Cotton circles are rather disappointed at the Government of India's decision not to lower export duty on non-*Deshi* varieties of cotton. The disappointment is on the score that the present rate of duty is very high vis-a-vis world prices and this has rendered it extremely difficult to export these varieties. Traders are also disappointed at the decision of the Government not to grant an additional quota for export of Bengal cotton, for which there is reported to be good overseas demand. Satisfaction is, however, expressed at the proposal to relax cotton control and to do away with zonal allocations of cotton, except in the deficit areas in the South. The proposal to increase the mills' individual quota by 20 per cent., as compared with that of last year, has not evoked any interest among traders, since these quotas are considered to be only permissive and not necessarily always a target.

The sentiment of the Karachi cotton market is reported to have somewhat improved. Business in new crop has been done with Hongkong, the U.K. and the Continent. The Continent has also purchased old crop 4F, LSS and 289F. The remnants of old crop are available about Rs. 3 per maund lower than the new crop prices. The Government of Pakistan has classified the position in respect of the fixation of minimum export floor prices for new crop. These prices, it is made clear, do not apply to the 1952-53 crop cotton, the quantity of which still lying unsold being 40,000 bales. A decision to set up a Lancashire-Pakistan Cotton Committee, with a view to popularising the use of Pakistan cotton by British spinners, is understood to have been taken by the Manchester Cotton Board. The latest available quotation for the Karachi market are: New crop: Sind *Deshi* Rs. 61; Punjab *Deshi* Rs. 58; 4F Punjab R.G. Rs. 58 to Rs. 59; S.G. Rs. 62 to Rs. 63; L.S.S. Punjab R.G. Rs. 62; S.G. Rs. 66-4; N.T. R.G. Rs. 63-8 to Rs. 64-8; S.G. Rs. 68-4 to Rs. 69-4; 289F Punjab R.G. Rs. 64 to Rs. 66; S.G. Rs. 69 to Rs. 71.

Quiet conditions prevailed in the Alexandria market during the week under review. Owing to scarcity of supplies of spot cotton, particularly in Ashmouni/Zagora, high prices are being quoted. Overseas demand has, therefore, slackened considerably. Moderate business is, however, reported with France, Italy, the U.S. and Japan, the purchases being confined mainly to medium grade Karnak and Giza 30. Japanese spinners are reported to have completed purchase of 20,000 bales of Egyptian cotton against payment in dollars. Rumours regarding the reopening of the Alexandria cotton market, which has remained closed since November, 1952, have been laid at rest by the reported decision of the Egyptian Government not to reopen the market. For the Government seems to feel that the present method of marketing the cotton "has successfully created long-needed conditions of stability and confidence in Egypt's economy." The cotton crop of the 1953-54 season is expected to be 800,000 bales, according to the first official estimate. The estimate for Karnak is less than half of that in the previous season, while the estimate for Giza 30 is placed higher. The lower outturn of Karnak variety is due partly to a drastic reduction in acreage and partly to lower yield per acre.

After an initial setback, following larger crop ideas and expectation of an increase in the 1954 cotton acreage allotments by the U.S. Congress, the New York futures market put on a cheerful note during the subsequent sessions. This was the result of mill buying and short covering induced by reports of an increase in latest loan entries. Prices, as a consequence, moved up. Not only the previous losses were fully recovered, but the closing quotations yesterday were above those eight days ago. The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

(In cents per lb.)

	10-11-53	2-11-53	27-10-53
Spot	33.70	33.50	33.65
December	33.03	32.84	32.97
March	33.42	33.25	33.41
May	33.62	33.45	33.71
July	33.41	33.27	33.69

The exceptionally favourable autumn weather has led cotton circles to believe that the current season's crop will be higher than this month's estimate of 16,093,000 bales. Current ideas of the crop are around 16,250,000 to 16,500,000 bales. The cotton growers in the U.S. are expected to favour the system of marketing quota and acreage allotment generally at the referendum to be held next month. When the U.S. Congress will reconvene in January, 1954, several members, it is considered likely, will press for a revision in the present law and urge for a minimum acreage of 21 to 22 million acres. Whether or not this plea will find favour with the Government remains to be seen. This much, however, is said to be certain, that there will be an upward revision in acreage allotments. The U.S. Agriculture Department spokesmen have discounted all rumours regarding the possibility of a grant of subsidy to cotton exports "this season," although they point out that the Secretary of Agriculture "could be forced into changing his mind about cotton subsidies by Congress."

STAPLE FIBRE YARN SHOOTS UP

(From Our Own Correspondent)

BOMBAY, 11*th November*

The highlight in the art silk yarn market was provided this week by the short staple fibre section. Under hectic short covering, induced by scarcity of floating stocks, staple fibre yarn values forged ahead this week. There was keen anxiety on the part of traders to cover sales in November contract, as the Yarn Merchants' Association, Bombay, withheld permission to commence forward trading in December contract, thanks to shortage of supplies. The price of staple fibre yarn 40 x 2 November contract, which was Rs. 675 last week, shot up to Rs. 706 to-day, the highest level touched since 3rd August, 1953. The Managing Committee of the Association will be meeting to-morrow to consider the question of allowing forward trading in December and January contracts.

Following highly encouraging advices from the staple fibre section, the art silk yarn market presented fully steady conditions. Limited arrivals of yarn and good demand in the ready section, as a result of improvement in the demand for rayon fabrics, were other helpful factors. Consequently, art silk yarn rallied modest gains. Thus, in the forward section, 150D November delivery advanced by Rs. 4 to Rs. 707. December contract gained a like amount to Rs. 708. Prices of yarn in the ready section were fully maintained. 150 Italy was higher by half an anna at Rs. 3-9. 120 Japan, 150 Japan and 120 Italy were all steady at Rs. 4-2, Rs. 4 and Rs. 3-14, respectively.

Moorat transactions on Friday were no more than a dull affair with quotations moving within narrow limits. Buyers were disposed to wait and watch further developments. November delivery was quoted at Rs. 706.

The table below gives the prices of art silk yarn and staple fibre yarn quoted to-day, as compared with those on the 3rd inst. and 28th October, 1953:

Art silk yarn	11-11-53 Rs. a.	3-11-53 Rs. a.	28-10-53 Rs. a.
150D November (per case of 200 lbs.)	707 0	705 0	703 0
150 December(.. .. ..)	708 0	708 0	—
120 Japan (per lb.)	4 2	4 2	4 2
150 Japan	4 0	4 0	4 0
120 Italy	3 14	3 14	3 14
150 Italy	3 9	3 8½	3 8
Staple fibre yarn			
2/40s November (per case of 200 lbs.)	704 0	675 0	664 0

GROUNDNUTS EASIER

(From Our Own Correspondent)

BOMBAY, 11*th November*

The oilseeds market presented a mixed trend during the week under review. Last week's easiness in groundnuts gathered further momentum on increased arrivals at the various terminal markets. Prices, therefore, recorded further falls. The castorseeds section moved irregularly on bouts of buying and selling, under the influence of conflicting rumours regarding changes in export policy for oilseeds. But the trend was generally downward with closing quotations revealing substantial losses. The linseed section, however, ruled slightly better on scarcity of floating stocks and on reports of business done with Australia in linseed oil.

The *moorat session* this year proved to be a dull affair and purely ceremonial. Trading was bereft of any development worth mentioning. The undertone was generally easy and traders were reluctant to enter into large commitments on the auspicious day. Castor May which opened at Rs. 114-8½, fluctuated between Rs. 114-10½ and Rs. 112-8½, before closing at Rs. 112-10½. Madras variety was down by As. 8 at Rs. 28-8. Groundnuts Bold December-January was done at Rs. 27-4. Linseed Bold February-March delivery was, however, higher by As. 3½ at Rs. 20-11½.

Sectionwise, the groundnuts ruled easy. Bold December-January fell from Rs. 27 to Rs. 26-12. Khandesh quality eased from Rs. 33 to Rs. 30 and November delivery from Rs. 29 to Rs. 28-12. Groundnut oil ex-mill was done at Rs. 16-14 as against Rs. 18 and railway receipts at Rs. 16-2 as against Rs. 17-8. Groundnut oil November delivery lost As. 4 to Rs. 15-5 and December delivery As. 5 to Rs. 14-5. Groundnut oil was quoted at £125 per ton on the Continent.

There was a mild tussle between bulls and bears in castor futures. May delivery which opened at Rs. 113, as against Rs. 112, fluctuated between Rs. 114-8 and Rs. 106-12, before closing at Rs. 109-4. Among spots, Madras quality lost Re. 1-8 to Rs. 26-8 and F.A.Q. As. 12 to Rs. 26-12. Castoroil B.S.S. was done at Rs. 16-14, as against Rs. 17 and First Pressure at Rs. 15-14 as against Rs. 16. Commercials, however, were done steady at Rs. 15-2.

In the linseed section, Bold ready shot up from Rs. 24 to Rs. 25. Bold October-November gathered Re. 1-4 to Rs. 25. February-March improved from Rs. 20-4 to Rs. 21-4. Linseed oil ready, however, lost As. 2 to Rs. 13-14.

Among others, *kardi* ready Bold gained As. 8 to Rs. 21-8 and October-November delivery As. 10 to Rs. 21-4. *Niger* F.A.Q. was quiet at Rs. 33. December-January delivery gained As. 4 to Rs. 26.

The following table shows the prices of oilseeds and oil on the 11th inst. as compared with those at the end of the previous two weeks.

	11-11-53 Rs. a.	3-11-53 Rs. a.	28-10-53 Rs. a.
Groundnuts—			
Khandesh Ready New ..	30 0	32 0	36 8
Bold December-January ..	26 12	27 0	28 2

Ex-mill Ready (per quarter).	16 4	18 0	19 5
Castor Oil—			
Commercial (per quarter)..	15 2	15 0	15 12

SUGAR FIRM

(From Our Own Correspondent)

BOMBAY, 11*th November*

The undertone of the Bombay sugar market continued to be firm during the week under review, despite larger arrivals of indigenous sugar and imports of 7,600 tons of British refined sugar per s.s. *Atlantico*. The firmness was chiefly due to heavy offtake during the *Diwali* holidays; the offtake was so heavy that the recent release of 21,000 tons of sugar was cleared off in no time. The other bullish factors were further depletion of stocks in the interior markets, rumours of an upward revision in the prices of imported sugar and cancellation of tenders for sugar per s.s. *Luciano*, the ship being diverted to Madras. To add to these, the scheduled dates of the arrivals of several ships bringing sugar from abroad had, once again, proved incorrect. Thus, the s.s. *Atlantico*, which was to have arrived on the 1st inst., arrived only on the 7th. Similarly, the arrival dates of the s.s. *Cyclops* and the s.s. *Fiducia* are now said to be 20th and 23rd inst., respectively, instead of on the 17th inst., as was originally expected.

In the ready section, British refined sugar and Mexican sugar were quoted higher at Rs. 87-4 and Rs. 88-8 per bag of two cwts. respectively. Prices of spot indigenous sugar (per maund) were well maintained at Rs. 92 for small grain, Rs. 94 for medium grain and Rs. 97 to Rs. 98 for large grain. There was considerable speculative activity in the forward section, the private trading quotations for *Kartik* and *Magshar* deliveries being Rs. 86-8 and Rs. 86-12 per bag, respectively.

There is a rumour in the market that the Government of India may raise the selling price of imported sugar. This move is believed to be a sequel to the reported protest of the Indian Sugar Mills Association, Calcutta, against the decision of the Union Food Ministry to sell imported sugar at Rs. 30 per maund ex-docks. The decision, the Association is said to have pointed out, constitutes a breach of word given by the Food Ministry to the millers that the imported sugar would not be sold at a price which would unreasonably compete with indigenous sugar. The points raised by the Association may be summed up thus: On the basis of a fair price of indigenous sugar, namely, Rs. 27 per maund ex-mill, plus expenses in the form of railway freight, town duty, sales tax and clearing charges, amounting to Rs. 4 per maund, the price of sugar in Bombay works out to Rs. 31. Since the Government sales of sugar (at Rs. 30 per maund) are exempted from sales tax and town duty, imported sugar should not be made available at a price less than Rs. 31 per maund, especially in view of the fact that even the most optimistic estimate of the current (1953-54) season's output is placed at not more than 1.25 million tons. Obviously, therefore, any factor which militates against an incentive to expanding production must be eliminated.

PEPPER BEARISH

(Messrs. Parekh & Co.)

BOMBAY, 11*th November*

During the earlier part of the week, following a fresh buying support, a mild rally in black pepper at all terminal markets was witnessed, but it proved short-lived and prices at Alleppey once again broke down to Rs. 1,650. This was Rs. 250 lower than the bottom touched last year and the lowest on record for the past five years. In the later part of the week, however, some of the bulls tried to rig up prices by buying small quantities up to Rs. 1,850. But no sooner the buyers withdrew than the prices again slipped down, and at the time of writing the growers at Alleppey are reported to be anxious sellers at Rs. 1,700. Such a state of affairs is reported due to selling pressure of loaned pepper and also of new arrivals which are increasing in quantity and improving in quality day by day. The undertone of the market continues to be bearish on expectation of a larger new crop and slacking enquiries from the U.S., where buyers are reported to be holding off in anticipation of still lower prices at the time of the movement of the new crop on the market. Export of black pepper from November, 1952, to October, 1953, is estimated to be about 10,600 tons against the total export of 12,800 tons during 1951-52. Such short-fall in our export is reported to be due to competition of Sarawak and Lampong, as there is no export duty in Sarawak and only 15 per cent. export duty is levied by the Indonesian Government while Malabar pepper has to bear an export levy of 50 per cent. *ad valorem* with ceiling of Rs. 150 per cwt.

In the A.S.T.A. section, during *Moorat* December and January-February-March shipments improved to $0.83 and $0.79 respectively under pressure of short covering and on buying from the bulls. But in the absence of any encouraging support from the U.S., prices sagged down to $0.80 for December and $0.78 for January-February-March. In the specific delivery section prices after touching the highest of Rs. 1,480 and Rs. 1,380 for December and February deliveries dipped down to Rs. 1,420 and Rs. 1,330 respectively. At the time of writing, there was, however, some reactionery improvement in this section, particularly owing to paucity of sellers. December is nominally quoted at Rs. 1,440, while February is offered at Rs. 1,360.

Following are to-day's nominal quotations:—Ready delivery Rs. 240-50 per cwt., December Rs. 1,430-50 and February Rs. 1,360-80 per candy of 5½ cwts.

JUTE GOODS STEADY

(From Our Own Correspondent)

CALCUTTA, 10*th November*

The week under review recorded steady conditions in all sections of the market. A fair amount of business saw further additions to the prices of raw jute as well as those of jute manufactures. Ready hessian has reached a tight supply position, and mills were reserved sellers for all constructions for delivery positions up to June next. Little regard was given to reports that buyers overseas were not prepared to follow the increase in prices, as Indian quotations were considered competitive, as compared to the prices of Continental producers. Since demand for jute goods has now become strong, mills are paying more attention to the production of hessians and sackings. With the result, supplies of specialities, which carry no export duties, have become difficult to be located, and business can be put through for ready as well as forward deliveries only at handsome premiums. Although the steadier trend in sacking derived support from the hessian section, enquiries were considered satisfactory.

The jute goods market opened last Tuesday on an easy note, and business put through was insignificant. Mills were reserved, and therefore, prices did not decline appreciably. Thus ready hessians 40" 10 oz. were quoted at Rs. 46-2 and B. twills Rs. 99. Steadiness returned to the market on Wednesday, when, after a weak start, bulls again became active. Ready hessians were keenly sought after, and 40" 10 oz. advanced to Rs. 46-14. Similarly, B. twills were in good demand and improved to Rs. 100-8 with the January-March position touching Rs. 100-14. Thursday was a holiday on account of *Kali Poojah*, and on Friday some deals were reported done on behalf of Great Britain and the United States. Being *Diwali* day, mills also put through some "lucky day" deals on that day. B. twills were therefore raised to Rs. 101 and 40" 10 oz. hessians to Rs. 48. The desire of mills to sell more and more checked advances. On Saturday, however, conditions were easier; but in the absence of business, mills preferred to keep out of the market. This factor maintained the rate for 40" 10 oz. hessians at Rs. 48, while B. twills moved down to Rs. 101-2. Yesterday also, prices fluctuations were narrow, with B. twills closing at Rs. 100-8 and hessian at Rs. 47-10.

The steady conditions in the goods market were duly reflected in raw jute prices, which this week registered substantial gains. Mills wanted to purchase as much as possible and stockists were reserved in the hope of obtaining still higher prices. Arrivals of new crop from mofussil centres to local bazars were limited. It is thought that since paddy harvesting has commenced, the grower's need for cash is less now, and that they can continue holding the remainder of the crop with them for some more time to come. Northern middles gained to Rs. 30-8 from Rs. 29-8. Dhubri bottoms met with business at Rs. 27-8, and middles Rs. 30-8. Daisee middles and bottoms realised rates up to Rs. 30 and Rs. 29 respectively. Cut *mesta* bottoms changed hands at Rs. 27, and middles Rs. 30. Pakistani jat bottoms realised Rs. 31-8 and Bimbli f.a.q. touched Rs. 25, as against Rs. 23 previously. Other latest quotations are: Murshidabad bottoms Rs. 25-8, and middles Rs. 28-8. Jungli bottoms Rs. 23-8 and middles Rs. 26-8, Pakistani northern bottoms Rs. 33 and middles Rs. 29-8, and Assam tossa bottoms Rs. 28-8.

CONTROLS ON WHEAT AND COARSE GRAINS ABOLISHED

(From Our Own Correspondent)

HAPUR, 9*th November*

The Food and Agriculture Ministry has given to the traders and the consumers the most coveted *Diwali* gift—abolition of all controls on wheat and coarse grains. This decision is a sequel to the improvement in the food position in the country. The inter-State barriers will, however, continue to operate. The year 1952-53 was very favourable in regard to agricultural production in the country, especially in respect of foodgrains. The total production of cereals during the year was nearly 5 million tons higher than that in 1951-52 and about 1.6 million tons higher than in 1949-50, which was more or less a normal year from the point of view of agriculture in recent years. The increase of 5 million tons, as compared to the previous year, is shared by rice, wheat and other cereals (mainly millets), the extent of increase being 2.7 million tons, 700,000 tons and 1.6 million tons, respectively.

STOCK & SHARE QUOTATIONS

Abbreviations:—D=Deferred shares. P.O.=Preferred Ordinary shares. Y=Accounts published yearly. H=Accounts published half-yearly. P=Company has Preference shares. T=Company has Debentures. N=Nominal quotation. x.d.=Ex-Dividend. c.d.=Cum. Dividend. i=Interim Dividend. f=Dividend for first half of the year.

Shares:—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery, and all other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends.—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year, they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly, dividends shown are for their financial year. Where, however, the accounts are closed half-yearly, dividends are shown separately for the respective half-years.

* Including bonus. a Sales and amount written off. (b) Investments. ‡ For 10 months ended 31st December 1951.

(1) Made up of an interim dividend of Re. 1-12 per share on 1,20,000 shares and final dividend of Re. 1-10 per share on 2,40,000 shares of which 1,20,000 shares are bonus shares.

* The following explanatory notes relate to the abbreviations and marks shown on page 936 in the debentures section:—

B Option to repay on six months' notice, on any interest date after 31st December, 1951, at 102 per cent. Also redeemable out of a cumulative sinking fund of 1½ per cent. per annum (commencing in 1938) by drawings at 102 per cent. or by purchase at or 102 per cent.

(a) Option of repayment at any time at 3 per cent. premium.

(b) Bearer bonds of Rs. 1,000 each repayable at par.

(c) Bearer bonds of Rs. 1,000 each repayable on 31st July, 1959.

(d) Bearer bonds of Rs. 1,000 each with option of redemption in whole for in part at par on 30th June, 1952 or on any subsequent interest date at one month's notice.

(e) Returnable on or after 31st July, 1950, at Rs. 102-8 or at par after 31st July, 1955 on six months' notice in each case.

(f) Bearer bonds of Rs. 1,000 each with option of redeeming on 3 months' notice at ¼ per cent. premium after 1st March, 1954, but before 1st March, 1957, and 1 per cent. premium on or after 1st March 1957.

(g) Option of redemption on or after 1st July, 1949, at par.

(h) Option of repayment at any time at par at any time on or after 30th June 1947 on six months' notice.

MARKET GOSSIP

(Concluded from page 891)

Electricity (Supply) Act. But this does not in any way remove the uncertainty, for "exactly what does or does not constitute an inconsistency is not always easy to say." It would appear that the Federation has now referred the question to a senior council and that, after the completion of such examination, it would decide its attitude towards the Bill.

• • • •

The State Government's failure to constitute statutory Electricity Boards is yet another obstacle to the expansion of the industry. Mr. Milne said that one particularly "compelling" instance of the need for the early constitution of State Electricity Boards is to be seen in Bombay where "wrangling and indecision" continue rife over the expansion of power in the Bombay City region. A State Electricity Board, as Mr. Milne suggested, would have settled the question by now. He was obviously referring to the controversy between the Tata Group of Hydro-electric Companies and the Bombay Government over the size of the thermal plant at Trombay. This controversy has dragged on for a long time now, the Government contending that it could allow only a 50 M.W. plant and the Companies asking for permission to erect two plants of 50 M.W. each, which would be an economic proposition. In this connection, we learn that there is no truth in the report, appearing in some sections of the Press, that the Government has yielded to the demand for two plants of 50 M.W. each. It would appear that the position remains the same as it was before. The Directors of the Tata Group of Companies have summed up the position in their latest report and accounts, wherein they observe that the Government has approved the installation of only one set (50 M.W. set), as it felt that the "Koyna hydro-electric power could be brought into the Bombay area well before 1960 and further that the estimates of demand for additional power would not be fulfilled."

• • • •

It will be recalled that General Motors India Ltd. had definitely expressed itself against undertaking the manufacture of cars in India and had reconciled itself to the prospect of closing down its plant in India. In fact, this Company has been retrenching its staff at a heavy cost. Now a report has appeared in a section of the Press that the Company has changed its mind and that it has sought or is about to seek the permission of the Government of India to launch on a scheme of manufacture of motor vehicles for catering to the neighbouring export markets. The same section of the Press also observes that Ford Motors which, too, had not submitted a programme for manufacturing cars and had decided to confine themselves to assembling vehicles as long as they were allowed to do so by the Government, have also changed their mind and propose to make cars. Another report credits this Company with a plan to establish an automobile producing plant in collaboration with Indian capital on a 50:50 basis. Our information is that both these reports are incorrect. We are told that neither General Motors nor Ford Motors have changed their mind. In fact, whatever remote chances there were of the Ford Motors taking up the manufacture of cars have completely gone, following the statement, made by the Commerce and Industry Minister some time ago, that, in view of the strategic and national importance of the automobile industry, the Government might have to take over the industry from the hands of private enterprise, if it did not deliver the goods within a reasonable time. There is, however, some truth in the report that the other three foreign automobile units, which have from the beginning been keen on the manufacturing programme, might pool their resources, or at least work out a co-ordinated production programme for the mutual benefit of all the three participants. It is true that even this report has been denied by one of the concerned firms. But it is believed that the move is still there, though it is too early to say what shape it will take, or when it will be put into effect.

• • • •

With commendable speed and solicitude for the travelling public, the Central Railway Administration has announced the provision of a new facility for the Bombay-Manmad-Dhond passengers. A through bogie service between Bombay and Dhond via Manmad will, it is stated, form part of the Bombay-Nagpur Express leaving Victoria Terminus at 9 p.m. The bogie, which will have II and III class accommodation, will be connected to the Manmad-Dhond Passenger. A similar bogie will run between Dhond and Bombay via Manmad. This was the suggestion which, as readers will recall, we made when we wrote on this subject in our issue dated 24th October last. We are gratified to find that the Central Railway has so promptly appreciated the usefulness of our suggestion and implemented it.

• • • •

The new arrangement enables passengers between Bombay and the centres along the Dhond-Manmad line to travel in comfort without the excruciating agony of a transhipment at Manmad in the dead of night. The Central Railway has thus earned the lasting goodwill of all travellers in this region. We have reasons to believe that the service will become extremely popular in course of time, not only because the Dhond-Manmad region is a rapidly growing industrial centre but it contains some important centres of pilgrimage. Only, it is to be hoped that the value and utility of this arrangement will not be judged from the quantum of traffic in any particular part of the year but treated as a service to the travellers to a region which even now contributes substantial revenue to the railways by way of freight on the sugar it exports and the raw materials and stores, it imports.

It is reliably learned that the Select Committee of the Bombay Legislative Assembly, which examined the Bill to amend the Sales Tax Act, has completed its task and that it will present its report to the Government most probably on the 17th inst. The Bill, as is well known, seeks to convert the present system of multi-point sales tax into a two-point system. It would appear that all the members of the Committee, excepting one, have voted in favour of the two-point tax. It is further learnt that there will be a special session of the Legislative Assembly in December to consider the Bill.

INDEPENDENT INDIA'S FIRST CENSUS REPORT

(Concluded from page 914)

ing assumption—continued availability of food supply at undiminished rates of consumption along with unchecked growth of population—is unlikely to hold good for as long as thirty years. This conclusion is reached after taking full account of the technological possibilities of development of agricultural productivity.

"Thirdly, the experience of 1943 gives warning of the possibility that growing food shortage might lead to a breakdown of the distribution of food supply and thus open the way to a return of those 'natural' checks to population growth which were in operation during the thirty years preceding 1921. This possibility, however, is unlikely to be permitted to materialise. The system of planned 'State trading' in foodgrains, developed during the last decade, is now well established. So long as we hold fast to it, there is a guarantee that food shortage will be kept under control and prevented from developing into a breakdown of food supply. Sufficient time will, therefore, be available for wise planning and efficient execution of measures designed to overcome food shortage permanently.

"Fourthly, it is possible to overcome food shortage permanently, by taking suitable measures over an extended period of about fifteen years. For this purpose, development of agricultural productivity on an even larger scale than that undertaken in the First Five-year Plan will be necessary, but it will not be sufficient. Effective steps should be taken concurrently to limit births to approximate parity with deaths and thereby achieve a substantially stationary population.

"Fifthly, births will get limited to approximate parity with deaths, if what has been described as 'improvident maternity' is avoided by all or most married couples. ('Improvident maternity' consists of all births occurring to mothers who have already had three or more children, when at least one of them is alive.)

"Sixthly, a combined approach to the solution of our problem calls for the following targets:

(i) Increase of agricultural productivity from the present level of approximately 700 lakhs of annual tons to about 940 lakhs of annual tons; (ii) Reduction of improvident maternity from over 40 per cent. (its incidence at present) to under 5 per cent.

If these two targets are accorded equal priority and ranked higher than all other development targets, they can be attained before population increases beyond 45 crores—our total number will then become substantially stationary round about 45 crores.

"Seventhly, the attainment of the target of reduction of improvident maternity will necessitate the prior creation and permanent maintenance of a nation-wide organisation of maternity and child welfare services. This is difficult, but feasible and essential."

MARKET REPORTS

(Concluded from page 925)

The Rajasthan Government has, with immediate effect, stopped the realisation of levy on wheat and barley. It also removed the restriction on the inter-district movement of wheat and barley. The 40 per cent. levy on export of gram too has been abolished. There will now be no restriction on the movement of foodgrains within the State.

The Andhra Government is expected to request the Centre for a revision of the present food policy. The authorities recently expressed the view that the future food policy should aim at "further decontrol." The Government has decided to export 16,000 tons of rice and 5,000 tons of paddy to Travancore-Cochin from the surplus stocks in the State.

Foodgrain markets in Uttar Pradesh remained quiet with very satisfactory overall food position in the State, heavy wheat reserve stocks with the State Government and flowing supplies of *kharif* grains to the markets. Stockists are also inclined to reduce their possession in apprehension of substantial fall in prices. The panicky trade demand for wheat and gram from the eastern districts has subsided and prices are steadily on a downward curve: Hapur quotations (per maund) are: Wheat Rs. 15-8 to Rs. 17; gram Rs. 13 to Rs. 15; barley Rs. 11-10; *bejhar* Rs. 11-8; *bajra* Rs. 11-8; *jowar* Rs. 11; *gwar* Rs. 10-8; rice Rs. 29 to Rs. 19-8; peas green Rs. 13, white Rs. 14 to Rs. 16-8; *arhar* Rs. 12-8; *urd* Rs. 19-8; *moong* Rs. 18 and *masoor* Rs. 15.

SUGAR PRICES ADVANCE

(From Our Own Correspondent)

VOL. LXXXVII. No. 2232 BOMBAY, 21 NOVEMBER, 1953 PRICE Rs. 1/8

PREMIUM ON FREE GOLD DISAPPEARS

AN important development of the week in the world financial markets which deserves some prominent notice is the complete disappearance of the premium in the free market price of gold. There are several free markets for gold in the world and the rates in each one of them vary rather widely, depending upon a number of factors such as the ready availability of the metal, restrictions on deals and movement of gold by the Governments of the countries concerned, the volume of demand, and the black market price of dollars, the currency in which free gold has to be paid for by the dealers. But the most representative rate for free gold is indicated by the quotations in the leading Continental markets expressed in terms of U.S. currency. On Wednesday this week, this rate touched $35 per fine ounce, which is the rate at which the U.S. buys or sells gold in exchange for dollars. Thus, for the first time in the post-war period, if not since the War, free gold has come to be quoted at par with the official price. This is a significant trend, in that it is one of the most convincing indications of the world's return to normality.

It will be interesting to recall here the trend of prices of free gold in recent years. This will show the magnitude of depreciation in the value of this precious metal which is regarded as the best store of value in times of inflation and political uncertainties. In most countries of the world, especially in Europe, the hoarding of gold in the form of bullion is illegal and private transactions are not allowed. The International Monetary Fund, when it was formed, set its seal of approval to this and the central banks of those countries which are its members are not permitted, under its rules, to deal in gold at premium rates or to encourage free markets by participating in it either as a buyer or a seller. In short, the I.M.F. frowns at the hoarding of gold. As a result of all this, gold is a severely controlled commodity even in a country like the U.S. where the free market economy dominates official policies. And like all controlled commodities, gold, too, has been having a black market, fetching a substantial premium in the past few years.

The premium varied from time to time, depending on the people's reactions to currency inflation, their fear of war and the trend of illegal gains which were mostly held in gold with a view to shielding them from tax collectors. It also varied from market to market. A high price of $69 per fine ounce was recorded in Hongkong in May, 1949, when in other parts of the world, it stood at about $55. Later, the rates declined. A low of $37 was recorded in Hongkong a few weeks before the Korean war. In Europe, free gold was then being quoted at $38 per ounce. During the period of extreme alarm and tension which followed the outbreak of the Korean war, the hoarders were once again prepared to pay fantastic prices for free gold. Early in January, 1951, for instance, free gold was quoted in Paris at approximately $47, an increase of $9 over the level prevailing in May, 1950. Even in New York, the price was as high as $45. The dollar equivalent of the highest price touched in Bombay in 1951 was $65, though, in the summer of 1950 before the Korean war, it had touched a high of $67 per ounce.

After the Korean war boom was over and European production of goods had recovered, the free market price of gold moved within a relatively narrow range. The highest and the lowest levels in 1951-52 (April to March) were $41.76 and $39.24, respectively. In the following year, 1952-53, the range of fluctuation was even less but at a lower level. Thus, the highest and the lowest levels witnessed in that year were $38.60 and $38.22. It was only in the autumn of this year that the real break in prices began. After a gradual recession in September and in the first half of October, the downward trend gathered momentum in the latter half of last month. Just before the close of that month, the free market price in Europe pierced the $36-limit for the first time in post-war years. This trend continued further in the current month, until the floor of $35 was touched during mid-week. A further fall is unlikely, for at this price the central banks in Europe will buy all gold that is offered to them in order to replenish their monetary reserves.

The premium for free gold in the other markets of the world has also virtually disappeared. At Tangier in the Middle East, it is only 5 cents over the official parity of $35 per fine ounce. In Beirut, another active centre in the Middle East, it is no more than 20 cents. In the domestic market in Paris also, the premium is less than 50 cents, while in Zurich, it is mere 10 cents. In the Far East, however, the premium is still perceptibly high, ranging between $1.95 and $2.58 per ounce, but not as high as it used to be in the past. The latest rates in Macao, Hongkong and Bangkok are $36.95, $37.09 and $37.58 per ounce, respectively. The relatively high premia in these centres, as compared with those in the European and Middle East markets, are the result of the long distance over which the yellow metal has to be hauled and higher handling charges, evidently because of the feeling of insecurity that prevails in these areas. It is only in Bombay that the price of gold is still markedly above the world parity, the current quotation being the equivalent of $45.67 per ounce, at the official rate of exchange. But this has always been so, because, unlike the other free markets of the world, gold cannot easily reach this country. Imports into India are officially forbidden and supplies have to be smuggled in. In recent months, smuggling into this country is said to have been a little more hazardous than before owing to the vigilance of the Customs authorities. The real reason for the fall in the unauthorised arrivals of gold, however, is that, at the current market prices, the profit-margin for the smugglers is next to nothing. Payment for smuggled gold has to be made in dollars which in black markets in this country is commanding a premium of 7 to 8 per cent. over the official parity. It is difficult to arrive at the exact cost of smuggling gold, for it varies widely, depending upon the circumstances and the parties. It is, however, generally believed in market circles that, at about Rs. 79 or Rs. 80 per tola, the profit left for the smuggler is hardly adequate to cover the risk involved.

To resume the story of the international markets for free gold. There are many reasons why the premium for this gold has practically disappeared. As in the case of every other commodity, the law of supply and demand has had its say on the price of gold too. Let us first take the supply side. The high prices commanded in the free markets have themselves been attracting progressively larger supplies. The world production of gold in 1952 was the highest in post-war years. Valued at $35 per fine ounce, total output (excluding the U.S.S.R. and the countries associated with it) was approximately $851 million in 1952, as compared with $828 million in 1951, $844 million in 1950 and $736 million in 1945. The output in the past year was greater than in any year since the end of World War II and about equal to the average annual output of 1934 and 1935, but it was still approximately 35 per cent. below the 1940 peak level. As compared with 1951, all the important gold-producing countries reported higher production. Not all the new gold produced, of course, finds its way into the free market, for a portion of it goes into the monetary reserves. But, in recent years, this quantity has been progressively diminishing, as a larger and larger proportion of gold production has been flowing into the premium markets.

In the initial years following the establishment of the I.M.F., the gold-producing member countries observed the rules of the Fund and refrained themselves from supplying gold to the premium markets. But the continued high level of premia in these markets and the U.S. refusal to raise the price of gold, coupled with the high cost of mining, tempted them to disregard the rules of the Fund and break their solemn undertaking to this international body. They began to sell a part of their current output in several ways. South Africa, for instance, decided to sell 40 per cent. of its current production and "attempted to cloak its action in respectability," to quote a contemporary writer, "by the very transparent device of insisting that the metal sold in the free markets be in 'fabricated' form. Factories were started to roll ingots into trinkets and ash trays and others to melt them back again into ingots." Other countries, too, followed suit, but soon gave up the pretence of observing the discipline of the Fund. The only condition they attached to such sales was that they should be against U.S. dollars. Recently, when the price of gold had declined to such a low level that it became unprofitable to sell gold in fabricated form, South Africa dropped this condition and decided to sell gold in the form of bars of the customary fineness. The cost of fabricating and defabricat-

ing gold, it may be noted here, is about 35 cents per ounce. It, however, decided to continue the condition that sales must be against payment in U.S. dollars and that, for the time being, sales would be restricted only to 40 per cent. of the newly mined gold.

As it invariably happens with all the markets, when prices pierce a certain limit in a declining market, more sales automatically follow. All those who were holding on to their purchases in expectation of some development would come out to sell in order to cut their loss. This has happened in the case of free gold also. Many speculators in Europe were hoping against hope that the U.S. would one day raise its official price of gold and had built up a large bull position. In recent weeks, it became pretty clear that there was no chance of the U.S. obliging them; this became almost a certainty when South Africa dropped its cloak and the price of free gold broke through the $36-level. Apparently, the aforesaid bulls in Europe must have been utterly disappointed and squared up their positions at a great loss, thereby adding to the supply of gold in the free market. Similarly, some of those who had bought gold as a hedge against inflation and future political insecurity might have liquidated their holdings either in full or in part.

Recently, Russia, too, has made some contribution to the supply of gold in the free market. Short of sterling for its increasing imports from Britain and the Commonwealth and unable to persuade Britain to do triangular deals in roubles with Finland, Russia has found it necessary to pay for these purchases in precious metals—gold, silver and platinum. The extent of gold sold by Russia thus is not known. According to one source, such has been modest. But this seems to have been the last straw on the camel's back. Evidently, the fact that Russia, the gold reserves of which are believed to be enormous, is ready to pay in gold for its imports, albeit at the free market price for the metal, would appear to have unnerved the free markets. The Communists, of course, may even allege that the Americans have scotched the free market, in order to see that the Russians did not get the benefit of the premium for gold in the free markets.

So much for the factors that influenced the supply of gold in the free markets. On the demand side, too, the developments have been unfavourable to these markets. There has been a sharp fall in the demand for hoarding. With the advent of the Communist regime in China, the hoarding demand from China, one of the biggest absorbers of gold in the East, has ceased. The Communists have suppressed the Chinese appetite for gold very successfully, thereby achieving something which seemed unattainable a few years ago. The waning fears of a third world war and the reversal of inflation in many parts of the free world have made hedging in gold unnecessary. In Europe, France, the principal "sink" for gold in the West, is said to have been saturated with the metal. Although inflation is still rife in France, the French farmers and other men of wealth cannot go on immobilising all their savings by investing them in gold. In other parts of the world, lower agricultural prices, high cost of living which has weakened the peoples' capacity to save, reduction in the profit margins of business men following a recession in trade, intensive drive against tax dodgers and vigorous campaign against corruption among service men, all these have brought about a substantial fall in the demand for gold. All available indications are that there is likely to be no reversal of these trends in the foreseeable future.

There are good reasons for welcoming the fall in the value of gold. To mention only a few. In the first place, it has scotched the tall claim of gold-producing countries that the U.S. has been keeping the price of gold pegged at an artificially low level. We have always contended that an upward revaluation of the gold price would amount to conferring unearned benefits to a few holders and producers of gold at the cost of the rest of the world, most of which is poor. Secondly, the depreciation in the price of gold would, it is to be hoped, act as an eye-opener to the investing public and show that investment in gold not only brings no return but also carries a risk of depreciation. This realisation may result in a larger flow of savings into productive channels. And, finally, a fall in the price of gold generally restores the confidence of the people in their currencies. This is by no means an insignificant advantage.

INDIAN CENSUS

TO count the population of India, which, despite the Partition, still contains nearly one-quarter of the world's population, and to set forth, with a wealth of details, the demographic trends, the economic status and the social set-up of this vast mass of people, is no mean achievement. That it has been done at the end of every decade within living memory does not detract from the value of the recent (1951) census. Indeed, there are several other factors which make it more valuable than the previous efforts. It is the first census of Independent India, it is the first census after the partition of the country, and it is the first census which sheds more light on the economic conditions of the people. That it should evoke considerable public interest is hardly surprising. Only, it would be tragic if the interest were to be merely an idle curiosity in the mass of data which it gives and not to become the inspiration for more purposeful social and administrative measures for raising the economic status of the country.

The demographic picture that emerges from the census is easily described. The 1951 census count yielded a total of 356.88 million (exclusive of the population of Jammu and Kashmir). Of this total, 295.0 million live in 558,089 villages and the rest in the 3,018 towns in India. Inclusive of the population in Jammu and Kashmir, the population is 361.3 million. Between 1900 and 1950, the Indian Union's population has multiplied from 235 million to about 356 million, while the world's population grew, during this period, from 1,608 million to about 2,390 million. During the present century, there has been only one occasion when India's population declined. That was during 1911 and 1921 when it fell by 0.9 million to 248.1 million. Since, 1921, it has been rising at a steadily increasing rate; it moved up by 27.4 million to 275.5 million over the 1921-31 period, by 37.3 million to 312.8 million in the next decade and by 44.1 million to 356.9 million over the 1941-51 period.

How does this vast population support itself? This is a subject on which more light has been thrown in the latest Census Report than by any of its predecessors. Of the total population of 356.6 million, there are 104.4 million people who are "self-supporting" persons; they have an income by which they can at least support themselves. There are 37.9 million people who are earning dependents (who can only partially support themselves) and 214.3 million non-earning dependents who take no part in providing their own livelihood. The well-worn slogan that India's foremost industry is agriculture finds its statistical support in the fact that, out of the total population of 356.6 million, 249.1 million belong to the agricultural classes. Among the agricultural classes, there are 71.0 million self-supporting persons, 146.9 million non-earning dependents and 31.1 million earning dependents.

It is interesting to note that, of the 71.0 million agriculturists, only 1.6 million persons are non-cultivating owners of land, popularly known as absentee landlords, the favourite target of attack by some of the political parties, including the Congress. Of the rest, 45.7 million persons cultivate the land they wholly or mainly own, 8.8 million cultivate land which is wholly or mainly unowned by them, and 14.9 million people are only cultivating labourers. The last mentioned figure, too, is important. It shows that the landless labourers are equal to less than one-third of the landowning cultivators. The distinction between the cultivator and the cultivating labourer is that the former gets the net profits of cultivation, while the latter gets "agricultural wages." The owner-cultivators are as many as 45.7 million. The preponderance of this class, as the Census Report points out, is the "most characteristic feature of an agricultural-class structure." This is what makes all attempts at large-scale co-operative farming so much more difficult than it would be if the owner cultivating class were a small minority. It also suggests that great care must be exercised before passing any legislation for regulating the wages of agricultural workers.

The Census Report brings out with characteristic thoroughness that the pressure on land is very acute in this country. The total land area in the country (excluding Jammu and Kashmir) is 7,532 lakh acres for a population of 3,569 lakhs, which gives a per capita land area of only 2.11 acres. But it must be remembered that a great part of the total area consists of mountains and hills or otherwise unusable area. The topographically usable area is only 4,997 lakh acres, excluding Jammu and Kashmir and 5,044 lakh acres including this State. The per capita area of land is 225 cents as against 1,354 cents for the world, 3,046 cents for the U.S.S.R., and 307 cents for Europe (except Russia); of agricultural land 97 cents, as against 351 cents for the world, 448 cents for the U.S.S.R., and 153 cents for Europe, of arable land 97 cents as against 126 cents for the world, 287 cents for the U.S.S.R., and 92 cents for Europe.

The Indian land problem has two aspects. In the first place, the per capita availability of land is, as already stated, extremely limited. No *Bhoodan* movement can wipe out this fact. One can give only what one has. And the fact is that the available land is strictly limited. Secondly, there is sufficient evidence to show that, since the population is growing at a faster rate than the cultivation of new land, the available land per person is a gradually shrinking quantity. The Report gives the results of the study of the trend in land use in all the districts of eight natural divisions and some of the districts of five other such divisions in the country; this territory is inhabited by 120 million people. The study shows that the per capita area of cultivated land, which was 111 cents in 1921, has declined successively to 104 cents, 94 cents, and 84 cents in 1931, 1941 and 1951. Between 1921 and 1951, the per capita double crop area declined from 13 cents to 10 cents and of irrigated area from 18 cents to 14 cents. Whichever way the matter is looked at, the unmistakable fact is that there is less and less land per person at the end of every decade of population growth.

So much for the agricultural part of India's demographic picture. How do the non-agriculturists live? The non-agricultural classes aggregate 107.5 million, of whom 33.4 million are self-supporting persons, 67.3 million non-earning dependents and 6.8 million earning dependents. Of the 33.4 million self-supporting persons, 1.1 million are employers, 5.9 million are engaged in commerce, 5.5 million in the processing and manufacture of foodstuffs, textiles, leather goods and 3.2 million in health, education and public administration, and the rest are distributed among other industries and services. It will thus be seen that commerce gives employment to the largest number of non-agriculturists. Of the 5.9 million people employed in commerce, nearly 5.1 million are retail traders, 0.4 million are wholesale traders and the rest are engaged in money-lending, banking, insurance and other spheres of commercial activity.

This brief survey must serve to bring out the essential features of India's population—the rapid growth of population and the shrinking per capita availability of land. On the basis of the growth in recent years, India will attain a population of at least 407 million in 1961, 458 million in 1971, and 527 million in 1981. The Census Report rightly draws attention to the fact that food resources cannot be augmented at a rate rapid enough to meet the needs of this growing population. By 1961, the country would need, it is calculated, 150 lakh tons of food in addition to the prevailing level of productivity which is placed at 700 lakh tons; by 1971, the country would need another 110 lakh tons or 260 lakh tons more than now. The increased production through the completion of the projects under the Five-year Plan (expected to yield 60 lakh tons) and through the adoption of better agricultural practices will, it is computed, add only 240 lakh tons. But this is only a theoretical estimate of a maximum that can be achieved given ideal conditions. In actual practice, however, this may not be achieved, or achieved within the next decade. The remedy, therefore, lies in the control of the growth of population, through a resolute programme of family planning. But it must be remembered that even this will leave the problem of the improvement in living standards unsolved. This would require not merely the adoption of a correct demographic policy but a more rapid rate of economic progress. Indeed, it is higher industrial and agricultural production, both in absolute terms and in per capita terms, that can make a significant difference to living standards. That this implies a higher rate of capital formation than what is available to-day only emphasises the need for economic incentives that would promote savings, and, what is more, stimulate the investment of these savings in productive enterprises.

STOCK EXCHANGES IN CHEERFUL MOOD

BONUS ISSUE RUMOURS—RISE IN GOLD—ECONOMIC OUTLOOK FOR UNITED STATES

THURSDAY, 5 P.M.

THE share markets are in a cheerful mood. The sentiment is bullish and the volume of business is tending to expand. Over the week, the closing rates of almost all the counters show a gain. Reports from Calcutta and Madras also point to the existence of similar conditions. The main cause for the brightness of these markets is the improvement in the cotton and jute textile markets. News from the cloth market is encouraging. Offtake of cloth of all varieties for internal consumption has been good at satisfactory prices. Export demand also is sizable. Several destinations, which had almost abstained from buying Indian piecegoods, have been evincing some interest. It is this welcome development in the piecegoods market that has imparted fresh strength to textile shares in Bombay and Madras. The buoyancy of the cotton mill section is having a contagious effect on other sections also. In Calcutta, the upward trend in prices of jute goods —hessians and sackings are now being quoted at Rs. 48-6 and Rs. 104-8, as against Rs. 48 and Rs. 101, respectively, a week before—and reports of a perceptible decline in the stocks of jute goods in several importing countries have occasioned a smart advance in the value of jute scrips. Another factor that has induced confidence in jute shares is the possibility of the mills either working longer hours than now or the removal of the 12½ per cent. sealing on the looms. The comparative table published on this page will show the extent of appreciation that has taken place in the value of jute shares in recent weeks, that is, since the export duty on hessians was reduced two months ago. The prices of tea, too, continue to be firm and this in turn has brought forth fresh enquiries for the shares of tea companies. With tea and jute scrips looking up, the entire Calcutta Share Market presents a pleasing picture.

MARKET GOSSIP

• • • •

There are also other causes for the rise in equity values. There is a general impression that interest rates will decline in the next six or eight months. This is responsible for selective buying of first class equities by institutional investors. Then, there are some encouraging reports about individual scrips, such as this cotton mill or that jute mill having been successful in filling up its order books for quite a few months ahead. There are also persistent rumours about the issue of bonus shares by some of the leading companies. These reports have received some credence, following the decision of the Khatau Mills this week to issue, subject to the Government's consent, bonus shares in the proportion of share for share. A.C.C. is one of the scrips which have gone up on these rumours. Not long ago, the market took scarcely any notice of rumours of bonus issue, for it felt that the dividends of companies issuing bonus shares would be proportionately reduced. Why is it that now these rumours bring about a rise in the value of the scrips concerned? Does the market now believe that an increase in capital structure through capitalisation of reserves need not necessarily be followed by a proportionate cut in dividend? The change in the market sentiment is significant. It shows that the market is not in a mood to take a pessimistic view of the outlook.

• • • •

Some knowledgeable circles are of the view that the coming months will witness a large crop of bonus issues. They have drawn this conclusion from an unguarded remark made by the Chairman of the Action Committee of Tata Deferred shareholders, in his statement to the public some weeks ago canvassing support for the conversion scheme. In this statement, he remarked that delay in implementing this scheme would mean postponement of the scheme for the issue of bonus shares by the Company. Such a delay, he said, would be unfortunate, for there was a possibility of the Government subjecting bonus issues to tax from next year onwards. It would appear that on investigation some found that this remark was advisedly made by him on the suggestion of a person who is believed to have the ears of the Government. It is not known how far this report is correct, but rumours of bonus issue by a number of well-known concerns lend some colour to it.

• • • •

It is, however, hard to believe that the Government will tax the distribution of reserves which constitute a capital gain and which, in any case, has already been taxed once. But it is possible that, in any reorganisation of the system of corporate taxation, some changes could be made in such a way as to encourage ploughing back of earnings. The Government, for instance, may abolish or reduce the corporation tax very substantially on those portions of the profit conserved and not distributed to shareholders by way of dividend. This will encourage companies to effect savings and build up reserves and thus enable them to find funds necessary for their expansion or for the rehabilitation of their worn out fixed assets. Later, however, if these companies distribute their accumulated reserves by way of bonus shares, this distribution might be subjected to a certain amount of taxation. It is possible that someone might have already hit upon this idea and forwarded it to the Taxation Enquiry Commission and that a garbled version of it might have reached some in the share market, thereby giving rise to the impression that the Government was contemplating to tax the bonus issues also. Anyway, this impression seems to be gaining ground among company managements. And it is quite likely a number of them may propose to capitalise a part of the reserves of their companies sooner or later.

• • • •

A more plausible explanation for the increasing tendency on the part of companies to issue bonus shares even in these days of falling profits is the fear of labour claiming a share in the reserves or in the profit in case the dividends happen to be high, as they will be in the case of companies with a small capital structure, supported by large reserves. Some apprehend that one of these days the present eagalitarian Government which has not hesitated to compel companies by Ordinance to pay relief to retrenched workers and to workers temporarily laid off, may one day introduce a system of compulsory profit-sharing. In view of this, some managements may consider it prudent to raise the capital of their concerns to a level at which it will not be possible to pay big dividends. In any case, declaration of big dividends may invite the envious eyes of the politician and the worker. Why not, then, write up the capital which will bring down the rate of dividend to the current ideas of market yields? This question is engaging the attention of company managements not only in this country but also in the U.K., as will be evident from "Our London Letter" this week.

• • • •

There has been a smart rise in the price of gold in the Bombay market which only a few days ago was in the doldrums. Ready gold is now being quoted at Rs. 84-6, as against Rs. 82-3 a week ago and Rs. 80 a fortnight ago. Silver, however, has been quiet revealing a loss of approximately As. 8 per 100 tolas over the week. The rise in the price of gold here is in distinct contrast to the slump in the world markets for free gold where the rate has sunk to the official parity of $35 per ounce, a historic event discussed in our leading article this week. The extent to which the Bombay market is isolated from the world markets will be obvious from the fact that, three weeks ago, when free gold was fetching $36 per fine ounce in European markets, spot gold in Bombay was standing at Rs 79-8 per tola, whereas now when the former is standing one dollar lower at $35, the latter has gone up by Rs. 4-14 to Rs. 84-6. One explanation for the advance in the price of gold in the local market is that some of the merchants, who were caught for selling smuggled gold, are believed to have sold forward fairly heavily. Now that they have been caught, the shrewd operators are of the opinion that they will have no gold to deliver against their sales and that they will have to cover them at a loss. It is further reported that, following this incident, smugglers will lie low for some time before resuming their activities and that this may result in a fall in arrivals in the coming weeks. The offtake, too, has been a little higher during the past few days. It seems that the bulls are taking full advantage of these developments.

