on a dial which magnifies the errors 10 times. The makers claim the machine has the advantages of avoiding annoyance to the customer and of saving wastage of key blanks.

HERE'S A 100 RUPEE NOTE FOR RS. 90 ONLY!

Here is an attractive way to save and *profit*.

Buy Bank of Jaipur 3-year Cash Certificates now for Rs. 90/- each. At the end of 3 years these certificates will be promptly redeemed for a 100-rupee note each!

LIFE ASSURANCE IN 36 COUNTRIES

LEADING POSITION OF WESTERN NATIONS

AN interesting table of the values of life assurance in force in different countries has been computed by the New York Institute of Life Insurance. The 1953 edition of the Institute's *Fact Book* gives the life assurance in force in 1951 in some 36 countries. In the following table, extracted from the *Fact Book*, life assurance amounts, which are naturally expressed in national currencies, have been converted into dollars at the rate of exchange which prevailed in 1951:

Life Assurance in Force in 1951

Converted to U.S. dollars
(000,000's omitted)

Country	Amount $	Country	Amount $
Argentina	467	Hawaii	801
Australia	3,282	India	1,650
Belgium	1,640	Italy	1,132
Brazil	1,555	Japan	1,959
Canada	17,494	Mexico	289
Canal Zone	15	Netherlands	2,146
Chile	234	New Zealand	1,191
Colombia	261	Norway	627
Costa Rica	19	Peru	66
Cuba	295	Philippines	333
Denmark	949	Portugal	102
Dominican Republic	25	Puerto Rico	143
Ecuador	21	Spain	1,099
Finland	541	Sweden	2,694
France	2,774	Switzerland	2,140
West Germany	4,264	Turkey	46
Greece	1	United Kingdom	18,197
Guatemala	26	United States	253,100

It will be seen from the table above that the U.S., the U.K., Canada, and West Germany are the leading countries in respect of life assurance. It will also be observed that the countries with large life assurance amounts to their credit lie in Europe. Some small countries have, through great effort, built up their life assurance amounts to make an impressive total. To this class of countries belongs Switzerland, Sweden and Norway. Of the countries for which the ratio of assurance in force to national income is available, Canada ranked first for 1951, with a rate of 100 per cent. This means that life assurance in force in this country was about equal to one year's national income. Those countries where this ratio exceeded 50 per cent. but was less than 100 per cent., were the U.S., the U.K. and New Zealand.

Indeed, Canada's position in the field of life assurance seems to have improved still further since these figures were computed, for, Canada has been able to increase its life business in 1952 by 15 per cent. over the level reached in the previous year. The net amount of new business effected amounted to $2,287 million, of which $415 million was group business, as compared with $1,990 million, of which $288 million was group business, in 1951. The total net amount of business in force at 31st December, 1952, was $19,090 million, as compared with $17,235 million at the end of the previous year. The business effected and in force was distributed among the companies by nationality as follows:

(In million dollars)

Companies	New business in 1952	Business in force as on 31-12-52
Canadian	1,540	13,085
British	74	443
Foreign	673	5,562
Total	2,287	19,090

Canada also writes a large business in fire and casualty insurance. The net premium income of fire insurance was $134 million and of casualty insurance $272 million. The following tables give the distribution of the fire and casualty premium income among the companies classified according to the country to which they belong:

(In million dollars)

Fire Insurance

	Net premium income	Net claims
Canada	33	13
British	52	24
Foreign	54	24
Total in 1952	139	61
Total in 1951	134	52

Casualty Insurance

	Net premium	Net claims
Canadian	101	57
British	53	28
Foreign	118	65
Total in 1952	272	150
Total in 1951	222	129

Thus, Canada holds a leading position in the field of insurance, though it has a comparatively small population. It is true that India is fairly high up in the list, as a reference to the first table will show, with $1,650,000,000 of life assurance in force to its credit. But this figure is very small indeed for this country which has a population of 357 million. It works out hardly to $4.6 per person. This should serve as a spur to increased effort in the sphere of life assurance.

EMPIRE OF INDIA LIFE ASSURANCE COMPANY, LTD.

If one judges from the "new business" standard only, one would find that the Empire of India Life Assurance Company, Ltd. (Administrator: Mr. R. Varadachari, Bombay), has suffered a setback in its working during the year 1952, for which the report and accounts are now available. Thus, the Company completed only Rs. 2.81 crores worth of business, as against Rs. 3.02 crores in 1951 and Rs. 3.94 crores in 1950. But, if one were to take into account the many unfortunate factors which affected the working of the Company in the few months preceding the arrival of the Government-appointed Administrator, Mr. R. Varadachari, on the scene—he took over the administration of the Company in July, 1951—one would concede that the Company has done much better than might have been expected. Also the "new business" yardstick is only a convenient, but not a very perfect one. An impressive new business figure may subsequently prove deceptive, for, the business acquired through high pressure salesmanship, as actually happened in the case of the Empire of India, may be lost through lapses. The Administrator was naturally concerned in improving the quality and dependability of the business completed by the Empire of India. In this difficult task, he has succeeded to a very considerable extent, as is evident from the fact that the percentage of lapses to the total business in force was 5.50, as against 6.03 in 1951 and 9.68 in 1950. The total business in force, as on 31st December, 1952, was Rs. 29.60 crores.

Next to the lapse ratio, the problem of expenses claimed the Administrator's attention. In the years immediately preceding the assumption of office by the Administrator, new business had been acquired at a heavy cost; the expense ratio had touched the high figure of 33.8 per cent. in 1948. The Administrator has, however, succeeded in reducing the expense ratio. From 30.31 per cent. in 1950, it declined to 27.43 per cent. in 1951 and during the year under review, it was no more than 26.93 per cent.

During the year 1952, claims aggregated Rs. 58.96 lakhs, as against Rs. 61.49 lakhs in 1951. The total income improved from Rs. 1.49 crores to Rs. 1.50 crores, while the total outgo declined from Rs. 1.11 crores to Rs. 94.62 lakhs. Thus, the excess of income over outgo amounted to Rs. 55.71 lakhs, as against Rs. 38.21 lakhs in the previous year. The rate of interest earned during the year was 3.56 per cent.; it was 3.22 per cent. in 1951. The two rates are, however, not strictly comparable, since the rate in 1952 included refunds of tax obtained, whereas there was no such refund in the previous year.

The Company's financial position is sound for, apart from a capital of Rs. 5.15 lakhs, its reserve and other funds aggregate Rs. 10.97 crores of which the life assurance fund amounts to Rs. 9.78 crores. The Administrator has rightly laid particular emphasis on the safety of investments, to secure which he has "deliberately concentrated" on Government securities of the appropriate type. Of the total investments of Rs. 8.48 crores, about Rs. 7.48 crores have been invested in Government securities, or in such semi-Gilt-edged as municipal or port trust securities.

The improvement effected in the working of the Company under the guidance of the Administrator, has resulted in increased confidence among investors. This is reflected in the market value of the Empire of India shares; the quotation now stands at Rs. 627½, at which level it shows an improvement of Rs. 227½ over the quotation at the time the Administrator assumed charge of the Company.

STATE INSURANCE SCHEME

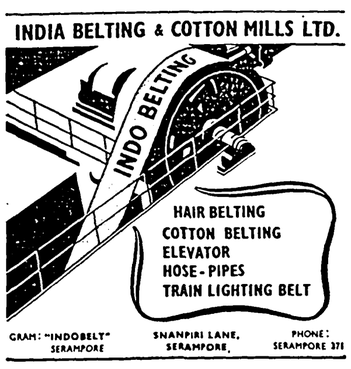
Mr. V. V. Giri, Union Minister for Labour, stated recently in the Council of States, that financial difficulties of State Governments had proved a stumbling block in the execution of the provisional schedule as regards implementation of the Employees' State Insurance scheme. The Governments were, however, co-operating with the Corporation and the Central Government was also assisting them in the conclusion of the necessary arrangements, in order to speed up the implementation of the scheme. He hoped that the second half of 1953 and the year 1954 would witness the extension of the scheme in large areas in the country. He disclosed that the Government of West Bengal had informed the Corporation that it might be possible to implement the scheme in the Howrah District and Calcutta City towards the end of 1953. The Centre was also in touch with the Bombay and Madras Governments to get early implementation of the scheme.

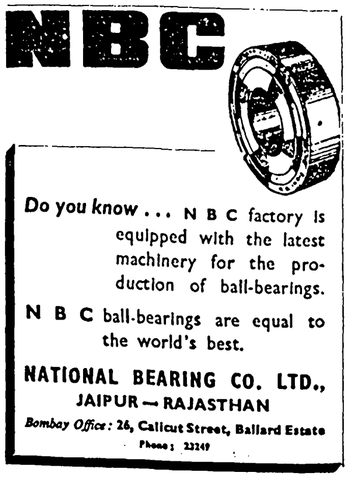
Reviewing the progress of the scheme since it was first introduced in Delhi State and Kanpur area in February, 1953, Mr. Giri stated that it had been extended to seven industrial areas in the Punjab, namely, Amritsar, Ludhiana, Ambala, Abdullapur (Jagadhani), Batala, Jullundur and Bhiwani with effect from May, 1953. The number of employees covered in the three States was 40,000, 84,000 and 32,000 respectively. The amounts collected (up to 30th June, 1953) from the workers and the employers were Rs. 38.96 lakhs and Rs. 174.16 lakhs, respectively.

WELFARE STATE

Addressing the annual meeting of the United Dominions Trust Ltd., held recently in London, Mr. J. Gibson Jarvie, Chairman, referred to the concept of the Welfare State and observed as follows:

"The Welfare State is presumed and designed to abolish poverty, but, if it has in fact reduced one form of poverty, it has merely created another in a different class. The country is in a perlous state; there is a crying need for drastic changes in our conception of social rights and duties. There should be free competition between business concerns and between individuals. Our currency should be freed to find its proper level—in all probability a much higher level than that at which it is at present artificially maintained. There should be no interference with natural supply and demand which alone can bring orderly markets out of the present disorder. Only by these means shall we ever get real efficiency, maximum production and—and what is needed to stimulate us as individuals—the opportunity to rise. No man, in present conditions, can establish a fortune unless through a lucky gamble; no man can build his fortune out of wages or salary. Natural incentives must be restored—the opportunity for reward to the able and the willing; hard fare for the able but unwilling. There is no longer real ambition because there is no longer any possibility of satisfying it. The rich are disappearing but no civilisation can exist without them. . ."





ANNUAL MEETING OF MYSORE PAPER MILLS LIMITED

MR. S. MUNINANJAPPA'S ADDRESS

IMPLEMENTATION OF EXPANSION SCHEME WELL UNDER WAY

A NOTE of optimism regarding the prospects for the Mysore Paper Mills was struck by Mr. S. Muninanjappa, B.A., B.L., I.A.S., Chairman of the Company, in the course of his address at the Eighteenth Ordinary General Meeting of the shareholders of the Company held at Bangalore on 23rd August, 1953. The products of the mills, Mr. Muninanjappa stated, continued to find a ready sale at a premium and were generally preferred to others. Alluding to the implementation of the expansion scheme, he said that substantial progress had been made. According to him, contracts for the supply of equipment to double the output had been concluded and the bulk of the machinery on order would be shipped within the next three months. He was confident that, by the time the next annual meeting was held, the new plant would be in service.

The following is the full text of Mr. Muninanjappa's speech:

"GENTLEMEN,

"I have great pleasure in extending to you a cordial welcome to the eighteenth ordinary general meeting of the shareholders of the Company, and in presenting for your consideration the report of the Directors and the audited balance-sheet for the year ended 31st March, 1953. These have been circulated already, and with your permission, I shall take them as read and proceed to review the salient features of the year's operation.

"An analysis of the working result detailed in the profit and loss account discloses a gross profit of over Rs. 18.5 lakhs, representing an increase of Rs. 3.5 lakhs over the results achieved in the previous year. Of the several factors contributing to this satisfactory result, the foremost was the successful substitution of expensive wood pulp by pulps obtained from indigenous raw materials.

Yield of Pulp from Bamboos

"Extensive tests were carried out during the year to explore the possibilities of increasing the yield of pulp from bamboos. Based on data collected during these trial operations, the method of processing hitherto followed was revised. In consequence, 12 per cent. more pulp than heretofore was obtained, the time taken for processing reduced substantially and the arduous working conditions in the soda recovery plant somewhat eased. The production of bamboo pulp rose to 3,252 tons and exceeded all previous records.

"Corresponding to the progressive increase from year to year in the production of bamboo pulp, the consumption of wood pulp, which, in 1948-49, was 1,800 tons, was reduced to 320 tons. Even this quantity was used not so much for making good the shortfall in production of pulps, as in the previous years, but primarily to impart to papers like bonds, ledgers and posters the special physical characteristics required of them.

Market for Paper Dull

"The market for paper was dull for the major part of the year. In spite of it, by reducing our selling prices, we maintained our position in the market. Our products continue to find a ready sale at a premium and to be generally preferred to others. In deference to the opinions expressed at the meeting last year, priority consideration was given to indents received from co-operative institutions and the quantum of supplies allotted to them substantially increased.

"The terms of the loan of Rs. 50 lakhs, sanctioned by the Industrial Finance Corporation of India, to finance the scheme of expansion were finalised and the deed of hypothecation of the fixed assets of the Company executed and registered during the year. We have since drawn Rs. 35 lakhs out of the Rs. 50 lakhs sanctioned.

"Special mention is to be made of two of the terms stipulated by the Industrial Finance Corporation and agreed to. One requires us to accommodate on the Directorate of the Company a nominee of the Industrial Finance Corporation of India, and the other to obtain the Corporation's prior approval in the event of our proposing to declare a dividend in excess of 7½ per cent.

"In this connection, we are deeply indebted to the Government of Mysore for their valued assistance in finalising the terms of the loan and I wish to avail myself of this opportunity to convey our grateful thanks to them.

Scheme of Expansion

"Substantial progress has been made in the implementation of the scheme of expansion. All the equipments ordered under the first stage of the scheme, initiated in 1950, have been received. Of these, the digester, the evaporator for the soda recovery plant, the water softening plant and the caustic soda plant have been installed and taken to service. The erection of the boiler is in progress and this unit is expected to be in operation by December. These additional installations intended to overcome operational difficulties and reduce production costs involved a capital outlay of Rs. 15.2 lakhs.

"Contracts for supply of equipments to double production have all been concluded. According to the latest advices of progress in fabrication received from the manufacturers, the bulk of the machinery on order would be shipped within the next three months. The civil works, though hampered by heavy rains, are also progressing rapidly. I am confident that, by the time we meet next year, the new plant will be in service.

"The total expenditure till date on account of the expansion scheme stands at Rs. 42 lakhs. Of this, Rs. 21.5 lakhs have been met by drawing on the loan disbursed by the Industrial Finance Corporation of India and the balance from our reserves.

Amenities to Employees

"Your Directors have consistently followed a liberal policy in the provision of amenities to employees and the promotion of their welfare. Housing accommodation has already been provided to 45 per cent. of the employees. Twenty units of labour quarters to house 40 families were built during the year and the construction of an additional 16 units was in progress. Schemes to step up construction still further by taking advantage of the concessions offered by the Labour Housing Corporation are under active consideration. We have provided facilities for primary, secondary and adult education, free medical aid, and extended them wherever necessary. Measures to improve sanitation and public health continued to receive special attention.

"The State Employees Insurance Act came into force in February, 1952, and, since then, we have been remitting our share of contribution to the Fund. We have been shouldering the onerous task of distributing amongst the residents of the colony rationed articles at controlled prices and to meet the cost of such distribution. An independent building for the Employees Co-operative Society was provided during the year. Sanction was accorded to the payment of bonus at one quarter the average basic wage or salary drawn by the employees during the year and Rs. 1.49 lakhs were disbursed on that account. I do trust our employees will appreciate the value of the indirect benefits extended to them and continue to assist us in securing the means further to extend the amenities that conduce to their comforts and well being.

Profit

"While the gross profit for the year has increased by Rs. 3.5 lakhs, the net profit has not shown a corresponding improvement and is, in fact, slightly less than that in the previous year. This is so chiefly because of the increase of Rs. 2.27 lakhs under 'depreciation' to provide for the wear and tear of the additional equipments installed and taken to service during the year. Your Directors have, however, deemed it prudent to maintain the appropriation to reserves and the rate of dividend at last year's levels and have also obtained sanction of the Industrial Finance Corporation of India to recommend payment of a dividend of 10 per cent.

"Your Directors fully recognise that the present healthy position of the Company is entirely due to the goodwill of its clients and the team-work and loyalty of its employees and desire to express their warm appreciation of the sincere co-operation extended by them and their hope that the cordial relations now prevailing will not only be continued but developed and strengthened.

"On behalf of the Board of Directors, I wish gratefully to acknowledge the continuing assistance and encouragement received from the Government of Mysore and the Government of India. Our thanks are also due to the Industrial Finance Corporation, but for whose timely aid it would have been impossible to plan and execute the scheme of expansion.

"My grateful thanks are also due to my esteemed colleagues on the Board for the assistance they have extended to me in the enunciation of the Company's policy and the direction and control of its affairs.

"Gentlemen, with these observations, I commend the Directors' report and the balance-sheet for your consideration and adoption."

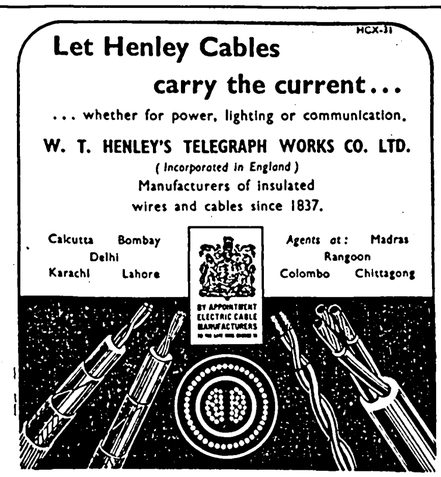
The Chairman's speech was followed by a brief discussion and questions and answers. The meeting then adopted the balance-sheet and profit and loss account for the year ended 31st March, 1953.

The meeting then passed a resolution declaring a dividend of 6¼ per cent. and bonus of 3¾ per cent., in all 10 per cent. (free of income-tax).

Sir V. N. Chandavarkar, Kt., Mr. M. Ct. M. Chidambaram Chettyar, and Mr. R. Sundram Iyer were re-elected Directors.

Messrs. Brahmayya & Co., and Messrs. B. K. Ramadhvani & Co., were appointed Auditors of the Company for the year 1953-54.

With a vote of thanks to the chair, the meeting terminated.



INDUSTRIAL FINANCE CORPORATION OF INDIA

LALA SHRI RAM'S ADDRESS AT THE FIFTH ANNUAL MEETING

FLOTATION OF DEVELOPMENT CORPORATION ADVOCATED

AN appeal to the Government of India for starting a Development Corporation to nurse and develop new industries was made by Lala Shri Ram, Chairman, the Industrial Finance Corporation of India, in the course of his address delivered at the Fifth Annual General Meeting of the shareholders of the Corporation held at New Delhi on the 19th inst. He said: "There are several directions in which such ventures could work, for example, manufacture of raw films, special kinds of steels, and card clothing, to name a few. It seems to me that the time has come for the setting up of a Development Corporation to nurse and develop new industries, and I would earnestly request the Government to give serious thought to the proposal." Dwelling at length on the various allegations made against the Corporation in Parliament in November last, the Chairman maintained that it would be gravely prejudicial to the applicants to publish detailed information about them. Visualising further expansion and modernisation of existing industries in India in the near future, Lala Shri Ram stated that there was increasing scope for the Corporation's activities in the coming years.

The following is the full text of Lala Shri Ram's speech:

"As the necessary quorum is present, we may now commence the proceedings of this meeting.

"The first item on the agenda is the consideration of the annual accounts and of the report of the Board of Directors on the working of the Corporation during the year. As printed copies of the accounts and of the report have been before you for some time, and have been circulated to all shareholders, I shall, if you agree, take them as read; and shall confine my observations to-day to a few points in the accounts, and to certain important aspects of the working of the Corporation during the year.

"The gross profit, during the year under review, was Rs. 23.16 lakhs, as against Rs. 17.48 lakhs in the previous year; and the Corporation has paid, for the first time in the five years of its working, the guaranteed dividend of 2½ per cent. on its paid-up capital without drawing any subvention from the Government of India. This, however, does not mean that it will be possible for the Corporation to reduce its rate of interest on loans, at any rate, in the near future. Apart from anything else, the Corporation has to return to Government quite a large sum of money, namely, about Rs. 27 lakhs, received by way of subvention, to enable the Corporation in the past to pay the guaranteed dividend. This alone may take some years, and it is, therefore, premature to devote further thought to the matter now.

"The first half of the year under review was, as you are aware, featured by an economic recession, which, from one aspect, may be viewed as the first healthy break from the unhealthy post-war boom. Failure of rains and consequent famine in many parts of the country, curtailment of electric power, and shortages of railway facilities added to the difficulties. Speaking in a general way, however, I would say that the year was one of comparative economic stagnation. A buyer's market had definitely displaced the seller's one; and industrialists were, therefore, hesitant about setting up new industries; on the other hand, they had to make their existing concerns efficient and profitable. They were inclined, therefore, to seek loans mainly for renovation of machinery and for making their units economic by suitable expansion. It, therefore, happened that, with the exception of two applications, which covered new lines, all the 74 applications for loans received by the Corporation during the year were for funds for modernisation of machinery or for expansion of existing units. The loans asked for were also for moderate amounts, and no application sanctioned during the year exceeded a sum of Rs. 25 lakhs. I may mention that the cost to the Corporation is the same whether it deals with an application for a crore or a lakh.

"The loans sanctioned by the Corporation from its inception to 30th June, 1953, amounted to Rs. 15,47,70,000. Of this total, a sum of Rs. 2,30,99,200 was not utilised for various reasons which I have mentioned in detail in my previous annual addresses.

"I shall now deal with some general aspects of our functioning during the past year.

"At our last annual meeting, I referred to a scheme we had in mind, viz., to employ, if possible, industrial consultants, each an expert in his own field, on the staff of the I.F.C. It is an ambitious scheme which can be worked up only gradually. Moreover, such specialists have mostly to be recruited from abroad. We have, however, appointed for the time being an engineer of considerable experience. We are also strengthening our banking and administrative staff.

"I have tried every year to utilise this occasion to deal with complaints which the general public or our own clientele have voiced in regard to our functioning. One hardy annual in this category, viz., delays in the sanctioning of loans, has now lost much of its force. Our clients now realise that, unlike short-term loans on commodities and goods by commercial banks, to the procedure of which they are accustomed, our loans, given on the security of fixed capital, have not only to comply with various legal formalities, but should also be satisfactory as regards the merits of the schemes for which the loans are taken. Where an application for a loan furnishes all the requisite information and complies with the various legal requirements, the Corporation is able to arrive at a decision well within two or three months. In fact, the delays cause loss to the Corporation, because money borrowed by it remains idle, and the Corporation is, therefore, keen to deal with applications for loans as quickly as possible. With better knowledge on the part of borrowers of our requirements, these delays will be considerably reduced.

Difficulties Facing Indian Industries

"At this stage, I may, perhaps, refer to some of the difficulties experienced by industrial concerns in this country nowadays. These difficulties fall under various heads, namely, (1) high freight on raw materials generally, (2) difficulties in some cases of supplies of raw materials, (3) difficulties about supply of coal, (4) shortage of electric power, particularly in Bombay and Madras, because of inadequate rainfall, and (5) shortage of railway wagons generally and also of road transport. The causes of most of these difficulties are fairly well known, and I can only hope that the responsible authorities concerned will before long do their best to alleviate the difficulties.

"Experience of our first few years' working showed us the need for amending the statute governing the Corporation in certain important respects, and particularly to enable the Corporation to borrow from the International Bank, to increase the limit of loans to individual borrowers and to take over borrowers' concerns when necessary. In the course of the passage of the amending Bill through Parliament, certain allegations were made against the Corporation; and we immediately requested the Government to appoint a Special Committee to enquire not only into the allegations but into the entire working of the Corporation. The Government accepted our suggestion and appointed a Committee of Enquiry, whose report and our comments on it have been for some time before the Government.

"It may be asked whether such allegations as those made in Parliament could not be prevented by publishing all the relevant facts—not merely the names and amounts—about each application for loan, both those rejected and those granted, but in my opinion it would be gravely prejudicial to the applicants, whether successful or unsuccessful, to publish such detailed information about them and their business. Persons not familiar with banking may not realise that two seemingly similar cases may, in the end, have to be dealt with wholly differently for some important reason or other, the publication of most of which will be definitely harmful to the borrowers. It would be even more inadvisable to publish only the details about sanctioned loans, withholding information about rejected loans, for it would be easy for interested parties to know that certain applications had been rejected, and their prospects of borrowings from other sources will be jeopardised. From every point of view, the publication of names, etc., whether of all cases or only of those in which loans have been sanctioned, will be inadvisable.

Close Supervision Maintained

"On the other hand, we appreciate the desire for close public supervision over an institution of this kind. This is already secured at present in many ways. Firstly, the Government nominates three Directors, and the Reserve Bank of India two Directors. Secondly, the Managing Director is appointed with the approval of Government. Thus, six out of twelve Directors are practically Government nominees; and the other six represent banks, insurance companies and co-operative institutions. Thirdly, there are two auditors, one of whom is appointed by Government with the approval of the Comptroller and Auditor-General. Fourthly, the Comptroller and Auditor-General has the right to inspect and audit, if he so desires. And finally, the Corporation works in the closest touch with Government, and does not, and will not, hesitate to furnish to Government any information the latter may require.

"In the last resort, the success of an institution of this kind will depend on the right exercise of banking judgment, viz., its balancing the need for security of its funds against the duty of helping industrial development; and this must, in turn, depend ultimately on the competence and adequacy of the staff of the Corporation and on the quality of its Board.

"My colleagues are busy and important men with other heavy responsibilities; some as leading industrialists, some as banking and insurance men, some as Government servants and others in spheres of no less valuable work. At great sacrifice, they attend to the affairs of the Corporation, both as members of the Board and as members of the Executive Committee, some of them making frequent journeys from far-off places. The contribution that they have all made to the work of the Corporation, has been of great value. We have so far been fortunate in having unanimous decisions on all matters, whether in sanctioning or refusing loans.

"The exercise of a balanced judgment which is the essence of all banking transactions, and particularly in banking of our type, usually leads to the adoption of a middle course. Such a course would always be open to criticism from opposite points of view as being either too lenient or too strict.

"The Corporation can be thought too niggardly and harsh or too easy-going, according as the critic is overenthusiastic about rapid industrial development or cautious and conservative. Again, it can be accused of charging too low rates on loans and neglecting the interests of shareholders and Government or of charging too high rates in order to pay good dividends. While well-informed criticism is always welcome, the Corporation, if it is to survive, must adopt certain minimum standards of strictness in examining the merits of applications for loans and certain legal safeguards; and it is only to be expected that some of those whose applications have been rejected make a grievance of it in public and make complaints against the Corporation.

"As a rule, we tell applicants for loans in what respect their applications are not in order, and if their applications are finally rejected, we give them the fullest reasons for our inability to assist them. I am sure that if those who receive such complaints merely read the correspondence between the applicants and the Corporation, they would get a true appreciation of the position. We have issued circulars to all chambers affiliated to the Federation of Indian Chambers of Commerce and Industry, explaining the nature of our loans and, in particular, that we give loans for expansion and modernisation.

"I make it a point during my tours, especially in Calcutta and Bombay, to find out informally from commercial bodies and associations whether they have any criticisms of our policy and our standards, and have received no complaints so far. I made special enquiries from the All India Manufacturers' Organisation at Bombay, which is particularly interested in the small industrialists, apart from its general interest in industrial development, and no specific complaint was made.

"I do not however, claim infallibility for us and our staff. The work that we have been doing is of a new type, at least in India; and we are not ashamed to confess that we have slowly felt our way. In the early stages, perhaps, we were groping, if not in the dark, certainly in feeble twilight. It is even possible that we may have made occasional mistakes, though we have so far not discovered any. There may be some among the rejected applicants for loans who feel that we have been too strict. While we have throughout endeavoured to help deserving applications to the best of our ability, our main function is to help industrial development, and we have, in many cases, instead of rejecting applications, asked applicants to modify them so as to qualify for loans.

Scarcity of Experienced Personnel

"It is a point of the criticism that some members of the Board have interest in industrial concerns assisted by the Corporation. In this country, with its limited economic, and more particularly, industrial development, there is a limited number of persons of sufficient status and experience, whether in industry, commerce, banking or insurance to enable the Corporation at all times to have a Board of Directors, none of whom will in any way be connected, actively or passively, not even as a shareholder with any of the concerns seeking loans from the Corporation from time to time. On the other hand, so far as I can judge, it will not be in the interest of the Corporation to run it without the guidance and counsel of persons experienced in industry, banking and finance. With few industries and financial institutions and not too many persons of experience and standing, it is inevitable that most of these persons should be connected in some capacity or other with one or more of the concerns that may ask for loans. So far, there has been no occasion for any conflict between the private interest of a Director and the interest of the Corporation, and it is not too optimistic to hope that the Corporation will not see any occasion for such conflict in the future also. In the meantime, I would submit, in all humility, that those who are working as Directors of the Corporation are doing so at great personal sacrifice. Institutions of this kind involving the exercise of discretion by those in authority can work properly only in an atmosphere of trust and confidence.

"Even as bankers, we have to take some risk; and, though no bank will welcome the taking over of a borrower's concern and running it, for management of industry is a specialist and often whole-time job, such a contingency cannot be altogether avoided. Fortunately, we have not had occasion so far, except in one case, to take over a business concern and run it.

"As you all know, we started the Corporation at a time of extreme shortage of capital in the country; and before long, the long-drawn seller's market gave way to a buyer's market, which was aggravated by the fall of prices in the first half of 1952. Against such a background, it is fairly certain that but for the help rendered by us, many industries which have taken loans from us could not have started the schemes, whether of expansion or of modernisation or of new lines, on which they have launched.

"You will see from the Annual Report that we have arranged to sell further bonds of the face value of Rs. 2 crores, making our total bond issue Rs. 7,80,50,000. Together with our paid-up capital of Rs. 5 crores, we are not short of money, since our existing commitments amount only to a little over Rs. 13 crores.

"With the help of the Government, we arranged for a loan from the International Bank for Reconstruction and Development, and the terms were almost finalised last year by our Managing Director's visit to Washington. The formal sanction of the loan awaited the amendment of the I.F.C. Act, in the course of consideration of which by Parliament allegations were made against the working of this Corporation. As already mentioned, we suggested the appointment of a Committee of Enquiry to go into the matter and felt that until the Government had reached their conclusions on the Committee's report, we should hold this matter in suspense. We shall take up the matter further after the Government have finally dealt with the Committee's report.

Increasing Scope for the Corporation

"Notwithstanding the definite emergence of the buyer's market, and the gloomy view taken by some as to the possibility of continued trade depression, I have every hope that, in India in the coming years, there will be both expansion and modernisation of existing industries, and also the setting up of new industries. It is also likely that, having regard to the heavy Government programme, industries will find it difficult to raise capital. I visualise, therefore, increasing scope for the Corporation's activities in the coming years, and I am confident that the experience gained so far by the Corporation will help it in meeting the demands made upon it. It should, I think, be not too difficult for the Corporation to raise such funds as it may require from time to time, with the help of the Government and of the Reserve Bank.

"Some people think that the Corporation has failed so far to take a broad view of the needs of the industrial development of the country, and particularly of industrially backward areas, and that it does not help in the dispersal of industries. But as we are only a Finance Corporation, and not a Development Corporation, we cannot act as promoters of industries, but can only deal with such applications as are made to us for loans against tangible assets. We have, however, not been indifferent to the needs of industrially undeveloped areas. The statement in Appendix A to our Fifth Annual Report will show that our loans are well distributed. Our policy has been in accord with that of Government; till the Five-year Plan appeared, we were guided by the Ministries concerned, and we now adjust our policy to the Five-year Plan. Our close contacts with the Ministries concerned will, however, continue.

Help to Small Industries Also

"Another criticism is that we have assisted only large industries, and have ignored the small and medium-scale ones. While it should be remembered that the I.F.C. is meant primarily to serve the needs of large-scale industries and that similar Corporations in States are meant to assist the smaller ones, it has also entertained applications from small industries provided they come under the definition of 'industrial concerns' given in the I.F.C. Act. The Corporation has, for instance, given a loan of Rs. 50,000 to a small chemical works.

"I have already referred to the shortage of capital in the country, to the reluctance of the industrialists to embark on new ventures and to the smallness of the loans applied for. On the other hand, it is in the interest of the country that pioneering ventures in new industries should be started as soon as possible. There are several directions in which such ventures could work, for example, manufacture of raw films, special kinds of steels, and card clothing, to name only a few. It seems to me that the time has come for the setting up of a Development Corporation to nurse and develop new industries, and I would earnestly request the Government to give serious thought to the proposal. As a basis of discussion the following outlines of a scheme may be taken. A Corporation may be set up with a capital of, say, Rs. 10 crores, the Government being the predominant, or the sole, shareholder, at any rate, in the beginning. The Board of the Corporation may consist of, say, a representative each of the Finance and Industry Ministries, the I.F.C. and, perhaps, also the Reserve Bank, three experienced industrialists and an experienced banker. The Corporation would set up separate companies for various industries, either wholly with the Corporation's own capital or with such public capital as may be forthcoming in response to a guarantee by the Corporation, say, for the first five years of a 5 per cent. dividend per annum. The Corporation would find funds for about half the capital expenditure in each case, the other half being found by the I.F.C.

Unemployment

"Turning now to the general economic situation, seeing that I have had to dwell at some length with our own affairs, I propose only to deal with one limited aspect of the situation, namely, the problem of urban unemployment. This problem is, in my view, only a worsening of an endemic situation, viz., the absence of growth in opportunities for employment to take up the growing supply of applicants seeking employment. The problem was there with us even before the war and had been covered up for some time by the economic and administrative expansion that we had during the war and for some time thereafter. Since economic activity tended to slow down in 1949, and partly since the recession of the early months of 1952, there has been a marked deterioration in the situation. Moreover, the output of schools and colleges has been increasing rapidly in recent years. I believe that the real remedy lies in reducing the cost of living, and cost of production, and thus reviving the demand for goods and services in general, so that the economy expands all round. Creating employment in artificial ways, such as are now proposed, would only postpone the solution of the problem to a later date, and not solve it.

"As far as the I.F.C. is concerned, I promise that, in its own limited way, it will do its best in giving financial assistance for the setting up of new industries and for the expansion of the existing industries. That is all that it can do.

"In conclusion, I thank my colleagues on the Board of Directors for their co-operation and guidance. As I have already said, they have helped the Corporation at great personal sacrifice. Three of my colleagues, each eminent in his sphere, viz., Sir Biren Mookerjee, Mr. B. K. Shah and Mr. R. G. Saraiya, are retiring from the Board, and I take this opportunity to thank them on behalf of the Corporation for the valuable guidance they have given to us all these years. We shall miss their counsel in future.

"Finally, on behalf of the Board and on my own behalf, I thank the Managing Director and the staff of the Corporation, both here and at the branches, for their loyal and devoted work. They have had to work under heavy handicaps all along, particularly because the field of the Corporation was uncharted."

OUTLOOK FOR RAW WOOL IN AMERICA

TREND OF CONSUMPTION MOVING UP

(By RUTH JACKENDOFF, Director, Department of Economics and Statistics, The Wool Bureau, Inc.)

PEACE in Korea and anticipated cuts in defence spending have been accompanied by periodic predictions of a downward readjustment in the U.S. economy. So far, none of these has materialised, but they have tended to induce a conservative attitude in business, especially as regards inventory policy. This, in itself, may modify the impact of a transition to a lower rate of defence spending, because excess inventories are usually a major feature of business recession.

Primary market prices and wholesale prices of all commodities have tended downward, while the consumer price level has been relatively stable, largely because wage increases have offset some of the declines in raw material costs. Raw wool prices during the current season have recovered some of the losses experienced in the 1951-52 deflation, but continue to be within the competitive range set up by the new synthetics.

Compared with prices immediately preceding the Korean conflict, the primary market prices of fine wool are 20 to 22 cents higher, while those of crossbreds are about the same or slightly lower. A similar comparison for Boston market prices reveals fine wool prices to be about equal to pre-Korean levels and crossbred prices somewhat lower. The lag of Boston wool prices on primary market prices reflects the gradual recovery of U.S. wool consumption, which is in contrast to the dynamic recovery in the United Kingdom and other wool-consuming countries. Yet the trend of raw wool consumption has been steadily upward since mid-1952, without benefit of substantial Government business.

Resurgence of Fashion Interest

On the basis of new orders placed for civilian apparel fabrics, the trend should continue to rise. A resurgence of fashion interest in worsteds, which is still not evident, would expand raw wool consumption at any level of demand, because these fabrics do not utilise waste fibres as do woollens.

Below is a balance-sheet of the U.S. supply-demand factors in wool in an effort to estimate potential import requirements for the remainder of the year. Such an estimate is complicated by the uncertain disposition of the total volume of wool acquired by the Commodity Credit Corporation on 14th May, 1953 under the 1952 loan-support programme.

It is assumed that these wools were all included in trade stocks reported at the end of March, 1953 either as C.C.C.-owned or consigned under loan by growers and dealers. A preliminary estimate of the total volume was placed at 97.5 million pounds (actual weight) probably mostly greasy shorn types. Without attempting an exact conversion of these wools to a scoured basis (since precise quantities of shorn and pulled wools are not known), the total is converted at a 44 per cent. yield to 43 million pounds (clean).

Estimated Statistical Position of Raw Wool in 1953

(In million pounds (clean basis)

Net	71	..	93

* Equals estimated.
† If market prices continue above C.C.C. selling prices, these wools may be absorbed commercially.

The dominating influence of Government spending is reflected in increased employment, production, earnings and sales, including clothing sales. Price deflation at wholesale and some retail levels has restored part of the loss in the value of the dollar. This is reflected in a rise in real total disposable income and *per capita* real income.

Mill consumption and imports of apparel wool continue to be substantially above pre-war levels. Despite the recent decline in mill consumption, the 1952 rate was 23 per cent. above the pre-war average. Imports account for a larger share of mill consumption. In 1951 and 1952, this trend partly reflected the non-competitive price structure of domestic wools under the loan-support programme, rather than true foreign wool requirements.

Consumption of Apparel Wool

However, although mill consumption of apparel wool is recovering, it continues to be below 1950 levels. Since mid-1952, weekly rates of consumption have exceeded those in the corresponding months of the previous year. Any marked recovery must come from increased demand for worsteds, as the rate of consumption on the woollen system for each month since 1951 has, with a few exceptions, exceeded the corresponding monthly rates of preceding years.

General imports of apparel wools grading finer than 40s are rising. Imports for the entire year 1952 were 17 per cent. lower than those for 1951. The rise in imports during the first two months of 1953 was accompanied by a sharp shift from the British Dominions to South American suppliers.

Virgin wool and other animal hairs account for an increasing share of total fibres consumed in wool textile mills. This has been a reversal of the trend since 1948. Synthetic fibres, other than rayon and acetate, are being reported separately from "other fibres" for the first time this year. They account for 3 per cent. of all fibres consumed during the two months of January and February, and represented 3.4 million pounds.

New Orders for Fabrics

The manufacturers' new orders for apparel fabrics are rising. These are unsupported by any significant volume of Government orders and point to a rise in production of apparel fabrics and consumption of apparel wool in the period ahead. Unfilled orders at the end of March, 1953, were at the highest level since the end of March, 1952, and should contribute to increased mill activity. As regards the recent rise in civilian fabric production, this did not entirely offset the decline in Government business. Civilian apparel fabric production was higher in 1952 than in 1951 and continued to show gains in the first quarter of 1953. Since Government business is expected to continue at fairly low rates, civilian demand will have to increase further to reach the level of total production in 1951.

Imports of wool semi-manufactures and manufactures added to mill consumption of raw wool resulted in 23 per cent. increase in civilian *per capita* consumption of raw wool equivalent from 1951 to 1952.

The current rate of wool consumption for both carpets and clothes is not seriously affected by man-made fibre competition. As compared with 1950, the trends of both wool and rayon and acetate staple consumption are low. Non-cellulosic staple fibre consumption is rising sharply. The production of non-cellulosic fibre is still relatively low. In the first quarter of 1953, the rate of rayon and acetate staple consumption would appear to have been affected by competition more from non-cellulosic staple than from wool. The price of fine wool is still within the competitive range of the new synthetic staple prices, but the rising trend of wool prices threatens to send it out of range.

Tailored Clothing

The men's tailored clothing of all types has increased sharply as compared with early 1952. Summerweight suit production, followed by separate trouser production, far outdistanced the gains in regular weight suit and coat production. Rayon and other synthetics continue to make sharp inroads in the summerweight suit market. The production of women's suits during 1952 declined as compared with 1951; this was in contrast to gains in other major outerwear items. Continued popularity of "separates" is tending to reduce the demand for tailored suits. Wool's share of the suit market declined further in 1952, but was stable in skirts and increased in coats. Dollar retail sales of both men's and women's clothing reached new peaks during 1952. In the first quarter of 1953, sales declined.

In view of the tight inventory positions reported to have been maintained in tailored clothing, particularly men's wear, during the past two seasons, it will not be altogether unexpected if 1953 results in the wool trade are considerably better than those of 1952. Initial excitement over the new synthetics has given way to the realisation that their limitations, as revealed by consumer experience, can be overcome when they are blended with wool. To the extent that wool will regain some of its 1951-52 losses to synthetics, the outlook for 1953 is even better.

BRITAIN'S TRADE IN AUGUST

The value of British exports in August was £198,100,000 and that of imports £249,200,000, according to provisional trade figures issued by the Board of Trade. Though both these figures are considerably below the totals for July—which were £234,400,000 and £293,000,000 respectively—the reduction in exports can largely be accounted for by the fact that August, traditional holiday period for British workers, contained only 25 working days and was as well affected by the annual holidays.

The best comparison with earlier periods, says the Board of Trade, is obtained by taking July and August together. The average of exports for those two months was £216,300,000, as compared with the average of £210,000,000 in the second quarter of the year and £208,500,000 in the first. The rate of exports for the third quarter so far thus compares well with the earlier part of the year. The average of imports—£271,100,000—was 7 per cent. lower than the level of the second quarter and slightly below the level of the first quarter.

Re-exports in August aggregated £8,800,000 and the trade gap—or excess of imports over exports and re-exports—was £42,300,000. In July and August, the gap averaged £46,200,000—well below the level of either of the two previous quarters (£53,900,000 in the first and £73,700,000 in the second). Britain's adverse balance of trade is thus being steadily reduced.

The value of Britain's exports to North America in August was £24,500,000—exports to Canada accounting for £11,800,000 and exports to the United States for £12,700,000. The average for July and August together, at £27,300,000 was 8 per cent. below the level of the second quarter, although well above that of the first quarter's average of £24,100,000.

Exports to the U.S.A. in July and August were maintained at the second quarter's average of £13,900,000, but exports to Canada averaged £13,300,000 a month, 15 per cent. below the high level of the second quarter.

NORWAY'S FOUR-YEAR PLAN

An average increase of 3 per cent. per annum in production is envisaged in the economic programme for the period 1954-57 drawn up by the Norwegian Government. A feature of the Plan is that investments are computed to remain unchanged as compared with that in the past few years. It is expected that, as production rises along with reduction in defence expenditure, a high consumption to the extent of 15 per cent. is expected during the four-year period.

The estimated rise in output is dependent upon a reasonable expansion of world trade. Owing to relatively large import and export needs, Norway is highly dependent on world market conditions. It is of major importance to the income from Norwegian foreign trade that the world market offers such opportunities that the export industries and shipping are able to operate at full capacity. Under the Plan, the exports of goods is presupposed to rise by approximately 15 per cent. during the period ending 1957. At the same time, the merchant fleet is expected to grow by 25 per cent. and the net revenues from shipping services by approximately 700 million kroner, based on prices at the end of last year. Imports too are estimated to go up by 500 million kroner during the period.

U.S. CUSTOMS SIMPLIFIED

The Customs Simplification Bill, enacted at the last session of Congress, went into effect early last week. The revised customs regulations ease many restrictions on importers and their foreign suppliers, in line with the U.S. Government's policy to co-operate with other nations in working for freer international trade. The major revisions are: (1) Foreign ships are exempted from payment of duty and internal revenue tax for supplies acquired for maintenance and repair. (2) The period during which imports can be shipped out again and original duty payments refunded has been extended from a maximum of three years to a maximum of five years. (3) The period in which goods not meeting the buyers' specifications can be returned to customs custody for exportation has been extended from 30 to 90 days. (4) The list of products that can be brought into the country temporarily without payment of duty has been broadened and the original bonds that importers must post lengthened from a validity period of six months to one year. (5) The requirement for special marking has been eliminated for a long list of products, including surgical and scientific instruments. (6) Penalties no longer apply for "technical undervaluation" of merchandise by an importer. The term refers to submission of values, with no intention to defraud, that turn out to be less than the values set by customs appraisers. (7) Under certain conditions, importers can correct errors in their entries at customs. (8) The measure also eliminates the provision in the Tariff Act that duties shall be based on the importer's entered value if it is higher than that appraised at customs.

ECONOMIC DEVELOPMENT OF U.K. DEPENDENCIES

MARKED EXPANSION IN PRODUCTION AND TRADE

BELIEVING that the richer the Colonies the better for all, including Britain, the U.K. Government is determined to do all in its power to help development of economic resources of its Dependencies. These Dependencies—scattered in the various regions of the Caribbean, Far East, and East, West and Central Africa—abound in rich natural resources. Agriculture is the basis of most colonial economies, providing food for local consumption and commodities for export. These latter include sugar, rubber, groundnuts, palm kernels and oil, cocoa, hard hemp, hides and skins, copra and coconut oil, tea, tobacco, cotton, coffee and pyrethrum flowers. The trade in these commodities, supplemented by minerals such as crude oil, refined oil, bauxite, manganese ore and iron ore, has won for these Dependencies an important place in the map of world commerce.

With a view to further developing these Dependencies, the U.K. Government has drawn up a six-point programme for implementation in partnership with their peoples. The plan envisages (1) improvement of communications, (2) development of agriculture, with an emphasis on peasant farming, (3) exploitation and winning of minerals, (4) expansion of electric power, especially hydro-electric, (5) promotion of local industries, and (6) encouragement to scientific research and development.

The six-point plan starts with the advantage of the experience gained from the great deal that has already been done. In the past, good government was established so that private enterprise could forge ahead. Not only extra-territorial enterprise developed Rhodesian copper, Malayan rubber and tin, East African sisal and coffee, the great *entrepots* of Singapore and Hong Kong, but local private enterprise was responsible for the growth of West African cocoa production to half the total world output as well as for growing cotton in Uganda.

Private Investment

In this drive for further economic development, overseas investors' contribution has been considerable. It is estimated that, in the period 1946-50, private investment in African territories alone might have reached a total of £100 to £150 million. Private capital is also being supplemented by Government action also. The U.K. Government is committed to providing (a) money, (b) the things money can buy, and (c) technical assistance to its Dependencies. Besides, the Governments of the Dependencies themselves have plans which are financed from their own revenues, loans and from the money made available by the U.K. Help has been coming from the U.S. through Mutual Security agency also.

The figures relating to the aid available to the U.K. Dependencies from the U.K. Government and from other external sources are revealing. By the Colonial Development and Welfare Acts of 1945-50, the U.K. Parliament voted £140 million for planned development over a period of 10 years ending 31st March, 1959. Of this, £96.7 million has been allocated to individual territories, £34.6 million for purposes such as research which affect all territories and £12.6 million to a reserve for supplementary allocations. During the six years ended 31st March, 1952, over £94 million had been committed and over £56 million actually disbursed.

Two Corporations

Besides, there are two corporations, namely, the Colonial Development Corporation and the Overseas Food Corporation, set up under the Overseas Resources Development Act, 1948. The former has power to borrow £100 million from the U.K. Treasury and spend on schemes which can pay their way within a reasonable period but which are not attractive to private capital working alone. This Corporation had in hand, at the end of last year, 57 schemes, involving a capital commitment of £394 million. The Overseas Food Corporation which started with a capital of £50 million and powers to borrow £5 million from the Treasury, undertakes schemes for the production of foodstuffs overseas to meet the U.K. needs. This organisation has already spent £36 million in East Africa and is now financed by sums voted annually by the British Parliament.

Under the Colombo Plan, the U.K. has undertaken to back the development programmes, involving £107 million, of the Dependencies in South-East Asia—the Federation of Malaya, Singapore, North Borneo and Sarawak.

Apart from the assistance mentioned above, public loans issued by the Colonial Governments also form part of their money for financing the programmes. These loans are mostly raised in London by the Crown agents. A particular attraction of Colonial Government loans is that they rank as trustee securities. The loans raised in this manner amounted to £3.17 million in 1948, £10.7 million in 1949, £17.5 million in 1950 and £24.9 million in 1951. These territories have access to World Bank loans also, guaranteed by the U.K. Government upto £100 million.

The total direct aid provided to the Dependencies during its lifetime, 1948-51, by the U.S. Economic Co-operation Administration set up under Marshall Aid was $13 million in grants for technical assistance and about $12 million in loans which, in effect, were advances against mineral production.

Production

With capital made available thus, production in the Dependencies has not lagged behind. A comparison of the production figures for 1932 and 1952 shows some remarkable increases in both agricultural commodities and minerals. During this period production of sisal, for instance, went up by 165 per cent., cotton by 150 per cent., sugar by 100 per cent. and rubber by 90 per cent. Rice supplies, however, remained a serious problem, especially in South-East Asia. Among minerals, copper output rose from 153,000 tons in 1930 to 310,000 tons in 1951, bauxite output from 170,000 tons to 2,132,000 tons and petroleum products from 2,230,000 tons to 9,518,000 tons.

Trade

The economic development of the Dependencies has made more goods available for export and put more purchasing power into the hands of the people for buying imports of goods they do not yet make for themselves. In 1951, the Dependencies accounted for 5 per cent. of the total world trade. As compared with 1938, the value of their exports (f.o.b.) had risen from £185 million to £1,697 million and imports (c.i.f.) from £182 million to £1,486 million. Imports comprised, among others, cement, iron and steel manufactures, machinery and commercial vehicles. Exports consisted of raw materials such as coffee, copper, sugar, vegetable oils and oilseeds and cotton. These are purchased by the U.K. through bulk purchase contracts. Trade in tin, timber, hides, sago, oranges and grapefruit is in private hands.

The currencies of the Dependencies are linked with sterling. Colonial Governments' reserves are held in sterling and capital is freely transferable between the Colonies and other parts of the sterling area.

PHARMACEUTICAL ENQUIRY COMMITTEE

The Chairman and members of the Pharmaceutical Enquiry Committee, at a meeting with the representatives of the Indian Chemical Manufacturers' Association, at Calcutta last week, emphasised the need for the industry to co-operate with the Government in solving many of its problems. The Chairman pointed out that the present enquiry was with a view to assisting the industry in every possible manner. He assured the members of the Association that the Industrial Finance Corporation was ready to give loans to the industry if it was experiencing lack of funds. The industry was requested to prepare a list of essential drugs which it could produce within a period and also suggest the forms of assistance required for the purpose. The industry was also asked to establish a control laboratory under the joint auspices of the manufacturers and the medical profession.

Tendering evidence, the representatives of the Association drew the attention of the Committee to the fact that Indian pharmaceuticals were generally sold at lower prices in spite of their dependence on imported raw materials, duties levied thereon and fluctuations in their prices. As production in the industry was related to joint costs, it was difficult to draw conclusions from sales of particular products. The existing scale of profits being small, the industry was not in a position, it was stated, to spend desirable amounts on research and development. The Association stressed the fact that the number of units for which manufacturing licences were issued in the various States was out of proportion to the extremely limited number of well established manufacturers. It pleaded that activities of foreign firms in lines already well established in India needed careful examination.

MANAGEMENT OF STATE INDUSTRIES

GOVERNMENT POLICY EXPLAINED

QUESTIONS relating to the working of nationalised industries and the information which Parliament was entitled to get on such undertakings figured prominently in the Council of States last week. An idea of the Government's policy regarding the management of these concerns was given by Mr. K. C. Reddy, Production Minister.

The nationalised undertakings are managed, according to Mr. Reddy, on a particular pattern. In November, 1950, the Cabinet decided to entrust the management of Government industrial undertakings to private limited companies promoted under the Indian Companies Act. The object of this decision has been primarily to extend a measure of autonomy to these units. So far six companies (namely, Sindri Fertilisers and Chemicals Ltd., Hindustan Shipyard Ltd., Hindustan Machine Tools Ltd., Hindustan Cables Ltd., Hindustan Housing Factory Ltd. and Nahan Foundry Ltd.) have thus been constituted. It is intended to form similar companies in some more cases.

Not all the share capital is owned by the Government. Again, the Boards of Directors of these concerns are not solely composed of Government's representatives. For representatives of other partners also serve on these Boards. Even in fully-owned Government undertakings, there are other non-official Directors nominated by the Government. The tendency of the Government in many a matter has, it is stated, been in the direction of giving more and more autonomy to the Boards of Directors rather than curb it at every stage.

While this is the method now being followed by the Government in regard to the management of nationalised industries, there seems to be no finality about it. For Mr. Reddy observes: "The adoption of the method of promotion under the Indian Companies Act does not mean that we are wedded to this method of managing our undertakings. What we have now attempted to do is only by way of experiment. We have to see how this system works. If after a time, it is found to be not satisfactorily working, our idea is to try out other methods. There is no finality about these things. We are experimenting and, in course of time, we will evolve a type of management which will be satisfactory from all points of view."

As regards the responsibility of the Minister concerned, it is stated that, since autonomy has been given to the units, the Minister cannot be held responsible for those aspects of their working over which he has no control. However, in the articles of association of these undertakings, certain specific reservations are provided for. These reserve provisions will ensure that in matters such as appointment of the Board of Directors, appointment of persons above a particular salary and increase or reduction of share capital, the Government's decision would prevail.

In the course of discussion on the above statement of the Minister, some of the members pointed out that Parliamentary responsibility regarding nationalised industries was becoming increasingly important. Parliament was, therefore, entitled to get full information regarding them. Dealing with this demand, the Minister stated that the extent and the manner of Parliamentary control had to be settled by establishing conventions and that conventions were still being established even in the advanced countries such as the U.K. In the U.K., the convention that, in day-to-day matters of management, there should not be any Parliamentary question had been established. In that country, questions could be asked, he said, in regard to policy or even on administrative matters. Proceeding, he observed: "There is no doubt that Parliament should be given full information regarding the activities and policies of Government undertakings. It would not be appropriate, however, for the Minister to answer questions on matters which completely fall within the competence of the Board of Directors."

TOBACCO ESTIMATE

According to the Directorate of Economics and Statistics, Ministry of Food and Agriculture, the all-India supplementary (final) estimate of tobacco, 1952-53, puts the current year's area and production at 798,000 acres and 219,000 tons, as against 712,000 acres and 205,000 tons, respectively, in the partially revised estimate of last year. This shows an increase of 86,000 acres or 12.1 per cent. in area and 14,000 tons or 6.8 per cent. in production.

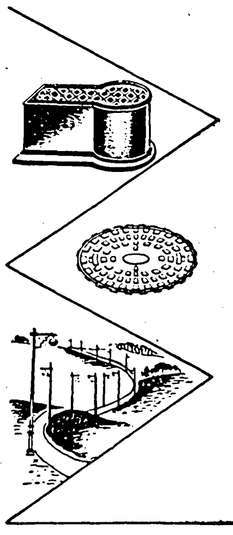
Castings of Infinite variety



for civil engineering

Among the wide range of cast iron products which a civil engineer requires are pressure pipes for water works, lamp posts, surface boxes, manhole frames & covers, drain gratings, water tanks—to name only a few. With years of experience behind them, ISCO manufacture cast iron products of high quality and undertake to supply them according to any design or specification.

THE FACTORIES ACT, 1948

PROVISIONS OF NEW BILL ANALYSED

A BILL to amend the Factories Act, 1948, was introduced in the Council of States on 3rd September, 1953. The Bill has three main purposes in view. First, it proposes to give effect to I.L.O. Conventions Nos. 89 and 90 prohibiting employment of women and young persons during night in factories, by amending sections 66, 70 and 71 of the Factories Act, 1953. Section 66, as it stands at present, provides, among others, that no woman shall be employed in a factory except between the hours of 6 a.m. and 7 p.m. It, however, gives the option to a State Government to vary the limits, though "no such variation shall authorise the employment of any woman between the hours of 10 p.m. and 5 a.m." To this section the amending Bill provides an addition that "there shall be no change of shifts except after a weekly holiday." Section 70 of the Act states that an adolescent is one who has been granted a certificate of fitness of work in a factory as an adult and who, while at work in a factory, carries a token of giving reference to the certificate. The Bill seeks to amend this section so as to provide "that no such adolescent, who has not attained the age of 17 years, shall be employed or permitted to work in any factory during night." Defining night, the Bill provides that "night" shall mean "a period of at least 12 consecutive hours, which shall include an interval of at least 7 consecutive hours falling between 10 p.m. and 7 a.m." Section 71 of the Act prohibits employment of children between 7 p.m. and 6 a.m. The amendment seeks to replace it by providing for prohibition of their employment during night. In this case, night is defined as "a period of 12 consecutive hours which shall include the interval between 10 p.m. and 6 a.m."

Annual Leave with Wages

Secondly, the Bill proposes certain changes in regard to annual leave with wages. The statement of objects and reasons says that the provisions of the Factories Act, 1948, relating to annual leave with wages have been causing considerable difficulty, particularly in determining the 12 months' "continuous" service for eligibility to leave with wages. It has, therefore, become necessary, according to it, to simplify the relevant provisions, so as to remove any cause for difference of opinion between employers and workers. Accordingly, the Bill provides a period of 240 days as the minimum attendance necessary during a calendar year to qualify for leave with wage. The condition of qualifying service will not be applicable to workers who are discharged or dismissed in the course of the year by the employer. Proportionate leave will be granted to workers whose service commences after the beginning of the calendar year. The annual leave with wages admissible under the Act "shall be exclusive of holidays occurring during or at either end of the period of leave." No prior notice will be necessary when a worker requires leave to cover a period of illness. The sums payable by an employer on account of leave with wages will be recoverable as if they were wages under the Payment of Wages Act.

Change of Shifts

Finally, the Bill seeks to carry out certain changes in the Act, which are expected to remove certain practical difficulties experienced in its working during the last four or five years. Thus, an amendment has been proposed to enable the Chief Inspector of Factories to permit the exceeding of the limit of nine hours of work in a day for a worker, provided in section 54 of the Act, in order to facilitate change of shifts. Further, an amendment to section 55 permits six hours of work at a stretch, without any interval, when the total number of hours to be worked on any day in a shift does not exceed six. This amendment is intended mainly to enable workers to avail themselves of half holidays in full on Saturdays, wherever such holidays are allowed. It also permits newspaper printing presses to work their entire night shift of six hours at a stretch. Again, the Bill enables the State Governments to declare two or more factories of the same occupier being declared as a single factory if an application for that purpose is made by the occupier. At present, the State Governments are empowered to declare different departments of a factory as separate factories. The Bill also seeks to amend the definition of manufacturing process as provided in the Act to include some of the presses including Government presses. The present definition, as worded, excludes them, as they are not considered as being carried on by way of trade or for purposes of gain, but this was not the intention of the framers of the Act. The definition is further sought to be amended to cover separate presses engaged in "composing types for printing." An amendment to section 64 enables State Governments to frame rules to exempt workers engaged in the printing of newspapers, who are held up on account of breakdown of machinery, from the provisions of the Act governing weekly hours, daily rest and spread-over. The section is also sought to be amended to liberalise overtime working conditions and enable continuous employment of workers in case some of the subsequent shift workers do not turn up in time.

Wages for Overtime

The Bill seeks also to make certain changes in calculation of "cash equivalent of the advantage accruing through the concessional sale to workers of foodgrains and other articles" for the purpose of computing ordinary rate of wages of individual workers, for payment of wages for overtime. This is being done because the existing provision is creating some practical difficulties. At present, calculation has to be made in each individual case taking into consideration the size of the family, the actual rations bought, as distinct from the maximum quantities the worker is entitled to buy and the actual difference. This involves considerable volume of clerical and computational work and the only practical way of avoiding this is to lay down in section 59 itself that the cash equivalent will be computed on the basis of the maximum ration admissible to a standard family of a specific number of consumption units. Accordingly, the section is now sought to be amended.

Under section 58(2) of the Act, State Governments have powers to frame rules exempting any factory or class of factories from the provisions relating to overlapping of shifts. It has, however, been found not possible to prescribe by the rules the type of these factories, as the grant of exemption has to be considered on the circumstances of each case. A re-draft of the section enables State Governments to exempt "any factory class or description of factories."

Safety Provisions

So far as safety provisions in respect of cranes and other lifting machines are concerned, the Bill seeks to provide for safety requirements in regard to chains, ropes and lifting tackles, in addition to cranes and other lifting machinery. An amendment to section 26, besides making clear that all new machines should comply with the requirements of encasement, also authorises State Governments to make rules specifying any further safeguards to be provided in respect of any class or description of machines. By an amendment to section 22 of the Act, the Bill provides that "no woman or young person shall be allowed to clean, lubricate or adjust any part of a prime mover or any transmission machinery, while the prime mover or transmission machinery is in motion, or clean, lubricate, or adjust any part of any machinery if the cleaning, lubrication or adjustment thereof would expose the woman or young person to risk of injury from any moving part either of that machine or any adjacent machinery."

INDUSTRIAL DISPUTES DROP IN JULY

Provisional statistics of industrial disputes for the month of July, 1953, show a decrease in the number of disputes, workers involved and man-days lost, as compared with those in the previous month. The total number of disputes during the month was 79 involving 43,713 workers, with a resultant time-loss of 108,346 man-days. The average duration of disputes during the month came down to 2.5 days from 3.1 days in June. Five of the disputes resulted in lockouts affecting 1,710 workers and accounted for a time loss of 8,210 man-days. Four of these were in West Bengal and one was in Madras. Apart from strikes and lockouts resulting from industrial disputes, there were seven work stoppages not connected with industrial disputes. These involved 60,700 workers and resulted in a time loss of 150,607 man-days. One of these was in Bombay and the rest were in West Bengal.

Sixty-four disputes ended during the month, of which 50 lasted for not more than five days each. Wages, allowances and bonus were the main points of dispute in 21 cases, while grievances relating to personnel alone accounted for 31 disputes. Fourteen disputes ended in complete or partial success to the workers and, in 18 disputes, they were unsuccessful. In 27 cases, the result was indefinite and in five cases not known.

Among the States, West Bengal, as in the previous month, accounted for the largest number of disputes and the highest time loss. As compared with the previous month, West Bengal, Bombay and Madhya Pradesh showed less disputes and a lower time loss. Although Madras recorded a higher number of disputes, the resultant time loss was appreciably less, as compared with that in June, 1953.

Among the industries, cotton textiles accounted for the largest time loss during the period under review. Reduced time losses were recorded during the month in cotton, jute, engineering, iron and steel, food, drink and tobacco, chemicals and dyes, ports, plantations and miscellaneous industries. The jute mill industry, which had accounted for over 70,000 man-days in June, accounted for a little less than 10,000 man-days during the month under review. The industries which showed increased time losses were other "other textiles," paper and printing and mines.

BRITISH TECHNICIANS FOR NEW INDIAN GLASS FACTORY

A batch of technicians belonging to a well-known British firm of glass manufacturers will be leaving the U.K. at the end of this month for India. Members of a 20-man team—part of which is already in India—they will be engaged in training Indian workers at a new glass factory at Asansol, in West Bengal. With their assignments completed, all but one or two of the team will return to the U.K. to rejoin their firm, which has been manufacturing sheet glass for 130 years.

In preparation for their stay in India, the technicians are at present learning Hindi. Instruction in Hindi is, however, only part of an intensive course on Indian affairs arranged for them by the British firm. The technicians have been made honorary members of the British Council Centre in Liverpool, which has enabled them to meet and talk with Indian students and others who are members of the Centre. Film shows and talks have also been arranged by the firm's education officer, who is looking after their general training.

EMPLOYEES' PROVIDENT FUNDS ACT, 1952

The Bill to amend the Employees' Provident Funds Act, 1952, introduced in the Council of States on the 14th inst., seeks to remove certain defects in the working of the Act. The full text of the Bill is not yet available. But, Press reports from Delhi reveal that there is no provision empowering the Government to apply the scheme to a factory not covered by the Act, even when the employer and employees ask for such application. Considerable doubts have also arisen regarding certain expressions used in the schedule to the Act, and no provision has been made in the Act for removing the doubts and difficulties.

The amending Bill is intended to remove the defects in the Act, as above, which have come to light since the Act came into force last year. One of the clauses now incorporated in the Bill provides that the Central Government may apply the Act to a factory, if it is satisfied that the employer and a majority of employees in the factory have agreed to such an application. Secondly, it provides for the recovery of any amount due from the employers in the same manner as arrears of land revenue. Thirdly, it prohibits the reduction by an employer, either directly or indirectly, of the wages of an employee, or the total quantum of benefits in the nature of old age pension, gratuity or provident fund to which the employee is entitled, under the terms of employment, express or implied, by reason only of his (employer's) liability for the payment of any contribution to the fund or any charges under the Act or the Scheme. Fourthly, it provides for inspection of exempted factories. Fifthly, power is sought to be vested in the Central Government to exempt any class of factories from the operation of the Act for such a period, as it may specify, on the ground of either financial position of such class of factories or circumstances of the case. Sixthly, it is sought to vest the Central Government also with power to remove difficulties in the working of the Act, as also any of the doubts. Further, under the Act, employees of the exempted factories are not entitled to benefit of nomination, protection against attachment or prior claim on the assets of an insolvent employer. The Bill seeks to remedy these defects also.

Under the Bill, again, any contravention of the Act or any of the conditions subject to which an exemption is granted will be liable with imprisonment which may extend to three months or with fine extending upto Rs. 1,000 or with both. Power is also sought to recover from the employer damages not exceeding 25 per cent. of the arrears, where an employer either defaults in the payment of a contribution to the fund or to the transfer of accumulations required to be transferred or in the payment of any charges payable under the Act.

the NATIONAL DRINK
Each day more and more people are turning to tea because this delicious drink quenches thirst and builds up stamina. Tea is, besides, one of our major industries and, as these facts will show, plays an important part in our national economy.
India produced 622,466,627 lbs. of Tea and exported 427,565,465 lbs. in 1952. Exports represent 68·7 per cent of the total crop.
A revenue of Rs. 145,715,000 is derived by the Union Government from Customs and Excise duty on Tea.
1,250,000 workers are employed in the Indian Tea Industry.
India earns an equivalent of Rs. 930,000,000 in foreign currency from her Tea exports.
India contributes over 50 per cent of the total world consumption of 1,175,000,000 lbs. of Tea.
About 170,000,000 lbs. of Tea are consumed in India.
Over Rs. 730,000,000 have been invested in India's Tea Industry.
In India there are 6,240 Tea gardens covering 785,584 acres.

EARNINGS OF TITAGHUR PAPER RISE

DIVIDEND UNCHANGED—FINANCES SOUND

THE performance of the Titaghur Paper Mills Company, Ltd. (Managing Agents: Messrs. F. W. Heilgers & Co., Ltd., Calcutta), during the half-year ended 31st March, 1953, has been encouraging. Two important factors have been responsible for this. First, production registered further improvement, thanks to the successive improvement effected under the Company's renovation programme, on the one hand, and to the satisfactory supplies of raw materials and coal, on the other. Secondly, there was a better demand for paper which was reflected in increased despatches and lower stocks. The sale proceeds, as a consequence, show a marked rise, from Rs. 269.86 lakhs for the six months ended September, 1952, to Rs. 284.32 lakhs for the period under review. The rise, however, has not been accompanied by a corresponding improvement in trading profit which shows a rise of only Rs. 6.32 lakhs to Rs. 63.90 lakhs. The is due to increase in expenses, as a result of higher labour costs and larger consumption of general stores.

Despite the rise in trading profit, the net profit is actually a little lower at Rs. 27.62 lakhs, as against Rs. 28.48 lakhs. That has been so because of the need for larger provision for taxation and depreciation. The net profit, however, has been sufficiently high to maintain the return to shareholders at 20 per cent. per annum, made up of a dividend of 15 per cent. and a bonus of 5 per cent. per annum.

The results of the Company for the half-year under review, as compared with those for the three preceding half-years, are presented in the following table:

(In lakhs of rupees)

	For the half-year ended				
	31-3-53	30-9-52	31-3-52	30-9-51	
Sale proceeds	284.32	269.86	273.23	258.20	
Stocks	4.56	6.61	5.43	9.65	
Expenses	219.05	214.39	206.24	201.30	
Trading profit	63.90	57.58	63.52	58.34	
Managing Agents' commission	4.30	4.01	4.22	3.97	
Provision for—					
Taxation	21.00	17.50	18.50	17.00	
Depreciation	10.49	7.21	8.50	8.06	
Net profit	27.62	28.48	31.69	29.84	
E.P.T. refund (less tax) ..	..	15.50	..	..	
To general reserve ..	3.00	7.50	3.00	2.00	
,, other funds* ..	14.75	22.75	15.70	14.73	
,, commission to Managing Agents on E.P.T. refund	..	1.26	..	..	
Dividends—					
Preference and preferred ordinary ..	1.02	1.02	1.02	1.02	
Ordinary ..	11.20 (D. 15% +B. 5% p.a.)	11.20 (D. 15% +B. 5% p.a.)	11.20 (D. 15% +B. 5% p.a.)	11.20 (D. 15% +B. 5% p.a.)	
Carry forward	6.44	6.00	4.75	3.98	

* Includes tax contingency reserve.
D—Dividend. B—Bonus.

It will be noted from the above table that a large part of the rise in trading profit for the half-year under review has been taken away by "taxation" and "depreciation," the sum actually earmarked being higher by Rs. 3.50 lakhs and Rs. 3.28 lakhs, respectively. The net profit, therefore, shows a fall, albeit slight, from Rs. 28.18 lakhs to Rs. 27.62 lakhs, as stated above. Out of this profit, a sum of Rs. 3 lakhs has been added to the general reserve, which, as compared with the amount set apart six months ago, is less by Rs. 4.5 lakhs. The sum added to "other funds" also is less, being Rs. 14.75 lakhs, as against Rs. 22.75 lakhs. The fall has been shared by reserve for plant replacement and development (—Rs. 7.5 lakhs) and reserve for taxation contingencies (—Rs. 50,000). The allocation of such large sums to general reserve and other funds in the previous half-year, it must, however, be noted, was possible by the receipt of a sum of Rs. 15.5 lakhs (net) by way of post-war refund of excess profits tax.

That the Company has judiciously husbanded its resources during the past several years is clearly borne out by the strong and sound financial position which it is now enjoying. The reserves and surplus as on 31st March, 1953, amount to Rs. 276.12 lakhs, which are equal to nearly twice as much as the paid-up capital amounting to Rs. 142.92 lakhs. Of these, Rs. 94.49 lakhs represent reserves for plant replacement and development, Rs. 76.30 lakhs capital reserves arising from a revaluation of fixed assets reserves, and Rs. 36.40 lakhs general reserves. Current liabilities (including provision for taxation), at Rs. 124.30 lakhs, are covered by current assets amounting to Rs. 337.62 lakhs, that is by a margin of Rs. 113.32 lakhs. The current assets are represented, in the main, by stocks of paper and raw materials amounting to Rs. 202.71 lakhs, debts and advances Rs. 72.03 lakhs, investments Rs. 77.28 lakhs and cash Rs. 37.71 lakhs. The gross block, at Rs. 485.34 lakhs, has been substantially written down to a book value of Rs. 192.61 lakhs, the depreciation so far provided being equal to about 60.3 per cent. of the gross block.

The Company's Rs. 10 fully paid up ordinary shares are currently being quoted at Rs. 34-6 *ex-div.*, at which rate and on the basis of the annual dividend of Rs. 2 per share, the yield works out to about 5.8 per cent. per annum, free of income-tax.

INDIA UNITED MILLS LTD.

The annual general meeting of the India United Mills Ltd., held on the 18th inst., proved to be such a stormy one that, even after lasting for over three and a half hours, it was inconclusive and had to be adjourned to 8th October, 1953, without the report and accounts being adopted. Many shareholders expressed their indignation over the financial results of the Company for the year ended 31st December, 1952, which disclosed a loss of over Rs. 52 lakhs. Strong criticisms against the management were voiced at the meeting. Almost all of them wanted to know as to why this Company should have suffered such a high loss in 1952 when other mills had made a profit. So numerous and loud were their complaints against the management that there was utter confusion in the meeting.

Explaining the causes for the Company's heavy loss, Mr. Rameshwards D. Bagla, Chairman of the Company, said in his speech to the shareholders that a loss of Rs. 27.61 lakhs was attributable to the valuation of cotton stock as at the close of the year and of Rs. 13.35 lakhs to the gap between the cost and market price of unsold stocks of cloth and yarn as at the end of the year. Besides, the prices realised on sale of cloth during the year were much below the ceiling prices. The Chairman disclosed that the Company had to sell its production at rates ranging from 5 to 30 per cent. below the ceiling prices. He added that the ceiling prices of some varieties were not very remunerative due to the heavy price paid for cotton.

Mr. Bagla further pointed out that the liquid fuel prices increased substantially during the year and resulted in a rise of Rs. 11.50 lakhs to the Company's costs. The Company had also to pay about Rs. 10 lakhs as carry-over charges on cotton bales which could not be paid in time and this increased the cost of cotton. Among the other factors which contributed to the adverse results of the Company were the loss of loom-hours due to power cut, extra cost of power under the power pool scheme, the poor export business, etc.

Readers will recall that, in April last, the Government of India deputed Mr. S. D. Chopra, a chartered accountant of Delhi, to make a full and complete investigation into the working of the Company under the provisions of the Industries (Development and Regulation) Act. This step was taken by the Government as it felt that the Company was being managed in a manner likely to cause serious injury or damage to the interests of the consumers of the mills' products or a substantial body thereof. Adverting to this investigation, Mr. Bagla revealed that, in consultation with the Managing Agents, Mr. Chopra had put up a scheme, as an interim measure, for the conduct of the affairs of the Company. The Directors of the Company had accepted the scheme. One of its provisions seeks to reduce the number of nominees of the agents' firm on the Board of Directors from seven to four and to increase the strength of the Board by taking five more independent Directors.

The Chairman also disclosed that the Company had fared better during the first half of 1953. The renovation scheme undertaken by the Company is expected to result in economy in working and improvement of yarn production qualitatively.

One of the shareholders proposed an amendment suggesting appointment of a committee of shareholders to enquire into the working of the Company during the past year, pending the adoption of the report and accounts for the year. The amendment was seconded, but it was not moved as the meeting was adjourned.

SITHARAM SPINNING AND WEAVING MILLS LTD.

On an application made by the Travancore-Cochin Government to work the Sitharam Spinning and Weaving Mills Ltd., which has remained closed since July, 1953, for alleged want of resources, the Trichur District Judge has granted the Government permission to work the mills. The T.C. Government made this application under section 153(c) of the Indian Companies Act for directions to run the mills. In granting the request, the Judge directed that the Government should prepare, for submission to the Court, a scheme for working the Mills, to produce the labour essential for its working and also to execute a bond embodying the conditions under which it proposes to work the Mills.

The Indian Standard Wagon Co., Ltd., has made an application to the Controller of Capital issues for permission to capitalise its reserves to the extent of Rs. 9,74,625 and to make an issue to its ordinary shareholders of one bonus share of Rs. 25 for each existing share held. It will be recalled that in the year 1926, the ordinary shares of the Company were written down to Rs. 25 each from their original parity of Rs. 100 and that after the bonus issue in prospect, the ordinary share capital will stand at only 50 per cent. of the original amount subscribed.

TRANSFER OF SHARES

ESTATE DUTY BILL SUITABLY AMENDED

THERE has been considerable agitation—and perfectly justifiable agitation—against clause 80 of the original Estate Duty Bill which made it unlawful for a company to register the transfer of any shares standing in the name of a deceased member of the company, unless a certificate from the Controller is produced to the effect that either the Estate Duty has been paid or will be paid or that none is due, as the case may be. This clause was opposed on two main grounds. In the first place, it was contended that the buyer of a share can never know whether the seller is dead or alive. Secondly, he could never know whether the Estate Duty is payable by the seller or not. It was, therefore, rightly contended that the clause would impose considerable hardship on company managements and also interfere with the negotiability of shares. The Finance Minister was, therefore, wise in deciding to amend the clause. The amended clause now reads:

"*If* any member of a company, formed and registered under the Indian Companies Act, 1913 (VII of 1913), dies after the commencement of this Act and the company, through any of its principal officers as defined in section 18, has knowledge of the death, it shall not be lawful for the company to register the transfer of any shares standing in the name of the deceased member, unless the company is satisfied that the transferee has acquired such shares for valuable consideration or there is produced before it a certificate from the Controller that either the Estate Duty in respect thereof has been paid or will be paid or none is due, as the case may be."

The main change introduced by means of this amendment, is the addition of the words "has knowledge of the death." The principal officer of the company cannot transfer the shares from one party to another party only when he has knowledge of the death of the seller. The "principal officer" means a manager, a managing agent or secretary. This is a considerable improvement on the original Bill which imposed, for all practical purposes, a blanket restriction on transfer of shares, for it would have been a well nigh impossible task for a company to determine the status and antecedents of all the holders of its shares who may choose to divest themselves of their holdings. The company would, in such cases, have had to ask for the relevant certificate from the buyers who would, in their turn, have been put to great hardship, since they too could not normally be expected to possess the knowledge about the antecedents of the sellers. The Finance Minister recognised the strength of this contention, for he said, in the course of his speech made prior to moving the amendment:

"Shares are freely convertible and in many cases the transferors are dead and, consequently, if in such cases registration is refused by the company, the free negotiability of the shares is unduly affected. It is for this reason that we seek to modify this clause. We have taken counsel with the various Stock Exchanges in the country, and they generally approve of this amendment."

Incidentally, the need for this amendment would not have arisen if the Government had chosen to consult the authorities of the Stock Exchanges in the country before it agreed to the insertion of the clause at the Select Committee stage. Indeed, the Government might have avoided this amendment if it had even anticipated—as it might well have done—the effect which such restrictions would have on the transfer of shares.

The Bill has a provision which relates to the position of foreign shareholders of companies incorporated outside India but who have been resident in India for two out of the three previous years. The Duty on their shares would be payable by the company and not by the shareholders. Explaining the reason for this provision, Mr. Deshmukh pointed out that that it had been inserted, because, in the case of foreigners, it was not possible for the Government to recover the taxes from them, as ordinarily such foreigners had no assets in India from which the Duty could be recovered. On their shares, the flat rate prescribed in the schedule would be imposed. For income-tax purposes also a flat rate of super-tax was applied in those cases in which foreigners did not declare their total world income. He explained further that the shareholders of such companies, who were domiciled in India, were not affected by the flat rate; they would be assessed in the ordinary way.

Points From The Chair

Solution to Unemployment

"IT is not that there is superfluity of manufactured goods. As a matter of fact, the consumption of various kinds of goods in this country is lower than in any Western country. The standard of living is far below what it should be, which means that the people cannot buy even the normal requirements. On the other hand, there are unemployed people, which means that the work is there and the workless are there, but the two have to be brought together in a properly organised fashion. So far as either reduction in production or complete stoppage of production causing unemployment is concerned, may I suggest that there should not be only two alternatives, i.e., either complete stoppage of work, and employment and starvation for the workers and losses to the employer due to closure, or full remuneration to labour and normal return to the employer. Surely between these two extremes, there must be a *via media*, where both can make sacrifices, so that the factory may not go out of production, but produce goods at prices at which the consumer can buy and to some extent unemployment may be reduced. It is a matter in which it is desirable again that the Government, labour and capital must sit down together before damage is done or a particular unit has to close down causing misery and loss to all concerned."

LALA SHRI RAM,
Jay Engineering Works Ltd.

Prospects for Indian Tobacco

"Tobacco is one of the most important cash crops of the country. In a sense, it is even more important from the point of view of national economy than sugarcane, inasmuch as, besides a large consumer demand in the country, a considerable proportion of tobacco is exported, and in 1951-52 tobacco earned nearly 17 crores of foreign exchange by export. Thanks to the operations of the Mysore Tobacco Company, the cultivation of tobacco has become increasingly popular in the State and has come to stay. Tobacco cultivation holds, therefore, bright and steady prospects and it is gratifying that an increasing number of farmers are eager to take up this cultivation. However, a word of caution to the cultivator is simultaneously necessary. The value of tobacco leaf to curers and packers is almost entirely dependent upon its quality. Therefore, unless the ryot takes special care in regard to the cultivation, spaces the plants properly in the field, uses good seed for the proper variety of plant, applies manures correctly, irrigates the plantation in the required manner and finally picks the leaf, in neither immature nor over-ripe condition, he may not expect a fair price for his produce."

E. V. GANAPATHI IYER,
Mysore Tobacco Co., Ltd.

Britain's Cargo Liners

"A great variety of post-war factors, such as import and export restrictions, political stresses, currency regulations, American aid, etc., have brought about many changes in the general pattern of trade. Outstanding examples of changing conditions in trades, in which your Company is concerned, are the Confederation of Newfoundland with Canada, which has undoubtedly been beneficial to the economy of Newfoundland, but which has had the effect of switching a good deal of traffic away from the United Kingdom and the United States to Canada. Also, the very large movement of coal from the United States to Japan has given employment to a considerable volume of tramp tonnage which has sought homeward employment to Europe from the North Pacific Coast. Normally this should not greatly affect the liner trade from the North Pacific, but, owing to the restriction of dollar purchases, traffic in fresh and dried fruits and canned goods, which, in pre-war days, flowed freely to the United Kingdom, has fallen to such small dimensions as to be practically non-existent. Consequently, liner tonnage, which is expected to maintain regular and frequent outward sailings to support the export drive, is forced to look to an increasing extent to homeward cargoes to bulk commodities, which, welcome as they are, do not require fast and expensive ships for their economical transport."

SIR ERNEST H. MURRANT,
Furness, Withy & Co., Ltd.

Outlook for Rubber

"As you know, the price of rubber, in common with that of palm oil, shows a further fall during the course of this year—a fall which, for estates in Indonesia, threatens an already precariously slender working margin. It is, therefore, with concern that we learn that appreciable further additions to the remuneration of estate workers in Java, South Sumatra and certain other territories have just been officially ordered. An official decision is still awaited covering North Sumatra, where, already, wages are on a higher scale. The increases now reported come at a time when, in recognition of the sharp decline in the value of rubber, sensible reductions have been agreed and introduced in competing territories. These enforced heavy additions to producing costs in Indonesia must jeopardise the economic existence of rubber estates already struggling to make ends meet, unless relief is promptly granted by simultaneously abolishing the extra export duty."

A. L. MATHEWSON,
Allied Sumatra Plantations, Ltd.

THE TATA IRON AND STEEL COMPANY, LIMITED

NOTICE OF EXTRAORDINARY GENERAL MEETING

NOTICE IS HEREBY GIVEN THAT AN Extraordinary General Meeting of the Company will be held on Thursday the 5th day of November, 1953, at 4-30 p.m. (S.T.), at the Registered Office of the Company at Bombay House, 24, Bruce Street, within the Fort of Bombay, when the following Resolution will be proposed as Special Resolution:—

"That subject to the Scheme of Arrangement circularised to the shareholders, copy whereof is placed before this Meeting and for the purpose of identification signed by the Chairman thereof, being sanctioned by the Court and becoming operative and subject to the consent of the Government under the Capital Issues (Continuance of Control) Act, 1947, being given to the issues of capital provided under the said Scheme of Arrangement and herein:—

(a) The Capital of the Company be increased from Rs. 10,52,12,500 to Rs. 17,38,75,000 by the creation of 9,15,500 new Ordinary shares of Rs. 75 each ranking as regards dividend, capital, voting rights and in all other respects *pari passu* with the existing 3,50,000 Ordinary shares which have been issued and are fully paid up.

(b) A sum of Rs. 2,04,75,000 being part of the sum standing to the credit of the General Reserve Fund be capitalised and utilised for the payment and issue as fully paid up of 2,73,000 out of the aforesaid 9,15,500 new Ordinary shares of Rs. 75 each to be distributed amongst and allotted as fully paid up to the holders of the 48,750 Deferred shares in the capital of the Company in the proportion of 5-3/5 Ordinary shares for each Deferred share held by such holders respectively on the footing that they become entitled thereto as capital.

(c) A further sum of Rs. 4,81,87,500 being part of the sum standing to the credit of the General Reserve Fund be capitalised and utilised for the payment and issue, as fully paid, of a further 6,42,500 out of the aforesaid 9,15,500 new Ordinary shares of Rs. 75 each and the said 6,42,500 new Ordinary shares shall be distributed amongst and allotted as fully paid to the holders of the 6,42,500 Ordinary shares resulting from the reorganisation and consolidation of 3,50,000 existing Ordinary shares and the said 2,73,000 new Ordinary shares of Rs. 75 each and 48,750 Deferred shares of Rs. 30 each referred to in Clause 4 of the said Scheme of Arrangement in the proportion of one new Ordinary share for each Ordinary share held by such holders respectively on the footing that they become entitled thereto as capital.

(d) The Articles of Association of the Company be altered as provided in Clause 8 of the said Scheme of Arrangement in manner following:—

(i) For Article 4 substitute the following Article:

"4. The present capital of the Company is Rs. 17,38,75,000 divided into 50,000 six per cent. Cumulative Preference shares of Rs. 150 each, 7,00,000 seven-and-half per cent. Cumulative Second Preference shares of Rs. 100 each and 12,85,000 Ordinary shares of Rs. 75 each."

(ii) In Article 82 for the words "Ordinary and/or Deferred share" substitute the words "and Ordinary Share."

(iii) For Article 140 substitute the following Article:

"140. Subject to the provisions of these Articles and the terms of the Scheme of Arrangement sanctioned by the Court for conversion of the former Deferred shares of the Company into Ordinary shares, the profits of the Company which it shall, from time to time, be determined to divide in respect of any year or other period shall be applied first in paying the fixed cumulative preferential dividend at the rate of six per cent. per annum on the capital paid up on the Preference Shares to the close of such year or other period, and secondly in paying the fixed cumulative preferential dividend at the rate of seven-and-half per cent. per annum on the capital paid up on the Second Preference shares to the close of such year or other period, and the balance of such profits shall be divisible among the holders of Ordinary shares in proportion to the amount of capital paid up on the shares held by them respectively to the close of such year or other period."

Note.—The Scheme of Arrangement above referred to is an arrangement proposed under Section 153 of the Indian Companies Act between the Company and the holders of Ordinary and Deferred shares in the capital of the Company respectively *inter alia* for conversion of Deferred Shares into Ordinary shares and a copy of such Scheme is forwarded herewith along with a circular letter dated the 15th day of September, 1953.

By Order of the Board,
J. R. D. TATA,
Chairman.

BOMBAY, 15*th September*, 1953.

THE INDIA CEMENTS LIMITED
MADRAS

NOTICE TO SHAREHOLDERS

NOTICE IS HEREBY GIVEN THAT THE Seventh Annual General Meeting of the India Cements Limited will be held on Saturday the 24th October, 1953, at 11 a.m., at the registered office of the Company, 11/12, Second Line Beach, Madras, to transact the following business:—

(1) To receive, consider, and adopt the Directors' Report and the audited Balance Sheet as at, and the Profit and Loss Account for the year ending 31st March, 1953.

(2) To declare dividend on Preference Shares.

(3) To elect two Directors in the place of Messrs. S. N. N. Sankaralinga Iyer and P. Suryanarayana, who retire by rotation under Article 114 of the Articles of Association of the Company. The retiring Directors being eligible offer themselves for re-election.

(4) To appoint Auditors and fix their remuneration. (The retiring Auditors, Messrs. P. S. Subramania Iyer & Co., and Messrs. Brahmayya & Co., Madras, being eligible, offer themselves for re-appointment.)

(5) To approve the donations of Rs. 8,184-8-0.

NOTICE is also given that the Register of Members of the Company will be closed from 12th October, 1953, to 24th October, 1953 (both days inclusive).

By Order of the Board,
For THE INDIA CEMENTS LIMITED,
For ESSEN LIMITED,
T. S. NARAYANASAMI,
Director,
Managing Agents.

CALCUTTA, 16*th September*, 1953.

PROFIT OF UNITED NILGIRIS LOWER

INDORE MALWA STEPS UP DIVIDEND

United Nilgiri Tea Estates Co., Ltd.

THE directors of the above Company (Managing Agents and Secretaries: Messrs. T. Stanes & Co., Ltd., Coimbatore) submitted the audited accounts of the Company for the year ended 31st March, 1953.

The result of the year's working was very satisfactory, and showed a net profit of Rs. 4,27,232 (Rs. 4,76,306) after providing for reserves for taxation, depreciation and other charges. With the balance brought forward from last year of Rs. 68,786 (Rs. 50,142) a sum of Rs. 4,96,020 (Rs. 5,26,448) was available for distribution, which the directors disposed of in payment of 5 (8) per cent. interim dividend paid on 16th February, 1953, Rs. 68,540 (Rs. 1,09,664), 13 (12) per cent. final dividend (making 18 (20) per cent. for the year) Rs. 1,78,204 (Rs. 1,64,496), transfer to development reserve Rs. 1,50,000 (Rs. 1,50,000), bonus to staff Rs. 8,200 (Rs. 8,500), charity and donations Rs. 5,000 (Rs. 5,000), pension fund Rs. 15,000 (Rs. 20,000) and carried forward Rs. 71,076 (Rs. 68,788).

Capital expenditure during the year were Rs. 36,018 (Rs. 64,211) on buildings, Rs. 22,397 (Rs. 93,140) on factory and machinery, and Rs. 27,470 (Rs. 29,577) on new clearings.

Factory and machinery.—The visiting agent and engineers have recommended for some time past that it is advisable to have a good second drier in the factory in place of the very old double down draft drier which is at present our only spare when there is a rush of leaf. The directors have accordingly decided to order a new 4' e.c.p. drier to pair with the existing 6' e.c.p. and Rs. 65,000 has been included for this in the estimate of Rs. 91,000 for new machinery for the present year. The balance represents a large standby engine and alternator installed already when the electricity cut reached a serious position earlier this year. The dust extraction plant mentioned last year has recently been received. For buildings, fittings and furniture the estimate is Rs. 30,000 including Rs. 52,200 on new labourers' quarters. For new clearings Rs. 73,000 is required. A sum of Rs. 1,50,000 has been recommended for transfer to development reserve to provide finance for this expenditure.

The crop of made tea has totalled 7,46,000 lbs. against the estimate of 9,00,000 lbs., reduced during the year to 8,00,000 lbs., and a crop of 8,10,000 lbs. during the previous year. The cost on the estate was As. 20.75, including excise duty, and the all in cost was As. 25.21, against As. 23.44 the previous year. The selling price averaged As. 35.55 against As. 33.99 the previous year. Crop to the end of the half year, 30th September, 1952, was very short due to drought conditions, having been only 3,23,000 lbs., and as the half-year's results showed a much reduced profit, the directors considered it advisable to reduce the interim dividend. It is fortunate that the results for the second half of the year have proved so satisfactory and enabled the directors to recommend the dividend for the year at 18 (20) per cent. Much more rain is still required. The S.W. Monsoon has been a satisfactory one, and the directors hope the N.E. Monsoon will also not fail us, and with evenly distributed rains, the tea will recover from last year's drought and show an increase over the conservative estimate.

The demand for quality teas as produced by the Company's estates continues satisfactory, and prices are reasonable. The estimated cost of production for the current year is 119.60 cents including excise duty at 1 anna per lb. against As. 3 per lb. for this item last year.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	13,70,800	Block ...	17,41,005
Reserves ...	9,33,759	Stock-in-trade	1,49,526
		Stores, etc. ...	1,43,067
Provision for taxation ...	83,466	Debts, depositsand advances ...	2,43,088
Liabilities ...	3,04,506	Investments	5,05,404
Profit and loss account ...	4,27,479	Cash ...	3,39,920
	Rs. 31,22,010		Rs. 31,22,010

Indore Malwa United Mills, Ltd.

The directors of the above Company (Managing and Selling Agents: Messrs. Govindram Seksaria (Indore), Indore) submit the audited accounts of the Company for the year ended 31st December, 1952.

The profit for the year, after deducting Rs. 5,01,736 (Rs. 4,68,479) for the agents' commission on profits and sales, amounted to Rs. 10,07,825 (Rs. 5,93,132). After adding to this sum the balance brought forward from the accounts of the previous year of Rs. 6,989 (debit of Rs. 3,36,146) there was a total of Rs 10,14,824 (credit of Rs. 2,56,989). From this sum the directors have written off the accrued depreciation for the years 1947 to 1949 as under:—

Buildings Rs. 2,87,126, machinery Rs. 3,60,992, drosophor installation Rs. 783, fire service Rs. 1,533, electric installation Rs. 9,187, motor cars and lorries Rs. 42,744, furniture and dead-stock Rs. 1,526, and ginning factories Rs. 8,109. There was an available balance of Rs. 3,02,824 (Rs. 2,56,989). The directors paid a dividend of Rs. 6 (Rs. 5) per share, free of income-tax, absorbing Rs. 3,00,000 (Rs. 2,50,000), leaving to be carried forward Rs. 2,824 (Rs. 6,989).

During the year under report the control on cotton continued as in previous year. The Company was able to purchase most of its requirements of cotton for the year in the last quarter of the preceding year and the first quarter of the year under report, when the new crop was moving in the market, at ceiling prices. The Company also purchased a considerable quantity of American cotton for fine varieties of cloth. However, the profits of the Company were adversely affected due to worldwide recession in textile and other commodities, specially cotton, and the mills all over India were faced with a serious problem. The steep fall in prices of cotton and certain varieties of cloth which resulted in financial stringency forced certain mills to liquidate their holdings at substantially reduced prices. In view of the above circumstances, the Government of India thought it advisable to make certain changes in their control policy and accordingly the Government withdrew distribution control on superfine cloth of all varieties and on certain varieties of fine cloth. They also withdrew progressively distribution control on coarse and medium varieties of cloth to the extent of 80 per cent. and production control on the manufacture of *dhotis* and *saris*. The aforesaid measures helped the industry to a great extent in the disposal of their stocks. The Government of India, from 1st October, 1952, withdrew price control also over a number of varieties. However, despite all the abovesaid adverse circumstances, the directors reported that the profit for the year was satisfactory. The directors further informed that various measures were being taken by the management to bring down the manufacturing cost and hope that the results of the current year will be much more encouraging.

During the year an expenditure of Rs. 81,012 was incurred on account of structural alterations, additions and extensions to existing buildings, and a sum of Rs. 70,984 was expended for one c.k.t. 2 e.5 capacitor, 12 bahnson h.d., 2 humidifiers with six switches and 1 type humidifiers complete, 8 c.i. ducts, one dronsfield's motor-driven flat grinding and roller covering machine, 3 ring frames comple, one electric motor, one busbar trucking machine, one spinopinc pin machine and one 22" w.h. friction clutches complete.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	50,00,000	Block ...	42,24,175
Reserves ...	12,52,505	Stock-in-trade	1,04,30,403

		Cash ...	1,45,956
	Rs. 1,89,80,980		Rs. 1,89,80,980

Dishergarh Power Supply Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st March, 1953.

In accordance with the provisions of the Electricity (Supply) Act, 1948, Rs. 20,645 (Rs. 18,571) have been transferred to contingencies reserve and Rs. 70,774 (Rs. 2,00,837) have been transferred from tariff and dividend control reserve.

After crediting excess provisions for previous years totalling Rs. 1,71,088, and after charging Rs. 1,89,066 (Rs. 2,19,365) for depreciation and providing Rs. 1,10,000 (Rs. 1,50,000) for taxation in respect of the current year, there remains a balance of Rs. 8,34,915 (Rs. 5,49,854) at the credit of the profit and loss account which the directors recommend should be allocated as follows:—

Dividend of Rs. 5 (Rs. 5) per share on the "A" preference shares Rs. 80,000 (Rs. 80,000), dividend of Rs. 4-8 (Rs. 4-8) per share on the "B" preference shares Rs. 54,000 (Rs. 54,000) and dividend of Rs. 6 (Rs. 6) per share on the ordinary shares Rs 2,59,200 (Rs. 2,59,200) leaving to be carried forward Rs. 4,41,715 (Rs. 1,56,654).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	71,20,000	Block ...	58,11,907
Reserves ...	15,14,079	Stores ...	8,66,419
		Other assets	8,045
Provision for taxation ...	1,78,316	Debts, deposits and advances ...	7,73,400
Liabilities ...	15,74,169		
Profit and loss account ...	4,41,713	Investments	33,54,664
		Cash ...	13,844
	Rs. 1,08,28,279		Rs. 1,08,28,279

Patna Electric Supply Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Octavius Steel & Co. Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st December, 1952.

The revenue account showed a profit on the year's working of Rs. 9,25,045 (Rs. 6,78,740) to which was added refund of income-tax on investment income Rs. 584 (Rs. 1,222), making a total of Rs. 9,25,629 (Rs. 6,79,961). From this sum was deducted debenture interest Rs. 1,00,000 (Rs. 1,00,000), debenture trustees' fees Rs. 700 (Rs. 700), gratuity to employees Rs. 619 (nil), arrears of depreciation Rs. 20,927 (Rs. 22,522), contribution to Vallabhbhai Patel National Memorial Fund Rs. 1,097 (nil), reserve for deferred taxation Rs. 1,85,000 (Rs. 1,70,000), reserve for contingencies under the Electricity (Supply) Act, 1948 Rs. 25,569 (Rs. 24,847) and reserve for redemption of debentures (special appropriation permitted by Government of Bihar Rs. 3,25,000 (Rs. 25,000). Thus there was a net profit for the year of Rs. 2,66,717 (Rs. 2,73,892). After adding the adjusted credit balance of Rs. 39,826 (Rs. 36,351) brought forward from the previous year and deducting Rs. 2,560 (Rs. 45,908) being the additional bonus paid to employees for 1951 (1949 and 1950), there was a credit balance of Rs. 3,03,983 (Rs. 2,64,335) on profit and loss account. The directors paid a dividend of 7½ (7½) per cent. for the year 1952 without any deduction of income-tax paid by the Company (shares issued in 1952 being entitled to dividend in accordance with the terms of issue and allotment) Rs. 2,42,601 (Rs. 2,24,395) and carried forward the balance of Rs. 61,382 (Rs. 39,940).

During 1952, 1,00,806 shares were offered to the shareholders for subscription out of which up to date only 51,544 shares have been taken up and paid for in full.

A continuous supply of energy was maintained throughout the year, and an increase of approximately 12 per cent. in the number of units sold was recorded as compared with the previous year. Total number of units sold during the year was 25,415,740 (22,707,810).

The number of consumers connected to the Company's system at the close of the year was 12,950 with a connected load of 21,959 kw. as compared with 11,795 with a connected load of 20,248 kw. at the close of the previous year.

There is a continued demand for additional supply within the Company's licensed area, and the prospects are considered good. Satisfactory progress was made during the year with the erection of the fifth boiler.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	34,92,978	Block ...	82,64,750
Debentures ...	20,00,000	Stores ...	7,29,848
Reserves ...	27,61,487	Debts, deposits and advances ...	8,43,444
Liabilities ...	15,90,406	Investments	1,07,525
Profit and loss account ...	3,03,983	Cash ...	2,03,287
	Rs. 1,01,48,854		Rs. 1,01,48,854

Agarpara Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. B. N. Elias & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st March, 1953.

Including the sum of Rs. 3,33,368 (Rs. 3,47,176) brought forward from the previous half-year and after deducting the manufacturing and revenue expenses, commission, depreciation and all other charges, there remains a balance of Rs. 3,93,243 (Rs. 19,46,246) for disposal with which it is proposed to deal as follows:—

To payment of dividend on 10,000 preference shares at 7 per cent. per annum, free of income-tax Rs. 35,000 (Rs. 35,000), to payment of dividend on 6,00,000 ordinary shares at 10 (20) per cent. per annum, free of income-tax Rs. 3,00,000 (Rs. 6,00,000) and to carry forward to next period Rs. 58,243 (Rs. 3,11,246).

In accordance with the provisions of the Indian Jute Mills Association working time agreement, the mills worked 42½ hours per week throughout the half-year with 12½ per cent. of the total looms remaining sealed as before.

In the jute and gunny market much speculation and fluctuations created difficult trading conditions during the period under review. Prices steadily declined and as a remedy to this Government reduced the sacking export duty from Rs. 175 to Rs. 80 per ton. This reduction helped to prevent further deterioration of the market, but did not stimulate demand.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	70,00,000	Block ...	46,61,835
Debentures	12,00,000	Stocks ...	38,57,036
Reserves ...	59,50,000	Stores and spare gear	9,70,183
Provision for taxation ...	11,07,985	Debts, deposits and advances ...	77,22,281
Liabilities ...	20,14,339	Investments	4,31,701
Profit and loss account ...	3,93,243	Cash ...	22,471
	Rs. 1,76,65,567		Rs. 1,76,65,587

Mysore Spun Silk Mills, Ltd.

The directors of the above Company (Chairman: Mr. K. Shamsuddin Khan, Channapatna) submitted the audited accounts of the Company for the year ended 31st March, 1953.

The abnormal factors which led to the temporary suspension of operations in the spun silk section of the mills last year were detailed in the sixteenth general meeting of the Company. The situation having gradually improved during the latter half of the year, action was taken to restart work in all the departments in one shift. There were impediments however to commence work in full swing owing to 40 per cent. cut in power supply from January to March, 1953 and again in June when there was a cut of 75 per cent. for a fortnight and 100 per cent. for one week due to the very low level of water in the Krishnarajasagara reservoir. The factory is now working in full swing, some of the departments working on two shifts also. The majority of the retrenched labour were taken back as and when work increased.

The overhauling, re-conditioning and re-organisation of the entire machinery of the mills undertaken with the help of the Japanese expert last year were completed by the end of July, 1953. As a result of this and due to the introduction of improved methods of processing on the lines prevailing in Japan introduced by the Japanese expert the production in the Factory per unit has increased resulting in lowering the costs of production appreciably and improving the quality and efficiency side by side. As a result of the implementation of the new methods of processing, the Company will be able to reduce its expenditure by about Rs. 2 lakhs per annum.

The filature, carpet and weaving departments of the Mills continued to work in full swing throughout the year and helped appreciably in averting what otherwise would have been a heavy deficit for the year.

The directors are very grateful to the Government of Mysore for their timely help during the year by coming forward to stand guarantee for an additional loan of Rs. 3 lakhs raised from the Bank of Mysore Ltd., and also for their continued solicitude for the successful working of the Company.

The raw material market which underwent steep upheavals during 1950-51 and 1952 is practically steady during the current year and supplies are now available at economic prices. This has helped the Mills to keep a steady programme of manufacture. Though the spun silk section could not work fully for the major portion of the year under report, yet due to the satisfactory working of the other departments, the Company's working during the year has resulted in a small surplus of Rs. 2,232 (loss of Rs. 4,71,298) after providing for depreciation. As during the year there was a fall in the prices of stocks of raw materials and finished goods carried forward from the previous year to the extent of a little over Rs. 1½ lakhs, the directors have appropriated the sum of Rs. 1½ lakhs which had been provided in the balance-sheet as a reserve for such contingencies. The directors hope that with the improvement in the conditions since January this year, the Company's results in future years would be more satisfactory.

The directors propose that the deficit of Rs. 4,60,002 which has occurred as a result of the carry forward of the previous year's losses may be wiped off by adjustment in the reserve fund, leaving a balance of Rs. 2,24,997 in the reserve fund.

The accounts of the Company for the years 1943-44 to 1945-46 are under examination by the income-tax authorities as to whether any profit has arisen which was taxable in British India during that period. This Company has disputed any liability under this head.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	13,61,780	Block ...	13,97,675

	Rs. 29,96,050		Rs. 29,96,050

New Victoria Mills Co., Ltd.

The directors of the above Company (Secretaries: Messrs. J. P. Srivastava and Sons Ltd., Kanpur) submitted the audited accounts of the Company for the year ended 31st December, 1952.

The results for the period, after making the usual provisions, showed a loss of Rs. 4,26,666 (profit of Rs. 19,78,141) to which was added depreciation Rs. 5,70,975 (Rs. 4,74,424) leaving at debit of profit and loss account a sum of Rs. 9,97,641 (debit of Rs. 15,88,215 after reducing the debit balance brought forward from the previous year of Rs. 30,91,932).

The directors reported that inspite of the marked improvement in the working of the mills, which resulted in higher efficiency and lower costs, the Company made a loss during the year. These adverse results are entirely attributable to the unprecedented conditions that prevailed in consequence of the landslide in prices of raw materials in the Spring of 1952, which was followed by a general slump in the cloth market. These unforeseen factors have affected the Textile Industry of the country in a manner and to an extent unknown in its annals and the mill was no exception to the misfortunes that flowed from this. The Company had with the object of securing quality cotton purchased a sizable quantity of Indian cotton against their quotas allotted to them in the beginning of the cotton season 1951-52. They were also allotted and secured large quantities of foreign cotton at the much higher market prices ruling early in the season.

At the commencement of the year when ceiling prices of cloth and yarn were based on the ruling prices of new crop cotton, the mill was working on a profitable basis, but unfortunately towards the end of March there was a sudden crash which affected both indigenous and foreign cotton. The Government of India in complete disregard of the prices paid by the mills for cotton revised the prices of cloth in a downward direction. Later in the year when prices of cotton registered a rise the Government declined to accept the just demand of industry for an upward revision in prices which they were bound to do in accordance with the Tariff Board formula and the only action they took was to remove the price and distribution control on a few varieties of cloth. This unreasonable action of Government led to further depression in the piece-goods market and the mills were compelled to dispose of their goods at uneconomical prices which were far below the cost of manufacture. The inevitable consequence of this was lower realisation from sales which resulted in heavy losses.

To add to the difficulties, during the year the Employees Provident Fund Act was put into force under which all workers earning Rs. 300 and below were compulsorily required to contribute 6¼ per cent. of their basic wages and dearness allowance per month to the Fund. Employers were being called upon to contribute an identical amount. The novel feature of this Provident Fund Scheme is that contributions have to be paid not only on the basic wages but on the dearness allowance as well. The introduction of the Provident Fund Scheme has resulted in an increased charge of approximately Rs. 3,50,000 per annum.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	52,02,178	Block ...	45,22,709
Reserves ...	25,62,533	Stock-in-trade	78,63,487
Liabilities ...	1,14,39,826	Stores, etc. ...	20,60,734
		Debts, deposits, and advances ...	20,11,679
		Investments	1,20,894
		Cash ...	39,388
		Profit and loss account ...	25,85,856
	Rs. 1,92,04,837		Rs. 1,92,04,837

INDIA CEMENTS LTD. Annual General Meeting, Madras, 24th October, 1953. Transfer books close from 12th to 24th October, 1953, both days inclusive.

COMPANY REGISTRATIONS

INTERNATIONAL AUTO INDUSTRIES LTD. First Director: Mr. Chimanlal Dahyabhai Nanavati.) Business: Importers, Exporters, Manufacturers and Dealers in Automobiles, Motor Cars, Motor Lorries, etc. Authorised capital: Rs. 25,00,000. Private company. Address: International Building, Mirjapur Cross Lane, Ahmedabad.

PEOPLE'S OWN HOUSING AND INDUSTRIAL CORPORATION LTD. (First Director: Dr. Rameshwar P. Bhatt.) Business: Builders, Contractors, Sanitary Plumbers and Engineers, etc. Authorised capital: Rs. 10,00,000. Private company. Address: 97, Stock Exchange Building, Apollo Street, Fort, Bombay.

VIPIN BROTHERS LTD. (First Director: Mr. Jivanlal Lalloobhai Shah.) Business: Importers, Exporters and Dealers in Merchandise, etc. Authorised capital: Rs. 5,00,000. Private company. Address: 28, Alexandra Road, Opposite Gamdevi Police Station, Bombay 7.

AGRI-HORTICULTURAL PRODUCTS LTD. (Managing Director: Mr. W. L. Dahanukar). Business: Sugarcane Planters, Importers, Exporters and Dealers in Sugar, Molasses, etc. Authorised capital: Rs. 5,00,000. Private company. Address: 759/75-4, Fergusson College Road, Poona 4.

QUESTION HOUR IN PARLIAMENT

Adulteration of Oil

SO far as the Government are aware, argemone oil is not used in the manufacture of bath soaps, but it is understood that no risk to human health is likely even if it is so used. The question of preventing the use of argemone oil in the manufacture of bath soaps does not arise. Argemone oil is generally used for adulteration of mustard oil. The Government of India has already requested the State Governments concerned to take necessary steps to exterminate the argemone weed wherever found. The Indian Standards Institute has also recently finalised the specification for mustard oil where it has been laid down that the oil should be free from admixture with argemone oil. The Prevention of Food Adulteration Bill, which is pending before the House, when enacted, will also help in preventing the adulteration of edible oils with argemone oil.

—Deputy Minister for Health

Loans to States

During the period April to August, 1953, a sum of Rs. 1,416.90 lakhs had been given to States as loans, including short-term loans under the Grow-more-food campaign. A sum of Rs. 184.37 lakhs had also been given to various States as grants under the G.M.F. scheme.

—Minister for Agriculture

Minimum Wages Act

The suggestion that all major Port Trusts should be exempted from the Minimum Wages Act, 1948, has not been accepted by the Government. The arrears of wages to be paid to the Port Trust employees of Bombay, as a result of this decision, will be paid to them. The Calcutta Port authorities have also been similarly addressed by the Central Government.

• • • •

Labour Conditions in Salt Factories

The Government of India sees no sufficient ground to interfere with the action of the Travancore-Cochin Government in setting up a Court of Enquiry to go into the conditions of labour in certain salt factories in the State. In 1951, following a dispute between the employees and employers, a tripartite conference was held and an agreement was reached. The employers, however, later said that they could not implement the agreement, due to an alleged slump. The workers went on hunger strike. Thereupon, the Travancore-Cochin Government set up a Court of Enquiry under the Industrial Disputes Act. The Employers' Association which has made representations to the Central Government on this matter, has been advised to represent its case before the Court of Enquiry.

—Minister for Labour

Orders for Wagons

Up to 31st July, 1953, 350 wagons had been received, as against the orders placed for 3,090 wagons in India and 10 in the U.K. No locomotives or coaches have been received against orders for 50 locomotives in India and 62 coaches, 12 in Italy and 50 in Switzerland. The delivery of the orders placed in 1952-53 are not due for completion before March, 1954.

• • • •

Shipping Statistics

Indian shipping companies have been carrying, on an average per sailing, larger tonnages than the foreign lines in Indian trade. I have based my conclusions on the statistics relating to Calcutta, which is the largest export port in the country. Forty-six ships of 97,324 gross tons employed in the coastal and overseas trade are over 20 years of age and may require replacement in the near future. Thirty-seven per cent. of shipping in the coastal trade and about three per cent. of shipping engaged in overseas trade require replacement and the Government is assisting the shipping companies in this regard. A sum of Rs. 6 crores will be advanced as loans to them and the companies are also required to find a sum of Rs. 3 crores. It is estimated that the total cost of replacement will be well within the amount.

—Deputy Minister for Railways

Cloth Control Order

Instructions have been sent to State Governments in regard to 45 textile mills against which prosecution might be launched for contravening the Cloth Control Order regarding production of *dhotis*. About 149 mills have been detected in the act of contravening the Order in this regard during the four months February-May, 1953. In the case of other mills, the excess production is comparatively small and they have been directed to reduce their production in succeeding months so that it is readjusted within the quota. There is no question of any Government refusing to launch prosecution.

• • • •

Price of *Dhotis*

The price of *dhotis* have risen in Orissa, Bengal and Uttar Pradesh, and even in other areas. The finer varieties too have registered an increase. The Government's policy in regard to the matter (that is, restriction on production of *dhotis* in favour of handlooms) must be determined by the exigencies of the situation. I am unable to say anything in regard to the future. At the moment, I have no such thought. In regard to the total production of *dhotis* by mills, it is well within the overall quota fixed, namely, 30,000 bales, although individual mills here and there contravene the restrictions of the Order.

—Minister for Commerce and Industry

MONEY RULES STEADY

(From Our Own Correspondent)

BOMBAY, 23rd *September*

The short-term money market ruled steady during the week under review, though trading was dull and the volume of business in the inter-bank call money sector was low in the absence of any further fresh local demand for funds. The inter-bank call rate among the Exchange banks and big Indian banks remained steady at 2 per cent. in the early hours of the day, while left over funds after clearing were on offer at 1½ per cent. The steadiness in call money among these banks was attributed to the fact that Exchange banks remained active borrowers and to the likelihood of the withdrawal next week of a large quantity of funds by a big bank which closes its accounts on the 30th inst. The big Indian banks were not keen borrowers and at times they were lenders. Activity among the smaller Indian banks was subdued and inter-bank call money was bid at 2½ to 2 per cent.

Period money also kept steady at 2½ per cent. for one to two months and at 2¼ per cent. for three to six months. Some banks were prepared to pay slightly higher rates of interest. Thus, they offered 2½ per cent. for three months and 2¾ per cent. for deposits maturing in the first quarter of 1954. House money continued to fetch 2¼ per cent.

The tenders for Rs. 1.5 crores of three months' Government of India Treasury Bills this week brought an offer of Rs. 1.95 crores. This was only Rs. 12.5 lakhs more than that of the previous week. The average rate of accepted tenders was higher at Rs. 2-6-8 per cent. per annum, as against Rs. 2-6-7 per cent. in the previous week.

A perceptible drop of Rs. 11.57 crores in notes in circulation is disclosed by the statement of the Reserve Bank of India for the week ended 18th September, 1953, as compared with that for the previous week. Notes held in the Banking Department, on the other hand, show an expansion of Rs. 9.09 crores. The net decline of Rs. 2.48 crores in total notes issued is covered by a fall of Rs. 3.48 crores in rupee securities and an increase of Rs. 99.97 lakhs in rupee coin. In the Banking Department, the deposits of the Central Government have risen by Rs. 9.42 crores, while those of other Governments have dropped by Rs. 2.55 crores. Deposits of banks and others do not show any notable variations. On the assets side, cash balances have risen by Rs. 9.13 crores, while very minor variations are noted in other portfolios.

The Scheduled Banks' statement for the week ended 11th September, 1953, as compared with that for the previous week, reveals a fall of Rs. 1.81 crores in demand deposits. Negligible changes are seen in time deposits and inter-bank borrowings. Borrowings from the Reserve Bank are lower by Rs. 43 lakhs and those from the Imperial Bank by Rs. 1.95 crores. Advances have recorded a fall of Rs. 4.72 crores and bills purchased and discounted of Rs. 1.43 crores. Investments are higher by Rs. 1.19 crores. Cash has shrunk by Rs. 2.49 crores, while balances with other banks in current account have increased by Rs. 37.46 lakhs and money at call and short notice by Rs. 33.28 lakhs.

The Gilt-edged market was steady during the week under review, though not much activity was reported in Central Government loans. Some support was in evidence in 3 per cent. 1986 Conversion Loan which picked up As. 4 to Rs. 82-3 before closing at Rs. 82-2. 3½ per cent. National Plan Bonds had some small business at Rs. 98-6½. The other Central Government issues were mostly unchanged, except 3 per cent. 1964 which rose by an anna to Rs. 92-8. There were some enquiries for 4 per cent. State loans during the week, as a result of which they recorded a rise of one to two annas. 4 per cent. 1963 Bombay and Madras were done an anna higher at Rs. 100-7 and Rs. 99-11, respectively. 4 per cent. 1964 Bombay, Madras and U.P. each rose by an anna to Rs. 100-7, Rs. 99-11 and Rs. 99-10, respectively. 4 per cent. 1964 West Bengal moved up by As. 2 to Rs. 100-4.

In the foreign exchange section, the rupee became a little stronger in terms of the U.S. dollar. The banks' selling rate for ready dollars declined from Rs. 478-8 to Rs. 478 per $100 and the buying rate from Rs. 474-4 to Rs. 474. In New York, sterling also gained strength, though the closing rates were a shade lower than the highest rates for the week. Thus, spot sterling rose from $2.79½-2.79¾ to $2.80-5/16-2.80-7/16 before closing at $2.80¼-2.80½. Three months' sterling hardened to $2.79¾-2.79¾, from $2.78¾-2.79 a week ago and so also six months' sterling to $2.79¼-2.79¼ from $2.78½-2.78¾.

METALS EASY

(From Our Own Correspondent)

CALCUTTA, 22nd *September*

Conditions in the metal market were easy during the week under review. In view of the coming spell of holidays, manufacturers were interested only in small quantities. Stockists were not willing to discount prices further, as a shift in the international situation over the composition of the Korean political conference was noted.

Tin opened the week at Rs. 415 and, after fluctuating within narrow limits, closed at Rs. 414. The nature and the amount of transactions were such as to prevent the quotations from moving up. After the recent hectic activity, mercury eased to Rs. 500 a flask, as it would appear that the re-export demand remained fulfilled. The occurrence of a spurt depends on the receipt of further enquiries and finalisation of concrete business. Electrolytic copper ingots were quoted at Rs. 167 with little business passing. Electrolytic zinc, which reopened at Rs. 54-8, shaded to Rs. 53, following reports that a moderate quantity would reach this country sooner than earlier expected. Lead was quiet at Rs. 66.

BULLION WEAK

(From Our Own Correspondent)

BOMBAY, 23rd *September*

Conditions in the bullion market were distinctly bearish during the week under review, with prices disclosing a sizable fall, particularly in silver. The erratic trend in silver noted in the previous week yielded place to one of weakness on selling induced by fears about the implications of the proposed change in the by-law relating to the penalty for non-delivery of goods by sellers at the time of settlement. The offtake in silver was also too poor to arrest the downward trend in prices.

Gold also displayed some weakness due to apprehensions about large unauthorised arrivals in the coming months and the decline in offtake, as also in sympathy with silver.

On Saturday last (19th inst.), the Board of Bullion Association decided to bring about a change in the by-law in order to restrict the penalty for non-delivery of bullion at the time of the settlement. The Board's decision is subject to the approval of the General Body of the Association by a two-thirds majority and sanction by the Government of Bombay. The by-law as at present lays down that if a seller defaults in giving delivery, his outstanding sales will be auctioned at prices which will be determined by the purchaser. The proposed amendment to this by-law states: (a) when a seller defaults to deliver goods in terms of his delivery order, he shall pay damages to be determined by an auction and (b) under no circumstances, his damages will be determined by an auction at a rate higher than Rs. 3-8 per 100 tolas in the case of silver and Rs. 2 per tola in the case of gold over the rate of current settlement prevailing on the auction day (that is, the settlement following the one to which the transaction relates).

The above change in the by-law is being opposed by a section of the traders which is of the opinion that it will unduly encourage speculators to indulge in heavy short-sales and will restrict the penalty payable by him if he fails to give delivery of the goods he has sold. In view of the controversy that has risen over the legality of the proposed change in the by-law, the Board is at present engaged in taking legal opinion before placing the proposal before the general body.

Silver for forward delivery (25th September settlement) opened the week at Rs. 157-3 and moved down in successive stages to a low of Rs. 153-5 to-day before closing at Rs. 153-15. Business in the next settlement (October) which was done early in the week at Rs. 157-11 was put through at the close to-day at Rs. 153-15.

Ready silver (.996 Mint) closed to-day at Rs. 153-15, disclosing a loss of Rs. 3-1 over the week. The floating stocks of silver are placed at 2,200 bars. The daily average offtake was no more than 10 to 15 bars.

Gold for forward delivery (24th September settlement) began at Rs. 87-1 and dropped soon to Rs. 86-4 on reports of arrivals of smuggled gold. At the lower level, there was some bear covering which pushed up the price to Rs. 87, but the recovery was not sustained for long. The forward rate, therefore, declined again to Rs. 86-4 before finishing at Rs. 86-5. The forward rate for the next settlement likewise receded from Rs. 86-10 to Rs. 85-9.

Ready gold suffered a loss of Re. 1-1 per tola to stand at Rs. 86-9 at the close to-day. The floating stocks of gold are placed at 20,000 tolas. The daily stocks of gold are placed at 4,000 tolas, while the offtake average arrivals were 4,000 tolas, while the offtake was no more than 3,000 tolas on an average.

The following comparative table shows the trend of the market during the week under review:

	23-9-53	Highest	Lowest	16-9-53

GOOD DEMAND FOR TEAS

(From Our Own Correspondent)

CALCUTTA, 22nd *September*

Offerings during yesterday's tea export sale aggregated 56,000 packages which met with good demand. The most impressive features were tippy Assam B.O.Ps. and O.F.s., the prices of which were raised by As. 3 to As. 4 above brokers' valuations. Other varieties were also better. The medium fannings and commons were priced an anna higher. Low medium brokens were steady and the price advanced by half an anna. C.T.C. Assams and whole leaf grades were sold at firm rates. The quotations were: Best C.T.C. Assam B.P. Rs. 2-2 to Rs. 2-3, medium Assam B.P. Re. 1-13-6, clean black pekoe Re. 1-13 and clean common B.P. Re. 1-12.

Steady conditions were in evidence during last week's sale for domestic consumption. There was good demand for offerings, which amounted to 14,161 packages of dust and 400 packages of other grades. Among dusts, C.T.C. Assams were a strong feature and black leafy types suitable for export met with ready buyers. Small grainy varieties were steady. Small grainy Darjeelings with flavour received good market. The rates were: Best Assam C.T.C. Re. 1-14 to Re. 1-15, medium Assam grainy dust Re. 1-10 to Re. 1-10-6 and medium Dooars Re. 1-9-6 to Re. 1-10.

FORWARD COTTON FINISHES HIGHER

(From Our Own Correspondent)

BOMBAY, 23rd *September*

There is nothing to be surprised at in the recurring concern, expressed by people interested in cotton production from time to time, about the possibility of this ancient fibre, which has clothed mankind for thousands of years, being gradually ousted by new natural and synthetic substitutes. To a certain extent such replacement has already taken place and, in an industrially advanced country like the U.S.A., cotton accounts now only for a little less than 70 per cent. of all textiles used for clothes. However, according to a Director of the U.S. National Cotton Council, there is no need for any fear regarding the extinction of cotton, because of new fibres being evolved, if cotton production is backed up by adequate research and made more attractive and economical. But then, and only then, would it be able to hold its prominent position in the textile industry. In the course of his speech, this expert revealed that the amount of cotton used in the U.S.A. rose from 2,800 million lbs. in 1920 to 4,500 million lbs. in 1952. Cotton constitutes the backbone of India's economy also and it is gratifying to note that the authorities are keenly alive to its importance in the scheme of things and are paying increasing attention to research and development in this field.

But whatever be the future of cotton after a generation or two, the cotton trade in Bombay is obviously gbsessed by the increased production of this commodity expected this year. The forward market has been consistently showing a weakness week after week and the last week under review was no exception to this fact. February was quoted at one time as low as Rs. 607, as a result of further favourable weather reports from several parts of the cotton producing areas and also partly of a reported failure of one broker to meet his liabilities in the last weekly settlement. However, feeling that this process of pushing down prices under one pretext or another had been carried a little too far, some courageous operators came forward to support the market at this stage, followed by some short covering on the part of the bears. There was also some hedge lifting by spot interests and some call fixing by mills. As a result of this, the market staged a good recovery and many shrewd observers are inclined to believe that the price is likely to be stabilised, at least for some time, at about Rs. 610 for the February contract. The premium for May is only Rs. 3-8 at present. But any change in sentiment is bound to be reflected in an increase of this difference in favour of the later contract.

So long as the stock of old cotton, which the bulls were made to accept in the expiring contract for the 1952-53 season, continues to weigh heavily on this market, there cannot be much improvement either in demand or in price. This week however, saw a successful placing of about 10,000 bales of this cotton mainly of Lakshmi and Vijay varieties, with the result that the spot market displayed greater activity all round. In the hope that the export policy of the Government would be announced during the course of this week and that it would include a reduction in the export duty on Mathia, Dhollera and Oomra, there was some enquiry on speculative grounds for some of these short-staple varieties which are not usually in demand. There were also some transactions in Bengals. Greater activity was witnessed in the delivery contract section for October, November and December deliveries on the basis of the low forward contract rates. Similarly, lower prices in New York were responsible for attracting enquiries for imported cotton.

Following reports of comfortable supply position and discouraging advices from cloth markets, forward cotton was subjected to professional selling pressure, which led to a fall in prices. The fall persisted till to-day, when, on account of support at lower levels, there was notable recovery. Not only were the previous losses completely erased, but the closing rates stood higher than those a week before. I.C.C. February contract opened the week at Rs. 616 and after receding to Rs. 608 yesterday, recovered to finish at Rs. 619-12. I.C.C. May contract dropped Rs. 7-8 to Rs. 6-12 yesterday. To-day, however, it was higher at Rs. 622-4. The following is the trend of prices over the week ended to-day:

	Opening	*High*	*Low*	*Closing*
I.C.C. February	Rs. 616	620	608	619½
I.C.C. May	Rs. 619	622¼	612	622¼

The latest available quotations from the Sewri market are: Vijay Rs. 845; Berar *jarilla* Rs. 625; Berar C.P. *deshi* Rs. 650; Mughlai Rs. 635; Bengal Rs. 530; Khandesh New Rs. 75 on.

There is no change in the situation at Karachi. There have been some enquiries from France leading to some transactions in N.T. cotton new crop. But apart from this, U.K. and other Continental centres have remained aloof, in view of the prevailing prices being above parity. The fluctuations in prices, therefore, have been confined to about As. 8 per maund. There may be a little more activity in the coming weeks, as the U.S. prices are likely to be stabilised around the present levels. The latest available quotations from the Karachi market are: Old crop 4F. Punjab R.G. Rs. 54 and S.G. Rs. 59; L.S.S. Punjab R.G. Rs. 56-8 to Rs. 57 and S.G. Rs. 61; N.T. R.G. Rs. 62-8 and S.G. Rs. 66 to Rs. 67; 289F Punjab R.G. Rs. 61 and S.G. Rs. 67. All these quotations are nominal. *New crop:* Sind *deshi* Rs. 59; Punjab *deshi* Rs. 56; N.T. R.G. Rs. 64-12 and S.G. Rs. 68-8; 289F. Roller Rs. 69 and S.G. Rs. 74; 4F R.G. Rs. 51 and S.G. Rs. 55.

At Alexandria, there was some widening of demand for medium-staple cotton. But apart from India, Karnak still remains more or less neglected. There are talks also of a fresh barter deal with Spain for exchange of cotton against sugar. A similar deal is also being mentioned with Formosa. Japan has been a good buyer during the week, while Continental centres in Germany and Italy have continued to show interest. There are rumours that the political tension between Egypt and Hongkong will soon ease and trade relations, especially covering cotton, might be expanded. All this has led the Alexandria market to maintain a very steady front.

At New York, there has been some improvement during the week under review, which is, however, of a technical nature. The bearish wave in the other commodity and equity markets has, however, receded, for the time being at any rate, and this also is likely to help cotton prices to recover to a certain extent. Much of the activity at present is of a switching over nature from October to December contract, with consumer buying absent in either deliveries. Export demand too continues to remain within very narrow limits and, until there is visible improvement in this case, the volume of activity is bound to remain small.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

(In cents per lb.)

	22-9-53	15-9-53	8-9-53
Spot	33.70	33.75	33.75
October	32.84	33.11	33.30
December	33.13	33.36	33.52
March	33.45	33.71	33.81
May	33.61	33.81	33.82

ART SILK YARN EASY AGAIN

(From Our Own Correspondent)

BOMBAY, 23rd *September*

For the second week in succession, the art silk yarn market displayed easy conditions, values declining further. Traders evinced little interest in fresh business, their sentiment having been adversely affected by disquieting reports of heavy cotton cloth accumulations in many centres, especially in Ahmedabad. The traders seemed to fear that the rayon fabric markets also would face a similar situation. They took note of the reported increase in stocks with mills owing to poor demand for rayon fabrics. In their anxiety to dispose of their stocks, the mills, it was expected, might effect a cut in prices, which meant that art silk yarn values too would be pressed down. The operators were, therefore, generally extremely cautious in purchases, while some among them were eager to liquidate their stocks. The prices, as a consequence, drifted downwards, and in this, weak advices from cotton and oilseeds markets also had their share.

In the forward section, 150D September contract dropped 10 points to Rs. 750; at one time, it was still lower at Rs. 748. October contract receded from Rs. 764 to Rs. 750 before finishing slightly better at Rs. 753. Ready art silk yarn, 120 Italy, fell by an anna to Rs. 4. 120 Japan, 150 Japan and 150 Italy shed half an anna each to Rs. 4-0-6, Rs. 4 and Rs. 3-12-6, respectively.

In sympathy with the art silk yarn market and following reports of larger arrivals, thanks to improvement in output, the staple fibre yarn section presented a weak trend. October contract (2/40s) declined by Rs. 8 to Rs. 658. September contract remained fully steady throughout the week till almost the close to-day, due to strong bull grip. The quotation for the contract was Rs. 700 early to-day, as against Rs. 694. The improvement, however, could not be sustained towards the close, when prices suffered a short break, on reports of a settlement by the prominent bulls with a leading trader who was in short. The closing quotation was as low as Rs. 676, which is Rs. 18 below the previous week's rate.

The table below gives the prices of art silk yarn and staple fibre yarn quoted to-day, as compared with those on the 16th inst. and 8th inst.

	23-9-53	16-9-53	8-9-53

OILSEEDS BEARISH

(From Our Own Correspondent)

BOMBAY, 23rd *September*

The oilseeds market presented a distinctly bearish trend during the outgoing week. The trend was pronounced in the groundnut section as sentiment of operators was considerably affected by large arrivals of til seeds, estimated at about 10,000 bags during the past fortnight. Also prospects of bumper groundnut crop and discouraging overseas advices contributed to the weakness. The linseed, *kardi* and niger seeds sections ruled in sympathy with groundnuts inasmuch as they mostly constitute substitutes to groundnuts. Spots in the castorseeds section were also easy. But the trend was otherwise in the futures section in which prices were more or less maintained. Barring this section of the market, which recorded narrow variations, the rest of the market disclosed sizable losses over the week.

In the groundnuts section, Bold F.A.Q declined from Rs. 51 to Rs. 47-8. August-September and December-January deliveries eased from Rs. 48 and Rs. 31-8 to Rs. 47 and Rs. 30-6, respectively. Khandesh quality was lower by Rs. 3 at Rs. 49. October delivery lost Rs. 2-4 to Rs. 35-12. Groundnut ex-mill and railway receipts each fell from Rs. 28-8 to Rs. 26. October, November and December deliveries changed hands at Rs. 20-11, Rs. 17-11 and Rs. 16-11, as against Rs. 22-2, Rs. 18-3 and Rs. 17 respectively.

The tussle between bulls and bears in castorseeds, September delivery, still persists. September delivery which opened at Rs. 169-8, fluctuated between Rs. 171 and Rs. 165-8, before closing at Rs. 168. May delivery was at Rs. 119-4, the same as that prevailing at the end of last week, the highest and the lowest being Rs. 120-8 and Rs. 116-14, respectively. Madras quality slipped by As. 12 to close at Rs. 32-12. Castorseeds oil B.S.S. lost As. 14 to Rs. 17-6. I Pressures and Commercial were done lower at Rs. 17 and Rs. 16-6, as against Rs. 17-12 and Rs. 17 respectively.

Heavy drop in values were witnessed in the linseed section. Bold ready, for instance, fell from Rs. 28-6 to Rs. 24-14. So also August-September and October-November, each of which was done lower at Rs. 24-14, as compared with Rs. 28-6 and Rs. 26-12, respectively. February March delivery was lower by As. 10 at Rs. 22-6. Linseed oil fell from Rs. 15-12 to Rs. 13-12.

Among other seeds, *kardi* Bold was down by Rs. 2-4 at Rs. 23. August-September and October-November deliveries were done at Rs. 23 and Rs. 21-8, as against Rs. 24 and Rs. 22-12, respectively. Niger F.A.Q. and Madras eased from Rs. 37-4 and Rs. 38-4, respectively, to Rs. 35 each. December-January was done steady at Rs. 25.

Arrivals of oilseeds in Bombay from 1st January to 21st September this year, as compared with those in the corresponding period last year were as follows:

(In cwts.)

	1953	1952
Groundnuts	1,667,035	1,880,835
Linseed	113,149	231,980
Castorseeds	607,475	567,246
Cottonseeds	667,413	1,078,564
Gingellyseeds	135,912	267,131

Arrivals of oil from 1st January to 19th September as compared with those in the same period last year were as given below:

(In tons)

	1953	1952
Palm oil	7,023	Nil
Coconut oil	13,752	11,825
Castor oil	11,741	9,965
Cottonseed oil	4,932	1,947
Groundnut oil	27,901	57,542
Linseed oil	2,036	8,301

The following table shows the prices of oilseeds and oil on the 23rd inst., as compared with those at the end of the previous two weeks.

	23-9-53	16-9-53	8-9-53

LINSEED EASY

(Messrs. A. Bradley & Co.)

CALCUTTA, 21st *September*

The general decline in the prices of oilseeds, had a bearish effect on the linseed market during the week under review and the undertone is easy. Supplies, however, were still scarce. There has as yet been no notable reaction in the producing centres, although there are keen sellers, chiefly for forward delivery. Moderate interest has been shown by crushers and the daily turnover has slightly improved, with small lots changing hands daily at gradually receding prices. Following the weak trend in groundnut oil, linseed oil prices have declined, business is reported on a very restricted scale, and that too for immediate deliveries only.

Latest quotations are: September-October Rs. 19-12 and October-November Rs. 19-8 per maund.

SPOT SUGAR RECEDES

(From Our Own Correspondent)

BOMBAY, 23rd *September*

Following specific cable advices that the s.s. *Dumphreys*, carrying Mexican sugar, would reach Bombay harbour on Sunday next, price movements in the forward and spot sections of the Bombay sugar market tended to be restricted to a narrow range. There was great rush among traders to submit tenders for Java sugar at Rs. 30 per maund ex-Bombay docks per s.s. *Havildar*, which is scheduled to reach on 4th October, 1953. It looks as though the Central Food Ministry will keep on inviting tenders and declaring arrival dates according to the tentative arrangements made at the time of purchase, without any regard to the actual sailing of the respective steamers. Would it not be better if tenders were to be invited only after the steamers actually leave the port of loading? Surely, such a step will avoid artificial movement of prices based on inaccurate dates regarding arrival of steamers.

Owing to the short position of outsiders, forward sugar (*Badrapad* delivery) was rather firm, and business was done up to Rs. 91-12 per bag, as against Rs. 90 last week. To-day's nominal quotation is Rs. 91-8. To-day being the last day for submitting delivery orders, the contract, it is expected, will be squared up around this level.

The ready section, however, staged a decline in prices, on reports of the availability of cheap imported sugar next week. The demand is confined only to immediate requirements. Small, medium and large grain sugars are quoted at Rs. 91, Rs. 94 and Rs. 96 per bag, respectively. The corresponding quotations for the previous week were Rs. 93, Rs. 95 and Rs. 97 to Rs. 98.

There was a slight improvement in arrivals of sugar into the Bombay market during the week under review, the quantity that actually arrived being 12,600 bags, as against 11,700 bags last week. Stocks (including wet sugar) with the spot trade are estimated at 11,000 bags, which are lower by about 4,000 bags than those a week before.

RISING TENDENCY IN PEPPER

(Messrs. Parekh & Co.)

BOMBAY, 23rd *September*

During the earlier part of the week, pepper market showed further improvement owing to local short covering and in sympathy with New York which is reported firm in view of the paucity of offers from other competitive centres such as Sarawak, Singapore and Djakarta and owing to the impending stevedore strike at New York by the end of this month. Exporters purchased a fair quantity at Alleppey at as high as Rs. 2,450. Cochin also recorded improvement from Rs. 400 to Rs. 435 per cwt., while Calicut quoted to sell at Rs. 2,600. A good sized turn-over for October and November shipments for New York were done at $1.08 and $0.99 respectively. Shorts covered September shipment up to $1.11. In the delivery section, September, October and December delivery were done at as high as Rs. 2,180, Rs. 2,050 and Rs. 1,730 respectively.

In the later part, however, the market reacted in sympathy with easier advices from New York and Sarawak. Alleppey sold at the reduced price of Rs. 2,350 a fair quantity, while in the A.S.T.A. October shipment was sold at as low as $1.01 and November was done at $0.94. Easiness in the market, however, proved shortlived, in view of the constructive news from Sarawak and Djakarta. Markets in all primary centres again showed rising tendency, and good sized short covering was put through in October shipment at $1.05 and October-November-December was done at $0.99. An expectation of an early decision on the part of the Government for reducing the export levy having failed to materialise, the opinion among a section in the trade is now veering in favour of *status quo* as for the change in the export duty in the near future. However, there are others who believe that in the interest of foreign exports, the Union Government should reduce export duty on pepper so as to put our export on a competitive basis in the world markets, particularly, in view of the recent slow, but steady, competition from other supplying countries.

Following are to-day's nominal quotations:—Ready delivery Rs. 320 per cwt., October delivery Rs. 2,025-45 and December delivery Rs. 1,725-45 per candy of 5½ cwts.

STRONG AND ACTIVE DEMAND FOR TEA

(Messrs. Forbes, Ewart and Figgis Ltd.)

COCHIN, 19th *September*

Sale No. 19 was held on Tuesday, 15th September, and contained approximately 10,75,000 lbs. From the outset there was a strong and active demand with competition for all types. Commonest kinds were half to one anna dearer, but low medium and medium brokens and fannings met with a strong enquiry and were irregularly As. 1 to As. 2 dearer. Good medium teas, particularly those with a clean leaf and good style, were often As. 2 dearer. There was some improvement in the quality of the high-grown teas and buyers followed this trend with higher prices. Tippy fannings were well supported, but clean black leaf fannings tended easier. Whole leaf grades were stronger and dearer. The following are the quotations:—

	1953	1952
	Rs. a. p.	Rs. a. p.
Low-grown Travancore B.O.P.	1 10 6	0 14 0
		to 0 15 0
Medium Travancore B.O.P. ...	1 12 6	1 10 6
	to 1 13 6	
Anaimallais B.O.P.	1 15 0	2 0 0
Best liquoring Nilgiri B.O.P.	2 6 6	2 15 0
Clean black leaf O.P. ...	2 2 0	2 0 6

London Market.—Strong demand. Good tea dearer where quality improved. Clean commons half penny dearer.

Colombo Market.—Good liquoring fannings dearer. Commonest steady. Others less demand. Low-grown and medium brokens declined eight cents. High-growns declined 10 to 20 cents.

Calcutta Market—Export.—Strong demand. Commons half to one anna, mediums occasionally up to As. 1½, good liquoring often As. 2 to As. 3 dearer.

Dust.—Good general demand, market being As. 1 to As. 1½ dearer for all descriptions. Strongest feature black exportable types. C.T.C fairly well supported at bottom valuations. Darjeelings met with fair enquiry.

Export Quota.—The market has strengthened considerably and business has been done at 15½ pies.

Forthcoming Auctions.—Sale No. 20 will be held on Tuesday, 29th September.

As we go to press, Messrs. Forbes, Ewart and Figgis, Ltd. wire as follows:

"*Dust Sale S.*—1,75,000 lbs. Strong demand. Market fully firm to dearer for low and low medium types. Medium and better sorts As. 1 to As. 2 dearer."

JUTE GOODS FINISH LOWER

(From Our Own Correspondent)

CALCUTTA, 22nd *September*

The immediate reaction to the reduction in the export duty on hessian from Rs. 275 to Rs. 120 per ton with effect from the 15th inst. was the rise in the prices of both hessian and sacking. The improvement, however, was not sustained, in

STOCK & SHARE QUOTATIONS

Abbreviations:—D=Deferred shares. P.O.=Preferred Ordinary shares. Y=Accounts published yearly. H=Accounts published half-yearly. P=Company has Preference shares. T=Company has Debentures. N=Nominal quotation. x.d.=Ex-Dividend. c.d.=Cum. Dividend. i=Interim Dividend. f=Dividend for first half of the year.

Shares:—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts.—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery, and all other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends.—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year, they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly, dividends shown are for their financial year. Where, however, the accounts are closed half-yearly, dividends are shown separately for the respective half-years.

* Including bonus. z Sales and amount written off. (k) Investments.

(l) Made up of an interim dividend of Re. 1-12 per share on 1,20,000 shares and final dividend of Re. 1-10 per share on 2,40,000 shares of which 1,20,000 shares are bonus shares.

* The following explanatory notes relate to the abbreviations and marks shown on page 612 in the debentures section:—

§§ Option to repay on six months' notice, on any interest date after 31st December, 1951, at 102 per cent. Also redeemable out of a cumulative sinking fund of 1½ per cent. per annum (commencing in 1938) by drawings at 102 per cent. or by purchase at or 102 per cent.

(a) Option of repayment at any time at 3 per cent. premium.

(b) Bearer bonds of Rs. 1,000 each repayable at par.

(c) Bearer bonds of Rs. 1,000 each repayable on 31st July, 1959.

(d) Bearer bonds of Rs. 1,000 each with option of redemption in whole or in part at par on 30th June, 19[illegible] on any subsequent interest date at one month's notice.

(e) Returnable on or after 31st July, 1950, at Rs. 102-8 or at par after 31st July, 1955 on six months' [illegible] in each case.

(f) Bearer bonds of Rs. 1,000 each with option of redeeming on 3 months' notice at ¼ per cent. premium 1st March, 1954, but before 1st March, 1957, and 1 per cent. premium on or after 1st March 1957.

(g) Option of redemption on or after 1st July, 1949, at par.

(h) Option of repayment at any time at par at any time on or after 30th June 1947 on six months' notice.

MARKET GOSSIP

(Concluded from page 567)

view for reasons mentioned above. But it is equally true that there is no pronouncedly downward trend, notwithstanding the severe shake-outs that are being experienced by Wall Street from time to time; if anything, the trend is steady, in refreshing contrast to the quiet or weak undertone displayed by bullion and most of the commodity markets. Thus, whereas the Tata Steel shares have registered a small gain over the week and Indian Irons are well over the lowest levels registered early in the week, there has been a perceptible fall in bullion and commodities. Cotton, however, is a shade better than a week ago, but it is still appreciably below the levels that were prevailing a fortnight ago. The weakness of commodities is attributable mainly to the fuller realisation that the new crops will be substantially larger than those in 1952-53 and that prices elsewhere in the world are also going down. It is also attributable, in part, to the fast approaching end of the bull grip over the outstanding contracts in old crop oilseeds.