It will be seen from our leading article on free gold in the world markets that one of the reasons for its slump is the sale of gold by Soviet Russia. The quantity of gold that has so far been sold by this country has been so small that the Economist, London, describes it as only a marginal factor. Nevertheless, it is interesting to hear from our contemporary that Russia has not delivered any gold bars with its marks on them. "Though the gold is of Russian origin," it says, "the bars do not usually bear the hammer and sickle brand of the Moscow mint. Before offering on this (London) market they are remelted or, in market jargon, put through the laundry to remove their red taint." It is not, however, explained as to why Russia takes this trouble and expense. This is, perhaps, typical of the mysteries of the land behind the iron curtain.

• • • •

It is a pity that, in this country, the word "profit" almost arouses a revulsion in several quarters where it is often confused with "profiteering." It is too often forgotten that "profit" is the fulcrum on which the entire economic edifice of a free economy rests. Mr. E. D. Sheppard, Chairman of Killick Industries Ltd. rightly deplored, in his address at the annual meeting of the Company, that such an attitude should develop in this country. He said that "profit-making on a scale which would encourage and enable industrialists to develop and expand their undertakings and which would attract investors to come forward with the necessary capital is looked upon as little short of a crime." It is hardly necessary to point out that where profit is looked down upon, no capital formation could ever take place. By neglecting its profits, a concern does not necessarily rise high on the ethical scale. Very often, to ignore this consideration is to indulge in reckless extravagance and to court financial disaster. If this is to be avoided, it should be clear that what is needed is that the concerns should, as Mr. Sheppard said by implication, be enabled to make sufficient profit, so as to pay higher dividends and attract new capital or to plough back its profits into business so as to facilitate the expansion of output. The net effect of the Government's attitude towards profit is that there is no incentive to industrial expansion. Mr. Sheppard was, therefore, quite pertinent when he asked: "Though established units may be able to continue, the starting of new undertakings in certain lines has been rendered impossible; how then is India to develop and prosper?"

• • • •

Mr. Sheppard touched upon the controversial issue of the managing agency system and referred to the new Companies Bill which postulates greater control of the system. Only time would show, he said, whether more rigid control of the system would lead to the "blunting of the initiative and enterprise which are associated with the system." He, however, hoped that the Government and parliament would take a sympathetic note of any suggestions that might be made to improve the provisions of the Bill. He added: "Speaking generally, companies like yours should have little to fear from the new provisions visualised by the Bill, for they are certainly aiming in the same direction as the targets we have always adopted for ourselves voluntarily and I, therefore, see no reason why we should not continue to be of service to the country in fostering and developing industries as we have done in the past."

• • • •

The free world has become so much used to predictions of a slight recession, even depression, in the U.S. economy that alarmist news have ceased to give the jolt they were wont to in the past. But when so responsible an economic prognosticator as Mr. Collin Clark, a noted economist of world-wide repute, makes the same prediction, it is, perhaps, necessary to sit up and take notice. He states, in the course of an article to the Manchester Guardian, that a disastrous American business slump, with six or seven million unemployed, is all but inevitable. He forecasts a "rapidly mounting emergency" setting in in about the middle of next year.

• • • •

Mr. Clark points out that a great deal of construction has taken place in the U.S. in the last few years and it is difficult to see demand rising so fast as to keep up the pace of expansion. In addition, much surplus production has been going overseas financed by grants, loans, Marshall Plan Aid and offshore purchases. As soon as sales cease to grow, business will start cutting down sto
Mr. Clark predicts. He contends that th
volume of stocks is enormous and that "
danger of a chain reaction. Mr. Clar
with economists who think the Americ
ment is able to take effective counter-ac
vent the recession from getting out of
says Congress would never agree to *4th November*
priate action until the slump was alre
advanced—and then it would be too late.

• • • • elopment

Commenting on Mr. Clark's statement, the *Manchester Guardian* disagrees with his pre
dictions, although it admits that Mr. Clark has been able to see into the future more clearly than many other economists. It adds:

"Without entering into the mathematical argument, we do not feel that it (Mr. Clark's prediction) is convincing. It seems to allow no part at all to the amazing resilience of the American economy, or the undogmatic inventiveness of the American mind. Up and down that vast country, business people, farmers and ordinary consumers have been looking over their shoulders almost constantly for the last five years. They are always torturing themselves to decide whether they have borrowed too much, bought too much stock, or committed themselves too far to be safe in the event of a setback. Yet business men have not shown any intention so far of reducing their expenditure for new plant and equipment even in 1954; and consumers have behaved with complete confidence."

• • • •

Now Mr. Clark has at least one successful prediction to his credit. In 1941, he predicted that there would be a long post-war boom and a "fairly severe and prolonged" depression to follow. The first part of his prediction has come true. And he feels that the time for depression is near at hand. Apart from the fact that an economic soothsayer who predicts correctly one event need not necessarily be able to predict correctly another event, it is necessary to see whether the American economy is showing signs of a depression. There are, of course, a few disturbing portents. The net farm income in the U.S., to take one index of prosperity, has been declining for the past two years. In 1951, it was $16 billion; for this year it is estimated at $12.5 billion. In 1953, agricultural prices have been 10 per cent. lower than they were last year. But unemployment is at a low level, at about 1.16 million, thanks to the fact that the Administration always has its eye on the country's 63 million jobs. There has, however, been a slight fall, rather than an anticipated rise, in factory employment. In many other respects, there is no ground for economic pessimism. The index number of wholesale prices (Base: 1947-49= 100) was 110.6 in August this year, as against 111.6 in 1952, 114.8 in 1951 and 50.1 in 1939. There has been a slight fall since then, but it is not so great as to cause serious alarm. The index number for farm products (same base) has, however, fallen from 113.4 in 1951 and 107.0 in 1952 to 96.3 for August, 1953. The 1939 prices work out to 36.5. The index number of consumer prices (same base), on the other hand, is steady. For August, 1953, it was 115.0, as against 113.5 in 1952, 111.0 in 1951

SHARE MARKET BULLISH

HEAVY SHORT COVERING IN BOMBAY BURMAHS

(From Our Own Correspondents)

BOMBAY, 19*th November*

HECTIC speculative activity marked trading on the Stock Exchange during the week under review. Steel shares once again came under a spell of bullish enthusiasm, sustained by the expected favourable results of voting for the Tata Deferred Conversion scheme. Support for textile shares broadened further and brisk activity was witnessed in some of the prominent counters. Prices advanced under the influence of continued bullish advices from the cloth market. A spate of rumours afloat in the market about bonus issues by several companies in the textile and the miscellaneous sections also provided the stimulus to the buoyancy of the market. Advices from Calcutta were also encouraging, where Indian Irons shaped well and jute and tea shares were active.

The results of voting for the Tata Deferred Conversion scheme, released by the Company, showed the overwhelming majority of both classes of shareholders in favour of the scheme. Thus, the total number of ordinary shareholders who voted in person or by proxy in favour of the scheme was 3,358, representing 1,97,324 shares, and that against the scheme 8, representing 335 shares. The total number of deferred shareholders who voted in person or by proxy in favour of the scheme was 3,535 and that against 209, the total number of shares represented being 32,025 and 3,229, respectively. The Company's report on the voting has been submitted to the High Court. The conversion scheme has thus become a settled fact now and the Deferred shares would soon make an exit from the market.

The announcement of bonus issues by two jute companies in Calcutta under the management of Messrs. McLeod & Co. and the decision of the Directors of the Khatau Makanji Spinning and Weaving Co., Ltd., to issue bonus shares to the existing ordinary shareholders have given rise to a spate of rumours. Among companies whose names are coupled with such rumours are: Bombay-Burmah, Associated Cement, Edward Textiles and Podar Mills.

The Directors of Khatau propose, subject to the sanction of the Controller of Capital Issues, to ·alise a sum of Rs. 29.92 lakhs from out of the fund Rs. 35.32 lakhs) and issue bonus the ratio of one ordinary share for every share now held. The paid-up ordinary thus be doubled to Rs. 59.85 lakhs.

steel section, Tata Deferreds advanced 1,941-4 to Rs. 1,960 in the absence of and on persistent professional support, by the strength of ordinary shares. After of respite, in which they came down to 1,943-12 yesterday, the shares picked up ength and jumped to-day to Rs. 1,962-8 before closing at Rs. 1,960. Strong speculative interest in Tata Ordinaries, on account of the proximity of bonus issue, boosted the shares from Rs. 329 to Rs. 336. The closing was, however, done at Rs. 335-8. Indian Irons rallied from Rs. 25-10½ to Rs. 26-2, and closed at Rs. 26-1½.

The textile section continued to be in the limelight with sharp advance in most shares. And several counters which were hitherto in the background appeared on the scene with renewed vigour. In brisk activity, Bombay Dyeings recorded a rise of Rs. 9-6 to Rs. 397-8. Kohinoors advanced from Rs. 298-4 to Rs. 301-12 early in the week, but finished slightly lower at Rs. 299. Centurys were marked up by Rs. 5-8 to Rs. 280, Central Indias by Re. 1-8 to Rs. 166-8 and Colabas by as much as Rs. 7-4 to Rs. 76-4. Edwards, which had remained stagnant at Rs. 232-8 till yesterday, suddenly shot up to-day to the handsome figure of Rs. 262-8, before closing at Rs. 260, on rumours about a bonus issue. Finlays held their own at Rs. 260, but Gokaks moved ahead by Rs. 6 to Rs. 248. Indu Ordinaries received some attention and added As. 3 to Rs. 11-6. Indore-Malwas gained Rs. 3-2 to Rs. 98-2. Khataus were marked up by Rs. 15 to Rs. 211-4 on the announcement of the bonus issue. New Greats gathered Rs. 5 to Rs. 165, Phœnix Rs. 3-12 to Rs. 121-4 and Podars Rs. 11-4 to Rs. 137-8. Simplex could score no more than Re. 1-12 to Rs. 151. Standards firmed up by Rs. 5 to Rs. 313-12. Svadeshis by Rs. 3-12 to Rs. 264, Swans by Rs. 6-4 to Rs. 325 and Tatas by Rs. 3-4 to Rs. 51.

Bank shares were steady with a slight marking up in values. Imperial Fully Paids put on Rs. 2-8 to Rs. 1,828-12 and Contributories changed hands Rs. 6-4 higher at Rs. 457-8. Centrals were fractionally better, the old shares at Rs. 64 and the new shares at Rs. 66-8. Indias were done a fraction higher at Rs. 156, as also United Commercials at Rs. 37-8. Barodas were, however, dull at Rs. 107-8.

Business in insurance shares was selective. New Indias were in demand and deals were put through, a rupee higher, at Rs. 40-8. In small lots, Orientals gained Rs. 40 to Rs. 6,900. Other issues were featureless and prices were unchanged.

Excepting for some, electric shares generally fared better. The selling pressure in Ahmedabad Electrics noted in the previous weeks was well absorbed and the shares improved this week by As. 10 to Rs. 113-7. There are rumours that the Company will issue debentures early next year, the terms of the issue being the same as those of the existing debentures. Bombay Suburbans were marked down by As. 10 at Rs. 124-6, while Surats continued to be in favour and gained further Re. 1-4 to Rs. 126-4. Andhras improved by Rs. 5 to Rs. 1,282-8, as also their Rights to Rs. 175. Coupons were done a rupee better at Rs. 35-8. Tata Hydros were fractionally higher at Rs. 140-8 and Rights Re. 1-4 higher at Rs. 26-8, while Coupons were unchanged at Rs. 9. Tata Powers reacted from Rs. 1,370 to Rs. 1,352-8, and Rights from Rs. 241-4 to Rs. 232-8, while Coupons were wanted Rs. 2 better at Rs. 46.

In the miscellaneous section, Associated Cements were a bright feature with a rise of Rs. 7 to Rs. 183-12 on revival of hopes about bonus shares. At one time to-day, the shares hit a high of Rs. 185-4, the highest since 29th January, 1952. Bombay Burmahs were conspicuous with a rally from Rs. 330-10 to Rs. 365 before closing at Rs. 361-4, on account of heavy bear covering and bull support inspired by expectations of favourable results for the current year and unconfirmed reports about a cash bonus. The shorts who had sold heavily in the previous week, therefore, made frantic covering this week, lifting up the shares by more than Rs. 30. Belapurs were noted higher at Rs. 262-8 as against Rs. 259-8. B.I.Cs. rose by As. 3 to Rs. 9-6½ due to shortage of scrips. Scindias were concerned in strong speculative support on expectations of higher dividend. There were also unconfirmed reports that the company might capitalise the amount standing against premium on shares and consolidate the shares into shares of Rs. 20 each. The shares were, therefore, taken up from Rs. 14-11½ to Rs. 15-7. National Rayons attracted attention on favourable reports about cost of raw materials for the ensuing year. On that account, the shares forged ahead by Rs. 4-4 to Rs. 123-12. Tata Chemicals were steady at Rs. 9-11. Tata Oils were in demand and moved up by Rs. 1-12 to Rs. 33-12. Wimcos were done at Rs. 198-12 ex-*rights* as against Rs. 238-2 *cum-right* last week. On the basis of the previous week's closing quotation, the ex-*right* value of the shares was Rs. 190-8, so that the rise during the week was Rs. 8-4.

Mining and engineering shares shaped well. Alcocks put on Re. 1-4 to Rs. 330. Premier Constructions rose by Rs. 3 to Rs. 103, in sympathy with Scindias. Telcos were done at Rs. 86-8. Shivrajpurs were steady at Rs. 67, Indian Coppers at Rs. 3-1 and B.B. Petrols at Rs. 2-5.

• • • •

Calcutta Stock Exchange

CALCUTTA, 18*th November*

Trading on the Calcutta Stock Exchange during the week was lively, but the volume of business during the three sessions from Monday suffered a decline in view of the caution exercised by operators. Jutes continued to be in the forefront, as, with increased sales of jute goods for the last one month, the outlook for the jute industry has changed. Operators paid keen attention to shares of companies producing more hessian than sacking, as the increase in prices of *sacking goods was more, due to* speculative activity than to actual export business. On the other hand, the advance in prices of hessian was less striking, but sales were impressive and there is a degree of expectation that current gains would be maintained in the days to come, although market circles stated that the abolition of the duty could only ensure the maintenance of the improved outlook.

Textile shares were also shown moderate attention, as the improvement in the prices of piecegoods following the keen activity in the export market was noted. The Government's decision to set up an export promotion council had also some effect on the course of prices. Tea shares provided many features, and the continuance of strong export demand at the tea auctions explains this. Tea gardens are recovering from the recent crisis, and, although full recovery would take one or two more seasons, investors showed a desire to possess good class scrips on the expectation that the working results for 1953 would be satisfactory. Engineering shares were steady, but profit-taking reduced some of the gains. Good attention was shown to speculative Indian Irons which impressed with a gain of one point. The market was closed on Saturday on account of *Gopastami*.

Sectionwise, business took place in jutes on a moderate scale. Even after profit-taking gains were maintained. Speculative fowrahs opened at Rs. 25-2 last Thursday and gradually moved to Rs. 25-6, although on Monday there was a small recession to Rs. 25. The rise in Chitavalsahs from Rs. 34 to Rs. 35-12 and in Nellimarlas from Rs. 37 to Rs. 40-4 followed news of bonus issues. In the former counters, a reaction set in, however, which reduced the gain to Rs. 35-2. Nationals were better at Rs. 24-15 and Barnagores hardened to Rs. 162 *ex-div*. Strong demand pushed Gourepores from Rs. 290 to Rs. 301, while Anglo-India's recession to Rs. 228 earlier in the week was offset by to-day's rise to Rs. 232. Budge Budges were better at Rs. 168 and Orients were a shade higher at Rs. 185. Indias made good the earlier loss by a latter recovery to Rs. 130. Other features included Belvederes at Rs. 204, Deltas at Rs. 236, Agarparas at Rs. 17, Bally at Rs. 180 and Alliances at Rs. 161.

A feature in the engineering section was the impressive rise from Rs. 22-15 to Rs. 25-2 in Britannias. Last Thursday, a spurt from Rs. 25-4 to Rs. 25-11 was recorded in Indian Irons, and on Friday a high of Rs. 26 was touched. On Monday, the rate was kept at around Rs. 25-14, but yesterday the shares staged a rise to Rs. 26-1. To-day, however, the quotation was lower at Rs. 25-13. Jessop & Cos. at one time eased from Rs. 25-2 to Rs. 24-14, but in the subsequent recovery the rate was raised to Rs. 25. Keen buying forced Indian Standard Wagons to move from Rs. 106 to Rs. 117-8. Texmacos changed hands at Rs. 7-13, but Braithwaites fell from Rs. 12-11 to Rs. 12-5. Burn & Cos. were steady at Rs. 322, and Kumardhubis changed hands at Rs. 8-6.

As usual, miscellaneous shares claimed a good portion of the funds available to the market. Midnapore Zemindaris continued to figure prominently and held firm at Rs. 41. Interest in Rallis raised the rate from Rs. 64-4 to Rs. 67, and Rohtas Industries advanced from Rs. 9-2 to Rs. 9-14. Titaghur Papers were taken at the factionally higher rate of Rs. 37-4, and Shree Gopal Papers were done at Rs. 19-6. British Burma Petrols changed hands at Rs. 2-3, and B.I. Corporations after receding from Rs. 9-6 to Rs. 9-2 strengthened again to Rs. 9-5. India Steamships were marked at Rs. 7-10. Bengal Flours at Rs. 21-5 picked up Re. 1-5, but latter receded to Rs. 20-9. From Rs. 18-10, Angelo Bros. gained to Rs. 19-14, and Indian Cables were steady at Rs. 19-15. F. & C. Oslers were quiet at Rs. 6-15, as were Jardine Hendersons at Rs. 116-8.

Moderate attention was paid to tea shares. A firm trend was displayed in Banarhats which advanced from Rs. 350 to Rs. 360. Hantaparas at Rs. 178 were up by eight points, while Central Cachars eased from Rs. 62 to Rs. 58-8. New Dooars gained from Rs. 340 to Rs. 356, Patrakolas from Rs. 135 to Rs. 141, and Choonabhuttis from Rs. 245 to Rs. 252. Hasimaras were done at Rs. 30 and Ananda Assams at Rs. 16-13.

Among textiles, Kesorams continued to be in the forefront and at one time were as high as Rs. 21-1, to-day's rate being Rs. 21. Dunbars improved from Rs. 194 to Rs. 202. Cawnpores met with business at Rs. 8-4.

Sparse interest was shown to coal shares, but even so Central Indias hardened from Rs. 5 to Rs. 5-10, and Dhemo Mains from Rs. 8-8 to Rs. 9-6. Equitables were steady at Rs. 33 and Bengals met with business at Rs. 506. Burrakurs were quiet at Rs. 8-7. Pench Valley changed hands at Rs. 22-13, South Karanpuras at Rs. 9-9, and Churullas at Rs. 8-8.

• • • •

Madras Stock Exchange

MADRAS, 17*th November*

Activity broadened further this week on the Madras Stock Exchange. The steadier trend witnessed earlier in the textile section persisted under the influence of sustained demand for piecegoods and yarn both from consuming centres in India and abroad. The announcement by the Minister for Commerce and Industry that an export council would be set up to boost exports of cloth also imparted stimulus to trading in textile shares. Favourites, as a result, came in to register sharp gains. Among plantings, tea scrips continued to be in good demand due to encouraging prices obtained for tea leaves both at local and London auctions. Rubbers also were well supported on speculative enquiries. Coffees were no exception to the generally cheerful sentiment of the market. Miscellaneous scrips too came in for considerable enquiry. The undertone was strong and volume of business done was relatively large, with prices recording sizable gains over the week.

In the textile section, Bangalore Woollens shot up from Rs. 272-8 to Rs. 280, thereby gaining Rs. 7-8 over the week. Metturs were higher by Rs. 8 at Rs. 209. Radhakrishnas, Rs. 100 paid-up, advanced from Rs. 162-8 to Rs. 164-8 and Rs. 80 paid-up from Rs. 80 to Rs. 81. Lakshmis and Rangavilas rallied As. 8 each to Rs. 78-8 and Rs. 43-8, respectively. Travancore Rayons were better by As. 7 at Rs. 5-12. But Pankajas lost Rs. 2 to Rs. 67 and Maduras As. 8 to Rs. 38-12.

Among plantings tea scrips were very active. United Nilgiris firmed up from Rs. 186 to Rs. 193. Kalasas gathered As. 12 to Rs. 11 and Highland Produces As. 5½ to Rs. 11-9½. Devasholas were higher by As. 4 at Rs. 17-12 and Periakaramalais by As. 2 at Rs. 7-2. Waterfalls were slightly better at 3-5½. Peermades were done at Rs. 25-12 *ex-div*., as against Rs. 26-8 *cum-div*.

Broad-based enquiries were also seen in rubber shares, and smart advances were reported in a number of selective scrips. Malankaras advanced from Rs. 106 to Rs. 107-8. Thamarapallys changed hands at Rs. 16, as against Rs. 15-8, and Cochin Malabars at Rs. 7, as against Rs. 6-12. Kailas gained As. 3½ to Rs. 3-8 and Anandams As. 2 to Rs. 8-14. Thirumbadis were unchanged at Rs. 3-4 and Travancore Rubbers at Rs. 13-2.

Coffee scrips enjoyed good support. Consolidated Coffees and Coffee Lands were each higher by As. 4 at Rs. 10-12 and Rs. 18-4, respectively. Puthutotams were better by an anna and a half at Rs. 3-5½ and Mysore Coffees by an anna at As. 10. Kil. Kotagiris (tea and coffee) were enquired at Rs. 6-1, as against Rs. 5-9.

Miscellaneous scrips were in good demand. Rallis gathered Re. 1-2 to Rs. 64-4. F.A.C.Ts. disclosed a gain of As. 6 at Rs. 3-10. Mysore Papers also put on a similar amount to finish at Rs. 14-8. Mettur Chemicals rallied As. 3½ to Rs. 4-15. E.I.D. 'B' sugars improved by As. 8 at Rs. 22-4 and E.I.D. 'A' by As. 2 at Rs. 15-8. Andhra Scientifics, however, lost As. 8 to Rs. 2-8 and Mysore Stonewares As. 6 to Rs. 8-3. Hubli Electrics declined by Re. 1-12 to Rs. 12-4.

In the Banking Section, Bank of Mysores improved by Rs. 2 and closed at Rs. 283. Indian Banks, Rs. 85 paid-up, were higher by Re. 1 at Rs. 140. Andhra Banks, Rs. 50 paid-up, gained As. 8 to Rs. 59. Imperial Banks Contributory, however, lost Rs. 8 to Rs. 450. Indian Overseas eased from Rs. 93-4 to Rs. 93.

NEWS IN BRIEF

WATER to irrigate over 100,000 acres of land in Rajasthan will be made available from the Bhakra Dam in June, 1954, it is stated.

The State-owned Road Transport Department in Hyderabad has acquired about 300 houses costing over Rs. 12 lakhs to provide housing accommodation for its employees.

The Government of India has removed the *restriction on the export of neem seed oilcake.* No licences will, therefore, be required hereafter for the export of the oilcake.

The Government of India has made it obligatory on all *vanaspati* factories to add synthetic vitamin 'A' to *vanaspati* manufactured on or after 1st December, 1953, in order to increase the nutritive value of *vanaspati*.

The Government of India has sanctioned a sum of Rs. 4.5 crores for a new dock to be built at Madras, for the purpose of accommodating four ocean-going ships at a time. This work is being done as a wet dock scheme for Madras Port. Last year, a sum of Rs. 1.49 crores was sanctioned to effect *an improvement* in the existing facilities.

The Central Government has sanctioned an expenditure of about Rs. 4 crores for the expansion of Bombay Port. This is in addition to that for the Port's development programme under the Five-year Plan. The present sanction is for the purpose of constructing three new berths for oil tankers at the port and laying an elaborate network of pipe-lines.

Six representatives of two German firms, Krupps and Demag, who are to be the technical assistants of the Government of India on the proposal to establish a new steel plant, have arrived in India. They will discuss details of technical assistance and manufacturing programme and processes with Government officials. They will also make recommendations on the location of the plant.

The Government of India has at present under consideration the future export policy in regard to aluminium sheets and circles. The export of aluminium sheets and circles was licensed freely up to the end of October, 1953. The Government is satisfied that the needs of the country are taken into consideration before export is allowed. The total production of aluminium sheets and circles in 1952 was 4,852 tons and in the first nine months of this year it was 3,850 tons, as against the installed capacity of 8,000 tons.

Ten specified cottage industries in six States are now receiving the benefit of development work financed by grants from the Union Government. They are: handloom, leather-tanning, and horn carving in Orissa, carpentry in Jammu and Kashmir, woollen carding and finishing in Rajasthan, pottery in Bihar, hand-made paper in Bombay and rattan work, hand-made paper, mat-weaving and leather stitching in Mysore. During the course of the current financial year, some more cottage industries will be taken up for development.

The Headquarters Bench of the Labour Appellate Tribunal of India will not be able to move in circuit to Patna and the appeals from Bihar will, consequently, be heard in Calcutta. The Sugar Bonus Appeals from that State have been fixed for hearing from 2nd December, 1953 at 20/1, Gurusaday Road, Calcutta. The Third Bench of the Labour Appellate Tribunal of India, consisting of Mr. Justice L. K. Jha and Dr. Justice Mohd. Waliullah at present sitting at Lucknow, has moved to Madras and is in session there at 2/8, Hunters' Road, Vepery, from 16th November, 1953.

A conference of the officials of the Andhra Government and the Planning Programme Adviser of the Planning Commission was held this week in Madras to consider *the modifications* in the Five-year Plan necessitated by the separation of the Andhra State and the splitting up of the Plan to suit the new State. Though no precise figures of the share of the Andhra State out of the total allotment of funds to the composite Madras State are available, it is stated that Andhra's share will come to about Rs. 51 crores out of the total of Rs. 140 crores allotted to the composite State in the first Five-year Plan.

It was announced on 12th September, 1953, that export of Indian raw wool would be licensed to actual shippers upto 20 per cent. of the shipment effected by them during the period January to June, 1953. The Government of India has now decided to release a further quantity for export. Export licences will on application be given to actual shippers upto 60 per cent. of the shipment effected by them during the period January to June, 1953. The licences will be valid for shipment till the end of February, 1954. Shippers, who may not have made any shipment during January-June, 1953, but have exported during January-June, 1951 or January-June, 1952, will also be considered for export allotment.

The Committee appointed by the Government of India, under the chairmanship of Mr. N. V. Gadgil, to enquire into the special problems of the Part B States of Saurashtra, Madhya Bharat, Rajasthan and P.E.P.S.U., is reported to have submitted its report. The Committee has, it is believed, recommended that the four Part B States should be given a total *ad hoc* grant of Rs. 10 crores for each of the last two years of the Five-year Plan period, so as to enable them to be in line with other States.

The Government of India has issued a notification under which court liquidators will be appointed in the High Courts at Calcutta and Bombay and of Travancore-Cochin, for liquidation of defaulting banks, under the recently promulgated Ordinance. The other High Courts in India have, for the time being, been excluded from the scope of the notification, as such appointment is not yet considered necessary by the Central Government, having regard to the number of banking companies wound-up and the other circumstances prevailing.

From Abroad

The foundation-stone for a new cement factory in Ankara has been laid. The factory will be ready by the end of September, 1954.

The Pakistan Government has given *permission for setting up a jute mill,* with a complement of 250 looms, at Daulapur in East Pakistan.

The Government of Japan purchased last week £13 million sterling from the International Monetary Fund. In September last, Japan purchased £5 million from the I.M.F.

Oil has been found in the Eastern provinces of Nigeria. Even if a substantial oilfield is proved to be in existence, it is estimated that it will be two or three years before large quantities of oil are produced.

Japan is considering a proposal to adopt a plural import tariff system, in order to enable it to discriminate against countries applying high import duties on Japanese goods. Japan has now a tariff system which has only a single schedule of most-favoured-nation rates.

The British trade unions have doubled their membership and quadrupled their funds since 1937. The membership of registered unions of employees increased from 4,214,000 in 1937 to 8,377,000 in 1952 and their funds from £16,032,000 to £67,607,000 during the same period.

The West German Government has granted industrial credits aggregating $50 million to finance development of industrial projects in Greece. The credits are for five to eight years and will be made available through normal banking channels, although they will be underwritten by the Federal Government.

A four-man mission from the World Bank in Washington is now in Japan to study Japan's economic and financial position. The mission is expected to *stay for nearly a month. The aim of* the study is to find out the best means of giving assistance to Japan to enable it to achieve economic and financial independence.

The Egyptian Government proposes to send out an official economic mission to India and the Far East to establish trade relations and find out markets for Egyptian products. The mission will be led by Mr. Hussain Fahmi, President of the Permanent Council for Development of National Production and former Minister of Finance.

A new organisation for chief executives, called the Institute of General Managers, has been formed in the U.K. by a number of managing directors and general managers. The Institute has been formed in view of the need for a powerful and representative professional institute of chief executives in the drive for greater productivity and management effectiveness in industry.

The U.S. Foreign Aid Director, Mr. Harold E. Stassen, has invited leading American universities to join the U.S. Government in a new and expanded programme of technical co-operation with lers developed nations. According to Mr. Stassen, the U.S. is now prepared to make new, broad long-term contracts covering university co-operation with specific countries and their educational institutions.

Britain will give £600,000 in the coming year to the United Nations expanded technical assistance programme for underdeveloped areas. If the total pledged by all the countries (including Britain) exceeds £8.25 million, Britain will increase its own contribution by a further £50,000. An advance payment of £150,000 will be made early in January to help the administration of the programme.

The Tin Research Institute of Middlesex, U.K., has developed a new alloy made of tin and aluminium which may be used to replace the copper-lead alloys, commonly used at present for many bearings. One advantage of using a tin-aluminium alloy is claimed to be that bearings made from it will create less friction when in contact with mild steel. The new alloy can also be used as a surface layer over steel to which it can be firmly bonded.

A New York firm of brokers has started a monthly budget plan for purchasing selected securities, designed to attract persons in the middle-income groups, who now hold few or no shares. Under the plan, an investor is permitted to buy shares by making an initial deposit, followed by regular monthly payments. Deposits range from $300 to $1,200 and monthly payments from $25 to $100. No margin is involved. Shares are bought only when an individual's account has sufficient cash to purchase one or more full shares.

The United States has offered to contribute up to $14.75 million in 1954 to the U.N. technical assistance programmes, if other nations increase their contributions. The U.S. delegate, Mr. James J. Wadsworth, told the Fourth Technical Assistance Congress that the American offer was being made to help the U.N. technical assistance programme achieve its 1954 budget goal of $25.3 million. Under the American offer, the United States, subject to Congressional approval, will contribute $12.75 million to match the first $7.5 million pledged by other nations. The United States would also contribute another $2 million at the ratio of $40 to every $60 from other nations.

A nation-wide toy-making competition held recently in Hungary brought 2,874 entries, of which 400 are to be manufactured by industry. Sixty-eight inventors received prizes in the competition, but all will receive payment for their ideas from the manufacturers. One of the most ingenious ideas was that of a retired engine-driver, with a method of driving moving toys by compressed air. A pump, similar to a bicycle pump, is used to build up the pressure. It is then detached and the motor has enough power to drive the toy, such as a model car or train, for several minutes. Other toys included an electro-magnetic sailing boat race game for several children, worked by a small battery, remote-controlled cars, building constructional sets, unbreakable dolls in PVC plastic, and a toy telephone set which really works, powered by flashlight battery.

PERSONAL

MR. Sadath Ali Khan, Member of Parliament, has been appointed Parliamentary Secretary to the Prime Minister of India.

Mr. Neville N. Wadia, Chairman of the Bombay Dyeing and Manufacturing Co., Ltd., has returned to Bombay from the U.K.

Viscount Swinton, Secretary for Commonwealth Relations, U.K., arrived in New Delhi on Sunday last on a visit to India.

Mr. Robert Menzies, Prime Minister of Australia, will preside over the conference of Commonwealth Finance Ministers to be held in Sydney on 8th January, 1954.

Mr. C. D. Deshmukh, Finance Minister, and Mr. M. V. Rangachari, Joint Secretary, Finance Ministry, Government of India, will represent India at the forthcoming meeting of the Commonwealth Finance Ministers.

Mr. J. P. L. Shenoy, General Manager, B.E.S. and T. Undertaking, Bombay, whose term of office is due to expire early in February, 1954, has been appointed General Manager of the Undertaking for a further period of two years.

Mr. B. F. H. B. Tyabji, Commonwealth Secretary, Ministry of External Affairs, Government of India, has been appointed Ambassador of India to Indonesia, in succession to Mr. Bhagwat Dayal, who has been appointed Ambassador to Afghanistan.

Mr. B. B. Joshi, Director, New India Industries Ltd., Baroda, and Mr. Indukumar C. Patel, Director, S. I. Works Quarry Ltd., Timba Road (via Anand) have been elected President and Vice-President, respectively, of the Federation of Gujerat Mills and Industries, Baroda, for the year 1953-54.

Mr. D. N. Mahta, Secretary to the Government of Bombay, Departments of Agriculture, Forests and Veterinary, has retired from service after a distinguished official career. His services to the development of cotton cultivation as Secretary of the Indian Central Cotton Committee and as a Director of the East India Cotton Association were noteworthy.

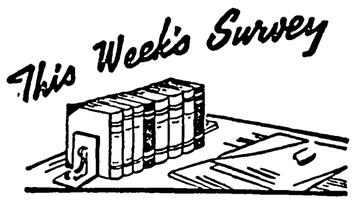
"COMMERCE" 1928

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, 24*th November*

Indian Road Development

The report of the Indian Road Development Committee, consisting of members of the Central Legislature, under the chairmanship of Mr. M. R. Jayakar, Bar-at-Law, M.L.A., which was appointed by the Governor-General in Council, in pursuance of a resolution of the Government of India in the Department of Commerce dated 3rd November, 1927, has been issued. The report of the Committee, which was representative of all parties of both houses of the Central Legislature and has cost the Government roughly Rs. 1,30,000, was submitted to the Government on 28th September last. The Committee, as the reader is aware, was asked to examine the desirability of developing the road system of India and, in particular, the means whereby such development could most suitably be financed, and to consider, with due regard to the distribution of central and provincial functions, whether it is desirable that steps should be taken for co-ordination of road development and research in road construction by the formation of a Central Road Board or otherwise. The questions referred to the Committee have been examined fully and carefully, and the Governor-General in Council has no doubt that this report will mark the beginning of a new outlook towards road development in India. The Governor-General in Council also expresses his appreciation of the services rendered by the Chairman and the members of the Committee.



COTTON POLICY

THE trade demand for a review of the Government's cotton policy has generally expressed itself in four forms—relaxation in cotton control, including the grant of higher quotas to mills, the grant of drawbacks on import duty on imported cotton used in the manufacture of the cloth that is exported, the request for a longer export quota for Bengal Deshi cotton, and the demand for a reduction in export duty on cotton. Of these demands, the Government has virtually conceded the first two. Thus, it has decided to abolish the system of zonal allocations of cotton to mills, except in the deficit area in the South from Hyderabad downwards. Individual mill quotas have also been increased by 20 per cent. over the allocations made to them last year. The general framework of the cotton control, however, remains unimpaired. Thus, the floor and ceilings remain and so also the system of licensing of dealers and of control over movement of cotton. Efforts are being made to implement the second demand. It would appear that the mechanism for the drawback on import duty paid on foreign cotton used in exported cloth is being worked out and will soon be announced.

The Government has, however, turned down—at least, for the present—the demand for a fresh export quota for Bengal Deshi and that for a reduction in export duty on cotton. At the Press Conference last week, Mr. T. T. Krishnamachari, Minister for Commerce and Industry, stated that he was not inclined to consider any further quotas "at the moment," and added that he did not want to make any further statement which would come in the way of the future course of action. This means that the Government has decided—and wisely too—that, at least tentatively, there would be no further export quota for Bengals.

The present allocations for export consist of 175,000 bales made up of Bengal Deshi (75,000 bales), Dholleras, Mathia and Kalagin (50,000 bales) and C.P.I., C.P.I. I., C.I. Deshi and Oomra Deshi (50,000 bales). The exports of Coconadas, Assam-Comillas, and linters, zoda and yellow pickings are, however, allowed freely. The demand for an additional export quota of Bengal Deshi cotton stems from keen enquiry for such cotton from foreign countries and ideas of a large surplus of this variety. It is true that Bengals are in good demand and that the initial quota of 75,000 bales has been sold out at attractive prices. But the more relevant point is whether the country has enough of this variety to spare. Our investigation reveals that it is now too early to say categorically that the country has a large surplus of this cotton.

The supply position of Bengal Deshi is at present variously estimated, thanks to the paucity of reliable statistical data. The carry-over of Bengal Deshi into the current season is estimated at between 60,000 and 70,000 bales, which, together with the production of about 280,000 bales, should give a supply of 340,000 to 350,000 bales. Mills might consume about 170,000 bales and exports, on the basis of the quota already granted and so'd, will account for 75,000 bales. This leaves a surplus of about 95,000 to 105,000 bales. But this does not take into account the extra-factory consumption of Bengal Deshi cotton which serves, in the form of *razais* and padding for coats in certain areas, as the poor man's substitute for wool. Perhaps, the surplus would be somewhat larger if the crop turns out to be better than now expected. Even so, it is doubtful whether the surplus would be large enough to permit another sizable export quota. Even if a quota of 50,000 bales were granted, it would mean that the carry-over at the end of the current season would be only 45,000-65,000 bales, or less than the quantity of this variety of cotton brought into the current season.

It seems unwise to ask for an additional quota, which, when granted, would leave the carry-over at a somewhat precarious position. The demand is unwise from another point of view too. The prices of Bengal Deshi cotton have improved during the last few weeks by nearly Rs. 100 per candy to Rs. 560 per candy. Any further quota for export might push up the prices still further and distort the whole pattern of differentials in the sphere of cotton prices. A situation might be reached when Bengals, a short-staple variety, would be getting a relatively better price than the better staple varieties, as is happening in Pakistan even to-day. One consequence of this would be a setback to the growing of medium and long-staple varieties which are needed by the mills. Surely the country cannot afford to take this risk.

The case for the reduction in export duty on non-Deshi varieties of cotton, however, seems to rest on more solid ground. The export duty on Bengal Deshi is Rs. 125 per bale, whereas the duty on Dhollera, Mathia and Kalagin, C.P.I., C.P.II., C.I. Deshi, Oomra Deshi and Coconadas is Rs. 200 per bale. There is no duty on Assam-Comilla but a 30 per cent. *ad valorem* duty exists on linters, zoda and yellow pickings. It will be recalled that, owing to the heavy incidence of the export duty on exportable varieties other than Bengal Deshi, a part of the export quota for those varieties remains even to-day unutilised. The Government will, therefore, do well to consider sympathetically the question of reducing the duty of Rs. 200 per bale at least to the level of the duty on Bengal Deshi varieties, namely, Rs. 125 per bale.

CEILING ON LANDHOLDINGS

The Prime Minister, Mr. Jawaharlal Nehru, whose views on nationalisation have been as wavering as the wind, has once again failed to give a definite lead on the issue of imposing a ceiling on the quantum of agricultural land which a person can hold. The views expressed by him on this question, at a Press Conference held at New Delhi early in the week, are so self-contradictory that they make one none the wiser. He stated that there had been no change in the principle and policy about ceilings on landholdings advocated by the Planning Commission in its final report and that the application of the principle and the time for putting into effect had been left to the State Governments. But, in the same breath, he observed that he would not break up the sixty-acre farm of a Punjabi farmer, who grew 40 maunds of wheat per acre, for he saw in it "a fine piece of work being done." In saying this he admitted that considerations of production are far more important than the doctrinaire principle preached by the Planning Commission. Thus, his attitude towards this particular farm, which incidentally is bigger than the ceiling contemplated by the land reformers, is inconsistent with his support to the principle as laid down by the Planning Commission.

The self-contradiction does not end there. For it manifested itself in his views regarding the timing of the implementation of the reform. He stated that there could be no uniformity in the whole of India about the extent and the method of determining ceiling. This is a perfectly sensible statement. He further added that there was no proper land census in India and it was now proposed to undertake such a census. This admission means that there is no reliable data on which one could proceed with such a complicated piece of land reform as placing a ceiling on landholdings. Assuming that this reform is desirable—we have our doubts about it; in fact, we feel that it is of a dubious nature—then the logical thing to do would be to collect the data and study them before embarking on it. But, what did Mr. Nehru say? He categorically stated that "fixation of ceilings would not await the land census." In other words, he meant that whatever might be the conclusions indicated by the land census, the Governments would go ahead with the implementation of the reform.

How inconsistent this attitude of Mr. Nehru is is highlighted by some of the recent developments. A few weeks ago, at the Conference of Agricultural Ministers, Dr. Punjabrao Deshmukh, Minister for Agriculture and a member of the Cabinet presided over by Mr. Nehru himself, conveyed a warning against any hasty move towards imposing a ceiling on landholdings. Taking this cue from him, the conference decided to refer the question to the National Development Council. At about the same time, directives were issued to the Delhi State Government which had sponsored a Land Reform Bill to withdraw from the Bill the provisions relating to fixation of ceilings on landholdings in the State. The prompt withdrawal of the provisions by the State Government created an impression that those in authority were revising their views on the subject. Meanwhile, the country had been awaiting a clear lead on the issue from the National Development Council to which the matter had been referred. The memorandum on the conclusions reached at the meeting of this Council held on 7th and 8th September, placed before Parliament this week, has no traces of the Council having discussed the question. Mr. Nehru's views, referred to at the outset, coming on top of these events, leave one to wonder whether the Central Cabinet has formed any definite opinion on the question of fixing a ceiling on landholdings.

That the logic of land ceilings goes against the principle will be evident from the leading article on the subject in our issue dated 10th October last. It is, therefore, unnecessary to go into it once again. It must, however, be stated that these views have been further substantiated by the proceedings of the Tanjore District Agriculturists' Conference held at Kumbakonam on the 15th inst. The warning uttered by many of those who spoke on the occasion merits the attention of policy-makers both at the Centre and in the States. We would particularly commend the advice tendered by Mr. C. R. Srinivasan, one of the oldest Directors of the Central Board of the Reserve Bank of India, who is by no means a die-hard, as will be seen from the excerpts of his speech published elsewhere in this issue. The very proposal for setting a ceiling in *ryotwari* areas under uneconomic holdings was to him "a surprise and a shock." He said that there was ample evidence in the data collected by the authorities that the vast majority of holdings in Madras was what must be classed really as uneconomic holdings. Single *pattas* below 15 acres represented 75 per cent. of the area under cultivation, and of this 40 per cent. represented holdings below 5 acres. Joint *pattas* below 15 acres represented 83 per cent. of the area under cultivation. In the circumstances, he considered that a fixation of ceiling can only introduce a disturbing element in the credit structure of rural economy. It was, he said, wiser to leave the few holdings that may be found above any optimum limit to set standards of scientific farming and provide demonstrable results of the reforms attempted. If, however, a ceiling had to be imposed, he was of the opinion that such should not be attempted at present. These well-reasoned arguments will fail to impress only those who do not want to be convinced. We are still optimistic enough to hope that those who are in authority will not let themselves be classified thus.

TRAINING WITHIN INDUSTRY

A national plan for implementing the "Training Within Industry" (T.W.I.) scheme is likely to be ready shortly. Already, a successful start in utilising the T.W.I. scheme has been made in the Ahmedabad textile industry, under the sponsorship of the Ahmedabad Textile Industry Research Association. Nearly 22 textile mills have accepted a training plan, which includes the use of T.W.I. for all the supervisors in the mills. Plans for the introduction of the scheme in the city of Bombay are being worked out. A similar scheme is also promised to industrial organisations of Baroda.

Mr. Clifford Fee, the I.L.O. expert on T.W.I., has been entrusted with the task of introducing the scheme to the industries in India. Mr. Fee, a senior training officer in the British Ministry of Labour loaned to the I.L.O. for service with the Government of India, will conduct a series of group discussions and courses which will enable the supervisors to examine and accept techniques and designs to improve their skill in leadership, in instructing workers and in improving methods of work. Ultimately, he will assist the Government of India in the framing of a national plan for the development of T.W.I. programmes for supervisors in Indian industries.

The scheme, as is well known, is designed to give training to supervisors in the art of supervision. It aims at training supervisors in such a manner as to ensure the correct interpretation of broad policies and rules to the workers. After all, however, effective the policy framed by top-level management might be, the responsibility for their interpretation and implementation of the policy falls upon the middle and lower levels of management. The I.L.O. accepted, at its conference in 1948 the need for introducing the T.W.I. scheme, first devised in 1940 in America, to all its member countries and later offered the T.W.I. service under the Technical Assistance Programme, to any country desiring it. The advantage of the scheme lies in the fact that it is learned at each firm's premises and that supervisors spend no more than two hours per day in their discussions and practice. The scheme has been successfully adopted in many industrial countries. In the U.K., for instance, since the scheme was introduced in 1944, nearly 300,000 supervisors have improved their supervisory ability.

INDUSTRIAL EXPANSION

Several interesting issues of considerable importance to India's national economy were raised by Mr. K. H. Kabbur, President of the Maharashtra Chamber of Commerce, at the annual meeting of the Chamber, held this week, in Bombay. Mr. Kabbur addressed himself to the task of indicating some of the defects in the present industrial and fiscal systems, which impede the growth of industries. He said, in effect, that any plan for aiding industries should not be exclusively concerned with prospective enterprises only, but should try to remove the handicaps of the existing industries also. He rightly contended that it would be unwise to add to the number of uneconomic units in the country, without solving the problems of insufficient finance, "undependable" transport and "irrational" labour awards, which dog the progress of the existing industrial units. He, however, welcomed the Union Government's move to set up a Rs. 300-500 crore Industrial Development Corporation, though he wondered whether an additional investment of this magnitude would be possible in the context of the continuing stringency in the capital market.

Mr. Kabbur welcomed, too, the appointment of the Committee to examine how increased finances could be made available to the private sector. He hoped the Committee would examine not only the question of providing short-term finance to industrial units but also the much wider question of financing long-range schemes which would increase their efficiency and output. Referring to the task before the Taxation Enquiry Commission, he made a few notable suggestions. He contended, in the first place, that, while personal incomes and that of small units should be exempt from taxation altogether, there should be a gradual and progressive taxation in the higher ladder depending upon percentage profits (and not incomes) earned by each unit or individual. This is a controversial issue. For, while a tax on income has at least the merit of uniformity, a tax in profits is a tax on efficiency. But he was on firmer ground when he insisted that the basic materials needed for industries should not be taxed at all or taxed only at a low *ad valorem* rate.

Proceeding, Mr. Kabbur examined the question of protection to industries. He argued —and rightly too—that the mere grant of protection to industries will avail them nothing if steps are not taken to augment the production of raw materials needed by the protected industries or to develop the subsidiary auxiliary industries on which the protected industries depend. It is to be hoped that the Government will take note of Mr. Kabbur's well-reasoned contention that to grant protection to the end-products only—that is, to grant such protection without taking care to develop raw materials and subsidiary industries—would only "inflate the costs, burdening the consumer without any compensatory advantage in the sphere of industrial development."

COMMUNITY PROJECTS

The official note on the progress of the Community Projects in India, released last week, would appear to be no more than a publicity stunt to commemorate the presentation of a purse to the Prime Minister on his sixty-fourth birthday. There appears to be hardly anything in it to commend itself. Wherever an attempt is made to describe the progress made by the Projects, such is only in general appreciative terms. It could not be otherwise, because in three instances, the release pleads inability to assess the progress, as full data have not been made available to the Community Project Administration. It is, however, claimed, albeit in general terms, that there is tremendous enthusiasm among the people to better their lot.

For one thing at least the official release deserves credit. And that is its frank admission of the difficulties which have handicapped the progress of these projects. In the first place, the need is being felt for a closer association between the members of the Project Advisory Committees and the Project authorities. Secondly, there is also lack of co-ordination among the various departments of State Governments. This has precluded full utilisation of the existing stuff and resources for the implementation of the programme. Thirdly, quite a few State Governments have been found wanting in preparation and planning to assist villagers in their work under the Projects. Lastly, there have also been delays in the procurement of equipment from abroad. It is, however, encouraging to note that the Projects Administration is alive to these handicaps and is doing its best to overcome them.

OFF THE RECORD

(By "ROVER")

IT would be such a welcome change, if our Ministers were to abandon the use of *cliches* and be intellectually honest, at least on some occasions. There is no more convincing sign of mediocrity and inability of a person in high position to face facts than this effort to hide poor achievement behind reassuring phrases. They deceive nobody, certainly not those whose doubts and fears they are supposed to put at rest. When some situation is fast deteriorating and demands immediate handling, in fact, when timely action might have altogether averted a "situation" which might require any public reference to it, an internally agitated and apprehensive Government or a member or spokesman of it is certain to come out with some such maddening phrase as "the Government is carefully watching the situation" or "the situation is under control."

Even if they must smother truth in some equivocal words or phrases, why must Ministers and officials be so dumb as to take shelter behind hackneyed phrases, which have become meaningless and nauseating by being overworked, instead of inventing some original ways of telling white lies. We have long since ceased to expect our Ministers to get things done. We have realised that all that they can do is to deliver not the "goods" but speeches. We might be somewhat satisfied, if they at least did this in an entertaining manner. As it is, they just bore people to death who are obliged to attend functions inaugurated by most of our Ministers.

On the occasion of the launching of the s.s. *Jalaputra*, built by the Hindustan Shipyards Ltd., at Visakhapatnam last week, Mr. K. C. Reddy, Union Minister for Production, though evidently trying to be mentally more honest than the usual run of Ministers, was guilty of using one such expression, which exasperated many of us who are rather fastidious about linguistic integrity. After detailing the progress made in recent years in shipbuilding activities and the measures taken by important maritime powers to promote these and sincerely deploring the "infant-like position of our shipbuilding industry", Mr. Reddy was certainly not right in claiming that "the Government of India is fully alive to the need for putting the shipbuilding industry on its feet."

There must be only a very pale flicker of life animating the various activities of the Government of which Mr. Reddy is a member, if being "fully alive" results in the building of 40,000 d.w.t., for our grossly inadequate merchant shipping, during the first half of the five-year period of the Plan. The Five-year Plan provided on a priority basis, a poor target of 200,000 tons, which a Government even if it had been only half awake would have overshot easily and long before the stipulated period. Perhaps, I am unduly harsh on Mr. Reddy. Perhaps, having never experienced in his own person the luxurious sensation of what being "fully alive" means, Mr. Reddy honestly holds the somnolent Government of India as fully alive and kicking.

But there is no reason why I should blame Mr. Reddy for this misplaced profession of his Government's great concern over a basic industry of the country and the wide, yawning gulf which divides it from the despicably poor achievement in this direction. Far greater men than Mr. Reddy, men with unprecedented power and authority in ordering the affairs of the country, have been indulging in similarly extravagant protestations for many years. If the promises of some of these were to be taken literally, as many credulous ones like you and I did before we had a taste of these great ones' inaptitude for turning their cheap aspirations into actualities, we would naturally be entitled to witness work going on at least on one hundred vessels in a dozen busy yards spread along our vast coastline. All that we have to-day, instead, is not much more than what little had already been established by private enterprise unaided against heavy odds. In spite of having orders on hand for five 7,000-ton and two 8,000-ton ships, keels for only two have been laid in a yard designed for building eight ships at a time, more than two years after taking it over from the concern which had the foresight to launch it a dozen years ago. If Mr. Jawaharlal Nehru's Government had not inherited the Visakhapatnam yard, in working order with all its equipment and structures, they would, possibly, still be looking for a suitable site for locating one.

Exactly fifteen years ago, in December 1938, Mr. Nehru said he was "impatient to see Indian ships carrying the flag of India across distant seas to far-away countries." Ten years later, in the first flush of newly won independence, on 14th March, 1948, while launching the first ship, the s.s. *Jalausha*, built at this historic yard, our Prime Minister categorically assured us that "shipbuilding will not suffer and will go on at all costs and at every cost." He asked us then to "rest assured that the Government is intimately interested in encouraging the industry." Only eight months later, on 20th November of the same year, while ceremoniously launching the second ship from this yard, the s.s. *Jalaprabha*, from distant Delhi by wireless, the late Sardar Vallabhbhai Patel, the then Deputy Prime Minister of Independent India, solemnly uttered a similar assurance that "the Government have recognised shipbuilding as an industry of great national importance." He went even further and told the country that besides helping the existing undertakings "to expand and develop in accordance with a well considered and carefully chalked out plan," the Government themselves proposed to undertake new construction.

Tragically enough, to-day, despite all these frequent vauntings, we are almost where we were on the eve of independence. Those well considered and carefully chalked out plans of the Government to undertake new construction on its own account, beyond what private enterprise had made possible, have been securely pigeonholed in some dust-laden cabinet, if not gone with the wind. Mr. Nehru, who, fifteen years ago, talked of being impatient to see Indian ships carry the flag of India across distant seas to far-away countries is to-day reconciled even to the closure of the meagre token passenger service between India and the U.K., begun with great flourish by the Scindia Company five years ago and maintained so long in the hope of adequate succour from a Government generous with its promises and loud in airing its empty aspirations.

From what Mr. Reddy said at the ceremonial launching of the *Jalaputra*, I gather that this pigeonholed plan for the development of the shipbuilding yard at Visakhapatnam has been resuscitated. The original plan, revised and redrawn with the assistance of its French advisers, is proclaimed to be presently under the Government's consideration. Perhaps advisedly, Mr. Reddy omitted to say that it was under the Government's "active consideration." It might be years before it could reach this advanced stage of being under the active consideration of Government. From our not-very-pleasant experience of the past few years, we are in a position to know that many plans, even under active consideration of our Governments, take a long time in being hatched to the point where the chick could break the shell and emerge alive. Even a farmyard fowl is quicker at this process than most of our Governments are over the many eggs they lay, a large number of which are destined ultimately to go addled.

Shipping and shipbuilding are unfortunately not the only things about which our Government's grandiloquent pronouncements have outstripped their skill and ability for translating them into realities. Their achievement in almost all spheres of official activities lag miles behind their promises made from a hundred platforms. And this very Government of India, whose list of failures is a long one and which should hang down its head in shame and contrition, has the cheek to blame the private sector of industry, after deliberately and at times even maliciously tying it up in knots, for not coming up to the expectations entertained in its Five-year Plan. While doing this, the Ministers conveniently forget that the private sector, handicapped severely as it is, has given the country almost as much sugar and as much cloth as bargained for in the Plan, within less than half the time allowed to it for reaching the prescribed targets.

It may be, however, that, at least, in the matter of shipbuilding, I am doing grave injustice to the Government. The Government is very keen on promoting cottage industries all over the country. It might quite conceivably have reserved shipbuilding for being undertaken extensively by this section and is only waiting for the Cottage and Small-scale Industries Board to perfect its plans for doing this! When a fad gets hold of a ruler's mind, there is no fantasy so wild as he cannot indulge in. We have all heard of a monarch of a completely landlocked country designing in all seriousness a uniform for himself as the head of his non-existent Navy.—*All Rights Reserved.*

FINANCIAL RELIEF TO DISPLACED PERSONS

PRIME MINISTER ON CEILING ON LANDS

(From A Special Correspondent)

NEW DELHI, *17th November*

THE winter session of Parliament commenced its sitting in the afternoon of yesterday. After customary greetings among members, the business of the House was taken up in right earnest. Preference is now being given to those Bills which have already been enforced through Ordinance. The first Bill on which discussions began was the Rehabilitation Finance Administration (Amendment) Bill. This Bill seeks to raise the limit of Rs. 10 crores to Rs. 14.5 crores to the total fund placed at the disposal of the Rehabilitation Administration for purposes of granting loans to displaced persons. Out of the above, Rs. 12.5 crores would be available for the grant of loans to refugees and the balance for the reimbursement of losses to Scheduled Banks in respect of loans advanced by them to displaced persons which were guaranteed by the Government. Any amount not utilised for the purpose of meeting the losses of Scheduled Banks would be allowed to be transferred by the Government for the purpose of granting direct loans by the Administration. Further, the Bill provides that the Administration might guarantee the full loss which a Scheduled Bank might incur in advancing loans to displaced persons. The maximum period of ten years for repayment of loans at present available is to be increased to 15 years. Provision is also made for audit of the accounts of the Administration by the Comptroller and Auditor-General, as was recommended by the Public Accounts Committee.

DELHI LETTER

Bank Liquidation

The Finance Minister, Mr. C. D. Deshmukh, introduced in Parliament a Bill to regulate the procedure for the liquidation of banks. This Bill, when adopted, will replace an Ordinance to the same effect promulgated by the President on 24th October, last. It is drafted on the same lines as recommended by a committee of jurists and banking experts appointed by the Government in July, 1950. The Committee, which submitted its report in December, 1952, disclosed that 321 banks were under liquidation under the various Courts from 1926 with outside liabilities of about Rs. 30 crores and that the procedure for winding-up of banking companies was cumbersome, prolonged and expensive. It recommended certain administrative, as well as legislative, measures for simplifying the procedure and expediting the proceedings. The Reserve Bank, the State Governments and the various High Courts were consulted on the recommendations of the Committee. The provisions of the Bill, among other things, aim at reducing cost of liquidation, affording relief to small depositors and avoiding multiplicity of proceedings which cause delay.

Although the development of cottage industries without the aid of power is not likely to bring quick relief to the unemployed and underemployed people, the Commerce and Industry Ministry has been doing its bit to encourage them. This promotion is being looked after by a responsible Deputy Secretary, now that the Ministry has to allocate the proceeds of the cess levied on mill cloth for the encouragement of the handloom industry, besides taking suitable measures for the expansion and rehabilitation of many small-scale industries. Among the industries that are being fostered, mention may be made of the handloom, leather-tanning and horn carving in Orissa, carpentry in Jammu and Kashmir, wollen carding and finishing in Rajasthan, pottery in Bihar, hand-made paper, mat-weaving and leather stitching in Mysore. Other cottage industries that are proposed to be encouraged during the forthcoming fiscal year are the bell metal industry, doll and toy-making, ivory, canning, wool dyeing and processing, lacquerware and brush making. It may be noted that some States like Madras, Madhya Bharat, Travancore-Cochin, West Bengal, Assam, etc., are reported to be taking keen interest on the development of cottage industries on a planned basis. At the same time, special attention is being devoted to the promotion of cottage industries under the Community Project Schemes.

The Prime Minister's statement, in the course of his periodical Press Conference this week in regard to the ceilings on land holdings, will give unequivocally the policy that the Government of India is likely to follow on this vexed problem. There have, for instance, been reports of divergence of opinion between the Planning Commission and the Agricultural Ministry. The latter is of the opinion that, although ceilings on landholdings might be justifiable on grounds of social justice, the whole question should be viewed from the point of view of their effect on agricultural production. The Planning Commission is reported to have held the view that land reform and an equitable distribution must be looked at not only from the point of view of agricultural production but also from the wider angle of national welfare and social justice. In its Report, the Commission pleaded for a thorough study of the land problem since any reform in this connection will affect every aspect of rural life. It suggested that, within each State, there is need for some machinery for investigating and reporting on the progress of measures of land reform. It felt that, in the Central Government also, there was need for an organisation which could pool knowledge and experience gained in the States and could suggest lines for further investigation. It recommended the establishment in the Central Government of a land reform organisation. According to the Commission, such an organisation "will prove to be of considerable value both to the Central Government and the States and will help the progress of land reforms." At the recent Agricultural Conference held in October last, it was thought necessary to have a detailed land census after which the fixation of ceilings would be considered and a uniform principle followed. At this Conference, it was favourably considered that relaxations should be permitted in respect of certain categories of land—owner-operated large farms run on efficient lines, newly reclaimed waste lands brought under cultivation by private parties, groves and holdings which were pooled into co-operative farms by their owners. Many States have not gone ahead with this reform, apparently in their desire not to antagonise the landed aristocracy. The Prime Minister at the Press Conference indicated that there could be no uniformity in the whole of India about the extent and method of ceiling. The overriding consideration, according to him, was that the food production should not go down by the application of even a good rule. The Prime Minister declared that the fixation of ceiling would not await the land census and that it was for the State Governments to take action, whether before or after the census.

Sindri Fertiliser

Five foreign firms, two Americans, two Germans and one Italian, have been asked by the Government of India to submit tenders for the establishment of a urea and ammonium nitrate plants at Sindri. It will be remembered that the Fertiliser Mission, which toured some foreign countries a few months ago, recommended that efforts should be made by Government to manufacture urea and ammonium nitrate. The report of the Mission suggested that plants for the production of 35 tons of urea and 180 tons of ammonium nitrate per day might be set up at Sindri, utilising a portion of the waste gases from the coke ovens. Alternatively, it recommended the manufacture of 70 tons of urea and 110 tons of ammonium nitrate. No precise estimate of the cost had been made by the Mission.

Meanwhile, the Demag-Krupps Steel Mission, which arrived in the Capital from Germany last week-end, has had discussions with Government spokesmen regarding the preliminary issues such as the formation of an Indian company, the supply of technical personnel and equipment to carry out the execution of the project according to schedule, the location of the proposed plant, etc. The choice in regard to the location is now between Orissa and Madhya Pradesh. Indications are that the former will be preferred in view of the fact that cost of construction of the factory is expected to be lower than in the latter.

UNDERVALUED CAPITAL

NEW DEVELOPMENT ON STOCK EXCHANGE

(From Our Own Correspondent)

LONDON, *14th November*

IN the past week, an interesting controversy has boiled up in the City over speculation in the shares of particular companies aimed at acquiring control over them and has been pursued hotly through the Correspondence columns of *The Times*. A number of large hotel and restaurant companies have been the target for this speculation, the most spectacular case being that of the Savoy Hotel Company, whose shares a month ago were quoted at 30/, reached 50/6 in the middle of the week, though they have now dropped back to 45/- following statements from the directors that they knew of no negotiations for transfer of control of the Company and of the application by a body of shareholders for an investigation into recent transactions in the shares.

LONDON LETTER

This speculation all arises from the extraordinary increase in land and building property values which has developed since the war. As a result, many companies—and the hotels and restaurants are good examples—find that the value of their land and buildings far exceeds the worth of the company as a going concern. So that, in some cases, a company can be bought up at the current market values based on dividend earnings and then have its assets sold up to realise a far larger sum. A similar situation arises where, as a result of the dividend limitation policy first introduced by the Socialist Government and continued informally with the blessing of their successors, companies have deliberately built up, without even capitalising, large reserves—which have not increased earning power. Under either of the above examples, the net assets of some companies can be substantially greater than the capital employed in earning income and in the case of the hotels the greater value is not even shown in the balance sheets.

Board of Trade Informed

Prudent company directors have always understood that an increase in the value of fixed assets should never be written up in the balance sheet as this does not affect earning capacity. But, when the increased value is on such a scale that it overshadows the whole of the rest of the assets, the company can become an easy target for speculators interested in getting a quick capital gain—and the argument that has flared up concerns the propriety of such speculation. Some correspondents have called for a banding together of prudent company directors to defeat such speculation (how, is not clear) and other proposals have been made to give existing managements security of tenure. The fact that the Board of Trade has acceded to the request by the Savoy Hotel shareholders for an enquiry into the names of the true owners of the stock recently purchased —the first time that the Companies Act has been invoked in such circumstances—suggests that the Government is at least prepared to look further into this question of propriety.

The arguments on the other side are that companies ought to keep their balance sheets at realistic valuations, taking capital profits where these are established beyond doubt—as in the case of a complete change in the level of the property market—and issue bonus shares to their shareholders. One obvious result of this would be to bring dividends quoted more into line with earnings on shares bought in the market: a 25 per cent. dividend looks high, but, if the capital has in fact appreciated to four times its original value, then the earning is only 6¼ per cent.—which looks very different, and cannot have the same political play made with it as can the high figures.

It is obviously going to be very difficult to distinguish speculative take-over bids from genuine share purchases to acquire an interest or control over an existing company, and the advocates of freedom in this matter are probably right. Companies have the remedy in their own hands; if directors fear they are likely to be the target for an attempt to oust them, in order to cash-in on a reconstructed capitalisation they had better take the necessary steps themselves to put themselves right with their shareholders.—*All Rights Reserved.*

AMERICAN LETTER

BUSINESS TREND QUITE CHEERFUL

PETROLEUM POSITION HEARTENING—POPULATION EXPECTED TO RISE FURTHER

(From Our Own Correspondent)

NEW YORK, *12th November*

MOST American financiers and business men have been preoccupied for some time over the future course of output and employment. The professional economists, with their slide-rules, have argued that all orthodox signposts pointed to a somewhat severe recession. This simply is not so. As pointed out in previous despatches, some adjustments are taking place, because Government controls have been removed here, as they have been in Great Britain, as a matter of policy. The markets have been freed and, after 20 years of regimentation, they do not quite know what to do with that freedom. Official forecasts, which are as realistic as they can be, see somewhat lower activity in 1954 in this country, but only fractionally so. Meanwhile, it is fairly certain that 1953 will be one of the best business years in history.

Good Business Apt To Continue

On the basis of third quarter statistics, it would seem that this year could easily establish new records for personal income, for corporate profits and for dividends. Business as a whole is still extraordinarily good, even though volume has been easing off in individual lines from the very high levels of last spring. The vigorous advance of the stock market late in October and early in November was as heartening to the American financial community as the previous downturn was disheartening. Moreover, the strength had the leadership of the old-line investment stocks rather than the speculative issues. In other words, the collective opinion of investors seems to be that good business is apt to continue with variations.

In fact, there is every reason to believe that present and future adjustments in the American economy will be "rolling adjustments." In other words, setbacks will not occur in all lines at the same time. Several years ago, soft goods and textiles experienced a slump, while capital and hard goods remained unaffected. The same thing may now happen in reverse. This is only normal and lower prices in certain markets would certainly stimulate business as has been the history of mass production.

No Distress Signs

Realisation that such rolling adjustments, rather than a recession, is in store undoubtedly accounts for the cautious optimism in Wall Street, in industry and among the masses of the people who are still saving record amounts, including the farm States which have been hit by the adjustment in commodities' prices. Few distress signs are apparent over the country and industrial buying policy continues to run predominantly to 60 days and under. Unworked inventories are lower and there has also been the first drop in worrisome automobile stocks.

In the midst of all that, working capital of U.S. corporations rose to a new record of more than $88,000 million. Third quarter earnings and dividend disbursements are also reaching new highs, so that 1953 may go down as a record year, as mentioned above.

So far, disastrous strikes have been almost completely absent this year. This is probably due to the hands-off attitude of the White House in labour-management disputes and to the relative stability in living costs. To mention a few specific details, U.S. personal income aggregated a record $284,000 million annual rate in the first nine months. This was 6.5 per cent. higher than in the same period last year. Dividends paid by American corporations in September aggregated $1,200 million, also a 6 per cent. boost over a year ago. Innumerable other straws in the wind can be cited to prove the underlying strength of the American economy and the growing dynamism of a growing population as well as setbacks in individual fields, where adjustments have become necessary owing to changes of all sorts. It is all within the pattern of the envisaged rolling adjustments.

In all this, there is an absence of the previous atmosphere of emergency. No special session of Congress is being called, despite the continuing international trouble spots, such as Trieste, the stalemate in Korea, Communism in Latin America and Iranian oil. The best guess in the oil industry is that petroleum out of the nationalised Anglo-Iranian Company will be flowing again within a year and that the present difficulties will be resolved. The addition of this flow of oil, the industry believes, will be no calamity. It would be another rolling adjustment, perhaps. Economists for six leading oil companies forecast that the U.S. domestic demand in 1954 would be about 3 per cent. higher than the estimated demand this year. This projection includes and takes into account a possible 5 to 10 per cent. decline in general business activity; also, a decline in automobile registrations and a tapering off in new oil-burner installations owing to increased competition from natural gas in some areas and lower levels for home construction.

Members of the American Petroleum Institute heard the other day details of a radically new petroleum refining process, designed to make possible the production of larger quantities of gasoline and heating fuels from given amounts of crude oil. The new process is called "fluid coking." Similar improvements are taking place in many industries. They suggest not only constant changes and necessary adjustments, but greater benefits for everyone concerned. This is superimposed upon growing population trends. Forecasters expect that, within the next decade, the U.S. population is likely to increase by more than 17 million persons to about 177 million by 30th June, 1963.

While the low birth rate of the early 1930's indicates that the number of young people coming into marriageable age will be lower than in previous years and although past prosperity has led to large savings and early marriages, new family formations are likely to be somewhat lower in future years than they have been in the past. Conversely, a new crop of youngsters is growing up which means demand for new schools, clothing and innumerable other items required by the growing number of consumers, including the larger number of old folks who live longer because of improved medical care.

All this points up the necessity of business adjustments to take care of the ever-changing conditions in all segments of the U.S. economy. In this process, it is natural that the majority will benefit and that some will get hurt, who are either unable or unwilling to adjust themselves. Such a state of affairs should not present too much of a problem to the United States or to overseas countries. All of them have to adjust themselves to constantly changing conditions.—*All Rights Reserved.*

(Concluded from next column)

In pursuance of an arrangement subsequently agreed to by the Governments of Pakistan and Japan, the funds to be deposited in a non-resident rupee account in the names of Japanese exporters are to be invested in non-interest bearing Treasury Bills to be issued by the Pakistan Government. Accordingly, no interest will be earned on deposits in account or from investment.

The establishment of a giant woollen mill at Harnai in Baluchistan, the official opening of which was held early this month, is a landmark in the industrial history of the Province of Baluchistan. This Province, with a population of 1.2 million and an area of more than one-third of the whole of Pakistan, has 2 million goats and sheep, the quantity of wool actually traded being 50,000 maunds per annum. This entire quantity was hitherto being exported. With the restrictions on sale in foreign lands, prices of Pakistani wool depend on world markets and often bring low returns to peasants. But with the establishment of this mill, the producers will get a regular and stable market for their products.

The mill has been constructed at a cost of Rs. 50 lakhs and the working of two shifts a day will result in an annual production capacity of 80,000 blankets, 800,000 lbs. of yarn for cottage industries and 540,000 yards of fine tweeds, and other finer woollen goods. Development of Baluchistan on well-conceived and scientific lines, it is generally felt, can help considerably in the resettlement of refugees.

PAKISTAN NOTES

CESS ON COTTON TO BE RAISED

INDO-PAKISTAN MOVABLE PROPERTY PACT

A FOUR-FOLD increase in the rate of cess on raw cotton, from As. 4 to Re. 1 per bale, has been proposed by the Government of Pakistan. This was revealed by Khan Abdul Qayyum Khan, Pakistan Food and Agricultural Minister, in the course of his presidential address at a meeting of the Pakistan Central Cotton Committee held at Karachi on Monday last. The proposed increase in cotton cess, it is stated, is a sequel to the need for augmenting the finances of the Committee which has been spending large sums on the implementation of the various research and development schemes for cotton.

The Minister reviewed the recent developments in the sphere of cotton. He held out the hope that the statistical position of cotton during the current (1953-54) season was, on the whole, quite satisfactory. He also expected that there would not be any serious difficulty in disposing of the exportable surplus, estimated at 1.4 million bales. The current season's output is placed at 1.6 million bales and previous season's carry-over amounts to 250,000 bales. The total supply available thus comes to 1.85 million bales, against the indigenous consumption requirements of 450,000 bales. How far and to what extent these hopes will be realised will, of course, depend on the trend of world cotton market. Although it is too early to make any predictions regarding this trend, it may be said that Pakistan will have to meet severe competition, thanks to the comfortable supply position the world over. The aggregate supplies available during the current season are estimated at 52.5 million bales (including the previous season's stock of 17.1 million bales), as against the estimated consumption of 25.5 to 26 million bales.

It is against this background that one should examine the possibilities of a satisfactory export trade in cotton. Exports are already on the downgrade. Indeed, to quote one report:

"The U.S. offer to sell cotton in return for local currencies holds out a threat to this country's potential buyers in the Continent who may be lured away. The trade agreement with Japan is almost inoperative, owing to scarcity of foreign exchange. . . . China, one of our biggest buyers last year, is practically out of the market. . . . The U.K. does not seem to be too eager to enter the Pakistan cotton market in a big way. . . . There seems to be no chances of India entering the market at all for Pakistan cotton. If conditions do not improve or if barter deals are not concluded expeditiously, there may well be a crash in prices (of cotton) early next year."

It is no wonder, therefore, that cotton circles in Pakistan are greatly worried about the future of the silver fibre, one of Pakistan's major earners of foreign exchange. This has revived the plea for a substantial reduction in export duty and further encouragement to barter deals. Stress is also laid on improving ginning and baling of cotton.

The Government of Pakistan has informed the Indian Government that it has ratified the Indo-Pakistan agreement on certain items of movable property reached early in August last. The agreement covers personal and household effects left behind by refugees on either side, appointment of a joint committee for the assessment of compensation in respect of property acquired by the respective Governments for the purpose of rehabilitation, restoration of articles seized after Partition, exchange of lists of sale proceeds on either side, settlement of claims of persons employed in local bodies and the Government, and procedure for recovery of buried treasures.

The procedure governing imports of capital goods from Japan has been clarified by the Government of Pakistan in a *communique* issued last week. It will be recalled that the Government announced on 23rd June, 1953, certain special concessions to Japanese exporters of capital goods to Pakistan, with a view to encouraging a larger flow of these goods. Under this arrangement of deferred payments, Japanese exporters were permitted to invest the amount realised on their exports in deposit in non-resident rupee account in Pakistan Government securities and remit, in sterling, as current payment, the interest earned on deposits in account or from investment.

(Continued in previous column)

STIMULATING FLOW OF U.S. PRIVATE CAPITAL ABROAD

REPORT OF COMMERCE DEPARTMENT

COMPREHENSIVE recommendations calculated to encourage American private investments in foreign countries have been submitted by the U.S. Department of Commerce which made a special study of this problem. These recommendations may be divided under three broad heads, namely, (a) action within the power of the U.S. Government, (b) programme for reaching an understanding with foreign Governments regarding acceptable conditions for investments in their land by private enterprise in the U.S., and (c) plans to support and advise U.S. business on the scope for investments abroad. These recommendations are the outcome of an elaborate study undertaken by the Department. This study throws a flood of light on the issues involved and the measures to be taken (both the U.S. Government and the Governments of countries in need of foreign investment) in order to increase the flow of U.S. private capital abroad. As India is in need of a large volume of foreign capital for implementing its Five-year Plan, it will be worthwhile studying the findings of the Department, recorded in a report entitled *Summary of Preliminary Findings and Recommendations: Study of Factors Limiting American Private Investments.* This report was submitted to the U.S. Government in July last. The salient features of its recommendations are outlined on this page.

The report lays stress on the various ways in which the U.S. Government can help increase the outflow of private investments to foreign countries. The scope for the Government's action is stated to be immense in the field of trade. It can help increase the earning capacity of other countries (a) through progressive and careful revisions of U.S. tariffs and import policies and (b) by supporting international efforts at removing trade barriers. In negotiations for the lowering of tariffs, careful thought should be given to impediments to the flow of international capital such as import and export controls, quotas and other regulations imposed by both the capital exporting and capital importing countries. Attention should be given to the lowering of U.S. tariffs and other trade restrictions which would encourage manufacturing and processing industries in other countries. These negotiations should also aim at achieving currency convertibility in progressive stages. The Government should also try to achieve a certain amount of stability in the U.S. demand for certain basic raw material. For violent fluctuations in the world market for these have caused serious disruptions in the economies and budgets of some countries needing U.S. capital.

Public Aid

Since the end of last war, the U.S. Government has made available large sums to assist reconstruction and defence programmes in other countries. In the administration of such assistance, the U.S. Government has been advised to utilise to the maximum extent possible, private trade and private financial facilities. Assistance to less developed countries should be continued. In order to increase the ability of these countries to attract private foreign investment, the U.S. Government should help by providing technical assistance to them. Laying down the conditions under which the U.S. Government should grant loans, the report says:

(1) The Government should, when requested by foreign Governments and in full co-operation with U.S. business, help to provide directly or indirectly technical assistance to improve the economic institutions, public administration, and health and educational conditions of less developed countries in order to increase their ability to attract private foreign investment. The Government should also support and encourage the flow of free voluntary assistance from private U.S. institutions, foundations, and individuals.

(2) Loans by U.S. Government agencies can, if properly administered, help to establish the conditions abroad which will be conducive to increased private investment. If public loans are granted for the purpose of helping the growth of such basic facilities as transportation, power, irrigation, and the like, they can help in establishing the economic base for development through private channels.

Loans by U.S. Government agencies for economic development purposes should be granted only after a careful check has been made to determine that private finance is not available or not interested, and after determination that the undertaking should not be financed by the I.B.R.D. Such loans, of course, should be extended only if there is a reasonable expectation that they will be repaid and that the interest of the United States in the undertaking is such as to warrant the use of public funds.

(3) When circumstances necessitate special economic assistance on a grant basis, grants should, in general, concentrate on, or be related to, those projects which would contribute to the development of the basic resources of the country, the amelioration of public services, the improvement of its creditworthiness and thus provide the framework for increased private investment.

Modification of Laws

Apart from revision of trade policies and aid programmes, the U.S. Government can, according to the report, render assistance to the flow of private capital to foreign countries, through legislative and other administrative action. Such action pertains to (a) tax concessions, (b) guarantees and risk insurance, (c) revision of anti-trust laws and (d) modification of the law relating to sale of foreign securities in the U.S.

With regard to tax concessions, the report expresses the view that tax incentives hold considerable appeal to present and potential investors in the foreign field. While it is difficult to gauge in advance the effectiveness of tax incentives in increasing the flow of private investments to foreign lands, there is, it observes, ample justification for a review of certain aspects of U.S. taxation by taxation specialists. The report underlines the need for a revision of the tax credit system in such a way that, in no event will tax concessions given by a foreign Government to attract American investments merely result in smaller U.S. tax credits for the investor.

Other proposals which have been made by such groups include: broadening the definition of creditable foreign taxes; elimination of the so-called 'overall limitation' on the foreign tax credit; extension of the tax advantages offered by Western Hemisphere Trade Corporations to the whole world; extension to foreign branches of U.S. firms of the privilege now enjoyed by foreign subsidiaries of U.S. firms to defer tax on incomes earned abroad until it is repatriated; special tax incentives to encourage the purchase of foreign securities by individual and institutional American investors; provisions for accelerated amortisation of plant and property abroad; and complete or partial exemption from U.S. taxes of income earned abroad—either unilaterally or subject to reciprocal advantages given by foreign countries through tax treaties.

Revision of Guarantee System

Flow of international investments is generally checked by certain impediments such as, inability to convert earnings into dollars, the possibility of expropriation, and threats of international or civil disturbances. A study of this problem reveals no clear evidence that the present U.S. programme of guarantee system has resulted in any increased volume of investment. Moreover, American business circles seem to be opposed to the guarantee principal on the ground that guarantees (a) should be paid by the foreign Government and not the U.S., (b) tend to perpetuate the very risks they are designed to compensate, and (c) lead to wider Government interference in private business. Objections to the guarantee system are also raised in respect of the cost of guarantees, the methods of negotiating the contracts, and the necessity of disclosing business affairs. As against these, there are a few others who feel that the guarantee principle is sound as a means of giving confidence in the face of the extraordinary risks encountered under present world conditions.

In view of the difference of opinion on the system of guarantees, the report does not make any specific recommendations on the subject. But it has advised the Government to examine the various proposals already made for the modification of the present system. These proposals include: (1) and civil disturbances, (s-tGhvci Osb rrsl TR extending the guarantees to old as well as new investments, (ii) extending the range of risk to cover international and civil disturbances, (iii) providing guarantees for portfolio as well as direct investments, (iv) reducing the cost of guarantees, (v) reducing the extent of Government scrutiny of applications for guarantees and (vi) eliminating in whole, or in part, the requirement for agreement with the host Government as a prerequisite for issuing guarantee.

Revision of Anti-trust Laws

Corporations and firms in the U.S. are subject to the anti-trust laws in their foreign operations, because such operations affect U.S. trade. In certain circumstances, many typical forms of private foreign economic agreements are illegal. These include price-fixing agreements and the allocation of markets; so also the exchange of know-how and concession contracts which may be made the basis of prosecution, if they tend to limit competition. Anti-trust laws such as these are considered by some business men as a deterrent factor to private foreign investment. They, therefore, want freedom to adjust to monopolistic arrangements abroad developed by foreign firms in accordance with foreign legislation. But there are others who feel that cartels may deter development, because they limit access to resources and to markets and foster unhealthy concentration of economic power. The other countries, too, may enact anti-trust laws and this may check the flow of capital to those countries. The report, however, feels that the Government should examine the effects of the existing laws on foreign investments.

Simplification of securities and exchange commission regulations is another measure suggested by the report for encouraging U.S. investors to participate in the economic development in foreign countries. These regulations aim at giving American investors more details than is customarily needed regarding the affairs of the companies which desire to sell their securities to the U.S. public. They also require the registration with the Commission of any securities issued by foreign as well as domestic business enterprises. These regulations include the Securities Act, 1933, the Securities Exchange Act, 1934, the Public Utility Holding Act, 1935, and Investment Company Act, 1940. Although these statutes are considered proper and necessary for the protection of American investors, it is suggested that every effort should be made to assist foreign firms and Governments to sell their securities in the U.S. by simplifying them. Foreign firms object to some of the provisions in the U.S. laws which ask for information, the disclosure of which is not permitted under their own laws.

The report has also pointed out the lines on which the U.S. Government can improve the climate for American investments to move abroad, by promoting mutual understanding between the U.S. and other countries. It says that there are many foreign countries which are conscious of the great advantages to them of importing American capital where it is accompanied by American know-how. These countries may be advised to change their laws in a manner calculated to attract U.S. private investments. A vigorous diplomatic effort is considered necessary for this purpose. Apart from signing treaties of Friendship, Commerce and Navigation (F.C.N. Treaties), the report advocates the advisability of special treaties regarding investments. Proceeding, the report says that the Government should, in addition, also negotiate taxation treaties. "If, in the future," to quote the report, "legislative concessions are provided for in U.S. taxes on income earned abroad, consideration should be given to the possibility of making them dependent on reciprocal advantages from foreign countries."

Clarification of Attitude

Foreign Governments should also take specific action to attract private American investment. It is admitted that many such steps have already been taken by some countries and that there have been relaxation of some restrictions. In some other countries for attracting increased investment in those fields considered important for national development. But there is still scope for action for improving the climate. Foreign Governments should be asked to state as clearly as possible their attitude and policy towards private investment. Such statements should (a) define the fields in which foreign capital may operate and (b) give assurances that investments would not be nationalised without adequate, prompt and effective compensation. No discriminatory measures harming American investors should be adopted by the Governments. In cases where controls exist, foreign Governments should be encouraged to be more consistent and more efficient in their screening of proposed foreign investments and in the administration of import and exchange controls.

The report is of the view that the U.S. Government should suggest to other Governments the value of special inducements to attract investment. These include (a) duty-free entry of equipment, (b) liberal tax treatment such as accelerated amortisation for the easing of corporate income taxes, reduction of tax rates for the earlier years of new investment and refraining from special taxes which in effect confiscate profits, and (c) financial assistance by local financial institutions.

U.S. business, in its foreign investment activities should be given the strongest possible support by the U.S. Government. This can be done, according to the report, by strengthening the role of U.S. missions abroad in the promotion of interests of business and help it locate investment opportunities. The U.S. Government has also been advised to step up its investment information activities in the U.S. These activities should pay special atention to the potentialities of greater participation by smaller U.S. business firms in foreign investment.

SHOULD CEILINGS BE PRESCRIBED FOR LANDHOLDINGS?

MR. C. R. SRINIVASAN'S VIEWS

IN all discussions relating to the question of fixing a ceiling on landholdings, it is all too readily assured that an upper limit on the acreage that one may own is essentially in the interest of social welfare. It is often forgotten that the issue raises fundamental questions of equity as well as of agricultural economy. In this connection, it is interesting to note that Mr. C. R. Srinivasan, Director, Central Board of the Reserve Bank of India, who discussed this issue in his thought-provoking address at the District Agriculturists Conference, held at Kumbakonam, Madras State, expressed the view that any attempt to fix a ceiling on the size of landholdings would introduce a disturbing element in the credit structure of rural economy. In view of the importance of this subject, we reproduce below the relevant extracts from his speech:

"When I address you to-day, naturally I am reminded of earlier conferences over some of which I had the privilege of presiding. The problems that we were confronted with in those days were of a different order. Then, we were mainly concerned with lightening the tax burden on land. Successive resettlements, based on a notional commutation rate, weighed heavily on the ryots at a time of falling prices. Since 1937, we have had no resettlements and what was a disadvantage has since proved an advantage at a time of rising prices. The post-war period, it may be conceded, has greatly helped agriculture to recover the proportions of an industry, in spite of intermittent hardships imposed by the control-*raj* expressing itself in terms of permits and licences, procurements and levies. Maybe, the cost of living has taken away much of the sap, but, by and large, it cannot be denied agricultural interests have benefited. Government found itself hoist with its own petard and, although the need for money was great and the question of agricultural income-tax was now and again canvassed, the urge to stimulate and sustain primary producers with grow-more-food, well-sinking and fertiliser campaigns overbore the desire to take advantage of the better climate of the agricultural sector and tap for more revenue.

"The recovery of our Independence and the introduction of a new democratic Constitution, broad-based on adult franchise, have brought new forces in the structure of the nation which it behoves all wise men to take note of. It is this aspect and its potential to make or mar things in the agricultural sector that you are interested in to-day. A democratic Government deriving its sanction and strength from a mass electorate will be directed and disposed to look at issues in terms of social justice, the only limiting factor in its application being public interest. Law, custom or usage will progressively have to yield ground if its effect is held to impair the health and harmony of our national economy. There is also another factor which will govern immediate reactions. In the last lap of our freedom struggle, with a view to gather support for the final push, those at the helm of the movement profusely promised all things to all men. These promises have now come home to roost and the redemption of many-sided and often mutually contradictory pledges has not made the task of administration easy. Vested interests would, therefore, be wise to take note of the trends of the times in resisting the pressure of the divested who are in the majority and whose voice cannot be ignored. Evidence of this pressure, quite apart from the merits, may be seen in the abolition of the *zamindari* system and the introduction of the *Pannaiyal* legislation.

Fundamental Rights

"The Constitution of India guarantees certain fundamental rights to all citizens of the State and has further enunciated certain directive principles to promote, in terms, a Welfare State. The Planning Commission comes into the picture to frame priorities and find funds for this purpose. The first Five-year Plan contemplates an investment of two thousand odd crore rupees and the Commission has set out in great detail the reason and purpose of this investment. Naturally, the agricultural sector claims first attention, for it is a commonplace that real India lies in rural India. The programme for this sector not merely seeks to recondition the economy of rural India but to recover the enthusiasm of the people for a better order and recharge them with faith and hope. If only wishes were horses, who dare deny that the future is one of great hope and much promise! Unfortunately, we are not writing on a clean slate and it is not so easy to create a new heaven and a new earth out of an outmoded economy of shreds and patches. A doctrinaire approach in a vital human sector where passions and prejudices intrude on logic and reason, I am afraid, will not yield so easily the results so confidently expected on *a priori* considerations.

"In the framing of any programme, sacrifices called for from the present generation should not bear too heavily on an under-fed economy. No doubt, it may be claimed, we are trying to cover in 10 years what other countries, more fortunately placed, have taken a hundred years to achieve, but it is difficult to stimulate and sustain enthusiasm all over India for large-scale projects which have limited regional appeal. The people in South India, for example, cannot be expected to enthuse over the Hirakud Dam or the Damodar Valley Project. Few know where these places are and, if they do, these represent what directly and immediately does not concern them. Unfortunately, Government have not the funds to undertake like work simultaneously at all centres. It is in this context

(*Continued on page 969*)

HISTORY OF AHMEDABAD ADVANCE MILLS

FIVE DECADES OF STEADY PROGRESS COMPLETED

THE Ahmedabad Advance Mills Ltd., the Golden Jubilee Celebrations of which were held in Ahmedabad early this week, has certainly reached an age at which both the management and the labour can look back with satisfaction upon a career which stands out as a remarkable performance in the history of the Indian cotton textile industry. The Mill, one of the four in the Tata group of textile mills, was purchased by the late Mr. J. N. Tata in 1900. It was, however, only after alteration and renovation of the plant and machinery—on 1st July, 1903 to be precise—that the Mill actually commenced operations. Over the past 50 years, the Mill has made remarkable progress. This is clearly evident from the fact that the size of the Mill has risen considerably, followed by a corresponding increase in production. Two notable features in the history of the Mill are that, during its 50 years' existence, provision for depreciation has been made every year and a dividend has also been regularly paid. There are few mills in India which can claim this record. Indeed, the Mill to-day can legitimately feel proud of being one of the most successful and efficient cotton textile producing units in this country. The following brief extract from the speech of Mr. A. D. Shroff, Chairman of the Mills, while welcoming the guests to the Golden Jubilee Celebrations, will bear full testimony to the achievements of the Mill:

"Fifty years ago, the late Mr. J. N. Tata, the founder of the House of Tatas, established the Ahmedabad Advance Mills Ltd., which was the third cotton mill company promoted by him during his lifetime. With a comparatively small capital of about Rs. 7 lakhs and a few hundred employees, the Company commenced operations. Despite the fluctuating fortunes which the cotton textile industry has experienced during the last five decades, the Company to-day has grown to its present size with funds aggregating over Rs. 84 lakhs. There has not been a single year in the history of the Company when the shareholders have not received a dividend and, therefore, those who reposed their confidence in the pioneering effort of the late Mr. J. N. Tata have been fully rewarded for their participation in the venture. Apart from the financial success that the Company has achieved, it is a matter of no small pride and satisfaction to us that the relations between the management and employees have been so cordial and harmonious that there has been no stoppage of work in the Mill throughout the period of 50 years, except in 1920, due to an industrial dispute."

Early Progress

The Company came into existence on 1st July, 1903. Even in the very first year, it made a profit of Rs. 70,050. A dividend of Rs. 20 per share was paid, after setting aside Rs. 27,581 to depreciation account. The working of the Mill improved steadily, dividends rising to Rs. 40 in the second year and Rs. 60 in the third year. Public confidence in this enterprise grew in strength and the shares of the Company became more and more popular with investors. Machinery and equipment in the Mill were being modernised and improved all the time, and the reputation of its products increased side by side with its growth. Its yarn was as acceptable by the China markets as locally. To cope with the growing demand, the management drew up a full-scale programme of expansion, starting from 1906. By 1912, the Mill's capacity increased from 9,640 spindles to 20,290 and from 240 looms to 294.

A further plan for extending the Mill was carried out in 1912; 10,000 new spindles and 300 looms were added, together with necessary preparatory machinery and a new weaving shed. By 1915, the productive machinery of the Mill aggregated 30,612 spindles and 600 looms. The year 1931 witnessed further expansion, with the addition of 15,000 spindles, 322 looms and necessary preparatory machinery. By February, 1933, these were all operating and, in 1938, a tentative beginning was made in spinning fine counts.

Thus, the Ahmedabad Advance Mills had built up, in just 30 years, a block account consisting of 44,224 spindles and 924 looms without raising fresh capital, having started with hardly any equipment. Particular attention was paid to building up a strong reserve out of the profits. In 1933, the reserves aggregated Rs. 56.14 lakhs, which represented more than 131 per cent. of the block account amounting to Rs. 42.79 lakhs.

The Second World War created an acute scarcity of cloth all over the world. India was practically the only country that could manufacture cloth on a large scale and meet the demand of countries which had hitherto depended on supplies from Japan, Germany and the U.K. This provided an impetus for increased production to the Indian textile industry. The Advance Mills began double shifts from 1941 which still continue. Naturally, the wear and tear on the machinery was pronounced and much of the pre-1916 machinery has had to be replaced. The Mill suffered from a serious handicap from the very beginning, namely, lack of machine bleaching and dyeing facilities. As it is situated well out of city limits, there was no drainage system in the Mills' locality. Consequently, there was no outlet for large quantities of bleach and dye-house waste. The problem, however, was solved a few years ago when the Ahmedabad Municipality completed its scheme for drainage extension.

Modernisation and Renovation

In 1950, plans were drawn up for the modernisation and complete renovation of the Mill. This was done in consultation with two American experts who made a thorough survey of all the textile mills belonging to the Tata group, including the Ahmedabad Advance Mills Ltd. A plan was then drawn up for each of the four mills in the Tata group. So far as the Ahmedabad Advance Mill was concerned, top priority was given to the bleaching, dyeing, printing and finishing plants and a mercerising plant. Most of this machinery has been received and is in the process of erection. Bleaching has already commenced. Older and uneconomical machinery will be replaced; the entire scheme, when fully implemented, will cost the Company about Rs. 80 lakhs. Appreciating the value of education and its utility to the growing industries of the country, Mr. J. N. Tata innovated a scheme of apprenticeship, which he first introduced at the Empress Mills at Nagpur and then at the Svadeshi Mills. It proved a great success. It helped educated young men to learn a trade and earn at the same time. It enabled the Mill to have a staff of well-trained men in different departments. This scheme was introduced in the Advance Mills also, with equal success. The apprentice enters into an agreement with the Company and learns the technical details of the different departments and serves the Company for a period of five years. After completing his training, the apprentice is absorbed as a regular employee into the particular department for which he has shown the greatest aptitude.

In spite of his numerous activities and the burden of piloting the affairs of young and struggling industries, Mr. Tata always looked to the welfare and happiness of his staff with genuine concern. The management has introduced various welfare schemes for the employees. These include provident fund, retirement benefits, free medical relief, education for the children of labourers, housing, creches for babies and modern sanitation. It is noteworthy that the management introduced its provident fund scheme for workers as far back as 1912. The keen desire always expressed by the management for the welfare of its operatives and staff is testified by the large number of persons in the Mill who have put in more than 20 years of loyal service.

The Company's labour policy has, since its inception, been in line with the enlightened attitude of the House of Tata. The response in the way of co-operation from employees has been gratifying. Under the Bombay Industrial Relations Act, 1948, provision is made for a Joint Committee for every industrial unit. The Advance Mills Committee has been functioning with great success since July, 1948, and has made an important contribution to harmonious industrial relations. Labour members of the Committee are thus given an opportunity of being trained in the routine affairs of the factory, while, through the process of discussion, they achieve an understanding of the industrial process which has valuable and far-reaching results. The Joint Committee has also been functioning as a Unit Production Committee in an advisory capacity in accordance with a directive from the Government of India.

There have been only two occasions in the Company's life when cessation of work took place as a result of disagreement between management and labour. Both of these occurred in the year 1920, one lasting for 12 days and the other for 20 days. Since then, the only stoppage of work—which lasted for nearly three and a half months—took place in 1942. This was not an industrial dispute, but formed part of a simultaneous stoppage in all the mills in Ahmedabad following the arrest of Mahatma Gandhi on 8th August, 1942.

The present position of the Mill is thus: the Mills has 44,224 spindles and 1,016 looms. The paid-up ordinary capital is Rs. 33 lakhs. The Mills has a strong reserve position, general and depreciation reserves accounting for Rs. 38.84 lakhs and Rs. 51.10 lakhs, respectively. The gross block is Rs. 88.30 lakhs.

The foregoing account is a tribute to the far-sighted and sagacious policy of the late Mr. J. N. Tata and the continuation of such policy by those who took over the guidance of the Mills from him. It was, therefore, quite fitting that, on the occasion of the Golden Jubilee Celebrations of the Mill, the statue of Mr. J. N. Tata—the statue, it is noteworthy, was presented to the management by the workers—was unveiled.

Mr. Girja Shanker Bajpai, Governor of Bombay, who unveiled the statue, emphasised, in the course of his address, that the relations of private enterprise to labour would remain a powerful factor in determining the scope offered by the State to the private sector of the Indian economy. Private industry, he said, must, in its own sector, assume more to itself the obligations and the functions of the State in relation to the workers. To quote him: "The more the industries in the private sector of our economy provide amenities to the workers, which otherwise would have to be provided by the State, the stronger would be the justification for partnership between State and private enterprise in the development of industry."

Welcoming the guests to the function, Mr. A. D. Shroff dwelt at length on the vital role of private enterprise in the economic development of India. Mr. Shroff rightly maintained that, given right conditions, including definite Governmental policies, private enterprise was capable of making a very important contribution to the future industrial advancement of the country. Significantly enough, he remarked: "Let it not be forgotten that, for over 50 years before India attained independence, private enterprise was able, against heavy odds, to show an achievement of which the country can well be proud. Not many years ago, India imported, for instance, from Lancashire crores worth of piecegoods, while, to-day, the Indian cotton textile industry is capable not only of clothing the 357 million of its people but also of exporting substantial quantities abroad."

It is no doubt true, as Mr. Shroff himself frankly admitted, that a section of the management of private enterprise is not entirely free from blame. It is equally true that, during the last six or seven years, no substantial progress has been achieved in the promotion of new industries. But to deny, on this score, the value of private enterprise to Indian economy is very uncharitable. The brief review of the progress of the Ahmedabad Advance Mills—a product of private enterprise—given above will clearly indicate that private enterprise can play a distinct role in raising the standard of living of the masses, given the right atmosphere. What is urgently required is a more rational attitude of the Government and the public towards private enterprise.

A NEW PROCESS IN SPINNING

What is claimed to be a revolutionary development in the history of modern spinning in recent years is the invention of "OM-S Type Super High Draft Ring Spinning Frame," by Mr. Kikutaro Honda, President of O-M Spinning Machine Manufacturing Co., Ltd., Osaka (Japan). A model of this frame was displayed and demonstrated, for the first time in India, at the Victoria Jubilee Technical Institute, Bombay, on Monday last. The invention does away with all the speed frame processes, such as slubbing, inter and roving. A draw frame sliver is directly spun on the frame, and the yarn spun by this process is claimed to be uniform in count, grain and strength; the yarn is 10 per cent. stronger than that spun through ordinary process. The frame renders possible a super high drafting upto as much as 700 times, in accordance with the yarn count to be spun while the maximum capacity for ordinary ring spinning frame is 20 times drafting (high draft). Further, the operation of the frame is simple and convenient. Again, each spindle—the number of spindles in each frame will be about 400 to 500—can be operated independently "in perfect sense" and, as such, the number of spindles made idle by trouble is reduced by half as compared with the normal two-spindle system, thereby improving the efficiency in operation.

Apart from the fact that the yarn produced by this process is very high in quality, there are said to be a number of other advantages in the adoption of this process of spinning. These are: (1) reduction in initial cost; (2) less cost on power and accessories; (3) reduction in the outlay on raw cotton; and (4) saving in personnel (to the extent of 10 to 20 per cent.). The other advantages are less noise and more clean, brighter interior of the factory and scope for remoulding old ring spinning frames into the new system.

WOOL EXPORTS FROM INDIA

One of the several important pronouncements which Mr. T. T. Krishnamachari, Union Minister for Commerce and Industry, made during his recent visit to Bombay relates to exports of raw wool. Mr. Krishnamachari revealed that the Government would shortly announce a quota for raw wool exports valid for shipment till the end of January, 1954, on the "first come first served" basis. He is also reported to have told the All-India Wool Trade Federation that he proposed to set up an *Ad Hoc* Committee for wool to act as a liaison between the trade and the Government and to review periodically the position in respect of availability and consumption of raw wool in the country.

Mr. Krishnamachari's statement regarding the export quota for raw wool, though welcome, is belated. Nearly two months have elapsed since the current (1953-54) wool season began. Wool commenced arriving in trade centres several weeks ago. Thanks to export restrictions, stocks have already accumulated at ports and interior centres. The stocks in the principal wool markets are believed, to be over 15 million lbs., which represent as much as 21 per cent. of the raw wool clip, estimated at 72 million lbs. This figure does not include stocks with wool growers and middlemen, which, it is said, are quite considerable. There has also been a fall in prices. Consequently, the wool growers and traders have been put to great hardship. If the Government of India had announced its policy earlier, earlier than the commencement of the season, all these could have been reduced.

HEAVY TASK BEFORE LIVERPOOL COTTON MERCHANTS

CLOTH OUTPUT MOVES UP

(From A Special Correspondent)

MANCHESTER 10th *November*

MANCHESTER LETTER

NOW that the Government has finally announced its intention of winding-up the Raw Cotton Commission and clearing the way for the re-establishment of the Liverpool futures market within the next few months, it is possible to survey the prospects so far as they can be gauged in the absence of the details of the system to be adopted.

Raw cotton merchants in Liverpool and Manchester have a heavy task before them and they will not be judged too swiftly on their response in the early stages. Time will be needed for supplies to be built up to sufficient proportions to meet the occasional urgent demand of customers.

On the other hand, it is essential that swift action should be taken to provide an accumulation of spot cotton. Since the Liverpool market last functioned the use of outside growths in Lancashire has been steadily fostered, partly through choice and partly by circumstances involving the reduction of dollar expenditure.

Many spinners are more than satisfied with the quality of cotton they have latterly received from African and Middle Eastern sources. The quantities may not be large in relation to the supplies formerly obtained from the American and Egyptian cotton fields but they represent an increasing proportion of imports. In addition, the need to stimulate reciprocal trade with several of these areas is now of far greater importance than it was before the war.

As a result of the larger number of contracts-out from the Commission this season, the volume of imports on private account is steadily growing. Arrivals in the three months from August to October inclusive are shown with the respective purchases by merchants and the Commission (in bales):—

	Total	*Raw Cotton Commission*	*Private*
American	61,770	1,383	60,387
Mexican	10,519	5,169	5,350
Brazilian	11,337	3,630	7,707
Peruvian	21,115	11,781	9,334
Egyptian	16,476	8,557	7,919
West African ...	47,855	31,719	16,136
East African ...	22,343	20,113	2,230
Indian	2,710	—	2,710
Pakistan	12,209	5,200	7,009
Sudan	80,173	66,606	13,567
Argentine	25,614	23,612	2,002
Sundries	13,911	7,023	6,888
Total ...	326,032	184,793	141,239

Important as the provision of supplies of actual cotton is to Lancashire mills, so also is the availability of cover against forward sales of yarns. Whatever the respective merits of State-controlled buying and distribution and the operation of a futures market, few people in the industry will deny that the Raw Cotton Commission, after its initial teething troubles, gave not only an adequate but an almost foolproof system of cover for spinners.

The taxpayer was at a disadvantage while the Commission lagged behind price movements abroad and there were numerous occasions when selling rates in this country were unrealistic. But however wide the fluctuations, the individual spinner was guarded against loss. In the future he will be able to take a more speculative attitude. A futures market provides cover for the operator skilled in its manipulation but there must be chinks in its armour which can create problems calling for ingenuity and initiative.