• • • •

In bullion, both gold and silver have lost considerable ground. There are fears that large quantities of smuggled gold may find their way into the market in the near future. The offtake of both silver and gold is poor, and operators feel that, in view of the lower prices which agricultural commodities are expected to realise in the coming months and the growing unemployment, the consumption of these precious metals next year will receive a marked setback. The move on the part of the Board of the Bullion Association to amend some of the bye-laws in such a way as to raise the handicaps to the bulls has also contributed to the fall in prices. Though expressed in a language which may connote an entirely different meaning, this move, briefly described elsewhere, aims at nothing short of re-introducing the much discredited practice of placing a ceiling on the carry forward charges which a bull may demand when the market is heavily oversold. To explain this, we will require more space than is at our disposal now. Suffice it to say, however, that, if the bullion authorities wish to encourage gambling in their market, they could think of nothing better.

BANKING

(Concluded from page 574)

dated bonds and other bills, the charge will be 2 per cent. instead of 2½ per cent.

Now the discount market can borrow against Treasury Bills from the Bank of England at Bank rate, namely, 3½ per cent., which is also the Special rate.

It is hoped that the changes noted above will bring about an improvement and some cheapening of the facilities available for foreign trade and will stimulate production for export at competitive rates. It is needless to add that anything that leads to an expansion of the export trade also assists the movement towards the restoration of convertibility of the pound sterling. Says the *Financial Times*: "The whole economy will receive a further incentive to expansion especially in capital investment and in export trade. A rise in the Gilt-edged market always encourages industrialists to invest more freely the profits which are normally retained in business. As well as this, there can be no doubt that the change in the Bank rate (whatever its technical limitations) will, in fact, cause bankers to shade off the price of their advances to industry. And the same cause will lower the rate at which export trade can be financed. As the latest analysis of bank advances shows, industry has recently been repaying debt—and on a considerable scale—rather than investing in new production." And Mr. Roy Harrod urges industrialists that they "should now begin to take longer views, to plan more radical modernisation, increasing capital and horse-power per man, and incidentally planning a higher exploitation of thermal capacity of coal. If the Bank rate reduction and what may follow could be taken as a sign for going ahead with a far more radical reconstruction it could prove a notable turning point in British industrial history."

Another real change will also follow the present cut in the U.K. Bank rate. The change is in respect of the cost of the conversion and funding operations of the U.K. Government. The Government has to repay or convert £577 million of 1½ per cent. Serial Funding Bonds which fall due in November next. Again in March next 2½ per cent. 1952-54 National War Bonds, amounting to £412 million, are due to mature. The lowering of the Bank rate will make the repayment of these stocks, together amounting to £989 million, easier because of the rise in confidence which the change has brought about, and less costly, because of the improvement in Gilt-edged prices and fall in yields. It may be noted that the Gilt-edged values in London have already gone up by about £3 since the Bank rate was changed. Another advantage to the Government is that it will facilitate the sale of steel shares by the Steel Holding and Realisation Steel Agency by enabling it to offer the shares on a lower dividend yield basis. Further, if the liquidity ratio of the banks is to be reduced again to somewhere near the conventional level at which monetary policy can be effective, another large slice of Treasury Bills has to be issued. This operation will be rendered on more favourable terms, owing to the strength of the Gilt-edged market resulting from the reduction in the Bank rate.

HOW RESTRICTIVE ARE U.S. TARIFFS?

(Concluded from page 575)

trading world economy of the nineteenth century underestimate or overlook some of the main institutional features which made the nineteenth century system work—the special economic position of Britain; European control over vast raw material producing areas; general willingness to subordinate domestic welfare to international solvency and acceptance of automatic balancing mechanisms, such as the gold standard, even when they exposed countries to depressions and other unfavourable developments originating in other parts of the world. In the absence and unlikely restoration of such attitudes and institutions, Dr. Piquet implies that doctrinaire free trade policy is doomed to continued frustration.

The author also argues that a narrow protectionism is equally obsolete as the basis for an effective American foreign economic policy in the twentieth century. The United States, he says, must follow policies which bolster the economic health of the free world by integrating the American economy more fully and constructively with other friendly countries.

Though he concludes that possible injury to domestic producers would be less than generally claimed, Dr. Piquet argues that equitable compensation and readjustment assistance should be provided for domestic manufacturers, workers, and farmers who can demonstrate legitimately that their special interests are being sacrificed in the national interest.

ANNUAL MEETING OF BOMBAY GAS COMPANY

(Concluded from page 583)

stress on the industrial development of the country and the necessity of creating a climate that would help achievements of this objective and I can only reiterate that those requirements are needed in no less a degree in the case of the gas industry than elsewhere.

"I drew your attention at our last meeting to the strike of workers in the month of September, 1952, and informed you that the union's demands together with our own application for dismissal of certain workers were under examination by the Industrial Tribunal. You will be gratified to learn that the Company's stand in this dispute was fully vindicated by the Tribunal.

"In conclusion, I wish to point out that despite the financial results being not too satisfactory for reasons earlier mentioned by me, the satisfactory working of the Company, but for the strike, was maintained and I must express on your behalf and on my own our thanks to all the members of the staff and particularly Messrs. Chowdhary and Ruggles for their co-operation and loyalty."

PROGRESS OF COLOMBO PLAN

THE Consultative Committee of the Colombo Plan, now holding its meeting at New Delhi under the chairmanship of Mr. K. G. Ambegaokar, leader of the Indian delegation to the Committee, has a somewhat more onerous task than its predecessors. Since the Committee last met at Karachi, the economic climate of not only the South-East Asian region, with which it is immediately concerned, but of the world as a whole, has considerably altered. It would, of course, be absurd to suggest that such economic changes as have taken place—the change-over from a sellers' to a buyers' market, from an abnormally higher to a relatively lower level of economic activity, from a more to a less urgent need to devote resources to defence programme—have been of an unhealthy nature just because they have made the essential nature of the problem of stimulating economic development in the underdeveloped countries of this region a more difficult one. These changes were as inevitable as they were necessary. At the same time, the fact remains that it is necessary to realise that these changes have, in a way, accentuated the need for devoting more urgent attention to the problems of this area. Perhaps, the temptation to regard the problems as less easy of solution is now harder to resist. And yet, nothing is more calculated to worsen the problem than for the South-East Asian countries to reconcile themselves to the status of backwardness on the ground that the time is not propitious for the implementation of courageous programmes or for pursuing the solution of the problems with the same idealism which characterised the decisions at the earlier meetings of the Colombo Planners.

The Colombo Plan—or to give it its full name, the "Colombo Plan for Economic Development of South and South-East Asia"—is, as is well known, a six-year development programme which aims at providing basic economic development of the countries of the area. The idea was first mooted at a conference of Foreign Ministers of Commonwealth countries, held in Colombo in January, 1950, and the Plan was subsequently finalised at a meeting of the Consultative Committee in September-October, 1950, in London. The countries which participated at this meeting, which has been rightly described as a "landmark in the history of international economic co-operation," were Australia, Canada, Ceylon, India, New Zealand, Pakistan, the U.K. and Malaya. Subsequently, more countries, including the U.S., joined the Plan, making the Consultative Committee not only representative of the Commonwealth countries but a wider organisation of the free world. The first meeting of the Committee was held in Sydney in May, 1950, the second in London in September, 1950, the third in Colombo in February, 1951, and the fourth in Karachi in March, 1952. Thus, the New Delhi meeting is the fifth of its kind to be held by the Committee. That the Committee is fully representative of a very large proportion of the free world will be evident from the fact that, while the 15 countries —Australia, Burma, Cambodia, Canada, Ceylon, India, Indonesia, Laos, Malaya, Nepal, New Zealand, Pakistan, the U.K., the U.S. and Viet Nam —which are regular members will participate in the discussions, five delegates, representing the Philippines, Thailand, the World Bank, the E.C.A.F.E. and the Bureau of Technical Co-operation of the Colombo Plan, are attending the meeting as observers.

The Committee will review the progress of development in the South and South-East Asian countries. Since the Plan is now in the third year of its operation, it should be possible, as Mr. Ambegaokar stated in the course of a broadcast prior to the meeting, to get a "clearer picture of the extent of development so far achieved as also the requirements of the future." It might be recalled that, in 1950 when the Plan was first drawn up, the development programmes included in the Colombo Plan were those of India, Pakistan, Ceylon, Malaya and British Borneo at a total cost of £1,868 million for the six-year period. The Plan takes into account the respective programmes of the individual countries and estimates the available internal resources and the assistance which is required to ensure a reasonable pace of development. Although the membership of the Plan was originally confined to the Commonwealth countries only, it has attracted the attention and sympathetic support of other countries, including the U.S.

In reviewing the work accomplished under the Colombo Plan, it is necessary to remember that the Plan does not envisage any variety of supra-national authority. Each member-country is free to pursue its own plans, and the others come in only to the extent of seeing how best they can co-ordinate and supplement each other's efforts; the industrially-advanced member-countries, including the U.S., the U.K., Canada and Australia are only interested in giving the aid which the underdeveloped members need. An important aspect of the assistance that is provided under the Plan is in the sphere of technology. It was recognised, at the earliest stages of the evolution of the Colombo Plan, that the South-East Asian region's development could be accomplished only through a judicious use of science and technology. A body, known as the Council of Technical Co-operation, was established and a £8 million fund set up for providing assistance to countries of the area. The framers of the Plan also recognised that, in addition to technological aid, the countries would need capital assistance, for which they relied on the utilisation of external assets of the countries of the area, such as sterling balances, foreign private investments, assistance by international institutions like the World Bank, and assistance on a Government-to-Government basis.

Much ground has already been covered since the Colombo Plan officially came into operation on 1st July, 1951. The Technical Co-operation Bureau, established in pursuance of the Plan, has successfully met the very large number of requests for specialists in every field in which development is planned. The Colombo Plan region has had the benefit of the services of 188 experts and over 1,260 places have been provided for training local personnel to take part in the expansion plans of the countries to which they belong. Financial assistance, too, has been provided by some of the countries, which are members of the Consultative Committee. The Government of Australia, for instance, has promised to make available £A51.25 million over the six-year period, its contribution for the first year being £A8.75 million. Similarly, the Government of Canada has offered to finance development projects in India and Pakistan to the tune of $25 million. The New Zealand Government has offered to provide £3 million. The U.K., of course, has done nothing more than releasing the accumulated sterling balances. The U.S. made available $70 million in 1950-51 and another $150 million in 1951-52, to the countries of this region. Since July, 1950, it has also provided about $280 million as loans to the area, including the wheat loan of $190 million to India.

India has both received and offered technical and financial assistance. Its Five-year Plan envisages a total expenditure of Rs. 2,069 crores—in the first two years of the Plan Rs. 585 crores have been spent—of which total as much as Rs. 521 crores (excluding the deficit financing to the tune of Rs. 290 crores) are estimated to be beyond its resources. Foreign assistance is thus vitally necessary for the implementation of the Plan. The amount of foreign financial assistance so far received by India includes (1) loan from the U.S. ($190 million or Rs. 90 crores for the supply of 2 million tons of wheat), (2) five loans from the World Bank ($190.8 million or Rs. 52 crores), (3) economic assistance from the U.S. ($88.35 million or Rs. 42 crores) and (4) assistance from Norway (Kr. 10 million or Rs. 67 lakhs). Under the Colombo Plan, India received during the two years ended June, 1953, £7.2 million from Australia for wheat, equipment, etc., $28.8 million from Canada during the same period for wheat and vehicles, £250,000 in 1952 from New Zealand; this last mentioned country has also earmarked £375,000 to this country to be spent in the current year. In the sphere of technical assistance, India has received experts, as well as training facilities for Indians to study in advanced countries. India has, in its turn, contributed £750,000 (about Rs. 1 crore) to the £8 million Technical Co-operation Scheme of the Plan. It has so far offered 75 scholarships to students from the Colombo Plan region who have received training in the Indian Statistical Institute, Calcutta, Institute of Sugar Technology, Kanpur, the Customs Collectorate, Bombay, All-India Radio, New Delhi and the Central Rice Research Institute, Cuttack. Facilities for training in a number of other technical institutions, such as the National Physical Laboratory, New Delhi, and National

Chemical Laboratory, Poona, have also been offered.

It will thus be seen that the Colombo Plan represents the highest level of co-operation among the free nations. External assistance is clearly envisaged. But it is not—as indeed it cannot be—a substitute for one's own effort. The major effort in implementing a programme of development, as Mr. Ambegaokar pointed out, must "necessarily come from within the country itself which must be ready to utilise its resources to the maximum." What is even more important is that these resources must be utilised in a profitable manner. The Committee, which is now meeting in New Delhi, will do well to re-emphasise the value of both internal effort and external assistance in any struggle for the betterment of living standards in the underdeveloped regions, for any exclusive emphasis on the one or the other will defeat the purpose which the planners have in view.

ANDHRA STATE

IT has taken nine months of discussion, consultation and preparation before the Andhra State could be ushered into existence. Ever since Mr. Nehru announced in Parliament, last December, the Government's decision to establish an Andhra State, consisting of the Telugu-speaking areas of the present Madras State, the question of the formation of the new State has engaged the attention of the Central Government, Parliament, the concerned State Governments and the State legislatures, and has been the subject of comment in the Press and on the public platform. That it has taken so much time and energy, not to mention finance, of the administrators at a time when they ought to have been busy with the economic development of the country should make those who participate light-heartedly in the agitation for the creation of linguistic States, as if their creation could be ordered at a moment's notice, a little more sober in their utterances. So far as the Andhra State is concerned, its formation has unfortunately been preceded by such fierce agitation—and counter-agitation—that the goodwill on all sides which marked the Parliamentary discussion in the closing stages of the passage of the Bill comes as a very welcome relief indeed.

The Andhra State Act, which ushers the new State into existence, is a remarkably simple document, considering that the formation of the new State involved some difficult principles of financial and administrative adjustments. The credit for this should go to Mr. Justice Wanchoo, who laboured hard at evolving some acceptable formula of the division of assets and liabilities and related financial questions and to the clarity of mind and sincerity of purpose which Dr. K. N. Katju, the Home Minister, brought to bear on this very controversial issue. The Act generally embodies the principles which Mr. Justice Wanchoo worked out. The only departure from his principle is that, since the Mysore State too has had to be allocated a share—this was not contemplated by Mr. Justice Wanchoo—the division will take place on the basis of 62½ : 36 : 1½, the ratio being based on the population of the residuary Madras State, the Andhra State and the territory now merged into the Mysore State, respectively. All land, stores, articles and other goods will, as Mr. Justice Wanchoo recommended, remain the property of the State in which they are situated. All cash balances in the undivided Madras State and the credit balances with the Reserve Bank will be divided between the States of Madras, Andhra and Mysore in the proportion of 62½ : 36 : 1½. This basis will apply to the division of the State's share of the taxes on income and the excise duties payable in 1953-54 to the undivided Madras State, of the sums at the credit of the Central Road Fund, and of the shares held by the three States in the Travancore Fertilisers and Chemicals Ltd., Madras Radio and Electricals Ltd., and the Madras Industrial Investment Corporation.

The public debt of the undivided State—that is, the loans from the Central Government, the Reserve Bank or any other bank before 1st October—will, however, be apportioned between the three States in proportion to the total expenditure on all capital works and other capital outlays incurred in the territories of the State. The same principle of division will apply to the division of the outstanding public debt of the undivided Madras State—that is, the debt raised by the issue of the Government securities. Nominally, the debt will, from 1st October, be the debt of the Madras State, the Andhra and Mysore States being liable to pay to the Madras State their shares of the sums due from time to time for the servicing and repayment of the debt. Thus, the residuary Madras State has been made responsible to the bondholder in respect of the loans raised in the market. The principle followed here is the same as that which was adopted when undivided India was partitioned and Pakistan was created. All sinking funds, raised before 1st October, 1953, will remain with the State of Madras and the net amount of such funds will be taken into consideration in allocating the dues on account of such loans between the three States.

The right to recover arrears of taxes or loans, including land revenue, will belong to the State in which the taxed property is situated or the taxed transactions take place or the borrower resides. The right to recover any loans or advances before 1st October, 1953, from any person or firm or institution outside the undivided Madras State will belong to the Madras State, but any sum so recovered will be divided between the States of Madras, Andhra and Mysore in the proportion of 62½ : 36 : 1½. The Andhra State will be entitled to 36/100th of the printing machinery in the Government Press at Madras; this share will be given in the form of machinery and, to the extent this is not practicable, through cash adjustments. The liability in respect of pensions of officers, retiring on or after 1st October, will be that of the State granting the pension but the portion of the pension attributable to the service of such officers before that date will be allocated among the three States in the proportion of 62½ : 36 : 1½.

Such, in broad outline, is the scheme for the allocation of assets and liabilities. The one thorny problem was the cost of the construction of the new capital. The Andhras had hoped that this could be settled amicably, if the Madras and Andhra States shared the same capital. But this suggestion was rejected in favour of a separate capital for Andhra. Mr. Justice Wanchoo, who went into this question, held that the new State should get a credit of Rs. 2.30 crores for building its capital from the residuary State. Since the residuary State has no liquid resources from which to pay for this item, he had suggested that the new State's liability on account of public debt might be reduced by this amount, the residuary State taking over the extra debt burden. This suggestion has been accepted by the Central Government. The Seventh Schedule to the Andhra State Act states, *inter alia*:

> "In order to compensate the State of Andhra finally for its relatively smaller share of building, its share in the liability on account of debt to be apportioned between the States of Andhra and Madras under subparagraph (2) of this paragraph shall be reduced by 230.4 lakhs of rupees and the share of the State of Madras in such liability shall be correspondingly increased."

This provision was assailed from certain quarters in Parliament on the ground that it was an unjust impost on the residuary Madras State. But it was defended on the ground that the new State would not have sufficient resources for building a new capital, and that since the original capital had been built through joint revenues, the new State was entitled to compensation. Apart from the question of the economic basis of the allocation, it is to be feared that the sum itself will prove inadequate to serve the purposes for which it is intended. In any case, the new State would be well advised to practise utmost economy in the expenditure of its admittedly limited resources on the erection of its capital. From this point of view, the new State will also be well advised to stick to the present temporary capital, Kurnool. Preparations are already under way for giving this town a "new look." It would be a waste of resources if the capital were once again moved from Kurnool to any other centre. Fortunately, there is no immediate urgency about housing of the High Court and its officers. The Act states that, as from 1st January, 1956, or such earlier date as might be determined, there will be a separate High Court for the State of Andhra. In the meanwhile, the jurisdiction of the Madras High Court will extend to the State of Andhra. The jurisdiction of the High Court of Mysore has, however, been extended to the territory transferred to it with effect from 1st October, 1953.

The position of the Tungabhadra Project, it is really sad to note, is left in a very nebulous condition. All rights and liabilities of the undivided Madras State in relation to the project accrue with effect from the "appointed day" (the inst inst.) to the Andhra and Mysore States, subject to "such adjustments as may be made by agreement entered into by the States after consultation with the President or, if no such agreement is entered into, within two years from the appointed day, as the President may by order determine." These rights and liabilities refer to the administration of the project and the utilisation of the water and power from it. The President has, however, been empowered to give such directions as may be necessary in regard to the completion of the project, pending the conclusion of an agreement between the two States. It will, therefore, be clear that any failure on the part of the two States to reach an agreement within a period of two years will be followed by a decision imposed on the States by the President. Incidentally, there is no room here for appeal to the Supreme Court, although the Court has powers over inter-State disputes. This provision might conceivably raise some ticklish issues in constitutional law. Only, it is to be hoped that the States will arrive at a mutually satisfactory agreement and thereby avoid the unpleasantness of a legal controversy or an imposed decision.

That the Andhra State will be yet another State in the list of deficit States has been clear for a long time now. Its revenues have been estimated at Rs. 17.70 crores and expenditure at Rs. 22.73 crores. How to bridge this gulf will be the first and only one of the many intricate problems which its leaders will be called upon to solve. Mr. Justice Wanchoo felt that its leaders would do well to "scrap" prohibition if the State is "to avoid bankruptcy from the very beginning." Economy in public expenditure and constant vigilance over public administration should be the guiding principles of those on whom the responsibility for laying the foundations of the new State has fallen. Fortunately, there are at least three factors which make their task easier. In the first place, they have no inconvenient traditions to abide by. They are beginning on a clean slate. They have also a negative model of administration in many States, so that, through intelligent observation, they can learn what to avoid. If they scrupulously eschew intolerable taxes which weigh heavily on trade and industry and thus retard economic development, costly and irresponsible administration, thoughtless innovations in education, and squandering of available resources on schemes such as nationalisation of transport, they will have avoided a great many of the pitfalls which have arrested the progress of many States in the country.

Secondly, they have an asset of inestimable value in the person of Mr. C. M. Trivedi, an experienced administrator, who, in the words of that shrewd judge of men, Rajaji, is a "gem," a precious gift which the Andhras have found. Thirdly, the new State has plenty of mineral, agricultural and other resources, not to mention the two great rivers, the Krishna and the Godavari. Mr. V. T. Krishnamachari, Member, Planning Commission, estimated that the State would require Rs. 350 to Rs. 400 crores, if all the resources have to be utilised. The State cannot, of course, find all this capital at once. But, through intelligent husbanding of resources and realistic planning, it should still be possible to implement schemes for the gradual improvement of living standards.

This, however, seems to be a fond hope, for the State is torn by political squabbles. The stability of the Ministry now being formed is most uncertain. The fact that the administration of this new-born State is headed by an eighty-four-year-old man, whose prejudices against large-scale industries are stronger than even those of Rajaji and who is a great devotee of prohibition, may prove a great handicap to the efficient and speedy development of Andhra. Public memory is proverbially short, but it may not be so short as to forget the fact that it was Mr. Prakasam, as the Chief Minister of Madras, who imposed the ban on any further development of the mill industry in South India, with a view to protecting *khadi*, now fighting a losing battle. It is, however, to be hoped that Mr. Prakasam has now turned a saner person and has the courage to give up some of those shibboleths, which the Congress Party could conveniently indulge in during its days of struggle against the British power and to which he still seems to cling. Mr. Trivedi rightly stressed that in States in India—he said he was not thinking of the Centre—"administration is 90 per cent. of the work and policy is 10 per cent." He, therefore, urged that the leaders should realise the vital importance of "good, efficient, clean, progressive and responsive administration." This will be the primary task before those who are now shouldering the responsibility for administering the new State.

SPECIAL COMMITTEE APPOINTED TO ADVISE GOVERNMENT

BANK RATE—I.I.S.CO.—CASTORSEEDS

WEDNESDAY, 5 P.M.

THERE are sufficient indications to show that the Government of India is anxious to stimulate industrial development under the private sector. The speeches of both Mr. T. T. Krishnamachari and Mr. C. D. Deshmukh in the Council of States a few days ago bear enough testimony to that effect. Both feel that plans for industrialisation should not be slackened and that only by more investment can employment opportunities be expanded. Although Mr. Deshmukh has not been able to see eye to eye with Dr. John Matthai, who suggested a reduction in investment in the public sector so that sufficient capital will be available for expansion under the private sector, he readily admitted that there is need for assisting the private sector to a much greater extent than has been done so far by way of loans, higher retention prices, channelling of external aid, etc. This recognition is reflected in the appointment of an *ad hoc* Advisory Committee, consisting of officials and non-officials. The latter include some leading financiers and bankers, as well as level-headed leaders such as Mr. K. C. Neogy. This Committee is expected to start work soon after the return of the Governor of the Reserve Bank of India from Washington. Its function will be to explore ways and means of stimulating investment in the private sector. It will specially examine, so we understand, the question of what the banks can do to help expansion of industries.

MARKET GOSSIP

• • • •

While the keenness of the Government to assist the private sector is laudable, the Government does not seem to be moving on right lines. It is not clear, for instance, as to what more the banks can do to assist the industrial development of the country. Can they, for instance, lend more than they are doing against fixed assets? Can they invest in equities, preference shares or debentures? The banks can only provide working capital and they have been doing this to the maximum extent possible, consistent with safety and security. After all, the spread between the interest they earn and the interest they pay being low, it is to their gain to have as much commercial advances as possible. If they are to do more, they must have the backing of the Reserve Bank; the latter must be prepared to provide liberal credit facilities to banks in the hour of their need. After a limit, no prudent banker can afford to give loans against collaterals which he cannot pledge with the Reserve Bank and raise funds when they are needed.

• • • •

News about the appointment of this Committee has given rise to speculation about the future of the Bank rate in this country. One source claims that the first thing this Committee will do is to examine whether the shift in the Government's monetary policy in November, 1951, in favour of higher interest rates has adversely affected the economic progress of the country. It is not known how far this report is correct. It may be no more than wishful thinking prompted by Mr. Deshmukh's statement, in the Council of States, to the effect that, to some degree, disinflation might have been carried too far. This is, perhaps, one of the few unwise remarks which Mr. Deshmukh made in an otherwise excellent thesis on the economic *malaise* which afflicts the country. For, this has been interpreted to mean that he may be thinking of altering the policy of higher rates of interest in favour of slightly lower rates of interest by taking the Bank rate back to 3 per cent.

• • • •

But, elsewhere in the same speech, Mr. Deshmukh has clearly observed that "judicious support to industries in the private sector rather than an overall change in priorities defined in the Plan or in *fiscal or monetary policy* (italics ours) would, it seems to me, meet the requirements of the case." This remark, too, is significant, perhaps more significant than the one relating to disinflation referred to above. For, here he clearly says that he sees no advantage in making any fundamental change in the monetary or fiscal policy. And one reason why he feels that way is that he is not quite sure that inflationary forces will not recur again. Mr. Deshmukh is fully conscious that, as the development outlay increases, larger quantities of food and other consumer goods would be needed. And since he is contemplating to raise the capital investment in the country, he may not like to take chances by tinkering with the monetary policy every now and then. In fact, he seems to be so much concerned with the possibility of revival of inflation that, in one place in the same speech, though in a different context, he has stressed the "need for caution in stimulating the demand excessively, without significant safeguards."

• • • •

Whatever Mr. Deshmukh may have in his mind, there is scarcely any sense in the *ad hoc* Advisory Committee spending its time and energy in conducting a post-mortem examination of the effects of a higher Bank rate. There have hardly been any adverse effects on the country's economy, consequent on raising the Bank rate. It is only speculators that have suffered most and that is not a development for which one need be sorry. On the contrary, a higher Bank rate has done more good than harm. Production has gone up and the balance of payments position has improved. It has encouraged savings, albeit only to a limited extent. It has enabled the Governments, local bodies and industrial houses to raise loans, because a higher rate of interest has provided some inducement to investors to invest in these securities. It might not have led to fresh capital formation and large-scale savings, but it did put an end to the apathy of investors who had funds but would not invest. These are all accepted advantages of higher Bank rate. If it could not do more, it was due to other factors.

• • • •

Mr. Deshmukh stated that "looking back one might argue that, to some degree, disinflation was, in fact, carried too far." There is, of course, some truth in this, but not the way many look at it. The disinflation in the monetary sector was certainly not overdone. In fact, the policy of selective credit control, followed by the Reserve Bank, was so liberally applied that all genuine business needs were fully met. Further, although the Bank rate was raised, bank credit in India remained relatively cheaper than in many countries. In the U.K., for instance, immediately after the Bank rate was pushed up, the Bank of England advised the banks to put up their rates for loans, advances, cash credits and overdrafts. In India, the Reserve Bank did nothing of that sort and the banks themselves did not take any initiative in this direction. The fear of competition for business was so strong that no bank dared to put up its advances rate, even though all of them had to pay higher rates of interest on their deposits. It will thus be wrong to attribute the present economic distress in the country to the higher Bank rate.

• • • •

It was in the sphere of fiscal and industrial policy that disinflation was overdone and it is in these spheres a corrective action by the Government is needed. The cumulative effect of tax burdens imposed by the Governments has been so heavy that it has robbed the *entrepreneur* of all zest for work and enterprise. Until the incentives for hard work and saving are provided, the situation is unlikely to show any worthwhile improvement. The industrial policy of the Government must be modified in a manner that will win the confidence of business men. The Government should not create the impression that it is tolerating private enterprise just because it is, in its view, a necessary evil. It should provide more evidence of its faith and confidence in private enterprise. It must, in fine, court private enterprise and relax all the unnecessary controls and also the controls which it is not able to administer efficiently. The *ad hoc* Advisory Committee will be doing real work, if it goes into the basic causes of the present economic impasse and suggests suitable remedies. But we wonder whether it will be able to do any useful work, because Mr. Deshmukh seems to have already made up his mind, in that he thinks that there is no need for any change in the fiscal policy of the Government. But it is in this sphere a change is badly needed.

• • • •

It is suggested in some quarters that, if the Government is contemplating a cut in Bank rate, it would be well advised to make the change by about the middle of December, 1953, in order to derive the maximum advantage from it. Such a change will help the banks to earn a bonus on their investments in Government securities and make the preparation of their balance-sheets a pleasant task. This school of thought argues that a psychological stimulus through a reduction in the Bank rate will change the sentiment in the markets, now in the doldrums, and bring about a cheerful atmosphere. If, for instance, banks are able to make a better showing, it will tone up the markets in general. This line of argument, however, ignores the fact that, so long as there are other strong disincentives to investment and enterprise, a reduction in Bank rate will only have a short-lived effect and that, after a while, markets will begin to sag again. If the advantages of a lower Bank rate are to be enjoyed in full, the disincentives to business must first be removed. It will be interesting to note, in this connection, that, in Britain, the Government first gave tax reliefs and restored private enterprise to its rightful place before it reduced the Bank rate.

• • • •

In saying this, it is not suggested here that there is a case for reduction in the Bank rate in India. In the previous paragraphs, we have mentioned a few points to show why a reduction in the Bank rate will not be desirable. To these, a few more points may be added. Taking the conditions in India, it looks as though a 3½ per cent. Bank rate is more suited than a 3 per cent. rate. As a result of the upward change in the Bank rate, small investors, whose savings are in provident funds, insurance and time deposits with banks, have considerably benefited. They will lose this advantage if the Bank rate is reduced. Further, too low a rate for an underdeveloped country like India will not be conducive to maintenance of efficiency. Easy money will encourage overtrading. In India, the mania for speculation is widely prevalent and a reduction in Bank rate will aggravate it. Again, with India needing foreign capital, both short-term and long-term, the Bank rate should always be higher than in Britain. It was so until March, 1952; when the Bank rate in Britain was 2 per cent., it was 3 per cent. in India. And, during the past 18 months, we have seen the disadvantage of the Indian Bank rate being lower than the British Bank rate. All said and done, there is a link between the Indian money market and the London money market. If the one per cent. difference between the British and the Indian Bank rates is to be maintained, as it well may, there should be no change in the Indian Bank rate even if the British rate goes down to 2½ per cent. It will be interesting to note, in this connection, that this difference of one per cent. was maintained when Britain first raised its Bank rate in November, 1951. It would have, of course, been too much to maintain this difference when the Bank of England put up its rate to 4 per cent. But now that the British rate is going down, let not India neutralise that advantage by lowering its rate too.

• • • •

The share market is steady but dull. There is some selective buying but the turnover is very small. Among the speculative counters, Indian Irons, after being firm, are subdued again. The Calcutta operator, who was credited with demanding delivery of 4 lakh shares, is believed to be carrying over his purchases by paying a charge of nine pies per share. Some are hoping that the Indian Iron and Steel Company may not suffer much from the recent strike of its workers—the Action Committee withdrew the strike early in the week—because the loss suffered by it may be added on to its retention price. It is, however, a moot point whether the authorities will agree to such a procedure. It is argued that, as the strike was a factor beyond the control of the management and that as the cost of production is worked out on the basis of actual production, the effect of the strike must be taken into account by the Tariff Commission while fixing the fair retention price. The terms of reference to the Tariff Commission on this subject do not include strike and lockout. There is, however, nothing to prevent the management of the Company from raising the issue with the Government and requesting it to refer the matter to the Commission. The question, therefore, is whether the Government will accede to this request. If it does, then it will be setting a very bad example, because it tantamounts to encouraging indiscipline and intransigence among the workers.

• • • •

The downward trend in commodities and bullion, noted in the past week, persists. The cloth market also is still in a depressed state. The only exception is castorseeds, where, owing to a squeeze on bears, there has been a spectacular rise of Rs. 50 per candy in the spot section and Rs. 44 per candy in the forward section, all within a few days. Excessive short-selling, at a time when supplies were short, has been the root of the trouble. It is not surprising that the bulls decided to take full advantage of the position. Never in recent years was the tussle between the bears and the bulls so keen and determined as in the September contract which came to a close to-day. The extent to which the price of castorseeds was pushed up to artificially high levels will be evident from the fact that, whereas ready castorseeds touched Rs. 220 per candy to-day and the September delivery Rs. 210, May 1954 delivery was standing at no more than Rs. 113; in short, the disparity between the old crop and the new crop was as high as Rs. 100 per candy. Further, early in September, that is, 3rd September, to be precise, when the squeeze had first started, September delivery was standing at Rs. 148 and ready delivery at Rs. 147-8. The rate for May, 1954 then was Rs. 125-4, the spread between the two forward positions being no more than Rs. 13 per candy. The behaviour of this market thus provides a striking example to the Forward Markets Commission for studying the working of a hedge market in a commodity.

• • • •

There were serious allegations against the Board of the Oilseeds Exchange. It was, for instance, stated that the Board was inclined to favour the short-sellers. At one time, it appeared as though there was some truth in this allegation, for the Board suddenly raised the margin payable by the bulls from 10 per cent. to 50 per cent. When similar circumstances prevailed in May last, no such action was taken by the Board. It was feared that the Board might use its discretionary powers in such a way as to fix a low rate (called the "due rate") for squaring up the outstanding business on 30th September, the expiry date for the Contract. This fear, however, has not materialised. The Board has fixed the due rate at Rs. 208 per candy, as against the ready rate of Rs. 220. This decision would appear to be a fair one and so far as one could ascertain late on Wednesday night, it has been accepted by the bulls.

• • • •

Not only has the rise in the price of castorseeds been spectacular, but also the large deliveries. It is stated that as many as 93,100 candies have been delivered against the Contract which has just matured. Of this, over a third, that is, 33,100 candies were delivered on the last day. Evidently, the high prices seem to have induced some of the holders to get rid of their stocks. It is feared by the bulls that a good portion of the tenders must be blank, but the other side points out that that must be an exaggeration, because the penalty for false delivery is Rs. 10 per candy. Those who failed to cover their sales either by delivery or by open market purchases will have to pay a penalty of Rs. 5, that is, their sales will be compulsorily cut off at Rs. 213 per candy.

• • • •

The Government of India has now allowed the mills to export pseudo-fine cloth, which had been banned for a long time now. This variety of cloth is not subject to export duty.

• • • •

Enquiries made in the cloth market reveal that reports of distress sales through auction on account of dealers who failed to take delivery of cloth are exaggerated. But the trend of demand, it is stated, is abnormally low for this time of the year. Since June last, prices have gone down by about 25 per cent. in superfines, 10 to 15 per cent. in fines and 10 to 12 per cent. in coarse and mediums. Despite this fall, the offtake has been poor, presumably because the dealers feel that a further decline in prices will be inevitable.

• • • •

There is a move on the part of the authorities to reduce the statutory selling price of Grades II

(Continued on next page)

DULL CONDITIONS IN SHARES

TEXTILES EASY

(From Our Own Correspondents)

BOMBAY, 30th September

TRADING on the Bombay Stock Exchange during the week under review lacked recuperative strength. For values could not make any notable headway, despite the optimistic interpretation by a section of the market of Mr. Chintaman Deshmukh's observations in the Council of State last week on the expenditure on the Five-year Plan to solve the unemployment problem. The sentiment of operators was adversely affected by uninspiring performance of textile shares, due to reports of "distress" sales in the cloth market, and the bearish trend in the cotton, bullion, grain and other commodity markets. None seemed to have any inclination to do business. Consequently, price movements were narrow and activity was at a low ebb. The undertone of the market remained, however, just steady.

In the steel section, the recovery in Indian Irons due to bull support in Calcutta aided sentiment. Tata Deferreds made a moderate advance from Rs. 1,816-4 to Rs. 1,835 on Monday. There was a mild reaction at this level, and the scrips moved down again to Rs. 1,826-4 this morning. Towards the close, however, they steadied up to Rs. 1,831-4. Tata Ordinaries after improving from Rs. 315-4 to Rs. 316-8 in the early stages, failed to consolidate the gain and closed lower at Rs. 314-12. The smart rally in Indian Irons noted towards the close of last week was kept up early in the week and a further gain from Rs. 22-10 to Rs. 23-1 was recorded on Friday. Although there was a minor recession to Rs. 22-12½, subsequently the shares resumed their upward trend and finished at Rs. 23-2½, a gain of As. 8½ over the week.

Exaggerated reports of "distress" sales in the local cloth market restrained activity in the textile section. Barring a few exceptions, most of the leading counters suffered recessions, Bombay Dyeings which opened at Rs. 367-8 came to be placed at Rs. 358-2 *ex-div.* (dividend Rs. 7-8) yesterday. To-day, there was a further recession to Rs. 356-4 *ex-div.* at the close. Kohinoors backed away from Rs. 281 to Rs. 276-8. Central Indias slipped down from Rs. 147 to Rs. 145. Century dropped a rupee to Rs. 256-8. Finlays gave way from Rs. 236 to Rs. 233. New Greats fell by a rupee to Rs. 144-8. Standards disclosed a loss of Rs. 3-12 to Rs. 298-12, Svadeshis Rs. 3 to Rs. 237-8 and Swans as much as Rs. 8-8 to Rs. 214. India Uniteds proved to be a prominent exception, in that it experienced some good buying support, as a result of which the Ordinaries rose by As. 9½ to Rs. 9-8½ and Deferreds by As. 2½ to Re. 1-6½. Gokaks hardened by Re. 1-8 to Rs. 220. Simplex were steady at Rs. 128-8 and Khataus at Rs. 170.

Bank shares provided a mixed pattern. Barodas were a weak spot and eased by Rs. 2-8 to Rs. 106-8. Central Banks were maintained at Rs. 63-12, while their new shares were put up by As. 12 to Rs. 68. Imperial Fully-paids were better by Rs. 5, while the Contributories were done, Re. 1-4, lower, at Rs. 450. Indias had business done at Rs. 155-8, as against Rs. 157 and United Commercials lost a fraction to Rs. 35-12.

Ahmedabad Electrics continued to be the highlight of the public utility section, with a smart rise of As. 15 to Rs. 113-2. Surats had a rise of As. 10 to Rs. 126-14. Bombay Suburbans were done up to Rs. 121-14, but closed at last week's rate of Rs. 121-4. Tata Hydro group lacked interest. Andhra Valleys were placed Rs. 2-8 lower at Rs. 1,325 *ex-rights*. The Rights were quoted at Rs. 203-12 and Coupons at Rs. 42-8. Tata Hydros declined earlier to Rs. 138, but recovered to Rs. 139-8 *ex-rights*. The Rights were quoted at Rs. 28 and Coupons at Rs. 10. Tata Powers dropped Rs. 6-4 to Rs. 1,381-4 *ex-rights*.

The miscellaneous section provided several bright spots, in distinct contrast with the general market trend. On investment support, A.C.Cs. firmed up by Rs. 2 to Rs. 170. Belapurs attracted good attention, due to proximity of dividend announcement, and rose by Rs. 4-8 to Rs. 242. On short-covering, Bombay-Burmahs (old) advanced by Rs. 5 to Rs. 331-14 and their new shares by Re. 1-14 to Rs. 121-14.

In the mining and engineering group, B.B. Petrols evoked fresh support to go up by As. 11 to Re. 1-8½. Indian Coppers were dull at Rs. 12-13½. Shivrajpurs were done As. 8 better at Rs. 55-4. Alcocks were quiet at Rs. 297-8, while Premier Constructions were wanted Re. 1-4 higher at Rs. 84-4. Larsen and Toubros passed hands As. 2 better at Rs. 10-10.

• • • •

Calcutta Stock Exchange

CALCUTTA, 29th September

There was a definite increase in the volume of transactions put through on the Calcutta Stock Exchange during the week under review. This was largely due to the increased activity in the tea, engineering and miscellaneous sections. Tea shares are now considered a good buy in view of the strong demand at the tea auctions; but inter-market speculation has made rates move up to very high levels which, it is feared, are likely to be hammered down at any time. More interest was shown on Indian Irons, and this lent general support to other engineering scrips. Reports that production in the I.I.S.Co. Works at Burnpur was improving gradually resulted in fresh enquiries for Indian Irons. No doubt, the trouble is not yet over completely, as a number of workers have yet to resume work. Nevertheless, the fact that production has gone up by 300 per cent. compared to the period of the "go-slow" movement enlivened activity and invited the speculative element.

Jutes, however, continued to lack enthusiasm, as prices for jute goods did not reach economic levels. Stockists were reluctant to increase their holdings for fear of losses resulting from any further reduction in the export duty, which the trade has demanded and which is needed to push up sales and to ensure fair return to mills. The accumulating stocks and the necessity for mills to buy raw jute to keep plants engaged have caused mills to block considerable money, and it is unfortunate that those who are given to lead labour and demand a "sumptuous" *Poojah* bonus to workers forget the difficulties which mills are facing in their attempt to see plants working. Investors generally are feeling that return on capital invested on industries is diminishing, and if more concessions are made to labour the incentive for savings to be drawn to the market will be further curbed.

Sectionwise, Indian Irons opened at Rs. 22-6 and advanced to a high of Rs. 23-3 on Saturday. The quotation fluctuated round about Rs. 23 during the last two days, and closed to-day at Rs. 22-14. Another strong feature was Indian Galvanisings which, on interested buying, advanced from Rs. 13-6 to Rs. 14-7.

Moderate interest was shown to particular counters in the miscellaneous section, where India Steamships continued to attract buyers and realised up to Rs. 7-9, a rise of As. 5 over the week. Indian Cables were supported at Rs. 19-4, as against Rs. 18-10 last week, and Jardine Hendersons rose from Rs. 115 to Rs. 116. F. & C. Oslers were maintained at Rs. 7-1 and Indian Wood Products at Rs. 30-8. Calcutta Trams realised Rs. 13-14, but at this level operators became cautious as the workers' Union was reported to have decided to go on strike. Dunlop Rubbers at Rs. 29-2, disclosed a gain of As. 13. Angelo Bros. changed hands at Rs. 17-10, Rohtas Industries at Rs. 8-9, and Rallis at Rs. 64. Titaghur Papers scored a rise from Rs. 35-4 to Rs. 36-2.

Sugar shares were steady, as the working results of mills for the current accounting period are expected to prove satisfactory. Champarans changed hands at Rs. 25-9, as against Rs. 25-4 previously. Ramnugger Canes improved from Rs. 18-4 to Rs. 18-8, and Carews gained from Rs. 6-13 to Rs. 7-2.

Teas were in the limelight, and a large number of transactions were recorded at hardening rates. Speculative activity has brought the rates to high levels which, if maintained, will be surprising to the more prudent investors. Patrakolas were pushed up from Rs. 119 to Rs. 125, Teen Alls from Rs. 21-2 to Rs. 22-10, and Dhelakhats from Rs. 11-12 to Rs. 12-8. Gungarams were shown interest at the higher rate of Rs. 202. Banarhats were steady at Rs. 334, and at Rs. 21-4 Seajulls recorded a gain of Rs. 2-4.

• • • •

Madras Stock Exchange

MADRAS, 29th September

The performance of the Madras Stock Exchange this week was dull and uninteresting. The easy trend witnessed last week in the textile section persisted this week also. The continued deterioration in the offtake of piecegoods in important consuming centres was mainly responsible for it. Plantings were cheerless, with interest in the scrips generally lacking. Among these, tea and coffee shares presented a poor appearance, while rubbers were somewhat better. Miscellaneous scrips, however, came in for some selective support. Business done on the Stock Exchange was limited and prices fluctuated within narrow limits. The list on balance revealed a sprinkling of both gains and losses during the week.

The textile section lacked enterprise. Maduras improved by As. 14 to Rs. 29-8. This was due to the decision of the Directors to raise the value of the company's gross block by Rs. 1 crore. Mysore Spuns were slightly higher at Rs. 5-14. But for these scrips, the rest presented a cheerless appearance. Thus, Buckinghams lost Re. 1 to Rs. 122. Rajalakshmis were also lower by a similar amount at Rs. 80. Metturs were done at Rs. 194, as against Rs. 195 and Pankajas at Rs. 71-8, as compared with Rs. 72. Bangalore Woollens were quiet at Rs. 270 and Cambodias at Rs. 11-9.

In the tea section, Highland Producers put on As. 4 to Rs. 11-4. Chembras were an anna higher at Rs. 2-5. But Peermades declined from Rs. 26-8 to Rs. 25-12. Chandramalais were slightly lower at Rs. 2-13½. Devoshalas were unchanged at Rs. 16-8. T.R.T. (tea and rubber) were done at Rs. 7-7½, as against Rs. 7-7 and Midlands (tea and rubber) at Rs. 11-8, as compared with Rs. 11-10.

Among rubbers, Rajairis gained As. 3 to Rs. 11-15 and Travancore Rubbers As. 2 to Rs. 13-1. Mercaras improved from Rs. 3-1 to Rs. 3-3. Cochin Malabars, however, lost an anna to Rs. 6-6. Periakaramalais were unchanged at Rs. 6-14 and Pullangodes at Rs. 2-12½.

In the coffee section, Consolidated Coffees and Coffee Lands lost As. 3 and an anna to Rs. 18-1 and Rs. 10-5, respectively. Nil Neergundis were dull at Rs. 3-6 and Kadur Coffees at Re. 1-8. Shevroys were colourless at Rs. 1-3½.

Miscellaneous scrips came in for selective enquiry. Andhra Cements 'A' put on As. 8 to Rs. 101 and Dalmia Cements As. 5 to Rs. 6-14. Indian Steel Rolling Mills rallied As. 4 to Rs. 11-4 and Mysore Papers As. 3 to Rs. 14-4.

MARKET GOSSIP

(Concluded from previous page)

and III coal. It is learned that the Coal Commissioner has asked the colliery interests concerned to show cause why the Grades II and III coal should not be subjected to a price-cut, in view of the strong evidence of the prevalence of rebates on a large-scale. It is stated that the rebate in some cases is as high as Rs. 4, or even more, per ton, that is, about 25 per cent. of the fixed selling prices. The Coal Commissioner, therefore, proposes to recommend to the Government a price cut at a flat rate of Re. 1-5 per ton for Grades II and III.

• • • •

It may be recalled that the Government recently accepted the Tariff Commission's recommendation that the demand for passenger vehicles and trucks should be concentrated only in the five automobile firms which have a manufacturing programme, namely, the Hindusthan Motors Ltd., the Premier Automobiles Ltd., the Standard Motors Products of India Ltd., the Automobile Products of India Ltd., Bombay, and the Ashok Motors Ltd., Madras. The last two firms, it is now stated, are contemplating a merger. It is further stated that the Directors propose to raise additional capital from the Indian market. Both the firms, it may be noted, have their principals in the U.K. Thus, the Automobile Products of India is connected with the Rootes Group and the Ashok Motors with the Austin Group. After the merger scheme is put through, one of the firms, it is stated, may concentrate on passenger cars, leaving the manufacture of heavy vehicles to the other.

• • • •

Industrial relations in West Bengal are going from bad to worse. The labour leaders are themselves unable to control the situation which they have helped so much to create. Unruly elements are abroad, and seem to be bent upon nothing short of paralysing the State's industrial life. A spirit of defiance is in the air. The Burnpur strike was but the beginning of this indiscipline. It was only a camouflage, as is now clear, for the political ambitions of a few over-ambitious leaders who count cheap the hunger and the misery of the people. It has been followed by waves of strikes, each more dangerously volatile than the preceding. Company officials have been mobbed, literally imprisoned in their cabins and told they could buy their freedom only through a favourable announcement regarding the *Puja* bonus issue. Today comes the news that Calcutta's industrial life has been brought to a standstill through transport strike, strike in the jute mills and a host of other industrial establishments. Now, labour leaders themselves seem unable to do anything more about it. They can only sit back with folded hands and say, in the words which Shakespeare put in the mouth of a mob orator, "Mischief, thou art afoot. Take what course thou wilt."

• • • •

How long will this madness last? This is more than we can tell. Unless the leaders know how to control the movements they initiate and the workers learn the difference between a peaceful strike, intended for a specific and justifiable grievance, and violent stoppage of all economic activity, there can be no hope of building up economic prosperity on strong foundations. The Committee of the Indian Chamber of Commerce has done well to warn that it is not "by the methods to which employees are now resorting that business activity can be sustained, much less expanded." It warns further that the employees "may for once have their way, but sooner than later the inexorable working of economic laws will force the issue and give rise to a situation which will be fraught with serious consequences to the entire economy of West Bengal." All this will only worsen the problem of unemployment, particularly acute in that State. The workers are, as the Committee rightly says, "only creating conditions which would scare away trade and industry from Calcutta and West Bengal." It is nothing short of lunacy that the labour leaders should egg the workers on to take extreme measures for earning an extra benefit, such as a *Puja* bonus, at a time when there are people who cannot find even a day's work. We earnestly appeal to West Bengal's leaders in all walks of life to condemn these lawless strikes which must ultimately cause irreparable damage to the State's economy, and help re-establish order and discipline in labour's attitude towards work. Mr. Deshmukh's exhortation in the Council of States, which was a fine piece of the new philosophy of work which this country should learn, has a particular relevance to West Bengal. For, he said:

"I should like to close with a message to the public that whatever we may provide for a plan, no implementation will be complete, unless one revises one's attitude towards work and I find that, in this country, somehow a spirit of despondency is growing in certain sectors and is actively encouraged which has the result of reducing this zest for work. Hon'ble members might be able to recall the *mantra* in Rig Veda *Samhita*, meaning that, on whichever object you fix your mind, you can only get it by endeavour and, Sir, it is this purposeful endeavour that I urge and advocate with all the sincerity at my command."

NEWS IN BRIEF

UNDER the Technical Co-operation Scheme of the Colombo Plan, India had provided till the end of last year, five experts and 75 scholarships to South and South East Asian countries and their students.

Over Rs. 62 lakhs are likely to be spent by Indian railways during the current financial year on providing amenities to passengers, such as more fans, improved lighting, etc., in existing passenger carriages, waiting halls and on station platforms.

The Government of Bombay has abrogated the orders under which a permit of the Director of Civil Supplies, Bombay, was so far required for the import and export of biscuits, vermicelli, spaghetti, macaroni and flake made of wheat into and out of Bombay State.

The fourth meeting of the Central Advisory Council of Industries will be held in New Delhi on the 12th inst., under the Chairmanship of Mr. T. T. Krishnamachari, Union Minister for Commerce and Industry. The Council will consider the report of its sub-committee which met on Wednesday last to review the cases of licensing disposed of by the Licensing Committee.

The Union Food and Agriculture Ministry has informed all State Governments that they can sell wheat in any quantity, both to consumers and traders. This concession will not, however, apply to the States of P.E.P.S.U. and Punjab. Inter-State cordons on the movement of wheat, except on Government account, will continue to remain in force.

The Central Government has empowered the State Governments to issue general permits for movements of cotton textiles from any place in their States. This decision does not apply to movements from Greater Bombay and Ahmedabad. Movement of cloth and yarn can now be made under a general permit of the Textile Commissioner or the State Government concerned.

The all-India first estimate of groundnut for the 1953-54 season places the area at 6,822,000 acres, as against 6,119,000 acres in the corresponding estimate of last year. This shows an increase of 703,000 acres or 11.5 per cent. in area. This estimate does not, however, cover the total area sown to this crop during the season under reference. The area reported at the final estimate stage is generally higher than that in the first estimate.

The Government of India is contemplating imposition of certain restrictions on unlicensed salt producers to improve the quality of their production, according to Mr. K. C. Reddy, Union Minister for Production. The Government propose to introduce a new Bill in Parliament at its next session to give statutory sanction for the collection of cess on salt manufactured and to make the rate of cess uniform all over the country. At present, the rates vary from As. 2 to As. 3½.

The Government of India has decided to extend the period of suspension of clauses 25 and 26 of the Cotton Textiles (Control) Order, 1948, by another three months from 1st October, 1953. The effect of this decision is that mills and dealers can continue to buy or sell or have in their possession time-barred cloth or yarn in packed or open condition till 31st December, 1953. Dealers can dispose of time-barred cloth or yarn in loose condition without getting it T.C.B. stamped by State Textile Controllers. Dealers can also dispose of any T.C.B. stamped cloth or yarn till 31st December, 1953, even though the time limit for disposal of such cloth or yarn has expired.

• • • •

From Abroad

Under the restricted crop scheme, Cuba produced 5,687,000 short tons, raw value, of sugar in the 1953 season, a decrease of 28.6 per cent. from the record output of 7,964,000 short tons in 1952.

The average income of an American worker in 1952 was approximately $2,300, according to statistics released last week by the U.S. Bureau of Census. This figure is about $100 above the 1951 level.

Steel production in the U.S. reached a new world mark with more than 114,600,000 tons in the last 12 months. The output was about two and three-quarter times greater than Russia's estimated total this year.

The Pakistan Government has decided to appoint a Committee to enquire into the whole of State trading in jute and cotton. Pakistan lost Rs. 9 crores on 14,50,000 bales purchased by the Jute Board last season by State trading.

The Committee appointed by the Pakistan Government to study the cotton market and various issues connected with the cotton trade and industry has completed its deliberations and has finalised its report for immediate submission to the Government.

Sugar rationing in the U.K. was withdrawn on Monday this week after a period of nearly 14 years. The purchase of 1 million tons of sugar from Cuba recently ensures adequate supplies for two years and provides the additional 500,000 tons a year necessary to abolish the rationing.

A specialised cloth for drop-head coupes, claimed to withstand all climatic conditions, has been developed by one of the most modern textile mills in England. The mill was built four years ago for the special purpose of catering to the motor trade and to-day it exports cloth for interior roofings of cars to many parts of the world.

A meeting of the International Master Cotton Spinners and Manufacturers Association opened in Copenhagen on 25th September, 1953. One of the main points on the agenda of the meeting was the question of arriving at an international cotton agreement as proposed by the International Cotton Advisory Committee.

Ceylon is ready to join hands with India for launching a joint tea promotion drive in Canada, provided the Canadian trade is willing to be a contributing partner. India proposed to Ceylon that a joint tea promotion drive should be made over as wide an area as possible, on the basis of a regional council in each consuming country, with a policy-making central body to co-ordinate the work of regional councils.

Ceylon and China have concluded an agreement under which China will sell rice to Ceylon and buy rubber from it for 1954. The two Governments have also agreed to extend for further two years the trade agreement concluded between them in October, 1952. The new agreement has been negotiated within the framework of a five-year pact on rubber and rice concluded in December, 1952.

The World Bank will shortly issue a $5 million loan in the Netherlands, according to a report from Amsterdam. The loan will have a currency of three years. The rate of interest will probably be 3 to 3½ per cent. and the issue price between 99½ and 100 per cent. Of the $5 million, it is stated, $2 million will be offered to the public and $3 million will be taken up by banks.

The Select Committee of the Upper Chamber of the Burmese Parliament has recommended the dropping of the compensation clause from the new Land Nationalisation Bill introduced in the House recently. The Bill proposed a sliding scale of compensation to landowners. The maximum compensation provided under the Bill was 12 times the land revenue per acre for the first 100 acres. The Bill scaled down the compensation until those having over 1,100 acres would receive only the equivalent of land revenue. The Burmese and Indian landowners have expressed their resentment at the scale of compensation.

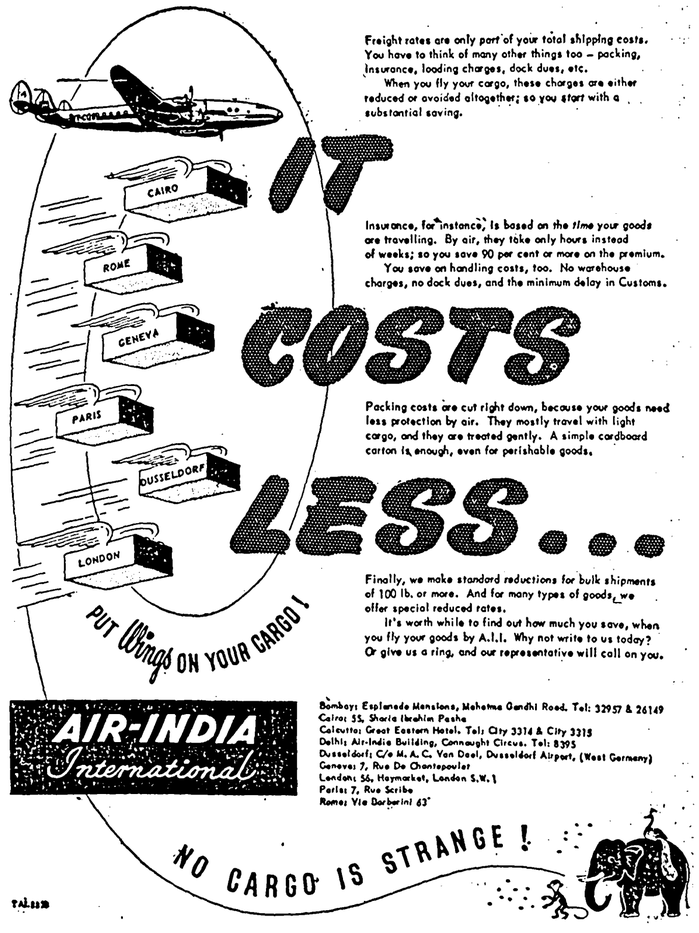
The Trans World Airlines will bring its Constellation Sky Tourist service to India for the first time on 4th October, 1953. The new flights will leave Bombay east-bound for Colombo at 11:35 hrs. every Thursday, commencing 8th October, 1953, and west-bound at 21:30 and 21:15 hrs. every Friday and Monday, respectively, commencing 5th October, 1953. These flights will serve all points on TWA's International network, and link-up with similar flights to Hong Kong and Tokyo on routes for which TWA has applied. TWA will operate their famous 300-mile-an-hour Constellations; omitting a few of the luxuries, and carrying a greater number of passengers, TWA will continue to serve excellent high quality meals on these flights. TWA has pioneered in the development of Sky Tourist services in the U.S.A. and across the Atlantic, and flying millions of passengers yearly, it operates more tourist class services than any other airline in the world. TWA has already been operating 217 schedule Sky Tourist flights each week, on its routes San Francisco, New York, Paris and Cairo.

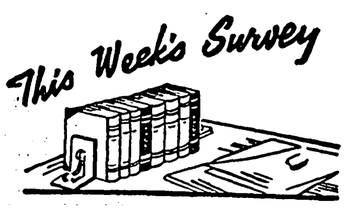
PERSONAL

MR. J. S. H. C. Brown, Labour Commissioner of the Federation of Malaya, has been invited by the Government of India to visit the Nicobar Islands to survey the archipelago's development potentialities. Mr. Brown will visit the Islands early in November and later on visit India.

Mr. A. B. Chatterjee, former Joint Secretary, Ministry of Rehabilitation, Government of India, has been appointed Managing Director, Sindri Fertilisers and Chemicals Ltd., vice Mr. M. P. Pai, transferred to Andhra State.

Mr. Samuel C. Waugh, Assistant Secretary of State for Economic Affairs, leads the U.S. delegation to the Colombo Plan Consultative Committee on Economic Development in South and South-East Asia which commenced its deliberations in New Delhi on Monday last. The other members of the delegation are: Mr. John A. Loftus, Economic Counsellor, American Embassy, New Delhi (Alternate); Mr. Clifford H. Wilson, Director of Technical Co-operation in India; Mr. Rufus B. Smoth, Attache, American Embassy, Karachi; and Mr. Walter S. Anderson, Jr., First Secretary, American Embassy, Rangoon.





CREDITABLE ACHIEVEMENT

A FEW years ago, a sewing machinery industry for India would have been regarded as outside the bounds of possibility. To-day, it is not only a well-established industry in the domestic sphere but is assuming the status of an export industry, thanks to the enterprise of the Jay Engineering Works' management. In his address at the annual meeting of the Company, the Chairman, Lala Shri Ram, devoted a portion to the problem of improving the export trade for its products. The Company exports its products—sewing machines, electric fans and hurricane lanterns—to about 25 countries. This is, indeed, a creditable record. But behind this record lies a story of hard work and reliance on quality and low prices. At a time when the Company's foreign rivals were increasing the prices of sewing machines, the Company reduced its prices by Rs. 25 per machine. The price reduction has not, however, been the only favourable factor. Efforts have been made to improve the quality of the Company's products. It would appear that the whole assembly section has been thoroughly modernised under the direction of a foreign expert. Many costly machines, designed to improve quality and reduce costs, have been installed. Some of these machines are of the "automatic and labour-saving" variety. And yet, their installation has—the inveterate enemies of labour-saving devices and efficiency in industry will do well to note this—resulted not in any decline in employment but in an increase in the workers employed. This is because a larger demand has been created for the Company's products which the consumers have realised are a good "buy" at the price quoted. The Company is, in fact, unable to meet the demand for its products.

But any advantage, which an export industry derives through lower costs and better quality, can be nullified by higher transport and other charges. This has happened to the Jay Engineering Works. It would appear that the Company finds that its rivals have the advantage of lower freight rates. Indian shipping companies would do well, in their own interest, to redress the Company's legitimate grievance. Lala Shri Ram said:

> "I have always held that, if quality articles are produced and at reasonable cost and if the Government, the manufacturers and the workers of this country help in the export business with single-mindedness, I see no reason why the light engineering industry, in particular, and the engineering industry, in general, should not be able to build up a very good market."

It is to be hoped that this consideration will not be dismissed on the ground that it is too trite. Actually, its implemenation will mean greater prosperity for the country.

EAST-WEST TRADE

A notable development of the week is the presentation of the semi-annual report to the U.S. Congress on the administration of the Mutual Defence Assistance Control Act relating to the control of strategic exports to Communist countries. In this report, however, the U.S. President, Mr. Eisenhower, has rejected the demand of Senator Joseph McCarthy to stop aid to the U.K. and other nations which are trading with Communist countries. The report has strongly criticised the advocates of trade blockade, who are spreading the "completely untrue" and "especially unfortunate fallacy" that the Western European Allies have been pouring military supplies into the Soviet group. Although the report does not refer to Senator McCarthy by name, its statements are obviously directed against the "trading with enemy charges" he and several others have made against the U.K. and other countries. The report bluntly says that (1) stoppage of all East-West trade is impossible, (2) the U.S. cannot afford to dictate to its allies, and (3) it is dangerous to think that the U.S. can coerce its allies into doing its bidding by cutting aid. It has expressed its faith in the removal of restrictions on trade among free countries to eliminate undue dependence of the West on the markets in Communist countries. The attitude of the U.S. on East-West trade, as summarised in the report, is as follows:

> "The U.S. does not oppose non-strategic trade as such. If, however, the shipment of non-strategic goods is made contingent on shipment of strategic items, it becomes another matter and must be closely examined by the free nations. The same is true if non-strategic trade is of such a nature as to build up undue dependence upon the unreliable and politically controlled sources and markets in Eastern European countries that are still being forced by Moscow to strain toward Soviet-bloc autarchy. Such dependence is risky, if great enough to make a Western country unduly vulnerable to pressures from the bloc, pressures that would weaken the Western alliance. The question of undue dependence is a hard one. The best answer to it is the development of new sources of supply and new markets within the free world. This cannot be done overnight but it must be done. It means the reduction of tariff walls in the United States, thus allowing more imports to come in from our friends and allies. It means a similar loosening of trade restrictions by other free nations. It means a greater economic integration among the European countries. It means more production per man-hour in the factories, mines and farms of the free world. It means steady advancement in the economic development of the underdeveloped areas of the world. All those things are important for reasons not related to East-West trade, but the problem of East-West trade gives them an additional element of urgency."

The question of trade with Communist countries is as delicate as it is politically explosive. It is easy to talk of a complete ban on trade with the Soviet-bloc but difficult to accomplish. It is certainly a matter of great concern to a number of countries. Hongkong, for instance, cannot do without trade with China and, if the trade is stopped, it will be a dead weight on the U.K. and its allies. Then, there is Japan, the future prosperity of which hangs precariously on the resumption of its trade with the Chinese mainland. The same is true of Western Germany, the trade of which with Eastern Europe is vital to its economy. Again, there are other countries such as Ceylon, Pakistan and many South-East Asian countries which cannot insulate themselves from trading with the Red bloc, except at a very great cost, inasmuch as many of the products of these countries cannot be marketed at present in Western markets profitably.

INDIAN ELECTRICITY ACT

The Government of India has set up an eight-member Advisory Board with Dr. K. P. P. Menon, Utilisation Member, Central Water and Power Commission, as Chairman, to suggest amendments to the Indian Electricity Act, 1910. Announcing the setting up of the Board, the official Press note says that the Government had under consideration for some time the revision of the Indian Electricity Act to remedy the shortcomings in the working and administration of the Act and to bring it in line with the developments in the electricity supply industry in the country. The new Board, it is stated, will take into account the views of the various institutions and State Governments, the proceedings of the Electrical Inspectors' Conference held in December, 1928, the action taken by State Governments to amend the Act, the comments of State Governments on the draft amending Bill circulated by the Labour Department in 1938, similar legislation abroad and the Electricity Supply Act, 1948. The Board is empowered to regulate its own procedure and to determine any matter with the aid of qualified assessors nominated by the Central Government. It is expected to submit its report in six months.

The eagerness of the Government of India to amend the Indian Electricity Act, although commendable, is difficult to explain. For the amendment of this Act is not so urgent as the Electricity Supply Act, 1948, which has virtually put a stop to the development of electricity supply in the urban and rural areas. It is stated that the Government has not been in a position to amend the Act for lack of sufficient time at its disposal. Even the Draft India Electricity Rules, made available to the industry early in 1951, and which was commented upon by the latter in July, 1951, has not yet seen the light for ostensibly the same reason.

The industry has changed hands from ministry to ministry. Originally, it was under the Department of Labour, when Dr. B. R. Ambedkar was the Labour Member. Then, it was taken over by the Ministry of Works, Mines and Power for some time under Mr. Bhaba and, subsequently, under Mr. N. V. Gadgil. It was then passed on to the Ministry of Natural Resources and Scientific Research under Mr. Sri Prakasa. Now it is under the Ministry of Planning, Irrigation and Power. Unfortunately, Mr. Gulzarilal Nanda, who is in charge of it, has been so much engaged with the implementation of multi-purpose projects that he has no time to devote to the problems of the electricity supply industry. Consequently, even to-day it has been regarded as a stepchild. It is surprising how the Government is finding time to amend the 1910 Act, which is not of much importance. Certainly, the intentions of the Government are not understandable.

Even the 1948 Act itself has remained a dead legislation so far as the constitution of the State Electricity Boards is concerned. For, except Madhya Pradesh and Delhi, no State has cared to implement this measure which is one of the chief objectives of the Act. Further, the utility of the part-time Central Electricity Authority under the Act is yet to be assessed. All this discloses the gross neglect of this vital industry. The neglect of the industry may not be due to any calculated action. But the fact is that, as a result of such neglect, the industry has no incentive to expand its capacity.

Be that as it may, the 1910 Act, that is, the Act which is now sought to be amended deals with the technical aspects of electricity supply, even as the 1948 Act regulates the finances of the licensees and introduces new provisions for the constitution of electricity boards. It is true that the 1910 Act has stood the test of time creditably. But there are certain defects which need elimination. Thus, there is a good deal of controversy regarding the ownership of service lines. It is contended that the ownership of service lines should be vested in the licensee, although a part of the costs of these lines has been paid by consumers. It is held that the contention that ownership should vest in the consumer merely because the consumer pays the cost of the service has created innumerable difficulties, for the responsibility of maintenance of service rests with the licensee. Then, the definition of responsibility of interested parties for the cost of moving licensees works when such movement is rendered expedient by civic improvement activities, especially road improvement, is lacking in the present Act. It is argued that the authority responsible for such movement should bear the expenses.

Another difficulty which the private licensees are facing relates to the placing of telegraph lines. It has been difficult to put telegraph lines in private agricultural lands for their concurrence is to be obtained for the purpose. If the private landowners refuse, it will not be possible to have cross-country telegraph lines. This involves the licensees in additional and unnecessary expenditure. It is true that section 51 of the Act provides that the State Government may confer upon any public officer or licensee any of the powers which the Telegraph Authority possesses under the Act with respect to the placing of telegraph lines and posts. Actually, the Government of Bombay has issued an order under section 51. But it involves considerable delay and other inconveniences. It is, therefore, held that the 1910 Act should be so revised as to enable licensees to pitch their telegraph posts in private lands, of course, on payment of nominal rent. Such is justifiable as land is here used for a public purpose. Further, there is a need for providing facilities for regional development of electricity supply. These are a few of the shortcomings of the Act. It is to be hoped that the Advisory Board will pay proper attention to them. In the meanwhile, the Government will, it is to be hoped, revise the constitution of the Advisory Board so as to provide representation to industry, so that it may be associated with the Amendment Bill in its formative stages.

CONFERENCE ON AGRICULTURE

The six-day conference of State Ministers of Agriculture which concluded at New Delhi this week is undoubtedly a momentous one. It is for the first time since the birth of the Ministry of Agriculture, both in the States and at the Centre, that the Ministers are meeting for so long a period for discussing practically every aspect of agriculture. The fact that on these Ministries falls the responsibility for achieving the targets of agricultural production set by the Five-year Plan invests the conference with special significance. Closer contacts between the State Ministers leading to greater co-ordination of different agricultural policies which this conference has facilitated should doubtless go a long way towards expediting the implementation of the planned programme for food and agriculture.

The decisions taken at the conference so far are so numerous, varied and comprehensive that full justice cannot be done to all of them in the course of a brief survey. A perusal of the list of problems discussed and decisions arrived at reveals that all of them are of vital importance to this country. Few will disagree with the decision of the conference to improve the reliability of agricultural statistics to ensure their prompt publication; this is sought to be done by giving the District Collector the assistance of a statistician and trained primary agencies. Nor will there be any disagreement with the decision relating to transmission of agricultural information at the village level through a single agency trained for the purpose. The proposal to entrust the Development Commissioners with the work of securing co-ordination among different development departments in executing work in the Project areas and Extension Blocks is also on right lines.

The conference has done well also in recommending to States the setting up of basic schools for providing trainees with basic agricultural background for work in villages. It is also intended to attract suitable village-level workers through the creation of such conditions of service as will enable them to rise to higher positions. The State Governments have been asked to frame legislation for bringing larger areas under improved seeds. They have also been requested to arrange for the proper maintenance of all minor irrigation works. Measures for development of cattle wealth in the country have also been recommended.

What is enumerated above relates only to a few of the many recommendations of the conference. It is true that, on all these questions, the decisions reached have been unanimous. But the point is that the State Governments will now be called upon to make available to their respective Ministries of Agriculture adequate funds required to implement these decisions. Burdened as they already are with heavy expenditure, the State Governments will certainly have an uphill task in providing money for the work now chalked out for them by the conference. In the result, many of the resolutions of the conference will remain only on paper, unless the Centre sees to it that they are effectively implemented.

INDIA'S GOOD PLANT STOCK

India is coming to be recognised as the best region in Asia for good plant stock. Dr. Howard S. Gentry, U.S. Department of Agriculture, has been assigned as full-time explorer in India this winter to look, among others, for new grasses and leguminous crops in which India is particularly rich. Dr. Walter Koelz, an ornithologist, is collecting useful plants in Assam at present. He has already sent many useful ones to the U.S. The latest reports indicate that, with high-quality sesame (gingili) seeds exported from India, the U.S. Department of Agriculture's Bureau of Plant Industry has been able to develop a strain with pods that ripen evenly, but do not shatter easily. The first fields cultivated with the improved strain in the Western and South-western cotton tracts in the U.S. has survived the drought to the "amazement" of Texas farmers. As there are many commercial demands for the oil and for the high protein meal that remains after the oil is extracted from the seeds, farmers in Southern U.S. believe that sesame will prove a valuable addition to their agricultural economy.

Sesame is not the only product of India's fields and forests that has been beneficial to the U.S. farmer. The profitable production of perila, the oil of which is used as a substitute for linseed oil in paint and varnish manufacture, is due to the fine strain exported to the U.S. from Surag (U.P.). The U.S. crops developed from this parent source are yielding as much as 1,100 pounds of seed per acre. A soya bean, immune to bacteriological blight, and excellent castor bean, both used largely by American farmers, also originated in India. A particularly good cucumber now being used to improve disease-resistant qualities of an important crop in the southern region of the U.S. came from Silchar (Assam).

(Concluded from third column)

for nationalising agriculture, possibly under the Soviet pattern of collective farms. I should not be at all surprised if what Mr. Gadgil had in mind was one great and grand spree of nationalisation of all economic activities in the country. Since his demotion about a year and a half ago, judging by his speeches in the House and outside it on various occasions, he has, perhaps because of his frustration, been moving not inch by inch, but yard by yard towards the left. His differences with the leaders of his Party and the Government must be regarded as a matter between himself and the Party organisation. It may be that this Party's principles and policies are elastic enough to provide asylum to both Mr. S. K. Patil, who pleads for fair treatment to the private sector, and Mr. Gadgil who condemns it out of hand and consigns it to eternal perdition. I wonder, however, if it has ever occurred to Mr. Gadgil to measure the distance dividing him from Moscow. When he tries to do so, he will find that probably all that he will need will be a short, six-inch foot-rule, which he could easily borrow from any school-boy.—*All Rights Reserved.*

OFF THE RECORD

(By "ROVER")

EVEN advancing years have not turned me so cynical as not to feel duly grateful to someone who comes to my rescue when I am in distress. When this champion of personal liberty hails from a camp, which I hold to be responsible for putting unnecessary and galling chains on me, this feeling of appreciation and gratitude is bound to be all the deeper. In spite of foreign rule and all the humiliation which it meant, people of my generation, men and women, were brought up in certain traditions of personal liberty and ways of life which made for more all-round sociability and zest in life. For these people, the last six years, with their ever-increasing number of petty tyrannies regarding matters which are usually looked upon as of purely personal concern, apart from the disillusionment and frustration they have brought about more important issues of public and corporate life, have meant a period of constant irritations and unhappiness over little details. It is, after all, these details which go to make up a large part of each individual life.

When these restraints and austerities are imposed, not in pursuance of a great and urgent national policy to overcome some temporary crisis in the affairs of the country, but for the personal gratification of the dark and primitive urges of a few benighted persons, who have been pushed into positions of power by some unusual combination of circumstances, the distress they give rise to is all the greater. Sacrifices which have no meaning and which serve no important purpose, save that of providing satisfaction to one who extracts them, are bound to create not a sense of exaltation but of humiliation. One can understand taxation being higher or life economically being harder for people in one State in the country than in another; one cannot reconcile to wanton destruction of the delicate fabric of social and personal life in one State, when there are no such deprivations in others.

When Mr. S. K. Patil, the President of the B.P.C.C., which is one of the four props on which the present State Government of Bombay rests, pointedly put the question, "why should so many sacrifice so much for so few anti-social people," while inaugurating the Hotel and Restaurant Owners' Congress in Bombay last week, he was, indeed, voicing the agony which most of us in this State are feeling to-day. He alone from amongst the vast membership of the Party in power had the courage to speak openly in defence of the people's liberties, which have paradoxically been lost since the country won independence. My gratitude to Mr. Patil is, therefore, neither misplaced nor that of a fleeting nature. His example might inspire the more timid members of the Party, to take a stand against such policies in the legislatures in future and to bring deliverance to a sorely tried people, who have so far felt helpless in the face of authority.

But it is not merely because of Mr. Patil's outspoken criticism of the State Government's policy of prohibition or its ban on night life and revelry for those seeking escape from boredom or distress, which large numbers are liable to experience because of the increasing urgencies and pressure of modern life, that I have been led to refer to this speech of his. I have done so more to draw the attention of the authorities and the public to his more realistic criticism of some of the economic policies in general pursued by the Government and of the labour policy in particular. I think it needed more courage on his part to warn against what he called "the craze of workers for more pay" and to label it as mischievous than it did to condemn the executive's fiat that eating houses must close at 11 p.m. It is all the more mischievous at this time because of the growing volume of unemployment. Employment could have relation only to production which in turn depends on demand. To-day we have reached a stage in this country, when increased production could only be absorbed at diminishing prices.

As Mr. Patil showed, any attempt at coercion of industrial establishments to pay higher wages could only result in retrenchment and ultimate closure of factories and firms, leading to a greater intensification of the problem of unemployment. Mr. Patil's plea to shelve the Minimum Wages Act was very timely, because at present there is a tendency on the part of some of the State Governments to extend the scheme of fixing minimum wages to industries, where workers are well organised and which are not known as sweated industries. The Central Act is wisely confined only to such industries, but the State Government of Bombay, for instance, unduly stretched some of the provisions of their own Industrial Relations Act to fix minimum wages for workers in the sugar industry in the State during this year, when Government's efforts should have been directed at securing a greater scope for employment than higher wages.

What is still more crazy and almost insane to my mind than the workers' cry for more wages at this time is theirs and the Government's growing opposition to modernisation of industrial plants and rationalisation of industrial technique and processes on the mistaken plea that it might lead to throwing some people out of work. In the West and in the U.S.A. more specifically, it is only as a result of continuous improvement of plant and processes that employment for more and more people in industry has been provided. Cheapening of products has always led to ever-widening demand and consequently to the expansion of industry and its providing work for greater numbers. Even in India mechanisation of transport, communications and production of consumer goods has resulted in opening avenues of employment for millions and, but for this during the last half century, the position with regard to unemployment might have been far more distressing and even more menacing than it is to-day.

There might be some sense and logic in a country deciding not to harbour any mechanised industries; but it is nothing short of madness to insist upon having railways and textile mills and cement and steel factories and asking them deliberately to be run inefficiently, lest efficiency should lead to a reduced demand for human labour. And it is the height of insanity for a country indulging in some such belief, to undertake to spend crores on industrial research and even atomic research. When politicians who pride themselves on being educated and even enlightened can be so blind to contradictions crying aloud and drawing attention to themselves, one could not but condone the suicidal conduct of some of the ignorant workers who resort to go-slow tactics, in the hope of reducing the chances of their being retrenched. If this campaign of a group of cave-men in the Congress against mechanisation and rationalisation succeeds even to a small degree, we might as well give up, without any further struggle, all our dreams of fighting poverty and improving the standard of life of the masses.

And this leads me to another speech on the same day, Thursday, September 24, at Poona, by another leading light of the Congress Party. In the past, I had noticed that sudden elavation to office, in the case of some men at least, endowed them with a sense of responsibility and reality. I had, however, to wait till some time after Mr. N. V. Gadgil was thrown out of office to learn that sudden removal from office tended, in some cases, to deprive the victims of all sense of proportion and to turn them into rabid demagogues. Mr. Gadgil is taken to be a trained economist. Besides, Mr. Gadgil must be well informed about the policy of mixed economy enunciated by the Government which speaks on behalf of the Party to which he belongs. He must be equally well informed about the accepted policy of gradually relaxing controls, especially those with regard to food and other agricultural products. He must also be aware of the injunction imposed by his Party on members restraining them from criticising the prevailing policies of the Government in public. He, however, had the temerity, at a specially organised public meeting at Poona, to express his dissatisfaction with the economic policies of the Government and to insist that, in the industrial sphere, the Government must consider afresh the extent to which it should leave the field to private enterprise. When Ministers are busy giving assurances to industrialists with regard to their fears of nationalisation, here is a prominent party member and an ex-minister of the Union, neutralising these with his tirades against the private sector.

With regard to agriculture, Mr. Gadgil's differences with the Government are even more pronounced. When the official policy tends towards greater decontrol, Mr. Gadgil cried for full control over crops, production and distribution. Though he was not very clear on this point, he seemed to hint also at the need

(Continued in first column)

COLOMBO PLAN CONFERENCE BEGINS

CENTRAL INDUSTRIES COUNCIL TO MEET

(From A Special Correspondent)

NEW DELHI, 28*th September*

CONFERENCES and Committees are galore during these days in the Capital. Generally, the intervals between Parliamentary sessions are occupied by the discussions of various problems at the committee and conference levels. During this week, State Ministers of Agriculture and Co-operation began a six-day Conference in order to formulate an effective agriculture policy for the country with a view to increasing production of foodgrains and other commercial crops. This is being followed by the meetings (commencing from to-day) of the Colombo Plan Consultative Committee, which are likely to last until mid-October. In the second week of next month, responsible Ministers of the various participating Governments are expected to take stock of the development plans under the Colombo Plan and to decide further programme for the next one or two years. India's Prime Minister will be inaugurating this meeting on 13th October. These apart, the meeting of the National Development Council which is to be held on 6th October will be important in more respects than one. Although this Council will be discussing the development of the community project work on a more ambitious scale than last year, the forthcoming meeting has a greater significance inasmuch as it will be considering as to how best the Government of India can tackle the problem of unemployment, rural and urban, and also how best its plans could be integrated with the overall planning to lessen the adverse effects of unemployment. On 12th October, there will be a meeting of the Central Advisory Council of Industries which will, as usual, be presided over by the Minister of Commerce and Industry. This Council, consisting of leading industrialists, will review the cases of licensing granted by the Licensing Committee for the expansion and development of industries. A meeting of General Managers of Indian railways is being held to-day with a view to reviewing the progress of regrouping which began about 18 months ago. There will be a conference of representatives of Finance Ministers of States for purposes of discussing the question of Central legislation for the levy of terminal taxes on goods and passengers carried by rail, sea and air.

DELHI LETTER

The Agricultural Conference was an elaborate affair. During its three sessions the Conference discussed a number of problems. Appropriately enough, the Prime Minister addressed this Conference briefly, and in his peculiar way brought its attention to some home truths. He pointed out the widening gulf between the administrator and the common man and stated that, in order to ensure the success of the Five-year Plan or for that matter any other development plans, a closer link between the ordinary villager and the administration should be established. He also instanced the wide disparity between precept and practice, especially in the matter of cow worship and observed that those who worshipped cattle were so little troubled by its starvation.

Colombo Plan

The Consultative Committee of the Colombo Plan which is meeting to-day, has a heavy agenda. This is the first meeting of its kind that is being held in this country in which 17 nations are participating. The officials of various Governments who are meeting to-day, will consider, among other things, the annual report of the Colombo Plan for 1952-53, as also a proposal to set up an information and publicity organisation. The meeting of the Technical Co-operation Council will be held from 9th to 12th October and that of Ministers from 13th to 17th. The Conference will devote special attention to the progress of the Plan ever since its inception more than two years ago and take into consideration in what directions the underdeveloped countries should be helped in order to accelerate the pace of progress. It will be remembered that among the various participating countries, India has been the largest beneficiary. Its outlay on the Plan forms about 75 per cent. of the total of all countries put together. Hence the success of the Plan will be largely determined by the progress that India will make during these years. Since the *tempo* of India's Five-year Plan in which is emerged the original Colombo Plan, is expected to be increased further during the next two years, it can be taken as certain that the donor countries under the Colombo Plan will be more than satisfied by the efforts that are being made by India and other under-developed countries in the matter of raising the living standards of the people.

India Gets Sizable Help

It may be noted that India has been able to secure a sizable help from the leading donor countries under the Colombo Plan. It has been receiving both technical and monetary help either in kind or cash for implementing many important long-term plans. From the U.S.A. and the International Bank of Reconstruction, India has received nearly Rs. 189 crores during the last two years and more. Australia's contribution, which is estimated at slightly above Rs. 6.7 crores, has been utilised in furthering the Tungabhadra Project, as also the Ramagundun Project in Hyderabad State. Canada's contribution, amounting to slightly above Rs. 7 crores, has been earmarked for the Mayurakshi Irrigation Project (West Bengal) and also for improving Bombay's transport. New Zealand's contribution, which is less than a crore of rupees, is being made use of for some health development schemes and that of Norway, amounting to Rs. 67 lakhs, for the furtherance of fishery projects. The sterling balances with the U.K. are being drawn sparsely during the last one year and more in view of the favourable balance of payments position of the country.

Policy for Next Budget

Mr. Chintaman Deshmukh occupies a unique position in the Government of India. Besides the Finance Ministership, he is a member of the Planning Commission and the Economic Committee of the Cabinet. Alike on account of wide knowledge and deep erudition of financial matters and great administrative ability and experience, he has practically been able to formulate and influence the economic policy of the country to a greater extent than anybody at present. His pronouncements on financial matters are, therefore, of particular significance. According to him, the Government's policy would hereafter have to be so based on the possibilities of increasing the employment opportunities as to absorb the large labour surplus available and to add to the volume of production and economic activity. During the forthcoming budget year (1954-55), he is expected to frame his policy from this angle. He has already indicated that, in 1954-55, the development expenditure will go up to Rs. 500 crores, as against Rs. 400 crores this year, without taking into account the proposed readjustment of the Five-year Plan. According to him, the emphasis hereafter will be more on investment and increasing employment, now that the inflationary forces have been eliminated in the country. He is of the firm opinion that "investment in the public sector, at this stage, and for many years to come is of the highest importance for the development of the country's economy," thereby creating additional social capital. Although the Finance Minister has not indicated as to how he would be undertaking the financing of the expanded investment plans, it is more than likely that he would be resorting to the greater use of deficit financing during the next two years. Perhaps, he will be helped to some extent by increased help from the donor countries under the Colombo Plan. One can, therefore, visualise that India will be making sizable economic progress in different spheres during the next few years since economic conditions have become very stable due to improved food prospects.

FOR SALE

ONE LIGHTFOOT COLD STORAGE Ammonia Plant consisting of 3-90 H.P. Lightfoot Compressors, Motors and Starters together with atmospheric Condensers and Water Pumps. The Plant is in South India and is in good working order. It may be inspected by appointment. Contact Box No. 768, c/o "Commerce," Royal Insurance Buildings, Veer Nariman Road, Fort, Bombay.

BANK RATE IN U.K.

A FLEXIBLE INSTRUMENT

(By OSCAR R. HOBSON, City Editor, News Chronicle)

LONDON, 18*th September*

THE Bank rate bombshell, which pleasantly hit the City at about noon yesterday and hoisted most prices, can seldom have been equalled for its complete unexpectedness. If anyone had anticipated a move of this kind earlier this year, their expectations must have vanished as a result of the recent weakness of sterling in the foreign exchange market, with its reminder that this is the time of the year when Bank rate normally goes up and not down.

The move was, of course, inevitably interpreted as a mark of confidence in sterling and it is notable that the rate on New York which had closed at $2.79-15/16 on the previous day, actually strengthened to $2.80. I will not deny the fact that there were some in the City who regarded this sign of confidence as one of overconfidence.

They would have preferred to see the higher Bank rate maintained until the recovery of sterling and the gold and dollar reserve had been consolidated—especially in view of the occasional indications we have had in the last few months that the demon of inflation had by no means been overpowered in this country.

Nonetheless, a reduction of ½ per cent. as against the increase of 2 per cent. that had ocurred since November, 1951, is far from indicating a return to cheap and abundant money. On the contrary, the earlier instructions to banks to scrutinise all requests for advances with particular severity have not been countermanded.

Towards Easier Money

The change in Bank rate should, of course, be viewed as part of the general world-wide trend towards easier money. It should also be welcomed for its indication that the Bank rate policy is now a flexible instrument and for the implication it carries that the authorities will have no compunction about putting the rate up at the slightest justification for such a move.

The adjustments to the reduction in Bank rate were impressive. In the Gilt-edged market the undated stocks gained about two points. The extent of this rise indicated clearly that there had been no speculative anticipation of a lower Bank rate and that there were no speculative profits to be taken.

The banks yesterday decided that they would reduce their deposit rate from 2 to 1½ per cent. The lower Bank rate is not expected to make any substantial effect on overdraft rates. It will, however, reduce the cost of financing through bills of exchange. The discount market yesterday quoted three months' bank bills at 2½ per cent., as against the previous rate of 3 per cent.

One of the results of the fall in Bank rate should be to narrow the recent artificial gap between rates for Treasury bills and bank bills. This is because the Bank of England has withdrawn the special privileged rate at which it was until yesterday prepared to lend against Treasury bills. From now on Treasury bills and bank bills will find their own level in what is a free market.

More for Production

The British Bankers' Association yesterday published its quarterly classification of advances which shows how well the higher Bank rate and the instructions to banks about scrutinising advances, have done their work. Over the twelve months to August, personal advances have fallen from £392 million to £367 million, and there have also been substantial falls in advances to food, drink and tobacco and retail trades.

On the other hand, advances to iron and steel, shipping and shipbuilding, and woollen textiles are all up. Here at least is one sign that the psychological impact of a lower Bank rate will not accentuate an unhealthy inflationary situation.

II

LONDON, 19*th September*

Yesterday, the City was having its second thoughts on the Bank rate reduction, and the nature of those thoughts can be discerned from the long array of rises which once again embellishes the Stock Exchange list. The Gilt-edged market was trying to complete its adjustments to the new set of circumstances—a complicated process in the course of which a very large turnover of business was done.

Once again, it was the long or undated issues that made the greatest headway, with

PAKISTAN NOTES

THREE-POINT DEVELOPMENT PROGRAMME FOR PAKISTAN

PRIME MINISTER'S ADDRESS TO BUSINESS MEN

A THREE-POINT programme designed to serve as a foundation for the economic progress of Pakistan was outlined by Mr. Mohammed Ali, Prime Minister, Pakistan, in the course of his recent address to the Pakistan Chamber of Commerce at Karachi. The address reveals that the Government is fully alive to the need for a comprehensive programme of economic development for the country. The programme, as outlined by the Prime Minister, has three objectives:

(1) Regaining not only self-sufficiency, but also substantial surplus in food;

(2) stimulating industrial production with a view to conserving foreign exchange; and

(3) stepping up exports of raw materials and manufactured products so as to secure a sound balance of payments position.

So far as stepping up food production is concerned, it is now common knowledge that many of the recommendations of Lord Boyd-Orr have been accepted. The Government secured 90,000 tons of fertilisers for the 1953 *kharif* crop, in implementation of one of the recommendations of the Committee. Arrangements, according to Mr. Mohammed Ali, are also being made to secure another 50,000 tons for the coming *rabi* crop. It is interesting to note, in this connection, that the fertiliser factory under construction at Daud Khel is expected to go into production by 1956. Dealing with food and agriculture, the Prime Minister observed: "We have reasons to feel sanguine that we shall achieve a large measure of self-sufficiency in food in the course of next two years."

Few will deny that stimulation of agricultural and industrial production will help achieve sound balance of payments position. Referring to the importance of maintaining proper standards of quality, Mr. Mohammed Ali remarked:

"For this purpose, it is essential that there should be arrangements for the proper gradation of quality. There has not been much difficulty in this respect with regard to jute but foreign complaints have been received in respect of cotton. I am sure that you are aware of the nature of these complaints. The crop was mixed during 1947-48 and legislative and executive action had to be taken to prevent the mixture of different varieties. There is, however, still room for improvement in the measures to ensure maintenance of proper quality standards. The Government of Sind and Khairpur are being advised to enact Cotton Control Acts on the lines of Acts already in operation in the province of the Punjab and the State of Bahawalpur. The Pakistan Central Cotton Committee will shortly establish a test house in Karachi and I do hope that the representatives of importing countries will take advantage of the facilities it is hoped to provide. So far as wool is concerned, we have already established a wool test house and it is hoped that proper grading facilities will be available from the next season. Measures designed to improve methods of flaying and curing of hides and skins are also under consideration."

Private Enterprise

Mr. Mohammed Ali expressed his unqualified faith in private enterprise. Consequently, he did not favour the recommendation of the Chamber for the setting up of a Production Authority Board. Referring to the creation of a high-power Planning Board charged with the responsibility of blue-printing and bringing about overall economic development of the country, the Prime Minister averred: "This Board and the Pakistan Industrial Development Corporation which undertakes or sponsors, under Government auspices, the establishment of such basic industries, as are of national importance, and for which private capital is not forthcoming, will, in co-operation, now forge ahead to make Pakistan industrially strong."

Mr. Mohammed Ali, however, felt that the Chamber's suggestion regarding the establishment of an economic council composed of both officials and non-officials was one which needed serious attention. He further said:

"I for one have always held the view that, in the field of commercial enterprise, it is essential that there should be closer and greater co-operation between the Government and the commercial communities. The council may provide an opportunity for mutual consultations and may help towards framing of programmes and formulation of policies, which will take into account the interests of the general public as well as the trading communities. The proposal, therefore, will receive my serious attention."

With regard to foreign capital, Mr. Mohammed Ali averred that so long as indigenous capital was shy, it was difficult to expect foreign capital from abroad. He said that the policy initiated by the Finance Minister in his last budget speech that development schemes would not be allowed to suffer for lack of funds still held good. He called for industrialists and such others as could afford to come forward for investment in industries.

Finally, Mr. Mohammed Ali expressed his disappointment at the statement made by the President of the Chamber that the present price control system would never work in Pakistan. Declaring that price control was essential in the present context, the Prime Minister observed:

"Soon after the termination of hostilities, control was relaxed on most commodities which were no longer in short supply. But, when the supply of any particular commodity gets restricted, control becomes more or less inevitable, because the trade takes advantage of shortages that occur from time to time. We have been forced to bring in controls over various essential commodities, because prices were ascending, in most cases without any economic reason. We are trying to bring in as much essential consumer goods as possible. But all of us must guard against unscrupulous persons taking advantage of the situation. In the fixation of prices, Government did take into consideration the views of the commercial and trading community. I request the commercial and trading communities to co-operate with us in our endeavours to make price control a success in the larger interests of the general consuming public."

Steel Plant

Pakistan has planned to attain self-sufficiency in steel within a period of ten years. According to an agreement signed recently between the Government of Pakistan and Krupps, the latter will set up a plant to manufacture 300,000 tons of steel and 50,000 tons of pig iron. This is expected to save annually foreign exchange to the extent of about Rs. 400 million (about £43.4 million) now being spent on the purchase of steel from abroad for consumption at home. The first batch of Krupps' engineers is due to arrive at Karachi shortly to survey the country's iron ore resources. The operations will be supervised by Mr. B. H. Weight, Chief of the Geological Department of Krupps. The Pakistan Industrial Development Corporation (P.I.D.C.) is entrusted with the task of developing the steel industry. Krupps, which has been appointed technical consultants to the P.I.D.C., will subscribe 10 per cent. of the capital of the industry, which is estimated to range between Rs. 40 million and Rs. 50 million. The preliminary work, it is understood, will be undertaken for a nominal payment. A sum of Rs. 1 million is stated to have been allotted by the Pakistan Government for the survey and prospecting operations which are expected to be completed by March next.

It will be recalled that a survey of the iron ore deposits in Pakistan conducted last year by another German concern, Demags, revealed that the iron ore deposits found in the Attock, Mianwali and Sargodha districts have an iron content of about 45 per cent. and the deposits in Chitral a high percentage of 64 per cent. Iron.

Deposits in the Mianwali District alone are estimated to have a minimum of 10 million tons and a maximum of 100 million tons. The precise quantity of the iron ore in all these areas will be determined by the final survey which Krupps will start. Simultaneously with the survey operations, a scheme will be prepared for a pilot plant capable of producing 15,000 tons of steel ingots per year. The final blueprint for this plant will be submitted by Krupps in November and the plant which will smelt iron ore and convert it into steel ingots is expected to start production by the end of next year.

(Concluded from next column)

finding larger markets for our industrial output. But since the latter course is subject to hazards outside this country's control, it is more intelligent economic policy to aim at reducing the home costs of agriculture. The farmers are themselves aware of the need for this, but their energies have in recent years been too taken up with insisting upon receiving high prices necessary to maintain the marginal producer in existence to concentrate on the more important objective. Public and Government have together shown them the danger signal and we may hear more in the future of rewards for efficiency and less of guarantees.—*All Rights Reserved.*

AGRICULTURE IN BRITAIN

FARMERS PRICING THEMSELVES OUT OF THE MARKET

(From Our Own Correspondent)

LONDON, 26*th September*

THE National Farmers' Union recently asked the Government for a special review of farm prices in view of recent wage increases which, the farmers alleged, were making production uneconomic at present prices. The Government turned down this request and told the farmers they must wait for the usual annual review next spring. The reason for this Government decision has been that, although wages have been going up, other costs, for example, that of imported feeding stuffs, have been coming down. But more important has been the realisation that farm prices must somehow or other be prevented from rising any further.

LONDON LETTER

This harvest time has seen the end of food shortages in the United Kingdom: Eggs, meat, bacon and sugar, all tightly rationed a year ago, are now in plentiful supply, sugar actually coming off the ration at the end of this month. Milk is so plentiful that increased supplies have to be turned to manufacturing, and only butter and cheese remain seriously rationed. Even these represent no hardship, especially cheese, where large quantities of imported varieties nearly as cheap as the rationed supplies are available. But the public are not buying all the food available. They have lost the spending habit on food as a result of 14 years of shortages and a level of taxation twice that of before the war. Tobacco, entertainments, travelling and holidays all absorb a far higher proportion of the consumers' income, and food consumption cannot increase now that the end of rationing has made that possible.

Current Costs Heavy

But the Government is pledged to an expanding agricultural programme. At the same time, they have, to implement their guarantees under the 1947 Agriculture Act for cereals, meat, milk, potatoes and eggs. The public has shown that they are not prepared to pay high prices for food and the Government expansion programme must come to an end unless prices can be reduced. On the other hand, the guarantees of the Agriculture Act prevent a reduction in price without large subsidies being paid to the farmers. Imported barley, for instance, now costs less than home-produced barley, with the result that this harvest the Government is being obliged to buy up all the barley coming on the market and to sell it back to the farmers at a lower price. Next year, to avoid this complicated movement of grain, a system of deficiency payments will be introduced, whereby the farmer will be paid at the end of the cereal year the difference between his guaranted price and the average price which barley has fetched on the market. Thus, grain growers as a body will receive not less than the guaranteed price (they are not prohibited from receiving more if the market will pay it to them), but some individual farmers will get less and some will get more according to their own skill or luck in marketing. An arrangement is already in existence for subsidising the production of eggs, now that market prices have fallen below the guaranteed price to the producer. Similar arrangements are being worked out for meat and bacon; but the result of all these financial exercises is to underline the heavy current costs of British agriculture.

The farmers' proposals are to set up marketing boards and to control production. Such arrangements would ensure guaranteed prices, but they would not mean expanding food production. The cost of producing bacon in this country and in Denmark has recently been under review and British costs are found to be 50 per cent. higher than Danish. Similarly, in eggs, the Danes can incur the costs of shipping eggs to this country, pay a 10 per cent. duty, and still undersell the home market by 15 or 20 per cent.

The only answer lies in a reduction of the cost of producing food in this country, unless the whole programme of agricultural production is to be scrapped and the country is to revert to the pre-war policy of greater dependence on imported supplies. But this only shifts the problem from reducing costs in agriculture to reducing costs in the exporting industries and in

(Continued in previous column)

CO-OPERATIVE CREDIT MOVEMENT IN BOMBAY STATE

GROWING MALPRACTICES THREATEN ITS EXTINCTION

MR. R. G. Saraiya's speech at the annual general meeting of the Bombay State Co-operative Bank, Ltd., held last week in the city, is a painfully sad commentary on the position of the Co-operative Movement in the State. According to him, three powerful factors have impeded the progress of the Movement in the State. First, the scheme for providing institutional credit to agriculturists through an integrated co-operative system is still in an experimental stage. It is beset with so many difficulties that the progress of its implementation has been poor. Secondly, in the absence of proper marketing institutions, the societies have not been in a position to exercise their hold on their members' crops and have, therefore, to rely on the honesty and loyalty of the members for repayment of loans. Local co-operatives have not been strong and efficient to undertake marketing, while the individual borrowers are not disciplined enough to conform themselves to the requirements of the institutional credit system. Thirdly, multiplicity of agencies working in the sphere of providing rural credit and in maintaining supervision and control over the primaries has resulted in lack of efficiency and of unity of purpose.

The adverse effects of these three factors on the Movement have been aggravated to a considerable extent by natural calamities. Thus, during the 1952-53 season, several districts of the State were in the grip of acute drought. Consequently, repayments from societies in these districts were not satisfactory as in the past and extensions had to be granted for the payment of instalments due during the year to the extent of nearly Rs. 45.86 lakhs to about 700 societies. This amount formed 18.2 per cent. of the total repayments due during the year. In addition, advances to the extent of nearly Rs. 30 lakhs were made to such societies to enable them to provide finance to their members for current year's agricultural operations. Thus, as a result of natural calamities like scarcity of rain and recurring famines or floods, not only defaults in repayments and loans got frozen, but further advances had to be granted to the stricken borrowers in the interest not only of the lending bank but also of maintaining agricultural production. Incidentally, overdue interest from agricultural societies increased by nearly Rs. 50,000 during the year on account of scarcity conditions.

Corruption

Of the four aforesaid impediments, it must be admitted that the last, namely, natural calamities, is only a temporary factor, which the co-operative credit institutions suffer in common with other types of banking concerns. When once special types of measures are devised to overcome the evil effects of this passing phase, the problem will cease to be a cause of worry. The other three factors, though a serious matter to reckon with, can, however, be tolerated for a while till proper remedies are applied for their eradication. But what threatens the extinction of the Co-operative Movement is the increase in dishonesty, disloyalty and misfeasance. Mr. Saraiya's remarks on this development are worth mentioning. He said:

"While the need for well-organised and efficient marketing societies is keenly felt on account of the rapidly increasing volume of agricultural advances, there has unfortunately been a marked deterioration in conditions and some of the societies which had made good progress in earlier years have been grossly mismanaged and some have been taken into liquidation. Large amounts have been misappropriated or unauthorised advances have been made which have resulted in large debts and sometimes the closure of the institutions concerned."

Again dwelling on the same aspect, albeit in another context, he observed:

"The increasing number of cases of misapplication of loans by office-bearers and misappropriation of funds and action under section 50A for misfeasance, election disputes resulting in sudden stoppage of work, and delayed enquiries under section 43(1) of the Bombay Co-operative Societies Act, only indicate the ineffectiveness of supervision and control and call for a change in the present set-up."

The aforesaid remarks of the Chairman of the Bombay State Co-operative Bank on the state of affairs of the Co-operative Movement is, in our opinion, only a mild description of a disease that is now rapidly tending to be a cancer. The evil has become so strong that it has tended to shake the confidence of even the staunchest supporters of the Movement in the efficacy of co-operation as an instrument to rejuvenate the economy of the country. Ordinarily one would not have bothered much had the Co-operative Movement been given a minor role in the development of the country. But now that it forms one of the chief planks of the Five-year Plan, one has to look to it with more concern. The important role assigned to Co-operation in the Plan will be evident from the following extract from the Planning Commission's report:

"As an instrument of democratic planning, combining initiative, mutual benefit and social purpose, Co-operation must be the essential feature of the programme for the implementation of the Plan. Besides it is the purpose of the Plan to change the economy of the country from an individualistic to co-operative basis, its success should be judged, among other things, by the extent to which it is implemented through co-operative organisation."

Besides, the Plan suggests, as pointed out by Mr. Saraiya, a number of ways for enhancing the utility of the Co-operative Movement to society such as the conversion of the credit societies into multi-purpose societies, promotion of small savings through co-operative societies, sale and purchase of the people's needs through such institutions and developing the Co-operative Movement in urban areas on extensive lines. It has also suggested that every department and every ministry must accept and adopt the policy of fostering co-operative methods of business.

Some Remedies

While thus the Five-year Plan sets store by the Co-operative Movement, the experience of Mr. Saraiya as the head of one of the leading co-operative banks of the country, supported by the experience of many others, hardly rouses any enthusiasm among the people for supporting the Movement. The main difficulty in the way of organising an integrated institutional credit system is the misfeasance of office-bearers of co-operative organisations. This evil can be minimised by organising frequent inspections and audits of societies. The system of supervision, too, must be improved. The Registrar of Co-operative Societies and his department must be vigilant. They should promptly look into all complaints from members of societies against office-bearers and directors. They should not go out of their way to shield the culprits. There should be less red-tapism in the administration of co-operative laws. But this does not mean that these laws should be interpreted in a liberal manner, especially where the integrity of a co-operator is questioned. In their anxiety to show an increase in the number of societies, the co-operative officials seem to be inclined to condone even serious errors by office-bearers of societies. Perhaps, they will be more vigilant than they are now, if the credit for their work is given on the basis of the quality of the Movement in their jurisdiction than on that of quantity. The democratic character of the Movement must be ensured by the officials of the Co-operative Department taking special care to see that no vested interests are created. The co-operative laws should be so amended as to see that the same persons do not hold key posts of a society for several years continuously. This will minimise the chances for corruption and nepotism.

Another method of achieving this objective is to insist on the appointment of paid men for executive posts of considerable responsibility which require time and energy, the board of directors exercising only an overall control over policy and administration. Such posts should not be filled in by members, as honorary work encourages misfeasance. This is an important requisite, especially for societies in urban areas, for most people in these areas are so busy and preoccupied with earning their own livelihood that they have not much time to take an active part in the working of societies. Consequently, those persons who have some leisure and who see a chance of making something through these co-operative societies crowd in and capture positions of responsibility. Efforts should also be made to impart systematic training in the principles of Co-operation to the staff, both supervisory as well as ministerial, serving in co-operative societies. The National Extension services and the Community Projects should address themselves to the task of reforming the Co-operative Movement on these lines without any further delay.

Finance for Agriculture

Now to refer to the question of finance for agriculture through co-operatives. A proper and effective system of crop finance envisages the linking of credit with marketing so as to ensure that the credit provided for raising crops is self-liquidated. This objective is sought to be achieved by means of starting multi-purpose co-operative societies. The limited experience gained so far in organising these societies would appear to be not quite favourable to its continuation. There is, therefore, a need for reviewing the position carefully before a further move is made in this direction. Another measure suggested is the creation of a common cadre for the employees of marketing organisations appointed and controlled by an efficient agency, such as a federation of marketing societies with the assistance of the Department and financing agencies. The suggestion sounds reasonable and can be given a trial if intelligent young men, with special aptitude for salesmanship, are attracted by the Federation by means of adequate remuneration comparable to those offered by big commercial organisations.

While the agricultural economy is expanding, the extent to which the co-operative institutions can extend financial accommodation for agricultural production is limited by their meagre resources. These resources are, to some extent, supplemented by such assistance as is available from the Reserve Bank of India and the State Governments. There are limitations to assistance from the Reserve Bank, too, although the procedure has been simplified. The Reserve Bank has agreed to discount agricultural paper of primary societies directly financed by Central Co-operative Banks. The credit limit sanctioned by the Reserve Bank to the Bombay State Co-operative Bank for discounting such paper last year was only Rs. 50 lakhs. Further, the State Bank was sanctioned a limit of Rs. 150 lakhs against Government securities under section 17(4) (a) of the Act, at a concessional rate of interest for financing primary societies classed A and B. The Bank availed of Rs. 100 lakhs out of this accommodation.

In addition, the Reserve Bank made available to 20 Central financing agencies in the State, through the State Co-operative Bank,

TR 3453

FREE WORLD COTTON OUTPUT IN 1952-53 SEASON

SLIGHT INCREASE OVER PREVIOUS YEAR ESTIMATED

THE year ended 31st July, 1953, was a year of record production of cotton in the free world. The output of cotton during the year, according to the International Cotton Advisory Committee, aggregated 28.7 million bales, as against the previous post-war record of 28.6 million bales achieved in the previous season. Since the carry-over stocks, as on 1st August, 1952 were 13.3 million bales, as compared with 10.6 million bales on the same date in 1951, the total supply of cotton during the 1952-53 season was 42.0 million bales or 2.8 million bales above the supply in the previous season. The consumption of cotton is now estimated at 25.80 million bales, as compared with 25.15 million bales in 1951-52. The carry-over stocks, as on 1st August, 1953, are placed at 15.5 million bales, or 2.2 million bales larger than the stocks brought into the 1952-53 season or 4.9 million bales larger than the stocks on 1st August, 1951. The free world's exports during 1952-53 are estimated at 10.4 million bales, as against 11.15 million bales in the previous season.

The foregoing is an outline of the position of cotton supply and absorption in the free world. It will be seen that, as compared with 1950-51, consumption has gone up by some 650,000 bales. This is attributed to increases in cotton consumption in the U.S., India and Japan. The following table gives the consumption of cotton in the textile producing countries of the world:

Cotton Consumption

(In 000's bales)*

Continent or country	1952-53	1951-52
U.S.A.	9,457	9,196
Other N. America	765	724
N. America	10,222	9,920
India	3,540	3,530
Japan	2,050	1,818

* In bales of 478 lbs. net, except in the case of the U.S. where they refer to running bales.

It will be seen from the table above that the U.S. is the largest consumer of cotton. To the overall increase in cotton consumption the Asian countries have contributed a relatively larger share than the countries of any other continent. Referring to the part played by these countries, the journal of the International Cotton Advisory Committee, *Cotton*, says:

"By and large, the significant increase in consumption in Asia was the result of expanding textile production in India and Japan. In India, cotton cloth production has increased continuously over the last six months and in July reached an all-time high. Yarn production, too, was maintained at a high level throughout the 1952-53 season. Accordingly, the Government has lifted all price and distribution controls for yarn and cloth from 1st July. This is in part an acknowledgement that, quantitatively at least, the Indian textile industry is now capable of satisfying both the domestic and export demand for its products in the foreseeable future.

"In contrast to the general tendency in most countries for a seasonal fall off in textile activity during July, cotton yarn production in Japan actually rose to reach a new post-war record of 77 million pounds and cotton consumption for the full 1952-53 season is now expected to exceed 2 million bales or an increase of almost 250,000 bales over the previous season's total. Factors contributing to the favourable situation in this industry in recent weeks have been the more promising demand conditions both at home and in the export field, the abolition of control legislation on yarn production, and the firmer prices for both yarn and textiles which may have given rise to speculative influences.

"In line with the Government's aim of greater self-sufficiency in certain basic industries, the cotton industry in Pakistan has made remarkable progress during the 1952-53 season. At the time of the Partition, Pakistan had 175,000 spindles installed but spindleage is now reported to exceed 400,000 and is continually being expanded. The rate of recent expansion here is demonstrated in the fact that cotton consumption during the 1952-53 season is estimated to have risen by nearly 100,000 bales to a total of 275,000 bales."

Western Europe's textile industries, however, consumed, as a reference to the table will show, less cotton than they did in the 1951-52 season, though the industries "fared better" than was expected earlier in the season. It is noteworthy that, while the consumption of cotton in the U.K., France and Italy is estimated to have fallen by 300,000 bales, the textile industry in West Germany consumed 100,000 bales more than it did in the 1951-52 season. Referring to the textile situation in the main Western European countries, the journal says:

"The extent of the recovery in the United Kingdom textile industry can be judged from the fact that yarn production over the first half of 1953 increased by 63 million pounds, as compared with the same period in 1952. In rayon and other synthetic fibres, production has recently been at record levels. Two discouraging features in this industry are the sluggishness of present export trade and the difficulty in attracting labour after the exodus in 1952.

"Many other European countries, particularly France, Italy and Belgium, are also experiencing difficulties in their export markets for cotton textiles. The French position may be affected by the recent devaluation in the vitally important market, Indo-China, while Italy is still being hurt by import restrictions in European markets."

Exports

There were quite a few significant changes in the pattern of the free world's cotton exports. Total exports are, as already stated, estimated at 10.4 million bales, as against 11.1 million bales in 1951-52. This, however, is not the only significant change. In 1951-52, nearly one-half of the total export of cotton from the free world came from the U.S. In the 1952-53 season this country's share fell to a mere 30 per cent. of the world total, or by 2.4 million bales; its exports for the season are placed at 3,150,000 bales. For the second successive season, Brazil's exports were but a mere fraction of their normal volume. But other countries, in the aggregate, exported over 7 million bales—a figure which is regarded as "easily a post-war record." Exports from nearly all the main producing countries and many of the smaller ones increased and established post-war records in Pakistan, Egypt, Turkey, Syria and Mexico. The following table compares the position of the U.S. in the world export trade in cotton in 1951-52 and 1952-53 seasons:

Cotton Exports

(In 000 bales)

	1952-53	1951-52
U.S.	3,150	5,519
	(30)	(50)
Other countries	7,252	5,615
	(70)	(50)
Total	10,402	11,134
	(100)	(100)

Figures in brackets refer to percentage share in export trade.

Brazil's export trade has shown certain interesting variations in recent years. In the immediate post-war years, exports from this country were well over one million bales each year. But this has proved a short-lived prosperity. In recent years, Brazil's cotton trade has shrunk to a mere fraction of what it was in the period, immediately following the cessation of the war. The seriousness of the recent decline in Brazil's cotton trade can be gauged from the fact that "exports in the last two seasons combined have been well under the smallest volume exported in any previous year." In 1952-53, Brazil's cotton exports were only 150,000 bales. The Brazilian Government has, however, adopted a few measures which are designed to stimulate exports of cotton. The schedule of premiums and discounts has been revised, with a view to making the lower grade cottons more attractive to buyers. Some concessions have also been made in the matter of payment. Discounts varying from 3 to 7 per cent. are available in respect of the 1952 crop cotton payable in desirable currencies. Payment for such cotton in convertible currencies is now rewarded by the granting of a further discount of 2 per cent. These measures, it is stated, have made Brazilian cotton competitive with other growths and have stimulated export enquiries.

A trend which has been very prominent in the free world's cotton trade is the increasing use of bilateral trade agreements in order to stimulate the export of cotton. The trade agreements concluded by Pakistan and Mexico with Japan, and the pacts concluded by Egypt with India, the U.S.S.R. and Yugoslavia, are only a few instances where cotton figures as the principal commodity in the exchange list. The impact of these agreements on the cotton trade will be watched with interest. The journal, on its part, regards the trend as very significant, and says that it is "likely to be of supreme importance in the distribution of cotton trade during the present season."

INTERNATIONAL TEXTILE MACHINERY EXHIBITION

An international exhibition of textile machinery, which may prove to be the most important event of the year for the world's textile industry, will be held in Manchester this month. Organised by the *Textile Recorder*, it will open on 14th October, 1953. The stand area of the exhibition will be just under 90,000 sq. ft. About a fifth of the 264 exhibitors are from overseas countries. Final details of all the new machinery to be shown are not yet available, but the organisers are confident that the quality of the exhibition will match its size.

There will be something new for every section of the industry. Spinners of man-made fibres will be shown a blending line and card machine for spun rayons and synthetics which, it is claimed, works on an entirely new principle and ensures blending accuracy to within a margin of error of less than one per cent. For the cotton spinner, there are new lines of blowing room machinery, including a ring spinning frame, capable of spinning a much wider range of counts than is normally possible. For the woollen industry, there will be shown a large package ring frame and a novel automatic hopper feed, while for the worsted spinner a system of worsted drawing using the revolutionary auto-levelling principle will be of special interest.

New types of gill-box for wool, synthetic and blended yarns are also to be shown. Two of the most interesting machines in the yarn preparation section will be a radial pirn winder on which up to 2,000 pirns an hour can be wound, and a single-spindle fully automatic pirn winder capable of winding synthetics at 12,000 r.p.m. and versatile enough to wind a range of yarns from the coarsest condenser weft to the finest synthetic. In the weaving section, there will be, in addition to the latest fully-automatic looms, units for adapting existing non-automatics and a wide selection of take-up, let-off and stop motions for fitting to any type of machine.

The main feature of the dyeing and finishing section will be the new materials used in machine construction and the developments that have taken place in recent years in the automatic control of drives and processing conditions. A unit of the molten-metal system is to be shown in operation for the first time to the general public. Besides the machinery for specific sections of the industry, a wide range of accessories of every type is to be shown, and the suppliers of ancillary equipment such as air-conditioning plant, power and transmission equipment will be well represented.

COTTON IMPORTS FROM EGYPT

The Central Government has agreed, it is stated, to permit payment wholly in sterling for cotton imports from Egypt contracted for before the signing of the Indo-Egyptian Trade Agreement on 9th July but received afterwards. It may be recalled that, under this pact, it was agreed that 60 per cent. of the payment for exports from Egypt to India would be made in sterling, the balance being payable in rupees which would be utilised by Egypt for financing purchase of Indian goods. Prior to the pact, all payments were made by India in sterling. Egyptian exporters wanted this arrangement to apply to the cotton they sold to India before the signing of this agreement. The question was the subject of correspondence between the Egyptian exporters and the Government of India. Apparently, the Government has yielded to the demand of the Egyptian exporters, for it had earlier instructed the Reserve Bank to permit sterling exchange facilities to Indian importers only to the extent of 60 per cent. of the value of the cotton imports.

MORE TALKS ON FUTURES TRADING IN COTTON

YARN OUTPUT MOVES UP

(From A Special Correspondent)

MANCHESTER, 22nd *September*

WHILE traders in Lancashire have spent three weeks grappling with the problems raised by frequently changing cotton prices, further developments have been taking place in the moves towards establishing a futures contract in Liverpool. Negotiations have been spurred on by the insistence of the Board of Trade that the principles involved must be established at a very early date, leaving details to be settled during the next few months.

MANCHESTER LETTER

The trade has now settled down to the new arrangements regarding cotton prices which are scheduled to last until at least the end of August next. The cover bases, having been established, are being altered in line with changes in New York on a recognisable formula. Variations in the index prices are being allowed a little more tolerance and are not necessarily moving so strictly in accordance with world values. Any sudden revisions in prices abroad, such as recently occurred in Alexandria, are being reflected in quotations on this side.

In view of the important assets involved it is no wonder that the Board of Trade is anxious to see a smooth change-over from part-public buying to purely private trading in raw cotton. It is equally in the interests of Liverpool and Manchester merchants that there should be no hitch in the proceedings once the decision has been taken.

As in the case of other commodities which have switched back to private trading, the stocks held by, or on behalf of, the Government have presented a problem. Some way of liquidating them by gradual absorption through private channels must be found. It is not outside possibility that the merchanting section of the Raw Cotton Commission might remain in being to act as a merchant and stockholder. Private importers might oppose this suggestion very forcibly but there must be quite a number of individual spinning firms which would not be entirely averse to such an idea.

Free Market

Currency difficulties are almost entirely responsible for nervousness over the reopening of the Liverpool futures market. However encouraging the present position appears to be, a continuance of easy conditions cannot be guaranteed and no one can predict with certainty that a dollar crisis might not again arise within a year or two. The maintenance of a free market in raw cotton would then be jeopardised unless definite arrangements to meet such an emergency are drawn up.

It has not escaped the notice of the Government officials who are concerned with this matter that in the first year of private trading contracors-out from the Commission tended to purchase larger supplies of the traditional American and Egyptian qualities of cotton than outside growths. This has led to some pointed questions being put to the industry as to what would happen when complete private trading is resumed. If dollars were made available for free purchases, for example, would all spinners be likely to increase their proportion of American cotton?

Empire Cotton Supplies

Underlying the discussions now proceeding is the argument between the supporters of Empire cotton growing and the attitude of the Liverpool Cotton Association in insisting on the initial introduction of a somewhat narrow American contract only. Those who wish to see Empire cotton tenderable against this contract have been partly satisfied by an assurance that if the original scheme is successful their proposition should be reconsidered at a later date, perhaps 12 months after the Liverpool market is re-established.

The official view in Liverpool is that a miscellaneous growths contract running alongside the American contract would be subject to considerable weakness and would tend to be neglected, as it was before the war. Once the market is firmly established, however, it should be possible to consider making experiments to broaden the scope of cover.

At the moment it seems unlikely that an Egyptian type contract can be drawn up, due to the control of marketing which is imposed by the Government at Alexandria. If this control was lifted it might be possible to reopen discussions on such a contract, although Liverpool apparently has hopes that it might become the basis for variations in prices in Alexandria, superseding the present arrangement based on New York.

Liverpool raw cotton interests are quite well aware that when the time comes to reopen trading in futures there will be not only some political hostility to the scheme but that spinners who have benefited under the Commission's cover arrangements will be critical of any shortcomings.

Quality Goods Call

Not only are Lancashire producers and merchants catering for export markets disturbed over the slow progress made in expanding shipments abroad. Leaders of the trade unions are also conscious of the unbalanced state of trade so far as its end-uses are concerned.

Calling attention to the situation in his latest quarterly report, Mr. Charles Schofield, Secretary of the Operative Spinners' Amalgamation, says: "Diminution of overseas trade cannot be regarded with complacency, as without a substantial Commonwealth and foreign trade the industry will become merely a very nominal section of our economy."

Having drawn the attention of the operatives to this disappointing state of affairs, he urges that production and marketing of the better types of goods should be kept to the forefront. Without neglecting the "bread-and-butter" qualities where competition is becoming increasingly intense and economic nationalism prevails, the need to stimulate output and sales of high grade cloths is vitally important.

Union leaders are also at one with the employers on the vexed subject of purchase tax, especially in connection with textile goods suitable for shipment abroad. Mr. Schofield says: "It is most unfortunate for the trade that no disclosure has been made as to whether it is intended to regard the taxation of textiles as an instrument for revenue raising as in the case of tobacco and liquor, or whether the trade shall eventually be freed of this pernicious extortion."

Juvenile Recruitment

A substantial increase in the number of summer school-leavers taking jobs in Lancashire cotton mills has followed the improvement in trade in recent months.

A survey of juvenile recruitment in all the north-west towns where cotton mills are situated, details of which were given by the Cotton Board, shows that 1,488 school-leavers joined the industry at the end of the summer term.

This represents 12 per cent. of all school-leavers in the region and compares with 766 recruits, equal to 6.6 per cent. in 1952.

The industry's highest-ever intake was in 1951 when the total juvenile recruitment was 1,930, equivalent to 15.3 per cent.

"It is a very encouraging result and reflects the greatly increased confidence in the future of the cotton industry," said an official of the Cotton Board.

Yarn Output Up

Lancashire spinning mills recorded their highest output for 19 months in the final week of August, according to the Cotton Board.

With holidays over they produced 19,810,000 lbs. of cotton and rayon yarn compared with 14,160,000 lbs. in the previous week and 15,060,000 lbs. in the corresponding week last year.

An increase during the week of 397 in the number of full-time operatives in the mills gave the industry its biggest manpower gain for nine months.

Textile Deal

A decision on the £4,000,000 deal involving Rylands and Sons, Ltd., the 130-year-old Manchester textile group, and Mr. Charles Loos, the Belgian financier and his associates, has been postponed for a fortnight.

On 21st September—the closing date for stockholders of Rylands to accept the offer of £2 for each £1 stock unit—it was announced that although holders of more than half the £2,000,000 ordinary stock had agreed to accept the terms of the deal, the requisite 90 per cent. had not suppported the plan.

"Under the terms of the deal, Mr. Loos and his associates have the right to consider, until 5th October, whether or not to accept the lower percentage," declared Sir Edward Rhodes, 82-year-old Chairman of the group. "A further announcement will therefore be made on or before that date."

The offer is being kept open until 5th October to give the remaining stockholders a further opportunity to accept.—*All Rights Reserved.*

ALUMINIUM CORPORATION OF INDIA, LTD.

MR. LAKSHMIPAT SINGHANIA ON STEPS TO DEVELOP THE INDUSTRY

ADDRESSING the shareholders of the Aluminium Corporation of India Ltd. at the Fifteenth Annual General Meeting held at Calcutta, on the 25th September, 1953, Mr. Lakshmipat Singhania made out a strong case for restricting the expansion of aluminium industry to a capacity of only 10,000 tons per annum, for the present. He argued that the industrial use of aluminium in India had yet to develop and that the important role played by the secondary metal to meet the demands of the aluminium utensil industry had been completely overlooked by the Planning Commission, while formulating plans for the expansion of the aluminium industry in India. He deprecated any talk of handing over of key industries to foreign interests for the so-called "know-how," but made an urgent plea for the establishment of a national non-ferrous metal research laboratory in order to create technical talent in the country which was very essential.

Sri Singhani said:

"The Planning Commission have estimated the current consumption at 16,000 tons of primary metal per annum as under:

10,000	tons for utensils;
2,500	tons for A.C.S.R. cables;
2,000	tons for industrial sheets;
1,500	tons for defence requirements and miscellaneous purposes
16,000	tons

They have planned, however, for an installed capacity of 20,000 tons by 1955-56, and almost the entire increased production is expected to be consumed industrially, as the Planning Commission themselves admit that "the amount of aluminium required for utensils may not show any appreciable increase." In other words, the Planning Commission estimate that, by 1955-56, the utensil consumption will remain static at 10,000 tons of primary metal per annum, while the industrial use will go up from 6,000 tons to 10,000 tons per annum. This estimate, on surface, does not look impossible at all, but on analysis, it will be found that facts are entirely different.

"The estimate of 16,000 tons of primary metal per annum is not supported by actual figures. From the table below giving the indigenous production and import in all forms, year after year, after Partition, it will be seen that in no year has the total requirement of the metal, both utensil and industrial, exceeded 12,700 tons, while the average comes to only 10,872 tons.

Year	*Indigenous production*	*Imports in all forms*	*Total metal available*
1948	3,372	9,327	12,699
1949	3,516	8,300	11,816
1950	3,590	5,767	9,357
1951	3,876	8,677	12,553
1952	3,566	5,833	9,399
1953 (6 months).	1,682	2,291	3,973

Heavy Imports

"When it is remembered that the markets had been completely starved of the primary metal during the war, and imports were possible only from the year 1946 onwards, the heavy import of 1948 will be understood as abnormal and only for meeting back demands. Similarly, the expected world shortage of aluminium at the outbreak of the Korean War and the placing of aluminium under O.G.L. by Government, are the causes for the abnormal imports during 1951. In other words, the requirement of the country in all forms is actually much below even 10,872 tons, the average figure. This is further substantiated by the fact that to-day, we have exportable surplus of metal, as the Government has decided to licence exports freely. In my opinion, therefore, there is no justification for estimating the primary metal consumption at more than 9,000 tons per annum. If out of this, we deduct 6,000 tons of primary metal estimated as being put to industrial uses, we get only 3,000 tons of primary metal for utensils. Where then does the balance of the requirements for utensils come from? From secondary metal, which has been entirely overlooked by the Planning Commission. From 1944 onwards, in all about 96,000 tons of primary metal have been put into use. If even 10 per cent. of this comes back as secondary metal, more than 9,600 tons of metal is available and is to-day being used by the utensil industry, which shows preference for the secondary metal, in order to meet the competition in the utensil market. This is proved by the fact that the scrap price which was only 50 per cent. of the primary metal price has now risen to 80 per cent. and is steady at this level, and there is dearth of scrap. Every year, the quantity of secondary metal will be augmented by about 1,000 tons, and soon there can be no doubt that all the requirements for utensils will be met from this source. So if the programme of expansion of the Planning Commission, i.e., to produce 20,000 tons of primary metal by 1955-56, is carried out, the whole of this metal has to be consumed for industrial uses only, as all the demand of 10,000 tons for utensils would have been met from the secondary metal. There is no possibility of any appreciable quantity of virgin aluminium being used for manufacture of utensils, as even in countries like the United States where aluminium utensils are used in each and every kitchen, the quantity of metal used for the purpose hardly exceeds 2 to 3 per cent."

Industrial Use Limited

Speaking on the industrial use of aluminium in India, Mr. Singhania observed: "But the question remains whether any of these industries exist in India today and whether there is a likelihood of using any appreciable quantity of aluminium for the same in the near future. It is common knowledge that large quantities of aluminium are required for construction of aeroplanes, but have we an aircraft industry which can consume even 5,000 tons of metal per annum? The only aeroplane factory in India, i.e., the Hindustan Aircraft Limited, Bangalore, hardly uses any aluminium of indigenous produce for construction of aeroplanes and their parts. Similar is the case of other aluminium consuming industries, too. It is well known that, for industrial uses, aluminium has to be alloyed and extruded into various shapes. For this purpose, high degree of technical skill and elaborate equipments are necessary. These equipments are themselves so costly that there is hardly any possibility of private industries installing the same, unless the demand is large enough to justify huge capital expenses."

Difficulties of Trainees Abroad

Mr. Singhania pointed out that due to lack of technical knowledge, there were no independent fabricators in India as in other countries, to cater to the industrial uses of aluminium and explained the enormous difficulties in training Indian personnel. Proceeding, he said: "Even our own Government have been trying for many years to get some of our technicians trained in aluminium industry abroad, but they have met with no success. Only last year, one of our technicians was selected for training in manufacture of alumina in West Germany for a period of two years under the Indo-German Industrial Co-operation agreement. But after a stay of only six months, the German firm terminated the training on the ground that the trainee was an employee of an aluminium firm in India; all further efforts of the Indian Embassy to prolong the training failed. If such are the difficulties in the way of technical training of our nationals in the manufacture of alumina which is, after all, not so very much of a secret, it is obvious that we cannot expect any extensive and thorough training in the manufacture of different alloys of aluminium for industrial uses, which alone can justify further expansion of aluminium production in this country. In the last two or three years, there has been a large exodus of Indian students to Europe, Canada and the U.S.A. under the Colombo Plan, President Truman's Point Four Programme and a few other educational schemes, but so far not one country has agreed to give training to any of our technicians in the aluminium industry."

Some Suggestions

In view of the above facts and circumstances, Mr. Singhania expressed unreserved concurrence with the first recommendation of the Planning Commission to expand the existing plants to produce a total of 10,000 tons of aluminium per annum but suggested that the further steps for developing the industry should be only,—

"(1) to establish a national non-ferrous metal research laboratory and to start immediate research and training in manufacture of various alloys of aluminium and other non-ferrous metals;

(2) to encourage the starting of aluminium foundries, die-castings and extrusions;

(3) to encourage the use of indigenous aluminium in all defence, transport and building programmes of the Government; and

(4) to make full use of all the extrusion and fabricating capacities in various ordnance factories"

and opined that "if the money which would have gone out by way of interest, etc., to foreign capital is earmarked for these purposes, we shall be having invaluable technical talent and a profitable fabricating industry in the country, which, in turn, would make the aluminium industry pay its way and at the same time remain in Indian control."

Reviewing the working of the Corporation for the year, Mr. Singhania pointed out the difficulties which industries were facing due to political rivalries between labour unions and irresponsible labour leadership and uttered the warning that "trade unionism is following a suicidal path in allowing politics and indiscipline to pervade it and in adopting strike as a weapon for every occasion, just or unjust, frivolous and serious." He said that the Corporation's expansion programme on hand at a total cost of Rs. 80 lakhs was progressing well and was hoped to be completed by March, 1954 and the Corporation had also submitted to the Government complete plans for expansion as recommended by the Planning Commission.

Mr. Singhania concluded by drawing attention to the selfless sacrifices made during the last fifteen years by the shareholders and the Managing Agents in building up this industry, and explained that the Directors were paying one year's arrears of dividend to the Preference shareholders in spite of low profits, only to maintain continuity and to clear the arrears as early as possible.

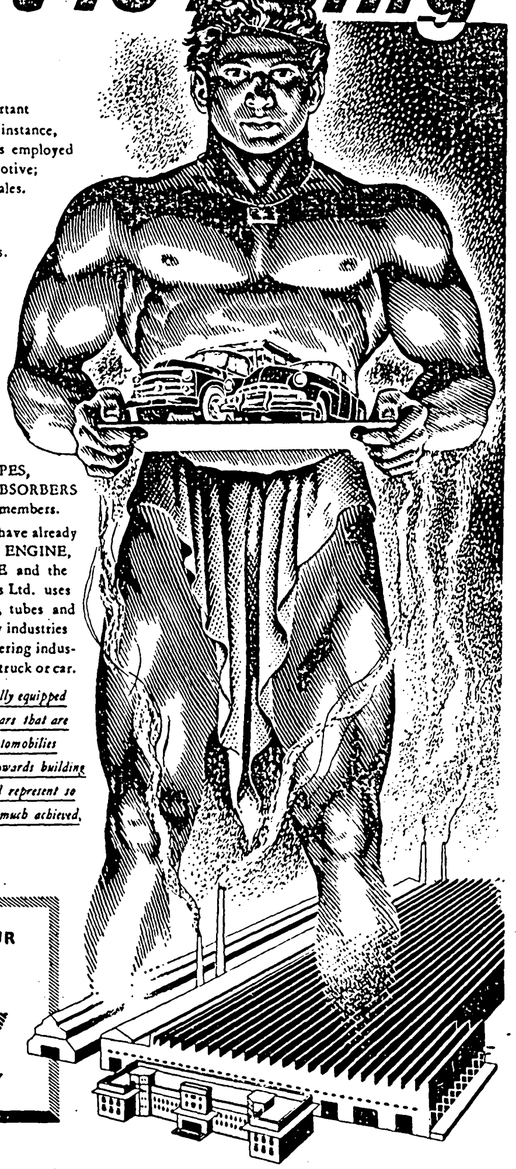
A Giant is rising



The automobile industry forms a very important factor in the economy of a country. For instance, in America one out of every seven persons is employed in this industry; one business in six is automotive; automobile retail sales are 20% of all retail sales.

In India, the foundation of this industry has already been truly laid by companies with a programme for manufacturing trucks and cars. The Premier Automobiles Ltd. is one of these. It was established in 1944 with a paid-up capital of over Rs 2 crores. Its plants, administrative buildings and residential colony are located in an area of 37,87,065 square feet at Kurla, ten miles from Bombay.

Today, The Premier Automobiles Ltd. has an assembling capacity of 30 trucks and 10 cars a day. It is manufacturing several important components such as RADIATOR, PROPELLER SHAFT, MUFFLER, TAIL PIPES, UNIVERSAL JOINT, SPRINGS, SHOCK ABSORBERS and parts of the chassis frame such as cross members.

Over and above this, large capital investments have already been made for the early production of complete ENGINE, TRANSMISSION, REAR and FRONT AXLE and the CHASSIS FRAME. The Premier Automobiles Ltd. uses several varieties of Indian steel, Indian tyres, tubes and batteries. It also supports a number of ancillary industries such as leather, rubber, glass, plastic and engineering industries which supply materials to make a complete truck or car.

Here, then, is a giant in the growing, an industry fully equipped to supply a large part of the 20,000 trucks and cars that are imported into the country every year. Premier Automobiles today is working according to a progressive plan towards building an automobile manufacturing organisation which will represent so much saved, so much served, so much planned, and so much achieved, in the scheme of India's national development.

FIXATION OF SUGARCANE PRICES

SUCROSE CONTENT, NOT QUANTITY, SHOULD BE THE BASIS

WHY is it that, when the value of sugarcane depends on its sugar content, the Government of India should fix a flat minimum rate for cane? This is, indeed, a very pertinent question that Mr. P. Hadfield, Managing Director of Messrs. Parry and Co., Ltd., one of India's leading sugar manufacturing firms, posed in the course of his address at the luncheon meeting of the Madras Rotary Club held in Madras the other day. Commending the introduction of the method of basing sugarcane prices on sucrose content, instead of on weight, he said:

"There is not much understanding between the cane growers and the producers. The producers can only give to the growers a certain percentage of the value of the sugar content of the cane. The higher the quality of the cane, the higher is the price he receives. Unfortunately, no machinery has yet been devised whereby the quality of the cane delivered by the grower can be assessed. Consequently, it still pays the grower, by the application of larger quantities of nitrogen, to produce large quantities of cane with relatively little sucrose content in it. The future of the sugar industry in South India—he could as well have covered the whole country—depends on finding out a method of reconciling the interests of the growers of cane and the producers of sugar."

The emphasis on relating cane prices to sucrose content is significant, in that it justifies the criticisms of many sugar industrialists in the country that fixation of uniform prices for all varieties of cane is detrimental to the growth of the sugar industry on economic lines. Even the sugarcane experts who have no direct connection whatever with the sugar industry are also of the same view. It was early last year, it will be recalled, that no less a person than Dr. C. Van Dillewijn, the sugarcane expert of the Food and Agriculture Organisation, drew pointed attention to the deplorably low yield of 1.5 ton to 3 tons of sugar per acre in India, as compared with as high as 8 tons in Hawaii and Java. The most important suggestion which he put forward, in this connection, related to payment of prices for cane on the basis of its sucrose content, instead of on that of weight. It is refreshing to find that the Union Food and Agriculture Minister, Mr. Rafi Ahmed Kidwai, is now realistic enough to appreciate the force of this point of view, as witness the remarks made in the House of the People only recently that "that (the formula under which the sugar producer will pay the cane grower a price in proportion to the recovery) will be the most satisfactory formula."

Feasibility of the Scheme

There is, however, a section of opinion which feels that it is not practicable to introduce the aforesaid system of fixing cane prices in India, because it requires chemical analysis of cane in every region, which is not possible in view of the absence of any suitable organisation for the purpose. But this, as we pointed out three weeks ago, may not be such a difficult proposition for the sugar factories in the Deccan, as they have their own laboratories for testing the quality of the cane supplied to them. The real difficulty to the change-over crops up in the other areas, especially the two major sugar producing States, the U.P. and Bihar where sugarcane cultivation is confined to thousands of small farmers scattered all over. What is worse, the farmers grow different varieties of cane in small areas and supply them to the factories in relatively small quantities.

This difficulty was no doubt appreciated by Mr. Hadfield, too. He remarked: "In most of the sugarcane growing countries in the world, the cane is grown by the factory owner. In India, there are small holdings and many growers, and it is found impossible for one man owning, perhaps, an acre of land to deliver enough cane to keep the factory going." What then is the solution? Mr. Hadfield offered a suggestion. According to it, the growers should be persuaded to form themselves into groups so that 20 or 30 groups can be treated and handled as one unit and the factory will be able to pay each such unit according to the quality of cane supplied. Proceeding, he observed: "If the ryot can be persuaded to grow quality cane, instead of concentrating on quantity, it will enable the establishment of a sound and stable sugar industry. . . The manufacturer now stands alone between the Scylla of the grower demanding high prices for the cane and the Charybdis of the consumer wanting low prices for sugar. He cannot hope to win the consumer to his side, but he can and must win the grower."

PALM "GUR" INDUSTRY IN INDIA

The past four years have witnessed notable expansion in the sphere of the palm *gur* industry, a cottage industry, which has bright prospects and no conflict with any one of the large-scale industries. This is clearly indicated by the marked rise in output. Thus, the production of *gur* during 1952 was 55,000 tons valued at Rs. 2.75 crores, as compared with 30,000 tons valued at Rs. 1.50 crores in 1948. Another indication is provided by the increase in the number of persons employed in the industry, from 180,000 in 1948 to 330,000 in 1952.

Considering, however, the immense potentialities for the development of the palm *gur* industry, the progress noted above pales into insignificance. The potential capacity of the industry is estimated at 1,000,000 tons (worth Rs. 50 crores). The slow pace of expansion has been due to several handicaps. It is to these handicaps that Mr. *Gajanan Naik, Palm Gur* Adviser to the Government of India, has drawn pointed attention in the course of an interesting article contributed to the *Economic Review*, a fortnightly journal of the Economic and Political Research Department of the A.I.C.C. The difficulties are: (i) Uncertainty of continued financial assistance to State Governments from the Central Government, (ii) delay in issuing sanction of the subsidies granted to the States by the Centre, (iii) inadequate funds made available by the Centre to subsidise palm *gur* development schemes in operation in different States, (iv) total lack of provision of funds in the Central budget for research in the problems of industry, (v) conflict with toddy trade, (vi) competition with sugarcane *gur*, (vii) slow action on the schemes in the States, (viii) delay in issuing licences for tapping palms, and (ix) reluctance of tree owners and State Governments to lend trees on reasonable terms to the producers.

The need for accelerating the development of the palm *gur* industry cannot be stressed too strongly. Apart from the fact that the industry is an important source of sugar—palm *gur* is claimed to be superior to cane and beet sugar—it can provide, if fully developed, employment to as many as two million people. Moreover, the development of the industry is expected to release 700,000 acres under sugarcane cultivation for production of 250,000 tons of wheat and 300,000 tons of rice per annum. Incidentally, it may be noted that the areas where palm trees are grown are not useful for any cereal crop. The acreage under palm trees is 1.4 million, the number of trees being 50 million. If the palm *gur* industry is to be set on a stable and sound footing, it is imperative that energetic steps should be taken by the Central and State Governments. In view of the importance of the subject, the several pertinent suggestions made by Mr. Gajanan Naik are reproduced below:

(a) At the Central Government level: (i) long-term decision for financing the State Schemes by the Government of India, spread over at least 5 years in the first instance. It is essential that definite allocation of funds according to the recommendations of the Planning Commission for the development of palm *gur* industry be made; (ii) a high level directive from the Centre to the States to give adequate priority to the palm *gur* schemes both in respect of funds and execution; (iii) elimination of delay by minimising red-tape; (iv) immediate organisation of research stations for tackling urgent problems of the industry; (v) national decision for introducing immediate prohibition of toddy wherever it is sold now; (vi) legislation for control on production of sugarcane *gur* for ensuring proportionate release of land under sugarcane; and (vii) preference to palm *gur* and palm sugar in all purchases on Government account.

(b) At the State Government level: (i) long-term planning, incorporating palm *gur* as a standing feature in the States' Agricultural and Industries Departments; (ii) legislation for ensuring protection of palms from indiscriminate cutting of trees as also palm leaves; (iii) legislation for making it obligatory on the part of palm owners to lend the palm for production of *gur* on reasonable rent; (iv) removal of excise obstacles in the prosecution of the industry; (v) timely sanction of schemes; so also provision of adequate funds for the implementation of palm *gur* development schemes; (vi) delegation of suitable powers to the authorities concerned for speedy action; (vii) preference of palm *gur* and sugar in all State purchases; (viii) organisation of marketing of palm *gur* and allied products on co-operative basis; (ix) increase in training facilities for the villagers; (x) sure participation of States in co-ordinated programmes such as conferences, refresher courses, exhibition, etc., organised by the Central Government; and (xi) active steps for encouraging planting of palms.

The success of the development of the palm *gur* industry depends as much on the efforts of the Central and State Governments as on those of the workers who are directly connected with the industry. As the Union President, Dr. Rajendra Prasad, pertinently remarked not long ago, the palm *gur* workers should not relax their efforts, as the work they have undertaken is of considerable national importance and would prove of great blessing, particularly to the peasants and poor workers of this country.

CONDITION OF SMALL COLLIERIES

CAN DISTRIBUTION CONTROL BE WITHDRAWN?

THE Indian Mining Federation has submitted a memorandum to Mr. K. C. Neogy, Member, National Planning Commission, deprecating the demand, by certain interests, for discontinuance of controls on price and distribution of coal. The Federation feels this demand, if conceded, will have a very deleterious effect on small collieries. It has pointed out that these collieries can exist only under the present policy of protection in the form of reservation of soft coke and brick-burning coke orders which constitute a part of the system of distribution control now in force. Lifting of these controls, according to it, will drive most of the collieries out of existence. The small collieries are stated to account for 60 per cent. of the production of selected B, not to speak of grades I and II, in Bengal and Bihar. A few of these collieries are said to be mining even selected A grade coal, but their production of this grade is too small to bear any comparison with that of the bigger collieries. It may be noted, in this connection, that the designation of small collieries includes not only middle-sized holdings varying from 100 to 1,000 *bighas*, with an annual output varying from 25,000 to 75,000 tons per unit, but also the smaller units, with a holding of 20 to 50 *bighas* each, producing about 5,000 to 10,000 tons per annum.

Although it is generally agreed that price control will have to stay for some time to come, there is a good lot of controversy regarding the need for distribution controls. While one section of the industry is in favour of the removal of distribution control, with some priority over wagons which are limited in number, the other section wants the control to continue mainly on the ground that the transport system still presents several difficulties. Representatives of consumers, too, are of divided opinion in this regard. One thing is certain and that is that distribution control does not provide freedom of choice for consumers. The natural preference, however, in case of such freedom is for better grade coals. This means that, if distribution control is removed, the demand for lower grades of coal will decline sizably.