Egyptian Spinners

At first, under the prospective new system, the contract offered by Liverpool will be based entirely on United States cotton. How then is the user of Egyptian and other similar growths to cover himself? By calculating the differential between current values in Alexandria and New York some attempt can be made to adapt an American futures contract in this way, but particularly at the outset the fine spinning branch of the industry will find conditions complicated.

Once again the combines will be in a more favourable position than single unit mills. Many of the big groups are believed to be planning to import direct without necessarily employing merchants.

It will probably be about six months before the Liverpool futures market is in actual operation. The organisations of raw cotton merchants are keenly anxious that the changeover should be smooth and amenable to all concerned. The spinners are vitally affected and will expect to be frequently consulted as to their requirements. Goodwill is evident on all sides from those directly concerned and the move should be effected with the minimum disturbance to the even flow of trade within the industry.

Commission's Chairman

When Sir Ralph Lacey, £5,000-a-year Chairman of the Raw Cotton Commission, leaves his Liverpool office early next year to join the Manchester textile group of Fine Spinners and Doublers Ltd. as a Vice-Chairman of the combine, he will be undertaking a job in a private business appointment for the first time for many years.

Sir Ralph, began his career in the cotton trade in a managerial capacity at several mills and before the war was the Secretary of the Joint Committee of Cotton Trade Organisations, which provided statistical information for the industry.

Throughout the war he acted as Secretary of the Cotton Control, later succeeding Sir Frank Platt as Controller in 1945. When the Raw Cotton Commission took over from the wartime Cotton Control at the beginning of 1948, he assumed the newly-created post of Director of the Yarn Spinners' Association, the body set up to deal with price-fixing arrangements in the spinning section of the trade. Early in 1951, Sir Ralph was called upon by the Government to take over the chairmanship of the Commission.

Peruvian Cotton

Nearly half the supplies of Peruvian and Californian cotton imported into Britain next year will be on private account, the Ministry of Materials has announced. On the basis of past consumption 47 per cent. of users of these types have decided to buy their cotton through Liverpool and Manchester merchants, against 36 per cent. in the current year. Imports of Peruvian cotton into Britain this year so far aggregate 53,000 bales.

Private Supplies

Private cotton buyers in Liverpool and Manchester are starting to build up stocks in preparation for next year's take-over from the State-sponsored Raw Cotton Commission. They imported more than 20,000 bales of cotton from the United States and 11,000 bales from Brazil this week out of total supplies arriving in Britain of 48,022 bales. The Commission brought in only 14,298 bales, mostly bulk purchases from African sources. The Government is to wind-up the Commission at the end of August, 1954.

New Output Gains

Production of cotton and rayon cloth in September reached the highest weekly average for eighteen months, the Cotton Board announced this week. The mills turned out an average of 51,600,000 yards weekly during the month—900,000 yards a week more than in the previous month and over 11,000,000 yards weekly more than in September last year.

In the first nine months of the year the weaving mills produced 1,917,860,000 yards of cloth—227 million yards more than in the first three-quarters of 1952.

Figures of cotton and rayon yarn output for the week ended 24th October, given by the Cotton Board, show that spinning operatives in Lancashire produced 20,290,000 lbs. of single yarn. It was the fourth successive week in which the 20,000,000-lb. mark has been exceeded.

All Rights Reserved.

An appeal to Lancashire spinning companies to give the fullest possible support to private raw cotton merchants in their attempt to build up supplies in preparation for the reopening of the Liverpool futures market, was made recently by Mr. D. Windel, a director of the Liverpool Cotton Association. The market would only develop broadly when the spinners realised that it was in their own interests to support it on a broad basis, he said.

Mr. Windel predicted that the Liverpool market would be reopened between April and June next year in readiness for the time when the Raw Cotton Commission was wound up at the end of August. He expressed disappointment at the response, so far, from small spinning concerns, and called for more confidence to be shown in the prospects for obtaining 'free' cotton.

Many of the big combines were arranging to secure their supplies from overseas shippers, he said. He thought it would be difficult to build up large quantities of spot cotton without prior knowledge of the requirements of the mills. He urged spinners to come forward and state their needs to enable merchants to estimate their forward supplies and arrange shipments accordingly.

FREE WORLD'S COTTON CONSUMPTION

PROVISIONAL ESTIMATE FOR 1953-54 SEASON

IT is now clear that the world supply of cotton during the current season will exceed, by a considerable margin, the supply of cotton in the last (1952-53) season. The International Cotton Advisory Committee has estimated the world supply (including that in the Communist countries) for the 1953-54 season at 52.6 million bales of 478 lbs. each, consisting of carry-over stocks of 17.0 million bales and production of 35.6 million bales, as against a supply of 50.6 million bales in the last season, being the total of a production of 35.7 million bales and the previous season's carry-over stocks of 14.9 million bales. Even if the Communist countries are excluded, the cotton supply position in the current season shows an increase of over one million bales. Thus, for the 1953-54 season, the supply of cotton in the Free world is estimated at 43.7 million bales (production of 28.2 million bales and carry-over stocks of 15.5 million bales), as against 42.1 million bales (production of 28.8 million bales together with stocks of 13.3 million bales) in the 1952-53 season. Against this background, any discussion about the possible level of cotton consumption in the world has more than a purely academic interest, for a high level of consumption would certainly go to reduce the chances of the larger supply position impinging too heavily on prices. From this point of view, it is interesting to note that the Committee has devoted a large portion of its latest monthly bulletin (October issue) to a study of the factors which will influence consumption of cotton in different countries during the current year.

The Committee recognises that it is impossible to predict, with any degree of accuracy, the level of cotton consumption in the present season, since far too many "unknown" factors are involved. It has, therefore, addressed itself to the less difficult problem of assessing the immediate outlook for cotton consumption. The pattern of consumption in the U.S. is first taken up for study, since this country accounts for the largest share among individual countries in the total consumption of cotton in the Free world, as will be seen from the table below:

Cotton Consumption
(In million bales)

	1950-51	1951-52	1952-53	Per cent.
U.S.	10.5	9.2	9.4	37
India	3.1	3.5	3.8	15
Japan	1.6	1.8	2.1	8
W. Europe ...	7.5	6.7	6.5	25
Others	3.8	4.0	4.0	15
Total	26.5	25.2	25.8	100

The Committee quotes the view of the U.S. Bureau of Agricultural Economics, which holds that the consumption of cotton in that country during the current season "may well come close to the estimated 1952-53 consumption of 9.5 million bales." The U.S. cotton textiles industry, according to the Committee, has begun the new season in good condition, although there are reported to be difficulties in some sections. Unfilled orders are substantially higher than early in 1953, while manufacturers' stocks, cloth prices and mill margins for the "industry as a whole have been quite stable for several months." Some unsettling factors, however, are the possibility of a recession in the latter half of 1954, which has been hinted in some quarters, deflationary budgetary policy which the Government may adopt in view of the prospective deficit of 3.8 billion dollars in the current fiscal year. At the moment, however, investment income and employment remain at record levels. It is true that cotton consumption has suffered some losses. It has been nearly completely replaced by rayon in tyres and by burlap in bag fabrics. But it has gained in clothing and household uses. After considering these factors, the Committee feels that cotton consumption in the U.S. should not move, unless there is a marked break in general business conditions, far from the last season's 9.5 million bales, though there "may be some decline due to possible reduction in military purchasing and textile exports."

Any opinion on the probable level of cotton consumption in India and Japan during the 1953-54 season, according to the Committee, is more "problematic" than a year ago. This is because there have been signs of easier supply position internally, while export trade prospects in both these countries are "more conjectural, in view of the continuing world-wide tendency to restrict imports, particularly of consumer goods." Summing up the outlook for the Far East, the Committee says that cotton consumption could conceivably exceed last season's level, particularly if the export outlook for textiles improves. Referring specifically to India and then to the position in Japan, the Committee says:

"Deducing from the recent trends in this country, however, it would appear that the fundamental factor in future cotton consumption will be the state of domestic demand for cotton textiles. Here, it might be noticed that the freeing of the industry from price and distribution controls imposed in earlier years for the protection of the domestic consumer may be temporarily indicative of an approaching equilibrium between supply and demand internally—temporarily, because the pressure of population and the current low *per capita* consumption of cotton textiles should in the longer period make for a further expansion of the textile industry in India, provided there is no major setback in the progress toward greater industrialisation and in the economy of the country in general. In short, although the potential demand for cotton textiles in India is still very great, the problem is to create sufficient purchasing power to make such demand effective. The Five-year Plan makes provision for a significant expansion of domestic textile production.

"Much the same situation exists in Japan with perhaps a somewhat greater emphasis on the future of cotton textile exports. In the last two years, exports of cotton textiles from Japan have been in significantly greater volume than exports from India, while their relative importance is immeasurably greater—some 34 per cent. of total textile production in Japan during 1952."

The third important determinant of Free world cotton consumption is Western Europe. The export segment of the main European textile industries shows signs of a return to more normal operations, with the exception of Italy where the export situation is dull. But the future of exports from the Western European countries has been affected by the fall in the purchasing power in their important textile markets in the East and the increasing competition on a buyers' market not only with countries outside this area but between the individual European countries themselves. The European textile industry has, however, shown very definite signs of recovery in recent months, thanks to the revival in domestic demand influenced among other things by the rising level of employment and incomes and lower textile values. The Committee, therefore, makes the tentative estimate that the consumption of cotton in Western Europe during 1953-54 may not vary significantly from the 6.5 million bales consumed in 1952-53.

In conclusion, the Committee estimates that there does not appear to be any significant change from last season's total consumption in the Free world of 25.8 million bales, although there are likely to be relatively minor changes in the individual countries. But this conclusion, the Committee emphasises, is subject to there being no new political development or adverse economic trends in the Free world.

U.S. COTTON CROP

The latest estimate of the U.S. Department of Agriculture (8th November forecast) places the 1953-54 cotton crop at 16,093,000 bales, as compared with the 8th October forecast of 15,596,000 bales and last season's final output of 15,136,000 bales. The yield per acre is placed at 325.4 lbs. as against the October estimate of 315.4 lbs. and last season's final estimate of 282.7 lbs. The yield is held a new all-time record, since it is 14.1 lbs. above the previous record in 1948. In trade circles, the estimate caused little surprise, as it had been anticipated that the crop would be larger than what had been indicated in the October estimate. In fact, the latest estimate is somewhat below the figure predicted by private sources. Interest in the U.S. has now switched over to the question of the extent of next season's cotton acreage. The Secretary of Agriculture has laid down that, under the existing laws allotments will be 17.9 million acres and marketing quotas 10 million bales. These fixtures, according to certain reports from the U.S. are likely to be stepped up to 21 million acres, with a corresponding increase in the quantity of cotton actually grown. Although even this would represent a reduction of 15 per cent. in cotton acreage in the current season, there may not be a substantial decline in production as compared with the present season, in view of the improvement in production caused by increased mechanisation and farming practices.

SUGARCANE DEVELOPMENT IN INDIA

INTENSIVE CULTIVATION, NOT INCREASE IN ACREAGE, THE REAL SOLUTION

SUGAR, as a leading sugar millowner in India once very aptly remarked, is made not in the factory but in the field. This indicates how vital a role sugarcane plays in the economy of the sugar industry; cane accounts for as much as two-thirds of the total cost of sugar manufacture. Thanks to this peculiar characteristic of the industry, particular attention has to be paid to sugarcane research and development wherever the industry is developed. The major sugar-producing countries of the world, such as Java, Hawaii and Cuba have been spending large sums of money on cane research and development. In fact, this has been one of the major factors responsible for the Java sugar industry securing a commanding position in the world sugar map.

In India also, efforts have all along been made to promote research in the sphere of sugarcane cultivation. Considering, however, that, notwithstanding the research done for several years, the quality of cane and the yield of cane per acre have registered no appreciable improvement in the principal seats of the industry, it must be said that the efforts have not met with adequate success. During the 21-year period since the grant of protection—1931-32 to 1952-53—for instance, the aggregate acreage under sugarcane has increased by more than 73 per cent., while the yield has risen by only 48 per cent., which means that the trend of average yield per acre must have been downwards.

With a view to augmenting the yield of cane, the Planning Commission has rightly laid special emphasis on intensive development of sugarcane. Despite the attempts made in the different States in this direction, nothing worthwhile seems to have been achieved. In fact, the yield of cane has not only not increased but has actually declined, the all-India average yield per acre for 1952-53 being 12 tons, as against 12.6 tons during 1951-52.

Per-acre Yield of Cane

The table below indicates the average yield of sugarcane per acre in the different States during the season 1952-53 as compared with the previous season:

(In tons)

	1951-52	1952-53
Bombay	28.8	24.8
Madras	26.7	26.6
West Bengal	17.8	20.0
Hyderabad	20.7	19.4
Orissa	18.7	18.8
Mysore	18.4	15.8
Madhya Pradesh	12.0	11.7
Punjab	11.7	11.1
Assam	11.2	11.0
Uttar Pradesh	10.7	10.0
P.E.P.S.U.	9.1	11.4
Madhya Bharat	8.5	9.0
Rajasthan	8.2	8.8
Bihar	7.2	6.8
All-India average	12.6	12.0

It will be seen from the foregoing figures that, barring West Bengal, Orissa, Rajasthan, Madhya Bharat and P.E.P.S.U., the yield of cane per acre in all the other States during 1952-53 was lower than that in the previous season. The all-India average yield is not more than 12 to 13 tons per acre, which is the average for the last 18 years. It is interesting to note that the average yield of cane per acre in Hawaii is as high as 62 tons and in Java 56. It is true that, in some of the estates in the Deccan and South India, the yield has been almost equal to the yield in these two countries, but they are exceptions, accounting for only a fraction of the total quantity of sugarcane produced in this country.

It is not the yield of cane per acre alone that is at a low level. The quality of the cane is also distinctly poor. Thus, the average recovery percentage of sugar in cane in India during 1952-53 was just 9.97, which compares very unfavourably with 14.33 in Australia, 12.93 in Formosa, 12.25 in Cuba, 12.23 in Puerto Rico, 12.08 in Mauritius, 11.49 in Java and 10.46 in Hawaii. Indeed, comparing the sucrose content of cane in India with that in the other sugarcane-producing countries, we find that it is the lowest in the world, with the exception of British Guiana and Louisiana.

The one conclusion that emerges from the foregoing study is that adequate attention has not been paid to intensified cultivation of cane. As the fortunes of the sugar industry are closely linked to a healthy and prosperous sugarcane economy, it is of the utmost importance that the yield of high sucrose content cane per acre is stepped up, especially in areas like Uttar Pradesh and Bihar.

A section of sugar interests, however, lays greater emphasis on extensive development of cane cultivation than on intensive development, with a view to raising sugarcane output. Inaugurating the recent Kanpur Convention of the Sugar Technologists' Association of India, Lala Shri Ram, a prominent sugar industrialist, stated, for instance, that "expansion of sugarcane cultivation is an urgent matter which deserved priority even before the improvement of cane varieties, which will, in any case, take some time." Lala Shri Ram went even to the extent of saying that the fear that such expansion might adversely affect the production of the staple food crops was not well founded. The two arguments which he put forward in support of this contention were: (1) sugar itself has a much higher food value (calorific) than cereals which are the usual rivals for the type of land growing sugarcane; (2) sugarcane occupies but 1 per cent. of the land under cultivation and a slight increase is not a matter for panic.

Intensive Development

It is rather difficult to agree with this line of reasoning adopted by Lala Shri Ram. For, considering the shortage of basic food crops, the country cannot afford to devote a larger share of the land for cultivation of sugarcane than it is doing at present. It was precisely this aspect which was stressed by Mr. Desraj Narang, the President of the Association. Indeed, if the area under sugarcane, especially in U.P. and Bihar, could be reduced, it would be welcome. This certainly can be done without any adverse effect on the total supply of sugar (both *gur* and white sugar) in the country. All that needs to be done is to increase the supply of cane to the sugar factories at the expense of *gur*. It is common knowledge that *gur* production results in an enormous wastage of energy-giving sucrose which could be avoided if the cane is crushed in factories. In these days of State patronage to cottage industries and uneconomic means of production, it is too much to expect this suggestion to receive any favourable response. The only alternative, therefore, is concentration of attention on intensive cultivation of cane, that is evolution of good quality cane with high sucrose content and increasing the yield of such cane per given area of land. This can be achieved by implementing the schemes relating to the provision of adequate irrigation facilities for cane-growing tracts, seed nurseries for the supply of sufficient quantities of disease-free seeds of suitable varieties, manures and fertilisers of the right type, qualified personnel to carry the results of research to the cane growers, an efficient plant protection service, zonal centres and soil extension service.

Two Conditions

The successful implementation of these schemes, it is scarcely necessary to point out, presupposes fulfilment of two fundamental conditions. First, the several small and scattered holdings should be made amenable to consolidation and utilisation of mechanised cultivation. Secondly, the State Governments should utilise the entire cane cess collected from the factories for cane development. As regards the former, it is gratifying that several State Governments—Uttar Pradesh, Bombay, Madhya Pradesh, Punjab and P.E.P.S.U.—have passed legislation for consolidating agricultural holdings. This alone is not sufficient. Not only has the legislation to be enforced, but, where this is found inadequate for the purpose, special measures such as co-operative farming must be taken. With regard to the cane development work, the cane cess should be utilised entirely for this on the lines indicated in these columns last week.

LABOUR RELATIONS IN COLLIERIES

CORRUPTION BY TRADE UNION POLITICS

THE labour-management relations in the collieries in India are being disturbed by extremist political elements for the aggrandisement of their personal and political advantages. This has led to widespread and contagious spirit of indiscipline which is bound adversely to affect, in the long run, the already low productivity of the worker and increase thereby the cost of production of coal. Some idea of the extent to which labour relations have deteriorated in the collieries of the Bengal Coal Co., Ltd., for instance, was given by Mr. G. A. S. Sim, the Chairman, in his speech at the last half-yearly general meeting of the Company, published in a previous issue of *Commerce*. He said:

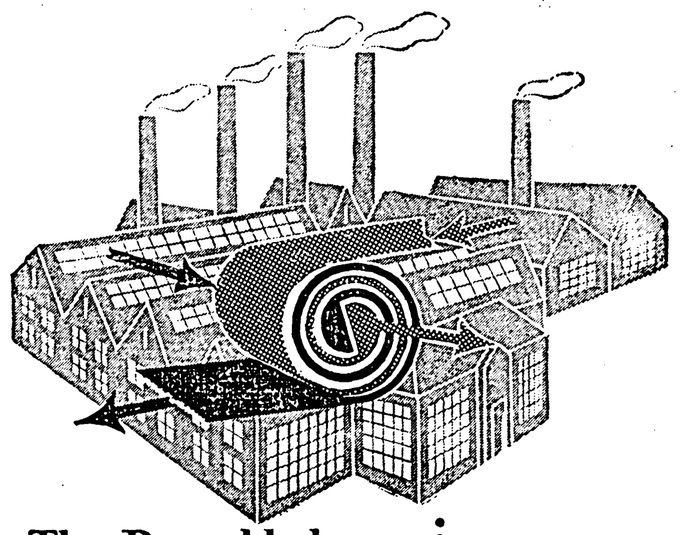
"The established and recognised union of the majority of your collieries is the Colliery *Mazdoor* Congress, which is affiliated to the Indian National Mineworkers' Federation, and in turn to the I.N.T.U.C. The leadership of this union has been the subject of political manœuvre between the Congress Party and the Praja Socialist Party, further aggravated by differences between the President and the Secretary of the union. Consequently, field work amongst the workers has been neglected over a period of years, leaving the more volatile elements vulnerable to exploitation by extreme left-wing political parties who have accepted this opportunity to intervene and cause disruption."

This is certainly a bad state of affairs. It is conceded by all reasonable men that there should, as far as possible, be only one union in an undertaking and its activities should be divorced from policies. If there are more than one, the union which is the most representative one, according to the findings of the Labour Commissioner, should be given the recognition by employers and all workers should abide by the agreements arrived at by talks with that union. The only way to minimise the influence of outside elements on trade unions is to restrict the participation of outsiders in the executive boards of the unions. It has, for instance, been suggested that the number of outsiders should not exceed four or one-fifth of the total membership of the executive body, whichever is less. Unless something is done quickly to cleanse the trade union movement in the country on these lines, the economic progress of the country will be seriously retarded. It will be appreciated that it will be impossible to maintain sound labour relations if rival political leaders, in their struggle for power, disregard the economic interests of the workers, whom they claim to represent, by giving them false hopes. The non-realisation of these hopes gives rise to frustration and discontentment. The workers then easily become victims to instigation of violence. It is thus that peace in industrial establishments gets disturbed.

The latest reports from the various collieries reveal that labour leaders have been raising high hopes about the outcome of the proposed tribunal to consider the demands of labour for a revision of the Conciliation Board Award of 1947, on which is based the wage-price structure of the collieries. The Government, however, still seems to be undecided on this question, because it is reported that it is contemplating the setting up of a Conciliation Board as an alternative measure. Commenting on this aspect, Mr. Sim observed as follows:

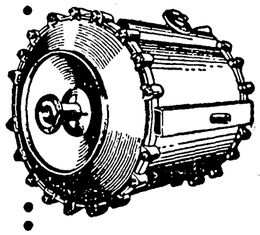
"This might be preferable to a Labour Tribunal, since, if employers and labour sit down at a table to debate each other's points of view before an independent adjudicator, the result should reflect the nearest approach to mutual agreement. It appears, however, that much additional information on this wide subject may be required before either course can be followed, as the results must inevitably be felt far beyond the confines of the coal industry. It has been calculated, from the figures of fourteen coal companies under six managing agencies, that, if these demands had been met and had applied to the 1952 output, the average cost of production would have risen by Rs. 8.075 per ton. The consequent appreciable increase in price to the consumer could only result in a wave of inflation affecting all basic industries, throwing out of gear the intricate calculations of the Planning Commission, and inevitably disrupting the whole economic structure of the country."

The observations of Mr. Sim are, indeed, pertinent. What the industry is in need of at present is relief from the many burdens which it has been bearing for a long time. It is high time that trade union leaders in this country realised that economic conditions in the country have changed, that the time for demanding more and more wages and amenities for workers has long past and that the workers will have to work harder than ever before to sustain even the existing level of their emoluments.



The Rosenblad Spiral Plate Heat Exchanger...

has proved to be a highly efficient apparatus for the transfer of heat from one medium to another—between two liquids, steam and liquid, or a mixture of condensable and non-condensable vapours and liquid. The Spiral Heat Exchanger is extensively used in the general and chemical industries for different purposes, for the recovery of heat from waste liquor and for heating or cooling of liquor involved in various processes in order to obtain the required temperatures.



The high efficiency of the Spiral Heat Exchanger contributes to compact design thus saving weight and space. The installation of several thousand Spiral Heat Exchangers in a wide variety of applications enables us to design the most efficient apparatus and also to select suitable material for the heating surface to give the best service for each individual case.

THE ADVANTAGES OF THE SPIRAL PLATE HEAT EXCHANGER

(*a*) High efficiency. (*b*) Low pressure drop with high heat transfer rate. (*c*) Controlled velocity in both passages, minimises scale formation, etc. (*d*) Easy accessibility to both passages. (*e*) High capacity/surface area ratio. (*f*) Low weight/capacity ratio. (*g*) Small space required due to the compact design—no expensive foundations required. (*h*) Utilisation of the entire heating surface.

REHABILITATION OF RUBBER PLANTATIONS

INDIAN RUBBER BOARD SEEKS GOVERNMENT AID

A FEW months back Indian rubber producers were faced with the serious problem of heavy accumulation of stocks. This was brought about by the sharp rise in output during 1952 to a record level of 19,863 tons—an increase of 2,715 tons over that in 1951—accompanied by a fall in consumption. At the beginning of the year 1953, there was a stock of 10,351 tons with the growers, dealers and manufacturers. Indian rubber growers sought, therefore, the permission of the Government of India to export at least 1,500 tons from India to counteract the artificial slump created by the lack of demand at controlled prices. The request was not granted. The position has since eased to some extent. As at the end of September, 1953, for instance, there was an unsold stock of only 6,403 tons, made up of 3,664 tons with estates and dealers and 2,739 tons with manufacturers. This, however, does not mean that the rubber industry has turned the corner and is in a comfortable position. They are still faced with the problem of rising production and of finding a permanent solution to absorb the increasing output. A more vital problem that has been exercising the minds of rubber growers is the rehabilitation of old and worn out rubber areas. It is but appropriate, therefore, that these two issues should have received prominence in the address of Mr. A. V. Thomas, M.P., Chairman of the Indian Rubber Board, at the sixteenth meeting held in Cochin last week.

Long-term Solution Needed

Though the accumulation of stocks may be termed as a normal seasonal phenomena due to the time lags between slow and intensified buying by manufacturers during the months of lean and better production, the problem cannot be dismissed so lightly as that. For, according to Mr. Thomas, this would have been manageable upto a point, as had been done when the overall production was around 15,000 to 16,000 tons a year, but it is not so easy when, as now, production is in the neighbourhood of 20,000 tons per annum. The output upto the end of September during the current year amounted to 13,920 tons, as against 13,035 tons in the corresponding nine months of 1952. In view of this rising trend in production, Mr. Thomas averred that the problem should be viewed from a different aspect and the solution must be of a long-range nature. If the proportion of consumption by manufacturers was not enhanced, Mr. Thomas feared, there would always be an accumulated stock position, almost as a recurring feature.

When the Rubber Board supported the growers' plea for export of 1,500 tons and recommended to the Government of India to that effect, it was made mostly with a view to affording immediate relief to them. But the Government did not take any action. However, as already pointed out, there was a decline in stocks and planters got relief. Explaining the causes that brought about this relief, Mr. Thomas said that this year the onset of the monsoon was late and when rains came they came with all the vehemence and continuity unknown to rubber planters for some years past. This naturally resulted in the loss of a great number of tapping days, as compared with similar periods last year and the year before. Moreover, under the Minimum Wages Act, the planters were compelled to give up tapping on Sundays as it would otherwise make too much inroads into their meagre economy. This was also responsible for the lower production. Further, there had been better buying and fairly quick and fast movement of stocks during the past few months. The planters did not, therefore, feel the accumulation of stock in recent months to such an extent as had been feared when the Rubber Board recommended the export of 1,500 tons. This did not mean, Mr. Thomas hastened to add, that the movements were all absolutely logical. Sales did take place and stocks did move, but prices obtained by producers were never anywhere near what was contemplated by the Tariff Commission as the fair price to the producers.

What is causing great anxiety among the growers is the prospect of accumulating stocks becoming a permanent problem. Mr. Thomas said this appeared almost inescapable as things stood now. For, on account of good rains this year and with many younger new planted areas coming into full maturity, the production would go up to further high levels. Mr. Thomas foresaw that, unless something was done to stimulate the offtake of rubber either through domestic consumption or exports, accumulated stocks, selective buying by manufacturers and distress sales would become the order of the day again. According to his estimates, at the end of the current year, stocks of unsold rubber would be about 9,357 tons.

Rehabilitation

Turning to the problem of rehabilitation, Mr. Thomas said that about 70,000 acres of old and worn out areas required to be replanted or new areas planted out with improved high yielding material. According to the report of the Development Committee for the Rubber Plantation Industry, the total area which required replanting was 120,000 acres, and the Committee recommended that 70,000 acres should be replanted during 1953-62 and 50,000 acres after 1962 or 1963. At the rate of Rs. 1,000 per acre, the cost of replanting 70,000 acres would amount to Rs. 7 crores. The main difficulty in undertaking this task was the lack of finance. Mr. Thomas desired that, irrespective of whether the finance was to be found by subsidy from Government, as is the case in Ceylon, or by any other means, the development scheme should be taken in hand immediately.

The Indian Rubber Board has passed a resolution requesting the Union Government to include the rubber rehabilitation scheme in the Five-year Plan and to allot necessary funds for subsidising the development plan for the rubber plantation industry. The Board has also requested the Government to take suitable steps for the opening of a rubber research laboratory and experimental station.

In this connection, the suggestion of the *Indian Rubber Bulletin*, the organ of the Association of Rubber Manufacturers in India, in its November issue, for establishing a development board after the pattern of the British Rubber Development Board, is worthy of consideration. This suggestion has been made in view of the considerable scope for the development of new uses for natural rubber. The International Rubber Development Committee, it would appear, has allocated various regions, including India, to the British Rubber Development Board for its operations. The British Board is not directly represented in India at present. In its absence the *Bulletin* suggests that a development body or our own be established. Such a Board, if formed, we may add, should work in co-ordination with the Indian Rubber Board, so that the growing output of Indian latex could be absorbed easily. In its October issue the *Bulletin* has published an article indicating the new vistas for rubber which makes interesting reading

(Concluded from next column)

On the basis of production of jute goods, the consumption of raw jute in October, 1953, may be placed at 387,336 bales, as compared with 445,695 bales in September, 1953.

With the output of 66,789 tons in October, the total production for the four months July-October, 1953, of the current season aggregates 286,400 tons, as compared with 304,944 tons in the same period last year. The consumption of raw jute, on the basis of production, during the four-month period may be put at 1,660,336 bales, as compared with 1,768,701 bales the previous year.

CENTRAL JUTE COMMISSION

The Central Jute Commission, headed by Mr. K. R. P. Iyengar, has completed its tour of Orissa. The Commission met representatives of the recently formed Orissa Jute Growers' Association and Patkura jute growers. The former urged that nothing but a steady and favourable jute policy of the Government can save the cultivators, and stated that Orissa, which stood fourth among the seven jute producing States in India, had an area of 161,340 acres under jute in 1951-52. This area dropped to 116,471 acres in 1952-53 and still further by 50 per cent. in 1953-54. The average yield per acre was, according to the Association, 11 maunds.

The Association further pleaded for the fixation of a minimum price for jute as also a ceiling for the acreage under jute, taking into consideration the food position in the country and the possible market for jute. It urged also the opening of a jute research institute in Orissa. It opined that India should do without Pakistani jute as far as possible.

The Commission, which is scheduled to report to the Central Government by the middle of September next, has yet to visit Bihar, Assam and North-West Bengal.

JUTE GOODS STATISTICS

STOCKS DECLINE—OUTPUT LOWER

THE stocks of manufactured goods with Indian jute mills at 102,713 tons as on 31st October, 1953 disclose a fall of 13.5 per cent. as compared with those at the end of the preceding month. In fact, they are the lowest touched for any month since December, 1952, when they stood at 114,938 tons. The fall in the stocks was partly due to a decline in the output, during the month, from 73,097 tons to 66,789 tons, owing to the intervention of *Puja* holidays and partly to higher offtake. Despatches in October at 82,746 tons were substantially larger than the output, but they were a shade lower, by 6,200 tons, as compared with despatches in September, 1953.

The table below gives at a glance the position of the various types of stocks of jute goods as at the end of each of the three months ended October, 1953 and the end of same month last year:

	As on			
	31-10-53	30-9-53	31-8-53	31-10-52
Civil				
Hessians	30,044	36,148	41,468	28,556
Sacking	69,403	79,494	83,039	60,855
Others	2,208	2,160	1,834	1,763
Total ..	1,01,655	1,17,802	1,32,240	91,204
Government				
Hessians	823	530	617	319
Sacking	698	332	699	3,411
Others	32	..	3	23
Total ..	1,058	862	1,219	3,753
Grand total ..	1,02,713	1,18,670	1,33,459	94,957

A glance at the table above reveals that the fall in the stocks was shared by both hessians and sackings. The stocks of hessians declined from 36,684 tons to 20,372 tons and those of sackings from 79,826 tons to 70,101 tons. It will be noted that the depletion in stocks of sackings was more pronounced than in those of hessians. This suggests that the month under review witnessed a good offtake of sackings. Stocks of other varieties, however, remained more or less unchanged at 2,200 tons.

During the month under review, the output of jute manufactures by Indian mills amounted to 66,789 tons, as compared with 73,097 tons in September and 68,138 tons in August, 1953. The output was also lower than that in the same month last year when it amounted to 76,844 tons. Part of the decline in the output may be attributed, as stated already, to shorter working days on account of the *Puja* holidays. The output figures for November when published may be expected to be considerably better. For not only have the stocks of jute goods gone down but the mills are reported to be having good enquiries from the U.K., U.S., Argentina and Burma. Besides, prices of both hessians and sackings have registered a marked improvement during the past few weeks and mills are reported to have booked orders in certain cases as far as June next. In the circumstances, mills have adequate incentive to produce relatively more jute goods. Of course, the firmness of the raw jute market may act as a limitation, but by now mills must have built up considerable stocks of raw jute, for, immediately following the announcement of lower crop estimates both here and in Pakistan, they had made sizable purchases and these should stand them in good stead at present for producing more goods.

The table below gives a summary of the output of the various categories of goods in each of the three months ended October, 1953, as also in October, 1952:

	October, 1953	*September,* 1953	*August,* 1953	*October,* 1952
Civil				
Hessians	30,754	32,701	30,055	24,091
Sacking	32,836	30,611	34,071	44,573
Others	2,307	2,630	2,420	3,522
Total ..	65,897	72,038	67,146	72,186
Government				
Hessians	510	821	637	3,330
Sacking	350	238	302	1,328
Others	32	..	3	..
Total ..	892	1,059	992	4,658
Grand total ..	66,789	73,097	68,138	76,844

As will be seen from the above table, the output of both hessians and sackings, as also of others, declined during the month under review. The output of hessians receded by 2,400 tons to 31,264 tons. The recession was slightly greater in the manufacture of sackings, in that the output was only 33,186 tons as compared with 36,849 tons in September, 1953. The output of others was lower by about 300 tons at 2,339 tons.

SYMPOSIUM ON REINFORCED CONCRETE

PROGRESS OF RESEARCH ON NEW BUILDING MATERIALS

A THREE-DAY symposium on "Reinforced concrete in India to-day" was held last week in Roorkee. Representatives of the Union and State Public Works and other Departments, national laboratories, research institutes, universities and the building industry participated in the symposium. Eminent engineers and scientists from France, Japan, Germany and the U.S. also took part in the proceedings.

The symposium, unique of its kind in India, was organised by the Council of Scientific and Industrial Research. The themes for discussion were divided into materials, design and construction. Over sixty contributors submitted papers on these subjects. The papers reviewed the progress achieved in the country in these fields and the contributions made by India to the theory of these three subjects. Research on timber and steel engineering was also highlighted at the symposium.

Inaugurating the symposium, Dr. S. S. Bhatnagar, Secretary, Union Ministry of National Resources and Scientific Research, and the Director of Scientific and Industrial Research, traced the growth of the cement industry in India and the role of concrete in building techniques. He was confident of a brighter future for the Indian cement industry.

The Indian cement industry is one of the biggest industries in the country, with a definite role to play, especially in the execution of river valley projects. In fact, one may say that the present age is one of steel and concrete. There were 23 factories in undivided India prior to the Partition. Out of these, five factories went to Pakistan. Since the Partition, additional units have been installed and India has now 23 cement factories, with an installed capacity of four million tons per annum. In order to meet the increasing demand for cement, a target of 5.4 million tons to be attained by 1955-56, has been laid down for the industry in the Five-year Plan.

The Central Building Research Institute is carrying on research on reinforced concrete. As its work progresses, the dual problem of finding other substitutes for steel and effecting economy in the use of steel in reinforced concrete is expected to be solved. A scientific study of reinforced concrete roads has also been undertaken at the Central Road Research Institute. These developments will provide ample scope for building and roadmaking machines in India. Scientific methods for testing raw materials and pre-stressed concrete structures with a view to determining their suitability and application of durability test to the finished structures are also being studied.

Varied Progress

A picture of the varied progress in India made in the field of research on new building materials emerged from the papers read at the symposium. Investigations on materials available at the Hirakud site for satisfactory concrete mixes have indicated that by using a suitable type of pozzuolana, considerable economy in expenditure and other benefits can be had. In the research for pozzuolanic material, the Hirakud Research Station has discovered that Talabira clay (a type of fire-clay) yields good clay cement mixes. Its amenability to pulverisation offer a further advantage in using this clay. Vermiculite is another mineral the possibilities of which in construction work are receiving increasing recognition. It gives concrete and plasters improved heat and sound insulating and fire-resisting properties. Deposits of this mineral were discovered in Mysore in 1948. Till now, the quality of the Mysore mineral has been considered to be poor for use in building construction. But research undertaken at the Central Building Research Institute has shown that the quality of the mineral can be considerably improved by cleaning with water to remove foreign matter and by treatment with chemicals.

Research undertaken in the Central Building Research Institute, Roorkee, has shown that the coal ash discharged every day from the boilers of the Sindri Fertilisers can be used as a light-weight aggregate for non-load bearing members, not directly exposed to weathering. Ash grains of a certain size can be used as a substitute for sand aggregate which when used can yield cement mortars with a higher tensile strength than ordinary cement mortars. Ground ash can be used in the manufacture of pozzuolanic cements and can replace 10 to 20 per cent. of the Portland cement.

Steel and Timber

Steel and timber are other construction materials on which research has progressed in India. The increased strength of twin-twisted steel bars has been recognised for over a quarter of a century. The Central Building Research Institute has introduced certain refinements in twin-twisting, which increases its efficiency and brings down the cost of the required equipment. The C.B.R.I. machine used for this purpose is an old lathe taken from a scrap heap of surplus machines, rusting away in a neighbouring workshop, and it was reconditioned at a cost of Rs. 200. In the effort to save steel in reinforced concrete structures, great efforts have been made to find a suitable substitute. Bamboo is one of the materials which has been tried and it is found to be better than cane for this purpose. The chief difficulty with bamboo is its large amount of absorption of water and swelling and consequent cracking of the surrounding concrete during setting. Research has shown that these defects can be remedied by giving coatings of resin dissolved in alcohol and a subsequent coat of white lead.

Some of the papers read at the symposium viewed with concern the increase in building cost by 200 per cent. to 300 per cent. and even more. The increase in building costs is considerably higher than that in the general cost of living. Consequently, they stressed the need for low cost housing. In this connection, they pointed to a structure provided in the Central Building Research Institute's Shell House, which is designed to approach the problem from the direction of functional requirements. It uses the minimum amount of material and labour, consistent with satisfactory strength and stability and effective protection against rain, wind, heat and cold. The problem of covering floor area without intermediate supports, using the minimum amount of materials, has been solved by using concrete in an arch. Corrugations increase the strength of this thin plate of concrete and these shells can be produced cheaply on flexible hessian moulds. For better insulation of heat and sound, a double shell can be employed.

The symposium also brought to light the importance of the experimental work now being carried out in the C.B.R.I. on the use of country earthen tiles for the construction of roofs. The progress made by the Indian railways in making increased and varied uses of concrete in the building of low-cost staff quarters and the like was appreciated at the symposium.

HIRAKUD DAM PROJECT

The Hirakud Control Board, which held its two-day session last week at Sambalpur, considered the revised estimate for the first stage of the Hirakud Dam Project, submitted by Mr. Thirumale Iyengar, the Chief Engineer. According to the revised estimate, the cost of the first stage of the project will be as high as Rs. 71.28 crores, as compared with the original estimate of Rs. 69 crores. The revised figure excludes the credit for the residual value of plant and machinery. The first stage envisages the construction of a dam at Hirakud which will provide irrigation facilities to Sambalpur area. It is expected to be completed by 1956.

The Board requested the Government of Orissa to transmit the revised estimate to the Government of India for sanction. It decided that the Orissa Government should undertake the construction of watercourses in the Sambalpur zone after the Hirakud authorities carried out an experiment in a small block and furnished a scheme for adoption by the Orissa Works Department for execution. The Board accepted, in general, the power transmission line system proposed by the Chief Engineer. It also considered the general report of the Sivaraman Committee on the question of water rates and betterment levy in the area to be benefited by the Hirakud dam waters.

PIG IRON PRICES RAISED

MYSORE WORKS TO BENEFIT

THE Government of India has increased the selling prices of graded and low manganese foundry pig iron by Rs. 20 per ton, with effect from 14th November. As a result, the price of standard Grade I pig iron is Rs. 163 per ton f.o.r. main port for sales by registered producers. The prices of off-grade pig iron have also been raised, albeit to a smaller extent, the increase varying from Rs. 10 to Rs. 12 per ton, depending on the sulphur content.

This is the third increase in the selling price of pig iron in the past two years, though the object of raising the price this time is different from that on the previous two occasions. In August, 1951, the ex-works retention price was raised from Rs. 92 per ton to Rs. 118 per ton for Grade I in order to cover the cost. The selling price was higher than the ex-works retention price by Rs. 15 per ton, this margin representing the cost of transport of raw materials. Virtually, therefore, the selling price was the price that was received by the T.I.S.Co. and the I.I.S.Co. On 16th June, 1952, the selling price was raised further by Rs. 10 per ton; this time, the increase was necessitated by the rise in cost of transport, consequent on the raising of the freight rates. The present increase of Rs. 20 per ton (Standard Grade I) is for an entirely different purpose which is unrelated to two principal producing companies, as we shall presently show. Neither of them gets any benefit from this increase. The only change that has happened so far as these companies are concerned is that what was hitherto described as selling prices become ex-works retention prices. This change in nomenclature does not mean any increase in the profit margin of these companies determined by the Tariff Commission. The difference between the prices of the ex-works retention price and the new selling prices will be credited to an equalisation fund as in the case of steel. Thus, for the first time an equalisation fund has been created for pig iron.

Subsidy to Mysore Works

All these changes have been effected with a view to enabling the rate of the sale of costlier pig iron produced by the Mysore Iron and Steel Works. The pig iron products of this Company which were hitherto free from price control are now brought under control. These products will now be sold to consumers at the same prices as those of the other two companies. The proceeds of the equalisation fund will be utilised to subsidise the production of the Mysore Iron and Steel Works to the extent to which its cost of production exceeds the uniform selling price now fixed by the Government.

The present arrangement is expected to help the Government of India to dispose of the large stocks of high-cost pig iron produced by the Mysore Iron and Steel Works. These stocks are placed at about 45,000 tons. It is true that the high price of Mysore pig iron is partly due to the higher quality of the product, as compared with those produced by the other two producers, but the foundries and other consumers seemed to be satisfied with the low-priced pig iron of the other two companies. Thus, market conditions have compelled the disposal of the high quality Mysore pig iron at the same price as that for the pig iron produced by the I.I.S.Co. and the T.I.S.Co. This is an indication of the extent to which the buyers' market has come to prevail even in a commodity the supply of which is admittedly less than the demand.

Be that as it may, the beneficiary of this step is not the Mysore Iron and Steel Works alone, for the consumers of pig iron as a whole also derive some benefit from it. Pig iron is undoubtedly in short supply and, if Mysore pigs are pooled with other supplies for distribution to foundries, it will relieve the shortage to some extent by bringing into use a certain quantity which could not be used hitherto. But, as Mysore pig iron is of high quality, it should be so distributed as to enable those who are in need of these high quality pigs to get them. In other words, there is need for a judicious allocation of this supply.

DIFFICULTIES IN WAY OF EXTENDING STATE INSURANCE

REGIONAL BOARD FORMED IN MADRAS

SOME of the important issues which faced the *authorities who are in charge of the State Insurance Scheme and the difficulties in the way of a speedier implementation of the Scheme* figured prominently in the speeches made last week by Mr. V. V. Giri, Union Minister for Labour, Mr. K. K. Bhargava, Director-General of the Employees' State Insurance Corporation, and Dr. U. Krishna Rao, the Minister for Labour, Madras State, on the occasion of the inauguration of the Regional Board at Madras. The Scheme which is now in operation only in Delhi, Kanpur and Punjab, is now sought to be extended to South India. The Madras Regional Board will be entrusted with the responsibility of looking after the administration of the Scheme in the States of Madras, Andhra, Hyderabad, Mysore, Travancore-Cochin and Coorg. It will, however, take some time before it is implemented all over these States. At present, the Scheme will be confined to the Coimbatore District of the Madras State.

Mr. Giri regretted that it had not been possible to extend the scheme more expeditiously, which fact he attributed to certain "unexpected" difficulties. Now the extension of the Scheme depends not merely on the co-operation of the employers and the employees, who are the principal contributors, and the Central Government, to which is entrusted the overall control, but also on the State Governments and the doctors who have to work under the Panel system. The State Governments have to bear a part of the cost of providing medical care, besides contributing one-third of the cost of the Scheme. Here is the rub. The State Governments feel—at least some of them have felt—that what they were being called upon to bear was "to much" for them and that the Corporation itself should take a part of their burden. The Corporation and the Central Government were, therefore, compelled to "embark on the prolonged process of convincing the State Governments concerned through facts, figures, persuasion and entreaties." But even after some of them were convinced, the path of progress was not smooth for there was another obstacle to be overcome. This related to the opposition of the Panel doctors who felt that the remuneration permitted to them was "meagre." Dr. U. Krishna Rao also referred to the same difficulty when he pointed out that the Indian Medical Association had held that the fee proposed to be paid to the doctors under the Scheme was "quite inadequate," though he expressed the hope that, in the actual working of the Scheme, the goodwill and co-operation of all parties would be forthcoming in an abundant measure. These were the main difficulties which, according to Mr. Giri, had held up the progress of the Scheme. He, however, expressed the hope that the Regional Boards which were being set up would result in a high standard of service and in satisfaction to the workers.

The delay in extending the Health Insurance Scheme under the auspices of the Employees' State Insurance Corporation throughout India has, as is well known, introduced a certain difficulty for some employers. These employers have already been providing a very high standard of medical care for their workers. Indeed, the standard is sometimes much higher than what the Corporation could offer. They naturally feel that they could not continue this service and also make their contributions to the Corporation. It is gratifying to note that the Corporation is alive to this very legitimate grievance of the employers, for Mr. Giri revealed that the Corporation had been considering the "question of utilising the facilities provided by the employers on the basis of suitable financial arrangements."

The State Insurance Corporation has now implemented the Scheme for over 1½ years in Delhi and Kanpur and for nearly six months in the Punjab. This is not certainly a very long period on the basis of which one could judge the success and popularity of the Scheme. It would, however, appear that an increasing number of workers is utilising the medical benefit granted to them under the Scheme. So far as the cash benefit is concerned, it has been in existence in Delhi and Kanpur only for a year now, whereas in the Punjab it will come into effect only in February, 1954. Mr. Giri stated, in this connection, that "such experience as they had in respect of cash benefits had been favourable." The payment of cash benefits had generally given *satisfaction to the insured persons.*

The delay in the implementation of the Scheme has brought to the fore yet another problem, the problem of accumulated contributions. The Corporation has been able to effect appreciable savings which have been invested in Government securities. What is the best way of utilising these surplus funds? The Corporation, Mr. Giri said, was now engaged in the examination of the best possible method of utilising these funds. The proper way of spending these savings, as Mr. Giri himself indicated, is to divert them for the construction of hospitals for insured persons. Perhaps, the Corporation will do well to construct separate hospitals only in those centres where the existing facilities are too inadequate. In many centres, it should be possible to economise this item of expenditure through suitable additions to the existing hospitals.

The success of the Scheme, as was repeatedly urged by many speakers at the meeting, depends on the co-operation of all the concerned parties—the Union Government, the State Governments, the employers and employees, and the doctors. The Regional Boards have an important role to play in the success of the Scheme. After all, it is these Boards that will be in constant touch with the people who will have to implement the scheme and those who will benefit by it. From this point of view, it is noteworthy that the Corporation has, according to Mr. Bhargava, decided to delegate to the Regional Boards certain executive powers so that the day-to-day work might be done more expeditiously. It is to be hoped that this device, which ensures that the local interests are more intimately associated with the Scheme, will contribute to the more successful working of this welfare measure.

DISABILITY RISK

Many insurers now recognise that an insured person must be protected against the contingency in which he might be permanently disabled from working, and therefore from paying his premiums. But even such insurers restrict this benefit only to those who are disabled through an accident. Pleading for a wider coverage so as to enable the insured persons to get a cover adequate enough to meet other causes of disablement, Mr. N. H. Lalwani, in a communication to us, says:

"Quite a number of leading Indian life offices have been granting since a number of years disability risk in their policies without any extra but the disability has to be the consequence of an accident and not a disease. This is hardly any benefit as is evidenced by the claim experience. Permanent disability is mostly the consequence of a disease. The business of leading Indian life offices has expanded sufficiently and their financial strength is such as should enable them to grant a comprehensive disability cover at a reasonable extra, just as is being done by the companies in the U.S.A. People take out life insurance so that in the event of death the pay-cheque does not stop. The pay-cheque does stop in case of disability due to disease and surely this type of protection too is needed in a life policy.

"I would, therefore, suggest to our leading Indian offices who already grant the disability benefit to make it a comprehensive one on the lines of the American cover by charging an appropriate extra. If possible, a monthly income of 1 per cent. of the sum assured should also be allowed.

"If a man owns large life insurance he will not be able to pay further premiums if he is disabled by a disease and will either allow his insurance to lapse or surrender it if it has acquired surrender value. Either of these is a waste. The real purpose of life insurance is defeated if protection of the kind suggested by me is not forthcoming from our leading life offices."

BIRTH AND DEATH RATES

Insurers, as a class, are greatly interested in vital statistics, particularly birth and death rates. Last week, we published the birth and death rates in different countries of the world, as estimated by the *U.N. Monthly Bulletin of Statistics*, and showed how India's birth and death rates are very high *vis-a-vis* other advanced countries. Yet another set of figures is now available in the 1951 Census Report. The figures given in the census do not, however, tally with the figures given by the U.N. publication. Thus, the birth and death rates for 1952, given by the U.N. publication, are 28 and 15 (per 1,000), as compared with 40 and 27 (per 1,000), (the average for 1941-50 period), given by the Census Report. It is not clear why there should be such a large discrepancy, even if it is recognised that the U.N. figures refer to "crude" birth and death rates.

In India, the Government has made arrangements, as is well known, for the registration of statistics relating to births and deaths. It would, however, appear that the system of official registration of these two occurrences is not satisfactory. In this connection, the Census Report quotes the example of Uttar Pradesh. In 1951, the State had a population of 632 lakhs, as against 565 lakhs in 1941. Thus, the number has grown by 67 lakhs in ten years. During this period, the birth and death records show that births were 145 lakhs and deaths 97 lakhs. Thus, the excess of births over deaths was 48 lakhs. The population of the State *should* have increased by this number only. How then does *the Census show an increase of 67 lakhs in the State's population? One explanation is that people might have migrated from Pakistan. But the Census authorities have recorded separately the refugee population, which aggregates only 5 lakhs.* Even if this number is taken into account, there is an unexplained difference between what is revealed in the birth and death registers and the Census records. Commenting on this divergence of estimates, the Census Report says: "Evidently a great many births escaped registration; and so also, no doubt, deaths. The basic record is materially incomplete." Among the major States, Madras, Bombay, Madhya Pradesh and the Punjab, according to the Report, are the "only four States where the registration system functions reasonably well and omissions are not unduly large."

The overall figures of birth and death rates during the period 1941-50 revealed by the Report, are 40 and 27 per thousand per year. The highest birth rate is found in Central India (44) and the lowest in South India (36 or 37). The birth rates in other zones are: West India (42), North-West India (41 or 42), North India (38-39) and East India (28-39). The highest death rate is also found in Central India (34). Similarly, the lowest death rate is also found in South India (21-22). The death rates for other zones are: North India (27-28), East India (26-28); West India (26) and North-West India (24-26).

"HASTE" AS CAUSE OF ACCIDENTS

Last week, we referred to the causes of accidents on the roads, and importance of preventing them through educating the road users in the principles of road safety. Similar problems are engaging the attention of the authorities in other countries too. Thus, Mr. Guy F. Johnson, Chairman of the Accident Offices Association of the U.K., in a paper he read at the National Safety Congress, held recently at London, made some interesting observations on the causes of accidents in roads. He said that motorists are often dominated by haste which is one of the causes of accidents. He added:

"People are often hasty without even being in a hurry; because they are impatient; and impatience can beget the sudden uncontrolled action which is the source of danger. I would like to make it clear that I am not talking about speed. Speed as such—and I repeat, as such—is not a source of danger. There is a safe maximum for any driver under any given conditions. Where this maximum is deliberately exceeded there is, of course, danger, but I should guess that there would be very few accidents attributable to that. What I am discussing is the momentary unpremeditated speed of movement, whether of car, cyclist or pedestrian.

"If there is something in this view that all road users come under an influence which tends to dominate their judgment and training, there is a serious limitation of the effectiveness of road safety propaganda and of training in good road habits. I am a great believer in propaganda but I am impressed by the need for continuous reminders and, unfortunately, anything which becomes continuous sinks into the background, and probably ceases to have any weight in competition with the sense of haste.

"In my view, therefore, although propaganda will do much to improve general conditions of safety, this can never prevent accidents. I said before that we could have perfect roads and vehicles and still have accidents. I will now go further and say we could have perfect vehicles and roads, and perfectly normal road users, and there would still be accidents because of haste.

"It might be thought that a slogan about haste would diminish this risk but, for the reasons I have given, nothing will diminish it unless all road users can be so impressed by the need for safety that this remains as a dominant against which the compulsion of haste will be powerless. But much can be done, I think, to reduce the haste factor among drivers if not among other road users. For one thing, I think the Courtesy Campaign will do much, particularly if it can be built up so that courtesy becomes instinctive enough to dominate the mind."

STATE INSURANCE SCHEME

The Employees' State Insurance Scheme, now confined to Delhi, Kanpur and certain centres in East Punjab, is likely to be extended to West Bengal in December this year. The general framework of the Scheme, which will cover 235,000 employees working under 1,200 employers, is stated to be ready for implementation. The panel doctor scheme—that is as distinguished from the dispensary system—will be adopted, each panel doctor to take 1,500 to 2,000 patients. The *per capita fee* for each doctor, it is stated will be Rs. 6 a year. There will be 16 local offices for registration and payment of benefits. The employees who are now contributing ½ per cent. of their wage bill will contribute 1½ per cent. when the Scheme gets under way in Calcutta. As in other centres, the West Bengal Government will meet one-third of the expenses for medical benefits and the remaining two-thirds will be met by the Employees' State Insurance Corporation. Hospitalisation of the workers will be undertaken in the existing hospitals. The Government, however, is expected to set up two specialist centres to deal with X-ray, blood examination and other aspects of medical care.

SUCCESS OF ECONOMIC PLANNING

CERTAIN PREREQUISITES STATED

(By KARODT A. JOSEPH, M.A., L.T.)

ECONOMIC Planning has now become inevitable in India, as in most countries of the world, and private enterprise is gradually giving place to public enterprise. "Private enterprise," as Sir William Beveridge points out, "is a good ship, but, to some extent, a fair-weather ship." In these days of stress and storm, all States have been compelled to launch all-weather liners of "public enterprise" and "economic planning" to prevent dangers of dismal disaster. Many people in India to-day believe that, under the prevailing conditions, the best results will be got by taking the essential industries and services into public ownership and control, and by making the use of economic resources, including man-power, a matter of collective decision under the authority of a democratic State. But we must plan not for the sake of planning, but for plenty and against want, and that means planning for high total production, for the right kinds of production, and for the distribution that will maximise Social Welfare.

Though the purpose of planning is clear, the path of progress through planning is beset with problems which deserve serious attention. Professor G. D. H. Cole has analysed these planning problems to be mainly the following:

(1) Problem of democratic control of planning, (2) problem of avoiding bureaucratic tyranny, (3) problem of incentives for labour and capital under planning, (4) problem of priorities and (5) problem of international collaboration in planning.

The navigators in the unchartered sea of public enterprise should be aware of the shoals and hidden reefs which may spell disaster to the new and attractive ship of "economic planning."

Threat to Democracy

The first and foremost peril inherent in any system of planning is the threat to democratic freedom and democratic ideal. Persons who are put in charge of planning may get it into their heads that they alone know what is best for the people, and may attempt to plan, and get their plans carried out on authoritarian lines. The love of power is present in most men of ability and is a special affliction of the capable, organising type of mind. It may not be an evil in itself to love power and wield power and, upto a point, progress is not possible without leadership exercising power. But there are different ways of using power. The way of the autocrat is one, and the other is by collaboration and co-operation, by consultation and mutual understanding. A democratic people will welcome planning, if the planners, before making their decisions, consult to the fullest possible extent those on whom they must rely to work the plan when it is made, and seek, wherever possible, both solutions and methods, which will enlist their enthusiastic co-operation, and not merely their obedience. This involves a readiness on the part of planners to take account of the views and attitudes of those whose work is being planned and a willingness to modify the plans in the light of legitimate criticisms, suggestions and proposals.

The autocratic planner will find most of these consultations as irritating waste of time, as he feels that he knows so much better than the people and, if at all any consultation is made, it may be only as a formality under certain conditions. This way of autocratic planning will yield remarkable results, especially under ruthless men. But it will be entirely inconsistent with democracy and, if such a system is forced upon a democratically minded people, it is bound to fail, unless the planners are powerful enough to terrorise the people and thus overthrow democracy.

Co-operation

For a country like India to-day, co-operative leadership and democratic planning alone will be acceptable. But this involves that the planned community shall be able to get rid of planners who fail in the art of co-operative leadership by normal political means without violence and revolutions. The sense of leading a team with the goodwill of its members and with the architectural functions of putting together their several contributions, in consultation with them, individually as well as collectively, to make a comprehensible plan, is the good democratic form of the will to power. Planners who are wanted in a democratic society are those who understand the art of consultation and of persuading and guiding instead of issuing arbitrary orders.

This type of planning requires not only the right type of men at the top, but also the right machinery. It cannot be achieved by a central planning organisation, however essential it may be. It involves the existence of machinery for planning at every level and in every sector of the economy at each level. There must be regional and local, as well as national organisations, for planning. Each industry and occupation must have its own planning machinery; and in each industry, there must be continuous planning, at every level, down to the individual factory or department, and consultation with the individual worker as well as his representatives.

Professor Cole has formulated a planning machinery for a country like Great Britain and this might be of use in other democratic countries. To begin with, there would be at the centre a responsible committee of ministers at the head of the main economic departments, with at least one minister free from departmental duties and in a position to give most of his attention to the tasks of central co-ordination. Under this minister and in close touch with this committee there would be a staff of professional planners, made up not only of economists and administrators, but also of scientists and technicians of high ability whose job it would be both to keep the ministers fully supplied with the right information and to think up projects to lay before them. In close connection with this central planning office there would be regional offices, staffed by men of similar qualifications. Staffs of these regional officers would be continually consulting the most representative groups in the several regions and gathering projects and suggestions from them, and these will be transmitted to the centre. They would also be receiving from the centre proposals to be tried out in consultation with the various groups in their regions, and would be reporting back to the centre on the results of these consultations.

Next, there would be, in the central office, someone whose particular task is to keep in touch with a particular industry or service, to listen to, discuss and transmit suggestions from the industry, and to consult about the projects emanating from other industries or planners. Each industry would be required to have its own planning machinery.

(*Continued on page 971*)

50 years

The task of clothing India's 356 millions is an immense and important one. The textile industry forms India's biggest industrial structure, with 380 mills distributed throughout the country which employ eight lakhs of workers.

As evidenced by the cotton it consumes, our textile industry is the second biggest in the world. In fact, we can justly claim that it has been the very basis of Indian industrialisation, and a source of valuable industrial experience.

In India's industrial progress, the Ahmedabad Advance Mills, which this year celebrates its fiftieth anniversary, has played a worthy part. Last year alone, indeed, it produced sufficient cloth to clothe 2,095,000 Indians.

The Ahmedabad Advance Mills looks forward with confidence to a prosperous future both for our country and for the industry of which it forms a part.

TAXATION SYSTEM IN INDIA

REFLECTIONS ON SOME OF THE QUESTIONS RAISED BY ENQUIRY COMMISSION—III

(By R. K. DALAL, B.Com., F.S.A.A., F.C.A.)

THE subject of rate structure is covered by question No. 66 of the questionnaire issued by the Taxation Enquiry Commission. It is asked, under this subject, whether it is desirable to combine income-tax and super-tax into a consolidated levy. Combining income-tax and super-tax structure will have the following advantages:

(1) It will avoid duplicate computations of the same income, one for income-tax and another for super-tax, taxable income for both being different.

(2) It will simplify the levy of income-tax and its administration, through the deletion of the section relating to levy of super-tax as an additional tax, as well as of the separate charging section and other sections authorising recovery, penalties, etc.

(3) From the point of view of the assessee, there will be only one tax and not two, with separate demands for each.

(4) From the point of view of the Department, it will be relieved of the work of maintaining separate files, returns, orders, charge, etc., of super-tax.

Thus, the consolidation of the two taxes has a merit which needs to be studied. There are, however, some demerits of a single rate structure. These are:

(1) The clear distinction between the income-tax paying public, i.e., lower grade incomes, and the super-tax paying public, i.e., higher grade incomes, will not be clearly marked in a single tax structure.

(2) The taxpaying public has been so accustomed to two taxes that any change in the structure is likely to lead to more confusion than clarity.

(3) The super-tax paying persons are not so numerous as income-tax paying public and, therefore, administratively it has never been a problem to maintain separate records of its levy, collection, etc.

(4) The system of two taxes accords with the enlightened tax systems of other Western countries like the U.K.

(5) The levy of super-tax clearly indicates what the country regards as income within super brackets and gives an indirect indication to the country's ability to contribute to national wealth.

On a balance of view, it seems that the present rate structure should be retained, in spite of some of its shortcomings.

Rates High

So far as rates are concerned, they are doubtless very high. The rates require to be lowered, both in the upper brackets (with a view to stimulating savings and thereby formation of capital) and in the lower brackets, with a view to giving much needed relief to the poor and the middle class people, when there are so many family calls on their income. These calls substantially affect their ability to pay. Especially in the absence of anything by way of family and other allowances as are obtainable in the Western countries, these rates need to be reduced substantially. To be more specific, income-tax rates on slabs between Rs. 5,000 and Rs. 20,000 should be lowered. Similarly, super-tax rates need a downward revision in respect of those whose incomes fall between Rs. 25,000 and Rs. 50,000.

Surcharge, if merged with the rates of tax, has the merit of one computation of tax. On the other hand, it has the disadvantage of disturbing the rate structure from year to year. Surcharge may be lowered or increased without the basic rates being altered. A careful consideration of the pros and cons leads to the conclusion that the surcharge should be merged with taxes so that the public may know the increase or decrease in the rates of taxation more readily than it would if it were to glean through the system of surcharges.

The degree of progression in the existing rate structure is very unsatisfactory. The maximum rate of taxation being applied at a comparatively lower level of income, the residue available at the disposal of an assessee, after meeting the tax demand, also compares unfavourably with the position under the taxation systems in other countries. To illustrate the point. On an assessed income of Rs. 5,00,000, the balance available to an Indian assessee would be just over 24 per cent., whereas, in Canada, it is over 43 per cent. and in the U.S.A., over 51 per cent. The inevitable consequence is that the object of savings assisting capital formation to subserve the needs of an expanding economy is not facilitated.

As regards the exemption limit (Question 67), the present minimum exemption limits of Rs. 4,200 for the individual and Rs. 8,400 for the Hindu undivided families should continue without any change.

Earned and Unearned Incomes (Question 68)

The differentiation between earned income and unearned income seems to be based on the theory that, where income needs personal exertion as against income which arises only from passive ownership, the ability to pay must be differentiated. Earned income should be given an abatement or lower rate of tax than unearned income. While for income-tax a distinction is made between earned income and unearned income, no such distinction is made in the super-tax groups. This is done possibly on the ground that, at that level of income which attracts super-tax, the factor of personal or impersonal exertion does not count much in the production of income. These double rates, however, lead to complicated computation with its attendant evils, namely, inordinate waste of time, avoidable delays, undetected errors, delayed refunds, inducement even for corruption in the clerical staff, loss of revenue, unnoticed over-assessment, etc.

The present relief given to earned income should be raised from 20 per cent. to 25 per cent. and the maximum from Rs. 4,000 to Rs. 10,000.

Valuation of Stocks (Question 69)

With regard to the principles of valuation of stock, the universally recognised method is cost or market value, whichever is lower. This principle prevails even for income-tax purposes in most of the European countries. So long as the basis of valuation followed by the assessee is regular and consistent, no objection should be taken for tax purposes.

In the U.K., it may be mentioned here, an expert committee was appointed to give its opinion on the correct basis of stock valuation. It will be pertinent to recall here its observations. The Committee said:

> "We consider that there is only one sound principle of valuing of stocks for the purpose of these Acts and that is that all stocks of every kind should be valued at the end of each accounting period on the basis of cost or market value, whichever is lower. The principle rests on the theory (which is perfectly sound) that profits can only be realised by the sale of commodities and that no profits can arise by mere increase of value unaccompanied by a sale. To follow this out consistently, stocks, therefore, should be carried at their cost price until they are sold and profit is ascertained. Where, however, the market price is lower than the cost, a precautionary reserve is permissible for the difference between the cost and the market value."

That being the position, the method of valuation that is recognised all over the world, should be accepted for tax purposes, but there should be no rigidity or inflexibility about this principle. Whatever method the assessee adopts must be regularly and consistently employed from year to year and must reflect the true profit of business.

There is one difficulty in adopting "the cost or market value, whichever is lower, basis" and that is, whether the 'global' method or 'pick-and-choose' method of valuation of inventory items should be insisted. 'Global' method is the one where the whole of the inventory list is valued on two bases, one at cost and the other at market value. Whichever list shows, in the aggregate, the value to be less than the other is adopted. The 'pick-and-choose' method is to compare the cost and market value of each article in the inventory and accept for inventory the lower of the two. The 'global' method is open to this criticism: It violates the principle of not taking profit into account on any individual article of stock before it is actually sold. Such anticipated profit cannot be made subject of taxation. The 'pick-and-choose' method adheres to the principle not only in the aggregate, but also item-wise inventory of stocks.

In *Brigg Neumann & Co.* vs. *C.I.R.*, 12 T.C. 1202, Rowlatt J. supported the contention that parts of the stock may be valued differently. Section 31 of the Australian Act distinctly supports the individual method. Regulation 111 of the Revenue Code of the U.S.A. also favours the individual method. There is no reason why, therefore, the method should not find ready acceptance with the Department.

Hindu Undivided Family Status (Question 70)

The present practice of many Income-tax Officers is to presume an assessee's status to be H.U.F. where the father and the sons live together in a common house, dine and mess together. Even if the members carry on individual activities, attempts are made to foist the H.U.F. status, because such a status yields a larger revenue to the Government. Such practices should be thoroughly discouraged. The status of an assessee must be a matter of a finding on facts and evidence and not merely presumption.

In case of immovable property, actual partition by metes and bounds as a condition precedent to accepting disruption under section 25A should not be insisted upon where the members divide the property in definite shares and hold it as such under a solemn declaration. Very often, the difficulty of selling property—an ancestral house—becomes difficult, as each member wishes not to sell it to an outsider. At the same time, the house may be too big to be purchased by one. In these circumstances, the allocation of parts of the house to each brother in defined share should be accepted as sufficient for purposes of an order under section 25A.

The same time difficulty is experienced when a H.U.F. lends sums of money at interest to one or more of its coparceners to start new business on their own account. An attempt to treat the personal activities of such members as forming part of a H.U.F. nucleus for purpose of assessment overlooks the fundamental fact that the H.U.F. suffers no detriment by such loans since interest is charged to coparceners and that the H.U.F. is not concerned with either profit or loss of the new businesses, since these are the individual activities of the coparceners as distinct from those of the H.U.F.

Nothing should be done in a way to fetter the right of H.U.F. to effect partial partition of its assets. This is a recognised legal mode of partitioning a portion of the assets and to the extent of such partition, the H.U.F. properly diminishes its corpus for assessment. There is a feeling that even partial partition should be brought within the ambit of section 25A with necessary amendment. This would be a most retrograde step.

A Hindu individual starting business even without any nucleus of ancestral property or funds is often up against the difficulty of proving negatively that his status is not an H.U.F. and the business started by him in partnership with his adult sons is to be presumed to be H.U.F., unless he proves otherwise. These create avoidable hardships to the assessee. At the bottom of these difficulties, one can very easily see that it is not so much the question of finding the true status of the assessee fairly and squarely on evidence that is regarded as the main question, as the status which enables the Income-tax Officer to put the largest shovel in the Government coffers with enhanced assessment.

Managing Agents (Question 71)

Voluntary surrender of managing agency commission, either wholly or partly, in the interest of the company should not be taxed twice as it is done now—once by increased assessment on the company by adding back of such commission and again in the hands of the managing agent as his accrued income under agreement subsequently surrendered as a gift. The question of such voluntary surrender of commission in case of company should not be a suspect in the eye of the Department, unless there are circumstances clearly indicating an attempt at avoidance or mitigation of tax liability. Further, there should be no attempt made to benefit the revenue by a double impost—once in the hands of the company and again in the hands of the managing agents. A safeguard against malpractices is to provide that such voluntary surrender of commission will be allowed exemption in the hands of the managing agents, provided the difference between the tax payable on such commission and the tax payable by the managed company on the same is made recoverable from the managing agents, despite its surrender. This safeguard will amply provide a check against artificial manipulation at avoidance of tax by the expediency of a surrender. Where, however, the managed company has actually incurred a loss which has been accepted by the Department as genuine and bona fide, no attempt should be made to tax the whole or part of the managing agency commission so surrendered by the managing agents.

Double Income-tax Relief (Question 72)

With regard to the double income-tax relief, there are two principles on which relief is usually based:

(1) half the tax is refunded by each country, leaving the assessee with higher of two taxes on such doubly taxed incomes;

(2) each country should tax profits accruing or arising within its jurisdiction.

The easiest and the best method is the latter one which avoids the process of taxing the income in the first instance and granting the relief after tax is paid in another country on the same income. Between India and Pakistan, the latter type of relief prevails, as it is easy to work and quick in its administration. The former involves delays, collection and then refunds.

Often a problem that arises is of persons who become resident in both the countries by reason of either continuous stay or short stay plus maintaining a dwelling house. These taxpayers are taxed on the basis of the world incomes in both countries. In the United Kingdom and India, unless the mode of relief is made uniform, the taxpayer is left not only with the higher of the two taxes on the income, but something more. For instance, a resident has income from dividends and commission in India. He has also business income and dividend income in England. In India, the policy is to tax the Indian income and leave the foreign income untaxed except for rate purposes. In the United Kingdom, in the absence of reciprocity of arrangement, the relief is given on Indian income, not wholly but only to the extent of three-fourths of the United Kingdom tax levied on it. The result is that the Indian dividends bear the whole of the Indian tax and one-fourth of the United Kingdom tax. This seems to be a hardship. In such a case, either country's Government should give executive relief in fit cases, unfettered by legal provisions.

In case of foreign income of a resident in India, the relief should be restricted to such an amount as would render the assessee liable to bear the higher of the two taxes ultimately.

With regard to a non-resident claiming relief, it should be ensured that he bears on the Indian income the same incidence of tax as the Indian resident bears on his income arising in India. In other words, a non-resident claiming relief under such agreements should not be given the right to deduct foreign losses arising abroad thereby whittling down the income in India. Why should a non-resident taxpayer be allowed to deduct foreign losses, when, under the law, foreign profits are not subjected to tax?

Property (Question 73)

Income from property at present is computed on the basis of an artificial figure, that is, *bona fide* annual value. The result of this has been very often anomalous in the sense that, whereas actually the income shows a loss, for purpose of assessment there may be a notional profit. This anomaly creates a further difficulty in the way of distribution under section 23A where the company is a building company. The company's profit and loss account shows a loss and hence legally no dividend can be distributed and yet the requirements of section 23A cannot be satisfied, unless 60 per cent. of this notional income is actually distributed by the company. This and other difficulties will be avoided, if the basis of computation is reduced to actual instead of the notional that obtains now. Amongst the deductions to be set off against such income should be revenue repairs, municipal taxes, land revenue, ground rent, insurance charges and interest on mortgage or charge on borrowed capital, specifically taken for acquiring, constructing, repairing, renewing or reconstructing property.

The assessment should be made always on cash basis so that the actual income realised will be the subject of charge. Expenses like legal expenses in recovering outstanding or such other legal proceedings taken for maintenance of property or realisation of rent should be allowed.

I understand that there is no provision for charging annual value of the self-occupied property in the taxation laws of at least four countries, namely, Canada, South Africa, New Zealand and Australia. This exemption seems to be based on the theory that, because the owner does not derive any income from self-occupation, no tax should be levied on the property on an artificial basis of annual value.

In case of co-operative co-ownership housing society, as is already stated previously, the co-ownership basis should be recognised for taxing of the co-owners on their aliquot share and not the company as an entity.

Carry Forward of Losses (Question 74)

A recent Supreme Court judgment has made the operation of relief under section 24(1) very much restricted. A taxpayer is not entitled to carry forward losses under sub-section (2), unless under section 24(1) a set off is made between different sources of income. The judgment is to the affect that, where a taxpayer's only source of income is business under section 10, there is no set off under section 24(1) and, therefore, he is not entitled to carry forward the loss suffered by him under the head business, even though it be the same business profit he wants to set off next year. This interpretation has materially affected the insurance companies, because, under section 10(7), the profit that is determined under the schedule is income from the head business. Insurance companies are thus at one stroke struck off from this essential relief.

There is another aspect of this question which needs close consideration and that is the recent amendment making speculation losses as a separate head of taxation. The idea behind this is to scotch the practices now prevailing of buying up losses and thereby underestimating the true income. The fact that such practices prevail cannot be denied, but this drastic manner of dealing with the subject leaves much to be desired. Why should law punish, for the sins of a few tax dodgers, the whole taxpaying public? The present amendment provides that speculation losses shall be excluded, while speculation profits shall be included in the total income of the assessee. This means that, while income shall be taxed and aggregated with a view to collecting the revenue on the basis of ability, this ability question will be ignored where this particular source shows a loss.

Speculation Loss

If an assessee has suffered a speculation loss of Rs. 4,00,000 and his other income is, say, Rs. 2,00,000, the latter profit will be subjected to tax notwithstanding that the assessee has suffered a net loss of Rs. 2,00,000. Further, speculation loss will be carried forward and allowed to be absorbed only against speculation profits as a separate business.

Another aspect of the question of carry forward of loss is that the present restriction to set off the carry forward only against the same business should be removed. The relief intended to be extended to the taxpayer by this section is rendered ineffectual and incomplete if it is restricted to the same business. The proper thing to do will be to allow the carry forward next year to be set off against any business profit subjected to tax under section 10.

On this subject of carry forward and set off of loss, there is another interesting point, and that is, whether an income which is exempted from tax, but which is required to be aggregated with the total income, should be allowed to be utilised for purpose of section 24(1). To give an illustration, let us suppose that 'A' has a dividend income of Rs. 25,000 from a company whose income is exempted from tax under section 15C. The dividend income is also exempt under section 15C(4). He has also a loss in business amounting to Rs. 45,000. The question is whether, in determining the carry forward of loss, the dividend income of Rs. 25,000 can be set off against Rs. 45,000 and only Rs. 20,000 allowed to be carried forward or whether the assessee is entitled to carry forward the whole of Rs. 45,000 loss. In other words, the question, in short, is whether an income which is exempt from tax can be utilised for purpose of a set off under section 24(1) although no tax is payable thereon. To allow such a set off would really amount to indirectly taxing an income which is expressly exempt from tax. In the above illustration, if the dividend income of Rs. 25,000 is set off against Rs. 45,000, the loss would be reduced to Rs. 20,000, having the same consequence as if Rs. 25,000 were liable to be taxed.

There is a judgment of the Madras High Court in *C.I.T.* vs. *Ratanshi Bhavanji* (1952), XXII I.T.R. 82, where a very national view is taken that income, which is not to be subjected to tax, although aggregable for purpose of determining the total income, must not be utilised with a view to reducing the loss determinable under section 24(1).

In case of a business which is discontinued, the loss should be allowed to be carried backward, so that, where the assessee extinguishes his source of business income during the period of its existence, the tax should not reasonably exceed the net profits made by it. This principle has found favour in the English tax system and needs to be copied and incorporated in our tax system to make it more equitable and real in its incidence and impact.

Advance Payment of Tax (Question 75)

The need for introducing this scheme of "pay-as-you earn" was founded on the principle of counteracting inflation, by mopping up the extra purchasing power in the hands of the taxpayer. But this need no longer hold good. Business conditions are becoming slack. And money market has become tight. The taxpayer finds it difficult to finance his business. Accommodation facilities have shrunk and become restrictive. To insist upon payment of quarterly taxes, in these circumstances, is to inflict a great hardship. Taxes are collected at source; when income is earned, they are collected on "pay-as-you-earn" scheme; they are collected provisionally on the basis of returns made so that the assessee is left with no funds to finance his own business activities. The calls from tax gatherers have become so numerous and so frequent and so clamorous that the taxpayer is hard put to it to meet them normally.

Though the Department has achieved the objective of quick collection, it has miserably failed to achieve efficiency in quick disposals as witness the mounting number of unfinished cases—some as old as four years. All incentive to be abreast with disposals is killed. The result has been inefficiency and inordinate delay on one part of the Department, on the one hand, and mounting tempo of dissatisfaction, harrassment and delays of the taxpayer on the other. No wonder, the Department has incurred much public odium. Neither the rich nor the poor, nor the middle class taxpayer has a word of sympathy or appreciation of the tax gatherer and his duties. Mutual distrust and suspicion have marred both efficiency and public goodwill. A fear complex has been generated in the minds of taxpayers and a superiority complex in the minds of the officials. This bespeaks no good either to the Government or the public.

Income From Dividend

Section 18A needs, therefore, to be removed from the statute. But if it is retained, it needs to be amended in the following respects. Among the heads included under section 18A is the income from dividend. Now the assessee, unless he is super-tax paying entity, pays no income-tax on it. In fact, section 18(5) regards tax paid by the company as deemed to be paid by the shareholder and credit for which is given to the assessee at the time of assessment. If tax on dividend is regarded as equivalent to tax deducted at source, is there any reason why dividend should be subjected to advance payment? To accept this proposition will mean a lot of collection work under section 18A only with a view to refunding the amount under section 18(5). Cannot Government conserve its efforts to better purpose than this? Having done something not permitted under section 18A, namely, collection of advance payments on dividends, the Department has to resort to another anomaly to give relief, namely, in computing advance tax, credit is given on the dividend income though super-tax is collected thereon. There is no warrant in the Act to do this under section 18A. No credit can be given under section 18A. It can only be given under section 18(5) and that too, in the following year. Thus one invalid act has pursued another with the result that the taxpayer's burden has increased. Dividend income should be expressly excluded on the ground that it is not a fit subject for taxation under section 18A. "Pay-as-you-earn" implies that one earns before he pays. In case of dividend one is called upon to pay before one earns, for dividend cannot be regarded as income of the shareholder before it is actually declared. Further, it is not capable of measurement, as is the business and other profits to which section 18A applies. How can a shareholder estimate in advance the dividend the company is going to declare at the end of the year? This and other reasons should suffice to make out a case for removing dividend income from the ambit of section 18A.

Penal Interest

Then, there is the question of penal interest. There is no appeal provided in the Act. It is automatic: where the estimate made by the assessee falls below 80 per cent. of the tax determined on regular assessment, the interest is charged on the deficiency. But there may be cases where the quantum is challenged; the right to levy interest may also be challenged. Why should an appeal be not provided? Take one instance. Among the sources of income of

NEW PUBLICATIONS

Indian Cotton Textile Industry—1952-53 Annual. Editor : M. P. Gandhi. Published by Messrs. M. P. Gandhi & Co., Jan Mansion, Sir Pherozshah Mehta Road, Bombay 1. Price : Rs. 6.

THE *Indian Cotton Textile Industry 1952-53 Annual* contains an interesting, as well as informative review of the recent developments on the cotton textile front in India. The review is quite comprehensive, covering, as it does, practically all the aspects of the textile economy. Thus, production and exports of cloth, controls on the industry, trend of prices of cloth and yarn, and export trade in cloth have all been dealt with. Several pages have been devoted for the presentation of an objective picture of the world textile trends in recent years. A detailed survey of the raw cotton economy in India and the world, futures trading in cotton, etc., appears in Appendix A. At the end of the publication is given a list of cotton textile mills in India and Pakistan, taken apparently from the *Mill Statement* published by the Millowners' Association, Bombay.

The *Annual* is, as usual, replete with statistical tables, giving up-to-date information regarding the two sectors of the cotton textile industry—mills and handlooms—and cotton production and distribution. The other notable features of the *Annual* are the reproduction of the Cotton Control Order, a note on industries auxiliary to the cotton textile industry and a list of members of the important textile committees and the All-India Handloom Board.

A perusal of the *Annual* under review will enable one to understand some of the perplexing problems which the Indian cotton textile industry is now facing. These problems have been summed up in the preface by Mr. M. P. Gandhi, the Editor. While commending the Government's action in abolishing all price and distribution controls on cloth, Mr. Gandhi urges removal of control on production also.

India At A Glance. By G. D. Bimal, Managing Editor, and T. V. Rama Rao, Editor. Published by Orient Longmans Ltd., Calcutta. Price : Rs. 40.

A great deal of authentic material relating to the various facets of India's national life—political, economic and social—has been brought together in this 2,000-page publication, *India At a Glance*. The authors must be congratulated on producing a work, which is perhaps the most comprehensive of its kind in this country. For sheer variety of information and wealth of details under each division, there is, perhaps, no other book that compares with this publication. The main divisions of the book include:

Indian Constitution, census, political parties, who is who in Parliament, Government of India directory, States in India, Union and States finances, banking, insurance, transport, industries, education, art and religion, Five-year Plan, Colombo Plan and foreign trade.

By far the largest section of the book is the one that deals with industries. This section describes nearly all the major and minor industries; about 88 industries are included. A full account of financial institutions like banking and insurance is given. A feature of the book is the comprehensive treatment of India's food problem. By a judicious selection of political, economic and cultural items of interest, the authors have certainly succeeded in making the book a valuable publication which justifies the tribute paid by Mr. K. C. Reddy, Minister for Production, who in his foreword, says: "It is, in fact, true to the claim of its publishers, a new and reliable directory with up-to-date information about India. To public men, journalists, students and to others it is bound to prove an indispensable reference book."

Handloom Weaving Industry—1952-53 Annual. Editor : M. P. Gandhi. Published by Messrs. M. P. Gandhi & Co., Jan Mansion, Sir Pherozshah Mehta Road, Bombay 1. Price : Re. 1-8.

Now that the controversy handlooms *vs.* mills has become a live issue, thanks to the fresh lease of life that Mr. C. Rajagopalachari, Chief Minister of Madras, gave it last year, the need for a clear insight into the real problems confronting the handloom industry needs no special emphasis. A perusal of the pages of the *Handloom Weaving Industry—1952-53 Annual* will enable one to have such an insight. The *Annual* gives a lucid account of the latest position of the handlooms with the help of much useful and relevant statistical data. The conclusion that the Editor of the *Annual*, Mr. M. P. Gandhi, has drawn in so far as regards the remedial measures for the difficulties of the handloom weavers is clearly absurd. The Editor, for instance, wants the mills to put up with greater limitations on its activity soon; they must, he says, be content to reflect that, after all, they have had a good innings. What does he mean by this? Does he want the mills to retire from the field, now that they have, according to him, had their innings?

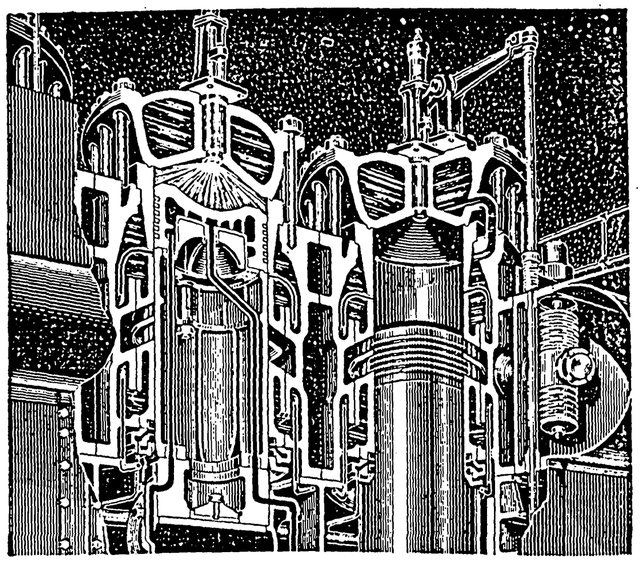
Teach Yourself Book-keeping. By Donald Cousins. Published by English University Press Ltd. London. Price : 6s. net.

Although there are several books on the subject of book-keeping, most of them are either too dull or too technical, while others are too technical to appeal to a beginner. Hence the need for a book which deals with the subject in a concise manner and is also well written. This need has been ably met by Mr. Donald Cousins in his publication, *Teach Yourself Book-keeping*.

In this little book of 270 pages, Mr. Cousins, the author, seeks to offer a guide to the beginner in book-keeping. The author begins the study with a fine introduction on "what is book-keeping." He then proceeds to describe the nature of business transactions, purchases and sales, and the way in which accounts pertaining to these are to be maintained. Balance-sheet, depreciation accounts and partnership from the subject-matter of three separate chapters. A special chapter has been devoted to the criticisms and interpretation of accounts. The utility of the book is enhanced by the adoption of the question and answer method for explaining some of the important aspects of the subject and the inclusion of the Royal Society of Arts question papers.

Teach Yourself Commercial Arithmetic. By J. H. Harvey. Published by the English Universities Press Ltd. London. Price : 6s. net.

The purpose of this volume, it is claimed, is to set forth, in clear and simple language, the elementary principles of commercial arithmetic and to enable students to acquire facility in their application to such problems as he or she is likely to encounter in business and everyday life. A perusal of the book will clearly reveal that this claim is fully justified. The book covers a fairly wide ground in the field of commercial arithmetic, from the first four rules—simple accounts—to the elucidation of such complicated topics as foreign exchange calculations and discounting of bills of exchange. The publication, though intended primarily for students, will also help all those engaged in business who are interested in the subject but are unable to attend classes.



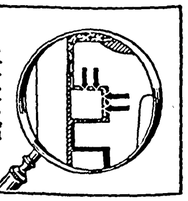
How oil makes an inferno useful!

Look inside a big Diesel engine – and you find an inferno of terrific heat.

Scorching temperatures and the actual flames generated inside the Diesel create the severest tests for oil. Not only is it important to prevent metal-to-metal contact *between* piston rings and cylinder wall, but the oil must also *seal in* the gases to save power.

The makers of Gargoyle lubricants were the first to lubricate Diesel engines correctly. Now, there are specially made oils for every type and size of Diesel. Gargoyle oils work on the principle which has proved to be the most vital factor in Industry: the *right* oil, in the *right* place, in the *right* way. 87 years of experience has shown them how!

Temperatures can go as high as 3,500 degrees Fahrenheit inside a Diesel engine. No wonder experience was needed to develop Gargoyle lubricants for Diesel engines!



Let this experience benefit you. Standard-Vacuum Industrial Lubricants give you correct lubrication with four special advantages:

- Reduced power consumption;
- More continuous production;
- Decreased maintenance;
- Lower lubrication costs.

How banking serves the RUBBER INDUSTRY

RUBBER was first planted commercially in India in 1902. Today Indian rubber plantations, concentrated in Travancore-Cochin and Malabar, produce 20,000 tons of rubber every year, valued at four and a half crores of rupees. More than 250 Indian factories depend on this output for their production of finished goods.

Without banking, this growth could never have taken place. The facilities and guidance offered by a good bank, such as the availability of ready funds when needed and the collection of dues in any part of the country, have become part of the structure of the rubber industry.

We at Palai are proud that so many important rubber producers, and indeed leading firms in every field of business and industry in South India, employ the *complete* banking service we offer.

Current Accounts—Demand Drafts—Telegraphic Transfers—Bill Collection—Letters of Credit—Deposits—Investments—Loans & Overdrafts—Confidential Credit Reports, etc.

* * *

If you have business interests in the South, it will pay you to open an account with us. Our 24 branches are strategically located, 22 in important South Indian business centres and two in Delhi and New Delhi; and we have correspondents in all important Indian cities. We offer a fully comprehensive banking service at each office.

Our clients can make deposits at any of our correspondent banks, situated in all important Indian towns and have the amounts credited to their accounts at any of our branches.

SALT INDUSTRY IN INDIA

MEASURES TO INCREASE EXPORTS

THE story of the salt industry in India, as retold by the Minister for Production, Mr. K. C. Reddy, at the meeting of the Salt Advisory Committee held at Madras last week, is both encouraging and informative. From what he stated, it is evident that the acute shortage of salt experienced for some time in the post-war years is now a thing of the past. For there has been a tremendous improvement in the production of salt. Thus, the total production at the time of the Partition in 1947 was only 516 lakh maunds, as against the requirements of 650 to 700 lakh maunds. The current year's production upto September, 1953, is 820 lakh maunds. On the basis of this output the production for the full year may be placed at about 1,200 lakh maunds. Thus what was once a deficit of 150 to 200 lakh maunds has since turned out to be a surplus of about 550 lakh maunds.

Another bright feature of the industry is the ability of the country to export salt abroad. Mr. Reddy's observations on this development are noteworthy. He said: "The year 1952 and the current year are also important, as we have, during this period, been able to create a new export market in Japan. During 1952, the total exports to Japan was 250,000 tons (67 lakh maunds) and during the current year upto October, the total export has been 200,000 (about 54 lakh maunds) against a licence of 400,000 tons for the whole year. The entire quantity this year has been exported from Saurashtra and Kutch. Governments are allowing exports to Japan very liberally, the only condition being that manufacturers send equal quantities to Calcutta."

Apart from exporting salt to Japan, the Government is stated to have been exploring possibilities, in collaboration with its foreign offices, to expand exports to the Philippines, New Zealand, etc. A development which should cause some concern is the attempts now being made in Thailand to produce 500,000 tons of salt to meet the requirements of Japan. A factory has been established, we are told, with a Thai national as Chairman and a Japanese as Manager of the factory. But samples show that the percentage of chloride contents of this salt at 94 to 95 is less than that in salt produced in Saurashtra or Kutch with 97 to 98 per cent. of sodium chloride. It is stated that, by proper contact, Saurashtra and Kutch can maintain their position in the Japanese salt market. Another helpful factor is the improvement in the prospects of Pakistan resuming its purchases of salt from India in the near future. For there are now, it is learned, enquiries from East Pakistan traders for Indian salt. Pakistan, it may be noted suspended its purchases of salt from India in July, 1952. In order to promote expansion of exports, the Salt Advisory Committee suggested, while reviving this question, that the Government should grant remission of cess on any salt sent outside India. The Chairman assured that the Government would agree to this suggestion, as it was keen on encouraging salt exports from the country.

Since 1951, the year in which the country attained self-sufficiency, no imports have been allowed from foreign countries. There have been requests that the Government should permit imports of rock salt from Pakistan. But, in the present circumstances with surplus production, it will be suicidal, as was rightly pointed out by Mr. Reddy, to import rock salt. Besides, the Government seems to have been satisfied that refined salt available in the country is as good as rock salt for all purposes.

Quality control is one of the chief problems facing the industry. The Indian Standard Institution has prescribed the minimum percentage of sodium chloride (Nacl) in edible salt at 96 per cent. But, at present, salt produced in several parts of the country contains only 94 per cent. The Salt Advisory Committee, which discussed this question, decided that the percentage should be raised to 96 in the course of two to three years. It was, however, of the opinion that a sudden rise from 94 to 96 per cent. would be undesirable; for many holdings being small, it would not be possible for them to raise the contents of Nacl all of a sudden.

Need for Regulated Production

As the Government of India has been granting licences liberally for salt production on the recommendation of State Governments, there is now overproduction in the country. The position has been made worse by the manufacture of salt by small-scale unlicensed manufacturers. This has threatened the economy of the organised industry in which there has been heavy investment of capital. The time has now come for initiating measures to regulate production. The Salt Advisory Committee, which went into this question, has done well in urging the Government to take immediate steps to control unlicensed production. It is stated, in this connection, that the Government is already seized of the matter and will initiate measures shortly for the regulation of production.

With regard to the zonal system, the Government of India, as was pointed out by the Minister, seems to be of the view that, if the system were to be scrapped, there would be no priority for salt movement at all, and that it would have to take a place down the list of priorities fixed by the Railway Board for different commodities and, therefore, adequate supplies of wagons would not be ensured for salt. The zonal system had been introduced, Mr. Reddy observed, to assist the railway authorities in conserving wagons, and avoiding needlessly long haulages, cross movements, wastages, etc. The Railway Board has issued general orders that salt should get priority booking under category 'C' only when such traffic is in accordance with the zonal sheme. The Committee is reported to have concurred with this view of the Government. It, however, stated that till 1956, the Government should not issue licences for the manufacture of salt by new works.

PRESERVED FOOD INDUSTRY

Our article on preserved fruit industry, appearing in *Commerce* dated 10th October, 1953, has evoked some observations from a section of those interested in this industry. One of them is a manufacturers' agent, Mr. R. N. Rustomji. In the course of a communication addressed to us, he focusses attention on, among others, three problems facing the industry, namely, (a) quality of the products produced by it, (b) certain difficulties which have handicapped the industry's progress, and (c) the demand for imposing a ban on imports in addition to tariff protection.

With regard to quality of the products produced by the industry, Mr. Rustomji says that an analytical examination by the Mysore Food Technological Institute of over 1,000 samples of both Indian and foreign products of fruits and vegetables revealed that quite a large number of Indian brands were found to comply with the recognised and established International Standards, while quite a lot of imported brands were found to be of substandard quality. Few would dispute this point especially in so far as it applies to products of large organised establishments. But consumers' prejudice, which is widespread, is due to the manufacture of substandard goods by a number of so-called factories licensed under the Fruit Products Order, as was mentioned by us. This fact is admitted by our correspondent who says:

"Just as in any other part of the world, there are also quite a number of black sheep packing spurious products, and trying to make hay while the sun shines and get themselves rich as quickly as possible. The presence of such unpatriotic, greedy persons is really a menace and a curse to the fair name of Indian products, and because of the presence of these people, anything Indian is outright rejected, mostly by Indian consumers, and even though a number of Indian brands are of unquestionable quality, as anything Indian purchased by them in the past did not give them appropriate satisfaction. Such consumers, quite naturally, insist upon buying anything that is foreign made, however low its quality may be, simply because it is foreign made. But for all these ills, the Government supervisory machinery is virtually responsible."

For this unfortunate state of affairs, no doubt the Government is partly responsible, as the writer also has pointed out. But we have to mention here that it is also the duty of the Food Preservers' Association to see to it, in the name of the industry and in the interests of the consumer, that the offenders got punished under the ordinary food adulteration laws. Mere frantic appeals to Government to put a stop to it are not enough to tackle the probem. Similar malpractices exist practically in every industry in India and it will be too much for all the industries to expect the Government to undertake single-handed this stupendous job. Associations of these industries or a federation of several such associations should be entrusted with the work of conducting a campaign, legal as well as educational, to put an end to the manufacture of spurious products. The lead thus taken by industries themselves would certainly receive active support from Governments as well as the public.

Some Difficulties

Mr. Rustomji then refers to the difficulties experienced by the food preservers in this country and observes:

"The packers of provisions and specially fruit and vegetable products have to surmount a number of odds, firstly against nature and, secondly, against the lip support only of the Government. Our country is situated in tropical zone, with extreme variations of humidity and temperatures, which results in hydrogen swells and reduces the life of the cans. Now, so far as the support from the Government side is concerned, the tinplate manufactured in India is of such a low quality that the contents get damaged and the sound keeping quality reduced to not more than a year. The sugar produced by the Indian mills is full of impurities and sulphur compound. In spite of the poor qualities of these two materials, you will be surprised to learn, the prices the canners in India are forced to pay are almost double than those at which they are available in any other part of the world. Last but not the least comes the question of railway transport. While it is cheaper to get a case of canned fruits from San Francisco—a distance of over 12,000 nautical miles—the freight rate for despatch from Bombay to Delhi—a distance of less than 900 miles—is much more than that. Apart from this high transport rate, the biggest menace hindering the trade, commerce and industry in India is the rough handling in transit resulting in heavy damages as also pilferages."

The difficulties have to be recognised and it is to be hoped that the authorities will do what they can to minimise, if not completely overcome, them. But, at the same time, the industries concerned also can help themselves by rationalising their production to reduce costs of manufacture. The cost of even domestically preserved fruits is prohibitively high and is not conducive to establishing an expanding market. Unless the prices of these products are brought down to levels which at least the middle class families can afford to pay, the market for them will remain limited. Unfortunately, there is a tendency on the part of all the protected industries in this country to use the tariff walls they have secured for keeping the prices of their products at a high level, instead of availing themselves of this opportunity to cut their prices and expand their markets. We do not think that the preserved fruits industry is an exception to this general trend.

Why Ban on Imports?

This takes us on to the third point raised by our correspondent who pleads for both protection and ban on imports. He says:

"You have taken exception to the preserved fruits industry's claim for total ban on imports, apart from demand for protective tariff barrier.... You are undoubtedly aware of the fact that there is complete ban on imports of such processed and packed goods as are produced and available in all countries. ... Since the beginning of the year, the New Zealand Government has banned imports of Indian chutneys simply because someone in that country has started packing fruit chutneys."

The case of New Zealand is beside the point, as it involves a number of other issues into which we need not go now. But we see no point in the demand for both tariff protection which assures a margin of profit and total ban on imports. Where is the necessity for a ban on imports when the industry has been given full protection after a thorough enquiry into its cost of production and the landed costs of the imported product? Again, even after the protective tariff, if the foreign product is sold at prices lower than those of indigenous product, the Tariff Commission is always ready to hear the industry's appeal for revised tariffs. Further, it must not be forgotten that imports have a vital role to perform in the upkeep of a country's economy. Imports allowed to the extent that foreign exchange resources permit and to the extent they are needed to satisfy the unfulfilled demand of the country are necessary for two reasons. They act as a stimulus to increase the efficiency of the domestic industry. And, secondly, besides satisfying the home demand, they strengthen the country's bargaining power in order to enlarge its exports.

DRAWBACK OF DUTY ON PLASTIC RAW MATERIALS

In a memorandum addressed to the Chairman, Export Advisory Council, which is scheduled to meet on the 29th November 1953, at New Delhi, the All India Plastics Manufacturers' Association has submitted that:

(i) The customs duty of 31½ per cent. ad valorem paid on imported plastics raw materials consumed in the manufacture of goods meant for export should be refunded in order to enable the Indian manufacturers successfully to compete with others in foreign markets;

(ii) in the bilateral trade agreements that may be concluded between India and other countries, provision should be made to include plastics manufactures and semi-manufactures in the list of items for export;

(iii) all plastics manufactures and semi-manufactures including the following should be placed on export O.G.L. 3: (a) plastic electrical accessories, (b) plastic semi-finished goods such as sheets, rods, tubing, beltings and strappings etc., and (c) plastic coated fabrics and electrical wires; and

(iv) a representative of the Association should be associated with the export promotion machinery for tendering advice on matters pertaining to export of plastics goods.

PROTECTION TO FOUNTAIN PEN INK INDUSTRY TO END

The Government of India's resolution on the Tariff Commission's report on the continuance of protection to the fountain pen ink industry has been published in the *Gazette of India*, dated 14th November 1953.

The Government has accepted the Commission's main recommendation that the protection granted to the fountain pen ink industry need not be continued beyond 31st December, 1953. If at any time the industry finds itself unable to meet foreign competition, it may apply to Government for a fresh examination of its case.

While recommending the withdrawal of tariff protection to the industry, the Commission has made some recommendations to help the industry. These recommendations too have been accepted by Government.

FOR HEAVY CONSTRUCTION WORK
you can depend on
AGRICO
the right tool for the right job!

Whether it is digging earth, reclaiming land or damming rivers, Agrico implements meet the tough demands of development projects. Known for their superior strength, balanced construction and efficient performance, they are the choice of contractors everywhere.

TATA AGRICO IMPLEMENTS

THE TATA IRON AND STEEL COMPANY LIMITED
Head Sales Office:
23-B, Netaji Subhas Road, Calcutta-1
Branches at: BOMBAY, MADRAS, NAGPUR, AHMEDABAD, SECUNDERABAD, KANPUR, VIZIANAGRAM CANTT. & JULLUNDER CANTT.

SQUARE-NOSED SHOVEL
Made from high-carbon steel to I.S.I. specifications. Fitted with seasoned wooden handles.

WEST INDIA POWRAH
Amazingly strong yet easy to handle. Specially fortified shoulders ensure long life.

PICK-AXES
Available in two patterns. Extremely sturdy and long lasting.

CROWBAR
In standard length of 5'-5" and sections from 7/8" to 1¼". Made from high-carbon steel.

AGI. 1271

LAND TRACTS OF INDIA—I

NEARLY TWO-THIRDS TOPOGRAPHICALLY USABLE

THE publication on the 1951 Census of India, issued last week, provides very useful and authentic information on the land and the people living on it. It reveals that the total area of land is 812 million acres. Secondly, the population of the Indian Union, between 26th January and 1st March, 1951, was 356,879,394. The Registrar General and Excise Commissioner of Census, Mr. R. A. Gopalaswami, seems to be quite convinced of the truth of these two figures. For the acreage, he says, is based on exact measurements scientifically designed and carried out by a highly trained professional agency over a long series of years. With regard to the number of people, he believes that there are good reasons that the count must have been at least as close to the truth on this occasion as at any previous census in India. At this census, particularly, a verification of the count was carried out under conditions designed to yield reliable information on this point. Thirdly, given the two basic figures—812 million acres and 356 million people—the third factor is derived namely, the land area *per capita*, at 2.25 acres (including Jammu and Kashmir).

The table below gives, for each of the five zones into which the country was divided for taking census the land area, population in each zone and *per capita* land area:

Zone	*Land area* (Million acres)	*Population* (Millions)	*Land area per capita*
North India	72.6	63.6	1.15
East India	167.5	90.1	1.86
South India	107.5	75.6	1.42
West India	95.7	40.7	2.35
Central India	185.2	52.3	3.54
North West India	122.6	35.0	3.51
India (excluding Jammu and Kashmir)	753.2	356.9	2.11
India (including Jammu and Kashmir)	812.6	361.3	2 25

It is clear that people living in some zones of India have not got more land per head than their fellow citizens in other zones. This does not mean that the former are better off than the latter. Central India, for instance, has 3.54 acres of land per person which is three times as large as the *per capita* land in North India of 1.15 acres. We all yet know that 1.15 acres of land in North India may provide a better living than 3.54 acres of land in Central India.

Topography is one of the major factors which make a difference between the productivity of land in one zone and the other. Topography indicates the nature of the terrain or the land-form of the tracts in question.

Out of India's 812.6 million acres, 86.9 million (or 10 per cent.) acres lie in mountains. The word "mountain" in this context, means steep land at a very high elevation and excludes all land below a limit of 7,000 feet above sea level. Nearly two-thirds of such mountain tracts (54.8 million acres) are found in Jammu and Kashmir. The remaining one-third is distributed among three zones: 14.1 million acres in East India, 9.7 million acres in North-West India, and 7.9 million acres in North India. Less than 500,000 acres are to be found in South India. There are no mountains in the strict sense of the term in West India and Central India.