Assuming that the transport situation is normal, the question whether distribution control should be retained or abolished depends on the acceptance of the principles of allowing free scope for demand and supply. This will naturally result in the closure of the marginal and inefficient units. Whether this development would be in the national interest or not and whether it would not result in the virtual loss of the reserves of these mines are all technical points which require to be carefully considered before a decision is taken.

RAILWAY COLLIERIES

The Government of India has decided to abolish the contract system in all railway collieries and has already done away with it in nine of them. According to a statement placed recently before Parliament, the contract system of coal raising at the railway collieries has been the object of repeated criticism by various committees and commissions which have examined the question, on the ground that it gave rise to various abuses. Labour also has been insistent in demanding the termination of this system. Recognising the force of this criticism, the Government of India has decided to abolish the contract system in all railway collieries. These railway collieries are at present owned by the Government of India in the Ministry of Railways, but are administered by the Ministry of Production. The transfer of the ownership of these collieries to the Ministry of Production has been accepted in principle and formal orders are expected to be issued soon.

The contract system has already been abolished in nine of the railway collieries. The introduction of the departmental system of working in Bokaro and Kargali has been under consideration for some time. It has been decided that every endeavour will be made so that with effect from 1st April, 1954, all coal raising at these collieries may be done departmentally.

The change-over might eventually necessitate a capital expenditure up to Rs. 20 lakhs on the acquisition of land, construction of offices, godowns and quarters for miners, clerical and supervisory staff. But such capital expenditure will be kept down to the minimum. A recurring expenditure of Rs. 6.3 lakhs will also be required on account of pay and allowances of staff.

A sum of Rs. 5 lakhs is required for the construction of staff quarters at Bokaro and Kargali collieries during 1953-54. This will, however, be found from savings under other subheads of the demand.

HINDUSTHAN GENERAL INSURANCE SOCIETY LIMITED

MARGINAL INSURERS FACE PROBLEM OF SURVIVAL

DR. N. N. LAW URGES REVIEW OF INSURANCE LEGISLATION

ADDRESSING the Ninth Ordinary General Meeting of the Hindusthan General Insurance Society Ltd., held at Calcutta on 23rd September, 1953, Dr. N. N. Law, Chairman of the Society, said that, under the insurance regulations, which prescribe a limit on expenses, the question which faces the marginal companies is whether they "can at all survive," even if they are "inherently sound." He pleaded for a "constructive review" and re-examination of the relevant provisions of the insurance law so that a "suitable" policy which will be conducive to the "furtherance of the progress and prosperity of general insurance business" may be evolved. Dr. Law said:

"GENTLEMEN,

"The report of the Directors and the audited accounts and the balance-sheet for the year ended 31st December, 1952, have been in your hands for some time and, with your permission, I propose that they be taken as read.

"Before I come to examine the year under review, I have to record with deep regret the passing away, early this year, of Mr. Nalini Ranjan Sarker, the founder-Chairman of the Society. The many-sided activities of Mr. Sarker who rose to an eminent position in both the political and commercial life of the country need not be recounted here. I should, however, like to recall with gratitude and to place on record the guidance and inspiration he provided to the Society from its inception and even in the midst of his multifarious important activities. Although Mr. Sarker is no longer with us, his inspiration is there, and the best homage that we can pay to his memory is to put forward our best endeavours towards the fruition of his cherished great hopes about this institution in which each one of us can do his part.

Post-war Recession

"As you may be aware, the year 1952 commenced with ominous symptoms of a post-war recession in business which seriously affected the outlook and prospects of commerce and industry in India, particularly by the suddenness of a slump in prices and its growing intensity during the first half of the year. Prices of a number of commodities in India which occupy an important place in her foreign trade received a serious seback. In the first half of 1952 the fall in commodity prices was so sharp that the wholesale price index in Calcutta registered a drop from 491 to 382 between January and March, the worst affected items being raw cotton, jute (both raw and manufactured), tea and oilseeds, the importance of which in the economy of India can be hardly overestimated. Jute faced one of the worst slumps in history and cotton trade met with a veritable crisis. Throughout the year at different points of time, the main industries of the country, jute, textiles, mica and tea faced most perturbing reverses resulting, in some cases, in closure of some units. Both the volume and value of India's export trade showed a heavy decline and the tempo of the business activity of the country sank down to a much lower level, causing and being caused by increased restriction of credit. It was only after the mid year that the deterioration was found to have been arrested to some extent as a result of the decrease in or abolition of some of the export duties, but on the whole, the weakness in the undertone of general trade conditions has persisted almost throughout the year. What made the situation worse was that the level of wholesale prices declining at a rapid rate was not reflected in a corresponding movement of the cost of living indices, which, paradoxically, showed an upward trend. The rigidity of high wages has continued, and resultant inflated cost synchronising with a lower level of prices could not but have a depressing effect on industry and commerce, despite the fact that production in certain industries was fairly well maintained, and in some, even showed an increase.

"It was all but natural that such a setback in general conditions of trade and industry should have its repercussions on the insurance business which thrives on them. It called upon your Society to exert itself to the utmost to overcome the difficulties, and it is a matter of gratification to me to be able to say that despite the heavy odds our Society has acquitted itself well in its working during last year, as will be evident from its business figures. Direct business of the Society in India in the fire department went up from Rs. 6,54,000 in 1951 to Rs. 6,80,000 in the year 1952, marine premium income from Rs. 3,90,000 to Rs. 3,94,000 and miscellaneous accident from Rs. 4,77,000 to Rs. 5,32,000. The increase is, however, not pronounced, but it is significant that in a period so difficult, the Society has been able to maintain the progress against most competitive conditions which are fostered by an attenuated scope of business.

Expense Rates

"Looking at insurance business by itself against the general economic background, a gradual stepping down of prices is, of course, a necessary feature of the transition from war-time economy to peace-time level, and insurance, as any other business, must share in this process. It is the adjustment of costs to prices that presents a problem in this transition, and this calls for the greatest circumspection for the avoidance of any steps under a theoretical bias, so that the remedy may not prove worse than the disease. In this context the expense provisions of the Indian Insurance Act reveal an obvious lacuna which gives serious cause for anxiety. Following the Amending Act, 1950, and Rules framed thereunder, a system has been devised for determining expenses of the insurers. This system for the present is hinged on direct business, and under it a fall in direct business entails a curtailment of permissible expense for the insurance companies. As I have already pointed out, although commodity prices have gone down the cost of living index has not moved accordingly during the year, and this has resulted in a maladjustment, confronting the insurance companies with an embarrassing and difficult situation in the light of the aforesaid provisions of the Insurance Act and Rules, *vis-a-vis* the depressed condition of trade and industry for the duration of its continuance. While a setback in the business of insurance companies under such conditions is all but natural, their permissible limit of expenses has necessarily to go down, following a fall in premium on direct business, whatever be the consequences of the application of such a rigorous formula. The question has, therefore, arisen whether the marginal companies which are hard put to it can at all survive, even if they are inherently sound. While insurance business in India has yet a considerable leeway to make up, it will indeed be unfortunate if such companies are forced out of existence for sheer non-compliance with a technical standard the merit and value of which are open to question.

Prosperity of a Company

"The matter, to my view, calls for critical examination from those who are interested in the well-being of the trade. It seems inequitable to assess the position and prosperity by direct business alone, and even that from year to year. The prosperity of a company is linked up with many factors, of which underwriting plays an important part. It will be unfortunate if the present measuring rod is adhered to without taking into account other facets of insurance business, including incoming and outgoing reinsurances. These two sectors consume a sizable part of the expenses of general insurance, and whilst, therefore, a reasonable proportion of the expenses may be prescribed for direct business, it is both reasonable and a practical necessity that a suitable percentage should also be allowed to cover expenses for the reinsurance business.

"Another undesirable consequence which emanates from this factor of linking up expense with direct business alone is the scramble for direct business in the market which it directly fosters. Admittedly, with limited availability of direct business in the context of present trade conditions, this scramble to seize direct business by any means acts to the unscrupulous as a potent inducement to have recourse to malpractices. It is good that the Code of Conduct has been evolved with a view to improving the ethics of the trade and to eliminating malpractices, which, as pointed out by many, vitiate the trade; but the two principles enunciated by the Government about the present business-expense relationship and the Code of Conduct seem to go one against the other, and the matter calls for a basic rectification by suitable modification of the standard of permissible expense.

Quantum of Expense

"In this connection, it is well to point out that at present whilst formulating their plans and programmes at the beginning of the year, the insurance companies have to work on the basis of some presumed conditions, not having any precise knowledge of the quantum of expense for the year, or of any relaxations that may be made in respect of expenses scheduled for the year, for which plans are made. I understand that the Department of Insurance exercises its discretionary authority after reviewing the results, but such post-mortem examination cannot be conducive to sound planning of business progress. Companies require to have a clear and dependable idea in advance of the limit of their expenses, so that they can adjust their programme accordingly, and refrain from taking a gambling chance.

"Directly connected with the scramble for direct business is the fall in rates of marine and other non-tariff business in the country. Due to slack export market and scramble for what business is available the marine rates have already reached the rockbottom level. It is open to question whether current rates have any statistical relation to claims experience. It is a matter of regret that even under such circumstances, a sizable part of the contract overseas is allowed by authorities to be made on c. & f. basis, which leads to further diminution of business available to Indian insurers.

Difficult Position

"There would thus appear to be no studied policy to ameliorate the difficult position of the insurers in the country. Their only basis of reliance at present is the discretionary leniency of the Government and the Administrative Authority. It is neither desirable nor honourable for insurers to approach the Government for exercise of such discretionary authority, and it stands to reason whether the Administrative Authority, can exercise its authority without subjecting itself to criticism on the score of discrimination. They are not likely to be acquainted with the particular problems facing each insurer, and have, therefore, to evolve a common policy for general application which may not meet the requirements of individual companies. Evidently, this must result in hardship to those companies whose trading conditions may justify special treatment.

"My object in dwelling upon these few salient points in the present address is to draw the attention of the Government and the authorities concerned to some of the outstanding practical difficulties in the working of general insurers. I need hardly stress that these call for a constructive review and re-examination in the light of experience, so that a suitable policy may be evolved conducive to the furtherance of the progress and prosperity of general insurance business in the country on sound lines.

"Before I close, I would like to express my appreciation of the useful services rendered to the Society by the field staff, office and the management of the Company, and their endeavours for establishing the Company on a firm footing. I hope in the years to come their co-operative effort will be available in the same way towards attainment of better results, and steady progress."

The Hindusthan General Insurance Society's financial position is sound, as will be evident from the fact that apart from a capital of Rs. 15 lakhs (in 30,000 ordinary shares of Rs. 50 per share) the Society's reserves aggregate Rs. 13.02 lakhs. The reserves consist of:

General reserve	1,20,000
Exchange reserve	90,000
Reserve for depreciation of investments	1,05,000
Reserve for bad debts	38,500
Fire Insurance Fund	5,08,426
Miscellaneous Insurance Fund	97,360
Workmen's Compensation Fund ...	2,234
Marine Insurance Fund	3,40,000
Total ... Rs.	13,01,520

COFFEE PRICES AND MARKETING POLICY

NEED FOR IMPARTIAL ENQUIRY

THERE seems to be no common ground on which the Government of India, on the one hand, and the coffee interests, on the other, could meet and solve the problem of the coffee industry in the interest of both the coffee grower and the consumer. The various statements issued by the Commerce Minister, the coffee planters and the coffee dealers from time to time go to show that the differences of opinion are widening, with the Government showing no signs of appreciating the well-reasoned view points of the industry.

In reply to a question in the House of the People recently, Mr. T. T. Krishnamachari, Minister for Commerce and Industry, stated that the large stocks of coffee now in the country had had no effect on the consumer's price. It was his personal opinion that the prices had not yet come down to a reasonable level. Obviously, this statement admits that coffee prices have come down in recent times, but not to a "reasonable level." The extent to which prices have come down will be evident from the fact that Plantation 'A' for instance, which stood at Rs. 325 per cwt. in the pool auctions of September, 1952, now stands at Rs. 220 per cwt. In fact, coffee prices have, after coming down rapidly from September, 1952 to April, 1953, more or less stabilised at about Rs. 220 per cwt. The earlier fall in prices was due to the cancellation of the export quota for 1952-53 and the Government's directive to release coffee through various channels.

Although the auction prices are now lower than those a year ago by over 30 per cent., the coffee interests are complaining of lack of offtake and accumulation of stocks. There is reported to be an accumulation of stocks of coffee with the Coffee Board to the extent of 14,700 tons. Does this mean that production of coffee is in excess of consumption? Or does it mean that the price of coffee is still beyond the means of average consumers? There is considerable difference of opinion on this point. Even coffee growers have admitted that consumption in the country is almost equal to production and it was on this basis that an export quota of 2,000 tons was originally fixed for 1952-53. It, therefore, seems that the stocks of 14,700 tons held by the Coffee Board does not represent the real surplus. In other words, coffee has not been freely flowing to the consumers. The reasons for this state of affairs needs to be examined.

Biddings at Auctions Poor

In the meanwhile, the fact remains that bidding for coffee in recent months has been very poor. The Commerce Minister himself admitted that the quantities earmarked for supply through the co-operative societies, propaganda units, etc., have not been fully taken up. According to another source, out of about 1,750 tons offered through Coffee Houses, only 595 tons were taken up by them, during the seven months, January-July, 1953. During the same period, 3,150 tons were offered to co-operative societies which, however, took no more than 1,314 tons, and 3,160 tons were offered at local auctions which could absorb only 1,553 tons. On the basis of these reports, a conclusion that forces itself is that the price of coffee is still high. But it can be argued that, in the previous year when the price of coffee was much higher than now, the offtake was not so poor as at present. Why then, it may be asked, is the demand slack, even though the present prices are lower? A plausible answer to this question will be that the purchasing power of coffee consumers in the country has gone down. In the light of the present economic conditions in the country, that seems to be partly true.

One explanation for the poor offtake of coffee is the uncertainty about the future trend of coffee prices. And, if anyone is to be blamed for this, it is the Commerce and Industry Ministry. Thus, in the face of the constant threats held out by the Commerce Minister and in the absence of any indication as to what extent the Government desires that coffee prices should go down, traders are unwilling to buy coffee in large quantities. Further, the Government has not yet announced the basic price for the current season. It follows from this that, if the offtake of coffee is to be stimulated, the uncertainty caused by the Minister's statements should be quickly removed.

The hesitancy on the part of the wholesale trade freely to buy coffee would appear to have resulted in very restricted supplies at the retail end. That is probably one reason why the price of coffee is still high for consumers. It is true that coffee seeds could be had through India Coffee Houses and co-operative societies at favourable rates, but these sources of supply are not found all over the country and, further, are not accessible to all. Be that as it may, the accumulation of unsold stocks with the Coffee Board has created a problem to the growers. The Board is unable to make payments to the planters and the industry is crying hoarse that it is losing heavily by way of warehouse charges, interest and deterioration of stocks. According to one estimate, the industry stands to lose Rs. 50 lakhs on the 1952-53 crop. What is more, in the face of accumulation of the 1952-53 crop, as mentioned above, the new crop will begin to flow in from December, 1953, onwards. This will further aggravate the problem of warehousing. Coffee growers are, therefore, considerably agitated over the present indecision of the Government.

Basic Price and Grower's Profit

Any suggestion to bring down the basic price of coffee is strongly opposed by producers. They contend that the cost of production has gone up so high that there is scarcely any scope for reducing the basic prices, without jeopardising the future of the industry. The Government, however, argues that the growers have been getting a price far in excess of the basic price. According to an official spokesman, the basic price of Plantation 'A' has been raised from Rs. 90 per cwt. in 1946-47 to Rs. 180 in 1951-52. Similar increases has been made in the case of other varieties also. The basic price does not represent the amount that the grower gets, but only the minimum he is entitled to receive. In addition to it, the grower gets all the profit made at the auctions as well as in exports, if and when they are allowed. In this manner, in 1947-48, as against a basic price of Rs. 120 per cwt. for Plantation 'A', the grower got Rs. 150-8. In 1949-50, as against a basic price of Rs. 135 per cwt., the grower got Rs. 182-8. In 1950-51, he got Rs. 180-13-4, as against Rs. 155 and in 1951-52 Rs. 215 to Rs. 220, as against Rs. 180 basic. There have been similar rises in the case of other varieties also. It is pointed out that, while the basic price is fixed by the Coffee Marketing Committee on the basis of the cost of production, the grower makes additional profit every year considerably in excess on his cost. So far as the consumer is concerned, he has to pay a price in excess of the price that the grower gets, because he has to bear the excise duty and the cost of administration of the Coffee Board, both of which are added to the price paid to the grower. In addition, the profit of middlemen is also borne by the consumer.

It will be noted from the foregoing that the grower has been getting a price in excess of the pool basic price throughout these years. But this is not a new feature. What is relevant to the point is whether the gap between the basic price and the actual price he gets has increased to any worthwhile extent. In other words, the question is whether the gap has increased to such an extent as to cover all the increases in costs and leave a reasonable margin of profit to growers. The latter maintain that it has not. They, therefore, argue that any reduction in the basic price will deprive the planter of all incentive to increase production and will, in the long run, only lead to higher prices and scarcity.

The issues to be thrashed out are, therefore, clear. The consumers' price should be brought to a more reasonable level. At the same time, the grower should be assured of a price which will not take away his incentive to grow more and thereby to bring down his cost of production which will ultimately benefit the consumer. Ways and means must be found to achieve this objective. Since the Government and the industry have failed to arrive at an amicable settlement, the issue must be referred to the decision of the Tariff Commission.

The only other alternative, in the absence of such an understanding, is to free the industry from all controls and allow the inexorable laws of economics to set right the situation. These laws no doubt operate harshly in the initial years and the expected results may not be achieved quickly. But, ultimately, they will restore the balance and bring about a healthy situation. After all, coffee is not a necessity and is consumed only by a section of the people of India. The restoration of free trading will mean that the co-operative marketing at present conducted by the Coffee Board will have to be given up. This will, it is feared, wipe out a large number of small estates. That, however, is inevitable. If the ultimate object is to bring down coffee prices, then only the economic units should be allowed to exist. It is high time the policy of providing crutches to support uneconomic units of production in every sector of activity in the country was ended.

JUTE INQUIRY COMMISSION

The Jute Inquiry Commission visited Sheoraphuli, an important secondary market for raw jute in Hooghly district, recently to make spot study of the factors involved in jute trading and the interests associated with it.

The *kutcha* balers, commissioned agents, and *aratdars* (stockists) working in this centre, who between them buy, sell and store all the jute grown in this predominantly Dalsee area before the fibre is finally disposed of in the terminal market in Calcutta, were individually examined by the Commission. The members of the Commission also witnessed the processes of assortment of fibre and its subsequent transformation into *kutcha* bales. From Sheoraphuli the Commission went to Dankuni, about 12 miles from Calcutta, to see the operations of harvesting and bundling of jute, steeping, retting and extraction of fibre.

Discussions with jute growers working on the fields yielded to the Commission some useful information from the primary producer's point of view. The Commission also saw the standing crops of line-sown jute raised by cultivators under expert guidance of the Indian Central Jute Committee.

FALL IN EXPORTS OF HEMP

WAGON SHORTAGE AFFECTS PRICES

THE latest to complain about wagon shortage among those unfortunate minor industries which have been assigned a lower priority in the scheme of wagon allocation is the hemp industry. Although sunn hemp does not figure so strikingly in the list of export commodities such as jute and tea, it is certainly one of those commodities which, if properly nursed and developed, are capable of adding considerably to the country's earnings. The exports of hemp from India rose from 271,118 cwts. in 1950-51 to 416,997 cwts. in 1951-52. In the following year, however, they dropped to 336,000 cwts. In value these exports represented Rs. 1.28 crores, Rs. 2.48 crores and Rs. 1.44 crores, respectively. The U.K., France, Italy and the U.S. were the principal buyers. The fall in export of hemp in 1952-53, according to Mr. G. S. Poddar, President of the Indian Hemp Association, Calcutta, is not due to any increase in local consumption but chiefly to delays in despatches of hemp to overseas countries on account of railway transport bottleneck. Presiding over the latest annual meeting of the Association held in Calcutta last week, Mr. Poddar observed: "Transport has been the most overriding factor in the situation, and, while buyers naturally chafe against continued and prolonged closure or restriction of bookings and are inclined to doubt often its validity, the sellers themselves have of late become cautious about undertaking commitments."

The complaints of Mr. Poddar, as also of the spokesmen of many other minor industries, such as soap, lamps, pharmaceuticals, leather, etc., which have been persistently heard, should serve as a serious reminder to the Indian railway authorities that, unless they increase their wagon capacity, no major development of the country's economy would be possible. Since the expansion of minor industries is held back by the priority system now in vogue, there is every urgency to see to it that the system is withdrawn as early as possible through measures calculated to augment supplies of wagons on our railways.

There is also another cause which seems to have adversely affected the Indian hemp industry. That is, according to Mr. Poddar, the improved supply position of the fibre in the world. Italy, the Philippines and Indonesia have, it is said, staged a complete revival of their production. In East Africa, the output is stated to have gone up further. The production of hemp in Italy is said to have risen from 64,139 tons in 1951 to 66,741 tons in 1952. It is estimated to go up to 70,000 tons this year. With a carry-over of 30,000 tons there has been a fall of 25 per cent. in the price of Italian hemp. The output in the Philippines in 1952-53 is estimated at 341,518 bales, as against 335,812 bales in the previous year. Besides, the production of other fibres such as sisal, abacca and henequen also seems to be 600,000 tons at present as against 527,000 tons in pre-war years. Again, substitutes such as wood-pulp, flax waste, and flax tows are now freely available to the tissue paper industry which is the main source of demand abroad for Indian hemp. In the result, Indian hemp has been experiencing keen competition from these, with prices experiencing a marked fall in recent years. The price for Indian hemp in the U.K. ranged between £112 and £180 per ton c.i.f. in June, 1951. Since July that year, prices have been sagging, the present quotation being about £64 per ton.

It is stated that in early June this year there were in the home markets nearly 1,200 tons of hemp awaiting movements against previous contracts. Stocks are also stated to be lying in the mofussil but shippers are not taking any interest in them, owing to the downward trend in prices.

The hemp industry is also suffering from another handicap. The competitive power of the fibre seems to have been affected by 'Agmark' charges which have been increased from As. 12 per bale to Re. 1 per bale. The increase is stated to be acting harshly on a small crop such as hemp which can hardly be expected to bear progressively increasing imposts.

In view of the difficulties facing Indian hemp, the Government should go into the complaints of the industry and take such measures as are necessary for the promotion of its exports. It is to be hoped that Mr. D. P. Karmarkar, who is now in charge of export promotion, will look into the matter without delay.

JAY ENGINEERING WORKS LIMITED

LALA SHRI RAM REVIEWS WORKING AT ANNUAL MEETING

PROSPECTS FOR LIGHT ENGINEERING INDUSTRY EXAMINED

THE prospects for the light engineering industry of India in the export trade of the country were examined by Lala Shri Ram, Chairman of the Jay Engineering Works Ltd., in his address to the Company's shareholders at their Annual General Meeting held in Calcutta on 17th September, 1953. Lala Shri Ram saw no reason why the engineering industry, in general, and the light engineering industry, in particular, should not be able to build up a very good export market, if quality articles were produced at reasonable cost and if the Government, the manufacturers and the workers of this country helped in the export business with a single-mindedness. Lala Shri Ram also reviewed the steps taken by the Company itself in this direction. The problem of unemployment in the country and the measures to solve it were also examined by Lala Shri Ram in his speech, the full text of which is given below:

"GENTLEMEN,

"The Directors' report and the accounts have been in your hands and I will make only a few remarks of a general nature.

"I am glad to say that the year ended 31st March, 1953, has been one of slow, but steady, progress. It was a year not very much of increased production, but of consolidation and improvement of quality. This consolidation and improvement was not confined merely to the USHA sewing machines, but equally to electric fans and hurricane lanterns.

"The depression of February-March, 1952, is known to all of you inasmuch as it affected many industries, particularly engineering industries adversely. The position of the lantern industry was particularly bad, but we brought down our prices suitably and saved ourselves from heavy accumulations and subsequent loss. The quality of our fans has also considerably improved, but we did not think it proper to increase the prices on that account.

"I had told you in 1951 that our aim was not merely to make money, but that we wanted to serve our country. We realise more than ever before that there are very few rich people in our country who can afford to buy costly things, and, if we want to serve India, then we will have to manufacture and supply quality goods at prices which our countrymen can afford to pay.

Price of Sewing Machines Reduced

"In view of this policy we reduced the price of our sewing machines also in July, 1953, although it was not necessary to do so, as we had ready sales, but the purchasing power of the people was going down, and we, without any demand from our customers and at a time when all other manufacturers of well-known makes were, in fact, increasing their prices, reduced the prices of our sewing machines by Rs. 20 per machine. This reduction, I am glad to say, has been very much appreciated both by our sales people as well as by our customers.

"During the year under report some unscrupulous dealers had started the practice of importing, under the guise of spare parts, complete units of sewing machines to the detriment of the sewing machine manufacturers in this country, on the one hand, and the manufacturers of spare parts, on the other. We are grateful to the Ministry of Commerce and Industry for taking timely steps for stopping the unfair activities of these people.

"I said, in my speech last year, that we are steadily building up our export business and increasing our sales. You must have seen from the report in your hands that, while the value of exports in 1951-52 was about Rs. 12 lakhs, in 1952-53 it was more than Rs. 16 lakhs. We are exporting to more and more countries every year, and are opening branch offices and appointing agents in many of these, and we hope that the export value this year will be much bigger than what it was in 1952-53. We export our sewing machines, electric fans and hurricane lanterns to about 25 countries.

"But as we try to get over one difficulty, other difficulties arise, and we now find that the shipping charges for about the same distance from India to various importing countries are much higher than from other exporting countries for the same distance to the countries to which they export. We are collecting figures for this purpose and will then approach the shipping companies, as also the Government, to help us out of this new difficulty, so that our competitive capacity in foreign markets may not be unfairly affected.

"I have always held that, if quality articles are produced and at reasonable cost, and if the Government, the manufacturers and the workers of this country help in the export business with a single-mindedness, I see no reason why the light engineering industry, in particular, and the engineering industry, in general, should not be able to build up a very good export market. Our raw materials, such as pig iron and steel, are cheaper than in any country in the world; we have intelligent labour, but what is, however, wanted is that the Government, the manufacturers and the employees should put their heads together and with a firm will to serve the country. The Government can help by carrying at low railway freight rates from the manufacturing centres to the port towns; providing steel, pig iron, etc., of proper quality and at particularly lower prices to the exporting engineering industries so long as these articles are controlled; giving help to the concerns who would produce special kinds of steel, and where import duties on raw materials or semi-finished articles are levied, by either abolishing the same or devising quick and easy refund procedure.

Efforts to Reduce Cost

"While, on the one hand, every effort is made to improve the quality of our products, every effort has been made and is being made to produce articles at decreasing costs to be able to stand in competition, on the other, and our efforts are gradually showing results. This is possible only because every one from the highest to the lowest has co-operated and contributed his mite, and this is only due to our continued friendly relations between officers and the workers, in short, between all concerned. While we are striving to reduce the cost of what we make, it is our definite intention that nobody's income in our concern should go down; if anything, it should improve.

"With the object of improving the quality of our products and reducing the costs, we have installed a number of costly machines, for instance, amongst others, an up-to-date bright bar drawing plant and a die casting machine.

"We have also improved the working conditions in our various sections. In many of our departments the working conditions were not as good as one would have liked them to be, and I am glad that steadily the working conditions are being improved.

"The whole assembly section has been thoroughly revised under an expert engineer from Germany. There are already improvements visible and soon things will be even better.

"The competition in the world market is constantly increasing. Every country to-day finds it more and more difficult to export. It is no longer a sellers' market, but a buyers' market, and, if all the three parties will not take concerted steps, India's exporting industry, in general, and engineering industry, in particular, may seriously be affected.

"In the fan section, the improvements have been indeed very marked and our Deluxe fan is so much in demand that, in spite of the increase in production we have not been able to meet it. More or less the same applies to our other sections, i.e., sewing machines and hurricane lanterns.

"Our foundry to-day is looked upon by all users of good quality and light castings in this part of the country as the one place where they can get their patterns satisfactorily made and satisfactory castings and at reasonable prices. As a matter of fact, the demand on our foundry to-day is more than we can easily meet.

"Our tool room department is equally popular, and both the quality of our work and our prices, as also our meeting the requirements of our customers in promised time, are bringing to us new customers steadily. We now feel that we will have very soon again to expand our tool room very considerably.

Unemployment

"These days, there is great increase in the number of the unemployed. We are glad to say that, in spite of our installing from time to time automatic and labour-saving machines, we have never reduced the strength, but, in fact, the total number of workers is higher to-day than at any time in our history.

"The unemployment position has aggravated, as, due to the lower purchasing power and higher cost of production, a number of factories have found that they could not manufacture their goods at prices within the means of the purchaser. It is the low purchasing power and the high cost of production which has caused a number of factories to close down or to curtail production.

"It is not that there is superfluity of manufactured goods. As a matter of fact, the consumption of various kinds of goods in this country is lower than in any Western country. The standard of living is far below what it should be, which means that the people cannot buy even the normal requirements. On the other hand, there are unemployed people which means that the work is there and the workless are there, but the two have to be brought together in a properly organised fashion. So far as either reduction in production or complete stoppage of production causing unemployment is concerned, may I suggest that there should not be only two alternatives, i.e., either complete stoppage of work and unemployment and starvation for the workers and losses to the employer due to closure, or full remuneration to labour and normal return to the employer. Surely, between these two extremes, there must be a *via media*, where both can make sacrifices, so that the factory may not go out of production, but produce goods at prices at which the consumer can buy, and to some extent unemployment may be reduced. It is a matter in which it is desirable again that the Government, labour and capital must sit down together before damage is done or a particular unit has to close down causing misery and loss to all concerned.

"In India, generally, and in Bengal, in particular, the distress among the educated classes on account of unemployment is of a very serious nature. We, in our own humble way, have made a beginning and we already have amongst our workers over 160 who have studied upto or passed either matric, intermediate or B.Sc., and over 225 middle pass, not to mention over 200 clerks. We are trying to help this class to an increasing extent.

"We are also glad to say that we have devised a system of our own for providing work to those men and women who cannot work in the factory, but need work at their homes. We are now providing work at their homes for over 200 persons, and intend to expand steadily in this direction for the benefit of all concerned.

Suggestions from Employees

"I had told you on previous occasions that we had introduced a scheme of getting suggestions from our employees. This has become a regular feature and is working extremely well. Quite a number of the suggestions made by our workers and accepted and put into practice have helped in solving problems which had been baffling us since long and the Company has given them suitable rewards. We are rightly proud of such men.

"Various types of new ideas, such as quality control, training within industry, time and motion study, handling of materials, etc., have been introduced and are being systematically attended to and are showing good results. As a matter of fact, I am glad to say that all concerned are taking keen interest in this direction.

"On the welfare side, we have built more than 200 additional houses for our workers, and a big theatre and meeting hall with sitting accommodation for over 4,000 persons. We have also built an up-to-date canteen.

"We have various types of outdoor games, and I am glad to say that our football team this year has been an unbeaten group champion in the 'B' Division Inter-Office Football League

(*Continued on page 659*)

PATTERN OF WORLD STEEL PRODUCTION

IMPORTANCE OF CONTINUOUS WIDE-STRIP PROCESS EXAMINED

THE most notable development in the history of the manufacture of steel so far is the development of the continuous wide-strip process, evolved in the early years of the twentieth century. This development has virtually transformed the pattern of world steel production, inasmuch as the wide-strip process is being universally adopted. In view of this, and the anxiety of India to install a steel plant of the latest model, an attempt is made here to review the development of the continuous wide-strip process.

The term "continuous wide-strip process" is used to cover: (a) Fully continuous mills comprising a roughing train of two or more stands placed in tandem and a finishing train comprising four or more stands also placed in tandem, the steel travelling continuously through the roughing and finishing trains without reversing at any stage; (b) semi-continuous mills comprising a reversing roughing train of one or two stands and a continuous finishing train of four or more stands placed in tandem; and (c) in Europe, Steckel mills (a single-stand reversing strip mill with coiling furnaces). The term covers only those mills producing hot-rolled flat products. In Europe, this classification includes only those mills capable of producing strip wider than 500 m.m. In the U.S., the term theoretically applies to mills capable of producing strip of 300 m.m. and more, but there appear to be relatively few mills in the U.S. producing flat products between those widths.

First Mill

The first continuous wide-strip mill was installed in the U.S. in 1924 and now this country has 33 mills, out of a world total of 55 such mills actually in existence or definitely planned. In Europe, the U.K. has been in the forefront in the introduction of the continuous wide-strip process as also the adoption of the associated process such as cold-reduction and electrolytic-tinning. Before the Second World War, Continental Europe possessed only one full continuous wide-strip mill and one Steckel mill (so-called, because it was developed by Mr. A. P. Steckel in 1931-33). This is a single-stand reversing mill, different versions of which may be used (for the hot-rolling or cold-reduction of wide-strip), both being in Germany. It is stated that Demag, one of the German firms with which the Indian Government has concluded an agreement for the establishment of a steel plant in India, was the first to introduce the wide-strip mill in Germany. But, since the war, practically every European country has been trying to adopt this process. As a result, two continuous strip mills have already been installed in France, one semi-continuous mill in Belgium and a Steckel mill in Luxembourg. Holland, Italy and Austria have each installed a semi-continuous mill. West Germany is planning to replace its dismantled Dinslaken continuous mill and also add a second Steckel mill. Belgium is hoping to have a second semi-continuous mill in operation next year. It is expected that, by 1956, there will be 11 continuous wide-strip mills and four Steckel mills in operation in West Europe, at least three and probably more in the U.S.S.R. and East Europe. The U.S.S.R. is said to have already two mills, one of which was obtained as war reparations from W. Germany. Among other countries, Brazil, Canada and Japan have each a wide-strip mill. Australia is contemplating installation of a continuous wide-strip mill.

The development of these mills is a natural corollary of the growth of demand for all types of flat products, which comprise plates, sheets (coated or uncoated), hoop and strip and their derivatives such as cold-rolled sheets and tin-plate, since it is these forms of steel which find new outlets in a highly developed economy. The demand for these products is increasing faster than the demand for any other type of steel. In the U.S., for instance, in 1951, flat products accounted for 58 per cent., as compared with 40 per cent. in West Europe, and approximately 30 per cent. in East Europe, West European output of flat products is expected to rise from a total of some 16.5 million tons in 1951 to no less than 25 million tons in 1956. It is this phenomenal growth in the productive capacity of flat products in West Europe that was the main factor which prompted the U.N. Economic Commission for Europe (Industry Division) to conduct a study of production and consumption trends in flat products and their implications to the economy of Europe. The results of this study (priced at $1 or 7s. 6d. and available from all dealers in U.N. publications) was published in May last.

The bringing into operation of these mills involves three major problems: First, the utilisation of the mills at a sufficiently high rate of operation to ensure reduction in costs; secondly, the probable markets for the products manufactured; and, thirdly, the complications caused by the obsolescence of so high a proportion of the existing plants.

Consumption of flat products can be influenced by the policies followed by Governments and by inducing changes in national habits which represents a problem in itself. The essential factors are, however, on the side of the steel industry, because the products produced should be cheap and of good quality. The principal consuming industries, too, have to alter their policies in such a way as to ensure a mass demand for standardised articles.

Problem of Obsolete Plants

The institution of continuous wide-strip mills and their ancillary undertakings and the modernisation of plate mills will inevitably render obsolete a large part of the existing steel capacity. The full benefits of modern productive presses can be attained more rapidly and the inevitable social disturbances minimised, especially in Europe, if a well-thought-out obsolescence policy bolder than the one that is at present conceived is put into operation. The alternative is likely to be a prolonged death struggle of obsolete sections of the industry to survive, which may, in the long run, be more harmful to the general interests, social as well as economic, in such countries as those of Europe where the pace of development of the continuous wide-strip mill has been sufficiently rapid. Unless, however, concerted effort is made by producers and consumers alike to expand the market for flat products, it is just possible that the present rate of development of the continuous wide-strip mill process may be followed by a period of under-utilisation of the expanding capacity.

Commenting on the market prospects of the rapid development of wide-strip steel mills, the British Iron and Steel Federation, in its July *Monthly Statistical Bulletin*, makes the following significant observations:

"One question posed by the E.C.E. is whether it will be possible to keep all these expensive strip mills fully employed. The Commission has serious doubts on this score, though it specially excludes the U.K. from this conclusion. On the Continent, wide-strip mills have been the major projects in steel-industry development since the war. It is arguable that they have been installed at too fast a rate—partly because questions of national prestige have been involved—despite the attempts at international co-ordination. Some of the mills are not well sited for economical production, and it is doubtful whether in any European country outside the U.K. adequate steel making facilities are being provided to enable the mills to operate at capacity. Whether there will be a sufficient inducement to balance these development projects, and to attempt to operate the European mills at something like the American rate, must depend in part on market prospects. The consuming industries—already considerably more developed in this country than on the Continent—will need to enlarge their capacity further if the demand for flat products is to show the hoped-for expansion. This, in turn, must depend upon the further growth of demand for such "consumer goods" as motor cars, kitchen equipment and containers, which are the typical products of these processing industries.

"In this connection, it is tempting to point to past experience in the U.S., where the development of the continuous strip mill was followed by a sharp fall in the relative prices of sheet and tin-plate; and where demand consequently showed a phenomenal expansion. A relative cheapening of flat products, with a marked improvement in quality, may also be expected as the Continental strip mills come increasingly into production. But the fact remains that American incomes are far above the European level—creating a much bigger market for motor cars and household appliances; and that the burden of taxation relatively to incomes, was considerably lower during the years of expansion in the United States than it is in most European countries to-day. The Continental strip mills—like their American counterparts in earlier years—may, therefore, have to face a period of under-utilisation before the new capacity can be fully taken up. But the period may be shortened, or possibly eliminated altogether, if a concerted effort is made by producers and consumers alike to extend the market for thin flat products."

PREFABS DESIGNED FOR THE TROPICS

As a result of interest in an exhibit at the last British Industries Fair and of direct market research, one of the leading firms in Britain's rapidly expanding prefabricated-buildings industry is about to produce a new range of units specially designed for tropical climates. A company official, Mr. H. J. Rush, said recently that it was hoped to have them on display at the B.I.F. next spring. He also intimated that the manufacturers, who have so far concentrated on single-storey buildings, are now engaged on production of their first three-storey prototype.

Until this year all the sales emphasis has been on the British home market, and the success achieved can be measured by the fact that to-day 70,000 children all over the country go daily to schools prefabricated by the firm.

Mr. Rush explained that the Company's structures are designed to be as cheap as traditional buildings, to have as long a life, and to be much quicker to put up without making impossible demands on scarce materials or scarce specialised labourers: should be able to erect the main structure of a two-classroom school in one day on a prepared site, with a further five or six days for finishing and decorating.

The firm's present prefabricated buildings, though designed mainly for temperate conditions, are suitable for the tropics in that they incorporate a minimum of timber and are made of materials resistant to damp, rust and insects. The new range of tropical units is, however, being produced with the specific requirements of tropical regions in mind.

TREE-FELLING DEVICE

A hydraulic-powered wedge which fells giant trees in minutes is being tested by the United States Forest Service near San Bernardino, California. The three-foot-long wedge device does the job after preliminary cuts with a chain saw. When the lumberman has determined the direction in which he wants the tree to fall, he saws an undercut in that side of the trunk and another cut on the opposite side. Then, inserting the wedge in the second cut, he pumps the hydraulic mechanism which drives in the wedge to topple the tree. The device eliminates the use of hundreds of wooden and steel wedges as well as the packing and swinging of heavy sledge hammers, according to the Hufford Machine Works of El Segundo, California, its manufacturer. The company claims that the wedge device reduces the danger of falling branches, sometimes caused by the shock of sledge hammer blows, and gives the logger much better control over the direction of the tree's fall. The device can be carried on a sling over a lumberman's shoulder. Only a few minutes and a minimum of effort are needed to topple a 100-foot tree with the combination wedge and saw technique. It has been used in the San Bernardino National Forest to eliminate trees infested with pine beetle.

SHIPPING ACTIVITY AT U.K. PORTS

The aggregate net tonnage of vessels entering British ports with cargo in the foreign trade during July was the highest since August, 1951. Statistics published in the *Board of Trade Journal* show that, at 6,500,000 tons, the July total was 177,000 tons higher than in June, but on a daily average basis entrances were slightly lower, as July was a longer month. The total clearances with cargo were also at a high level in July, rising by 291,000 to 4,600,000 tons net, the highest figure for clearances since August, 1939. The daily average was 3 per cent. higher than in June, and 5 per cent. higher than in July, 1952.

Foreign tonnage accounted for 46 per cent. of entrances with cargo in July, as against 45 per cent. in June, and 42 per cent. in July last year. Foreign tonnage accounted for 36 per cent. of clearances, the same as for July last year but slightly lower than in June. Entrance in ballast totalled 1,700,000 tons net, the daily average being 8 per cent. higher than in June. Clearances in ballast, aggregating 3,600,000 tons, were the highest since the end of the war.

MYSORE IRON AND STEEL WORKS

PROBLEM OF SURPLUS STOCKS OF PIG IRON

AT a time when the iron foundries in India are complaining of gradual deterioration in the supplies of pig iron, the news that the Mysore Iron and Steel Works, Bhadravati, is faced with the problem of disposing of a large quantity of surplus pig iron may sound rather strange. But it does not appear to be so on a careful consideration of facts. The quality of pig iron produced at the Bhadravati Works is high and it is not generally used in the ordinary foundries. Secondly, its selling price is very high. Thus, while the prices of charcoal pig iron and electric pig iron are Rs. 220 and Rs. 200 per ton f.o.r. Bhadravati, pig iron from the Tata Iron and Steel Co., Ltd., is available in Bombay at Rs. 150 to Rs. 160 per ton, irrespective of quality. It is true that the quality of pig iron of the Tata Company is not as high as that of Bhadravati pig, but it is sufficient for the purpose of the foundries.

The main reason for the difficulty of the Bhadravati Works is increased production of pig iron of a high quality for which the market is said to be limited. Formerly, the blast furnace was producing about 25,000 tons. But, presently, this furnace, along with the two electric pig iron furnaces installed, recently, is producing nearly 92,000 tons a year. Another electric pig iron furnace is expected to be ready shortly and, when this goes into production, the total output of pig iron at the Works will be more than 125,000 tons. The three electric pig iron furnaces are expected to produce an average of 360 tons per day.

While the output of pig iron is thus on the upward trend, there has so far been no corresponding increase in the consumption of these types of pig iron in the country. It is stated that, of the present total output of 92,000 tons, nearly 42,000 tons are consumed at the Works and about 4,000 to 5,000 tons per annum are sold outside. There is thus a surplus of about 45,000 tons. The stocks of pig iron at the Works now are estimated at 24,500 tons.

Disposal of Stocks

How to dispose of the surplus output of pig iron is certainly a big problem. This can be done by increasing the capacity of the steel and the casting plants at Bhadravati. Any surplus left over, after meeting the requirements in India, may be exported. It is said that this high quality pig iron is in good demand in many countries, especially in Japan. But it is desirable to devise ways and means of consuming this surplus within the country itself for obvious reasons. We are told that the Mysore Company is fully alive to this need and has been urging the Government of India to sanction early the expansion scheme for steel manufacture already submitted by it. Pending the examination of this scheme, it has submitted another scheme for the installation of a cast iron pipe plant estimated to cost Rs. 45 lakhs. This plant is expected to absorb about 12,000 tons of pig iron per annum. The Works has also submitted a scheme for an alloy and steel plant estimated to cost Rs. 30 lakhs. But, as the plant will not consume pig iron, it is not relevant here. It is to be noted, in this connection, that the management of the Bhadravati Works considers that, if the Works were to run as an economic unit, the major portion of the pig iron produced at the Works should be converted into steel. It feels that, having already completed the first stage of the expansion scheme, it is not desirable to delay further the second stage of the scheme, namely, increase in manufacture of steel. It is true that the price of Mysore steel is higher than that of either of the other two steel-making units in India, namely, the Tata Iron and Steel Co., Ltd., and the Indian Iron and Steel Co., Ltd. But this disadvantage could, it is said, be offset to a large extent by helping the Mysore Works to concentrate on the production of a variety of high quality products for which there is a good market and which fetch higher prices.

With a view to reducing the cost of production of steel, the Works is also examining the alternative processes of the manufacture of steel. It is considering, for instance, the adoption of the Basic Bessemer process, instead of the Acid Bessemer process. For, under the Basic Bessemer process, the cost of steel will be appreciably lower, as basic phosphatic slag will also be produced as a by-product which will go to reduce the cost of ingots by about Rs. 35 to Rs. 40 per ton. The Works is also considering the adoption of the new oxygen process for the manufacture of mild steel. The management of the Works point out that, if these alternatives were adopted, the cost of Mysore steel would not be higher than what it is expected to be in the case of the new Government-sponsored steel plant.

A light maintenance grader which, it is claimed, will handle many of the smaller jobs on which larger earth-moving machines have, until now, had to be uneconomically employed has been introduced by a British firm. The new machine, with a working weight of 8,000 lbs. and a big 42-b.h.p. motor, is capable of moving large amounts of earth and—because of its sensitive hydraulic controls which give quick, easy response to finger-tip touch—of grading to fine limits.

When you plan your winter wardrobe with one eye on the budget, remember Raymond's Jaykay Wool Fabrics are as good as any imported material and cheaper too.

A jacket fashioned in Raymond's Checked Tweeds, and trousers in Raymond's Grey Flannels — apparel for relaxed days—handsome, easy-going, comfortable.

PAY STRUCTURE

You have been obliged to make numerous changes in pay scales and special allowances in recent years, and no end to these alterations is in sight. However well thought out your pay structures may have been originally, the probability is that they are now out of balance and full of anomalies. One of the functions of Unions is to pick out these anomalies and place them before you for correction. In rationalising one existing anomaly it is dangerously easy to create fresh ones, and the process can go on indefinitely. You must have felt the need for an all-embracing review of your basic pay structures to adjust them in relation to each other and to take into account the latest rules governing taxation on incomes. Furthermore, you would like the pay for each job to be part of a flexible and permanent structure which will not have to be scrapped and rebuilt the next time pay has to be generally raised.

The way to attain these objectives is to prepare a plan in co-operation with management and the Unions for the evaluation of every job, followed by grouping into grades and the calculation of a graded incremental pay structure.

TRAINING YOUNG MEN FOR INSURANCE WORK—I

LACK OF EDUCATIONAL FACILITIES

AT the last annual meeting of the Chartered Insurance Institute, held in London, the President of the Institute, Mr. H. Routh, referred to the problem of the shortage of recruits to the insurance field in his own country and urged that insurance deserves to "attract the best brains in the country." He was, therefore, led to consider the problem whether British insurance was getting the "best recruits available." In the course of discussion of this problem, he made quite a few interesting observations which deserve as much notice in this country as in the one to which they were addressed.

Mr. Routh deplored that more young men were nowadays being attracted to the universities or technical institutions than formerly. Although he did not, naturally enough, decry university education as such, he asked whether the universities were not admitting young men who "would have been more profitably engaged in business." He added:

"Young men on the threshold of a university career should remember two things. Firstly, a degree does not of necessity mean a job. There is, I believe, a higher proportion of unemployment among university graduates than among unskilled labourers. Secondly, I maintain that several years in commerce give a man an education second to none. The market place is still the best university in the world."

Old-fashioned Virtues

Why does not insurance work appeal to the British youth of to-day as much as it did to an earlier generation of men? Mr. Routh provided the answer by pointing out that it appeared as though insurance had an "old-fashioned sound in the ears of the rising generation." He said:

"As regards those who do not proceed to the universities, I sometimes think that insurance may have an old-fashioned sound in the ears of the rising generation. In fact, insurance in one sense at least is old-fashioned. By that, I mean that insurance upholds certain old-fashioned virtues which are by no means universally popular nowadays—thrift, free enterprise, good faith and individual responsibility and initiative, for example. It is rather a disturbing thought that some of the fundamental principles on which our business is based should seem prim and unfashionable in the modern world. Yet it may be so, and it is possible that young people who hesitate to come into insurance are unconsciously affected by such ideas. If they are, the fault must be partly ours for not proclaiming our faith to people we meet outside insurance. There never has been room for compromise over the essentials of our business. We do believe in thrift, in free enterprise, in good faith and individual responsibility and initiative—and we shall continue to believe in them, whether they are in fashion or not. Perhaps also we have been at fault in telling our new juniors too much about pay and privileges and too little about duty, discipline and diligence."

Since insurers are finding it difficult to attract "new blood" into the industry, they are trying to make working conditions easier by improved salary scales, staff canteens, more free Saturdays and other devices. After referring to this trend towards making service conditions more acceptable to the workers, Mr. Routh said:

"Strange as it may seem, the appeal of comfortable salaries, easy hours, cheap lunches and short cuts to success is limited. In removing all possible reasons for his dissatisfaction with his conditions, you often make a man dissatisfied with himself. This is the dilemma that has arisen out of the numberless manifestations of the welfare principle we have seen in the last few years. It is not for me to deal with the larger implications of that problem, but, as far as the problem concerns insurance, I feel that to preserve the high standards of service and achievement our officials have maintained in the past, we must offer entrants to the business something more dynamic than Saturdays off and subsidised lunches. Far more effective than these are the inspiration of scope to ambition and the satisfaction that comes from doing work that is interesting and important. Such inspiration and such satisfaction we can certainly offer to those who seek a career in our business. ...

"Security and comfort hold out no great attraction to a vigorous young man just commencing his career. We are far more likely to get the best response from him by appealing to his spirit of adventure, enquiry and service—to the latent wish that is in every young heart to work for success and, at the same time, to help his fellow-men. Insurance, we can tell him, offers fulfilment to the most adventurous spirit or the most enquiring mind. There are opportunities abroad for those who seek them and, at the same time, there is infinite scope for adventure and profitable study in the home field, where insurance meets at first and every phase of the industrial, commercial and social activity that gives life and purpose to our native land. We should also tell our young friend that the strength of this country of ours has for many generations resided in that powerful section of the community which is engaged in professional work, commerce, administration and management—and that insurance is the ideal medium for preserving and developing the particular values and professional and administrative abilities that are typical of our best national characteristics and traditions."

Community of Interest

Mr. Routh was justifiably proud of the international character of insurance. There is no doubt that, if there is any profession which might be truly described as being world-wide in scope, it is insurance. Mr. Routh said:

"We might add that insurance, characteristically British as it may be, is also international, and that, in these days of a world in which distance has been annihilated and willy-nilly we are all neighbours, insurance plays an increasingly important role in contributing to international understanding and the achievement of world peace. Insurance men everywhere speak the same language and enjoy a community of interest. In all sincerity, I believe that that friendly relationship between fellow-practitioners of all races and creeds, based on the same ideas, incorporating the same moral standards, can be a powerful factor in the building of a better world. Naturally, one can hardly expect that a raw youth contemplating an insurance career is likely to understand or be directly influenced by these considerations. What I do think is that, if those who seek to influence newcomers to our business are aware of this broad cultural background to our activities, they can hardly fail to impart to the novice the enthusiasm and the questing interest in our many-sided world that have been the mark of the best insurance men throughout the years."

How are candidates for insurance recruited in this country? It is deplorable but true that no systematic attempt has been made to attract able young men to the field of insurance or to train those who are absorbed, apart from the isolated attempts, made by certain leading individual insurers, to train young recruits for executive positions. In general, for the ambitious young man, who has received only pre-university education, there is no means by which he can either improve his chances in life or learn to do his job in a more intelligent manner. In India, the problem is somewhat different from that in the U.K. There is fortunately no lack of manpower. Many are willing to take up a career in insurance, though Government service still attracts the best talent available in the country. But the point is whether insurers provide that all-round training which alone could make their staff more efficient in their work. Again, what facilities have young men in this country to acquire such knowledge of insurance as will make them better field workers or better members of the profession? This is a question which deserves to engage the attention of both the Government and the insurers.

RUBY GENERAL INSURANCE CO., LTD.

The general decline in business activity which was witnessed in 1952 is reflected in the report and accounts of the Ruby General Insurance Company, Ltd. (Manager: Mr. J. P. Kanoria, Calcutta), for the year ended 31st December, 1952, when the total premium income in the Company's general department aggregated only Rs. 70.38 lakhs as against Rs. 74.24 lakhs in the previous year. This decline was shared by the miscellaneous and marine departments in which the net premium income aggregated only Rs. 34.09 lakhs and Rs. 9.75 lakhs, respectively, as compared with Rs. 39.08 lakhs and Rs. 12.65 lakhs in the previous year. It is, however, noteworthy that the premium income in the fire department registered an increase of Rs. 3.42 lakhs to Rs. 25.94 lakhs. Indeed, the fire account has, once again, proved to be the mainstay of the Company, for it is this account which has, as it did last year, more than made up for the losses sustained in the other two departments. The Directors have consequently been able to maintain the dividend at 3½ per cent.

The following table gives the progress of the Company's fire, marine, and miscellaneous departments during the three years ended 1952:

(Rs. in lakhs)

	Year ended 31st December		
	1952	1951	1950
Fire Department			
Net premium income	25.94	22.52	21.17
Net claims paid and outstanding	7.62	8.49	9.04
Commission and expenses	11.53	7.12	8.04
Profit	4.79	7.91	4.09
Fire Fund	10.88	9.01	10.88
Miscellaneous Department			
Net premium income	34.09	39.08	34.79
Net claims paid and outstanding	24.42	27.05	21.43
Commission and expenses	13.80	18.41	16.80
Profit (+) or loss (—)	—3.93	—6.22	—4.46
Miscellaneous fund	13.88	15.63	13.92
Marine Department			
Net premium income	9.75	12.65	10.40
Net claims paid and outstanding	8.37	8.23	4.72
Commission and expenses	5.10	4.54	4.00
Profit (+) or loss (—)	—1.65	—0.36	+3.14
Marine fund	4.14	5.37	5.19

It will be seen from the table above that the impressive increase in the net premium income in the miscellaneous and marine departments which was witnessed in the year 1951 has been lost during the year under review. Explaining the setback in the marine business, Mr. B. M. Birla, Chairman, stated, at the annual meeting, that it was mainly due to the "serious competition" which this department had to face, "resulting in severe rate cutting." In the miscellaneous section, the decline is due to the adoption of a deliberate conservative policy, for the management has wisely refrained from underwriting uneconomic risks. This should be equally welcomed, for, as the Chairman rightly holds, it is only "by adopting a very cautious underwriting policy that heavy loss in this department can be avoided." But conservation does not mean stagnation. That the Company is alive to the need for exploring new avenues of improving as well as extending its activities is evident from the fact that it is trying to "establish itself as aviation underwriters in the international market." The Chairman expressed the hope that the Government would place the aviation insurance business—now that airlines have been taken over by the Government—with such Indian companies as have established regular aviation departments.

In the life department, the new business completed during the year was Rs. 2.49 crores, as against Rs. 2.58 crores in the previous year. The Company's total premium income improved from Rs. 55.97 lakhs to Rs. 56.07 lakhs. Another feature, which the Company shares with several other insurers, is that the yield from investments has gone up; it was 3.43 per cent., as against 3.02 per cent. in 1951.

The profit for the year, together with the amount carried forward from the previous year and the transfer of Rs. 0.72 lakh from the exceptional loss reserve account, aggregated Rs. 1.67 lakhs. After transferring Rs. 55,000 to the reserve for bad debts, there was a balance of Rs. 1.12 lakhs. The payment of the dividend of As. 4 per share absorbs Rs. 1 lakh, leaving a balance of Rs. 12,157 to be carried forward, as against Rs. 29,214 brought in. The Company's financial position is very sound, as will be evident from the fact that it has, apart from a capital of Rs. 32.0 lakhs, reserves aggregating Rs. 248.10 lakhs, inclusive of fire insurance fund of Rs. 10.38 lakhs, miscellaneous insurance fund of Rs. 13.88 lakhs, marine insurance fund of Rs. 4.14 lakhs and life insurance fund of Rs. 202.78 lakhs.

HINDUSTHAN GENERAL INSURANCE SOCIETY LTD.

Although the working of the Hindusthan General Insurance Society Ltd. (Officer-in-charge: Mr. D. Das Gupta) during the year ended 31st December, 1952, resulted in a decline of Rs. 2.34 lakhs in the overall premium income which aggregated Rs. 19.82 lakhs, it is satisfactory to note that the net premium income in the Society's accident and marine departments actually moved up from Rs. 2.36 lakhs and Rs. 4.25 lakhs, respectively, in 1951 to Rs. 2.49 lakhs and Rs. 4.62 lakhs in the year under review. Thus, the overall decline is mainly accounted for by the setback only in the fire department. Even here, it is the sizable decline of about Rs. 3 lakhs in the foreign business portfolio of the department that was responsible for the decline in fire business. Commenting on the working of the Society, Dr. N. N. Law, Chairman of the company, made a reference to the decline in general business activity and said:

"It was all but natural that such a setback in general conditions of trade and industry should have its repercussions on the insurance business which thrives on them. It called upon your Society to exert itself to the utmost to overcome the difficulties and it is a matter for gratification to me to be able to say that, despite the heavy odds, our Society has acquitted itself well in its work during the last year, as will be evident from its business figures."

The following table gives the working of the Society during the three years ended 31st December, 1952:

(Rs. in lakhs)

	Year ended 31st December		
	1952	1951	1950
Fire Department			
Net premium income	12.71	15.65	13.85
Claims paid and outstanding	4.78	5.71	6.97
Commission and expences	8.01	7.72	7.28
Profit (+) or loss (—)	+1.06	+1.40	—0.62
Accident Department			
Net premium income	2.49	2.36	2.10
Claims paid and outstanding	1.14	1.27	0.86
Commission and expences	1.40	1.14	0.97
Profit (+) or loss (—)	—0.10	—0.09	+0.32
Marine Department			
Net premium income	4.62	4.25	3.67
Claims paid and outstanding	2.12	2.07	0.65
Commission and expences	1.78	1.35	1.79
Profit	0.23	0.61	1.24

The table above shows how the net premium income in the Society's accident and marine departments has increased from year to year. In the fire department, the decline, as stated already, is due mainly to the setback in the Society's foreign business. The following table gives the premium income from the Society's Indian and foreign business in all the three departments of the Society for the three years ended 31st December, 1952:

(Rs. in lakhs)

	Year ended 31st December		
	1952	1951	1950
Fire			
Indian	2.67	2.21	1.21
Foreign	10.40	13.34	12.34
Miscellaneous			
Indian	2.47	2.22	2.07
Foreign	0.02	0.13	0.09
Marine			
Indian	2.89	2.39	1.61
Foreign	2.23	1.86	2.07

The Society's fire and marine departments are working on a profitable basis. The accident department, however, has again shown a loss, which is by no means an uncommon feature of the working of general insurance companies, whether in this country or abroad. After taking into account the profits from the fire and marine departments at Rs. 1.06 lakhs and Rs. 0.35 lakh, respectively, and the net income from interest, dividends and rents and other sundry items, the profit and loss account shows a credit of Rs. 1.79 lakhs. After making the necessary adjustment for the loss of Rs. 0.10 lakh sustained in the accident department, a sum of Rs. 1.69 lakhs has been carried to the profit and loss appropriation account, which, together with a sum of Rs. 0.19 lakh brought forward from the previous year, makes in all Rs. 1.88 lakhs. Out of this sum, the Directors have provided Rs. 85,000 for tax, Rs. 22,000 for reserve for bad debts and Rs. 5,000 for reserve for depreciation of investments, leaving a balance of Rs. 73,030. The payment of a dividend of Rs. 2 per share or 4 per cent. per year (the same as was paid last year) absorbs Rs. 60,000, leaving Rs. 13,030 to be carried forward. The Society's financial position is strong. As against a capital of Rs. 15 lakhs, it has reserves aggregating Rs. 13.01 lakhs, inclusive of fire insurance fund of Rs. 5.08 lakhs, accident and miscellaneous insurance fund of Rs. 1.00 lakh and marine insurance fund of Rs. 3.40 lakhs.

RUBY GENERAL INSURANCE CO., LTD.

SATISFACTORY PROGRESS IN FOREIGN BUSINESS

PRESIDING over the Annual General Meeting of the Ruby General Insurance Company, Ltd., held at Calcutta on Friday, 25th September, 1953, Mr. B. M. Birla, Chairman of the Company, emphasised the need for a liberal exchange control policy, in order to facilitate the expansion of foreign business by Indian insurers. He pointed out that the Company had maintained its satisfactory progress in the overseas field.

The following are extracts from Mr. Birla's speech:

"GENTLEMEN,

"The report of the Directors and the audited accounts for the year 1952 have been with you for some time and I expect you would permit me to take them as read.

"The following figures will reveal the progress of the Company:

Table A—General

	1952	1951	1950
	Rs.	Rs.	Rs.
Fire ...	25,94,000	22,52,000	21,17,000
Miscellaneous	34,69,000	39,08,000	34,79,000
Marine ...	9,75,000	12,64,000	10,40,000
Total Rs.	70,38,000	74,24,000	66,36,000

Table B—Life

	1952	1951	1950
	Rs.	Rs.	Rs.
New business	2,49,00,000	2,59,00,000	3,27,00,000
Life assurance fund ...	2,02,78,000	1,68,39,000	1,33,71,000
Premium income ...	56,07,000	55,97,000	52,42,000

"There has been a fall in the total premium income in the general business but examining the figures section-wise you will find that there is a satisfactory increase in the fire premium income, in spite of the lower commodity prices and the general business slump prevailing during the year under review. The decrease in the marine premium has been mainly due to the serious competition which this department has to face resulting in severe rate cutting. The scope of marine cover in recent years has become much broader and sometimes the underwriters are called upon to bear the losses which normally are of trade nature. It is, therefore, imperative that the premium rate should be maintained at a reasonable level which will be commensurate with the underwriters' liabilities. The reduction in the miscellaneous premium income has been due to the more cautious policy your Company has pursued in underwriting automobile and other accident risks. The automobile insurance has fared unfavourably all over the world in recent years and it is only by adopting a very cautious underwriting policy that heavy loss in this department can be avoided. It is a matter of satisfaction that the loss in this department is considerably lower as compared to that of previous years.

"Your Company is doing considerable business in aviation insurance and is trying to establish itself as aviation underwriters in the international market. The Government has recently nationalised the Indian airlines. I, therefore, reasonably expect that the Indian companies who have established regular aviation departments would continue to get Government support to sustain their departments sufficiently so that they may be counted as aviation underwriters of good standing in foreign countries.

"The Company has maintained its satisfactory progress in the overseas field but sometimes it cannot expand its activities according to the programme due to the rigid policy of the Insurance Department as well as of the Exchange Control authorities. A liberal policy by the Government would help the establishment of Indian insurers in the international market which will ultimately benefit the national economy.

"The business of life department has been slightly less this year than the previous years but in the last two years its expense ratio has been considerably brought down. Both in the year 1951 and 1952 the life department fund increased approximately by Rs. 35 lakhs annually as against Rs. 25 lakhs in the year 1950. The renewal expense ratio has shown further improvement. The interest yield has also increased and it is 3.43 per cent. in 1952 as against 3.02 per cent. in the previous years. It is hoped that the interest earning of life department would show a further improvement in future years."

ESTRELA BATTERIES LTD.

MR. F. H. MEHTA'S SPEECH AT ANNUAL MEETING

THE Fourteenth Annual General Meeting of the shareholders of Estrela Batteries Ltd. was held in Bombay on 25th September, 1953, Mr. F. H. Mehta, J.P., Chairman, presiding. Before reviewing the working of the Company for the year ended 31st March, 1953, the Chairman referred to the untimely and tragic death of Mr. Jagmohandas J. Kapadia, one of the Directors of the Company, and paid a tribute to his experience and profound knowledge of company law and accounting, which were greatly helpful to the Company. Mr. Mehta thanked the Committee of Management, which was appointed by the Board of Directors in April, 1947, for conducting the affairs of the Company efficiently up to the end of the year, when Messrs. Choonilal Manilal Ltd. took over charge as Managing Agents. Referring to the Company's working, Mr. Mehta said:

"The Directors' report and the audited statements of accounts for the year ended 31st March, 1953, having been in your hands for some time, I will, with your permission, take them as read. Before moving their adoption, I would like to say, at the outset, that the working of your Company for the year under review, has resulted in a meagre profit of Rs. 7,729-1-2 without making any provision for depreciation.

"In order to enable your Directors to recommend the dividend on preference shares, they have to fall back on the reserve fund by transferring the sum of Rs. 50,000 therefrom.

Competition

"The rapid drop in the profits, as compared with the previous year, is due to several reasons enumerated in the Directors' report, such as unprecedented fall in Government sales, strike at the Bombay Gas Co., Ltd., increase in price of raw materials and reduction in selling price of the finished goods. We have, in our industry, a powerful foreign unit which has at its disposal the technical assistance and know-how and other resources of a powerful foreign combine. The prejudice for our products is hampering us to such a great extent that to stand in the market we have always to maintain a price structure about 15 per cent. below theirs. Even the Tariff Commission, during the course of its enquiries, came to the conclusion that 'the two Indian units are already struggling hard to maintain their position in competition with the foreign unit. In the case of this industry, however, which, at present, consists mainly of three units, the elimination of two units will result in the remaining unit acquiring a monopolistic control of the entire field and this is obviously not in the long-term interest of the consumer.' I concur with this view and I feel that, if things are allowed to be continued in this way, a time may come when the Indian units will be non-existent. In view of the above, I appeal to the Government that it should find out a way to allay this difficulty."

Proceeding, Mr. Mehta observed:

"Efforts are being made to improve the quality of our products, as well as to increase production, by introducing new machinery wherever possible, as and when required, in our factory, and to bring down the production cost."

Protection

Adverting to the Government of India's resolution, following the Tariff Commission's enquiry into the continuation of protection to the dry battery industry, not to extend protection beyond 31st December, 1953, Mr. Mehta drew the shareholders' attention that it would be open to the industry to apply afresh for protection, if the underlying assumptions of the Commission's recommendations changed.

Mr. Mehta went on to say:

"In view of the adverse results of your Company, no bonus has been paid to the staff and workers of the Company.

"Regarding the working of the current year, I feel hopeful in the light of the results achieved so far.

"I now propose that the Directors' report, together with the audited statements of accounts for the year ended 31st March, 1953, be received and adopted. After the resolution is duly seconded, I shall be glad to deal with any enquiries from the shareholders."

PROBLEM OF UNEMPLOYMENT

SOME MISCONCEPTIONS REMOVED—ERRORS OF PLANNING COMMISSION BROUGHT OUT

(By Prof. D. R. SAMANT, School of Economics and Sociology, University of Bombay)

THE problem of unemployment has fortunately started attracting increasing public attention in this country. Whether the employment situation has really worsened lately in the proportion to the public agitation on that account may be subject to doubts. All the same, unemployment is an important economic problem in this country and needs serious attention.

Many people seem to be at a loss to explain how employment could have decreased when, as a matter of fact, prices and production have shown some rise during the past few months. But the situation will not prove so baffling, if it is viewed in the context of certain economic conditions and events.

In so far as prices are concerned, it must be remembered that the past year or so has been the period of decontrol. The justification for controls was the supposed disparity between demand and supply which, in the absence of controls, was expected to result in a great rise in prices. But, in spite of there being no significant increase in production, the lifting of controls has not led to much rise in prices. For instance, prices of cereals have risen but a little and so also the prices of cotton textiles. That the prices of such important necessities of life have shown such immaterial rise after decontrol, without there being any noteworthy increase in the supply, means that the demand for them meanwhile must have decreased a great deal. The only other explanation can be that the controls were entirely unjustified. But there is no doubt that controls in those days were justified. So the insignificant rise in prices after decontrol must be attributed to a sudden fall in demand during the corresponding period. This fall in demand must obviously be due largely to fall in employment.

Experience of Other Countries

In other countries, where employment has been maintained at a high level, the rise in prices has been much more. For instance, since 1948, the wholesale price index has risen in some of the important countries as follows:—

	Per cent.
Australia	88
France	57
U.K.	50
Union of South Africa	51
Canada	14

As compared with these figures, prices in India to-day are only round about 3 per cent. higher than in 1948. It must also be remembered that the high prices abroad influence the Indian price level through their influence on the prices of our exports and imports. In short, the small rise in prices in India alongside of increasing unemployment need not cause any perplexity.

Of course, this does not mean that we should have allowed a 50 per cent. rise in our price level too. What it means is that, with any programme of economic development worth the name, it would not have been possible for us to remove controls with such small rise in prices. The fact is that, though the Planning Commission has supported controls, it has removed all need for controls through its financial programme. It has completely failed to grasp that what matters here is not so much the size of public investments but the methods of financing them. Investments financed by external assistance, or by measures of additional taxation and borrowing, or by further deficit financing are not the same thing.

No Cause for Wonder

The next question is why should employment decrease when production is on the increase? The published production figures cover agriculture and large-scale industries. It should be easy to understand that the small increase in agricultural production need not mean any increase in employment. Similarly, such, increase in the large-scale industrial production as has been there can actually come about without any increase in employment or even with decrease in employment. During the war period, first because of high profits and, secondly, because of excess profits tax, employment in factories had increased much in excess of the increase in production. With the disappearance of excess profits and excess profits tax, as well as the controls, the employers are much more interested in keeping costs down. Besides, the labour costs also have increased a good deal recently. The employers, therefore, are now very keenly interested in cutting costs by keeping employment as low as possible and by getting from the workers as much as possible. So, considering the room for improvement in the organisation and management of Indian industries and the intervening surplus employment, there is no wonder if some 12 per cent. increase in industrial production since 1951 is accompanied by fall in employment.

Fall in Demand

But the total fall in demand undoubtedly has been much more than what is likely to be caused by the fall in employment in large-scale industries. This means that employment elsewhere, say, in services and certain other occupations supplying less essential consumption needs must have decreased to a much greater extent. In short, it should be clear, how, viewed against the proper economic background, the small rise in prices and production of agriculture and large-scale industries need not be incompatible with a fall in the total employment and income.

It is, of course, very difficult to make any accurate quantitative statement regarding the size of unemployment, owing to the lack of any up-to-date comprehensive data. The published figures cover only a part of the total employment and are very much in arrears. But, on the whole, it seems that employment in private sector is declining; much more so in the case of unorganised small-scale occupations. Looking to the figures published by the employment exchanges, it is clear that, while registrations are increasing, the placements are decreasing. Considering these facts, it should be obvious that, though accurate figures cannot be given, there are clear trends of declining employment. The situation is made worse by non-absorption of the new entrants to the labour market, who consequently inflate the ranks of the unemployed. For, India, it is not enough to have stable employment, but we must have expanding employment. The development programme, started under the expert guidance of the Planning Commission, was expected to achieve this. But, unfortunately, the introduction of the development programme, far from being followed by *increasing employment opportunities*, has actually been followed by decreasing employment opportunities. Even the Planning Commission had to admit in the Progress Report that, "in the general economic situation, the more serious development has, however, been the appearance of signs of growing unemployment." This is so, in spite of the fact that investments in the public sector under the Plan have been increasing from year to year. Such increase in investments must result in creating additional employment. If, in spite of this, unemployment is growing, it means that employment in other sectors of the economy is decreasing at a faster rate.

Test of An Expansionist Programme

Any expansionist programme worth the *name must result in increasing* the total employment. Increase in employment, if not accompanied by fall in wages, is bound to increase total national income. In India, money wages, far from falling, have actually been rising during the past few years and hence increase in employment must result in increasing national income. An increase in national income must necessarily mean either an increase in money supply or rise in its velocity of circulation or, and usually, both. No increase in employment, with constant or rising wage rates, can therefore be imagined without increase in monetary circulation. Now, according to the Planning Commission's Progress Report, the domestic money supply during the Plan period has declined by about Rs. 115 crores, which, by the way, seems to be an underestimate, looking to the Reserve Bank figures. A part of this decline, the Report says, is due to a shift from demand to time deposits. What, in short, this means is that, during this period, there has been a fall in the quantity as well as velocity of money. With quantity and velocity of money declining on the one hand, and labour costs prices rising on the other, transactions, that is, economic activity, and consequently employment, must have declined still more. In short, there has undoubtedly been a *rapid decline in employment* in the recent past, though there may be differences of opinion regarding the exact magnitude of the rate of that decline.

Wrong Conclusion

According to the Planning Commission, the growing unemployment "is largely a consequence of the break in the world prices, the deterioration in terms of trade, and the effect of these on domestic income." (Progress Report, page 2.) Fall in world prices can affect domestic employment by reducing production for exports or by reducing the surplus in the balance of payments. But, as the production of export commodities has not decreased, it means that fall in foreign demand was made good by rise in internal demand. So employment in the production of those commodities need not fall. Another possible effect of the fall in world prices may be that, as the total income earned from the exports decreases, the employment created by the expenditure of that income will decrease too. But, if whatever is earned abroad is spent abroad, then whether we earn more and spend more or earn less and spend less it will have no effect on domestic employment. From that point of view, inasmuch as there has been adverse trade balance during this period, the high or low income earned abroad must have affected the size of the deficit only and not domestic employment. Besides, a large part of the high income earned because of the high world prices was appropriated by Government by way of export duties. When, following the fall in the world prices, export duties were reduced or removed, a big part of the fall in income was suffered by Government. But this had no adverse effect on Government expenditure which actually has increased. So, in short, it is wrong to say that employment in India has decreased because of the fall in the world prices of our exports.

As regards the deterioration in terms of trade, it may reduce relatively the real national income by reducing the quantity of imports available in exchange for exports; but, by itself, it need not have any adverse effects on domestic employment. The decline in world prices for our exports, therefore, cannot be accepted as the cause of the growing unemployment.

Another explanation offered by the Commission is that "the growth in unemployment recently in evidence is mainly an urban phenomenon caused by a sharp contraction in trading incomes." (Progress Report, page 3.) This is a wrong explanation and that it should emanate from an expert economic body is astounding. The fall in trading incomes is itself the result of fall in demand which in its turn is the result of fall in employment. The Commission has thus reversed the order of the cause and the effect. In so far as foreign demand is concerned, as pointed out above, owing to adverse balance of payments, the high or low profits earned on exports must not have had any effect on domestic employment. The fall in trading incomes from domestic trade no doubt must have caused a second round of contraction of economic activity; but that certainly is not the originating cause.

Not Progress But Regress

As none of the explanations offered by the Commission can be accepted as satisfactory, the cause of the growing unemployment must be sought somewhere else. At the outset, it must be remembered that growing unemployment is the result of declining national income. The total national income is made up of consumption expenditure (public expenditure—transfers) and private investments. And so if total national income, in spite of increase in public expenditure, is declining it means that consumption expenditure and private investments are decreasing more than the increase in public expenditure. This obviously signifies not economic progress but regress.

In respect of determining national income, Government expenditure plays a key role. Private investments, being mostly induced ones, follow up the general trends that may be generated by public expenditure. From the point of view of national income, what is important, as pointed out earlier, is not the size of the public expenditure but the method of financing it. For an expanding economy, Government expenditure must result in initiating a rise in national income. This can be done in two ways by mobilising the idle cash holdings or by increasing the total money supply. Under normal economic conditions, i.e., in the absence of depression, Government borrowings are bound to be more at the cost of private investments, say, in buildings, than by way of mobilising idle cash holdings. Besides, for a rapid economic expansion, as is desired in this country, the monetary circulation must increase by much more than what can be achieved by demobilisation of the idle cash holdings. For this, the total Government disbursements must exceed the total Government collections in form of taxes and loans from the public or what is known as budgetary resources in Government of India's parlance.

Now let us see what has been the result in this respect of the total developmental expenditure by the Central and State Governments during the first two years of the Plan for which figures are published in the Progress Report. Of course, the rest of the budget of these Governments is supposed to be neutral from the income point of view. According to the Progress Report, the total outlay on the Plan by the Central and State Governments during the first two years of the Plan amounts to Rs. 584 crores. As against this, the total withdrawal of money by these Governments amounted to Rs. 596 crores. This figure is made up as follows: Taxes and railway surpluses, which is also a form of tax, Rs. 310 crores; loans from the public Rs. 130 crores; sale of securities, held in reserve, to the public, as the Progress Report admits, Rs. 66 crores; proceeds of the sale of American wheat, approximately Rs. 90 crores: total Rs. 596 crores. So the net effect of the developmental programme during the first two years of the Plan, instead of being expansionist has actually been deflationary. The whole development programme, instead of increasing the supply of money to the economy, has actually resulted in contracting it by nearly 12 crores of rupees.

Deflation Carried Too Far

The situation is made still worse by the adverse balance of payments. The total deficit on current account during these two years amounts to Rs. 169.1 crores. If we deduct from this Rs. 90 crores being the price of American wheat for which an allowance has been made above, the net deficit amounts to nearly Rs. 80 crores. Whether the deficit is financed by liquidating sterling balances or otherwise, it is bound to have deflationary effect on the economy. So Government transactions and the balance of payments transactions taken together, have been responsible for initiating a deflationary trend of the magnitude of more than Rs. 90 crores during the last two years. The total deflationary effect upon the entire economy is bound to be much larger owing to multiplier effects. No one who possesses any knowledge of economics, therefore, need feel surprised at the contraction of economic activity and employment in India during the Plan period.

With such deflationary trends, investments in the private sector cannot be expected to increase. Not only that but they are bound to decrease. Private investments, being induced investments, will not increase, unless effective demand increases. With declining effective demand, private investments are bound to decline. Here again things have been made worse by the rise in rate of interest and the scarcity of finance, thanks to the credit and monetary policy followed during this period. There is thus increase in the costs, on the one hand, and decrease in the expectations of profits, on the other. Under such a situation, private enterprise cannot be blamed for the stagnant or regressive economic conditions. Private enterprise is not on strike, but it simply finds it not worth while to function.

Importance of Demand Ignored

Surprisingly enough, the Planning Commission has completely failed in understanding the importance of demand for realising any increase in production in the private sector. It has proceeded to estimate increases in production and employment with complete indifference to demand as if it is not a determining factor at all. The Plan, too, does not contain anything that might lead to increase in demand in the absence of which all the estimates regarding increase in employment and production are bound to remain on paper only.

For instance, the Five-year Plan contains some estimates of the increase in industrial employment, large-scale, small-scale and cottage during the Plan period. Now, inasmuch as the production of this employment is meant for sale on the market, it will have to be accompanied by an equal increase in demand. Otherwise, howsoever we may wish for that increase in employment, it will simply not take place. Assuming all this increase in production to be of consumption goods, let us make a rough estimate of the rise in income that would be needed to create demand for the expected increase in production. The Planning Commission estimates that the additional employment in the mechanised industrial sector during the Plan period, i.e., 1951-56, will be of the order of four lakhs. Now, according to the National Income Committee, the productivity of the workers in such industries has been round about Rs. 2,000 a year. The total value at that rate of the production of these additional four lakhs of workers will be Rs. 80 crores. In the case of cottage and small-scale industries, the total employment is expected to increase during the same period by 20 lakhs. In this case, the productivity per worker is estimated by the National Income Committee to be Rs. 600 per annum. The total value of the production of the 20 lakhs of workers, therefore, would be Rs. 120 crores. These occupations are also expected to provide fuller employment to 36 lakhs of underemployed persons. Supposing, on an average, they are unemployed to the extent of one-third of the year, their additional contribution to production may be estimated at Rs. 200 per head per annum. The value of their contribution, therefore, will amount to Rs. 72 crores. The total value created annually by the estimated increase in employment will thus be Rs. 272 crores. Now, inasmuch as people spend only a part of their income on industrial products, the total increase in income will have to be much more than Rs. 272 crores if industrial products of that value are to be sold. According to the National Income Committee Report, of the total national output, only round about 17 per cent. consisted of "mining, manufacturing and hand-trades." So, erring on the liberal side, we may take 20 per cent. of the income being spent on consumption of industrial products. In that case, for creating a demand for Rs. 272 crores worth industrial products, the total income will have to rise by nearly Rs. 1,400 to Rs. 1,500 crores. If this increase were to be realised during the Plan period, the national income should have risen by this time at least by Rs. 500 crores. But nothing of that sort has happened. Actually, the national income to-day must have been less than what it was at the beginning of the Plan.

Certain Prerequisites

A pertinent question that arises here is how to follow a policy of expanding employment. Obviously, any increase in employment means increase in production. Such increase in production will not come about unless demand increases; and demand will not increase unless national income increases. National income in its turn will increase only as a result of increase in net investments. Investments for replacement of assets, as well as other investments out of prior savings, cannot increase the total national income. It should also be remembered here that even investments undertaken by new money will not increase national income if they are offset by adverse balance of payments. In short, if investments are to increase employment, they must result in increasing national money income, for that the planned investments must exceed prior savings, voluntary or compulsory, say, in the form of taxes. No increase in public investments financed by increasing taxation of the existing income will achieve any increase in total employment, except in special cases where the taxes may be paid at the cost of savings which would have not been invested. Not only that, but any rise in indirect taxes, impinging upon consumption, for financing more investments is bound to result in reducing total consumption and employment. The Planning Commission, unfortunately, has shown complete ignorance of the basic principles of financing employment expansion. And, if the present financial policy is not changed, we are sure to find ourselves faced by increasing unemployment.

The total amount of net investments needed for bringing about the desired expansion of employment need not be entirely in the public sector. Any increase in Government expenditure is bound to result in increasing demand. To meet the increased demand steps must be taken to increase production. This will be facilitated if institutions like the Industrial Finance Corporation come forward to guide and help private enterprise. They will have to direct and underwrite private investments. The Reserve Bank will have to supply finance, if necessary, against the backing of the underwritten capital issue. In this case, a part of the private investments also will result in increasing national income. Thus, private and public investments, both taken together, will contribute to the expansion of the total income and employment. To achieve maximum employment effect all the new investments should be undertaken not in the old industrial centres but in new places so that the geographical employment multiplier will be very high.

Not an Impossibility

It is frequently maintained that providing employment to the new entrants to the Indian labour market every year is a stupendous task, almost verging on the border of impossibility. But that need not be so. For instance, our Prime Minister is reported to have said recently that nearly 9 lakhs of new workers are to be provided with employment every year. That really need not be a difficult job for our economy. In the first place, all of them need not be employed in large-scale industries requiring huge capital equipment. Many of them will be absorbed in trading and building activities, other small-scale enterprises and personal services. Nearly 4 lakhs of people can be absorbed in this way if our national income increases sufficiently to pay for their services. In that case, only 5 lakhs of workers will have to be absorbed in industries. According to the Census of Manufactures, 1948, the average investment per worker in industrial factories was Rs. 1,100 and odd. If we deduct land values and make allowance for increase in prices, the average fixed capital investment required per worker may be taken as Rs. 2,500. This means total investment of Rs. 125 crores a year for employing 5 lakhs of workers. Supposing that, out of this Rs. 125 crores, nearly Rs. 40 crores are spent for imported capital goods, the remaining Rs. 85 crores, even at a multiplier of two, should generate an income of Rs. 170 crores, which should be enough to create employment opportunities for more than 9 lakhs. For instance, supposing the productivity of the 5 lakhs employed in large-scale industries is Rs. 2,000 per head per annum, the total value of their production will be Rs. 100 crores a year Similarly, supposing the productivity of the remaining 4 lakhs on an average is Rs. 1,000 a year, the total value of their output will be Rs. 40 crores a year. The total income generated by the initial investment, therefore, will be more than enough to create demand for the output of the 9 lakhs new entrants to the labour market. The excess demand created by the investment programme will prove useful in reducing the normal unemployment in the economy. For this, the most essential thing necessary is the net investment of Rs. 125 crores a year, in the public and private sector taken together.

Lastly, it may not be out of place to make here a passing reference to the two commonly held misconceptions regarding the employment problem in India. Quite frequently the present size of India's population and the annual additions to it are mentioned as the causes of unemployment. The large size of population need never be a cause of unemployment. As the consumption wants of population increase in proportion to increase in population, there is no reason why increase in population should be the cause of unemployment. Owing to niggardliness of nature, it may be a cause of relative poverty, but it need never be a cause of unemployment. Unemployment is essentially due to faulty economic organisation.

Technological progress is also frequently mentioned as the cause of unemployment. This again is entirely wrong. Technology simply increases the productivity of human labour. And, so long as total human wants have not become quantitatively absolutely fixed, there is no reason why any increase in the productivity of human labour should be a cause of unemployment. Employment is the function not of productivity but of demand. With deficient demand, unemployment will exist even with low productivity of human labour.—*All Rights Reserved.*

AGRICULTURAL MINISTERS MEET

PROBLEM OF RIGHT METHODS OF APPROACH TO FARMERS DISCUSSED

THE conference of State Ministers of Agriculture and Co-operation, held at Delhi last week, met in an atmosphere completely different from that in which a series of such conferences were held in the past. Formerly, the conferences were held with a view to co-ordinating measures such as controls on price, procurement, distribution and production of foodgrains. As the country was faced with acute shortage of food, the attention of Ministers used to be concentrated mainly on grow-more-food schemes. The conference also used to devote attention to the question of procurement and supply of foodgrains in both surplus and deficit States. A good deal of time was also spent on allocation of quotas by the Centre to the States. State Governments undertook upon themselves the onerous work of feeding the urban and semi-urban areas through rationing. The Central Government too assumed the responsibility of subsidising foodgrains, giving grants and importing foodgrains to the extent of three million to about five million tons per annum. These allied problems too used to figure in the conferences in the past.

Events on the food front during the past year and a half have so developed that some of the problems noted above are not there, while the importance of others has diminished on account of the improvement in the food position. Thus, thanks to good rains and seasonal weather last year, the overall acreage under cereals was the highest so far in 1952-53, being roughly 200 million acres. In the output of rice, maize and barley, the country witnessed an all-time record during the year. The usual "grow-more-food" method has been supplemented with a drive for rice cultivation. The prices of foodgrains, which had proved a severe headache in previous years, have generally declined and, therefore, give not much cause for anxiety. Again, to-day, modified rationing has been introduced in 13 districts including 40 municipalities in West Bengal. At present, the rationed population in the whole of India stands at 39 million, as against 128 million at the end of 1952. Rice content of the ration has been increased in West Bengal, Madras and Travancore-Cochin. Imported wheat has been supplied at reduced price of Rs. 14 per maund for sale in scarcity areas in Bombay, Mysore, West Bengal and U.P. What is more, all State Governments can now sell wheat in any quantity, both to consumers and traders, except in P.E.P.S.U. and the Punjab. This freedom is the result of large stocks of foodgrains with the Centre as also the States. The total stocks, amounting to 2.2 million tons at the beginning of August last, compared favourably with 1.5 million tons at the end of 1952. The producer is also now free to move his produce wherever he likes within the State and sell it at the best price he can get.

Change in Food Position

In view of the changed position in the supply and distribution of foodgrains as noted above, the conference which met at New Delhi last week under the presidentship of Dr. Punjabrao Deshmukh could devote itself to the constructive task of increasing the output of agricultural commodities, on lines indicated in the Five-year Plan instead of to the negative problems of food controls. Dr. Deshmukh, in his address to the Conference, drew the attention of the State Ministers to the recommendations made by the Planning Commission to achieve the targets. These include, as readers are aware, the land policy aiming at fixing a ceiling on the existing holdings and eliminating fragmentation of holdings, organisation of Community Projects, establishment of National Extension Service, encouragement of the Co-operative Movement, development of cattle wealth, marketing of produce, reclamation of land, establishing contact with farmers through proper agencies. None of these problems is new They have been in existence for centuries. In fact, it was to tackle them that the Departments of both Agriculture and Co-operation were established over half a century ago. The progress made by these Departments during this period has not been as much as one would wish. There has undoubtedly been an increase in the staff of these Departments, in the funds allotted to them and in the land and debt legislation found necessary for ameliorating the condition of the farming classes. Funds also have been expended on spectacular agricultural research schemes. In spite of all this, the results achieved have not been commensurate with the amount of money and effort expended.

The causes for this poor progress are too familiar to need any detailed reference here. Although poverty, ill-health, illiteracy, outmoded methods of cultivation, unhelpful tenancy laws, uneconomic plots, reluctance on the part of farmers to adopt modern process of farming, etc., gave rise to a series of difficulties, the major cause was the lack of proper approach on the part of State Governments in the matter of carrying the results of research to the field. It is, therefore, encouraging to note that a special emphasis on this problem was placed by both the Prime Minister, Mr. Nehru, and Dr. Deshmukh in their addresses to the Conference.

Kisan, the Common Man

In his inaugural address, Mr. Nehru did well in drawing pointed attention to the fact that the common man, whom the Five-year Plan was supposed to benefit, was being forgotten. This was true, he said, not only of planning, but also of the administration in all its aspects. He declared that "no real progress could be achieved till this attitude is corrected." The only test of planning for Mr. Nehru was the improvement in the living conditions of the *kisan*, his food, clothing, shelter, the education of his children and the social services extended to his family. The *kisan* was the common man of India, but his face was being seen less and less in both the publicity work of the Government and the agricultural conferences. The peasant should be taught, he said, better methods of agriculture through these conferences and suitable methods of publicity.

The same aspect was stressed by Dr. Deshmukh also: "I feel distressed," he remarked, "that our Government farms and demonstration plots should, in most cases, run at a loss. We may be prepared to incur generous expenditure on research, but, wherever these results are to be put into practice, we must insist that they are proved and demonstrated to be profitable. Unless this is done, we will not be able to convince agriculturists that our suggestions will definitely benefit them." These observations are a clear indication that the Government is aware of the main defect in the manner of approach. The remedy suggested by Dr. Deshmukh to rectify the defect, namely, establishment of a two-way traffic between the Government farms and the farmers, needs to be applied without any further delay. For the backwardness of the Indian peasant classes can only be set right by bridging the gap that isolates the farmers from the centres of research and knowledge.

Gram Sewaks

The Planning Commission too had recognised the need for establishing links between the farmers and the Government. Hence its recommendation for the organisation of a National Extension Service. It proposed that extension service blocks should be set up to cover one-fourth of the country during the Plan period. Accordingly, a number of Community Projects were started at selected centres in all the States, with a view to associating the farmer with the economic development of rural areas. For the purpose of forming a link between the State and the peasant, *Gram Sewaks* are being trained. This new machinery has brought to the surface certain difficult problems of co-ordination between the administrators and the various technical officers in the States such as Directors of Agriculture, Joint Directors of Extension and Directors of Animal Husbandry. These difficulties have to be overcome through proper co-ordination. Another difficulty which has come to light is that the trainees admitted to the Extension Training Centres have no basic agricultural background. It is now sought to provide these trainees with agricultural education through agricultural schools to be started as wings of these centres.

In the light of the problems facing the Government, some of the important decisions reached at the Conference of State Directors of Agriculture and Extension, held at New Delhi on the eve of the States Ministers' Conference mentioned above, make interesting reading. The Conference discussed at length the role which the Agricultural Departments could play in the formation of National Extension Service and the pattern of administrative set-up for the execution of work in the Community Project areas and extension blocks. Opinion was unanimous on the point that the message to the farmers should not be conveyed at the village level through the staff of different development departments, but that there should be a single agency of a multi-purpose nature, i.e., village-level workers given training in all subjects, to convey development programmes to the villagers.

Development Commissioners

In certain smaller States, the position is simple as all developmental activities like agriculture, co-operation and public health, are concentrated in one department, and, normally, the Secretary of that department is also the Development Commissioner. While in some States the staff of all development departments at the district and village levels is being pooled and given necessary multi-purpose training for being utilised as village-level workers and supervisory staff, in others the work is done by specially trained village-level workers, with advice at the higher level from the technical staff of development departments. In certain States, the village-level workers have also to look after revenue work.

It was stated at the meeting that co-ordination of work between the Development Commissioners in charge of project areas and the heads of various departments was satisfactory, but the real difficulty arose at the stage where work was executed. It was felt that, while the planning of development programmes for the project areas should be done by the district officer in charge of such work, in consultation with the expert departments, the actual agency executing the work, namely, the village-level workers, should be subordinate to the district officer, i.e., the District Magistrate, and not to the expert departments.

The Directors expressed the view that development departments in charge of project work should not grow up to the exclusion of the technical departments, and that the Development Commissioner should mainly be the co-ordinating officer at the higher level and be in a position to command the full co-operation of heads of all the other departments concerned.

As in all rural upliftment matters agriculture would always take a prominent place, it was urgent that the executive agency at the project level should give more weight to good work done for agricultural development rather than concentrate attention on work of a spectacular nature, like construction of roads and digging of channels, which might not, after all, be of much tangible use to the rural population as a whole. Moreover, as the primary function of multi-purpose workers would relate to agriculture, the training of village-level workers for the extension service should generally be under the supervision of Agriculture Departments in the States.

It was agreed that seasonal agricultural courses, recommended by the I.C.A.R. to be conducted by research institutions in State farms for the benefit of extension workers and those interested in improved methods and practices, should be arranged wherever possible. Vacation courses on agricultural farms and advanced courses at research institutions were not favoured, but it was suggested that specialists from research institutions should, whenever opportunity arose, tour extension areas and acquaint themselves with local problems.

The meeting endorsed the recommendations of the Agriculture Information Conference held at Lucknow. It recognised that the appointment of village-level workers and the setting up of the extension service would provide a link between the villager and governmental agencies, but felt that this could be supplemented by constituting information committees at State, district and lower levels.

Agricultural Training

The Centre's offer of assistance to the State Governments for opening basic agricultural schools to make available trainees with agricultural qualifications for entry into the extension training centres was explained in detail. As the Central Government had offered to meet the full recurring and non-recurring expenditure, during the remaining months of the current financial year, in respect of basic schools, the State representatives were asked to submit their schemes as early as possible to secure maximum advantage from the Centre's offer.

The other subjects considered by the Directors were: (1) organising supply of pure seeds and fertilisers and plant protection, (2) conducting surveys of land erosion, (3) improving reliafarming co-operatives, and (5) developing village youth clubs.

TRADE BETWEEN EAST AND WEST EUROPE

MARKED FALL IN VALUE AND VOLUME

THE United Nations *Economic Bulletin for Europe, First Quarter* 1953,* containing as it does, for the first time, statistics on the trade of Western European countries with the Eastern Zone of Germany, provides a clear picture of the trade between Western and Eastern Europe. Before analysing the different aspects of this trade, it may be mentioned here that the term "Eastern Europe" refers to the U.S.S.R., Czechoslovakia, Poland, Hungary, Rumania, Bulgaria and the Eastern Zone of Germany. The term "Western Europe" is used in this context for all other European countries, excluding Yugoslavia and Albania, namely, the U.K., Finland, Sweden, Italy, Austria, France, Western Germany, Netherlands, Belgium-Luxembourg and nine other countries.

The general level of trade between Eastern and Western Europe is indicated by the value of imports into and exports from Western Europe given in the table below:

Year	Imports into Western Europe	Exports from Western Europe
	(Current value in millions of dollars)	
1949	1,033	828
1950	803	644
1951	1,012	747
1952	991	739

It will be seen from the table above that the value of trade between the two halves was at its peak in 1949. It marked a sizable decline in 1950. However, in the following year, considerable improvement was recorded in both imports into and exports from, Western Europe. Thus they rose from $803 million and $644 million in 1950 to $1,102 million and $717 million, respectively, in 1951. But in 1952, they declined again to $991 million and $739 million, respectively. The decline was, however, greater in respect of the flow of goods from East to West in 1952 than *vice versa*.

Certain interesting features are also revealed by the terms of trade, as indicated by the value and volume indices in the table given below:

(Base: 1950 = 100)

	Index No. unit values		Index numbers of volume	
Year	Imports into W. Europe	Exports from W. Europe	Imports into W. Europe	Exports from W. Europe
1949 ..	116	125	111	103
1950 ..	100	100	100	100
1951 ..	142	119	89	98
1952 ..	146	128	85	91

The above table clearly shows that on balance, the terms of trade were definitely unfavourable to Western Europe. It will be seen that Western Europe paid more for its imports to, than it got on its exports from, Eastern Europe.

One significant feature revealed by the trade figures relating to the two blocs is the rise in the direct trade betwen Russia in Eastern Europe, with Finland in Western Europe. Again, in 1952, Russia took the first place, as the major trading partner on the Eastern side, accounting for more than one-third of the total trade of the area with Western European countries. Poland which stood first moved to the second rank, owing to a considerable drop in its deliveries of coal to W. Europe. Czechoslovakia, which held the third place, also saw its trade with W. Europe fall because of balance of payments difficulties.

On the Western European side, the U.K. continued to be the leading importer, accounting for one quarter of the total Western Europe's imports from E. Europe. Finland's trade with Eastern Europe fostered by long-term agreement, came to represent in 1952, one-fifth of its total exports and total imports alike. Austria appeared next, its trade with East Europe accounting for one-eighth of its total trade. Few other West European countries had more than 5 per cent. of their foreign trade with East Europe in 1952.

Price Policies

The figures given by the publication under reference, also reveal that the further reduction in the volume of East-West trade in Europe in 1952 was accompanied by a greater stability in prices and apparently also by a narrowing or removal of the chief disparities between prices charged in this trade and those ruling in other sectors of international trade. The price policies pursued by Eastern European countries have, it is stated, served to limit the demand for their goods in Western Europe and have thus proved to be a major obstacle to the development of trade. "It is not clear, however," the *Bulletin* says, "that supplies from Eastern European countries would have been forthcoming in greater volume, had their prices been lower and West European demand greater and the prices charged may rather have corresponded only to the marginal amounts of goods available."

Again, for several reasons, West European exports have also tended to command higher prices in East Europe than elsewhere. One has been the high cost of trading with East European countries, because of the formalities required and the uncertainty about the performance of reopened outlets in view of the industrialisation of these countries. Another reason has been the policy, pursued by some Western European Governments, of setting higher prices on exports, either simply to protect their terms of trade or to provide means for subsidising, and thus stimulating, imports from Eastern Europe. During the past year and a half, these disparities have been greatly reduced or have disappeared with the onset of a recession in certain industries of Western Europe, the improvement in supplies of raw materials and fuels in other parts of the world and the search for markets by West European exporters. Price premia are, therefore, paid now only for imports of certain raw materials and foodstuffs in which scarcity still persists. The principal exception in this group, however, has been wheat which is being purchased by West European countries under the World Wheat Agreement at prices lower than those ruling for wheat outside the Agreement.

Composition of Trade

Among the major items of exports from Western Europe to Eastern Europe are: (1) wood, timber and manufactures, (2) iron and steel, (3) ships and boats, (4) minerals, (5) textile manufactures, footwear and clothing, (6) machinery, (7) textile materials, (8) vegetables and animal oils and fats, and (9) non-ferrous metals. In 1952 the exports of the first five items registered a marked expansion, while in the remaining four items, the trade showed sizable recessions. Of the goods belonging to the latter group, most remarkable change was the continued and general decline in machinery exports. While the value of machinery exported by every exporting country to the whole world rose, the decline in the value of such exports to Eastern Europe was hardly less general. The share of machinery in total exports from West Europe to East Europe dropped from one-third in 1950 to one-fifth in 1952. The countries which were affected by the fall were Sweden, Finland, Austria and, to a smaller extent, Italy. The fall was mostly due to payments difficulties arising out of the accumulation of Western European clearing surpluses.

Eastern Europe's exports to Western Europe became heavily concentrated on food, fuel and raw materials, the aggregate share of which in the total rose from three-fifths in 1951 to more than 80 per cent. Within these groups, three main commodities—grain, coal and timber—accounted for one-half of the total in 1951 and slightly more than that in 1952. Livestock exports declined, partially owing to delay in Hungarian deliveries of pigs to West Germany. Exports of butter and margarine increased, particularly from Poland to France and Italy. Petroleum products do not figure prominently in the trade with West Europe. The offtake of coal from East Europe declined from 22 per cent. in 1949 to 14 per cent. in 1952, while, in the latter year, U.S. exports to West Europe accounted for 26 per cent. of the total imports of coal.

Payments Position

The trade between Eastern and Western Europe continues to be conducted predominantly under payments relationships, requiring a fairly close bilateral balancing accounts between individual pairs of countries. The major exception is provided by the facilities for transferability of sterling enjoyed by most East European countries, whereby the U.K. authorises them to use their current earnings of that currency for payments anywhere in the sterling area, and in settlement of direct current transactions for payments to members of the transferable accounts area and to many other countries. If the U.K. is excluded, trade between

C.S.I.R. ADOPTS NEW PROPOSALS

LABORATORY FOR LEATHER TESTS

SOME very notable proposals, calculated to help industrial research in India, were adopted by the Board of Scientific and Industrial Research and the Governing Body of the Council of Scientific and Industrial Research (C.S.I.R.) at their meetings held at New Delhi last week. These proposals related, among others, to facilities for testing of leather in a Central Leather Research Institute and testing of drugs in the Central Drug Research Institute, research in biophysics as applied to medicine and the appointment of a committee to co-operate with the International Programme of investigations during the third International Geophysical year.

The decision of the C.S.I.R. to set up a control laboratory at the Central Leather Research Institute at Madras is praiseworthy, in that it would help promote expansion of exports of standard tanned leather from India. The laboratory is entrusted with the work of analysing leather samples for fixing standards for East Indian tanned leather. The standard laid down by the laboratory is intended to prevent export of adulterated tanned leather from India. It has been decided by the Government of India that only East Indian tanned leather bearing the "Agmark" label, accompanied by certificates of grading, will be allowed to be exported. The proposed Central Laboratory will be financed by the Agricultural Marketing Adviser, at whose instance the Council has now decided to start the laboratory.

This move to aim at attaining improvement in the standard of tanned leather will by itself not yield results, as it has to be supplemented with other measures too, if exports of tanned leather are to be developed on right lines. It is true that this move would prevent high grading of stocks, poor quality of leather and shipments of adulterated goods—the defects regarding which complaints have not been infrequent. But the East India tanning industry consists of 540 tanneries, big and small, most of them adopting antiquated methods of processing. The tanneries generally do not employ trained leather technologists. These tanneries buy their raw materials from Northern India but do not receive them in time owing to inordinate delay in the supply of wagons for their transport. These stocks deteriorate to some extent owing to poor storage at loading stations. Bad flaying of animals, high cost of raw hides and tanning materials and costlier labour have added to the difficulties of tanners. Something must be done to remove these basic difficulties, if the quality of tanned hides is to improve. It is needless to add that the mere appointment of an organisation to certify the quality and grade will be of no avail, if the tanners are not enabled to make high quality goods. The authorities must, therefore, address themselves to this problem first.

In the meanwhile, there is no doubt that exports from India of tanned hides and skins have been losing ground in recent years. This is, of course, partly due to loss of market in the U.K. to supplies from Africa and to plastics substitutes also. The extent of loss in the value of exports of hides and skins, tanned and dressed, during 1952-53 amounted to Rs. 19.97 crores, as compared with Rs. 24.9 crores and Rs. 25.27 crores in the preceding two years, respectively. The quantity of hides and skins exported amounted to 467,304 cwts. in 1952-53, as against 489,880 cwts. in 1950-51 and 457,320 cwts. in 1951-52.

The second decision of the Governing Body of the C.S.I.R., namely, the setting up of an analytical wing in the Central Drug Research Institute, Lucknow, where commercial testing of drugs and pharmaceuticals will be undertaken, will also be welcome to the interests concerned. This industry too is handicapped by the same difficulties as those of the leather industry in respect of wagon supplies, cost of raw materials and labour and standardisation. These problems, too, need to be dealt with by the Government and the industry.

According to another decision of the Governing Body of the Council, the Central Drug Research Institute will shortly have a nucleus of a Biophysics Instruments Division. Biophysics is a recent development which finds increasing application in the field of medicine and therapeutics. The proposed division, which will function in collaboration with the Medical College at Lucknow, will undertake researches in the application of radio-active elements in the treatment of diseases, electrical stimulation, radiography and other related phenomena.

NEW PUBLICATIONS

Industrial Law Digest. By N. K. Khare and L. B. Bhide. Publishers: N. M. Tripathi Ltd., Princess Street, Bombay 2. Price: Rs. 10.

THE *Industrial Law Digest* is a supplement to an earlier one entitled *Digest of Decisions of the Hon'ble Labour Appellate Tribunal of India*, by N. K. Khare and N. N. Akruwala, published by the Indian Legal Publication, Ahmedabad, in 1952. The present digest has, however, been entitled differently, as it contains, besides the digest of the decisions of the Labour Appellate Tribunal, the decisions of High Courts, the former Federal Court and the Supreme Court of India pertaining to industrial relations.

Part I of the *Digest* contains exhaustive summaries of the decisions of the Labour Appellate Tribunal of India from 1st January, 1952, to 23rd April, 1953. It is, however, to be noted that some decisions of even earlier dates, which became available later, have been included. The decisions which could not be traced in any of the publications have been marked as unreported. Part II contains summaries of the decisions of the Federal Court, the Supreme Court and the High Courts in India on different aspects relating to industrial relations.

The efforts of the authors in bringing out this volume are commendable, inasmuch as the *Digest* provides for employers, trade unions and all those concerned with labour relations an easy access to the decisions on a variety of subjects on industrial relations. In fact, industrial relations would be smoother, if parties to the dispute are acquainted with not only their rights but also their obligations as the Labour Appellate Tribunal, the High Courts, the Federal Court and the Supreme Court of India have often stressed. As Mr. Shantilal Shah, Minister for Labour and Public Health, Government of Bombay, says in his foreword, the book is expected to prove "useful to judges, employers, employees and trade unionists."

Indian Insurance Directory 1952. Published by Sahakari Vima Prakashan Ltd., 11, Agiary Lane, Bombay 1.

Now in its second year of publication, the *Indian Insurance Directory* is a comprehensive handbook of information relating to insurance. Besides giving the progress of Indian insurance in a series of tables, which deal with such matters as premia income, new business, expense ratio and interest yield, the *Directory* for 1952 reproduces the main provisions of the Indian Insurance Act, the miscellaneous returns to be submitted to the Government by insurers and the registers to be maintained by them under the Act. It also gives, in summarised form, the premium tables of the Indian and foreign insurers. The chapter entitled "Directory of Indian Insurers" gives the head office address, the names of the directors and the branch offices of each individual insurance company. The heart of the *Directory* lies, however, in its three sections: (1) synopsis of revenue accounts of fire, marine and miscellaneous sections of the general insurers; (2) business (new and total business), revenue account, and summary of last valuation results of Indian life insurers and similar information for non-Indian life insurers in respect of their Indian business; (3) summary of the balance-sheets of Indian insurers. Under each section, the information is given for five years ended 1951. This brief account of the contents of the *Directory* ought to show that the Directory may justly lay claim to be a unique reference book of its kind in India. The authors deserve to be complimented on so careful a digest of the massive amount of information that lies scattered in *Insurance Year Books*, balance-sheets and other publications. The *Directory* is, from the purely technical point of view, very well produced. It ought, therefore, to commend itself to all those who are connected with, or are otherwise interested in, insurance in India. The publication, however, lacks one thing, a comprehensive index. Such an index would greatly enhance the value of this very useful publication—a deficiency which, we hope, would be made good in the next edition.

Commodity Trade Statistics—January-December, 1952. Prepared by the Statistical Office of the United Nations, Department of Economic Affairs, New York. Available in India: Oxford Book and Stationery Co., Scindia House, New Delhi.

This publication contains valuable statistical data on the trend of world commodity trade analysed with reference to countries of provenance and destination during the calendar year 1952. The figures relating to imports and exports are grouped according to the Standard International Trade Classification (S.I.T.C.). A notable feature of the publication is the uniformity maintained in presenting the analysis of trade. Thus, with a view to facilitating international comparability of the data, values have been converted into U.S. terms and quantities are, wherever possible, expressed in metric tons. Such a method will surely meet a fairly widespread need and may, as is claimed, "result in economics to many users of trade statistics."

Each group of the S.I.T.C. is fully identified by the number. Abbreviated titles are also given to facilitate the use of tables. No figures less than $1,000 are, however, given. Similarly, the analysis of trade by countries of origin and destination is not carried below the level of $10,000.

Aluminium Panorama. Published by Aluminium Ltd., Montreal (Canada).

Aluminium Panorama, published by Aluminium Ltd., Montreal (Canada), describes the progress of world-wide activities of the Company since 1928. Prefacing this description with an account of the evolution of aluminium from a scarce semi-precious metal to the status of an inexpensive and versatile commodity leading all other non-ferrous metals in the volume of production, the publication points out how it has become virtually indispensable to modern homes, business and industry. It is true, as the authors forecast, that the uses and applications of aluminium are certain to increase. But the metal is not, as they themselves recognise, destined to relegate such commodities of proven worth as wood, steel and copper to inconsequential roles. On the other hand, experience and knowledge will determine the most efficient and economical materials for every purpose. In other words, "aluminium like all other metals," to quote the publication, "will find its markets and its future determined by the uses it can serve best and these uses are expanding."

The publication consists of nine chapters. Of them, mention may be made of the fourth chapter, which deals with raw materials and their processing for aluminium production, with particular reference to bauxite mining in British Guiana, Jamaica, France and French Guinea and of the sixth chapter, which highlights the economic significance of power in aluminium production and an outline of operations relating to aluminium production in Canada, Norway, Brazil, Sweden, Italy and India. Another interesting chapter is the one which deals with basic fabricating processes and the outline of these operations in the U.K., Switzerland, the Netherlands, Denmark, Germany, South Africa, Australia, Mexico and Japan. Research facilities provided by Aluminium Ltd. is also indicated. The publication is bound to appeal to all those who are interested in this important metal of varied domestic and industrial uses.

Statistical Outline of India. Published by the Department of Economics and Statistics, Tata Industries Limited, Bombay House, Bruce Street, Fort, Bombay.

In this little handbook of just forty-four pages, the publishers of *Statistical Outline of India* have succeeded in presenting, in a compact form, the vital statistics relating to India's economy. The book is replete with tables which give at a glance statistics relating to such vital subjects as population, natural resources, national income, industry and transport, foreign trade, banking and insurance, and public finance. Two special tables are devoted to industrial labour and prices. Another special table gives the salient features of the Five-year Plan. Foreign loans and aid received and imports of foodgrains form matters of separate tables. Indeed, the publication contains a mine of information based on data obtained wholly from official sources. It will, there is no doubt, prove as an invaluable book for ready reference on topics connected with Indian economy.

JARDINE HENDERSON GROUP JUTE COMPANIES FARE BETTER

KANKNARRAH RAISES DIVIDEND, BUT KAMARHATTY MAINTAINS IT

THE financial results of the two jute companies belonging to the group managed by Messrs. Jardine Henderson Ltd., Calcutta, namely, the Kanknarrah Co., Ltd., and the Kamarhatty Co., Ltd., for the half-year ended 30th June, 1953, show a distinct improvement over those for the previous six months. As compared with the results for the corresponding half-year of 1952 also, they are better, though the increase is less marked in the case of Kamarhatty, than in the case of Kanknarrah. This, however, does not mean that the fortunes of the Companies have taken a turn for the better. All that the results of the two companies for the half-year under review suggest is that while the trading conditions in jute goods were somewhat better than in the previous two half-years, they were still below normal and not good enough to allow a reasonable margin of profit.

The trading profit of Kanknarrah for the half-year under review amounts to Rs. 14.92 lakhs and compares very favourably with that of Rs. 8.03 lakhs for the previous six months and Rs. 11.27 lakhs for the corresponding six months of 1952. Kamarhatty has earned a trading profit of Rs. 16.04 lakhs for the half-year ended 30th June, 1953 which represents an increase of Rs. 5.40 lakhs over that for the half-year ended 31st December, 1952. The profit for the half-year under review is only a shade better, as compared with that of Rs. 15.85 lakhs earned during the first half of 1952. After making provision for the Managing Agents' remuneration, depreciation and taxation, the net profits earned by the two companies are too inadequate to allow any addition to the reserves. The net profit of Kanknarrah amounts to Rs. 3.39 lakhs and represents an increase of Rs. 1.24 lakhs and Rs. 0.69 lakh over those earned in the previous two half-years under comparison, respectively. The net profit of Kamarhatty has, however, suffered a slight shrinkage from Rs. 3.33 lakhs for the half-year ended 31st December, 1952, to Rs. 2.94 lakhs, though it is fractionally better than that of Rs. 2.92 lakhs for the six months ended 30th June, 1952. As a result of the small margin of net profits, the two companies have not been able to put by anything to the reserves during the half-year under review also, the third half-year in succession in which they have not been able to strengthen their reserves.

The dividend performance of the two companies is not uniform. Kanknarrah has stepped up the dividend to 10 per cent. per annum from 8 per cent. per annum paid for the previous half-year, to which level it was reduced in two successive half-years from 15 per cent. per annum paid for the six months ended 31st December, 1951. The dividend has thus been restored to the level that was maintained for the half-year ended 30th June, 1951. The Kamarhatty, on the other hand, has merely maintained the dividend unchanged at 12 per cent. per annum; that is, at the level for the previous half-year when it was reduced successively from 25 per cent. per annum for the half-year ended 31st December, 1951.

During the period under review, the prices of raw materials and finished goods reached the lowest point in the early part of April. Thereafter, there was a steady increase in prices of raw materials and hessians. Prices for heavy goods, however, did not increase to a similar degree. Evidently, the remedial measures taken by the Government of India to help stimulate the export trade in jute goods, with a further cut in export duty on sackings from Rs. 175 to Rs. 80 with effect from 28th February, 1953, did not produce the results which might have reasonably been expected. The demand from consuming countries was very much below expectations, especially for sacking goods which became more and more difficult to dispose of. If despite this trend, the two companies have shown better results for the half-year under review, it is presumably due to the easier flow of Pakistan jute to India at cheaper prices, following the abolition by Pakistan of the discriminatory licence fee and the reduction in export duty on the export of jute to India in March, 1953.

How far the trading conditions described above have influenced the financial results of the two companies during the half-year under review can be seen from the table published at the foot of this page wherein they are presented against the background of those for the previous three half-years.

The balance-sheet of the Kanknarrah Co., Ltd., as on 30th June, 1953, shows that the reserves and surplus aggregate Rs. 18.14 lakhs, against a paid-up capital of Rs. 64 lakhs. Provision for taxation stands at Rs. 13.20 lakhs and other current liabilities at Rs. 26.85 lakhs. The gross block of the value of Rs. 131.03 lakhs has been written down to Rs. 36.42 lakhs. The current assets aggregating Rs. 85.77 lakhs cover the current liabilities, including the provision for taxation, by a wide margin of Rs. 45.72 lakhs.

The reserves and surplus of the Kamarhatty Co., Ltd., as at the close of the half-year under review, amount to Rs. 25.76 lakhs and represent 43.5 per cent. of the paid-up capital of Rs. 59.20 lakhs. The gross block of the value of Rs. 136.83 lakhs has been provided with a depreciation of Rs. 117.96 lakhs, so that the book value of the fixed assets amounts to no more than Rs. 18.87 lakhs. The current assets aggregate Rs. 118.03 lakhs and exceed the current liabilities (including provision for taxation) at Rs. 51.94 lakhs by Rs. 66.09 lakhs.

The Rs. 100 paid-up ordinary shares of the Kanknarrah Co., Ltd., are currently being quoted at Rs. 143-8 *ex-div.*, at which rate the yield on the basis of the latest dividend works out to 7 per cent. per annum, free of tax. The Rs. 100 paid-up ordinary shares of the Kamarhatty Co., Ltd., are currently being quoted at Rs. 174 *ex-div.*, at which rate and on the basis of the latest dividend the yield works out to about 6.9 per cent. per annum, free of tax.

TATA DEFERRED CONVERSION SCHEME

The proposal of the Directors of the Tata Iron and Steel Co., Ltd., to convert the Company's deferred shares into ordinary ones in terms of the Mediator's award has been brought to the penultimate stage with the convening of an extraordinary general meeting of the two classes of shareholders to be held on 5th November, 1953. In persuance of the Company's undertaking given to its shareholders to issue bonus ordinary shares by capitalising a part of the reserve fund, the Directors have given notice of their decision to incorporate this latter proposal in the conversion scheme. The issue of bonus shares will, however, be effective only on the conversion scheme being accepted by the two classes of shareholders at the aforesaid meeting.

Under the scheme of arrangement for conversion, circularised to the shareholders, the Directors propose to issue to the existing 48,750 deferred shareholders six fully paid-up ordinary shares, in lieu of each deferred share held by them and in consideration of the extinguishment or modification of the existing rights and privileges attached thereto. This will be carried out as follows:

(i) A sum of Rs. 2,04,75,000 being part of the general reserve fund will be capitalised and utilised for payment and issue of 2,73,000 new ordinary shares of Rs. 75 each to the existing 48,750 deferred shares in the proportion of 5 3/5 ordinary shares for each deferred share held by them; and (ii) the said 48,750 deferred shares will be replaced by 19,500 ordinary shares at the rate of 2/5th of an ordinary share of Rs. 75 each for each deferred share of Rs. 30 under the scheme of reorganisation and consolidation of the two classes of shares.

After the above scheme of reorganisation and consolidation of the two classes of shares is carried out, there will be only one class of 6,42,500 ordinary shares of Rs. 75 each (made up of the 3,50,000 existing ordinary shares, 2,73,000 new ordinary shares stated above and 19,500 ordinary shares in replacement of the existing 48,750 deferred shares).

The Directors propose to capitalise, in addition to the aforesaid sum of Rs. 2,04,75,000, a further sum of Rs. 4,81,87,500 being part of the general reserve and issue 6,42,500 new ordinary shares of Rs. 75 each to the aforesaid 6,42,500 ordinary shareholders as bonus shares in the proportion of one share for each share held by them.

After the aforesaid proposals are carried out, the capital structure of the Company will be as follows:

	Rs.
50,000 6 per cent.-cum-preference shares of Rs. 150 each	75,00,000
7,00,000 7½ per cent. cum-2nd preference shares of Rs. 100 each ...	7,00,00,000
12,85,000 ordinary shares of Rs. 75 each	9,63,75,000
Rs.	17,38,75,000

In a circular issued to the shareholders along with the notice to give effect to the above proposals, the Directors recall that the scheme for conversion of deferred shares was as old as 12 years, having been originally put forward by them in 1941. But in the beginning the scheme was on the basis of a conversion ratio of 5½ ordinary shares for one deferred share. This had to be abandoned due to conditions created by the entry of Japan into the world war in December, 1941, as also due to the lack of voting support from the deferred shareholders to the scheme. Thereafter, several attempts were made from time to time to revive the scheme, but they were of no avail. But now the Company has been "pressed" by the Government of India to implement it. The several steps taken by the Directors to get through the latest proposal upto this stage are only too familiar to the shareholders to be recalled. The issue of bonus shares, which had been under the Directors' consideration for many years, could not be carried out so far, because of the existence of the deferred shares. Even now, there is no unanimity among the deferred shareholders in accepting the conversion scheme on the basis of the present ratio of six ordinary shares for one deferred share. Some of them do not consider this ratio as a reasonable one. Any delay in carrying out the conversion scheme will result in a loss to the deferred shareholders themselves. In fact, by delaying the scheme thus far, the deferred shareholders have already lost a considerable amount by way of dividends. This will be evident from the following comparative statement of dividends which a deferred shareholder would have got on the basis of the dividend distribution for the last five years, if the conversion had been in force in those years:

Year	Dividend to ordinary shareholders	Dividend to deferred shareholders: Before conversion per deferred share	Dividend to deferred shareholders: Resulting from conversion per 6 ordinary shares	Excess in amount of dividend under col. 4 over col. 3
1	2	3	4	5
	Rs.	Rs. a. p.	Rs.	Rs. a. p.
1947-48 ..	14	64 15 0	84	19 1 0
1948-49 ..	14	64 15 0	84	19 1 0
1949-50 ..	16	79 5 0	96	16 11 0
1950-51 ..	18	93 10 5	108	14 5 7
1951-52 ..	21	115 8 0	126	10 11 0

It will be noted that for each of the above years the dividend to deferred holders would have been higher if the conversion scheme had been put through.

The scheme of arrangement for conversion and consolidation and that for issue of bonus shares are subject to the consent of the Controller of Capital Issues. The scheme of arrangement is also subject to the sanction of the High Court. We have no doubt that these approvals can be had without any difficulty provided all the shareholders, or at least a vast majority of them, accept the scheme, as we hope they will. Any attempt on the part of any shareholder to delay the scheme will only result in Government intervention, the outcome of which may not be favourable to the shareholders.

MADURA MILLS CO., LTD.

In a circular addressed to the shareholders of the Madura Mills Co., Ltd., the Company's managing agents, Messrs. A. & F. Harvey Ltd., Madural, point out that a noted firm of valuers and assessors of Manchester, assisted by a senior textile technician supplied by a leading textile machinery makers, made a survey recently of all properties owned by the Company. Their certificate of valuation made on the basis of a fair going concern, which was received early this year, placed the total value of land, buildings, plant and machinery at £5,484,612, which, at 1s. 6d. per rupee, represents over Rs. 7 crores. The Company's managing agents note with gratification that the valuers and the textile technician report favourably on the condition of the buildings and machinery and that the standard of maintenance has been extremely high.

The gross value of the Company's fixed assets as on 31st December, 1952 was Rs. 4.16 crores, on which the depreciation provided was Rs. 3.11 crores, so that the net value of the block was only Rs. 1.05 crores. Thanks to the conservative policy followed by the management over many years, the Company's position as disclosed by the above figures is sound. It has, however, been felt by the management that a moderate revision of the balance-sheet values by writing up the net block, so far as the annual additional provision for depreciation which it involves falls within the Company's means, would be in the interest of the shareholders. The Directors have, accordingly, sanctioned the revaluation of the Company's buildings and machinery by the addition of Rs. 65 lakhs and Rs. 35 lakhs, respectively as on 1st January, 1953. This calls for an additional provision of Rs. 6.75 lakhs in the current and subsequent years. The management feels that by such a step the Company's ability to meet eventual replacement of fixed assets will be considerably improved.

As a result of the above revaluation, there is a credit of Rs. 1 crore which has been placed to the renewal and replacement reserve, which, consequently, stands at Rs. 2.43 crores on 1st January, 1953. The renewal and replacement reserve will be treated as capital reserve.

BAGALKOT CEMENT CO., LTD.

The Directors' report on the working of the Bagalkot Cement Co., Ltd. (Managing Agents: Messrs. Tendulkar Industries Ltd., Bombay) during the year ended 31st December, 1952, read with the Chairman's address to the Company's shareholders at its annual general meeting held last week, reveals that considerable ground has been covered by the Company towards commencement of production. "Looking to the present rate of progress," the Chairman said, "it is hoped that the factory will produce cement some time about the month of October, 1954."

Orders were placed with the manufacturers in Germany and Switzerland between the months of October and December, 1952 for supply of cement manufacturing machinery of a capacity of 300 tons a day and power plant machinery of an installed 3,600 kw. The selection of factory site and locations for various structures and buildings were finalised in December, 1952 and the complete layout of the factory was decided upon in February, 1953 under the advice of a leading German cement manufacturing concern. Construction of the factory commenced in April, 1953 and is stated to be making steady progress. Negotiations for laying a railway siding to the factory site were completed with the Southern Railway. The Railway has taken up the work in hand. In terms of the Company's agreement with the manufacturers of machinery, the latter have undertaken not only the supply of machinery but also the erection and initial operation of the cement plant. The delivery of machinery is due to be completed before the end of March, 1954.

The preliminary operations of the Company during the year ended 31st December, 1952, resulted in a small loss of Rs. 4,848. However, the shareholders have been assured of a minimum dividend of 3 per cent., in terms of the guarantee given by the Bombay Government for the first five years. This is the third year for which the shareholders have received this dividend.

Points From The Chair

Expense Ratios of Medium-sized and Big Companies

"THE provision for expense limitations of the life department as laid down in Rule 17(D) of the Insurance Rules is grossly unfair. The same expense ratio is provided for companies having business in force of just over Rs. 10 crores and those having a business in force of Rs. 200 crores. It is unjust to expect younger and middle-sized companies to work within the same expense ratio as provided for big companies. I am not pleading for allowing a higher expense ratio for companies such as ours, but I would like to point out that the older and bigger companies should not be permitted to spend the same percentage of the premium as medium-sized companies. When the Rules were framed it was pointed out that the limits were the ceilings and older and bigger companies would be actually working at much lower expense ratio. The experience of the last few years has shown a tendency amongst the bigger companies to increase their expenses and to pursue an unhealthy and aggressive policy of new business procuration to the severe detriment of others."

B. M. BIRLA,
Ruby General Insurance Co., Ltd.

Dry Battery Industry

"We have in our industry a powerful foreign unit which has at its disposal the technical assistance and know-how and other resources of a powerful foreign combine. The prejudice for our products is hampering us to such a great extent that to stand in the market we have always to maintain a price structure about 15 per cent. below theirs. Even the Tariff Commission, during the course of their enquiries, came to the conclusion that the two Indian units are already struggling hard to maintain their position in competition with this foreign unit. In the case of this industry, however, which, at present, consists mainly of three units, the elimination of two units will result in the remaining unit acquiring a monopolistic control of the entire field and this is obviously not in the long-term interest of the consumer. I concur with this view and I feel that, if things are allowed to be continued in this way, a time may come when the Indian units will be non-existent. In view of the above, I appeal to the Government that it should find out a way to allay this difficulty."

F. H. MEHTA,
Estrela Batteries Ltd.

Lacuna in Expenses Provisions of the Insurance Act

"Looking at insurance business by itself against the general economic background, a gradual stepping down of prices is, of course, a necessary feature of the transition from war-time economy to peace-time level, and insurance, as any other business, must share in this process. It is the adjustment of costs to prices that presents a problem in this transition, and this calls for the greatest circumspection for the avoidance of any steps under a theoretical bias, so that the remedy may not prove worse than the disease. In this context the expense provisions of the Indian Insurance Act reveal an obvious lacuna which gives serious cause for anxiety. Following the Amending Act, 1950, and Rules framed thereunder, a system has been devised for determining expenses of the insurers. This system for the present is hinged on direct business, and under it a fall in direct business entails a curtailment of permissible expense for the insurance companies. As I have already pointed out, although commodity prices have gone down the cost of living index has not moved accordingly during the year, and this has resulted in a maladjustment, confronting the insurance companies with an embarrassing and difficult situation in the light of the aforesaid provisions of the Insurance Act and Rules, *vis-a-vis* the depressed condition of trade and industry for the duration of its continuance."

DR. N. N. LAW,
Hindustan General Insurance Society Ltd.

Lapse Ratio in Life Insurance

"Rough and ready methods of ascertaining lapse ratios cannot and will not give you a correct picture of the situation. For instance, if you work out lapses merely as a percentage of the 'business in force' figure, you are altogether omitting a very important factor, viz., the quantum and percentage of new paid-for business written during the year in relation to the business in force at the beginning of the year. If you confine your attention merely to the volume of new business written in a year, lump all the lapses together and work out a percentage purely on this basis, the result will be equally misleading, because you can never ignore the volume of business in force at the beginning of the year and out of which a number of policies are bound to have lapsed during the year. Further, it may be asked whether you should ascertain the 'lapses' percentage in relation to the volume of business in force at the beginning or at the end of the year. One can say a lot more in this connection, but this is neither the time nor the place for it. What I have only tried to show is the fact that the whole thing is extremely complicated and that it will not be correct to draw conclusions from incomplete or one-sided data."

RESULTS OF INDIAN STANDARD WAGON HIGHLY ENCOURAGING

BARNAGORE JUTE MAINTAINS DIVIDEND

Indian Standard Wagon Co., Ltd.

THE directors of the above Company (Managing Agents: Messrs. Martin Burn Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st March, 1953.

After providing for taxation, depreciation and all other charges, transferring Rs. 2,50,000 (Rs. 1,00,000) to general reserve and setting aside Rs 3,00,000 (nil) on plant replacement reserve, the profit on the year's working amounts to Rs. 3,28,977 (Rs. 2,83,032) to which is added the balance brought forward from the previous year of Rs. 10,996 (Rs. 11,812) making a balance available at credit of profit and loss account of Rs. 3,39,973 (Rs. 2,94,844). The directors recommend that this balance be disposed of in payment of dividend at 7 (7) per cent. per annum on the preference share capital; absorbing Rs. 1,37,655 (Rs. 1,37,655), and payment in respect of the ordinary share capital of a dividend of 15 (15) per cent. for the year together with a bonus of Re. 1 (nil) per share (equivalent to a further 4 per cent.) (nil) absorbing Rs. 1,85,179 (Rs. 1,46,194) leaving to be carried forward Rs. 17,139 (Rs. 10,996).

The works of the Company were fully employed throughout the year in all departments and the satisfactory increase in output achieved is reflected in the improved trading results.

The directors consider that the replacement and general rehabilitation and modernisation of the plant, the necessity for which has been foreshadowed for some years, should no longer be deferred. With the advice of the Company's Consulting Engineers, a programme of requirements has therefore been drawn up and the work planned in separate stages which will be undertaken progressively as and when the necessary funds are available. To provide these funds, sums have, as shareholders are aware, been set aside in previous years on the plant replacement reserve. This reserve is being supplemented by a transfer of Rs. 3 lakhs in the accounts under review and further sums will be set aside in the future as opportunity occurs. The first stage of the rehabilitation is estimated to cost approximately Rs. 12 lakhs and finance to this extent being now available, arrangements have been made for this work to be put in hand.

While marking the improved results for the year by the recommendation of payment of a special bonus of Re. 1 per share on the ordinary share capital, the directors have deemed it prudent to strengthen the financial position of the Company by setting aside a sum of Rs. 2,50,000 to general reserve.

On a review of the position the directors are of the opinion that the share capital of the Company should now be brought more into line with the actual capital employed in the business. Application has accordingly been made to the controller of capital issues for permission to capitalise reserves to the extent of Rs. 9,74,625 and to make an issue to the ordinary shareholders of one bonus share of Rs. 25 for each existing share held. As soon as this permission is received, an extraordinary general meeting of the Company will be convened at which the necessary resolutions will be submitted. In this connection it should be noted that in the year 1926 the ordinary shares were written down to Rs. 25 each from their original parity of Rs. 100 and that after the bonus issue in prospect the ordinary share capital would still stand at only 50 per cent. of the original amount subscribed.

Accounts in brief are as under:—

Liabilities		Rs.	Assets		Rs.
Capital	...	30,10,700	Block	...	9,55,974
Reserves	...	20,93,000	Stock-in-trade		7,63,386

			Cash	...	2,63,138
	Rs.	1,99,15,854		Rs.	1,99,15,854

Barnagore Jute Factory Co., Ltd.

The directors of the above Company (Secretary: F. E. Dilley, Esq., London) submitted the audited accounts of the Company for the year ended 31st March, 1953.

The balance available for appropriation as shown in the profit and loss account, amounted to £117,273 (£140,216). The directors have disposed of this sum by paying a dividend for the year of 5 (5) per cent. on the preference shares (net) £5,375 (£5,250), made up of an interim dividend of 2½ (2½) per cent. paid 17th December, 1952 £2,625 (£2,625), and a final dividend of 2½ (2½) per cent. payable on 14th October, 1953, to shareholders on register on 30th September, 1953 £2,750 (£2,625), dividend for the year of 20 (20) per cent. on the ordinary shares (net) £30,078 (£28,875), made up of an interim dividend of 2½ (2½) per cent. paid 17th December, 1952 £3,609 (£3,609), and a final dividend of 17½ (17½) per cent. payable on 14th October, 1953, to shareholders on register on 30th September, 1953 £28,469 (£25,266), and carried forward the balance of £81,820 (£91,091).

Good quality jute was very difficult to secure throughout the year. Pakistan jute which provided the bulk of the supplies up to 1947 has been subject to a discriminatory licence fee on importation into India, in addition to the export duty, and it was not until March, 1953, that the licence fee was withdrawn and the export duty reduced. These duties, coupled with the difference in exchange, kept prices of Pakistan jute out of proportion to that of Indian jute.

The Indian export duty on hessian was reduced from Rs. 750 to Rs. 275 and on sacking from Rs. 350 to Rs. 175 per ton in May, 1952, and that on sacking was further reduced to Rs. 80 in March, 1953, but none of these reductions had any lasting effect on the prices obtainable for the manufactured goods, and prices, particularly of sacking, remained barely economical.

It was recorded in the directors' last report that they had not yet arrived at a suitable solution for transferring control of the Company to India on terms that they could recommend as acceptable to a majority of all classes of shareholders. Meanwhile an approach had been made for the sanction of H.M. Treasury to the transfer and sanction was duly received.

As has been stated, the large majority of ordinary shareholders are in India. On the other hand a majority of preference shareholders are registered in this country and it has hitherto been considered that this class of shareholder must receive some compensation in any scheme for transfer of control from this country. The problem is, however, complicated by the differing circumstances of preference shareholders and there is an appreciable holding in the hands of a class of shareholder who would suffer a considerable diminution of income in any scheme except one which would prove costly to the ordinary shareholders. On the present basis of profits and having regard to taxation changes since the transfer proposal was first put before shareholders, it is not considered that any saving on taxation is now sufficient to justify such compensation and the present time therefore does not seem propitious to proceed with the proposal.

Belvedere Jute Mills Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 30th June, 1953.

After providing Rs. 1,40,000 (nil) for taxation and transferring Rs. 50,000 (nil) to general reserve there is a balance of Rs. 2,96,617 (Rs. 2,47,738) at the credit of profit and loss account, from which the directors recommend the payment of a dividend on preference shares at Rs. 3-8 (Rs. 3-8) per share Rs. 24,500 (Rs. 24,500) and on ordinary shares at Rs. 7-8 (Rs. 7-8) per share Rs. 2,10,000 (Rs. 2,10,000) leaving Rs. 62,117 (Rs. 13,238) to be carried forward.

In accordance with the working time agreement of the Indian Jute Mills Association the mills worked 42½ hours per week with 12½ per cent. of the total looms sealed.

Accounts in brief were as under:—

Fort William Jute Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Bangur Brothers Ltd., Calcutta) submitted the audited accounts of the Company for the half-year ended 30th September, 1952.

The accounts showed a loss of Rs. 4,41,218 (loss of Rs. 11,708) after adding the previous loss of Rs. 8,32,397 (credit of Rs. 8,305) besides deducting the reserve of Rs. 4,97,921, there remained a net debit of Rs. 7,75,693 (credit of Rs. 11,596 after paying a dividend at Rs. 3-8 per share absorbing Rs. 35,000) which the directors carried forward.

In accordance with the working time agreement of the Indian Jute Mills Association the Company's mills worked 42½ hours per week with 12½ per cent. of the total looms sealed during the period under report.

Jute stocks have been valued at market price and finished goods at contract price.

In spite of measures adopted by the Government of India to encourage the industry by way of reducing the export duty which the directors have already referred in their previous report, the trend of prices for both raw jute and manufactured goods continued downward throughout the entire period.

Though recession in prices of manufactured goods continued the working costs increased considerably due to implementation of Omnibus Tribunal Award and payment of Employer's special contribution towards the State Insurance Scheme. The Provident Fund Act has also taken effect from 1st November, 1952 and it is bound to involve further increase in expenses in the next half-year accounts.

As referred in the directors' last report, the new high speed sacking weft preparing and spinning machinery has been completely installed and now it is working quite satisfactorily.

	Rs.	64,71,415		Rs.	64,71,415

Nilambur Rubber Co., Ltd.

The directors of the above Company (Managing Agents: The Associated Planters Ltd., Madras) submitted the audited accounts of the Company for the year ended 31st December, 1952.

Net profit for the year after providing for depreciation and managing agents' commission, amounted to Rs. 69,424 (Rs. 48,631) to which was added the balance brought forward from last year of Rs. 2,305 (Rs. 3,674), making a total of Rs. 71,729 (Rs. 52,305). The directors have placed to reserve for contingencies Rs. 7,000 (Rs. 13,500), to reserve fund Rs. 27,000 (Rs. 3,000) and to leasehold redemption fund Rs. 1,500 (Rs. 1,500) leaving a balance available of Rs. 36,229 (Rs. 34,305) which the directors disposed of by paying a dividend of 6 (6) per cent. on preference shares Rs. 12,000 (Rs. 12,000), and a dividend of 10 (10) per cent. on ordinary shares Rs. 20,000 (Rs. 20,000) leaving a balance of Rs. 4,229 to be carried forward.

The stock of rubber has been valued at the sale price since realised. A crop of 1,95,669 lbs. of rubber was raised during the year.

Mention was made in the previous report, of the levy of the Coorg Agricultural income-tax with retrospective effect from 1st April, 1950. This will be a recurring burden on the income derived from the property in that State and annual provision will have to be made to meet this tax.

As the experiment of planting coffee in a small portion of the existing rubber area on the Glencoorg Estate has proved promising, the Company has applied to the Coorg Government for permission to be allowed to plant coffee, pepper, etc., in suitable areas and permission is awaited.

The rubber crop of the Nilambur Estate has exceeded the estimate but such excess has been offset by a similar deficit in the crop of the Glencoorg Estate, though in the total, the aggregate estimate has been reached. The new rubber plantation in the Chungathara division of the Nilambur Estate now shows an area of 202 acres. It is in a very healthy condition and holds out good promise for the future.

The directors report that the working results of the Company for the year was satisfactory. They hope that the present rubber price fixation which came into operation from 28th October, 1952, though not upto the expectation of the growers, will at least be continued for a good length of time.

The directors considered that it was desirable to allocate the Glencoorg property account under proper heads of account and accordingly have transferred a sum of Rs. 99,250 to buildings account and a sum of Rs. 5,000 to machinery account and kept the balance of Rs. 1,85,750 in leasehold property account.

Accounts in brief were as under:—

Liabilities		Rs.	Assets		Rs.

			Cash	...	17,430
	Rs.	7,14,038		Rs.	7,14,038

Investment and Finance Co., Ltd.

The directors of the above Company (Secretaries: Messrs. Bird & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the half-year ended 28th February, 1953.

Including the sum of Rs. 11,654 (Rs. 19,232) brought forward from the previous half-year, and transferring Rs. 5,000 (nil) from revaluation of investments reserve, and after providing Rs. 2,500 (nil) for taxation and special reserve and utilising Rs. 16,889 (Rs. 22,546) to write off depreciation on investments, there was an available balance of Rs. 26,787 (Rs. 36,164). The directors disposed of this balance by paying a dividend on the 1st cumulative preference shares at the rate of 5 (5) per cent. per annum, without any deduction for income-tax paid by the Company Rs. 5,000 (Rs. 5,000), dividend on the 2nd cumulative preference shares at the rate of 6 (6) per cent. per annum less income-tax at 48 pies plus 5 per cent. surcharge on income-tax Rs. 4,425 (Rs. 4,425) and a dividend on the ordinary shares at the rate of 5 (5) per cent. per annum without any deduction for income-tax paid by the Company Rs. 12,500 (Rs. 12,500) leaving to be carried forward Rs. 4,862 (Rs. 14,239).

The downward trend of share prices, indicated in the previous report, continued throughout the period. Numerous factors contributed towards this recess and still persist, resulting in a low level of activity on the Stock Exchange.

The Company's portfolio stands at a conservative figure and book values have been written down to market values wherever necessary.

Accounts in brief were as under:—

Liabilities		Rs.	Assets		Rs.
Capital	...	9,00,000	Investments		10,78,516

	Rs.	11,10,418		Rs.	11,10,418

National Machinery Manufacturers Ltd.

The directors of the above Company (Chairman: Mr. K. M. D. Thackersey, Bombay) submitted the audited accounts of the Company for the year ended 31st December, 1952.

The net debit balance for the year, subject to depreciation, amounted to Rs. 7,84,910. The directors carried forward this sum to next year's account along with the sum of Rs. 9,44,052 carried forward from the previous year.

During the year, all industrial and residential buildings were completed and taken over by the Company. Building work on the canteen was also completed. Out of a total of 760 items of machine tools and other equipment required, at the close of the year 484 were installed by the factory. During the year, the manufacture of spindles was established and the production of rings, top rollers and fluted rollers considerably increased. Under arrangements with Messrs. Textile Machinery Makers Ltd., the Company imported a number of partly manufactured ring frames for which spindles, rings, top rollers, fluted rollers and weights were supplied from these works. At the end of the year 40 ring frames had been delivered to various customers; in addition a number of individual orders, for fluted rollers, spindles and rings were completed. A high level production of all these items has now been achieved and the back log of orders almost liquidated. We are now in a position to offer reasonable deliveries of all items for which manufacture has been established. The Company's activities are now in the course of being further extended to the manufacture of tin rollers, conversion materials for longer lifts and a wide variety of high draft systems and complete ring frames.

Further applications for shares to the value of Rs. 27.15 lakhs in the new issue were received during the year. Mr. Kenneth Preston, Chairman of Messrs. Textile Machinery Makers Ltd., Oldham, paid a brief visit to the factory in December and attended a Board Meeting by special invitation of the directors.

Accounts in brief were as under:—

Liabilities		Rs.	Assets		Rs.
Capital	...	2,46,31,900	Block	...	2,22,49,204

			Other assets		58,445
			Debts, deposits and advances	...	8,43,519
			Cash	...	1,51,504
			Profit and loss account	...	17 28,962
	Rs.	2,97,20,841		Rs.	2,97,20,841

Dessai and Parbuttia Tea Co., Ltd.

The directors of the above Company (Secretaries: Messrs. Jardine Henderson Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st December, 1952.

The profit and loss account, after providing Rs. 74,741 (Rs. 82,776) for depreciation, showed a profit of Rs. 27,851 (Rs. 3,89,461), to which was added the balance brought forward from the previous year of Rs. 25,545 (Rs. 21,354). The directors have transferred from reserve account the sum of Rs. 50,000 (nil), making a total of Rs. 1,03,396 (Rs. 4,10,815). Out of this amount was provided for taxation Rs. 9,284 (Rs. 1,10,270), transferred to improvement reserve account Rs. 5,000 (Rs. 75,000) and transferred to taxation equalisation reserve account Rs. 10,000 (Rs. 25,000) leaving an available balance of Rs. 79,112 (Rs. 1,60,545). Out of this sum the directors paid a dividend at the rate of 10 (22½) per cent. per annum without any deduction for income-tax paid by the Company, absorbing Rs. 60,000 (Rs. 1,35,000) leaving a credit balance of Rs. 19,112 (Rs. 25,545) to be carried forward.

As explained in the report for the year ended 31st December, 1951, the amount set aside to taxation equalisation reserve account represents the immediate saving in taxation by operation of initial and double depreciation allowances on new buildings and machinery, the transfer this year amounting to Rs. 10,000. During the year the Company received a refund of excess profits tax under the provisions of section 10(1) of the Indian Finance Act, 1942, read with section 2 of the Excess Profits Tax Ordinance, 1943, amounting to Rs. 5,954 and it is, therefore, considered appropriate that a corresponding transfer should be made to the improvement reserve account, it having been a main object of the excess profits tax post-war refund arrangements to provide for improvements in and rehabilitation of buildings, plant and machinery. Although the results for the year do not by themselves justify the proposed dividend of 10 per cent. the directors feel that, having regard to the Company's current prospects and to the fact that since the end of the War and up to 31st December, 1951, additions to the Company's reserves totalled more than Rs. 3,25,000, which sums have been provided entirely out of the shareholders' undistributed profits of these years, they are justified in recommending this dividend. To enable the dividend to be paid they have, therefore, transferred from reserve account the sum of Rs. 50,000.