Mountain Tracts

Next to "mountain" tracts come hilly tracts. The word "hill" covers all kinds of weathered highlands (except mountains) without reference to the level at which the hills are situated. It also includes the entire area of all ranges other than the Himalayas, as also the foothills of the Himalayan range upto 7,000 feet above sea level. Hilly tracts thus defined comprise 150.9 million (18.6 per cent.) acres of all land in India. This area is divided among four zones: East India 52.5 millions, Central India 33.3 millions, South India 27.8 millions, and West India 19.8 millions.

There are 8.8 million acres of hill tracts in North-West India outside Jammu and Kashmir and 2.7 million acres in Jammu and Kashmir. Northern India has 4.1 million acres and Andaman and Nicobar Islands 2.1 million acres classed as hilly area.

Plateaus are the third variety of tracts. They include all varieties of flat tracts of land which lie between 1,000 feet and 3,000 feet above sea level. Such tracts measure 224.8 million or 27.7 per cent. of all land in India. Almost exactly one half of all plateaus (112.5 million acres) is found in Central India comprising Madhya Pradesh, Madhya Bharat, Hyderabad, Bhopal and Vindhya Pradesh. The remaining half is distributed as follows: North-West India, 30 million acres, South India 28.6 million acres, West India 28.4 million acres and East India 2.4 million acres. A fringe of North India measuring 3.4 million acres is also plateau land.

Finally, there are the plains of which India has 349.9 million acres or 43 per cent. of all land in India. They are distributed thus: East India 80.5 million, North-West India 74.2 million, North India 57.2 million, South India 50.6 million, West India 47.6 million and Central India 39.5 million. Generally, plains are tracts which are the best for purposes of cultivation and settlement of people. This is so because the chances of finding fertile soil are better in plains than in the plateaus where generally fertile land is scarce.

Plain Land

All the 350 million acres of plain land are not fertile or even cultivable land. There are vast stretches of land in some parts of the country which can be called land only in a technical sense. The "Rann of Kutch" is an instance in point. It measures 5.9 million acres and not suited for cultivation. So also 25.4 million acres of Rajasthan dry area. The capacity of this area to support life is negligible. Then there are the sandy wastes and marshy lands which occur in many plain tracts. These should be left out of the reckoning. Such lands account for 33 million acres in North-West India and 7.5 million acres in West India.

Thus, out of a total land area amounting to 812.6 million acres, unusable area accounts for 308.2 million acres. Topographically usable area, therefore, is of the order of 504.4 million acres. Again, it is not to be supposed that all the usable area is cultivable. Even within this area, there are large patches of land which are little better than barren rock, and have no soil or cover. It is, therefore, necessary to consider the nature and extent of soil cover available for land in different parts of the country. Unfortunately, such information is mostly of a descriptive nature. According to this information, there are four main groups of soils in India, namely, alluvial, black, red and lateritic. Following is the brief description of these soils:

(i) Four main groups of soils are found extensively all over India. Among them, the alluvial group is by far the most productive. They are distributed over practically the whole of the Gangetic plains in Uttar Pradesh, West Bengal and extend to the Punjab and parts of Assam and Orissa. The coastal tracts of Southern India are also alluvial, especially at the mouths of the rivers, where they are known as deltaic alluvium. The soils are deficient in phosphoric acid, nitrogen and humus, but not generally in potash and lime.

(ii) Then there are the black soils which are loamy to clayey in texture, vary in depth, and contain lime kankar in varying percentages, and free calcium carbonate. These soils are generally suitable for cultivation of cotton and are known in many places as "black cotton soils" or *regur*. Resembling tropical black earth, they are very well defined soils which occupy the greater part of Bombay and Saurashtra, western parts of Madhya Pradesh, Madhya Bharat, and Hyderabad and some parts of Madras including the districts of Tirunelveli and Ramanathapuram. The soils are fairly fertile and very useful for commercial crops.

(iii) Another fairly well defined and extensive group consists of red soils. They differ widely in depth and fertility in different parts of India and are generally of medium to low fertility. They cover very large tracts of Madras, Mysore, southeast Bombay, east Hyderabad and a strip of tract running along the eastern part of Madhya Pradesh to Chhota Nagpur and Orissa. In the north, the red soil area extends into and includes the greater part of the Santhal Parganas in Bihar, the Birbhum District of West Bengal, the Mirzapur, Jhansi and Hamirpur Districts of Uttar Pradesh, northern portion of Madhya Bharat, the Aravallies and the eastern half of Rajasthan.

(iv) The last of the four main groups consists of laterite and lateritic soils. Soils of this group are derived by the atmospheric weathering of several types of rocks under monsoon conditions of alternating dry and wet periods. Well developed laterite and lateritic soils are found on the summits of hills of the Deccan, Madhya Bharat, Madhya Pradesh, and of the Rajmahal and Eastern ghats, and certain parts of Orissa, Bombay, Malabar and Assam. The soils are deficient in potash, phosphoric acid and lime.

(v) Other miscellaneous types of soils include desert or arid soils occurring in the regions having low rainfall, e.g., Ajmer, Eastern Rajasthan, etc. Marshy or peaty soils occur over small areas in Travancore, and in parts of West Bengal, Orissa and Madras. Hill soils, which are generally sandy or red loam, occur in the hilly regions of West Bengal, Punjab and Assam.

THE COORLA SPINNING AND WEAVING COMPANY, LTD.

NOTICE IS HEREBY GIVEN THAT THE EIGHTY-FIRST ORDINARY GENERAL MEETING of the above Company will be held at the Registered Office of the Company, Readymoney Mansion, Churchgate Street, Fort, Bombay, on Friday the 18th day of December, 1953, at 5 p.m. (S.T.), to transact the following business:—

I. To receive the Directors' Report and Audited Accounts made up to 31st March, 1953.

II. To sanction the declaration of a Dividend.

III. To elect a Director in place of Lady Hirabai Cowasjee Jehangir who retires by rotation and is eligible for re-election.

IV. To elect a Director in place of Mr. Hirjee Cowasjee Jehangir who retires by rotation and is eligible for re-election.

V. To appoint Auditors for the current year and fix their remuneration.

The Transfer Books of the Company will be closed from Thursday the 10th day of December, 1953, to Thursday the 24th day of December, 1953, both days inclusive.

By Order of the Board,
COWASJEE JEHANGIR & CO., LTD.,
Secretaries, Treasurers & Agents.

READYMONEY MANSION,
CHURCHGATE STREET, FORT,
BOMBAY, 13*th November*, 1953.

N.B.—The Dividend when declared will be made payable at the Registered Office of the Company on and after the 28th day of December, 1953, to those shareholders whose names stand on the Register on the 9th day of December, 1953. The Dividend Warrants will be posted to the registered address of the Shareholders. Any change in address should be notified to the Company.

THE PHALTAN SUGAR WORKS LIMITED

NOTICE

THE TWENTY-SECOND ORDINARY GENERAL Meeting of the Phaltan Sugar Works Ltd. will be held on Monday the 28th December, 1953, at 3 p.m. (S.T.), at the Factory Office of the Company at Sakharwadi, District Satara North, to transact the following business:

(1) To adopt the Directors' Report and Audited Statements of Accounts for the year ending 30th September, 1953.

(2) To sanction payment of Dividend.

(3) To elect Directors in place of Messrs. Arvind N. Mafatlal and Himatlal Kantilal who retire by rotation but being eligible offer themselves for re-election.

(4) To elect Director in place of Seth M. L. Apte who retires in pursuance to Article 123, but being eligible offers himself for re-election.

(5) To appoint Auditors for the current year and fix their remuneration. A notice has been received by the Company from one of the shareholders of the Company proposing that Messrs. C. C. Chokshi & Co., of Bombay, be appointed Joint Auditors with Messrs. G. M. Oka & Co., the present Auditors.

(6) To transact any other business that may be brought forward by the Chairman.

The Transfer Books of the Company will be closed from 21st December, 1953, to 13th January, 1954, both days inclusive.

By Order of the Board of Directors,
For MAFATLAL, APTE & KANTILAL LTD.,
L. V. APTE,
Managing Director,
Managing Agents.

SAKHARWADI (DIST. SATARA NORTH),
3rd *November*, 1953.

N.B.—The Dividend when declared will be made payable at the Factory Office at Sakharwadi, on and after 28th January, 1954. The Dividend Warrants will be posted to those shareholders whose names stand on the Company's Register on the 20th December, 1953.

Notices

NELLIMARLA JUTE MILLS COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT AN Extraordinary General Meeting of the members of the abovenamed Company will be held at the Registered Office of the Company, "McLeod House," No. 3, Netaji Subhas Road, Calcutta, on Tuesday, the 8th day of December, 1953, at 3-15 p.m., to consider and, if thought fit, to pass, with or without modification, the following resolutions, namely:—

1. (*As an Extraordinary Resolution*)—That the Authorised Share Capital of the Company be increased from Rs. 15,00,000 to Rs. 31,25,000 by the creation of 1,62,500 Ordinary Shares of Rs. 10 each.

2. (*As a Special Resolution*)—That the Articles of Association of the Company be altered in manner following:—
In Article 4, the figures "15,00,000" and "1,00,000" shall be deleted and the figures "31,25,000" and "2,62,500" substituted therefor respectively.

3. (a) That it is desirable to capitalise a sum of Rs. 18,75,000 being part of the undivided profits of the Company standing at the credit of the General Reserve and accordingly that the said sum of Rs. 18,75,000 be capitalised and that this amount be used as a capital bonus which shall be applied on behalf of the persons who are on the 8th day of December, 1953, registered in the Company's Books as the holders of the 75,000 issued Ordinary Shares of Rs. 10 each in payment in full for 1,87,500 new Ordinary Shares of Rs. 10 each and that such 1,87,500 new Ordinary Shares credited as fully paid, shall be accordingly allotted to such persons respectively in the proportion of five new Ordinary Shares for every two issued Ordinary Shares held on the 8th day of December, 1953, by such persons respectively, and that the said new Ordinary Shares so distributed shall rank in all respects *pari passu* with the existing issued Ordinary Shares save and except that they will not participate in any dividend declared in respect of any period ending on or before 30th June, 1953, and shall also be treated for all purposes as an increase of the nominal amount of the capital of the Company held by each such Ordinary Shareholder and not as income.

(b) That pursuant to the above resolution and in satisfaction of the said special capital bonus, the Directors be and they are hereby directed to allot and distribute 1,87,500 new Ordinary Shares credited as fully paid amongst the persons who are on the 8th day of December, 1953, registered in the Company's Books as the holders of the 75,000 issued Ordinary Shares of the Company in proportion to the issued Ordinary Shares held by them.

(c) That if on such allotment and distribution as aforesaid fractional entitlements are involved, the Directors be and they are hereby directed to allot the shares represented by the fractions to the Chairman of the Meeting as Trustee on behalf of those shareholders who are entitled to fractions of a share and that the Chairman be and he is hereby authorised to sell such shares and distribute the net proceeds of sale amongst such shareholders in accordance with their respective fractional entitlements.

(d) That the draft of the Agreement providing for the allotment of the said new Ordinary Shares in satisfaction of the said capital bonus submitted to this Meeting and signed in the margin by the Chairman thereof by way of identification be and the same is hereby approved and that the Directors be authorised to affix the Seal of the Company to duplicate engrossments of such Agreement as and when the same shall have been signed on behalf of the members holding Ordinary Shares in the Company on the 8th day of December, 1953 by some person to be appointed by the Directors in that behalf under Article 170 of the Articles of Association of the Company.

NOTICE is also hereby given that the Share Transfer Books and the Register of Members of the Company will be closed from 24th November, 1953 to 8th December, 1953, both days inclusive.

By Order of the Board,
McLEOD & Co., LTD.,
C. L. BAJORIA,
Director,
Managing Agents.

Gilby, Mono Shum Shere Jung Bahadur Rana, Mr. C. H. Jaimal Rai, Major General Nara Shum Shere Jung Bahadur Rana, Mian Aziz Ahmed Khan Bhatti, Madan Shum Shere Jung Bahadur Rana, Padma Narsingha Rana, Mohamed Khalil Sheraze, Comdg. General Bahadur Shum Shere Jung Bahadur Rana, Bahadur Shum Shere Jung, Maj. General Krishna Shum Shere Jung Bahadur Rana.

TATA CHEMICALS' RECORD PROFIT

PREFERENCE DIVIDEND, HOWEVER, STILL IN LARGE ARREARS

FOURTEEN years constitute too long a period for any investor to go without a return on his investment and still hold his patience. Yet there are a few instances where investors are still hopeful and evince an interest in the shares of such companies. The ordinary shares of the Tata Chemical's Ltd. (Managing Agents: Messrs. Tata Industries Ltd., Bombay) belong to this category. Although the dividend on preference shares is still in arrears for as many as 6½ years, the ordinary shares at Rs. 9-9 are quoting very nearly their par value. And what is more, their marketability is good. If anything, it seems to have improved in recent days, the value of the scrip hardening from Rs. 8-14-6 to Rs. 9-9 in a fortnight. An explanation for this is to be found in the fact that the Company's financial results for the year ended 30th June, 1953, are far more encouraging than those for the previous year. It is true that no dividend on ordinary shares has been recommended for 1952-53, but the fact that earnings are better and that arrears of preference dividend has been reduced fairly substantially has evidently given rise to fresh hopes of better days in the coming years.

The gross profit for the year, at Rs. 26.52 lakhs, not only represents an increase of Rs. 9.48 lakhs over that for 1951-52 but also constitutes a record for the Company. Another encouraging feature of the year's results is that, for the first time since the Company began reducing its arrears of preference dividend three years ago, its profit for the year under review has enabled it to pay in full the preference dividend for two years simultaneously. No doubt, the Company has, up to the end of the year under review, still to clear off arrears of dividend on preference shares for 6¼ years.

The improvement in the financial results for 1952-53 is due, according to the Directors, to "increased output and efficiency, consequent upon greater continuity of operations and a larger volume of sales." The Company's sale proceeds of chemicals show a substantial rise from Rs. 137.15 lakhs to Rs. 161.50 lakhs, an increase of 18 per cent. This rise has been offset to some extent by the decline in sale proceeds of salt from Rs. 5.72 lakhs to a mere Rs. 9,320, as well as in the income from sale of foodgrains and other commodities from Rs. 4.75 lakhs to Rs. 2.87 lakhs and in miscellaneous income from Rs. 4.30 lakhs to Rs. 2.10 lakhs. Expenses, including consumption of raw materials, have risen from Rs. 134.88 lakhs to Rs. 140.05 lakhs. Out of the gross profit of Rs. 26.52 lakhs, Managing Agents' commission, including adjustment in respect of previous years, has taken up Rs. 1.17 lakhs, as against Rs. 35,066 in the previous year. Provision for depreciation has been raised by Rs. 5.25 lakhs to Rs. 17.50 lakhs, on account of the substantial additions to the gross block during the year. The net profit works out to Rs. 7.85 lakhs, as against Rs. 4.44 lakhs for 1951-52. The Directors have written off completely the balance of preliminary expenses, underwriting commission and brokerage on issue of shares and debentures, all aggregating Rs. 1.64 lakhs. The payment of preference dividend for two years from 1st January, 1945 to 31st December, 1946, absorbs nearly Rs. 6 lakhs. The balance left to be carried forward is Rs. 29,390.

The Company's production of soda ash was stepped up by 60 per cent. over the previous year's output, in spite of reduced operations for a temporary period when sales were restricted. The Company had to curtail its production of soda ash for a period of three months due to excessive imports. It had also to reduce its selling prices for some time. The position, however, improved from January, 1953. The caustic soda and other heavy chemical plants, except for bleaching powder, worked steadily. However, sales of caustic soda were poor on account of excessive imports allowed during 1952, and operating costs increased. The Company had to shut down temporarily its caustic soda and zinc chloride plants, in order to enable it to dispose of its accumulated stocks of these chemicals. During the latter half of the year, the bleaching powder plant was reopened, after it had remained closed since December, 1951, owing to large accumulation of stocks and poor offtake. Production in the marine group of plants was better and sales of these chemicals were satisfactory. The brine evaporator plant was brought into operation from October, 1952. As a result of its working, a good supply of distilled water to the boilers has been assured, as also a daily output of 40 tons of vacuum salt. This salt, which is free from impurities and superior to solar salt, is being put on the market in different parts of the country. The production of salt during the year was only a little below the target figure of the previous years, although lifting operations were affected by an early monsoon and excessive rainfall. The Company, according to the Directors, was not able to despatch any salt to Calcutta, partly because the bulk of the production was required for internal consumption in the manufacture of chemicals, and partly in view of ample stocks of salt in the Bengal market, where salt prices fell steeply to unremunerative levels. Even the demand for Indian salt in Japan, the Directors add, has tapered off, since it is now increasingly looking to nearer Far Eastern sources for its requirements.

The problem of disposal of the Company's output of chlorine is in the process of being solved. It has now concluded arrangements with a German firm for the manufacture of insecticides by a German process. When the plant for the manufacture of the insecticide goes into production, not only the surplus chlorine will be absorbed but the electrolysers will be operated to capacity with a corresponding increase in the output of electrolytic caustic soda.

The following synopsis of the Company's balance-sheet as on 30th June, 1953, gives an idea of its financial position:

Liabilities	Rs.	Assets	Rs.
Capital ...	1,32,15,280	Gross block	2,64,69,593
Debentures	25,00,000	Less—Depreciation ...	70,27,268
Reserves and surplus ...	29,690	Net block	1,94,42,325
Liabilities ...	1,31,38,415	Stock-in-trade	33,32,969
		Stores, spares, etc.	60,64,245
		Debts and advances	17,53,393
		Cash ...	2,90,453
	Rs. 3,08,83,385		Rs. 3,08,83,385

During the year the Company spent Rs. 10.94 lakhs on additional plant and machinery and improvement to the township. Further modifications and additions are in hand for increasing the capacity of the soda ash plant. When these are executed, the maximum rated capacity of the plant is expected to be reached.

NEW KAISER-I-HIND MILL MAINTAINS DIVIDEND

A decline of Rs. 13.42 lakhs, in the gross profit, that is from Rs. 24.85 lakhs to Rs. 11.43 lakhs, is disclosed by the audited accounts of the New Kaiser-I-Hind Spinning and Weaving Co., Ltd., for the year ended 31st March, 1953, as compared with those for the previous year. Consequent on this shrinkage, the Directors have not allocated anything to the reserves, to which had been added a sum of Rs. 5 lakhs last year. The dividend on the ordinary shares is, however, maintained at 8¼ per cent. per annum.

Sale proceeds of cloth, yarn, etc., have declined from Rs. 259.97 lakhs to Rs. 247.73 lakhs. Expenses, including consumption of raw materials, on the other hand, show a small rise of Rs. 235.90 lakhs to Rs. 237.06 lakhs. The provision for depreciation has been reduced slightly from Rs. 5.75 lakhs to Rs. 5.50 lakhs, in spite of the additions made to the gross block during the year. The provision for taxation, which had received Rs. 10 lakhs last year, has been allotted only Rs. 1.50 lakhs. Thus, the net profit stands at Rs. 4.43 lakhs, a little less than half that for the previous year, at Rs. 9.10 lakhs. The distribution of the preference dividend requires Rs. 75,000 and the ordinary dividend Rs. 3.82 lakhs. It may be recalled, in this connection, that the dividend on the ordinary capital of the Company had been reduced from 30 per cent. paid for 1948-49 to 8¼ per cent. for 1951-52, but, in the years 1950-51 and 1951-52, the Directors had issued scrip bonus at one ordinary share for every share in the former year and one ordinary share for every two held in the latter year. This is in addition to the bonus issue of one preference share for every ordinary share made in 1949-50.

The recession in earnings during the year under review is clearly due to the trade depression which came to be felt in the latter part of 1951-52, leading to a crash in prices of raw materials and manufactured goods. In spite of the partial decontrol of cloth in October, 1952, the cloth market continued to slump and the mills were not able to sell most of the decontrolled varieties at remunerative prices. They were, therefore, obliged to sell their products at heavy loss. Thanks, however, to the liberal policy followed by the Government in the matter of export of cloth, the Company was able to sell quite a good quantity of cloth for export, although the heavy export duty hampered the export trade.

The latest balance-sheet of the Company shows that the reserves and surplus stand at Rs. 12.31 lakhs, as against a paid-up capital of Rs. 60 lakhs. During the year, the Directors, had to transfer a sum of Rs. 17 lakhs from the general reserve to provision for taxation, as the Company's appeal in respect of income-tax assessments for earlier years did not succeed. In addition to the sum of Rs. 17 lakhs transferred from the general reserve, the Directors have added to the provision for taxation a sum of Rs. 6.43 lakhs being the net E.P.T. refund received during the year. After paying Rs. 35.48 lakhs by way of taxes, there is a balance of Rs. 2.15 lakhs in the taxation reserve account. Current liabilities aggregate Rs. 53.06 lakhs. As against a gross block of Rs. 109.81 lakhs (including Rs. 4.67 lakhs being the value of the additions during the year) a depreciation reserve of Rs. 85.23 lakhs has been built. The current assets amount to Rs. 102.95 lakhs and exceed the current liabilities and provision for taxation by a margin of Rs. 47.77 lakhs.

CHITAVALSAH AND NELLIMARLA JUTES TO ISSUE BONUS SHARES

The Directors of the Chitavalsah Jute Mills Co., Ltd., and Nellimarla Jute Mills Co., Ltd. (Managing Agents: Messrs. McLeod & Co., Ltd., Calcutta), have decided to capitalise a part of their undivided profits standing to the credit of their respective general reserves and to issue new ordinary shares as bonus to the holders of the existing ordinary shares as on 8th December, 1953.

The Directors of Chitavalsah propose to capitalise a sum of Rs. 20.10 lakhs from out of the Company's general reserve (which stood at Rs. 38 lakhs as on 31st December, 1952) and issue 201,000 new ordinary shares of Rs. 10 each to the holders of the existing 100,500 ordinary shares of Rs. 10 each as bonus shares in the proportion of two new shares for every one held by them. For the purpose of carrying out the aforesaid proposal, the Directors propose to raise the authorised capital of the Company from the present level of Rs. 15.05 lakhs to Rs. 35.10 lakhs. After the aforesaid, proposal is carried out, the paid-up capital of the Company will stand at Rs. 30.15 lakhs, made up of 301,500 ordinary shares of Rs. 10 each and 5,000 (7 per cent.) cumulative preference shares of Rs. 100 each.

The Directors of Nellimarla propose to capitalise Rs. 18.75 lakhs from out of the general reserve (which, as on 31st December, 1952, stood at Rs. 37 lakhs) and issue 187,500 new ordinary shares of Rs. 10 each as bonus to the existing 75,000 ordinary shareholders, in the proportion of five new shares for every two held by them. The implementation of the aforesaid proposal requires the raising of the authorised capital from Rs. 15 lakhs to Rs. 31.25 lakhs by the creation of 162,500 ordinary shares of Rs. 10 each. After the aforesaid capitalisation proposal is carried out, the paid-up capital of the Company will stand at Rs. 31.25 lakhs, made up of 262,500 ordinary shares of Rs. 10 each and 5,000 (6 per cent.) cumulative preference shares of Rs. 100 each.

It may be noted here that, even during recent years, when the jute industry passed through very difficult days, both the companies were able to pay good dividends, as will be seen from the following set of figures:

	Dividend per cent		
	1950	1951	1952
Chitavalsah	15	60	37½
Nellimarla	30	75	30

Although the ordinary paid-up capital is being raised by 200 per cent. in the case of Chitavalsah and by 250 per cent. in the case of Nellimarla, both the Companies should be able to pay dividends at present rates. If the trend of the jute goods market is any indication, the profits of these Companies for the current year should be better than in 1952. It can, therefore, be reasonably expected that the Companies will be able to set apart a larger sum for payment of ordinary dividends than they did in 1952. In short, the Companies seem to be justified in raising the level of their ordinary capital.

SHOLAPOOR MILL SUFFERS LOSS

After a welcome improvement in its fortunes during the previous two years, the Sholapoor Spinning and Weaving Co., Ltd., which has been under a court of wards management ever since 1950, has had to face a period of adverse working conditions during the year ended 31st March, 1953. Thus, the Company has sustained a gross loss of Rs. 18.24 lakhs for the year, as compared with a gross profit of Rs. 17.95 lakhs for 1951-52 and Rs. 14.24 lakhs for 1950-51. This loss has been covered to some extent by the receipt of a sum of Rs. 6.03 lakhs, being the net E.P.T. refund, and by the writing back of Rs. 37,609, representing depreciation on account of the city electrification department for 1948-49 and 1949-50. The balance of the loss amounting to Rs. 11.83 lakhs, subject to making a provision for depreciation for the year (Rs. 4.61 lakhs), is proposed to be carried forward, raising the total accumulated loss to Rs. 89.86 lakhs. Besides this huge deficit, the Company is in arrears of preference dividend since 1946-47, aggregating Rs. 4.32 lakhs.

It will be recalled that, as on 1st April, 1950, that is, only about three months after the present Board of Directors had taken charge in January, 1950, the accumulated loss of the Company stood at Rs. 84.87 lakhs, subject to depreciation for the years 1947-48 onwards. During the succeeding two years, the Company was able to earn sufficient pro-

(Continued in next page)

Points From The Chair

Growth of Trade Unionism in India

"IN India, since her independence, there has been a very rapid growth in trade unionism. In fact, India has attempted in six years to achieve a relationship between labour and management which, in this country, has emerged after more than 100 years. That this rapid progress in India has been accompanied with many problems was only to be expected and, of these, one of the greatest has been the number of rival unions competing for members in the same industry. These unions endeavour to attract members by making ever more exacting demands for increased wages and other benefits. In an endeavour to settle such claims the Industrial Disputes Act of 1947 was passed. This Act enabled Government to set up tribunals, composed of persons of a status of High Court or District Judge, to hear disputes arising between employers and employees. These tribunals administer no principles of law and, in fact, make their own principles as they go along. They are composed of men with no commercial experience whatever, and their awards appear to bear little relationship to common sense or commercial prudence. To take one example only, when I was in Calcutta last November, a tribunal issued its award granting retrospective and continuing increases in dearness allowances and also a special bonus in respect of the year 1950."

D. E. WEBB,
Calcutta Tramways Co., Ltd.

Improving Standard of Living

"I dare say no sensible thinking man in our country to-day will dispute the *desideratum* of the ideal of our Government to provide employment for all healthy people, helping them to improve their standard of living and well-being which is the first *sine qua non* of a successful Welfare State. But whether mere legislative enactments divorced of their practical possibilities would serve to achieve this object, I am not so sure of. Ideological enthusiastic approach to this problem, no doubt, is the essential prerequisite; but mere enthusiasm without a realistic approach to the situation and without fully appreciating the overall economic set-up of our country, can more probably mislead us than help us to serve and realise the laudable object. It is in this I am very particular that all phases of the industry must be fully taken into confidence and they must also be fully put in possession of the pros and cons of every attempt and the possibilities of the results, before they can be adopted as a standard yardstick."

A. V. THOMAS,
Midland Rubber and Produce Co., Ltd.

SHOULD CEILINGS BE PRESCRIBED FOR LANDHOLDINGS?

(Concluded from page 947)

that the need for a programme which establishes a synthesis between the immediate and the ultimate arises and the allocation of funds for minor irrigation works, long neglected all over the country, is called for. I would even go further and suggest that the immediate should take precedence over the ultimate if people are to be made planning-conscious and their co-operation extended in expanding measure.

Ways and Means

"The pace and progress of the plan, whatever its shape, will depend predominantly on the resources that can be mobilised by Government. The resources at the disposal of the Government are what they can raise by way of taxes and loans. Substantial additions have been made to the tax structure of the State in recent years. The most notable instance is the sales tax which has been worked to regressive proportions under pressure of growing requirements of the States. Taxes on income still stand at a level which financial circles consider offer no margin for savings, especially, against the background of a continuous rise in the cost of living. A democratic system of Government by its very nature involves a more costly set-up for administration and when it is keyed to produce the amenities of a Welfare State, the need for more and more funds to run normal administration can easily be recognised; and we want funds not merely for normal administration, but also for large-scale investments on a planned programme. In the last session of Parliament one more taxation measure in the shape of death duties has been placed on the Statute Book and brought into effect from the 15th of last month. You are aware that a Taxation Commission is now starting on its rounds to take evidence on the rationalisation of the tax structure and incidentally explore the prospects of addition to the taxes.

"In our own State, the question of agricultural income-tax has come in for periodic examination, though every time the unpromising outlook has damped enthusiasm and delayed action. Apart from agricultural income-tax, the question of standard assessment of land tax on grounds of rationalisation of resettlements of the past geared to the ruling prices of commodities, to provide elasticity is being canvassed. I am referring to this at the moment in the context of the State's need for money not only for abnormal investments but also for normal administration.

State Loans

"Apart from what can be raised by way of taxes, the other alternative for the Government to raise funds is by way of loans. How much money can be raised this way? It is difficult to prognosticate on the data available. Savings on which any reliance could normally be placed was usually associated with fixed income groups in urban areas and informed opinion on this does not encourage any optimistic expectations. There have been few new flotations of companies in the private sector to assess the correctness of this impression. If the ruling prices at the Stock Exchange provide any indication, there is little ground for optimism. The evidence seems to point the other way about. Still, the fact remains that the provincial loans issued this year, particularly the loan in Madras, have proved that there are unsuspected reserves still available. It has been suggested that there is more money on the countryside waiting to be integrated and canalised, of which no proper assessment is possible. Assuming that what the Government expects to raise by way of taxes and internal loans is realised, the financing of the plan still leaves a margin to be found by way of external help and what is known as deficit financing. The plan, moreover, is undergoing constant revision calling for more and more investment and this is only the First Five-year Plan! It is only the result that must justify the strains and stresses clearly indicated in the financial sector.

"If the Plan had merely outlined programmes and priorities, it might have raised a ripple in knowledgeable circles but left the general body of the people unconcerned. In order, however, that the latter may be interested and enthused, the Commission has set about an exposition of the new philosophy on which the Welfare State is presumably based. Against the background of large irrigation schemes, power projects, fertiliser plans and mechanised farming, novel proposals are put forward for setting a ceiling on holdings which, to those who are familiar with the actual size of holdings in the *ryotwari* areas, have come as a surprise and a shock. After the abolition of the *zamindaris*, there may be a few tall poppies left in the *ryotwari* sector, but there is ample evidence in the data collected by the authorities of Government that the vast majority of the holdings in this province are what must be classed really as uneconomic holdings. Single *pattas* below 15 acres represent 75 per cent. of the area under cultivation; and of this 40 per cent. represent holdings below 5 acres. Joint *pattas* below 15 acres represent 83 per cent. of the area under cultivation!

"These facts should effectively dispose of any expectation that a fixation of ceiling would release land for distribution to the landless. Any attempt to fix a ceiling in the context of the facts disclosed can only introduce a disturbing element in the credit structure of rural economy. It would be wiser to leave the few holdings that may be found above any optimum limit to set standards of scientific farming and provide demonstrable results of the reforms attempted. In any event, if the pressure for a ceiling cannot be resisted, it should be fixed at a sufficiently high level to allow farming to flourish as an industry and such limitation should operate only in respect of the future holdings and not current holdings.

"The possibilities of collective and co-operative farming are still in the unproven stage and a time-lag is necessary to assess its results. The human factor does not always chime in with the economists' expectations. We are passing through a period of unrest, due to political and economic reasons and it would be wise not to attempt any hasty reforms especially, in the agricultural sector where the have-nots will not be content with what is conceded and the haves will not yield with grace what they can well let go.

"There is one note of caution that may be struck in this context. The cycle of drought which was sustaining high prices of commodities is breaking. A progressive fall in prices is in the offing. An emergency may rise which will call for a fixation of floor level of prices of farm products. With these in prospect it would be wise, if all engaged in agriculture, landlord, tenant and *pannaiyal*, would not engage in fracticidal war. Their interests are common and they should hold together."

(Concluded from previous page)

fit not only to make good the arrears of depreciation upto the end of 1951-52 but also to reduce the accumulated loss from Rs. 84.87 lakhs to Rs. 78.04 lakhs at the end of 1951-52. But now the deficit has again widened to Rs. 89.86 lakhs on account of the loss incurred in 1952-53. This latter loss was, however, inevitable. It was, according to the Directors, "largely due to the severe slump which set in about March, 1952." The goods manufactured from high-priced cottons, particularly the foreign varieties, they add, had to be sold at heavy discounts. The overseas demand was also not brisk and the export margin which had largely contributed to the profits of the previous years dwindled to unremunerative levels.

The financial position of the Company can be judged from the following summary of its balance-sheet as on 31st March, 1953:

Liabilities	Rs.	Assets	Rs.
Capital ...	47,96,000	Gross block	2,87,33,062
Reserves ...	1,60,39,517	Less—Depreciation ...	2,03,87,726
Liabilities ...	1,83,81,830	Net block ...	83,45,336
		Stock - in - trade ...	1,69,92,345
		Stores, spares, etc. ...	23,46,576
		Debts, deposits and advances ...	21,06,883
		Investments	2,48,703
		Cash ...	1,93,006
		Loss	89,86,498
	Rs. 3,92,17,347		Rs. 3,92,17,347

Notices

KESORAM COTTON MILLS, LIMITED

NOTICE IS HEREBY GIVEN THAT THE Fifty-eighth Ordinary General Meeting of the Shareholders of the Company will be held at 8, Royal Exchange Place, Calcutta, on Monday the 7th December, 1953, at 3.00 p.m.

(*a*) to receive and adopt the Directors' Report and Audited Accounts for the year ended 31st March, 1953;

(*b*) to declare Dividends on Preference and Ordinary Shares;

(*c*) to elect Directors;

(*d*) to appoint Auditors for the current year and to fix their remuneration;

(*e*) to approve and confirm payment of Donations of Rs. 1,18,365-9-0 as per Profit and Loss Account;

(*f*) to transact any other business that may be brought forward with the permission of the Chairman.

The Share Transfer Register will be closed from 24th November, 1953, to 7th December, 1953, both days inclusive.

By Order of the Directors,
BIRLA BROTHERS, LTD.,
Managing Agents.

CALCUTTA, 9th *November*, 1953.

In particular to:— Mr. Abdus Sattar Mollick, Mrs. B. E. Honeybone, Mr. C. M. D'Souza, Mrs. Dossibai Dinshaw, Mr. V. B. Pandit, Mr. Harendra Narain Chakravarty Choudhury, Mr. J. E. Dhanjibhoy, Lt. Genl. Kaiser Shum Shere Jung Bahadur Rana, Mrs. L. D. Jenkins, Mrs. Marie R. D'Souza, Mr. Nagendra Man Singh, Maj. Genl. Narendra Shum Shere Jung Rana Bahadur, Mr. Purshottam Ram, Mr. Suresh Chandra Nandi, Mr. Sohanlal Bawa, Yubaraj Shum Shere Jung Bahadur Rana and Col. Sir G. P. L. Conyngham.

Note.—If Dividends on shares as recommended by the Directors are passed at the Meeting, THE DIVIDENDS WILL BE PAYABLE ONLY TO THE REGISTERED SHAREHOLDERS, whose names are on the Company's Register on the 7th December, 1953. No application need be sent for dividend as relative Dividend Warrants will be posted to such Shareholders by the 21st December, 1953.

The Shareholders are requested at once to notify any change of address.

THE WEST COAST ELECTRIC SUPPLY CORPORATION LIMITED

(Registered Office: MADRAS)

NOTICE OF THE 19th ANNUAL GENERAL MEETING OF SHAREHOLDERS

NOTICE IS HEREBY GIVEN THAT THE 19TH Annual General Meeting of THE WEST COAST ELECTRIC SUPPLY CORPORATION LTD., will be held at the Registered Office of the Company, No. 20, Second Line Beach, Madras, on Thursday the 3rd December, 1953, at 4-30 p.m.

1. To consider and adopt the Directors' Report and the Audited Accounts for the year ended 31st March, 1953.
2. To consider the declaration of a final dividend of 2½ per cent. less tax on Preference Shares and a dividend of 6½ per cent. tax-free on Ordinary Shares, making a total of 5½ per cent. less tax on Preference Shares and 10 per cent. tax-free on Ordinary Shares for the year ended 31st March, 1953.
3. To elect Auditors for the current year and fix their remuneration.
4. To elect a Director in the place of Sri V. K. Eradi, who retires by rotation, but is eligible for re-election.
5. To elect a Director in the place of the late Dr. T. S. Tirumurti.

The Share Transfer Books of the Company will be closed from 25th November, 1953 to 3rd December, 1953, both days inclusive.

By Order of the Board,
CHANDRIE & CO., LTD.,
Managing Agents.

MADRAS, 8*th November*, 1953.

Note:—The dividend when sanctioned at the Annual General Meeting will be paid on or after 10th December, 1953, to those Shareholders whose names stand on the Register of Members on 3rd December, 1953.

DECLINE IN TEA PRICES AFFECTS DUNCAN BROTHERS COMPANY

CENTRAL INDIA COAL PAYS MAIDEN DIVIDEND

Duncan Brothers and Co., Ltd.

THE directors of the above Company (Chairman: Mr. J. R. Vernede, Calcutta) submit the audited accounts of the Company for the year ended 31st December, 1952.

The revenue profit for the year amounts to Rs. 31,36,973 (Rs. 41,24,038) to which is added registration fees Rs. 101 (Rs. 743), E.P.T. post-war refund Rs. 1,63,520 (*nil*), and balance brought forward from 1951 Rs. 2,07,314 (Rs. 2,12,315), making a total of Rs. 35,07,908 (Rs. 43,37,314). From this sum the directors have made the following appropriations:—

Provision for taxation Rs. 16,50,000 (Rs. 16,00,000) and transfer to investment reserve Rs. 5,00,000 (nil) leaving a sum of Rs. 13,57,908 (Rs. 12,87,314) which the directors recommend should be distributed as under:—

In payment of a dividend on 45,000 tax-free cumulative preference shares at the rate of 4 (4) per cent. for the year ended 31st December, 1952 without any deduction for income-tax paid by the Company, declared payable by the directors on 31st January, 1953 Rs. 1,80,000 (Rs. 1,80,000) in payment of a dividend on 90,000 ordinary shares at the rate of 10 (10) per cent. for the year ended 31st December, 1952, without any deduction for income-tax paid by the Company Rs. 9,00,000 (Rs. 9,00,000) and in carrying forward Rs. 2,77,908 (Rs. 2,07,314).

Provision for taxation is considered adequate to meet outstanding assessments both in India and Pakistan at current rates of exchange.

As foreshadowed in the last report the disastrous fall in tea sale prices which continued throughout 1952 had its inevitable effect on the Company's revenue from this important side of the business. Since the turn of the year, however, measures taken to secure equilibrium in supply and demand have tended increasingly to exert their influence and auction prices in the world's markets have recovered to a level when producers can again expect some reward for their labours. While therefore the position in recent months has greatly improved many of the cuts imposed in estate expenditure cannot be continued indefinitely and losses incurred have been of a magnitude that the most conservative policy in the future will be necessary if tea companies are to be restored to their previous stability. Statistically the outlook for tea is sound with consumption once again showing a slight upward tendency.

Reduced demand for manufactured goods accompanied by a general fall in the price level over the year had its effect on the prosperity of the jute industry and on the Company's earnings from that source.

For similar reasons the subsidiary Company in Pakistan has reported a lower level of profits than in the previous year, but taking into account the seriousness of the crisis affecting the tea industry and the recession in raw jute prices results achieved are not unsatisfactory.

Although since the close of the period to which these accounts relate there has been a welcome improvement in Stock Exchange values for many of the Company's investments it has been deemed prudent to set aside the sum of Rs. 5,00,000 from profits to investment reserve.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	1,35,00,000	Block ...	18,22,180
Reserves ...	50,14,618	Stock of stores, etc. ...	2,39,083
Provision for taxation ...	21,48,359	Debts, deposits and advances ...	1,36,31,425
Liabilities ...	1,19,36,168	Investments	1,70,07,864
Profit and loss account ...	2,77,908	Cash ...	1,76,501
Rs.	3,28,77,053	Rs.	3,28,77,053

Central India Coal-Fields Ltd.

The directors of the above Company (Managing Agents: Hindustan Investment Corporation, Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st March, 1953.

After writing off Rs. 1,22,250 (*nil*) paid for share brokerage and providing Rs. 1,00,000 (*nil*) for depreciation and adding the balance carried forward from the last year, there is available a sum of Rs. 1,27,963 (Rs. 8,776 after adjusting the previous year's debit balance of Rs. 2,89,495) on the credit side of the profit and loss account. The directors propose to distribute this amount in the following manner:—

To pay dividend on 4,99,700 shares on ordinary shares at As. 4 (*nil*) per share free of income-tax Rs. 1,24,925 (nil) and to carry forward Rs. 3,038 (Rs. 8,776).

The progress of the work achieved during the year was better in comparison to previous year. The raisings at Pure Chirimiri Colliery were about 22 per cent. higher than the last year. The production might have further increased but was kept down according to the availability of wagons to avoid further accumulation of stocks.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	49,97,000	Block ...	33,74,722
Reserves ...	1,00,750	Stock of coal	1,65,388
Liabilities ...	1,69,218	Stock of stores	4,36,050
Profit and loss account ...	1,27,963	Other assets	18,934
		Debts, deposits and advances ...	8,54,662
		Investments	1,32,250
		Cash ...	4,12,925
Rs.	53,94,931	Rs.	53,94,931

Dauracherra Tea Co., Ltd.

The directors of the above Company (Secretaries: Messrs. Duncan Brothers & Co., Ltd., Calcutta) submitted the audited accounts for the year ended 31st December, 1952.

The accounts showed a profit of Rs. 1,31,470 (Rs. 11,386). On transfer of this sum to profit and loss account and after sundry adjustments, including the appropriation of Rs. 1,00,000 (*nil*) from contingencies reserve, there was a balance at credit of that account amounting to Rs. 82,047 (Rs. 45,134), of which the directors transferred Rs. 25,000 (nil) to revenue reserve. The directors paid a dividend of 5 (2½) per cent. and carried forward Rs. 27,047 (Rs. 10,134).

The values of the Company's current assets and liabilities in Pakistan have been converted into Indian currency at the current rate of exchange, now recognised by the Government of India, and the resulting unrealised profit has been carried to an Exchange Suspense Account. Since the close of the year under review sanction to remit to this country the net trading profits earned in Pakistan during seasons 1948 and 1949 was obtained from the State Bank of Pakistan, and a total of Rs. (1) 3,62,892 was received and credited to the Company's account in India in May, 1953.

The crop harvested was 5,238 maunds as against 4,919 maunds in 1951. The average selling price in Pakistani Currency was Re. 1-3-9 per lb. as compared with Re. 1-1-0 per lb. in the previous year. Planted area—As the result of a recent survey the area under tea now measures 544.12 acres.

Estimates for 1953 provide for a crop of 5,200 maunds at an outlay of Rs. (P) 3,82,100, including inland freight and sale charges.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	6,00,000	Block ...	4,50,000
Reserves ...	6,47,046	Stores and supplies ...	58,399
Provision for taxation ...	1,89,497	Tea sales receivable ...	4,27,668
Liabilities ...	1,34,696	Advances and deposits ...	1,46,147
Profit and loss account ...	27,047	Investments	1,54,008
		Cash ...	3,62,064
Rs.	15,98,286	Rs.	15,98,286

Clevedon Tea Co., Ltd.

The directors of the above Company (Secretaries: Messrs. Duncan Brothers & Co., Ltd., Calcutta) submitted the audited accounts for the year ended 31st December, 1952.

The accounts showed a loss of Rs. 1,16,670 (loss of Rs. 1,56,218). On transfer of this sum to profit and loss account and after sundry adjustments, including transfers of Rs. 26,000 (Rs. 2,14,000) from revenue reserve and Rs. 54,300 (*nil*) from buildings and machinery reserve, there was a balance at debit of profit and loss account of Rs. 34635 (credit of Rs. 1,074) which the directors carried forward.

The values of the Company's current assets and liabilities in Pakistan have been converted into Indian currency at the current rate of exchange, now recognised by the Government of India, and the resulting unrealised profit has been carried to an Exchange Suspense Account.

The loss would have been much larger had not the greater portion of the crop, which was some 740 maunds less than that of the previous year, latterly sold at considerably enhanced prices. Unfortunately, this gain failed to offset the heavy loss sustained on earlier unremunerative sales concluded at a time when disastrously low market prices were ruling. Results were further aggravated by the continuance of the adverse exchange ratio.

The crop harvested was 5,659 maunds as against 6,400 maunds in 1951. The average selling price in Pakistani currency was Re. 1-0-7 per lb. as compared with As. 11-8 per lb. in the previous year. Planted area is now 551.42 acres.

Estimates for 1953 provide for a crop of 6,000 maunds at an outlay of Rs. (P) 4,38,480, including inland freight and sale charges.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	4,00,000	Block ...	4,00,000
Reserves ...	1,95,624	Stores and supplies ...	84,415
Provision for taxation ...	8,864	Tea sales receivable ...	4,33,357
Liabilities ...	4,75,649	Advances and deposits ...	1,03,701
		Investments	1,282
		Cash ...	22,747
		Profit and loss account ...	34,635
Rs.	10,80,137	Rs.	10,80,137

United Provinces Electric Supply Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Martin Burn Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st March, 1953.

In order to meet the demand for electricity in places within the Company's licensed area, where mains do not already exist, the transmission and distribution systems are being gradually extended as and when finances permit.

To overcome the numerous demands made for new connections on the direct current system which is nowadays considered obsolete, the system of alternating current is being introduced, thereby bringing the whole of the Company's distribution net work up to date.

The following schedule indicates the progress made during the past three years:—

Half-year ended	*Units sold*	*Revenue* Rs.
30th September, 1950	23,221,659	28,92,286
31st March, 1951	23,129,769	27,79,281
30th September, 1951 ...	26,484,521	31,10,349
31st March, 1952	25,430,966	31,52,162
30th September, 1952 ...	28,185,332	34,33,172
31st March, 1953	28,300,558	34,62,595

After complying with the provisions of the Electricity (Supply) Act, 1948, and making adequate provision for liabilities, there remains a balance of Rs. 3,58,548 (Rs. 3,54,361) including Rs. 76,045 (Rs. 60,899) brought forward from the previous half-year available for distribution, and this the directors recommend be disposed of in paying a dividend at the rate of 10 (10) per cent. per annum free of income-tax Rs. 2,80,000 (Rs. 2,80,000) and in carrying forward to next half-year Rs. 78,548 (Rs. 72,471).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	56,01,185	Block ...	1,26,00,736
Debentures ...	30,00,000	Stores, etc. ...	18,68,964
Reserves ...	33,08,430	Tools and instruments	1,61,234
Liabilities ...	39,56,730	Goods-in-transit ...	1,000
Profit and loss account ...	3,58,548	Debts, deposits and advances ...	15,73,080
		Investments	4,57,806
		Cash ...	5,09,270
Rs.	1,72,76,790	Rs.	1,72,76,790

Central Hydraulic Press Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 30th June, 1953.

After providing Rs. 14,184 (Rs. 14,815) for depreciation and Rs. 3,500 (Rs. 45,000) for taxation and after transferring Rs. 10,000 (*nil*) to lease amortisation reserve, there is a balance at the credit of the profit and loss account of Rs. 30,627 (Rs. 45,327) from which the directors recommend payment of a dividend of Rs. 4 (Rs. 5) per share, absorbing Rs. 20,000 (Rs. 25,000), and leaving a balance of Rs. 10,627 (Rs. 20,327) to be carried forward.

On the 31st July, 1953, a circular letter was issued to shareholders, in which it was explained that, in view of the poor outlook for the jute baling industry, the directors had decided that baling should cease at the Press House from 1st July, 1953 and that negotiations were being carried on to lease out the premises for storage purposes. The directors are pleased to advise that the property has now been leased to the Government of West Bengal with effect from 1st September, 1953, for a period of 10 years.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	5,00,000	Block ...	1,76,344
Reserves ...	1,55,000	Stores and spare gear	16,250
Provision for taxation ...	30,768	Debts, deposits and advances ...	52,442
Liabilities ...	59,282	Investments	3,95,383
Profit and loss account ...	10,627	Cash ...	1,15,258
Rs.	7,55,677	Rs.	7,55,677

Camperdown Pressing Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Pyne & Sons, Calcutta) submitted the audited accounts of the Company for the year ended 31st July, 1953.

After having provided for depreciation and income-tax, the profit and loss account showed a credit balance of Rs. 42,454 (Rs. 41,216) including Rs. 1,116 (Rs. 2,393) carried forward from the previous year's account. The directors paid a dividend at 7 (7) per cent. free of income-tax Rs. 30,100 (Rs. 31,000) transferred to reserve Rs. 10,000 (Rs. 10,000) and carried forward Rs. 2,354 (Rs. 1,116).

The managing agents have voluntarily waived claim to Rs. 6,000 out of their dues of Rs. 18,000 as commission.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	4,30,000	Block ...	2,16,470
Reserves ...	90,000	Advances ...	156
Provision for taxation ...	30,746	Investments	2,86,959
Liabilities ...	20,061	Cash ...	1,09,675
Profit and loss account ...	42,453		
Rs.	6,13,260	Rs.	6,13,260

N.B.—Figures within brackets relate to the corresponding period of the previous year.

COMPANY MEETINGS AND DIVIDENDS

UNITED FLOUR MILLS CO., LTD. Half-yearly General Meeting, Calcutta, 24th November, 1953. Dividend: As. 8 per share, free of income-tax. Transfer books closed from 17th to 24th November, 1953, both days inclusive.

HOOGHLY FLOUR MILLS CO., LTD. Half-yearly General Meeting, Calcutta, 24th November, 1953. Dividend: Re. 1-4 per share, free of income-tax. Transfer books closed from 17th to 24th November, 1953, both days inclusive.

TELIAPARA TEA CO., LTD. Annual General Meeting, Calcutta, 24th November, 1953. Dividend: Rs. 7-8 per share. Transfer books closed from 16th to 24th November, 1953, both days inclusive.

RAGHUVANSHI MILLS LTD. Annual General Meeting, Bombay, 26th November, 1953. Transfer books closed from 19th November to 3rd December, 1953, both days inclusive.

TINGAMIRA TEA SEED CO., LTD. Annual General Meeting, Calcutta, 27th November, 1953. Transfer books closed from 20th to 27th November, 1953, both days inclusive.

AMALGAMATED ELECTRICITY CO. (BELGAUM) LTD. Annual General Meeting, Bombay, 27th November, 1953. Dividend: As. 12 per share. Transfer books close from 23rd November to 3rd December, 1953, both days inclusive.

BRIDGE AND ROOF CO. (INDIA) LTD. Half-yearly General Meeting, Calcutta, 27th November, 1953. Dividend: As. 12 per share. Transfer books closed from 20th to 27th November, 1953, both days inclusive.

MUTTRA ELECTRIC SUPPLY CO., LTD. Annual General Meeting, Calcutta, 28th November, 1953. Transfer books closed from 21st to 28th November, 1953, both days inclusive.

RAJAGIRI RUBBER AND PRODUCE CO., LTD. Annual General Meeting, Alleppey, 30th November, 1953. Dividend: Re. 1-12 per share (including bonus of As. 4 per share). Transfer books close from 24th to 30th November, 1953, both days inclusive.

DYER MEAKIN BREWERIES LTD. Annual General Meeting, Solan Brewery, Simla Hills, 30th November, 1953. Dividend: As. 8 per share, free of income-tax. Transfer books closed from 20th to 30th November, 1953, both days inclusive.

HUKUMCHAND JUTE MILLS LTD. Annual General Meeting, Calcutta, 30th November, 1953. Dividend: Rs. 3 per share. Transfer books closed from 21st to 30th November, 1953, both days inclusive.

SALEM-ERODE ELECTRICITY DISTRIBUTION CO., LTD. Annual General Meeting, Calcutta, 4th December, 1953. Dividend: Re. 1 per share. Transfer books close from 27th November to 4th December, 1953, both days inclusive.

DELHI CLOTH AND GENERAL MILLS CO., LTD. Annual General Meeting, Delhi, 6th December, 1953. Transfer books closed from 21st November to 6th December, 1953, both days inclusive.

INDIA STEMSHIP CO., LTD. Annual General Meeting, Calcutta, 10th December, 1953. Dividend: As. 8 per ordinary share, free of tax. Transfer books close from 26th November to 10th December, 1953, both days inclusive.

HINDUSTAN MOTORS LTD. Annual General Meeting, Calcutta, 10th December, 1953. Transfer books closed from 20th November to 10th December, 1953, both days inclusive.

INDIAN CABLE CO., LTD. Annual General Meeting, Calcutta, 11th December, 1953. Transfer books close from 28th November to 11th December, 1953, both days inclusive.

COORLA SPINNING AND WEAVING CO., LTD. Annual General Meeting, Bombay, 18th December, 1953. Transfer books close from 10th to 24th December, 1953, both days inclusive.

INDIAN IRON AND STEEL CO., LTD. Interim dividend of Re. 1 per ordinary share, for the year ended 31st March, 1953, payable on or after 30th December, 1953. Transfer books close from 5th to 19th December, 1953, both days inclusive.

INDO-BURMA PETROLEUM CO., LTD. Interim dividend of Rs. 2 per share, free of income-tax, for the year ending 31st December, 1953, payable on 9th December, 1953. Transfer books close from 23rd November to 8th December, 1953, both days inclusive.

BARNAGORE JUTE FACTORY CO., LTD. Interim dividend of 2½ per cent. (2s. 6d.) per share, less U.K. income-tax of 9s. in the £. Transfer books closed from 19th November to 2nd December, 1953, both days inclusive.

COMPANY REGISTRATIONS

UNIVERSAL CINE TRADES LTD. (First Director: Seth Prahladrai B. Seksaria.) Business: Proprietors, Managers or Lessees or Licensees of Laboratories, Studios, Theatres, etc. Authorised capital: Rs. 30,00,000. Private company. Address: Sekaria Chambers, 139, Medows Street, Fort, Bombay.

K. GIGABHAI AND SONS LTD. (First Director: Mr. Gulamali Karmali.) Business: Exporters and Importers. Authorised capital: Rs. 5,00,000. Private company. Address: 8-10, Green Street, Fort, Bombay.

MODI SPINNING AND WEAVING MILLS COMPANY LIMITED (REDUCED), MODINAGAR

RAI BAHADUR GUJARMAL MODI'S SPEECH AT ANNUAL GENERAL MEETING

IN the course of his address to the shareholders of the Modi Spinning and Weaving Mills Co., Ltd. (Reduced), at their annual general meeting held recently, Rai Bahadur Seth Gujarmal Modi, Chairman of the Company reviewed the working of the year ended 30th April, 1953, during which period the Company had made a profit of Rs. 14,66,276-3, after meeting all expenses including normal depreciation, recording an increase over the profit of the last year. This profit was appropriated to pay dividend on 5 per cent. redeemable preference shares, amounting to Rs. 1,30,000 and on ordinary shares at 6¼ per cent. requiring about Rs. 4,30,000. A sum of Rs. 9,00,000 was also transferred to preference shares redemption fund. The initial total preference share capital of the Company was of Rs. 30 lakhs, out of which a sum of Rs. 12 lakhs has already been redeemed. A further sum of Rs. 9 lakhs was proposed to be redeemed immediately and the balance of Rs. 9 lakhs would be redeemed soon after. The redemption of these shares would be in the best interests of the Company, because, in the present period of competition in the industry, it was necessary to reduce capital to ensure and maintain fair dividend. The present was the opportune time when funds could be spared on account of exemption from income-tax on 'new concerns' like this, and for utilisation of the money from the reserve fund for payment of bonus shares in future. He pointed out that, in spite of the present shyness of capital for investment in industrial enterprises, he apprehended no difficulty in raising funds when necessary.

Latest Machinery Installed

Proceeding, the Chairman observed that it was essential to increase the capacity of the plant to make it an economic unit and ensure the supply of quality goods at cheaper rates. With this object in view the Company had imported and installed some necessary and latest machineries. The factory had also been equipped with modern fire extinguishing plant, thereby reducing the cost on insurance premium by about Rs. 25,000 per year and minimising fire risks. With these improvements the working of the plant was expected to be more economical and remunerative.

The Chairman appreciated the far-sighted policy of the Government in having introduced the two measures of great importance, namely, the Employees' State Insurance Act, and the Employees' Provident Fund Act, in the best interests of the workers, which were expected to go a long way to improve their condition. In spite of the fresh burden of these legislations on the industry and of the new cess of three pies per yard on mill-made cloth for helping the handloom industry in the country, the Company was making every effort to make the working of the mills economical and to maintain a fair return.

Export Trade

Referring to the export trade of India during the year, Seth Gujarmal Modi said that it continued to be unsteady, due to export duty and restrictions, as also due to dull foreign market. It was really a matter of great satisfaction, he added, that the Government had now abolished the export duty on medium cloth and reduced the excise duty on superfines which will help the industry to meet the crisis to a great extent.

Due to accumulations of stocks, most of the textile mills in the country had either to close or reduce the number of shifts. However, it was a matter of great consolation, Seth Gujarmal Modi observed, that it had not been the case with this mill. The quality and cost of production of this mill would be such as would enable the Company to stand competition successfully. Though the initial cost of the plant was very high, because the prices of the machinery and the building material, etc., when the plant was erected had gone very high, yet in view of the fact that the plant was new and modern and the cost of production would be economical, it was confidently hoped that the results would be far more satisfactory.

Management-Labour Relationship

The relations between the management and the workers continued to be very cordial. The labour co-operated by keeping up a high standard of production. As in the case of mills in Ahmedabad, there was an agreement entered between the Company and the labour union and ratified by the Government, whereby all differences between the management and the labour would be resolved by conferences rather than by resorting to adjudication by tribunals appointed by the Government. This would minimise the chances of friction in the industry and will strengthen collective bargaining. This arrangement, Seth Gujarmal Modi said, was unique in Northern India and it was hoped that it would meet with the success it deserved and would prove beneficial both to the workers and the concern.

SUCCESS OF ECONOMIC PLANNING

(*Concluded from page 959*)

Sometimes, the function of the national planning authority will be only that of co-ordinating the plans made by regional or particular industries. But, at other times, plans may have to be imposed from above. A national plan of this type will not be a planner's plan, but a nation's plan. There are bound to be difficulties and distortions in the beginning, especially in an undeveloped country, but they are bound to be dissolved with experience and adjustments.

High Sense of Honesty and Honour

Planning of this diffused and co-operative type is not possible, except where the supply of skill and intelligence is large and the capacity for common action highly developed. The Russian method of autocratic planning is largely the result of the absence of conditions of democratic planning. Democratic planning requires a high sense of honesty and honour among the people, clean hands and pure heart among the leaders and experts, and a common spirit of pride in integrity and intelligent progress. A high level of intelligence and general education, and a normal reasonableness and understanding are necessary among the people. In the words of Dr. E. Anirvatham, "democratic planning by well-intentioned fools will be a greater national calamity than the evils of autocratic planning by intelligent villains." Plans and policies in the last analysis depend for their success on the people. If the people are disposed to place the general welfare above personal interest, if they are men with mutual sympathy without class jealousy, if they will bear the present ills for future benefit with foresight and fortitude, and if they select as representatives and officers men of ability, character and culture, then and then only democratic planning could succeed.

The Planning Commission in India is fully conscious of this difficulty. Thus, it says in its report:

"A national plan has to be an expression of a basic unity of purpose in the community. It is this unity which will constitute the ultimate sanction behind the plan, give it driving force and evoke the necessary sacrifice and effort on the part of its members. Joined to this unity of purpose must be effective power in the hands of the State to be exercised with the necessary persistence and determination, in order to ensure the furtherance of accepted ends. Constructive use of this power calls for integrity, efficiency and responsiveness in administration. The creation and maintenance of these basic prerequisites of economic and social growth have to be considered as matters deserving continuous and careful attention."

In the world to-day, however, there is one great limitation. As pointed out by a great planner, the late Sir Stafford Cripps, "we cannot any longer solve our difficulties by the ingenious thinking of a few translated into authoritarian action. The people must think and act." If the people of India think and act rightly, the mighty ship of "economic planning" can be safely steered into a new haven of safety, security, peace and prosperity.—*All Rights Reserved.*

SHARP FALL IN CALL MONEY RATE

(From Our Own Correspondent)

BOMBAY, 18th *November*

The short-term money market presented a paradox during the week under review. The stringency in money and the consequent sharp rise in inter-bank call money rate in the previous week gave the impression that the busy season had started with full vigour. But the complexion of the market changed entirely during the week under review. The supply of funds was plentiful. The inter-bank call money among the Exchange banks and big Indian banks, which had been bid up to 3 per cent. last week, became almost unlendable at 1 per cent. during the week under review.

The sharp decline in inter-bank call money rate is attributed to a large inflow of funds and paucity of trade demand. On account of the sharp rise in money rates last week, banks got funds from Calcutta. Further, some of the Exchange banks are reported to have borrowed from London. The money that had been taken during the *Diwali* also returned early in the week. While thus the supplies rose, the demand for funds fell. The demand for financing crop movement failed to come up to expectations. Even those districts which had earlier made a move for borrowing from banks did not fully draw on the banks.

The smaller Indian banks, however, continued to feel the stringency and inter-bank call money was still keenly bid by them at 3 per cent.

House money was placeable at 2¼ per cent.

As a result of the sudden change in the market conditions, banks were unable to gauge the future trend of demand for money. They, however, maintained the rate for term deposits at 2½ per cent. for one month, 2¾ per cent. for two months and 2¾ per cent. for three to six months.

The Treasury Bill rate was unchanged at Rs. 2-7-0 per cent. per annum this week, but the amount offered was fractionally better at a little over Rs. 1.98 crores, as compared with a little over Rs. 1.50 crores tendered a week ago. Presumably on account of the high rate of interest that has to be offered and the waning response to the present quantum of tenders, the authorities have reduced the amount of tenders for next week to Rs. 1 crore.

The Reserve Bank of India's statement for the week ended 13th November, 1953, shows minor variations in the portfolios of the Currency Department, as compared with the previous week's statement. Thus, notes in circulation have gone up by only Rs. 40.77 lakhs. Notes held in the Banking Department are lower by Rs. 54.53 lakhs, so that the net drop in total notes issued is only of the order of Rs. 13.76 lakhs. In the Banking Department, deposits of the Central Government have improved by Rs. 1.10 crores, while those of other Governments have gone down by Rs. 2.87 crores. In contrast to the drop of Rs. 13.45 crores in the previous week, deposits of banks show a rise of Rs. 2.35 crores, reflecting the improvement in the supply of their funds position noted since Wednesday last. Cash balances are lower by Rs. 52.48 lakhs, while balances held abroad are better by Rs. 5.54 crores. Loans and advances to banks have recorded a decline of Rs. 1.69 crores and investments of Rs. 1.55 crores.

The extent of pressure for funds on banks noted on the eve of *Diwali* is fully reflected in the Scheduled banks' statement for the week ended 6th November, 1953. Demand deposits show a drop of Rs. 18.28 crores, while time deposits have recorded an increase of Rs. 1.50 crores. Inter-bank borrowings have declined by Rs. 2.86 crores. Borrowings from the Reserve Bank and Imperial Bank, on the other hand, have gone up by Rs. 1.75 crores and Rs. 3.74 crores, respectively. Advances show a sharp rise of Rs. 11.66 crores and bills purchased and discounted of Rs. 2.66 crores. Cash on hand and balances with the Reserve Bank have together declined by Rs. 15.93 crores, balances with other banks in current account by Rs. 85.22 lakhs and money at call and short notice by Rs. 4.78 crores.

The Gilt-edged market experienced another week of dull conditions, with the volume of business showing no signs of expansion. Buying interest was very limited and patchy. Most of the counters attracted sellers, but, in the absence of buying, hardly any business could be put through. 3 per cent. 1957 was unchanged at Rs. 98-5, while 3 per cent. 1958 had sellers at Rs. 98-1, an anna lower than last week. 3 per cent. 1959-61 was marked down by an anna to Rs. 96-1. 3 per cent. 1963-65 and 3 per cent. 1964 were on offer, but the quotations were unchanged at Rs. 92-9 and Rs. 92-8, respectively. 3 per cent. 1966-68 declined by an anna to Rs. 90-1. 3 per cent. 1970-75 had buyers at Rs. 86-6. 3 per cent. 1986 Conversion Loan lacked support and was marked down by an anna at Rs. 81-15. Among the State loans 4 per cent. 1963 Bombay was on offer at the unchanged rate of Rs. 101, while the corresponding Madras issue receded by As. 2 to Rs. 100. 4 per cent. 1964 Bombay dropped an anna to Rs. 101-1. 4 per cent. 1964 Madras, however, was placed As. 2 better at Rs. 100-2.

LINSEED ARRIVALS POOR

(Messrs. A. Bradley & Co.)

CALCUTTA, 16th *November*

Prices have ruled firm during the past week and activity has been poor, whilst the undertone of the market remains steady. A fairly good demand for ready goods continues from the local crushers, but with arrivals being poor and local stocks scare sellers have been reserved. Trading has been fair in the oil section and local enquiries, mainly for near positions, have been on a better scale. The latest quotations are as follows:—

Ready Rs. 20-4, November Rs. 20 and December Rs. 19-12 per maund.

GOLD HARDENS

(From Our Own Correspondent)

BOMBAY, 18th *November*

A feature of the trading on the Bullion Exchange during the week under review was the notable stride in gold price. Though the closing level of gold was just a shade lower than the highest touched during the week, it disclosed a gain of Rs. 2-3 per tola on balance. Silver also firmed up in the earlier part of the week, but the upward movement was short-lived. Values began to recede from Monday onwards and the earlier gains were almost wiped out at the close.

The rise in gold during the week was attributed to a decline in arrivals, as compared with those in previous weeks and the relatively better offtake *vis-a-vis* the arrivals. Resurgence of speculative buying on reports of good demand in the ready position and the favourable carry forward charges gave renewed hopes to bulls. The hardening of silver in the earlier part of the week was the result of sizable support from bulls and nervous short-covering. Reports of renewed arrivals of unrefined silver and apprehensions about an increase in floating stocks, coupled with paucity of sufficient offtake, not only checked bullish enthusiasm but actually brought about some selling pressure in the latter part of the week.

Forward gold (21st November settlement) started on a bright note at Rs. 81-3 and on general buying and short covering rose by stages to Rs. 83-5, the highest rate to be witnessed in the last six weeks. To-day, however, the yellow metal turned a shade easier and drifted down to Rs. 82-13, due to the weakness of silver; nevertheless, it managed to close higher at Rs. 83-1. Business in the December settlement began on Saturday at Rs. 81-11, which was As. 6 lower than the rate for the current settlement and wound up the week at Rs. 82-9, that is As. 8 lower than the closing rate for November settlement.

Opening at Rs. 81-11, ready gold moved up to Rs. 83-13 and finished at Rs. 83-9, the premium over the forward rate for the current settlement remaining unchanged at As. 8 throughout the week. The floating stocks of gold are estimated at 20,000 tolas. The daily average arrivals were 6,000 tolas, while the offtake was about 8,000 tolas on an average.

Silver for forward delivery (23rd November settlement) opened at Rs. 153-3 and advanced to Rs. 154-6 on Saturday. In the downward movement from Monday onwards, the white metal drifted down to Rs. 152-7 to-day before winding up at Rs. 152-8. Trading in the December settlement commenced on Saturday at Rs. 154-4, that is, at As. 8 over the rate for the current settlement. The closing to-day was done at Rs. 153-1, the carry forward rate being in favour of sellers.

Ready silver (.996 Mint) was quoted on par with the forward rate for the current settlement, the opening and closing rates being Rs. 153-3 and Rs. 152-8, respectively. The floating stocks of silver are placed at 2,600 bars. The daily average offtake was 10 to 15 bars.

The following comparative table shows the trend of the market during the week under review:

	18-11-53	Highest	Lowest	11-11-53

HIDES QUIET

(From Our Own Correspondent)

KANPUR, 15th *November*

During the week under review the conditions in the local hides and skins market were more or less similar to those noted in the previous week. New arrivals were fair and up to average. The Madras dealers were a bit lukewarm in their support during the week. The main purchasers were the local tanners. The latest quotations are as follows:—

Wet salted cow 1st grade superior at Rs. 240 to Rs. 360 and inferior at Rs. 280, 2nd grade superior at Rs. 330 to Rs. 350, medium at Rs. 220 to Rs. 230 and light at Rs. 160 to Rs. 180 per score; wet salted buff 1st grade at 1 lb. 11 ozs. 2nd grade at 2 lbs. and 3rd grade at 2 lb. 2 ozs. per rupee; goat skins 1st grade at Rs. 320 and 2nd grade at Rs. 200 to Rs. 225 per 100 pieces; goat sheep skins at Rs. 360 per 100 pieces.

KIPS RULE FIRM

(From Our Own Correspondent)

MADRAS, 16th *November*

Madras market for kips ruled firm during the week, but U.K. dressers declined to follow the prices asked at origin as they were unable to obtain increases on leather sales. There were inquiries for buff calf, buff heavies and cow calf, but, here again, business did not result, in view of higher prices ruling in Periamet. It is stated that U.K. importers do not propose to buy at current levels, and markets, therefore, are likely to rule steady to weak this week.

Prices of goat skins remained firm and of sheep steady. Arrivals of raw skins met with ready demand in all centres.

FORWARD COTTON MOVES UP

(From Our Own Correspondent)

BOMBAY, 18th *November*

The cotton market has derived considerable inspiration from two sources. In the first place, the repeated reports of better offtake in cloth in the Bombay and Ahmedabad cloth markets have engendered a buoyant feeling in the market. Secondly, the crop ideas have been revised downwards. While estimates of the current season's crop ranged from 40 to 42 lakh bales only a few weeks ago, current ideas of the crop are sometimes as low as 38 to 39 lakh bales. Partly as a result of these two factors, and partly by the increasing interest shown by the mills in the spot market the values both for forward and ready cotton have wiped out the losses witnessed during the last five or six weeks.

Lower crop ideas stem from certain unfavourable weather reports. Thus, continued dry weather in Madhya Pradesh, it is stated, indicates a crop that will be one lakh bales less than what was originally estimated. There is also a report that Madhya Bharat has suffered some damage due to insect pests. Recent heavy rains in the South are reported to have caused slight damage to the growing crop, though the subsequent fine weather has done something to repair the damage done. The Vijay, Surti and Dhollera crops are reported to be making good progress, but, owing to excessive rains, the Mathia crop is expected to be about 15,000 bales less than the earlier estimate of 59,000 bales.

In the forward section, I.C.C. February opened the week at Rs. 615, as against the previous week's closing of Rs. 613. But it soon moved up, on reports of sizable offtake in the ready cotton market and in the cloth market and of decline in arrivals in the upcountry markets, to touch Rs. 626 on Monday. Renewed buying support coupled with short-covering operations, lifted the contract to Rs. 628½ on the following day, and still further to a high of Rs. 629½ to-day, which was both the highest and the closing level for the week.

I.C.C. May underwent a similar change. After opening the week at Rs. 623½ it fluctuated between Rs. 621 and Rs. 636, the latter figure being the closing level also. The spread between the two contracts remained practically unchanged over the week: it was Rs. 6 early in the week and Rs. 6½ towards the close of the week.

The following is the trend of prices in the forward market:

	Opening	*High*	*Low*	*Closing*
I.C.C. Feb. ..	Rs. 615	629½	615	629½
I.C.C. May ..	Rs. 621	636	621	636

The spot market was steady with all-round improvement in prices. Mills were buyers of Jarilla, old Broach, Khandesh new and other varieties. The following are the latest available quotations from the Sewri market:

Dengal *Deshi* Rs. 600; Berar *Jarilla* Rs. 690; Khandesh Rs. 740; Vijay Rs. 765; Oomra *Deshi* Rs. 620; Moglai Rs. 615.

Reports from Karachi emphasise the somewhat difficult problem of promoting exports of cotton, which the Government faces now. The U.S. offer to sell cotton in return for local currencies, it is stated, implies a threat to Pakistan's export trade, since its customers might be lured away by the American cotton. The trade agreement with Japan, it is further stated, is inoperative, owing to scarcity of foreign exchange. Pakistan is faced with two alternatives, either to reduce the export duty on cotton or to make fresh attempts at concluding barter deals. Although the Government favours the conclusion of fresh barter deals, it is pointed out that other countries would not be as willing to enter into such deals as they might have been formerly, in view of the fact that American and other cottons are more easily available. Again, the U.S. offer to sell cotton for local currencies of its buyers might come in the way of these deals.

The Pakistan Government's decision to raise the cotton cess from As. 4 per bale to Re. 1 per bale with a view to securing more finance for the Pakistan Central Cotton Committee is resented in cotton circles. Surprisingly enough, the Committee itself has opposed this increase in the cess. It says: "The cotton cess should not be raised until the Government has explored other sources and in any case, no addition to the cess should be made as long as any export duty is imposed on cotton."

The following are the latest available quotations for the Karachi market:

Sind *Deshi* Rs. 63, Punjab *Deshi* Rs. 59 to Rs. 61; 4F R.G. Rs. 59 to Rs. 60; S.G. Rs. 63 to Rs. 64; L.S.S. R.G. Rs. 62½ to Rs. 63; S.G. Rs. 67 to Rs. 68; N.T. R.G. Rs. 64 to Rs. 64½; S.G. Rs. 69½ to Rs. 69½; 289F R.G. Rs. 67; S.G. Rs. 72½.

Advices from Alexandria indicate that the market was steady. Foreign interest was evinced in Karnak, while Ashmouni derived some local mill support. Cotton growers are, it is stated, holding back their stocks in expectation of higher prices. But it is believed that it is unlikely that prices will improve further, since foreign buyers have already shown some resistance. It is learnt that a trade agreement with Rumania is in the making and that if it is concluded, it might result in large sales of cotton to that country.

Cotton futures in the New York market moved up, following the Government's November estimate of 16,093,000 bales. Although the estimate is 497,000 bales higher than the previous estimate, it is below certain private estimates of 16.6 million bales. The fact that the official estimate was lower than private ideas of the crop, coupled with the high rate at which the crop has been moving into the Government loans, served to push up prices. Since then, there has been a slight setback due to local selling and hedging.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

(In cents per lb.)

	17-11-53	10-11-53	2-11-53
Spot	33.55	33.70	33.50

May	33.63	33.62	33.45
July	33.46	33.41	33.27

STAPLE FIBRE SHOOTS UP

(From Our Own Correspondent)

BOMBAY, 18th *November*

Except for the firmness in the staple fibre section this week, the art silk yarn market would have been absolutely featureless. The firmness in staple fibres was due to persistent short covering in November contract, following the refusal of the Bombay Yarn Merchants' Association to commence forward trading in December contract. The decision regarding opening of January, 1954, contract has been deferred for consideration on 12th December. There was also shortage of supplies. Consequently, November 40×2 which opened at Rs. 695, as against Rs. 704, gradually shot up to Rs. 762, where it finally closed for the week.

The firm conditions in staple fibre yarn had no appreciable effect on the sentiment of the operators in the art silk yarn market, as discouraging advices regarding the offtake of rayon fabrics from the important consuming centres acted as a damper. Prices, therefore, more or less remained steady. 150D November delivery which opened at Rs. 703, as against Rs. 707, gradually improved to Rs. 712 and Rs. 695, respectively. 150 December which was done on the 12th inst. at Rs. 703, as against Rs. 708 on the previous day, fluctuated between Rs. 711 and Rs. 694, before closing at Rs. 710. 120 Japan was unchanged at Rs. 4-2 and 150 Japan at Rs. 4. 120 Italy lost an anna to Rs. 3-13, while 150 Italy was quiet at Rs. 3-9.

The table below gives the prices of art silk yarn and staple fibre yarn quoted to-day, as compared with those on the 11th and 3rd November, 1953:

Art silk yarn	18-11-53 Rs. a.	11-11-53 Rs. a.	3-11-53 Rs. a.
150D November (per case of 200 lbs.)	707 0	707 0	705 0
150 December (.. .. ..)	710 0	708 0	708 0
120 Japan (per lb.)	4 2	4 2	4 2
150 Japan	4 0	4 0	4 0
120 Italy	3 15	3 14	3 14
150 Italy	3 9	3 9	3 8½
Staple fibre yarn			
2/40s November (per case of 200 lbs.)	762 0	704 0	675 0

GROUNDNUTS FIRM

(From Our Own Correspondent)

BOMBAY, 18th *November*

The oilseeds market presented a mixed trend during this week also. In distinct contrast to the easiness last week, the groundnuts section ruled generally firm on scarcity of floating stocks. Encouraging advices from the Continent for groundnut oil at £124 c. & f. per ton also contributed to the firm trend. But in the linseed section, the steadier trend witnessed in the latter half of last week persisted in the few earlier sessions on reported deals in linseed oil with Australia. Subsequently, however, the section looked slightly down on utterly discouraging Continental advices for linseed oil at £94 c. & f. which was £10 lower than the quotation for Indian oil. There was also strong competition by Uruguay and the U.S. The consequent decline in prices was, however, not such as to wipe out the earlier gains. In the castorseeds section, futures disclosed narrow fluctuations, but the trend was downward and, therefore, closing quotations lost a few points over the week. This was due to reports of Russia having sold castor oil to the U.K. and the Continent at £114. Besides, East Africa and Brazil also were strong competitors to India there. Spots moved more or less in sympathy with the futures.

Scarcity of arrivals induced some speculative activity in the groundnuts section. Bold December-January shot up from Rs. 26-12 to Rs. 28. February-March delivery which opened at Rs. 27-15 on the 13th inst. improved to close at Rs. 28-14. Khandesh quality ready new disclosed a gain of As. 2 to Rs. 30-2 and November-delivery As. 8 to Rs. 29-4. Groundnut oil ex-mill was quiet at Rs. 16-4, while railway receipts lost As. 2 to Rs. 16. But November and December deliveries were done higher at Rs. 15-12, Rs. 14-14, as against Rs. 15-5 and Rs. 14-8, respectively. January delivery gathered As. 8 to Rs. 15.

In the linseed section, Bold ready gathered As. 8 to Rs. 25-8. October-November delivery closed quiet at Rs. 25. But February-March delivery rallied As. 4 to Rs. 21-8. Linseed oil ready shot up from Rs. 13-12 to Rs. 14-8. Uruguay sold linseed oil at £78 c.i.f. per ton to the Continent and U.S. at £75 15s. per ton.

Among castorseeds, May delivery which opened at Rs. 110, as against Rs. 109-4, fluctuated at Rs. 110, as against Rs. 109-4, fluctuated between Rs. 112-6 and Rs. 105-8, before finishing at Rs. 106-4. F.A.Q. lost Re. 1 to Rs. 25-12, while ready Madras was done almost quiet at Rs. 26-8. Oil B.S.S. and I Pressure lost As. 2 each to Rs. 16-12 and Rs. 15-12. Commercials lost an equal amount to Rs. 15. British East Africa sold castorseeds to the Continent at £49 10s. c. & f. for December delivery and Brazil at £48 c.i.f., equivalent to $134½ per ton. British mills were selling castoroil B.S.S. at £133 per ton for January delivery and Commercials at £120 per ton.

The following table shows the prices of oilseeds and oil on the 18th inst. as compared with those at the end of the previous two weeks.

	18-11-53 Rs. a.	11-11-53 Rs. a.	3-11-53 Rs. a.

Commercial (per quarter)..	15 0	15 2	15 0

SUGAR STEADY

(From Our Own Correspondent)

BOMBAY, 18th *November*

The bullish fervour witnessed in the sugar market towards the close of last week faded out as speedily as it came. After touching Rs. 89, British refined sugar is again freely offered at Rs. 86 and at Rs. 85 ex-s.s. *Cyclops*. Tenders for s.s. *Luciana* are being transferred to s.s *Norton*, stated to be due in Bombay after a month. It is reported that s.s. *St. David* is loading 8,800 tons of British refined sugar, along with an equal quantity per s.s. *Norton*, and that 10,000 tons of Cuban sugar is being loaded per s.s. *Marsella*. Besides these, two parcels of 2,500 tons each of British refined sugar will be loaded for Bombay. In short, the Food Ministry expects to deliver about 30,000 tons of imported sugar in Bombay during the month of December.

It is rumoured that a private party who had sold Cuban sugar to the Government is unable to meet his obligations and as such another party is manœuvering to sell to the Food Ministry Eastern German crystal (beet) sugar at around £36 per long ton c.i.f. Bombay for December shipment. Enquiries from reliable sources indicate that there is no chance of the Food Ministry increasing the selling price of imported sugar.

It is also understood that no decision has yet been taken by the Food Ministry on the question of further imports in the current season. But it is reported that the Food Ministry is being persuaded to make bulk purchases without any further delay on the plea of taking full advantage of the ruling low prices in the world markets. It is further pointed that India should buy its requirements before the world sugar syndicate fixes the export quota for each country in January next, lest it should miss the advantage of buying when there is free international competition to sell sugar.

There is, of course, another side to this picture. The advocates of the sugar industry assert that no import programme for further quantities should be decided at the moment, as the factories have already commenced crushing and that they would all be eager sellers from December onwards. Further, there is no guarantee, they argue, that world sugar prices would not fall still further. They, therefore, feel that a decision on further imports can be profitably deferred to the end of April next, by which time the position in regard to the supply of sugar in the country will be clearly known and the extent of deficit, if any, can be gauged more accurately than now.

Another point mentioned in support of this view is that, if the factories know that there will be no further imports, they will be encouraged to crush to the maximum extent possible. In the circumstances, it remains to be seen what decision the Food Ministry will take on this matter. Meanwhile, it is understood that final touches are being given to the overall sugar policy for the season, including imports, and that the first release of the season may be made on a liberal basis in the first week of December, probably the 5th.

Arrivals of indigenous sugar during the week under review amounted to 10,000 bags.

The prices of indigenous sugar for small, medium and large grains are Rs. 92-8, Rs. 94 and Rs. 98 as against Rs. 92, Rs. 94 and Rs. 97-8, respectively, a week ago. Quotations for British refined sugar are Rs. 86 for spot delivery and Rs. 85 ex-s.s. *Cyclops*. Java and Mexican sugar are out of stock. The forward section, too, has been easy, the quotations for *Kartik* and *Magsar* deliveries being Rs. 85-12 and Rs. 84-12, respectively. It would appear that the market in the spot and forward sections has now steadied up at the existing levels. Much, however, will depend on the arrival of the s.s. *Cyclops* and the s.s. *Fiducia* in time.

PEPPER QUIETLY STEADY

(Messrs. Parekh & Co.)

BOMBAY, 18th *November*

Pepper markets at all primary centres ruled quietly steady practically without any change in the prices. Alleppey is quoting at Rs. 1,800, while Calicut is indicating at Rs. 1,950 with small doing. As the trade in New York is inclined to await Indian developments, so also the exporters in India are closely watching the day-to-day developments as to the arrivals of new crop and the selling policy thereof of the growers. A section in the trade is expecting some announcement from the Indian Government regarding the reduction in the export duty during the first week of December. The crop prospects are encouraging and the latest estimate of the new crop is placed between 21,000 and 23,000 tons. The trade is expecting lower prices on arrivals of new crop which are likely to exert pressure on the market by the end of the month, if demand from America remained hand to mouth, as it was during the past so many months.

In the ASTA section, during the greater part of the week, December shipment remained fairly steady at $0.82, while January-February-March in equal monthly lot, moved between $0.79 and $0.80 per lb. c. and f. New York. At the time of writing, however, December shipment showed a small improvement, and is being quoted at $0.83 on the receipt of the news of improvement at Alleppey. In the delivery section, business is very small and the spread between December and February has greatly contracted, the present quotations for December and February being Rs. 1,455-75 and Rs. 1,430-60 respectively. Improvement in February delivery is reported due to buying as a cover by merchants who are reported to have sold in America January-February-March at reduced limits and owing to speculative purchases in anticipation of a reduction in the export duty in the near future.

Following are to-day's nominal quotations: Ready delivery Rs. 240-50 per cwt., December delivery Rs. 1,470-90 and February Rs. 1,450-70 per candy of 5½ cwts.

JUTE GOODS CHEERFUL

(From Our Own Correspondent)

CALCUTTA, 17th *November*

Although prices fluctuated within narrow limits, all sections of the jute market presented cheerful conditions this week. The volume of business done was also higher. Stockists seemed to have regained confidence, and quotations for ready goods were firm. More purchases by foreign buyers, heavy decline in stocks with mills and fall in output in October all contributed to the firmness. Gains on each day were fractional, and a feature was the maintenance of higher levels at each rise. With the result, closing rates yesterday were higher on balance for the week.

Demand for export to foreign countries was highly satisfactory during the week. Argentina was a consistent buyer, and this country's off-take from India during this year is expected to reach a record figure. Buyers on behalf of the United States were a little shy, as they believed that once the Argentine demand was satisfied, the market would be left entirely for them. Another reason for their hesitancy to enter into large commitments was their doubt regarding the maintenance of the export duties.

A feature of last Tuesday's trading was the considerable speculative interest, which raised ready 40" 10 oz. hessian to Rs. 48-6 from an overnight rate of Rs. 47-14, the December goods being discounted at Rs. 47-4 and the January-March delivery at Rs. 45-14. B. twills at Rs. 101-6 scored one point. The steadiness in sacking goods has been due not so much to increased sales as to the declining production caused by the anxiety of mills to produce more hessian at the cost of heavy goods. On Wednesday, after an early tendency for prices to move up following speculative interest, quotations eased. At higher levels, mills were successful in securing some business especially for the January-June goods, but they withdrew from the market when dullness set in. The United States was a buyer for small quantities. B. twills closed easy at Rs. 101, as did 40" 10 oz. hessian at Rs. 48. On Thursday, a fight between bears and bulls was a feature, as a result of which hessian gained to Rs. 49-1 and B. twills to Rs. 102-14, the January-March positions at Rs. 46-8 and Rs. 103-8 adding Re. 1 and Rs. 2 respectively. Mills continued to sell the January-June goods on Friday also, when speculators called for a break and utilised the opportunity to profit-taking, which brought down ready 40" 10 oz. hessian to Rs. 48-14 and ready B. twills to Rs. 102-4. At these rates, mills were off the market, and on Saturday when the lower levels continued, selling was done only by stockists. Rates fluctuated narrowly, and despite the day's poor turnover, ready B. twills and hessian 40" 10 oz. at Rs. 102 and Rs. 48-12 respectively were steady. The news that American consumption of burlap during October increased to 83 million yards from 80.4 million yards in September and the expectation that exports to America would increase in the coming months helped to maintain steady conditions over the week-end, despite the fractionally lower levels. The best feature was provided yesterday, when B. twills spurted to Rs. 104-4 and 40" 10 oz. hessian at Rs. 49-4 recorded the best level during the period under review. The eight oz. hessian was up at Rs. 39-12 f.a.s. and at Rs. 43 f.o.b.

The raw jute market was steady, and fractional gains were added in the prices of many varieties. As prices were rising, sellers were reserved. The quantity that figured in transactions this week is estimated at 400,000 to 450,000 maunds. Fresh arrivals continued small, and before the next crop begins to arrive early next season at the market, a tightness in the supply position of the better varieties is expected. Assuming that Pakistan's official forecast of the new season's crop at 25.02 lakh bales proves correct, the availability of raw jute is expected to fall short of world requirements by about 6 lakh bales. However, according to trade circles, this shortage will be converted to a surplus of 4 lakh bales as they expect that the Pakistani crop will total at least a minimum of 35 lakh bales to which, if India's own crop of 35 lakh bales and the carry-overs in both the countries are added, the total availability comes to 104 lakh bales. Pakistan's requirement is placed at 7 lakh bales, the Indian mills' at 53 lakh bales, and other countries' 40 lakh bales. In transactions this week, Indian northern bottoms moved to Rs. 28-8 from Rs. 26-8, with middles realising Rs. 31-8. Assam

STOCK & SHARE QUOTATIONS

Abbreviations:—D=Deferred shares. P.O.=Preferred Ordinary shares. Y=Accounts published yearly. H=Accounts published half-yearly. P=Company has Preference shares. T=Company has Debentures. N=Nominal quotation. x.d.=Ex-Dividend. c.d.=Cum. Dividend. i=Interim Dividend. f=Dividend for first half of the year.

Shares:—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery, and all other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends.—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year, they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly, dividends shown are for their financial year. Where, however, the accounts are closed half-yearly, dividends are shown separately for the respective half-years.

* Including bonus. ‡ Sales and amount written off. (b) Investments. ‡ For 10 months ended 31st December 1951.

(B) Made up of an interim dividend of Re. 1-12 per share on 1,20,000 shares and final dividend of Re. 1-10 per share on 2,40,000 shares of which 1,20,000 shares are bonus shares.

* The following explanatory notes relate to the abbreviations and marks shown on page 984 in the debentures section:—

(B) Option to repay on six months' notice, on any interest date after 31st December, 1951, at 102 per cent. Also redeemable out of a cumulative sinking fund of 1½ per cent. per annum (commencing in 1938) by drawings at 102 per cent. or by purchase at or 102 per cent.

(a) Option of repayment at any time at 3 per cent. premium.

(b) Bearer bonds of Rs. 1,000 each repayable at par.

(c) Bearer bonds of Rs. 1,000 each repayable on 31st July, 1959.

(d) Bearer bonds of Rs. 1,000 each with option of redemption in whole or in part at par on 30th June, 1952 or on any subsequent interest date at one month's notice.

(e) Returnable on or after 31st July, 1950, at Rs. 102-8 or at par after 31st July, 1955 on six months' notice in each case.

(f) Bearer bonds of Rs. 1,000 each with option of redeeming on 3 months' notice at ½ per cent. premium after 1st March, 1954, but before 1st March, 1957, and 1 per cent. premium on or after 1st March 1957.

(g) Option of redemption on or after 1st July, 1949, at par.

(h) Option of repayment at any time at par at any time on or after 30th June 1947 on six months' notice.

MARKET GOSSIP

(Concluded from page 939)

and 59.4 in 1939. Gross national product is running at an annual rate of $371 billion, as against $348.0 billion in 1952, $329.8 billion in 1951 and $91.3 billion in 1939. The index number of industrial production (1935-39=100) was 234 for September, 1953, as against 219 for 1952, and 220 in 1951.

• • • •

That the general attitude of American business men, who might really be able to get scent of any possible recession, is still optimistic is clear from the fact that no attempt has been made by them to slow down their programme of expansion. A survey conducted by McGraw-Hill, publishers of business journals, shows that American companies plan to spend almost as much on new plant and equipment in 1954 as the record-breaking $28,700 million they are spending in 1953. In the process, they will increase their productive capacity by about 5 per cent., it is stated. Since defence programme has been virtually completed these expenditures will go, it is predicted, largely into civilian production. American business will thus be in a position to turn out more and better products at lower cost, thereby stimulating higher consumer demand. These plans do not represent haphazard or speculative investments, but are in line with careful, long-range programme. About 30 per cent. of the manufacturers surveyed report plans for investment more than one year ahead. It is significant that in past years companies have tended to underestimate rather than overestimate their expansion plans. This year, for instance, American companies are spending about 8 per cent. more on new plant and equipment than they estimated in a similar survey conducted last year. These long-range investment plans, coupled with the Government's determination to combat a short-term decline if one develops, give renewed assurance that the effects of any adjustment in the American economy will be neither serious nor prolonged.

• • • •

Small wonder then, that the American authorities are now anxious to prevent people talking their country into a slump. In a statement to the Press issued in Paris recently, Mr. C. Randall, Chief of President Eisenhower's Commission on Foreign Economic Policy, strongly rejected any fear of a serious economic depression in the United States. He said that there was no visible signs which would justify any such apprehensions. The only trend he detected was from the abnormal to the normal. Business had been running too long at too high a level, he said, and was now returning to a normal pace. Singling out his own particular industry, that of steel, he emphasised that there had been no sign of crisis in that industry. Yet another of the American authorities, who has spoken in the same confident vein, is Dr. Gabriel Hauge, President Eisenhower's Executive Assistant on economic matters and his liaison with the Council of Economic Advisers. He has emphasised that economic stabilisation ranks with a strong national defence as a prime objective of Government policy. Plans for balancing the federal budget, another Government goal, will be adjusted in a pace consistent with these objectives. Dr. Arthur F. Burns, Chairman of the President's Council of Economic Advisers, told newsmen last week that the Council had already gone "some distance" in planning measures to strengthen the national economy to resist a recession. He made this statement at the American Assembly Conference on Economic Security, attended by leading representatives of industry, labour, Government and other segments of the population. Mr. Burns noted that the American free enterprise system had been moving in a "new direction," with the Government assuming a certain responsibility for maintaining a high level of activity, so that private adjustments can be facilitated and output, income and employment remain at high levels. Possible measures outlined by Mr. Hauge and Mr. Burns to maintain economic stability include the easing of money and credit, further tax reductions, and large-scale public works. The need for such measures as these may never arise. As Mr. Burns points out, however, they could be authorised on a "stand-by basis" to be put into effect when and if they became necessary. At what point in a possible business decline these measures would be applied is difficult to determine in advance, it is stated. This is particularly the case now when the American economy is moving along in high gear and business leaders are expressing great confidence in it. They are backing up this confidence with expenditures to expand and modernise their productive facilities.

• • • •

Although no one can predict economic events with absolute certainty, it seems reasonably fair to assume that the U.S. should be able to weather any economic storm, if it came. If defence programme slows down, there would be other programmes, social expenditure, for instance, to take its place. Possibly, some adjustment at a lower level of prices might become necessary. But this need not add up to a full-fledged depression. In any case, the U.S., as indeed many other countries of the free world, has gained considerable experience in meeting setbacks in economic trends, so that if one such did come, it should be able to overcome it without the pain and suffering such unforeseen recessions brought in their wake in the past. But distinguished economists, who predict disasters, certainly serve a great purpose. They do put nations on the alert. This is a great service.

TAXATION SYSTEM IN INDIA

(Concluded from page 961)

an assessee there is one from commission. Commission is liable to advance payment only after it is adjusted to the credit of the party in the books of the company. Suppose the Income-tax Officer includes this item for a penal interest action, what is the remedy of the assessee? Under section 30, no appeal lies it is stated. How is he to challenge this illegality? Is it not fair that an appeal should be provided against all acts of the lower officers, even where the question involves correction of mistakes in the order or wrong computation or levy of penal interest?

Now, to the estimates submitted under section 18A. The proviso to section 18A(2) states that the assessee is entitled to revise his estimate till the last quarter and pay up the deficiency in the previous instalments. If the estimates for purpose of penal interest are to be taken in aggregate, must the assessee be penalised under section 18A(7) for deficiency in the first three instalments? This penal interest is in addition to any action under section 18A(9) for penalty for deliberate underestimate. For advance payment of tax there is no provision for extension of time in suitable cases where the instalment, provisional taxes or arrears of assessment are all completed during one period, and the assesse finds it difficult to find finance to meet all his liabilities. There is no provision for such extension in the Act. This is necessary. At present, not only the Income-tax Officer but even the higher officers are not very appreciative of the needs and difficulties of the assessees.—*All Rights Reserved.*

(To be continued)

MARKET REPORTS

(Concluded from page 973)

middles were higher, at Rs. 31, as were bottoms at Rs. 28. Business took place in supervised marks at Rs. 27. Bimli f.a.q. had buyers at Rs. 25-8. Interest was shown in *habi jabi* pucca bales at Rs. 95 a bale, and in Pakistani jat N.C. cuttings at Rs. 75 a bale.

"GUR" PRICES DECLINE

(From Our Own Correspondent)

HAPUR, 16th November

Gur markets remained very unsteady and prices in all important West U.P. *mandies* recorded a sharp decline. *Gur* price at Hapur this season opened at Rs. 19-8, went up to Rs. 20-12 and has now fallen to Rs. 14-12 quoted to-day. Meerut and Musaffarnagar quotations were also on the same level. There were quite heavy seasonal arrivals this week and, due to easy availability of wagons, despatches to the various importing areas too were heavy. There was sustained enquiry at declining rates. Sustained demand and active despatches could not prevent a fall because enquiry was only at competitive rates. *Gur* arrivals were in full swing in South Indian markets also and the demand from importing areas could be diverted to that end had prices remained high. The quality of this year's produce has been excellent, as a result of the cane having been free from disease throughout the season. *Gur* arrivals will be very small this week, on account of the annual *kartik* fairs in Meerut District at Garbmukteshwar and Hastinapur.

Crystal sugar markets remained quiet to steady. There was moderate enquiry in the markets. As very little of last year's produce has now been left with the mills, deals related to the first produce of the

INVESTORS' RIGHTS WHITTLED DOWN

THE award given by Mr. N. H. Mujumdar, Chairman of the Madhya Pradesh Industrial Court, on the dispute between the workers and the mills in that State in regard to bonus for 1950-51 and 1951-52 is notable for introducing certain novel features which confer on workers some additional rights not found in other awards of similar nature, accompanied by a corresponding decline in those of investors. If the principles enunciated in this award were to go unchallenged and were to be confirmed by the Appeal Court, it would mean adding one more to the numerous disincentives that are retarding investment in industrial enterprises. The award is yet another instance where the employer is forced to yield further ground in favour of the worker whenever the settlement of a dispute is referred to an arbitrator. It is true that Mr. Mujumdar has rejected certain demands put forward by the workers, but the net result of the award is adverse to employers in terms not merely of money but also of vital principles, as he has accorded a much higher place to workers than to shareholders and the public in general. He has, in short, made the worker the senior partner in industry.

To take first that feature of the award which may seem to be favourable to employers. The workers demanded that bonus should be granted on industrywise basis, instead of on unitwise basis. They quoted, in support of this claim, the granting of bonus on industrywise basis to workers employed in Uttar Pradesh sugar mills, although not all of the mills had made profits. They also cited a few instances where Industrial Courts had directed payment of bonus, even though the companies concerned had suffered a loss. The Court, however, turned down this suggestion and gave an award on a unitwise basis, taking into consideration the financial results of each mill. The Court held that the principle of collective bargaining in the case of textile mills in the State was not applicable, as conditions were different and not comparable with those experienced by the industrial units quoted by the workers. Although the detailed arguments advanced by Mr. Mujumdar, in this connection, were neither completely logical nor quite convincing—this was so presumably because he did not want to criticise the awards of his confreres in other States that were quoted by the workers—his decision that only such mills as are found to have made profits shall be liable to pay bonus to their workers is essentially sound.

Further, this is not the first occasion when the principle of payment of bonus on unitwise basis has been followed in the textile industry. This had been done in the past by the Appellate Tribunal in the case of Bombay and Ahmedabad mills as early as 1950 and 1951. Mr. Mujumdar thus had a number of good precedents in rejecting the demand of workers to consider the case of all the mills put together and to declare a uniform rate of bonus for the workers of all the mills. Credit, however, must be given to him for awarding varying rates of bonus from mill to mill on the basis of their profits. Thus, for 1951-52, the bonuses declared by him vary from two to three months' basic wages. In the case of one mill, the bonus is only half of a month's basic wage. Hitherto, while the mills that made no profit were exempted from the responsibility of paying a bonus, the mills that made a profit were all treated alike and directed to pay a uniform rate of bonus, though the quantum of profit differed from mill to mill.

In actual practice, the application of this principle may involve more work to the adjudicator, for he will have to calculate the surplus profit available for distribution in respect of each mill, which is by no means an easy task. In fact, it will be a very onerous task to Industrial Courts in such centres as Bombay and Ahmedabad, each having over 60 mills of varying capacity. But it has an advantage to the country as a whole, in that it may indirectly lead to better management of mills that are now ill-managed and, therefore, make no profits and do not pay a bonus. The workers of these mills, for instance, are bound to agitate for an improvement in the efficiency of management. Another advantage that may flow from this decision is that it will result in a close scrutiny of the working of the mills by the Industrial Court and any irregularities that are found may be exposed. We find that, in the case under reference, Mr. Mujumdar has made a little enquiry into the working of each mill which has brought forth some interesting revelations that deserve further enquiry by either the authorities or the shareholders concerned. It is arguable that all this amounts to undue encroachment by the Industrial Court on the sphere of private enterprise and that such will encourage workers' representatives to make irrelevant and wild charges against employers. The truth of this contention cannot be denied, but, as there are a number of badly managed concerns in this country, it is better, from the point of view of both sound industrial managements themselves and the country in general, to suffer this loss of freedom. In any case, well-managed concerns will have nothing to lose. On the contrary, they may have something to gain, inasmuch as their workers will have an opportunity to know the real worth of their employers which they would be denied, if the bonus were to be paid on an industrywise basis.

It is in calculating the quantum of bonus and defining the rights of workers in regard to reserves that Mr. Mujumdar has not, in our view, been fair to investors. It is now generally held by all Industrial Courts that bonus is not an *ex-gratia* payment, that it is something which satisfies, often partially and temporarily, the deficiency in the legitimate income of the worker in an industry and that, once such income has been attained, bonus would also partake of the character of profit-sharing. In giving his award, Mr. Mujumdar has carried this principle too far. He seems to have overlooked that the achievement of the ideal of a living wage standard for industrial workers can be realised only when there is a general all-round improvement in economic conditions in the country and that, if attempts are made to reach this objective in disregard of the general economic trends by the force of industrial law, it can be done only at the expense of the other sections of the community. The effect of such a forced raising of the wages of workers on the general economy of the country would be to check its progress. It is the failure to realise this fundamental economic factor that must have been responsible for some of the ridiculous conclusions of Mr. Mujumdar in regard to the rate of return on capital employed and the rights of labour to reserves earmarked for rehabilitation, replacement and modernisation of machinery.

Thus, in the formula followed by him for calculating the surplus available for distribution to workers, the Chairman of the Madhya Pradesh Industrial Court has allowed only 4 per cent. as a reasonable return on the paid-up ordinary capital, although the Appellate Tribunal has considered 6 per cent. as a reasonable one. His explanations for doing so are by no means convincing. He has allowed 2 per cent. as a reasonable rate of return on reserves. This rate is, no doubt, the same as that conceded by the Appellate Tribunal. But Mr. Mujumdar has qualified the application of even this negligible return by restricting it only to those reserves as are used for a fairly long period of the year as working capital. The unreasonableness of this learned Judge will be evident from his

decision not to allow this return of 2 per cent. on reserves, if they are used for enlarging business by addition of machinery and buildings. We do not see why such a distinction should be made; the author of the award has given no reasons for doing so.