A crop of 14,685 maunds was harvested against an original estimate of 13,500 maunds. The following is a comparative statement of tea marketed and average prices realised for the past three years:—

	1952	1951	1950
	Lbs.	Lbs.	Lbs.
	11,31,749	11,15,589	10,74,881
Average sale price per lb. ... Rs.	1 10 11	2 0 9	2 1 0

The average cost per lb. for 1952, exclusive of depreciation, worked out as follows:—

	Rs. a. p.
At Estate	1 5 8
In Calcutta	0 4 8
Total ...	1 10 4

The estimated crop for 1953 is 14,400 maunds.

Accounts in brief were as under:—

Liabilities		Rs.	Assets		Rs.
Capital	...	6,00,000	Block	...	9,17,223
Reserves	...	7,15,000	Capital expenditure		1,03,808

	Rs.	23,69,211		Rs.	23,69,211

N.B.—Figures within brackets relate to the corresponding period of the previous year.

COMMERCE AND INDUSTRIES

(Concluded from page 640)

the two broad groups is seen to be very closely in balance. This balancing extends down to most bilateral relationships. Multilateral settlements have also played a limited role in covering surpluses and deficits in East-West trade.

The basic limitations on the growth of East-West trade are partly political and partly economic. The main economic factor is the limited availability of goods for export. Yet, the development of trade could be made possible, if transfer of Western-owned balances in one East European country were permitted for use in another or converted into sterling. Such arrangements will provide greater flexibility for the development of multilateral trading patterns, whereby exports of West European capital goods may be increased to East European countries and the proceeds used to buy increased quantities of Soviet grain. The creation of additional payment facilities will not, by itself, ensure expansion of trade, but it will help remove any obstacles to such growth arising from payment difficulties.

PACKING CHARGES FOR CEMENT

On 26th November, 1952, the Government of India announced that packing charges for cement would be fixed every quarter on the basis of the average market price for packing material ruling on the first day of each month during the immediately preceding nine months plus Re. 1-4 per ton to cover incidental charges. On this basis, the packing charges for the current quarter worked out to Rs. 11-14 per ton and for the quarter commencing from 1st October, 1953, they worked out to Rs. 11-9 per ton. The Government of India has informed all the State Governments of the revised packing charges.

These are the charges applicable to cement packed in new bags only. Packing charges for cement packed in old bags will be a matter for settlement between the buyer and the seller, but should not exceed the charges fixed for new bags.

BRITAIN'S NEW SHOEMAKING METHODS

Shoe production in Britain, like many other industries, is going through a rapidly changing phase. In the past, the method was to built up shoes by adding various components to one another after the upper had been pulled over the wooden last. Now the use of already prefabricated bottom units is becoming increasingly popular, and novel methods of shoe manufacture are replacing the old. Since the war, an independent industry has grown up which supplies complete bottom units to shoe manufacturers, thus for the first time enabling relatively small shoe firms to produce novel footwear economically.

COMPANY MEETINGS AND DIVIDENDS

INDIAN STANDARD WAGON CO., LTD. Annual General Meeting, Calcutta, 5th October, 1953. Dividend: Rs. 4-12 (including bonus of Re. 1) per share. Transfer books closed from 26th September to 5th October, 1953, both days inclusive.

HOARE MILLER & CO., LTD. Annual General Meeting, Calcutta, 6th October, 1953.

HASIMARA TEA CO., LTD. Annual General Meeting, Calcutta, 8th October, 1953. Dividend: *Nil.* Transfer books closed from 1st to 8th October, 1953, both days inclusive.

DIMAKUSI TEA CO., LTD. Annual General Meeting, Calcutta, 8th October, 1953. Transfer books closed from 1st to 8th October, 1953, both days inclusive.

BETJAN TEA CO., LTD. Annual General Meeting, Calcutta, 8th October, 1953. Dividend: *Nil.* Transfer books closed from 29th September to 8th October, 1953, both days inclusive.

ARCUTTIPORE TEA CO., LTD. Annual General Meeting, Calcutta, 8th October, 1953. Dividend: *Nil.* Transfer books closed from 29th September to 8th October, 1953, both days inclusive.

SELIMBONG TEA CO., LTD. Annual General Meeting, Calcutta, 8th October, 1953. Dividend: *Nil.* Transfer books closed from 29th September to 8th October, 1953, both days inclusive.

MANIPUR TEA CO., LTD. Annual General Meeting, Calcutta, 8th October, 1953. Dividend: *Nil.* Transfer books closed from 29th September to 8th October, 1953, both days inclusive.

TAIPOO TEA ASSOCIATION LTD. Annual General Meeting, Calcutta, 8th October, 1953. Dividend: *Nil.* Transfer books closed from 29th September to 8th October, 1953, both days inclusive.

DHRANGADHRA CHEMICAL WORKS LTD. Annual General Meeting, Dhrangadhra, 9th October, 1953. Transfer books closed from 1st to 15th October, 1953, both days inclusive.

KALASA TEA AND PRODUCE CO., LTD. Annual General Meeting, Kozhikode, 10th October, 1953. Dividend: 10 per cent. on the ordinary share capital. Transfer books closed from 28th September to 12th October, 1953, both days inclusive.

BELVEDERE JUTE MILLS CO., LTD. Half-yearly General Meeting, Calcutta, 12th October, 1953. Dividend: Rs. 7-8 per share. Transfer books closed from 28th September to 12th October, 1953, both days inclusive.

NILGIRI TEA ESTATES LTD. Annual General Meeting, Kottayam, 20th October, 1953. Dividend: Re. 1-4 per share. Transfer books close from 13th to 20th October, 1953, both days inclusive.

SHREE DIGVIJAYA WOOLLEN MILLS LTD. Annual General Meeting, Jamnagar, 23rd October, 1953. Transfer books close from 9th to 23rd October, 1953, both days inclusive.

INDIA CEMENTS LTD. Annual General Meeting, Madras, 24th October, 1953. Dividend: *Nil.* Transfer books close from 12th to 24th October, 1953, both days inclusive.

KHATAU MAKANJI SPINNING AND WEAVING CO., LTD. Annual General Meeting, Bombay, 26th October, 1953. Dividend: Rs. 10 per share, payable on and after 2nd November, 1953. Transfer books close from 12th October to 10th November, 1953, both days inclusive.

HINGIN-RAMPUR COAL CO., LTD. Dividend of Rs. 3 per share, for the year ended 30th June, 1953. Transfer books close from 20th to 27th October, 1953, both days inclusive.

SURAT ELECTRICITY CO., LTD. Ad-interim dividend of Rs. 2-8 per share, for the half-year ended 30th June, 1953, payable on and after 22nd October, 1953.

MANAR ESTATES LTD. Dividend of 9 per cent. on the ordinary shares, for the year ended 30th June, 1953. Transfer books closed from 1st to 12th October, 1953, both days inclusive.

COMPANY REGISTRATIONS

DAULAT THEATRES LTD. (First Director: Mr. Jehangirji Dhanjibhoy Engineer.) Business: Cinematograph Trade and Industry in all its Branches. Authorised capital: Rs. 5,00,000. Private company. Address: C/o. Daulat Talkies, Grand Baliwala Theatre, Foras Road Junction, Tardeo, Bombay 7.

SUTRAMDAS (INDIA) LTD. (First Director: Mr. R. Sutramdas) Business: Spinners, Weavers, Coirmakers, Silk Mercers. Silk Weavers, etc. Authorised capital: Rs. 5,00,000. Private company. Address: 5th Floor, United India Building, Sir Phirozshah Mehta Road, Fort, Bombay.

MONEY DULL

(From Our Own Correspondent)

BOMBAY, 29*th September*

Conditions in the short-term money market were dull, with very little activity during the week under review. Demand for funds was very much on the wane, as reflected in the continued fall in the advances of Scheduled banks. Though there was no surfeit of funds in the market, supply was quite comfortable and borrowers were able to get their requirements without any difficulty. Inter-bank call money among the Exchange banks and big Indian banks was done at 1½ to 1¾ per cent. in the early hours, while left over funds after clearing were on offer at 1½ per cent. Among the smaller Indian banks, the rate was 2¼ to 2 per cent. Fixed money was available at 2½ per cent. for one to two months and at 2¾ per cent. for three to six months.

The tenders for Rs. 1.5 crores of three months' Government of India Treasury Bills evoked a better response this week than in the previous week, the amount offered being Rs. 2.51 crores, as against Rs. 1.93 crores. The average rate of accepted tenders, however, stood unchanged at Rs. 2-6-8 per cent. per annum.

The Scheduled Banks' statement for the week ended 18th September, 1953, as compared with that for the previous week, reveals a sharp fall of Rs. 4.54 crores in demand deposits and Rs. 88.21 lakhs in time deposits. Inter-bank borrowings repayable on demand are lower by Rs. 46.75 lakhs, while those of a time nature are up by Rs. 30 lakhs. There has been practically no change in either the borrowings from the Reserve Bank or those from the Imperial Bank. Advances disclose a decline of Rs. 2.09 crores and bills purchased and discounted Rs. 1.98 crores. Investments have gone up by Rs. 4.01 crores. Cash on hand and balances with the Reserve Bank are together lower by Rs. 84.29 crores, balances with other banks in current account by Rs. 27.27 lakhs and money at call and short notice by Rs. 79.29 lakhs.

There was no change in conditions in the Gilt-edged market during the week under review from those noted last week. The undertone remained steady, but activity continued to be at a low ebb, for want of sellers. Enquiries were there for most of the Central Government loans at quoted rates, but business done was poor. 4 per cent. State Government loans, particularly Bombay loans, continued to elicit investment demand.

3 per cent. 1957 was quoted at the self-same rate of Rs. 98-7 3 per cent. 1958 at Rs. 98-2 and 3 per cent. 1959-61 at Rs. 96-1. Both 3 per cents. 1963-65 and 3 per cent. 1964 were unchanged at Rs. 92-8. 3 per cent. 1966-68 was in demand due to proximity of interest payment; it therefore, rose by an anna to Rs. 90-2. 3 per cent. 1970-75 was maintained at Rs. 86-8 and 3 per cent. 1986 Conversion Loan at Rs. 82-3. 3½ per cent. 1961 N.P. bonds attracted good attention and on brisk buying rose by an anna to Rs. 98-7 at which rate the Reserve Bank of India was also reported to have sold. On keen demand, 4 per cent. 1963 rose by As. 3 to Rs. 100-10 and 4 per cent. 1963 Madras by As. 2 to Rs. 99-13. 4 per cent. 1964 Bombay picked up As. 3 to Rs. 100-10. 4 per cent. 1964 Municipal Loan had buyers As. 2 higher at Rs. 99-12. Bombay State Transport Corporation Bonds were in favour due to proximity of interest payment and business was done an anna better at par.

In the foreign exchange section, the rupee-U.S.-dollar rates were unchanged at Rs. 478 per $100 (banks' selling) and at Rs. 474 (banks' buying). In New York, spot sterling acceded to strength from $2.80½-2.80½ to $2.80-3/16-2.80-5/16. The forward sterling, however, after an initial strength, relapsed to finish at last week's closing rates. Thus, three months' sterling stood on balance unchanged at $2.79½-2.79¾ and six months' sterling at $2.79½-2.79½.

STRONG DEMAND FOR TEA DUSTS

(Messrs. Forbes, Ewart and Figgis Ltd.)

COCHIN, 26*th September*

The total offerings in dust sale "S", which was held on Tuesday 22nd September, amounted to approximately 1,75,000 lbs. There was a strong general demand for all types. Low and low medium dusts were fully firm and occasionally dearer. Medium and better liquoring types were irregularly As. 1 to As. 2 dearer.

London Market.—Strong demand all kinds. Commons half penny, mediums one penny dearer.

Colombo Market.—Good general demand. Low growns steady; mediums firm to dearer; Dimbula Dickoya types advanced ten cents; U.V.A. sorts lower on quality.

Calcutta Market—Export.—56,323 packages. Market firm to dearer. Strong demand for U.K. types, especially at the bottom. Assam B.O.Ps. and O.Fs. renewed interest and often As. 2 to As. 4 dearer.

Dust.—Strong demand. Market As. ½ to As. 1 dearer for medium Dooars and Assams. Best liquoring types well supported. Darjeelings, particularly powdery sorts, As. ½ to As. 1 dearer. Strongest feature commonest and residue types.

Export Quota.—The market has strengthened further to 19-20 pies.

Forthcoming Auctions.—Dust Sale 'T' will be held on Tuesday, 6th October.

As we go to press, Messrs. Forbes, Ewart and Figgis, Ltd., wire as follows:

"*Sale* 20.—10,75,000 lb. Very strong and active demand. Commons and low mediums As. 2 to As. 3 and mediums As. 1 to As. 2 dearer. Best liquoring buyers selective, but dearer with improved quality. Whole leaf As. 1 to As. 2 dearer."

BULLION QUIET

(From Our Own Correspondent)

BOMBAY, 29*th September*

The bullion market continued to rule easy during the week under review also, though the extent of fall in prices was not the same in both the metals. In gold, there was a more marked recession than in the previous week, while in silver, the sharp downward trend noted in the previous week was somewhat arrested. The uncertainty regarding the legality of the proposed amendment to the by-law continued to hang on the market and checked any rise in prices. It is reported that a questionnaire is being prepared by two solicitors to be placed before the Advocate-General for his opinion. Meanwhile, reports of arrivals of smuggled gold and *kutcha* silver and the weakness of other commodity markets were sustaining the bearish sentiment that came to prevail a fortnight ago.

Forward silver (25th September settlement) opened the week at Rs. 154-4 and declined to a low of Rs. 151-15 on Friday before the settlement ran out at Rs. 152-10 on that day. Business in the next settlement (23rd October) opened at Rs. 154-14 and reacted to Rs. 152-9 on Friday. The lower level, however, led to a revival of support and the forward position recovered to Rs. 154-4. But a wave of selling soon ensued and it fell to Rs. 152-15 at the close.

Ready silver (.996 Bullion) began at Rs. 154-4 and finished the week at Rs. 152-15. The floating stocks of silver are reported to be 2,200 bars. The daily average offtake was 10 to 15 bars.

Gold for forward delivery (24th September) commenced at Rs. 86-2 and receded to Rs. 85-5 when the settlement ran out on the opening day of the week. Business in the next settlement (22nd October) began the week at Rs. 85-8 and declined to Rs. 84-1 on liquidation by a prominent bear and the application of *Mandi* option. There was a slight revival to Rs. 84-10 on reports of an improvement in offtake. After a short-lived decline to Rs. 84-2 yesterday, the forward rate steadied up to Rs. 84-9 at the close to-day.

Ready gold declined from Rs. 86-12 to Rs. 85-15. The floating stocks of gold are estimated at 20,000 tolas. The daily average arrivals and offtake were identical at 3,000 tolas.

The following comparative table shows the trend of the market during the week under review:

		29-9-53	Highest	Lowest	23-9-53

POOR ENQUIRY FOR GUR

(From Our Own Correspondent)

HAPUR, 28*th September*

Gur markets remained quiet. With the arrival of imported sugar in the South and with the new crop arrivals in many markets, enquiry for old *gur* has been substantially reduced. New crop *gur* arrivals have started at Meerut and Hapur, but the quantity received is very small. *Gur* recovery from the cane is extremely poor, but the prices are attractive, and these may come crumbling down as soon as new crop arrivals gather momentum. Already prices of all agricultural produce are falling and *gur* cannot stand alone. It has been officially announced that no control would be exercised by the Government on the movement and price of *gur* and *khandsari* during the coming season.

The *gur* and *khandsari* sections of the Indian Institute of Sugar Technology, Bhadruk, which had been conducting experiments in the manufacture of *khandsari* sugar and *gur* by the open pan system, has evolved an improved process of sugar manufacture with which higher recovery and better quality sugar is obtained. Some improved *kohlus* and crushers and furnaces have also been evolved, for the production of improved quality of *gur*. In order to popularise these improved processes, the authorities are arranging a number of demonstrations during the coming season. New pansera *gur* at Hapur is quoted at Rs. 20 and at Meerut at Rs. 20 to Rs. 20-8.

Crystal sugar markets remained quiet to bearish. Consignments of imported sugar have already arrived at the ports and more may be received in the coming weeks. The market at Calcutta ruled quiet throughout the week, with local sales being small. The public demand was met mostly with cheaper Government subsidised sugar. At Madras prices of sugar in the open market declined by about Rs. 2-8 to Rs. 3 per maund due to arrivals of Java sugar.

Prices have remained stationary or tended to decline in other markets. The following are the latest average sugar quotations in different markets: Ambala: Rs. 32-4, Amritsar: Rs. 32-14, Delhi: Rs. 32-4, Jullundur: Rs. 31-4, Agra: Rs. 31, Hapur: Rs. 30 to Rs. 31-4, Kanpur: Rs. 30-14, Malhuri: Rs. 30-8, Meerut: Rs. 30-14, Muzaffarnagar: Rs. 30-15, Patna: Rs. 31-4, Calcutta: Rs. 30-15, Gauhati: Rs. 32-12, Cocanada: Rs. 33-10, Madras: Rs. 33-4, Bombay: Rs. 34, Bhavnagar: Rs. 33-2, Nagpur: Rs. 32-12 and Indore: Rs. 30-11.

COTTON EASY

(From Our Own Correspondent)

BOMBAY, 29*th September*

The cotton market has wisely turned its eyes now towards the cloth and yarn markets to get a clue about its future dealings. The slump in textiles has already spread to yarn. Since offtake in the handloom and powerloom sections has gone down considerably, the market for yarn has also come to be severely contracted. In spite of the *Pooja* holidays and *Dassera* and *Diwali*, things are very quiet in the cloth market. If further evidence with regard to a lower tempo in the consumption of cotton during the coming months was necessary, it has been provided by the fall in the production of cloth, after months of progressively increasing production. The pressure of cloth stocks in the mills' godowns is being felt and till this is relieved, the mills will be forced to reduce production still further.

All this was not lost upon some of the shrewd operators in the forward cotton market. The week-end had witnessed an artificial splutter in cotton prices lifting them by as much as Rs. 15 per candy for both the February and May deliveries. On Monday, after an initial show of steadiness the market had to yield to heavy bear pressure engendered by disappointing news from the piecegoods markets. Nearly two-thirds of the recent gain came to be sacrificed. As things stand, further recession in prices appears very probable, because the ruling sentiment still continues, even at this lower level, to be bearish. A rumour that the U.S.A. might send about a couple of lakhs bales of cotton as a gift to India has gone further to upset the market and this had its repercussions in the sentiment even at Sewri where spot business is carried on. But for some mills covering their requirements for the next three months and improved offtake by shippers of certain short-staple varieties for export, the price level even in this section might have been lower.

The Press note issued by the Government of India announcing a quota of 175,000 bales for export has come in time to lend some support to the market. This quota consists of 75,000 bales of Bengal *Deshi*, 50,000 bales of Mathias, Kalagins, and Dholleras and 50,000 bales of C.P. I and C.P. II Oomras of not more than 11/16" staple. As in the last season, Comillas and Cocanadas will continue to be freely licensed for export. There will be some disappointment at not getting any reduction in export duties, but the market had already reconciled itself to this eventuality after the reimposition of export duty on *Deshi* varieties at Karachi. Several Continental centres have been eagerly awaiting this announcement and in some cases negotiations for purchase subject to receipt of licences for export had advanced considerably with shippers here. The export trade does not consider the extension of validity of all licences for the export of short-staple cotton of 1952-53 season to the end of October as very helpful, in view of the fact that the Japanese buyers have not made any more to open credits here and so do not appear to be in earnest about the transactions they have entered into. Some of this cotton is likely to be resold to the continent.

I.C.C. February opened the week at Rs. 617½ and moved up, on good support, to touch a high of Rs. 622½ on 26th September. Thereafter, it gradually receded to touch a low of Rs. 612½ on 29th September, before it closed a shade higher at Rs. 614½. I.C.C. May followed a similar trend. Opening the week at Rs. 620½ it fluctuated between Rs. 624½ and Rs. 614 before it closed to-day at Rs. 615½.

The following is the trend of prices in the forward market since our last report was published:

	Opening	*High*	*Low*	*Closing*
I.C.C. Feb. ...	Rs. 617½	622½	612¼	614½
I.C.C. May ...	Rs. 620½	624½	614	615½

The following are the latest available quotations from the Sewri market: Bengal *Deshi* Rs. 570; Berar Jarillas Rs. 680; Khandesh Rs. 770; Vijay Rs. 850; Oomra *Deshi* Rs. 590; Moglai Rs. 590.

At Karachi, the Pakistan Government is trying to inaugurate an export drive for cotton and other commodities, by appointing a Committee to examine this question and to suggest practical steps in this direction. This Committee has also been asked to consider the advisability of renewing forward trading in the new season cotton. It is expected that about half the quantity available for export this year will be disposed of under the trade agreement which Pakistan has entered into with Japan, Italy and France. Australia is also expected to take a larger quantity than last year and for the rest Karachi will have to look forward to the U.K. and the Continent. The U.K. has been showing some interest and France has already bought a sizable quantity during recent weeks. But it is noticed in the Continental centres that Brazilian cotton, which is selling cheaper on parity, is gradually undermining the demand for Pakistan varieties in these markets. No fresh demand is likely to come from France now as full advantage of the licences issued has already been taken, while Spain will soon turn away from Karachi to New York in view of the new political relation with U.S.A. under which it might be possible for it to secure credit more easily there than at Karachi.

The following are the latest available quotations from the Karachi market: 4F Punjab R.G. Rs. 54 to Rs. 56; S.G. Rs. 58 to Rs. 60; L.S.S. Punjab R.G. Rs. 56 to Rs. 58; S.G. Rs. 60 to Rs. 62; N.T. R.G. Rs. 62 to Rs. 63; S.G. Rs. 66 to Rs. 67; 289F Punjab R.G. Rs. 60 to Rs. 62; S.G. Rs. 66 to Rs. 69. New crop: Sind *Deshi* Rs. 64; S.G. Rs 65 *Deshi* Rs. 56½; N.T. R.G. Rs. 59½; Punjab Rs. 63½ to Rs. 64½; 289F Roller R.G. Rs. 60 to Rs. 61; S.G. Rs. 68 to Rs. 68½; 4F R.G. Rs. 66 to Rs. 66½; S.G. Rs. 70½ to Rs. 71.

The market at Alexandria continues to be active with export demand from several directions. India has been a good buyer and the U.K. and the Continent have all been securing their supplies earlier in view of the smaller size of the crop this year in Egypt. While the Government estimate of the crop is between 7 and 8 million *cantars*, trade ideas regarding the size of the crop place it below seven million *cantars*, as weather conditions during the last two weeks have not been as favourable as before. Demand having been concentrated mostly on Ashmouni, the spot supply of this variety has again gone scarce and as a result of this, the Cotton Commission has raised the ceiling prices of all Ashmouni types. These prices are already higher than New York prices on parity. But those in the up-country local centres, where shippers who have committeed themselves are buying freely are at a considerably higher rate than the Government rates for purchase from growers. Demand for Karnak though limited is on the increase. Japan is also expected to enter into this market soon in view of the reported trade agreement concluded between the two countries.

The market at New York, in spite of numerous efforts to stage a recovery, is not able to get away very far from the 33 cents level. The price level, however, during the few days preceding the maturing of a contract is not a very reliable guide as to the general trend of prices likely to prevail later. Transactions at present are more in the nature of squaring up business in the October delivery or of switching it over to the next delivery. The process of adjustment of commodity prices in the U.S.A. does not appear to have been completed and two-sided fluctuations round about the present levels might be expected during the coming days, till the markets have discovered a more abiding resting place. Much will also depend on the next official forecast.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

(In cents per lb.)

	28-9-53	22-9-53	15-9-53
Spot	33.75	33.70	33.75
October	32.81	32.84	33.11
December	33.06	33.13	33.36
March	33.46	33.45	33.71
May	33.60	33.61	33.81

ART SILK YARN EASY

(From Our Own Correspondent)

BOMBAY, 29*th September*

The art silk yarn market ruled eventless this week too. The market continued to present an easy tone almost upto the 28th inst. This was due to lack of demand induced by disquieting reports about accumulation of cotton cloth in important consuming centres and with the mills. The demand for rayon fabrics also persisted to be poor. But yesterday at the lower levels, some offtake set in and values as a result rallied slightly, thereby partially wiping out a part of the earlier losses. Despite this improvement, prices at close disclosed heavy losses over the week.

In the forward section, 150D September which opened at Rs. 738 as against Rs. 758, declined to Rs. 723, on the 26th inst. On profit-taking at this level, it shot up by 10 points to close at Rs. 733. 150D October eased from Rs. 753 to Rs. 726, before finally improving to close at Rs. 738. 120 Japan was done at Rs. 4-0-6 as against Rs. 4-1-6. 150 Japan lost an anna to Rs. 3-15. 120 Italy and 150 Italy changed hands at Rs. 3-14 and Rs. 3-13-6 as against Rs. 4 and Rs. 3-12-6, respectively.

In sympathy with the art silk yarn market, the staple fibre yarn too ruled easy upto Saturday the 26th inst. But the recovery that ensured later in September delivery was such as to wipe out not only all previous losses but also to put on a few points. Thus 40×2 September delivery, which fell from Rs. 676 to Rs. 660, shot up to Rs. 678 on short covering, thereby disclosing a gain of Rs. 2 over the week. The short covering was due to reports that most of the goods tendered for delivery were disqualified, as they were not upto the standard counts and tests fixed by the Association. There was also the rumour that the Association might not permit trading in November contract, which is due to start on 1st November. October delivery which was done early in the week, at Rs. 645, as against Rs. 658, declined Rs. 630 on the 26th inst., and thereafter shot up to close at Rs. 648 to-day.

The table below gives the prices of art silk yarn and staple fibre yarn quoted to-day, as compared with those on the 23rd inst., and 16th inst.

Art silk yarn	29-9-53 Rs. a.	23-9-53 Rs. a.	16-9-53 Rs. a.
150D September (per case of 200 lbs.)	733 0	750 0	760 0
150 October " "	733 0	753 0	764 0
120 Japan (per lb.)	4 0½	4 0½	4 1
150 Japan "	3 15	4 0	4 0½
120 Italy "	3 14	4 0	4 1
150 Italy "	3 13½	3 12½	3 13
Staple fibre yarn			
2/40s September (per case of 200 lbs.)	678 0	670 0	604 0
2/40s October " "	648 0	658 0	666 0

CASTORSEEDS FIRM

(From Our Own Correspondent)

BOMBAY, 29*th September*

History was made in the oilseeds market this week with castorseeds September contract being quoted far lower than the spots. Thus September, 1953 was done at Rs. 196 per candy, as against Madras ready and F.A.Q. ready each at Rs. 200 per candy. The bull grip in the market turned out to be tighter and bears struggled virtually for survival. Small wonder, the Board of the Oilseeds Exchange has thought of calling for spot rates in the various up-country centres for the determination of delivery rate of the maturing hedge contract. More so, when the Directors themselves who control the Board are bears. The situation is certainly intriguing and, therefore, provides the appropriate menu for the Forward Markets Commission to gain the practical experience of hedge market.

The other sections of the oilseeds market depicted a highly bearish trend during the week. Expectations of a bumper crop following the official announcement of a rise of 11.5 per cent. in the estimated acreage under groundnuts, continued arrivals of new groundnut crop, the refusal of the exchange to accept new crop, as against the maturing contract and a steep fall in the prices of gingili—all cumulatively weakened the sentiment of operators. Persistent selling pressure which ensued depressed values. Closing quotations were, therefore, substantially lower than those at the end of last week.

Sectionwise, castorseeds, September delivery, opened steady at Rs. 168. On persistent speculative support, the rate gradually shot up to close at as high as Rs. 196, the lowest rate touched during the week being Rs. 165. Total tenders delivered so far are about 60,000 candies. Ready Madras quality and F.A.Q. gained Rs. 7-4 each to Rs. 40. May 1954, however, ruled easy. Opening at Rs. 118-12, as against Rs. 119-4, it gradually declined to Rs. 112, before closing at Rs. 113-4. Castor-oil I pressure was steady at Rs. 17, while commercials lost As. 2 to Rs. 16-4 B.S.S. was down by As. 4 at Rs. 17-4.

The groundnuts section came in for some selling pressure on increasing arrivals of new crop. The Board of Oilseeds Exchange decided to-day that new crop will not be acceptable for delivery, against maturing September contract. Consequently, the September delivery which remained generally steady upto yesterday firmed up to-day on short-covering. September delivery commenced the week at Rs. 44-8, as against Rs. 47. Persistent buying support lifted the rate to Rs. 47 to-day, after a temporary set-back. December-January was done lower at Rs. 28-2, as compared with Rs. 30-6, in view of the prospects bumper crop. Khandesh quality ready new declined by Rs. 4 to Rs. 40. October delivery changed hands at Rs. 34, as compared with Rs. 35-12. Groundnut oil ex-mill and railway receipts lost Rs. 2-8 each to Rs. 23-8. October, November and December were enquired at Rs. 18-8, Rs. 16-4 and Rs. 15-6 respectively, as against Rs. 20-1, Rs. 17-11 and Rs. 16-11 respectively.

The linseed section was distinctly easy. The prices are on the verge of reacting to world market prices. Bold ready fell from Rs. 24-14 to Rs. 22-8. August-September and October-November deliveries declined from Rs. 24-12 each to Rs. 22-12. February-March was lower by As. 14 at Rs. 21-8. Linseed oil suffered Re. 1 to Rs. 12-12.

Other oilseeds and oils too were easy. Among them, *gingili* seed was done at Rs. 200 per candy, as against Rs. 210 and *gingili* oil at Rs. 65 per Bengal maund, as against Rs. 64, *kardi* seeds bold were down by As. 12 to Rs. 22-4. August-September and October-November deliveries eased from Rs. 23 and Rs. 21-8 and Rs. 21-6 respectively. Niger F.A.Q. and Madras declined from Rs. 35 each to Rs. 30-6 and Rs. 31, respectively. December-January was steady at Rs. 25.

The following table shows the prices of oilseeds and oil on the 29th ult. as compared with those at the end of the previous two weeks.

	29-9-53 Rs. a.	23-9-53 Rs. a.	16-9-53 Rs. a.

FOODGRAINS' POSITION IMPROVES

(From Our Own Correspondent)

HAPUR, 28*th September*

The Indian Food and Agricultural Minister Mr. Rafi Ahmed Kidwai made a detailed review of the country's food situation at Lucknow this week. Mr. Kidwai reiterated that at present there was no food problem as such in the country. There was no shortage of food and people could buy as much as they could consume. Mr. Kidwai stated that there would be all round improvement in the food production next year. He said: "This year the crop has been good in almost all the States. There would be increased yield of rice in Bengal, Orissa, Uttar Pradesh, Punjab, Madhya Pradesh and other States. In the whole of India the total production will certainly go up." The increased production was mainly owing to sufficient rain and the use of more fertilizers.

With a firm note of optimism, Mr. Kidwai observed that the policy of decontrol initiated by him was a complete success. With an increase in production of agricultural commodities all over the world including India, prices tended to fall. The Food Minister was, however, not in favour of any step to bring about further decline in prices which, according to him, created more problems than those it settled. Mr. Kidwai is now on a survey tour with a view to formulating the next year's food policy. Mr. Kidwai told correspondents at Lucknow that India's wheat imports from 1953-54 would be one million tons on the basis of the International Wheat Agreement. He added, however, that India would buy cheap and coarse foodgrains from foreign markets for deficit areas.

The Central Government has authorised the State Governments to sell wheat in any quantity both to consumers and traders. Inter-State cordons on the movement of wheat, except on Government account will continue to remain in force. Imported wheat at subsidised prices has not only been given to Uttar Pradesh and Bihar for distribution in flood suffered and scarcity affected districts, but is also allotted to rice eating States of Bengal, Madras, Mysore, Travancore and Cochin. Rice quotas for States will be raised by about December after the position in regard to rice crop has been finally assessed.

The food position in U.P. continued very satisfactory. The Government of India has now agreed to supply 546,000 maunds of imported wheat at the subsidised rate of Rs. 14 a maund in order to supplement the distribution of foodgrains at subsidised rates in the flood affected eastern districts. The State Government has already distributed 3 lakh maunds of coarse grains at subsidised rates. The U.P. Government has agreed to divert its old stock of 64,000 tons of imported wheat to Bihar. This wheat has been given to the millers, but it found no market as indigenous wheat was available everywhere at comparatively cheaper rates.

Procurement of rice for supply to deficit States under the Basic Plan of the Government of India has been started all over the State. The purchasing rates would be the same as last year. The Indian Food Minister does not appear to be very happy over the procurement situation here. According to him, last year, the U.P. Government fixed procurement price of rice rather high with the result that it became uneconomical to purchase it and the market price started soaring up in the State itself. Under these circumstances the Government had to cry halt to any further procurement. Total purchase of foodgrains upto 10th September amounted to 55,600 tons, of which rice contributed 39,490 tons. *Kharif* crop produce has started reaching the markets everywhere supplementing existing supply of foodgrains.

Local quotations are: Wheat: Rs. 15-8 to Rs. 16-8; gram: Rs. 14-8 to Rs. 15-4; barley: Rs. 10-8; *bejhar*: Rs. 10-8; rice: Rs. 30 to Rs. 20; peas: Rs. 13; *arhar* Rs. 12-12; *urd*: Rs. 18; *moong*: Rs. 16-8, and *Masoor*: Rs. 16.

KIPS BUSINESS POOR

(From Our Own Correspondent)

MADRAS, 28*th September*

Trading in kips has been poor, as importers in the U.K. have been probing into the prices rather than placing business in the usual way. Run, fifths and inferior fifths selections have attracted buyers at a penny or two less than last week, while fourths selections have been unsaleable. Enquiries for cow calf, buff calf and buff hides have been negligible. Tanners are resisting lower prices, in view of the strength in the raw markets.

In the tanned skins section, prices of goat skins have been weak due to absence of shipment business for market qualities. Tanned sheep skins market rules steady and clearances have been fair-sized.

NEW ARRIVAL OF HIDES HEAVY

(From Our Own Correspondent)

KANPUR, 27*th September*

During the week under review the conditions on the local hides and skins market were more or less unchanged. The new arrival was considerable and quite above the average for this period of the year. The main purchasers were the local tanners and the Madras dealers. The latest quotations are as follows:

Wet salted cow, superior heavy Rs. 360, light Rs. 280, medium heavy Rs. 300 and light Rs. 180 per score; wet salted buff, superior 2 lbs. and medium 2 lbs., 12 ozs. per rupee; goat 1st grade Rs. 225 and 2nd grade Rs. 210 and sheep Rs. 300 per 100 pieces.

SUGAR POLICY FOR 1953-54

The Government of India's sugar policy for the ensuing (1953-54) season was editorially commented upon in our last issue. We now give the details of the policy announced by the Government in its Press Note dated 23rd September, 1953:

"The Government of India has decided to fix the minimum price payable for sugarcane by vacuum pan factories in the ensuing season at Re. 1-7 per maund for gate deliveries and Re. 1-5 per maund for deliveries at rail centres, as against Re. 1-5 and Re. 1-3 per maund, respectively, in 1952-53. This decision has been taken after taking all relevant factors into consideration, such as the trend of sugar production, the prevailing prices of sugar, *gur* and *khandsari* and the returns to the cane grower from alternate crops.

As a result of the increase in the minimum price of cane by As. 2 per maund, there should normally be an increase of Re. 1-4 per maund in the price of sugar. In order to prevent this increase in the price of sugar, the Government has decided to discontinue the special additional excise duty of Re. 1 per maund of sugar which it imposed last year for the specific purpose of meeting the loss involved in reducing the price of the previous year's carry-over controlled stocks. The sugar mills have agreed to forgo the remaining As. 4 per maund from the margin of profit. There will, therefore, be no increase in the price of sugar to the consumer.

"It has further been decided by the Government that the minimum price for cane in the 1954-55 season will be the same as in 1953-54, namely, Re. 1-7 per maund for gate cane and Re. 1-5 per maund for rail deliveries. This practice of fixing minimum price for cane one year in advance has been adopted by the Government for the first time in order to meet the longstanding demand of cane growers and to facilitate planning of cane production with previous knowledge of the minimum price

STOCK & SHARE QUOTATIONS

Abbreviations:—D=Deferred shares. P.O.=Preferred Ordinary shares. Y=Accounts published yearly. H=Accounts published half-yearly. P=Company has Preference shares. T=Company has Debentures. N=Nominal quotation. x.d.=Ex-Dividend. c.d.=Cum. Dividend. I=Interim Dividend. f=Dividend for first half of the year.

Shares:—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery, and all other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends:—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year, they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly, dividends shown are for their financial year. Where, however, the accounts are closed half-yearly, dividends are shown separately for the respective half-years.

* Including bonus. z Sales and amount written off. (k) Investments.

(D) Made up of an interim dividend of Re. 1-12 per share on 1,20,000 shares and final dividend of Re. 1-10 per share on 2,40,000 shares of which 1,20,000 shares are bonus shares.

* The following explanatory notes relate to the abbreviations and marks shown on page 660 in the debentures section:—

§§ Option to repay on six months' notice, on any interest date after 31st December, 1951, at 102 per cent. Also redeemable out of a cumulative sinking fund of ½ per cent. per annum (commencing in 1938) by drawings at 102 per cent. or by purchase at or 102 per cent.

(a) Option of repayment at any time at 3 per cent. premium.

(b) Bearer bonds of Rs. 1,000 each repayable at par.

(c) Bearer bonds of Rs. 1,000 each repayable on 31st July, 1959.

(d) Bearer bonds of Rs. 1,000 each with option of redemption in whole or in part at par on 30th June, 1952 or on any subsequent interest date at one month's notice.

(e) Returnable on or after 31st July, 1950, at Rs. 102-8 or at par after 31st July, 1955 on six months' notice in each case.

(f) Bearer bonds of Rs. 1,000 each with option of redeeming on 3 months' notice at ½ per cent. premium after 1st March, 1954, but before 1st March, 1957, and 1 per cent. premium on or after 1st March 1957.

(g) Option of redemption on or after 1st July, 1949, at par.

(h) Option of repayment at any time at par at any time on or after 30th June 1947 on six months' notice.

BANK RATE IN U.K.

(Concluded from page 620)

rises of more than a point in Old Consols, War Loan and other of the longer-dated securities. The shorter-dated bonds also rose impressively and would have gone ahead further had it not been for considerable sales of such issues as National War Bonds 1954-56 on official account.

Cheerfulness was also evident in other sections of the market and notably in that for shares of discount houses, institutions which automatically receive a substantial increment of profits whenever there is a sharp downward move in interest rates—since they can finance bills and bonds bought on relatively high yield basis with the help of short loans which are now cheaper than they were. Bank shares were also looking up. The Bank rate bonus on their investments has made the preparation of year-end balance sheets a positively joyous prospect.

The Government's Treasury Bill tender attracted unusual interest, as the first to take place after the fall in Bank rate. It showed an average rate on bills of 2-5/32 per cent., a drop of about 5s. per cent. on the figure for the previous week.

A Flexible Instrument

I still find evidence of two very divergent views about the Bank rate change. In the City, generally, the move has proved very heady wine not only in terms of its actual impact on Stock Exchange values, but also of expectations of more to come. The discount market was repeating an old tag that "Bank rate never stays at ½ per cent. for long" and there were many discussions on the timing of the move to 3 per cent.

Among my economist friends and soberer civil servants, there is still some shaking of the heads as to the timing of this reduction in Bank rate at a moment when substantial wage demands are in the offing and when there is increasing evidence of the difficulty which British industry finds in gaining or even holding export markets.

The main answer to this school of thought is that the Bank rate is now a truly flexible instrument and that we can expect it to move far more frequently than of late and to be raised at the slightest hint of trouble.

While it is easy to pretend that Bank rate changes are a purely technical device divorced from politics when the movements are in a downward direction, it may be much more difficult to carry general conviction with this plea if and when the time comes to put the rate up again.—By courtesy: *News Chronicle*.

BANKING

(Concluded from page 622)

against their pro-notes endorsed by the State Bank a sum of Rs. 312 lakhs during the year 1952-53. This compared with Rs. 220 lakhs in the previous year. The total amount drawn amounted to Rs. 193.53 lakhs, as against Rs. 215.50 lakhs last year. The balance outstanding at the close of the year was Rs. 68 lakhs, as against Rs. 148 lakhs the year before.

Although such assistance as this is welcome, it should be noted that a larger measure of credit should come from the co-operative system itself. This point was fully emphasised by Mr. Saraiya. He remarked:

"It is necessary to secure the utmost co-ordination and co-operation of the component units in the credit structure and to mobilise the rural savings and channel them through co-operatives for stepping up agricultural production. In course of time, it should be possible to build up a co-operative agricultural credit system depending mainly on its own resources and supplemented only by assistance from the Central banking institution in the country during periods of seasonal stress and economic strain."

The principle of self-sufficiency, as stated above, is in line with the ideal set down by the Planning Commission. Co-operative institutions should strive hard to achieve it in their own interests which are identical with those of the masses as a whole.

JAY ENGINEERING WORKS LIMITED

(Concluded from page 631)

under the Indian Football Association. As a result, our team has been declared runners-up, and promoted to 'A' Division Inter-Office Football League.

"On the indoor side, we have dramas and religious discourses, etc.

"I have told you on previous occasions that we are expanding our distribution arrangements, and I am glad to say that we have now selling arrangements either in the shape of our own branches, or agents or sub-agents in India and outside in more than 600 places, and the network is steadily increasing. Even now, our General Manager, Mr. B. S. Agarwal, has gone out of India to establish new and to renew old contacts in foreign countries. So far as our export business is concerned, we are extremely grateful to the Ministry of Commerce and Industry and their officers in India and in foreign countries for the very great help they unstintingly give us.

"It is obligatory on our branch managers and agents to send their men to the factory for two to three months, where they are trained in the mechanism of our machines, whether sewing machines or fans, so that they may be able to provide efficient service to the customers, and the servicing arrangements are steadily being improved and expanded.

"In the end, I thank you and I thank all those, particularly our two General Managers, Mr. B. S. Agarwal and Mr. T. R. Gupta, and all my other colleagues, be they technical officers, supervisors, or workers or those working in the office or sales, or in other sections, for their co-operation and help, and I hope that we will go on succeeding from one step to another."

MARKET REPORTS

(Concluded from page 649)

that will be received, when the crop becomes ready for the factories. It is hoped that this new policy will help, to some extent, stabilise the availability of cane to sugar factories, thus avoiding fluctuations in sugar production from year to year.

"No statutory control will be exercised on the price or distribution of sugar, but releases of stocks from factories will be controlled by the Government in the ensuing season in the same manner as was done in 1952-53. Approximately, 25 per cent. of the year's production will, however, be treated as reserve stock from which the Government will make releases at controlled prices, if and when necessary, if the market price of sugar rises unduly high. The possibility of reducing this controlled price below Rs. 27 per maund is being examined. The factories will be free to sell the rest of their production at prices and to buyers of their own choice as in 1952-53.

MORE SUGAR SHIPS NEXT WEEK

(From Our Own Correspondent)

BOMBAY, 30*th September*

Submission of tenders last week in Bombay for sugar shipped per s. s. *Havildar* indicates a certain amount of unreality in the manner in which the imported sugar is being distributed in the country. While tenders for bold grain crystals of Java sugar were more than doubled, those for Mexican and British refined sugar, which is preferred in Calcutta and Madras, were just enough for the shiploads intended to be discharged in the Bombay harbour. This means that the small grain white sugar preferred by the Calcutta and South Indian markets is offered in Bombay, whereas Java sugar favoured by this market is being despatched to Calcutta and other markets. Besides, actual discharge, deliveries and movements of imported sugar show that a bulk of it will be absorbed by the adjacent interior areas with the result that the prices of both indigenous and imported sugar must look down a bit to adjust at a reasonable level.

The offer of tenders for so large a quantity of Java sugar also indicate that the trade considers that purchase at Rs. 30 per maund is almost a guaranteed no-loss business, as witness the long queues this week at the Imperial Bank's call deposit department as late as 7 p.m. to collect the call deposit receipts for submission of tenders. The present tender system also signifies that the Food Ministry does not invest anything in the huge sugar import business, since tenders are invited and deposits accepted even before the ships sail from the port of loading and that full balance amounts are collected far in advance of the actual arrival of the steamers. Lastly, rejection of tenders for Java sugar submitted by parties in the interior and accepting those from local parties, coupled with absolute lack of wagon facilities in the B.P.T. docks, would indic

TAXATION IN UNDERDEVELOPED COUNTRIES

THE fiscal dilemma which stares all administrators in the underdeveloped countries in the face, is that, while they are compelled to collect maximum revenues which could be used for development purposes, they are also under an obligation to provide adequate tax reliefs that would stimulate private investment. It is true that this dilemma presents itself in one form or another in nearly all countries. But it assumes a special significance or presents more intractable problems in underdeveloped countries which have a long economic leeway to make up but which find that sources of revenue are limited and the yield either poor or uncertain or both. This explains why the problem of mobilisation of capital has been kept under constant scrutiny by the U.N. Economic Commission for Asia and the Far East. At the first meeting of the Commission's Working Party of experts on financial aspects of economic development programmes in Asia and the Far East, it may be mentioned here, the fiscal problems of this region received considerable attention and evoked much lively discussion.

As was briefly reported in an earlier issue of this journal, the Working Party recognised that private saving in most countries was inadequate and needed to be supplemented by substantial public savings. It also found that every country in this region had a mixed economy. Development thus depended on public, as well as private, investment. It was, therefore, felt that, while the tax yields should be increased in order to provide the finance necessary for public investment, the taxes should "not stifle incentive." The fundamental purpose of taxation, according to the Party, is to "limit consumption so as to make available resources for investment." But this process should not be carried so far as to create a tax structure that would provide "inadequate incentive to private investment." The Party observed that, in some countries, notably Japan, "general or specific reductions in taxation resulted in an increase of total investment through the stimulus given to the growth of private capital."

The twin purpose of taxation in the countries under reference, according to the Party, should be that it should "limit the growth of consumption, while expanding the rate of investment." Since the rate of investment in the public sector depends on the yield of taxation, the Party's next concern was to examine the tax yields in relation to the national income. It was found that the proportion of national income taken by taxation was "relatively low." This remark needs some examination, for an unqualified statement of this kind might be—indeed, it has been—seized upon by the revenue-minded Governments to increase the level of taxes or to impose new levies. It is, therefore, gratifying to note that the Party emphasised that, if this proportion was low, it was due to the low living standards, the existence of "substantial non-monetised sectors" and serious deficiencies in tax administrations. The Party actually found that, if the low level of national income were taken into account, the tax rates were "not unduly low."

The Party's views on income-tax and sales tax deserve particular notice in this country. The Party found, on an examination of income-tax in this region, that there might be "no large opportunity for extending it beyond its present limits." It was, however, recognised that income-tax was specially suited to developing economies, in that it fell on persons able to bear the tax, and permitted, through appropriate expenditures, the benefits to be more widely diffused." It is necessary to point out that this remark implies that the tax rates are realistically conceived and, further, that the expenditure-pattern is so devised as to enable the country to derive the maximum benefit from it. If this criterion were applied to this country, it would be found that administration leaves much to be desired.

The Party felt that sales tax shared the advantages of many other indirect taxes in "reaching people with incomes low enough to avoid income-tax." The Party further felt that some form of taxation on such low incomes was absolutely necessary, if the revenue required for development were to be raised. It, however, warned against frequent changes in sales tax rates, since they led to speculation about future changes and to undesirable shifts in stocks and sales. Perhaps, the most notable point in the Party's view of sales tax is its emphasis that a "large measure of uniformity within individual countries was extremely desirable" and, further, that "in most circumstances single-point taxes proved to be the most satisfactory from the point of administration and economic effects." The entire agitation against sales tax in this country stems from the fact that both these important considerations, namely, uniformity and single-point levy, have been ignored.

The Party has made quite a few notable suggestions in regard to taxation on land. The Party recommended that Increased attention should be paid to rural taxation, whether in the form of land tax or in some other form. This recommendation is based on the consideration that efforts should be made to ensure that "increased agricultural productivity resulting in increased incomes and increases in land values should also lead to larger tax payments." If the significance of this recommendation has not yet been grasped in this country, it is because the governing party has felt that its implementation is politically inconvenient. This is clear from the fact that, while the State Governments have had no hesitation in imposing heavy taxes on tea, rubber, sugarcane and other plantation industries organised on joint-stock company basis, they have been chary of increasing the rates of land revenue. Thus, while the urban and industrial sector is compelled to bear a disproportionate burden of taxation, the agricultural sector, which has benefited in no small measure from the increase in commodity prices, gets preferential treatment.

There is certainly no need to raise here the traditional controversy about the relative values of agriculture and industry. But it is necessary for the Governments to realise that, although agriculture might be justifiably treated with some special consideration by reason of its dependence on the vagaries of nature, it is folly to exempt it altogether from the contribution it could make to general revenues. If it is politically unwise to ask agriculture to share the tax burden with others, it only exists to that vital economic considerations are sacrificed at the altar of political expediency. It was only this week that Mr. V. T. Krishnamachari, Deputy Chairman of the Planning Commission stressed the need for tapping all available sources of revenue, including better levy and enhancement of water rates. It is to be hoped that this call would evoke a sympathetic response from the State Governments.

Yet another aspect on which the Party had some commendable suggestions to make is the one which relates to export taxes. Although the importance of export duties as a source of revenue to Governments has been rapidly declining owing to the return of the buyers' market in most of the goods exported from this region, the Party's views on it may be noted for future guidance. It is common knowledge that the

countries in the South-East Asian region derive a considerable part of their national income through the exports of a few commodities. This, coupled with the sellers' market in them during the past several years, encouraged the Governments to impose export taxes. Since the prices of these export commodities have fluctuated widely in recent years, the Governments have often been faced with either inflation or depression. The avoidance of these painful alternatives is an important problem for underdeveloped countries. Some members of the Party suggested that the countries could build up foreign exchange reserves or cash reserves during periods of prosperity for use when export earnings declined. This is a valuable suggestion, despite the fact that the fiscal machinery has proved "more successful in securing large revenues during periods of buoyant economic activity than it was in stimulating economic activity when a decline was threatened or existed." The Working Party's emphasis on the building up of cash reserves out of export tax revenues deserves the attention of the Government of India, for, if the windfalls, which periodically accrue to the Government through export booms, were properly conserved in order to grant assistance to the trades and industries concerned during periods of depression, it would go a long way towards the maintenance of the stability of that sector of Indian economy, represented by jute, tea, pepper, coffee, cotton and cotton textile industries, which depend on export markets in varying degrees.

Although the Party was convinced that there was no scope for a large increase in tax rates in this region, it found that there was scope for increasing the tax yields through improvement in tax structure and in tax administration. It emphasised that "tax structures should be simple." And this is an aspect which has been entirely lost sight of in this country. A complex structure promotes evasion of taxes. The Party again stressed the need for tightening up the tax administration. Indeed, more revenue, as experience in this country has shown, is lost through leakages than gained by fresh imposts. The Party was perfectly justified in concluding that the yield from income-tax could be "increased substantially by better administration and improved collection." It rightly stressed, as was pointed out earlier, that "good tax morality" depend upon the public acceptance of taxation as well as upon the application of penalties, and that public acceptance depended upon, at least in part, on widespread knowledge of the uses to which revenues were put. Ultimately, it is not the fear of penalty that makes citizens good taxpayers, but a sense of duty and a consciousness of social obligation. And it is a moot point whether any government can create this consciousness, if it continually treats private enterprise with suspicion and distrust. The Government spokesmen in this country have not enhanced the chances of creating "good tax morality" by harping—very often, unnecessarily—on the failings of private enterprise, ignoring the valuable contributions it has made.

CEILING ON LANDHOLDINGS

AN important aspect of land reform which is once again in the limelight is the fixation of a ceiling on landholdings. The occasion for the revival of this controversy has been provided by the land reform legislation initiated by the Governments of three States, namely, Hyderabad and Madhya Pradesh. The Delhi, Opposition parties in these States have availed themselves of this opportunity to force the issue and demand a ceiling on the amount of agricultural land which a person or a family can hold. The Congress Party itself had, at one time, supported the principle of placing a limit on landholdings. But, on a careful consideration of the issues involved, the top men in the Party have realised that this aspect of land reform is not as sound as it was once believed to be. They have, accordingly, advised the State Governments not to proceed with its implementation. The Opposition is now trying to make political capital out of this development.

In the Delhi State, for instance, the deletion of a clause prescribing a ceiling on holdings from the Land Reform Bill, at the instance of the Central Government, has found stern opposition from certain sections of the State Assembly. The Hyderabad Government, however, has not yet decided to drop its move to fix an absolute limit on the land which any individual may hold in terms of a net annual income. Still the Opposition is critical of it, on the ground that the measure falls far short of its expectations. In Madhya Pradesh, the Revenue Minister has flatly rejected the demand of the Opposition to fix a ceiling on landholdings, in the course of the debate on the Revenue Code Bill. The reluctance of the Hyderabad State Government to drop its proposal, in striking contrast to the realistic behaviour of the Madhya Pradesh and Delhi State Governments, shows that some in the ruling party itself holds divergent views. This divergence of views demonstrates lack of clear perspective of the ultimate shape the land policy must take for attaining maximum agricultural production.

Much of the prevailing controversy on the principle of fixing ceilings on landholdings may, in a way, be ascribed to the vacillating attitude of the Planning Commission. In its draft outline published in July, 1951, the Commission was undoubtedly more practical and realistic on this problem. In that report, it gave valid reasons for being extraordinarily cautious in adopting the principle. It said:

> "It is possible that any large-scale and sudden attempt to break up existing holdings may give rise to such organised forces of disruption as may make it extremely difficult to bring about the very transformation in the organisation of agriculture which is needed. In the conditions of India, peaceful and democratic change is likely to be the most lasting. *It is, therefore, necessary to ponder carefully over the practical results of a policy of ceilings on individual holdings.*" (Italics ours.)

This clear and sagacious advice was, however, modified in its final report, published exactly a year after, in December, 1952. Thus, in this report, it said:

> "The question whether some limit should not be placed on the amount of land that an individual may hold has to be answered in terms of general principles rather than in relation to the possible use that could be made of land in excess of any limit that may be set. We have considered carefully the implication of the various courses of action which are possible. It appears to us that, in relation to land (as also in other sectors of the economy), individual property, in excess of any norm that may be proposed has to be justified in terms of public interest and not merely on grounds of individual rights or claims. *We are, therefore, in favour of the principle that there should be an upper limit to the amount of land that an individual may hold.*" (Italics ours.)

The changeover from an attitude of caution to one of faith in the principle of ceilings, as indicated by its own observations on different occasions as noted above, is hardly justified by the enunciation of the concept of a "family farm" for the determination of the ceiling. The term "family farm" has been defined in a broad way which is capable of varied interpretation. It is defined as a farm which can be managed by an average cultivating family with the usual assistance by seasonal labour. Three times the "family farm" is taken as the proper basis for ceiling landholdings. Even the application of this ceiling is subject to a series of conditions. Thus, the ceilings are not to be given retrospective effect, and are not applicable to present holdings and lands reclaimed. Joint families and succession arrangements under the Estates Duty Act are excluded from it. They are, however, applicable to land acquisition in future and to resumption of land for personal cultivation. Income as the standard for determining ceiling, as now proposed in the Hyderabad law, has been rejected by it. These limitations indicate that, when the concept of "family farm," conditioned by so many exceptions, is put into operation, it is the exception that will govern and not the rule. The very fact that a number of qualifications had to be made is proof enough of the complicated nature of the reform.

Even with regard to the concept of "family farm," the Planning Commission agrees that due regard must be paid to the fertility of the soil, cultivation processes adopted by farmers in particular areas and the enterprise of the cultivator concerned. There are also other factors to be taken into consideration such as the type of crops grown, their relative yields and prices, availability of water supply, proximity to means of communication, etc., all of which have a say in the net productivity of a "family farm." The Commission is fully aware that the acquisition of such land as is in excess of the ceiling will not achieve the aim of providing land for the landless. If, despite all these considerations, the Planning Commission has expressed itself in favour of the principle of ceiling, such must be attributed to political pressure rather than to considerations of cold reasoning.

In this context, the bold lead given by the Union Minister for Agriculture, Dr. Punjabrao Deshmukh, by expressing his disapproval of the principle, is commendable. Summing up the discussions on land policy at the Agriculture Ministers' Conference last week, he strongly pleaded for the abandonment of the policy of putting a ceiling on the existing landholdings. In unequivocal terms he declared: "I firmly believe that it would not be in the interest of any nation like India to disturb the rural conditions too violently. There may be people who differ from me, but I have no doubt whatever that any such interference will, in the end, recoil upon us." Earlier, while inaugurating the Conference, he stated that, in considering the question of ceiling, the danger to production should not be lost sight of. The proceedings of the Conference reveal that Dr. Deshmukh has secured the support of the State Ministers of Agriculture. Although no resolution was passed, the Conference held that the problem should be considered by the National Development Council. It is, however, not yet quite clear from Press reports whether the question received the attention of the Council which met in New Delhi this week. On the Council now devolves the responsibility of giving a clear lead to the country on this highly controversial issue.

A ceiling on landholdings may be beneficial under certain conditions. Concentration of land in the hands of a few people in areas brought under cultivation as a result of development projects, for instance, will be undesirable, as it would serve neither social justice nor economic efficiency. Ceilings, therefore, can be imposed in such areas. But the same can hardly be applicable to the bulk of existing landholdings in the country. The more urgent problem of land policy in the country is to arrest further fragmentation and accelerate the process of consolidation of uneconomic holdings. The solution to this problem lies in determining the economic plot, which, again, bristles with the same difficulties as those in deciding the "family farm" proposed by the Planning Commission. Thus, if once the economic plot is determined, it will, *pari passu*, pave the way for determining the ceiling for landholdings, if conditions warrant such a step. Thus an attempt at imposing ceilings before floors are fixed will be just like putting the cart before the horse.

The Planning Commission has admitted that limitation of holdings may be a varying multiple of productivity, saleability, leasability and revenue assessability of land. For a proper application of this principle, statistics based on land surveys are quite essential. But such statistics are not available, and consequently, any attempt at fixing ceilings will be only arbitrary. Rough estimates made on the basis of such data as are available reveal that, if the ceiling were to be fixed at 30 acres, only about 8 per cent. of the entire cultivated area would be in excess of such holdings. If allowance were made for exemptions mentioned already, only about 4 per cent. of the area, it is stated, would be available for redistribution. Granting that the scheme is implemented to cover this fractional area, there will remain the twin problems of redistribution of the acquired land and of payment of compensation to those from whom the lands were taken. Both these, in their turn, will present numerous other problems. Thus the lands acquired will consist, invariably, of plots scattered over the whole village and will not lend themselves to the introduction of co-operative farming. Besides, it will not be fair to take away land from enterprising farmers and distribute them to landless farmers with no means to cultivate the land efficiently. Then there is the problem of finance, administration and management, in all of which the country is woefully deficient. In these circumstances, any move to impose a ceiling on holdings will only divert the country's attention from more pressing problems the solution of which is urgent.

The experience gained in other countries, too, does not justify the move to impose ceilings. In Communist China, no such limitation is imposed on a cultivators' holdings. Even non-cultivators, it is stated, are allowed to hold lands. In Egypt, the ceiling is fixed at 200 acres as compared with 50 acres in Bombay and 30 acres in U.P. Further, in terms of productivity, the ceiling of 200 acres in Egypt are equal to 600 to 800 acres in this country. Japan seems to be cautious in interfering with age-long tenures and the structure of property. Those who have been clamouring for land distribution in this country will, therefore, do well to ponder these facts, before pressing their claims.

TASK BEFORE COMMITTEE ON FINANCE

SOAP PRICES REDUCED—FOREIGN INVESTORS CONCERNED OVER ESTATE DUTY

THURSDAY, 5 P.M.

A REFERENCE was made in these columns last week to the appointment of a committee of financiers, bankers and officials to explore ways and means of stimulating investment in the private sector. It was also stated that the Committee would start functioning soon after the return of the Governor of the Reserve Bank of India from Washington. This information has now been officially confirmed. Mr. Rama Rau returned to Bombay on the 1st inst. He must have immediately paid attention to this work. For, after the week-end, on the 5th inst. to be precise, the Reserve Bank of India issued a *communique* announcing the terms of reference and the personnel of the Committee. The terms of reference are brief and precise. To quote the *communique*:

MARKET GOSSIP

"The Planning Commission have assigned an important role to the private sector in the implementation of the National Plan. Investment in this sector has not, however, reached the level envisaged in the Commission's Report. The Taxation Enquiry Commission is investigating the effects of the structure and level of taxation of income on capital formation and on maintenance and development of productive enterprise. There are, however, other factors which influence investment in the private sector. With the approval of the Government, the Reserve Bank have decided to appoint a Committee to examine how increased finance could be made available to this sector through sources other than those which are under the consideration of the Taxation Enquiry Commission. In particular, the Committee will examine the possibility of providing, on a larger scale, bank finance for development in the private sector."

• • • •

It will be obvious from the above quotation that the Committee has a specific assignment but that it has not been given a time limit to complete its task. The Committee will not impinge on the sphere of work cut out for the Taxation Enquiry Commission, even though it is clear, as was stated by us last week, that the structure and level of taxation constitute one of the chief factors that have been responsible for the inadequacy of capital required by the private sector for playing the role assigned to it in the Five-year Plan. It will confine itself to an examination of only the other sources through which finance could be made available. It will particularly examine what banks can do in this matter.

• • • •

The personnel chosen for carrying out this task is undoubtedly of the right type. The Chairman of the Committee is Mr. A. D. Shroff, whose ability as a financier is well known. Mr. Shroff is, of course, more than a financier. He is an eminent economist and a business man as well. Other members of the Committee are: Messrs. J. V. Joshi, Executive Director, Reserve Bank of India, Bombay; S. Ananthanarakrishnan, Member, Local Board, Reserve Bank of India, Madras; C. W. Middleton, Secretary and Treasurer, Imperial Bank of India, Bombay; B. T. Thakur, General Manager, United Commercial Bank Ltd., Calcutta; V. R. Sonalkar, Managing Director, Industrial Finance Corporation of India, New Delhi; B. K. Dutt, General Manager, United Bank of India Ltd., Calcutta; M. S. Nadkarni, Department of Banking Development, Reserve Bank of India, Bombay; and Dr. K. S. Krishnaswamy, Department of Research and Statistics, Reserve Bank of India, Bombay. Of these, the two last mentioned will act as Joint Secretaries of the Committee.

• • • •

As will be seen from the foregoing list, the Committee is dominated by practical bankers who have won the positions they now hold by dint of hard work. It is gratifying to find that official representation is limited only to the executives of the Reserve Bank who have not yet become hidebound by red-tapism. The Committee is, therefore, a live-wire one. Further, it is small and compact. It should, therefore, be able to discharge its functions efficiently and speedily. It can be depended upon to be realistic in its findings and practical in its recommendations.

• • • •

Although we feel that lack of credit is not the main handicap of private enterprise, it will be wrong to dismiss the appointment of this Committee as superfluous. The Committee may not be able to perform any miracle, but it can at least help the powers-that-be understand the issues better and seek a solution to the economic problems on the right lines, provided, of course, they are willing to profit by the experience of these hard-boiled bankers. From this point of view, however, the terms of reference are rather narrow. They should have been so broad-based as to include all the factors, other than taxation, which influence investment in the private sector. This would have given the Committee sufficient room to examine the various disincentives to investment and suggest measures for overcoming them. In any case, it is to be hoped that the Committee, while making its suggestions, will take care to state clearly the conditions under which their proposals will yield results. If, for instance, the Committee were to recommend the provision of medium-term finance for industries by commercial banks, that is to say, mixed banking, then it must tell the Government the kind of economic climate that must be created for its success.

• • • •

Even within the present terms of reference, the Committee has, of course, plenty to do. It can, for instance, examine the monetary policy of the Government and its effect on the availability of funds to the private sector. It can go into the working of the Industrial Finance Corporation and suggest measures for increasing its utility. Similarly, it can put forward proposals to bring into existence at an early date the Finance Corporations in the various States and to make them useful agencies for providing long-term finance for small enterprises. It can consider the feasibility of the suggestion for the establishment of a Development Corporation, as suggested by Lala Shri Ram a few days ago. It can indicate the ways and means of attracting foreign capital. It can see for itself to what extent the control of capital issues and the Industries Regulation and Development Act are impeding investment in the private sector. It can scrutinise the working of capital markets and advocate suitable reforms for removal of defects, if any, in them and for reviving the confidence of investors.

• • • •

The main function of the Committee will be to explore the ways and means of providing, on a larger scale than hitherto, bank finance for development in the private sector. As mentioned by us last week, we do not think there is much scope for commercial banks, organised as they are at present, to extend more credit of a long-term nature to industries. Even as it is, most of the big banks are financing a substantial amount of replacement and renovation of industries. If they are to do more, they will require the backing of the Reserve Bank of India in the form of expanded rediscount facilities. Suggestions may be made by some for the introduction of mixed banking. Others may cite as examples what the commercial banks in Japan and Germany have done for the industrial development of their countries. Great care and thought must be bestowed by the Committee on such suggestions before recommending their adoption in this country. It must be remembered that India is neither Japan nor Germany. Further, provision of credit alone did not help them rebuild their economy as fast as they have done. There were other far more important factors that contributed to their rapid economic recovery. The Committee will also do well to study the after-effects of large industrial expansion in these two countries based on a liberal bank credit. There is sufficient evidence to show that they have not been quite healthy.

• • • •

There has been a welcome improvement in the trend of markets in the city. The downward trend noted in the previous weeks has been arrested in commodities and bullion. Values in these markets are well above the lowest levels touched earlier. In the share market, too, there has been a sizable recovery. The main cause for the improvement in all the markets is covering by bears; only, it has been more marked in shares than in others. Evidently, the bears have decided to book their profits for the present. Market circles are hopeful that the Government will not let the economic situation deteriorate any further and that it will take corrective steps. The appointment of a committee of bankers and financiers by the Reserve Bank, as mentioned above, has been regarded by them as yet another straw in the wind, indicating the direction in which the authorities' thoughts are now running. There are also reports that the question of prohibition will be seriously reconsidered by the Centre. Dr. Punjabrao Deshmukh's statements on this subject, as well as on land reform, are significant.

• • • •

The Government of India's concession to imports of palm oil has begun to yield results. Not only has the upward trend in the prices of edible oils been reversed, but the prices of soaps also have started to decline. In fact, the price of the latter would have gone down at least some six weeks ago, but for the monopolistic tactics of the Indian soap manufacturers. But even they had to yield finally and pass on at least a part of the benefit of duty-free cheap palm oil imported from abroad. The soap manufacturers have decided to lower the prices of toilet and washing soaps with effect from the 15th inst. Lever Brothers (India) Ltd., for instance, have reduced the price of their washing bar soap from Re. 1-3 to Re. 1-1-6, Sunlight soap from As. 5-6 to As. 5, Lifebuoy from As. 5-9 to As. 5-3 and Lux from As. 6 to As. 5-9. Tatas have also effected similar reductions. Thus, the price of 501 bar has been cut from Re. 1-2-6 to Re. 1-1-6, 501 special cake from As. 5-6 to As. 5 and toilet soap (Hamam) from As. 6 to As. 5-9. Other manufacturers also have made similar reductions.

• • • •

It has been reported in certain circles that Lever Bros. first decided upon a reduction in the price of their soaps, with a view to offering keen competition to other manufacturers and that others had to follow suit. This report is baseless. It is true that Lever Bros. were the first to propose a cut in the prices of their soaps, but it is not true that they made this move in any spirit of unfair competition. They proposed a reduction in their prices, because they wanted to pass on the benefit of the saving in the cost of raw material, consequent on the abolition, on 12th May last, of the preferential import duty on palm oil and the reduction in the standard rate from 43⅓ per cent. to 10 per cent. They made this move nearly a month ago, but had to stay their hand as the other soap makers would not readily agree to it. Even now, the reduction in the price of soap is not as much as it could have been. The Government, we think, will do well to look into this question. It would appear that all the Indian soap makers have formed themselves into a combine and are resorting to restrictive practices, taking shelter under the popular slogan "Swadeshi."

• • • •

The controversy relating to the setting off of losses in hedge transactions against other income has again come to the fore. In moving the relevant clause of the Income-tax Amendment Bill, the Finance Minister, Mr. C. D. Deshmukh, had suggested that it would exclude hedge contracts which are entered into by investors and operators in shares in order to guard against losses which might arise in the ordinary course of their business. He had also suggested that the clause would exempt another variety of transactions in which an investor might want to protect himself against any loss in certain scrips he holds by selling some other scrips which he expects will have a reverse movement. This assurance regarding the exemption of an investor's transactions in scrips which he might not possess has been nullified by the Central Board of Revenue which gives a different interpretation to the scope of exemption granted in the Act. The Board has informed the Federation of Indian Chambers of Commerce and Industry that it cannot grant relief to hedging transactions which involve shares outside the assessee's holdings. There is no doubt that the Board's interpretation —however technically correct it may be—goes counter to the specific assurance given by Mr. Deshmukh. In view of this difference in interpretation between the Finance Minister and his Secretariat, the Government will do well to clarify the issues involved, if only to prevent the uncertainty it might introduce into genuine hedging transactions.

Clause 80 of the Estate Duty Bill has been the subject of extensive comment in the British Press. This clause says that a company incorporated outside India but treated as "resident" for tax purposes, has to pay estate duty on the death of a foreign shareholder of the company. The duty is payable by the company, because, in the case of such foreign shareholders, there are no assets in India from which the duty can be recovered. No duty is, however, payable on shares below the value of Rs. 5,000. On shares in excess of this limit, the duty will be collected at a flat rate of 7½ per cent. The main ground on which this clause has been opposed in British circles is that it will impede the flow of foreign investment into India. Writing under the heading "An Unwise Idea," the *Financial Times*, London, says:

> "Where companies operate outside the territories in which they are registered, there is always a question of the right of two Governments to the tax on those profits. Should the Government of the country in which the company is registered have the benefit of the taxes, or the country in which they are in fact earned? Increasingly this question is being settled by the negotiation of double taxation agreements—unless the companies themselves cut the Gordian knot by the removal of their seat of control to the territories in which they mainly operate. It is possible to argue that if agreement is reached about taxation of income, agreement should also be reached about the taxation of the capital values which result from the same profits, when and if these values become liable for any taxation at all. Let the Indians then help to bring the negotiation of such agreements to a speedy conclusion. It is equally true, however, that in this case it is not very sensible to raise the issue at all. India badly needs outside investment. Outsiders will not be encouraged to buy shares in any company operating in India, still less to invest new money, if it becomes plain that they are to be subject to taxation of this kind, even if the amount were moderated by a double estate duty agreement.
>
> "The second point of principle arises from the provision that the tax should be collected not from the shareholder, or rather his executors, but from the company. There is one precedent for this provision, in the tax laws of Queensland, where, apparently, the company is expected to recover the tax from the executors. And there is one apparent parallel which has perhaps encouraged the Indian legislators to enact this clause: nearly all companies collect and pay over income-tax on behalf of their shareholders. But what is an administrative convenience for income-tax is a nightmare for estate duty. Moreover, where, in paying income-tax on behalf of the shareholder, the company acts merely as an agent, in becoming liable to estate duty its own identity is confused with that of its owner's. All in all, the Indian Government, whose previous essays in new taxation have not always been fortunate, would be wise to reflect again on this most unwise proposal."

• • • •

The month of September is traditionally a month of setback in balance of payments position for the sterling area, since this month normally reflects the seasonal fall in the flow of exports from the area. It is, therefore, hardly surprising that the increase in the area's gold and dollar reserves was only to the tune of £17 million. In August, the increase was slightly less; it was £13 million. But the area received, in September, £28 million by way of American aid, as against only £19 million received in August. In July, when the increase was £89 million, American aid accounted for £36 million. Be that as it may, the September surplus brings the total of the area's gold and dollar reserves to $2,486 million. The rise in these reserves over the third quarter of the current year

EQUITIES RULE FIRM

TEXTILES IMPROVE

(From Our Own Correspondents)

BOMBAY, *8th October*

THERE was a distinct improvement in the sentiment on the Stock Exchange during the week under review. The main prop for the market was, of course, provided by the steel shares and some miscellaneous industrial shares. Activity broadened in these shares, consequent on their having received the necessary stimulus from several inspiring factors. The report that normal work at Burnpur had almost been resumed and that the output per man was showing a welcome improvement induced fresh interest in Indian Irons and this had a sympathetic effect on Tata Deferreds. The move by a section of the Deferred shareholders to block the progress of the Conversion scheme having proved ineffective, optimism regarding the scheme was revived and it gave fresh support to Tata Steel Shares. Abolition of export duty on iron and steel products, disquieting developments in Korea, appointment of a committee under the chairmanship of Mr. A. D. Shroff to examine the question of providing increased finance to the private sector of industry were additional factors which induced speculative activity. The resulting rise in values induced short covering. Closing quotations were, therefore, higher than those at the end of last week. The undertone remained firm.

In the steel section, Tata Deferreds opened at Rs. 1,830 and moved round about that level till Saturday. From Monday onwards an enlivened activity was noted for reasons stated above and Deferreds advanced to a high of Rs. 1,871-4 this morning before profit-taking pruned it to Rs. 1,868-12. Tata Ordinaries scored a gain of Rs. 6-4 over the week to close at Rs. 321. Indian Irons had a quiet spell early in the week, declining from Rs. 23-2½ to Rs. 22-15, but later on made a spirited rally to close at Rs. 23-11 on revival of support.

Textile shares had a steady spell in the wake of the strength in steels and on expectations that there would be an improvement in the cloth trade in the coming weeks. Kohinoors experienced brisk activity on consistent support due to rumours of good working of the Company. As a result, they advanced from Rs. 276-8 to Rs. 284-8 before finishing at Rs. 283-12. Bombay Dyeings firmed up from Rs. 356-4 to Rs. 364-6 but closed lower on realising at Rs. 362-8. Central Indias spurted by Rs. 4 to Rs. 149. The Company had declared a dividend of Rs. 5 per share of Rs. 100 on the ordinary shares for the year ended 30th June, 1953, as against Rs. 2 paid for the previous year. Century rose by Rs. 5 to Rs. 261-8. Ahmedabad Advances were dull at Rs. 137-3. The Directors of the Company have decided to maintain the distribution to the ordinary shareholders at Rs. 10 per share (Rs. 100 paid-up) including a bonus of Rs. 3 per share for the year ended 30th June, 1953. New Greats had a rise of Re. 1-8 to Rs. 146. Standards hardened by Rs. 5 to Rs. 303-12, Svadeshis by Rs. 3-8 to Rs. 241. Gokaks put on Re. 1-8 to Rs. 227-8. A feature of the trading in the textile section is the spurt in Elphinstones which had a rise of Rs. 5-8 to Rs. 43. It is reported that the Managing Agency of the Company has been acquired by Messrs. Surajmal Nagarmull of Calcutta from the present Managing Agents. India Uniteds, which continued to be well favoured early in the week, met with realising towards the close. The Ordinaries which rose from Rs. 9-8½ to Rs. 9-14 reacted to Rs. 9-7½ and Deferreds, after an advance from Re. 1-6½ to Re. 1-7½, closed lower at Re. 1-5½. Finlays were a quiet feature with a loss of Rs. 4 to Rs. 249 and Swans Re. 1-8 to Rs. 312-8.

Bank shares manifested a steady trend. Barodas had a gain of Re. 1 to Rs. 107-8. Centrals put on As. 12 to Rs. 64-8, while their new shares shed Re. 1 to Rs. 67. Imperial Fully Paids were better by Rs. 5 at Rs. 1,840, while the Contributories were unchanged at Rs. 450. Indias were in good form with a rise of Rs. 2 to Rs. 157-8. United Commercials were steady at Rs. 36.

In the insurance section, a drop of Rs. 150 to Rs. 6,900 was noted in Orientals. New Indias were done at Rs. 40, as against Rs. 39-12. Indian Mercantiles hardened by a similar amount to Rs. 38-4. Vulcans had business at Rs. 11-5.

In the public utility section, persistent buying support was in evidence in Ahmedabad Electrics which shot up by Re. 1-9 to Rs. 114-11. Surats were held at Rs. 126-14. Other issues met with realising. This was more in evidence in the Tata Hydro group. Andhra Valleys dropped Rs. 35 to Rs. 1,290. Their Right shares fell by Rs. 37-8 to Rs. 166-4 and Coupons by Rs. 10-8 to Rs. 32. Tata Hydros declined by Rs. 4-8 to Rs. 135. Right shares by Rs. 6 to Rs. 22 and Coupons by Rs. 3 to Rs. 7. Tata Powers drifted lower by Rs. 26-4 to Rs. 1,335. Their Right shares were quoted at Rs. 228-12 and Coupons at Rs. 45. Bombay Suburbans reacted from Rs. 121-4 to Rs. 120-10.

Miscellaneous group of industrials displayed a firm trend, with several counters reporting smart gains. A.C.Cs. steadied up from Rs. 170 to Rs. 171-8. Belapurs provided a bright spot with a spurt of Rs. 7 to Rs. 249. Bombay Burmahs Old moved up by Rs. 4-6 to Rs. 336-4 and the New shares by Rs. 2-8 to Rs. 124-6. B.I.Cs. were steady with a rise of As. 2 to Rs. 8-11. A sharp advance of Rs. 7-8 to Rs. 119-12 in National Rayons was a notable feature on consistent buying from knowledgeable circles. Tata Chemicals were steady at Rs. 8-9 and Tata Oils experienced a rise of Re. 1-4 to Rs. 31-4. Wimcos responded well to the Directors' decision to issue bonus shares in the proportion of one new share for every four shares held, any jumped by Rs. 5-10 to Rs. 243-2. Walchandnagars put on Re. 1-4 to Rs. 147-8. Scindias hardened by As. 3 to Rs. 13-13½, India Steamships by As. 2½ to Rs. 7-10½ and Bharat Lines by Rs. 3 to Rs. 87.

In the mining and engineering group, Shivrajpurs provided the highlight with a rise of Rs. 7-12 to Rs. 63. B.B. Petrols which had been in favour for the last two weeks received fresh stimulus from the announcement of a 9 per cent. dividend, for the year ended 31st March, 1953, the first to be paid after 1940. As a result, the shares moved ahead by As. 3-3 to Re. 1-12. Indian Coppers were steady at Rs. 2-15. Premier Constructions improved by Rs. 2 to Rs. 86-4. Alcock Ashdowns were taken up from Rs. 297-8 to Rs. 305.

Calcutta Stock Exchange

CALCUTTA, *7th October*

Although the Calcutta Stock Exchange closed last Saturday on a dull note, conditions were better on Monday and Tuesday following the broadening of activity in speculative issues, and in tea, jute and miscellaneous shares. Transactions also recorded an impressive increase. There was no session to-day on account of *Mahalaya*. Last Friday was also a holiday. The interest in only selected counters during the last two sessions was a result of operators' disinclination to enter into commitments in view of the forthcoming *Poojah* holidays. Since Monday, reports from the jute goods market had been encouraging, and this revived enthusiasm in jute shares. Although demand for jute goods is now equal to production, the lack of interest for jute shares in earlier sessions was due to the low prices realised by jute goods. The need for marketing as much as possible had forced mills to cut down profits to a minimum level. The improvement in prices of jute goods during the last two days was the result of speculative activity, and the more prudent operator doubts, if the gains will be supported by the foreign buyer. This was one more reason why only selected counters in the jute section registered gains.

The market is lacking in outside support, and the real investor feels strongly that this is hardly the time to go in for shares of industrial undertakings situated in this part of the country. Last Wednesday witnessed yet another general strike, and many factories had to keep idle. This sort of general strikes for the ventilation of all grievances, real as well as imaginary, against the Government of the day, and other strikes following demands on employers, only narrow down the capital market.

The rough weather which the cotton piecegoods market is facing was naturally reflected in the textile section, where buyers were difficult to be found. Measures to reduce production in Western India were also a factor which chilled enthusiasm. New Victorias changed hands at Re. 1-2, and Kesorams were taken at Rs. 19-10. Dunbars were dull at Rs. 166, while Cawnpores were unchanged at Rs. 8-1.

Coals fluctuated within narrow levels. South Karanpuras recorded business at Rs. 10, while Bengals were available at Rs. 505 *cum-div.* and at Rs. 496 *ex-div.* At Rs. 79-8, Karanpura Developments showed a loss of As. 8. Churulias were fractionally lower at Rs. 2-1, but Burrakurs, on speculative support, gained from Rs. 8-13 to Rs. 9-2. New Beerbhooms realised Rs. 17-8 *ex-div.*

Upto last Saturday, Indian Irons hovered around Rs. 23-3, but speculative enthusiasm pushed up the value to Rs. 23-11 during the last two sessions. Indian Galvanizings were very steady at Rs. 14-8, and in transactions Kumardhubis advanced from Rs. 7-5 to Rs. 7-9. Burn & Cos. scored a gain from Rs. 280 to Rs. 285, while Bartlas were quiet at Rs. 10. At Rs. 99, Indian Standard Wagons recorded an improvement of Rs. 2-8.

Strong support was given to selected counters in the miscellaneous section, where India Steamships were held very firm at Rs. 7-10. An interesting feature was the spurt in Bengal Flours, which gained from as low as Rs. 16 to Rs. 18-11. Midnapore Zemindaris, after improving to Rs. 35-4, receded to Rs. 33-10 on profit-taking. Moderate attention was shown to British Burma Petrols which at Re. 1-12 were better by As. 4. F. & C. Oslers held a firm ground at Rs. 7-1, and the buying spree pushed Indo-Burma Petroleums from Rs. 62-12 to Rs. 69-4. Other transactions of importance included Ramnugger Canes at Rs. 18-12, Alkali Chemicals at Rs. 16-2, and Shree Gopal Papers at Rs. 18-8. Darbhanga Sugars were steady at Rs. 11-12.

Jutes were dull upto last Saturday, and searched for further lower levels, but the last two sessions witnessed a change in sentiment and selected counters recorded gains which were considered impressive as compared to the lethargy of recent weeks. Although prices of jute goods are such that will give mills a low profit, the increasing nature of sales is beginning to change the ideas of operators. Indias, at Rs. 123, made a six-point gain. Speculative Howrahs were fractionally better at Rs. 23-4. Interest shown in Barnagores raised the rate from Rs. 138 to Rs. 145. Fractional gains were recorded in Chitavalsahs at Rs. 30-3, Nationals at Rs. 22-12, Agarparas at Rs 15-13 and Northbrooks at Rs. 18-2. Deltas, at Rs. 225, had a gain of Rs. 7 and Birlas gathered strength from Rs. 35-8 to Rs. 41.

After an earlier profit-taking, interest in tea shares widened. Thus Hasimaras, after being lower at Rs. 27-2, regained to Rs. 28-8. Baradighis at Rs. 31-8 were better by Re. 1. Nagaisurees had buyers at Rs. 156-8, Tengapanis at Rs. 22-2, and Tezpores at Rs. 16-14. Batelis were, however, fractionally lower at Rs. 12-10 and Dhelakhats at Rs. 12-7.

• • • •

Madras Stock Exchange

MADRAS, *6th October*

This week too the Madras Stock Exchange put on virtually a cheerless appearance. Textiles, once again, lacked vigour, on continued reports of cloth and yarn accumulations in important consuming centres and with the mills. There was, besides, a considerable amount of uncertainty, as the effect of new tariffs in Burma on cloth exports was still under close scrutiny. Among plantings, coffee scrips were completely out of shape, in view of the confused outlook for coffee. The performance of tea shares was uninspiring. Rubbers, however, were the only scrips which came in for some notable enquiry. But miscellaneous scrips proved no exception to the generally dull and uninteresting trend. Consequently, business done on the Exchange was limited and price movements were narrow.

In the textile section, Malabar Spinnings lost Rs. 4 to Rs. 126 and Metturs Rs. 2 to Rs. 192. Buckinghams eased from Rs. 122 to Rs. 121. Coimbatore Spinnings were lower, by As 8, at Rs. 39 and Maduras, by As. 4, at Rs. 39-4. Travancore Rayons were down, by an anna, at Rs. 5. But Vasantas gained Re. 1 to Rs. 160 and S. K. Rajendras As. 8 to Rs. 46. Trichinopolys were slightly higher at Rs. 8-11.

The tea scrips were dull. Twyfords improved by As. 2 to finish at Rs. 11-6 and Waterfalls by an anna to close at Rs. 3-5. But for these, the rest of the scrips was mostly quiet. Thus, Blue Mountains were fractionally lower at Rs. 2-15-6. Nilgiri teas were unchanged at Rs. 12-6 *cum-div.* and Chembras at Rs. 2-5. Periakaramalais lost As. 2 to Rs. 6-12.

Among rubbers, Vaikundams advanced from Rs. 14-5½ to Rs. 14-8. Peninsulars gained As. 8 to Rs. 10-8. Thirumbadis and Velimalais were fractionally higher at Rs. 3-1 and Rs. 2-0, respectively. But Anandams had a loss of an anna and a half to Rs. 8-11½. Kallas were slightly lower at Rs. 3-3. Nilamburs were done at Rs. 8-4 *ex-div.* as against Rs. 9-4 *cum-div.*

Coffee scrips were colourless. Consolidated Coffees lost an anna to close at Rs. 18, while Coffee Lands were unchanged at Rs. 10-5. Shevroys changed hands at Rs. 1-3½ *cum-div.*, as against Rs. 1-3½ *ex-div.* The Directors of the Company have recommended a dividend of 6½ per cent. on ordinary shares for the year ended 30th April, 1953. The dividend is the same as that of last year. Kadur Coffees were dull at Re. 1-8.

In the miscellaneous section, Stanes Motors were enquired at Rs. 11-8 *ex-div.*, as against Rs. 12-12 *cum-div.* Spencers gained As. 2 to Rs. 14-6. But Rallis lost Rs. 2 to Rs. 64. Parrys and Mysore Chromes were somewhat lower at Rs. 4-10 and Rs. 4-14½, respectively. Aluminium Industries were colourless at Rs. 11 and India Cements at Rs. 16. Deccan Sugars were quiet at Rs. 8-14 and E.I.D. A's and B's at Rs. 15-6 and Rs. 21, respectively.

CHANGES IN THE CONSTITUTION OF BANK OF MYSORE

As a sequel to the arrangement between the Government of Mysore and the Reserve Bank of India, the Bank of Mysore is shortly to be appointed as the agent of the Reserve Bank of India in the Mysore State. The function of the Bank will be to conduct, on behalf of the Reserve Bank, all the State Government's cash and banking transactions, especially in the mofussil centres. In order to enable itself to carry out these functions, the Bank is now required to make a number of additions to, and alterations in, its Memorandum and Articles of Association. The object of these changes is to bring the practices of the Bank of Mysore in line with those of banks in other parts of India.

One of the important changes prescribes that the Bank of Mysore should not effect any changes in its Memorandum and Articles of Association without the approval of the Reserve Bank of India. Another change seeks to provide that the appointment or removal of the Managing Director of the Bank made by the Board of Directors is subject to the approval of the Government of India. Provision is made for nominating on the Board of the Bank a representative each of the Reserve Bank of India, the Central Government and the Government of Mysore. For this purpose the number of Directors has been increased from 10 to 13. These nominated representatives will serve on the Board at the pleasure of the agencies appointing them.

In addition to the changes in the constitution of the Bank of Mysore as noted above, certain other alterations have been proposed regarding some of its transactions also. One of the changes proposed seeks to impose the maximum limit of Rs. 1 lakh on the amount of bills to be discounted by the Bank for any individual or partnership firm at any time. Similarly, the Bank of Mysore will not have power to make advances, to issue loans or to open cash credit for a period longer than 12 months. There are, of course, provisions to the relevant clauses which are common to all banking institutions.

The appointment of the Bank of Mysore as the agent of the Reserve Bank of India will become effective after all these constitutional changes are completed. It may be noted that the Bangalore Branch of the Reserve Bank of India started functioning as from 1st July.

NEWS IN BRIEF

THE Estate Duty Act will come into force on 15th October, 1953.

The total amount invested in the Indian automobile industry is Rs. 10.03 crores.

The Indian Posts and Telegraphs is the second largest nationalised public utility service in India, employing a staff of about 2,21,000.

The Government of India has decided to continue the free licensing of export of cld hemp rope cuttings, on shipping bills against confirmed sale orders, beyond 30th September to 31st December, 1953.

The Ministry of Commerce and Industry, Government of India, has announced that import of biscuit and bread-making machinery will now be permitted against quota licences issued for other machinery.

The one-man Railway Tribunal, Mr. Sankar Saran, appointed by the Government of India to adjudicate on disputes between the railway labour and railway administration, will commence sitting in New Delhi shortly.

Individuals and associations or bodies desirous of offering their views or making any suggestions in regard to the Bill to amend the Bombay Sales Tax Act, 1953, are reminded that the last date for receipt of memoranda in that respect is 12th October, 1953.

The quota for export of castor oil will be granted for the period August-December, 1953, for a quantity equal to one-fourth of the total exports of castor oil effected by each exporter during the period January-July, 1953, instead of January-June, 1953, as announced previously.

The Assam Oil Company has reduced the price of petrol by As. 2 per gallon in the entire State of Assam and by As. 4 per gallon in Shillong with effect from the 1st inst. This step has been taken on an *ad hoc* basis, pending further examination of the price structure and the economies of production and distribution.

It has been decided to treat fountain pens and ball pens manufactured in India, partly with indigenous and partly with imported parts, as fountain pens and ball pens manufactured in India and to allow their export accordingly without export licences, according to a notification issued by the Deputy Chief Controller of Imports and Exports, Madras.

The Government of India has abolished, with effect from the 7th inst., the export duty on iron and steel bars, heavy structural (plates and hoops. The Government considers that the present rate of duty is retarding the export trade and, in order to improve the competitive position of these manufactures in foreign markets, it has decided to abolish the export duty on these.

A representative of the Ford Foundation and two officers of the Government of India have undertaken a fact-finding tour of U.P. preparatory to the arrival of a team of seven international experts who are to tour India from next month. The team of experts is being sent by the Ford Foundation at the request of the Government of India to give advice and plan development of village and small-scale industries, thereby assisting in the solution of the problem of unemployment.

The Government of Bombay has specified the Chief Inspector of Factories as the authority for purposes of sub-rule 3 of Rule 5 of the Welfare Officers (Recruitment and Conditions of Service) Rules, 1952. As such, when an occupier of a factory makes an appointment of a welfare officer, he should furnish to the Chief Inspector of Factories full details of the qualifications, etc., of the welfare officer appointed and the conditions of his service.

The export of manganese ore and iron ore will continue to be licensed freely from Bombay and other minor ports in the Madras State, provided the ore is ready at the port for shipment. Exports of these ores from Vishakapatnam and Marmagao will be allowed against advance licences. Exports from the ports of Calcutta and Madras will be subjected to quota restrictions, established shippers being allowed 25 per cent. of the best year's exports during any three of the financial years ended 31st March, 1953.

The British Overseas Airways Corporation has introduced two low-fare tourist services linking India with the U.K. with effect from the 1st inst. One of these will operate from Calcutta via Delhi, and the other, connecting with the Far East and Ceylon, will be routed through Bombay. The fares on these will be approximately two-thirds of the existing rates and will include free meals and free baggage allowance. Tourist services will be operated with fully pressurised Argonaut airliners with seating capacity for 54 passengers.

A subsidy and a loan amounting to Rs. 125 lakhs out of the cess on mill cloth have been granted by the Government of India to the handloom industry in Madras. Out of this sum, a sum of Rs. 50 lakhs is given as a subsidy to give rebate on sales. Another sum of Rs. 10 lakhs is set apart for starting new co-operative spinning mills which will provide cheap yarns to weavers' co-operatives. The balance of Rs. 65 lakhs will be in the shape of loans to co-operative societies to develop the marketing aspect of the industry. The allotment for Madras includes an allotment to Andhra also.

The Union Ministry of Commerce and Industry has decided to increase the quota for import of tallow from the existing level of 30 per cent. of half of the best year's imports to 60 per cent., so that a larger quantity of imported tallow may be available for stock and sale. The increase in import quota has been raised, because it had been represented that the quantity licensed for import through established importers is not sufficient to meet the requirements of small-scale manufacturers, who are unable to import tallow direct against actual user licences.

The first month of air transport nationalisation, namely, August, witnessed an increase in air passenger traffic. The Indian Airlines (Line-5) carried by night airmail service 1,065 passengers, as against 1,030 carried in July, and the Bombay-Delhi night service operated by Indian Airlines (Line-6) carried 564 passengers, as compared with 447 in the previous month. The mails and freight carried, however, showed a decline. Thus, Line-5 carried about 200,000 lbs. of mails and more than 64,500 lbs. of freight, a decline from over 216,000 lbs. and 72,000 lbs. respectively in July. Line-6 carried more than 58,000 lbs. of mail and about 24,000 lbs. of freight in August, as against 67,700 lbs. of mail and 27,000 lbs. of freight.

A seasonal fall of over 22,000 in the number of fresh registrations at Employment Exchanges during August checked the steep rise in the number of registered unemployed. Despite this, the number of registered unemployed at the end of August was 4,98,891. The number that sought employment assistance at the Employment Exchanges during the month was 1,14,208, while that of those placed in employment was 13,114. The most notable feature in respect of employment opportunities was a rather sharp drop in Government vacancies, though a further decline in the private sector occurred. There was no sign at the Exchanges of any general improvement in the employment situation. A shortage of highly skilled compounders, electricians and technicians continued to be fairly widespread.

• • • •

From Abroad

Production of various sorts of paper in the Netherlands during the first half of 1953 amounted to 190,200 m. tons, as against 160,759 m. tons in the corresponding half-year of 1952.

One hundred American industrialists, members of the Associated Industries of Massachusetts, are to make a ten-day study tour in Sweden in the spring, visiting the important Swedish export industries.

The Pakistan Government has set up a Sub-Committee to investigate ways and means of increasing production of tea in Pakistan from the present 52 million lbs. to 80 million lbs. in the next ten years.

Sweden leads Europe in the number of telephones per inhabitant with 25.2 per hundred and is second only to U.S.A.'s 29.3. Stockholm is second to Washington D.C. among world's capitals, with 49.5 per hundred, as against 63.9.

The construction of a new coal washery, called heavy-liquid washery, is proposed to be taken up in Holland. This will yield considerable advantages, such as the possibility of working poorer seams, enabling the economic life of the mine to be lengthened.

Under the recent Sino-Ceylon trade pact signed on 21st September, which was ratified by the Ceylon Cabinet on the 2nd inst., China has agreed to sell rice to Ceylon at £47 per ton in exchange for Ceylon rubber at 28d. per lb., that is 10d. above the world price.

Some Japanese firms have approached the Pakistan Government with proposals to install industries in Pakistan and these cases are under consideration of the Government. All facilities within the framework of the country's industrial policy will be provided to these undertakings by the Government.

The Pakistan Government is considering a revision of its industrial policy to make it all the more attractive for investment of foreign capital. A foreign company has asked the Pakistan Government permission for oil exploration in 17 areas of East Pakistan after a survey of the region. This was disclosed in the Constituent Assembly last week, by the Pakistan Industries Minister, who, however, did not give the information whether this permission had been granted.

Experiments aimed at domesticating tea are going on in Hungary. Research work has established that several parts of Hungary enjoy climatic conditions similar to those in the tea producing regions of India. Several pounds of refined tea seed were obtained from Georgia, in the Soviet Union, to begin growing tests. The type selected was produced by Soviet research workers and is more frost-resistant than the Indian varieties. Last year, several thousand plants were successfully grown on an experimental farm of Fertod near the Austrian border. This year, experiments are going on in the southern part of county Zala. By next year, it is hoped, greater quantities of seed will be available and it will be possible to experiment in several regions at once. Hungary has already successfully domesticated other non-native plants, such as cotton and lemons.

PERSONAL

MR. B. Rama Rau, Governor of the Reserve Bank of India, has returned from the U.S. after attending the annual meetings of the World Bank and the I.M.F. held at Washington early last month.

Mr B. L. Jalan has been elected President of the Indian Hemp Association, Calcutta, for the current year.

Mr. L. F. H. Goodwin, Managing Director, the Bombay Co., Ltd., sailed for the U.K. this week on retirement from India.

Mr. C. S. Pettit, Managing Director of Messrs. Lever Bros. (India) Ltd., left Bombay this week on transfer to the Company's branch in Belgium. He has been succeeded by Mr. A. J. C. Hoskyns-Abrahall.

Mr. A. N. Khosla, Special Secretary, Union Ministry of Irrigation and Power, left last week for Washington to attend the Indus Basin Working Party talks on the utilisation of the waters of the Indus river system.

Dr. P. K. Kapre, M.Sc., Ph.D., Development Officer (General and Electrical) in the Ministry of Commerce and Industry, Government of India, has joined Messrs. Philips Electrical Co. (India) Ltd. as its new Director. Dr. Kapre is the first Indian to be appointed in the top management of the Company.

Sir Miles Thomas and Lord Douglas of Kirtleside, Chairmen of the British Overseas Airways Corporation and the British European Airways, respectively, whose appointments are due to terminate next year, will continue as Chairmen of the respective airlines for another term.

Mr. D. L. Mazumdar, I.C.S., who has been Officer on Special Duty in the Department of Economic Affairs, Ministry of Finance, dealing with Company Law, has been appointed Commissioner for Corporate Investment and Administration, in addition to his own duties.

Lord Swinton, Secretary of State for Commonwealth Relations, U.K., who left London on the 24th ult. on a two-month tour of Australia, New Zealand, India, Pakistan and Ceylon, will arrive in Calcutta on 14th November. He will be in Delhi from 15th to 19th November and leave for Karachi on 19th November.

Mr. A. C. Ramalingam, J.P., and Mr. C. C. Sutaria, F.C.C.S. (Lond.), have been elected President and Chairman of the first Council of the Institute of Secretaries, a new secretarial body recently established in Bombay to organise and promote the profession of Company Secretaries in India on the lines of similar professional bodies in foreign countries.

Mr. Chhotabhai S. Patel, a prominent business man of Bombay and Chairman of the Bombay State Road Transport Corporation, has been elected Chairman of the Vanaspathi Manufacturers Association of India in the place of Mr. C. S. Pettit. Mr. A. J. C. Hoskyns-Abrahall, Messrs. Lever Bros. (India) Ltd., is the Vice-Chairman.

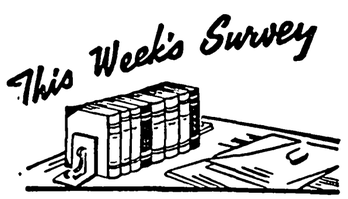
"COMMERCE" 1928

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, *13th October*

Agricultural Conference

Keen anxiety at the delay in implementing the proposals of the Royal Commission on Agriculture in India was given expression to at a recent meeting of the Council of State, when the leader of the House, Sir Mahomed Habibullah, accepted on behalf of the Government of India the resolution of Sir Phiroze Sethna, as amended by Mr. Ramdas Pantulu, for prompt action on the Agricultural Commission's recommendations, particularly those relating to the uplift of the agricultural population, including the establishment of central and mortgage banks. The report of Lord Linlithgow was as voluminous as momentous and so many considerations and complications involved the shaping of a final decision on it that no blame can be attached to the Government of India for the cautious, but earnest, manner in which it has been moving in the matter. Notwithstanding preoccupations of a variety, almost unprecedented in the annals of British administration in India, the Government of India has lost no reasonable opportunity in collecting and collating materials likely to help it and its advisers in linking into shape a definite policy to be adopted in regard to the recommendations of the Commission. But as regards a great majority of the recommendations, action can only be taken by Local Governments, while a good number concerns the Government of India. In order to facilitate consideration of the recommendations, especially with a view to determining which recommendations primarily concerned the Local Governments and which the Central Government and which both and also to determine the priority of the recommendations, the Government of India invited, on 23rd July last, all Local Governments to send to a conference in Simla on 1st October and the following days their representatives, including Ministers of Agriculture. The object of the conference was to secure personal discussion and no binding decision and also to find out the best methods of giving effect to the recommendations of the Commission.



INDIAN FOUNDRIES

IN the course of his address to the annual meeting of the Indian Foundry Association, held on the 3rd inst. at Calcutta, Mr. Monilal Atta, the Chairman, stated that the biggest problem facing the Indian foundry industry was lack of demand for foundry products. He attributed this chiefly to two causes, namely, the general trade depression resulting in the reduction of purchasing power in the country and, secondly, the disruption in normal trade between India and Pakistan, especially East Pakistan. Mr. Atta made the following suggestions in order to help the foundry industry:

(a) Government, including the railways, should place bulk orders with foundries. This would give not only stability but result in economy in the cost of production;

(b) Government factories should not be allowed to compete with private industries;

(c) imports from abroad should be stopped and local foundries should be given a chance to meet the country's requirements;

(d) export to neighbouring countries such as Pakistan, Ceylon, Burma, etc., should be encouraged. Foundry items should be included among the items of export whenever a trade agreement is signed with these countries;

(e) Government should carry out a survey of the foundry industry so that reliable data may be available regarding the requirements of different foundry products in the country, the present production, scope of expansion, possibility of export, etc.;

(f) foundries should also adjust their manufacturing programmes according to the changed circumstances; and

(g) the railways should restore the special concessional rates which they had previously granted for despatching cast iron pipes to long distances. They should also remove the restriction on sending foundry goods above 20 mds. from West Bengal to Bihar and other up-country centres.

It is true that the demand for the products manufactured by the foundries is small. But that is due not only to lack of purchasing power and disruption of normal trade between India and Pakistan, especially East Pakistan, but also to the fact that, generally speaking, the quality of Indian foundry products is not very high. Government establishments such as the railways cannot waste public money in buying such products and at the same time expose the public to risk of life. And, in the absence of manufacture of quality products, it is wrong to suggest that the Government factories should not compete with private industries. For the only alternative will then be to allow imports, which is not desirable. The industry will do well to rationalise its production techniques and concentrate on manufacturing special types of goods instead of becoming multi-purpose foundries. It is gratifying to note that Mr. Atta recognised that the foundries should adjust themselves to changed circumstances. But it is surprising that he did not stress the "quality aspect."

The second important problem facing the foundry industry is shortage of pig iron. According to Mr. Atta, only 160,000 tons of pig iron are available, as against a minimum demand of 400,000 to 420,000 tons. Further, the shortage of pig iron has been accentuated by the increasingly larger proportion of off-grade pig iron that is being allotted to foundries, instead of graded pig iron which is what the foundries need most. Moreover, the price of this type of pig iron has registered an increase of 109 per cent., as compared with 1939 prices, whereas the other grades, excepting specials (which were non-existent upto 1948), have registered an increase of less than 60 per cent. This position, in the opinion of Mr. Atta, is not conducive to an increase the output of graded pig iron. He, therefore, suggested that the price of off-grade should either be considerably reduced, or the difference between the off-grade and graded pig iron should be maintained as before and the main producers should be asked to produce at least a minimum percentage of graded pig iron.

That there is shortage of pig iron is in a sense true. The North Indian foundries, which depend mainly on the Indian Iron and Steel Co., Ltd., for their requirements of pig iron, are finding it difficult to get even 40 per cent. of their requirements. The recent strike and lock-out at the Burnpur Works have only aggravated the situation. But there is considerable surplus of pig iron in the South at the Mysore Iron and Steel Works which is going abegging for orders. But the price of Mysore pig iron is higher than that of the other two companies. Also, there is the high cost of rail freight for transferring it to North India. It is true that the price of Mysore pig iron is high because the quality is also high. It is contended that the foundries can do without this additional quality. But it is pointed out in certain circles that, if the foundries were to make use of Mysore pig iron, they will be in a position to produce better quality goods which may, to a great extent, offset the high cost of Mysore pig iron. Surely, some concession by way of railway freight to Mysore pig iron will go a long way towards limiting the increase in production costs. All these are technical problems and, therefore, need careful investigation. Meanwhile, it is to be hoped that the Government of India will institute an enquiry into the conditions of the Indian foundry industry with a view to rehabilitating it. The foundry industry is a basic industry and its future development is undoubtedly of great importance to national economy.

SMALL-SCALE INDUSTRIES

Two notable points were stressed at the recent meeting of the E.C.A.F.E. Working Party on small-scale industries and handicraft marketing, held at Bangkok, at which Mr. K. L. Nanjappa, the Indian delegate, was elected Chairman. In the first place, small-scale industries, it was recognised, could not venture into fields which are more appropriately cultivated by larger industries. Secondly, small-scale producers, it was urged, should concentrate on those lines in which they had a natural advantage and improve their technique of production and marketing. In the Philippines, it was observed, emphasis in the design of fabrics was placed on the materials which could not be woven on the power loom. This included fibre fabrics which "could only be woven on handlooms."

Even in the fields in which the small-scale producers had a natural advantage, it was emphasised, their income, as well as the marketability of their products, could be improved through the application of better production techniques, by mechanising a part of the manufacturing process by developing greater skill, and by improving the marketing facilities. The Party emphasised that there was need for a proper inspection system to ensure standard quality of handicrafts. Quality control should embrace quality of raw material, standard dimensions and specifications as well as workmanship. The Party's experts suggested the establishment of the system of "common facilities," modelled on the Japanese system, which would ensure joint purchasing of raw materials, standardising and mixing of dyes and centralisation of marketing.

Export markets, it was generally conceded, could be won and maintained only through the production of quality articles. Although inspection by producers' organisations would be satisfactory for the domestic market, it was felt that inspection by Government agencies would be necessary for the export market. It was stated that the exports of Asian handicrafts to the U.S. had recently increased in volume but shipments to the sterling area had declined. The experts drew attention to the high distribution costs and profits in the U.S. which were limiting the volume of trade in Asian handicrafts with that country. They also expressed concern over the U.S. tariff policy. They suggested that the exporters should concentrate on low-priced rather than high-priced handicrafts."

Apart from the excellent suggestions of great practical value, offered at the meeting, there are two other matters which are bound to evoke public interest. It would appear that the Party made a marketing analysis of the exhibition of bamboos and lacquerware from Burma, China, India, Japan, the Philippines, Thailand and Viet Nam. It is to be hoped that the results of this analysis will be published for the information of the producers in this region. Again, the Party has endorsed a programme for a five-week study tour of cottage industries in Japan to be carried out in 1954. The report of this team will be awaited with interest.

BURMA'S NEW TARIFF RATES

Burma has announced new standard tariff rates ranging from 2½ per cent. for essential rehabilitation articles to 300 per cent. on non-essential luxury articles. Although the new rates, introduced in the form of a Bill, have not yet been adopted by the Burmese Parliament, they have been made effective from the first night of this month under a Presidential order. The new rates replace all preferential rates enjoyed upto 1st October by the U.K., India and Pakistan. Some of the rates are as follows:

(1) 5 per cent. to 75 per cent. on the import of textiles;

(2) 300 per cent. on the import of playing cards and gambling requisites;

(3) 150 per cent. on the import of precious stones and jewellery;

(4) 100 per cent. on the import of wines and liquors not containing 42 per cent. proof spirit, as well as on cigarettes;

(5) 50 per cent. on the import of motor cars;

(6) 15 per cent. on the import of ships and shipbuilding materials;

(7) 10 per cent. on import of locomotives and trolleys;

(8) 5 per cent. on the import of building and rehabilitation materials like cement, iron and steel, tin, tin-plates and steel wire and on educational toys;

(9) 2½ per cent. on the import of transport equipment like aircraft and parts and accessories; and

(10) Rs. 10 per ton export duty on rice—husked and unhusked.

The new tariffs are applicable to all imported goods without special preference to any one country. They are so designed as to provide incentive to industrialisation. Thus, capital goods and equipment are charged at low rates. The high duties on tobacco and matches will promote local cigar, cigarette and match industries. The taxes on luxuries will reduce the drain on foreign exchange, which needs conservation for importing essential requirements.

So far as India is concerned, the removal of preferential advantage will expose its cotton goods to Japanese competition. For now Indian goods stand on par with those of Japan in the Burmese market. Hitherto, India was favourably placed, in that it enjoyed a 40 per cent. preference on textiles. Now, the import duty on cotton textiles from India has gone up from 10 to 25 per cent. and on blankets from 5 per cent. to 25 per cent. Netting and cotton yarn imported by Burma from India is now subject to a duty of 10 per cent. and 5 per cent., respectively; there was no duty prior to 1st October. On the other hand, the effect of the abolition of preference is that the duty on imports of Japanese cotton goods has been halved from 50 per cent. to 25 per cent. Thus, to India it is a trial of strength to survive Japanese competition in its traditional market.

ESTIMATES COMMITTEES' POWERS

In all democratic countries, estimates committees have come to be recognised as an important adjunct to the national financial administration. The main function of these committees, as is well known, is to scrutinise the estimates of expenditure submitted by the various ministries. Indeed, the Treasury will have already scrutinised these estimates before they are included in the budget, so that the committees' task is rendered easy thereby. Their function then takes the form of a revision of the estimates. The great importance which the democratic governments attach to their work is reflected in the British practice by which the chairman of the committee is the Leader of the Opposition.

In India, the Estimates Committees and the Public Accounts Committees at the Centre, as well as in some of the States, have distinguished

themselves by a creditable record of painstaking investigation into governmental expenditure. It is, therefore, gratifying to note that it is now proposed to enlarge the powers of the Estimates Committee. Under the existing rule, the Committee can report on "what, if any, economies consistent with the policy underlying the estimates may be effected therein." Under the new rule, the Committee is empowered not only to recommend economies but also improvements in organisation and alternative policies in order to bring about efficiency and economy in administration. Some of these powers have been exercised by the Committee by a convention. It was, however, felt that it would be better to specify the Committee's powers more explicitly. The Committee is now empowered to suggest not only economies and alternative policies, but also to examine whether "the money is well laid out within the limits of the policy implied in the estimate." Armed with these enlarged powers, the Committee can be expected to render more useful service in the cause of national budgetting. Only, it is to be hoped that the Committee's recommendations will at all times be implemented by the Government. From this point of view, the Government's assurance that the "fullest possible weight" would be given to the Committee's suggestions is welcome.

MADRAS TRAMWAYS

The Madras Government's decision to terminate the licence of the Madras Electric Tramways Co., Ltd., will be widely regretted. Although the tram services have remained suspended since 12th April, 1953, there were reports that they might be resumed. Apparently, no agreement could be reached on the outstanding issues. Announcing the decision, the Government says that the management was asked to show cause why the licence should not be cancelled and that the Company has not furnished a satisfactory reply. In exercise of the powers conferred on the Government under the Indian Tramways Act, the Madras Governor has terminated the licence issued to the Company. This Act, it may be pointed out, empowers the Government to terminate the licence in the event of the failure of the licensee to run the service for a period of three months or more. But the Government has given more time to the Company in order to enable the latter to explain the reasons for the termination of its services.

It is unfortunate that the Government does not state in what respects the Company's explanation was unsatisfactory. If the statement, issued by Mr. K. Subramaniam, who represented the Company in its negotiations with the Government, were to be believed, it would appear that the Government has precipitated the permanent closure of the Company's tram services. There were three hurdles to be overcome—the two labour unions' intransigent attitude towards the question of retrenchment, the absence of sufficient liquid resources to resume the services and the arrears of electricity charges. The first obstacle was overcome when the two unions, representing the workers, reached an agreement with the Company stipulating that 1,150 persons should be re-employed. In order to overcome the second obstacle, the Company had applied to the Government for a loan of Rs. 3 lakhs. This application was rejected. The Andhra Bank authorities, whom the management approached, were willing to advance the loan. Thus, the second obstacle too was overcome. The only obstacle that remained was the question of electricity charges. It would appear that the management was engaged in negotiations with the Chief Engineer of Electricity with a view to arriving at an understanding on three points: (1) a fresh agreement as required by the Government for supply of electricity, (2) to fix the amount due to the Government for the supply, (3) to request the Government to receive the agreed amount in instalments. Before these negotiations could come to a close, the Government told the management that the licence was to be cancelled.

If the Government has another, and a more convincing case to present, it will do well to take the public into confidence and issue a statement, explaining the circumstances in which it felt compelled to terminate the Company's licence. Mr. Subramaniam's statement makes it clear beyond a shadow of doubt that the Government has precipitated the closure without seeking the means for the settlement of outstanding differences. By this action the Government has dashed to the ground all hopes of the tramway workers getting back their jobs.

OFF THE RECORD

(By "ROVER")

WHAT a magnificent lark it would be for some adventurous members of our business community, to have the opportunity of spending crores of rupees of other people's money, with no obligation to account for any of the amounts entrusted to their care. It is a pity that no such luck is in store for them with the dark shadow of the proposed comprehensive amendments to the Indian Companies Act, and the vigilance of the Shareholders' Association. The ever-present threat from these factors should be enough to dissuade them from going on such a grand spree. Besides, there are the minions of the Union and the State Police establishments vindictively alert to track those foolish enough amongst business magnates to succumb to such a temptation down to their lair and to expose them to the glare of publicity, by dragglory of this little piece of paradise would be that, secution in a criminal court. The picture of having an unrestricted run through borrowed millions with no one there to ask for accounts is too good to be true for any business man, however astute and adventurous he may be. In the attempt to satisfy the most elementary requirements of the law, he would have to cook up accounts of sorts at least to balance receipts with imaginary items of expenditure. This distasteful and risky task of faking accounts would rob the spree of more than half the pleasure to be derived from it, even though in the case of a business man his conscience may not prove very troublesome.

For the realisation of such an Arabian Nights dream, you would have to arrange matters in such a way as to be placed in charge of one of those big multi-purpose projects, or, better still, something like the gigantic State Corporations in monopolistic control of road transport in big States like Bombay. You could then do with impunity what you dare not attempt when in charge of some joint-stock industrial undertaking, financed by hundreds of small shareholders clamouring all the time for generous dividends. In such a capacity you would also be spared all the trouble of collecting enough mugs from amongst the public to put up the money for you to run through. Crores will literally be thrust on you, by way of capital and loans, by enthusiastic Central and State Governments and all that you would be required to do would be to spend these amounts as quickly as you could. And the crowning glory of this little piece of paradise would be that, instead of condemning you for your failure to maintain accounts of the money advanced to you from time to time, powerful Ministers of the Government would always be there to plead your cause and to defend you for your temporary neglect of such an insignificant part of your activity as that of entering in a book petty details of what you were given and what you paid out to run the show.

I know that you would once again accuse me either of pulling your leg or of exaggerating things. I must, however, assure you that not only was I in dead earnest when I drew the enticing word-picture recorded above but that, having been brought up in the British traditions of journalism as distinguished from those which inspire the scribes on the other side of the Atlantic, I am in a measure guilty of understatement in describing how matters stand with some of our new statutory public corporations created by advocates of public enterprise. Having soared far above the materialistic and mundane level of private enterprise, these political aristocrats naturally look in contempt upon your petty little *bania-like* insistence on proper account books and auditing, which hamper the rapid progress of important and urgent works of public utility. It is not merely the poets and long-haired artists, taking a queer delight in robbing poor barbers of their lawful and legitimate gains, who are above the sordid consideration of filthy lucre. Our Ministers share this noble trait with them. They naturally despise all those like you, who are chained to petty-cash books and postage stamp ledgers and who sit till late hours in their offices to discover the source of and to set right a discrepancy of an anna or two.

For them maintaining of accounts right from the start of a business concern is of little import. Where crores are involved and where all energies have to be bent towards quick spending lest the sources should dry up, they are prepared to overlook such minor matters as book-keeping during the first few hectic years of its history. It is not as if they did not realise the ultimate importance of proper accounts in a business set-up, but, being realists to their finger tips, they hold that first things must come first and such paltry consideration as the need for preparing an accurate annual balance-sheet should not be allowed to hold up the spending of large amounts of money, which is the real measure of the progress achieved by an industrial enterprise. One cannot be in real earnest about securing all-round welfare of the masses, if every time one interrupts real constructive work to jot down in a day-book how many thousands or lakhs one has spent on this thing or that.

Now, please, do not think for a moment that I have spun out this new philosophy of successful business management, all out of my own fervid imagination. I have deduced it from a close study of some of the observations made by no less an authority than Mr. B. J. Patel, Deputy Minister for Public Works in the Government of Bombay, in the State Assembly last week. It appears that, when the Government presented a supplementary demand for over a crore of rupees to be given as additional loan to the Bombay State Transport Corporation, some of the members complained that the Corporation did not keep accounts since its inception. Mr. Patel, being the Minister responsible for this undertaking, assured these critics in his usual suave manner that what they said was true in 1949, but that, during the following four years, the Government and the Corporation had been making progressive efforts to maintain accounts as perfectly as possible. One could gather from what he said that even now they are at the stage of "making progressive efforts" to reach this goal. He did not say when this effort, which does great credit to both the Government and the Corporation, was to be crowned with complete success, but one could take it for granted that it was bound to be so in the course of the next few years. All that I have done is to supply a few explanatory notes to this basic official attitude embodied in Mr. Patel's assurance to the custodians of the public purse.

Bankruptcy of Statesmanship

1st October, 1953, might well prove itself an evil day for India in the long run. This day witnessed the birth of the new State of Andhra. There is nothing wrong with the creation of this new unit in the Union, taken by itself. It was inevitable as a more or less logical culmination of the events of the last thirty years. What is dangerous, however, is the devastating fire it will start in many parts of the country. The passions this will arouse, the bad blood this will create, the intrigues this will give rise to and the unholy bargaining this will lead to in widely scattered areas for the formation of new States will once again start the process of disintegration, which two or three times in the last three thousand years shattered the not-very-firmly-established unity of the country and brought centuries of slavery and unhappiness for our people. We are already in the midst of serious economic difficulties; we are engaged in a life-and-death struggle to extricate ourselves out of them. It will take all our strength during the next twenty-five years to do this. If we are going to dissipate and squander this in bitter political bickerings over redrawing the map of our our country, nothing, not even the Gods who have been kind to us and presented us with chance after chance of redemption, could save us from a fresh repetition of the process of disintegration, which history has so vividly underlined for us in the past.

What has made these apprehensions of mine more acute is the way the protagonists of United Maharashtra have gone, to offer very questionable inducements to the Marathi-speaking people in other States to throw in their lot with the bulk of Maharashtra, which at present forms part of the State of Bombay. If a common language is such a binding force as to overrule all other considerations as those favouring linguistic States would have us believe, these people from Nagpur, Maha-Vidarbha and Marathawad should come rushing to join their long-lost brethren in Maharashtra, especially as the administration of this new State is bound to be more progressive and enlightened than that of Madhya Pradesh or Hyderabad. Instead of doing this, they are holding out and bargaining for guarantees, which points to a state of distrust in their minds about the *bona fides* of the proposed new set-up. And if this be the attitude of the people whom the Maharashtrians in the Bombay State claim as their own blood-brothers, how could they expect the cosmopolitan business community, which has built up Bombay's great industries and commerce and evolved a new pattern of life for the City's millions, to be reconciled to their absorption in a State specially designed to be dominated and swamped by a single linguistic community? Their fears are anything but imaginary, in view of the fact that this community has not shown any special aptitude for business or understanding of the requirements of important key industries.

But apart from the justifiable misgivings of the business community in Bombay, the terms of the agreed formula on the lines of which a demand for the creation of the New Maharashtra or Marathi Pradesh is to be presented to the high power Boundary Commission, which is soon to be appointed by the Central Government, are such as to make one shudder to think what might happen to the future of the country. These include proportionate representation in the Cabinet, special guarantees for fair and adequate *facilities for admission* to educational and other institutions, as well as services under the Government, and specified budget allocations to various regions on the basis of population. Even in such details as the matter of appointment of High Court judges, the principle of zonal representation has been insisted upon. These were the devices which the Britisners employed to divide and rule us. The Constitution of India has taken good care, in the interest of the unity of the country, to eschew this corrosive poison of separate and proportionate representation in Cabinet services, schools and colleges, the High Courts and the Supreme Court, from its entire structure and recognised the claims of certain very backward communities for representation in the legislatures only for a very limited period.

There would be nothing but great calamity for new States based on this foundation of mutual distrust amongst its component parts, which is bound to give rise to perpetual friction and local jealousies. Once such cramping provisions are accepted for Maharashtra, every small region in each State, even if it be a fully linguistic State, would clamour for such guarantees. Incidentally, this also goes to show how weak and flimsy a foundation a common language could provide for the creation of new States, if fundamental unity in other respects is lacking amongst the people speaking the same language. There was a time when Maharashtra bred greater statesmen; the agreed formula evolved for the creation of Marathi Pradesh points not only a bankruptcy of statesmanship but of common sense and patriotism as well. None but those obsessed by a "fixed idea" would agree to pay such a price for its fruition.—

BUSINESS AWAITING WINTER SESSION OF PARLIAMENT

CENTRE TAKES OVER COMPANY LAW ADMINISTRATION

(From A Special Correspondent)

NEW DELHI, 5th October

THE House of the People is scheduled to commence its winter session on 16th November next and will sit till Christmas. During the five weeks of its session, it is expected to dispose of a number of minor Bills. So far as the Commerce and Industry Ministry is concerned, there are about nine Bills, out of which six are pending Bills, the other three being fresh Bills. Among the pending Bills, mention may be made of the Coffee Market Expansion (Amendment) Bill, 1952, the Rubber (Production and Marketing) Bill, 1952, the Coir Board Bill, 1952 and the amending Bills to the Forward Contracts Act, 1952, and the Indian Tariff Act. The Iron and Steel Control Bill, the Control on the Payment of Royalties Bill and the amendment to the Patents and Designs Act are the three fresh Bills which, if time permitting, will be passed in the forthcoming session of Parliament.

DELHI LETTER

The Bills relating to the Coir Board, coffee and rubber are expected to get high priority. It will be remembered that the Coir Board Bill had been taken up for consideration in Parliament in August last. In view of the importance of this industry to the economy of the State of Travancore and Cochin and also due to the necessity for stabilising it on efficient lines, the Commerce and Industry Ministry is anxious to put this Bill on the statute book as early as possible. The Ministry is also attaching considerable importance to the early passage of the Rubber (Production and Marketing) Bill, as also the Coffee Market Expansion (Amendment) Bill. The natural rubber industry is considered as a strategic industry in these modern times and the Government has been anxious that the output of rubber should not only be increased as early as possible but the cost of production should also compare favourably with that of Ceylon, Malaya and Indonesia. For this purpose, it is likely to introduce a development scheme by levying a larger cess, subject to a maximum of one anna per lb. The object of the Government in introducing this Bill is to alter radically the constitution of the Indian Rubber Board. In order to ensure proper co-ordination between the Board and the Central Government, it has become necessary, the statement of objects and reasons points out, to effect a change in the method of representation of the interests concerned by vesting more powers in the Government in regard to nomination of members of the Rubber Board. Experience of other similar commodity Boards has shown that there are difficulties in according individual representation, by name, to various associations on the Board. The relationship between the Board and the Central Government will be further strengthened if the Chairman and the Vice-Chairman are appointed by the Central Government instead of being elected by the members. The Government says further that "the Rubber Price Advisory Committee, constituted under section 7 of the Act, has outlived its utility, as prices of raw rubber are now fixed on the recommendations of the Tariff Commission," and that "it is, therefore, no longer necessary to have the Committee."

In regard to the coffee industry, the Government is of the view that the Coffee Market Expansion Act, 1942, was passed to meet the situation which confronted the coffee industry on the outbreak of World War II when most of the European markets for Indian coffee were lost. This resulted in a surplus of coffee in the country and a slump in prices. The situation to-day is entirely different. The internal consumption of coffee has increased considerably and it is of the utmost importance to step up production in order to meet the increasing demand of the home market, keep prices at reasonable levels and to meet the country's export requirements. The problem is, therefore, one of the development of the industry rather than of marketing. In the opinion of the Government, the Indian Coffee Board also needs to be reconstituted to ensure better co-ordination between the Board and the Central and State Governments and a more equitable representation of all the interests concerned by changing the present method of according individual representation, by name, to various associations on the Board. The relationship between the Board and the Centre would also be strengthened if the Chairman and the Vice-Chairman are appointed by the Central Government instead of being elected from among the members.

Company Law Bill

The Finance Ministry is anxious to go ahead with the Companies Bill, 1953, which, it will be remembered, is both an amending and a consolidating Bill and is based largely on the recommendations of the Company Law Committee's Report. This Bill is one of the biggest pieces of legislation to be introduced in Parliament in recent times and contains as many as 612 clauses and 12 schedules. The last major amendment of the Indian Companies Act, 1913, was passed in 1936, when the main brunt regarding the piloting of the amended Bill fell on the shoulders of that distinguished and veteran lawyer statesman of Bengal, Sir Nripendra Nath Sircar, who was at that time the Law Member to the Government of India. The passage of the entire Bill will take many days and hence it is doubtful whether the whole Bill could be passed during the forthcoming winter session. Mr. Chintaman Deshmukh, who will be sponsoring this Bill, will have an arduous task since the sheer quantum of work in this connection will be of considerable dimension.

The need to expedite the passage of the Bill has become imperative, now that the Central Government has taken over the administration of joint stock companies from the State Governments, to whom it had relegated this power about 50 years ago. Mr. D. L. Mazumdar, who has been connected with the drafting of this Bill and kindred economic matters during the last few years, has taken charge of the administration and will control the Registrars of Joint Stock Companies of States in his capacity as the "Commissioner for Corporate Investment and Administration." It may be mentioned that the Company Law Committee, under the chairmanship of Mr. C. H. Bhabha had recommended the establishment of a statutory authority for the administration of this part of the Companies Bill. In this connection, the Committee observed: "The working of joint stock companies has a very close bearing on the economic development of the country, and it is futile to try and plan the development of the private sector of the country's economy without being in close and constant touch with the developments that take place in company formation and management. The need for a uniform policy called for uniform administration of the instruments of that policy." For the present, the Commissioner for Corporate Investment and Administration will be working under the administrative control of the Department of Economic Affairs of the Finance Ministry, and the conferment of the statutory status on this new organisation will be deferred for some time more, presumably until the adoption of the Companies Bill by the House. In the meanwhile, the Commission will look after diverse functions such as the capital issue control, regulation of stock exchanges, etc.

The idea of an Industrial Development Corporation has been taking some practical shape during the last few days. It is likely that at the forthcoming Industries Council meeting, the Minister for Commerce and Industry will informally discuss with leading industrialists the role of this Corporation in the development of industries in future. Generally speaking, the Government does not want to stultify the expansion of industries in the private sphere, but since the investment of private capital in what are known as risk-bearing industries has become somewhat shy, especially where the capital requirements are large, the Government is desirous of filling the lacuna. This has become necessary at present from two angles, one for combating the unemployment problem and the other for promoting strategic and key industries. Some of the industries which will come under this Corporation will be the steel, heavy electrical equipment, soda ash, caustic soda, dyestuffs, wood-pulp, raw films, synthetic oils, photographic materials, etc. Among the personnel of the Corporation will be included leading bankers, industrialists, engineers, scientists and some key Government personnel, so as to ensure the development of this Corporation on right lines from the very inception. Side by side, the Government will be encouraging private enterprise to expand by the advance of liberal loans on easy terms. In some foreign countries as, for instance, in Australia, industrial development is being fostered by the Government in a number of ways such as reduction of corporation taxes, lower tax on imports of essential raw materials, etc. The Finance Minister will not be unaware of these recent developments in foreign countries and can be depended upon to take similar measures, if necessary, at the right time.

LABOUR REJECTS MORE NATIONALISATION

DIVISIONS ON ECONOMIC POLICY

(From Our Own Correspondent)

LONDON, 3rd October

A PUBLIC opinion poll taken this week by the only Liberal daily newspaper showed that the Government's popularity has now taken a turn downwards—some think because of insufficiently following up the Prime Minister's move for an easement of international tension earlier this year. However that may be, it gave added point to the annual conference this week of the Labour Party which has been debating the shape of the electoral programme it hopes to put forward in due course. This programme is mainly one of economic priorities but the left wing of the Labour Party was anxious to urge wider and more rapid nationalisation while the right wing was content with the compromises made in the document published earlier this year called *Challenge to Britain*.

LONDON LETTER

Officially, the Labour Party has compounded its differences between right and left and at the Conference the truce began to shape into a likely firm peace settlement. The Conference rejected any idea of further nationalisation and the Labour Party programme becomes principally one of developments in the field of social legislation—health, education, unemployment and sickness insurance, and so on. In other words, they are out to expand the Welfare State but the Conference did not show that the Party has yet got down seriously to the question of priorities. An extension of the Welfare State costs money, and such restrictions in social services as the Conservative Government have introduced have been made on economy grounds. But for the moment the Labour Party accepts the continuance of the cold war and the need for more rearmament. If these are the priorities, then they have to explain how the desired social expenditure is to be financed.

Admittedly, both right and left wings are looking for development of the British economy towards a collectivised society in which economic resources would be used to the best advantage under central direction. The ultimate objective is increased production and, thus, the financing of improved social services. The only difference between right and left wings is how best such economic changes toward a collectivised society can take place and the Conference has shown that progress must indeed be moderate. That is why when it comes to an electoral programme the Party will have to concentrate on what in the immediate future it proposes to do and how it proposes to achieve it.

The left wing has this advantage over the right in that if nothing positive can be put forward to the electorate as a reason why they should vote for a new government, the Party will have to revise its appeal which means its concept of the order of priorities more the way the left would have it go: that is, positive steps to ease the cold war, to reduce dependence on United States' aid—must not the corollary be a reduction in armaments?—more control over investment, and probably more public ownership.

However, the only conclusion an impartial observer can draw from the present state of the Labour Party as revealed at the Conference is that it is wrong to speak any more of division between right and left, that the Party is determined on concentrating on social rather than long-term economic aspects of its programme, but that it has not yet got any clear view of how to finance what it regards as desirable. The divisions on economic policy within the Party have been put to sleep for the time being but they are most certainly likely to re-emerge before the next election.—*All Rights Reserved.*

AMERICAN LETTER

U.S. BANKERS ON ECONOMIC TRENDS

CAPACITY TO ABSORB INCREASED PRODUCTION HIGH

(From Our Own Correspondent)

NEW YORK, 24th September

THE one question which exercises American public opinion at this point is the business outlook. Professional economists are still trying to point out that a recession is not only inevitable, but that it actually began several months ago. There is no sense in denying that the freeing of the markets from Government control by the Republican Administration produced readjustments. Supply and demand, under more normal conditions than previously, have produced the spectre of over-production in some lines, such as housing and that only regionally, and in certain types of automobiles. Farm production, too, is somewhat in excess of foreseeable demand, but all these readjustments, so far, have not resulted in any drop in unemployment or in a decline in income. Up to this point, both of these figures are stable.

This is not to say that farmers are not having a bit more difficult time than when they were riding atop the crest of the wave. Farm income has fallen about 6 per cent. this year and those who bought or over-bought farm equipment to work their land are somewhat pressed to make the payments in order to liquidate the debt on their tractors and combines.

Textiles Feeling the Pinch

Likewise, some textile mills are feeling the pinch of competition from synthetic fibres. The entire economy, in fact, is moving into a more and more competitive area. Gone are the days which lasted about 20 years, when business men could relax and take orders for goods that everyone wanted. To-day, they have again to go out and sell and the better the selling, the better the turnover. That is certainly no calamity as long as savings of all classes remain at the extraordinary levels they have maintained for some time.

Deposits in the 528 mutual savings banks in the United States, for example, rose $89 million in August to reach a new high of $23,820 million. Although this gain was not as great as the deposit increase of $108 million in August, 1952, it was higher than any other August since 1947. Over the first eight months, the deposit rise was $1,209 million, or 11 per cent. above the 1952 increase of $1,085 million for the same period. Nearly the entire August gain represented new money, not interest-dividends credited to depositors' accounts.

It continues to be one of the most encouraging signs that savings are still moving up. This was one of the most compelling topics of discussion among the 6,000 bankers who attended the annual meeting of the American Bankers' Association at Washington. Delegates from the South-west and the Far West were the most optimistic. They flatly declined to go along with the slide-rule economists who have proclaimed for some time the beginning of a recession—yet to occur. From the Middle West voices were heard which viewed with some alarm the decline of farm income and Secretary of Agriculture Benson pleaded with the country bankers to stay with their farm customers and not to cancel loans. Delegates from the Eastern section of the United States frankly admitted soft spots in the economy, such as textiles.

Government officials demonstrated that the U.S. was a sound going concern, operating on the basis of private markets as free as possible from Government interference under the new Republican doctrines.

Value of Rising Population

The latter was pointed up by W. Randolph Burgess, Deputy to the Secretary of the Treasury, who said, "we shall always have as our objective sound money and economic stability, avoiding either inflation or deflation and encouraging, not impairing the steady forward growth of the country's activity."

Consideration of expansion cropped up in another Government announcement, almost akin to the philosophy of the late Lord Keynes. It said, "our ability to carry the debt depends on growth. If we nourish a dynamic economy of free men, so that our strength grows steadily and surely, the debt won't seem as big."

The aim here is, obviously, to point out that a rising population of more consumers will inevitably catch up with whatever over-production may have developed.

What seems even more important is that the state of the nation's business is being bared for everyone to see. If there is going to be a slight recession, industry-wide or by areas, it certainly would be the best advertised slump in history.

The edge of it has already been taken off by the firm commitment of the Eisenhower Administration that the excess profits tax would expire at the end of the year without any request for renewal—which cannot be done without a special session of Congress—and that a reduction of 10 per cent. in personal income taxes would also become effective.

It may be concluded from this that both mean higher take-home-pay for business and wage earners. That, in turn, may well reflect itself in higher retail sales and volume, thus offsetting the statistical tax reduction for the U.S. Treasury.

Congressional Elections

Politically, the jockeying begins for next year's Congressional elections. The stock accusation by the Democrats, now out of office, is that this is a bankers' administration and one dedicated to foster the interests of big business. It is a popular and easily palatable line of attack, but it does not conform to the facts.

The banks have lost as much as they have gained from the sound money policy and industry is certainly going to lose Government contracts, as a result of the decreed reduction in Government spending in the future. The Administration is only pro-business to the extent that it allows free markets; otherwise, it certainly seems determined to operate for the greatest good of the greatest number of people rather than for special interests.

While the playing for positions has begun for the Korean "peace" conference, voices of warning are increasing. They say, in effect, that South Korea will take to arms again after the 180 days from the armistice have elapsed; that the U.S. is committed now to cross the Yalu River and bomb Communist bases in Manchuria and that this would probably herald the start of the next global war with or without atomic weapons.

In the inner circles of the U.S. air strategic command, there seems to be great confidence that the American armed services can cope with almost any emergency which may be presented by an enemy, almost instantaneously.

What is also certain is that President Eisenhower's personal popularity throughout the country has been fully maintained, if indeed it has not increasd. Thus, he could decide on any course of action to-day and have the backing of the country. At the moment, he and his associates in the Government are politically secure—there is no question.—*All Rights Reserved.*

U.S. TARIFFS LOWER THAN THOSE OF MANY COUNTRIES

The American Tariff League has declared that United States tariffs are lower than those of most of the world's trading countries. In a special study submitted to the Commission on Foreign Economic Policy, the League said that the U.S. is seventh above the lowest—in a list of 43 countries—in the ratio of customs collected to total imports. The League, in letters to the Commission members, refuted the recent statement of former U.S. Ambassador to Britain, Mr. Lewis W. Douglas, that "for 30 years the barriers that we have erected against imports into the United States have been incompatible with and have operated against the re-establishment of international economic financial health and equilibrium."

Comparing 38 of 43 trading studies examined, both before and after World War II, the League report shows that the U.S. in 1937 was ninth above the lowest with a ratio of 15.8 per cent. In 1951, the United States dropped to seventh with a ratio of 5.1 per cent. This decrease of 68 per cent, according to the Report, was larger than that listed for all, but eight, of the other countries in the same period. The study lists Chile, Pakistan, Haiti, Egypt, Ceylon, the United Kingdom, El Salvador, Burma, Guatemala, Mexico, Iran, Iraq, Thailand, Venezuela, New Zealand and India—in that order—as having the highest ratio of customs duties collected to total value of imports, with percentages ranging from 46.3 to 17.3. Nations having lower ratios than the United States are listed by the League as the Netherlands, Norway, Sweden, Argentina, Belgium, Luxembourg, Denmark, and Japan, with percentages from 4.6 to 1.6 lower.

PAKISTAN NOTES

PAKISTAN JUTE POLICY

FOOD POSITION DIFFICULT

PAKISTAN'S jute policy came in for a good deal of discussion in the Pakistan Constituent Assembly last week. Initiating the discussion, Mr. Mohammed Ali gave an optimistic picture of the jute position. He said that the supply of jute both from India and Pakistan this year would be nearly 9,200,000 bales, including last year's carry-over. This falls, according to him, short of world demand. Accordingly, he expected the jute prices to be maintained at high levels.

So far as Pakistan is concerned, the Prime Minister said that the Government had restricted jute acreage to 1,000,000. Pakistan would have 5,800,000 bales to sell this year. It was less than the Indian average and foreign demand. This short supply, he added, would ensure better return to the grower. On this basis, he continued, the Government had decided not to interfere with normal trade. Licences, however, would still have to be issued and the State Bank of Pakistan would watch the price trend. This vigilance, the Prime Minister said, was necessary to check malpractices. Mr. Mohammed Ali asserted that the jute industry was improving. Already, Pakistan's manufactures had found foreign markets for their products. The Pakistan Industrial Development Corporation was engaged in establishing jute mills with 6,000 looms capable of consuming 1,200,000 bales of raw jute.

The optimism of Mr. Mohammed Ali was, however, not shared fully by any section of the house. While some members questioned the accuracy of official statistics, a few others charged the Government with complacency. Many members criticised the previous Government's jute policy and the working of the Jute Board. The price-support scheme launched by the previous regime was characterised as a "flop" which had enriched the pockets of middlemen at the expense of growers.

Mr. Chakravarty, the Deputy Leader of the Opposition, and Mr. Ibrahim Khan (League), demanded nationalisation of jute trade. They felt that nothing short of nationalisation would assure a fair wage to the cultivator. Malik Firoz Khan Noon opposed this demand and was against Government blocking the normal trade channels. He criticised the licensing policy of the Government and wanted baling presses to be scattered in rural areas.

A proposal to offer to India only *pucca* baled jute is in the offing. India now imports only *kutcha* baled jute. It is argued that India might favourably view this proposal as this would mean doing away with complaints about the presence of 5 to 10 per cent. moisture in bales. If the offer is accepted by India, it is expected to result in more work for presses in Narayanganj. But, as India will have to pay more, there is cautious optimism among certain circles in regard to its acceptance of the offer.

Foodgrains

The Government of Pakistan may have to import foodgrains next year also. The deficit of foodgrains is estimated at eight lakh tons. Latest reports indicate that the area under wheat will not be more than 9½ million acres and the yield may not exceed 2½ million tons, almost the same as that estimated for this year which is 20.6 per cent. less than last year. The yield of rice, however, is expected to be just over eight million tons, that is, higher by about half million tons. But, the yield of *bajra*, maize, barley and grain are not expected to be encouraging.

In the absence of any foreign aid for the import of foodgrains, Pakistan will be placed in a very awkward situation. To add to this difficulty, the employment situation is deteriorating which calls for intensified investment programmes both in public and private sectors. It is estimated that about one million males are unemployed. Employment exchanges as in India, have become almost instruments for mere recording statistics relating to unemployment. Meanwhile, the cost of living index is increasing.

The most notable development during the week is the announcement by Mr. Mohammed Ali that the deadlock over constitution-making had been broken and a new formula evolved. This is hailed as the best news in six years. Mohammed Ali has succeeded where Liaqat and Nazimuddin failed. Under the new formula, unanimously accepted on 5th October by the Muslim League Party, the Federation of Pakistan will have a bicameral legislature. The Upper House with 50 seats will have five units, namely, (1) East Bengal, (2) West Punjab, (3) N.W.F.P., Frontier States and tribal areas, (4) Sind and Khairpur and (5) Baluchistan, Baluchistan States, Bahawalpur and Karachi, each having equal representation. The 300-member strong Lower House will be based on population basis. Both the Houses will have equal powers. There will be joint session of the two Houses for purposes of election of President of Pakistan and the settlement of differences of opinion between the two Houses.

INVESTMENT OF BANKS IN INDIA

HOLDINGS IN DATED LOANS INCREASE

THE Reserve Bank of India's latest periodical analysis of investments of banks disclose a marked fall in the aggregate investments as on 30th June, 1953, as compared with those at the end of December, 1952, but a perceptible improvement over 30th June, 1952. The fall, as compared with the end of 1952, merely reflects the reduction in the sale of Treasury Bills, which is customary at this time of the year, as it includes the major part of the busy season. Actually, the banks' investments in the dated loans of the Government of India were higher not only as compared with the end of 1952 but also with the end of June, 1952. This was due to the issue of a new 3½ per cent. 1961 loan, known as the National Plan Bond, by the Government of India in June, 1953, which was patronised by the big Scheduled banks to a considerable extent.

The total investments of banks amounted to Rs. 384.46 crores at the end of June, as compared with Rs. 401.78 crores at the end of 1952 and Rs. 381.31 crores on 30th June, 1952. Of the total investments of Rs. 384.46 crores, as much as Rs. 370.61 crores or 96 per cent. were owned by the Scheduled banks, while the Non-scheduled banks' share was Rs. 63.85 crores or 4 per cent. of the total. Of the other domestic investments of Rs. 30.81 crores, the holdings of the Scheduled banks amounted to Rs. 27.88 crores. Foreign investments amounting to Rs. 22.09 crores were almost wholly held by the Scheduled banks.

The table below gives, at a glance, the various types of investments held by all banks as on 30th June, 1953, as compared with their position at the end of the two preceding halves:

(Rs. in crores)

Types of investments	June 1953	December 1952	June 1952
Government securities	331.56	344.96	322.90
	(86.2)	(85.9)	(84.7)
Other domestic investments ..	30.81	32.32	31.43
	(8.0)	(8.0)	(8.2)
Foreign investments	22.09	24.50	26.98
	(5.8)	(6.1)	(7.1)
Total investments	384.46	401.78	381.31

(Figures in brackets are percentages to respective totals.)

Of the total Scheduled banks' holdings of Rs. 370.61 crores, at the end of June, 1953, the share of Government securities was Rs. 321.06 crores. These revealed a fall of Rs. 6 crores, as compared with those at the end of 1952. The fall was equally distributed between Central and State Governments securities which stood at Rs. 289.01 crores and Rs. 31.75 crores, respectively. A point that must be mentioned here is that the decline was wholly due to the shrinkage in the Central Treasury Bills held by the banks. Thus, as against Rs. 17.41 crores on 31st December, 1952, the Treasury Bills with banks on 30th June, 1953 were only Rs. 3.10 crores. Over the year ended June, 1953, however, investments in Central Government securities rose by Rs. 17 crores, while those in State Governments' securities declined by Rs. 1 crore.

Maturity Distribution

Some interesting changes are noted in the maturity distribution of holdings of Scheduled banks during the half-year under review. Investments of these banks in short-dated securities, that is, those maturing within five years, dropped from Rs. 127 crores to Rs. 102 crores. The drop is due to the conversion of the 3 per cent. 1953-55 loan announced at the end of May this year, as also to maturity or rediscounting of Treasury Bills. On the other hand, holdings of short-medium loans (maturing in 5-10 years) increased by Rs. 19 crores to Rs. 159 crores, as a result of investments in 3½ per cent. National Plan Bonds, 1961. Investments in medium-long dated loans (maturing in 10-15 years) and in long-dateds maturing after 15 years remained unchanged at Rs. 28 crores and Rs. 32 crores, respectively.

An analysis of distribution of investments in Government securities (including Treasury Bills) group-wise discloses a drop of Rs. 10 crores to Rs. 232 crores in the holdings of major Indian Scheduled banks. On the other hand, investments of other Indian Scheduled banks and Exchange banks rose by Rs. 2 crores each to Rs. 43 crores and Rs. 46 crores respectively.

The major Indian Scheduled banks' holdings of short-dated securities declined from 38 per cent. of their total securities holdings in December, 1952, to 31 per cent. in June, 1953. Their holdings of short-mediums, however, rose from 43 per cent. to 49 per cent. But the investments of other Indian Scheduled banks in both the categories remained almost unaltered at 26 per cent. and 54 per cent. respectively. The holdings of short-dated loans by Exchange banks fell from 55 per cent. to 42 per cent. of the total security holdings, whereas their investments in short-medium dateds rose from 34 per cent. to 48 per cent. Their holdings of medium-longs and long-dateds, however, showed only minor variations.

Other Domestic Investments

Other domestic investments of Scheduled banks declined by Rs. 64 lakhs to Rs. 27.88 crores. There was a fall of Rs. 1.77 crores in investments in fixed deposits which stood at Rs. 62 lakhs. But holdings of trustee securities, shares and debentures and real estate rose by Rs. 29 lakhs, Rs. 60 lakhs and Rs. 16 lakhs to Rs. 9.1 crores, Rs. 11.6 crores and Rs. 6.2 crores, respectively. Investments in bullion remained insignificant.

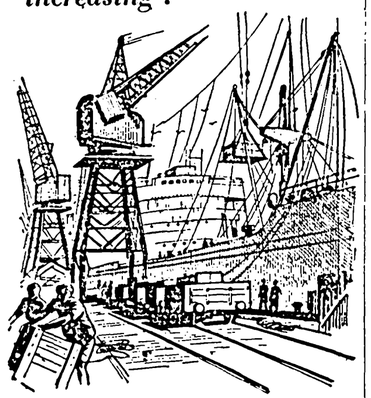
The Scheduled banks' holdings of shares and debentures rose from Rs. 10.96 crores to Rs. 11.56 crores during the half-year under review. Nearly two-thirds of the rise was on account of the major Indian Scheduled banks, and that was mainly as a result of an increase in their holdings of industrial debentures. The rest of the increase was accounted for by other Indian Scheduled banks. In the case of other trustee securities, the entire increase from Rs. 8.85 crores to Rs. 9.14 crores was due to the major Indian Scheduled banks and was in respect of municipal and unclassified trustee securities.

The bulk of foreign investments were held by the major Indian Scheduled banks. The total foreign investments at Rs. 21.7 crores as on 30th June, showed a fall of Rs. 2.5 crores. Investments in Pakistan declined by Rs. 3.8 crores to Rs. 8 crores. But investments in the U.K. remained stationary at Rs. 5 crores. There was a rise of Rs. 1.4 crores in investments in other centres, particularly in Burma. Ninety per cent. of foreign investments were held in Government securities, 2 per cent. in other securities and one per cent. in shares and debentures.

The total investments of the Non-scheduled banks receded from Rs. 22.1 crores to Rs. 13.9 crores. This reflects the large reduction in holdings of Government securities by these banks which fell from Rs. 17.9 crores to Rs. 10.5 crores. Investments in Central Government securities came down from Rs. 13.6 crores to Rs. 6.7 crores, whereas those in State Government securities remained around Rs. 4 crores. But the proportion of the latter to total investments rose from 17.1 per cent. to 26.1 per cent. It must be mentioned here that the Non-scheduled banks do not generally invest in Treasury Bills. The total holding of these Bills by them was only Rs. 20 lakhs at the close of December, 1952, and it declined to Rs. 10 lakhs by the end of June last.

The Non-scheduled banks substantially reduced their investments in Government securities maturing after five years, while there was only a small reduction in the holdings of short-dated loans.

"Is your Overseas trade increasing ?"



With a network of almost 1,700 Branches in England and Wales as well as Agents and Correspondents throughout the world, Lloyds Bank has helped many of its customers to expand their overseas business as the Bank is specially equipped to deal with every aspect of overseas trade.

NEXT COMMONWEALTH CONFERENCE

The Finance Ministers of the Commonwealth will hold their next meeting in Sydney, Australia, in January next year. An announcement to this effect was made by Mr. Robert Menzies, Prime Minister of Australia, last week in the Australian Parliament. He stated: "At the Conference of Prime Ministers in London at the time of the Coronation of Her Majesty, it was agreed that it would be desirable to hold a further meeting of Commonwealth Finance Ministers about the turn of the year. The Chancellor of the Exchequer undertook to communicate with the Finance Ministers in the other Commonwealth countries about arrangements for the meeting. Before I left London, I invited the Chancellor to consider holding the meeting in Australia. . . . I have pleasure now in informing the House that it has been agreed amongst all the Commonwealth countries to hold a meeting of Finance Ministers in Australia between the dates of 8th and 15th January, 1954." A meeting of officials from each of the countries will precede the Conference. These officials will meet on 4th January, 1954.

No details of the agenda for the Sydney Conference are available. But, according to Mr. Menzies, the purpose of the meeting will be to enable the Finance Ministers to review together such subjects as the balance of payments prospects for the sterling area in 1954, progress with the plans for moving towards a system of freer trade and payments covering the widest possible area, and co-operation in development of the economic resources of the Commonwealth. The topics specified by Mr. Menzies are in broad terms and contain no explicit reference to the most discussed question of convertibility of sterling. However, the phrase, "freer trade and payments covering the widest possible area" implies that the coming conference may bestow attention on issues connected with convertibility. As the U.K. in particular is anxious to move as rapidly as possible towards complete freedom for the pound, the conference is likely to review the balance of payments position of not only the Commonwealth countries but others outside, which have established large trade relations with the U.K. and other countries.

Ever since the venue of the next Commonwealth Finance Ministers' Conference was announced, financial circles in London have been discussing the question of convertibility again with great avidity. The question raised by them is whether a definite date for convertibility of sterling will be fixed. According to the *Financial Times*, London, the outlook for sterling appears to be reasonably good. It says:

"The gold and dollar reserve has been rising, not only because of an improvement in the dollar balances of the outer sterling area, but also because of an even more marked improvement in the U.K.'s own dollar trade. During the last year or so, in fact, the improvement has been greater than is perhaps always realised. For the first time since the war, the sterling area has earned a steady surplus of dollars, at a time when prices generally have been falling. And this has meant that the value of the reserve has been rising even faster than its volume. Provided there is no great change in the general level of world production and world trade, there seems no reason why this steady rise should not continue. Though defence aid will fall away in the next month's payment for the offshore orders that have already been placed in Europe will soon take its place."

It is evident from the foregoing remarks that sterling has strengthened considerably. The internal stability of the currency is also indicated by the fact that it has withstood the effects of the freeing of commodity markets from controls. But this by itself is not enough to support convertibility of sterling. According to the original plan, convertibility depends on the extent of help the sterling area was likely to receive from the American Administration either by "trade, not aid" or more directly by a loan. The strength of sterling depends on its ability of being converted into dollars. There is, therefore, a need for sterling and other non-dollar countries to have free access to the American market. This is only possible if the American economic policies are so designed as to make more dollar earnings or dollar capital available to the rest of the world. Unfortunately the American Administration has not so far been in a position to announce its economic policy. And it is now feared that there is no likelihood of any such announcement before the spring of next year when the Randall Commission is expected to submit its report to President Eisenhower. Delays may also occur even after the spring, as the U.S. Administration will still have to prepare a fairly extensive legislative programme and obtain Congressional permission to it. Consequently, any definite and bold stride towards convertibility of sterling will have to await developments in the U.S. Viewed against this background, the Sydney Conference of Commonwealth Finance Ministers is likely to do no more than stock-taking of the position of the respective Commonwealth countries in respect of their trade and balance of payments.

FOREIGN PRIVATE INVESTMENT IN INDIA

VIEWS OF RESERVE BANK GOVERNOR

AT the last annual meeting of the Board of Governors of the International Bank for Reconstruction and Development, held at Washington, there was an informal discussion on private investment, with particular reference to underdeveloped countries. Many leading personalities in the sphere of finance participated in this discussion. These included two persons familiar to India, namely, Sir Jeremy Raisman and Sir George Schuster, both of whom were once in charge of the portfolio of Finance at the Centre. The American representative, Mr. George Woods, Chairman of the first Boston Corporation, was very critical of the attitude of the Governments of underdeveloped countries towards this question. Even Sir Jeremy Raisman was not satisfied with the climate for private investment in these areas, while Sir George Schuster pleaded for better understanding between the capital exporting and importing countries. Some of the issues raised by these speakers were ably met by Mr. B. Rama Rau, Governor of the Reserve Bank of India, who represented India in these annual gatherings. We reproduce below the observations of Mr. Rama Rau, as we feel that full justice had not been done to them by the cabled version of his speech by the news agencies:

"MR. CHAIRMAN,

"You have excluded from the scope of this discussion the question whether private capital movements are preferable to capital movements to Governments or international organisations, or whether they could or should eventually replace them. I cannot, however, refrain from expressing the feeling, particularly in the light of what seems to be the trend of opinion in the United States to-day, that for a very considerable period of time capital movements other than those through private channels will be essential for the task of developing the underdeveloped areas of the world and also to restore equilibrium in the balance of international payments. Before private capital can flow into an area, certain basic economic developments must already have taken place. As has been often emphasised, the private investor in those fields which attract him can operate only if certain basic facilities are available, such as power, transport, communications, and the like. Though there are some underdeveloped countries where this basic development has already taken place and, therefore, satisfies these conditions of private investments, there are, perhaps, the majority where these conditions are not satisfied and where, therefore, a great deal of public capital will have to be invested before the private investor, whether native or foreign, is prepared to take over.

"With these preliminary remarks, I will proceed to discuss and deal with the various points raised by the previous speakers. The principal factors that have operated as deterrents to foreign investment under present conditions have been explained by the speakers on behalf of the capital-exporting countries and also in the reports circulated to us earlier. It is not necessary for me to deal with one of the main obstacles in the way of flow of private capital, which Sir Jeremy Raisman has mentioned, namely, the conditions of political instability in the world to-day and the general tension in international affairs which have made foreign investment difficult and have encouraged investment in the home market, where dividends, as Mr. Woods has just explained, are not much lower than in foreign countries, except in certain spheres. Many of the other impediments which Sir Jeremy Raisman raised are real, but conditions are not uniform for all the underdeveloped countries. In some of the countries in South and South-East Asia, these obstacles do not exist, as, for instance, India, which is naturally the country I know best. It has political stability such as few countries in this unsettled world seem to have to-day. It has an able and efficient administration which, I am bold to say, does not compare unfavourably with that of the most developed countries in the world. It has a judiciary which is impartial and has maintained high traditions of integrity, and which will enforce all contracts, uninfluenced by political considerations. We have an adequate credit structure, and we have adopted in the last two years an effective monetary and fiscal policy which has clearly contributed to the curbing of inflation in the country.

"India has no discrimination whatever against foreign capital. There are no limitations on dividends nor any restrictions on the transferability of profits or the withdrawal of capital. There are no requirements regarding control by Indian nationals nor any legislation, as in some countries, prescribing any particular percentage or proportion of employment for Indians. There has recently been some pressure—I presume this is the point to which Sir Jeremy Raisman referred—for a larger employment of Indians in non-technical posts, but this can hardly be said to be a serious deterrent to the flow of foreign investment.

"The growth of economic nationalism and the influence of socialistic creeds have undoubtedly generated fears of expropriation and nationalisation, especially after the Iranian crisis. This is undoubtedly an important factor. I may explain how this difficulty has been dealt with in India in respect of corporations which have decided to invest large sums in that country. The Standard-Vacuum and other oil companies, who are now setting up refineries in India, have a specific provision in their contracts with the Government, under which an assurance has been given by the Government that they will not take over the refineries for a period of at least 25 years after the commencement of operation. If, after that time, the refineries are taken over by the Government, reasonable compensation will be paid, and necessary facilities allowed for transferring the amounts invested in the Indian companies as share capital and loans. If I may say so, the Indian Government has never dishonoured its agreements with foreign countries or failed to fulfil its foreign obligations.

"Another impediment that has been mentioned in the reports circulated to us is the policy of screening private capital that seeks investment. I may explain that even indigenous capital is subject to this scrutiny by the Capital Issues Committee in India. From the point of view of the underdeveloped countries, screening is absolutely essential, and that for two reasons. First, foreign investment sets up a drain on the foreign exchange resources of the country, because profits have to be remitted and capital has to be repatriated. It is, therefore, essential for the country to see that foreign investment by and large takes place in those industries which will result either in a direct saving of foreign exchange or, through an increase of productivity, lead to the same result indirectly.

"Indiscriminate permission to foreigners to invest, if it were taken advantage of on a substantial scale, might well result in demands for foreign exchange for the remittance of profits and the repatriation of capital reaching limits beyond the capacity of the country to service. This has happened in certain countries. But those countries which are anxious to retain and to build up their credit must necessarily take action to stop this trouble developing at the very root. Screening, therefore, should not be regarded as an obstacle to investment. On the contrary, effective screening is one of the greatest safeguards the foreign investor can have to insure that the country will not get into foreign exchange trouble which might lead to his profits and capital being frozen.

"The second reason why screening is essential is that, if foreign capital is allowed to operate indiscriminately, it will naturally tend to flow where profits are highest. Profits are highest very often in industries which are not essential for the economic life of the country and which, on any rational list of priority, especially in a poor country like India, would come very low on the scale. If capital is available to develop these unessential industries, it is the natural desire of countries to prevent such developments setting up a drain on their resources. Screening, however, has not operated as a serious impediment, though it has in some cases inevitably resulted in some delay.

"It is not for me to say that my country satisfies most of the conditions required by the private investor. I do not expect an investor to take my statements at their face value. But I am sure that some of the speakers here to-day who happen to know India very well will substantially endorse my statements. Nevertheless, it has to be admitted that the private investor, particularly the U.S.A., has not been attracted to India, but this is probably due to ignorance about conditions in India.

"The private investor with small resources will naturally seek safety and prefers to invest in

ALL-ROUND DECLINE IN CLOTH PRICES

HEAVY ACCUMULATION OF STOCKS

THE recent deterioration in cloth markets all over the country, the accumulation of heavy stocks with the mills, and the reduction in cloth prices which the producers have been compelled to effect constitute a problem for the textile industry, the Government and the workers alike. A series of events relating to the setback in trading conditions in the cloth markets have culminated in the reported decision by the managements of seven textile mills in Ahmedabad to close their second shift. Ten more mills, it is stated, are contemplating similar action. Dull trading conditions and poor offtake of mill cloth and yarn have been reported from South Indian textile centres too.

It is, of course, difficult to draw an all-India picture of the textile situation since the necessary data are not now available. According to one estimate, all-India cloth stocks must be of the order of 480,000 bales valued at about Rs. 74 crores. Of these, Ahmedabad and Bombay cities alone are said to be holding not less than 300,000 bales. One report has it that the exact share of Ahmedabad mills is 150,000 bales. In Bombay, the total of uncleared stocks, as at the end of August, is placed at 146,000 bales, as against 86,000 bales on the corresponding date in 1952. In January, 1953, the total of uncleared stocks in Bombay was about 131,000 bales. There was some improvement in the following months and a low of 103,000 bales was touched in May, 1953. Thereafter, the stocks began to rise again and, by July-end, mills held 130,000 bales of uncleared stocks of cloth. By the end of the following month, the stocks moved up further to 146,000 bales. Between August, 1952, and August, 1953, both the stocks of cloth sold, but not taken by the buyers and the stocks of cloth remaining actually unsold have increased, thereby showing that there is not only a decline in the offtake of cloth but an unwillingness on the part of the buyers to take delivery of the cloth bought by them. In August, 1952, the cloth stocks held on buyers' account were 46,000 bales and unsold stocks 40,000 bales. In August, 1953, each of these two varieties of undisposed stocks rose to 73,000 bales. Since then, some 15,000 to 20,000 bales, it is stated, have been added to the stocks. Legal means are, of course, open to the mills to enforce the sales. But the question is the economic significance of this trend.

Government's View

What meaning can be read into the accumulation of cloth stocks? Does it represent merely an adjustment of the mills to the rigours of the climate of free competition, created by the exigencies of the decontrol of textiles? Or, does it portend a recession which must be stemmed by resolute measures? Although the problem of accumulation of mill stocks has been publicised for some time now, no indication is yet available of the official reaction to this problem. Presumably, the Government dismisses it as an exaggerated version. Press reports aver that the Government is not impressed by the demand for the reduction in either the excise or export duty on cloth. The Government, according to the same sources, holds the view that the increase in stocks represents the after-effect of decontrol and of the sales tax legislation in Bombay. Irrespective of what these reports have to say about the official attitude, the fact that the Government has not so far issued a statement of its views on the textile situation suggests that either it is considering the position or has made up its mind that the situation calls for no change in its textile policy. But it is unfortunate that the public should be left guessing about the Government's intentions. It would greatly clear the air, thick with controversy about the textile situation, if it made an authoritative statement on the subject. It is somewhat deplorable that the industry or the public should rely on Press reports to get an insight into the official mind.

The Government would, however, do well to consider some facts about the textile situation. There is no doubt that the stocks have increased. In assessing whether the level of stocks is "alarming" or it is merely a "trifle abnormal," the Government should, in the first place, take into account the fact that the stocks in certain centres, notably Bombay, are the heaviest in the last five years. Secondly, the figures of these stocks, it is well to remember, do not include the stocks which are held by wholesalers and innumerable retailers in the country. Thirdly, it is significant that the stocks have accumulated in a season which is normally associated with plentiful offtake; usually at this time of year a good demand for cloth manifests itself, thanks to the *Dassera, Puja* and *Diwali* festivals. Finally, the fact that the stocks have accumulated despite the undoubtedly substantial recession in prices that has occurred must make the Government a little less complacent in assessing the gravity of the situation.

Some of the leading mills in the country have announced a reduction in prices. The decline in prices since June last, whether effected at the mill-end or at any other point in the course of trade, has been to the extent of 10-12 per cent. in coarse and medium varieties, 15-20 per cent. in fine varieties, and 20-25 per cent. in superfine varieties. Any decline in prices in these days of high living costs ought really to be welcomed. But the question is whether the decline will be conducive to the maintenance of mill activity at a high level. If a diminution in this activity is the price that the country has to pay for the decline in cloth prices, it will, in the end, be found that the cheaper cloth has been too "dearly" bought, for the decline in such activity will inevitably lead to reduced output and higher prices once again.

The question that must be squarely faced is whether the accumulation of stocks does not present a challenge to the Government, the industry, and the workers to find a solution which will promote offtake without any forced closure of mills or reduction in the number of shifts. The immediate problem for the mills is, of course, the locking up of their capital in the shape of uncleared stocks of manufactured goods. If the all-India stocks are taken at 5 lakh bales—each bale consisting of 1,500 yards—and the price of each yard of cloth is taken at a rupee a yard, the amount of capital locked up in these stocks would represent a total of Rs. 75 crores. This is by no means a small sum even for so big and well-organised an industry as the textile industry.

Long-term Problem

The long-term problem, however, consists in stimulating the offtake of cloth. The total supply of mill cloth in the country in the current year may be placed at 4,335 million yards, taking the production at 4,960 million yards (on the basis of the output during the first seven months in 1953) and exports at 625 million yards (on the basis of exports during the first eight months in 1953). This supply—it does not include carry-over stocks nor handloom production at 1,000 million yards—is considerably higher than the 4,000 million yards of mill cloth that was available for domestic consumption in 1952. This increased supply of cloth can be sold, as is now becoming clear, only, if the prices are made more attractive to the buyers.

The buyers' resistance could be broken only through a reduction in prices. And here, the Government could certainly help—so long as the textile production costs continue to be rigid, as they have been—by taking a more realistic view of the imposts on the industry, in the shape of excise duty, export duty, cess on cloth, and sales tax. The excise duty was never conceived as a permanent measure. But the Government has never shown any inclination to revise or abolish it. This attitude might have been correct so long as the industry was prosperous. It would hardly be a correct attitude now.

Export Target

This applies to the export duty too. Exports are now running at an annual rate of 625 million yards. This is certainly better than the exports of 543 million yards which took place in 1952 but far below the level of 732 million yards reached in 1951. Further, the present level of exports is a far cry from the target of 1,000 million yards fixed at the Buxton Conference. It is pertinent to mention here that, when this target was fixed, mill production was considerably lower than it is to-day. The need for at least reaching this target, if not exceeding it, is more urgent now than it was at the time the target was fixed. Again, the duty on coarse and medium cloth exports was imposed, as the Government then felt the need for conserving these stocks for home consumption for fear that they might be drained away to the more prosperous markets abroad. The country can now afford to export more.

Yet another impost, against which the industry has rightly protested, is the duty on imported cotton. This is an unheard of measure in any modern textile producing country. Neither Japan, nor the U.K.—these are two of the leading cotton importing and textile exporting countries of the world—compels its industry to pay such a duty. The least the Government can do—even if it sees no need for abolishing it—is to grant a rebate of the duty on exports of cloth manufactured out of imported cotton. The Government has recognised the justice of this demand and has already initiated legislation for the grant of the rebate of duty. It will do well to expedite its passage through Parliament.

It has been contended that the stocks with the mills have accumulated, because the first wholesalers want to bring the next wholesalers or bigger retailers into contact with the mills, so that sales tax might be eliminated at least at one point. If this is correct, it only strengthens the case for the abolition of the multi-point system. But this line of reasoning does not explain why stocks should have suddenly mounted, even though the multi-point system has been in operation for several months now. Nor does it explain why stocks have accumulated even in States which do not collect sales tax on the multi-point basis.

The workers contend that the industry is raising the cry of accumulation of stocks only to reduce their wages. There is no truth in this contention, for no mill would light-heartedly put up a closure notice. It is absurd to imagine that any mill management would be so foolish as to cut its nose to spite its face. It is in the interests of every mill to work so long as it is profitable to do so. Some labour leaders have, however, appreciated the mills' point of view and have offered to strengthen the latter's case for relief from unjust fiscal burdens. They have, naturally enough, realised that their own prosperity is bound up with the prosperity of the industry. This is a constructive attitude which augurs well for the future of the industry.

UPWARD TREND IN TEXTILE PRODUCTION

LABOUR SHORTAGE COMPELS 50-YEARS-OLD MILL TO CLOSE DOWN

(By A Special Correspondent)

MANCHESTER, 29th September

MANCHESTER LETTER

RECOVERY in Lancashire from the 1952 slump is just about a year old. Coinciding with this anniversary, production and manpower figures issued by the Cotton Board for the first week in September showed a sharp upward trend. Recruitment of 659 full-time workers in spinning was the highest ever recorded in a week, and cotton and rayon yarn output passed the 20,000,000-lb. mark for the first time since January, 1952.

The 1953 holiday season has been a much happier period than 12 months ago, to judge by the production figures which have come from the mills and the steady rise in employment, which is shown in the table below:—

Week ended			Production (In 000's lbs.)		Recruitment	
			1953	1952	1953	1952
May	30	..	16,190	13,140	—100	—914
June	6	..	13,670	8,020	— 8	—892
,,	13	..	19,550	11,410	+ 69	—526
,,	20	..	19,600	13,710	+ 50	—411
,,	27	..	15,330	10,720	+ 50	—362
July	4	..	12,300	8,200	—122	—161
,,	11	..	14,760	10,700	+ 28	—144
,,	18	..	16,930	12,250	+116	— 85
,,	25	..	16,780	11,130	+315	— 80
Aug.	1	..	16,540	11,500	+309	— 26
,,	8	..	17,080	12,060	+130	— 49
,,	15	..	12,910	9,120	+395	+ 89
,,	22	..	14,160	10,240	+ 81	+ 16
,,	29	..	19,810	15,060	+397	+201
Sept.	5	..	20,020	14,230	+659	+103

During these weeks, yarn output exceeded the previous year's totals by an average of about 5,000,000 lbs. weekly and in the period shown was over 74,000,000 lbs. above the 1952 figures. A major part of this improvement, however, must be attributed to the rapidly expanding output of rayon and mixture yarns which are riding the crest of the wave.

Exports in August

As a holiday month August is not normally expected to provide high production or export returns but the progress recently made in both directions compared with 1952 has been maintained. Overseas shipments of British cotton goods last month were valued at £10,632,780 compared with £8,525,261 in August last year.

Twelve months ago cotton cloth exports slumped to the lowest total for nearly five years back at 41,710,000 square yards. August, 1953, brought a recovery to 56,272,000 square yards, which was 10,000,000 yards lower than the July figure but was well up to the average of the first half of the year, the value being £6,948,535.

Although cloth exports made a slower start in 1953 than in the previous year, they are gradually regaining the ground then lost. For the eight months total shipments at 465,744,000 square yards are barely 10,000,000 yards short of the corresponding figure a year ago, but due to the lower prices ruling their earnings are only £57,804,326 against £71,816,257.

Leading consumers of Lancashire cotton cloth so far this year are (in square yards, with 1952 comparisons): West Africa 91,675,000 (109,241,000); South Africa 59,485,000 (38,242,000) and Australia 56,761,000 (58,447,000).

Yarn exports last month were the highest since March, 1952, with the exception of May this year. The steadiness of monthly totals in 1953 has been remarkable and in August the figure was 3,472,600 lbs., worth £1,312,668. This compares with 1,963,800 lbs., valued at only £970,050, in August last year. For the eight months shipments amounted to 26,506,600 lbs., worth £10,656,356, against 23,675,600 lbs., valued at £12,292,143.

Leading markets for cotton yarn in the first eight months this year have been (with 1952 comparisons):—Australia 3,581,400 lbs. (1,994,300); Irish Republic 3,406,600 lbs. (2,036,500) and Canada 2,849,300 lbs. (1,287,300).

Imports of cotton grey cloth last month, at 4,590,000 square yards, remained at the lower level now being recorded and to the end of August were only 50,094,000 square yards, against 122,574,000 square yards in the same period of 1952. Japan continues to be the chief supplier, having provided 34,148,000 square yards.

Foreign Labour Call

Because of the shortage of operatives in cotton weaving sheds, Lancashire mill employers are seeking permission to bring in Continental workers again to operate idle machines.

Mr. Lewis Wright, General Secretary of the Weavers' Amalgamation, said in Manchester this week that a joint meeting of union representatives and employers was likely to be held shortly to discuss the issue following requests for permission from individual employers in many parts of Lancashire.

Hundreds of looms were idle, he said, and rivals were getting into the market with goods which Lancashire could not supply because of its present labour problems.

Mr. Wright pointed out, however, that there were thousands of former Lancashire operatives who would like to return to the industry but who were rather chary at the moment because they wanted to be sure about the future.

If the present trend of trade continued until spring, thousands of Lancashire workers might return to their old jobs in the mills. Union leaders will meet shortly to discuss their attitude towards the employers' appeals.

Mill to Close

Casualty of the labour shortage now affecting the Lancashire cotton trade due to the revival in activity is the Holyrood Mill Company, Ltd., of Oldham, whose Directors have decided to recommend the winding-up to shareholders. This proposal, coupled with the realisation of assets and a distribution, is to be considered at a special meeting on 19th October.

A circular issued to members declared that the Directors felt considerable capital expenditure would be necessary to meet competition in the near future, probably exceeding present liquid capital. Shortage of operatives, they continued, had handicapped the Company since the mill restarted in 1946 and showed no sign of abating. Since last year's trade depression it had been very difficult to earn more than "a very modest profit."

The Directors estimate that shareholders should receive at least four shillings per two-shilling share after liquidation costs. The mill, which contains nearly 50,000 ring spindles, has been in operation for more than half a century.

New Cotton Wage Peak

Industry in general throughout Britain did not experience the profound depression which attacked textiles last year, and the average earnings of the 6,500,000 workers which are collated half-yearly by the Ministry of Labour continued to register their regular upward movement throughout that period. At the end of April this year the average was not far short of £8, representing a rise of nearly 200 per cent. compared with before the war.

In the cotton trade all previous earnings have been exceeded during the current year. The former peak in October, 1951, was established just before the slump overtook the industry. The revival has been such that by April the average earnings of all cotton operatives were a few coppers above the previous highest, as shown below. These figures do not take into account the 5 per cent. advance which became effective in August.

	Men (over 21)	Youths (under 21)	Women (over 18)	Girls (under 18)	All workers
All workers	s. d.	s. d.	s. d.	s. d.	s. d.
Oct. 1951 ..	166 0	69 1	90 1	57 11	141 1
Apr. 1952 ..	173 7	71 9	92 2	57 9	147 3
Oct. 1952 ..	178 6	74 11	96 4	60 9	151 11
Apr. 1953 ..	185 11	77 7	100 3	62 6	157 7
Cotton					
Oct. 1951 ..	166 10	90 6	105 1	79 11	124 5
Apr. 1952 ..	149 0	80 4	93 9	70 4	111 6
Oct. 1952 ..	160 6	88 6	102 5	77 8	121 0
Apr. 1953 ..	166 1	90 7	106 2	79 0	124 8

Cotton weaving continues to be rather more remunerative an occupation than spinning for adults but juveniles get more pay in the spinning and doubling sections. Average earnings of women weavers, for example, in April were £5 10*s.* 11*d.* per week, while girls in the spinning departments received more than £4 a week and retained their position as the best paid workers in this group in all industry.

Cotton mills are still not working the same number of hours as they did before the slump but the trend remains upward. At the end of April the average was 44.1 hours per week compared with 43.1 hours six months previously. In the spinning section the average was 43.9 but in weaving it was 44.5 hours.—*All Rights Reserved.*

COTTON CULTIVATION IN ASSAM

ITS IMPORTANCE TO TRIBAL ECONOMY

ALTHOUGH Assam does not figure prominently in the cotton map of the Indian Union, it is a State which produces a variety of cotton, known to the trade as "Comilla," one of the chief varieties of Indian cotton for which there is a sizable export market. The cotton produced in this State derives its importance from the fact that it is cultivated on the hills and not in the plains and also from the fact that its cultivation is an additional source of income to the hill tribes which inhabit the State. Cotton being the chief cash crop which the tribes of Assam hills cultivate, this commodity has come to possess a great significance for the tribal economy of this region. So little is, however, known about the methods of cultivation used by the tribes and of the variety of uses to which this cotton is put that the very comprehensive article, entitled "Cotton in Assam," contributed to the July issue of the *Indian Cotton Growing Review*, the journal of the Indian Central Cotton Committee, by Mr. B. De and Mr. P. M. Ganguli, both members of the Department of Agriculture, Assam State, will be read with particular interest.

Assam accounts for only about 30,000 acres in the total of about 16 million acres devoted to cotton in the Indian Union. The average area under cotton and the output of cotton in the Assam State during the 1947-49 period were 30,564 acres and 11,856 bales respectively. The Garo hills region represents the most important cotton-growing area in the State; this region accounts for 77.6 per cent. of the total production in the State. These hills form the centre of origin of a coarse short-staple cotton, the leaves, flowers and bolls of which are "markedly distinct from other cottons of the world in their predominantly big size." The cultivation of cotton in these hills is an occupation which has been carried on from "immemorial past." The cotton cultivated in the Garo hills is known locally as *kil*. This is grown at an altitude of about 1,500-1,800 feet. These varieties are very coarse and of short-staple (0.5 inch).

The cultivation of cotton in Assam is, as already stated, mainly confined to the hill districts. It is the occupation of the hill tribes who continue to follow "very primitive methods of cultivation," handed down from generation to generation. The authors describe the method of cultivation adopted by the tribes as follows:

"During winter season the headman of a village, i.e., *nkma*, allots plots of land to different families of his village on hill-sides (under his jurisdiction, i.e., *akhing*), preferably at very high altitudes. Trees and shrubs growing on these plots are cut down by the respective families by means of a type of bill hooks, generally in the months of January and February. These cut down jungle trees and shrubs are not removed but are allowed to dry in their positions. These are burnt when thoroughly dried by the summer heat. The whole plot of land thus gets cleared of its forest covering. If any portion is left unburnt, it is burnt again or removed from the field."

The system of cultivation through clearing the ground by burning down the thick jungle, described above, is known as *jhum* cultivation. It is a common practice not to use the same plot of land for more than two successive seasons. It may be mentioned here that cotton in the State gets ready for picking from November onwards and the picking is done till January or February. Generally speaking, the entire crop is harvested in a single picking in December and January in the Garo hills. The bulk of the *kapas* produced in the hills is sent by traders to ginneries at Salmona and Mankachar in the Goalpara District.

There is no doubt that cotton production in Assam has declined. In pre-war years, Assam accounted for a production of 15,000 to 20,000 bales of 400 lbs. each, of which Europe used to take 40 per cent., the U.S. 40 per cent. and Australia and the U.K. 20 per cent. Assam's cotton output declined during the war years to abcut 3,000 bales. This was because there was no export outlet during these years, as a consequence of which the price for *kapas* fell to as low as Rs. 3 per maund. Since then, there has been marked recovery both in prices and production. In recent years, the Garo hills' commercial cotton crop has been placed at 5,000 bales, while the prices have ranged between Rs. 30 and Rs. 35 per maund. Incidentally, it might be pointed out here that the Government estimates place the crop at double the figure. If the official estimate refers to seed cotton, it is certainly very confusing as bales are always made of ginned cotton. The authors have rightly emphasised the need for "regularising the acreage and yield statistics."

Assam cotton is, as already stated, exported abroad where it is used for mixing with wool. In India it is used mainly as stuffing material for quilts, *razais* and cushions. The Lushais use the cotton for making a kind of warm jacket. Some of the finer types, which can spin up to 20s, are used by the hill tribes for making the "beautifully designed fabrics of Assam." The cotton produced in the Garo hills is, however, too coarse for such use. The tribes in the hills do not, in fact, cover themselves completely even in winter, their only protection against cold being a "lit fire around which they sit and sleep."

The short-staple coarse cotton which is produced in the Assam State is capable of being used in other ways. Thus, it can be used as absorbent cotton in hospitals. It can also be used in the manufacture of lamp and candle wicks, ropes and twines and blankets and carpets. It is also capable of being converted into cellulose which is used in the making of artificial silk, rayon, paper, cellophane, explosives and other articles in which cellulose is used. Although it is thus true that these short-stapled varieties are capable of extended use within the country itself, there is no denying the fact that, so long as there are no well organised industries which can utilise these varieties, the country must continue to rely on export markets for the disposal of this cotton.

It is sometimes argued that the exclusive dependence on foreign markets for Assam's cotton could be corrected if the State could be made to grow long and medium-staple cotton. The authors have approached this question in a very realistic manner. They have not ignored the consideration that it might be possible to grow such cotton in the Garo hills or in other hilly tracts in Assam. The authors hold that since cotton is a crop which grows in widely different soils and climatic conditions of tropical and sub-tropical regions, the possibility of the successful "introduction and acclimatisation" of long and medium-staple varieties cannot be "ruled out." Indeed, such varieties of cotton as 4F, L.S.S., Indore I, Buri, etc., it is stated, have been successfully grown in small plots at the Cotton Research Station, Garo hills. They also aver that it is possible to evolve a medium-staple cotton from the "State's own stock of cotton by selection and breeding." But the whole question is whether all this effort will yield results commensurate with the labour involved. In this connection, they observe:

"But taking it for granted that a suitable medium-staple cotton is evolved for the State, how much land can be put under it? At present, there are only 30,000 acres under hill cotton and with utmost effort even if this acreage be doubled up there will be about 60,000-70,000 acres only under this crop. Based on India's average yield, this acreage will produce about 20,000 bales only. This is about one-hundredth of India's total produce and about one-eighty-fifth part of India's total long and medium-staple production. It will be of very little help towards solving India's need for staple cotton. So, there seems at present no need to make this frantic effort for replacing the present indigenous short-staple crop for which there is already a good market in existence. Rather, the need lies in the improvement of the existing cernuum crop—in increasing its yield, ginning percentage and quality, making it more suitable for mixing with wool—a quality the trade demands—and increasing area under it."

Research attention is, therefore, rightly concentrated on the evolution of a suitable variety of hill cotton with high yield, high ginning percentage and maximum possible coarseness. It would appear that Garo hill cotton offers the maximum scope for improvement in these directions. But the improvement of cotton cultivation is not merely a question of research. It is necessary to carry those results of research to the cotton field. This is always a difficult problem in India, but more especially so in Assam's hills which have not yet "received the light of civilisation." The authors observe that the *jhum* system of cultivation, which offers the worst form of soil erosion and makes the soil unimaginably poor within two years of cultivation, must be stopped either by educating the public through propaganda and demonstration or, if need be, by legislation. They add:

"Another point to remember in connection with the improvement of cotton in Assam is that introduction of recommended varieties will only be a half-way approach towards the solution of the problem unless it is accompanied by recommendation and introduction of suitable agronomical practices for the hills. It is well known that proper agronomic practice alone can improve the crop cent per cent or more."

It is to be hoped that the Assam Government will try to achieve these objectives, though it will no doubt have to be assisted by the Indian Central Cotton Committee on the purely technical aspects of cotton cultivation. When such improvement in the cultivation of cotton has been effected, it would be possible to raise the income of these tribes—the cotton they produce is a highly valued commodity in the West—and thereby pave the way for the improvement in their living standards.

NEW EXPORT QUOTA FOR COTTON

In response to the widespread and persistent demand for the announcement of export policy in regard to raw cotton belonging to the 1953-54 season, the Government of India declared, on 28th September, 1953, an export quota of 175,000 bales, made up of 75,000 bales of Bengal Deshi, 50,000 bales of Mathias, Kalagins and Dholleras and 50,000 bales of C.P. I and C.P. II, Oomras of 11/16". The Government has also stated that the present policy of free licensing of Assam Comillas and Coconadas will be continued. The shares of established shippers and new-comers remain the same as they were last year, namely, 80 per cent. and 20 per cent. respectively. Exporters have also been permitted to utilise old stocks for export, through the new quotas that might be allotted to them. The quotas relating to the 1952-53 crop had already been extended to the end of October, 1953.

Two considerations have influenced the recent demand for the early declaration of export quotas. In the first place, the exporters have learnt, through bitter experience of the Government's cotton export policy in the 1951-52 season, that, in the absence of early quotas, it would be difficult to avail themselves of any generous quotas that might be allotted in the later part of the cotton season. Last year, however, the Government recognised the contention of the exporters that they should know well in advance the Government's export policy. It might be recalled that the Government announced the entire export quota for the 1952-53 season in the course of two announcements made in October, 1952. This year, too, the Government has taken the decision fairly early in the season, though it might have been even more prompt than it has been. Another consideration which has influenced the exporters' plea for prompt declaration of export policy is that several enquiries from abroad were received in India for short-staple varieties, following the re-imposition of export duty by Pakistan, the only competitive supplier of these varieties to foreign markets. Indeed, some exporters have already carried their negotiations with foreign importers to an advanced stage, with the usual clause about "subject to the receipt of export licence." It is, therefore, gratifying to note that the Government has been prompt in announcing the cotton export policy for the current season.

The Government has, however, not seen eye to eye with the exporters in the latter's demand for the reduction or abolition of the export duty. The demand can be defended on the ground that the world cotton trade is bound to witness a recession in prices, which would have an unhealthy effect on foreign offtake of Indian cotton. Already, there has been some resistance from the buyers' side. For instance, the U.S. and the U.K., it is stated, have not been too eager to buy from India. Presumably, they would like to hold out a little longer in the hope of buying the varieties at lower prices. Another important buyer, namely, Japan, would no doubt be willing to buy from India or Pakistan. But it is a shrewd buyer and will wait for a favourable chance. It might be mentioned that the Japanese buyers have not opened credits here. It remains to be seen whether they will evince keener interest in the next few weeks.

The rates of export duty on cotton are different for different varieties. At present, the duty on all varieties, except Bengal Deshi and Assam Comillas, is Rs. 200 per bale. On Bengal Deshi varieties it is Rs. 125 per bale. There is no duty on Assam Comillas. Exporters have in the recent past found it difficult to sell non-Bengal Deshi varieties of cotton which are subject to a duty of Rs. 200 per bale. The Government itself has recognised this position and permitted the partial conversion of unutilised quotas for non-Bengal Deshi varieties into Deshi varieties. The position could certainly be set right if the Government decides to reduce the export duty on the non-Bengal Deshi varieties at least to the level of the duty on Bengal Deshi varieties. In the case of Bengal Deshi varieties, it must be conceded that the demand for reduction in export duty has lost some part of its earlier strength, thanks to the re-imposition of the export duty by Pakistan. It will be recalled that, last month, the Pakistan Government re-imposed an export duty of Rs. 60 per bale on short-staple varieties. Hence the case for the downward revision of the duty in India is not as strong as it was earlier. Nevertheless, the Government should keep an open mind on this question. It should not regard the duty as a source of revenue. It must be prepared to reduce it if foreign demand shows distinct signs of slackening, in order to stimulate the exports of these short-staple varieties.

Total pressings of cotton in the Indian Union during the 1952-53 season have been returned at 2,948,918 bales as compared with 3,247,683 bales last season.

truth's triumph over evil...

Easily the most important festival in North India, Dusserah commemorates the victory of Rama over Ravana, symbolizing the triumph of truth over evil. The ten-day festivities conclude with the burning of out-size effigies of ten-headed Ravana and other demons. Huge open-air stages are set up and scenes from the Ramayana enacted before large audiences on each day of the festival.

Special importance attaches to the Dusserah festivities in Ayodhya, the birthplace of Rama. The sacred town is 4 miles from Fyzabad in Uttar Pradesh. A metalled all-weather road connects Fyzabad with Lucknow 79 miles away.
Ready access to the scenes of India's famous festivals is assured by the safety and comfort of road travel made possible by John Boyd Dunlop's invention of the pneumatic tyre.

LANDS UNDER SUGARCANE IN BOMBAY

HIGH RATE OF IRRIGATION CESS TO BE LEVIED

THE Government of Bombay has fixed the irrigation cess payable in respect of lands under sugarcane at as high a level as Rs. 22-8 per acre. This cess, which is in exercise of the powers conferred upon the Government by subsection 56E of the Bombay Irrigation Act, 1879, as amended in 1950, will be effective for a period of three years from 15th February, 1954. The fixation of the cess at such a high level is deplorable. It is seven times higher than that recommended by the Cabinet Sub-Committee in 1948. This Committee, it will be recalled, was appointed to suggest measures for improving the financial position of the major irrigation works in the State of Bombay. The Sub-Committee had suggested a cess of only Rs. 3 per acre on lands under irrigable command in the perennial zone. It had clearly expressed the view that the irrigation cess should not be fixed at an unnecessarily high level.

The Government's right to collect an irrigation cess cannot be questioned. We are aware that, under section 56E of the Act referred to above, "the irrigation cess, payable in respect of land under the command of a canal, shall be at such rates and for such a period as may be fixed by the State Government by notification in the official *Gazette*." That section also states that "the determination of such rates and period shall be final and shall not be questioned in any court of law." Thus, *litera scripta*, the Government can fix any rate it likes. But that does not absolve the Government of its moral responsibility. Surely, this blanket authority does not entitle the Government to fix a rate which is uneconomic. That is why the issue had been referred to a Cabinet Sub-Committee. This Committee had made certain specific recommendations. Instead of accepting them, the Government has chosen to disregard them in this important respect. Further, the intention behind the amendment is clearly stated to be to give effect to the recommendation of the Cabinet Sub-Committee.

The statement of objects and reasons to the Bill amending the Act observed: "After a careful consideration of the report and the views thereon conveyed to the Government, the recommendations in regard to betterment levy or charges and irrigation cess contained in the report which relate exclusively to major irrigation projects have been accepted by the Government and the present Bill is designed to give effect to these recommendations." Thus, the relevant Article, read with the statement of objects and reasons, fundamentally violates the spirit behind the amended Act.

In fixing the cess, as mentioned above, the Government of Bombay has also unjustifiably discriminated against lands under sugarcane crop, for the rate at Rs. 22-8 per acre for land under sugarcane is double that fixed for lands under other perennial crops which will also be effective from 15th February, 1954. The Cabinet Sub-Committee, however, made no such discrimination. In the absence of any explanation for such discrimination, it is difficult to understand the consideration that has moved the Government to fix a higher cess for lands under sugarcane crop.

The effect of this high rate on lands under sugarcane is yet to be assessed. It is true that section 56D(1) of the Act provides that "in the case of unallenated land, the occupant, and in the case of alienated land, the superior holder, shall be primarily liable to the State Government for the payment of such cess, inclusive of all arrears of such cess." But section 56D(2) further states that "in case of default by any person who is primarily liable under this section, the irrigation cess including all arrears as aforesaid shall be recoverable from any person in possession of the land: Provided that where the irrigation cess is recovered under this section from a person who is not primarily liable for the same, such person shall be allowed credit for any payments which he may have duly made to the person who is primarily liable, and shall be entitled to credit, for the amount recovered from him, in account with the person who is primarily liable."

Most of the lands under sugarcane crop are unalienated lands; they are held by the sugar companies on a rental basis. According to section 56D, the occupant of the land is primarily liable for payment of the cess and in case of default by him, the tenants, which in the present case are mostly factories, in possession of them. There are, however, certain occupants who are getting rent per acre at a rate which is less than the proposed irrigation cess. In such cases, they would not be in a position to pay the cess and, consequently, the tenants, who have paid the rent, will not be able to recover it from such occupants. In effect, the tenants will have to bear the burden of the cess.

The high cess will certainly have an adverse effect on the production of sugar and enhance the cost of production. As no such tax is levied on sugarcane grown in U.P. and Bihar, which account for about 90 per cent. of the total sugar production in the country, the natural advantages which Bombay Deccan has over these two States will be diminished further.

That the rate is exorbitantly high will be evident from the table given at the foot of the column, compiled by the Sub-Committee, showing culturable and irrigable areas in perennial and non-perennial zones of the major canals in the Deccan and the working expenses and the irrigation cess as proposed by the Committee.

It will be clear from the table that irrigation cess even at Rs. 3 per annum in the perennial zone and at Re. 1-8 per annum in the non-perennial zone is more than sufficient to meet the working expenses. It may be that working expenses have gone up since then, but such could not have risen by as much as seven times. It is to be hoped that the Government of Bombay will revise its rate and fix it at a more reasonable figure on the lines recommended by the Cabinet Sub-Committee.

ABOLITION OF CONTROLS ON SUGAR IN U.K.

The Government of the United Kingdom has abolished controls on distribution, use and prices of sugar, syrup and treacle with effect from 1st October, 1953. While making this announcement, the Food Minister stated that price control on invert sugar was being discontinued and that all restrictions on the use of sugar for manufactured food such as cakes, biscuits and sweets would cease.

Commenting on this development, Lord Lyle of Westbourne, President of Tate and Lyle, the world-famous sugar refineries, said that this step marked the end of subsidy to the consumer and that henceforth the price of sugar would reflect the true costs based on the price paid for raw sugar. Refineries, he added, had agreed to relate their selling price of a 2-cwt. bag of refined sugar to the price they pay to the Ministry for raw sugar. Other packings and qualities would also find their true level of price, and distribution through the wholesale and retail trade would come under the influence of competition again.

Lord Lyle, however, observed that Government trading in raw sugar would continue until three problems were solved. First, there was the problem of disposing of the large stocks of raw sugar held by the Government. Secondly, the position of home-grown beet sugar *vis-a-vis* sugar from sugarcane had to be determined. Thirdly, there was the question of implementation of the Commonwealth Sugar Agreement.

Pre-war consumption of sugar in the U.K. was 2.1 million tons per annum or about 100 lbs. per head. Allowing for the 7½ per cent. increase in the population and other factors and taking into consideration the fact that sugar is now free from control, consumption is expected to rise to about 2.25 million tons per annum.

Commenting on the Food Ministry's arrangements to take, before the end of the year, an additional 200,000 tons out of the 1 million tons of sugar purchased from Cuba, Czarnikow's latest review says that this means that about 800,000 tons will be shipped this year instead of the 600,000 tons mentioned in the contract. The year-end stock in the U.K. is expected to be at a peak of about 1.62 million tons.

COAL IN BIHAR

CESS ON DESPATCHES RAISED

THE Government of Bihar has, in consultation with the Government of India, increased the rate of cess, to be collected from the notified collieries in the district of Manbhum on their despatches of coal and coke in 1952-53, to As. 2 per ton. It is stated that this rate will apply in respect of assessment during 1953-54 as well. The Centre, however, seems to have refused to consider the proposal of the State Government to levy a cess on despatches from the mines in the districts of Palamau, Ranchi and Santhal Parganas at the rate of As. 2-6 per ton, unless the financial requirements of the District Boards for 1952-53 were enquired into.

It will be recalled that the Government of Bihar sought the approval of the Centre to levy a cess of As. 3-6 under the Bihar Cess (Amendment) Act, 1952, which was brought into force on 1st April, 1952. The Act authorises the State Government to levy a cess through Local Boards in Bihar at a rate not exceeding As. 4-6 per ton of annual despatches of coal and coke, subject to the consent of the Government of India. When the Indian Mining Association was asked to suggest the rates leviable, it expressed the view that the rates should not be more than what was necessary for the Local Boards concerned to cover their average expenditure, based on the year that had just passed, and leave a small surplus in hand. Accordingly, it recommended that the rates should be as follows:

(Per ton of aggregate annual despatches)

	As.	p.
Manbhum District Board	1	2
Hazaribagh	1	6
Hazaribagh Mines Board	1	2

Although the present rate fixed for the Manbhum District is 10 pies higher than that suggested by the Indian Mining Association, it is lower by an anna and a half than that proposed by the Bihar Government. It is calculated that the income to the Board by this cess will be about Rs. 16 lakhs. About 50 per cent. of the cess is expected to be spent on constructing, maintaining and repairing roads in the sub-division of Dhanbad. So far, the coal industry has alleged that the facilities to the industry provided by the Manbhum District Board is not commensurate with the burden of taxation. It is to be hoped that, in future at least, this matter will receiver proper attention.

The increase in cess, although smaller than that proposed, is expected to weigh heavily on the coal industry. This is so especially now, when costs are rising and the selling prices are statutorily fixed, which have made many of the mines uneconomical. Consequently, unless the loss is compensated by way of a reduction in transport costs, etc., that are expected to follow the facilities to be provided by the Board, the coal mines will be hard hit. The cess on despatches of coal from other areas in the State will be levied by the Local Boards, as soon as their financial requirements are assessed. The rates will be based on the results of the assessment.

COAL IN PAKISTAN

It is learned that Pakistan will be able to reach the target for production of coal of 800,000 tons per annum, originally proposed to be hit by the end of 1957, by the end of this year. During the first quarter of this year, the output of coal was 187,000 tons, giving an annual average of 748,000 tons.

Pakistan imported from India during January-May, 1953 as much as 343,870 tons. Of this, East Pakistan absorbed 239,206 tons and West Pakistan 104,664 tons. The month-wise despatches were as follows:

(In tons)

Month	East Pakistan	West Pakistan	Total
January	51,872	17,535	69,407
February	52,116	19,005	71,121
March	45,279	17,235	62,514
April	42,059	19,569	61,628
May	47,880	31,320	79,200

DESPATCHES OF SOFT COKE

Despatches of soft coke during January-May, 1953, were 505,938 tons, as against 430,068 tons in the corresponding period of the previous year, a rise of 75,890 tons. The month-wise despatches of soft coke were as follows:

(In tons)

	1952	1953
January	90,902	112,650
February	79,018	76,041
March	80,379	112,050
April	85,424	96,459
May	94,345	108,758

TREND OF WORLD TEA PRODUCTION

OUTLOOK WILL DEPEND UPON ECONOMIC FACTORS

TEA plays a minor role in world agricultural economy as a whole, but that does not belittle its importance, which is, in fact, great, to a number of producing and consuming countries. Its cultivation is important, especially to countries with a very high ratio of population to arable land, on account of the high labour requirement and high product value per unit area of cultivation. In India, which is the largest tea producing country in the world, tea provides employment to about a million agricultural labourers. It also contributes 12 to 16 per cent. of the total value of exports from India and 50 to 60 per cent. of those from Ceylon. Its importance to the balance of payments of the sterling area is also considerable. It is, therefore, in the fitness of things that the Food and Agricultural Organisation (F.A.O.) of the United Nations should have devoted some thought and attention to the position and the prospects for this important commodity. In one of its useful series of commodity reports, the F.A.O. has examined the progress of tea production, consumption, trend of prices, and the working of the International Tea Agreement during the two decades ending 1953. This is the first review on tea. (priced at 1s. 3d.) and the credit for it goes to the Sugar and Beverage Section of the Economic Division.

Discussing the trend of production and the future world output of tea, the F.A.O. Report points out that there is not likely to be any fundamental change either in the world production map or within the three major producing countries of the Far East. So far as India, Pakistan and Ceylon are concerned, the F.A.O. finds that the production outlook will depend almost entirely on economic factors, especially on the relationship between cost of production and prices. The Report reveals, significantly enough, that the import demand for tea has not kept pace, since 1934-38, with the increase in population in consuming countries. One of the important reasons for this is the increased competition from other beverages, notably coffee. Consumption in some of the producing countries, however, has increased markedly.

Decline in 1952

World production of tea (exclusive of China and the U.S.S.R.) in 1952 was estimated at about 580,000 metric tons (1 metric ton=2,204.6 lbs). Although this was slightly below the record level touched in 1951, it was 30 per cent. above the pre-war average of about 450,000 metric tons. India, Ceylon and Pakistan, which between themselves had contributed 66.6 per cent. of the total world output in the pre-war years, 1934-38, expanded their production by 54 per cent., to contribute as much as 78 per cent. of the total world production. These countries benefited greatly from the decline in production in Indonesia (Indonesian production during 1950-52 was only half of pre-war average) and the decline in exports from Japan and China.

The following table shows the trend of world production of tea during the last four years, as compared with the pre-war average, and the percentage distribution thereof:

(In 1,000 metric tons)

	1934-38	1949	1950	1951	1952†
India	187.9 (42.9)	265.4 (50.9)	278.0 (49.6)	285.1 (48.4)	281.6 (48.7)
Pakistan ..		21.3 (4.1)	24.2 (4.3)	24.2 (4.1)	24.6 (4.2)
Ceylon	103.9 (23.7)	140.4 (26.9)	143.4 (25.5)	147.6 (25.1)	143.7 (24.8)
Indonesia	75.2 (17.1)	27.3 (5.2)	35.4 (6.3)	46.5 (7.9)	36.9 (6.4)
Taiwan	11.6 (2.6)	10.1 (1.9)	9.6 (1.7)	10.5 (1.8)	11.6 (2.0)
Japan	49.3 (11.2)	32.6 (6.2)	41.7 (7.4)	44.0 (7.5)	48.6 (8.4)
Malaya	0.4 (0.1)	1.5 (0.3)	1.6 (0.3)	1.7 (0.3)	1.7 (0.3)
Nyasaland	4.3 (1.0)	5.7 (1.1)	7.0 (1.2)	7.2 (1.2)	7.2 (1.2)
British East Africa ..	3.9 (1.0)	7.6 (1.5)	9.6 (1.7)	9.9 (1.7)	10.0 (1.7)
Mozambique	0.3 (0.1)	2.8 (0.4)	3.1 (0.6)	3.1 (0.5)	3.2 (0.6)
Others	1.7 (0.3)	7.8 (1.5)	8.4 (1.5)	8.7 (0.5)	9.6 (1.6)
Total ..	439	522	562	589	578

N.B.—Figures in brackets represent the percentages of production to the total.

† Preliminary.

It will be noted that the largest increase (140 per cent.) in production between the years 1934-38 and 1952 took place in Africa, although its contribution to the world supply was only 3.5 per cent. in 1952. This increase in output was due to the rise in planted area in British East Africa and Nyasaland from 13,900 hectares (1 hectare=2.47 acres) in 1939 to 33,000 hectares in 1950 and to the new plantings in Southern Rhodesia, Belgian Congo and Mauritius.

The decline in the total world output in 1952 from the 1951 level was due to two factors, namely, (1) less favourable weather conditions in some areas, such as Ceylon and Indonesia, and (2) economic and social factors, notably the decline in prices which led to internal measures to restrict production. In Indonesia, unsettled social conditions and the spread of disease among tea bushes resulted in a substantial decline in production. India and Pakistan took steps to restrict the output of tea.

Though there was a decline in output during 1952 in India, Ceylon and Pakistan, their overall production during the last few years was on the increase due to a slight expansion in area planted (these countries did not utilise fully the permissible areas under the International Tea Agreement), introduction of high yielding varieties and coarser plucking. High yields per hectare became an economic necessity, in view of the increase in production costs.

No Fundamental Change Expected

No fundamental change either in the world tea production map or in the three major producing countries of the Far East, is anticipated in the course of the next few years, the F.A.O. Report observes. It, however, adds that economic problems will become of increasing importance to India, Ceylon and Pakistan. It further goes on:

"The next few years, may witness some shifts in the internal organisation of production. The rise in the cost of living and in wages of estate labourers, in comparison with pre-war, is creating serious economic problems, especially for estates in India and Pakistan. Since production expanded more rapidly than import demand during the last three years, producers have not been able to pass on to consumers in a relatively competitive market, the full increase in production costs. It is possible that peasant production may become of increasing importance, notwithstanding the better quality control and other marketing advantages enjoyed by estates. Secondly, while the three great producers of the Far East will continue to produce the dominant share of supplies moving in international trade, the contribution of new areas, especially in Africa, is likely to increase in coming years."

Referring to the economic conditions in the tea estates of India, Pakistan and Ceylon, the Report says that a meaningful comparison of current money and real wages with those of pre-war is extremely difficult. For, in addition to money wages, tea estates are required to provide numerous perquisites, such as housing, supplies of food at special prices, medical and various other social facilities. Though these facilities are still primitive, judged by Western standards, and do not exceed the barest minimum, they have, nonetheless, imposed considerable financial burdens on estates in India, Pakistan and Ceylon. Wages also are low as compared with standards in Western countries, but estates have found it necessary to reduce wages. The Report indicates that estates in these three countries may have to face more difficulties in the years to come. Its observations on the future of tea production in these countries and suggestions to lessen the burden on the estates are, therefore, noteworthy. Thus it says:

"While the International Tea Agreement provides a storm shelter for producers in these countries, the possibility of further difficulties cannot be ruled out. The long-term trend can be in the direction of higher wages, not lower. To attain higher productivity per man-day, it will be necessary to raise productivity per tree and per hectare, to investigate more carefully the possibilities of mechanisation of certain operations both from an economic and technical standpoint. The difficulties of mechanisation are well known; but those were at least as formidable in some other agricultural industries until the decline in profitability made mechanisation the only alternative to bankruptcy. Another measure to which these producers may have to resort is simplification of the capital and management structure—amalgamation of small estates into larger producing units, reduction of overhead costs and greater reliance on supplies from peasant producers for processing by estate factories.

"The production outlook in India, Ceylon and Pakistan will depend, therefore, almost entirely on economic factors—specifically on the relationship between production costs and prices. Production can be expanded greatly, both in the short run (through coarser plucking) and in the long run, through fertilisation, replanting with higher yielding varieties and through various cultivation practices. On the other hand, if prices decline to uneconomic levels, output can be adjusted downward more easily than for many other agricultural commodities."

Non-Far Eastern Countries

The F.A.O. does not anticipate any substantial increase in exportable supplies from Indonesia during the next few years. For numerous internal problems will have to be solved before production can be increased. Prospects in Indo-China are no more favourable. Production in China is increasing, but any increase in exportable supplies is likely to be channelled largely to the U.S.S.R. and Eastern Europe. The output in Japan, Taiwan and Malaya is likely to increase slowly. The prospects of production in other countries are more promising. The total production is likely to remain below 35,000 metric tons in the near future, but, in the more distant future, a somewhat greater increase is in prospect. This is more especially visible in African countries. Expansion in production is also expected in Latin America, Iran and the U.S.S.R. The Iranian Government has formulated plans to make the country self-sufficient in tea and the services of production experts have been made available under the U.N. Technical Assistance Programme. Thus, there is a growing tendency to increase production of tea in countries other than the Far Eastern ones and where labour and production costs are lower than in the Far Eastern countries. These trends in production coupled with the development of production in new areas cannot, therefore, be disregarded by the old producers, especially in view of the fact that demand for tea in the principal importing countries is not showing any significant improvement. These countries, especially India, will, therefore, do well to concentrate on measures for expanding their domestic market as an outlet for their increased production. With the efforts that are now being made to raise the living standards of people in these lands, the prospects of success in this direction are promising.

TWIN PROBLEMS OF JUTE INDUSTRY

STIMULATION OF EXPORTS—MODERNISATION OF MACHINERY

IN the course of a stimulating article contributed to the Jute Supplement published by the *Statesman*, the Chairman of the Indian Jute Mills Association, Mr. G. J. Gardner, has focussed public attention on the problems facing the jute industry and the measures that are being taken by the industry to tackle them. Although these problems are familiar, the refreshing manner in which they have been presented by him compels the attention of those who are interested in the jute industry to think again.

In order to emphasise the importance of the jute industry to the country, Mr. Gardner mentions in the article above, the role of jute manufactures in India's export trade. Of the all-India exports for 1952-53, jute goods represented 23 per cent., their value being Rs. 129 crores out of a total of Rs. 551 crores. In 1952-53, jute manufactures represented 33 per cent. of India's exports to the U.S. worth Rs. 37 crores out of a total of Rs. 111 crores. The jute mills in West Bengal employ approximately half of the total industrial workers in that State and their wage bill in 1952 was over Rs. 24 crores.

After stressing the importance of the jute industry thus, Mr. Gardner then proceeds to describe the change which has taken place in the supply position of raw jute. He states that, as a result of the recent agreement with Pakistan, arrangements for the supply of raw jute to the mills are now very much more secure. Although the position may not be entirely satisfactory from the point of view of the quality of jute available to the mills, the industry has now a breathing space to devote more attention to other problems. The more important of these, according to Mr. Gardner, are: (1) the urgent necessity for stimulating a greater offtake of Indian jute goods and (2) the modernisation of machinery of the various mills. To quote Mr. Gardner: "The solution of the second problem theoretically forms parts of the first, but, in view of the time factor, an expansion of the trade must obviously be sought by more immediate means. The rehabilitation of the industry will certainly give improved efficiency and lower costs but such rehabilitation cannot be completely effected in much less than 15 years."

Mr. Gardner admits that the series of reductions in the export duties should be helpful for stimulating greater offtake. But he does not appear to be quite sure whether the new levels of duty, particularly on hessians reduced recently, will solve the problem of reduced offtake. He, however, welcomes the move as a step in the right direction.

Commenting on the problem of modernisation of mills machinery, the Chairman of the I.J.M.A. appears to be very anxious to remove, what he terms as "the entirely erroneous impression" that, by modernisation, the industry means the complete replacement of what is virtually obsolete and worn out machinery. "Nothing could be farther from the truth," he says. "Despite the heavy demands made upon it during the war years, and the difficulties than experienced in its maintenance, the machinery of the industry is in general well looked after, efficient and capable of good production at an economic cost." Pursuing this point further, he avers that modern machinery is expensive and its installation is wise and prudent only when it is justified on economic grounds. Bearing this in mind, considerable progress, he claims, has already been made in the re-equipment of the Indian mills, although much remains to be done. But we are told that the industry's programme cannot be completed overnight and nothing spectacular should be expected for two reasons. One is that machinery makers are limited in what they can supply, and the other is that the mills are equally limited as to the funds available for modernisation. Nevertheless, he seems to have no doubt as to the ability of the mills to solve this latter problem, provided the Government rendered some assistance.

Modernisation of jute mills on the scale envisaged cannot be without some repercussions from the labour point of view. Commenting on this aspect of the problem, Mr. Gardner observes: "That the programme of replacement will be slow and gradual has already been noted and, in the rationalisation which must inevitably attend the installation of modern machines, 'natural wastage' will, for this reason, play an important and 'painless' part. Some actual displacement of labour will, however, clearly have to be made and that is a development which must be recognised and faced by all concerned. The whole object of modernisation is to rationalise the process of manufacture, reduce operating costs and bring about the maximum possible efficiency. Only by doing this can the industry hope to maintain and improve its position in the face of unrelenting competition from substitute packing materials, foreign jute industries and the extension of bulk handling."

Cotton and paper, the increased cultivation of *kenaf* and other substitute raw materials, mills in the Continent of Europe and in Pakistan, small indigenous manufacturing units set up to avoid the necessity for importing bags, and new bulk-handling plants in Australia have all taken advantage of the difficulties of Indian mills. As these are formidable rivals, Mr. Gardner warns against the folly of underestimating them. He thinks that the next decade will be a severe testing time for the industry—a time when short-sightedness, exaggerated caution and complacency must find no place in the counsels of those who desire its well-being.

As regards the outlook for the industry, Mr. Gardner seems to have no doubt about its capacity for expansion, in spite of the development of competition referred to above. "We still have many advantages as compared to our rivals and I am convinced," he remarks, "that, given the full co-operation of all the interests concerned—and I stress the word all—the Indian industry can, and will, maintain and expand its position against all opposition. With the help of research, propaganda and public relations activities which the industry is now developing, he feels that it will be possible to leave no potential source of demand untapped.

DROP IN JUTE GOODS DESPATCHES

Figures relating to monthly shipments of gunnies reveal a marked fall in August, 1953, the latest month for which these are available. The shipments, which were 66,000 tons in July, dropped to 52,400 tons in August this year. The drop has been shared by both hessians and sackings. The former have declined from 38,700 tons to 31,900 tons and the latter more sharply from 29,300 tons to 20,500 tons.

During August, 1953, total despatches of gunnies of all types, for both export and internal consumption, were lower than those in the preceding two months. During August, jute goods despatched by mills aggregated 71,800 tons, as compared with 76,700 tons in July and 77,100 tons in June, 1953. The fall is accounted for by both exports and internal consumption. Exports during the month (hessians, sackings and rope, twine, etc.) amounted to only 63,000 tons, as compared with 67,000 tons in July, 1953. The offtake for internal consumption, which stood at 9,700 tons in July, receded by 1,000 tons to 8,700 tons in the following month.

An encouraging feature of the statistics for the month under review was the increase in the consumption of burlap in the U.S. The consumption, estimated at 75 million yards in August, showed a marked rise of 19 million yards over that of the previous month, namely, July, 1953, though it was still some 9 million yards lower than that in the same month of 1952. Simultaneously with the high consumption, there was also a rise in August-end stocks of burlap, both spot and afloat, held in the U.S.A. Thus, at an estimated quantity of 204 million yards, stocks were 9 million yards more than those at the end of July, 1953, and 8 million yards higher than the stocks in the same month last year.

The higher stocks in the U.S. as at the close of August, despite the increase in consumption, shows that arrivals of burlap must have been more than the offtake. Mill circles are complaining of lack of foreign orders, particularly from the U.S. But a U.S. firm is reported to have pointed out that large quantities of jute goods are being sent out from Calcutta on a consignment basis by people who are not regular shippers These goods, which reach the U.S. unsold, are, it is stated, purchased spot at a discount. This is stated to be the cause of the poor placing of orders with the mills. While the prevalence of this practice is not denied, it is generally felt that the U.S. is anticipating the possibility of a further cut in export duties in addition to the reduction in export duties on hessians announced last month. The present reduction has doubtless rendered Indian jute goods competitive, but it seems that the U.S. market is not very eager to take advantage of lower priced Indian jute goods. This is indicated by the fact that there has been no appreciable rise in the price of hessians since the reduction in the export duty was given effect to. Thus hessians 40 oz. 10 in., which stood at Rs. 41-14 per 100 yards on the eve of the announcement of the cut in export duty, has moved up, but only slightly, to Rs. 43-8 on the 4th inst. This increase is attributed more to large orders recently placed by Argentina than to the offtake by the U.S. In respect of sacking, the position has turned worse, since the prices have gone down from Rs. 94-4 per 100 bags to Rs. 91-8 on the 4th inst.

However, what is most disquieting at the present moment is the steep fall in the prices of raw jute. Thus, Assam bottoms are currently being quoted at Rs. 22 per maund as compared with Rs. 25-8 in the middle of September last. Quite a few causes seem to be responsible for the present weakness of the raw jute market. At the time when first crop forecasts were made in respect of jute output in Pakistan and India, the belief that reduced production would lead to hardening of prices of the commodity later in the season put the mills on their guard and induced them to purchase in advance and build up stocks of raw jute. Having thus made their purchases already, the mills are not inclined to buy now. Consequently, their purchases are now confined to certain select varieties and that too, in negligible quantities. Meanwhile, with arrivals of the new crop on the increase, prices have tended to go down. Further, there would appear to be a growing feeling that the crop this season will not be as small as was anticipated some weeks ago. The market does not seem to have taken seriously the assurance of the Pakistan Prime Minister in the Parliament of that country that the grower would get better return this year, because of a relatively short crop. He said that the Pakistani jute crop this season would be 5.7 million bales, including carry-over of last year. As against this, the world demand for Pakistani jute was 6.0 million to 6.5 million bales. He, therefore, felt that prices were likely to be at a reasonable level this year. Despite this statement, Pakistani jute is being quoted currently at Rs. 16-8 as against Rs. 18 per maund a few days ago.

BRAZIL'S JUTE SUPPLY POSITION IMPROVES

Brazil expects to raise 25,000 tons of fibre from the current year's jute sowings—19,000 tons from the State of Amazonas and 6,000 tons from Para. Besides, jute, production of *Uacima* and other indigenous fibres is estimated to reach a total of 20,000 tons. Stocks held by the Bank of Brazil at Santos amount to 8,000 tons, taking the total of all available supplies to 53,000 tons against the local requirements of 45,000 tons. Last year, Brazil imported 16,530 tons of raw jute, of which a good part is still on hand. Jute growers have benefited immensely by the extension of the Minimum Price Law to jute and similar fibres.

U.K.'s JUTE CLOTH EXPORTS AND IMPORTS

The U.K. imported from India 75,500,000 sq. yds. of jute cloth, valued at £2,586,000, during the seven months ended with July, 1953. During the same period last year, imports from the same source amounted to 88,000,000 sq. yds. worth £7,162,000.

Exports of jute cloth from the U.K. during the current year's first seven months shrank both in quantity and value to 3,700,000 sq. yds. worth £948,000, from 7,800,000 sq. yds. at a value of £1,750,000 to the end of July last year.

While both exports and intake of jute cloth declined, there was a remarkable rise during January-July, 1953, in the U.K.'s imports of jute yarns estimated to total 1,820 tons, costing £297,000, as compared with 180 tons valued at £53,000 during the same time last year.

MR. KIDWAI VISITS JUTE RESEARCH INSTITUTE

Mr. R. A. Kidwai, Union Minister for Food and Agriculture, visited the Jute Agricultural Research Institute farm at Nilgunge, about 16 miles from Calcutta, on the 2nd inst. Pandit K. N. Agha, Secretary, Indian Central Jute Committee, accompanied him. Mr. Kidwai inspected the new building of the Institute now under construction on the farm. He examined the hand-pushed jute seed drill perfected by the I.C.J.C. and other cheap agricultural implements, the use of which has been proved effective in economising the jute cultivation cost and increasing the per-acre yield. He was of the opinion that manufacture of these implements should be undertaken on a commercial scale as soon as possible in order to bring down their price within the reach of the average jute growers.

While going round the farm, Mr. Kidwai was pleased to see the performance, both in quality and yield, of the improved jute strains evolved by the Institute. The progress made in the Institute's research on soil science, jute pests and diseases, and different substitute fibres interested him.

FINAL FORECAST OF E. BENGAL JUTE

Jute production in East Bengal, including Sylhet and Chittagong hill tracts this year is estimated at 25,02,865 bales according to the final forecast of the jute crop for East Bengal for the 1953-54 season. The area under harvest is shown as 7,60,215 acres proportions of litorious and capsularis being 24.7 and 75.3 No mesta has been allowed to be grown this year.

The forecast says that, as price of jute fell considerably in the year 1952 due to overproduction relatively to world demand, the Government of East Bengal has decided to issue licences for growing jute in the 1953-54 season for only 998,430 acres.

AID TO NEW GUINEA KENAF PLAN

The Government of Australia has reportedly decided to invest £2,60,000 on subsidising the plan to expand the production of kenaf in the Oro Bay district of New Guinea. The Government has also granted a lease of 15,000 acres to a local company known as the Erima Estates for developing this fibre. The official aid is intended to be spent on road-building, bridge-building and the construction of wharves.

EUROPEAN COAL AND STEEL POOL

PROGRESS DURING FIRST YEAR REVIEWED

THE European Coal and Steel Pool has completed the first year of its working. A review of the progress made by it during this period will, therefore, be appropriate and useful. It was on 10th August, 1952, that the High Authority, the executive of the Schuman Community responsible for the fulfilment of the provisions of the Schuman Plan Treaty for establishing a European steel community based on a common market, common objectives and common institution, among others, was brought into existence. Six months later, that is, on 10th February, 1953, a common market for coal, iron ore and scrap came into operation. For a short period, until 15th March, however, the scrap market was governed by an interim decision designed to enable a special mechanism for supervising distribution to be set up. The common market for steel began on 1st May, 1953.

Among the first obstacles to free trade within the community which required removal were customs duties and quantitative restrictions. Removal was complicated by member-countries' obligations under the G.A.T.T. and the O.E.E.C. The necessary exemptions were, however, secured. In future, the community will act as a single contracting party to the G.A.T.T. representing the entire European territory so far as the trading policy with regard to coal and steel is concerned. The removal of internal barriers to trade gave rise to the problem of the barriers to trade with third countries, as a lower fence at one point in the common external frontier might divert trade into abnormal channels. But, even in this regard, the Schuman Community is making steady progress. One of the main objectives of the common market is to ensure that consumers in comparable positions within the community enjoy equal access to the sources of production. The commercial policy of the community is accordingly aimed at reaching this end.

Prices

So far as prices are concerned, the High Authority has, according to a review made by the British Iron and Steel Federation, maintained the existing price structure, fixing average maximum prices for each category of coal in each coalfield with particular maximum prices for each of the grades considered to be in short supply. This decision is valid until 31st March, 1954. The flow of coal to the common market was accompanied by a levy on German and Dutch coal output to subsidise coal production in Belgium and Italy, during the transitional period. There is, however, still some confusion in the application of these pricing arrangements. So far as iron ore is concerned, prices are left to find their own level as no supply difficulties are apparent. A discrepancy between home and export price of French ore, however, was removed, resulting in a slight increase in home ore prices. As regards scrap, maximum zonal prices were fixed as from 15th March and an organisation was set up to keep in touch with the scrap situation in the community and to negotiate purchases from outside and to administer a compensation fund to spread the extra cost of imported scrap over all consumers of scrap. An all-round reduction in prices of scrap took place in June last, but the system remains in force. The community has normally a net import of scrap. Prices for steel are allowed to find their own level, as demand and supply are considered to be in approximate balance.

Monopolistic Practices

The High Authority has already made use of its powers to control monopolistic practices. According to a decision taken by the Authority, all joint-selling, joint-buying and similar organisations in the six countries of the European Pool which had not applied to the Authority for official recognition of their status have been declared illegal from 31st August, 1953. The Schuman Plan Treaty, it may be noted here, allows continuation of only such bodies to be licensed as are not culpable of monopoly and other restrictive practices.

Equal treatment of consumers, making comparable transactions, within the community, required the abolition of special transport rates that were being applied to, as, for example, domestic uses of German coal or French iron ore, or exports of Belgo-Luxembourg steel via Antwerp. It is noteworthy that most of these special rates were removed by mutual agreement between member-States, without the intervention of the High Authority, in time for the opening of the common market. Some 12 per cent. of the total traffic in coal and steel in the community (practically all the traffic crossing international frontiers) was subject to these discriminating rates. A few still remain, and the problem of through rates (which would prevent loss of benefit from tapering rates through interruptions at frontiers) has still to be dealt with. The case of traffic subject to contract rates and not to normally published schedules is also being examined and the High Authority is engaged in larger term study of special rail schedules (some of which may benefit coal and steel firms) and of the possibility of harmonising the sales for all kinds of transport within the common market.

Taxes

The problem of indirect (turnover) taxes is also being tackled. Such taxes form a relatively large proportion of the final selling price of coal and steel and other products in all Schuman countries. Discrimination arises on this account, where levels of taxation differ and no uniform system exists under which tax exemptions are granted and compensatory taxes are imposed on products crossing national boundaries. The High Authority wishes to see the following system adopted: products subject to tax should be exempted, or the tax returned, in the case of exports, while in the case of imports a compensatory tax should be imposed, equivalent to the corresponding turnover tax on similar products in the importing country. This system should ensure that, even though the rate of taxation differs in each country, both imported and domestic products bear the same tax burden. The High Authority has, in consequence, decreed that no seller may include in his selling price the amount of tax for which he may claim exemption, and has, on the other hand, requested Governments to examine means by which the present system of exemptions and compensatory taxes can be improved.

Rate of Levy

As regards the finances needed, after assuring adequate initial funds to cover its expenses (by means of repayable advances by member-countries proportional to their national income), the High Authority proceeded to enforce, as from 1st January, 1953, the levy on coal and steel, which it proposed to collect. The rate of levy at present in operation is 0.9 per cent. of the value of output. This is expected to yield some 47 million "E.P.U. units of account" (one E.P.U. unit=one dollar) in the financial year 1953-54. Administrative expenses are expected to amount to some 10 million units of account in the same period.

It will be seen from the foregoing account that the High Authority has done much valuable work during the first year of its existence and has successfully solved the complicated problems arising from its attempt in bringing about a common market in six countries which differed from one another in some material respects. Its success is due as much to the ingenuity of the High Authority as to the commendable spirit of co-operation shown by the member-countries. In fine, the progress of the Schuman Plan in the first year is encouraging enough to hope that, ultimately, it will be a great success and lead to the unification of the European democracies into a single nation.

LIFCO
Letter-Writing BOOKS

These are both useful text-books for students and books of reference for the general public and for every office, school, college, home, bank and library. All kinds of letters are treated in a charming manner in these unique publications.

1. THE LIFCO'S BIG LETTER-WRITER
● 700 Pages and 2,300 Topics.
● Rs. 5-0; By Post: Rs. 6-3.

2. THE LIFCO'S LITTLE BOOK OF LETTERS

TUNGABHADRA PROJECT

INTER-STATE BOARD SET UP

THE Government of India has appointed, with effect from 1st October, an inter-State Board to take charge of, and deal with, all matters relating to the Tungabhadra Project which are common to both the States of Andhra and Mysore. According to a notification issued on 30th September, 1953, by the President, in pursuance of section 66(4) of the Andhra State Act, the functions of the Board, known as the Tungabhadra Board, include the following:

(a) The completion of the construction of the sanctioned Tungabhadra Project and its operation and maintenance during the period of such construction;

(b) the regulation of supplies of water and power in accordance with such rules as may be made in this behalf by the Board;

(c) the maintenance of the dam and reservoir of the project;

(d) the maintenance of the main canal and of other works relating to both the States of Andhra and Mysore;

(e) the granting of leases of fisheries in the reservoir and in the main canal;

(f) the proper utilisation of land acquired for the purposes of the project; and

(g) any other function incidental to, or connected with, the functions specified in clauses (a) to (f).

All matters in which there is any difference of opinion among the members of the Board are to be referred to the Chairman, whose decision thereon shall be final. But, if there were to be any difference of opinion regarding any question of policy or the rights of the States concerned, the matter is to be referred by the Chairman to the Central Government. The decision of the Central Government, in such a case, shall be final. The notification clearly states that the Board shall not deal with any matter in respect of works relating to only one of the States or in which only one State is interested.

Funds

The Governments of Andhra and Mysore are to provide the necessary funds for the construction and maintenance of the Tungabhadra Project. The share of expenditure of each State is to be determined by an agreement between the two State Governments. In the absence of any such agreement, the liability shall be in such proportion as may be fixed in this behalf by the Central Government.

The Board has, in relation to technical sanction, administrative approval and other sanctions required for the construction and maintenance of the project, all the powers which the Chief Engineers of Madras have, in relation to any project in the State of Madras under the Public Works Code and the Electricity Department Code, but the powers exercisable under either of the said Codes by the Government of Madras should be exercised by the Central Government.

The need for the creation of the Board arose as a result of the complications caused by the creation of the Andhra State and the transfer of the Bellary District to the Mysore State. One part of the project is situated in Hospet (north taluk) and the other part in the State of Hyderabad. That part of the project in Hospet (north taluk) has come, with the creation of the Andhra State, under the jurisdiction of the Mysore State. The project not only serves the areas which have gone to the Mysore State but also a part of the Andhra State. Each State, however, is a legal entity and, therefore, there cannot be any extra-territorial jurisdiction. Accordingly, the ownership of properties concerned rests with the respective Governments according to the Transfer of Properties Act. The Andhra State Act itself has defined the boundaries and the land so defined, including everything appertaining to it, in the States in which it is situated.

The Tungabhadra Project was being implemented up to 1st October by the Governments of Madras and Hyderabad. Madras was financing it from its own resources, while Hyderabad was financing its share of the project with the assistance of the Central Government. Under the Andhra State Act, the rights and liabilities of the Madras State in respect of this project have devolved on the Mysore and Andhra States.

Section 66(4) of the Andhra State Act provides the President with power to issue directions, from time to time, as may appear to him to be necessary, particularly in regard to the completion of the project, its operation and maintenance. No such direction shall, however, be issued or have effect after an agreement has been entered into by the States of Andhra and Mysore under sub-section 1 of section 66, or after an order has been made by the President under that sub-section, whichever is earlier. Sub-section 1 reads as follows:

"Notwithstanding anything contained in this Act but subject to the provisions of paragraph 12 of the Seventh Schedule, all rights and liabilities of the State of Madras in relation to the Tungabhadra Project or the administration thereof shall, on the appointed day, be the rights and liabilities of the States of Andhra and Mysore subject to such adjustments as may be made by agreement entered into by the said States after consultation with the President or, if no such agreement is entered into within two years from the appointed day, as the President may by order determine having due regard to the purposes of the project, and any such order may provide for the management of the project jointly by the said States or otherwise:

Provided that the order so made by the President may be varied by any subsequent agreement entered into by the States of Andhra and Mysore."

Paragraph 12 of the Seventh Schedule relates to public debt of the State of Madras liable to be shared by Andhra and Mysore along with Madras itself and the like.

The expression Tungabhadra Project means, according to sub-section 5 of section 66 "the project agreed to between the Government of Madras and the Government of Hyderabad before the appointed day and, so far as the State of Madras is concerned, intended for the supply and distribution of water from the Tungabhadra River by means of high level and low level canals to the districts of Bellary, Anantapur, Cuddapah and Kurnool and for the generation of electric energy, both hydro-electric and thermal, and its transmission and distribution to the said districts and includes any extension or further development after that day of that project for the said purposes."

NEW SOVIET LOCOMOTIVE

A new Soviet-made passenger locomotive of the 2-4-2 type has been put into service on the railways in the U.S.S.R. Its design includes a number of technical novelties; in particular, the axles have roller bearings. The efficiency of the new locomotive is approximately 20 per cent. higher than that of former models. It has a technical speed of 125 kilometres per hour. The work of the locomotive crews is rendered easier by mechanical stoking and improved lubrication system. The size of the cab has been increased and there is a special heating system which makes it possible to regulate the temperature of the cab. Several new locomotives are undergoing tests. The trunkline T.E.-3 diesel locomotive manufactured at the Kharkov Transport Machinery Plant is noted for its high exploitation qualities. It is the most powerful diesel locomotive in the U.S.S.R. An experimental model of a new freight eight-axle electric locomotive has been made. Its capacity is 50 per cent. greater and the speed is 10 per cent. higher than that of operating engines.

Mobiloil wins highest honour for brand names!

U.S. Brand Names Foundation award—"in Recognition of Continuous Service".

This year, Mobiloil proudly accepts America's highest honour for any brand name — the Brand Names Foundation Award. This is given only to brand names which, for fifty years or more, have held the confidence of the public.

Motorists the world over know the *greater* protection of Triple-Action Mobiloil. Stop at the sign of the Flying Red Horse today, and fill up with Mobiloil — for over half a century, the greatest name in motor oil!

TRAINING YOUNG MEN FOR INSURANCE WORK—II

COMMENDABLE BEGINNING MADE BY LIFE INSURERS

ALTHOUGH Indian insurers have for long realised that insurance is too complex and intricate a business to be left in the hands of untrained men, little concerted effort has been made to train the men who are in the business. This statement, however, deserves to be qualified by a reference to some notable efforts made in the cause of insurance education by individual insurers—the New India Life Assurance Company Ltd., for example—and the Indian Life Assurance Offices Association which conducts examinations in insurance. But individual efforts are no substitute for joint effort and the examinations conducted by the Association deserve much greater popularity than they have attained.

The need for education and training requires no special emphasis. Indian insurers will do well to note what is being done in an allied field, in the field of banking, where the men concerned have not only evolved a course of studies leading to the Associateship of the Institute of Bankers but also a system of training for bank staff. The need for training in insurance is much greater than in banking. For one thing, insurance business is a long-term contract between the insurer and the insured. A banker helps a business only when the latter has a reasonable chance of success. An insurer is a friend in need, for his services become important and useful precisely at the time when his services are most needed—at a critical period in the life of a family or a firm. An insurer's work involves far more sympathy, understanding and goodwill, and knowledge of trade practices and human psychology. That so important a service should be regarded as capable of being performed without specialised training and equipment is to underrate not only the intricacy of the job but also to develop an attitude towards insurance which must ultimately lead to the undermining of the very basis of this business. Indeed, with the advance of technology, insurance is becoming more and more complex, although, in another direction, namely, in the ways of reducing the risks of damage to life and property, science and technology are of increasing importance and value.

Facilities for Training

For such an intricate business as insurance, what are the facilities for training and education in this country? On the technical side of insurance, there are the examinations of the Institute of Actuaries, London, which are becoming more and more popular in India. They are the best, even as they are the most difficult, of their kind, so that no purpose will be served by duplicating these examinations in this country. After all, it will be best if India's connections with that Institute, the most renowned of actuarial bodies in the world, are maintained unimpaired. Also, this will mean that India will continue to benefit from its connection with England, the country which is an acknowledged leader in the insurance field.

In ranks lower than those of an actuary, there are jobs which call for a great deal of initiative, technical training and expert knowledge. The question is whether all that needs to be done is being done in this field. There are two divisions in the field: life assurance and general insurance, including fire, marine and miscellaneous departments. The Indian Life Assurance Offices Association has made a very commendable beginning in the field of insurance education. It has been conducting, since 1945, the examinations which lead to the diploma in life assurance (Dip. L.A.). The examination is conducted in three parts, though a candidate will be declared successful in the latter part or parts only if he passes the earlier ones. The examination consists of the following courses of study:

Part I: Field Workers' Certificate. This part consists of two papers: Paper I—Principles and Practice of Life Assurance; Paper 2—Salesmanship.

Part II: Certificate in Life Assurance. Paper 3—Elementary Human Physiology and Principles of Life Selection; Paper 4—Law relating to Life Assurance; Paper 5—Advertising, Office Organisation and Correspondence; Paper 6—Elements of Actuarial Science.

Part III: Diploma in Life Assurance. Paper 7—Life Office Accounts and Income-tax; Paper 8—Office Premium and Valuation; Paper 9—Investment of Life Assurance Fund; Paper 10—Higher Secretarial Practice.

The scheme of the examinations which are in charge of a Board of Education of the Association, shows that a candidate who passes these examinations will have a very wide and comprehensive knowledge of the subject of life assurance. The fees for the examinations are also moderate, being only Rs. 15 for Part I and Rs. 20 for each of the other two parts. The Association also conducts correspondence courses for the benefit of students who would like to appear for the examinations. And yet, the examinations are not as popular as they should be. Last year—after nearly eight years since the system of examinations commenced—only 12 candidates appeared for the final part. There are now only about 20 diploma-holders in life assurance.

Number of Candidates

The following figures give the number of candidates who appeared and passed in different parts of the examination from 1945 to 1952:

	Part I		Part II		Part III	
	Appeared	*Passed*	*Appeared*	*Passed*	*Appeared*	*Passed*
1945 ..	133	45	12	2	..	..
1946 ..	90	20	20	6	3	..
1947 ..	76	18	13	4	8	2
1948 ..	70	19	22	5	8	3
1949 ..	97	27	15	2	7	2
1950 ..	93	26	18	5	6	3
1951 ..	81	16	25	8	9	3
1952 ..	85	20	13	6	12	7
Total..	..	191	..	38	..	20

It is the duty of all Indian insurers to encourage the members of their staff to take these examinations. Some insurers do, of course, give special increments to the staff who pass these or similar examinations. But this practice is not universally followed. It is to be hoped that every effort will be made by the insurers to provide the necessary incentive for their staff to take the examinations, and also to give the members the necessary facilities, such as study leave and access to their library so that the staff may be encouraged to take the courses of study.

NATIONAL FIRE AND GENERAL INSURANCE CO., LTD.

Established 21 years ago, the National Fire and General Insurance Company, Ltd. (Manager: Mr. S. D. Srinivasan, Calcutta), has gradually built up for for itself an important position among Indian general insurers, with an expanding volume of overseas business. Although the latest report and accounts of the Company—that for the year ended 31st December, 1952—shows that the impressive increase in business witnessed during the year 1951 has not been maintained, the general level of activity was considerably above what it was in 1950. Thus, the net premium income from all the three departments—fire, marine and miscellaneous—was Rs. 38.27 lakhs during the year under review, as against Rs. 41.50 lakhs in 1951 and Rs. 30.08 lakhs in 1950. This setback, it must be noted, is not peculiar to the National Fire and General, for it is a feature that is common to general insurers in India as well as in overseas countries, thanks to the general decline in prices which characterised the trend of world markets in 1952.

The overall decline in the premium income was shared by the fire and marine departments. The premium income in the fire department declined by Rs. 2.53 lakhs to Rs. 19.73 lakhs. In the marine department, the decline was only Rs. 0.75 lakh to Rs. 6.62 lakhs. The premium income in the miscellaneous department was, however, somewhat better at Rs. 11.92 lakhs. The following table brings out the salient features of the working of the fire, marine and miscellaneous departments during the three years ended 31st December, 1952:

(Rs. in lakhs)

	For the year ended 31st December		
	1952	1951	1950
Fire Department			
Net premium	19.73	22.26	12.76
Claims	7.46	8.43	3.26
Reserve for unexpired liability ..	7.89	8.90	5.74
Marine Department			
Net premium	6.62	7.37	7.67
Claims	2.77	2.91	2.05
Reserve for unexpired liability ..	5.29	5.90	4.22
Miscellaneous Department			
Net premium	11.92	11.87	9.65
Claims	7.13	6.66	4.17
Reserve for unexpired liability ..	4.77	4.75	4.34

A notable feature of the Company's business is the increasing importance of its foreign portfolio. Ten years ago, the Company was deriving a premium income of less than Rs. 2 lakhs from business effected outside India. In 1952, the Company's foreign business fetched as much as Rs. 21.26 lakhs. Besides branches in principal towns in India, the Company either has branches or is otherwise represented in Pakistan (both East and West Pakistan), Ceylon, Burma, the U.K., West Germany, Belgium, France, East Africa and Egypt.

Both the fire and marine departments worked at a profit. But the working of the miscellaneous insurance department resulted, as in the case of several general insurers, in a loss, thanks to the increase in cost of claims. The fire and marine insurance yielded a profit of Rs. 4.11 lakhs and Rs. 1.10 lakhs respectively, making a total profit of Rs. 5.22 lakhs. Other income, consisting mainly of interest and dividends, aggregated Rs. 0.41 lakh. Thus, the profit and loss account showed a credit of Rs. 5.63 lakhs. After providing for depreciation on certain items of block account at Rs. 0.11 lakh, for depreciation on investments at Rs. 4.40 lakhs and for the loss of Rs. 1.10 lakhs in the working of the miscellaneous department, there was a profit of Rs. 2,766 which together with Rs. 12,833 brought in from the previous year made in all Rs. 15,599. Out of this sum, the Directors have transferred Rs. 14,115 for taxation, leaving Rs. 1,485 to be carried forward to current year's accounts. The Company has a sound reserve position. As against a capital of Rs. 25 lakhs, its reserves amount to Rs. 18.70 lakhs, inclusive of fire fund of Rs. 7.89 lakhs, marine fund of Rs. 5.29 lakhs and miscellaneous fund of Rs. 4.77 lakhs

NATIONAL INSURANCE CO., LTD.

The National Insurance Company, Ltd. (Manager: Mr. S. D. Srinivasan, Calcutta), is growing stronger every year. The Company transacts both life and general business, though the mainstay of the Company is its life department. In 1950, the National's new life business exceeded the Rs. 8-crore mark by a wide margin. Since then, it has scaled new heights. During the year 1952, to which the latest report and accounts refer, the Company's new business aggregated Rs. 10.07 crores. This figure takes the business in force to an impressive total of Rs. 50.44 crores. A similar trend is disclosed in the general department, too, where the total premium income moved up from Rs. 11.43 lakhs in 1951 to Rs. 14.82 lakhs in the year under review. The profit of the general department has, however, declined from Rs. 4.09 lakhs to Rs. 0.18 lakh. But the handsome amount of Rs. 2.87 lakhs, brought in from the previous year, has enabled the Directors to recommend a dividend of 9 per cent. as against 7 per cent. in the previous year.

The following table shows the progress of the Company during the three years ended 31st December, 1952:

(Rs. in lakhs)

	For the year ended 31st December		
	1952	1951	1950
Life Department			
New business	10.06.97	962.91	8.80
Business in force	50.44.24	46.47.04	41.06.50
Premium income	228.47	209.14	206.85
Claims by death	20.57	18.86	16.41
Claims by maturity	40.29	37.17	33.23
Overall expense ratio .. %	80.23	80.96	33.63
Renewal expense ratio .. %	16.96	16.48	19.80
Fire Department			
Net premium income	4.60	3.54	1.70
Claims	0.86	0.73	0.74
Reserve for unexpired liability ..	1.84	1.42	0.68
Marine Department			
Net premium	5.98	4.95	2.80
Claims	1.38	1.13	0.43
Reserve for unexpired liability ..	3.29	2.72	1.27
Miscellaneous Department			
Net premium	4.24	2.95	1.47
Claims	1.82	1.02	0.23
Reserve for unexpired liability ..	6.83	1.18	0.59

Two features of the above table deserve notice. In the first place, claims by maturity continue to exceed by a wide margin, the claims by death. This suggests that the Company exercises due care in the selection of lives. Secondly, both the overall expense ratio and the renewal expense ratio have shown a fall in recent years; the former has declined from 30.96 per cent. in 1951 to 30.23 per cent. during the year under review and the latter from 16.48 per cent. to 15.96 per cent. Both these ratios, it may be noted here, were substantially higher at 33.63 per cent. and 19.80 per cent. in 1950.

The total profit from the general department was, as already stated, only Rs. 0.18 lakh as against Rs. 4.09 lakhs in 1951. This, together with a sum of Rs. 2.87 lakhs brought in from the 1951 accounts, makes in all Rs. 3.06 lakhs. The payment of the 9 per cent. dividend absorbs Rs. 1.33 lakhs, leaving Rs. 1.71 lakhs to be carried forward to current year's accounts.

The Company's financial position is very sound, as will be evident from the fact that, as against a capital of Rs. 15 lakhs, its reserve and other funds aggregate over Rs. 11.44 crores, inclusive of a life assurance fund of Rs. 10.61 crores, fire fund of Rs. 1.84 lakhs, marine fund Rs. 3.29 lakhs, and miscellaneous fund of Rs. 1.69 lakhs.

REBATING IN INSURANCE

Although the Indian Insurance Act prohibits rebating in any form, it is well known that this evil persists in the insurance field in this country. Many attempts have been made to eradicate the evil. Apparently, they have achieved no marked success. In this connection, Mr. N. H. Lalwani of a firm of insurance underwriters has, in the course of a communication addressed to us, suggested what he considers to be a remedy for this evil. He points out that, since rebating is not shown in the books of accounts, it represents a loss to the shareholders of the insured companies which encourage this practice, and also a loss to the exchequer. He estimates the loss of revenue to the Government through rebating at several "lakhs of rupees." He adds:

"I, therefore, suggest that the Government should insist upon the Tariff Associations to amend their rules whereby public limited companies paying a premium of, say, Rs. 50,000 or over, should be allowed a discount which is equal to the principal agency commission of 20 per cent. on fire and accident and 15 per cent. on marine and a note should appear in the revenue accounts of such companies showing that this discount has been deducted from the premiums. This will not amount to a rebate and, therefore, the anti-rebating law will not be affected. No commission should be paid when such a discount is allowed and the business should be treated as direct."

GENERAL AGREEMENT ON TRADE AND TARIFFS

ITS ACHIEVEMENTS AND FAILURES

(By THE RIGHT HON'BLE C. D. HOWE)

[The General Agreement on Trade and Tariffs, popularly known as the G.A.T.T., has been the target of some justified, as well as of much unjustified, criticism in recent years. In his address at the current session of Contracting Parties to the General Agreement on Tariffs and Trade, Geneva, the Right Hon'ble C. D. Howe, Canadian Minister of Trade and Commerce, subjected the Agreement to a critical study, assessing its achievements against its failures. The following are excerpts from his address.—Ed.]

IT is common in my country, as it probably is in some of yours, to blame trade difficulties on the General Agreement. This is, perhaps, natural, because those who feel that their interests are adversely affected by the General Agreement are inclined to be more vocal than those who benefit. When trade developments are adverse, those affected blame the General Agreement; when trade improves those benefiting take the credit for themselves. While we all know that the G.A.T.T. is an imperfect document, that improvement is possible and we all hope that steps towards improvement will not be too long delayed, I am convinced that, without the General Agreement, the dislocations resulting from the Second World War would have been much more persistent. I believe that all those associated with bringing the General Agreement into being must feel a sense of satisfaction in the accomplishments to date.

I count myself amongst the supporters of the General Agreement on Tariffs and Trade. It is not a perfect instrument, for there are deficiencies and weaknesses in its provisions. It was drafted in troubled times, at the end of the war, as a temporary measure. Some of its important provisions represent only the common ground which could be reached, at that time, between different points of view. In spite of such a modest beginning, however, this General Agreement has served the participating Governments far better than might have been expected. Whatever its shortcomings, it does provide the best basis thus far attained for the successful and efficient conduct of world trade. Under this Agreement, Governments have consulted one another on matters of trade, tariffs have been reduced, and fair trade practices have been established. While there are different viewpoints as to what we should do next, I do not suppose any responsible person wishes seriously to propose that we abolish or weaken the structure of international trade arrangements, which has thus been built up.

Some of the outstanding successes of an international agreement of this sort must go almost unnoticed, while undue attention is often paid to the failures. Although we cannot count the number of trade problems which have been successfully overcome by the influence of this General Agreement, we can at least recognise that the cases are numerous, and that a great service has been rendered to the cause of world trade.

Failures of G.A.T.T.

I must now go on to express disappointment at some of the failures of the General Agreement, but in doing this I do not want to detract in any way from its accomplishments, to which I have already referred. There are reasons for disappointment. World trade is still being hampered by quantitative restrictions. That these are widespread is, on the face of it, an indictment of this Agreement.

If we enquire into this situation, we find that the facts of international trade in the past six years have turned out to be very different from those that were anticipated by different countries when these commitments were entered into. Hard currency countries are dissatisfied that their tariffs have been reduced, and bound, while they have not enjoyed the corresponding freedom of access to markets in soft currency countries, which they expected when this Agreement was negotiated. At times, the question has been raised whether countries in external financial difficulties were adopting measures of policy appropriate to their circumstances. While the General Agreement contains escape clauses for countries which are in difficulties with their balances of payments, it is doubtful whether adequate consideration has been given to the best means of overcoming such difficulties.

On the other hand, many soft currency countries have encountered problems in excess of anything they anticipated at the end of the war. There have been complaints that, under this Agreement, much of the responsibility for the adjustment of world-wide difficulties is placed upon the shoulders of the weakest countries. It is claimed that the responsibilities of creditor countries should be more clearly defined.

Need for Re-examination

The fact that criticisms are being expressed, from these divergent points of view, make me think it would be in the interests of all concerned to undertake a constructive re-examination of this whole Agreement. The time is clearly approaching for the general review of the General Agreement on Tariffs and Trade, which is envisaged in Article XXIX. The question is, when can this advantageously be undertaken? In addition to taking a fresh look at the basic provisions of the Agreement, we may well wish to provide for further multilateral tariff negotiations, connected with the accession of new Governments. At the same time, an opportunity should be afforded to existing Contracting Parties, to carry on such negotiations amongst themselves as may be required.

When these major tasks are undertaken, constructive thought must, of course, be given to the best methods of rectifying the problems of deficit countries, so that they can participate in trade on the basis of the principles of this Agreement. The basic question will be, what policies are most in the interests of world trade and of the countries which participate in it? In answering this question, it will be necessary to give careful consideration to the responsibilities of creditor countries, as well as of debtors, and to reach understandings on this score.

It must be recognised that these large problems of trade and commercial policy can only be dealt with satisfactorily in circumstances where the Governments concerned, and particularly the Governments of the larger countries, have reached some conclusions on where they are going, not only in trade policy but in the field of international finance and payments as well. During the past year, proposals have been put forward, aimed at the achievement of progressively freer trade, and at the convertibility of currencies. While the urgency is very great, a good deal of time is necessarily involved in the consideration of these proposals, because some of them are broad in scope and complex in their details.

U.K.'s Example

Meanwhile several Governments, and particularly the Government of the United Kingdom, have moved courageously ahead with policies which bring ultimate convertibility much more firmly within the range of possibility. During a period of great difficulty for sterling, the United Kingdom Government instituted a policy of placing imports of primary foodstuffs and basic raw materials on a system of open general licence, a system, in other words, of non-discriminatory import control. Since then, great progress has been made in improving the financial position of the United Kingdom and the position of sterling as a currency. If I may be permitted to make a comment, as an outsider, I believe at least some part of this notable success is attributable to these policies I have mentioned, which reduce the costs of production and increase the efficiency of industries. Other countries, which have been pursuing restrictive policies, are showing an increasing amount of interest in what the United Kingdom is attempting to do in this way. I think it clear that, if world trade can be conducted on a non-discriminatory basis for a sufficient number of important commodities, it should be quite possible to take the other steps necessary for the eventual restoration of the convertibility of currencies.

Turning to the United States, an important Commission has recently been appointed in that country to study all aspects of foreign economic policy. It is obvious that proposals such as those emerging from the Commonwealth Conference are now in abeyance, pending the further formulation of policy by the Government of the United States. The conclusions of the United States Government on these questions are of crucial importance for other countries. I feel sure that the ultimate purposes of the United States are constructive in this broad field and I have no doubt that people in the United States are as aware as any in the world of their international responsibilities.

In various Governments, studies are being made, conclusions are being formulated and informal consultations are undoubtedly taking place. This takes time but such work is a necessary part of the process. The Contracting Parties to the General Agreement on Tariffs and Trade will not, therefore, for some months to come, be in the best possible position to conduct the negotiations to which I referred. We have not yet reached that stage. When we do reach it, however, it will be important not to lose time.

In the meantime, my Government believes that the most important question to be faced at the present session is, what to do about the tariff schedules when the period of their assured life expires at the end of this year? In the existing situation, it seems to me that the schedules should be re-bound for a definite period. This period should be as short as possible and still provide enough time for the necessary arrangements to be made. We might consider a period of a year, to extend until the end of 1954.

In the present circumstances, it seems unwise to permit Article XXVIII to be used on a widespread basis, because there is no telling how far the withdrawals might go. As long as it is known that negotiations are being arranged for the latter part of 1954, it should not be too difficult for the Governments concerned to rebind the existing schedules until then. If any such re-binding is to be effective and acceptable, however, there must be no major withdrawals or impairments of the Agreement in the meantime, by any of those concerned. In the broad interests of our export trade in Canada, I believe we can do this, provided other countries will do the same.

Bilateral Trade

Two years ago, bilateralism was probably more of a threat to the ideas of the General Agreement than it is to-day. In the meantime, more people have learned through experience that restrictive trade policies create problems rather than solve them, and that they lead to high costs and inefficiency. There is a tendency, among some of the financially weaker countries, to wonder whether they have been well served by their own restrictions. Two years ago, the threat of economic regionalism was probably more in people's minds than it is to-day. In various parts of the world, ideas have arisen from time to time about escaping from world-wide problems by organising a restrictive trading system among a few countries and erecting barriers against outsiders. Small groups of countries cannot really live in self-sufficiency or in splendid solitude in to-day's world, however, and most of the advocates of regional blocs have had to come up against the inescapable facts of the world situation.

There is an opportunity at present to consolidate our past accomplishments and to prepare ourselves to meet the future. It is possible that new opportunities may arise, next year, for the Contracting Parties to take new initiatives in the development of multilateral world trade. The task of reconstruction of the international trading world is a very large one and it cannot all be done at once. It can only be done through sustained efforts of international co-operation and much has already been achieved. I hope that we shall be in a position to take full advantage of further opportunities when they do arise.

PROBLEMS FACING G.A.T.T.

Writing soon after the commencement of the G.A.T.T. meeting at Geneva last month, Mr Oscar Hobson, City Editor, *News Chronicle*, London, tried to assess the problems facing the meeting. He described the G.A.T.T. as part of the "dreams of a better, saner world" which the leading statesmen of the U.K. and the U.S. dreamt. He added:

"In some ways the dream was a little naive; it did not fully allow for the immense damage of the war years; assumed too readily that the world could get back without much trouble or delay in a normal pattern of trade and payments."

Forecasting the possible decisions which the member-countries might take on the issues facing the Geneva session, Mr. Hobson observed:

"Those tariff reductions negotiated under G.A.T.T. cease to be valid after the end of this year. They must—and certainly will—be extended for at least another year. Japan has applied for membership, backed by the United States. The British Government is not too keen. The Australians refuse to have the Japanese in—though Australia to-day sells 12 times as much to Japan

(*Continued on page 687*)

PROBLEM OF RAISING EMPLOYMENT OPPORTUNITIES

VIEWS OF FINANCE MINISTER

*[Intervening in the debate on the non-officialresolution in the Council of States two weeks before on the unemployment situation in the country, the Finance Minister, Mr. C. D. Deshmukh, gave a clear exposition of the problem. His analysis merits close study by students of economics and business men, as it bears signs of careful preparation and planning. It is a comprehensive account of the economic malaise afflicting the country. Mr. Deshmukh availed himself of this opportunity of making some weighty pronouncements of policy on such issues as revival of food subsidies, foreign investments, retrenchment of workers, promotion of swadeshi, foreign trade, cottage industries vs. large-scale industries, the place of private enterprise in a mixed economy, etc. Although a summary of what he said has appeared in the daily Press, we are reproducing his speech here for purposes of record, in view of the importance of his remarks.—*ED.]

UNEMPLOYMENT is a basic problem, and in its study one must go to the fundamental features of our economy. But we must recognise that, at the present moment, it has also an emergency aspect. In the first place, it has many aspects and its causes are multiple and complex. It would be wrong, therefore, to assume the potential danger from the operation or the lack of solution of this problem merely in terms of what is seen on the surface or to base conclusions regarding its magnitude merely from the variations in the aspects that come to our notice on the surface.

First, as regards facts, it is common knowledge that, in assessing the magnitude and character of the problem, we are handicapped by lack of adequate data. I do not know whether the members of the House know that the Planning Commission has already instituted certain enquiries and that data are being collected in various directions which I shall briefly give. In the first place, there is going to be a study of the trend of migration from the rural areas to the urban areas. This was recognised as an important cause of the growing unemployment in urban areas.

Secondly, there is going to be a survey of households in Calcutta, because it is suspected that in that part of the country, owing to the operation of various causes, this problem is in its most acute form. Thirdly, there is going to be a sample enquiry into the live registers of the Employment Exchange in Delhi. The reason for that is that one ought to be quite clear as to the implications of the figures recorded in these exchanges and that cannot be done until there is a certain amount of sample enquiry. Fourthly, there is going to be a special study of the employment potential of the irrigation and power programmes in the Plan, because it is claimed that, so far as labour intensity goes, these programmes are calculated to give employment to a very large number of people, and the object of this enquiry is to verify such an assumption. Such data as are available at the moment have been scrutinised and the results of the scrutiny were placed before the House of the People by Mr. Bhagat, Parliamentary Secretary, a few days ago. Now, several speakers here also have made reference to the available data, and I do not think it is necessary for me to go over the whole ground again. But, broadly speaking, and concerning oneself with the aggravation of the problem rather than the fundamental problem, one could say that what we are dealing with for the purposes of relief is mainly an urban phenomenon.

Nature of the Problem

Contrary to the view generally held, we find, from the statistics available, that the problem is acute as much among semi-skilled and skilled labour as among persons seeking clerical posts. The statistics of Employment Exchanges show that, while the numbers of the unemployed registered with the exchanges have been going up steadily over the last 12 months, placings have been going down and there has been a large fall in the number of vacancies notified, especially by the private sector. It does not appear, however, that aggregate employment in organised industries has gone down, though it is conceded that in some industries and in certain units of industries, difficulties have been or are being experienced. It is principally in the trade and ancillary services that employment opportunities appear to have declined. These are significant conclusions, because they indicate the remedies that are likely to be successful. In the rural areas, cottage industries and traditional handicrafts have now been fighting a losing battle, and, of course, as everybody knows, in this country, there is a great deal of chronic unemployment in agriculture.

Few will contend that the economy of India as a whole has been running down or has often been stationary during the last two years. Foodgrain production in 1952-53 was about 5 million tons higher than in the previous year, and probably about 3 million tons higher than in the year preceding that. Industrial production rose from an average of—this is an index number—105.2 in 1950 to 117.2 in 1951, to 128.5 in 1952, rising further to a level of 132.6 for the first quarter of 1953. Therefore, for the economy as a whole, the problem so far as one can see, is not so much one of declining employment opportunities as one of a lack of adequate expansion relatively to the increase in the labour force coming on to the market.

My purpose is to show that the total production has increased, and, therefore, *pari passu* the total employment opportunities must have increased. And the point I am making is that they have not increased sufficiently to absorb all the job-seekers that are coming on to the market. I do not deny that there has been some ebbing of demand in certain lines, and that undoubtedly is an aspect of the problem which we must take note of. But it is no less important to keep before our minds the overall situation.

Now, as also for many years to come, the central problem of our economy would be to see how best employment opportunities could be increased rapidly so as to absorb the large labour supply available. This is common ground. We would also have to add substantially to the volume of production and economic activity. This is all as regards facts.

Diagnosis of the Problem

Now as regards the diagnosis, one thing to be remembered is that this problem, in its long-term aspect or in its more permanent aspect, is not with us here and now to-day. One has short memories. The public has short memories. I am referring to the fact that, since the beginning of the war, there has been a great deal of what was bound to be spurious expansion in employment, and, therefore, we are now reverting to the state of affairs that existed, certainly in a very acute form, just before the war. Secondly, to say that the problem of unemployment is a problem of poverty, it seems to me, is to argue in a circle. The real problem is our inability to utilise our resources to the optimum extent. Resources become employable only subject to the removal of certain limitations, and not all of these limitations can be removed at our discretion or simultaneously. And, that, in essence, is the core of what I call the long-term unemployment problem. Now, if our facts are not complete and their inter-connection is not fully understood, then the diagnosis must necessarily be tentative. Translated into practical terms, this means that it is necessary to be particularly watchful in regard to new trends and to keep on checking and re-checking our working hypothesis.

I shall have to revert later to this question of the criteria in terms of which we must work out our employment policy. So far as we can diagnose the situation at present, the recent accentuation—I now come to the short-term aspect—of urban unemployment would seem to be due to the following factors: one is, as I have already stated before, the disappearance of the inflationary conditions which began in 1939 and assumed a more accentuated form after the end of the war. The disappearance of this started since the beginning of 1952, partly as a result of domestic policy and partly as a result of the operation of various international factors. Connected with this is the adverse movement in the terms of trade in the last two years. In simple terms, it seems that we have to export much more or increasingly in order to obtain the same volume of imports. In other words, that brings us to the next reason, that is, our exports are finding it increasingly difficult to find markets outside. What is the reason? The reason is the high cost structure of certain industries or units which had been built up as a result of the inflationary factors which were in operation during the last 13 years and the need to retrench and rationalise by way of adjustment to this transition from a sellers' to a buyers' market. *I should like to observe here that, if we fail to do so, we do so at our peril.* (Italics ours.—ED.). Then, there are subsidiary reasons like the growing urbanisation which, I think, was encouraged by the rationing systems which were in perfect operation in most of the industrial towns in a large number of areas and the large increase in the number of educated men seeking employment. I think it has been stated that, during the last five years, the number of matriculates and graduates has almost doubled. Then, there are psychological factors which are difficult to measure but which are important nevertheless. There is a general transition from a sellers' to a buyers' market with the general psychology based on the shortfall in prices in 1952 which naturally has reacted with varying degrees of adverseness on private investment for the time being.

Development Expenditure

It is often asked as to why the employment situation should have taken an adverse turn while the Plan is being implemented. The answer to this question is twofold. First, the implementation of the Plan in the first two years has necessarily been at a relatively low rate. The Plan had already started operation when the Planning Commission was called into being and it had proceeded for nearly two years before the final version of the Report was brought in. Over the two years 1951-53, the expenditure in the public sector was only about 30 per cent. of the total, instead of 40 per cent. as envisaged. Secondly, there has been a change in world conditions and here we come to factors over which we had no control and which could not have been foretold. There has been a change in world conditions and as I have said, a general change-over from a sellers' to a buyers' market. Now, it was not entirely unexpected that, in the first two years, the rate of development expenditure under the Plan would be comparatively low. Some of the schemes such as the Community Projects—very important schemes—were introduced in the Plan at a late stage, and in some areas the necessary administrative machinery for implementing the Plan to the full extent has not been built up and is not available. In certain States, for example, in the sphere of social services like education and health, progress has been slow for lack of trained personnel, and it takes some time to train personnel. So, while it is true that, in the first two years of the Plan, the development expenditure has been stepped up progressively and that in the current year it is expected to be something like 78 per cent. higher than in 1950-51, the position on the whole is that the Plan has only just started to gather momentum, and, therefore, the full impact of the Plan on employment has yet to come. In the current year, the development expenditure of the Centre and the States together will be over Rs. 400 crores. Next year it will have to be stepped up by another Rs. 100 crores; that is to say, taking into account the readjusted Plan, to a level of Rs. 500 crores, and some further stepping up will be necessary in the year after. So, it is necessary to keep in mind this phasing of the plan of expenditure while appraising the Plan as a whole and indulging in a mood of defeatism.

Change in Economic Climate

There has been a distinct change in the economic climate in this country as well as abroad since the Plan was prepared. I think that even the most hostile critics of the Plan might be prepared to admit this. The major problem at the time the Plan was formulated was to see how best investment could be stepped up without accentuating the existing inflation. The accent of policy under those conditions was to combat or eliminate the inflationary pressures and, in this, we have fully succeeded. The need now, it is recognised, is to shift the stress to investment and employment. The disinflationary policy adopted in 1951 has on the whole, it has been recognised the world over, I think, had very beneficial effects on the economy of the country. On the one hand, there has been a substantial increase, as I have already stated, in agricultural and industrial production. On the other hand, the money supply has been steady or has fallen slightly over the last 12 months. I think it has fallen by about Rs. 28 to Rs. 30 crores. The economic climate is, on the whole, in much better balance than it was one and a half or two years ago. Altogether, therefore, the stage is set and conditions are more favourable now for a more intensive effort at development. When the Plan was first formulated, the change that has now taken place in the world economic conditions, could not have been foreseen, although the trends might have been known. No one could predict, for instance, that the world wheat situation would alter so radically in such a short time. The changes now taking place in the rearmament programmes of major countries or in their stockpiling programmes are also developments to which adjustments have to be made from time to time as the situation clarifies. Considering the increase in domestic production and the outlook of world supplies, one could say to-day that the stage has arrived when investment in the economy could well be stepped up to a level higher than what was contemplated or has materialised so far.

Remedial Measures

Coming to the various remedies suggested, various questions have been asked. I had better deal with them straightaway. Are we going to give free rations and spend Rs. 50 crores on this? The answer is, "No." Are we going to compulsorily retain the profits of British enterprises here? The answer again is, "No." Are we going to stop retrenchment altogether? I say, "No" subject to what I am going to say. My reason for giving these categorical answers is this, that these remedies will only take away the symptoms and will not solve the problem of unemployment. I sincerely believe that the remedies that they have suggested will only aggravate the problem in the long run. They are like distributing poverty because they are all unproductive and likely to be regarded as political, although I do not regard them as such. I think they are short-sighted. The other remedies suggested were ban on imports, and promotion of *swadeshi* as suggested by business men, as well as by several Hon'ble Members here, then encouragement of cottage and small-scale industries, then land distribution, construction of roads, education, social services, etc. In the other House, somebody suggested the abolition of capitalism as a capital remedy for this disease. Then confiscation of British capital has been suggested. Reduction of prices and revival of food subsidies is a remedy that seems to find favour in certain quarters. Then, there are even suggestions for the scaling down of expenditure in the public sector so as to release resources for the private sector and then there is some reference to austerity measures.

Before I take up the discussion of some of these—and it may not be possible for me to deal with all of these—some of it will be covered indirectly by what I am going to say, I should like to refer to the letter to the State Governments which the Planning Commission has already issued. I have heard another criticism that these are only suggestions and that there is no specific way of implementation that has been indicated. I would submit that this criticism is premature. We expect answers from the States working out in detail some of the programmes that have been suggested and giving an indication of the cost involved. Then, it will be for the Central Government to consider how best such of the schemes as appear to be practicable and likely to be effective could be financed. The Planning Commission has issued follow-up letters in regard to each suggestion, giving some guidance and directive in the matter. Then, reference has already been made, I think either by me or by my colleague, to certain plans for establishing an Industrial Development Corporation. Then, there is this question of State Finance Corporations and an examination of any difficulties that might be coming in the way of their establishment. A scheme for the spread of education has already been sent, worked out in detail, together with an indication of the division of financial liability to all the States.

Mixed Economy

I had better deal with the fundamental issue, that is, this question of abolition of capitalism as a remedy for the relief of unemployment. In other words, the feasibility of what has been called the mixed economy approach which has been adopted by the Planning Commission, and on its recommendation, by the Government, has been questioned. The argument is that unemployment arises, because the private sector is not playing its part and will not do so. The remedy, it is suggested, is to abolish capitalism. I would like to state, in this connection, that the concept of mixed economy, in which the public and private sectors would operate side by side, has been accepted by the Government after full consideration of the pros and cons and yesterday I had occasion to remark in some other connection that this really involves a judgment as regards human capacity and human ability to subject the community to various kinds of control and discipline. Now, whatever may be the merits of capitalism and socialism and that is what it amounts to here, a wholesale alteration in the economic system cannot be made, overnight. That I think must be conceded by the most ardent advocates of socialism. *It is also—and that is the Government's view—not desirable to have a completely monolithic structure, so to speak, in which all the crucial decisions will have to be made by the State, because, in the ultimate analysis, the decisions of the State will mean decisions taken by a hierarchy of officials. In my experience of Government, I find it impossible for the very thin layer at the top level to keep control over the thousand and one matters that came up for decision. The capacity of the official machinery to stall, not necessarily viciously but on account of inexperience, on account of their special attitude to things, is immense.* (Italics ours—ED.)

On the other hand—and I hope the advocates of socialism will agree with me—if abolition of capitalism means a judicious expansion of the public sector, a recognition of the vital role of the State in promoting development, a narrowing of economic inequities, a social direction of investment and a cutting down of class barriers, then certainly these are the underlying objectives of the Plan, as they must be the underlying objectives of the advocates of socialism or any other—I was going to say—"leftism." Now there is nothing very much in a name and, indeed, one would hope that, in the not distant future, we should have changed the economic structure substantially in the light of the social objectives we have in view, but it should be realised that, in dealing with short-range plans, it is dangerous to change horses in mid-stream or, if I might alter the metaphor, to change the direction of the ship in the middle of the course, once having decided upon the goal after due consideration. It would be possible for me to elaborate this but I pass on.

Investment in Public Sector

Another issue is whether the scale of investment visualised for the public sector comes in the way of private investment. I refer to this, because this suggestion has come from a very experienced and important a quarter. The view is that expenditure in the public sector should be scaled down in order to release resources for investment in the private sector. Whatever the general case for stepping up of private investment may be—and we certainly admit that there is a very good case—it is difficult to see, in the context of unemployment, how a given amount of investment in the private sector could create more employment than the same amount of investment in the public sector. During the last year, there was, as I have said earlier, a certain amount of deflation of money incomes, partly as a result of domestic policy and partly in consequence of developments abroad. Looking back one may argue that, to some degree, disinflation was, in fact, carried too far. Now, in these matters, it is rarely possible to predict and we have to readjust our sights from time to time in view of the changing trends that make themselves felt or become measurable.

I should like to stress, however, that investment in the public sector, at this stage and for many years to come, is of the highest importance for the development of the country's economy. This investment is certain over a period of years to assist the development in the private sector and that is the important point. It is just the kind of investment which will, in course of time, expand employment opportunities in the entire economy, because, in short, it is directed towards the creation of additional social capital. At the same time, Government have been directly assisting the private sector in a variety of ways—loan assistance, retention price policy, channelling of external aid, etc.

We readily admit that, perhaps, there is need for doing more in this respect; but that is a matter for detailed examination, however, it appears to me that the malady is not that there is over-investment in the public sector, but that investment in the economy as a whole is not high enough to sustain the increasing economic activity and employment. That appears to me to be the crux of the matter. Judicious support to industries in the private sector rather than an overall change in priorities defined in the Plan or in fiscal or monetary policy would, it seems to me, meet the requirements of the case. Of the other remedies suggsted, as I have already stated, doles must be rejected as economically as well as socially undesirable. Indeed, they might even aggravate the malady. At present, our old social institutions like the family and the caste provide a measure of social insurance against unemployment—it is an insurance of a kind—and the incidence of the cost is widely spread. These institutions are, we recognise, becoming less and less capable to afford the necessary protection and the State will have to take over increasing responsibility in this direction as the economy expands and develops. But obviously, this is a big task which can be undertaken only as the economy generates larger surpluses through increased productivity of the resources that it employs.

Foreign Capital

Then there is this suggestion that British capital should be confiscated; and there are elegant variations of it, that the profit should be compulsorily ploughed back or that the management should be transferred to Indian nationals and so on. But I am unable to understand the implication of the last point in the present context. I am not now arguing the case for or against, in respect of this limited point; but I cannot see how change of management is going to create increased employment opportunities. *Now, reverting to the main issue, to me it appears to be extremely unwise to even put out ideas of the confiscation of foreign capital, because I feel that what we need here is not so much management as capital. That is to say, everyone has recognised that all the resources that we can muster, are going to be inadequate for the development that we are planning. And certainly confiscation of the existing sources or concerns is not a very admirable way of inviting additional capital resources from outside.* (Italics ours.—ED.). It is common ground that foreign capital must work within any codes that may be agreed upon and I am quite certain that that matter is in very capable hands.

Cost Structure

I come now to the fundamental issue of how to readjust the Plan and what are the criteria for a better employment policy. I should say that the three criteria, the main criteria in terms of which one should frame an employment policy are: (i) prices, (ii) measurement of the state of employment itself, and (iii) the state of foreign exchange resources.

As regards prices, in the short run, it is difficult in an underdeveloped economy, to increase the supply of consumer goods which the newly employed would want. This is an economic platitude and this is what limits the rate of advance in the direction of full employment. If the increasing incomes which result from larger employment are not matched by a corresponding increase in the supply of essential goods, then the result will be inflation with all the distortions and hardships that are familiar to everybody. Therefore, in trying to provide more employment, it is necessary to keep in mind the necessity of avoiding sharp price rises.

During the last eight or nine months, the index of wholesale prices has risen by 8 to 9 per cent. Ordinarily, this should indicate a high level of effective demand in the economy and an increase rather than a decrease in the level of employment in that economy. But, on analysis, one finds that there are certain limitations of the existing series of index numbers and I think it may not be altogether safe to infer the course of action to be taken in the matter of employment merely from a reading of these series of indices over a short or over a long period of time. A considerable part of the rise in cost has been due, undoubtedly as it appears now, to seasonal factors in particular commodities. For instance, there is tea. The revival of external demand has raised prices and this, incidentally, is not an unwelcome feature, because it adds to our export receipts.

In the last few weeks, there has been, I think, a small downward trend in prices and considering the overall demand and supply situation, we might expect that, in the coming months, the prices will reach a plateau—and that is an important finding so far as the Government is concerned—around a level somewhat lower than was reached in June and July of this year. Now, if one takes a long view of the matter, the rise in the prices since the pre-Korean War period has been, as my colleague has already pointed out, about 3 per cent. And, over the last five-year period, our prices have risen much less than the prices of many other countries, including the United Kingdom and the United States of America. We use this argument only to counter the argument that our prices are rising. When we institute comparisons, we are told that these comparisons take us nowhere. That is what we also say and that is why we are countering the original argument advanced. It seems to me that the consequences of price rises in the short run are exaggerated somewhat and I think that, in a developing economy, a certain amount of price rise becomes inevitable, although since our ultimate objective remains the lowering of the cost structure, it is necessary to aim at a gradual lowering of prices. Therefore, one has got to separate the short-term trends from the long-term trends. Unless there is a little rise in prices, there will not be that incentive to production which would bring about continued production which will help us to keep the cost structure low.

There are many aspects of this price issue into which one cannot go but the position appears to me to be that, while the picture which is sometimes drawn of prices rising rapidly and inflationary forces, by implication, gathering strength—because that would be the only cause of an anticipated continued rise in prices—that picture, I think, is unwarranted, although we recognise that there is need for caution in stimulating the demand excessively without sufficient safeguards. A problem of special importance in this country is the relationship between prices and costs in the economy. If a large and continuing increase in demand is to be sustained and if our position in the export market has to be strengthened, the cost structure of the country must adjust itself to the new circumstances created by the emergence of the buyers' market. That is a vital fact. Now, up to a point, a judicious expansion of purchasing power can, under present conditions, be undertaken with good effect, but, in view of the relatively high level of prices and costs in the country, the need for ultimate reduction of costs and increasing productivity all-round remains paramount.

Balance of Payments Position

I come to the next indicator which is the balance of payments position. In 1952-53, the balance of payments left us with a sizable surplus of Rs. 55 crores and our foreign exchange position at present would permit larger imports of essential goods. To that extent, it would be safe to increase domestic investments; but, here again, there are limits which we must recognise. Part of the improvement in the balance of payments last year was of an altogether exceptional and non-recurring nature—I think it was remittance of capital by our nationals—and, as the Plan gathers further momentum, I believe that import demands are bound to go up either for raw material or for essential goods. One has also to be prepared to meet other unforeseen developments such as sudden drought or any other untoward circumstances. A country's external account is perpetually variable; it depends not only on domestic policy but also on developments abroad. Nevertheless, in so far as we have not been drawing down our sterling balances at the rate expected, there is a certainly scope for the liberal financing of domestic developments

There was some reference to the banning of imports. The suggestion assumes various forms and it was dealt with by my colleague but I would like to deal with it in its economic aspect. It is that we should ban, or at least progressively reduce, imports. *Now, it is true, and it is Government's policy that our aim should be to make this country more and more self-reliant. I will not say self-sufficient, because I do not know of any country in the world which is self-sufficient, unless it is Tongo Island or Christmas Island or some other islands I do not know.* (Italics ours.—Ed.). But, an analysis of our imports at present will show that the quantity of what may be called non-essential goods which are imported is very, very small. And, in the interests of domestic development, we are, at present, protecting some 40 industries and it cannot, therefore, be said that our commercial policy is determined only in terms of immediate cost differences. That would be grossly unfair to my colleague as well as to myself; nevertheless, relative costs are an important consideration. It must also be borne in mind—and that is of immediate importance in the present context—that the banning of imports does not by itself lead to an increase in domestic output. It might merely create monopoly profits for the favoured producers.

In regard to essential imports like food, we are at present in the happy position of being able to reduce our demands from abroad. But, one must have it always at the back of one's mind that more employment means greater demand for food, and here I join issue with those who argue that there is infinite room for austerity in a country run under a democratic constitution. As the development outlay increases, larger quantities of food might have to be imported. In any case, I think it is necessary, before we readjust our plans, to be prepared to import food as and when required. Similarly, we shall need more capital goods; as the economy develops, the character of our exports as well as of our imports is bound to change. This has happened in the case of all countries in regard to their development and they themselves have had to adapt themselves to changing conditions. As industrialisation progresses in areas hitherto undeveloped, these other countries had to switch over to capital goods—from the simpler types of goods at first which they sold to the more complex types. Now, it is in the light of these more fundamental considerations that our export and import policy has to be framed.

Adjustment of the Plan

I come to the question of the adjustment in the Plan. There is a certain conflict between the short-term remedies and the long-term solution of the problem of unemployment. Short-term remedies even amount to providing work irrespective of whether it is productive or unproductive and, to that extent, one might say that, owing to a concatenation of circumstances, one has to lower the efficiency coefficient of our Plan. Now, these certainly have a place; for work, even if it is not fully productive, is, in our opinion, better than doles or acute discontent or frustration. Nevertheless, short-term remedies which come in the way of a satisfactory implementation of a long-term solution must be eschewed. I admit that the choice is difficult and there is need for keeping a balance between these competing or conflicting considerations. Here, therefore, I do support the plea that what we want is increased work and increased production.

Therefore, all the considerations that I have put forward suggest that whatever measures we take for improving the employment situation must be fitted generally into the structure of the Plan. Over a period, the Plan, and the continuation of such Plans for successive periods —I might go even further and say that we must have a succession of plans—is the answer to the problem of unemployment. The Planning Commission is at present considering what adjustments have to be made in the Plan, in view of the present employment or unemployment trends. It is proposed, for instance, to increase the provision for minor irrigation. It is also intended to substitute some of the existing schemes which will immediately provide considerable employment in the rural areas for the educated. That is to say, we are proposing to replace some of the existing schemes by new ones. Training schemes for certain classes are also being prepared. The Planning Commission has written to the State Governments indicating the directions in which the Plan could be expanded or adjusted. This is a series of follow-up letters to which I have referred and it is hoped that decisions would be taken in about a month's time after discussions in the National Development Council which is due to meet early next month. The need at the present moment is, therefore, to concentrate on the fullest possible implementation of the Plan, and our motto has to be "full steam ahead," even if it means some increase in the total expenditure envisaged under the Plan. It is through such adaptations of the Plan that we can take care both of the long-term as well as the short-term aspects of the problem of unemployment, or rather, as we have put it in the amendment, "of increasing the employment opportunities."

Save Time and Money

FLY TWA

'Sky Tourist' to Europe and -to and across the USA

TWA is the *only* airline offering you this extensive Sky Tourist service...to *and* across America—linking world capitals in Europe, Africa and Asia with the major cities of the U.S.A. Enjoy "Stretch-out" comfort in world-proved TWA Constellations. Complimentary meals.

★ *TWA's standard flight No. 903 leaving Wednesdays is retained.*

NATIONAL INSURANCE CO., LTD.

ALL-ROUND PROGRESS WITNESSED IN 1952

MR. LAKSHMIPAT SINGHANIA'S REVIEW OF INSURANCE PROBLEMS

"THE Estate Duty Bill which is about to be placed on the Statute Book may, in the opinion of many, disintegrate the longstanding economic structure of our society. It should also be considered in this context if the small revenue of Rs. 10 to Rs. 15 crores which the Government estimates to get out of this is at all going to be helpful considering the other repercussions of the measure on the social and economic structure of the country," said Lala Lakshmipat Singhania in the course of his presidential address at the 46th Annual General Meeting of the National Insurance Company, Ltd., held in Calcutta on the 29th September, 1953.

So far as insurance is concerned not only has the Bill given scanty relief but the limits of exemption prescribed are so low that it may act as a deterrent on insurance and may even neutralise the incentive to insurance provided by the income-tax rebate. It will, as he observed, certainly kill the incentive for taking bigger policies by the higher income group and it is extremely doubtful if anyone among them will now be interested in taking life policies for more than the minimum.

Company's Progress

Reviewing the progress of the Company, Mr. Singhania was happy that "National" has scaled a new height by completing a new life business of Rs. 10,06,97,031 as against Rs. 9,62,90,815 of the year previous. The Company, he said, had reached the double figure in crores in respect of new business and he hoped that it might be the beginning of bigger things for the Company. The total business in force of the Company at the end of 1952 stood at Rs. 50,44,24,171 which was an increase of Rs. 3,97,19,755 over that of the preceding year. The total premium income in the life department of the Company has increased to Rs. 2,28,47,323 in 1952, while the life fund stood at Rs. 10,60,92,792. The position of claims was also very pleasing over a number of years; at present the ratio of actual to expected deaths was only 50 per cent.

"National" has thus concluded another successful year and has thrived on a spirit of service which has brought the Company closer and closer to the nation. As a matter of fact, inspired with a spirit of service, "National" has now embarked upon a programme of having new buildings of its own which would serve as service centres of the Company and as a projection of its personality among the people of those areas. The management have actually started construction in Nagpur. Designed on the most modern lines to combine beauty and utility, "National's" building in Nagpur will be a concrete expression of dignity and stability of the Company. As Mr. Singhania said: This building is not intended to be a show of the pomp and power of the National Insurance Company, big though the institution is. It is intended instead as a concrete emblem of our desire to serve the country through insurance and as a symbol of solidarity and security we offer. I like to think that this building of ours will really help us in giving better and varied service to the members of the nation. I also like to think that this building will be a standing testimony to the inherent strength of the Company, being an outward manifestation of its unassailable assets."

General Conditions

Coming to the general conditions, Mr. Singhania said that anything which goes to make a change in the economic pattern of the country and living standards of the people was of the utmost importance to the insurance companies. Such a measure was the first Five-year Plan which hopes to raise capital formation by about 20 per cent. of the additional income each year. But the first two years of the Plan had been mainly a period of preparation, though they had shown signs of improvement in domestic output. But the increase in production did not reflect corresponding increase in incomes available for consumption. It would, therefore, appear to be essential, according to Mr. Singhania, that in the implementation of the Five-year Plan emphasis should be placed on new production which again should be within the reach of the consumers. Merely producing to replace what we had was not going to help, and even production of new goods would be of no avail if there was no corresponding increase in consumption.

Referring to the difficult condition of working of insurance, Mr. Singhania felt that even when the bigger companies were finding it so hard to work within the limited liberty allowed to them under the Act, one could easily appreciate how difficult it would be for the smaller units to manage their affairs. Here, Mr. Singhania suggested that it should be the duty of the bigger and the stronger companies to come forward as sustaining props. Amalgamation of the uneconomic with the economically stronger units would seem to be the only answer to this problem. He hoped that the bigger companies would realise their responsibility in this regard and was glad that "National" had given concrete proof of this responsibility by agreeing to have National Mercantile Insurance Company, (India) Ltd. amalgamated with it.

Postal Insurance Scheme

Speaking about the recent proposal of the Deputy Finance Minister regarding extending the scope and raising the maximum limit of the Postal Insurance Scheme, Mr. Singhania desired it to be clearly understood that the private sector of insurance was not afraid of any intrusion. But he was of the opinion that postal insurance should be made to bear all the expenses incurred by it for running its business, asked to pay income-tax on its income as every other insurer had to do and also to comply with the Act as any other private insurer. It should be, as a matter of fact, all fair play and no favour if the benefit of the Postal Insurance Scheme was to be extended to include other people as well. But it would be unfair protection if postal insurance was allowed to enter the field free from all the irksome restrictions.

Reviewing the position of business in the general department which is only of recent origin, Mr. Singhania said that "National" had written a net premium of Rs. 14,82,107 in 1952 as against Rs. 11,43,279 of the year previous. While talking about general business, Mr. Singhania drew attention to the recent discussion in the Council of States about the formation of a reinsurance corporation being under active consideration. He himself had been stressing, over the last few years, the need for such a corporation which was a "must" for conservation of premium income inside the country and for conservation of India's foreign currency. But he sincerely hoped that the Government would appreciate that if such a reinsurance corporation must fulfil its purpose, it should be managed by private enterprise. Insurance in India is in the hands of private enterprise and nobody will deny that they have done a wonderful job of it. The Reinsurance Corporation too should be under their fostering care so that the two may work in the closest co-operation.

(Concluded from page 683)

as it buys from that country. The solution will be a compromise. Japan will be allowed 'provisional accession' to the Agreement which means that present members will be free either to treat Japan as a new member or to ignore her.

"Last, but far from least, the British Government is going to ask for the right to raise duties on certain foreign imports even though the same goods will continue to come in duty-free from the Commonwealth. This would be against the G.A.T.T. rules as it would create a new preference or widen an existing preference—hence the request for a 'waiver.'

"This may well provide the main issue at the Geneva meeting. It will also supply the answer to the Conservative Government's pledge of protection for British agriculture. Before this year is out we shall probably have steep tariffs on such articles as imported vegetables, fruit, eggs, perhaps bacon. At present British agriculture is protected by Government control of imports, as in the case of meat, or by sudden prohibitions which descend on imports of tomatoes, fruits, cauliflowers, etc., at certain times of the year.

"The Government rightly want to get away from this clumsy type of protection. They want to use tariffs instead. What will our friends the Dutch, the Danes, the French say to this? Will they try to hit back at us? What will the British consumer say? Is there anything left of the free trade fervour that won so many victories against dear food in the past. All these questions will be placed fair and square before us by the end of the year."

THE NATIONAL FIRE AND GENERAL INSURANCE

RESERVES MAINTAINED

"I AM wondering whether the good work that is being done by the insurance industry is getting that amount of publicity that it should have. Where *per capita* insurance is so small, giving increasing publicity to the virtue of insurance should be one of the primary concerns of insurers." With these pregnant words Mr. Lakshmipat Singhania, President of the National Fire and General Insurance Company, Ltd., made a strong plea for publicity and more publicity for insurance in the course of his address to the shareholders of the Company at their Annual General Meeting held at Calcutta on 29th September, 1953.

He urged the different Indian insurance associations to emulate the example of the British Insurance Association and put up insurance stands in the various exhibitions that are arranged from time to time in this country and through them broadcast the message of insurance. He also urged our Government to bring out suitable documentary films on insurance and screen them not only in the cities but also in smaller places for spreading the knowledge of insurance amongst those who have as yet not the faintest idea about what insurance is.

Reinsurance Company

Mr. Singhania who, in the course of such annual addresses, has been bringing to the notice of all concerned the vital necessity of the country having a professional reinsurance company of its own, expressed gratification at the statement made by the Hon'ble the Finance Minister of India, Mr. Deshmukh, that the proposal to establish reinsurance concerns was under the Government's active consideration. He has, however, pointed out that the subject being extremely technical and international in character, the insurance industry may advisably be left to itself to evolve a suitable scheme on its own.

In reviewing the Company's results during the year 1952, Mr. Singhania said that, while the fire and marine departments showed profits, unfortunately the same could not be said of the miscellaneous department—the principal section contributing to the loss of the department was again the motor section.

He was, however, happy to record that the various regional insurance councils of India seized themselves of the serious adverse position and have rationalised the motor rates, increasing the private car comprehensive rates and decreasing the Act and Third Party rates effective from 1st January, 1953.

Premium Income

The result of the Company's operations for 1952 were as follows:

The net premiums this year amount to Rs. 38,26,903, as against Rs. 41,50,029. There is a fall of about Rs. 3,25,000 in the net premium which is mainly accounted for by the fire department, the fire premium being Rs. 19,73,254 against Rs. 22,25,879 last year. The fall is mainly due to trade depression. The marine department shows also a small reduction in premium, as compared with last year. The net premium in 1952 is Rs. 6,61,652, as against Rs. 7,37,464 in 1951.

The miscellaneous department shows a small increase in premium from Rs. 11,86,686 in 1951 to Rs. 11,91,996 in 1952. Claims are higher at Rs. 7,13,088 this year as against Rs. 6,65,900 the previous year.

The expenses of management and commission are within the limits prescribed under the Insurance Amendment Act, 1950, and the reserves in the different departments have been maintained at the same percentage as in the previous year.

The statistical review of the U.K.'s Royal Society for the Prevention of Accidents shows that, based on figures published by the National Safety Council of America, the average risk of being killed in a road accident is more than twice as great in the U.S. as it is in Britain. There were 24 road deaths for every 100,000 inhabitants of the U.S. last year, as compared with 10 in Great Britain. On the other hand, there were 102 deaths per 100,000 vehicles in Great Britain, as compared with 72 in the United States. About one in every three of the 52,800,000 motor vehicles registered in the United States last year was involved in an accident causing damage, injury or death. Of the 38,000 people killed, 8,600 were pedestrians, 14,100 people were killed in collisions between motor vehicles 12,000 in accidents not involving other vehicles, 1,350 in collisions with trains and 500 in collisions with bicycles. The number of people injured was 900,000.

PRESERVED FRUITS INDUSTRY

HIGH TARIFF PROTECTION CLAIMED

ENQUIRY after enquiry into the claims of industries for continuation of protection by the Tariff Commission underlines one significant feature, namely, the continued non-availability of accurate statistics regarding production and consumption of products manufactured by the industries. The statistics presented to the Commission by producers, consumers, traders, and the official agencies during these enquiries reveal such wide divergencies that the Commission has, in every one of these enquiries or reviews of the same industry, unnecessarily to waste a considerable portion of its precious time in arriving at estimates. The latest instance of such divergence is seen in the case of the enquiry for continuance of protection to the preserved fruits industry taken up by Mr. M. D. Bhat, Chairman, Tariff Commission, last week.

From a clear cut analysis of the present position of the preserved fruits industry by Mr. Bhat in his speech while opening the public enquiry on 29th September last, it is evident that the Commission will have a trying time in assessing accurately the annual output and consumption of preserved fruits in the country. For one manufacturer has estimated the demand for preserved fruits at 5,000 to 7,500 tons, while the Ministry of Food and Agriculture has placed it nearly 50 per cent. lower at about 2,480 tons for 1953, 2,844 tons for 1954 and 3,300 tons for 1955. The Ministry has also furnished breakdown figures for canned fruits, crystallised fruits, jams, jellies and marmalades and pineapple products which differ by almost 100 per cent. from those given by the manufacturer. Mr. Bhat, therefore observes: "It appears that the task of estimating the demand for preserved fruits is by no means easy, because while some manufacturers have stated an increase in consumption of preserved fruits in India, others are of the view that a fall has occurred in the demand due to the decline in demand from the defence services and a fall in the purchasing power of the civilian population."

Installed Capacity

More or less a similar disparity is also seen in the data regarding installed capacity and actual production. At the time of the last Tariff Board enquiry, there were 454 establishments engaged in preserving and canning fruits and vegetables licensed under the Fruit Products Order. According to the All-India Food Preservers' Association, the number of such licence holders on 30th April, 1953, was 549. No information is available about the number of licence holders engaged in the manufacture of only protected categories, but the Food Ministry placed the figure at 157. The Tariff Commission has been supplied with information regarding the installed capacity and production by 56 manufacturers only. This shows that the annual installed capacity of these units is about 28,000 tons for all types of protected categories. As regards actual production, the data collected from 53 units reveal that the output was 5,394 tons in 1950 and 5,094 tons in 1951. Again, during January-June, 1953, the actual production of 51 units was 2,619 tons. As against these, the figures supplied by the Food Ministry shows the output at 4,499 tons in 1951 and 1,360 tons in 1952. Commenting on this unsatisfactory position, Mr. Bhat says: "In view of the wide discrepancies in these figures, I suggest that we should examine them closely and discuss the reasons which account for the discrepancy."

The point that emerges from what has been stated above is the continued lack of adequate data, despite the fact that the industry is now appearing before the enquiry body for the fourth time. As this phenomenon is usually noticed in the case of every enquiry, it is high time that the Government and the Tariff Commission paid serious attention to this problem. A solution to this may lie in compelling the industry to submit regular production figures to the Tariff Commission. We have no doubt that such a course will be in the industry's own interests, in that not only will accurate satistics be helpful to them but it will also facilitate the Tariff Commission to complete the enquiry expeditiously.

Now to come to the other aspects of the preserved fruits industry. This industry owes its development largely to the conditions created by the war. The case of this industry was among the earliest to be referred to the post-war Tariff Board and protection was granted early in 1948. The industry has thus enjoyed protection for a little less than six years. The present tariff protection is governed by the decision by the Government on the recommendations of the Tariff Board in 1951. The Board then recommended considerable reduction of duties on all categories of preserved fruits, viz., from 60 per cent. to 36 per cent. *ad valorem* on fruits in syrup, from 80 per cent. to 40 per cent. *ad valorem* on jams, marmalades, etc., and the removal of protective duty on juices, squashes, cordials, etc. The Government accepted the recommendation but decided to levy an additional duty, equivalent to one-quarter of the amount of duty leviable on all fruit products, whether or not they would continue to be subject to protective duties. Protection at this rate was granted and later extended upto the end of December, 1953. And recently, that is from 28th February, 1953, it has received added, though somewhat adventitious, protection from an enhancement for revenue purposes, of the rates of duty on canned, bottled or otherwise packed fruit to 65 per cent. *ad valorem* standard and 55 per cent. *ad valorem* preferential.

Wanted More

Now that the Tariff Commission has taken up the question of continuing protection, the industry has not only asked for continuance of protection at higher rates of duty and that for a fairly long period but also for assistance in almost every conceivable form. The Association has pleaded for an increase in protective duties to as high a rate as 98 per cent. on imports, of which 18 per cent. is required to offset the freight disadvantage of the indigenous producer and 40 per cent. as compensation for consumer prejudice against the indigenous products. The period of protection sought has been for five years. Further assistance in the form of import restrictions, supply of raw materials of better quality and at lower prices and reduction in freight both on raw materials and finished products has also been asked. The supply of extra fine sugar at ex-factory prices has also been suggested. A suggestion has also been made for making available to the manufacturers of cans good quality tinplate at lower rates for cans required by the industry. Among other claims are duty-free imports of machinery, financial assistance, and securing technical experts from abroad.

The categories of preserved fruits which are protected and fall within the scope of the present enquiry are (1) fruits, canned and crystallised, (2) fruits, canned, bottled or otherwise packed, not otherwise specified, (3) jams, jellies and marmalades, canned, bottled or otherwise packed, and (4) canned or otherwise packed apricots, berries, grapes, plums and prunes and fruit salads composed of not less than 80 per cent. in quantity and in value of the above named fruits and (5) pineapples canned or otherwise packed.

As regards the quality of the indigenous preserved fruits, there would appear to have been some improvement in that of products of large establishments. Some large producers have lately introduced modern methods of quality control. Most of the importers seem to be feeling that the imported goods are very well packed, the get-up is good, the fruits are well graded and of selected quality and generally superior to the indigenous products. Consumers' prejudice is attributed to the manufacture of sub-standard goods by a number of so-called factories, licensed under the Fruit Products Order, having no proper equipment, trained personnel or finance and situated in unhygienic surroundings.

For its part, the industry has placed before the Commission for its consideration a series of handicaps under which it is carrying on its operations. Thus fruits of good quality are available to it only at high prices. Sugar required by it is not only costly but contains sulphur. Prices of cans required by it are stated to have risen continuously, thereby inflating its costs. Glass bottles supplied are not colourless and have generally a reddish or greenish tinge and breakage is heavy. Corking and lidding do not ensure perfect airtight seal.

Tall Claims

It is evident from the above that the fruit preservation industry's claims for assistance are very tall. It may be that the industry is operating under trying conditions. The presence of innumerable unorganised units producing low quality products, high costs of production, lack of highly cultured orchards, inferior quality fruits not properly graded and selected, and high cost of raw materials, all these, if true, make one wonder whether the industry will ever be in a position to survive without protection and, if so, whether it is worth having that industry at all. The fact that the industry is putting forward a long list of claims in addition to a very high tariff protection impairs its case for assistance. Having been born under conditions of war, the industry is entitled to the protection promised to all such industries by the Government of India. But, as "protection is not a gift but an opportunity," while it lasts the industry must do everything in its power to deserve it by lowering costs, improving standard of quality of its product and generally by strengthening its technical and financial basis. It will be interesting to know as to what the industry has done to place its house in order and to win over the consumer. Too high a rate of import duty seems to have robbed it of its incentive to improve its efficiency. The Commission must examine whether the industry has grown up on economic lines and whether it is dominated by sub-standard units. It must also lay down specific measures calculated to place the industry on economic lines within a period of time. While the responsibility for providing technical assistance and other aid should be placed on the Food Research Institute, Mysore, the industry must do everything that lies in its power to do its own research. It is to be hoped that, at the next enquiry, the industry will be able to give a better account of itself, justifying the assistance given to it by the Government.

INDIA'S BALANCE OF TRADE

India's foreign trade during the first quarter of the fiscal year 1953-54, that is, April-June this year, has given a better account of itself as compared with that of the corresponding period of 1952-53. For the adverse balance of trade, which stood at Rs. 80.38 crores at the end of June, 1952, had gone down to Rs. 30.24 crores at the end of the same month this year.

Thus the total exports for the period under reference amounted to Rs. 118.89 crores, as against Rs. 147.95 crores for April-June, 1952. The decline in exports were, mainly, in jute yarns and manufactures, oils and oilseeds. Thus, exports of jute manufactures dropped from Rs. 44.07 crores to Rs. 24.65 crores. Exports of oils receded from Rs. 8.6 crores to Rs. 3.41 crores and those of oilseeds from Rs. 2.14 crores to Rs. 78 lakhs. There were certain other commodities the exports of which registered an increase in the period under review. Notable among these were hides and skins, the despatches of which shot up from Rs. 3.54 crores to Rs. 6.48 crores. There was a remarkable increase in the value of shipments of metallic ores and scrap iron which amounted to Rs. 8.51 crores, as against Rs. 5.98 crores.

The fall in the value of imports during April-June, 1953, was even more marked than the fall in that of exports. The imports amounted to Rs. 169.13 crores, which were Rs. 51.95 crores lower than those during the three months ended June, 1952. The decline was reflected in the main in foodgrains, cotton, and a few other items.

The downward trend in the adverse balance of trade witnessed in the first quarter of 1953-54 would appear to have continued in the second quarter as well, though the total value of trade (perhaps volume as well) was relatively smaller. Estimates of the average monthly exports and imports in the second quarter are Rs. 40 crores and Rs. 52 crores, respectively. On this basis, the adverse balance of trade for the second quarter works out to Rs. 36 crores, giving a progressive total of Rs. 86 crores for the first half of 1953-54.

Usually, the second half of the fiscal year witnesses a marked improvement in exports as compared with the first half. For this is the period when a large number of new crop agricultural commodities come on the market and quite a number of them is exported. Considering the sizable increase in the output of cash crops, the quantum of goods available for export this year should be larger than a year before. But this does not necessarily mean an increase in the volume and value of exports, as much will depend on the trend of world prices and the Government's attitude in regard to export duties. If the Government removes the handicaps to the export trade, an improvement can certainly be expected.

The imports, however, may continue to be high as in the past. Recently, not only have liberal imports of palm and cottonseed oils been allowed but also two lakh tons of sugar from Java, Cuba, Mexico and the U.K. As against this, however, there will be some saving in imports of foodgrains and cotton.

ECONOMIC RESOURCES OF ANDHRA

FINANCIAL POSITION NOT BRIGHT AT PRESENT

THE Andhra State has come into existence after four decades of persistent agitation. It is the first State to be formed on a linguistic basis and now ranks as the tenth 'A' State. The formation of this State necessitates a brief account of its economic resources, actual as well as potential, with a view to assessing how far the new State will be able to stand on its own feet economically and to contribute to the economic development of the country as a whole.

The new State covers an area of 63,417 sq. miles, and has a population of 20,507,801. In area, it is bigger than that of the residuary Madras State, which now covers only 60,189 sq. miles, but in population the latter is larger, with 35,734,489 people living in it. The Andhra State is, however, larger than West Bengal and Orissa, the two other smaller 'A' States. The density of population of Andhra per square mile is 323, as compared with 594 for Madras, 840 for West Bengal and 244 for Orissa.

The State is situated between 78° W. and 85° E. longitude and 13° N. and 20° S. latitude, and covers 11 districts. Geographically, climatically and agriculturally, it is in the region of transition between sub-tropical and tropical India. The districts are physiographically divided into two groups, namely, (1) Rayalaseema, and (2) the Circars. The districts comprising the former are (1) Cuddapah, (2) Kurnool, (3) Anantapur, (4) Chittoor with the Adoni, Alur and Rayadrug taluks of Bellary. The Circars comprise the coastal districts of (1) Srikakulam, (2) Visakhapatnam, (3) East Godavari, (4) West Godavari, (5) Krishna, (6) Guntur and (7) Nellore.

Climate

The climate of Andhra is warm and humid or hot and humid, according to the season and exercises an overwhelming influence on agriculture with its long hot dry period and short rainy spell. The average total rainfall is the highest for the State in the north with 40 to 50 inches of rain which gradually decreases to 20 inches towards the south and south-west. Two-thirds of the rainfall are from the south-west monsoon. Srikakulam, Visakhapatnam, parts of West Godavari and Nellore Districts suffer from both periodic floods and droughts, while others are more liable to droughts. The yields are thus considerably affected by both droughts and floods and are unpredictable. The fickle-mindedness of the elements makes agriculture in the Andhra State a precarious profession and the lot of those who are dependent on it harder. As the seasons are irregular and vary in intensity, delayed sowings, hurried and inadequate soil preparation, untimely and unwanted rains and lack of drainage are some of the drawbacks of agriculture. The attention of the State Government must, therefore, be devoted not only to preventing destruction by floods but also to raising irrigational facilities, both minor and major, in order to make agriculture immune to natural calamities.

Agriculture

As in most parts of India, agriculture is the main source of subsistence for the people; it provides occupation for 80 per cent. of the population. Nearly 90 per cent. of the total area is devoted to foodcrops. The principal crops of Andhra are rice, millets, groundnut, sugarcane and tobacco. Rice is grown in the Godavari and Krishna deltas, the output being estimated at four million tons per annum. Andhra accounts for more than 60 per cent. of the groundnut produce in undivided Madras. It is claimed that about 80 per cent. of the Virginia tobacco grown in India comes from Andhra.

On division, Andhra gets approximately 52.7 per cent. of the total land area of the undivided Madras State, 51 per cent. of the cultivated area and 40 per cent. of the forest area. The following is the percentage pattern of gross land utilisation now current in the 11 districts of the new State: Land under forest 15.4 per cent., under crops 34.2 per cent., current fallows 9.2 per cent., uncultivated area other than fallows 14.4 per cent., and land not available for cultivation 26.8 per cent.

The general impression is that Andhra will be well off in regard to food. But informed opinion is that the State is just on the border line. According to Mr. S. V. Ramamurthy, the State needs an integrated policy of soil utilisation, with increasing concentration of the cultivation of the crop best suited to the land. There is, it is stated, a large scope for the improvement of crop production of rice, millets, groundnut, sugarcane, tobacco and cotton.

The forests in Andhra have a rich variety of flora, among which the more useful species for timber are *kosum*, rosewood, teak and *irul*. Bamboo suitable for the manufacture of paper pulp also occurs in abundance.

Industry

Andhra is industrially backward. The funds available for capital investment are very limited. The State lacks trained manpower and experienced industrial leadership. It has, however, large natural resources. Its river systems are capable of irrigating 10 million acres. Its mineral resources are adequate for building up chemical and metallurgical industries, and its hydro-electric power resources are immense. At present rice and oil milling are its largest industries. In 1950-51, as much as Rs. 46.4 crores worth of vegetable oils were produced. The value of rice production was Rs. 61.8 crores. There are a few *vanaspati* factories in the State. The manufacture of jaggery and sugar figures next among agro-industries of the State. In 1950-51, the total value of these products was about Rs. 20 crores. There are nine sugar factories with an installed capacity of 50,000 tons a year, as against an estimated consumption of 35,000 tons. It is suggested that about 20 more factories, each with an annual capacity of 7,500 tons of sugar, can very well be established in Andhra. When cheap hydro-electric power is made available from the Godavari and Krishna river systems, manufacture of calcium carbide, ferro-alloys and pig iron can be taken up in the State.

Of about 1.9 million cotton spindles and 8,000 looms in Madras State, Andhra has only 26,000 spindles and no looms. The area is deficit in cloth and, therefore, the establishment of cotton mills is urged. Andhra has two cement factories with an annual productive capacity of 175,000 tons. As limestone and clay are available in all Andhra districts, the scope for the establishment of cement factories is considered to be very large. Andhra has no steel industry. It has adequate deposits of high grade iron ore, dolmite and limestone in Cuddapah, Kurnool and Guntur. Production of iron and steel on a medium-scale basis is considered possible, after cheap power is available.

Minerals

Andhra is potentially rich in a variety of useful minerals. Manganese occurs extensively in the form of such ores as black psilomelane, pyrolusite and leraunite in the Visakhapatnam District. The biggest formations of mica are in the Nellore District along a length of 60 miles with a width of 15 miles. Minor occurrences of mica are present in the Krishna and Godavari Districts. Along a ten-mile belt, stretching from Lingala to Brahmanpalle in Cuddapah, occur asbestos resources. It is estimated that about four million tons of good quality iron ore can be obtained in the Kurnool District. In the same district, as also in Nellore, are found copper ores. Barytes, a chief material for white paint, and gypsum, needed for the manufacture of plaster of Paris, occur in Cuddapah and Nellore Districts. Chromite is found in the Krishna District and lead in the Guntur and ceded districts. Among other minerals which could be worked out after surveys are coal, graphite, diamonds, limestone, sulphur and pyrites.

Electric Power Shortage

Shortage of electric power is the main handicap of industrial progress in Andhra. The State, with an extent of 63,000 square miles and 15,750 villages, has at present only about 251 villages and towns which are supplied with electricity. Rural electrification has not made much headway. The *per capita* consumption of electricity in the Andhra area is only four units. The State is, however, well served with plentiful water-supplies by the two mighty rivers, the Godavari and the Krishna, as also the Pennar. These rivers hold almost all the potential hydro-electric power resources of the State. As the reaches of these rivers lie in the plains of the east, most of the potential water power can only be derived from irrigation-cum-hydro-electric projects, involving construction of large dams and reservoirs costing crores of rupees.

The most important of such projects already taken in hand is the Machkud Scheme, on the borders of Orissa and Andhra. It is now in an advanced stage of construction. The power site is situated at about 125 miles from Visakhapatnam. Its ultimate capacity is 102,000 kw. The first stage of the scheme, comprising three generating units of 17,000 kw. each, is expected to commence operation in 1955. Srikakulam, Visakhapatnam, West and East Godavari, Guntur and Krishna districts will stand to benefit by this project.

The Tungabhadra Hydro-electric Project is another big undertaking. From this, some 27,000 kw. of power will be available initially and 63,000 kw. ultimately. Of this about 32,000 kw. will be firm. The power will be distributed to Bellary, Anantapur, Kurnool and Cuddapah. The Ramapadasagar Project, involving 6,600 feet in length, is designed to supply water to 4.85 million acres and 150,000 kw. of electric power. The project has yet to be sanctioned. The Krishna-Pennar Scheme contemplates a generation of 100 mw. in the near future.

Finances

At present, there are four thermal steam stations at Visakhapatnam, Vijayawada, Nellore and Rajamundry.

The finances of the Andhra State do not appear to be very bright at present. The new Government is likely to meet with a series of revenue deficits, if no care is bestowed on the husbanding of the revenue resources of the State. The revenues of the Telugu districts, as outlined in the Madras Budget for 1953-54 under different heads, are as follows:

(Rs. in lakhs)

Union excise duties	101.44
Share of income-tax	313.19
Land revenue including irrigation charges	494.87
Stamps	186.96
Forests	49.23
Motor vehicles tax	143.43
Sales tax	329.03
Other taxes	114.00

The estimated total revenue of the State is of the order of Rs. 20.77 crores.

On the expenditure side, the important heads are:

(Rs. in lakhs)

General administration	296
Justice	62
Police and jails	282
Education	403
Medical and health	127
Harijan and backward classes	46
Public works	206
Interest	94
Pensions	72
Prohibition	35

The estimated expenditure is Rs. 22.80 crores.

Thus the figures show a revenue deficit of about Rs. 2 crores. According to Mr. Gopala Reddy, a former Finance Minister of the undivided Madras State, the actuals of the first quarter of the current year show that there is less revenue and more expenditure than anticipated. He estimates for the half-year after division, a deficit of over Rs. 2 crores and for the full year, a deficit of Rs. 4 crores. Of the 11 districts in the Andhra State, only four are financially surplus, while in the other districts the deficits are large. The thermal power stations, taken as a whole, are losing concerns. The net receipts are not sufficient to meet even interest on the capital outlay. Sales tax in Andhra area is about a quarter of the entire receipts under that head for the undivided State. The collections in the entire Andhra area is no equivalent to those in the city of Madras. Section 286 of the Constitution is expected to work adversely to both the States, as the goods which passed from one part of the divided State to the other, which were liable to tax then, are required to be exempted now.

Public Debt

The debt of the Andhra State, after making all additions and deductions, will be over Rs. 28 crores. Large sums of money are required to meet the expenditure on the half-built projects. Compensation promised to *zamindars* has to be paid according to schedule. The construction of a new capital needs more than Rs. 10 crores. Nearly Rs. 300 crores are required to take up all the irrigation projects in the State. But more than all this is the immediate prospect of big gaps in the budget, to cover which will be a problem of problems for the new administration. Of course, when all the projects are completed when agriculture is made prosperous, when the mineral wealth is exploited on a large scale and when industrial potentialities are fully exploited, Andhra will become a rich State. If the leaders of the people realise this and work for the economic development of their State with single-minded devotion and in a realistic manner, they will have amply justified their demand for carving out a separate State for themselves, within the four corners of the Union Constitution. They must realise that the achievement of this goal requires efficient administration, economic sagacity and political stability.

TR 3451

RECORD OUTPUT OF BENGAL COAL

NET PROFIT, HOWEVER, FALLS—RETURN TO SHAREHOLDERS REDUCED

THE audited statement of accounts of the Bengal Coal Company, Ltd. (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta), for the half-year ended 30th April, 1953, fully depicts how far the fortunes of the coal industry are being fettered by undesirable controls. Thus, while the output of the Company for the half-year under review has gone up sizably over that for either of the preceding two half-years and touched a record level, the improvement in despatches has not kept pace with that in output. The gross profit for the half-year under review does not show any notable rise over that for the previous half-year, which, it may be recalled, was itself over Rs. 10 lakhs lower than that for the half-year ended 30th April, 1952. Net profit, on the other hand, has suffered a sizable shrinkage and is the lowest for the last three half-years. The Directors have, therefore, decided to pass on a part of this decline to the ordinary shareholders. Thus, the distribution to them is proposed to be reduced from 20 per cent. per annum (made up of a dividend of 10 per cent. and a bonus of 10 per cent.) which had been paid for the previous two half-years, to 17½ per cent. per annum by pruning the bonus part of the return to 7½ per cent.

The Company's raisings for the half-year amount to 12,14,532 tons, representing an increase of 1,58,825 tons and 33,465 tons over those for the previous two half-years, respectively. The output for the half-year constitutes a record in the history of the Company. Despatches (including coal purchased) for the half-year under review are also better at 13,07,370 tons, by 86,434 tons, as compared with those for the half-year ended 31st October, 1952, and by 48,180 tons as compared with those for the six months ended 30th April, 1952. The despatches for the half-year under review are the highest since the half-year ended 30th April, 1950. Though this is satisfactory in itself, the increase in the amount of coal despatched falls considerably short of the rise in output. This has resulted in a sharp rise in the Company's stocks of coal. Thus, the value of the closing stocks, at Rs. 22.85 lakhs, reveals a rise of Rs. 7.07 lakhs.

The gross profit for the half-year under review, at Rs. 42.90 lakhs, shows an increase of Rs. 0.36 lakh over that for the previous half-year, but a decline of Rs. 9.86 lakhs from that for the corresponding half-year of 1952. The net profit which had declined from Rs. 20.89 lakhs for the half-year ended 30th April, 1952, to Rs. 18.71 lakhs in the subsequent six months, has further dwindled to Rs. 15.56 lakhs in the half-year under review.

A more detailed picture of the Company's results for the half-year under review is given in the following table, against the background of those for the previous three half-years:

(In lakhs of rupees)

	For the half-year ended			
	30-4-53	31-10-52	30-4-52	31-10-51
Sale proceeds	315.82	256.83	285.70	286.78
Other income	11.26	9.20	8.18	10.01
Stocks	23.91	14.88	19.24	8.44
Coal purchases ..	23.85	16.78	25.41	29.06
Freight, shipping charges and commission ..	107.33	59.63	81.89	88.36
Other expenses ..	161.52	142.22	145.80	133.82
Gross profit	42.90	42.54	62.76	36.52
Provision for—				
Depreciation	11.20	10.00	7.00	7.50
Taxation and cesses ..	13.85	11.50	21.00	12.25
Managing Agents' commission	2.29	2.23	3.19	2.01
Net profit	15.56	18.71	20.89	14.76
Reserves	7.50	7.50	10.00	5.00
Dividends—				
4½% preference ..	0.33	0.33	0.33	0.33
Ordinary	8.75 (D. 10% +B. 7½% p.a.)	10.00 (D. 10% +B. 10% p.a.)	10.00 (D. 10% +B. 10% p.a.)	8.75 (D. 10% +B. 7½% p.a.)
Directors' commission ..	0.09	0.10	0.10	0.09
Carry forward	6.91	8.03	7.25	6.18
	Tons	Tons	Tons	Tons
Raisings	12,14,532	10,55,707	11,91,067	9,69,231
Despatches (including coal purchased) ..	13,07,370	12,20,936	12,59,190	12,03,916

It will be noted that the rise in sale proceeds and other income has been almost wiped out by the increase in coal purchases, freight, shipping charges and commission and other expenses. Of the increase in other expenses, colliery expenses account for Rs. 13.63 lakhs and salaries and wages for Rs. 5.50 lakhs. The provision for depreciation has been raised by Rs. 1.20 lakhs, on account of the substantial additions made during the half-year under review to the fixed capital expenditure. While the provision for cesses has been reduced from Rs. 1.50 lakhs to Rs. 1.10 lakhs, that for taxation has been stepped up from Rs. 10 lakhs to Rs. 12.75 lakhs. It is noteworthy that the amount set aside for the general reserve has not been affected by the recession in net profit, even though it has meant a reduction in the return to the shareholders and in the amount to be carried forward to the next half-year.

The judicious policy followed by the Directors in conserving the resources of the Company has undoubtedly endowed it with a strong financial position. The reserves and surplus at the end of the half-year under review amount to no less than Rs. 123.91 lakhs, surpassing, once again, the paid-up capital of Rs. 120 lakhs. The gross block, to which Rs. 19.27 lakhs has been added during the half-year under review, stands at Rs. 550.20 lakhs, including Rs. 22.68 lakhs representing plant in transit or pending installation. But this has been written down substantially to Rs. 192.02 lakhs. The current assets aggregate Rs. 281.87 lakhs and exceed the current liabilities and provision for taxation, at Rs. 252.65 lakhs, by Rs. 29.22 lakhs.

The Rs. 200 fully paid-up ordinary shares of the Company are currently being quoted at Rs. 508, at which rate and on the basis of the latest dividend, the yield works out to 6.9 per cent. per annum, free of income-tax.

INDIA CEMENTS LTD.

After having paid a maiden dividend of 5 per cent. on the ordinary shares for the year ended 31st March, 1952, the India Cements Ltd. (Managing Agents: Messrs. Essen Ltd., Madras) has had to go off the dividend list for the year ended 31st March, 1953. This is consequent on the sizable shrinkage in the Company's earnings for the year under review. The gross profit, which had gone up from Rs. 18.72 lakhs for the year 1950-51 to Rs. 28.82 lakhs for 1951-52, has dwindled to Rs. 14.25 lakhs. The net profit, after providing for Managing Agents' commission and depreciation, shows a fall from Rs. 17.94 lakhs to Rs. 5.36 lakhs.

The sale proceeds of cement have gone down from Rs. 101.20 lakhs to Rs. 88.06 lakhs, while the value of the closing stocks has risen from Rs. 8.33 lakhs to Rs. 9.29 lakhs. Manufacturing and other expenses show a decline from Rs. 76.58 lakhs to Rs. 74.94 lakhs. Managing Agents' remuneration has been reduced from Rs. 2.29 lakhs to Rs. 75,841. The provision for depreciation has been nearly maintained, at Rs. 8.13 lakhs (as against Rs. 8.59 lakhs). Out of the net profit, the Directors propose to distribute Rs. 1.49 lakhs as dividend on the 5 per cent. preference shares and Rs. 65,000 as bonus, leaving to be carried forward Rs. 4.01 lakhs, as against Rs. 87,531 brought in. Although the amount required to maintain the dividend on the ordinary shares at 5 per cent. is only Rs. 3.04 lakhs, the Directors have proposed to carry over this larger sum, pending the decision of the Government of India on the question of revising the price of cement, which was referred to the Tariff Commission and on which the Commission has already submitted its report to the Government.

Describing the trading conditions during the year under review, the Directors observe: 'During the year under report, the cement industry, in general, has had to face a number of difficulties. The railway freight on coal was increased by 30 per cent. Provision had to be made for provident fund and health insurance scheme for labour. The selling price of cement was reduced by Rs. 7-8 per ton as from 1st April, 1952, and by a further amount of Rs. 11-5 per ton as from 1st December, 1952. Our factory, in addition, had to face a severe power cut for nearly four months during the financial year. We have, however, as already mentioned in our last general meeting, installed three diesel generators by the middle of March, 1953."

The following synopsis of the Company's balance-sheet as on 31st March, 1953, provides an idea of its financial position:

Liabilities	Rs.	Assets	Rs.
Capital ..	98,93,555	Gross block	1,43,54,423
Reserves and surplus	8,01,322	*Less*—Depreciation ..	31,47,637
Liabilities ..	73,86,241	Net block	1,12,06,786
		Stocks ..	9,28,789
		Stores, etc. ..	32,43,522
		Debts, deposits and advances ..	15,50,656
		Investments	7,34,642
		Cash ..	4,21,723
	Rs. 1,80,86,118		Rs. 1,80,86,118

Of the reserves and surplus, Rs. 4 lakhs represent mortgage loan redemption reserve and the balance the unappropriated surplus. The Company has taken a loan from the Industrial Finance Corporation of India, the outstandings of which at the end of the year amount to Rs. 36 lakhs. Other borrowings (secured and unsecured) aggregate Rs. 19.88 lakhs

PROFIT OF ALUMINIUM CORPORATION DROPS

ARREARS OF PREFERENCE DIVIDEND REDUCED

PROLONGED labour trouble at the works, coupled with trade depression, had an adverse effect on the financial results of the Aluminium Corporation of India Ltd. (Managing Agents: Messrs. J. K. Industries Ltd., Calcutta), for the year ended 31st March, 1953. The Company's gross profit for the year under review shows a shrinkage from Rs. 11.93 lakhs earned in 1951-52 to Rs. 5.62 lakhs. The Directors were, therefore, unable to provide full depreciation for the year. Accordingly, they provided only a sum of Rs. 3.15 lakhs (as against Rs. 11.93 lakhs set aside for the previous year). They, however, decided to pay the dividend on the cumulative preference shares for one year, that is, for the year 1947-48, thus reducing the arrears of dividend on these shares.

Loss of production due to labour strike and lower offtake on account of the general slump meant a decline in the Company's sales and an accumulation of its stocks. The net sale proceeds for the year amounted to Rs. 41.36 lakhs, as against Rs. 52.30 lakhs. The value of closing stocks shows an increase from Rs. 28.59 lakhs to Rs. 34.77 lakhs. Expenses reveal a decline from Rs. 49.53 lakhs to Rs. 43.43 lakhs, mainly due to smaller consumption of raw materials and stores and loss of wages by labour.

The operations in all the departments of the Company's works, including colliery, were satisfactory during the first four months of the year. But, towards the close of July, the workers of the cell house adopted go-slow tactics. As it was found impossible to keep the furnaces running, the entire cell house had to be closed down from 12th August. This resulted in the gradual closing down of other production departments. Soon, the colliery also had to be closed on account of a strike by the power house workers. It was not until January, 1953, that normal operations were commenced. On the whole, the cell house remained closed for 138 days, with a huge loss of production of metal and corresponding loss of production in other departments. The general slump of last year also had an adverse effect on the trading activity of the Company. As the Indian rollers had previously made commitments for imports, based on the then current fear of world-wide shortage of metal, large quantities of metal continued to come in with no offtake. The utensil market was also very poor and, consequently, stocks accumulated everywhere. The Company had to carry large stocks of metal. With the increase in price of aluminium by the U.S.A. and with the prices of indigenous metal remaining at a low level, some stocks began to move out from November, 1952. Even at the end of the year under review the position was far from satisfactory. Sales of sheets and circles of the Corporation, however, continued to be good, in spite of the competitive markets.

The Company's financial position is disclosed by the following summary of its balance-sheet as on 31st March, 1953.

Liabilities	Rs.	Assets	Rs.
Capital ..	90,00,000	Gross block	1,56,92,044
Reserves and surplus ..	15,70,991	*Less*—Depreciation ..	53,15,329
Mortgage debentures ..	65,00,000	Net block	1,03,76,715
Liabilities ..	18,28,452	Stock - in - trade ..	34,76,909
		Stores, raw materials etc. ..	17,72,596
		Debts, deposits and advances ..	21,25,798
		Cash ..	11,47,425
	Rs. 1,88,99,443		Rs. 1,88,99,443

Due to delayed deliveries of some of the machineries ordered from foreign suppliers, the entire loan of Rs. 50 lakhs, sanctioned by the Industrial Finance Corporation of India, could not be drawn by the Company and utilised. Up to the end of the year under review a sum of Rs. 40 lakhs was drawn. During the year, the additions to the fixed assets amounted to Rs. 21.89 lakhs.

As regards the Company's expansion programme, there was a delay in the delivery of the rolling mill plant and the first consignment of the plant was shipped only in January, 1953. The entire plant has since been received and the erection is progressing satisfactorily. The delivery of the boiler was also delayed. The entire boiler plant had been shipped and was expected to be received by the end of August, 1953. The other expansions in the remelting section, alumina house, etc., have almost been completed. A new railway siding has been constructed to serve the rolling mills. The Managing Agents have taken steps to expand the works as far as finance could permit. A comprehensive expansion plan has been drawn up as recommended by the Planning Commission and has been submitted to the Government for approval.

Points From The Chair

Aluminium Consumption in India

". . . ALUMINIUM can be put to several industrial uses and, in fact, extensive use of the same is being made in most of the advanced countries of the world. The United States of America, for example, consumes 30 per cent. of her total production of aluminium for building trade, 15 per cent. for electrical industry, 20 per cent. for transport, 15 per cent. for food and chemical industry, 18 per cent. for miscellaneous and only 2 per cent. for utensils. But in India utensils account for 75 per cent. of the total production, the balance 25 per cent. being used mostly for foils and cables. Of late, lots of propaganda for extensive use of aluminium metal in different industrial fields have been made in this country through extensive advertisements, giving illustrations from various publications from large aluminium producing countries of the world. As propaganda for educating the public for industrial uses of aluminium these advertisements are excellent. But the question remains, if any of these industries exist in India today and if there is a likelihood of using any appreciable quantity of aluminium for the same in the near future. It is common knowledge that large quantities of aluminium are required for construction of aeroplanes, but have we an aircraft industry which can consume even 5,000 tons of metal per annum? The only aeroplane factory in India, i.e., the Hindustan Aircraft Limited, Bangalore, hardly uses any aluminium of indigenous produce for construction of aeroplanes and their parts. Similar is the case of other aluminium consuming industries, too."

LAKSHMIPAT SINGHANIA,
Aluminium Corporation of India Ltd.

Fair Price for Natural Rubber

"Quite a consensus in the U.S.A., while not prepared to bolster artificially the price of natural rubber produced in Malaya and Indonesia, still desire to see that products in these Eastern countries do not go out of production, an eventuality which might certainly happen, if the artificial price of Government-produced synthetic rubber, as compared with natural, was to continue indefinitely. The effect of this on the economy of these countries would open the door to communistic infiltration. The Rubber Study Group is meeting again in London, in October this time, to seek agreement as to whether a buffer stock scheme can be put into operation, especially as regards U.S. participation. From my own point of view, I doubt whether a buffer stock scheme would be successful. I believe that, in the long run, general expansion of consumption in the world in the use of rubber, whether natural or synthetic, is capable of giving both the natural and synthetic product a fair price. Restrictive measures, whatever they may be, can only be temporary palliatives."

C. C. IVESON,
Telogoredjo United Plantations, Ltd.

Shipbuilding and Rising Costs

"I am certain that the only possible policy for a company such as ours is a conservative dividend policy and the avoidance in both good times and bad of large fluctuations in dividends. With ships costing three to three and a half times as much as in 1939, provision for replacement and development has become very difficult, if we are to contribute our full quota to increased productivity and keep the tools of our trade up to date. Like all shipowners we are continually up against the problem of the present enormous cost of building new vessels, and there is clearly a limit beyond which it is quite uneconomic to build tonnage. I venture to suggest that that limit has now been reached and that unless a great effort is made by all concerned not only to halt the continuous rise in prices which we have experienced since the war but to reduce the cost of new ships, this country cannot hope to maintain for long its position as the largest shipbuilders in the world."

A. R. S. NUTTING,
Coast Lines, Limited.

Higher Productivity Wanted

"At the risk of repetition, the position remains more or less the same. We have the orders (for engines, diesel locomotives, etc.) but, because of failure to obtain licences or of lack of sterling, our despatches are restricted. These are matters that are beyond our control and we can only continue to draw attention to them. Finally, I must speak out and express the utmost concern that, in these circumstances, responsible Trade Union officials should be pressing their claim for a further wage increase. The sellers' market is gone and, surely, it is a matter of plain common sense that we will survive as an industry only by increasing productivity. What hopes have we of effecting reductions or of remaining competitive, if we are to go on paying more for the same amount of work? I feel it is my business to continue to direct attention to these matters. To my mind, they are of such vital importance that they cannot be overemphasised."

W. J. RUSTON,
Ruston and Hornsby Ltd.

Sound Foundation for Industry

"The Americans do not believe in the theory that increased production and work-loads by operators necessarily cause unemployment. On the contrary, they have proved that reduced costs result in increased purchasing power, thereby increasing the demand for the particular product. Some people in Ireland are under the mistaken opinion that, as long as there are tariff walls, the profits of inefficient factories are guaranteed and the same work-load as operates in other countries does not have to be undertaken. This cannot be a sound foundation for industry."

C. O. STANLEY,
Sunbeam Wolsley, Ltd.

Notices

THE CENTRAL INDIA SPINNING, WEAVING & MFG. CO., LTD.

NOTICE

THE SEVENTY-NINTH ORDINARY GENERAL MEETING of the Shareholders of THE CENTRAL INDIA SPINNING, WEAVING & MANUFACTURING COMPANY, LIMITED, will be held at the Registered Office of the Company, Bombay House, Bruce Street, Fort, Bombay, on Thursday the 29th October, 1953, at 4-30 p.m. (S.T.), to transact the following business:—

The Preference Share Transfer Register of the Company will be closed from 26th October to 1st November, 1953, both days inclusive.

Dividends are paid only to Registered Shareholders or their Mandatees.

By Order of the Board,
F. RANKEN,
Secretary.

63, NETAJI SUBHAS ROAD,
CALCUTTA, *1st October, 1953.*

BALMADIES PLANTATIONS LIMITED

MADRAS

NOTICE IS HEREBY GIVEN THAT THE TENTH Ordinary General Meeting of the above Company will be held at the Registered office of the Company, "Oriental Buildings," Armenian Street, Madras, on TUESDAY the 3rd November, 1953, at 4-30 p.m., to receive and adopt the Balance Sheet and Profit and Loss Account for the year ended 31st May, 1953, to elect Directors in place of those retiring, to declare Dividend on Ordinary and Preference shares and to elect Auditors for the current year.

The Share Transfer Books of the Company will be closed from 14th October to 3rd November, 1953, both days inclusive

By Order of the Board,
PLANTING AGENCIES, LTD.,
Managing Agents.

MADRAS, *30th September, 1953.*

The Directors have recommended a Dividend of 12½ per cent. on Ordinary shares and 6 per cent. on Preference shares, which if passed at the Meeting, will be paid to those Shareholders whose names are on the Company's Register on 3rd November, 1953.

THE TRAVANCORE RUBBER AND TEA COMPANY, LIMITED

(Incorporated in Travancore)

NOTICE IS HEREBY GIVEN THAT THIS Company will pay on the 30th October, 1953, to the Registered holders as at that date, a first interim Dividend of 2½ per cent. on the Ordinary Share Capital of the Company in respect of 1953 working. The Ordinary Share Transfer books will remain closed from 22nd October, 1953, to 31st October, 1953, both days inclusive.

By Order of the Board,
ASPINWALL & CO. (TRAVANCORE) LTD.,
Managing Agents.

ALLEPPEY, *30th September, 1953.*

INDUSTRIAL FINANCE CORPORATION OF INDIA

KEELING ROAD, NEW DELHI

NOTICE

NOTICE IS HEREBY GIVEN THAT A SPECIAL GENERAL MEETING of the Shareholders of the Corporation will be held at the HEAD OFFICE of the Corporation, U.S. HOSPITAL BUILDING, KEELING ROAD, NEW DELHI, on SATURDAY, the 21ST NOVEMBER, 1953, at 2-30 p.m. (Standard Time), for the purpose of electing one Director under section 10(e) of the Industrial Finance Corporation Act, 1948, to fill the vacancy caused by the retirement of Mr. R. G. Saraiya, O.B.E., one of the Directors representing Co-operative Banks on the Board of Directors of the Corporation.

V. R. SONALKER,
Managing Director.

3rd October, 1953.

GILLANDERS GROUP OF TEA COMPANIES SUSTAINS LOSS

UNITED BREWERIES EARN LOWER PROFIT

Manipur Tea Co., Ltd.

THE directors of the above Company (Managing Agents: Messrs. Gillanders Arbuthnot & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st December, 1952.

Except for drought conditions in the early part of the year, and a short period of very heavy rain during October, conditions generally were favourable for growth and operations. Hail damage was only slight, and there was fortunately no repetition of the storms which did so much damage in the previous year.

Helopeltis was more in evidence in 1952 than in the previous year, also black rot, but red spider attacks were less severe than in previous years.

The total outturn amounted to 4,363 mds. which compares with the 1951 harvest of 5,438 mds. and an estimate of 6,000 mds. The shortfall was due entirely to the indifference and indiscipline of the labourers. The directors commented on labour conditions at this garden in previous reports, and during 1952 there was no improvement. The crop was sold partly in London and partly in Calcutta, but the prices realised were unremunerative and below the cost of production. The acute recession which set in towards the end of 1951, with a catastrophic fall in prices continued throughout the greater part of 1952, and prices for common teas fell to a very low level.

The net sale proceeds realised amounted to Rs. 3,23,399 compared with the 1951 proceeds amounting to Rs. 4,99,124. The substantial drop is due partly to the shortfall in crop and partly to the lower prices obtained for the crop.

The total garden outlay amounted to Rs. 7,56,538 compared with the outlay in 1951 of Rs. 7,17,300. Labourers' wages, dearness allowance and compulsory allowances together with the cost of foodstuff concessions continued at a high level during the year and constituted a large part of the total outlay, and accounted for the greater part of the increase in expenditure. Loss on sale of rice cost As. 6.28 and dearness allowance As. 4.29 per pound of tea.

The year's working resulted in a loss of Rs. 4,80,891 (loss of Rs. 2,50,777) and after adjustment for contributions to pension and provident funds, provision for leave and passage reserve and depreciation the total loss for the year amounted to Rs. 5,27,086 (loss of Rs. 2,92,788), bringing the balance at debit in the profit and loss account to Rs. 7,93,314.

The result is very disappointing, and is due to a combination of the precipitous drop in prices and the heavy burden of expenditure on wages and concessions which this estate, together with all other estates in Cachar, continued to have to bear during 1952.

Shareholders were advised on the 7th February, 1953 that as the concessions granted by Government as a result of the Rajaram Rao Inquiry Committee's recommendations were insufficient to allow the garden to continue as an economic unit, and as the labourers had refused to accept reductions in wages and the curtailment of certain concessions, the estate had been closed down with effect from 31st December, 1952.

The property was worked on a "care and maintenance" basis for the first three months of 1953, and was re-opened towards the end of March, with a smaller and more economical labour force which had agreed to accept the scale of wages previously offered. As a result of savings made during the early part of the year, and by eliminating all other than absolutely essential expenditure, the estimated cost of production for 1953 has been reduced to a figure which is at present economic.

The directors report that there has been a welcome improvement in tea prices, and though it is early yet to say whether or not the present remunerative level will be maintained, they do not expect a recession of the same magnitude as that which started in 1951 and lasted throughout 1952.

The garden is in good condition and as long as the labour force work well the directors are confident that the crops harvested in the future will approximate very closely to the estimate, and with better leaf being plucked as a result of an improvement in discipline of the labourers the standard of manufacture from this estate will improve.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	4,20,000	Block ...	5,81,841
Reserves ...	2,50,000	Stock of tea	1,13,948
Provision for taxation ...	541	Stores, etc.	94,842
Liabilities ...	10,21,668	Debts, deposits and advances ...	72,076
		Cash ...	36,188
		Profit and loss account ...	7,93,314
Rs.	16,92,209	Rs.	16,92,209

Arcuttipore Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Gillanders Arbuthnot & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st December, 1952.

Drought conditions prevailed during the early part of the year, but from April, except for a short period in July and again in October when heavy rain hampered operations, conditions were on the whole favourable for growth. A hail storm in April caused slight damage only.

There was a severe attack of red spider in June, which was common to the district generally, and the total outturn as a consequence was affected.

The total crop harvested during 1952 amounted to 3,318 mds. of saleable tea, a decrease of 427 mds. compared with the 1951 crop which was 3,745 mds.

The crop was sold partly in Calcutta and partly through local sales at the garden, but the directors reported that prices realised were unremunerative and below the cost of production. The recession which started towards the end of 1951 with a catastrophic drop in prices continued throughout the greater part of 1952, and common teas were affected to a greater degree than the quality types.

The net sale proceeds realised amounted to Rs. 2,73,879 compared with the 1951 proceeds which amounted to Rs. 4,22,071. The drop in realisations is due entirely to the generally low level of prices obtained in 1952.

The total garden outlay amounted to Rs. 6,08,438 compared with the outlay of Rs. 5,44,854 in 1951. Labourers' wages and compulsory allowances, together with the cost of foodstuff concessions continued at a high level during 1952 and constituted a large part of the total outlay. Foodstuff concessions alone cost As. 12.94 per pound of tea.

The year's working resulted in a loss of Rs. 3,62,029 (loss of Rs. 1,44,316), and after adjustments for leave and passage reserve, contributions to provident and pension funds and depreciation the total loss for the year amounted to Rs. 3,78,059 (loss of Rs. 1,59,158), bringing the balance at debit in the profit and loss account to Rs. 6,74,430. The result is most disappointing, and is due to a combination of the precipitous drop in prices and the heavy burden of expenditure on wages and concessional foodstuffs which the estate, together with all other estates in Cachar, continued to have to bear during the greater part of 1932.

Shareholders were advised on the 2nd February, 1953 that as the concessions granted by the Government were insufficient to allow the garden to continue as an economic unit, and as the labourers had refused to accept reductions in wages and curtailment of certain concessions, the estate had been closed down with effect from 31st December, 1952.

The property was worked on a "care and maintenance" basis for the first three months of 1953, and was re-opened towards the end of March, with a smaller and more economical labour force which had agreed to accept the scale of wages previously offered. As a result of savings made during the early part of the year, and by eliminating all other than absolutely essential expenditure, the estimated cost of production for 1953 has been reduced to a figure which is economic.

The directors report that there has been a welcome improvement in tea prices, and though it is too early to say whether or not the present remunerative level will be maintained, they do not expect a recession of the same magnitude as that which started in 1951 to occur again.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	3,00,000	Block ...	3,31,569
Reserves ...	1,75,000	Stock of tea	1,23,770
Liabilities ...	8,34,409	Stock of tea sweepings	5,250
		Stores ...	69,282
		Debts, deposits and advances ...	91,227
		Cash ...	13,881
		Profit and loss account ...	6,74,430
Rs.	13,09,409	Rs.	13,09,409

Taipoo Tea Association, Ltd.

The directors of the above Company (Managing Agents: Messrs. Gillanders Arbuthnot & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st December, 1952.

Weather conditions generally were favourable throughout the year; the total rainfall of 145 inches compared with the total rainfall in 1951 of 105 inches, being well distributed over the season. Red spider was less in evidence than in previous years, and no other blights were reported. The total outturn amounted to 5,115 mds. of saleable tea compared with 4,867 mds. manufactured in 1951. The crop was sold partly in London and partly in Calcutta, but the prices realised were on the average lower than the prices paid for the Company's teas in 1951. The acute recession which set in towards the end of 1951, with the catastrophic drop in prices, continued throughout the greater part of 1952, and both in London and Calcutta the prices realised for common teas were below the cost of production. There was an improvement towards the end of the season and prices in London in particular appreciated to more remunerative levels, but the improvement came too late to make any appreciable difference to offset the losses sustained earlier in the season.

The net sale proceeds realised and estimated amounted to Rs. 4,98,943 compared with the 1951 proceeds amounting to Rs. 5,24,880. The short fall in sale proceeds is due to the lower sale average prices realised.

The total garden outlay amounted to Rs. 5,28,848 compared with the outlay in 1951 of Rs. 4,86,511. The increase in outlay is on account of the additional crop and because of the higher rate of dearness allowance, introduced under the Minimum Wages Act in 1951, being applicable throughout the whole of 1952. Labourers' wages, dearness allowance and compulsory allowances together with the cost of foodstuff concessions constituted a large part of the total outlay, As. 5.96 per pound out of a total garden expenditure of As. 20.68 per pound.

The loss for the season's working amounted to Rs. 59,391 (loss of Rs. 15,549) and after adjustments for contributions to pension and provident funds, provision for leave and passage and depreciation the total loss for the year amounted to Rs. 1,10,616 (loss of Rs. 60,955). After an adjustment on account of 1951 the balance carried forward as a debit to the profit and loss account was Rs. 1,06,327 (debit of Rs. 26,834). The directors reported that they cannot recommend the payment of a dividend for the year. The result is most disappointing and is due entirely to the recession in prices, together with the heavy burden of expenditure on wages and concessions imposed on the industry by statute.

The directors advised the shareholders that as a result of constant representations to the Provincial and Central Governments, the West Bengal Government, after a tripartite conference in January 1953 agreed that tea estates in the Province would be permitted to sell rice at Rs. 15 per md., and also to the complete abolition of the issue of other foodstuffs. Although a cash payment in the form of dearness allowance has had to be given in lieu of the increase in the sale price of rice, there is a substantial overall saving. The directors have budgetted only for expenditure on essential works during 1953, and it has been possible to reduce the cost of production to an economic level.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	5,00,000	Block ...	6,26,176
Reserves ...	1,55,000	Stock of tea	1,98,296
Provision for taxation ...	1,10,989	Stores, etc.	2,27,950
Liabilities ...	5,12,812	Debts, deposits and advances ...	1,17,845
		Cash ...	2,207
		Profit and loss account ...	1,06,327
Rs.	12,78,801	Rs.	12,78,801

Selimbong Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Gillanders Arbuthnot & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st December, 1952.

The weather conditions in 1952 were normal throughout the year except for August and September when the hours of sunshine were low. The total rainfall measured was 107.80 inches compared with 100.42 inches in 1951. The garden suffered from thrip at the time of the second flush, and blister blight was very prevalent in August and September.

The crop for 1952 weighed out at 1,956 mds. which compares with the 1951 harvest of 2,401 mds. The shortfall is due partly to spells of unfavourable weather conditions and partly to a change in plucking routine which was deemed necessary to conserve the health of the bushes. Practically all the crop was sold in Calcutta, a small portion only having been shipped to the U.K. for sale in auction.

The recession which started towards the end of 1951 continued throughout 1952, and prices realised in auction were poor bearing no relation to the intrinsic value of the tea sold. It affords some satisfaction to record that the average price in Calcutta auction was As. 5 above the district average, and was higher than that of the previous year which augurs well for the future.

The net sale proceeds realised and estimated amounted to Rs. 3,20,557 compared with Rs. 3,65,491 in 1951. The drop in sale proceeds is entirely due to the smaller crop harvested.

The total garden outlay in 1952 amounted to Rs. 3,85,129 which compares with the outlay in 1951 of Rs. 3,84,543.

The year's working resulted in a loss of Rs. 99,065 (loss of Rs. 36,072) and after taking into account leave and passage reserve, depreciation and contributions to provident and pension funds the net loss amounted to Rs. 1,29,016 which compares with the net loss in 1951 of Rs. 64,643. After adjustments on account of 1951, there was a balance at debit of Rs. 1,74,852 in the profit and loss account, and the directors reported that it was not possible to recommend a dividend on account of 1952 working. The 1952 result was most disappointing, due to causes, over which the directors have had no control. Market conditions have recovered, and the prices which have so far been paid for 1953 teas, for this garden have been satisfactory.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	3,00,000	Block ...	4,35,274
Reserves ...	1,15,000	Stock of tea	94,785
Provision for taxation ...	14,043	Stores, etc.	1,08,297
Liabilities ...	4,73,804	Debts, deposits and advances ...	80,371
		Investments	301
		Cash ...	8,967
		Profit and loss account ...	1,74,852
Rs.	9,02,847	Rs.	9,02,847

Betjan Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Gillanders Arbuthnot & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st December, 1952.

The total crop harvested during the year was 8,231 mds. compared with 8,425 mds. cropped in 1951, the decrease being due to unfavourable conditions.

The major portion of the crop was sold in Calcutta, only 2,194 mds. having been shipped to the U.K. for sale in auction. The recession in prices which set in towards the end of 1951 continued throughout the greater part of 1952 and both in Calcutta and London all types of tea sold for prices which were near to or under the cost of production. After Christmas 1952 prices improved, and the teas sold in later auctions realised satisfactory prices. The improvement unfortunately came too late to offset the uneconomic prices obtained for the Company's teas earlier in the season.

The net sale proceeds realised and estimated amounted to Rs. 10,25,798, compared with Rs. 11,16,414, in 1951, a substantial drop due to the lower sale average and smaller crop.

The total garden outlay amounted to Rs. 10,36,277 which includes Rs. 2,69,344 on account of dearness allowance to labour and loss on the sale of rice, compared with Rs. 9,05,173 incurred in 1951.

With effect from the 30th March, 1952 the Government introduced the Minimum Wages Act, the result of which was to increase still further the very high rate of wages already being paid to labour without giving any alleviation to the burden of concessional foodstuffs and compulsory allowances which remain at an unreasonably high level.

The directors reported that the working for 1952, resulted in a loss of Rs. 69,198 (gross profit of Rs. 1,51,733) and after taking into account leave and passage reserve, depreciation and contributions to provident and pension funds, the net loss amounted to Rs. 1,03,377 which compares with the amounted to Rs. 1,03,377 which compares with the gross profit in 1951 of Rs. 1,51,733. After adjustments on account of 1951 and taking into account a carry forward of Rs. 54,942 (after declaring 15 per cent. dividend for 1951), there was a balance at debit of Rs. 37,182 in the profit and loss account, and the directors reported that it was not possible to recommend a dividend on account of 1952 working.

The result of the season's working is most disappointing and is due to the combination of two causes, the depression in the market which affected the industry generally so acutely in 1951 and 1952, and the higher costs of production attributable to the continuance of inflated wage scales. By effecting economies at the garden the directors have been able to reduce the estimated cost of production for 1953, which they trust will be reflected in the working results of the season.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	3,20,000	Block ...	7,03,606
Reserves ...	4,90,000	Stock of tea	4,61,129
Provision for taxation ...	31,462	Stores, etc.	1,49,588
Liabilities ...	6,53,600	Debts, deposits and advances ...	1,31,015
		Cash ...	12,542
		Profit and loss account ...	37,182
Rs.	14,95,062	Rs.	14,95,062

United Breweries Ltd.

The directors of the above Company (Chairman: Mr. Vittal Mallya, Bangalore) submitted the audited accounts of the Company for the 38th year, which ended on the 31st March, 1953.

The working of the Company for the year, resulted in a profit of Rs. 2,53,231 (profit of Rs. 3,18,325) from which was deducted Rs. 25,062 (Rs. 63,177) for depreciation, leaving a balance of Rs. 2,28,169 (Rs. 2,55,158). After adding the unappropriated profit brought forward from the previous year of Rs. 3,951 (Rs. 884) there was an available sum of Rs. 2,32,120 (Rs. 2,56,042) the directors paid an interim dividend at the rate of Rs. 7-8 (Rs 7-8) per share, free of income-tax, on 28th February, 1953, Rs. 60,000 (Rs. 60,000), second interim dividend at the rate of Rs. 7-8 (Rs. 7-8) per share, free of income-tax, on 29th August, 1953, Rs. 60,000 (Rs. 60,000) leaving a balance of Rs. 1,12,120 (Rs. 1,36,042). The directors have written off from investments Rs. 80,159 and carried forward Rs. 31,961 (Rs. 3,951).

In view of the payment of a second interim dividend equivalent to the usual final dividend, the directors did not recommend any final dividend. No provision was made for taxation since the provision made in previous years is sufficient to cover the liability for taxes on the profits of the year under review.

The full effect of the enhancement of the excise duty in Mysore State mentioned in last year's report was felt during the year under review, and this, coupled with the general recession in trade, caused a drop in the sales of both bulk and bottled beers. Further plant and equipment were installed during the year.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	6,00,000	Block ...	6
Reserves ...	9,00,000	Stock-In-trade	24,376
Provision for taxation ...	1,25,738	Stores, etc. ...	2,88,229
Liabilities ...	4,41,994	Debts, deposits and advances ...	15,842
Profit and loss account ...	31,961	Investments	17,48,422
		Cash ...	22,818
Rs.	20,99,693	Rs.	20,99,693

Pench Valley Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Shaw Wallace & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the half-year ended 28th February, 1953.

The Company's profit for the half-year after the inclusion of the amount brought forward of Rs. 31,995 (Rs. 15,740) was Rs. 4,12,397 (Rs. 2,88,544). After making provision for taxation of Rs. 1,66,868 (Rs. 1,18,007), there remained a balance of Rs. 2,45,529 (Rs. 1,70,537). Out of this sum the directors placed to development reserve Rs. 1,00,000 (nil), and made payment of a dividend at the rate of 15 (12½) per cent. per annum, free of income-tax, absorbing Rs. 1,18,125 (Rs. 98,438), leaving to be carried forward Rs. 27,404 (Rs. 22,099).

Output and despatch of steam and other grades of coal for the last three half-years are as follows:

Half-year ended	*Raisings* Tons	*Despatches* Tons
28th February, 1953	2,10,704	2,04,748
31st August, 1952	1,97,226	2,00,821
29th February, 1952	2,07,139	2,04,969

Raisings and despatches during the half-year showed a slight improvement and this is likely to be maintained provided sufficient wagons are made available by the railways. Heavy capital expenditure has been planned for mechanisation and development and with this object in view a lakh of rupees has been transferred to development reserve during the half-year.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	15,75,000	Block ...	13,00,000
Reserves ...	9,87,919	Stock of coal	1,03,740
Provision for taxation ...	3,25,000	Stores ...	9,94,891
Liabilities ...	14,92,498	Debts, deposits and advances ...	15,47,291
Profit and loss account ...	27,404	Investments	4,07,240
		Cash ...	54,659
Rs.	44,07,821	Rs.	44,07,821

Hasimara Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Davenport & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st December, 1952.

During 1952 the tea industry in general in North-East India experienced the most serious crisis within experience and the Dooars and Darjeeling districts suffered particularly. Every effort was made to improve the standard of teas produced, but with common teas difficult to sell even at As. 14 a pound during the height of the season, a substantial part of the crop was sold below the cost of production.

The net average sale price fetched in the Hasimara division during the year was As. 20.53, as against As. 25.82 in 1951. The total working cost per pound of tea produced was As. 21.00, as compared with As. 20.25 in the previous year. The net average sale price in the Tumsong division was As. 28.70, and cost per pound of tea As. 40.75, as compared with As. 28.81 and As. 30.85, respectively in 1951.

Smaller crops were made as a result of the improved standards of plucking, the total being 61,60,024 pounds, compared with 65,44,406 pounds in 1951, and this reduction was reflected in the increased costs of production per pound of tea, despite the strictest possible economy.

In the circumstances described in the report for 1951, expenditure incurred during the year amounted to Rs. 15,34,323 and it is estimated that expenditure in 1953 on completion of capital projects already in hand will amount to Rs. 1,70,000.

The liquidation of the Tumsong Tea Co., Ltd. was completed during the year. Pursuant to section 152(3) of the Indian Companies Act, no remuneration or other emoluments were received by the directors of the Company by virtue of their being directors of the subsidiary company.

The revenue loss for the year was Rs. 2,91,530 (gross profit of Rs. 30,89,410) and to this has to be added Rs. 3,66,022 (Rs. 3,55,613) for depreciation of assets. A further Rs. 6,80,347 (Rs. 6,32,686) was incurred on replacement of assets and against this, Rs. 2,00,000 (nil) have been transferred from welfare reserve and Rs. 5,00,000 (nil) from renewals and additions reserve. Allowing for these and the other adjustments shown, there was a final loss for the year of Rs. 5,90,382 (credit of Rs. 10,92,502) and a final debit balance of Rs. 2,48,880 (credit of Rs. 3,41,502 after payment of 15 per cent. dividend and other provisions) which was carried forward to 1953.

Estimates for 1953 are based on a crop of 75,774 maunds of tea at a total cost of Rs. 70,34,518. These estimates are based on the labour wages at present in force, and on the strictest economy; continuance of this reduced level of expenditure would not be in the best interests of the maintenance of the estates.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	35,00,000	Block ...	58,50,929

CLIVE MILLS CO., LTD. Annual General Meeting, Calcutta, 12th October, 1953. Transfer books closed from 1st to 12th October, 1953, both days inclusive.

PATHEMARA TEA CO., LTD. Annual General Meeting, Calcutta, 13th October, 1953. Dividend: *Nil*. Transfer books closed from 9th to 13th October, 1953, both days inclusive.

GROB TEA CO., LTD. Annual General Meeting, Calcutta, 13th October, 1953. Dividend: Rs. 2 per "A" ordinary share and Re. 1 per "B" ordinary share. Transfer books closed from 9th to 13th October, 1953, both days inclusive.

HANTAPARA TEA CO., LTD. Annual General Meeting, Calcutta, 20th October, 1953. Dividend: *Rs. 2-8 per share. Transfer books closed from 8th* to 20th October, 1953, both days inclusive.

ELLORE ELECTRIC SUPPLY CORPORATION LTD. Annual General Meeting, Madras, 22nd October, 1953. Dividend: As. 12 per share. Transfer books closed from 8th to 22nd October, 1953, both days inclusive.

INDIA CEMENTS LTD. Annual General Meeting, Madras, 24th October, 1953. Dividend: *Nil*. Transfer books close from 12th to 24th October, 1953, both days inclusive.

PUTHUTHOTAM ESTATES (1943) LTD. Annual General Meeting, Pollachi, 25th October, 1953. Dividend: As. 5-3/5 per ordinary share. Transfer books close from 17th to 25th October, 1953, both days inclusive.

JUBBULPORE ELECTRIC SUPPLY CO., LTD. Half-yearly General Meeting, Calcutta, 26th October, 1953. Dividend: As. 8-2/5 per share (including additional payment of As. 2 per share). Transfer books close from 20th to 26th October, 1953, both days inclusive.

INDIAN CITY PROPERTIES LTD. Annual General Meeting, Calcutta, 26th October, 1953. Transfer books close from 14th to 26th October, 1953, both days inclusive.

PARASEA COLLIERIES LTD. Half-yearly General Meeting, Calcutta, 27th October, 1953. Transfer books close from 20th to 27th October, 1953, both days inclusive.

GUZDAR KAJORA COAL MINES LTD. Half-yearly General Meeting, Calcutta, 27th October, 1953. Transfer books close from 19th to 27th October, 1953, both days inclusive.

NEW BANSDEOPUR COAL CO., LTD. Half-yearly General Meeting, Calcutta, 27th October, 1953. Transfer books close from 19th to 27th October, 1953, both days inclusive.

PURE SITALPORE COAL CONCERN LTD. Half-yearly General Meeting, Calcutta, 27th October, 1953. Transfer books close from 19th to 27th October, 1953, both days inclusive.

SHREE MAHAKALI COAL MINES LTD. Half-yearly General Meeting, Calcutta, 27th October, 1953. Transfer books close from 19th to 27th October, 1953, both days inclusive.

BENGAL COAL CO., LTD. Half-yearly General Meeting, Calcutta, 29th October, 1953. Dividend: Rs. 17-8 per share (including bonus of Rs. 7-8 per share). Transfer books closed from 8th to 29th October, 1953, both days inclusive.

PENINSULAR PLANTATIONS LTD. Dividend of Re. 1-8 per share, for the year ended 28th February, 1953. Transfer books close from 11th to 20th October, 1953, both days inclusive.

NEW BEERBHOOM COAL CO., LTD. Half-yearly General Meeting, Calcutta, 29th October, 1953. Dividend: As. 8 per ordinary share. Transfer books closed from 8th to 29th October, 1953, both days inclusive.

TALAYAR TEA CO., LTD. Dividend of As. 10 per ordinary share, for the year ended 31st March, 1953. Transfer books close from 24th October to 7th November, 1953, both days inclusive.

RANE (MADRAS) LTD. Dividend of Rs. 20 per ordinary share, for the year ended 31st March, 1953. Transfer books closed from 1st to 15th October, 1953, both days inclusive.

CENTRAL SCIENTIFIC SUPPLIES CO., LTD. Dividend of As. 8 per ordinary share, for the year ended 31st March, 1953. Transfer books close from 12th to 24th October, 1953, both days inclusive.

DHUNSERI TEA CO., LTD. Annual General Meeting, Calcutta, 19th October, 1953.

COMPANY REGISTRATIONS

MINERAL WEALTH OF INDIA LTD. (First Director: Mr. C. Didwania.) Business: Exporters, Importers and Dealers in Ores, Metals and Minerals. Authorised capital: Rs. 5,00,000. Private company. Address: Seksaria Chambers, 139, Medows Street, 1st Floor, Fort, Bombay.

SUTRAMDAS (INDIA) LTD. (First Director: Mr. R. Sutramdas.) Business: Spinners, Weavers, Coirmakers, Silk Mercers, Silk Weavers, etc. Authorised capital: Rs. 5,00,000. Private company. Address: 5th Floor, United India Building, Sir Phirozshah Mehta Road, Fort, Bombay.

STATE LOANS IN GOOD FORM

(From Our Own Correspondent)

BOMBAY, 7th October

The short-term money market experienced fairly comfortable conditions during the week under review. There was not much of a demand for funds. Up-country demand was noted to a small extent, but, in the absence of any large-scale movement of the new crop, there was no trace of stringency creeping in. Inter-bank call money was, therefore, placed at a slightly lower rate than in the previous week. Exchange banks and big Indian banks did business at 1½ to 1¼ per cent., though occasionally lenders were able to obtain 1½ per cent. Smaller Indian banks were not prepared to pay more than 2¼ per cent.

Banks were more interested in period money which was bid up to 2½ per cent. for one month, 2¼ per cent. for 2 to 3 months and 2¾ per cent. for 4 months and over. House money fetched 2¼ per cent.

There was no change in the three months' Government of India Treasury Bill rate which stood at Rs. 2-6-8 per cent. per annum this week also. The amount offered against the usual tenders for Rs. 1.50 crores was lower at Rs. 2.01 crores, as against Rs. 2.51 crores in the previous week.

The statement of affairs of the Reserve Bank of India for the week ended 2nd October, 1953, as compared with that for the previous week, discloses an expansion of Rs. 1.86 crores, as against a fall of Rs. 10.13 crores noted in the previous week. Notes held in the Banking Department are lower by Rs. 1.47 crores, so that the total notes issued are higher by only Rs. 38.88 lakhs which is covered by a similar rise in rupee coin. A decline of Rs. 11.87 crores is noted in Central Government deposits and a rise of Rs. 7.96 crores in those of State Governments. Deposits of banks also show a rise of Rs. 3.17 crores. On the assets side, cash balances record a shrinkage of Rs. 1.56 crores, while balances held abroad are better by Rs. 1.71 crores.

The Scheduled Banks' statement for the week ended 25th September, 1953, reveals a rise of Rs. 3.06 crores in demand deposits and Rs. 51.69 lakhs in time deposits. Inter-bank borrowings, borrowings from the Reserve Bank and those from the Imperial Bank show very insignificant changes. The declining trend in advances persists, as witness the further drop of Rs. 3.07 crores in loans, cash credits and overdrafts and of Rs. 47.15 lakhs in bills purchased and discounted. Investments are higher by Rs. 71.17 lakhs. Cash on hand and balances with the Reserve Bank are together better by Rs. 3.36 crores, balances with other banks by Rs. 74.55 lakhs and money at call and short notice by Rs. 74.03 lakhs.

The most notable feature of the activity in the Gilt-edged market during the week was the keen demand for the 4 per cent. State Loans which, as a result, rose by As. 2 to As. 8, the sharpest rise having been in Bombay 1964 loan. Business in the Central Government loans did not reveal any appreciable increase, though most of the dated loans experienced enquiry. The undertone remained very steady. Among the Central loans, 3 per cent. 1957, 3 per cent, 1958 and 3 per cent. 1959-61 held their ground at Rs. 98-7, Rs. 98-2, and Rs. 96-1, respectively, 3 per cent. 1963-65 and 3 per cent. 1964 too were maintained at Rs. 92-8, 3 per cent. 1966-68 was in request at Rs. 90-1 *ex-voucher*, as against Rs. 90-2 *cum-voucher* last week. 3 per cent. 1970-75 was marked up by an anna to Rs. 86-9, following the stepping up of the selling rate by the Reserve Bank. 3 per cent. 1986 Conversion Loan had sellers and receded by an anna to Rs. 82-2. 3½ per cent. 1961 National Plan Bonds were unchanged at Rs. 98-7.

Among the State Loans, 4 per cent. 1963 Bombay advanced by As. 6 to Rs. 101 due to good demand and absence of sellers. 4 per cent. 1963 Madras rose by As. 2 to Rs. 99-15, M.P. and U.P. loans by As. 3 each to Rs. 99-11, 4 per cent. 1964 loans met with good buying at hardening rates. The Bombay Loan went up by As. 8 to Rs. 101-2, Madras by As. 3 to Rs. 99-14, U.P., by As. 2 to Rs. 99-12 and West Bengal by As. 6 to Rs. 100-10.

In the foreign exchange section, the rupee gained a fractional strength in terms of the U.S. dollar, banks' selling rate for ready being quoted half a rupee better at Rs. 478½ per $100 and buying rate a quarter higher at Rs. 474¼. In New York, spot sterling was cheaper, having declined from $2.80-3/16—$2.80-5/16 on 28th Sept. to $2.80—$2.80-1/16 on the 6th inst. The forward rates, however, revealed no change over the week at $2.79½—$2.79¾ for three months and at $2.79¼—$2.79½ for six months.

KANPUR HIDES FEATURELESS

(From Our Own Correspondent)

KANPUR, 4th October

During the week under review the conditions of the local hides and skins market were drab and featureless. The supply and demand position was more or less similar to that in the previous week, except for the fact that there was a greater demand for the superior grade buff. The local tanners were the main buyers. The latest quotations are as follows:—

Wet salted cow I grade heavy at Rs. 360, wet salted cow I grade medium at Rs. 280, wet salted cow II grade heavy at Rs. 300, and wet salted cow II grade medium at Rs. 180 per score; wet salted buff I grade at 2 lbs., and wet salted buff II grade at 2 lbs. 12 ozs. per rupee; goat skins I grade at Rs. 300 and goat skins II grade at Rs. 250 per 100 pieces.

GOLD WEAK

(From Our Own Correspondent)

BOMBAY, 7th October

Trading on the Bullion Exchange during the week was characterised by a further sharp fall in the price of gold and an irregular narrow movement in silver. The recession in the price of gold noted in the previous two weeks developed into a minor landslide during the week under review, when, at one time, the yellow metal touched a low of Rs. 81-13 (for forward), the lowest for the last nearly 10 months. Though there was some improvement later, the decline over the week was Rs. 2-2, thus taking the price down by nearly Rs. 5 per tola in the last three weeks. Larger arrivals of the metal with no corresponding improvement in the offtake, the heavy fall in the price of gold in the world free markets, weaker advices from the commodity markets were the chief factors that unnerved the speculators. Further, the reported opinion of the Advocate-General on the proposed amendment of the by-law of the Bullion Association would also appear to have induced further selling pressure.

The Advocate-General is reported to have expressed the view that if the by-laws with regard to restricting penalty in auction, in the event of non-delivery of the bars, are properly made, there should be no legal difficulty. The Board of the Bullion Association met to-day to consider the opinion of the Advocate-General and make suitable changes in the framing of the by-law.

Silver for forward delivery (23rd October settlement) opened at Rs. 152-5 and declined on Thursday to a low of Rs. 151-2, the lowest since 3rd August last, in sympathy with the weakness of gold. At the lower level some bear covering and replacement buying due to an improvement in offtake lifted up the price to Rs. 152-12 on Monday this week. But renewed weakness in gold and apprehensions about the proposed amendment of the by-law caused a recession to Rs. 151-10. This morning, there was a smart recovery to Rs. 153-5 before the reported opinion of the Advocate-General brought the price down to Rs. 152-10 at the close.

Ready silver (.996 Mint) was on par with the forward rates, closing at Rs. 152-10, as against Rs. 152-15 last week. The floating stocks of silver are placed at 2,200 bars. The daily average offtake is 25 bars.

Gold for forward delivery (22nd October settlement) began at Rs. 84-5 and slipped down successively yesterday to Rs. 81-13, the lowest level since 29th December, 1952. To-day there was a minor recovery to close at Rs. 82-7.

Ready gold, which commanded a premium of Re. 1-6 (at Rs. 85-15) over the forward at the close of last week, came to be done at a premium of Re. 1-2 (at Rs. 83-9) to-day. The floating stocks of gold are estimated at 25,000 tolas. The daily average arrivals are 6,000 tolas, while the offtake is no more than 3,000 tolas on an average.

In Europe, the international free market price of gold fell from $36.25 on 28th September to $36.10 yesterday.

The following comparative table shows the trend of the market during the week under review:

	7-10-53	Highest	Lowest	29-9-53
GOLD	Rs. a.	Rs. a.	Rs. a.	Rs. a.
Ready (.99 fine Mint)	83 9	86 0	82 15	85 15
Forward	82 7	84 10	81 13	84 9

SILVER				
Ready (.996 fine Mint)	152 10	153 5	151 2	152 15
Forward	152 10	153 5	151 2	152 15
London Ready ..	74d.	—	—	74d.
London Forward ..	74d.	—	—	74d.
New York Ready ..	85½c.	—	—	85½c.

MADRAS KIP RULES WEAK

(From Our Own Correspondent)

MADRAS, 5th October

The kip market ruled weak during the week under review. Arrivals were moderate, and clearances small. Demand from U.K. was poor and importers were asking lower prices. Sellers were following a wait and see policy. As raw prices ruled steady, tanners were not ready to meet the buyers' ideas, but eventually will have to follow London levels.

The Shoe and Leather Fair takes place in London from the 5th to 9th instant, and if leather buyers show some active interest, prices may take an upward curve shortly.

Shipment business in tanned skins was small, and prices of tanned goat skins declined by As. 2 per lb., as also tanned sheep. There was good clearance of sheep in the local bazaar.

It is reported that at the instance of the Agricultural Marketing Adviser to the Government of India, the Council of Scientific and Industrial Research has decided to set up a control laboratory at the Central Leather Research Institute at Madras, where analysis of leather samples for fixing up standards for East Indian tanned leather would be undertaken with a view to preventing export of adulterated tanned leather from India. It has also been decided by the Government of India that only East Indian tanned leather bearing "Agmark" label, accompanied by certificates of grading, will be allowed to be exported. The proposed control laboratory will be financed by the Agricultural Marketing Adviser.

SUBDUED TONE IN COTTON

(From Our Own Correspondent)

BOMBAY, 7th October

For cotton, the first week of October has been one devoid of any important development. The only exception to this was the Government's clarification that the quota of 1,75,000 bales of short-staple cotton released for export is not final but provisional and that a supplementary quota might be announced at a later date, when a more reliable estimate of the new season's production was available. All further developments in the cotton market whether these be bearish or bullish in spot or forward trading will now depend not so much on internal factors but on the prospects and the pattern which might emerge for the textile industry in the country. If there is a genuine switch-over from fine and superfine cloth to coarse and medium varieties, a greater demand for Indian cotton will be in evidence. In this case a fair support will be forthcoming in both the markets at Sewri and Kalbadevi as this pattern becomes clearer. On the other hand, a transfer from superfine to fine will only affect the quality of imported cotton. This process appears to be in evidence inasmuch as India which has generally concentrated on Karnak in the Alexandria market is now paying more attention to Ashmouni and Giza 30. Such a change will not affect the price level of Indian cotton.

Similarly, the whole question of excise duty on cloth for internal consumption and export duties on shipments of cloth going abroad will very likely shape the price structure of Indian cotton. With export duties at the present level, the target for exports can never be reached. We are losing a good bit of the market in Burma. Competition elsewhere is also growing. Exports, so far, for the first nine months of the year, amount to barely half the quantity of the target of 1,000 million yards. Unless there is a drastic cut in the export duties there is no possibility of reaching even the 800-million yard mark. While there is an attempt to belittle the complaints about rising stocks of cloth with the mills in the country, it has to be admitted, even by those not very sympathetic towards the textile industry, that the offtake is poor and this is not likely to improve till either prices are slashed severely or the excise duty is reduced. The mills have already cut prices and this may not mean actual sacrifice on their part inasmuch as cotton prices have gone down during recent months. But a further reduction will be necessary to encourage the disposal of increased production of cloth during the year. This can come now only from a reduction in the excise duty.

While good business has been reported during the week in the delivery contract by some mills this has not been of such a magnitude as to create confidence which is lacking in the cotton market. The only hope now lies in the fact that the Government would be very unwilling to see any reduction in output just at present when the main problem before it is that of unemployment. To maintain output at the present level Government would have to help in making cloth more easily saleable both within the country and abroad. This consideration might lead to a cut in the export and excise duties on cloth thus creating a greater demand for cotton.

There is a feeling of disappointment in the market with regard to the Government's refusal to reduce export duty on cotton. The very fact that quotas for qualities other than Bengal remained unutilised would have gone to convince the authorities that the duty of Rs. 400 per candy on Dholleras, Kalagins and Oomras is acting as a deterrent to the disposal of the stocks of such cotton. In fact but for the reimposition of export duty on Deshi cotton by the Pakistan Government just when India's cotton policy was being formulated, the Government of India would have allowed an appreciable reduction in this duty when fresh quotas were announced. Demand for this cotton has somehow remained poor both here and at Karachi and it is quite likely that when the Government come to perceive that exports at present rates are not possible, it might reconsider its decision in this respect.

Partly due to holidays and partly because of subdued activity, fluctuations in the forward market during this week have been within comparatively narrow limits. The price is likely to stabilise about Rs. 614 to Rs. 615 because a Rs. 5 difference either way brings support or liquidation. This is a good sign considering the wayward course the market has pursued so far. The future price trend will follow, as already indicated above, the developments in the cloth and yarn markets. In the spot section also, activity was subdued. Mills are naturally reluctant to increase their commitments at present either with regard to imported cotton or Indian styles in view of the uncertainty attending their own future. This hand-to-mouth buying is likely to continue for some time, till a clearer picture with regard to the offtake of cloth and the varieties which are likely to be in demand emerges after the *Pooja* and the *Diwali* holidays. The consistent fall in prices at New York has also come to influence the mills' buying of any cotton just now as, after all, New York does provide the basis for world cotton trade.

I.C.C. February opened the week at Rs. 612 and under selling pressure reached to Rs. 609½ on 6th instant. There was some recovery to-day when it touched Rs. 616. But it soon gave way and declined to Rs. 612¼. I.C.C May opened the week at Rs. 614½ and fluctuated between Rs. 619½ and Rs. 613½ before finishing the week at Rs. 616½. The following is the trend of prices over the week ended to-day:

	Opening	High	Low	Closing
I.C.C. Feb (Rs.) ...	612	616	609½	612¼
I.C.C. May (Rs.) ...	614½	619½	613½	616½

The following are the latest available quotations from the Sewri market: Bengal *Deshi* Rs. 585; Berar Jarilla Rs. 680; Khandesh Rs. 770; Vijay Rs. 850; Oomra *Deshi* Rs. 580; Moglai Rs. 580.

At Karachi it is not yet known what the Government's plans would be to encourage exports. Trade agreements with various countries are all very well, but complications are bound to arise in implementing these. Karachi has already found this in connection with Japan. There is a slight increase in the interest evinced by certain Continental centres, especially Germany, in some of the Pakistan varieties, but on a parity Pakistan cotton is dearer than the similar cotton from the U.S. Brazil is making a fair bid to capture some of the Continental markets and this can be to a certain extent at the expense of Karachi. The following are the latest available quotations from Karachi:

Old crop Sind *Deshi* Rs. 61; 4F Punjab R.G. Rs. 54; S.G. Rs. 59; L.S.S. Punjab R.G. Rs. 58; S.G. Rs. 62½; N.T. R.G. Rs. 63½; S.G. Rs. 67½; 289 Punjab R.G. Rs. 63½; S.G. Rs. 68½; new crop N.T. R.G. Rs. 64½ to Rs. 65; S.G. Rs. 68½ to Rs. 68½.

Curiously enough the activity at Alexandria continues to be brisk. When all other markets in the world are cutting prices, the Egyptian Government has been actually able to raise its prices. The Continental countries and Japan have remained persistent buyers and shippers who have already promised early shipment are finding it difficult to fulfil this. It may be that in spite of this strong position, New York prices are bound to affect the position at Alexandria sooner or later and the Indian mills who appear to be in a hurry to secure Egyptian cotton would do well to wait for some time till the Uganda new crop comes on the market in November, especially now that some supplies of 'S' and 'L' Sudans have been secured by some mills. There is also a possibility of the export tax being revised.

At New York, the trend has been persistently bearish especially in the early deliveries. There has been a good deal of liquidation in these and hedge selling to a certain extent was also responsible for the downward trend. A new trend might emerge after the official estimates due to be announced this week. Indian mills are not actively interested in U.S. cotton at present. But the quotations in New York have a certain degree of theoretical interest for this inasmuch as the world markets are guided to a very large extent by the working of the various U.S. markets.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

(In cents per lb.)

	6-10-53	28-9-53	22-9-53
Spot	33.25	32.81	32.84

ART SILK YARN QUIET

(From Our Own Correspondent)

BOMBAY, 7th October

On rumours that the Art Silk Yarn Merchants Association had been granted licences for import of art silk yarn worth Rs 1.5 crores, the art silk yarn market ruled easy during the earlier part of the week. The trend was further aided by reports of continued absence of demand from almost all consuming centres and by a decline in the price of cloth and yarn. The sentiment in the market was also affected by the weakness of other commodity markets in the city. Consequently, yarn values registered sharp recessions. But, subsequently, the low levels attracted some buying support. The short-covering which followed lifted the prices. In the futures section, as a result, earlier losses were partially recovered. The spot quotations were, however, generally steady on limited stocks, restricted arrivals and non-materialisation of a reduction in prices of Japanese and Italian yarns as expected early.

In the forward section 150D October, which opened at Rs. 702, as against Rs. 738, declined to as low as Rs. 680, before improving to close at Rs. 702. 150D November delivery, which commenced at Rs. 698 on 1st October, was done steadier at Rs. 707. 120 Japan was unchanged today at Rs. 4-0-6, while 150 Japan gained an anna to As. 4. 120 Italy was quiet at Rs. 3-14, whereas 150 Italy lost As. 5 to Rs. 3-8-6.

The staple fibre yarn moved in sympathy with art silk yarn. 40 x 2 October declined from Rs. 648 to Rs. 625 on the 30th ultimo, on heavy unloading. But, on fresh support at this level, the rate shot up to as high as Rs. 658, before closing at Rs. 648. November delivery, trading in which was started on 1st October at Rs. 611, improved to close at Rs. 633.

The table below gives the prices of art silk yarn and staple fibre yarn quoted to-day, as compared with those on the 29th ultimo and 23rd ultimo.

	7-10-53	29-9-53	23-9-53
Art silk yarn	Rs. a.	Rs. a.	Rs. a.
150 October (per case of 200 lbs.)	702 0	738 0	753 0
120 Japan (per lb.)	4 0½	4 0½	4 0½
150 Japan	4 0	3 15	4 0
120 Italy	3 14	3 14	4 0
150 Italy	3 8½	3 13½	3 12½
Staple fibre yarn			
2/40s October (per case of 200 lbs.)	648 0	648 0	659 0

GROUNDNUTS STEADY

(From Our Own Correspondent)

BOMBAY, 7th October

The oilseeds market presented a mixed trend during the week under review. In the groundnut section, old crop ruled easy, while the new crop put on a steady trend. Trading in September, 1953, having ended on 30th ultimo, the castorseeds section presented cheerless appearance. The Government announcement that castor oil export quotas for August-September, 1953, will be granted for a quantity equal to one-fourth of total exports of castor oil effected by each shipper during January-July, 1953, as against that in January-June, 1953, as announced previously, had, however, a favourable effect on castor oil. For this meant an addition of about 600 tons for export. The linseed section was firm on speculative support. Over the week, groundnuts and castorseeds ready deliveries disclosed sizable losses, while some gains were noticed in the other sections.

The Common Production Programme Committee of the All-India Khadi and Village Industries Board, at its meeting held in Bombay, recommended to State Governments to amend the existing rules governing sales tax with a view to giving exemption to *ghani* oil (bullock-pressed oil). It recommended also to levy a cess of Re. 1-4 per maund (of 80 pounds) on oil produced by the mills. It will be recalled that the All-India Oilseeds Committee had earlier agreed to levy a cess of only one rupee per maund. The Production Committee further decided that the rate of subsidy to be given to the cottage oil industry should be fixed at Rs. 2 per maund in the first year and Re. 1-8 per maund in subsequent years. It agreed that subsidy to cottage oil industry should be given through registered co-operative societies.

In the groundnut section, Bold F.A.Q. (old crop), which stood at Rs. 50, in view of the firmness in the maturing contract last Thursday, declined to Rs. 38. For the same reason, Khandesh quality fell from Rs. 40 to Rs. 38. Bold December-January delivery was, however, higher by As. 4 at Rs. 28-6. Khandesh October delivery gained As. 4 to Rs. 34-4 and November As. 8 to Rs. 30-8. Groundnut oil, ex-mill, lost As. 4 to Rs. 23-4 and railway receipts Rs. 2 to Rs. 21-8. October and November deliveries were done at Rs. 18-12 and Rs. 16-2, as compared with Rs. 18-8 and Rs. 16-4, respectively. Business in groundnut oil was reported done with the U.K. for about 5,000 tons at about £132, subject to export licences expected shortly.

The linseed section came in for some buying pressure, although Australia, U.K. and the Continent were reported to have turned down Indian offers. This was chiefly due to speculative activity. Bold ready shot up from Rs. 22-8 to Rs. 24-8, and October-November delivery from Rs. 22-12 to Rs. 24-4. February-March was done higher by Re. 1 at Rs. 22-8. Linseed oil gained As. 10 to Rs. 13-6.

In the castorseeds section, May delivery which opened at Rs. 111-4 as against Rs. 112, fluctuated between Rs. 116-2 and Rs. 111, before closing at Rs. 114-10. F.A.Q. slumped by Rs. 9 to Rs. 31 and Madras by Rs. 7 to Rs. 33. Castor oil B.S.S. gained Re. 1-4 to Rs. 18-8, and I Pressure Re. 1 to Rs. 18. Commercials improved from Rs. 16-4 to Rs. 17-4.

The following table shows the prices of oilseeds and oil on the 7th inst. as compared with those at the end of the previous two weeks.

IMPORTED SUGAR PRICES RISE

(From Our Own Correspondent)

BOMBAY, 7th October

Consistent with its aggressive frantic efforts to mow down high sugar prices, the Food Ministry threw in almost the entire portion of its reserved sugar force lying under Government control, with millers, by announcing release of one lakh tons out of 1.4 lakh tons from the 1952-53 season's production. This release of one lakh tons is considered in market circles as rather rash action and it is felt that the Ministry would have done well, had it released a smaller quantity, so that more sugar would have been available to it for meeting any unforeseen eventuality.

Meanwhile sugar ships continue to arrive at Indian ports. Two ships have already discharged imported sugar at Calcutta, two at Madras and three at Bombay. Tenders for further Mexican sugar per s.s *Fiducia* and further British refined sugar per s.s. *Atlantico* had been invited, and it is understood that tenders for the latter quality have been received for the entire shipload, while those for the former being few, the last date for submitting tenders for the same has been extended by further six days from the 6th inst. It is also reported that another ship carrying Java sugar is on its way and may unload the sugar either at Madras or Bombay.

While it is not known whether this grave strategy to fight high sugar prices was formulated in consultation with the C.-in-C. or the Defence Ministry, especially in regard to throwing in almost the entire bulk of the 1952-53 season's reservation, it is obvious that the Food Ministry must have relied for its action on the following considerations: (1) the entire Peninsular markets have been fed with adequate supplies of imported sugar, and the supplies would be surfeit when two further ships which are on their way to Bombay, and one more from Java either for Madras or Bombay, reach their destinations; (2) the interior markets have been offered more than they want for the ensuing heavy seasonal demand; and (3) the month of November is traditionally a month of slack demand for sugar.

These considerations would appear to have weighed most with the Food Ministry in its expectation that a bearish chain action initiated at ports would spread right up to the main source of supply, namely, the U.P. and Bihar factories—the fountain-head of bulk supplies of sugar in the country—and blow up the ruling high prices of sugar. This indeed is a laudable ideal and praiseworthy goal.

A section of the trade, however, feels that the desired results may be difficult to achieve, although it is conceded that the northern millers have come down with their prices, on an average, by As. 12 per maund and that good granular sugar can now be had at Rs. 28 per maund. This section argues that (1) factories in Southern India will not commence crushing earlier than mid-December, and that it takes them at least two weeks to gear up to normal production, (2) the aggregate quantity already discharged at ports, and that on the way to India does not exceed 75,000 tons and the balance of about 1.25 lakh tons has been bought for October-December shipments, (3) sellers of imported sugar would, therefore, naturally attempt unloading in December or early January when new crop sugar from the ports of loading is available at an advantageous price, (4) good demand for sugar revives from December onwards, (5) millers would be in no mood to offer their meagre releases at anywhere around Rs. 27 per maund, and as such, entire reliance would have to be placed, for lower sugar prices, on imported sugar which may not be coming in desirable quantities and at the required time.

Arrivals of indigenous sugar into Bombay during the week amounted to 3,000 bags. It is also reported that the s.s. *Dumphreys* delivered 6,500 tons and that the s.s. *Havildar* and the s.s. *Volcano* are delivering 7,000 and 7,500 tons respectively. In substance, therefore, Bombay has received, since the 29th ultimo, 21,000 tons of imported sugar. After an initial drop in price of imported sugar on account of distress selling by outsiders to take up whatever profit was available, quotations for imported sugar looked up in the face of good demand from the interior. Mexican sugar was sold as low as at Rs. 41 per bag of 110 lbs. net, British refined at Rs. 83-8 per bag of 2 cwts., and Java refined at Rs. 85 per bag of 2 cwts. net. These quotations have improved to-day to Rs. 41-8, Rs. 84-12 and Rs. 90 per bag respectively. Smart rise in prices of imported sugar is due to the fact that millers in the interior are quoting high prices for the sugar under their recent release. Due to great shortage of bold grain sugar prices of indigenous bold grain sugar have registered a spectacular rise and this quality cannot be had for less than Rs. 86 to Rs. 98 per bag, whereas medium grain sugar is being offered at Rs. 92-8 and small grain at Rs. 86 to Rs. 87. Spot demand is good and forward trading remains suspended.

PEPPER TURNS EASY

(Messrs. Parekh & Co.)

BOMBAY, 7th October

Pepper market at all primary centres turned easy on account of paucity of foreign enquiries and selling pressure by growers who seem to have become anxious sellers owing to the proximity of new season. Planters at Alleppey sold a sizable quantity at as low as Rs. 2,150. Calicut remained anxious sellers at price ranging from Rs. 2,350 to Rs. 2,450. Following the settlement of Dock-strike in New York which was until recently showing keen interest in the named steamers, withdrew from the market, and this made Indian exporters rather nervous. They sold in the local market October shipment at as low as $0.98. November shipment was done at $0.94 and December was offered at $0.89 with small buying interest.

In view of the poor crop in Lampong and good export of Sarawak to-date, the statistical position of world pepper market on the whole appears fairly sound. Yet the intelligentsia in the market attribute the present selling pressure by the Indian growers to the following among other reasons:—1. bearish psychology now prevalent in other commodities; 2. feeling of weariness among the growers who were all along expecting that the Government would come to their help by reducing the present high export duty on pepper; 3. nand to mouth buying policy of New York and other foreign buyers; 4. expectation of better prospect for the new crop; and 5. fear of higher invisible stock in the hands of growers than generally expected by the trade.

All estimated figures of the coming crop and invisible stock are always elusive and are made to look smaller or larger according to the bull or bear psychology of exporters, dealers, growers and speculators who always want to exploit the market according to their book positions.

In the delivery section, the business turn-over is very poor, as bears are very cautious in hammering the market lest bulls should squeeze them at the time of delivery.

In the larger interests of pepper export which is a big dollar earner and of growers on the coast, all the parties concerned wish that the Government should act quickly in either abolishing or reducing drastically the present export duty so as to improve the competitive position of India in foreign markets. But the Government machinery is moving slowly and nothing has been announced so far. Malabar pepper labours under the handicap of a heavy export duty. Competition is developing in an acute form, and the Government should see that Malabar pepper holds its own against serious and fast developing rivals like Sarawak and Muntok and Lampong.

Following are to-day's nominal quotations:—Ready delivery Rs. 270-90 per cwt., October delivery Rs. 1,845·75, and December delivery Rs. 1,565·95 per candy of 5½ cwts.

TEA PRICES ADVANCE FURTHER

(Messrs. Forbes, Ewart and Figgis Ltd.)

COCHIN, 3rd October

The total offerings in sale No. 20, which was held on Tuesday, 29th September, amounted to approximately 10,80,000 lbs. Quality had shown some improvement, particularly amongst the low medium and medium teas. The sale opened to a

STOCK & SHARE QUOTATIONS

Abbreviations:—D=Deferred shares. P.O.=Preferred Ordinary shares. Y=Accounts published yearly. H=Accounts published half-yearly. P=Company has Preference shares. T=Company has Debentures. N=Nominal quotation. x.d.=Ex-Dividend. c.d.=Cum. Dividend. I=Interim Dividend. f=Dividend for first half of the year.

Shares:—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery, and all other items on which depreciation is allowed, less sales, *if any*, and stands for the gross figures except where otherwise indicated.

Dividends:—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year, they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly, dividends shown are for their financial year. Where, however, the accounts are closed half-yearly, dividends are shown separately for the respective half-years.

* Including bonus. x Sales and amount written off. (a) Investments.

(D) Made up of an interim dividend of Re. 1-12 per share on 1,20,000 shares and final dividend of Re. 1-10 per share on 2,40,000 shares of which 1,20,000 shares are bonus shares.

* The following explanatory notes relate to the abbreviations and marks shown on page 708 in the debentures section:—

§§ Option to repay on six months' notice, on any interest date after 31st December, 1951, at 102 per cent. Also redeemable out of a cumulative sinking fund of 1½ per cent. per annum (commencing in 1938) by drawings at 102 per cent. or by purchase at or 102 per cent.

(a) Option of repayment at any time at 3 per cent. premium.

(b) Bearer bonds of Rs. 1,000 each repayable at par.

(c) Bearer bonds of Rs. 1,000 each repayable on 31st July, 1959.

(d) Bearer bonds of Rs. 1,000 each with option of redemption in whole or in part at par on 30th June, 1952 or on any subsequent interest date at one month's notice.

(e) Returnable on or after 31st July, 1950, at Rs. 102-8 or at par after 31st July, 1955 on six months' notice in each case.

(f) Bearer bonds of Rs. 1,000 each with option of redeeming on 3 months' notice at ½ per cent. premium after 1st March, 1954, but before 1st March, 1957, and 1 per cent. premium on or after 1st March 1957.

(g) Option of redemption on or after 1st July, 1949, at par.

(h) Option of repayment at any time at par at any time on or after 30th June 1947 on six months' notice.

MARKET GOSSIP

(Concluded from page 663)

was $119 million, which compares with a rise of $201 million in the previous quarter and a rise of $320 million in the first quarter of the year. At $2,486 million, the area's total of gold and dollar reserves, it is noteworthy, is well below the peak of $3,867 million touched in June, 1951.

* * * *

The U.K. Government has followed up its downward revision of the Bank rate by a loan operation which has been well received in financial circles in that country. The loan operation, which was completed last week, consisted of two parts. One was a conversion offer to holders of the £577 million 1953 Serial Funding Stock, which is due to mature on 14th November. These holders had the option to convert their holdings into either 1½ per cent. 1954 stock or for a new 2½ per cent. stock repayable in 1957. The other was an issue, for cash subscription only, of a new Government bond, with a life of 9 to 10 years. This bond is a new medium-dated stock, entitled "Exchequer Stock," and is dated 1962-63. It carries interest at the rate of 3 per cent. It was offered at £99¾ per cent. No limit was placed on the amount that might be issued. But the lists were kept open for one day only. It is stated that no less than £341 million was subscribed in the course of the day.

MARKET REPORTS

(Concluded from page 697)

very strong and active demand and prices for commonest kinds and low medium brokens and fannings advanced fully As 2. Medium and good medium types were 1 to 2 annas dearer. Best liquoring teas with improved quality were dearer to buy, but buyers were selective. Clean, black leaf fannings met with a good demand but teas with tip were more difficult to sell. Whole leaf grades were well supported and prices advanced by As. 1 to As. 2. The following are the quotations:

	1953 Rs. a. p.	1952 Rs. a. p.
Low grown Travancore B.O.P	1 12 6	0 13 0 to 0 14 0
Medium Travancore B.O.P.	1 13 6	1 11 6
Anaimallais B.O.P.	2 0 0	1 15 0
Best liquoring Nilgiri B.O.P.	2 6 0	2 15 0 to 2 3 0
Clean black leaf O.P.	2 3 0	2 2 0 to 2 0 0

London Market.—Market generally dearer, particularly where quality improved and best commons which were half penny to one penny dearer.

Colombo *Market.*—Active demand. Low-grown firm. Medium and high-grown dearer, except UVAS which declined in quality.

Calcutta Market—Export.—Strong general demand. Commons, especially fannings, firm to often a half to one anna dearer. Remainder well supported.

Dust.—Good demand. Market fully firm to occasionally half an anna dearer for medium Dooars of Assams. C.T.C. steady. Commonest strongest feature.

Export Quota.—Due to rumours of a second release of 11.1 per cent. of the basic crop (amounting approximately 58,000,000 lbs.) the market declined sharply and transactions have been done at 14/14¼ pies.

As we go to Press, Messrs. Forbes, Ewart and Figgis wire:—

"*Dust Sale T.*—1,48,000 lbs. Very strong general demand. Prices have advanced irregularly As. 1 to As. 2 for everything."

FOODGRAINS BEARISH

(From Our Own Correspondent)

HAPUR, *5th October*

There has been a sharp decline in agricultural commodities during the week under review, and there is an apprehension that the decline in farmers' incomes would soon create many complex problems. Favourable crop reports have already had a psychological effect on the current prices of wheat, rice, pulses, oilseeds and may affect *gur* prices also as soon as new crop arrivals begin. Compared to last year, agricultural production is estimated to be about 10 per cent. higher, but the possibility that the fall in prices will offset the advantage of higher production is being discussed.

As wheat prices have settled down at lower levels, the Food Ministry has found it difficult to dispose of its huge stocks, imported last year, and though the flour mills have been allowed to use them for milling for export purproses, very few came forward to take advantage of this. The position in regard to *bajri* and *juwar* has undergone a considerable change. The Saurashtra Government which was hitherto a buyer of *bajri* and *juwar* from the Centre has emerged as an exporter and the supply position in Madhya Bharat, Madhya Pradesh and Hyderabad is very satisfactory.

Foodgrain markets in U.P. have continued quiet to bearish. Plentiful supplies, excellent *kharif* crops and considerably brightened next *rabi* crop sowing prospects depressed the general outlook and induced the trade stockists to reduce their commitments before the full advent of *kharif* crop yield to the markets. According to agriculturist experts, recent rain in U.P. was well timed and should be highly beneficial to the standing *kharif* crops, particularly the paddy crop, which in most places, was in need of the moisture in soil, as well as the *arhar* crop, which should flourish after these rains.

Wheat prices in the open market are below the Government sale rates, and the result is that wheat on trade account is being despatched to hill districts and selling at competitive rates. The latest quotations in the Hapur market are: Wheat Rs. 15-10 to Rs. 16-12, gram Rs. 14 to Rs. 15, barley Rs. 10-12, *bejhar* Rs. 10-12, maize Rs. 11 to Rs. 12, rice Rs. 31 to Rs. 20, peas Rs. 12-4, *arhar* Rs. 12-4, *urd* Rs. 17-8, *moong* Rs 16-8, and *masoor* Rs. 15-4.

All quantitative controls on the sale of wheat in Bengal have been withdrawn from 5th October. The price control will, however, remain. The Government of India has announced that there would be no procurement of rice in West Bengal as from the 14th inst. The State Government has been instructed to purchase rice or paddy from the open market when the prices fall to an uneconomic level in order to protect the agriculturists.

SUGAR QUIET

(From Our Own Correspondent)

HAPUR, *5th October*

Indian sugar markets remained quiet this week. There was very poor offtake. The tendency at the ports was slightly bearish with the arrival of imported sugar consignments at Bombay, Madras and Calcutta. Calcutta gave the lead for a downward trend, where stock holders showed eagerness to liquidate their stocks due to the rumour that the Government contemplate to reduce the price of subsidised sugar to As. 12 per seer. It is said that the Java sugar imported at Calcutta is cheaper than any other foreign sugar imported at other ports, with the result that traders in other areas have showed considerable interest in the recently imported sugar. The Madras market also broke down under pressure of sales with a distinctly improved supplies position. The market at Bombay ruled quiet and awaited the arrival of three shiploads of imported sugar.

In the up-country markets, Jullundur remained steady with depleted supplies position, and Muzaffarnagar due to good spot demand. Meerut, Ambala, Hapur and other markets remained quiet to bearish due to poor enquiry from importing areas. Enquiries for sugar in the open market at Kanpur were reported to be far from satisfactory but the prices did not fall as there was no pressure of sales. The declaration of sugarcane prices for the ensuing season had no effect on the markets.

The Government of India has released a further quantity of one lakh tons of sugar for sale in the open market out of the 1952-53 production of all factories in the country.

The latest quotations in the open market are: Ambala Rs. 32-4, Amritsar Rs. 33, Delhi Rs. 32-4, Jullundur Rs. 31-4, Agra Rs. 31-4, Hapur Rs. 30 to Rs. 31-4, Kanpur Rs. 30-10, Mathura Rs. 31, Meerut Rs. 30-14, Muzaffarnagar Rs. 31, Patna Rs. 31, Calc

MR. KIDWAI ON SUGAR

FROM our recent writings on the Government of India's sugar policy, one would have noticed that it is defective in several respects. But these defects are not due to any lack of understanding of the basic problems of the sugar industry on the part of the Minister concerned, namely, Mr. Rafi Ahmed Kidwai. On the contrary, Mr. Kidwai has a remarkable grasp of these problems and, what is more, he is also aware of the right solutions for them. Yet, if his policy does not reflect this, it must obviously be due to the limitations imposed on him partly by political exigencies and partly by his distrust of sugar millowners. This is the impression we got after listening to his brief extempore speech at the tenth annual convention of the Deccan Sugar Technologists' Association held on the 10th inst., at Harigaon, where the factory of the well-known sugar company, the Belapur Company, Ltd., is situated. Mr. Kidwai was aware that the chief defect of the Indian sugar industry was its high cost of production. The problem, therefore, was one of reducing its cost and making it competitive with its foreign confreres. He was confident that this could be done. He proposed two suggestions for achieving this object. One was the need for linking the price of cane to recovery of sugar and not to its weight, as at present. The other was the necessity for raising the yield of cane per acre in Northern India (U.P. and Bihar), where it was very low at present and where the major portion of Indian sugar was produced. He appealed to sugar technologists in India to devote their time and energy to make the implementation of those two solutions practicable.

In order to enforce the first suggestion, he wanted the technologists to devise an infallible formula for fixing the proper price of cane on the basis of its sugar content. It is true that Mr. Kidwai has been advocating this solution for some time now. But the significance of his reiterating this point is further proof of the fact that the present method of fixing the price of cane is defective, inasmuch as it is not conducive to securing an improvement in the quality of cane which is essential for bringing down the cost of sugar. Mr. Kdwai's reiteration of the self-same point a'so means that he is not in favour of complete decontrol of sugarcane.

There seem to be two reasons for his reluctance to give up the system of fixing a minimum price for cane. The first is his fear that sugarcane producers may be forced by sugar millowners to part with their crop at depressed prices, as the former are not well organised to stand the pressure tactics of the latter. The second is his desire to ensure for cane growers a share in the profits of sugar makers. He has given public expression to the first point on several occasions in the past. The second point is an inference from his explanation, given at the Harigaon meeting of the Deccan Sugar Technologists, for raising the price of cane for the 1953-54 and 1954-55 seasons by As. 2 to Re. 1-7 per maund. He said that, although a price of Re. 1-5 per maund of sugarcane was quite adequate considering the prices of competing crops, it had to be increased, because cane growers complained that, in the 1952-53 season, the prices of sugar realised by the factories were higher than in the preceding season, even though the price of cane had been reduced from Re. 1-12 to Re. 1-5 per maund. The force of this line of reasoning by sugarcane growers, Mr. Kidwai thought, was irresistible. If that is so, it follows, *ipso facto*, that, in the event of a fall in sugar prices in one season, the minimum price of sugarcane must be revised in a downward direction for the following season. It is to be hoped that the Government will not conveniently ignore this point when the time comes for the revision of cane prices again.

It may be asked why Mr. Kidwai chose to fix the minimum price of cane for the next two seasons on the basis of weight, knowing full well that that system suffered from a serious defect. Mr. Kidwai's explanation for this is that he has to follow that system so long as there is no foolproof method for determining the sugar content of cane. His experience, he avers, has convinced him that, in the absence of such a formula, most of the manufacturers in U.P. and Bihar would not do justice to cane growers. Only last year he found, in one instance, that the recovery percentage of cane grown in a particular area in U.P. and crushed in the two adjacent factories differed to a considerable extent, with the result that the grower got a good price from one factory and a substantially lower price from another factory. From this, he inferred that the latter factory must have wilfully underestimated the sugar content of the cane.

It is, however, clear that Mr. Kidwai is prepared to change the present basis of fixing the price of cane, provided a suitable method for determining the sucrose content of cane is found. The sugar industrialists and technologists must, therefore, bestir themselves and explore the possibilities of evolving the formula suggested by him. If, however, their experiments in this direction fail, the only alternative is to free the control on prices of sugarcane, for it is unfair to expect the sugar industry to continue to follow a system of price control for its raw material which is admittedly defective. In fact, as the possibility of evolving a foolproof formula, which can be easily followed in Uttar Pradesh and Bihar, is remote, the best thing to do will be to lift the control on the price of sugarcane. It is true that Mr. Kidwai is reluctant to accept this course for reasons already mentioned. Nevertheless, the sugar millowners, especially those in U.P. and Bihar, will be well advised to meet his objections and to see what they can do to remove his fears about the cane grower being forced to sell his product at unduly low prices.

The fixation of cane prices on the basis of recovery or, better still, the removal of price control on sugarcane will provide an incentive to cane growers to produce high quality cane. But that alone will not be sufficient. A farmer may have the desire to produce good quality cane but may not have either the means or the knowledge to fulfil it. This is where the Government and the technologists come in. While the State should help him to translate his wish into action by giving him some financial aid, the technologists should provide him with the know-how. This service is required particularly by farmers in U.P. and Bihar, where cane cultivation is backward, and which account for about 72 per cent. of the sugar produced in India. Thanks to the ceaseless endeavours of the Deccan sugar technologists in the farms where they are employed, the yield of cane per acre in the Deccan has gone up to 56 tons. As against this, the per-acre yield in North India is as low as 13 tons. As Mr. Kidwai rightly observed at Harigaon last week-end, if only the per-acre yield in the two leading sugar-producing States in North India could be trebled, the cost of Indian sugar will come down to a level at which it will be competitive with foreign sugar. A reduction in the price of sugar is very necessary, if the industry is to prosper. That is no exaggeration.

It is noteworthy that Mr. Kidwai did not expect North India to produce as much cane per acre as is being done by the South—his expectation was only 35 to 40 tons per acre for the North, as against 56 tons per acre in the South. He knows that soil and climatic conditions in the North are not so well suited to growing cane as in the South. Indeed, it will be a tremendous task to treble the present per-acre yield. The assistance of technicians alone will not be sufficient to reach the target. The State Governments concerned also will have to co-operate by changing their attitude towards the farmer and the factory. They must take energetic steps for proper zoning of cane fields on the basis of the sugarcane needs of each factory. In doing so, the uneconomic or inefficiently managed factories must either be reformed and renovated, or exterminated. Owners of all small fields in the neighbourhood of a factory must be induced, or forced by law, if need be, to merge themselves into a co-operative farm, so that cultivation of cane can be done on modern lines, with the help of machines and scientific application of manures. Unless the technologists are given suitable conditions for applying their technical knowledge of cane cultivation, they cannot be expected to show results. All this has been stated in these columns ever so often. Mr. Kidwai, too, we are sure, is fully aware of this prerequisite, though he did not make a reference to it in his brief speech at Harigaon. It is high time he used his undoubted influence over the State Governments and persuaded them to take the necessary steps in this direction. Unless this is done, there can be no increase in the per-acre yield of cane in North India and unless the per-acre output of high quality cane in the main seat of industry is raised, all talk of bringing down the cost of production and selling sugar at cheaper and cheaper prices is just moonshine.

POPULATION GROWTH AND LIVING STANDARDS

MOST thinking persons are of the opinion that the rapid growth of population in India is a stumbling block in the way of the efforts which are being made to raise the living standards of the Indian people and that the solution for this problem must be given a very high, if not top, priority by the Governments and the leaders of the country. This certainly is the general or the predominant opinion which has been accepted with tacit or explicit approval by many in this country. India's Prime Minister, Mr. Jawaharlal Nehru, however, struck a

slightly more optimistic note when he declared this week that, although he was in favour of limiting India's population, he believed that the idea that "we cannot economically survive or improve our lot, unless we put a stop to the growth of population is not wholly justified." This change in emphasis from a mere cry of a halt to growth in population to the need for more purposeful effort in the economic sphere finds another—and a more authoritative—exponent in Mr. Colin Clark, the famous economist, who surveys, in an article entitled "Population Growth and Living Standards," published in the August 1953 issue of the *International Labour Review*, the world's population problem with special reference to underdeveloped countries.

Mr. Clark starts off by emphasising the fact that there are many industries such as large-scale manufacture, transport, postal communications, banking and insurance, which are quite specifically benefited by increasing population, because they work under the law of increasing returns. This law is said to prevail in any industry where, as a consequence of an increased scale of output, we can expect to obtain increasing returns per unit of labour or other economic resources employed. Without the large and densely settled population of North America and Western Europe, most modern industries would have been working under great difficulties and at very high costs.

Agriculture, mining, forestry, fishing and some other productive activities, which are dependent upon the use of scarce materials, work under the law of diminishing returns. On the other hand, some of the most highly mechanised branches of agriculture, such as production of sugarcane, work under increasing returns. Again, it must be remembered that all that the law of diminishing returns points out is that, if an increasing number of men farm a limited area of land, the returns per man will diminish, although the total returns from the land will increase. Further, the law applies only if two conditions are fulfilled: first, that the inhabitants of the more densely settled area do not use any different farming methods from those of the less densely settled area and, secondly, that they do not employ any more capital per head. But these conditions make the law of very limited application. The reason is that the use of improved farming methods and the application of larger quantities of capital per man are precisely the steps taken by progressive countries, when they find their population increasing while their agricultural land limited in area. In this context, we give below statistics relating to 26 countries, showing the value (in Rs.) of agricultural production per person engaged therein and the number of persons engaged in agriculture per square kilometre of cultivable land, given within brackets. The highest income countries, such as the U.S., and Australia have been excluded because there is no shortage of land in them.

Below Rs. 1,000—Philippines (5-10); India (25-30); Rs. 1,000-1,500—Turkey, Yugoslavia, U.S.S.R. (10-15); Rs. 1,500-2,000—Poland (10-15); Rumania (15-20), Italy (25-30); Rs. 2,000-2,500—Brazil (0-5), Greece (5-10), Cyprus, Bulgaria (10-15); Portugal (15-20); Rs. 2,500-3,000—France, Austria (5-10); Spain (10-15), Hungary (20-25); Rs. 3,000-3,500—Sweden (0-5); Ireland (5-10); Syria (10-15); Rs. 3,500-4,000—Germany, Czechoslovakia (10-15); Belgium (15-20); Rs. 4,500-5,000—Britain (5-10), Netherlands (15-20); over Rs. 5,000—Denmark (10-15).

The above figures show how little relation there is between density of settlement and average product per head. Although the same density of settlement prevails in Denmark as in Soviet Russia, the product per man in the former is five times that in the latter.

Some persons assert that it is difficult to teach Indians any new agricultural methods and that it would, therefore, be better to try to obtain the same objective by reducing population density. Mr. Clark has exposed the absurdity of this contention by pointing out that, to carry it out, the Indian population will have to be reduced to one-quarter of what it is at present. He states that immense improvements are possible in agricultural productivity in most parts of the world, including India. To secure such improvements, however, an immense dissemination of education and technical knowledge new equipment at a steadily increasing rate and capital to provide equipment, buildings and livestock will be needed.

The most successful farming, as judged by the ability to obtain the highest product at the highest density of settlement, is to be found in Denmark and the Netherlands, with Belgium and Britain not far behind. They provide very concrete evidence that agricultural land can be worked to yield a high product at a high density of settlement. Denmark's net exports (i.e., exports less imports) of farm products are as much as 45 per cent. of net product (defined as output less seed and fodder used up in the process of production). Denmark thus feeds not only its own population of 4.4 million, but also another 3.6 million people elsewhere or 8 million in all; that is, at Danish standards of productivity and diet, about 200 people are fed per square kilometre of cultivable land, or about 500 per square mile, as Denmark has no more than 39,000 square kilometres of such land. On the criterion of having sufficient land to feed one's population at Danish standards, the only countries in the world which are overcrowded are Japan, the Netherlands, Belgium and probably Switzerland. The Federal Republic of Germany is just on the borderline. England is overcrowded, if considered by itself, but not if the territory and populations of Scotland and Northern Ireland are considered in conjunction with it. The population of India and Pakistan per square mile of cultivable land is about 400—high but not above the limit. The corresponding figure for China is lower, probably between 300 and 350. For Indonesia, it is still lower. On the basis of a study of world population in relation to availability of culturable land, Mr. Colin Clark comes to the conclusion that most of the world is populated at far below its potential density. The world's total area of cultivable land (allowing for double cropping in the highest rainfall tropical areas) is 24 million square miles and, at Danish standards of cultivation, could support 12,000 million people, as opposed to the 2,300 million people it supports now.

Some demographers, however, may say that Danish (or any other) standards of high cultivation could never be reached in many of the countries, because population increases in them are so unbearably rapid that they are bound to overtake any increase in production. Mr. Clark has carefully examined this view against the historical trends of population. On the basis of the view of the geologists that the human race began 500,000 years ago, Mr. Clark deduces that the average rate of increase in numbers of the human race, over the greater part of its existence, was not more than .004 per cent. per annum. Between the beginning of the Christian era and the seventeenth century, the average rate of increase of mankind was no more than .04 per cent. per annum. From about the middle of the nineteenth century onward, the average rate of increase of the whole world has been only slightly over 1 per cent. per annum.

Both the historical and present-day evidence thus seems to point to the conclusion that any appreciable increase in population is only possible when two conditions are fulfilled, namely, the establishment of a firm and ordered political system and the dissemination and utilisation of medical knowledge. On this basis, it may be asked whether with the prospect of continuously decreasing rates of mortality and with the hope of world peace and good Government, we will not create, in the course of the next century, a world population problem of unmanageable dimensions? Under such conditions with an average of six children per family, we shall get a rate of population increase of about 4 per cent. per annum, or population doubling itself every 20 years.

This all turns on the question of whether the average family is likely to remain as high as six; this number is based on the result of the investigations into the family sizes in many countries. Mr. Clark points out that, in India, the average family of Hindus has not been more than five owing to the looking down upon the remarriage of widows. Moreover, there has been a considerable fall in the size of the family in partially industrialised areas, owing to late marriages. In Japan, the average size of the family has fallen from six at the beginning of the present century to less than four now. A similar tendency is noticeable in Soviet Russia and Ceylon. In an urban population, the desire to accumulate money and achieve social position is a far greater force than in a static peasant community. The work of Indian statisticians shows that the rise in production has since 1870 been far greater than the rise in population and there is every prospect that, with increasing industrialisation, this process will continue.

But, whether for industrialisation or for the extension of agricultural production, considerable capital resources are required. The amount of capital required per head in these countries, in the opinion of Mr. Clark, is generally equal to about four years' income per head. He, therefore, lays down a simple rule. Take the expected rate of population increase and multiply it by four. This gives the percentage of national income which has to be invested in order to provide employment of the same average kind as now exists for the increasing population. This investment may come from internal savings or external borrowing. It is only in so far as the rate of investment exceeds the rate of population growth multiplied by four that anything will be left over for industrialisation or for raising standards of real income per head. In most of the underdeveloped countries, the rate of saving is less than what is required according to this rule.

Mr. Clark concludes his analysis by the assertion that any foreseeable rate of population increase, in any part of the world, can be economically provided for at a satisfactory and indeed rising standard of real income, subject to three conditions. The first, which is of comparatively minor importance, is that free emigration should be facilitated from a few isolated overcrowded areas. The next condition is that for large and densely populated countries, such as India, which have reached the stage where industrialisation is obviously their only suitable prospect of economic advance, the rest of the world, even if it cannot offer direct help for such industrialisation should at least co-operate by leaving markets open for these countries to sell their goods and not place tariff and quota restrictions upon their trade. Japan was treated with gross unfairness by the Western powers in the 1930's, and this played a considerable part in forming her determination to go to war. The final condition is that countries, which are in need of economic development, should receive external assistance from the advanced countries. Countries which have already reached the size and stage of development of India and Brazil will probably be able to proceed with industrialisation with their own resources, but the progress cannot be rapid without external assistance. For the smaller and weaker countries, development will be impossible without external assistance.

It seems that Mr. Clark has drawn an unduly optimistic picture of the world's population problem at present and the near future, on the basis of theoretical considerations, which have little or no chance of being realised appreciably in many countries of the world for many years to come. Reaching the Danish or any other standards of high cultivation may be a theoretical possibility for all countries, but even approaching them will not be a practical proposition for many countries, for a long time, on account of a lack of necessary education, skill and capital. On the other hand, rapid increase of population has now become a reality in many countries. Mr. Clark lays stress on the fact that population remained stationary in most countries for many centuries, until recent years. But he has not adequately emphasised the fact that, owing to the establishment of orderly government and the growth of medical knowledge and facilities, population is now increasing at the rate of 1 to 3 per cent. per annum in several countries and that, with the further development of medical knowledge and facilities, population threatens to double itself every 20 or 25 years in some countries.

Further, none of the conditions laid down by Mr. Clark in his conclusion has much chance of being realised. In the first place, those fertile areas, which are sparsely populated at present, are dominated by white people and these people will not allow the immigration of coloured people from overcrowded areas. Secondly, the Western powers will not abandon tariff restrictions in the areas under their control upon imports from those countries which are overcrowded and which have been trying to industrialise themselves. Mr. Clark has himself pointed out that Japan was treated with gross unfairness in this respect by the Western powers in the 1930's and there are already enough indications that they mean to treat it in the same fashion, now that it has begun to raise itself once more. It is very doubtful whether other countries will receive any better treatment.

Finally, although underdeveloped countries may get some external assistance, there is not much chance of their receiving, in the near future, such assistance to the extent necessary for a considerable raising of their standards and volume of agricultural and industrial production. The conclusion, therefore, seems to be that the population problem of the world at present is serious enough to be tackled not merely on the front of raising the standards and volume of agricultural and industrial production, but also on the front of applying the negative checks to the growth of population. It must, however, be said to Mr. Clark's credit that he has shown that there are other and more construction ways of tackling the problem of overpopulation than a policy of merely negative restraints.

MR. NEHRU'S FAITH IN PRIVATE ENTERPRISE WANING

OILSEEDS JUDGMENT—OUTLOOK FOR TEA SHARES

THURSDAY, 5 P.M.

THE Government of India is still speaking in two voices on the role of private enterprise. While Mr. C. D. Deshmukh, Finance Minister, stated the other day in the Council of States that the Government did not have the necessary talent to take on more and more responsibility in the sphere of industries, Mr. Nehru keeps on repeating that nationalisation is the ultimate goal and that it is inevitable. In recent weeks, Mr. Nehru has reiterated his conviction in the virtues of public ownership at least twice. Addressing the Congress workers and the legislators at Madras on the 2nd inst., Mr. Nehru referred to capitalism and private enterprise in a manner which clearly means that he has scarcely any faith in private enterprise and that he has to tolerate it, simply because its elimination at the present stage may do the country more harm than good. Nevertheless, the aim should be, according to him, nationalisation by stages. Here is a summary of what exactly he said, as reported in the *Hindu*:

MARKET GOSSIP

"Capitalism, Mr. Nehru said, was an out-of-date anachronism. It had no meaning in the world of to-day. Even in America, which was a citadel of capitalism, it was different from what it was 50 years ago. The whole structure had changed and private enterprise had ceased to be a temple of worship and was not even a road-side shrine. In undeveloped countries, they wanted private enterprise, of course. But one had to see it in the context of larger things. They talked of mixed economy. But that by itself did not convey much. They had to think apart from these fixed ideologies and 'isms' and consider the problem in the light of not what they might gather from those 'isms,' but independently of them. Mature persons should not talk about these 'isms' as in a schoolboys' debate. Full employment was the thing that mattered. The Socialists wanted them to nationalise everything. He was not against nationalisation, but he wanted to understand how a particular piece of nationalisation would take them further along the line of full employment. Their general policy was nationalisation, but not nationalisation of everything by some kind of edict or decree. What was needed was greater production. Let them nationalise bit by bit, one by one, understanding each thing."

There are, of course, many ifs and buts in the above quotation. Nonetheless, the inner working of Mr. Nehru's mind is clear.

• • • •

On Monday this week, Mr. Nehru spoke again on this subject. This time the occasion was the meeting of the Consultative Committee of the Colombo Plan which he inaugurated. Here, too, he was vague in what he said, but confessed that the tendency was towards public ownership, though sometimes it might be towards mixed ownership. He did say, of course, that the Government of India's approach was still that of a mixed economy and that it proposed "to allow full play to what is called the private sector of this economy." He, however, quickly qualified this statement by saying that "the pressure of events and circumstances in this country—all drive us more and more towards thinking in terms of public ownership".

• • • •

It is common knowledge that, though Mr. Nehru is a socialist at heart, no useful purpose would be served by asking him to state his stand clearly and unambiguously in favour of either socialism or private enterprise, for he is not prepared to face the consequences. Mr. Nehru himself has stated several times that he does not wish to be dogmatic on this subject and that he wishes to approach this problem from a practical point of view. But we wonder whether he is at all practical in taking this stand. Some may feel that it is good in so far as it goes. In certain respects, vagueness may be an advantage. But in a matter like this, where the question of confidence is involved, it is not. It definitely ceases to be so when some of the actions of the Government happen to be contrary to its earlier assurances. The thought that the party in power may decide to nationalise a particular sector at any time it likes, will not induce private enterprise to come forward and take a risk by starting new industries or expanding existing ones. There is, therefore, a clear need for the Government of India, nay, for the Congress Party, to make up its mind and state categorically which sectors of the economy are meant for private enterprise and which are for public ownership. The Congress Party must also indicate the principles on which it is in favour of public ownership.

• • • •

Since the Congress has no faith in the merits of private enterprise and is always inclined to lean more towards the left than to the right, many a business man now feels that the country must have a full-fledged party which believes in a free-market economy. It is not known whether they will ever attempt to give effect to their feelings, because most of them are diffident of the success of such a move; they know that the Congress Party is still very powerful. There are, however, a few who feel that, if there is unity and honesty of purpose amongst all those business men who are convinced in the efficacy of a free-market economy, success will be theirs, if not in the first attempt, at least in the second or third attempt. To the question whether business men should take part in politics, their answer is that, if politicians continuously let down the business men and endanger the country's economy by their mismanagement and lack of foresight, if they disregard the need for maintaining the value of money, then business men cannot afford to remain as silent spectators. They feel that a time has now come when the political parties should be organised on definite economic principles. Failure to do so will result in chaos which will sooner or later endanger the democratic set-up in the country.

• • • •

It is surprising that Mr. Nehru and other Congress men should still talk of nationalisation as a goal to be achieved in course of time, when even those countries which have tried it do not feel so enthusiastic about it any more. The T.U.C. in Britain, for instance, is not interested in further nationalisation. It has become a little more chastened in its attitude towards this question after the Labour Party's defeat in the last election. Evidently, it now realises that to approach the electorate again with a fresh programme of nationalisation is to court a more severe defeat. It will not, of course, be correct to say that the change in the British Labour Party's attitude towards nationalisation is based entirely on political considerations. The British workers themselves now realise that their bargaining power for securing better working conditions would receive a sharp setback, if the State were to become the employer in all the important industries.

• • • •

In refreshing contrast to Mr. Nehru's lack of confidence in private enterprise is the robust optimism of Sir Winston Churchill in its ability to deliver the goods. Speaking at the Conservative Party Conference held at Margate last week, he said:

"A few years ago nationalisation was the cure-all for social and economical difficulties; now there is a general feeling that it is an utter flop. The Conservative Government have adopted a sensible and practical policy towards what we found on becoming responsible. For the success of those industries like coal mining and railways, which we felt must remain nationalised, we have done and will continue to do our best. But steel and transport, which had been so harshly struck at, we have liberated just in time. It will be proved in the next two years that this is greatly to the public advantage and convenience. . . . It has been a remarkable feat with our small majority to overcome all the resistance and obstruction with which we were confronted. There is no doubt that nationalisation has been proved a failure, hampering the competitive power of our industry, rendering an inferior service to the public and weakening the just and necessary influence of the trade unions by confronting them not with private employers but with the power of the State."

• • • •

Sir Winston Churchill has every reason to feel proud of associating himself with the cause of private enterprise. During the last two years when the Conservatives have been in power, Britain has made rapid progress in the economic sphere. Here are some of the achievements of Britain under the leadership of the Conservative Party, as described by Sir Winston himself:

Britain's Finances: "I think danger is farther away than when we went into harness. Certainly the sense of crisis in our world relations is less than it was two years ago, and we have the hope that, if we persevere, recovery from the convulsions of the past and barriers against their recurrence will grow surer and firmer as the clattering months roll by. Take our finances. Surely they come first to our minds, for it is not much use being a famous trade and nation, with institutions which are the envy of the free world and the model of many States, if at the end of the week you cannot pay for your housekeeping. We are not out of the wood yet, but we have the feeling of increasing strength, and certainly we have far larger reserves. Two years ago we were sliding into bankruptcy, and now, at least, we may claim solvency.

Housing: "And what about 300,000 houses a year? I remember well at Blackpool three years ago how you clamoured for a tremendous effort and an audacious target, and how a gust of passion swept the hall when we proclaimed the goal of 300,000 houses a year. I remember also how we were mocked by the Socialist Ministers and told we were promising the impossible. But we persevered, and now this second year at least 300,000 houses to let or sell will actually be built. Moreover, we are building more schools than ever before.

Meat: "Well, what about meat? Well, here is the plain vulgar fact. In the first two years of Tory Government, the British nation has actually eaten 400,000 tons more meat, including red meat, than they did in the last two years of Socialist Administration. Here at any rate is something solid to be set off against the tales we are told of the increasing misery of the people and the shortage of television sets."

• • • •

It will be seen from the above quotation that considerable economic progress has been achieved by the Conservative Party, without in any way sacrificing social objectives. On the contrary, the British people are now better housed, well clothed and certainly well fed.

• • • •

The decision of the Bombay City Civil Court that forward contracts in groundnuts were illegal and void under the provisions of the Oilseeds (Forward Contract Prohibition) Order and the setting aside by the Court of the award made by the Arbitration Board of the Bombay Oilseeds Exchange have evoked considerable interest in market circles. The judgment was delivered on a petition filed under section 40 of the Arbitration Act for setting aside an award, made on reference to arbitration without the intervention of the Court. The points argued on this petition were: (1) whether forward delivery contracts in groundnuts were prohibited by law in 1952? (2) if so, whether arbitration agreement contained in the contract notes was not invalid? and (3) if it was invalid, whether the award made by the Arbitration Board of the Bombay Oilseeds Exchange Ltd. was invalid?

• • • •

Relying upon Bombay Forward Contracts Control Act, 1947, and the by-laws of the Bombay Oilseeds Exchange, approved by the Government of Bombay, counsel for the opponent urged that the forward contracts in groundnuts were not prohibited or void. But the Court set aside the arguments of the opponent on the ground that there was nothing in the Bombay Forward Contracts Control Act, either authorising forward contracts in groundnuts or prohibiting any such contract. All that the Act laid down was that forward contracts should be done only under the auspices of certain associations recognised by the Government and in accordance with the by-laws framed by the association with the approval of the Government. The Court found nothing in the by-laws nullifying the provisions of the Order made by the Government of India in 1943 and kept alive upto 26th January, 1955, prohibiting forward contracts in groundnuts. The Bombay Act and the by-laws of an association applied, it held, only to forward contracts in such commodities as may not have been prohibited by an order or an Act of the Central Government. Further, it pointed out that, if there was any conflict between the Legislature of a State and the provisions of law made by Parliament, then, under Article 254 of the Constitution, the law made by Parliament, whether passed before or after the law made by the Legislature, should prevail over the law made by the Legislature of the State, and the State law shall be void to the extent of repugnancy. Consequently, the Court held that forward contracts were prohibited by law at the time of alleged contract between the parties to the dispute above. And, as forward contracts were void, the agreement to refer any dispute arising out of the contract to arbitration was also void. The Court further held that, if the agreement to refer to arbitration was void, an award made on reference by only one of the parties without the concurrence of the other party and in spite of the objection of that party was invalid.

• • • •

It will be recalled that forward trading in oilseeds was prohibited on 29th May, 1943, under the Defence of India Rules of the Oilseeds (Forward Contracts Prohibition) Order, 1943. In enacting this Order, the Government of India was actuated by the motive of eliminating undue and unhealthy speculation in the oilseeds market and at the same time of securing the efficient prosecution of the war and maintaining supplies essential to the community. The Order specifically stated that no person shall, after 31st May, 1943, enter into forward contracts; but, by a subsequent amendment, the Government exempted the following classes of contracts from the provisions of the Order, namely, "forward contracts for groundnut, linseed, mustard seed, rapeseed or toria seed of specific qualities or types and for specific delivery at a specified price, delivery orders, railway receipts or bills of lading against which contracts are not transferable to third parties." The same Order still holds good, as it has been kept alive by a succession of notifications. Under the latest notification, issued under the Essential Supplies Temporary Amendment Act, 1952, the said Order is extended upto 26th January, 1955.

• • • •

The dispute which was the subject matter of the above judgment is a simple one. All those who are intimately connected with the working of the Oilseeds Exchange must be aware that forward trading in groundnuts is illegal. Nevertheless, it is common knowledge that a large volume of speculation in this commodity has been a regular feature of this market. The *modus operandi* here also is common knowledge. Futures trading is being carried on under the guise of the specific delivery non-transferable forward contract. The whole thing works smoothly so long as neither party to the deal decides to go to Court. If one of the parties chooses to do so, as was done in the case under reference, the whole thing will fall to the ground. The surprising part of the story is that authorities of the Oilseeds Exchange take cognisance of disputes arising between members on such illegal contracts and arbitrate on them. They may conveniently plead ignorance of the real nature of the dispute referred to them. But, surely, they must be aware that the major portion of the business that is being done in groundnuts is of a highly speculative nature and that the facility meant for the convenience of genuine businessmen is often misused by rank speculators. What steps have they taken to curb such activity? Will the Forward Markets Commission look into the behaviour of this Exchange please?

• • • •

In recent weeks, there has been good buying enquiry for shares of North Indian tea gardens. This has carried the quotation for many leading shares in this section of the Calcutta Stock Exchange to higher levels. There is, of course, some speculative element in this rise. But it seems also to be true that the scrips have attracted some investment support, both in Calcutta and in

(Continued on page 755)

EQUITIES MAINTAIN FIRM TREND

SPURT IN BELAPURS

(From Our Own Correspondents)

BOMBAY, 15th *October*

THE buoyancy noted on the Stock Exchange last week was kept up during the week under review also. In fairly active dealings, the main body of shares moved ahead on continued bull support followed by considerable short covering. Under the leadership of Tata Deferreds, which crossed at one time the Rs. 1,900 mark —the highest after the shares were listed ex-dividend early in September last—some prominent industrial scrips improved to touch, during the week, fresh high levels in the recent recovery movement. The higher levels brought some caution and operators preferred to book their profit, resulting in an all-round pruning down of values. However, the closing levels showed sizable gains over the week, indicating the firm undertone of the market.

The fact that the amount of expenditure on the Five-year Plan was stepped up by Rs. 175 crores, as also the willingness of the U.K. to grant a loan of £5 million to India, added to harden the sentiment of the market. The expectation that the closure of certain textile mills, leading to unemployment, would prompt the Government to remove export duty and reduce excise duty on cloth, induced some support for textile shares. Consequently, under the influence of speculative activity prices advanced, despite occasional profit-taking.

In the steel section, Tata Deferreds made a promising start at Rs. 1,871-4 and edged forward to Rs. 1,902-8 on Tuesday this week on sustained bull support and nervous short-covering. The higher level, however, brought some realising and the scrips reacted to Rs. 1,878-12 this morning, before gaining ground to Rs. 1,897-8 at the close. Tata Ordinaries looked up early in the week from Rs. 321 to Rs. 323-8, but softened to Rs. 319-4 on Monday. Subsequently, a keen enquiry set in and the scrips gained considerable strength to go up to Rs. 323-8 at the close. Indian Irons provided a notable feature of the section. On inspiring advices from Calcutta, they emerged firm, advancing from Rs. 23-11 to Rs. 24-5½ yesterday, the highest level touched since 3rd July, 1953. The closing was, however, a shade lower at Rs. 24-2½.

In the textile section, Bombay Dyeings made an early gain from Rs. 362-8 to Rs. 372-8, but profit-taking pressed the rate down to Rs. 367-8 at which it closed. Kohinoors made a spirited advance from Rs. 283-12 to Rs. 290, but yielded ground to Rs. 286 at the close. The highlight of the section was provided by Central Indias which were concerned in brisk bull support, on favourable working results of the Company for the year ended 30th June, 1953. The shares, therefore, buoyed up from Rs. 149 to Rs. 157. Centurys, however, were quiet with a loss of Re. 1 to Rs. 260-8. Svadeshis gained Rs. 2½ to Rs. 243-8. Finlays held ground at Rs. 249. Indu Ordinaries put on As. 9½ to Rs. 10-1. Gokaks were in good form to go up by Rs. 5 to Rs. 232-8.

Dull and quiet conditions were noted in the bank section. Barodas dropped a fraction to Rs. 107. Centrals were uninteresting at Rs. 64-4 and their new shares declined by a rupee to Rs. 66. Imperial Fully Paids lost Rs. 2-8 to Rs. 1,837-8, while the Contributories added Rs. 2-8 to Rs. 432-8. Indias were a shade lower at Rs. 157, whereas United Commercials put on As. 8 to Rs. 36-8.

Revival of investment support to some of the Tata Hydro group shares was a feature of the trading in public utility shares. Tata Hydros which were taken down from Rs. 135 to Rs. 132 revived to close at Rs. 137-8. Similarly, Tata Powers, after having been marked down from Rs. 1,335 to Rs. 1,325 early in the week, rallied to Rs. 1,360. Andhra Valleys, however, succumbed to pressure and declined from Rs. 1,290 to Rs. 1,265.

Miscellaneous industrials were firm, with speculative activity centred round prominent counters. Belapurs staged a sharp rally from Rs. 249 to Rs. 260 on persistent rumours about a bonus issue by the Company. Associated Cements recorded a gain of Re. 1-8 to Rs. 173. Scindias improved by As. 5½ to Rs. 14-3. Alcocks jumped from Rs. 305-10 to Rs. 310. Bombay Burmahs (old) rose from Rs. 336-4 to Rs. 343-12. National Rayons continued to receive good support to and added Re. 1-4 to close at Rs. 121. Premier Constructions changed hands, Rs. 4-12 better, at Rs. 91. Shivrajpurs Re. 1, at Rs. 64 and Walchandnagar, Rs. 2-8, at Rs. 150. On reports that the Common Production Programme Committee of the All-India Cottage and Village Industries Board had recommended the levy of a cess on Wimco matches, the Company's shares reacted from Rs. 243-2 to Rs. 238-12.

• • • •

Calcutta Stock Exchange

CALCUTTA, 14th *October*

With operators showing considerable interest in selected counters in the principal sections, firm conditions developed on the Calcutta Stock Exchange during the week under review. Although the list of transactions did not record an impressive increase, gains were attractive and were well maintained. Such a trend before the commencement of the long spell of holidays—the vacation for the *Poojahs* is the longest spell of rest for the market which closed last evening for the holidays and which will reopen only on 26th October—has been a little surprising, especially when there has been no particula: cause. However, the change in sentiment is believed to be the result of the heavy decline in prices which had been noticed during recent weeks. Jute goods markets continued to be active, and although no rises were recorded, the sharp decline in stocks of mills as at the end of September was hailed by operators as a sign of the beginning of a recovery in the demand for jute goods.

Section-wise, Indian Irons opened steady at Rs. 23-14 last Thursday, and that rate was maintained up to Saturday. The publication last Friday of the production figures pleased the market, and consistent buying during the last two sessions raised the rate to Rs. 24-3. Pig iron produced amounted to 21,320 tons, as against 20,230 tons in August. Steel ingots were, however, lower at 2,270 tons (7,710), but semis and finished steel were higher at 8,990 tons, an increase of 4,800 tons. The improved trend of production is expected to be fully reflected in this month's working. Indian Steel and Wire Products were a strong feature and, on interested buying, improved from Rs. 61-4 to Rs. 63-8.

Miscellaneous shares invited a considerable interest from operators, and several features resulted. Alkali Chemicals at Rs. 17 were better by Re. 1, and Rohtas Industries were taken at Rs. 9-4 as against Rs. 8-10 previously. Indian Cables hardened to Rs. 20-4 and British Burmah Petrols gained from Re. 1-12 to Rs. 2. A bright spot was provided by Assam Saws which spurted from Rs. 6-11 to Rs. 7-6. Sone Valley Cements were steady at Rs. 6-13, and Titaghur Papers at Rs. 36-8 were better by As. 6. Following the announcement by the Calcutta Tramway Company that no final ordinary dividend would be paid for the year to December, 1952, Calcutta Trams were shaded from Rs. 13-6 to Rs. 12-8, but there was a subsequent recovery to Rs. 13-1 as the threatened strike by tramway workers has been averted in the last minute.

Selected features were also recorded in the coal section, where Burrakurs firmed up from Rs. 9-2 to Rs. 9-5. Equitables at Rs. 36-13 recorded a gain of As. 14, while Khatras Jherriahs declined from Rs. 38-12 to Rs. 37-15. Central Indias derived strength at Rs. 5-9, and Bengals were favoured at the higher level of Rs. 511.

After recent weeks of hectic activity, a reduced volume of business was recorded in teas, but gains were well maintained and further rises reported. At Rs. 336, Banarhats gained Re. 1, and New Dooars provided an interesting spot with a rise of seven points to Rs. 340. Hasimaras, in transactions, were pushed from Rs. 28-8 to Rs. 29-12. Hattikhiras were steady at Rs. 12-4.

Selected features were provided in jutes, where Ganges were pushed from Rs. 69-8 to Rs. 75 and Nellimarlas from Rs. 34-8 to Rs. 37-6. Opening at Rs. 23-4, Howrahs advanced to Rs. 23-11. Reliances were favoured at Rs. 15-8. Birlas were one of the strong features with the rate improving from Rs. 41 to Rs. 43-5. Standards gained Rs. 3 to Rs. 135 and Chitavalsahs were supported at Rs. 33. Nuddeas were in demand at Rs. 33. Anglo-Indias at Rs. 203 and Cheviots at Rs. 200.

Notices

THE ASSOCIATED CEMENT COMPANIES, LIMITED

NOTICE

THE SHARE TRANSFER BOOKS OF THE Company will be closed from MONDAY, the 2nd November to MONDAY, the 30th November, 1953, both days inclusive.

By Order of the Board,
FOR THE ASSOCIATED CEMENT COS. LTD.,
CEMENT AGENCIES, LTD.,
Managing Agents:
J. H. PATEL,
Managing Director.

BOMBAY, 25th *September*, 1953.

MACNEILL AND BARRY, LIMITED

NOTICE IS HEREBY GIVEN THAT THE Board of Directors of this Company has sanctioned payment of the Dividend on the Preference Share Capital of the Company at the rate of 5½ per cent. per annum for the half-year ended 30th September, 1953.

Payment will be made on 2nd November 1953, to those Preference Shareholders whose names appear on the Company's Register on that date, or in accordance with their instructions.

By Order of the Board,
A. H. FOSTER,
Secretary.

2, FAIRLIE PLACE.
CALCUTTA, 12th *October*, 1953.

Madras Stock Exchange

MADRAS, 13th *October*

The Madras Stock Exchange presented a mixed trend this week. Only a few scrips changed hands in the textile section. Barring these, others reported fractional losses on fears regarding continued accumulation of yarn and cloth with textile mills. Operators in this section seemed inclined to await authoritative information regarding rumours of a possible reduction in excise duty, or abolition of export duty, on cloth. Planting shares, however, came in for some selective enquiry. Rubbers were somewhat steadier on reports of a reduction in rubber stocks with the leading consumers. Tea scrips evoked little interest, as the overseas demand was not encouraging. Coffee shares presented no better trend, despite the Commerce Ministry's decision to permit export of 2,000 tons of robusta coffee out of the 1952-53 crop. Trading in the market, as a whole, was limited and prices fluctuated within narrow levels. There was, on balance, a sprinkling of both gains and losses.

Trading in the textile section was poor and the tone remained quiet. Ranga Vilas declined from Rs. 45-8 to Rs. 44-8. Lakshmis (Rs. 50 paid-ups) eased from Rs. 79 to Rs. 77. Kotharis were lower by As. 4 at Rs. 10-4. But Metturs gained Re. 1 to Rs. 193. Premiers also rallied Re. 1 to Rs. 81. Maduras and Cambodias were up by As. 2 and an anna to Rs. 39-6 and Rs. 11-10, respectively. Buckinghams, however, were quiet at Rs. 121 and Bangalore Woollens at Rs. 270. Coimbatore Pioneers were colourless at Rs. 117 and Spinnings at Rs. 39.

In the planting section, tea scrips came in for sporadic enquiry. Parksides improved from Rs. 13-4 to Rs. 13-12. Coorg teas were higher by As. 2 at Rs. 6-4. Chembras were slightly better at Rs. 2-5½. Periakaramalais were done at Rs. 6-14 cum-div., as against Rs. 6-12 ex-div.

Rubber scrips ruled somewhat better. Vaikundams gathered As. 6 to Rs. 14-14 and Rajagiris As. 4 to Rs. 12-2. Nilamburis gained As. 2 to Rs. 8-6. Be Bes were better at Rs. 2-4½. But Malankaras lost As. 8 to Rs. 102. Kailas and Velimalais were lower by an anna each to Rs. 3-2 and Rs. 2-5½, respectively.

Among coffee shares, Consolidated Coffees were higher by an anna at Rs. 18. Shevroys was fractionally better at Re. 1-4 cum-div. Coffee Lands was unchanged at Rs. 10-5.

In the miscellaneous section, Rallis declined from Rs. 64 to Rs. 62. Mysore Stonewares showed a loss of As. 4 at Rs. 8-8 and Parrys As. 2 at Rs. 4-8. Mysore Gold eased from Rs. 2-5 to Rs. 2-4. Andhra Cements 'B' were down by an anna at Rs. 10-1.

GENERAL ELECTRIC COMPANY

The seventy-fifth anniversary celebrated by the General Electric Company of U.S.A. on the 15th inst. marks the completion of an eventful career of seven and a half decades in the history of the Company. The Company has been the ultimate outcome of a continuous process of consolidation and expansion of a series of mergers of several sister concerns at different times. Thus it may be mentioned that, 75 years ago, was established the first firm into which, ten years later, in 1899, was merged a group of companies to form a new firm, the Edison General Electric Company. Again, three years after, in 1892, this Company, along with Thomas-Houston Company, was merged into the new Company, now known as the General Electric Company of U.S.A. This Company owes the place of pride which it occupies to-day in the sphere of international business to a succession of five energetic and enterprising presidents who moulded its destinies all these years.

The early life of the new Company was anything but steady. The financial havoc of 1893 almost shook its foundations, but it managed to survive on account of the wise stewardship of its affairs by its first President, Mr. Charles A. Coffin. Mr. Coffin's greatest contribution to the General Electric was in the field of corporate organisation.

Mr. Edwin Rice, who succeeded Mr. Coffin in 1913, made his mark as a scientist. His analytical abilities were demonstrated when he engaged the services of Mr. Charles P. Steinmetz, who later came to be known as "the wizzard of electricity" as he evolved mathematical systems to predict the efficiency and power of electrical equipment. He was an exponent of alternating current by designing the suitable machinery and systems which later became standard in the electrical industry. He was also the pioneer in the field of artificial lighting.

Mr. Gerard Swope, who was the successor of Mr. Rice in 1922, was responsible for the expansion of the services of the Company. Soon, General Electric, which was primarily catering to the needs of industry, found itself in the consumer goods business. The last war focussed the attention of the Company to study methods of generation of power by atomic energy.

Under its present President, Mr. Ralph J. Cordiner, General Electric Company is being modernised and expanded in line with new developments. Mr. Cordiner looks forward to a great future for the electric industry. To quote him: "Based on the best estimates of the growth of economy as a whole, it is probable that in the next ten years, as much electrical generating equipment will be built, sold and installed as has been built and installed in the industry's past 75 years' history."

It may be mentioned here that the Company will be celebrating this year its fiftieth anniversary of service in India through its subsidiary, the International General Electric Company (India) Ltd.

NEWS IN BRIEF

OVER 30,000 acres of land in 29 districts of Uttar Pradesh are stated to have so far been brought under the Japanese method of paddy cultivation.

The first all-metal coach produced from the Perambur railway workshops will be put into service in three years' time from now. The programme of building coaches at the factory has been speeded up.

The Bihar Government does not propose to decontrol cement in the State, as there is an overall shortage of cement in the country and the quotas allotted to the State are not sufficient to meet the demands of the consumers.

The export quota of rosewood logs allotted to the Port of Cochin during 1953-54 has been raised from 500 tons to 900 tons, by allowing the unutilised balance of 400 tons from the quota of the Madras Port to be added to the quota allotted to Cochin.

The 24th annual session of the Central Board of Irrigation and Power will be held on the 26th inst. The session, which will be inaugurated by the Prime Minister, will hold a symposium on the determination of cost and benefits of the river valley projects listed under the Five-year Plan.

A conference of *ghee* packers will be held in New Delhi on the 21st inst. Dr. Panjabrao S. Deshmukh, Union Minister for Agriculture, will inaugurate the Conference. The Conference will discuss, among other subjects, the question of popularising Agmark brand of ghee.

The U.P. Government spent in 1952-53 over Rs. 27.23 lakhs on development plans under the community projects in the State. Of this expenditure, Rs. 17.47 lakhs were non-recurring and Rs. 5.80 lakhs recurring. The balance was advanced to individuals and co-operative societies as loans. As a result of the 12 months' progress of these projects, 60,000 maunds of additional crop yield, estimated to cost Rs. 10 lakhs, has been obtained from the cultivators.

The Government of India has agreed to provide a loan of Rs. 60 lakhs during the current financial year for new special minor irrigation schemes in the Madras State, in addition to a loan of Rs. 22 lakhs required for similar schemes taken up during the previous year. Besides this, the State Government has also been allowed additional loans of Rs. 17.16 lakhs and Rs. 20 lakhs for its tube wells programme and supply of oil engines and electric motors respectively.

The Institute of Town Planners, India, has finalised plans for establishing a town and country planning school, the first of its kind in India. The school will be located in New Delhi and is estimated to cost Rs. 3 lakhs in the initial stage. It will offer a three-year course covering all aspects of town and country planning. The school which is expected to start functioning from the next academic year, will receive financial assistance from the Government of India.

A batch of eleven students from India, Pakistan, Ceylon and Indonesia has just completed a six-month training course in agriculture with Plant Protection Ltd., Fernhurst, England, an associated company of I.C.I. The students were sent to England under the Economic Aid Programme of the Colombo Plan. The course covered intensive theoretical, as well as practical, training in mechanised agriculture, pest control, and the latest farming practices. The most interesting feature of the training was, however, its emphasis on current problems.

About 100 *gram panchayats* have been selected in U.P. for the enquiry into local taxation now being conducted by the Taxation Enquiry Commission of the Government of India. A comprehensive questionnaire containing questions relating to various aspects of local taxation has been forwarded to the selected *panchayats*. Among the points to be enquired into are, the finances of *panchayats*, the origin and development of individual taxes, the relative importance of various sources of revenues, trends on the income and expenditure sides of *panchayat* budgets, tax evasion and measures taken to prevent it.

A delegation sponsored by the Federation of Indian Chambers of Commerce and Industry, consisting of Mr. C. L. Jhunjhunwalla (leader) and eleven others visited the village community development projects of the West Bengal Government in Burdwan, the Central Government enterprises at Chittaranjan and Sindri, the Dhanbad School of Mines and the Fuel Research Institute, the Jamadoba and Digwadhi Collieries and the irrigation and power projects of the D.V.C. at Tilaya, Bokaro, Konar, Maithon, Panchet Hill and Durgapur. The delegation appreciated the constructive efforts and the potentialities of these projects and studied their relation to private enterprise. The delegation will be submitting a report shortly.

A two-day conference of officers of the Central Marketing Organisation and the Marketing Officers in various States will be held in New Delhi beginning on the 19th inst. The Union Minister for Agriculture, Dr. Panjabrao S. Deshmukh, will inaugurate the Conference. The Conference is expected to review the progress already made in agricultural marketing and discuss its various aspects, such as marketing surveys, grading and standardisation, regulation of markets, co-operative marketing, establishment of licensed warehouses, standardisation of weights and measures and a market news service. Discussions at the Conference will be connected in a large measure with the implementation of the recommendations concerning agricultural marketing, in the first Five-year Plan.

The Government of India has brought into force the Industries (Development and Regulation) Amendment Act, 1953, which was recently passed by Parliament. A notification in the *Gazette of India Extraordinary*, issued on the 1st inst. in this regard, contains also certain amendments to the Registration and Licensing of Industrial Undertakings Rules, 1952. Rule 19 makes it obligatory on every owner of an industrial undertaking, registered under the Act, to send half-yearly returns showing the progress made in the establishment of the undertaking. Again, Rule 19A prescribes that owners of all registered and licensed undertakings should give notice, from time to time, of changes, if any, in the ownership or name of any undertaking within 14 days of such change. Notice also should be given of an industrial undertaking falling outside the scope of the Act by reason of a reduction in the number of workers employed or of discontinuation of production of articles falling within the scope of the Act or for any other reason. Undertakings should also report closure of factories for a period exceeding 30 days, as also decisions to liquidate undertakings.

• • • •

From Abroad

A party of ten women from Ceylon and three men from India is now in Britain for a nine-month course in dairy husandry at the Monmouthshire Institute of Agriculture and Horticulture of Usk, Wales. Training facilities for them have been made available by the British Government under the Technical Co-operation Scheme of the Colombo Plan.

The output of yarn in Japan during September, 1953, reached a new post-war record of 200,327 bales, as compared with 185,829 bales in the previous month and the previous record of 1,92,724 bales established in July, 1953. The increase in output during September was due to rise in domestic prices of cotton goods and the Japanese Government's policy to encourage expansion of production to stabilise the market.

The Burmese Parliament has passed into law its new Land Nationalisation Bill to resume private lands and redistribute them to the peasants. A detailed schedule for distribution of the different kinds of lands to the cultivators for individual ownership and co-operative production has been drawn up. The compensation clause in the Act has been dropped on the recommendation of the Select Committee of the Upper House. However, a new Compensation Bill is expected to be presented to the next session of Parliament in February.

Ten surveyors and engineers from Burma, Ceylon, Pakistan, the Philippines and Thailand arrived in the U.K. early last week to take a year's special diploma course in aerial survey methods provided by the British Government under the Technical Co-operation Scheme of the Colombo Plan. The course, which began on the 5th inst., is the first of its kind to be given in the United Kingdom under the Colombo Plan. An important feature of the syllabus will be the study of aerial survey methods, with Asian conditions borne constantly in mind.

The International Handicrafts Exhibition, now on in London, is the first ever to be held in Britain. The principal aim of the exhibition is to further and encourage the great and growing interest in handicrafts and homecrafts fostered by all nations in the face of mass production and industrial development. Exhibits from India figure prominently at the exhibition and include beautiful ivory-work as well as silver filigree, brass-work, carvings, *saris*, brocaded scarves, bead-work and printed cotton. Other overseas countries represented at the exhibition include France, Italy, Canada, the U.S.A., Pakistan, Yugoslavia, Hungary, Poland, Cyprus, Kenya and the Gold Coast.

Finland has asked Britain to explore the possibilities of a triangular trade agreement between Britain, Finland and Russia. No clear-cut proposals have so far been submitted, but the British Government will welcome anything which might emerge for increasing the level of trade between the three countries. There is no obstacle at present to triangular trade, as sterling can be freely transferred between the three countries.

France's three main small car manufacturers, Renault, Simca and Peugeot, cut the prices of their cars by about 10,000 francs as the Paris motor show displaying 1,300 cars from eight nations opened on the 1st inst. On the eve of the show, the Rootes group of Britain, announced a substantial reduction in prices of some of its cars. There is rivalry between British, French, German and Italian manufacturers to sell cheap four-seater cars for business and pleasure which will be economical in petrol consumption.

United States imports during the first half of 1953 rose to record proportions by volume, although dollar value of receipts fell short of the peak achieved in the first half of 1951, according to the U.S. Department of Commerce. In the first half of 1951 unit prices of imported merchandise were extremely high, reflecting the boom brought on by the Korean situation. The $6,000 million record figure for any semi-annual period reflected import prices averaging about nine per cent. higher than those of 1953 to date. As a result, the $5,600 million U.S. import figure for the first half of 1953 actually represented a larger volume of goods. This record volume was larger by about one-tenth than in the first half of 1952.

PERSONAL

MR. K. G. Apte, of the Phaltan Sugar Works Ltd., has been elected President of the Deccan Sugar Technologists' Association for the current year.

Dr. N. V. Rajkumar, of the Foreign Relations Department of the All-India Congress Committee, has been appointed Commissioner for the Government of India in Fiji.

Mr. C. C. Desai, High Commissioner for India in Ceylon, has been elected President of the Council for Technical Co-operation under the Colombo Plan, in succession to Mr. R. Coomaraswamy of Ceylon.

Mr. Anand Mohan Sahay, Commissioner for the Government of India in British West Indies, including British Guiana, has been appointed Commissioner for the Government of India in Mauritius.

Mr. A. D. Balasundaram Mudaliar, Joint Registrar of Co-operative Societies, Madras, and Business Manager of the Madras Handloom Weavers' Co-operative Society, has been appointed Director of the Central Marketing Organisation of the All-India Handloom Board with its headquarters at Madras.

Mr. Frederick Grant, M.C., Q.C., has been appointed Independent Chairman of the Executive Committee of the British Iron and Steel Federation in succession to the late Sir Andrew Duncan. A prominent Bencher of the Inner Temple, Mr. Grant was a member of the Monopolies and Restrictive Practices Commission from 1949 to 1952 and Chairman of the Purchase Tax (Valuation) Committee, 1952-53.

Professor W. A. Robson, Professor of Public Administration in the University of London (London School of Economics and Political Science) has arrived in India at the invitation of the Patna University to deliver a series of lectures in November and December at the University. In the meanwhile, he will undertake a lecture tour of India under the auspices of the British Council.

Dr. S. K. Muranjan, Principal of the Sydenham College of Commerce, Bombay, has left for London *en route* to the U.S. to conduct post-graduate seminars of the Universities of Texas, Indiana and New York. On the completion of work in the U.S., Dr. Muranjan will visit Japan to study the organisation of cottage industries there.

Mr. M. R. Bhide, Vice-President, Indian Council of Agricultural Research and Additional Secretary, Ministry of Food and Agriculture, will lead the four-man co-operative mission to be sent to Canada at the invitation of the Government of Canada. The other members of the mission are Mr. D. A. Shah, Principal, Co-operative Training Institute, Poona, Mr. Shyam Bharose, Registrar of Co-operative Societies, Bhopal, and Mr. R. Bhardwaj, Joint Registrar of Co-operative Societies, Uttar Pradesh. The mission will study the formation and management of credit societies, co-operative marketing of agricultural products for small communities, fisheries, etc.

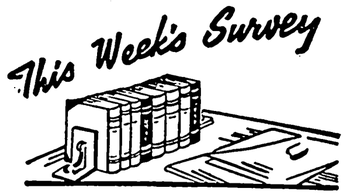
"COMMERCE" 1928

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, 20th October

The Tide of Speculation

With the autumnal holidays commencing, operators in the share market, as their usual custom is at this time of the year, are endeavouring to discover the probable trend of values when our Stock Exchanges reopen after the *Poojah* recess. Now that the strike in the Bombay cotton industry has come to an end, the question is being asked whether cotton textile shares are likely to appreciate to any appreciable extent beyond this week's closing rates. Are the prospects of the jute industry sufficiently promising to justify an advance in jute mill securities? What are the possibilities in the same direction for tea, tin and rubber? The scope and diversity of what is termed the industrial market, backed by past experiences, of an unpleasant nature in many instances, predispose the prophet to the opinion that spectacular developments are not likely to be experienced. The assumption is almost certain of fulfilment. Nor can anything out of the ordinary be anticipated in the Gilt-edged schedule. The fixed-interest-bearing list is seldom productive of anything sensational, though its investment prospects may be good. The public, watching the trend of trade statements and feeling that general trade recovery must be gradual, shows no inclination to turn towards railway securities to any extent. Light rails, it is true, have a large circle of devotees who have been gratified by the excellent economic progress of the territories which the railways touch. The attention of investors is now centred more than ever before upon electric supply projects, which are constantly increasing in number, and the companies are sure to make a popular counter when the markets reopen after the *Poojah* holidays. Both rubber and oil have had their periods of intense activity, and doubtless will again; but discernible prospects for the near future in both directions are far from being settled and satisfactory enough to warrant any expectations of strong buying.



COLOMBO PLAN COMMITTEE MEETS

THE Consultative Committee of the Colombo Plan began, according to schedule, its five-day session at New Delhi on the 13th inst., India's Finance Minister, Mr. C. D. Deshmukh, presiding. Representatives of the fifteen nations and the three world bodies, mentioned in the course of a leading article in this journal a fortnight ago, attended the meeting. India's Prime Minister, Mr. Nehru, inaugurated the meeting, Mr. R. G. Casey, Australian Minister for External Affairs, and Mr. Mohammad Ali, Pakistan's Minister for Economic Affairs, also spoke on the occasion.

The aforesaid speakers spotlighted attention, among others, on two characteristics of the Colombo Plan, namely, international co-operation and self-help by the countries seeking aid. Mr. Nehru who pleaded for a quick solution of the economic problems of Asia by means of technical and other assistance under the Plan, said that, apart from such assistance, the coming together of the Colombo Plan countries would lead to not only a better understanding among the countries but a greater lessening of tensions. Mr. Casey echoed more or less the same view when he said that the Colombo Plan offered a way in which countries with greater resources could share them with other underdeveloped countries so as to make for a better world. Mr. Mohammad Ali also echoed the same thing. He said: "Whatever we have to achieve will only be achieved by methods of international co-operation and the Colombo Plan embodies this noble aspect of international co-operation."

The speakers' views were also unanimous on the need for self-help. Mr. Nehru remarked: "We welcome the assistance, co-operation and help of other countries which are in a position to give that help. But we realise very well that, ultimately, it is by our own hard work that we will go ahead." In a different phraseology, Mr. Casey emphasised the same point. He declared: "Asian Governments must themselves finance the bulk of the projects and countries outside Asia can contribute only the margin of the finance required." And Mr. Mohammad Ali reiterated the same idea by pointing out that the people of Asia felt that they must, by their own efforts, move forward with such help as might come from their friends.

The uniformity in the views of the speakers mentioned above underlines complete recognition by the aid-receiving countries that no amount of foreign aid will help their cause, unless they themselves worked hard to build up their economies. This should inspire confidence among the aid-giving countries that the assistance given by them would be put to the best advantage and would not engender complacency and laziness among the recipient nations.

Mr. Nehru made significant remarks on the population problem. He sought to dispel the fear that no improvement in India was possible unless it put a stop to the growth of the population. He did not, of course, underrate the adverse effects of a growing population, but he said, apparently as a result of the realisation of the limited results that will follow in the initial years of even a vigorous family planning drive, that the country's schemes should be implemented at a rate faster than the rate of increase in the population. "We have always to keep this objective," he said. In this context he referred to the improvement in the food situation and hoped to tackle the country's problems of industry by a judicious approach to mixed economy. But almost in the same breath he said something which, while not being entirely contradictory, is certainly not conducive to the working of a mixed economy.

The concept of a mixed economy cannot work satisfactorily, if the powers-that-be have no confidence in private enterprise. Mr. Nehru is one of those in the Congress Party who do not have much respect for private enterprise. On many an occasion, he has voiced his misgivings about private enterprise. He did so in one of his numerous public utterances during his recent visit to the South. He reiterated it again in his speech at this Conference also. Thus, he took it for granted that "the pressure of events and circumstances in this country—all drive up more and more towards thinking in terms of public ownership." Of course, he added, rather grudgingly: "We propose to give full play to what is called the private sector of this economy." But he quickly added: "Nevertheless, our tendency is towards public ownership." This policy of "pinching the child and rocking the cradle" is scarcely calculated to encourage private enterprise to come forward and start new ventures only to be taken over by the State later on.

OIL TANKERS

It is now revealed that there is a definite provision, in the agreement between the Government of India and the Standard-Vacuum Oil Company for the construction of India's first modern oil refinery, for the future use of tankers under the Indian flag. But, as India does not possess at present a tanker fleet, the Government has agreed that foreign tankers, which bring in either crude oil for the refinery or oil products for the Indian markets, could lift the products from the refinery in Bombay for other ports in India. This agreement will hold good till the Government or a corporation in which the Government holds the controlling shares acquires tankers of a size economically suitable for use. When this is accomplished, Standard-Vacuum will negotiate for the utilisation of a reasonable number of these tankers. In these negotiations, the Stanvac's charter commitments existing at the time will, however, be taken into account. It may be added here that a similar provision exists in the Government's agreements with the Burmah-Shell and Caltex Oil Companies also.

This information disproves the allegation that the Government of India has contravened the policy of reservation of coastal trade to national ships by making no provision for the utilisation of tankers under the Indian flag, which might become a possibility in the near future. The agreement could, of course, be criticised on the ground that it is not applicable to tankers owned by private companies or corporations in which the Government might not hold the controlling interest. But such a criticism is unrealistic and theoretical, inasmuch as the possibilities of private enterprise being in a position to organise a tanker fleet are remote in view of lack of sufficient capital. None of the existing shipping companies will be in a position to find the large capital that will be required to own a tanker fleet of adequate size. Indeed, they have not the funds even for expanding their existing lines of business and are dependent upon Government assistance for buying even a few vessels. In these circumstances, to criticise the arrangement, which the Government has entered into with the refinery companies for carrying the refined oil and other by-products to the Indian coastal ports, as being a violation of the principle of reservation of coastal trade to national shipping, is tantamount to advocating a dog-in-the-manger policy.

ASIAN MARITIME CONFERENCE

The ten-day deliberations of the Asian Maritime Conference, which concluded this week at Nuwara Eliya (Ceylon), discussed the methods of recruitment and welfare facilities for Asian seafarers in Asian ports. It also considered a report of the Director-General of the I.L.O. containing a survey of maritime developments in Asia, general conditions of Asian seafarers and the position in regard to ratification of maritime conventions by countries of the Asian region. Seven Asian countries, namely, Ceylon, Hongkong, India, Indonesia, Japan, Pakistan and Singapore and four non-Asian countries, namely, the U.K., France, the Netherlands and Norway, were represented at the conference. There were also representatives of, among others, the Governing Body of the I.L.O. and the Joint Maritime Commission. Asian seafarers constitute a large proportion of those employed in the seafaring profession in the merchant fleets of important maritime countries. So far as India and Pakistan are concerned, last week's deliberations in Ceylon are of particular significance, because their shipping has witnessed considerable expansion since the war, with the result that the owners of vessels of these two countries now constitute an important group among employees of seamen.

The full text of the deliberations of the Conference is not available at the time of writing. But from Press reports, it is clear that the attention of the delegates was mainly concentrated on methods of recruitment and conditions of engagement of Asian seafarers. That is only as it should be, for it has long been recognised that the fundamental problem of the Asian seafarers is the organisation of recruitment. Recruitment methods are open to charges of corruption and bribery. This has resulted in irregularity of engagement, and intolerable conditions to Asian seafarers seeking employment. The chronic indebtedness of the Asian seafarer and the absence of trade unions organised on democratic principles have aggravated the situation. It is natural, therefore, that recruitment was the main theme of the Conference. The observations of the Indian shipowners' delegate, Mr. N. Dandeker, on this aspect, while discussing the report of the Director-General of the I.L.O., are pertinent. He said:

"An effective recruitment organisation will have to solve many problems. The number of employable seamen will have to be ascertained; if the number is too large, as it undoubtedly is, effective methods of minimising the intake of new recruits and of excluding those who are really unemployable by reason of age, ill-health, lack of experience, etc., will have to be evolved and systematically applied; the equitable rotation of available employment among those who are employable, without the intervention of *serangs* or other middlemen and without jeopardising the quick and effective manning of vessels is another aspect of the problem which will have to be tackled; and so on. The list is long and important. But it is only when these and other problems connected with the recruitment of seafarers have been satisfactorily resolved that any significant progress in other directions, including welfare and social security schemes, seems practicable."

Mr. N. M. Buch, the leader of the Indian delegation, complimented the Director-General of the I.L.O. for his masterly survey of the conditions of Asian seafarers, while Mr. Aftab Ali, delegate of seafarers from Pakistan, commenting on the report, vehemently repudiated the charge that Asian seafarers were not capable of organising themselves. Speaking in relation to Indian and Pakistani seafarers, he laid the blame for the existing lack of organisation among seafarers at the door of the "time-worn and vicious systems of recruitment" which, according to him, had been "deliberately foisted on them by shipowners, particularly British shipowners, with the studied purpose of maintaining disunity in their ranks." Mr. Ali also took exception to the statements made in the report that the inefficiency of most of the Asian seafarers was due to lack of facilities for their training for the seafaring profession. Agreeing with Mr. Ali, Mr. Dandeker said that the lack of organisation was not due to any inherent or natural inability on the part of seafarers to set up such an organisation. Proceeding, however, he called for "right solutions." He deplored the tendency of indulging in "witch-hunting" to find out "who was wrong." That would serve no useful purpose. The task to be done now is, as he rightly remarked, to ascertain as to "what is right" and not "who is right."

RAISING COCONUT PRODUCTION

It has been estimated by the Planning Commission that there is a shortfall of 100,000 tons in the supplies of copra in India to be covered during the planning period. The case for closing the gap is, therefore, clear. This can be done either through imports or through raising the internal production. It is true that the task of filling the gap entirely by stepping up domestic production is not an easy one, but to close it solely by importing coconuts is not quite desirable. It is, therefore, gratifying to note that measures to increase production of coconuts in India considerably are receiving the attention of the Indian Central Coconut Committee.

Thus, the Committee at its eighteenth session, held in Bombay on the 12th inst., approved of the following recommendations of the Sub-Committee, especially appointed, at its last meeting, to go into this question:

"The production of coconuts should be stepped up by 30 per cent. in the course of the next five years; for this purpose publicity regarding improved manuring and cultivation practices should be conducted; measures should be adopted by the State Governments for the control of pests and diseases; growers should be given *taccavi* loans to encourage them to cultivate coconuts in suitable waste lands; a survey should be conducted by the Revenue and Agriculture Departments of the States to bring additional areas under coconut cultivation; more coconut nurseries should be established to meet the demand for seedlings; pamphlets on various aspects of coconut cultivation should be published; coconut propaganda officers should be appointed in Madras, Mysore and Andhra, as in Travancore-Cochin, and prizes instituted to encourage the growers to step up the yield and bring larger areas under cultivation."

The Central Coconut Committee also recommended to the Government of India that the annual import of coconuts and coconut products be restricted to 50,000 tons in terms of copra and during the first half of 1954 only 25,000 tons of copra be imported, of which not more than 25 per cent. should be in the form of coconut oil. In the alternative, the Committee recommended that, if the Government guaranteed a minimum economic price to coconut growers, there need be no restriction on the imports of coconut products during 1954, although it would be desirable to effect the import as far as possible in the shape of copra.

It will thus be seen from the foregoing that the emphasis is more on raising the internal production. Referring to this aspect, Mr. Rafi Ahmed Kidwai, Union Minister for Food and Agriculture, who addressed the meeting of the Committee, laid stress on the fact that this could, to a large extent, be achieved by regular manuring and inter-cultivation of coconut gardens. Mr. Kidwai advised the Committee to devote its attention to the task of persuading the small cultivators, who formed the bulk of coconut growers, to take to improved methods of cultivation. In his presidential address at the above session, Mr. K. R. Damle, Secretary, Union Ministry of Food and Agriculture, also stressed the need for enlisting the wholehearted co-operation of thousands of small growers and for undertaking an intensive propaganda on behalf of the States for raising coconut production.

Outlining the plans that are under way to achieve the Committee's objective, Mr. Damle revealed that one of the ways of stepping up production is to make available improved quality seedlings to cultivators through the help of nurseries and coconut research stations. There are at present 30 nurseries in India, with a total annual production target of about 5 lakhs seedlings, whereas the annual demand for replanting and underplanting is nearly 23 lakh seedlings. There is thus ample scope for starting more nurseries. Mr. Damle disclosed that the Committee had received schemes for starting three new nurseries, one in West Bengal, another in Travancore-Cochin and the third in Orissa. In addition, the Mysore Government also proposed to start a nursery, along with its proposed coconut research station. The Madras Government had asked for extension of the comprehensive coconut nursery scheme in that State up to the end of March, 1954. There are only three regional coconut research stations at present in the South, all of them being in Travancore-Cochin State. After considering these requests carefully, the Committee sanctioned schemes for starting regional stations in East Godavari District of the Andhra State, in the Malabar district of the Madras State, at Ratnagiri in Bombay State and in West Bengal. In this connection, Mr. Damle did well to remind the Committee of the need for selection of proper sites to locate research stations, lest the mistake made in Orissa (where the station had to be closed down after working it for five years because of the unsuitability of the site) should be repeated.

COFFEE EXPORTS

The Government of India's decision to permit the export of 2,000 tons of robusta coffee out of the 1952-53 crop has come not a day too soon and will, we are sure, be welcomed by all sections of the coffee industry. There has been such an alarming accumulation of coffee stocks with the pool that the Marketing Committee of the Indian Coffee Board which met in Bangalore recently had expressed grave concern over the situation. On 1st October, 1953, the stock of coffee was stated to be 12,570 tons (not 14,000 tons as stated in the report from New Delhi of 9th October), as compared with 5,500 tons on 1st October, 1952, whereas the monthly average offtake is not more than 1,650 tons. It was, therefore, estimated that, if there were no exports, the balance of coffee in the pool at the end of this year would be about 7,600 tons, as against 1,280 tons only at the end of last year. Even after allowing for about 2,000 tons to be carried forward to next year, there will be a large stock of some 5,600 tons.

It is now learned that the Coffee Board was recently of the opinion that, instead of exporting only robusta for which the immediate export demand may not be as much as 2,000 tons, this quantity might be made up of plantation, arabica cherry as well as robusta. One other reason for this was that a further analysis of the stock position had shown that a large quantity of arabica and plantation varieties may be found to be available as surplus to internal requirements at the end of the year.

The coffee growers have not been able to assess the implications of the proposed levy of an export duty of Rs. 62-8 per cwt. in respect of the 2,000 tons to be exported. It is pointed out that the world price of robusta is to-day not more than Rs. 70 to Rs. 80 per cwt. above the Indian price and that, if the export duty at the proposed high rate is levied, the demand for this quantity may not be as much as was expected.

OFF THE RECORD

(By "ROVER")

THOUGH the sordid details regarding the affairs of the India United Mills Ltd. in Bombay had been a subject of market gossip for months before the Government ordered an enquiry into these by an auditor-cum-chartered accountant from Delhi, the preliminary report of this enquiry which was placed before the Central Advisory Council of Industries by Mr. T. T. Krishnamachari, Central Minister for Commerce and Industry, must have made sad reading for the members of this body. No less than the enquiry itself, Mr. Krishnamachari's attitude with regard to this sorry business was dispassionately objective and correct. To begin with, the Ministry had not given any specific directives to the investigator with regard to the mode and manner of carrying out his onerous task. He was left completely free to chart out a course for himself. In presenting the report to the Council, the Commerce and Industry Minister, who is ordinarily apt to allow his sentiments to run away with himself on such occasions, was scrupulously fair and impartial like a presiding judge at a criminal sessions in his charge to the jury. As I have been sharply critical of this Minister's indiscreet observations on many an important occasion in the past, I deem it my duty to emphasise this aspect of this otherwise unsavoury affair.

The "Indu" Mills was not the only industrial concern to come under the Council's scrutiny during this session. Similar reports in connection with the management of five sugar mills in U.P., under the Industries (Development and Regulation) Act, also formed part of the reference by the Government to the Council. In a way, apart from the six allegedly erring concerns, one might take it that the Central Advisory Council of Industries itself is on trial both before the bar of public opinion and in the eyes of the authorities. For a very long time, there have been genuine and justifiable complaints regarding the cavalier attitude of the Government towards the business community. I have myself often voiced these complaints in these columns. Here is a genuine instance of a change of heart on the part of the Government. Instead of taking any hasty action on these reports or Instead of making merely a formality of consulting this advisory body, the Government have treated it with due consideration, courtesy and respect.

To impress the Council with the responsible nature of the task entrusted to it, the Minister has not only drawn its attention to the fact that it was "in the position of a jury sitting in judgment" over the six concerns whose conduct was in question, but has also conveyed an assurance to it, on behalf of the Government, that they had not made up their minds in regard to the future course of action which has to be taken in this matter. Mr. Krishnamachari, in inviting the Council to consider these cases and tender its advice to the Government, told the members that the Government would view their recommendation with a completely open mind. He also reminded the Council of the fact that this was, perhaps, the first case of the kind that it was asked to deal with. In addition to this, one of the accused in the dock was the largest unit in the biggest industry in the country, which fact was not without significance. And, finally, the Council was also solemnly told by the Minister that "if you come to the conclusion that the report indicates gross mismanagement and all that follows thereafter, you cannot ignore the repercussions, for better or for worse, of any decision that might be taken on the entire textile industry."

All the six concerns are believed to be charged with gross mismanagement, serious financial irregularities and adoption of several undesirable business practices. Impressed as much by the dark shadow these disclosures in the reports threw on the private sector of industry, as by the depth of responsibility cleverly but correctly thrown upon it by the Commerce and Industry Ministry, the Council devoted practically the whole of the morning session in discussing this subject. While nobody would question its decision that further investigation was necessary before the Council could make its recommendations to the Government with regard to the future of these industrial units, it must be remembered that time is one of the essential factors in devising means of rehabilitating and saving these concerns, both in the interest of the country, as well as of the large number of shareholders who have trustingly put their money into them.

The sugar season is about to start and an extra year's closure might ruin any chances of recovery that there might be of putting these five moribund sugar factories on their feet again. From the meagre reports available of the proceedings of the Council as published in the daily Press, it is not clear whether the whole question with regards to all the six units has been entrusted to the Sub-Committee to be presided over by Mr. Ramaswami Mudaliar, with Messrs. G. D. Birla, Kasturbhai Lalbhai, S. R. Vasavada, N. N. Kanungo, Lala Shri Ram and Miss Maniben Kara as members, or only the case concerning the group of Bombay textile mills, popularly known as the "Indu" Mills, has been referred to it. While the period of little over a month allowed to this competent and representative Sub-Committee might be necessary in the case of the India United Mills, a shorter period would certainly have sufficed for formulating proposals concerning the sugar factories involved in this scandal.

Besides, it would have been better on other grounds also if the Council had appointed two separate sub-committees, one to deal with the reported recalcitrant sugar factories and another to probe further into the affairs of the textile mills. It is not necessary that the measures recommended in each case should be of a similar nature, even though the principle involved in dealing with all of them might be the same. It is not the ultimate fate of the respective Boards of Directors or the Managing Agents that the Sub-Committee has been asked to decide. Its advice has been sought, so far as one can see it, only in connection with the best way of salvaging these units and rendering them production-worthy. For this the suggested remedy might vary from case to case, both in principle and details. A separate body dealing with the sugar factories would also have secured two additional benefits. In the first place, the members of the Sub-Committee are likely to be preoccupied mainly with the colossal "Indu" combine and they might quite logically be prone to apply their recommendations with regard to the rehabilitation of this group of textile mills to the sugar factories also, instead of giving their full mind to the separate set of problems which the future managements would be called upon to face in the case of these sugar mills. On the other, a smaller sub-committee to deal with the affairs of the sugar mills would have saved valuable time and secured a more impartial consideration of the remedies to be applied in their case.

As I have observed before, it is the Advisory Council of Industries itself, more especially the group consisting of members associated with the management in various industries, which is on trial. The line they adopt in this case will go a long way towards defining the attitude of private enterprise in regard to the need for honest and efficient management and the ability of the sector itself to set its house in order. That standards of business integrity have fallen sadly low during the last decade is a fact which cannot be hidden any more. Both the Industries (Development and Regulations) Act and the proposed amendment of the Indian Companies Act on drastic lines have resulted from the failure of the private sector to control anti-social members operating within its sphere. Important top level organisations of business men, such as the Federation of Indian Chambers of Commerce and Industry, as well as the no less important regional bodies like the various millowners' associations, the Indian Sugar Mills' Association, and merchants' chambers in Bombay, Calcutta, Madras, Kanpur and other important industrial centres, which should have been primarily concerned in securing a minimum standard of honesty and fair dealing on the part of their members, have failed signally in this respect.

Beyond passing some pious and vague resolutions from time to time, recommending business men to show greater regard for the welfare of consumers, these powerful organisations have been too timid to attempt anything constructive in this direction. It could not have been outside the knowledge of the leaders in the various organisations that shameful, and at times even inhuman, practices, as exemplified in the field of manufacturing and marketing of medicinal preparations, were being adopted progressively by some of the highwaymen and freebooters amongst them. They must also have known that Nemesis was bound to overtake them as well as the whole private sector one day, if they did not take practical steps to check the growing immorality amongst their ranks. But, during all these years, these bodies did nothing more than safeguarding the interests of their constituents and engaged themselves solely in securing small concessions here and there for the community as a whole, without paying any attention to the misdeeds that were taking place right before their eyes.

Be that as it may, it is obvious that those who managed to wriggle themselves into positions of eminence and authority by a process of bargaining into these bodies, were more concerned with maintaining internal harmony and smooth running than in securing a healthy growth of conventions binding all their members to a code of honour, which alone could guarantee continued existence and efficient functioning of private enterprise as a partner in the national effort. Where internal checks are lacking or non-operative, regulation from outside is bound to follow, and, by and large, it is the failure of these trade bodies to take disciplinary measures against the black sheep amongst them, which is responsible not only for the volume of corruption that is in evidence to-day in the economic world, but to the harsh measures which the Government has been forced to adopt to keep the private sector in order. I am not in favour of these harsh measures, because, while they might succeed, to a certain degree, in minimising malpractices, they are sure to kill initiative, enterprise and the capacity for quick readjustment which are very essential for the healthy growth of both commerce and industry. Let us hope that the Advisory Council of Industries will succeed, where the Federation and the various chambers have failed so miserably.—

CENTRAL GOVERNMENT SEEKS ADVICE OF INDUSTRIALISTS

AGRICULTURAL OUTPUT IN EAST PUNJAB UP

(From A Special Correspondent)

NEW DELHI, 12*th October*

THE proceedings of the Central Advisory Council of Industries, which met in the Capital yesterday under the chairmanship of Mr. T. T. Krishnamachari, Minister for Commerce and Industry, represent a new line of development in regard to industrial administration and management. In a lucid and sober speech, the Minister indicated the anxiety of the Government to enlist the co-operation of leading industrialists of the country for weeding out the undesirable elements in industrial administration. The elimination, or at any rate, the reformation, of the disreputables from the industry would, from the point of view of the Government, be as desirable in the interests of the capital market in future as it is necessary for protecting private enterprise from the attacks of the leftists. In other words, it is essential for preserving the concept of mixed economy. The Minister was right when he brought the analogy of the Court House and compared the industrialists assembled there to the position of a jury sitting in judgment over the erring industrial units.

DELHI LETTER

A substantial portion of the Minister's speech was occupied with the recounting of the maladministration of a particular unit of the textile industry and hence he did not put forward, in his customary assertiveness, any Government viewpoint on many important questions of the day. He, however, dwelt on the smooth progress made in regard to the licensing of new units, as also on the expansion of the existing units. He revealed that, since the last meeting of the Council in May, 1953, the Licensing Committee had examined 118 applications for licences. Out of these, the Committee had recommended the grant of licences in 87 cases; 34 of these related to cotton textiles, eight to pharmaceuticals and drugs, eight to vanaspati and vegetable oils, seven to heavy chemicals, six to rubber goods, four to cement, four to glass and ceramics and the rest to other industries. The Sub-Committee of this Council, the Minister said, held a meeting on 20th September, 1953, and endorsed all the recommendations of the Licensing Committee. This Committee also examined certain general principles to be followed in the licensing of new units and expansions.

Two More Development Councils

The Minister took the opportunity to announce his proposal to form two more Development Councils, one for the bicycle industry and the other for the sugar industry. It may be mentioned that, at present, two Development Councils have been functioning, one for the internal combustion engines and power-driven pumps and the other for heavy chemicals—acids and fertilisers. Mr. Krishnamachari wanted the Council to give its opinion and advice in regard to (a) foreign participation in industry, (b) finance for rehabilitation, (c) development of industries, and (d) facilities for training in business management and industrial administration. The industrialists were also asked to give their views on the question of framing rules for elucidating the meaning of the expressions "substantial expansion" and "new articles" occurring in the Industries Act.

The agenda of the Conference also included such topics as the survey of idle capacity in the engineering industries and the question of bringing the panel reports up to date. The Committee appointed by the Government for making a preliminary survey of the spare capacity in the country in the engineering industries, under the chairmanship of Mr. S. Moolgaokar, has drawn up its terms of reference which include an assessment of the possibilities of producing in indigenous factories, goods that are at present being imported, finding out methods of utilising effectively idle capacity at reasonable cost, and the achievement of co-ordination between different manufacturing units. The Committee on Training in Business Management and Industrial Administration is tentatively of the view that training should be confined to those persons who choose to be trained for a business career or to occupy posts in public utilities and in industries run by Government. It feels the specialised training should be confined to a limited number of persons to ensure high quality. A limit of 20 persons has been recommended as the maximum for a single training centre.

Lack of Precision

A certain amount of precision was sadly lacking in the recently held, much publicised meeting of the National Development Council. All the leading members of the Government and the Planning Commission participated in the two-day discussions. The meeting was well attended by Chief Ministers of many States and their deputies. The State Ministers could not take up an all-India viewpoint and most of them were anxious to press the interests of their individual States and pleaded for more help from the Centre. They were completely silent on the question of raising additional resources for the implementation of the Five-year Plan, perhaps due to the apprehension that the imposition of any new taxation would make them unpopular with their electorate. The Prime Minister, who addressed the Council, asked the members to view the problem from the angle of providing "progressively fuller employment." The Finance Minister, Mr. C. D. Deshmukh, was in a more optimistic frame of mind and was confident that he would be able to finance the Plan without any difficulty. He pointed out that the *tempo* of expenditure would increase, especially with the gradual advancement of the Plan. He particularly emphasised the need for vigilance on the part of the States while taking up non-developmental schemes lest they should drain away a portion of the funds intended for productive projects included in the Plan. A number of State Ministers who spoke on the occasion would appear to have favoured the widening of the spheres of housing, transport and small industries, in order to increase the employment potential under the Plan. It is somewhat unfortunate that the Council did not fully study the full implications of Mr. Krishnamachari's plan for the starting of a number of industrial townships spread all over the country in which should be located some leading key industries. The Commerce and Industry Minister's plan may be ambitious, but, from the long-term point of view, his plan, if implemented, will confer considerable benefit to the economy of the country.

The Council has tentatively decided to increase the expenditure on the Five-year Plan by Rs. 175 crores for financing new specific schemes which are expected to expand employment potential and check the growing unemployment in the country. This means that the total expenditure under the Plan will go up to Rs. 2,244 crores. Now that only Rs. 1,000 crores are expected to be spent within the first three years of the Plan, it is somewhat doubtful whether Government will be able to spend at the rate of Rs. 622 crores during the fourth and fifth year of the Plan. This will be possible only if the Government takes bolder measures to increase the absorbable capacity of such large investments.

Mr. V. T. Krishnamachari, Deputy Chairman of the Planning Commission, took up a more realistic attitude, being an experienced administrator, and urged the States to take all

STERLING STILL GOES STRONG

U. K. CHANCELLOR'S OPTIMISM

(From Our Own Correspondent)

LONDON, 10*th October*

THIS year's rise in the gold and dollar reserves of the sterling areas seems to have faded away in the last two months. It is true that in August and September they did increase by £11 million, but this was less than the amount of U.S. aid received. In commercial account there was a deficit of £6 million, due entirely to an unfavourable balance with Western Europe. This weakness has looked all the more disturbing because it has come at the close of a year of steady and substantial surplus during which the gold and dollar reserves have risen by £285 million.

LONDON LETTER

The following table shows, in dollars, how the reserves have increased in each of the last three quarters, distinguishing gold payments from the European Payments Union (with which settlements are now being made as to half in gold) from the trade receipts and from U.S. aid. In the first quarter the net gain was $320 million, in the second $201 million and in the third $119 million—mostly acquired in the first month of the quarter:

Gold and Dollar Receipts

(In million $'s)

	1953 *Quarters*		
	1st	2nd	3rd
Settlement with Western Europe (E.P.U.)	95	42	−19
Other gold and dollar receipts ...	119	98	55
Net trade gain	214	140	36
U.S. aid	106	61	83
Total	320	201	119
Reserves at end of period ...	2,166	2,367	2,480

The second quarter was not really so much weaker as shown here, since various special payments were made in its course, including the Cuban sugar purchase and a large share repatriation. For that matter, the trade surplus in the third quarter has also been reduced by the Canadian debt settlement.

The European figures are especially disappointing since the flow of gold in settlement of favourable balances was steady till the mid-year. In the third quarter there has been a total deficit of £26½ million on trade account, though offset by £16 million of debt repayments from France and Germany. The October E.P.U. payments (in respect of September) will show a small gold increase but on balance the quarter (actual payments August-October) will show a loss of $10 million.

With this background, it was very encouraging indeed to hear the Chancellor's statement made at the Margate Conference of the Conservative Party this week that the future outlook would show continued steady improvement. Even allowing for the natural optimism with which Chancellors must view the situation when they confront their constituents at purely Party meetings, this statement could not have been made without a basis of real strength in the position of sterling. He said, indeed, that for the third quarter the improvement in the gold and dollar balance was better than he had expected since at that time of the year purchases of tobacco, grain and other dollar commodities are being made. He gave the impression that there had been no real worsening of the country's internal position and that during the autumn he expected to see the strengthening of sterling continue.

This interpretation puts a very different light on the apparent deterioration in the figures in recent months. If the Chancellor has correctly interpreted the situation, there has been no more than a seasonal halt in rise in the gold and dollar reserves.

The Chancellor did not, of course, lose the opportunity to say that things would be a good deal better if all "ability, resource and inventiveness at the command of employers, workers and the Government" were fully mobilised. He added a word of praise for the internal stability of the nation financially (of which the recent oversubscribing of the issue of Treasury 3 per cent. stock 1962-63 has been evidence) and reaffirmed the Government's policy of continuing economies, ending state trading, and encouraging private enterprise.—*All Rights Reserved.*

AMERICAN LETTER

NO ECONOMIC CALAMITY EXPECTED

LEVEL OF BUSINESS ACTIVITY WELL MAINTAINED

(From Our Own Correspondent)

NEW YORK, 8*th October*

THERE has rarely been a time in the past when much more time, thought and calculation have been expended to gaze into the future than at present. What will business be like in 1954 and 1955 is the main question being asked. The financial and business community seems almost equally divided between those who expect a slight recession and others who do not. The resulting confusion is understandable, because, in all debates, the present state of affairs is being judged by the experience of the past 20 years. Two decades of Government regimentation, spending and direction simply cannot be forgotten overnight.

Those accustomed to controlled markets and interest rates, therefore, have found it difficult to get attuned to the new philosophy. The new line is to let business alone, not to interfere in the normal functioning of supply and demand for either money or goods and to create conditions under which prices will find their natural level. Also to do everything possible to foster the normal growth of the American economy, based on a steady rise in population and technology.

The shift from a rigidly controlled economy to a nearly free one, obviously, is bringing about adjustments. The Federal Reserve system is no longer committed to support Government bond prices and artificially low interest rates. But it still furnishes funds to the banking system by the purchase of Treasury Bills and it hopes the market understands that the central bank's desire is to keep healthy credit conditions. In full accord with the Treasury, the official aim of the Federal Reserve authorities is to provide enough credit for essential business, but no funds, if possible, for inflationary speculation either in securities, real estate or in consumer goods.

Within this general scope, it is admitted that overproduction in some lines will have to be adjusted to more normal levels. By the same token, other fields of endeavour may flourish and double their volume, based on normal incentives and market conditions. Most of the prognostications of a downturn seem to be based on the assumption that activity in all lines is apt to decline concurrently. Such forecasts have been made ever since the end of the war, but they have not been borne out. The recent rather steep stock market decline, for example, was halted primarily by the large institutional investors who bought in these periods of lower prices to "average down" their balance-sheet position.

Farm income is also averaging down, because of lower commodity prices; autos and textiles are not selling as rapidly as during the height of the war prosperity. There have also been warnings that future building must be supported by sufficient mortgage money, or the Government will have to step in to provide the sinews of progress.

The Other Side

On the other side of the ledger, there is a very good chance that steel production will be 5 to 6 million tons above the previous historical high of 105 million tons in 1951, even though the industry is operating only at about 95 per cent. of capacity. Retail trade may also top all previous records and the overall picture of employment and income could hardly be more satisfactory. Such luxuries as travel and resort business just concluded a very satisfactory season.

Whatever rolling and non-concurrent adjustments may occur, it would seem perfectly obvious that such minor adjustments or setbacks could be absorbed easily, owing to the tremendous'y strong financial position in which most individuals and businesses find themselves to-day after prolonged periods of high business activity and of ploughing back of earnings. In fact, the inherent position of the American economy is so strong that the reduction in the British Bank rate in the latter part of September created just a flurry of rumours. Easier money rates had already become a fact in the United States by other means and, in the face of heavy demands for loans from all types of borrowers, there was no necessity to second the British move.

The heaviest municipal financing in many a moon was absorbed without a hitch in the last two weeks, to the greatest surprise of everyone concerned. It proved to be the turning point of the, then, overwhelmingly bearish sentiment in Wall Street and it led to restoration of confidence.

While overtime is disappearing in many plants and some managements have cut below the 40-hour work week to keep everybody on the pay-roll, about 78 per cent. of all business in the U.S. are maintaining their working forces or adding to them. Inventories, moreover, seem well balanced and are giving no particular concern either to manufacturers or banks.

Living Costs Higher

Living costs have risen another notch between July and August. The chief element seems to be rents which have increased with the lifting of controls, but that situation is likely to adjust itself as newly built space has to compete with occupancy. Meanwhile, workers whose wages are tied to the cost of living, get more pay.

Expansion also continues at the steady rate of about 6 per cent. in the total debt outstanding, both public and private. This can hardly be regarded as excessive in the light of the normal economic growth. As top spokesmen have pointed out, recent reductions in defence spending have not even hurt the aircraft industry a bit. Appropriations now available from Congress will support that segment of American industry at its current production level well into 1955. So far as banking is concerned, third quarter bank balance-sheets show eloquently that, under freer markets, bond portfolios may have declined, loans may be harder to get, but earnings are certainly well maintained, if not universally better than in preceding lean years.

Foreign Situation

The foreign situation, however, remains as enigmatic as ever—beyond the control of Washington or business planning. Surprise moves by Russia cannot be ruled out. Even the convening of the peace conference, projected in the Korean armistice, seems doubtful now and the Washington Government has issued grave warnings about Soviet Russia's potential striking power with lethal weapons. Thus, any of the well-laid plans, which are designed to bring the country back to a status of quasi-normalcy and out of the state of permanent emergency of the past two decades, may be upset easily and suddenly. Barring such developments, the outlook would seem to be for a continued high level of activity, good business, near capacity employment, income and savings, coupled with adjustments in whichever field supply exceeds demand. Calamity, certainly, is not in the air. —*All Rights Reserved.*

Pakistan. They are also exported to Afghanistan. Sukkur is also noted for its blankets. About 500 persons are engaged in the industry which produces 100 blankets a day. Other important products of Sukkur are biscuits and confectionery.

Village Panchayats

The Government of Punjab has under consideration several proposals to reorganise the *panchayats* in the State so as to make them act as a liaison between the rural population and the Government in nation-building activities. The proposals envisage the constitution of *panchayat* development boards consisting of the representatives of the district boards, M.L.As of the districts and persons interested in rural development. Under the reorganisation plan there will be no village without a *panchayat*. In view of the Government's decision to separate the judiciary from the executive, it has been suggested that the *panchayat* should consist of two wings, one concerned with the administration of justice and the other with other aspects of village life, such as rural sanitation, street lighting, etc.

• • • •

The 3½ per cent. 1960 East Bengal loan, the first ever to be floated by the Government of the State, was "on tap" only for four hours on 8th October and was over subscribed. At 1 p.m. that day, when the list closed, the subscription exceeded the limit of Rs. 3 crores.

PAKISTAN NOTES

FOREIGN TRADE OF PAKISTAN

FRESH MOVE TO STIMULATE EXPORTS

PAKISTAN is considering, according to latest reports from Karachi, a plan for entering into payments agreements with the Middle East countries on the lines of the one entered into between India and Egypt. It is also considering the question of giving certain concessions to exporters. This is obviously intended to stimulate exports and set right the precarious balance of payments position, which is expected to persist unless drastic measures are taken to set it right. The Government will include in the contemplated payments agreements, it is stated, not only such commodities as cotton, jute, hides and skin, wool and tea, but also hemp, chillies, fish, tobacco, rock and sea salt, forest products, medicinal herbs, sports goods, surgical instruments, cutlery, handloom products, dry and fresh fruits, bonemeal, and the like which have been so far neglected.

Pakistan, it may be mentioned in this connection, had a favourable balance of trade to the extent of Rs. 7.49 crores with India during the period 8th August, 1952 to 31st July, 1953. The figures relate to trade both by land and sea routes. The value of Pakistan exports, during August, 1952 to July, 1953, to India was Rs. 16.06 crores, while its imports from India were about Rs. 8.57 crores. Of the commodities exported to India, rice accounted for Rs. 1.16 crores, fish, poultry and eggs for Rs. 1.33 crores and fruits for Rs. 33 lakhs. Of the imports from India to Pakistan, coal accounted for Rs. 2 crores, mill-made cloth for Rs. 89 lakhs, betel leaf for Rs. 13 lakhs.

Wool

The Pakistan Department of Trade Production and Commercial Intelligence is of the view that Canada provides a good market for Pakistan wool. Pakistan has, we are told, so far exported during this year 64,000 pounds of wool. There were practically no enquiries during the previous year. It is, however, pointed out in the meanwhile that, at present, Canada takes only a few varieties of wool. But there is, it is stated, a great scope for a large number of varieties such as Punjab wool, Sind, Khorassan, Bibruk, Harnai, Kandahar, etc. Manufacturers of woollen goods in Canada are, however, buying wool from importers of Pakistan wool and not directly from Pakistani exporters. This is done, it is stated, with a view to avoiding trade disputes. Naturally, the Government is interested in promoting direct exports of Pakistan wool to consuming interests.

The Pakistan Foreign Trade Development Council is likely to be reconstituted shortly. The Government is at present considering a plan for this purpose. The new Council will, it is expected, consist of two committees—one dealing with the import and the other with the export aspect of foreign trade.

Transfer of Bank Accounts

Pakistan is proposing to confer with India in the near future on the question of transfer of bank accounts of displaced persons. According to a statement made by the Finance Minister, in the Constituent Assembly last week, the bank accounts of displaced persons from India were to have been transferred to Pakistan, in accordance with the Banking agreement of 1949. However, due to the deadlock on exchange rate, after devaluation of the Indian rupee, and, subsequently, on account of exchange control restriction and also due to lack of Indo-Pakistan accord on other issues, the agreement could not be fully implemented. The balance held in bank accounts in India as on 26th January, 1951, he said, could be operated in India by the depositors resident in Pakistan. No information in regard to actual bank balances held in India was available, he added. Claims received by the State Bank of Pakistan against Indian Banks amounted to Rs. 2 crores, of which about Rs. 3.7 lakhs had been sett'ed. Proceeding, the Finance Minister declared that it was proposed to discuss at a conference with India in the near future the entire issue relating to transfer of bank accounts of displaced persons.

Sukkur

Sukkur is coming into prominence as the biggest ball and embroidery thread-making centre in Sind. More than 1,500 men, women and children are engaged in the industry. About 400 handloom and powerloom machines and 400 spindles are producing 5,000 lbs. tube, ball embroidery and sewing threads per day. Sukkur-made goods have a good market in West

I.M.F. AND PAYMENTS DIFFICULTIES

TRIANGULAR TRADE FOR EARNING DOLLARS ADVOCATED

LACK of a clear perspective on the part of the Press, international and national, regarding its responsibilities towards well-known world bodies, denies the enlightened public throughout the world of the benefits of a fuller account of the proceedings of these bodies. A case in point is the scant and disjointed publicity given to the proceedings of the meetings of the two Bretton Woods institutions, namely, the International Monetary Fund (I.M.F.) and the International Bank for Reconstruction and Development (I.B.R.D.), held in the second week of last month at Washington. India is particularly disappointed at this poor publicity. For being interested in the welfare of these two institutions, India is always anxious to keep itself informed of not only the progress of these institutions but also the role of its representatives on their Governing Boards in shaping the policies of these bodies. The return to this country of its representative a few days ago has, however, enabled us to gather more details of the work done at the meetings referred to above. Indian points of view were presented at the Fund's meeting by Mr. B. Rama Rau, Governor of the Reserve Bank of India. His analysis of the problems facing the Fund and of India's efforts at resolving them in its own way is stimulating and, therefore, merits some attention.

Last year the I.M.F. had come in for a good deal of criticism that it had made no significant contribution towards payments difficulties of member countries, as these continued even though seven years had passed since the end of the year. The Executive Board of the Fund itself had admitted that international payments had still not attained a state of balance and that exchange difficulties and exchange restrictions were, again, the order of the day over a large part of the trading world. Dealing with this criticism, Mr. Rama Rau observed, at the annual meeting of the Fund, that he was happy to note that during the year under review (1952-53), the world payments position as a whole showed a much better balance than in 1951-52. He conceded that payments difficulties still existed but they were, he said, largely of localised nature and were traceable either to the problems of particular commodities or to a partial failure to adopt appropriate monetary policies on the part of some countries. The main factor which helped to bring about the change was, according to him, the combination of a suitably adjusted monetary and fiscal policies. He pointed out that this method was particularly successful in India, in holding inflation and thus help relaxation of import restrictions. He was glad that the Executive Board of the Fund had appreciated this aspect in its Annual Report. At the same time he agreed with the Fund that inflation in India had not been completely won. He mentioned that, during the last few months, prices were tending to rise and that the authorities, who were keeping a close watch on the situation, would take appropriate action to keep it in check.

Proceeding, Mr. Rama Rau next referred to two aspects of the problem of payments position. These were, (1) the balance resulting from lower volume of trade, and (2) the residual dollar problem. Analysing the first aspect, he said that it had been recognised that a greater degree of balance had been achieved on the basis of a lower volume of world trade. While admitting that some reduction in the volume of trade was inevitable with the disappearance of speculative demand, he pointed out that there were also other factors in operation. He disagreed with the opinion of the Executive Board that the decline in trade was not likely to start a progressive deterioration. He quoted the example of India to show that the experience of this country did not confirm the Board's conclusion. "Although our export prices have," he said, "been adjusted downward and the full benefit of the devaluation of 1949 has been passed on to our consumers, our exports have failed to show any improvement." This appeared to be also the case with other countries in Asia and the Far East, he added. He stressed the fact that measures calculated to restore export incomes of these countries must be taken in order to improve their balance of payments position. He hoped that, with the establishment of the Asian Department in the Fund, it would be possible for the Fund's authorities to make a more intensive study of the problems of Asian countries.

Dealing with the second problem, namely, shortage of dollars, Mr. Rama Rau admitted that there had been considerable improvement during the recent past, but the rate at which the dollars accumulated with the rest of the world was still inadequate for ensuring an appropriate level of foreign exchange reserves. He incidentally reminded that a part of even this limited improvement was due to off-shore purchases and to restrictions on dollar imports. Calling, therefore, for bold action, he pleaded for the restoration of the mechanism of triangular trade. Continuing, he said:

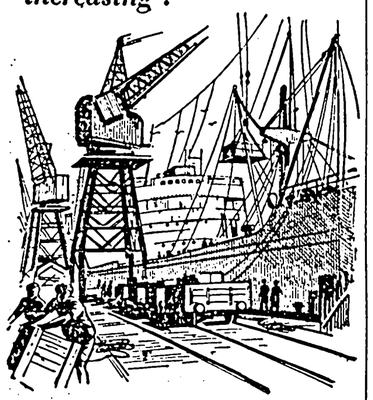
"It is clear, therefore, that more determined efforts will have to be made before a stable balance can be established. Considerable progress has already been made in so far as it lay in the power of the countries. Exchange rates have been adjusted. Internal inflation has been brought under control. Production has been expanded, and suitable development programmes have been designed in several countries. Despite these measures, these countries have been unable appreciably to step up their dollar earnings, in the absence of a change in the commercial policy of the United States. With their meagre resources, they have been unable to safeguard themselves against the consequences of even a minor recession in the United States. It is to be hoped, therefore, that the United States will respond favourably to the strong plea made in the Report (of the Executive Board) for a comprehensive revision of the United States commercial policy, and will fulfill their responsibilities as a creditor nation. In addition, it will also be necessary to restore the mechanism of what I may term triangular trade. In the present period, this mechanism has enabled European countries with dollar deficits to earn dollars from the primary producing countries with dollar surpluses. The revival of such a trade factor is dependent, however, on two conditions. First, European productivity must increase further so that the types of goods required by the so-called third countries can be had on terms competitive with the United States. Secondly, these third countries, which include largely the underdeveloped countries, must be enabled to maintain high and stable levels of income and to pursue energetically their development programmes."

The suggestion to organise the triangular trade made by Mr. Rama Rau deserve unstinted support. In fact, similar suggestions have been made by leading economists of Europe.

The Governor of the Reserve Bank welcomed the policy underlying the U.S. foreign aid programme as an indication of greater appreciation of the needs of underdeveloped countries.

He expressed appreciation of the Fund's recognition of the principle that member countries which are implementing development programmes have the same right as other members to seek access to the Fund's resources to cover temporary and inevitable deficits. He welcomed the introduction of more flexibility in the Fund's operations and its eagerness to explore ways of assisting its members, especially the standby arrangements which would go a long way towards reassuring assistance during emergencies. He gave the instances of Turkey, Thailand and India to show how the action of the Fund, in a broad and liberal manner, would inspire general confidence and lead to greater use of the Fund's resources. He pointed out that member countries were benefited by the Fund's gold transaction service, its annual consultations and the services of its technicians in drawing up development programmes. Incidentally, he observed, that the recent Fund Mission in India, whose report is to be out shortly, had carried out a careful and dispassionate analysis of India's development programmes and emphasised the importance of adequate and timely foreign assistance to this country.

"Is your Overseas trade increasing ?"



With a network of almost 1,700 Branches in England and Wales as well as Agents and Correspondents throughout the world, Lloyds Bank has helped many of its customers to expand their overseas business as the Bank is specially equipped to deal with every aspect of overseas trade.

Let LLOYDS BANK

look after *your* Overseas interests

Lloyds Bank Limited — Incorporated in England

LBO/AB—1953

WORLD BANK'S LOANS

The International Bank for Reconstruction and Development has, in addition to the four loans announced on 4th September, 1953, sanctioned since then five more loans aggregating $44.84 million to four more countries, namely, Turkey, Columbia, Chile and Panama.

Of this total, a loan for $9 million has been granted to Turkey in favour of the Industrial Development Bank of Turkey. This latter Bank will re-lend these funds for financing certain projects requiring imports of equipment from abroad. This is the second loan made to the Turkish Bank. The loan is for a term of 15 years and carries interest at the rate of 4½ per cent, including the usual 1 per cent. commission chargeable under the Bank's Articles of Agreement. Amortisation payments are to begin from 15th August, 1958. The Government of Turkey has guaranteed this loan.

The loan of $20 million for Chile is for helping construction of a chemical pulp mill and a newsprint paper mill in that country. This is a 17-year loan bearing interest at 5 per cent. including the 1 per cent. commission mentioned above. This, it may be noted, is the highest rate of interest which the Bank has charged so far. Repayment will begin as from 15th May, 1958. The joint borrowers of the loan are a privately owned Corporation and an agency of the Chilean Government known as *Fomento de la Production*. The loan carries the guarantee of the Government of Chile.

The loan sanctioned to the Republic of Colombia amounts to $14.35 million. It will help the Colombian Government to carry forward improvements in the national highway system which were begun in 1951 as a matter of pressing importance to the economy. The term of the loan is for 10 years and carries interest at 4¾ per cent., including the 1 per cent. commission. Amortisation payments will begin from 15th May, 1956.

The two loans granted by the Bank for Panama amount to $1.49 million. Both the loans are intended for agricultural development. One of the loans amounting to $1.2 million is for the purchase of agricultural machinery and the other of $290,000 for a grain storage plant. The borrower in Panama is the *Instituto de Fomento Economico* (I.F.E.), an autonomous Government agency, and the loan is guaranteed by the Government of Panama.

The loan for the larger amount, namely, $1.2 million, is for a term of seven years and carries interest at the rate of 4½ per cent. including the 1 per cent. commission. Repayment is to begin from 15th November, 1955. The smaller loan is for a term of eight years and bears the same rate of interest as the first loan, namely, 4½ per cent. In this case, too repayment begins on 15th November, 1955.

The keen interest evinced by member countries in the new loan of $75 million issued by the World Bank on 28th September last, even before it was announced, is an indication that the issue would be a success. The new issue is a short-term loan being only for a three-year period. It bears interest at 3 per cent., the issue price being 99½ per cent. On this basis, the redemption yield works out to 3.13 per cent. The bonds are non-callable prior to 1st April, 1956, but they are redeemable on and after that date at par and will not be subject to a sinking fund.

For several reasons the loan is popular. Being a short-dated loan, it is an ideal form of investment for banks. Secondly, it is also attractive in that it is offered below par, which means a capital profit which is not usually subject to income-tax. Lastly, member countries are recognising the importance of the Bank as an international institution and feel that the Bank is entitled to their full co-operation.

The loan is being marketed by a nation-wide underwriting group of 147 investment firms jointly headed by Messrs. Morgan Stanley & Co. and the First Boston Corporation. Besides the U.S., other member countries too have come forward for substantial participation. Requests have been received from 11 member Governments to purchase an aggregate of $20 million bonds for special funds. Further, an additional $20.5 million will be distributed publicly or privately in some of the European countries, namely, Switzerland ($10 million), Holland ($5 million), U.K. ($3.5 million), Sweden and Belgium ($1 million each). The extent of foreign participation in the loan is of interest not only because of its size, but because of its significance in relation to the increasingly international character of the market for dollar securities of the World Bank.

WORLD PRODUCTION OF GOLD

I.M.F. SURVEYS POSITION IN 1952

TOTAL world production of gold recovered in 1952 from the moderate decline recorded in 1951 and was slightly above the 1950 total, the highest recorded up to that date since the end of World War II. Valued at $35 per fine ounce, total output (excluding the U.S.S.R. and the countries associated with it) was, according to the *Annual Report* 1953 of the International Monetary Fund, approximately $851 million in 1952, compared with $828 million in 1951, $844 million in 1950, and $736 million in 1945. Although gold production was greater in 1952 than in any other post-war year, and about equal to the average annual output of 1934 and 1935, it was still approximately 35 per cent. below the 1940 peak level. Except for the Gold Coast, Colombia, and Brazil, all the more important gold-producing countries reported production increases. The largest absolute increase was in the Union of South Africa, where total production rose from about $403 million in 1951 to nearly $414 million. Total sterling area production increased from approximately $497 million to $511 million. Increases of from $2 million to $4 million were reported for Australia, the Belgian Congo, Canada, Mexico, and the Philippines, and of about $1 million for India, Japan, and the United States.

The Report says that the increase in South Africa was the result of the expanding output of the new mines of the Far West Rand and the Orange Free State, which more than offset the declining output of the older Rand mines. The South African Minister of Mines has stated that, in spite of steadily increasing costs and shortage of labour, it is expected that South African gold output will increase steadily for the next ten years, and that the continued development of new mines in the Orange Free State will ensure an output above the present level for at least 30 years.

Gold mining costs continued to rise in 1952. Average working costs per ton milled in South Africa were 35s. 2d. in December, 1952, compared with 33s. 7d. in December, 1951, an increase of nearly 5 per cent. In several countries higher costs have, we are told, induced a shift from the mining of lower grade ore to that of higher grade ore. The rise in costs in Canada was coupled with a decrease, as a result of the rise in the Canadian dollar exchange rate, in the local currency price realised by gold producers on their sales to the Canadian Mint. For these reasons the Canadian Government, after consultation with the Fund in November, 1952, granted an increase in the scale of assistance provided by its system of subsidies to gold producers for the calendar year, 1953.

Gold Reserves

The total stock of gold in the possession of monetary authorities in the world (excluding the U.S.S.R. and the countries associated with it, but including international institutions—the Fund, the Bank for International Settlements, and the European Payments Union) is estimated at $35,500 million at the end of 1952. The increase during the year was approximately $350 million, compared with an increase of $250 million in 1951 and of $350 million in 1950. There is an inevitably wide margin of error in any calculation of the flow of newly mined gold into official gold holdings. A comparison between the figures recorded above and annual world gold production of over $800 million in recent years suggests, however, that a large proportion of gold production continues to go into hoards. The conditions that sustain the hoarding demand for gold are still operative in many parts of the world.

During 1952, several countries took further measures, in addition to those reported in the Fund's *Annual Report* 1952, for relaxing restrictions upon the sale of gold and upon the movement of gold through their territories. The Union of South Africa has continued to restrict premium sales to approximately 40 per cent. of current output. Most of the British Commonwealth and colonial gold producers, however, may now sell 100 per cent. of their production in free markets in the form of fine gold bars, instead of being permitted to sell gold only in "processed" form with a maximum fineness of 22 carats. The latter requirement still applies in Canada and the Union of South Africa. Free market sales of newly mined Canadian gold amounted to approximately 30 per cent. of current production during 1952; since the rate of subsidy assistance has been increased and the local currency price of gold has fallen, it is expected that several marginal producers will in 1953 elect to sell to the Canadian Mint and receive the subsidy instead of continuing their free market sales.

The framework of regulations designed to reduce evasion of the gold regulations of the countries of immediate destination has generally remained unchanged. London firms have been granted permission to act as agents for the sale against U.S. dollars of newly mined gold from the British Commonwealth to buyers outside the sterling area, but they are still restrained from engaging in the general buying and selling of gold in free markets. Switzerland and Uruguay have permitted free transit of gold through their territories without restrictions. Uruguay has also decreed that gold not intended for industrial use may be imported, traded, and circulated freely in the country, and that banks may issue negotiable certificates against gold deposited with them. In order to curtail smuggling, Thailand has established a licensing system for the importation of gold intended for domestic sale. The Central Bank of the Philippines has temporarily suspended its regulation requiring the sale of 25 per cent. of domestic gold production to the Central Bank at the official price. Philippine gold producers are thus permitted to sell their total output on the internal free market.

Premium Gold Prices

The general level of premium gold prices during the year under review was lower than in any equal period since World War II though the price had at no time fallen so low as it did for a few days prior to the outbreak of hostilities in Korea. The main reasons which have helped to keep premium prices close to the official price have been the relaxation of controls by countries noted above and their creation of new marketing facilities; the continuance of the legal restrictions imposed in certain countries on the purchase and holding of gold; and the general tightening of monetary policy and the decline of inflationary pressures. The relaxation of controls and the new marketing facilities have made it easier for gold to move into free markets; the legal restrictions on the purchase and holding of gold have kept some potential markets for gold effectively closed, and the decline of inflationary pressures has reduced the demand.

The price at which gold was traded directly for U.S. dollars in various markets of the world, after declining to about $37 per ounce by the end of April, 1952, fluctuated during the next 12 months between a low of $36.75 (reached at the end of November) and a high of $38.25 (attained in the middle of January, 1953). By the end of April, 1953, the price was $36.81.

During the year under review, U.S. dollar equivalent prices for bar gold in such markets as Beirut, Bombay, Hong Kong, and Paris tended to follow the same general trend as the price at which gold was traded directly for U.S. dollars. Alexandria, where the price rose during the year by about $2.50 per fine ounce to the equivalent of $49.80 (at the official rate of exchange) on 30th April, 1953, was again an exception. In Paris, bullion quotations ranged between a high of 525,000 francs per kilogram (18th August, 1952) and a low of 478,000 francs (23rd March, 1953). On 30th April, 1953, the quotation was 508,000 francs per kilogram, practically the same as the price quoted a year earlier. When converted into U.S. dollars at the parallel market franc dollar rate, which also fluctuated widely, the price of bullion per fine ounce was equivalent to $38.60 on 18th August, 1952, $38.22 on 25th March, 1953, and $38.26 on 30th April, 1953.

Prices in Bombay

In Bombay, the price of bar gold dropped from a high for the year of Rs. 95 per tola (equivalent to $53.20 per fine ounce at the official rate of exchange) on 5th May, 1952, to a low of Rs. 72-12 ($40.74) on 19th December, 1952. By 19th February, 1953, the price had recovered to Rs. 91-1 ($50.99), and on 30th April, it was quoted at Rs. 86-11 ($48.54). The general level of gold prices in Bombay during the 12 months under review was about $10 to $15 per ounce lower than it had been in 1950 and 1951.

There was also a downward trend in the price of gold coins in most of the free markets, notable declines being recorded in the price of the sovereign, which dropped by the equivalent of about $7 per ounce in Alexandria and of about $5 in Beirut, Brussels, Milan, and Paris. The napoleon declined by the equivalent of about $3 per fine ounce in Paris and of about $2 in Alexandria, Beirut, and Milan. This movement followed the decline recorded in the price of gold bars, and it may have been amplified by the release of limited amounts of coins by monetary authorities from time to time, as well as by sales in certain centres of coins manufactured by private persons in order to take advantage of the higher premiums of approximately 25 per cent. over bar gold offered for coin.

Gold Transactions Service

Since the inauguration of the gold transactions service, which was announced, in the *Annual Report* 1952, five members desiring to sell gold and ten members desiring to buy gold have communicated their offers and bids to the Fund. The Fund has been successful in facilitating the completion of one or more transactions for each of these members, with the exceptions of one prospective seller and two prospective buyers. By the end of April, 1953, a total of 24 such transactions, amounting to the equivalent of approximately $219 million, had been consummated through the Fund's service. The extent to which gold transactions can be matched depends upon supply and demand conditions at the time when it is desired to conclude the transactions. There have been occasions when transactions were consummated within a few days of the receipt of offers and bids from members. At other times, the supply of gold exceeded the demand, or *vice versa*. On such occasions, the Fund has attempted to find partners for members on the basis of "first come, first served." Where the element of time was not an essential factor for either the buyer or the seller, the Fund has been successful in seeing the transactions through. A procedure has been adopted which ensures that the identity of buyers and sellers is not disclosed. Seven members have effected four or more transactions, and two have both bought and sold gold through the Fund's service. Each partner to a completed transaction pays to the Fund a charge of 1/32 of 1 per cent. in dollars. The Fund is ready to discuss with any member, the manner in which it can avail itself of these facilities.

Managing Director.

RE-ORGANISATION OF THE CO-OPERATIVE MOVEMENT IN HYDERABAD

The Co-operative Department in Hyderabad has conducted, as a preliminary to the re-organisation of the co-operative banking and credit structure on the lines recommended by the Reserve Bank, a survey of the financial position and working of all the central banks in the State. The State Government has agreed to the proposal to reduce through amalgamation the number of central banks—many of which are small and uneconomic with a view to having as far as possible one central bank for each district. It is reported that seven uneconomic central banks have been amalgamated with the neighbouring central banks. At the primary level, the Assistant Registrars are proceeding with an investigation into the condition of agricultural credit societies with a view to weeding out bad and useless societies and putting the rest on a sound basis.

In the case of the apex bank also, several of the recommendations made by the Reserve Bank, such as maintenance of adequate fluid resources, reconstitution of the Board of Directors, abandonment of certain inappropriate types of loans, fixation of the maximum borrowing limit of the Bank, appointment of a wholetime paid Managing Director, etc., have been carried out or are in the process of implementation.

MARKED RECOVERY IN WORLD'S WOOL TRADE

OUTLOOK HELD BRIGHT

WOOL is one of those national textile fibres which have never been successfully challenged by the artificial fibres. It has, on the contrary, held its own, and won for itself a unique position. But it has not, however, escaped the irksome fluctuations in prices, which have been the bane of nearly all the world's commodities in recent years. Wool interests, the world over, have faced in recent years some striking changes through both rising and falling prices, both increase and decline in production, as well as in consumption. It is, therefore, gratifying to note the somewhat encouraging conclusion which the U.N Food and Agriculture Organisation (F.A.O.) has reached after a careful study of the trends in wool economy, namely, that the present world wool situation shows a "better balance than at any time in the post-war era."

Among the world's chief commodities, the production of which has expanded in recent years, wool occupies an important place. World wool production has increased from 3,788 million lbs. in 1934-38 to about 4,000 million lbs. (estimate for the 1952-53 season). Mill consumption of wool has increased from about 2,000 million lbs. in pre-war year to over 2,400 million lbs. in recent years. The *per capita* consumption of wool too has increased from 0.9 lb. in 1938 to 1.1 lbs. in 1950. These facts would normally suggest that wool must have had a bright career in the markets. But this has not been so, for the fluctuations in the output and the use of wool have caused some violent changes in prices. Thus, from 1946 to 1950, world consumption was running 20 per cent. ahead of production. The war-time shortage of textiles and the high levels of real income in the post-war period had stimulated consumption.

Post-war Boom Extended

The post-war boom in textiles was extended by the strong buying movement which followed the outbreak of the Korean conflict. Indeed, by this period, the war-time accumulations of wool stocks had been exhausted. A new defence demand arose on account of the rearmament needs of the Western nations. Wool prices advanced so greatly that the mills began to use a larger admixture of substitutes, not only mungo and shoddy but also of man-made fibres. In 1951-52, however, the position changed and mill activity remained at a reduced rate, with wool consumption falling 10 per cent. below current production. The following table gives the world production, consumption and changes in stocks in 1946-47, 1949-50, 1950-51, and 1951-52:

World Wool Position
(In 000 metric tons)

	1946-47	1949-50	1950-51	1951-52
World wool clip	964	992	1,038	1,044
Changes in stocks in producing countries	—114	—200	+10	+36
	1947	**1950**	**1951**	**1952**
World consumption	1,108	1,213	1,027	1,046
Changes in stocks in consuming countries	—30	—15	—2	—36

There was a healthy improvement in wool textile activity during 1952-53. Describing this change, the F.A.O. Report says:

"In 1952-53, the recession gave way to gradual recovery. Textile stocks having been worked down to normal levels, home and export demand improved. Confidence in wool prices recovered. Governmental price support operations in the United States and strategic stock purchasing by the United Kingdom contributed to this, as did also the eventual downward adjustment of Argentine wool prices to world levels through currency devaluation. There was also the fact that wool prices had receded to their pre-Korean relationship with prices for synthetics. The proportion of virgin wool used by the major wool textile industries increased significantly in 1952 after the setback of the two preceding years; from 68½ per cent. in the first quarter of 1950, it fell continuously to 57 per cent. in the third quarter of 1951 and then rose to 66½ per cent. in the first quarter of 1953.

"Except for a pause in 1947-48, world wool production has expanded gradually throughout the post-war period to a record clip (on a clean basis) in the 1952-53 season. The expansion is mainly attributable to British Commonwealth countries in the Southern Hemisphere. There has been some decline in South American production from the exceptionally high levels reached at the end of the war and the post-war decline in North American production has been proportionately large. In recent years, there have been some signs of recovery in these areas. In Europe and the Soviet Union, the post-war trend has been upwards as sheep numbers recovered from the war-time decline."

Foreign Trade in Wool

Foreign trade in wool has also expanded since the pre-war years. War-time stocks of wool were exhausted in 1950. Since then, there has been an increase of 5 per cent. in the world trade in wool. On the side of supply, the "Dominion" wools have contributed an increasingly larger share of the total world trade. Trade in South American wool has been adversely affected by currency and trade difficulties and by attempts to maintain export prices above the world level. With the devaluation of the Argentine peso for wool exports in July, 1952, however, these stocks were reduced. There was generally a substantial increase in wool exports in 1952-53. On the demand side, the outstanding feature has been the increase in the imports of wool by the U.S. The following table shows the world trade in wool in 1934-38 and during the five years ended 1951-52:

World Trade in Wool
(Season October-September)
(In 000 metric tons)

	Exports	*Imports**
1934-38 average	550	550
1947-48	775	715
1948-49	680	700
1949-50	820	765
1950-51	575	575
1951-52	570	600

* Retained imports.

In assessing the present world wool situation, a factor which must give considerable satisfaction to wool interests is the fact that production and consumption are approximately in line and slowly rising. This fact becomes clear from a reference to the first table given above. Another encouraging factor is that stock movements in both producing and consuming countries have tended to equalise. This has a stabilising effect on prices. The F.A.O. Report forecasts an increase in the use of wool by manufacturers. It says:

"Given favourable economic conditions, recovery in the wool textile industry may continue. With prices on a sounder basis than at any time in the past few years, manufacturers will feel more inclined to increase their usage of wool and to extend their operations. Commercial stocks of wool are by no means over-abundant and some rebuilding may occur.

"The average rate of increase in wool production has been about 3 per cent. annually over the past five season, a rather higher rate (6 per cent.) being achieved in 1952-53. Expansion is, however, dependent on many uncertain factors and highly susceptible to weather conditions. Moreover, the past few years have demonstrated that variations in consumption in the shorter run may be comparatively wide and prices unstable.

"Over the longer term wool prices will be affected by advances in technology and falling costs of man-made fibres. Exceedingly high prices for wool in recent years have provided an opportunity for the usage of such fibres in products formerly, entirely or largely, manufactured from wool. The extent to which this will continue depends largely on the quality of such fibres and their ability to replace wool."

It is, however, well to remember that, in any forecast about wool, the words "demand" should be carefully used. More than in many other commodities, it is the effective demand that really counts in the determination of the price for wool. The *per capita* consumption in New Zealand, the U.K., Canada, and the U.S. has been computed at 11.0 lbs., 6.6 lbs., 4.8 lbs. and 4.4 lbs., respectively. Any rise in the living standards of the backward regions, which are also densely populated areas, will give a tremendous fillip to the wool trade, and the woollen industry.

COMMONWEALTH IN WOOL TRADE

The major part played by the Commonwealth in world wool output is stressed by the distinguished historian, Professor E. Lipson, in a book just published in London—"A Short History of Wool and Its Manufacture." Paying tribute to wool as "one of the pillars of the state" in Britain, Mr. Lipson writes: "Among the textile fibres which have been utilised through the ages to clothe man's body, wool—the coat of the sheep—occupies a unique position. It is not alone the oldest but one which has been continuously and universally used." The importance of wool in world economy is reflected in the status it has enjoyed from early times as one of the major commodities in international trade, he adds.

Mr. Lipson notes that the world's sheep population is estimated at over 750,000,000, and world output of wool at about 4,000 million lbs. annually. Of these totals, the British Commonwealth claims the "lion's share" for it possesses approximately one-third of the sheep, produces nearly half the wool, and furnishes the bulk of the exportable surplus.

ROLE OF TEXTILES IN U.K.'S ECONOMY

RAYON LOSES GROUND TO COTTON

(From A Special Correspondent)

MANCHESTER LETTER

Manchester, 6th October

SOME idea of the line most likely to be pursued by official spokesmen of the Cotton Board at next week's conference at Harrogate has already been indicated by Sir Raymond Streat. Under the heading "Cotton Fights Back" he has reverted to his call for a clarification of the Government's attitude towards the textile trades as a whole.

Writing in a leading financial journal, he refers to "Lancashire's impatience with Governmental policies which seem to reflect a lack of confidence in the cotton industry's future importance." The conflict of ideas between the manufacturers of capital and consumer goods is no new phenomenon. The post-war export scene has to some extent been dominated by the growing insistence of the authorities on the importance of shipping capital equipment abroad.

The lack of confidence in the future for mainly consumer trades could, as Sir Raymond says, have a harmful influence on investment policies. In the circumstances there is every justification for demanding that some indication should be given as to whether the cotton industry's eventual role is to be a predominantly home trade industry or that it is able to live in a modern world, still playing its part as a big national asset.

If proof were needed that textiles do play their part—and a major part—in the economic aspect of the national finances, Sir Raymond quotes the latest figures for exports. In 1951 textiles earned £492,000,000 for Britain, with vehicles second at £480,000,000 and machinery £363,000,000. The subsequent slump in the textile trades caused an obvious reduction in shipments but the revival this year has evened out the position. For the first eight months, vehicles contributed £310,000,000 from exports, machinery £271,000,000 and textiles £227,000,000. Since the beginning of 1952 the average prices obtained for textile goods have, of course, fallen very substantially.

Export Results

A comparison can now be drawn between the exporting fortunes of the leading countries which aspire to provide cotton and rayon cloth for consumers in many parts of the world during the first half of the current year. The table below shows the combined and individual shipments of cotton and rayon cloth and the comparative figures in the first six months of last year.

(In million yards)

	First half 1953			*First half 1952*		
	Cotton	*Rayon*	*Total*	*Cotton*	*Rayon*	*Total*

* Three months. † Five months for rayon only.

Quoting from the latest statistical review issued by the Cotton Board—"Whilst world trade in cotton piecegoods remains at a fairly low level, trade in rayon piecegoods rose to record heights in the second quarter of the year." This is clearly portrayed in the figures above, where it will be seen that practically all countries shipped more rayon cloth abroad in the first six months this year than in the same period of 1952, whereas only India has been able to expand her exports of cotton cloth.

Yet the advance of rayon is in some quarters showing signs of being checked. In the United States, for example, there are reports that the rayon industry as a whole is operating at only about 70 per cent. of capacity. It has been stated that cotton as a fibre has made competitive gains in apparel and household uses at the expense of rayon.

Reaching Too Far?

It is felt in some directions that the sponsors of the numerous different types of man-made fibres which have been produced since the war have over-reached themselves. The public is undoubtedly confused by the many claims put forward on behalf of the various fibres.

Rayon itself appears to have lost ground and consumption in the United States has fallen, the use of cotton for such products as sports shirts, pyjamas and women's dresses increasing correspondingly. Even the much vaunted nylon shirt is said to have fallen out of favour.

The American equivalent of terylene appears to be one of the few new fibres to be holding its own but a report from the United States sums up the situation in the phrase: "Experience seems to have shown that there are few new miracles in the textile industry after all. Meanwhile, some of the virtues of established natural fibres are being rediscovered."

Whether the same attitude persists in European textile centres, including Lancashire, is rather doubtful. It is, however, true that the considerable expansion in output of spun rayon yarn in Lancashire mills has slowed down and the recent increase in total production has been more from cotton yarn than spun rayon. Considering the rapid growth of synthetic fibre output, however, this development was not unexpected.

It may be remembered that even the Chairman of the Rayon Staple Spinners' and Doublers' Association, Mr. W. T. Winterbottom, warned against the speculative possibilities of further expansion barely three months ago. "We cannot overlook the fact that the enormous expansion of the last year is to some degree artificial and distorted because of the influence of purchase tax," he told the annual meeting. "It may well be that the present production level is already higher than is warranted at this stage of development by the known merits of spun rayon."

Labour Shortage

Concerned at the number of idle spindles in their mills, owners of Lancashire's 450 cotton spinning mills are to press for a big speed-up in the recruitment drive to get stopped machinery running again.

They are to ask the Cotton Board to discuss with them how Lancashire's labour problems can best be solved, Mr. C. Henniker-Heaton, Director of the Master Spinners' Federation, announced after a meeting of the Federation in Manchester.

One of the points the employers will raise is whether hundreds of foreign operatives should be brought into Lancashire again. "At the moment we are not quite sure ourselves whether this is desirable or whether it is the best way to solve our difficulties," said one mill chief.

"The reason for asking for discussions with the Cotton Board is to discover what recruitment methods might be adopted to attract more workers to the mills," said Mr. Heaton. "Because of the present situation, order books are lengthening and delivery is becoming more difficult."

Chinese Competition

Cut-price competition from Chinese mills has been reported by the Silk and Rayon Users' Association. Silk trade leaders have already discussed the situation with Board of Trade officials.

In its trade bulletin the Association said: "We have received reports from members of the disturbance being caused by the offer of large quantities of Chinese silk piecegoods at extremely low prices. This matter is being thoroughly investigated and has been discussed with the Board of Trade.

"Every step was being taken to protect the interests of the British producer of similar fabrics and further details of the investigation would be given when they became available."

Textile Deal

Mr. Charles F. Loos, the Belgian financier, and his associates have now gained control of the 130-year-old Manchester textile group of Rylands and Sons, Ltd. Sir Edward Rhodes, Chairman, announced this week that sufficient support had been received from stockholders for the £4,000,000 deal to go through. Each stockholder will get 40 shillings for every £1 stock unit held, the price of which on the Manchester Stock Exchange only a few months ago was 13s. 6d.

A fortnight ago the deal was held up because support for the scheme was below the requisite 90 per cent. of stockholdings. In the meantime "missing" stockholders have rallied round and the latest tally showed acceptances from 96½ per cent. of the £2,000,000 issued ordinary capital.

Mr. Alexander H. Dunbar, Director and Secretary of the Company, said: "We have no further comment to make at this stage regarding future developments."

Cloth Output

Production of cotton and rayon cloth in Lancashire weaving mills averaged over 50,000,000 yards a week in August, the Cotton Board announced yesterday (Monday).

The average weekly output of 50,700,000 yards compared with 35,450,000 yards a week in the previous month and an average of 39,000,000 yards in August last year.

There was a net recruitment gain of 1,060 full-time operatives by the weaving mills during the month.—*All Rights Reserved.*

COTTON SUPPLY POSITION IN 1953-54

FUTURE OF CONTROL ON PRICES AND MOVEMENT

IT is gratifying to note that the tentative estimate of the 1953-54 Indian cotton crop, compiled by the cotton branch of the Textile Commissioner's office, shows that the production is likely to be more than what it was in the previous season. Thus, this organisation, the estimates of which have always been more accurate and much nearer the trade estimates than those prepared by the Ministry of Food and Agriculture, places the 1953-54 crop at 42 lakh bales, as against the production of 35 lakh bales in the 1952-53 season.

The following table compares the cotton crop for 1952-53 season and the tentative estimates for the 1953-54 season:

Commercial Crop of Indian Cotton

(In 000 bales of 400 lbs. each)

Name of State		1952-53	1953-54 (tentative)
Uttar Pradesh	..	10	50
East Punjab	..	255	275
P.E.P.S.U.	..	230	275
Rajasthan and Ajmer	..	150	150
Assam-Bengal	..	10	10
Madhya Bharat-Bhopal	..	300	325
Madhya Pradesh	..	750	900
Hyderabad	..	340	450
Saurashtra-Cutch	..	175	190
Bombay :			
(a) Khandesh	..	160	250
(b) Broach-Surti	..	425	525
(c) North Gujarat	..	160	200
(d) Bombay D Zone, Laxmi-Jayadhar, Pundharpur, Baramati, etc.	..	215	225
Madras :			
(a) Tinnevelli-Karungani	..	75	350
(b) Cambodia-Uganda-216F	..	100	
(c) Cocanadas	..	15	
(d) Westerns	..	110	
Mysore	..	20	...
Total	..	3,500	4,200

The increase in the estimate for the cotton crop for the current season is based on the favourable weather and crop progress reports in many of the cotton-growing areas. Thus, in Uttar Pradesh, East Punjab, P.E.P.S.U., Madhya Pradesh, Hyderabad, Bombay and in several other regions, the actual crop is likely to be more than in the previous season. Indeed, in some parts, notably Madhya Pradesh, some private estimates place the crop at a higher level than what is disclosed in the table above. This applies to the Madhya Bharat crop also. Thus, the estimate of 42 lakh bales may not turn out to be on the high side. Actually, it may, if anything, prove less than the actual crop. This remark is, however, subject to there being no unfavourable development in weather or crop conditions which might cause damage to the growing crop.

It is necessary to discuss the cotton supply position in the 1953-54 season in the light of the figures in the table above. The following tables give the supply and distribution position of cotton in the 1952-53 and 1953-54 seasons:

Supply and Distribution of Cotton—1952-53

(In 000 bales of 400 lbs. each)

Particulars	Indian cotton	Foreign cotton	Total
Supply			
Carry-over with mills and trade on 31-8-1952 ..	1,913	490	2,403
Estimated Indian crop (commercial) for 1952-53 season ..	3,500	..	3,500
Estimated imports 1952-53 season ..	..	675	..
Total supply	5,413	1,165	6,578
Distribution			
Estimated consumption, 1952-53 ..	3,600	847	4,447
Estimated exports, 1952-53 ..	335	..	335
Total disappearance ..	3,935	847	4,782
Estimated carry-over on 31-8-1953	1,478	318	1,796
Total distribution ..	5,413	1,165	6,578

Supply and Distribution of Cotton—1953-54

(In 000 bales of 400 lbs. each)

Particulars	Indian cotton	Foreign cotton	Total
Supply			
Carry-over with mills and trade on 31-8-1953	1,478	318	1,796
Estimated Indian crop (commercial) 1953-54 ..	4,200	..	4,200
Estimated imports, 1953-54	..	650	650
Total supply ..	5,678	968	6,646
Distribution			
Estimated mill consumption, 1953-54 ..	3,800	700	4,500
Estimated exports, 1953-54 ..	300	..	300
Total disappearance ..	4,100	700	4,800
Estimated carry-over on 31-8-1954 ..	1,578	268	1,846
Total distribution ..	5,678	968	6,646

It will be seen from the tables above that the total supply of cotton in the 1953-54 season is likely to be as much as 66.46 lakh bales, as compared with 65.78 lakh bales in the 1952-53 season. If these estimates turn out to be correct—there is nothing in the present situation to suggest that they may not prove correct—it is reasonable to expect that the mills will not find any great difficulty in procuring their cotton requirements.

Indeed, there is one school of thought which believes that the supply position is likely to be even more comfortable than what a study of the table above may lead one to expect. This view is based on the consideration that the estimates of consumption, assumed in the table above, are on the high side considering the state of the cloth market. In the distribution table, it has been assumed that the mills will consume about 38 lakh bales of Indian cotton in the 1953-54 season. This compares with 36 lakh bales consumed in the 1952-53 season. This section of opinion holds that the actual mill consumption may not even come up to the 1952-53 levels, considering that mills may be compelled to curtail production, if the dull trading conditions, to which we referred in our last issue, continue to prevail throughout the 1953-54 cotton season. This would naturally have the effect, it is stated, of reducing the offtake of Indian cotton. This section further believes that, if there is no improvement in the cloth markets in the country, it is quite possible that Indian cotton prices may decline to the "floor" levels fixed for cotton by the Government.

In these circumstances, it is hardly surprising that the Cotton Advisory Board should have taken the view that there is no longer any need for maintaining an elaborate system of controls on cotton. In view of the improved supply position, the Board is reported to have recommended to the Government the abolition of the control over the distribution and movement of cotton. If this recommendation is accepted, the mills will have greater freedom in the matter of buying the styles they need.

It is difficult to gauge what the Government's attitude towards cotton control will be in the near future. The control on cotton it may be recalled, was instituted in 1943. This control has remained in one form or another since that date except for a brief period, namely, the period covered by January-August, 1948. The control was reimposed in August, 1948. In September, 1950, the Government replaced the earlier regulations by the Cotton Control Order, 1950, which is the order now in force. The Government has, however, not examined the case for decontrol of cotton so far, though it has periodically relaxed the restrictions on cotton. Even the Commodity Controls Committee (Chairman: Mr. S. V. Krishnamurthy Rao) did not examine the case for the decontrol of cotton. It referred only to the Government's cotton price policy. On this question, it said:

"As the supplies of Indian cotton are insufficient to meet the needs of the textile industry, the price policy of Government has two basic objects in view. Firstly, it is intended to prevent prices from rising merely because supplies are insufficient, and thus resulting in a general increase in cloth prices in the country. Secondly, it is intended to assure the grower of a certain minimum return which Government guarantee, by purchasing cotton on their own account, if necessary, so that the progress of cotton cultivation in the country is not hampered by any temporary slump in prices. It was suggested to us that the prices fixed earlier were far too low with the result that, on the one hand, the cultivator did not find it profitable to expand cotton production and, on the other, the control was circumvented and deals were made at prices higher than the ceiling. The ceiling price was raised in July, 1950 and again in August, 1951. The floor price also was raised in 1952. The present price levels are considered reasonable. The only other suggestion on this subject which we heard was that announcements of change should be made in good time to have their proper effect on sowings. This point, we understand, is fully realised and, therefore, in 1952, the intention to raise floor prices was announced on the 1st July, 1953 although it took effect only, when the new crop came under a notification issued by the Textile Commissioner on the 23rd October, 1952. If the new prices are not announced by June or July it is usually taken as an indication that the *status quo* continues. While this may be so, the possibility that a change might be made always exists in the minds of the grower, and the trade alike. Therefore, it would seem desirable that a definite announcement should be made each year even if it is intended that there should be no change in the prices. We suggest that this announcement should, as far as possible, be made before the end of June at the latest so that the grower knows where he stands."

The Government has announced that it has noted the Committee's views regarding the need to make a timely announcement of the floor and ceiling prices for each cotton year.

The Indian cotton market has for long functioned in an artificial manner, in the sense that world cotton trends have been prevented from exercising their influence on prices of cotton within this country. It may be doubted whether such a policy could be allowed to continue without any modification for an indefinite period. There is, therefore, an urgent need to review the entire control regulation in the light of the cotton supply position in India, and, incidentally, in the world. In this connection, it is well to remember that many observers regard the current season as a very critical one for cotton producers. Referring to the outlook for cotton in this season, the report of the U.N. Food and Agriculture Organisation says:

"The 1953-54 season will be a crucial one for cotton. With prices at a lower level than at any time in the last four years, and resting largely on official supports, Governments are already discouraging cotton production. In the United States, a crop of 2½ million bales smaller than last season was officially recommended, but the first estimate of the area planted at 24,618,000 acres, indicates a crop of perhaps one million, but not more than 1½ million bales smaller. Official cotton acreage restrictions are in force in Pakistan, Egypt, and Syria and reduced plantings are expected also in Mexico and Turkey. In general, therefore, even excluding the possibility of yields falling below last season's relatively high level, a fairly substantial reduction in the world crop is anticipated.

"A reduction of 3 million bales in the world cotton crop would bring it substantially into line with the current rate of world consumption. The future of cotton consumption is, however, doubtful. The conflicting long-range influences of losses of markets to man-made fibres and of gains in standards of living in densely populated regions where cotton textiles are consumed on a large scale are not easy to balance. In any event, they may be masked in the short period by the influence of price fluctuations and general industrial levels. The outcome of the 1953-54 harvest and the way in which Governments define their production and price policies will, therefore, be important factors determining the volume of consumption achieved next season.

"As to the longer range factors, it cannot be assumed that the inroads made by synthetics into cotton's markets will be continued at the same rate as in the past few years. Early post-war technical and economic advantage of rayon may not be nearing fullest exploitation and new advantages may be less easily developed. At the same time, the promise which rising standards of living hold for increased cotton consumption can be expected to be fulfilled only gradually and will depend to a considerable extent on continued economic progress in underdeveloped countries.

"As importing countries have tended to allow stocks to run down somewhat, an increase in prices would encourage trade. Longer range prospects depend on the nature of the price leadership given by the United States. Since export subsidies for cotton have now been officially ruled out, the world price structure for cotton and the volume and pattern of trade in it will depend on the more fundamental issues of United States agricultural policy."

What is now required is that the Government should review in an impartial manner its cotton, as well as its cotton textile, policy. Both these sectors, it cannot be overemphasised, are inextricably linked together. Any further delay in making such a review and in taking constructive decisions will have unhealthy repercussions on the trend of cotton and cloth prices, affecting thereby the prosperity of both the cotton farmers and the mill industry.

COTTON ACREAGE, 1953-54

The all-India first estimate of the area under the 1953-54 cotton crop, compiled by the Directorate of Economics and Statistics, Ministry of Food and Agriculture, places it at 11,708,000 acres as compared with 10,775,000 acres in 1952-53. Thus, the area under cotton shows an increase of 933,000 acres or 8.7 per cent. over the cotton area in 1952-53. The details according to trade descriptions for the current and last seasons are as follows:

Area (1000 acres)

Variety	1953-54	1952-53
Bengals	1,088	1,116
Americans	788	605
Oomras	5,477	5,055
Broach	492	486
Surti	11	9
Dholleras	726	539
Others	3,201	2,965
Total ...	11,708	10,775

The increase in acreage, which is shared mainly by Bombay, Madhya Pradesh and Saurashtra, has been reported by almost all the cotton-growing States except U.P., Mysore, Kutch and Vindhya Pradesh and is due partly to favourable weather conditions at sowing time and partly to the efforts made to grow more cotton under the Five-year Plan.

The information given in this estimate relates to the period generally upto the end of July, 1953. Till then, the condition of the crop was reported to be, on the whole, satisfactory.

The estimate does not cover the entire area sown to this crop during 1953-54. Past experience shows that the area of the first estimate stage forms roughly 65 per cent. of the area under the crop finally reported.

EGYPTIAN COTTON

The first official estimate of the 1953-54 Egyptian cotton crop places it at 5,927,000 cantars. Private estimates, however, place the crop at about 1.5 million cantars above the official estimate. The details of the official crop estimate are:

(In cantars)

Karnak	1,900,000
Menouf	82,000
Giza 30	1,625,000
Ashmouni/Zagora	2,320,000

ESTATE DUTY ACT COMES INTO FORCE

SUMMARY OF ITS MAIN PROVISIONS

[In the following article, the main provisions of the Estate Duty Act, which came into force with effect from 15th inst., have been summarised in a manner that will be readily understood by the layman. The Act is a very complex piece of legislation. The salient features of the Act, summarised on this page, will, therefore, be found useful.—Ed.]

THE Estate Duty Bill has taken nearly a year to pass through both Houses of Parliament, having been introduced in August last year. It will be recalled that it was in 1925 for the first time that a legislative measure of the kind was suggested by the Taxation Inquiry Committee then appointed, but the recommendation could not be given effect to on account of the impending constitutional changes. The need for such a duty was felt again during World War II which helped a number of people to amass fortunes, but such a duty, on the analogy of the death duty existing in the U.K., could not be levied under the Government of India Act, 1935. The Act had, therefore, to be amended to confer on the Central Legislature the power to impose such a duty. A Bill was introduced in the Central Legislature in 1946, but due to various reasons it could not be taken up for consideration. It was reintroduced in the Provisional Parliament in 1948, and, although it passed through the Select Committee stage, it did not come up and ultimately lapsed with the dissolution of this Parliament.

The Central Board of Revenue have brought out a booklet entitled *Hints on Estate Duty*, which summarises the main provisions of the Act, giving examples to illustrate the manner in which the calculations are to be made. Earlier the Board had issued a small pamphlet containing the speech of the Finance Minister which he made in the House of the People on the motion for consideration of the Bill as reported by the Select Committee. In the near future, the Board hopes to be able to issue a publication on Estate Duty, similar to *Income-tax for the Layman*, already out.

Scope of the Measure

The Act applies to the whole of India, except the State of Jammu and Kashmir. All properties, both movable and immovable, situated in the States of India are liable to duty. Immovable property outside the territories to which this Act applies are not dutiable, but foreign movable properties of a person domiciled in India at the time of his death attract the duty.

Estate Duty is a mutation duty, in that it is charged according to the value of the property changing hands on death irrespective of to whom it passes. Duty is payable on the capital value of all property, real or personal, settled or not settled, which "passes" or is "deemed to pass" on the death of any person on or after 15th October, 1953.

The inclusive definition of property has been given as (*a*) any interest in movable or immovable property, (*b*) proceeds of sale of the interest mentioned in (*a*), (*c*) any money or investment for the time being representing the proceeds mentioned in (*b*), (*d*) any property converted from one species into another by any method, (*e*) equitable interests, (*f*) debts created by a person or with his consent enforceable against him, (*g*) any other right capable of being reduced to a money value, and (*h*) benefit conferred by the extinguishment of a debt or right at the expense of the deceased.

"Passing on death" has not been defined in the Act. This is "evidently used to denote some actual change in the title or beneficial possession of the property as a whole which takes place at death".

Property Deemed to Pass

There are also certain properties which do not actually pass on death, but for which provision has been made for deeming them to pass on death. These are:

(*a*) Property which the deceased was competent to dispose of.

(*b*) Property in which the deceased or any person had an interest ceasing on the death of the deceased. (This also covers the coparcenary interest of the deceased in the joint family property governed by the Mitakshara Marumakkattayam or Aliyasantana law. However, a concession has been given and no duty is payable if the deceased member of a joint Hindu family had not attained the age of 18 years. If the deceased member is governed by the Mitakshara law, duty is payable even if he was less than 18 years of age provided no male ascendant of his was a coparcener in the family at the time of his death.)

(*c*) Property taken as a *donation mortis causa* (i.e., gifts in contemplation of death). This is because the gift is not irrevocable and does not become effective before death.

(*d*) Property taken as a gift *inter vivos* (i.e., between living persons) made by the deceased either within six months or two years of death, according as the gift is made for public charitable purposes or to others respectively, or at any time where the donor has reserved some benefit for himself by contract or otherwise. But gifts made in consideration of marriage or proved to have been part of the normal expenditure of the deceased, but not exceeding Rs. 5,000 in the aggregate, do not fall under this provision.

(*e*) Property in which a life interest, limited to cease on the death of the deceased, was disposed of or determined, whether for value or not, where such disposition was made or determination effected (i) within the statutory period of six months in the case of public charitable purposes and two years in other cases, or (ii) at any time with reservation. (Reservation here means either retention of enjoyment of the property by the original beneficiaries or some collateral benefit accorded to him.)

(*f*) Property comprised in a settlement made by the deceased, reserving for himself for life any sort of interest in that settlement.

(*g*) Property which the deceased vested in himself and another person jointly either by transfer or by purchase in the joint names, and the other person takes it by survivorship.

(*h*) Money payable under a policy of insurance effected by the deceased and kept up, either by him or under a settlement made by him, for the benefit of a nominee or assignee or a proportion thereof where the deceased partly kept up the policy.

(*i*) Annuities and other benefits purchased or provided by the deceased, either by himself or by arrangement with some other person, to the extent of the benefit accruing or arising on his death.

(*j*) Assets of a company controlled by not more than five persons where the deceased made a transfer of property to the company and received, or had power to obtain, benefits from the company during the three years ending with his death. The duty is payable on that part of the assets which bears to the total assets of the company the same proportion as the benefits accrued, due or received by the deceased in the last three accounting years (actual or potential) bore to the net income of the company for the said years.

Not Liable to Duty

The following kinds of property do not pass on death, and are therefore not liable to duty:

(*a*) Property in which the deceased or any other person had an interest only as holder of an office or recipient of the benefits of a charity or as a corporation sole.

(*b*) Property held by the deceased as a trustee. But if he is a co-trustee under a disposition made by himself, such disposition must have been made more than two years before death. This period will be five years if the deceased was a sole trustee.

(*c*) Settled property in which the deceased's interest failed before it became an interest in possession.

(*d*) Property settled on the deceased for life and which reverts on his death to the settlor.

(*e*) Life interest taken by a surviving husband or wife in the income of property originally settled by such survivor on or before the coming into force of the Act.

(*f*) Property passing by reason only of a *bona fide* purchase for full consideration in money or money's worth.

Absolute gifts made without any reservation are not dutiable unless made within the statutory period of six months in the case of public charitable purposes or of two years in the case of other gifts as the case may be. The conditions to be satisfied if the gifts made beyond the statutory period are not to attract duty are: (*a*) the donee must take immediate possession, (*b*) the donor must be excluded from possession, (*c*) the donor must not retain any benefit either by contract or otherwise, and (*d*) there must be no reservation or any secret arrangement.

Aggregation and Valuation

For the purpose of determining the rate at which Estate Duty is to be levied, all property passing on the death of the deceased has to be aggregated (subject to certain exceptions) so as to form one "estate." There are certain items of property which, though exempt from duty, are to be aggregated for the purpose of determining the principal value of the estate; e.g., agricultural land in non-scheduled States.

Correct valuation is the main issue involved in the determination of Estate Duty. The principal value of any property has been defined in the Act as the price which, in the opinion of the Controller, it would fetch if sold in the open market at the time of the death of the deceased. The market price means the best price which can be obtained. But no reduction is to be made on the ground that all the property is to be placed in the market at the same time, but due consideration has to be given to the fact where it is proved that the property has depreciated by reason of the death of the deceased. Where property has actually been sold within a short time after the death of the deceased under open-market conditions, the gross sum realised may generally be taken as the principal value without any deduction for expenses of sale. There valuations may either be estimated by the parties concerned themselves or with professional assistance.

A specific provision (section 39) has now been made as to how the benefits arising from the cesser of interest in a joint family property are to be computed. This section provides that in the case of any joint family governed by the Mitakshara, Marumakkattayam or Aliyasantana law of inheritance, the interest that ceases on death will be valued as if a partition had taken place immediately before the death of the deceased. Such a partition will be purely notional for the purposes of ascertaining the duty and ignores the point whether the deceased had any right to claim partition.

In determining the total value of the entire property of the Hindu undivided family, the provisions relating to gifts, settlements, etc., should apply so that any transfers made by, say, the manager of the family within the statutory period may be brought back to the joint family pool for the purpose of determining the deceased's share therein.

Deductions From Estate's Value

In determining the principal value of an estate for the purpose of Estate Duty, certain debts and encumbrances have to be allowed. The deductions permissible under the Act are (*a*) funeral expenses not exceeding Rs. 1,000, (*b*) *bona fide* debts and encumorances, (*c*) dower debts not exceeding Rs. 5,000, and (*d*) cost of administering or realising foreign property not exceeding 5 per cent. of the value of property. Taxes of whatever nature which have become due up to or on the date of the death are considered as debts and as such are deductable.

The rates of duty, prescribed in the Act, have been fixed under a slab system. That is to say that different rates of duty are applicable to each successive slab in an ascending scale. No duty is payable on the first slab of Rs. 50,000 of property which consists of an interest in a Hindu family governed by the Mitakshara, Marumakkattayam or Aliyasantana law. In the case of others, no duty is payable on the first slab of Rs. 1,00,000. These first slabs on which no duty is calculated are called exemption limits.

Exemptions From Duty

The following properties are exempt from duty but are to be included in the principal value of the estate for the purpose of rate:

(*a*) Gifts for public charitable purposes made within six months of death to the extent of Rs. 2,500; (*b*) gifts for any other purpose within two years of death to the extent of Rs. 1,500; (*c*) proceeds of insurance policy for the purpose of paying Estate Duty and assigned to Government to the extent of duty payable but not exceeding Rs. 50,000; (*d*) moneys deposited with Government for the purpose of paying Estate Duty to the extent of duty payable but not exceeding Rs. 50,000; (*e*) insurance proceeds on the life of the deceased to the extent of Rs. 5,000; and (*f*) moneys earmarked under a policy of insurance or under a declaration of trusts or settlement for the marriage of any of the female relatives dependent on the deceased for necessaries of life to the extent of Rs. 5,000 for each of such relatives.

The effect of these exemptions is that a rebate will be allowed at the average rate on the amounts of such items included in the principal value.

Relief has been provided for quick succession to the same property. If there is a succession to the same property or part of it within five years, duty payable will be reduced by 50 per cent., 40 per cent., 30 per cent., 20 per cent., or 10 per cent. accordingly as the second death occurred within one, two, three, four or five years. It is to be noted that in the U.K. this relief is restricted to land and business only.

Further, in India all deaths occurring within a period of three months of the first death in respect of which duty has been paid will be treated as one death. This is meant to cover quick deaths arising out of epidemics or accidents. Relief is also provided for the Hindu widow's limited interests if she dies within seven years of her husband's death.

Court fees paid in any of the States of India for obtaining probate, letters of administration or succession certificates is an allowable deduction from Estate Duty. But in respect of duty paid in any non-reciprocating country, the whole or so much of the duty paid in the other country as may be prescribed by the Central Board of Revenue will be deducted from the value of the property situated in that country.

Return of Accounts

The Act will be administered through officers of the Income-tax Department. The Commissioners of Income-tax will be the Controllers, the Inspecting Assistant Commissioners of Income-tax the Deputy Controllers and the Income-tax Officers the Assistant Controllers of Estate Duty. All of them will exercise the functions of a Controller under the Estate Duty Act, but the actual work will be divided amongst them in accordance with the monetary value of the estate of the deceased. The Commissioners, the Inspecting Assistant Commissioners and the Income-tax Officers who had or would have had jurisdiction in respect of the income-tax assessment of the deceased immediately before his death will function as Controllers for the estate left by the deceased.

At important places like Calcutta, Bombay, Madras, Kanpur and Delhi, special Estate Duty circles may be created to deal specifically with cases that will be allotted to them.

Who Makes Payment ?

Every executor, manager of a Hindu joint family, trustee, guardian, committee or any other person to whom any property of the deceased passes or is vested or who takes possession or intermeddles with the estate, is accountable for the whole of the duty payable on the principal value of the estate, but the liability for such duty is limited to the value of the assets which such a person actually received or would have received but for his negligence.

It is the duty of every accountable person to deliver to the Controller, within six months of death, a verified statement of account of all property within his knowledge and belief in respect of which duty is payable.

Estate Duty is due from the date of death and is collectable on the account delivered. But the Controller may allow payment to be postponed for such period as he thinks fit. The Controller has power to call for any accountable person to submit

SUGAR INDUSTRY, MILCH COW OF BOMBAY STATE

SHARP INCREASE IN WATER RATES

THE growing tendency on the part of the Government of Bombay to treat the sugar industry in the State as its milch cow was strongly deplored by Mr. Gulabchand Hirachand, in the course of his brilliant address to the Tenth Annual Convention of the Deccan Sugar Technologists' Association held at Harigaon (Belapur) on 10th October, 1953, in his capacity as its Chairman. Mr. Gulabchand did not stop with merely making a remark on this subject, but cited facts and figures to substantiate his charge against the Bombay Government. Indeed, the facts presented by him justify the conclusion that this Government has come to regard the sugar industry in the Deccan as an interloper in the sphere of growers of other agricultural products and as one the growth of which needs to be restrained rather than encouraged. It seems to have completely forgotten the past history of the dry districts of Ahmednagar, Sholapur and parts of Nasik and the contribution made by the sugar industry to the prosperity of these areas which were once no better than desert.

In its anxiety to promote production of foodgrains, including rice, for which there are more suitable areas elsewhere in this country and in the State itself, the Government would appear to have ignored the fact that the dry Deccan tracts where irrigation is available are eminently suited for growing sugarcane on a profitable basis and that, therefore, every encouragement should be given to expand production of cane and sugar in this area. It is surely a negation of economic planning to divert land, which is absolutely ideal in every respect for cultivation of sugarcane, for growing foodgrains. It is a sheer waste of resources and Nature's bounty. Yet that is exactly what the Government of Bombay is doing at present. It is doing everything possible to discourage the expansion of the sugar industry in the Deccan. It is, for instance, very niggardly in the supply of water to sugarcane plantations and shows a pronounced tendency in favour of other crops in this respect. Again, it is taxing the water supplied for sugarcane cultivation to a much greater extent than other agricultural crops. Further, even in the sphere of sugarcane cultivation, it is penalising the larger and, therefore, the more efficient sector in favour of the uneconomic and inefficient sector. What is rather disquieting is that, although the Government's attention has been repeatedly drawn to the unsatisfactory features of its policy, it has paid no heed to them. Its lack of interest in the welfare of the sugar industry is reflected in Mr. Gulabchand's bitter remark quoted below:

"It becomes almost painful for us to repeat, year after year, the same set of grievances, without any heed being paid to them or effort being made to convince us of the unreasonableness of our request, if they be unreasonable. Just as justice is best when tempered with mercy, all authority would be the better for being tempered with constructive reasonableness. When we have gone to the length of making out a case about some special grievance or request, it is not only humiliating but distressing to receive a reply from some Assistant Secretary in some Ministry stating that 'the Government are not prepared to reconsider their decision' or that 'they cannot see their way to accede to your request for an interview.'"

Two-fold Difficulties

The difficulties of the sugar factories in the Bombay State in regard to supply of water are, according to Mr. Gulabchand, two-fold. The first is inadequate supply of water. Referring to this, the President of the D.S.T.A. said:

"We have been complaining for years that the volume of water supplied to us for raising cane is not adequate for securing a normally good crop, which the soil is capable of giving and to which we are entitled because of the heavy investment that we make in raising this crop. This has now been proved beyond any measure of doubt by the fact that many of the sugar factories prefer to reduce their guaranteed area under cane in order to secure a better crop. No factory would be foolish enough to plant a smaller area, unless it was convinced that it would be uneconomical to utilise the whole of the guaranteed area with the niggardly supply allowed to it by the irrigation authorities. . . . Unless this supply is liberalised, many of our efforts at bringing about technological improvements are likely to fail in giving results which would otherwise flow from them naturally. This is a basic problem and has to be tackled before there could be any hope of deriving the maximum advantage from the soil which Nature is prepared to confer on us, but which a Government, advised by experts experimenting under ideal conditions on small plots, is determined to deprive us of."

Sales Tax on Water!

The second difficulty is excessive rates charged on even the limited quantity of water supplied to the factories. How serious it is will be evident from the following quotation from Mr. Gulabchand's speech:

"We were still groaning and complaining about the 100 per cent. increase that has been brought about during the last few years from Rs. 45 per acre to Rs. 90 when the irrigation authorities came down on us with notices of further increase of Rs. 30 per acre from February next. By a diabolically cunning device, water rates have been linked to the local cess, so that every increase in these charges automatically brings about an additional increase of As. 3 in the rupee in the local cess also. This local cess itself, which stood originally at one anna in the rupee, has been raised to three annas. It passes my understanding why the revenue of the District Board should go up automatically, with every increase in the price of water. Water charges for irrigation purposes are not in the nature of State revenue. It is a simple process of buying and selling and the local cess should have no relation to the price of water, in the same way as it has no relation with the price of manure or other charges incurred by us in cane cultivation. Levying of local cess on water charges turns it into a sales tax and I leave it to the legal *pundits* to decide whether an impost of this nature, which amounts to a tax on sale of water, is either constitutionally valid or economically justified. It is bad enough for a Government to sell water at such an exorbitant price; it is infinitely worse to impose sales tax at the rate of about 20 per cent. on such a commodity as water.

"As if these staggering increases of Rs. 30 plus Rs. 5-10 per acre for water charges to a price which had already been inflated to bursting point during the last two years were not enough to break the back of sugarcane cultivation, the authorities have thought it fit, at the same time, to impose an additional burden of Rs. 22-8 per acre as irrigation cess on all lands under sugarcane from next year. I am not aware if this irrigation cess is also to be subject to local cess or not; but, even if no local cess were to be levied on this new irrigation cess, this, together with the proposed increase in water rates, would raise the burden on sugarcane from next year by more than Rs. 80 to Rs. 85 per crop acre. A sudden and simultaneous increase of this nature is a thing unheard of in the history of taxation."

It will be seen from the foregoing extract that the Government is exploiting the monopolistic position it occupies in the matter of water-supply. If the Government were thus to heap burden after burden on the industry, what incentive will there be for the industry to improve its position through research and technology? It is time, therefore, some check was imposed on the Bombay Government to prevent it from taxing public utility services beyond a limit, and there is no doubt that supply of water for irrigation purposes is as much a public utility service as railway transport or electric supply is. The Government of India should not try to take shelter under the plea that all this fell under the jurisdiction of State Governments. The Centre has a clear obligation to the sugar industry in this matter, inasmuch as the industry is one of those which have been brought under the scope of the Industries (Development and Regulation) Act, 1951. It must see to it that the sugar industry got fair treatment for its development from the State Governments.

History of Deccan Sugar Industry

Public memory being short, a brief account of the history of the development and establishment of modern sugar industry in the Deccan will be quite relevant, if only to bring out the difference in the Bombay Government's attitude towards the industry in its initial years and now. The then Government was all out to help the sugar industry, as it wanted to see that the Deccan canals became a paying proposition. It gave several assurances to the entrepreneurs of those days who were willing to establish sugar factories in this barren tract and entered into solemn agreements to ensure sufficient supply of water and availability of land. All this is in refreshing contrast to the harsh treatment that is now being meted out by the present Government, a treatment which is certainly not in consonance with the spirit of the agreements in the past. Mr. R. G. Padhye, Senior Resident Executive of the Belapur Company Ltd., who welcomed the delegates to the Convention, did well, therefore, in choosing a historical survey of the sugar industry in the Deccan as the main theme of his speech. It proved to be a very apt background for the main story of Mr. Gulabchand. Mr. Padhye naturally traced the history of the Deccan sugar industry by referring to that of the Belapur Co., Ltd. We say "naturally" not because of Mr. Padhye's connection with this Company but because the Belapur Company was the pioneer of the industry in the Deccan and its trials and tribulations were, generally speaking, those of the industry itself. In view of the importance of the issues raised by Mr. Gulabchand, Mr. Padhye's account bears reproduction here:

"You all know that the Deccan tract is ideally suited for the establishment of a successful sugar industry, owing to three principal causes. First, it is entirely situated in the tropical belt and as such is not subject to excessive cold or frost and is thus climatically suited to growing of high quality and high yielding cane crop—the raw material used for manufacture of sugar. Secondly, the availability of perennial irrigation from Government-owned canals, without which successful growing of sugarcane in an arid tract as the Deccan, having scanty rainfall, is not possible. Thirdly, existence of suitable soil, which is found fairly satisfactory for growing heavy cane crops of high sucrose content under irrigation.

"As a result of the shortage of sugar felt by the British Government during the First World War—years 1914-17—the then Government thought of developing the resources of its tropical possessions, out of which India was considered to be the most suitable country, possessing many favourable factors such as land, irrigation water, labour and suitable climate for purposes of increased production of sugar, though the sugar industry at that time was not in a prosperous state in India. In fact, an Indian Sugar Committee was appointed by the Government of India in October, 1919, to consider the question of organising and developing the sugar industry in India. Our concern, the Belapur Company, was, however, actually formulated and started in the year 1918, before this Committee was appointed.

"In Bombay State, the Department of Industries of the Bombay Government included in their scheme of post-war industries development of the sugar industry on the Deccan canals. In the year 1917, at the suggestion of Mr. Mead, the then Director of Industries, Bombay, Mr. Frank Harrison of Marshall Sons & Co., the Founder of this Company, started working on a scheme of a sugar factory on the Pravara canal, newly opened then. The problem before the Government then was to increase the area under cane and see an extended use of canal water, which was not fully utilised at that time. After careful consideration, Mr. Harrison came to the conclusion that, for a successful sugar industry on the Deccan canals, the first requisite was to produce cane at low prices; this, he thought, was possible by means of scientific cultivation of cane with modern and mechanised methods. This was considered impossible with the methods followed then by the local cane growers, whose means were limited and so he stipulated two conditions, namely, that Government should give land on a long-term and suitable lease and guarantee irrigation water for sugar cane at fixed rates to enable the Company to grow cane at reasonably low prices. The Government immediately agreed to do this and helped Mr. Harrison to make a selection of the land and the present site for the estate and the factory was chosen and work was started in April, 1920.

"Most of the acquired land was lighter and hence poorer, but the potential value of that land with deeper cultivation and under irrigation was considered to be good. The high yields of cane subsequently raised on this land, the anticipated success achieved with the stipulations of these conditions justified the foresight shown by the promoter of this Company. At that time, an attempt was made to establish a sugar factory at Baramati under the name of The Nira Valley Sugar Co., Ltd., by purchase of cane from the cultivators, but the prices at which cane was grown on that canal at that time were so high that sugar making as was foreseen by the promoter of this Company, was found unprofitable and the Company had to go into liquidation soon.

Tribute to Sir Joseph Kay

"As pioneers, this Company had to face many difficulties in the initial stage, mostly agricultural and mechanical, which involved substantial financial loss, but the principles with which the Company started its operations being sound and correct, the Company ultimately became a successful concern and thus paved a way for the successful establishment of a number of sugar factories that were started later. Had it not been for the able guidance and help of the then Mr. and now Sir Joseph Kay and other members of the staff, the Company would have gone into liquidation before manufacturing even a bag of sugar, which would have caused a death-blow to the sugar industry in the Deccan, a fact that should be remembered by the public as well as by the industrialists, who later turned their attention to this industry.

"The factory started its first season on 31st October, 1924, and actually made a profit in the year 1927, though it started paying dividends from the year 1930—the year when the Government of India appointed a Sugar Tariff Board (in May 1930) to enquire into the question whether protection was required for the sugar industry in India, which the Board ultimately recommended for a period of 15 years. The Company, however, had started making profits even before the Tariff Board's recommendations took effect.

"In the year 1931 (October 1931), the Government of Bombay appointed the Deccan Canals Financial Improvement Committee under the presidentship of Mr. Kamat, of which Mr. Millar, the first General Manager of this Company, was a member. It recommended establishment of more sugar factories on the Deccan canals in order to increase the area under cane to improve the irrigation revenue, for which purpose it made certain recommendations, which involved compulsory leasing

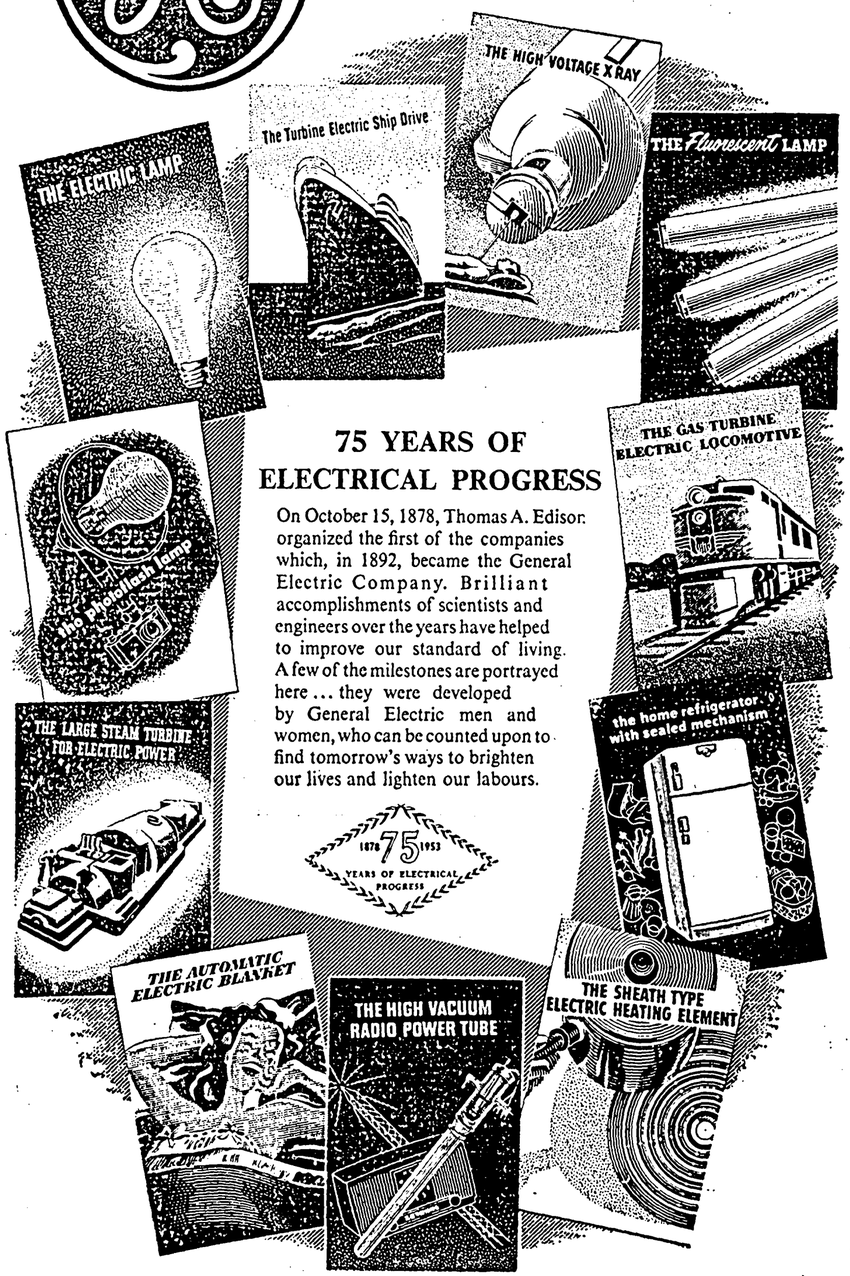
LEADER...
IN ELECTRICAL PROGRESS



75 YEARS OF ELECTRICAL PROGRESS

On October 15, 1878, Thomas A. Edison organized the first of the companies which, in 1892, became the General Electric Company. Brilliant accomplishments of scientists and engineers over the years have helped to improve our standard of living. A few of the milestones are portrayed here ... they were developed by General Electric men and women, who can be counted upon to find tomorrow's ways to brighten our lives and lighten our labours.

PLACE OF THE COMMONWEALTH IN WORLD TEA TRADE

F.A.O.'S ANALYSIS OF OUTLOOK

ONE of the outstanding features of the post-war tea economy of the world is the concentration of the world exportable supplies in the Commonwealth countries. The Commonwealth countries now contribute 81 per cent. of the total supplies entering the international trade, as compared with 67 per cent. in 1934-38. This key position is not likely to be disturbed, as indications are that neither China, Japan nor Indonesia are likely to regain their pre-war positions in the world tea trade in the near future. On the contrary, with bright prospects of an increase in tea output in British African colonial possessions, this position is likely to be consolidated. Although the future trend of production, as was pointed out in these columns last week, will depend on the level of prices and other economic factors, the general outlook for the industry will depend primarily on the consumption, which in turn will be influenced by the level of economic activity in the consuming countries such as the U.K., the Continent, the U.S. and the Middle East. Nevertheless, a study of the recent trends in world trade in tea, with particular reference to the Commonwealth, will be useful. It is accordingly proposed to make here an analysis of the post-war trend in international trade, consumption and prices of tea on the basis of the information made available by the F.A.O. in its report on commodities, referred to in these columns last week.

Decline in Exports

Exports of tea from producing countries declined strongly during the war years and remained at about 75 per cent. of the average for the pre-war years 1934-38, until 1947. In 1947 and 1948, however, they rose to about 90 per cent. of the pre-war average. Following the abolition of rationing in some of the countries and rebuilding of stocks in some others, exports in 1949 rose further and exceeded those of 1934-38. But in 1950, exports suffered a decline, mainly on account of the cut in the U.K. ration in July, 1950, resulting in a reduction in its imports by 23 per cent. as compared with the previous year. This fall was, however, transitory, inasmuch as exports, in the following year, to countries other than the U.S.S.R. rose to the highest figure on record. The main contributory factors to this increase were the Korean War and stock rebuilding in some countries. As these were temporary factors, the revival of upward trend in exports was not sustained in 1952. Further, that year witnessed a world-wide recession is prices and the end of war and post-war inflation in several countries of the world. Tea was, therefore, no exception to this trend. Although complete data for 1952 are not available, preliminary figures reveal that exports of this commodity were substantially smaller than in the previous year. Indications are that the current year may prove somewhat better than the past. It will thus be seen that the volume of world trade has been fluctuating year to year since 1949. The extent of such fluctuation will be evident from the following table, showing production, exports, imports and prices for the years 1946-52 and the average for 1934-38:

	(1,000 metric tons)			Index of price Average Calcutta and Colombo	
	Production	*Exports†	Imports‡	Price	Deflated by U.K. Import values
1934-38 ..	439	402	396	100	100
1946 ..	433	297	304	..	..
1947 ..	458	360	349	245	96
1948 ..	457	353	374	246	81
1949 ..	522	435	420	298	97
1950 ..	562	399	392	318	91
1951 ..	589	453	438	236	62
1952 ..	578	416§	435§	240	53

* Excluding China, Indo-China and U.S.S.R.
† Exports from producing countries only.
‡ Imports less re-exports.
§ Preliminary.

It will be observed that, since 1949, world exports have averaged about 423,000 metric tons a year, or 20,000 metric tons (5 per cent.) higher than the 1934-38 average. The F.A.O. points out that exports of tea have not kept pace with the increases in population of the importing countries.

The world totals do not, however, reveal the significant changes that have taken place among producing countries. Thus, while exports from India, Pakistan and Ceylon have risen by almost 40 per cent., those from Indonesia, China, Taiwan and Japan together have gone down by 57 per cent. During 1949-51, exports from China alone to destinations other than the U.S.S.R. and Eastern Europe averaged 10,000 metric tons a year or only about a quarter of pre-war Chinese exports. In 1952, the sharp increase in production of low quality tea in India affected that country's exports adversely. Although the large decline in the first four months was subsequently made up by high shipments to the U.K. and other markets, India's exports in 1952 showed a net decline. Exports from Pakistan also declined on account of poor quality and high exchange rate. Indonesian exports, too, were lower, in part because of the effects of adverse climatic conditions on production. Indications are that Indonesia, Japan and China are not likely to regain their pre-war positions in the world trade in the near future. The large domestic demand and the change in taste in overseas markets from green tea render it unlikely that Japan's exports will again become so important, even if some recovery does take place in the coming years. However, the possibility of Japan attempting to switch over from green to black teas still remains. As regards Indonesia, the depressed production outlook does not augur well for a speedy recovery to pre-war levels. Exports from China are likely to be absorbed by the U.S.S.R. and its neighbouring countries.

Pattern of Imports

No major change in the world import pattern took place during 1952 except for the effect of the derationing of tea in the U.K. Average net imports of the U.K. during the three years preceding 1952 were almost the same as in 1934-38. A large drop in Ireland's imports was noted in 1952, due solely to large carry-over stocks from the previous year and does not represent a change in consumption. Germany and the Netherlands imported a slightly larger quantity during 1952 than in 1951. The imports by Europe (excluding the U.K.) was about 7 per cent. of the world net imports, as against 9 per cent. in pre-war years. Final figures of imports for 1952 by other countries and continents are not available, but they are unlikely to reveal any marked change over the previous year's level. Australia, New Zealand and some British colonial territories reduced their imports for reasons of balance of payments. Imports by the U.S. in 1952 rose slightly, following the sharp decline in 1951. As in the pre-war years, the U.S. continues to absorb about 10 per cent. of the total world imports. The imports by the Union of South Africa were higher than in 1952. Imports by the African Continent, as a whole, during 1952 were about the same as in 1951, but they were sizably higher than in the pre-war years.

The F.A.O. does not anticipate any major change in the world import pattern in the near future. The derationing in the U.K. has not yet affected demand. Ireland is likely to increase its imports in 1953. No substantial changes are to be expected in the imports by the rest of Europe. The U.S. is expected to continue the present level of imports in 1953. If the latest reports from the U.K. and the U.S. are any indication, these remarks of the F.A.O., however, seem to err on the conservative side. In the last London auction, the trend of prices was very firm, which is attributed to a perceptible improvement in demand. Similarly, the advices from the U.S. also point to a distinct improvement in consumption following the activities of the Tea Council. Consequent on these developments, the North Indian tea gardens have decided to withdraw the voluntary restriction on crop production imposed about this time last year.

Although restrictions on the British re-export trade were not lifted until the middle of last year, re-exports from London increased considerably in 1952. It is stated that further improvement in this direction can be expected in 1953, but the F.A.O. doubts whether the pre-war volume of re-exports will again be reached in the near future. For, apart from such adverse factors as higher freight and storage charges on tea sold through London, the financial burden of carrying large stocks and the delay in the remittances to producers, the F.A.O. finds that many countries (such as Ireland and the U.S.) have become accustomed to buying directly at the Far Eastern auctions. Calcutta and Colombo have made great efforts to improve auction facilities and to attract overseas customers. Despite these trends, the F.A.O. adds, the re-export trade of London is likely to remain of considerable, though reduced, importance in supplying European and African consumers, because the requirements of these countries are small and do not warrant the setting up of buying agencies in the East.

The recent difficulties of the tea industry in regard to price and marketing are due not only to the increase in production during the last two years and to the poor quality of tea, but also to the absence of the dynamic growth in consumption, in contrast to coffee and cocoa. For the past 40 years, tea consumption in importing countries has not only failed to rise, but has actually declined. Another notable feature about tea consumption is that the trend in consumption of tea in all the consuming countries taken as a group during the last 40 years has been quite different from that of almost all other foods. The experience of the past 40 years shows that either there has been a genuine change in taste or tea-producing countries have made little or no effort to strengthen consumer acceptance of their product, in the face of the strong promotion efforts made by producers of other soft drinks.

Trend of Consumption

While the world population outside Asia has increased by 42 per cent. since 1909-13, tea consumption in importing countries (except Asia and the major producing countries) has gone up by only 11 per cent. Following a period of war-time shortages, shipping difficulties and controls on consumption, which ended in 1948-49, consumption, except in the U.K. and a few other countries, generally returned to the traditional pre-war pattern. In India, as well as in a few African importing countries, the *per capita* consumption has, however, shown a marked rise; in most others, it has either remained stationary or declined.

The following table gives the *per capita* consumption in selected countries during the period 1950-52, as compared with that in 1934-38:

(In kilograms)

	1934-38	1950-52
United Kingdom ...	4.20	3.85
Ireland	3.50	3.98
Netherlands	1.23	0.74
Scandinavian countries	0.08	0.17
Germany	0.07	0.05
Southern Europe ...	0.01	0.01
U.S.A.	0.29	0.28
Canada	1.54	1.53
Egypt	0.45	0.77
French Morocco ...	1.28	1.32
Australia	3.02	3.09
New Zealand	3.05	3.58
India	0.10	0.25
Ceylon	0.74	0.87
Japan	0.45	0.43

The U.K. retains its place as the chief market for tea, but its *per capita* consumption has gone down. Following the abolition of rationing and high level of employment, some rise is, however, likely in the near future. In all the other large consuming countries, especially the U.S. and Canada, there has been keen competition from other beverages. The decline in the *per capita* consumption of the Netherlands to 60 per cent. of the pre-war level is attributed largely to economy habits formed during years of scarcity. A gratifying feature of the trend in consumption is the large increase in Egypt, the Union of S. Africa and other African territories and especially in India. As regards the future trend in consumption, the following observations of the F.A.O. will, we believe, be read with interest:

"The future trend of consumption is of great concern to producing countries, since (1) tea is one of their principal export commodities, (2) its cultivation gives employment to a large number of labourers and provides cash income to small holders, and (3) gross income per hectare is one of the highest of any agricultural crop. In view of the low price and income elasticities of tea, increases in production above current demand are bound to have disproportionate adverse price effects. Since consumption is determined mainly by taste, habit, custom and similar factors, it would appear that sales promotion campaigns through advertising and marketing research might have considerable effect in stimulating demand. Until now such campaigns have been on so small a scale, except in the United Kingdom and a few British territories, as to be almost without value. Furthermore, Governments of tea-producing countries might give consideration to the possibility of including tea in their trade negotiations, to obtain reductions of tariffs and other duties which at present render the price of tea extremely high in some markets, especially in Europe.

Prices

The decline in tea prices during 1952 was primarily due to the deterioration in quality, especially of Indian and Pakistani teas. Secondly, buyers foresaw the possibility of an increase in output by estates to offset the rise in production costs and of total supplies exceeding import demand. The slow and gradual removal of controls in the U.K. came too late to reverse the downward trend. The closing of the economically weaker gardens in India and the decision to reduce production by 8 per cent. reversed the trend of prices. The recovery which set in at the end of 1952 has so far persisted. "Short of a major recession in prices of primary products," says the F.A.O., "a comparatively high degree of price firmness for the balance of the year seems to be indicated." Notwithstanding the recovery in recent months, the current prices, according to the F.A.O., are not remunerative enough to solve the difficulties of tea producers in general.

The output of tea in South India during August, 1953 amounted to 6.83 million lbs. (subject to revision), as against 7.38 million lbs. in July, and 5.22 million lbs. in August, 1952. The total output for the period January-August, 1953 amounts to 79.21 million lbs. (subject to revision), as compared with 74.36 million lbs. in the corresponding period of 1952.

DETAILS OF JUTE CROP FORECAST

INDUSTRY IN U.P. FACES CRISIS

THE all-India first estimate of raw jute, released last month by the Ministry of Food and Agriculture, for the 1953-54 season, as stated then in these columns, disclosed a fall of 27.8 per cent. or 488,000 acres in the area sown to jute as compared with the corresponding estimate for the 1952-53 season. Details regarding the forecast which have since been made available reveal that, though a decline in acreage under jute was reported by all jute-growing States, it was more marked in Bihar and West Bengal. This was because of unfavourable weather, damage to crops by excessive rains and floods and to low prices of jute.

The following table gives the first estimate of the area under jute in 1953-54, as compared with the corresponding estimate for the previous season in the various jute-growing States mentioned below:

(In 000's of acres)

1	2	3	4
State	1953-54 1st estimate	1952-53 1st estimate	Difference between cols. 2 and 3
Assam ...	256	295	— 39
Bihar ...	330	491	—161
Orissa ...	60	109	— 49
Uttar Pradesh	39	110	— 71
West Bengal	569	728	—159
Tripura ...	15	24	— 9
Total ...	1,269	1,757	—488

The sharp fall in jute crop in the U.P., which is far away from the main jute-growing areas of Bihar, Assam and West Bengal, seems to have led to the creation of a piquant situation for the few jute mills that are there. For a recent Press report from Lucknow says that jute mills in Kanpur and other parts of the State are experiencing acute shortage of raw jute. As a result the industry in the State appears to have been practically paralysed. Considerable hoarding and speculative activity are stated to have been responsible for wide fluctuations, from time to time, in the prices of raw jute and jute goods in U.P. markets. These fluctuations are causing, the report says, considerable hardships to both the growers and the jute mills. The three biggest units of the industry operating in Kanpur, having only two days' stocks of jute, are stated to be on the brink of suspension of their operations.

It is reported that representations have been made by the industry to the Government of India that fluctuations in prices of raw jute and jute goods mentioned above have been frequently aggravated by such factors as marketing difficulties of growers, the prevalent unhealthy practices in the jute goods trade and speculation. So far no action has been taken by the Government, as the Jute Enquiry Commission, appointed by the Government of India under the chairmanship of Mr. K. R. P. Ayangar, Joint Finance Secretary, Ministry of Finance, in August last, is scheduled to visit the jute-growing area in U.P. this week.

Considerable significance is now attached to the arrival of the Commission, since it has coincided with the very type of crisis for enquiry into which the Commission has been appointed. It may be noted that the Commission's terms of reference include, among others, examination and enquiry "into the nature and the content of speculations both in raw jute trade and the jute goods trade, the extent to which market prices are affected by the operation of mill-owners, jute dealers and the speculative operators in the market and to consider, in relation to the circumstances which rendered the closing of the *fatka* market in Calcutta in December, 1952, the malpractices indulged in the various units that operated in the *fatka* market resulting in undue depression of prices of raw jute as well as jute goods. Now that similar speculative activity has developed in the U.P. jute markets, the Jute Enquiry Commission has a splendid opportunity to gather firsthand information on the spot. Its investigations and recommendations will no doubt be of some assistance in handling problems of futures trading in jute which, under conditions of scarcity, always harms the interests concerned.

While thus the Government of India has every reason to await details of the findings of the Jute Enquiry Commission, before taking action to control wide fluctuations in prices, it is imperative that it should make necessary arrangements for supplying wagons with a view to transporting raw jute to the Kanpur mills in distress from the jute-growing areas in Bihar and West Bengal.

IRON AND STEEL IN AUSTRALIA

EXPANSION PROGRAMME GATHERS MOMENTUM

THE iron and steel industry of Australia is progressively expanding its production capacity with a view to making Australia self-sufficient in steel. This is evident from the statistics relating to production of ingot steel, which shot up from 1.05 million tons in 1945-46 to 1.52 million tons in 1951-52. The output is estimated to have touched 1.90 million tons for the year ended 30th June, 1953.

In Australia, much of the expansion of steel industry is taking place in Port Kembla on the south coast of New South Wales. At this centre, the integrated iron and steel works operated by Australian Iron and Steel Ltd. (the principal subsidiary of Broken Hill Pty. Co., Ltd.) is extending its plants in almost all departments, while other nearby companies that draw their supplies of basic steel from A. I. and S. Ltd. are themselves expanding their capacities to handle more steel.

The most outstanding in importance among the projects which will increase the output of finished steel products are two plants which are expected to be in operation in 1955. The larger of these plants is a hot and cold continuous strip and plate mill with an annual productive capacity of over 1,000,000 tons of flat steel products which is to become part of A. I. and S. Co.'s steel works. The other is a new cold rolling mill, which is a part of the £A7,000,000 expansion programme, undertaken at Port Kembla by the Australian subsidiary of the English steel firm of John Lysaght & Co. The mill, when in operation, will be one of the largest cold strip rolling mills in the world and easily the biggest of its kind in the Southern Hemisphere. This plant will operate on coiled strip produced by the A. I. and S. Co.'s new mill. It will increase the output of sheet steel of Lysaght's Port Kembla plants from 145,000 tons a year at present to 520,000 tons a year. These two plants are expected to supply all Australia's requirements of sheet steel, one of the most important forms in which steel is used.

Lysaghts rolling plants at Port Kembla and Newcastle are still the only producers of sheet steel in Australia. Their sheets in various forms, black, bright, galvanised, zincanneal and terneplate are some of the most important and widely used products of the steel industry. Hot and cold rolling of sheet from sheet bars has been used generally by Lysaghts, but already a four-high coiled strip rolling mill has been installed at the C.R.M. division, as the first phase of Lynsaght's £7,000,000 development programme. The mill is designed to roll coiled strip from the proposed A. I. and S. Co.'s continuous strip mill, but, so far, apart from a few days of test runs with imported strips, it has rolled sheet bar as distinct from the coiled strip for which it is essentially designed. But even this will be no match for the gigantic four tandem stand of four-high cold rolling mills which are expected to come into operation in 1952.

Major Step

The rolling of steel sheets from coiled strip which these mills will undertake, represents a major step forward in steel rolling methods in Australia. First attempted successfully in America about 20 years ago, the rolling of cold coiled strip, it may be noted, has revolutionised the entire process of steel rolling. The operation of new methods at Port Kembla will render naturally obsolete the old hot and cold rolling mills at Lysaght's and Commonwealth Rolling Mills, built to take sheet bar, as opposed to coiled strip, irrespective of the fact that they contain probably the most up-to-date equipment of its type in the world.

With the cold rolling method, the steel emerges as a single ribbon and thus the slow and costly operation of opening the packs by hand is entirely eliminated. Moreover, as the cold rolled strip is recoiled after passing through the mill, all further processing can be carried out with coils weighing as many tons as the individual hot rolled sheets weigh pounds.

The truly formidable superiority of the new method over the old is clearly indicated by the fact that the tandem cold mill produces exactly 20 times as much sheet steel per hour as a two-high pack mill, i.e., 80 tons, as against four tons. Only 1.5 man-hours of labour are required to produce a ton of steel sheet, as compared with 6.8 man-hours with the old method. Power consumption is reduced from 88 kilowatt hours to 48 kilowatt hours a ton and, of course, where the hot rolling method requires 4,250,000 British thermal units a ton, the cold method dispenses with heat entirely. Provision has been made for the construction of the various buildings for annealing or baking furnaces which will anneal 250 tons of steel in strip form in one operation. In the first stage of development, however, the steel will be annealed in sheets after it has passed through the "cut-up time"—an automatic means of cutting the coil into steel sheets of the dimensions required by the customer.

NEW LEVEL FINDER

Work in the building industry throughout Australia has been greatly simplified in recent years by the use of a new type of instrument for ascertaining and checking levels. Both in the range of operation and in purchase price, it has filled a gap between the carpenter's straight edge and spirit level, on the one hand, and the long-range dumpy level on the other. The instrument is known as the Cowley Automatic Level, being named after its inventor, Mr. Keith Cowley, of Richmond, Victoria. The new automatic level is surprisingly simple in design and construction. It consists of an arrangement of small flat mirrors, one set on a horizontal pendulum in combination with two pairs of fixed mirrors set at angles to reflect the light rays at certain deviations. The whole arrangement is such that whatever be the level of the ground on which the tripod holding the instrument is standing, the pendulum ensures a direct line of rays to the levelling target, and compensates for any variation that might be caused in the levelling of the instrument through uneven ground surfaces.

The Cowley automatic level may be used on small or large works. A carpenter may include it in his tool kit to check levels on bench jobs; bricklayers may employ it to give them correct levels on foundations or walls; surveyors or builders may use it on large construction works and farmers may use it for setting out levels for contour cultivation, pasture furrows, dams, drains or other requirements on their properties. The Cowley level is being manufactured in Melbourne, Victoria, for Australian and New Zealand distribution.

Patent rights for overseas countries have been taken out, and the instruments are being made in England by Messrs. Hilger and Watts, manufacturers of surveying instruments, London, for world-wide distribution with the exception of North America. Arrangements have been made for the manufacture of Cowley automatic levels in Canada and the United States of America. The effective range for the Cowley level using an 18-inch target is from 6 inches to 100 feet. For distances up to 300 feet, a larger target is provided. Because it is automatic in operation, the instrument does not have to be set with accuracy, and it is claimed that it can be used for all levelling done by more expensive instruments for distances within the requirements of builders and primary producers.

NEW 'STANDARD' MODEL

The Standard Motor Company has announced the introduction of a new economy car, the Standard 8. The car with a 803 c.c. overhead valve, four-cylinder engine which develops 26 b.h.p. at 4,500 revolutions per minute combines liveliness with economy. With two passengers, it is stated to have a maximum speed of 62 m.p.h. and a fuel consumption of 48 miles per gallon at 40 m.p.h. The car is a four-seater with four doors and special attention has been paid to the stowage of luggage. The boot has a capacity of 12 cubic feet normally and is reached through the rear passenger doors. When, however, only two persons are travelling, the rear seat can be folded away and the whole of the rear of the car is available for luggage—a total of 38 cubic feet. The chassis and the body are built as one unit which gives rigidity with lightness of weight.

IMPROVED RECORDING MACHINE

SoundScriber Corporation, New Haven, Connecticut, has developed a recording machine capable of registering continuously for 48 hours on a single tape. The machine uses a magnetic tape three inches wide moving at a rate of slightly more than 4¼ inches a minute. The narrower tapes in most machines move at about 60 times more rapidly. The tape used by the new machine is 1,125 feet long, but any particular point on it can be found in four minutes or less. Numbers corresponding to each minute of the day are printed on the edge of the tape to make locating easier. With the addition of certain equipment, the machine can record simultaneously from two channels of communication having different radio frequencies. SoundScriber expects the machine to prove useful in monitoring radio programmes, recording police and fire department calls between headquarters and mobile equipment, recording conference telephone calls in industry, and registering rail-road messages between trains and control towers.

A new type of bridge structure has been designed by a Houston (Texas) engineer to facilitate the moving of heavy oil-drilling equipment over rough terrain and streams to drilling sites. Successfully tested recently, the "Clear Span Bridge" uses less steel, time and labour than the bridge types currently used, its designer claims. The bridge is made of a series of hermetically sealed box girders braced from the inside. The interior bracing eliminates much of the steel used on splices, rivets, stiffeners and reinforcing places in the usual bridges. The box girders require no heavy steel structure over or under the bridge span.

SMALL ENGINEERING INDUSTRIES

STATISTICAL SURVEY REPORT

THE survey of the small engineering industries of the Howrah (West Bengal) municipal area made by the Bureau of Industrial Statistics, Calcutta, just made available, examines some of the problems of these industries. Although the report is essentially a fact-finding document, it also suggests ways and means for improving the position of small firms. The survey, which has been conducted under the guidance of Mr. T. Ghose, Secretary of the Bureau, represents a notable method of studying the industrial problems in different regions. In fact, it may well be regarded as a model for similar studies in other States.

Commenting on the survey, Mr. Titus Podea, President, International Technical Associates Inc., and Index Number Institute Inc., New York, U.S.A., has observed as follows:

"The scheme that you are presenting herewith, will provide the tool for a systematic, i.e., scientific approach to estimate the future developments in the small engineering industries. The recent growth in American industries has been possible, because American management, both public and private, has planned in all its aspects such growth. Statistical estimates and business forecasting are common practices in the American Government and business life.

"I expect that the West Bengal Government will give due consideration to the present scheme in its various aspects and get the industries' economic position surveyed. In the small engineering industry, your survey will set an example which is very much needed at the beginning of an industrial era."

The survey covers 762 firms, out of which 192 are samples drawn at random. For the purpose of the survey, the small engineering firms are defined as those engaged in the construction, adaptation and repair of machine tools, both power-driven and portable, by hand, in turning lump and sheet metals into utility products, in preparing moulds, in welding and so on. For the purpose of the study, small engineering firms have been taken as those which pay a licence fee not exceeding Rs. 50 per annum. The firms have been grouped into five categories, namely, (1) machine, machine parts, tools and engineering stores manufacturing units; (2) sheet metal processing, (3) foundries; (4) nut, bolt, rivet, etc., manufacturing units and (5) welding.

From the survey, it is evident that the small engineering firms, generally speaking, are predominantly proprietory in character though there are few firms founded on partnership. These firms, according to the report, are having a "weak" capital structure and there is a "pressing" demand for new capital. The report says that in any reorganisation plan, this problem must be "very carefully looked into.". The raw materials used are mostly indigenous. Their supply, however, is not satisfactory. The report rightly emphasises that the present quota and permit system should be thoroughly revised in order to bring about sufficient improvement in the distribution of raw material to small industries. As is generally the case in small industries, family members, along with outsiders, work as labourers in these engineering firms. They work on an average 8 hours a day and labour relations are good. From the point of view of the "value added by manufacture" or the "contribution to national income" per firm, the units which manufacture nuts, bolts, rivets, etc., occupy the first position. The next in order of importance are the sheet metal processing units. Then come foundries followed by machine, machine parts, tools and engineering stores industries. Finally, there are the engineering units engaged in welding.

Although the small engineering industries are poor in organisation and capital structure, and also suffer from many other handicaps, they form a vital part of the industrial and agricultural organisation of the country. Properly organised, they can make a considerable contribution to the industrial development, as envisaged in the Five-year Plan. In order to achieve this development, intensive efforts both on the part of industry and Government are needed. The report suggests that a small engineering development committee may be set up with representatives of Government, industry and consumers and that both short and long-term financing of these units should receive the special attention in a reorganisation plan. The report, however, warns that the small engineering industries cannot be developed on a "cottage basis." Other suggestions include the creation of special directorate for the inspection of products and enforcement of "standardised quality."

WITH A "CATERPILLAR" D4-HT4 TRACTOR-SHOVEL TEAM!
There are four other Tractor-Shovel profit-makers, with bucket capacities of ½ to 4 cubic yards; to match the work-ability of "Caterpillar" Diesel D2, D4, D6 and D7 Tractors
The gripping traction of a "Caterpillar" Diesel D4 Tractor packs heaped loads into the bucket of a hydraulically-operated HT4 Tractor-Shovel—and every load is a heaping load of profit!
The team is designed and built to do a variety of tasks at low-cost—excavating, loading, dozing, backfilling and others—with maximum efficiency.
Engine power is converted into big digging effort...a choice of five speeds enables the unit to meet every ground condition in loading, hauling or dumping. Hydraulic control is sure, fast and accurate—permits controlled dumping at any level.
You, too, can get in on these loads of profit. Our sales engineers can tell and show you how and where the team can work for you.

For the attention of
Far-sighted Industrialists
COSTING
You are well aware that success in business largely depends on correctly determining the economic selling price of your products. The first thing you want to know then is the true cost of manufacture, after proper distribution of overheads. Accurate costing will also tell you whether it is advisable for you to manufacture a particular product at all.
Costing is not merely a matter of accountancy. To set up a sound costing system, it requires not only a knowledge of accounting procedures but also a thorough technical grasp of the processes to be costed.

TRAINING YOUNG MEN FOR INSURANCE WORK—III

CASE FOR CHARTERED INSURANCE INSTITUTE

IN the field of general insurance no effort has unfortunately been made to initiate a system of examinations for young men in order to enable them to qualify themselves for positions of responsibility. This is surprising in view of the fact that the general insurance problems are in many ways more intricate and complex than the problems of life insurance. Although general insurance in this country is only of recent origin, it must be admitted that it has developed rapidly. But the problem of trained personnel has not been solved, for many leading insurance executives continue to complain not only of the lack of trained staff, but also of the questionable practice of deflecting trained personnel from one company to another by offering higher emoluments.

It must, however, be conceded that general insurers, as a class, are not unaware of the dangers inherent in the continued absence of facilities for education and training of their staff. Addressing the recent annual meeting of the Indian Insurance Companies' Association, Mr. T. K. Desai, Chairman, alluded to the many lines of new and potentially prosperous avenues for expanding general insurance business, and said:

"Insurance is highly technical and some of the lines to which I allude require extensive technical knowledge and here one encounters the difficult problem of personnel training. This is a problem which should engage far greater attention of insurance managements than it has done so far. I need hardly emphasise that insurance undertakings depend so largely upon their personnel for their success and that the problem of trained manpower, both in the office and in the field, should receive immediate attention of the managements. We will have to spare some time to see that an insurance institute is established, offering adequate facilities for insurance education to the young men in our business."

The need for an Indian institute on the lines of the Chartered Insurance Institute of England is a long-felt one. The question of establishing such an institution has been before the general insurers for some time now. And yet, no decision has been taken on this question. It would appear that some of the sponsors of the J. C. Setalvad Memorial Fund are in favour of utilising the fund for the establishment of an institute which will cater to the educational needs of those engaged in insurance work. It is to be hoped that this idea will take concrete shape at no distant future. Indeed, the best tribute which could be paid to the memory of the late Mr. J. C. Setalvad who laboured unceasingly in the field of Indian insurance is to set up an institute which could serve the present and coming generations of workers in this field. The constitution and functions of such an institute may be modelled on those of the Institute of Chartered Accountants.

The originators of this idea of an insurance institute will, however, do well to bear in mind that its standards of examination and evaluation should be high enough to make the associateship or fellowship of the Institute a valued possession. Many Indian students have distinguished themselves as associate members or fellows of the Chartered Insurance Institute, London. The need for having a separate institute arises from the consideration that insurance laws and problems in India are somewhat different from those of the U.K. But it must be remembered that the general principles of insurance are the same everywhere. From this point of view, it would be wise to take the Chartered Insurance Institute, London, as a model for the Indian Institute. Indeed, the Institute would do well to work in close co-operation with the London Institute.

In the creation of such educational facilities, it would be legitimate to expect financial assistance from the Central Government. After all, insurance is a Central subject. And it should be the duty of the Central Government to assist any non-official effort that may be made to spread the knowledge of insurance among those who are desirous of having it. When the time comes for starting an institute of this kind it is to be hoped the Government will readily give such assistance as its sponsors may need in order to place insurance education on a firm basis.

The question whether insurance can be introduced as a subject in the Indian Universities deserves the attention of University bodies. It may be asked whether the subject has attained the academic status which has been accorded to subjects like literature or history, mathematics or physics. The whole question is bound to raise some controversy. But it must be conceded that the subject does certainly possess a status of no mean order. It does lend itself, especially on the mathematical side, to research work. Some of the best minds in the West have devoted their lifetime to the study of the subject. The literature on the subject is growing every day. There is no reason why it should not be introduced in Indian universities as part of the courses of study for the B.A. or B.Sc. degrees. A beginning has been made in this direction at least in one Indian university. And several universities permit candidates to offer insurance as an optional subject for the degree of Bachelor of Commerce.

There is another question which is likely to arouse even keener controversy. It is whether the field workers too should be asked to take an examination in insurance. Some countries, notably the U.S., do insist upon the field workers passing a qualifying examination. It is true that there is woeful ignorance of insurance among the field workers in this country. Many of them are mentally so ill-equipped that their knowledge of insurance does not extend beyond a familiarity with the tables of endowment rates of the companies which they represent. There is, therefore, a great deal to be said in favour of compelling them to acquire a better and a more comprehensive knowledge of insurance. But the question deserves to be looked at from the practical point of view. So long as the insurance profession does not attract the best talent it would be wrong to dispense with the services of the existing field workers on the ground that they cannot pass an examination. In any case, it seems too early to make so important a change as would require a successful completion of a qualifying test for entrants into the ranks of field workers. But there is no doubt whatever that when the country is fit for such a change it would be most desirable to introduce a qualifying test for field workers.

It would be folly to imagine that the entire problem of insurance education would be solved once an institute of insurance is established. After all, it takes many years of work at the desk and of experience in handling people before a person can lay claim to that degree of knowledge of insurance which will enable him to perform his task even with reasonable efficiency. A diploma in insurance is, therefore, no substitute for training in insurance. Much can, of course, be gained from books. But familiarity with books alone will not give the knowledge, the temperament and the outlook which make men successful executives in insurance offices. It is, therefore, impossible to overlook the vital importance of an adequate training in insurance work.

It is a pity that few offices devote any attention to the systematic training of their staff. Although some individual insurers, notably the management of New India, have made some commendable attempts in the field of staff training, the question on the whole remains neglected. No attempt is made to sift the chaff from the grain, to encourage the more efficient by giving them an all-round training in different sections. Insurers will do well to remember that it pays them in the long run to give the more intelligent members of the staff an all-round training that will enable them to perform responsible tasks with ease and efficiency.

GENERAL ASSURANCE SOCIETY LTD.

Established 46 years ago, the General Assurance Society Ltd., (General Manager: Mr. P. M. Dalal, Ajmer) has made notable progress from year to year until it is now one of the leading insurers in the country, transacting both life and general insurance business. The report and accounts of the Society for the year ended 31st December, 1952, shows that notable additions have been made to the funds of the Society's different departments. Thus, the life assurance fund has increased from Rs. 334.79 lakhs in 1951 to Rs. 359.65 lakhs in 1952 and the funds in the general departments from Rs. 16.69 lakhs to Rs. 19.19 lakhs.

The Society's new life business during the year under review aggregated Rs. 2.03 crores, as against Rs. 2.45 crores in 1951. This decline reflects the recession in price levels which was witnessed in 1952. Although business is more difficult to procure, insurers find that management expenses continue to increase. Thus, the Society's renewal expense ratio increased from 13.00 per cent. to 14.68 per cent. But the Society was able to show commendable progress in two directions. In the first place, the net interest yield improved from 3.63 per cent. to 4.17 per cent. Secondly, the Society's mortality experience was encouraging, the percentage of actual to expected deaths having moved down from 71.38 per cent. in 1951 to 65.94 per cent. in 1952.

The total income in the life department during 1952 aggregated Rs. 87.02 lakhs, inclusive of a premium income of Rs. 72.32 lakhs. The total outgo amounted to Rs. 50.85 lakhs. This would have enabled the Society to make a net addition of Rs. 36.16 lakhs to the life assurance fund. But the Directors decided to write back the appreciation taken into account in 1949 on the value of lands and buildings and accordingly a sum of Rs. 11.31 lakhs was utilised for this purpose. The net addition to the life fund was accordingly Rs. 24.85 lakhs.

The total premium income in the general department was Rs. 32.92 lakhs, as against Rs. 34.57 lakhs. This decline is shared by the fire and marine departments in which the premium income aggregated Rs. 11.59 lakhs and Rs. 7.53 lakhs, respectively, as compared with Rs. 13.81 lakhs and Rs. 8.71 lakhs in 1951. In the miscellaneous department, however, the income moved up from Rs. 12.05 lakhs to Rs. 13.80 lakhs. The working of the fire department yielded a profit of Rs. 2.2 lakhs, as against Rs. 0.83 lakh in the previous year. In the marine department, the results of working disclosed a loss of Rs. 1.05 lakhs, as compared with a profit of Rs. 0.53 lakh in 1951. This is due to the increase in cost of claims and in management expenses. For similar reasons, the miscellaneous department also disclosed a loss of Rs. 0.53 lakh, as against a loss of Rs. 0.24 lakh in 1951.

The profit transferred from the fire department, together with the income derived from interest and dividends, was Rs. 2.82 lakhs. After meeting the losses in the other two departments and providing for bad debts (Rs. 620) and income-tax payable to Ceylon Government (Rs. 1,120), there was a profit of Rs. 1.22 lakhs, which together with the amount brought in from the previous year, amounted to Rs. 1.99 lakhs.

The Directors have transferred Rs. 50,000 to reserve for taxation, and Rs. 25,000 to reserve for contingencies. This leaves a balance of Rs. 1.24 lakhs. The payment of a dividend of 4 per cent. —no dividend was paid last year—absorbs Rs. 40,000, leaving a balance of Rs. 0.84 lakh to be carried forward to current year's accounts. The Society's financial position is impressive. Apart from a capital of Rs. 10 lakhs, the Society's reserves aggregate Rs. 421.38 lakhs, inclusive of a life fund of Rs. 359.65 lakhs, fire fund of Rs. 5.80 lakhs, marine fund of Rs. 7.53 lakhs, and miscellaneous fund of Rs. 5.86 lakhs.

THE INSIDE STORY OF DUNLOP
INDUSTRIAL V-BELTING

THE TOPPING RUBBER seals and protects the jacket overlap.
THE JACKET, of strong woven fabric impregnated with rubber, armours the belt against surface wear.
THE FILLER RUBBER ensures that the cords are placed at the correct level to prevent distortion or undue stress of cords when flexing round the pulleys.
THE CUSHION RUBBER ensures maximum cord adhesion and long life.
THE CORDS are specially designed to provide adequate strength and resistance to stretch and fatigue.
THE BASE RUBBER, specially compounded to resist frictional heat, provides a suitable foundation for the cords, and gives a sufficiently large gripping surface on the sides.

Dunlop Industrial V-Belts are the product of advanced technical experience and methods of manufacture. They are made in the standard range of sections—M,A,B,C,D, and E—and are suitable for the efficient transmission of power in multiple belt drives.

Range of Horse Power Capacities for Multiple Belt Drives

FARM POLICY IN THE UNITED STATES

CONTROVERSY REGARDING FIXED VERSUS FLEXIBLE PRICE SUPPORTS

[A succession of bumper crops, followed by large carry-over each year, and a sharp drop in exports of various commodities have created conditions of over-surplus in the U.S. The situation has called for drastic measures such as acceptance of cuts in acreage, introduction of market quotas and reductions in support price. U.S. farmers are reluctant to accept control on output or forgo the benefits of price support. But the Administration is meeting with innumerable difficulties as a result of buying crops and storing large quantities of them. It favours withdrawals of support, on the ground that market forces would determine levels of prices and volume of output. The U.S. Congress, however, is opposed to this view and seems to feel that some system of price support is necessary. The divergence in views has given rise to a controversy regarding the question whether there should be flexible or fixed price supports. The various aspects of this controversy, as also the present position of basic crops, have been dealt with in an article appearing in the September issue of the Guaranty Survey, published by the Guaranty Trust Company of New York. The article reproduced below may be read with interest, especially as there are suggestions in this country, too, for guaranteeing minimum prices for agricultural crops.—Ed.]

WHEAT farmers have accepted marketing quotas on the 1954 crop rather than forgo Federal price support at 90 per cent. of parity. Their collective decision has been interpreted by defenders of the fixed-supports system as a repudiation of the Administration's desire to move away from close governmental controls on agricultural production. At the same time, opponents of fixed supports have criticised the farmers for renouncing their traditional freedom of action.

Actually, it seems doubtful that either of these broad interpretations can fairly be placed upon the farmers' vote. The wheat growers were not judging the wisdom or unwisdom of a governmental policy or its relation to their long-run welfare. They were not choosing between fixed and flexible price supports, or even between fixed supports and no supports at all as a long-term proposition. They were faced with a condition of acute oversupply which called for a sharp reduction of acreage, and which, in the event of an abrupt return to a comparatively free market, would undoubtedly have precipitated a drastic decline in price.

A Choice of Objectives

In this situation, the farmers did what individual members of any large economy group would probably do, if given the opportunity. They voted for the maximum immediate cash income for themselves. They chose marketing quotas on the 1954 crop in preference to a sudden reduction in the support price from 90 to 50 per cent. of parity—a drop of about a dollar a bushel. Even Secretary Benson, an open opponent of fixed supports and rigid controls, conceded that, in the present situation, the farmers had made a wise decision in their own best interests.

There are plenty of signs that farmers, like everyone else, dislike restrictions on output. Farm organisations, including those that defend and those that oppose the regulatory system, have been reluctant to accept governmental limitations on production as a permanent solution to the problem of farm surpluses. Congress, while extending "fair price" guarantees, has sought ways to sweeten the bitter medicine of output controls. An illustration of this tendency was seen at the last session when the proclamation of marketing quotas for 1954 wheat was quickly followed by Congressional action raising the limit on acreage from 55 million to 62 million.

The desire to produce freely at a guaranteed price may be normal psychologically, but it is impossible economically. If prices are to be regulated, production must be regulated also, when the occasion arises. In no sector of economic life can enterprise be free unless markets are free. The unregulated market price is the device by which supply and demand are kept in balance. Destroy this device, and the balance must be maintained by direct governmental authority. Otherwise, supply and demand would soon cease to bear any significant relation to each other.

The Position of Basic Crops

A glance at the market position of wheat is enough to show the nature of the emergency in which the farmers and the Government now find themselves. A succession of large wheat crops, combined with a sharp drop in exports during the past 12 months, has caused the year-to-year carry-over to mount until now it is equivalent to half of a full year's output. This carry-over, added to still another large crop in prospect for the current growing season, makes a total supply 50 per cent. in excess of estimated requirements, far above the 20 per cent. excess that must exist before marketing quotas are invoked.

Unfortunately, the wheat situation is only the beginning of the problem of surpluses. Marketing quotas are already in effect for tobacco and peanuts. The carry-over of cotton is equivalent to about 43 per cent. of a normal crop, and this year's output is expected to be about 20 per cent. above the ten-year average. The Department of Agriculture has estimated that a crop of more than 12 million bales would call for a proclamation of marketing quotas in 1954. The crop is now expected to total 14.6 million bales. Hence, output controls next year are indicated.

Corn is in somewhat the same position, as to supply. The crop is believed to be nearly 10 per cent. above average, and the carry-over on 1st October is expected to be the largest on record, equal to about 26 per cent. of a normal season's output. Secretary Benson recently indicated that marketing quotas in 1954 were probable, although some statisticians in his department are reported as estimating that the crop will fall somewhat short of the total that would make this step necessary.

Even if quotas were in effect, they would not have the same significance as do wheat and cotton quotas. Corn is not primarily a cash crop. Much of it is fed to animals on the farms where it is produced. Even when it is sold to other farmers, its price position benefits one party to the sale to the same extent that it injures the other. From the standpoint of agriculture as a whole, therefore, the price of corn is less important than are those of the major cash crops. Moreover, the fact that most of the crop is not marketed makes output restrictions difficult to enforce. The present law provides for quotas but imposes no penalties for violation. Hence, quotas would presumably have no more force than do acreage allotments, which carry no penalties except the loss of price-support privileges.

Thus at least four, and perhaps five, of the six so-called basic crops, for which price supports are mandatory, are likely to be subject to governmental restrictions on output next year. Rice, the other basic commodity, is selling well above parity and, therefore, does not enter into the price-support picture.

Potatoes and Dairy Products

The Government's price-support activities are not confined to the so-called basic commodities. Supports are mandatory with respect to a number of designated non-basic products and discretionary with the Secretary of Agriculture as to others. Among the designated commodities are dairy products and potatoes.

The need for effective regulation of output to accompany price supports was illustrated by the critical situation that arose in the potato market three years ago. At that time, acreage allotments had been in effect for several years. Producers, however, had found it possible to circumvent these restrictions by increasing output per acre through the use of superior soil, better seed, more insecticides and fertilisers, and closer planting. At the same time, "free riders" were able to exceed their allotments and, though deprived of direct price protection for themselves, to sell their output at prices slightly below the official supports. By 1949, production exceeded the Government's goal by about 15 per cent. Yet Congress refused to require marketing quotas as a condition of price support for the 1950 crop.

In its efforts to hold up the domestic price in the absence of effective control of output, the Government offered to sell potatoes for export at one cent a bushel, although consumers at home were paying prices that enabled Canadian producers to sell shiploads of potatoes in United States ports, after paying the tariff duty of 75 cents per hundred pounds. In the end, large quantities of potatoes were destroyed or virtually given back to farmers to be fed to livestock, while human consumers paid high prices for a scanty supply of inferior potatoes.

Now there is reason to fear that a somewhat similar situation is developing in dairy products. Since last November, the Government has been actively supporting prices of these products at 90 per cent. of parity by buying and storing large quantities of them. From November, 1952, through May, 1953, the Commodity Credit Corporation purchased about 162 million pounds of butter and 337 million pounds of cheese and dried milk with a total value of more than $192 million. The Government has undertaken to continue this support for another year.

In the absence of effective curbs on output, the production of fresh milk this year has run consistently higher than in 1952. With consumption *per capita* of fresh milk and cream about equal to that a year ago, the increase in output is going into butter, cheese and powder, and these products are being bought by the Government for price support.

A grave complication affecting butter is the fact that this staple has been steadily losing competitively against margarine for many years, despite the discriminatory laws against oleo. With most of these laws now repealed, the competitive position of margarine has become even stronger. Twenty years ago the consumption of butter was about three times that of margarine. To-day they are about equal.

The Coming Debate

Like many other governmental practices, the present fixed price supports at 90 per cent. of parity began as a temporary device. Their purpose was to increase farm output quickly in response to the emergency needs of World War II. They were to have expired automatically after hostilities ended. Instead, they have been successively extended, always on a *temporary* basis, through 1954. In 1948 and 1949 Congress provided for permanent flexible supports ranging from 60 to 90 per cent. of parity, the level at any time depending upon prospective supply of, and demand for, individual commodities. These flexible schedules were to have become effective beginning 1st January, 1950. Actually, they were never allowed to take effect.

At next year's session, Congress will have to decide whether to extend the fixed supports again or to allow the flexible schedules to become effective. It will also have to act upon the Administration's proposals for long-range modifications in Federal farm policy. Secretary Benson has not said what changes will be recommended, but both he and the President are known to favour more reliance upon market forces and less upon governmental controls in determining the level of prices and the volume of output. The weight of opinion in Congress is on the other side, to judge by the actions taken in recent years.

It seems to be generally conceded that some system of price supports will be maintained. The real issue in the coming debate will probably be between fixed and flexible supports.

The Case for Flexible Supports

Those who favour flexible supports believe that the fixed rates strongly encourage overproduction. They concede that this tendency can be curbed, in theory at least, by rigid governmental restrictions on output. They argue, however, that such restrictions lend a socialistic flavour to the agricultural sector of the economy —that they tend to reduce the farmer virtually to the position of an agent of Government, producing specified quantities for a specified fee. They argue further that output controls, which necessarily apply to all producers alike, subsidise the inefficient and thus keep costs higher than they would otherwise be.

These critics question the ultimate effectiveness of curbs on output, citing the human tendency to evade laws and rulings when it is profitable to do so. They think that even if controls are effective in balancing supply and demand, they do so by restricting both, thus depriving farmers of part of their market and consumers of part of their supply of foods and other farm products. These restrictive effects, they maintain, have already become serious in some divisions of our foreign trade and have largely destroyed overseas markets for some American farm products, besides necessitating new trade barriers that run counter to the national policy of freeing the channels of world commerce.

Finally, the critics fear that sooner or later the taxpayers and consumers will tire of paying the bill and will turn against the whole farm programme. In support of this view, they point to the cumulative operating loss of $3½ billion incurred by the Commodity Credit Corporation from its inception through May, 1953, the C.C.C.'s present investment of $3½ billion in farm products, and Secretary Benson's estimate that purchases may amount to nearly $7 billion by the end of next year.

Arguments for Fixed Supports

Defenders of the present support system reply that farmers are subject to exceptional risks and that their average financial resistance is low. Consequently, they believe, it is unfair to expose the farmer to the rigours of competition. Weather, insects, and disease can raise havoc with agricultural output. The turn of the seasons limits the promptness with which production can be adjusted to demand. The inelasticity of demand slows and limits the response of consumption to changes in price.

While these tardy adjustments are taking place, innumerable farmers may suffer ruin because the lack of ample financial reserves makes most of them so vulnerable to even temporary losses of income that a single bad season can result in hardship or disaster. Defenders of high price supports point to the exceptional variability of prices of farm products and argue that the decentralisation of agriculture places the individual farmer at the mercy of the market to an extent that does not exist in most other branches of business.

These special risks, they contend, were tragically illustrated by events during the period between the two world wars. Even in the generally prosperous 1920's, agriculture was in difficulties, and low farm purchasing power may have been an important factor in precipitating and intensifying the general economic collapse that followed. In any case, by the early 1930's farmers were in dire straits. Millions were obliged to accept public relief, and hundreds of thousands lost their farms. Such drastic onsets of adversity, it is maintained, are not only intolerable to farmers but also destructive of general economic stability, because farm areas account for a large share of the total demand for the products of industry.

So run the arguments of the opposing schools of thought on the farm problem. The issue will probably be joined in 1954 more directly than ever before. If a workable solution is not reached, it will not be for want of long and careful consideration on both sides.

The farmers themselves will have a strong voice in arriving at the decision, and it is important that they, above all others, have the nature of the issue clearly in mind. Either way, they will be surrendering one privilege in exchange for another. The more price protection, the less freedom of operation. No one can have both.

POST-WAR DEVELOPMENT OF GERMAN INDUSTRY

FREE ENTERPRISE HELPS RAPID RECOVERY

(By FRITZ BERG, President, Federal Association of German Industry)

BETWEEN 1949 and 1953, German industry has gone through a remarkable development. Looking back, the changes become evident. From the catastrophe of a totally defeated enemy State, we have risen to-day to the status of allies of the West. Meanwhile, the world has become divided into two camps. We stand in the front line of defence of the free nations of the West against the pressure of Communism from the East. Our aims are clear. They are to prevent a third world war by strengthening this line of defence, and to preserve individual liberty and the freedom to carry on independent and responsible work. These are, after all, the principles upon which the Western world and our future depend.

German industry knowingly and willingly endorses the Government's foreign policy. The most practical and important contribution to this, on our part, has been the economic recovery which has been brought about through our efforts. Our economy to-day bears comparison with the standards of the years 1936-38. I must, however, express here one grave concern. The new edifice is not securely based upon those foundations of capital and reserves which were considered normal in earlier days. This particularly applies in the case of capital available for investment and long-term export planning. We must direct our most immediate attention, therefore, to ensuring the necessary support for this economic structure and to consolidating our whole productive apparatus, and do everything in our power to supply the necessary capital.

Free Enterprise

The speedy and marked success which has characterised our economic recovery has been due to the resolute way in which the shackles of State control have been cast off and free enterprise and individual production encouraged through the principles of free market economy.

To-day, when most of the backlog of demand has been covered and the change over the whole world from a sellers' to a buyers' market means a sharpening of competition, an increase in our production by leaps and bounds, such as we have seen in the last two or three years, is not to be expected. Considering the global economic situation as a whole, however, there is every reason for a confident expectation of steady progress in the near future. Moreover, the still unsatisfied backlog of demand for consumer goods and, in particular, for investments, means that there is a considerable reserve market which will ensure a certain stability to the economic trend.

This development, which has brought benefit to all sections of the population and especially to the workers, most certainly confirms the principles of free market economy. Allied with these principles is our aim to encourage the acquisition of as much private property as possible by all ranks of the population. Such a widespread property-owning basis would help to provide our society once more with firm foundations.

The importance of free enterprise in industry, and the demand that property ownership should become as widespread as possible are to-day being accepted in circles which formerly held very different opinions. Even allowing for a certain amount of justified scepticism, this is a matter for satisfaction.

In these circles, it has also been said that the economy of the Western world has no effective slogans to set against communist doctrines. The success of free market economy and independent creative effort, based on the recognition of individual freedom, prove such statements untrue. The tide of Communism from the East beats in vain against the bulwarks erected by the success of our economy and the productive possibilities which our Government and our economic system grant to the individual. Here is the core, here is the chief triumph of our liberal, economic and political principles.

The next step is to secure the level of production which has been reached, and to provide the basis for sound progress and further development. Considerations of how these aims may best be achieved turn on the question of finding capital. We need capital for two main purposes: for the investments which will enable our industry to develop, and to finance long-term export transactions, which, to an ever-increasing degree, are becoming the focal point of international trade.

International Co-operation Necessary

If we wish to secure our future economic progress, we must aim at extending and intensifying our world markets. This goal can only be achieved through close co-operation between nations.

The setting up of a common market for coal and steel is such a step and of extraordinary significance. At the moment the disputes and difficulties which necessarily accompany its realisation tend to cast their shadow over the proceedings. I think, it a mistake to deal with these difficulties through the medium of legal formalities and specialists. There is only one way, and that is through co-operation between the industrialists, who are motivated by the spirit and not by the letter of the agreement. And this spirit is equally starting chances on a common market. The industrialists will meet as business men on the market and will know what line to take, so that the spirit of the plan can be truly complied with.

An essential point in the extensive work abroad of the Association of German Industry is the maintenance of contacts and of friendly co-operation with leading economists in the U.S.A. The negotiations going on at present in the United States regarding the direction to be given to tariff policy draw our attention to what is probably the most significant economic problem of the Western world. The importance of closing the dollar gap and levelling out the dependence of Western countries on the dollar markets, by shaping American tariff and import conditions in a more liberal manner, has frequently been discussed. We cannot imagine that this great country, which has emerged so decisively from its earlier isolation and has undertaken its political tasks in the world with such earnestness, will continue to follow the path of protectionism in the sphere of foreign trade. In 1952, the exports of the Federal Republic to the United States reached the low figure of 0.07 per cent. of the American gross national product. American exports to Germany in comparison make up 2 per cent. of the German national product. From these figures it may be clearly seen that even a slight increase in American imports from Germany would go far to close the dollar gap. The same applies to American imports from other European countries.

We have tried to prove to the United States —and we may say with some success—that we are ready to help ourselves. By further developing the basis of our production we wish to enter into genuine competition with American industry. The prerequisite for this is the general implementation of liberal principles in trade policy. This means that tariffs must be gradually, but progressively, reduced.

THE GENERAL ASSURANCE SOCIETY LIMITED

ROLE OF INSURANCE IN BUILDING UP OF NATIONAL CAPITAL

MR. B. N. JALAN'S OBSERVATIONS

THE vital role which insurance plays in the building up of national capital, was emphasised by Mr. B. N. Jalan, Chairman of the General Assurance Society, Ltd., in the course of his address at the 46th Annual General Meeting of the Society, held at Ajmer on 28th September, 1953. He urged that the Government should encourage savings by way of life assurance.

In his address, Mr. Jalan referred to the general economic conditions in the country and said:

"After the precipitate fall in prices in the early part of 1952, the price level had stabilised at a slightly higher level. But of late there is an upward trend particularly in the group of raw materials and food and a downward trend in the group of manufactured articles. Though industrial production has improved, the phenomenon mentioned above is likely to adversely affect further improvement in industrial production. Again, it has been noticed that a number of small industries that had come up in the wake of war-time scarcity are suffering a severe setback."

Advice to Labour

Emphasising the need to stabilise prices of food and raw materials, he also referred to the spectre of unemployment consequent upon the difficulties the industries were facing, and said:

"In the circumstances that our industries face to-day, it would be in the general interest of labour also to tone down their demands and adopt a more conciliatory and reasonable attitude in their dealings with the employers. No employer wishes to see his labourers thrown out of employment nor does he enjoy their low standard of living. But when he is hemmed in by rising prices of raw materials and falling prices of his product he has got to rationalise if his industry is to survive. Any obstruction in that process will only result in the industry ultimately going to the wall and larger unemployment. In fact, the tendency to throw the whole burden of unemployment on industry is going to be suicidal."

Endorsing the move for *swadeshi*, he said:

"I believe as a free nation we should voluntarily prefer goods made in India even if they are not up to the standard of quality of foreign-made goods and even if they are a little costlier. Only when our people adopt that attitude, it will be possible for our Government to successfully tackle the great economic problems of unemployment and low standard of living facing the country to-day. I also hope that preference or movement in favour of *swadeshi* will also be extended to insurance and our industrialists and others will thereby encourage Indian insurance."

He then dealt with the burden of taxation on insurance companies and the relief of income-tax allowed on life insurance premiums and the provisions relating to life insurance policy in the Estate Duty Bill. He felt that the present attitude in these respects was due to the lack of proper appreciation of the role of life insurance.

Role of Insurance

"Life insurance," he said, "played a very vital role in the stability of the home and the economy of the country. A home whose bread-winner is not adequately insured may face difficulties in the event of his early death and will not have much financial stability even if he lived long. With the break-up of the joint family system, this problem assumed greater proportion with most of the middle class families. There can be nothing more painful for a man than to leave his wife and children unprovided for. By taking out a life policy which entails small sacrifices on his part he builds up an estate for himself and his family. But in doing so he also serves larger economic ends. He helps to build up national capital.

"If the twin services which life insurance provides—security of the home and creation of long-term capital—are admitted to be very desirable objectives to be widely achieved, I believe Government ought to encourage savings by way of life insurance. Men must be encouraged to build up life insurance to the maximum of their capacity by full relief in tax and full relief from estate duty. That will mean prosperous homes and a prosperous nation. Or, is it the attitude of the Government to encourage people to build up their estates not in life insurance policies but in gold and silver?"

Results of Working

In referring to the working of the Society during the year under review, he presented the following tables:

(In lakhs of rupees)

	1952	1951
Life Department		
New business completed ...	203.19	189.42
Net premium	72.32	71.24
Net interest	14.18	11.41
Claims by death	7.90	7.57
Claims by maturity ...	10.77	10.84
Life assurance fund ...	359.65	334.79
Renewal expense ratio ...	14.68	13.00
Net interest yield	4.17	3.63
Percentage of actual to expected mortality ...	65.94	71.38
Fire Department		
Net premium	11.59	13.61
Claims	4.74	7.54
Commission and expenses of management	5.03	7.34
Profit (+) or loss (—) ...	+2.24	+.83

(In lakhs of rupees)

	1952	1951
Marine Department		
Net premium	7.53	8.71
Claims	3.39	3.23
Commission and expenses of management	3.33	2.83
Profit (+) or loss (—) ...	—1.05	+.53
Miscellaneous Department		
Net premium	13.80	12.05
Claims	6.58	6.56
Commission and expenses of management	6.70	5.21
Profit (+) or loss (—) ...	—.53	—.24

"Total net premium in the general department was Rs. 32.92 lakhs as compared to Rs. 34.57 lakhs in 1951. The reserves under the various departments were increased from 45 per cent. to 50 per cent. in the fire department, from 65 per cent. to 100 per cent. in the marine department, and from 40 per cent. to 42½ per cent. in the miscellaneous department. The total reserves stood at Rs. 19.19 lakhs as compared to Rs. 16.70 lakhs at the end of 1951.

"The net profit of the general department in the year amounted to Rs. 1,21,893 as compared to Rs. 75,789 in 1951. The Directors recommend a dividend of 4 per cent. free of tax."

He also mentioned that the valuation of the life department was nearing completion and was expected to be satisfactory.

In conclusion, he said:

"I think you will agree with me that in spite of the difficult economic conditions and in spite of the heavy stress of competition, we have had a fairly satisfactory year and I would like to take this opportunity to thank our policy-holders and patrons for their continued support and our officers at the head office and the branches and the members of the staff for their unstinted and loyal services which have made these results possible."

Firestone TRUCK BUS TYRES

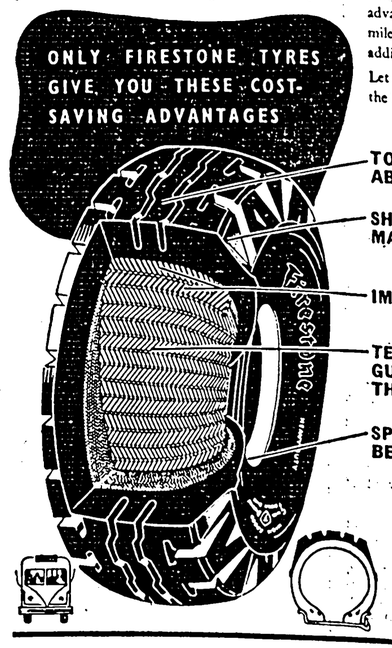
Are the Lowest Cost-Per-Mile Tyres you can use today!

Let your own Mileage Records Prove It!

GIVE Firestone Truck Bus Tyres a true mileage test ... a test in your own fleet operation with your own service. Your mileage records will prove that *Firestone Truck Bus Tyres are the lowest-cost-per-mile tyres you can use today!*

Only Firestone Tyres give you the extra advantages that result in lower original mileage costs and lower costs through additional retread service.

Let tyre performance be your guide for the best Truck Bus Tyre buy.



TOUGH, LONG-WEARING ABRASION-RESISTANT TREAD

SHOULDER DESIGNED FOR MAXIMUM PROTECTION AND COOLER RUNNING

IMPROVED EXTRA TREAD PLIES

TENSION DRIED AND SUPER GUM-DIPPED CORD BODY ... THE TOUGHEST EVER BUILT

SPECIALLY ENGINEERED BEADS TO RESIST BRAKE HEAT

PROGRESS OF PATENTS IN INDIA

VIGOROUS POLICY FOR PROMOTION OF INVENTION NEEDED

ALTHOUGH the total number of applications for patents from persons in India and abroad in 1952 was greater than in any other post-independence year and about 100 per cent. higher than in 1939, it was still below the peak reached in 1946. Thus, during the year 1952, the total number of applications amounted to 2,272, as compared with 1,060 in 1939 and the peak of 2,610 in 1946.

Of the total of 2,272 applications, as many as 518 originated in India; of this 45 came from residents other than Indians. The balance of 1,754 applications came from abroad, the U.K. alone accounting far as many as 711. Notable among other countries were the U.S. with 321 applications, Switzerland 167, Germany 155, the Netherlands 94, France 78, Italy 46, Canada 26 and Sweden 18. As compared with the figures for 1951, the number of applications originating from the United Kingdom was almost the same, but there was an appreciable increase in those from India, the U.S., Switzerland, the Netherlands, Italy, Norway and Japan.

As many as 698 applications claimed priority under the reciprocal arrangements existing between India, on the one hand, and certain other countries of the Commonwealth, on the other. Sixty-one applications were for patents of addition. Of the five applications received from women, four were from inventors themselves.

At the commencement of the year, there were 559 applications for patents awaiting examination. And 2,272 applications were added during the year. Of this total of 2,831 applications, as many as 1,986 were examined. On first examination, 137 of them were accepted and as many as 1,849 were returned for meeting objections. Applications deemed abandoned due to non-filling of complete specifications within the prescribed time numbered 146. At the end of the year, 699 applications were awaiting examination.

Trend of Invention

Revolutions in industry, agriculture, transport and communications owe their origin to the genius of inventors. Industrial progress, efficiency, productivity, low costs, new processes of manufacture, all are attributed to continuous process of inventions in mechanical, electrical, civil and scientific engineering. Consequently, countries in which inventing talents are in abundance are always known to have kept the lead in the field of industry. While glowing examples of this are found in the history of the U.K., Germany and the U.S., the attainments in India in the field of invention have been poor. This is clearly indicated by the *Annual Report* of the Patent Office for the year 1952. Not only the number of inventions appearing for registration, as stated at the outset, is negligible for the size and requirements of a country such as India, but the field in which the lead is normally taken, namely, chemical industry, is so limited that no spectacular revolution in industry can be expected in the near future. Out of 518 applications orginating in India, only 473 were from Indians and among these a large number of them were connected with the sugar industry. The inventors devoted their attention to processes for the clarification of cane juices and manufacture of glucose by saccharification of plant materials.

In the field of electric engineering, the inventions relating to heavy current or power engineering were on the decline. Extraction and deposition of metals from fused electrolytes and by wet electrolytic processes, however, attracted considerable attention.

The number of inventions in communication engineering showed an increase during the year. This increase was most conspicuous in inventions relating to automatic telephone exchange equipments, particularly, information storage devices, transmission and receiving arrangements, selector switches and cable and cable balancing and wave distributing networks. The inventions relating to telegraph and wireless signalling declined. However, attention was devoted to remote control signalling systems and electron discharge devices. A sad feature is that Indian inventors have not taken much interest in this field.

The sphere in which inventions could help considerably the expansion of industries in the country is mechanical engineering. Although progress in this field, as stated by the *Annual Report*, was much better than in 1951, it must be admitted that so far no marked contribution has been made by these inventions to increase the channels of investment and employment which alone are the criterion in the prevailing conditions in the country, to judge the utility of the inventions. A large number of inventions in this field were confined to metal working and processing machines, mainly for metal extraction, tube and pipe-making, metal welding and cutting, and making and bending of metal rods. There was also an increase in the number of inventions relating to internal combustion turbine plants. The inventions concerning transport vehicles were much more than in 1951 and were directed to the fabrication of railway carriages out of steel frames and plates, motor cars and other vehicle bodies and driving central systems for such vehicles as aeroplane bodies.

The number of inventions in the field of civil engineering was much less than in 1951. The majority of these inventions related to the construction of buildings and structures particularly foundations, floors, walls, iron and steel frames and reinforced concrete structures. Only a small percentage originated in this country and these concerned with earth walls, structural materials made of bamboo and cement filing composition.

The inventions relating to food were also very small. The majority originated from this country and were concerned with husking of paddy, grinding of corn, treatment of seeds and grains and production of flour. The interest shown in the preceding year in the manufacture of synthetic drugs, particularly the new anti-tuberculosis drugs, was sustained.

In the field of metallurgy, manufacture of ferro-nickel and aluminium magnesium alloys, processes for purifying metals and moulding and casting machines were some of the subjects that attracted the attention of inventors. A large number of inventions, almost all from foreign countries, relating to coke oven regenerators, rotary furnaces, retort cake ovens, coking processes and manufacture of liquid fuels was also received by the Patent Office.

Design applications received by the Patent Office rose from 880 to 1,299. Of these, as many as 1,257 originated from India. The major portion of these applications related to textile designs and came mostly from Bombay.

One notable feature which emerges from a review of the *Report* is the backwardness of India in the field of invention. This point emphasises the need for following a vigorous policy for the promotion of invention in India by providing financial, technical and other aids to inventors. Organisation of exhibitions and awards of merit will also stimulate considerably inventive talents in the country. The national laboratories, which have been instituted under the aegis of the Indian Council of Industrial Research, should take up the question, so that the advent of new inventions may contribute largely towards opening new channels of investment and employment.

(Concluded from next column)

In an article contributed to the recent issue of the *Journal of Industry and Commerce*, an official publication of the Ministry of Commerce and Industry, He observes: "The industrial structure of the country is to-day stronger and more broad-based than it was 30 years ago, but there are still many gaps in it. We have yet to go a long way before we can get in step with some of the advanced industrial nations. The process of the building up of industries has, therefore, to be accelerated and necessary measures concerted with a view to achieving the desired end. Carefully thought out and judiciously executed policies of tariff protection and price control can be potent instruments for industrial expansion and consolidation. Already tariff protection has made an important contribution in building up the industrial structure as it exists to-day. As industrial development proceeds on a planned basis, the extent, as well as the importance, of the part played by the Tariff Commission is bound to increase in years to come."

WORK OF TARIFF COMMISSION

ITS RELATION TO PLANNING STRESSED

DURING the three months ending 31st December, 1953, the Tariff Commission has before it a crowded programme of enquiries. According to the tentative schedule drawn up by it, claims to assistance or continuance of assistance by industries such as hurricane lanterns, bicycles, caustic soda and bleaching powder, and drugs, dyestuffs and pharmaceuticals will have to be completed by the end of the current month. During November, the demand for aid by the cocoa and chocolate, and bichromates industries, fixation of prices of rubber tyres and tubes and the case of the sheet glass industry are to be enquired into by the Commission. The enquiry into the claims of artificial silk, cotton and hair-belting, cotton textile machinery and pickers is programmed to take place in the last month of the year. During this period the examination of some cases of automobile ancillary industries is also likely to be taken up.

Considering the large volume of preliminary work involved in connection with the data relating to production, consumption, determination of actual costs, estimation of future costs of products under enquiry, the landed costs, exduty, of the corresponding imported products, their qualities, etc., the number of enquiries of industries scheduled above will doubtless appear to be fairly large indeed. But the fact that the Commission has by now acquired considerable experience in these matters and possesses a body of experienced officers should not be overlooked.

An idea of the pace of progress made by the Commission can be had from a brief description of the work done by it during the 18 months since its inception on 21st January, 1952. The Commission held 26 enquiries during this period and forwarded an equal number of reports to the Government. The industries whose claims to protection or assistance have been dealt with include motor vehicle batteries, woollen hosiery, ball bearings and steel bulbs, transformers, flax goods, glucose, dry batteries, hydroquinone, plywood and tea chests, woodscrews, titanium oxide, pencils and fountain pen ink. Cases of price fixation include those of retention prices of steel produced by the Mysore Iron and Steel Works, Bhadravati, and Steel Corporation of Bengal Ltd., prices of raw rubber, prices of steel produced by the Tata Iron and Steel Co., Ltd., prices of cement, fixation of a fair conversion rate for registered re-rollers and retention prices of electric furnace billets.

Besides the work detailed above, the Commission has handled two important and complicated cases, viz., the question of granting protection or assistance to the automobile industry in India and fixation of the fair ratio between the ordinary shares of the Steel Corporation or Bengal, Ltd., and the Indian Iron and Steel Company Ltd.

To this must be added the entire range of day-to-day activities of the Commission, such as research and statistical work. In this field, considerable progress has been made, especially in regard to compilation of data relating to protected industries.

A period of eighteen months is, of course, not long enough to make a proper assessment of the achievements of the Commission, considering that the Commission had, during this period, to complete the change-over from the previous arrangements under the Tariff Board and had also to handle a large number of cases of claims to protection and of enquiries taken over from the Board. Nevertheless, two features of note stand to the credit of the Commission. First, in the meetings of chambers of commerce which are usually the platforms from which the business community ventilates its grievances, no unfavourable comments on the work of the Commission have so far been voiced. Secondly, the Government of India is known to have accepted, with minor alterations in rare instances, almost all the recommendations of the Commission. These two features, in a way, reflect the satisfaction of the Government and the industry over the Commission's work.

It is being increasingly realised that the work of the Tariff Commission, whether in the sphere of protection or price fixation, is closely related to planned economic development of the country. This aspect is adequately emphasised by Mr. M. D. Bhat, Chairman of the Commission,

LAND REFORMS IN INDIA

VIEWS OF PROF. PARSONS

THE report of Prof. Kenneth H. Parsons, Wisconsin University, U.S., on land reforms, which has been submitted to the Planning Commission, deals, among others, with the regulation of relations between landlord and tenant, fixation of ceilings on rents and of minimum wage levels, feasibility of converting tenants into owners and also conferring occupancy status to *ryotwari* tenants. The report is the outcome of a close examination of the land reform problems of U.P., Bombay, Madras and P.E.P.S.U. undertaken by Prof. Parsons and two other experts on agricultural economy recently, at the invitation of the Government of India last year. The report is, it is understood, under the active consideration of the Planning Commission with a view to taking suitable action on the findings of experts. The full text of Prof. Parsons's report is not available. But from Press reports, it is evident that the Professor favours "a carefully designed complex of progressive tenure adjustments" as having greater prospect of leaving India a continuously functioning and going concern of economic and political activity. There is nothing strange in this plea for progressive tenure adjustments. Because India is such a vast continent that each part has developed conventions which are peculiar to itself. And to enact an overall legislation designed to ensure uniform land tenures, although theoretically feasible, is practically impossible. The problems of Madras State differs from those of either West Bengal or U.P. and so on. Yet, a certain amount of uniformity is desirable as well as necessary.

Prof. Parsons has interpreted the present agitation and clamour for land to be only the "beginning of a process which is destined to make the peasants a much more active political force." While conceding that equality of opportunity must be held as the great goal before India, he cautions that a movement to eliminate inequalities in the present-day India can end only in "equality of poverty unless the productivity is increased." This truth, which has been emphasised on several occasions ere now, can hardly be disputed, for the ultimate aim of land reforms is to improve the standard of living of the nation in an atmosphere of freedom. Supposing the urge for peasant proprietorship were to be pushed to the extreme limit, it may lead to fragmentation of lands into uneconomic units and thus thwart all efforts at increasing productivity.

Conversion of Tenants into Owners

Prof. Parsons has wisely ruled out the feasibility of converting all the present tenants into owners which involve the purchase of land from the present *ryotwari* holders, and also the possibility of conferring occupancy status on *ryotwari* tenants. The Constitution requires compensation for property taken and, therefore, the cost involved and the consequent economic dislocation cannot be ruled out with little thought. According to the Professor, the typical land situation emerging in India is that of *ryotwari* holding, a few large and many medium and small. In this system, the landless village workers are expected to continue in existence, constituting a third to fourth of the rural population. More than half the cultivators are tenants in some States. In this connection, the following remark of Prof. Parsons deserves to be noted:

"Madras State is going to be one of the principal laboratories in India for trying out the regulatory or police power approach to the tenancy problems. As such, it would seem to deserve the most careful attention of both the Madras and the Central Governments, since tenancies on *ryotwari* holdings present the great emerging problem. One gets the impression that Madras officials feel that they have matters in hand. But an observer may be permitted to wonder, for it is to be noted that the field for the contest had been chosen by the agitating opposition. What would seem to make the matter of nation-wide concern is the possibility that the future of regulating tenancies in India may be in the process of decision in Tanjore. Should this effort fail to bring a tolerable stability, the whole *ryotwari* capital and investment structure will be threatened."

The foregoing observations of Prof. Parsons seem to be logical. Because the land available is limited and the population depending on it is almost unlimited. There is a limit up to which estates can be divided and distributed. Beyond this limit, the distribution will result in uneconomic holdings, which are not suited to increase the output of land. Large-scale farming and scientific cultivation are more conducive to greater productivity. The division of large estates, however, satisfies the inner urge to ownership, which cannot be had in the case of large-scale farming even if the farms are owned and managed on a co-operative basis by the farmers in the present circumstances. For co-operative farming to be run on democratic lines needs an educated populace and efforts towards that aim is still lacking, owing to inadequate finances of the State.

Landlord-Tenant Relations

What then is the solution to the complex land problems in India? Prof. Parsons feels that the regulation of landlord-tenant relationship is the only alternative for the general improvement of *ryotwari* tenancies. It should be possible to put effective ceilings on rents and floors to wages. The regulation of landlord-tenant relationship should ensure security of tenure for tenants, wherein occupancy depends primarily on the performance of good husbandry. Prof. Parsons thinks that automatically renewable leases at the end of every five-year period might well be a part of the regulation of tenancies.

The regulation of landlord-tenant relations is also closely allied to the division of the crop. Prof. Parsons thinks that there should be a division of the crop which gives the tenant an income above the ordinary wage commensurable with his duties especially of management and his investment in working capital and, to the landlord, a share commensurate with a prudent investment policy and his responsibility for the management. It is to be noted that the present value of land cannot be taken as an adequate guide for the calculation of returns, since the value of low cultivator returns is automatically capitalisable into higher land values. Further, Prof. Parsons says that landlords and tenants should assume shares of variable non-labour costs in approximately the same proportion as the crop is divided, as only in this way can the landlords be given a real function in the improvement of production. The tenant should not be expected to bear the costs of increasing production greatly out of proportion to his expected return. The last observation is prompted by a review of the recently promulgated Tanjore Ordinance in Madras in which the tenants are required to bear all costs of production and yet give the landlord 60 per cent. of the gross yield of the crop.

That there should be ceilings on rents and floors to wages can also hardly be disputed. So also the view that the landlord should be a productive partner and that the non-labour costs of improvement of the land should be shared by the landlord and the tenant on a certain agreed basis. But the question is how far these objectives can be realised in an atmosphere of amity.

Adjustment of Rents

Once the machinery for regulating the tenancies is thoroughly established, Prof. Parsons says a mechanism should be provided for the adjustment of rents to the circumstances of the time and place, according to the relative bargaining power inherent in the alternatives of the different parties and the public conscience as expressed in the minimum terms of the transaction compatible with public interest. It would seem extremely useful, he says, if some way could be devised to classify and evaluate the performances of ryot landlords, who lease lands. Evidently, the investment function is the elemental common ground for all landholders. Where the landlords do nothing beyond this, they are mere rent collectors and as such, are entitled only to interest on capital. In terms of performance, and perhaps in intention, these landholders are scarcely distinguishable from the former *zamindars*, except that their legal position in the economy is much more secure. But there must be many practical ways of giving tenants considerable security of tenure which are also not against the best interests of landlords. If the landlords were held for some positive production performance, there would be some basis for putting sanctions on landlords for non-performance or for classifying landlords into those who were mere rent receivers and they could be treated accordingly. Eventually, the latter might go the way of *zamindars*. This is more than a suggestion for protecting good landlords. Even more important is the need for arrangements for using the interests and talents of qualified landlords in the constructive tasks of increasing farm production and improving rural economy. Prof. Parsons feels that, if equitable tenancy arrangements cannot be devised by a regulatory approach, India would have no alternative, except the more drastic measures of transferring the title of land to actual cultivators. Some of these statements hardly need any comment for they are general in nature and therefore, acceptable.

Ceilings on Holdings

Dealing with the issue of ceilings on holdings, Prof. Parsons states that the real question is whether land shall be treated as another form of investment. A second question is whether the holdings are being used in a sufficiently efficient manner to protect the public interest in farm land. A third question is that of confidence in the security of property so that owners of the larger tracts may safely proceed to the investment and improvement programmes. While pointing out that these are vital policy matters which can be solved only by the people of the country, Prof. Parsons observes that, to an outsider, it would seem doubtful whether India should treat the land merely as a form of investment. If this is accepted any ceiling on future holdings can be defended, which is high enough to promote efficient farming under Indian conditions. Prof. Parsons suggests that steps should be taken to prevent fragmentation of holdings below a specified minimum size. He also makes numerous suggestions for the consideration of the Central Government in formulating a national land policy which merits attention. They are:

(a) There is a great need for a clear and firm lead from the Central Government to the States in these extremely controversial matters of land reform. Landlords in the several States are keenly aware of the fact that they must all follow policies that can be harmonised. It is also at the State level where the local pressures develop that may result in *ad hoc* decisions which may eventually determine the actual general policies;

(b) planners and the formulators of Central policy must have more adequate research support, if they are to even formulate wisely the issues in land reform. Furthermore, there is no source of real guidance and even inspiration in policy formation except the experiences of persons trying to deal constructively with problems at the programme operating level. One function of research would be to reconcile what peasants desire with what is desirable for India as a whole; A strong research centre to give support and guidance to the analysis and formulation of general principles of agrarian policy is urgently needed;

(c) minimum standards of landlord-tenant relations might be formulated or adopted by the Central Government. They should be designed to promote and protect minimum standards of cultivation and the use of land, as well as minimum rates of returns to tenants;

(d) a strong educational policy of encouraging and developing indigenous and informed farmers' movements and farmer-leadership might do a great deal to prevent the stirrings of the peasants from being directed solely into political channels. There may be a greater danger of the peasants being diverted into the support of Communism from frustrated intellectuals seeking to lead movements, than from the peasants' reaction to their own poverty and frustration; and

(e) very little improvement either in the production process of agriculture or in the basic tenure pattern is possible without adequate rural credit. A national system of rural credit is almost certainly needed.

SCOPE FOR HIGHER FOOD OUTPUT

In the world's efforts to increase food supplies to keep pace with increasing populations, the "saving factor" was the possibility of raising agricultural output in underdeveloped countries. This view was expressed by Professor Arthur Lewis in Glasgow. Prof. Lewis, who holds the Chair of Economics at Manchester University, was addressing the first conference to be organised in Scotland by the "War on Want" Association. Referring to population increases in various countries, Prof. Lewis said the birth rate would have to be reduced to equilibrium with the death rate. In his view, the only way to achieve this was by increasing production, raising the level of education, and improving living standards.

It was possible, he said, to increase production faster than population was likely to grow. The saving factor was that, in underdeveloped countries, agriculture was so little advanced that production was very limited, as compared with what it could be. For example, said Prof. Lewis, it was estimated that India's agricultural output could be doubled with the use of fertilisers, better seeds, insecticides, and proper storage for the harvest.

FURTHER DROP IN EARNINGS OF KHATAU MILLS

DIVIDEND, HOWEVER, MAINTAINED

THE working of the Khatau Makanji Spinning and Weaving Company, Ltd. (Agents: Messrs. Khatau Makanji & Co., Ltd., Bombay), during the year ended 30th June, 1953, has resulted in a gross profit of Rs. 25.73 lakhs, recording a contraction of Rs. 7.20 lakhs from that earned in the previous year. This is the second year in succession that the Company has recorded a fall in earnings, the gross profit for the previous year having shown a decline from Rs. 41.68 lakhs to Rs. 32.93 lakhs. The successive recession in the Company's profit during the last two years has taken the profit for the year under review to the lowest level in the last four years. The net profit also has dropped from Rs. 8.63 lakhs for 1951-52 to Rs. 4.43 lakhs which represents the lowest profit earned by the Company during the last decade. The dividend on the ordinary shares has, however, been maintained at 10 per cent., to which level it was reduced last year from 14 per cent. paid for the year 1950-51. The maintenance of the dividend at the previous year's level has been done without any addition to the reserves. This is the second year in succession that no addition has been made to the general reserve fund. It may, however, be noted that a sum of Rs. 4 lakhs was added last year to the contingency fund which had been created two years ago.

The following comparative table shows how the fortunes of the Company has varied in the last three years:

(In lakhs of rupees)

	For the year ended 30th June			
	1953	1952	1951	1950
Sale proceeds	379.53	407.05	361.02	305.91
Stocks	51.60	52.43	53.81	47.23
Expenses	354.94	373.84	326.49	283.99
Gross profit	25.73	32.93	41.68	28.64
Agents' commission ..	2.65	4.25	4.73	3.62
Provision for taxation ..	0.50	7.25	11.19	5.65
Depreciation	18.15	12.70	12.18	11.91
Net profit	4.43	8.63	13.58	6.56
To reserve fund ..	..	..	1.00	1.00
,, contingency fund ..	..	4.00	6.75	..
Dividends—				
Preference	1.45	1.80	1.80	1.80
Ordinary	2.99	2.99	4.19	3.50
	(10%)	(10%)	(14%)	(12%)
Carry forward	0.23	0.24	0.31	0.47

As will be noted from the above table, the Company's sale proceeds of cloth, yarn and waste have declined by Rs. 67.52 lakhs during the year under review, thus reversing the upward trend noted in the previous two years. No doubt expenses also have gone down, but the decline, namely, Rs. 18.70 lakhs, is relatively smaller than that noted in sale proceeds. Of the expenses, the value of cotton and staple fibre consumed shows a decline of Rs. 18.46 lakhs to Rs. 192.32 lakhs and stores, colours and chemicals of Rs. 12.64 lakhs to Rs. 33.66 lakhs. The decline in the value of raw materials and stores has been offset to a large extent by the increase in the cost of coal, fuel and power by Rs. 2.08 lakhs, salaries, wages, bonus and food allowance by Rs. 13.47 lakhs and contribution to provident fund by Rs. 1.89 lakhs. The decline in raw materials and stores consumed and in sales suggests that the Company's production must have been lower, though there has not been any corresponding decline in wages and other production costs.

The cut in the provision for taxation from Rs. 7.25 lakhs to Rs. 50,000 is due, besides the drop in gross profit, to the initial depreciation allowances for purpose of taxation allowed on the substantial additions made during the year to the fixed capital expenditure. This is evident from the increase of Rs. 5.45 lakhs in the provision for depreciation. The net profit of Rs. 4.43 lakhs is just sufficient for payment of dividend on the preference and ordinary shares. The small decline in the amount required for distribution of preference dividend is due to the fact that the Company has had to pay dividend on the now extinct 6 per cent. preference shares for only five months of the year. It may be recalled that the Company redeemed, during the year, the 10,000 6 per cent. preference shares of Rs. 100 each by paying back Rs. 135 in respect of every such share. These preference shareholders were also entitled to dividend up to 30th November, 1952.

On account of the aforesaid redemption of the preference shares, the paid-up capital of the Company stands reduced from Rs. 69.87 lakhs to Rs. 59.87 lakhs. The reserves and surplus also have declined from Rs. 53.16 lakhs to Rs. 49.75 lakhs, mainly due to the withdrawal of a sum of Rs. 3.50 lakhs for payment of premium on redemption of the 6 per cent. preference shares. The provision for taxation amounts to Rs. 15.42 lakhs, as against Rs. 23.60 lakhs a year ago. Current liabilities amount to Rs. 130.48 lakhs, having been reduced from Rs. 143.65 lakhs. The gross block aggregates Rs. 207.51 lakhs, including Rs. 29.06 lakhs representing the additions made during the year to plant and machinery. The depreciation provided so far amounts to Rs. 157.18 lakhs, so that the book value of the fixed assets is no more than Rs. 50.33 lakhs. The current assets aggregating Rs. 205.22 lakhs cover the current liabilities and provision for taxation by a wide margin of Rs. 59.32 lakhs.

The Rs. 100 paid up ordinary shares of the Company are currently quoted at Rs. 175. At this rate, the proposed dividend on these shares gives a yield of over 5.7 per cent. per annum, free of income-tax.

KALASA TEA'S PROFIT LOWEST SINCE 1946

A decline in the trading profit from Rs. 2.01 lakhs to Rs. 1.36 lakhs is disclosed by the audited accounts of the Kalasa Tea and Produce Co., Ltd. (Managing Agents and Secretaries: Messrs. Petrce, Leslie & Co., Ltd., Kozhikode, Malabar), for the year ended 31st March, 1953. The profit for the year under review is the lowest earned by the Company since the year ended 31st March, 1946. The recession in earnings has occurred despite an increase in the crop harvested. This is due to the sharp drop in the price of tea during the major part of the year under review. Though the price of tea has made a recovery since January, 1953, the average price realised during the 12 months under review has been lower than that for the previous year. Moreover, the expenditure on estates also shows a slight rise. The net profit has suffered a setback from Rs. 1.33 lakhs to Rs. 74,309, that is a fall of nearly 45 per cent. The Directors have, however, thought it fit to double the allocation to the reserve fund from Rs. 25,000 to Rs. 50,000 and reduce the dividend from 15 per cent., which they had paid for the previous three years, to 10 per cent.

The following comparative table shows at a glance the salient features of the Company's results for the last four years:

	For the year ended 31st March			
	1953	1952	1951	1950
	Rs.	Rs.	Rs.	Rs.
Proceeds of crop ..	5,60,091	6,17,357	4,86,615	4,54,081
Estate expenditure ..	4,24,507	4,16,164	3,02,801	2,91,328
Trading profit	1,36,394	2,01,192	1,83,814	1,62,753
Managing Agents' commission	8,823	10,060	8,042	7,860
Provision for—				
Depreciation	13,609	5,505	6,188	7,061
Taxation	20,000	29,000	26,500	22,000
Net profit	74,309	1,34,677	1,20,250	1,06,917
Reserves	50,000	25,000	25,000	60,000
Dividend	54,000	81,000	81,000	81,000
	(10%)	(15%)	(15%)	(15%)
Carry forward	22,679	52,370	23,693	9,445
Crop of tea (lbs.) ..	2,89,873	2,77,000	2,14,197	2,32,200
Crop of coffee (cwts.) ..	137	130	208	159
	Rs. a. p.	Rs. a. p.	Rs. a. p.	Rs. a. p.
Cost of tea per lb. ..	1 5 8	1 5 11	1 4 4	1 2 1
Price realised per lb. of tea	1 13 3	2 1 9	1 15 2	1 10 10

Although the Company's output of tea, at 2,89,873 lbs., was 12,873 lbs. more than the production in 1951-52, it fell short of the estimated crop of 3,00,000 lbs. The coffee crop also fell short of the estimates. As against an anticipated crop of 240 cwts., the crop realised was only 137 cwts. It is, however, gratifying to note that the cost of production of tea has dropped a little, but this has been more than offset by the decline in the price realised per lb. of tea. Despite the fractional recession in the cost of production of tea from Re. 1-5-11 to Re. 1-5-3 per lb. and of coffee from Rs. 287.32 to Rs. 280 per cwt., the estate expenditure shows an increase of over Rs. 8,000.

INTEGRITY
SERVICE
SECURITY

Our forty-six years' honourable record of insurance practice ensures these to all our policy holders in Life, Fire, Motor, Marine, Accident and Workmen's Compensation.

INDIAN MERCANTILE
INSURANCE COMPANY Ltd.
BOMBAY

The Company's financial position, as seen from the latest balance-sheet, is satisfactory. Despite the capitalisation of a sum of Rs. 1.80 lakhs in 1947-48, the reserves and surplus stand at Rs. 4.18 lakhs or 77 per cent. of the paid-up capital of Rs. 5.40 lakhs. The gross block of Rs. 7.52 lakhs has been written down by about Rs. 56,000. The current assets aggregate Rs. 3.95 lakhs, as against which the current liabilities and tax provision amount to no more than Rs. 1.32 lakhs.

PRAGA TOOLS CORPORATION LTD.

The Praga Tools Corporation Ltd. (Managing Agents: The Industrial Trust Fund, Government of Hyderabad, Hyderabad, Deccan) earned a gross profit of Rs. 2.68 lakhs during the year ended 31st December, 1952, as compared with Rs. 2.76 lakhs in the previous year. After providing for depreciation at Rs. 2.13 lakhs (as against Rs. 2.14 lakhs in the previous year) and writing off mortgage and preliminary expenses and brokerage on shares amounting to Rs. 11,182, the net profit at Rs. 44,381 compares with Rs. 50,765 for 1951. This net profit has been utilised to reduce the accumulated loss brought in from the previous year to Rs. 7.32 lakhs.

The Company's production and sales during the year were about 20 per cent. higher than those of the previous year, in spite of the intermittent and unsatisfactory supply of raw materials which interfered with production to a great extent. The improvement in production and sales was not, however, reflected in the Company's profit. This was mainly due to very low prices fetched for the Company's products on account of unprecedented internal competition. However, with a view to keeping the Company's capacity as fully loaded as possible, the Directors decided to keep the Company on the active list of competitors. This has brought orders for over Rs. 20 lakhs from the Central Government.

The diversification in the Company's manufacturing programme was taken a step further during the year under review, which enabled the Company to produce 8" centre lathes and No. 1 size milling machine of its own design towards the end of the year. The Industrial Trust Fund, Government of Hyderabad, sanctioned a loan of Rs. 5 lakhs for financing the expansion of the forge shop to meet the increased demand of light and medium forging. A major portion of the equipment has arrived and is under erection. The Directors have drawn up a five-year plan for full-fledged manufacture of machine tools, heavy forgings, automobile and diesel engine components. The plan has been forwarded to the Government of India and is now under the latter's consideration.

WIMCO TO ISSUE BONUS SHARES

The Directors of the Western India Match Co., Ltd. (Managing Director: Mr. T. Rydin, Bombay), have proposed to capitalise a sum of Rs. 59 lakhs, being part of the Company's general reserve fund, and to issue 55,000 ordinary shares of Rs. 100 each on 7th December, 1953, as capital bonus in the proportion of one such share for every four held by them on that date. The new shares will rank *pari passu* with the existing shares and for dividend from the current year onwards. Consent of the Controller of Capital Issues has been obtained for the proposed issue.

The authorised capital of the Company is Rs. 3 crores made up of 300,000 ordinary shares of Rs. 100 each, of which only Rs. 2.20 crores (220,000 shares of Rs. 100 each) have been issued and subscribed. The Company's general reserve fund, as on 31st December, 1952, amounted to Rs. 100.44 lakhs. After the aforesaid proposal to capitalise part of the general reserve is carried out, the issued and paid-up capital of the Company will stand at Rs. 2.75 crores and the general reserve at Rs. 99.89 lakhs.

This is the fourth occasion in its history when the Company is issuing bonus shares. The first occasion was in June, 1943, when the Company raised its paid-up capital from Rs. 70 lakhs to Rs. 77 lakhs by the capitalisation of a sum of Rs. 7 lakhs from out of the reserve fund and issued, to the then existing shareholders, 7,000 ordinary shares of Rs. 100 each as bonus shares in the proportion of one share for every ten shares held by them. The second occasion was in February, 1947, when it doubled its paid-up capital to Rs. 1.54 crores by capitalising Rs. 77 lakhs from out of the general reserve, and issued 77,000 ordinary shares of Rs. 100 each as bonus shares in the proportion of one share for every share held by the then existing shareholders. In December, 1948, the Company capitalised, for the third time, a sum of Rs. 66 lakhs from out of the general reserve fund, thereby raising its paid-up capital to Rs. 2.20 crores, and issued 66,000 ordinary shares of Rs. 100 each as bonus shares to the then existing shareholders in the proportion of three new shares for every seven shares held by them. When the present proposal is carried out, the Company will have earned the enviable distinction of having raised its paid-up capital, in the course of eleven years, by Rs. 2.05 crores, that is from Rs. 70 lakhs to Rs. 2.75 crores, out of its own earnings conserved year after year. A feature of these issues was that on all occasions when the bonus shares were issued they were entitled to dividend for the years in which they were issued.

SHRI JAGDISH MILLS TO MERGE WITH SHRI AMBICA MILLS

For some time past, the Boards of Directors of Shri Jagdish Mills Ltd. and Shri Ambica Mills Ltd., both of Ahmedabad, have been considering the question of the merger of the two companies. They have now decided, after due consideration, to effect the merger for reasons of more economical and efficient working of both the companies.

According to the scheme of amalgamation, the assets and liabilities of Shri Jagdish Mills are to be transferred to Shri Ambica Mills. The existing

5,000 5 per cent. cumulative preference shares of Rs. 100 each of Shri Jagdish Mills will be cancelled on repayment of the amount of capital paid-up thereon, together with the amount of cumulative preference dividend upto the date of the order of the Court sanctioning the amalgamation. Every holder of the ordinary shares in Shri Jagdish Mills, whose name stands in the register on 31st December, 1953, will, in respect of every five ordinary shares of Rs. 25 each held by him, be entitled to two ordinary shares of Rs. 50 each in Shri Ambica Mills. Shri Ambica Mills Ltd. which holds 28,200 ordinary shares of Rs. 25 each of Shri Jagdish Mills will surrender the same to Shri Jagdish Mills without any payment. Upon such surrender these shares also will be cancelled. The Managing Agents of Shri Jagdish Mills, Messrs. Jagdish (Agency) Ltd. will be paid a sum of Rs. 4.32 lakhs as compensation for the loss of office of managing agents.

According to the valuation report of the auditors, the fair relative value would be seven ordinary shares of Shri Jagdish Mills of Rs. 25 each for every two ordinary shares of Shri Ambica Mills of Rs. 50 each. However, the Directors of Shri Jagdish Mills have succeeded in getting an offer of two ordinary shares of the other mill for every five ordinary shares of Shri Jagdish.

WAGE EARNERS AS SHAREHOLDERS

The movement for enlisting the support of the lower-income groups for purposes of capital formation is gaining momentum in the U.K. This movement has two objectives. In the first place, it is designed to create a new shareholding class out of wage-earners who could then be expected to take a more lively interest in the affairs of private enterprise. Secondly, it will encourage saving habit among workers, whose income has greatly expanded in recent years. These aims are sought to be reached through the formation of what are called unit trusts which will invest the funds in desirable undertakings or by directly encouraging the workers to subscribe for the shares of the companies in which they are employed. Reviewing the progress of this movement, Mr. Oscar Hobson says in the *News Chronicle*:

"The problem, of course, is how to interest the 'industrious and successful working man' in saving—and in saving in the particular forms required by this objective. Can he be persuaded to do what the much richer, but much smaller, investing class of earlier generations did—invest in industrial securities? It is interesting to observe that quite a movement to attempt this task of persuasion seems to be growing up. In America, it is, of course, well under way. But here we learn of steps being taken to make industrial shares available to small investors on the instalment system. And, potentially much more important, we hear of certain gatherings of the Unit Trust clans with a view to taking advantage of the power to extend their capitals which, after being very stupidly denied them for so long, is now being restored.

"Lord Dorchester, the Chairman of one of the smallest trusts, Orthodox Unit Trusts, formed just before the war, and which has just sold its millionth unit, said that his trust had 'recently approached a number of large industrial concerns seeking their co-operation in starting local savings schemes by which our units could be bought by their employees on an instalment basis.' Though they have found a few company secretaries helpful, they have so far been disappointed with the response. Lord Dorchester's comment was that while, as a body, industrialists had much to say on the shortage of risk capital, they did not appear to be very helpful as individuals when proposals towards remedying the shortage were made. It is fair comment.

"One cannot, of course, be surprised that companies should feel chary of seeming to favour investment by their employees in individual trusts of which they may know little. Nevertheless, industry cannot afford to stand aloof and be merely 'unhelpful.' Quite a number of companies encourage investment by their workers in their own shares. Basically, they would be on much sounder ground in encouraging them to spread their risks by investing in collections of shares such as those offered by reputable investment trusts."

CALCUTTA TRAMWAY PASSES OVER FINAL DIVIDEND

The Directors of the Calcutta Tramways Co., Ltd. have announced that, in view of the need to conserve remaining cash resources, they are unable to recommend a final dividend on the ordinary shares of the Company for the year ended 31st December, 1952. Total distribution for the year is, therefore, limited to the interim dividend of 2½ per cent. tax-free paid in May last. It may be recalled that the Company had paid 6 per cent. tax-free, for each of the four preceding years. The balance of profit of the Company for the year under review, after taxation, in accordance with the agreement dated 30th August, 1951, is £87,457 which is the same as for the previous year. A provision of £95,000 (as against £150,000 in the previous year) has been made. To the above balance of profit has been added a sum of £23,857 being the tax provision made in previous years no longer required. The Directors have placed to the renewals and replacement reserve £80,000 (same as in the previous year) and to the special reserve account £11,974 (£74,354). They have not, however, provided anything to deferred repairs account which had received £3,018 last year.

Points From The Chair

Future of Machine Tool Industry

"DUE to the strict import control policies of the Government of India with regard to machine tools, the demand for indigenous machine tools has been much better now as compared to demands in previous years. The demand for machine tools from the Government of India at present is quite lively due to the various development schemes in the Five-year Plan and it is felt that as the Plan reaches its final stages, the demand should simultaneously increase. Your Company needs some vital equipment for completing its diversification programme of converting a major portion of its capacity into machine tool manufacture and if this equipment can be made available the results of working should be very encouraging. The Board of Directors, therefore, decided to draw up a four or five-year plan of production according to enquiries and demands on hand, as well as by taking into consideration demands that are likely to arise within the next few years. Your Company has since drawn up such a manufacturing programme and has submitted proposals for balancing your Company's plant for full-fledged manufacture of machine tools, heavy forgings, automobile and diesel engine components to the Government of India through the Commerce and Industries Department, Government of Hyderabad. This proposal is now under consideration of the Government of India."

VINAYAK RAO KORATKAR,
Praga Tools Corporation Ltd.

Reasonably Stable Price for Tin Needed

"What is needed in the tin industry, by the producer and consumer, is a reasonably stable price. Violent fluctuations in the price are embarassing to everyone concerned and cause uncertainties which make economic planning most difficult. Also what is needed by both producer and consumer is an industry which is working on a sound basis, a basis which the producer finds remunerative and which encourages him fully to meet the market's requirements and to plan and to make provision for the community of production at a level which will satisfy any demands made. It is to this end that it has been decided to reconvene the International Commodity Conference held in Geneva under the auspices of the United Nations in 1950 and which was adjourned. It must be borne in mind that in the tin industry there is special need for large reserves of money to be held by producing companies. In Malaya and Siam the area on which a dredge works has only a fixed life. To find new areas needs continuous and large-scale prospecting as and when conditions permit."

J. IVAN SPENS,
London Tin Corporation Ltd.

Sale of Low Quality Teas

"It was, in my view, not fully appreciated that free auctions meant more discriminatory buying, and that when supplies equalled or exceeded demand, low quality teas would be very difficult to sell. The public also made their contribution by realising that the cheapest packet was not necessarily the most economical to buy; consequently, low grade teas, when sold, fetched prices considerably below cost, bringing other prices down too. The difficulty in selling the poorer types of tea also gave rise to thoughts of excess supplies and was a factor in formulating a scheme for regulation of crop; it would appear that it was not fully recognised that the demand for quality would of itself reduce crop in many instances and that low prices, bringing their own economic pressure, were also likely to lower crop through a reduction of fertilisers used."

THE HON. P. F. REMNANT,
Assam Co., Ltd.

Life Insurance Must be Built Up

"If the twin services which life insurance provides, security of the home and creation of long-term capital, are admitted to be very desirable objectives to be widely achieved, I believe Government ought to encourage savings by way of life insurance. Men must be encouraged to build up life insurance to the maximum of their capacity by full relief in tax and full relief from Estate Duty. That will mean prosperous homes and a prosperous nation. Or is it the attitude of the Government to encourage people to build up their estates not in life insurance policies, but in gold and silver?"

B. N. JALAN,
General Assurance Society Ltd.

SUGAR

(Concluded from page 724)

of lands and guaranteeing irrigation water to the factories, thus justifying the conditions stipulated by the Founder of this Company. Later history of the development of this industry on the Deccan canals is known to you all, as almost every one of you has been a witness to it."

It will be observed from the above account that, but for the establishment of the sugar industry, the arid tracts of the Bombay Deccan would not have attained the prosperity which they enjoy now. Surely, it would be nothing short of ingratitude if the present Government were to persist in its policy of subjecting the industry to penal taxation. If the industry is to expand, as it must, in order to meet the increase in the consumption of sugar in the country, the Government must come forward to reduce the burden of its taxes and expand the availability of water supply for sugarcane cultivation.

Notices

THE SWADESHI COTTON MILLS COMPANY, LIMITED
KANPUR

NOTICE IS HEREBY GIVEN THAT THE Thirty-second Ordinary General Meeting of Shareholders of The Swadeshi Cotton Mills Company, Limited, will be held at the Registered Office of the Company at Kanpur on Thursday the 29th October, 1953, at 2-30 p.m., to transact the following business:—

1. To receive and consider the Annual Statements of Account and Audited Balance Sheet for the year ended 31st December, 1952, and the Reports of the Directors and Auditors thereon.
2. To elect Directors in place of those retiring.
3. To appoint Auditors in place of those retiring and to fix their remuneration.
4. To sanction the declaration of a Dividend.
5. To transact any other business.

The Share Transfer Book and the Register of Members of the Company will be closed from the 22nd October, 1953, to 29th October, 1953, both days inclusive.

A proxy form and an application for Dividend are enclosed.

By Order of the Board,
For JAIPURIA BROTHERS LTD.,
MUNGTURAM JAIPURIA,
Managing Director,
Managing Agents.

KANPUR, *5th October,* 1953.

THE INDIAN IRON AND STEEL COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT THE Board of Directors has sanctioned payment of dividend on the Preference Share Capital of the Company at the rate of 5 per cent. per annum for the half-year ended 30th September, 1953.

The Preference Share Registers will be closed from the 24th to the 31st October, 1953, both days inclusive. Payment will be made on or after the 1st November, 1953, to those Preference Shareholders whose names are on the Company's Register on the 31st October, 1953, or in accordance with their instructions.

By Order of the Board,
MARTIN BURN LTD.,
T. LESLIE MARTIN,
Director,
Managing Agents.

12, MISSION ROW,
CALCUTTA, *13th October,* 1953.

THE CALCUTTA TRAMWAYS COMPANY, LIMITED

IN VIEW OF THE UNSETTLED CONDITIONS in Calcutta at the present time and the losses incurred during the disturbances and strike in July, 1953, and taking into account that the finding of the Tribunal set up to investigate the increase in tram fares will still not be known for some time, the Directors feel that it is of paramount importance to conserve the remaining cash resources of the Company. They, therefore, regret that they are unable to recommend the payment of a final dividend on the Ordinary Shares for the year ended 31st December, 1952.

A. SMITH,
Acting Agent.

P. 4 MISSION ROW EXTENSION,
CALCUTTA, *8th October,* 1953.

DROP IN PROFITS OF BEGG, SUTHERLAND SUGAR COMPANIES

HANTAPARA TEA HALVES DIVIDEND

Samastipur Central Sugar Co., Ltd.

THE directors of the above Company (Managing Agents: Messrs. Begg, Sutherland & Co., Ltd., Kanpur, U.P.) submit the audited accounts of the Company for the year ended 30th June, 1953.

The results for the period, after making the usual provisions, including taxation, show a profit of Rs. 90,575 (Rs. 2,34,575) from which has been deducted depreciation amounting to Rs. 50,000 (Rs. 50,000) leaving a balance of Rs. 40,575 (Rs. 1,34,575). To this sum has to be added the carry forward from the previous year of Rs. 23,281 (Rs. 8,606) leaving at credit of profit and loss account Rs. 63,856 (Rs. 1,43,181). This balance, the directors recommend, should be disposed of in payment of a dividend of As. 8 (Re. 1) per share, free of income-tax, for the year ended 30th June, 1953 Rs. 59,950 (Rs. 1,19,900) leaving to be carried forward to next account Rs. 3,906 (Rs. 23,281).

The factory commenced crushing operations on the 24th November, 1952, and finished on the 25th April, 1953. The cane crushed was considerably more than in the previous season, and amounted to 24,10,481 maunds. The extraction rate of 10.14 per cent. was the highest attained during the past four years. The factory operated at a high level of efficiency for most of the season, although, unfortunately, a labour "Go-Slow" movement took place during the month of January, 1953.

In November, 1952, the Government of India announced the sugar policy for the season 1952-53, including a reduced cane price of Re. 1-5 per maund at the factory gate, and Re. 1-3 per maund at out-stations. The large carry-over of sugar stocks in India at the end of 1952 made it necessary for the Government to reduce the control price of sugar from Rs. 31 per maund to Rs. 27 per maund. The stocks of control sugar held by the factory on 30th June were valued at the Government control rate of Rs. 31 per maund, but much of this sugar was later sold at the lower control price but Government in this case compensated factories for the difference in price.

The free sugar, which was valued at Rs. 31 per maund, as at 30th June, 1952, was however, sold in the months of November-December, 1952, at considerably lower prices, and the loss sustained is reflected in the Company's accounts and for which no compensation was allowed.

The abovementioned difficulties experienced by the Company, despite a high efficiency of factory operation, have adversely affected the trading results.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	11,99,000	Block ...	15,45,231
Reserves ...	17,25,204	Stock-in-trade	22,51,588
Provision for taxation ...	3,75,958	Stores, spare parts, etc.	4,25,947
Liabilities ...	40,09,134	Debts, deposits and advances ...	31,08,974
Profit and loss account ...	63,856	Investments	600
		Cash ...	40,812
Rs.	73,73,152	Rs.	73,73,152

Ryam Sugar Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Begg, Sutherland & Co., Ltd., Kanpur, U.P.) submit the audited accounts of the Company for the year ended 30th June, 1953.

The results for the period, after making the usual provisions, including taxation, show a profit of Rs. 1,41,583 (Rs. 2,62,727) from which has been deducted depreciation amounting to Rs. 50 000 (Rs. 50,000) leaving a sum of Rs. 91,583 (Rs. 1,24,000). To this sum has been added the carry forward from the previous year of Rs. 15,410 (Rs. 4,683) leaving at credit of profit and loss account Rs. 1,06,993 (Rs. 1,43,410). This balance, the directors recommend, should be disposed of as follows:—

In payment of a dividend on the preference shares of 6 (6) per cent. per annum, free of income-tax, for the year ended 30th June, 1953 Rs. 48,000 (Rs. 48,000) and in payment of a dividend of As. 8 (Re. 1) per share, free of income-tax, on the ordinary shares for the year ended 30th June, 1953 Rs. 40,000 (Rs. 80,000), leaving to be carried forward to next account Rs. 18,993 (Rs. 15,410).

The factory commenced crushing operations on the 11th December, 1952, and finished on the 3rd May, 1953. The relatively late start of crushing in the season under report, in view of the large crop to be taken off, was again due to the serious flooding of the tramway line and the feeder roads servicing the factory. The floods around the factory were more serious than in previous years, and the Board of Directors have represented this matter to the Government of Bihar.

The factory crushed 23,79,823 maunds of cane, which was the highest crush recorded in the last 15 years. The extraction rate was 10.20 per cent. as compared with the extraction of 11.28 per cent. in the previous year. The reduction in the extraction rate was the result of the exceptionally long season and the general fall in the yield of sugar per maund of cane in Bihar during the season 1952-53.

In November, 1952, the Government of India announced the sugar policy for the season 1952–53, with a cane price of Re. 1-5 per maund at the factory gate and Re. 1-3 per maund at out-stations. That was the first occasion that the Company obtained any price relief for transporting cane from out-stations. The large carry-over of sugar stocks in India at the end of 1952 made it necessary for the Government to reduce the control price of sugar from Rs. 31 per maund to Rs. 27 per maund. The stocks of control sugar held by the factory on 30th June, 1952, were valued at the Government control rate of Rs. 31 per maund, but much of this sugar was later sold at the lower control price but Government in this case compensated factories for the difference in price.

In regard to free sugar, Government was not responsible for any loss incurred by the factory. That free sugar, which was valued at Rs. 31 per maund, as at 30th June, 1952, could not be sold owing to the impossibility of delivery over the flooded tramway line. When delivery of free sugar was eventually effected the prices had decreased considerably in sympathy with the control price and the loss sustained is reflected in the Company's accounts, for which no compensation was allowed. There were then exceptionally large stocks of unsold free sugar at the factory on account of the flooding of the tramway line which earlier had stopped the despatch of sugar from the factory, and thus, the Company had to face substantial losses. The question of obtaining some compensation for those losses which were caused by circumstances beyond the control of the Board of directors, has been referred to the Central and State Governments.

The abovementioned difficulties experienced by the Company, despite a high efficiency of factory operation, have adversely affected the trading results. It is, however, satisfactory to report that the quality of sugar produced was of a very high standard.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	16,00,000	Block ...	4,64,569
Reserves ...	6,04,162	Stock-in-trade	18,77,484

Liabilities ...	48,37,412	Debts, deposits and advances ...	44,59 934
Profit and loss account ...	1,06,993	Investments	80,875
		Cash ...	60,810
Rs.	73,76,180	Rs.	73,76,180

Bairampur Sugar Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Begg, Sutherland & Co., Ltd., Kanpur, U.P.) submit the audited accounts of the Company for the year ended 30th June, 1953.

The results for the period, after providing for all charges, show a profit of Rs. 65,215 (Rs. 2,02,641) to which has been added the carry forward from the last account, amounting to Rs. 18,412 (Rs. 23,637) leaving at credit of profit and loss account Rs. 83,627 (Rs. 2,26,278). From this sum has been deducted depreciation amounting to Rs. 70,000 (Rs. 1,50,000) leaving to be carried forward to next account Rs. 13,627 (Rs. 18,412). In consequence of previous unabsorbed losses there is no liability to income-tax for the year under report.

In view of the unsatisfactory trading results arising from circumstances beyond their control, the managing agents have again agreed to forgo their commission which in respect of the year ended 30th June, 1953 would have amounted to Rs. 4,891.

The quantities of cane crushed at the factories during the season 1952-53 constituted a record for the Company. Bairampur factory crushed 25,40,397 maunds of cane, which is the second highest crush in the history of the factory while Tulsipur factory crushed 26,02,206 maunds of cane, which is the highest crush ever recorded at the factory. The yield of sugar per 100 maunds of cane was again rather disappointing. Bairampur recorded a yield of 9.51 per cent., which is slightly better than in the previous year, despite the longer season. Tulsipur factory, however, recorded a yield of 9 10 per cent. Bairampur factory commenced crushing on the 9th December, 1952 and completed the season on the 29th April, 1953. The Tulsipur factory commenced crushing on the 15th December, 1952 and finished the season on the 12th May, 1953.

The extended crushing at Tulsipur factory was the main reason for the reduction in the yield of sugar from cane, and although the State Government did compensate the factory by reducing the cane rate during the month of May, 1953, that compensation did not fully cover the losses sustained. The reason for the extended season was due entirely to serious under-estimation by the cane growers' co-operative societies, over which the factory have no control, of the cane available for crushing.

The large carry-over of sugar stocks from the previous season was sold at much reduced prices. In respect of controlled sugar, however, the loss sustained was made up by a subsidy from Government of an amount equal to the difference between the controlled price in the 1951-52 season and the controlled price in the 1952-53 season, and that amount is incorporated in the accounts. No compensation was received, however, to cover the loss sustained on free sugar, which is reflected in the trading results for the year under report.

The cane prices fixed by the Government of India were Re. 1-5 per maund for gate cane, and Re. 1-3 per maund for cane delivered at outstations and transported in the Company's own transport.

The quality of cane continued to be poor with the resultant low yield in sugar. The factories operated satisfactorily throughout the season and, in particular, Bairampur factory increased its crushing rate by some 10 per cent., maintaining a high level of efficiency as in previous years.

After careful consideration, the Board of Directors has approved a scheme for replacing some of the plant and machinery at the factories by more modern and up-to-date equipment with a view to effecting a saving in the cost of production. The scheme will be spread over a number of years and it is hoped that the Company will derive considerable benefit therefrom.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	14,00,000	Block ...	11,61,408

Hantapara Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Duncan Brothers & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December, 1952.

The profit for the year is Rs. 53,758 (Rs. 2,41,091). On transfer of this sum to profit and loss account and after sundry adjustments, there is a balance at credit of that account amounting to Rs. 2,61,140 (Rs. 3,78,707), of which the directors have transferred Rs. 50,000 (Rs. 75,000) to buildings and machinery reserve.

The continued high cost of statutory concessions coupled with the fall in outturn and the depressed state of the tea market during the major part of the season contributed to the disappointing result.

Dividend on the preference shares was paid on 30th December, 1952, leaving Rs. 2,07,140 (Rs. 2,12,707 after paying interim dividend at 2½ per cent. on ordinary shares) now to be dealt with. It is proposed to pay a dividend of 2½ (2½ interim plus 2½ final) per cent. on the ordinary shares and to carry forward Rs. 1,47,140 (Rs. 1,52,707).

The outturns and average selling prices compared with those of the previous year are as under:—

	Crops		Average selling prices per lb.	
	1952	1951	1952	1951
	Mds.	Mds.	Rs. a. p.	Rs. a. p.
Hantapara ...	20,832	22,445	1 8 10	1 8 6
Dumchipara ...	16,088	17,600	1 6 7	1 1 9

Planted area remains at 2,427.00 acres, comprising 1,265.08 acres at Hantapara and 1,162 acres at Dumchipara. Estimates for 1953 provide for a total crop of 38,000 maunds at an outlay of Rs. 35,17,500, including inland freight and sale charges.

Accounts in brief are as under:—

Liabilities	Rs	Assets	Rs.
Capital ...	24,50,000	Block ...	20,00,000
Reserves ...	11,28,533	Stores and supplies	5,56,064

Profit and loss account ...	1,47,140	Advances and deposits ...	2,42,968
		Investments	1,50,200
		Cash ...	2,04,270
Rs.	54,50,620	Rs.	54,50,620

New Beerbhoom Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 30th April, 1953.

After providing Rs. 2,00,000 (Rs. 1,50,000) for depreciation and Rs. 50,000 (Rs. 13,000) for cesses and taxation and transferring Rs. 1,80,000 (nil) to capital reserve, there remains a balance at the credit of profit and loss account of Rs. 1,09,076 (Rs. 62,399) from which the directors recommend a dividend of 7 (7) per cent. per annum on 20,000 preference shares for the half-year ended 30th April, 1953 (for half-years 30-4-51, 31-10-51 and 30-4-52) Rs. 7,000 (Rs. 21,000), and a dividend of As. 8 (nil) per share on 1,77,623 ordinary shares 88,812 (nil) leaving to be carried forward Rs. 73,264 (Rs. 39,911).

Raisings for the half-year ended April, 1953, totalled 2,69,616 tons as compared with 2,46,202 tons in the previous half-year, and 2,53,976 tons in the half-year ended April, 1952. Despatches, which included purchased coal, totalled 2,49,219 tons as compared with 2,91,745 tons in the previous half-year, and 2,18,785 tons in the half-year ended April, 1952.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	19,76,230	Block ...	34,00,830
Reserves ...	13,72,000	Stock of coal	3,65,742
Provision for taxation ...	1,44,986	Stores ...	7,79,857

		Cash ...	1,69,875
Rs.	74,44,233	Rs.	74,44,253

Moheema Ltd.

The directors of the above Company (Managing Agents: Messrs. Duncan Brothers & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st December, 1952.

The accounts disclosed a loss of Rs. 2,17,379 (loss of Rs. 1,28,456). On transfer of this sum to profit and loss account and after sundry adjustments including transfers of Rs. 5,000 (Rs. 1,20,000) from revenue reserve and Rs. 17,535 (nil) from buildings and machinery reserve, there was a balance at debit of profit and loss account of Rs. 1,89,815 (credit of Rs. 286), which was carried forward.

Although the crop harvested was in excess of that of the previous year, the average sale price realised for the season's teas was somewhat lower and receipts was insufficient to cover production costs due mainly, to a labour force in excess of requirements and to further statutory concessions to the workers.

Crop weighed out at 5,337 maunds which compares with 4,861 maunds harvested in 1951. The average selling price was Re. 1-5-7 as compared with Re. 1-6-6 per lb. in the previous year. The area under tea cultivation remains at 673.37 acres.

Estimates for 1953 provide for a crop of 5,000 maunds at an outlay of Rs. 5,44,590, including inland freight and sale charges.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	8,00,000	Block ...	8,00,000
Liabilities ...	7,78,522	Stocks ...	82,651
		Tea sales receivable ...	4,29,886
		Advances and deposits ...	53,229
		Cash ...	22,941
		Profit and loss account ...	1,89,815
Rs.	15,78,522	Rs.	15,78,522

Jhansi Electric Supply Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Moonna Lall & Sons, Jhansi) submitted the audited accounts of the Company for the year ended 31st December, 1952.

The revenue from all sources amounted to Rs. 8,16,972 (Rs. 6,97,297) from which was deducted the operating expenditure during the year Rs. 6,78,803 (Rs. 5,67,884), depreciation as per Electricity (Supply) Act, 1948 Rs. 88,504 (Rs. 83,633) and contingency reserve (statutory) Rs. 4,828 (Rs. 5,431) leaving net profit for the year of Rs. 44,836 (Rs. 40,335).

The provision for income-tax has not been made for the year as there is sufficient reserve to meet the liability. Also the provision for sinking fund for redemption of debentures has not been made during the year as the question for its allocation is still under correspondence with the State Government.

Thus with the balance of last year of Rs. 3,488 (Rs. 9,047) a sum of Rs. 48,325 (Rs. 50,932) was available for distribution which, was disposed of in payment of a dividend to shareholders at As. 14 (As. 14) per share, free of income-tax Rs. 46,781 (Rs. 43,643) leaving to be carried forward to next year Rs. 1,544 (Rs. 3,488).

In order to encourage the employees, a bonus of 14 months' salary out of the profit of the Company, was paid for the year 1950, and for the year 1951. But under the inspiration of some out-side agencies they put up a demand of three months bonus, which has been adjudicated in their favour. This adverse award has been referred to the Hon'ble Labour Appellate Tribunal of India (Lucknow Bench) which is still under their consideration. The shareholders' interest, as well as the proper and efficient working of the Company largely depend upon the judgment of the Tribunal and its possible implications. It has been decided, not to recommend a special bonus to the directors as the profits were not encouraging as compared to the turn-over.

The power stations operated satisfactorily throughout the year in spite of various difficulties and gave excellent service. On requisition by the Municipal Board concerned, the Company has made necessary extensions in street lights at Jhansi as well as at Gorakhpur. It has also been able to supply energy to the Central Railway, Jhansi and improve the transmission and distribution system at Gorakhpur.

During the year due to improved supply conditions, control against new connections, which was in operation since 1942 was lifted by the State Government but the development may be retarded due to recently imposed U.P. Electricity Duty of 25 per cent. upto a maximum of one anna per unit on gross electricity charges. The estimated cost of the duty to the consumers on present consumption is expected to be about Rs. 1,00,000 per annum.

The amendments to the sixth schedule of the Electricity (Supply) Act 1948 to increase the rate of reasonable return for which the Industry has been agitating, are still under the consideration of the Government of India. The federation of electricity undertakings has been urging upon the Government to effect early legislation on the subject. It is expected that the Government would soon realise the justice of the contention that a return upto 5 per cent. on the capital outlay is totally inadequate to build up sufficient reserve or to attract fresh investment in the industry for financing the improvement and expansion of the work. The Electricity Board, which the Industry rightly feels is a desideratum for national development of power, is yet to be formed in Uttar Pradesh.

In spite of the best efforts of the managing agents and the board of directors the progressive increase in the running cost of the concern is telling upon the profits. All the same efforts are continuously being made to keep to its beneficient activities as is evident from the fact that although there is considerable difference in the living cost of index at Kanpur on one side and Jhansi and Gorakhpur on the other, the Company has paid Rs. 75,516 to its staff on the basis of Kanpur dear food allowance during the year.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	5,34,640	Block ...	12,42,761
Debenture loan	3,80,000	Stores and spare parts	2,30,122
Reserves ...	77,622	Deposits, deposits and advances ...	2,01,828
Provision for taxation ...	44,644	Other assets	73,120
Liabilities ...	6,83,662	Investments	4,598
Profit and loss account ...	48,325	Cash ...	16,464
Rs.	17,68,893	Rs.	17,68,893

Hastings Mill Ltd.

The directors of the above Company (Managing Agents: Messrs. Bangur Brothers, Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st March, 1953.

After providing for depreciation and making necessary allowance for taxation and machinery replacement reserve there was a credit balance of Rs. 7,36,845 (credit of Rs. 27,86,255) on profit and loss account including the balance brought forward from the previous account. Out of this sum the directors paid a final dividend on preference shares at Rs. 3 (Rs. 3) per share Rs. 75,000 (Rs. 75,000), dividend on ordinary shares at Rs. 10 (Rs. 10) per share Rs. 4,00,000 (Rs. 4,00,000) and carried forward Rs. 2,81,845 (Rs. 3,06,824).

In accordance with the working time agreement of the I.J.M.A. the mills worked 42½ hours per week with 12½ per cent. of the total looms sealed throughout the year under report.

The general downward trend of prices of both raw jute and finished goods referred to in the last report continued throughout the period. On 28th February, 1953, Government further reduced the export duty of sacking goods by Rs. 95 per ton. Since the closing of the accounts all markets have improved with, however, a rather disproportionate rise in the price of raw jute.

Orders for modernisation of a section of spinning plant have been placed. The directors have therefore made provision in this regard as above.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	63,00,000	Block ...	28,17,667
Reserves ...	46,39,631	Stock-in-trade	32,91,990
Provision for taxation ...	40,30,463	Stores and spare gear	9,41,244
Liabilities ...	25,10,645	Debts, deposits and advances ...	58,22,760
Profit and loss account ...	2,81,844	Investments	50,34,322
		Cash ...	54,600
Rs.	1,79,62,583	Rs.	1,79,62,583

N.B.—Figures within brackets relate to the corresponding period of the previous year.

ESTATE DUTY ACT COMES INTO FORCE

(Concluded from page 723)

such verified statement of accounts, particulars, documents, evidence, etc., as he may require.

On determination of the duty or additional duty payable, a notice of demand will be served on the accountable person specifying the amount payable and the time within which and the place at which it is payable. Where there are more than one accountable person, the liability for the whole of the duty is joint and several, but if any accountable person pays any part of duty in respect of any property not passing to him, he has the right to recoup it from the owners or trustees of such properties.

Provisions For Appeals

The first appeal against the determination of the duty, penalty or valuation made by the Controller or refusal by the Controller to grant a discharge certificate lies to the Board. Such appeals are to be filed within 90 days of the receipt of the order objected to. Where the dispute pertains to valuation, the question may be referred to the arbitration of valuers.

On any question of law arising out of the order of the Board an application may be presented to the Board within 90 days of the receipt of the order along with a fee of Rs. 100 requiring the Board to refer the question of law to the High Court. If the appellant is not satisfied with the Board's decision, he may apply to the High Court, which may require the Board to state a case. An appeal lies to the Supreme Court from any judgment of the High Court delivered on a case stated by the Board, which is certified by the High Court to be a fit one for appeal to the Supreme Court.

Discharge Certificate

Estate Duty forms first charge on the immovable property of the deceased, and any transfer of the property would be void or would be subject to the claim in respect of the duty. Any purchaser of the deceased's property would, therefore, require the seller to produce a certificate to the effect that either the duty had been paid on such property or that it is not liable to duty. Where no estate duty is payable, a discharge certificate is really not necessary, but the purchaser may want to see it as a measure of abundant caution, as otherwise he cannot get a clear title. Cases requiring an exemption certificate will be very common and, therefore, a simple form of account to be furnished to the Controller for obtaining an exemption certificate has been devised.

If the Controller is satisfied that the account submitted is correct, or that, in any case, the total principal value of the property will not exceed the exemption limit, he will give a certificate of discharge in respect of the whole property or any particular item contained in the account.

COMPANY MEETINGS AND DIVIDENDS

DHUNSERI TEA CO., LTD. Annual General Meeting, Calcutta, 19th October, 1953. Dividend: Nil.

RYAM SUGAR CO., LTD. Annual General Meeting, Kanpur, U.P., 24th October, 1953. Dividend: As. 8 per share. Transfer books closed from 6th to 24th October, 1953, both days inclusive.

JAIPUR METALS AND ELECTRICALS LTD. Annual General Meeting, Jaipur, 26th October, 1953. Transfer books closed from 16th to 26th October, 1953, both days inclusive.

FORT GLOSTER JUTE MANUFACTURING CO., LTD. Half-yearly General Meeting, Calcutta, 27th October, 1953. Transfer books close from 20th to 27th October, 1953, both days inclusive.

BENGAL BHATDEE COAL CO., LTD. Half-yearly General Meeting, Calcutta, 27th October, 1953. Dividend: As. 2 per share. Transfer books close from 19th to 27th October, 1953, both days inclusive.

HINGIR-RAMPUR COAL CO., LTD. Annual General Meeting, Bombay, 28th October, 1953. Dividend: Rs. 3 per share (tax-free), payable on and after 5th November, 1953. Transfer books close from 20th to 27th October, 1953, both days inclusive.

CENTRAL INDIA SPINNING, WEAVING AND MANUFACTURING CO., LTD. Annual General Meeting, Bombay, 29th October, 1953. Dividend: Rs. 5 per share, payaole from 30th October, 1953. Transfer books closed from 5th to 31st October, 1953, both days inclusive.

AHMEDABAD ADVANCE MILLS LTD. Annual General Meeting, Bombay, 30th October, 1953. Dividend: Rs. 10 per share (including bonus), payable from 31st October, 1953. Transfer books closed from 5th to 31st October, 1953, both days inclusive.

AGRA ELECTRIC SUPPLY CO., LTD. Half-yearly General Meeting, Calcutta, 30th October, 1953. Dividend: Rs. 5 per share (tax-free). Transfer books close from 24th to 30th October, 1953, both days inclusive.

SAHARANPUR ELECTRIC SUPPLY CO., LTD. Annual General Meeting, Saharanpur, 30th October, 1953. Transfer books closed from 17th to 30th October, 1953, both days inclusive.

TENGPANI TEA CO., LTD. Annual General Meeting, Calcutta, 30th October, 1953. Transfer books closed from 12th to 30th October, 1953, both days inclusive.

JUTLIBARI TEA CO., LTD. Annual General Meeting, Calcutta, 30th October, 1953. Transfer books closed from 12th to 30th October, 1953, both days inclusive.

LACKATOORAH TEA CO., LTD. Annual General Meeting, Calcutta, 30th October, 1953. Transfer books closed from 12th to 30th October, 1953, both days inclusive.

ANANDA-BAG TEA CO., LTD. Annual General Meeting, Calcutta, 30th October, 1953. Transfer books closed from 12th to 30th October, 1953, both days inclusive.

THACKER & CO., LTD. Annual General Meeting, Bombay, 30th October, 1953. Transfer books closed from 16th to 30th October, 1953, both days inclusive.

ALBION JUTE MILLS CO., LTD. Half-yearly General Meeting, Calcutta, 2nd November, 1953. Dividend: Rs. 12 per share. Transfer books close from 27th October to 2nd November, 1953, both days inclusive.

NEW CENTRAL JUTE MILLS CO., LTD. Half-yearly General Meeting, Calcutta 2nd November, 1953. Dividend: Rs. 12 per share. Transfer books close from 27th October to 2nd November, 1953, both days inclusive.

BALMADIES PLANTATIONS LTD. Annual General Meeting, Madras, 3rd November, 1953. Dividend: As. 4 per share. Transfer books closed from 14th October to 3rd November, 1953, both days inclusive.

ARRAH-SASARAM LIGHT RAILWAY CO., LTD. Half-yearly General Meeting, Calcutta, 3rd November, 1953. Dividend: Rs. 3 per share, less income-tax. Transfer books close from 24th October to 3rd November, 1953, both days inclusive.

FUTWAH-ISLAMPUR LIGHT RAILWAY CO., LTD. Half-yearly General Meeting, Calcutta, 3rd November, 1953. Dividend: As. 15½ per share. Transfer books close from 24th October to 3rd November, 1953, both days inclusive.

HOWRAH-AMTA LIGHT RAILWAY CO., LTD. Half-yearly General Meeting, Calcutta, 3rd November, 1953. Dividend: Rs. 3 per share, less income-tax. Transfer books close from 24th October to 3rd November, 1953, both days inclusive.

SHAHDARA (DELHI)-SAHARANPUR LIGHT RAILWAY CO., LTD. Half-yearly General Meeting, Calcutta, 3rd November, 1953. Dividend: Rs. 6 per share, less income-tax. Transfer books close from 24th October to 3rd November, 1953, both days inclusive.

HOWRAH-SHEAKHALLA LIGHT RAILWAY CO., LTD. Half-yearly General Meeting, Calcutta, 3rd November, 1953. Dividend: Rs. 3 per share, less income-tax. Transfer books close from 24th October to 3rd November, 1953, both days inclusive.

TRAVANCORE RUBBER AND TEA CO., LTD. First interim-dividend of As. 4 per share, for the year, 1953. Transfer books close from 22nd to 31st October, 1953, both days inclusive.

NONSUCH TEA ESTATES LTD. Final dividend of Rs. 2-4 4/5 per share, for the year 1952-53.

MADRAS SAFE DEPOSIT CO., LTD. Dividend of Rs. 2-8 per share, for the year ended 30th June, 1953. Transfer books close from 26th October to 9th November, 1953, both days inclusive.

SPENCER & CO., LTD. Tax-free interim dividend of As. 8 per share. Transfer books closed from 17th to 24th October, 1953, both days inclusive.

SHEVAROY ESTATES LTD. Dividend of As. 2 per share, for the year ended 30th April, 1953. Transfer books close from 24th to 31st October, 1953, both days inclusive.

MONEY CONDITIONS COMFORTABLE

(From Our Own Correspondent)

BOMBAY, 14th October

There was no change in the complexion of the short-term money market during the week under review, as compared with that in the previous week. In the absence of any fresh demands for funds, conditions continued to be quite comfortable. Inter-bank call money was generally done, among Exchange banks and big Indian banks, at 1½ per cent., though towards the close of the week, a few transactions were done at 1 per cent. consequent on the inflow of some funds from Calcutta in view of the *Poojah* holidays there. There was a little activity among the smaller Indian banks and the inter-bank call money in that sector, therefore, fetched a slightly better rate, namely, 2 to 2½ per cent.

Term money was offered 2½ per cent. for one month, 2½ per cent. for 2 to 3 months and 2¼ to 2¾ per cent. for 4 to 6 months. House money was placed at 2¼ per cent.

Tenders for Rs. 1.5 crores of three months' Government of India Treasury Bills this week brought an offer of Rs. 1.81 crores. This is the lowest amount for the last four weeks and compares with Rs. 2.01 crores offered in the previous week. The average rate of accepted tenders was, however, unchanged at Rs. 2-6-8 per cent. per annum for the fourth week in succession.

A sharp rise of Rs. 17.28 crores in notes in circulation is disclosed by the statement of affairs of the Reserve Bank for the week ended 9th October, 1953, as compared with that for the previous week. Notes held in the Banking Department, on the other hand, show a fall of Rs. 18.11 crores. Total notes issued have, therefore, fallen by Rs. 82.46 lakhs, which is balanced by a similar decline in rupee coin. In the Banking Department, deposits of the Central Government have recorded a rise of Rs. 2.66 crores. Deposits of other Governments and banks have dwindled by Rs. 13.51 crores and Rs. 7.41 crores, respectively. Cash balances have shrunk by Rs. 18.08 crores, while balances held abroad have gone up by Rs. 2.08 crores.

The Scheduled Banks' statement for the week ended 2nd October, 1953, as compared with that for the previous week, shows a rise of Rs. 61.43 lakhs in demand deposits and a fall of Rs. 47.73 lakhs in time deposits. Inter-bank borrowings are higher by Rs. 1.40 crores. Borrowings from the Reserve Bank are better by Rs. 31 lakhs and those from the Imperial Bank by Rs. 21 lakhs. Loans, cash credits and overdrafts have together risen by Rs. 3.15 crores, while in land bills purchased and discounted have gone down by Rs. 2.11 crores. Investments have recorded a fall of Rs. 30.90 lakhs. While cash-on-hand has recorded a shrinkage of Rs. 1.37 crores, balances with the Reserve Bank have been better by Rs. 4.35 crores.

The Gilt-edged market continued to maintain its steady tone during the week under review also, with further gains in selected Central Government loans and State issues. Among the Central Government loans, 3 per cent. 1937 stood unchanged at Rs. 98-7 and 3 per cent. 1958 at Rs. 98-2. 3 per cent. 1959-61 changed hands an anna better at Rs. 96-2. 3 per cent. 1963-65 and 3 per cent. 1964 were maintained at Rs. 92-8. 3 per cent. 1966-68 had buyers and went up by As. 2 to Rs. 90-3. 3 per cent. 1970-75 changed hands at Rs. 86-9. 3 per cent. 1986 Conversion Loan had scattered support but there was no change in its quotation at Rs. 82-2. 3½ per cent. 1961 N.P. Bonds were in favour to rise by an anna to Rs. 98-8. Among the State loans, 4 per cent. 1963 Bombay continued to be in demand and moved up by As. 2 to Rs. 101-2. 4 per cent. 1963 Madras were in request an anna better at Rs. 100, as also M.P. and U.P. loans at Rs. 99-12. 4 per cent. 1964 were stagnant at Rs. 100. U.P. and West Bengal loans stood at Rs. 99-12 and Rs. 100-10, respectively. 4 per cent. 1964 Bombay Municipal loans continued to attract enquiries up to Rs. 100-2, a rise of As. 2 over the week.

The Ahmedabad Municipal Corporation has announced a new loan for Rs. 67 lakhs. The issue price of the loan, which has a maturity of 15 years (with the option to repay after 10 years), will be Rs. 98-12 per cent. and the rate interest is 4 per cent., the net yield being Rs. 4-2-2 per cent. per annum. The list opens on the 15th inst. and closes on the 23rd inst. Repayment of principal and interest on this loan is guaranteed by the Government of Bombay.

In the foreign exchange section of the money market, the rupee, which had weakened fractionally last week, gained strength in terms of the U.S. dollar. Thus, the banks' selling rate for ready, which had stood at Rs. 478¼ per $100, moved down to Rs. 477½ and so also the buying rate from Rs. 474½ to Rs. 473½. In New York, spot sterling advanced from $2.80—2.80-1/16 to $2.80-5/16—2.80-7/16. The forward rates also moved up from $2.79½—2.79½ to $2.79½—2.80 for three months and from $2.79⅜—2.79½ to $2.79⅜—2.79½ for six months.

KANPUR HIDES STRONG

(From Our Own Correspondent)

KANPUR, 11th October

During the week under review, conditions of the local hides and skins market were firm, the general tone being optimistic. Fresh supplies were liberal and their disposal were ready and prompt. The main purchasers were the local tanners headed by the Cooper Allens. The Madras dealers were prominent buyers of goat and sheep of all varieties, whereas the country tanners were the willing buyers of lighter grades of the cow. The latest quotations are as follows:—

Wet salted cow, 1st grade heavy at Rs. 350, 1st grade light at Rs. 280, 2nd grade heavy at Rs. 330, 2nd grade light at Rs. 220 to Rs. 230 and 2nd grade inferior at Rs. 160 to Rs. 180 per score. Wet salted buff, 1st grade at 1 lb. 10 ozs., 2nd grade at 2 lbs. to 2 lbs. 6 ozs. per rupee, goat 1st grade at Rs. 350, 2nd grade Rs. 225 and sheep at Rs. 360 per 100 pieces.

BULLION IRREGULAR

(From Our Own Correspondent)

BOMBAY, 14th October

No definite trend in prices was visible on the Bullion Exchange during the week under review. The movements were irregular, but narrow, in both the metals. Early in the week, there was a tendency for prices to harden on reports of good offtake, locally and at Calcutta, and the revival of bull grip on expectations that the proposed amendments to the by-laws would not be carried out in the near future. However, this upward trend proved to be a short-lived affair, as arrivals of unrefined silver and larger inflow of gold brought about a setback during mid-week. At lower levels fresh selling ceased and bears were tempted to cover their earlier sales and book their profit. There was also some improvement in gold offtake induced by the lower prices. But towards the close, a recession again set in, the drop in values being more pronounced in silver than in gold, due to persistent arrival of the white metal.

The Board of the Bullion Association was engaged in considering suitable amendments to the by-laws, as suggested by the Advocate-General on the basis of three alternative proposals for fixing the penalty in the event of non-delivery of goods. The first was to fix the penalty over the rate for the next settlement prevailing on the day of auction. The second was to fix it over the delivery rate and the third on the highest rate touched during the current settlement. After framing the amendments to the by-laws on these lines the Board will submit the draft to the Advocate-General for his opinion as to their legality. A section of the market is of the view that it will take considerable time for the amendments to take final shape. And even after that one cannot be sure that they will come into force, as much will depend on the attitude of the Government.

To revert to a review of the market. Silver for forward delivery (23rd October settlement) opened at Rs. 152-11 and advanced to touch a high of Rs. 154-12 on Friday on speculative support. At this level, there was some profit-taking, induced by reports of large arrival of unrefined metal. On Monday, forward silver dropped to Rs. 153. Though there was a revival to Rs. 153-9 on Tuesday morning, it did not persist; for, to-day, the forward silver again drifted lower to Rs. 152-4.

Ready silver (.996 Mint) was on par with the forward rate throughout the week. The floating stocks of silver are placed at 2,200 bars. The daily average offtake was 10 to 15 bars.

Gold for forward delivery (22nd October settlement) began at Rs. 82-7 and recovered soon to Rs. 83-4. However, a bearish sentiment soon came to prevail on increased arrivals and the quotation touched a low of Rs. 82 on Saturday. But an improvement in offtake on subsequent days restored the price to Rs. 82-13. At the close, there was a minor drop to Rs. 82-7 in sympathy with silver.

Ready gold, which had commanded a premium of Re. 1-2 (at Rs. 83-9) over the forward at the close of last week, closed this week (at Rs. 83-1) with a premium of As. 10 only. This reflects the weakness of the ready position. The floating stocks of gold are estimated at 35,000 tolas. The daily average arrivals were 8,000 tolas, while the offtake was a little lower at 7,000 tolas on an average.

The following comparative table shows the trend of the market during the week under review:

	14-10-53	Highest	Lowest	7-10-53
	Rs. a.	Rs. a.	Rs. a.	Rs. a.

TEA DEARER

(Messrs. Forbes, Ewart and Figgis Ltd.)

COCHIN, 10th October

Offerings in dust sale 'T' which was held on Tuesday, 6th October, amounted to approximately 1,48,000 lbs. There was a very strong general demand and prices advanced irregularly As. 1 to As. 2 for all types. There was some enquiry for clean, black, grainy dusts and best liquoring types were well supported.

London Market.—Dearer tendency throughout. Commons ½d. higher.

Colombo Market.—Strong demand. UVAS lower on quality. Others firm to dearer, particularly fannings.

Calcutta Market.—Export.—58,000 packages. Market firm. Most types sale strengthened during Punjab R.G. Rs. 59; S.G. Rs. 63; N.T. R.G. the day.

Dust.—Fair demand. Market irregularly easier for commons, medium Doors and Assams. C.T.C. fairly well supported. Darjeelings sold well.

Export Quota.—A fairly large volume of business has been done at 15 ples. To-day's quotation stands at 15 ples.

Forthcoming Auctions.—Dust sale 'U' will be held on Tuesday, 20th October.

As we go to Press, Messrs. Forbes, Ewart and Figgis, Ltd., wire as follows:

"*Sale* 21.—11,90,000 lbs. Good general demand, but prices tending easier half to one anna, except for medium fannings, which are stronger and dearer. Improved quality best liquoring As. 2 to As. 3 above valuations."

COTTON LOSES EARLIER GAINS

(From Our Own Correspondent)

BOMBAY, 14th October

It is difficult to understand why so much fuss is being made about the issue regarding the removal of distribution and movement controls. The Standing Committee of the Cotton Advisory Board has recommended such removal. But so far as demand for cotton goes, neither the trade nor the mills, nor the producers are likely to benefit from this move. This does not amount to saying that these superfluous controls, which are there only on paper, should not be removed. In actual practice they have been removed. What is implied is that any rise in the prices on this count is unjustifiable and would only result in bringing further reaction. What is really required to maintain stable prices during the season is not so much the removal of distribution and movement controls as the granting of the full quota for Indian cotton to the mills, so that buying on a more comprehensive scale, both quality and region-wise, might come into operation. The ways of Governments are indeed strange, because now, even when by its own estimate a crop of 42 lakh bales, which means an increase of nearly 7 lakh bales on last year's production, is assured, the authorities have still not issued full 100 per cent. quotas to the mills. Nobody knows what they are waiting for.

The improvement in prices both in the spot and the forward markets during the early part of the week under review was a result not really of expectations of removals of distribution and movement controls but of a persistent feeling in the market that Government would have to do something really constructive towards helping a greater offtake of cloth in the very near future. This alone can maintain the average consumption of about 3 lakh bales per month of Indian cotton by the mills. A total consumption of 36 lakh bales of Indian cotton itself is in question at present, because the *tempo* of cloth production cannot be maintained at the present level during the next 12 months, unless both exports and internal consumption of textiles are aided by the removal or reduction of export duties and excise duties respectively. In the absence of some such incentive, this consumption might even go below 35 lakh bales.

In view of this, the trade is bound to be disappointed over the week-end's announcement of merely allowing cloth manufactured for domestic consumption to be exported out of India and this might have a reactionary effect on the price level during this week. Such concessions are of little account and what is wanted is a real good stimulant for the textile markets. If nothing is done in this direction during the earlier part of the season by the Government, the pressure of stocks during the busy season is bound to operate heavily and prices in the cotton market must collapse.

In view of these gloomy prospects and the first all-India estimates of acreage showing a substantial increase over last year of 8.7 per cent., the morale in the market was really good. Support came from the spot market where both staple cotton and Bengals were in fair demand. There was even some demand for imported cotton barring new Egyptians, for which at present there is no inclination to buy, in view of the high prices ruling for Ashmouni and Giza. An increase of Rs. 10 to Rs. 15 in the spot market for varieties in demand of Indian cotton was reflected in the forward market by lifting the prices from about Rs. 610 to a little over Rs. 620, though a part of this had to be sacrificed even before the week-end. The U.K. has purchased a good quantity of Bengal and there are enquiries also from various centres on the Continent for this cotton, as a result of the comparatively smaller quota released for export than expected. The actual business, however, is not as good as the volume of enquiries would lead one to believe.

I.C.C. February started the week at Rs. 612-3 being the lowest for the week. On speculative support the contract rallied strength and moved up to touch a high of Rs. 621-8 on the 10th inst. At higher levels profit-taking appeared and the rate showed a tendency to decline. The down trend was accelerated by bear-selling and the contract closed lower at Rs. 613-4 to-day. I.C.C. May opened the week at Rs. 616. After moving up to Rs. 624-8 on the 10th inst. it reacted to close the week at Rs. 617-8.

	Opening	*High*	*Low*	*Closing*
I.C.C. Feb. ... Rs.	612-8	621-8	612-8	613-12
I.C.C. May ... „	616-0	624-8	616-0	617-8

The following are the latest available quotations from the Sewri market. Bengal *Deshi* Rs. 585, Berar *Jarillas* Rs. 680, Khandesh Rs. 770, Vijay Rs. 850, Oomra *Deshi* Rs. 580, and Mogiai Rs. 580.

At Karachi, the position has not improved in any way. While there is a partiality for U.S. styles of Pakistan amongst spinners in the U.K. and those on the Continent, no business is possible at present prices. Apart from the sale of about 10,000 bales to Japan already reported previously, Italy appears to be interested in old crop 4F cotton. Japan too is expected very soon to conclude a deal for 10,000 additional bales against a supply by it of steel. The textile industry in Japan has received authorisation for allocations of foreign exchange for purchase of cotton upto about 450,000 bales. But how much of these will come from Pakistanis is still doubtful, in view of the fact that the U.S.A. might give liberal supplies at favourable rates to the Japanese textile industry. The first official forecast at Karachi shows a 10 per cent. decrease in the area under cotton in West Punjab and an increase of 1.6 per cent. in American varieties. The following are the latest available quotations from Karachi:

Old crop: Sind *Deshi* Rs. 60; 4F Punjab R.G. Rs. 53; S.G. Rs. 57; L.S.S. Punjab R.G. Rs. 58; S.G. Rs. 62; 289F Punjab R.G. Rs. 62; S.G. Rs. 67. New crop: Punjab *Deshi* Rs. 54-8; 4F Punjab R.G. Rs. 55 to Rs. 56; S.G. Rs. 58-8 to Rs. 59-8; L.S.S. Punjab R.G. Rs. 59; S.G. Rs. 63; N.T. R.G. Rs. 61-4 to Rs. 61-12; S.G. Rs. 65-8 to Rs. 66; 289F Punjab R.G. Rs. 64 and S.G. Rs. 69.

Considering the world trend of cotton prices, the Alexandria market appears to be in a really enviable position. There is a good deal of excitement in the market in view of the Government's estimate being lower by nearly a million and a half cantars than the earlier market expectations. Ashmouni is in such short supply that the ruling premium is as much as 10 tallaries. France, Switzerland and the U.S.A. are active buyers and some of the shippers have suspended offers for Giza 30 and Uppers, while it is rumoured that the Cotton Commission might ban exports of Ashmouni of lower grade. Total sales till a week ago by the Cotton Commission came to 3,72,000 bales of which 2,05,000 bales were of Ashmouni and 85,000 bales of Giza 30, leaving a balance of 66,000 bales of Karnak.

At New York, the October Bureau report estimated a production of 15,596,000 bales showing an increase of 437,000 bales. Even though the market had expected this increase, the effect of this announcement was bearish to the extent of pushing prices far below the national loan average of 32.70 cents. The hedge sales are heavy and they are likely to continue to be so for some time. With prices receding fast not only the export demand but domestic enquiries also disappeared and speculative interest being at a low ebb, there was little support forthcoming for prices. Entries into loan till 25th September came to little below 4 lakh bales which so early in the season is unprecedented. More cotton is likely to move into loan as the authorities have allowed a fresh concession of accepting cotton stored into the open for loan purposes.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

ART SILK YARN EASY

(From Our Own Correspondent)

BOMBAY, 14th October

The art silk yarn market ruled generally steady early in the week on speculative enquiry and on reports of shortage of stocks with the mills. Consequently, the somewhat large arrivals did not disturb the steadiness of the market. But, subsequently, easiness set in, on selling pressure induced by reports that cotton cloth was being sold in auctions at lower prices. Weakness in cotton also had a deleterious effect on the morale of the operators. As a result, prices staged a sharp fall. The decline was assisted by fears of a possible reduction in the price of 150D art silk yarn of the National Rayon Corporation.

In the forward section, 150D October, which opened at Rs. 697, as against Rs. 702, shot up to a high of Rs. 712 on the 9th inst. At this level selling pressure ensued and, therefore, the rate gradually receded to Rs. 680, before closing at Rs. 682. 150D November changed hands at Rs. 686, as against Rs. 707. In the ready section, 120 Japan lost an anna to Rs. 3-15-6, and 150 Japan As. 2-6 to Rs. 3-13-6. 120 Italy eased from Rs. 3-14 to Rs. 3-13 and 150 Italy from Rs. 3-8-6 to Rs. 3-7. 150D of National Rayon Corporation was lower by As. 6 at Rs. 3-6.

The staple fibre yarn section which also ruled better early in the week depicted later a weak trend. Transactions done over the week were not much, as operators were not inclined to do business, in view of uncertainty about count and test-ness of 40 x 2 staple fibre yarn in the market. 40 x 2 October, which was enquired at Rs. 652, as against Rs. 648, shot up to Rs. 658 and then gradually eased to-day to close at Rs. 642. November delivery lost Rs. 10 to Rs. 623.

The table below gives the prices of art silk yarn and staple fibre yarn quoted to-day, as compared with those on the 7th inst. and 29th ultimo.

Art silk yarn	14-10-53 Rs. a.	7-10-53 Rs. a.	29-9-53 Rs. a.

GROUNDNUTS IMPROVE

(From Our Own Correspondent)

BOMBAY, 14th October

A disturbing development during the week under review was the judgment of the Bombay Civil Court declaring null and void the forward transactions in groundnuts under the provisions of the Oilseeds (Forward Contracts Prohibition) Order of 1943, setting aside thereby the award of the Bombay Oilseeds Exchange in favour of Messrs. Basantlal Banarsilal in a dispute between this party and Mr. Banslial Dagdulal of Dhulia. The Court's decision created nervousness among the operators who were in a similar position. There was, as a result, feverish covering up of commitments in groundnuts by these operators. Consequently, groundnuts under a wave of buying activity, groundnuts made marked headway. Rains in important groundnut growing centres, indicating delays in the movement of crop, also assisted the upward trend.

Among other sections, linseed improved in sympathy with groundnuts, as also on good demand from upcountry centres. The castorseeds section, however, ruled easy on reports of stagnant export enquiries. But *kardi* and *niger* seeds were quietly steady. On balance, while linseed recorded some gains, castorseeds revealed sizable losses.

In the groundnuts section, Bold F.A.Q. which opened at Rs. 39, as against Rs. 38, shot up to a high of Rs. 42, and then declined gradually to close at Rs. 40. December-January was done at Rs. 29-2, as against Rs. 28-6. Khandesh quality, however, eased by Re. 1 to close at Rs. 37. But, October and November deliveries were higher by As. 12 each to finish at Rs. 35 and Rs. 31-4, respectively. Groundnut oil ex-mill lost As. 8 to Rs. 22-12, while railway receipts gained As. 8 to Rs. 22. October-November and December deliveries were done at Rs. 19-4, Rs. 16-8 and Rs. 15-12, as against Rs. 18-12, Rs. 16-2 and Rs. 15-5, respectively. Groundnut oil was enquired at £120 per ton in bulk in the continent. But there is very little inclination on either side to commit itself, in the absence of export policy on which an announcement is expected shortly.

The linseed section was steadier. Bold ready improved from Rs. 24-8 to Rs. 25-4, before closing at Rs. 25. October-November delivery rallied As. 12 to Rs. 25 and February-March As. 2 to Rs. 22-10. Linseed oil ready gained As. 10 to Rs. 14. There was good demand for oil by varnish and paint manufacturers.

In the castorseeds section, May delivery which opened at Rs. 114-2, as against Rs. 114-8, fluctuated between Rs. 112-8 and Rs. 115-12, before closing at Rs. 113-12. F.A.Q. lost Re. 1 to Rs. 30, and Madras As. 12 to Rs. 32-4. Oil B.S.S. was enquired at Rs. 17-10, as against Rs. 18 and First Pressures at Rs. 17-4, as against Rs. 18. Commercial eased from Rs. 17-4 to Rs. 16-8. Commercial Oil is quoted in the Continent at £130 to £135, as against £172 at the same time last year.

Among other seeds, *kardi* Bold gathered As. 4 to Rs. 20-4. October-November delivery was quiet at Rs. 20-4. Niger F.A.Q. rallied As. 8 to Rs. 31-8.

The following table shows the prices of oilseeds and oil on the 14th inst. as compared with those at the end of the previous two weeks.

	14-10-53 Rs. a.	7-10-53 Rs. a.	29-9-53 Rs. a.

SUGAR FIRM

(From Our Own Correspondent)

BOMBAY, 14th October

The demand for sugar is very good, in view of the ensuing festive days and the quotations for spot sugar are firm with British refined ruling at Rs. 86-8. Mexican refined at Rs. 85-8 and Java refined at Rs. 91 to Rs. 94. The quotations for indigenous spot sugar are Rs. 89-8, Rs. 93 and Rs. 96 to Rs. 98 per bag for small, medium and large grain, respectively. The latest ex-mill rates in the Deccan are Rs. 89 per bag for small grain, Rs. 91 for medium and Rs. 93 for large grain. Forward trading remains officially suspended, but unofficial dealings are reported in *Ashto* delivery at Rs. 86-4 per bag of imported sugar and in *Kartik* delivery at Rs. 85-4 per bag. These rates indicate a clear margin of Rs. 3 per bag of imported sugar to tenderers of sugar per s.s. *Fiducia* and s.s. *Atlantico*.

Arrival of indigenous sugar into Bombay during the week amounted to 3,200 bags. Estimated ready stock of indigenous sugar is about 5,000 bags and that of imported sugar 7,500 tons.

Quotations for indigenous sugar in Southern India are looking up, as a result of reluctance on the part of millers to part with their sugar under the recent release at lower rates. They argue that the high ruling prices for imported sugar can hardly compete with their products in the local areas and that further ships indicated by the Food Ministry to reach Bombay Harbour at the end of this month may come in only after *Diwali*. They further argue that the unreleased quantities with them are now negligible and that they must maintain some stocks to meet the local demand, as their crushing would commence only by about the middle of December next.

Southern India, Gujerat, Kathiawar and Madhya Pradesh are, as is well known, deficit areas for sugar. Import programme for sugar was initially undertaken by the Food Ministry under the misapprehension that there was hoarding of sugar; but later the quantity to be imported was increased to two lakh tons on the distinct admission that consumption of sugar in the country had exceeded all earlier estimates and that the available supply within the country would not be sufficient to maintain a reserve of 300,000 tons. With a view to facilitating distribution of sugar in the deficit areas, foreign sugar was proposed to be unloaded at the ports of Bhavnagar, Bombay, Cochin, Madras and Calcutta. Imported sugar has now arrived at all these ports. Market quotations of imported sugar at these ports offer a significant indication of the success or otherwise of our import programme. The quantity imported into Cochin and Calcutta is subject to Government control both in regard to distribution and price, whereas in the ports of Bhavnagar, Bombay and Madras, dealings in imported sugar are free and unfettered. In Bhavnagar, the quotation for British refined sugar is Rs. 85-4 per bag of 2 cwts., in Madras the quotation for Java refined sugar is Rs. 89 per bag; in Bombay the rates are Rs. 86-8 for British refined sugar, Rs. 85-8 for Mexican refined sugar and Rs. 91 to Rs. 94 for Java refined sugar. Demand in all these ports is good.

The old routine practice of inviting tenders simultaneously with the loading of ships at the ports of loading still continues. It is rumoured that s.s. *Fiducia* is already on the high seas, but the s.s. *Atlantico* is still loading British refined sugar in the U.K. Rumours also indicate that, quantity-wise, allotment of British refined sugar to tenderers will be about 75 per cent. of their offers.

PEPPER STEADY

(Messrs. Parekh & Co.)

BOMBAY, 14th October

During the earlier part of the week, the pepper market at all primary centres improved after a drop of about Rs. 100 per candy, in sympathy with New York which is reported to have purchased a few parcels for shipment during October at prices from $1.08 down to $1.03. There was also a fair-sized enquiry for the nearby and distant afloats by the dealers at New York. Alleppey, after touching the lowest at Rs. 2,100, improve to Rs. 2,300. Price at Calicut was also lifted under pressure of buying by exporters from Rs. 2,350 to Rs. 2,500. In the later part, however, demand from New York petered out owing to holiday feeling in view of Columbus Day on the 12th inst. and, consequently, after tone was in evidence at all terminal markets. Business at Alleppey was reported done at prices ranging from Rs. 2,200 to Rs. 2,250. But, Bombay remained fairly steady, there being no selling pressure from shorts, as they were awaiting developments in the Korean and Yugoslavian affairs and in the matter of the export levy. There are sellers for October shipment at $1.01 while November and December shipments are nominally quoted at $0.97 and $0.91 respectively.

The growers at Alleppey are anxious sellers at round about Rs. 2,200, though they do not fail to raise their price by about Rs. 50 to Rs. 100 immediately they see that a couple of exporters are in the market against their sales to New York and the Continent.

Looking to the present trend of the market at New York, it appears that there will be no noticeable pick up in the demand from the source, unless the Government of India decided to reduce the present heavy duty on export of Malabar pepper, which works out to about 28 cents per lb. and it is too heavy to be absorbed by foreign consumers, looking to the present set-up of buyers' market in commodities all over the world.

Following are to-day's nominal quotations:—Ready Rs. 270-90 per cwt., and October Rs. 1,870-90, and December Rs. 1,610-30 per candy of 5½ cwts.

KIPS DECLINE

(From Our Own Correspondent)

MADRAS, 13th October

Arrivals of kips have been on a moderate scale, and clearance was good. Owing to price resistance of the U.K. importers, there has been a decline in prices in the local market by As. 1 per lb. The U.K. buyers have taken a few bales of lights at 55, 50 and 42 pence, mediums 43, 39 and 35 pence and heavies 39, 36, and 33 pence for ordinary marks and paid one to two pence more for better marks. The demand for tanned cow calf, buff calf and buff heavies has been poor. The Shoe and Leather Fair did not help the booking or orders for kips, and was as disappointing as it was last year.

In the tanned skins section, there has been no change in prices. Owing to heavy shipments of living sheep to Japan arrivals of sheep met with excellent clearance at firm prices. Shipments during September to the U.K. were:—3,688 bales tanned cow, 261 cow calf, 191 buffs, 125 buff calf, 838 tanned goat and 601 tanned sheep; to the continent 280 tanned goat, 25 tanned sheep; to the U.S. 123 tanned cow, 2 cow calf, 116 buffs and 25 buff calf, 65 tanned goat, 6 tanned sheep and 199 drysalted goat skins and to Japan 5 bales tanned goat and 320 tanned sheep.

DOWNTREND IN WHEAT ARRESTED

(From Our Own Correspondent)

HAPUR, 12th October

The overall food position in the country remained unchanged. The Union Deputy Food Minister has expressed the hope that a number of deficit States would be self-sufficient in food this year, while major deficit States would reduce their deficiency to a great extent, as a result of good rainfall. The prospects of the standing paddy and millet crops in all States were very bright, he said. With the arrival of grain from the new harvest, prices in the open markets were bound to come down.

The Deputy Food Minister said India's decision to cut imports had had a considerable effect on world wheat and rice prices, since India had been the biggest buyer of rice and the second biggest buyer of wheat in the world. The carry-over of foodgrains by the end of this year compared favourably with that of last year. Stocks with the Government were adequate.

Reviewing the food situation this year, the Minister said that the overall acreage of cereals during the 1952-53 crop year reached a new record of 200 million. Total production was five million tons more than last year and was the highest since partition. For rice, maize and barley production had been an all-time record. He said imports of foodgrains had been greatly reduced. "We have imported this year only two million tons of foodgrains against 3.9 million tons in 1952 and 4.7 million tons in 1951. The internal supplies position of rice has shown a marked improvement. Wheat had been decontrolled in all the major wheat-growing areas like Punjab; U.P; P.E.P.S.U. and the price to-day, at the end of the season, was much lower than the price in Government depots.