Another instance where Mr. Mujumdar has gone a step further than the Appellate Tribunal is in classifying the paid-up capital into three categories and fixing three different rates of return. First, comes the original paid-up capital (by which he presumably means equities issued for cash), for which 4 per cent. is regarded as fair return. Second is the capital inflated by a revaluation of the fixed assets, such as buildings, plant and machinery. The rate of return for this portion of paid-up capital is 3 per cent. Mr. Mujumdar's explanation for reducing the return thus on this part of capital is that millowners have been deliberately following the tactics of boosting their capital, with a view to reducing the quantum of profit that will be available for distribution to workers as bonus. Thirdly comes the capital representing capitalisation of reserves. Since this increase represents only a book adjustment of the reserves to the capital account, argues the chief of the Nagpur Industrial Court, there is no reason why it should be allowed anything more than what the reserves would have received had they remained as reserves. It may be noted here that the Appellate Tribunal has so far made no such distinctions in regard to the return on paid-up capital. This is, of course, one of the chief reasons why several companies have capitalised a good part of their reserves.

Yet another new feature provided in the award of Mr. Mujumdar is the right given to workers to control the utilisation of the reserves for rehabilitation and replacement. Before describing this, we must mention here that this learned judge has decreed that a mill which does not actually set apart from its profit the sum allowed for building up a rehabilitation and renewal reserve should not be allowed to deduct these amounts from the gross profit for determining the surplus available for payment of bonus. That this is a healthy condition cannot be denied, for sufficient reserve should be built up from current profits to be expended later on the improvement of plant and machinery. If such improvement is not effected, the efficiency of machinery will fall and with that, that of the worker as well. It is in recognition of this that all Industrial Courts have come to regard the provision for plant rehabilitation, over and above that for depreciation as allowed under the Income-tax Act, as a prior charge on the gross profit.

Now, Mr. Majumdar feels that the accumulation of reserves for rehabilitation constitutes a sacrifice on the part of workers. He, therefore, considers that the latter should have a say in regard to the disposition of this reserve. Since this is a revolutionary line of argument, the relevant quotation from his award needs reproduction:

"This fund is formed out of sums set apart from gross profits. The contribution of labour to the earning of gross profits must be considered in determining the right of ownership or control over this fund. As the workers in all the mills are being paid wages at a rate far below the living wage standard, it would not be wrong to hold that whatever is left after paying out of the gross profits, a fair return on paid-up capital should belong to the workers. The Full Bench of the Bombay Industrial Tribunal considered it fair that the share of labour should even be more than 60 per cent. in the profits left after paying out amounts on account of depreciation, taxes and contribution to reserve funds, because the workers had been paid much less than the living wage for their labour. Labour should, therefore, have greater share in the gross profits than the investor when the wages paid are below the living wage standard. From this point of view, if a fund is built out of sums of money set apart from gross profits for the purpose of replacement of machinery, *it would not be proper to hold that the owner of the machinery would have an absolute right or control over such fund.* (Italics ours.) The fund comes out of profits to the earning of which labour has contributed far more than the investor (because they have worked on wages far below the living wage standard), and it is, therefore, necessary that labour should have greater control over the fund than the investor. The fund cannot, therefore, be allowed to be used by the investor, that is, the owner of the machinery, in any way detrimental to the interest of the workers."

The above line of argument carries the rights of labour too far. It is not flawless either. Labour alone does not contribute to the earning of gross profit. The consumer, too, does and, if the learned judge's contentions were to be accepted, he too should have a share in the control and ownership of the reserves of a company. Be that as it may, acceptance of this principle, as well as the absurdly low rates of return on capital assumed by Mr. Mujumdar, will impair the confidence of investors in industries. It will be regarded as the first definite step towards the admission of the workers' right to a share not only in reserves but also in capital. No attempt to safeguard the rights of shareholders by transferring the reserves to the capital account and by writing up the value of fixed assets, as is now being done by several companies, will succeed, for, just as Mr. Mujumdar has refused to accept this arrangement for determining the return on capital, so also some other arbitrator may endorse the workers' claim for a share in the capital of industrial concerns. Such awards, we are afraid, will do great harm to the industrial development of this country by private enterprise which, in turn, will react on workers themselves. The rights of workers should no longer be the fancy of any individual adjudicator. It is high time they were precisely defined and a directive given to all Industrial Courts not to depart from such definition.

SHIPPING TARGET

IT is becoming increasingly clear that the progress of the Indian shipping industry is not all plain sailing. The progress is not only less spectacular than what the country was led to expect in the first flush of the enthusiasm, generated by that epoch-making report of the Shipping Policy Sub-Committee, but slower than even the very modest rate of achievement set by the Planning Commission. The meeting of the Consultative Committee of Shipowners last week provided the occasion for some heart-searching, and a re-examination of the issues involved in achieving a more substantial volume of shipping for the country. The official Press Note on the Committee's deliberations throws less light than what one would expect on the problem which this representative body discussed. But it is clear even from that note that some intricate problems are involved.

The need for a well developed shipping industry for a country, like India, which has a coastline of about 4,000 miles, and which is geographically so neatly placed as to be the centre of an expanding volume of trade with a number of countries in the Asian Continent, is so obvious that it requires no emphasis. Apart from strategic considerations, which should dictate a vigorous shipping policy, the mere fact that, of the Rs. 1,000-crore value of India's foreign trade and Rs. 100-crore value of coastal trade, only a small fraction is carried in Indian bottoms, shows the need for giving top priority to the development of the mercantile marine. Indeed, it is these considerations which led the Shipping Policy Sub-Committee (1947) to recommend a target of at least two million tons in five or seven years; even then, India would have only 2 per cent. of world's shipping tonnage. This target was deemed necessary in order to enable *the country to carry "100 per cent. of the purely* coastal trade of India, 75 per cent. of India's trade with Burma and Ceylon and with the geographically adjacent countries, 50 per cent. of India's distant trades and 30 per cent. of the trades carried in Asian vessels in the Orient." This objective too was approved by the Government. But experience shows that both the target for shipping and the objectives of the shipping policy are distant, elusive, unapproachable ideals. If India achieves all this, it will be a dream come true. For the present, it is well to recognise that it is a dream.

When the Planning Commission came on the scene, it re-examined the whole issue of the target for shipping. The Commission fixed it at 600,000 tons, as against the then previously accepted 2 million ton target. This appeared to many as a descent from the sublime to the ridiculous, a far cry from the original target. But it was possible to defend the Commission's target by the traditional argument that to achieve a modest, down-to-the-earth shipping target is infinitely better than to indulge in daydreaming, or to set larger, ships-in-the-air targets. Events have justified this argument—and with a vengeance, at that. Even the Planning Commission's modest target of 600,000 tons now seems somewhat difficult to reach, thanks, of course, to the unrealistic policies, fiscal and financial, of the Government in regard to this industry of vital importance.

The Commission fixed a target of 315,000 tons for coastal shipping and 283,000 tons for overseas shipping; the tonnage now engaged in these two sections of trade is about 211,000 tons and 173,000 tons, respectively. To augment the tonnage employed in the coastal and overseas trade, the Commission provided for loans to the tune of Rs. 4 crores and Rs. 6½ crores, respectively; the Companies were expected to provide Rs. 2 crores and Rs. 2.2 crores, respectively, from their own finances. The Commission also assumed that the Visakhapatnam Shipyard would be able to make available during the period of the Plan about 100,000 tons, of which 60,000 tons could be utilised for replacement of obsolete tonnage and the balance for providing additional tonnage for coastal trade.

These calculations seem to have gone wrong, both in regard to the availability of ships and the utilisation of the loans set apart by the Government for financial aid to the industry. Partly owing to the delay in receipt of steel, partly to labour troubles and partly to the delay in implementing certain technical improvements, the Visakhapatnam Shipyard is unable to keep to the scheduled delivery dates for ships. In any case, it is unlikely that it will be able to supply ships to the tune of 100,000 tons, which the Commission assumed for purposes of reaching the target. Even the subsidy, which the Government has agreed to grant in order to offset the difference between the cost of the ships manufactured in the shipyard and *the cost of ships manufactured in the U.K.*, is unlikely to stimulate larger production of ships in the yard.

If the industry is to augment its tonnage in the immediate future, it must, therefore, seek other sources of supply. There are three ways in which the industry could supplement its tonnage: (1) to place new orders, (2) to buy ships under construction for other customers who are willing to dispose of their right to ownership; and (3) to buy second-hand ships. So far as the first alternative is concerned, Germany, it is stated, is able to quote favourable terms. The U.K. quotes a longer delivery date. Japan quotes the earliest delivery date among the shipbuilding countries, but its prices are high. The second alternative removes the delivery date obstacle, though, price-wise, it may not always be attractive. Incidentally, the fact that several countries are prepared to give up their right to ownership of the ships they ordered either for a small or no premium suggests that they do not take a favourable view of their ability to earn a reasonable return on their investments. It also shows—a depressing contrast with the position in this country—that they have reached a stage at which they could make a shipping gift; they have enough and to spare. The third alternative is to buy second-hand ships. Fortunately, both the factors—the availability and the price factors—are favourable; Liberty ships, for instance, are currently quoted at £180,000, as against the £600,000 which they fetched during the Korean boom. At any rate, any one or two or a judicious combination of these three sources of supply should be tapped, and tapped soon enough, if the Commission's modest target of 600,000 tons is to be reached.

How soon it will be reached, or whether it will be reached at all, will, of course, depend on the provision of financial aid to the shipping industry. Assuming that the 200,000 additional *tonnage will be equally met* by new ships and second-hand ships, it is computed that the industry would require to spend Rs. 12 crores on the former and Rs. 7 crores on the latter, or Rs. 19 crores in all. The Government has provided for loans only to the tune of Rs. 10½ crores. Even this amount has not been utilised, in full, by the industry. It is necessary to examine why this has been so, and also whether the industry is in a position to raise the additional finance on its own.

The industry's failure to utilise the loans, for which the Government has made provision, is attributable to the stringency of the terms. It seems necessary to revise these terms. Perhaps, a liberal extension of the period for the return of the loan, say, to 20 years, a reduction in the rate of interest (4 to 5 per cent) at which it is now given for buying ships for coastal trade, and a relaxation of the restriction by which the shipowners are required to find 25 per cent. of the cost of a ship from out of their own resources will go a long way towards making the loans more attractive than now. A more constructive solution would, however, lie in a resolute acceptance by the Government of the need for tax reliefs, such as liberal depreciation allowance, lower rates of income and corporate taxes—no country in the world has developed its shipping industry without making unorthodox innovations in its fiscal policy—and in a deliberate policy of aiding Indian ships to carry nearly all the Government cargo. Such concessions will enable the industry to raise finance on its own, and will reduce the financial burden on the Government. In the absence of some action on these lines, it seems unlikely that even the modest target set by the Planning Commission for the industry will be reached.

OUTLOOK FOR TEA SHARES PROMISING

LOTTERY FAVOURED—BRITAIN LAUNCHES FRESH EXPORT DRIVE

THURSDAY, 5 P.M.

THE bullish fervour in share markets persists. Equity values have advanced further almost over the whole front, though the extent of gain over the week has been modest. During the week, Tata Iron and Steel shares received good support, with Deferreds going up at one time to as high as Rs. 1,975. Indian Irons, however, experienced some profit-taking, but the bull grip over them still seems to be quite strong. Textile shares were popular, with bargain-hunting being the main feature. Some of the back-benchers in this section such as Mysore Spinning, New City, Swan and Vishnu have scored quite a good number of points. Activity in the miscellaneous section was, however, confined only to a few chosen scrips. Among these, Scindias held the pride of place. The market's expectation of a higher dividend and an increase in the paid-up value of the share from Rs. 15 to Rs. 20 by capitalisation of reserves in the case of this scrip has materialised. As is usually the case, there were some who expected something more by way of dividend; they were talking of a dividend of a rupee, instead of As. 12, the rate now decided by the Company's Directors. Their disappointment accounts for the closing rate of this share being a little lower than the highest level recorded earlier. It is just possible that profit-taking in this scrip by those who had bought recently might not have been over. But, generally speaking, the market is still well disposed towards this scrip. Its conviction that the Scindia Company has turned the corner seems to be strong.

MARKET GOSSIP

• • • •

Among the very active counters on the Stock Exchange this week were Andhra Valleys and Tata Powers. Both have appreciated perceptibly, the former by Rs. 17-8 to Rs. 1,300 and the latter by Rs. 37-8 to Rs. 1,400. Their Rights have gained Rs. 21-4 to Rs. 196-4 and Rs. 20 to Rs. 252-8, respectively. These gains are attributed to reports in a section of the Press that the ordinary shares of the two Companies of the face value of Rs. 1,000 each will be split up into 10 shares of Rs. 100 each and that, early next year, the ordinary shares of the Andhra Valley are likely to be put on the forward list. Enquiries in knowledgeable quarters reveal that the former report, namely, that the shares of Andhra Valley and Tata Power are to be divided into smaller denominations, is based on the suggestion made to this effect by some of the shareholders at their recent annual general meetings. In reply to this suggestion, the Chairman promised the shareholders that their idea would receive due consideration at the hands of the Directors. No move has been made by the Directors in this direction so far. As regards the second report, it is stated that this is also a conjecture based on a suggestion made by some of the shareholders at the meeting of the Andhra Valley. The Company, we are told, has not so far made any application to the authorities of the Stock Exchange. It may be noted that the other two shares in the group, namely, the Tata Power and the Tata Hydro, are already on the forward list. And there is no reason why the Andhra Valley also should not be promoted to this list.

• • • •

In recent weeks, the ordinary shares of the Phaltan Sugar Works Ltd. have come to the forefront in the cash section of the share market. The Rs. 50 fully paid-up shares were, a few weeks back, lifted up from about Rs. 90 at the beginning of October last to Rs. 106 on 23rd October, though they are being currently placed at Rs. 96 cum-div. (dividend Rs. 6). This rise has followed the reports that the shares of the Company will be placed on the forward list of the Bombay Stock Exchange. These reports have now been confirmed and the authorities of the Stock Exchange have agreed to do so, provided the management of the Company releases sufficient number of shares to the public. The stipulated number of shares that are to be so released is 12,000. It has also been stipulated that they should be held by at least 300 new shareholders. The Company has agreed to comply with these requirements and have released the said number of shares. The shares have been underwritten and are being offered for sale by the underwriters at Rs. 90 per share *cum*-dividend.

• • • •

The present paid-up capital of Phaltan Sugar, it may be noted here, is Rs. 50 lakhs, made up of 100,000 shares of Rs. 50 each. Of this, Rs. 40 lakhs have been raised by way of capitalisation of the reserves alone. Even after such capitalisation, the reserves and surplus of the Company, as on 30th September, 1953, stand at Rs. 52.36 lakhs. After maintaining the dividend at Rs. 8 per share or 16 per cent. per annum taxable, for the three years ended 30th September, 1952, the Directors have decided to pay for the year 1952-53 a dividend of Rs. 6 per share or 12 per cent., tax-free. On the basis of the current market value and the latest dividend, the yield on these shares works out to 6.25 per cent. per annum, tax-free.

• • • •

The upsurge in tea shares in the Calcutta market, witnessed since the last month, continues unabated. Since September, Tezpore, for instance, has moved up by more than Rs. 6 to Rs. 19-8, Basmatia by Rs. 5 to Rs. 30½, Hantapara by Rs. 35 to Rs. 180, Hansqua by Rs. 2½ to Rs. 15½, Central Cachar by Rs. 8 to Rs. 63, North-Western Cachar by Rs. 19 to Rs. 55 and Teliapara by Rs. 36 to Rs. 136. Elsewhere in this issue, the price-trend in tea scrips is given. It shows that the uptrend is not only steep but embraces many counters. Last year, tea scrips were depressed, thanks to the fact that, in many cases, the sale prices of tea realised were lower than production costs. The reports of the tea companies for 1952, which are being received now, show the full impact of the critical conditions which the industry faced then; many companies have been compelled to go off the dividend list. Against this background, the recent improvement in tea scrips is too good to be believed.

• • • •

Nevertheless, there are sound reasons which justify the increase in their values. Credit for this improvement must be given to the North Indian tea companies which decided in March this year to restrict their output to 87½ per cent. of the best crop in any year during the 1947-52 period. The permissible target was, however, revised to 88½ per cent. in September, and to 90 per cent. in October. This was done because the gardens participating in the scheme—they account for 80 per cent. of the total North Indian crop—felt that there could be a safe relaxation of the rigour of the earlier restrictions in order to bring the supply more in line with the increase in demand as reflected in the upward trend in the London tea auctions. Referring to the price-trends in the tea market and the prospect for tea scrips, Messrs. Place, Siddons & Gough, Calcutta, make the following observations:

"Prices being obtained at the present time both in the London and Calcutta auctions are very satisfactory and even at this late stage, when end-of-season teas are being offered, there seems little slackening in demand. We believe that prices are likely to be maintained around current levels. As a result of this and the fact that producers have reduced their costs to a minimum, most gardens are at present showing a satisfactory profit on the sale of their teas. Whilst we anticipate that company reports for 1953 will show marked improvement, it must be remembered that, in the previous year, a number of companies had to draw very heavily on reserves and most curtailed necessary expenditure on plant, machinery and fertilisers, all of which will have to be taken into account this year.

"In view of these encouraging factors, there has been a good demand for tea shares and prices over the last two months have been marked up quite considerably. Although it is possible that there may be some reaction due to profit-taking, we believe that investment in tea shares should prove profitable over the coming months."

• • • •

Since the voluntary crop regulation scheme has produced good results—though the weather probably contributed as much towards this end—it is only natural that the tea interests should want to continue the scheme and also to see that a larger number of tea gardens participate in it. This sentiment was neatly expressed by Mr. S. H. Davies, Chairman of the Indian Tea Association, who, at a recent meeting of the Assam branch of the Association, at Calcutta, said: "It is quite clear that, if we are to keep prices at a reasonable and consistent level, we must continue the crop regulation scheme. Without some such action, to see that supply and demand are kept in reasonable relation, we shall always have the threat of surplus tea and abnormally low prices hanging over our heads."

• • • •

It would appear that the method of fixing the crop basis for 1954 is being carefully examined by the Association, with a view to evolving a fairer system of regulation. Next year, arrangements, he said, would be made to transfer extra production rights from one garden to another, without instituting an entirely free market in these rights. Mr. Davies was anxious to defend the system of crop regulation against the argument that it was directed against the interests of the consumer. He said: "I would emphasise that the object is not to create a shortage of tea and thus obtain high prices for our produce, but to keep production in reasonable relation to demand. Were we to create an artificial shortage of tea with crop regulation, our markets for tea would contract, and we all realise how adverse that would be in the long term. The alternation of high and low prices is something we must seek to avoid."

• • • •

Nevertheless, it must be admitted that any system of crop regulation, however well intentioned, is only a negative approach. A more constructive solution lies in expanding the market for the product. From this point of view, it is noteworthy that tea producers are alive to the need for promoting tea sales. Mr. Davies, who was himself a member of the Indian tea mission which visited the U.S. recently, said that the prospects of "increasing consumption in the U.S. are extremely bright." Referring to the immediate problems ahead of the Indian tea producers, he said that they would now have to spend money on the maintenance and development of estates, which expenditure was suspended during the slump. He added that this must be a first charge on such profits as they made, and next must come rebuilding of reserves which had been heavily depleted. Finally, the improvement of labour amenities must be resumed. The slump had shown that tea markets would not absorb large quantities of common teas, so "the maintenance of the highest possible standards of plucking and tea-making should be the aim of every manager." He concluded by saying that the industry could look forward to "a period of fair prosperity. We cannot imagine that in one, two or even three years, we can wipe out the effects of the depression," he said, "but, given the co-operation of labour, the recovery will be maintained." It is to be hoped that this co-operation will not be denied to the industry, which deserves particularly to get it by virtue of its being a pre-eminent export industry of this country.

• • • •

The advent of the busy season has not yet made itself felt on the short-term money market. Although cotton, jute, oilseeds, sugar and tea have been moving on a fairly large scale, the demand for bank accommodation is not keen and inter-bank call money is as low as ¾ per cent. per annum. In consonance with the easier trend of money, the Gilt-edged market is steady to firm. With due date for payment of half-yearly interest on some of the Central Government loans approaching, voucher-eaters are active. It is this factor that has lent an appearance of briskness to Gilt-edged. The volume of genuine investment buying, however, continues to be limited. There has, of course, been a smart rise of over As. 4 in 3½ per cent. National Plan bonds. This was due to an order for Rs. 20 or Rs. 25 lakhs from a leading industrial house, presumably representing the investment of its workers' provident fund. This order was split over a few brokers who, in bidding against one another, pushed up the rate. The Reserve Bank, of course, refused to oblige them by selling from its stock. The general impression is that the Bank may resume its sales if the price of this loan tends to exceed Rs. 99 ex-voucher. Although the volume of investment buying has not broadened, the long- medium- and long-dated loans which, at one time remained uncared for, are tending to look up, because there is a growing feeling that, in the next summer, that is, just on the eve of the Centre's new borrowing, the Bank rate may be lowered.

• • • •

The commodity markets, too, have registered notable gains. The upward trend in cotton continues. The attempts made last week by a section of the market to create an impression that the size of the crop would be as large as was expected earlier has been quietly ignored as the viewpoint of interested parties. Actually, over the week, I.C.C. February and May have gone up by Rs. 24-8 and Rs. 21-4, respectively. The closing rate is lower than the highest levels touched yesterday, but that is quite natural, considering that, in a fortnight, the Contract had gone up by about Rs. 35. More striking than the improvement in cotton is the sudden reversal of the downward trend in oilseeds. A week ago, everyone was crying hoarse that these commodities would sink lower still, unless the Government allowed exports and reduced the export duty. But this week groundnuts and castorseeds, the two commodities that had suffered most, have moved up, the rise in the latter being quite substantial. It is evident from this that the recent fall in this market must have been due to excessive bear activity.

• • • •

Among the shortages which afflict the modern world—or at least the non-dollar part of it—the pride of place must be given to the shortage of capital. That elusive commodity, called capital, is everywhere in short-supply, thanks to the disappearance of the individual saver—as distinguished from the institutional savers—under the impact of the "soak-the-rich" policies adopted in many countries of the world. Even the U.K., the home of all traditional financial virtues, such as thrift, independence and wise investment, faces the problem of finding the money that is needed for investment. The rich class has nearly ceased to be the repository of savings and the fountain of investment finance. The middle class has, as in this country, ceased to be a factor to reckon with, what with their fixed incomes and soaring living costs. There is a shift of income from these classes to the working class, which has money but not the wisdom to utilise it properly. How to draw off this money for productive investment has been the problem which has engaged the attention of the financial experts in that country. In this connection, it is interesting to note that Lord Piercy, Chairman of the U.K. Industrial and Commercial Finance Corporation, made the somewhat unorthodox suggestion that the revival of lotteries by the State or a public corporation might be a way of stimulating savings by a broad mass of the population. Apparently, he took the cue for this suggestion from the fact that, even in that advanced country, the expenditure on betting is reckoned at £67 million. Explaining his scheme, he said: "A lottery need not represent, like betting, a complete loss of money for some of the participants. It could be arranged on a footing whereby the consolation prize was a low-yielding security or a deferred or life insurance benefit, plus the essential, which is a number of glittering prizes. There is plenty of ingenuity at hand to devise such schemes if the time were ripe."

• • • •

For one reason or another, this idea of State lotteries has never appealed to the Indian Government. The suggestion is often regarded as somewhat unethical. It is held wrong for a State to encourage the gambling habit. But then, it might be wondered why a State, which permits crossword puzzles, cigarette coupons, lucky numbers in consumer goods and, above all, horse-racing, should fight shy of going a step further and using some device whereby the money from a broad section of the population, which goes into these speculative activities, could be siphoned off for productive purposes. State lotteries are certainly one such device. It will be recalled that, as far

EQUITIES RULE STEADY

TATA HYDRO-ELECTRIC GROUP IN FAVOUR

(From Our Own Correspondents)

BOMBAY, *26th November*

A CAUTIOUS sentiment came to prevail on the Stock Exchange during the week under review. Though several leading counters touched new high levels, operators were generally anxious to book profit at bulges. The undertone, however, remained steady and, on balance, equity values showed small variations. In the steel section, Tata scrips consolidated their previous week's gains, but no sharp upward movement was possible, as it was held up by selling pressure in Indian Irons. Sentiment in these shares was adversely affected by the liquidation of a considerable part of his holdings by a leading Calcutta operator. Moreover, operators in the *Mahajan* market concentrated their attention on Tata Ordinary shares by selling Deferreds, in view of the decision of the authorities to remove the deferred shares from the list from 9th December, 1953. Despite occasional profit-taking, most textile shares hardened further under sustained support on reports of continued broadening of demand for cotton textiles, both in the internal market and abroad. A feature of trading was the support given to the Tata Hydro-electric group, Scindias and Tata Chemicals for reasons mentioned elsewhere in this review.

In the steel section, Tata Deferreds advanced falteringly from Rs. 1,960 to Rs. 1,975 yesterday, but further upward movement was halted by profit-taking and selling in sympathy with the weakness of Indian Irons. Tata Ordinaries hardened from Rs. 335-8 to Rs. 339-4, but the closing was done at Rs. 337. After an initial depression from Rs. 26-1¼ to Rs. 25-11 on persistent selling from Calcutta, Indian Irons firmed up to Rs. 26-4 yesterday, the highest level touched since 23rd March, 1953, but dropped to-day to Rs. 25-10 on heavy realising by a leading Calcutta operator.

Barring the two leading scrips, Bombay Dyeings and Kohinoors, which recorded small losses on balance, most of the counters in the textile section were active and recorded fair gains. Bombay Dyeings were marked up from Rs. 397-8 to Rs. 400, but in the profit-taking movement, which was pronounced to-day, the shares reacted to Rs. 394-6, disclosing a loss of Rs. 3-2. Kohinoors suffered a drop of Re. 1-8 over the week to Rs. 297-8, the highest level touched during the week being Rs. 300-8. Central Indias were active and were taken up Rs. 3-8 higher at Rs. 170. Centurys came up from Rs. 280 to Rs. 283, but closed lower at Rs. 281. Finlays moved up by Rs. 5 to Rs. 265, Swans by as much to Rs. 330, Gokaks by Rs. 3 to Rs. 231 and Vishnus by Rs. 8-2 to Rs. 152-8. Mysore Spinnings came to the forefront with a sharp rally from Rs. 122-8 to Rs. 140 and New Citys from Rs. 160-10 to Rs. 170. New Greats, on the other hand, dropped a rupee to Rs. 164. Shrinivas recouped Rs. 3-12 to Rs. 173-12. Simplex were lifted up from Rs. 151 to Rs. 156-8, before closing at Rs. 154. The Directors of the Company have declared an interim dividend of Rs. 5 per share of Rs. 50 for the year ended 31st March, 1954, as against Rs. 6 last year, but the present dividend is on the increased capital of Rs. 42 lakhs, as against Rs. 32 lakhs last year. Standards were unchanged at Rs. 314-8. Svadeshis were in request to gain Re. 1-8 to Rs. 265-8.

Bank shares were steady with no brisk activity. Some business was reported in Imperial Fully Paids, Rs. 3-12 higher, at Rs. 1,832-8, and in Contributories, Rs. 2-8 better, at Rs. 460. Centrals were well held at Rs. 64 and the new shares at Rs. 66-8. Indias were dull at Rs. 155-12, while Barodas were a fraction better at Rs. 108. United Commercials had business at the unchanged rate of Rs. 37-8.

A sharp rise in the values of Tata Hydro group shares was the highlight of the public utility section. Keen demand was particularly in evidence in Andhra Valleys and Tata Powers and their right shares, on reports that the Directors would consider the splitting up of the shares of Rs. 1,000 each into those of Rs. 100 each, as also applying to the authorities of the Stock Exchange for enlisting the Andhra Valley shares on the forward list. Andhra Valleys staged a rise of Rs. 17-8 to Rs. 1,300, their Rights Rs. 21-4 to Rs. 196-4 and Coupons Rs. 4-8 to Rs. 40. Tata Powers spurted by Rs. 37-8 to Rs. 1,400, their Rights by Rs. 20 to Rs. 252-8 and Coupons by Rs. 4-8 to Rs. 50-8. Tata Hydros were placed at Rs. 135-8 ex-div., as against Rs. 140-8 cum-div. (dividend Rs. 7-8) last week. Their Rights were unchanged at Rs. 26-8, while Coupons were a fraction better at Rs. 9-8. Among other shares in the section, Ahmedabad Electrics revived from Rs. 113-7 to Rs. 114-1, but went back at the close to Rs. 113-7. Surats scored a gain from Rs. 126-4 to Rs. 127-8, while Bombay Suburbans were held at Rs. 124-6 cum-div.

In an otherwise featureless miscellaneous section, Scindias, National Rayons and Tata Chemicals were concerned in brisk buying. The Directors of Scindias have decided to raise the dividend for the year ended 30th June, 1953, from As. 8 per share of Rs. 15 paid for the previous year to As. 12 per share. They have also decided, subject to the sanction of the Government, to write up the face value of the shares from Rs. 15 to Rs. 20 by capitalising the amount standing to the credit of the share premium account. Though these decisions were generally expected, some anticipated a dividend of Re. 1. The expectation of this section having failed to materialise, they came to sell after the Directors' decisions were announced yesterday evening. The shares, therefore, fell to Rs. 15-12½, after a rise from Rs. 15-7 to Rs. 16-3½. Operators in Tata Chemicals seemed to have faith in the long-term prospects of the Company and bid the shares upto Rs. 10-14. Although closing lower at Rs. 10-9, they still revealed a rise of As. 14 over the week. On active buying and in large turnover, National Rayons touched a record high of Rs. 130-8 from last week's closing of Rs. 123-12, but profit-taking brought them back to Rs. 127. A.C.Cs. were steady at Rs. 183-12. Belapurs were done up to Rs. 265-8, but closed lower at Rs. 263-8. Bombay Burmahs met with selling pressure and fell from Rs. 361-4 to Rs. 353-2. B.I.Cs. were steady with a fractional rise to Rs. 9-5. Indian Coppers were quiet at Rs. 2-14½. Alcocks dropped Rs. 2-8 to Rs. 327-8. Premier Constructions had business upto Rs. 104-8, but finished at Rs. 102-8. Shivrajpurs were firm at Rs. 69, a rise of Rs. 2 over the week. Tata Oils were a fraction better at Rs. 34, while Wimcos showed no change at Rs. 198-12.

• • • •

Calcutta Stock Exchange

CALCUTTA, *25th November*

Steady conditions prevailed on the Calcutta Stock Exchange during the week under review and there were a good number of features, although prices fluctuated narrowly and there was a decline in the volume of transactions. During the last three sessions, jute shares were marked down following the fall in the prices of jute goods. In spite of this, interest was maintained, as the general view that the outlook for the jute industry had changed for the better, was shared by operators. The fall in quotations was bound to occur, as profit-taking is a natural tendency after an impressive upward trend. Therefore, this week's tendency in jute shares was of a profit-taking nature rather than of touching lower levels on account of depression. The fall in the prices of jute goods made operators only cautious and should be considered a welcome feature, as rises should be checked, so that Indian quotations should maintain their competitive nature in world markets. It is realised that jute goods would regain a predominant position in world markets, which was once theirs, only after the abolition of the export duties, which market circles look forward.

Tea shares derived considerable support and interest was evinced in selected scrips for institutional investment. It is the voluntary restriction of tea output by the North Indian gardens which has changed the fortunes of the tea industry. Interest in tea shares widened following the announcement of the Chairman of the Indian Tea Association that the crop regulation scheme would be a permanent measure to maintain supply and demand in reasonable relation. In the miscellaneous section, shares of paper mills were special favourities of buyers. Interest was also shown in sugar shares.

Sectionwise, coals continued to lack enthusiasm. Burrakurs hovered around Rs. 8-8. Central Indias at one time were better at Rs. 5-11, but subsequently eased to Rs. 5-6.

Interest in jutes was guarded and part of the recent gains in some counters was lost. Thus, Agarparas were As. 2 lower at Rs. 16-14, and Barnagores moved down from Rs. 162 to Rs. 160. Howrahs hardened a little to Rs. 26 last Thursday, and since then fluctuated narrowly at lower levels. The closure to-day was Rs. 25-8. On balance, Reliances gained by As. 4 to Rs. 17-4. Northbrooks were marked up at Rs. 20-14. Anglo-Indias were unchanged at Rs. 232, while Kinnisons picked up Rs. 2 to Rs. 206. A firm note was displayed in Dalhousies at Rs. 144.

Engineering shares were steady. Indian Irons were dealt with at Rs. 26-1, the highest and lowest levels being Rs. 26-3 and Rs. 25-8, respectively. To-day's closure at Rs. 25-8 was the lowest level for the period under review.

Tea shares continued to advance steadily. The following table shows the gains recorded by some of the leading scrips:

	Rate as on 7-1-53		13-10-53		18-11-53		Latest quotation	
	Rs.	a.	Rs.	a.	Rs.	a.	Rs.	a.

Hasimara ..	19	12	29	12	29	14	30	12

Among paper mills shares, Bengals were done at Rs. 51, and Orients at Rs. 38-8 gained one point. India Paper Pulps, after being lower at Rs. 187, recovered to Rs. 189 and closed to-day at Rs. 188. Titaghur Paper changed hands at Rs. 37-4.

• • • •

Madras Stock Exchange

MADRAS, *24th November*

The performance of the Madras Stock Exchange this week was again encouraging. Planting scrips depicted a cheerful tone with broadbased enquiries. The upward trend witnessed in the tea section during the previous few weeks persisted this week also, on encouraging preliminary estimates of profits based on hopes of better crop realisations this year. Rubbers too looked generally upwards on speculative support. Coffee scrips, however, lacked energy and drive. But the textile and banking sections came in for selective buying. Miscellaneous shares witnessed good demand and notable gains were seen in a number of these shares. Trading in the market as a whole was brisker than in the previous week, and prices recorded sizable gains on balance.

Favourites, among textile shares, met with good support and rallied smart gains. Metturs shot up from Rs. 209 to Rs. 214 and Dhanalakshmis from Rs. 188 to Rs. 192. Bangalore Woollens gained Rs. 2-8 to Rs. 282-8 and Vasantas Rs. 2 to Rs. 164. Cannanores improved by Re. 1 and finished at Rs. 86. Travancore Rayons were higher by As. 15 at Rs. 6-11. Maduras, however, lost As. 4 to Rs. 38-8. Buckinghams were quiet at Rs. 121 and Coimbatore Pioneers at Rs. 119. Coimbatore Spinnings were unchanged at Rs. 38 and Krishna Rajendras at Rs. 48-8.

Among plantings, tea scrips ruled firm. Nonsuch Teas advanced from Rs. 30 to Rs. 30-12 and Nilgiri Teas from Rs. 10-14 to Rs. 11-4. Peermades rallied As. 8 to Rs. 26-4 and Devosholas As. 4 to Rs. 18. Kalasas were done at Rs. 11-4, as against Rs. 11 and Twyfords at Rs. 12, as against Rs. 11-14. Parksides were higher by As. 4 at Rs. 15-8 cum-div. Neelamalais gathered an anna to Rs. 5-1 cum-div. Waterfalls were quiet at Rs. 3-5½. The Directors have declared a dividend of 12½ per cent. on ordinary shares for the year ended 30th June, 1953, as against 10 per cent. for the previous year.

Rubbers evoked considerable interest with Vaikundams being bid As. 6 higher, at Rs. 16-2. Teekoys advanced from Rs. 7-6½ to Rs. 7-9 and Kailas from Rs. 3-8 to Rs. 3-9. Bc Bes gathered an anna to Rs. 2-6. Mercaras and Velimalais were fractionally better at Rs. 3-3½ and Rs. 2-6½, respectively. Rajagiris, however, lost As. 8 to Rs. 12-12 cum-div. Cochin Malabars were slightly lower at Rs. 6-15½.

Miscellaneous scrips were very active this week. Rallis gained Rs. 2-12 to Rs. 67. Bangalore Transport was higher by As. 12 at Rs. 13-4 cum-div. and Mysore Tobaccos As. 10 at Rs. 11-2. Mysore Chemicals and Fertilisers gained As. 6 to Rs. 8-10. Mysore Papers and Mettur Chemicals gathered As. 5 each to Rs. 14-13 and Rs. 5-4, respectively. Spencers advanced from Rs. 14-4 to Rs. 14-8 and Mysore Gold from Rs. 2-11 to Rs. 2-14.

THE BRITISH BANK OF THE MIDDLE EAST

The British Bank of the Middle East has received permission to open branches in Bombay and Calcutta. The Bank has reached an agreement with Nationale Handelsbank N. V. to take over the business of the Bombay and Calcutta branches of the latter and undertake the responsibilities and obligations of these offices as from 1st January, 1954.

The British Bank of the Middle East was founded in 1889 as The Imperial Bank of Persia and from 1919 until 1934 maintained an office in Bombay which was particularly employed in facilitating trade between India and Persia. As the result of import restrictions introduced by Persia this trade came almost to a standstill and the Bank retired from Bombay in 1934. Since then the character of the Bank has changed considerably, and it has now ceased to operate in Persia, but has opened a large number of progressive branches throughout the Middle East, particularly in the Persian Gulf and Arabian Peninsular centres, some of which employ the Indian rupee as currency. There is a considerable volume of export trade from India to many of the Persian Gulf and other areas where the Bank's branches operate. It is with the intention of facilitating, and if possible expanding, this trade that the Bank has decided to reopen branches in India.

Notice

INDIAN WOOD PRODUCTS COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT THE Register of Members of the Company will be closed from the 5th to the 18th December, 1953, both days inclusive, for payment on the latter date of an Interim Dividend of 10 per cent. free of Income-tax payable by the Company on account of the year ended the 30th September, 1953.

Dividend Warrants will be sent only to Registered Shareholders or to their Mandatees.

By Order of the Board,
For GILLANDERS ARBUTHNOT & CO., LTD.,
(Sd.) P. W. PARISH,
Managing Director,
Managing Agents.

CLIVE BUILDINGS,
NETAJI SUBHAS ROAD,
CALCUTTA, 24th *November*, 1953.

NEWS IN BRIEF

THE annual meeting of the Associated Chambers of Commerce of India will be held in Calcutta on 14th December, 1953. Mr. *Jawaharlal* Nehru, Prime Minister, will be present as the principal guest and speaker.

The House of the People took up consideration of the Banking Companies (Amendment) Bill, 1953 on the 21st inst. The Bill, which seeks to replace an Ordinance, aims at simplifying the process of liquidation of banks.

The ninth annual meeting and 14th ordinary meeting of the Indian Central Tobacco Committee will be held in Madras, on 5th December, 1953. Mr. K. R. Damle, Additional Secretary, Central Ministry of Food and Agriculture, will preside.

The Deputy Chief Controller of Imports, Madras, has notified that licences issued to established importers for cycle parts for the period July-December, 1953, are not valid for the import of cycle bells, cycle lamps, cycle carriers and cycle grips.

An evening non-stop Viking service will be introduced between Delhi and Calcutta from 1st December, 1953, by the Indian Airlines Corporation. The time of departure of the services will be 6-30 p.m. from Delhi and Calcutta, so that passengers will be able to reach either destination before midnight.

An Industrial Finance Corporation has been established by the Travancore-Cochin Government. The capital of the Corporation is Rs. 1 crore, of which the State's share will be Rs. 50 lakhs. Provision has been made for investment by the Reserve Bank and the public.

The seventh session of the Indian Commerce Conference will be held at Banaras from 30th December, 1953 to 1st January, 1954, under the *chairmanship of Lala Shri Ram of Delhi.* The subjects for discussion at the Conference are: (1) Indian internal trade, (2) price policy under a controlled economy, and (3) cost accounting and public enterprise.

A three-day session of the Pharmaceutical Enquiry Committee was held in New Delhi last week to review the work so far done and to consider the different views expressed by the various bodies connected with the industry on the measures necessary for improvement of the industry. The meeting was also attended by the Minister for Commerce and Industry.

The two-man committee of India and Pakistan which had been set up to settle difficult cases involving the apportionment of income under the Double Taxation Avoidance Agreement between the two countries, held a meeting in New Delhi from 7th to 17th November, 1953. This was the seventh meeting held by the Committee after its creation in 1949.

A two-day conference of chemical manufacturers will be inaugurated in Calcutta on the 30th inst. by Mr. K. C. Reddy, Minister for Production, Government of India. The occasion will mark the 13th annual session of the Indian Chemical Manufacturers Association. A symposium on the chemical industry and the Five-year Plan will be held under the chairmanship of Dr. J. C. Ghosh, Director, Indian Institute of Technology.

The Railway Board will shortly invite tenders from all over the world for plant and machinery worth about Rs. 2 crores for the Integral Coach Factory at Perambur, Madras. After the tenders have been invited, a financial expert of the Railway Board is likely to visit Europe to finalise arrangements. The Railway Ministry is trying to get most of the equipment and materials from *internal* resources. Only essential plant and machinery worth about Rs. 2 crores will be imported.

Investigations conducted by the Harcourt Butler Technical School, Kanpur, have revealed that oil from the seeds of *alubukara* can form a good substitute for the highly expensive almond oil. The seeds of *alubukara* are obtained in western temperate Himalayas from Garhwal to Kashmir, where the fruit is also cultivated. Its kernel is bitter and contains a nutritive oil. The oil is used by hill people for lubricating and cooking purposes and as a hair oil on a very limited scale.

The first phase of the U.P. Government's economy campaign now seems to be over. Largely as a result of the work of the inspection, economy and reorganisation section created within the Civil Secretariat, under the Finance Ministry, savings of about Rs. 2½ crores have been effected in the current year. One of the principal means employed was to freeze part of the budgetary grants of each department under a specially worked out formula. An enquiry committee will be appointed to probe further into the matter of expenditure and resources.

According to the Directorate of Economics and Statistics, Ministry of Food and Agriculture, the All-India First Estimate of Rice, 1953-54, puts the current year's area at 67,452,000 acres, as against 65,374,000 acres in the adjusted First Estimate for 1952-53. This shows an increase of 2,078,000 acres or 3.2 per cent. in area over 1952-53. The estimate covers the period up to the end of September or the beginning of October, 1953. Till then, the condition of the crop was reported to be generally satisfactory. This estimate does not cover the total area sown to rice during 1953-54. Past experience has shown that the area at the first estimate stage forms roughly 90 per cent. of the area under the crop finally reported.

The Government of India will spend about Rs. 24 crores during the next three years on the construction of a large number of tube-wells in the country. The scheme envisages the sinking of of 2,650 production tube-wells and 350 exploratory tube-wells in 15 States. Out of the 2,650 tube-wells to be sunk, 1,505 will be done through three private companies and 625 through Government agencies. In the case of 320, no final decision has been taken as to how they should be sunk. Since the launching of the minor irrigation programme in 1950, the Government of India has constructed 940 tube-wells. Most of the tube-wells so far sunk are in Uttar Pradesh, the Punjab and Bihar. Each tube-well costs about Rs. 30,000.

The 13th session of the Indian Labour Conference will be held in Mysore from 7th to 10th January, 1954. The Conference will be presided over by Mr. V. V. Giri, Minister for Labour. The Conference will review the action taken on the conclusions reached at the 12th session of the Conference held at Naini Tal in October, 1952 and the work of the I.L.O. Conference and Committee held recently. Problems of technical assistance, women labour, wage-fixing machinery and the Gorakhpur Labour Scheme will be examined. The Conference will discuss the question of implementing the Industrial Statistics (Labour) Rules and the feasibility of having uniform legislation in regard to maternity benefits. Matters relating to the payment of provident fund dues to a subscriber before retirement and the composition of the Indian Labour Conference itself will also be examined.

From Abroad

The Swedish Bank rate has been reduced from 3 per cent. to 2½ per cent. with effect from the 20th inst.

A delegation from the Tea Marketing Board of Pakistan has gone to Turkey, presumably to explore the possibility of expanding the market for Pakistan tea in Turkey. At present, most of Turkey's import of tea is from India and Ceylon.

A Labour Member of the British Parliament has tabled a motion calling for amendment of the Companies Act to make the issue of bonus shares illegal and to divide the undistributed profits of companies between their employees and the Treasury.

The Chairman of the Industrial and Commercial Finance Corporation, U.K., Lord Piercy, has suggested that a revival of lotteries run by the State or a public corporation might be a way of stimulating savings by the broad mass of the population.

The U.K. Government has rejected firmly the idea of abolishing the Capital Issues Committee or of having its activities scrutinised in Parliament. The Government feels that the Committee performs an essential advisory function on individual applications for consent to raise money for capital purposes.

The Canadian Government proposes to strengthen the anti-dumping law against cheap foreign goods competing with Canadian products. The proposed changes in law will be directed chiefly at keeping out textile imports that have been undermining the Canadian market and causing considerable distress in the industry.

Business circles in Karachi have criticised the Pakistan Government's recent decision to import, on "Government account," textiles worth Rs. 4 crores from Japan and other countries. The Textile Merchants' Association and the Pakistan Chamber of Commerce said in a statement that the trade and not the Government should do the purchasing.

A two-man mission of the International Bank for Reconstruction and Development, consisting of Mr. F. D. Gregh, Director of the Middle East and South Asia Division of the Bank and Mr. W. D. S. Fraser, arrived in Lahore last week, to acquaint itself with the irrigation and allied problems of the Punjab(P), with particular reference to tube-wells. It also paid an inspection visit to Thal, where a considerable amount loaned by the Bank is being used to develop some aspects of the project.

According to a report, the result of a five-year study of world population and production, prepared by a non-profit foundation of New York for research and public education in economic and social questions, the total world income in 1948 was $548,000 million. The share of the U.S. in the total world income in 1948 was 40.7 per cent., having risen from 26 per cent. in 1938. The report also states that, in 1947, the U.S. and Canada accounted for about half the world's industrial output.

The British Ministry of Food stated last week that a price of £41 per ton would be paid for 1954 "negotiated price sugar," bought under the terms of the Commonwealth Sugar Agreement, as compared with £42 6s. 8d. paid for 1953. Announcing the results of the series of meetings with representatives of the Commonwealth sugar exporting territories which concluded last week, the Ministry said that it had been decided to extend the agreement by a further year, so that it would now run to the end of 1961.

PERSONAL

MR. John A. Thivy, Commissioner for the Government of India in Mauritius, has been appointed Minister to Syria.

Mr. Dharam Vira, Commerce and Industries Adviser to the High Commissioner for India in London, has been appointed India's Ambassador to Czechoslovakia.

Mr. C. Ramasubban, ad hoc member of the Indian Tariff Commission, has been appointed whole-time member of the Commission, in place of Dr. B. V. Narayanaswami Naidu.

Mr. Clyde Fullerton, General Sales Manager and Mr. Frank Bush, General Operations Manager, Trans World Airlines, were on a week's visit to India to develop and promote air traffic between India and the U.S.

Dr. H. K. Ghosh, officer in charge of the lignite projects at Neiveli, has returned to Madras after a tour of Australia, as a member of the Asian lignite experts delegation, sponsored by the E.C.A.F.E.

Mr. J. Wilkie of the Hong Kong and Shanghai Banking Corporation, Ipoh branch, has arrived in Bombay and assumed charge as Manager of the Bombay branch of the Bank, in place of Mr. G. A. Stewart, who has gone on leave.

Mr. S. T. Raja, Deputy Secretary, Ministry of Food and Agriculture, Government of India, has been appointed Administrator of the proposed tube-well projects of the Government of India, with headquarters at Delhi.

Mr. L. N. Ray, Second Secretary, Embassy of India at Bonn, will represent the Government of India on the Indian delegation to the fifth session of the I.L.O. Committee on Coal Mines to be held in Dusseldorf in the Federal Republic of Germany from 30th November to 12th December, 1953. Mr. P. Mukerjee of Calcutta and Mr. B. P. Agarwalla of Jharia will be the employers' delegates and Mr. B. P. Sinha of Ahmedabad and Mr. Sobhanand Jha of Asansol will represent workers.

Dr. P. S. Deshmukh, Minister for Agriculture, Government of India, is leading the Indian delegation to the seventh session of the F.A.O. Conference which commenced in Rome on the 23rd inst. The members of the delegation are: Mr. H. Siddaveerappa, Minister of Food and Home Affairs, Government of Mysore (Alternate leader), Sardar Datar Singh, Additional Secretary and Production Commissioner, Ministry of Food and Agriculture, Mr. S. K. Wankhade, Member of F.A.O. National Liaison Committee. Dr. V. Pause, Statistical Adviser, Indian Council of Agricultural Research, and Mr. J. V. A. Nehemiah, Secretary, Indian Council of Agricultural Research.

OBITUARY

We regret to announce the death in London last week of *Sir Arthur S. Rogers, Chairman of* the London and Lancashire Insurance Co., Ltd. He was a very distinguished leader in the world of insurance. His entire career had been spent in the "London and Lancashire" which he joined in *Liverpool as a junior clerk more than 50 years ago.*

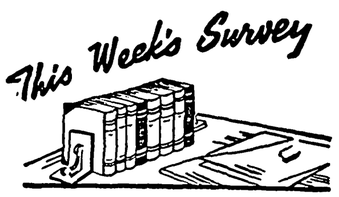
"COMMERCE" 1928

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, *1st December*

Threat to Chemical Industry

The President of the Indian Tariff Board, Sir Padamji Ginwala, has brought much publicity to what he calls "an attempt to strangle an Indian industry, obtain a monopoly, and then raise the prices above what is considered to be an economic level." He asked the representatives of the big German Chemical Trust to appear before the Board in Bombay and give their point of view. Witnesses had told the Board that it was the intention of this big German Trust to get hold of practically the whole business in magnesium chloride used in cotton mills. One witness stated that the German Trust offered to give his firm 30 per cent. of the business and retain 70 per cent. for themselves—the thin edge of the wedge, the suggestion being put forward that the wedge would be driven home to break up the Indian chemical industry. Another witness recounted an interview he had in Bombay with representatives of a German firm who, he stated, offered two alternatives. The first was that the German firm should enter upon a rate-cutting war with the object of driving local industry out of the market; and the second was that both firms should come to some sort of mutual arrangement and a pool established. The President of the Tariff Board, thinking the position serious, has explained that allegations have previously been made against foreign trusts, but this is the first time they had been able to secure documentary evidence which throws a flood of light on their methods. He stated that it was certainly a matter of importance to discover whether there were any trusts operating in India and working to the prejudice of the Indian industry, "because, when competition ceases and when monopoly is obtained, there is no guarantee that the consumer will continue to get the same benefit."



TROMBAY THERMAL PROJECT

ADDRESSING the annual general meeting of the Tata Hydro-Electric Supply Co., Ltd., held at Bombay last Monday, Mr. J. R. D. Tata, Chairman of the Company, deplored the *difference of opinion between the Tata Hydro-electric* Companies and the Government of Bombay on the Trombay electric scheme. He warned that the installation of only one generating unit, for which the Government had decided to grant licence, with a capacity of 50,000 kw. as against two units of 50,000 kw. each, for which the Companies had applied, would result "in a continuance until 1960-61" of the power shortage from which Bombay and the area covered by the Tata licences had suffered for so many years. This would necessitate the maintenance of the system of staggering factory hours for nearly another decade, a system which has been causing considerable inconvenience to thousands of workers and increases the ultimate cost of the project by about Rs. 50 lakhs. It would also subject the power supply to the vagaries of the monsoon, thereby reducing industrial activity (in the Bombay-Poona region) also to a gamble in the monsoon. Mr. Tata disclosed that the Bombay Government's reluctance to grant permission for a second unit of another 50,000 kw., along with the delay, on the part of the Government, in finalising the documents for the extension of the hydro-electric licences of the three Tata companies and in granting the new licence for the Trombay thermal station had prevented the companies from completing negotiations with the World Bank for the grant of a loan to finance the project. Consequently, he feared that it was unlikely that the plant would be brought into operation before the end of 1956.

This is a disquieting situation, indeed, for the consumers of power in Bombay. The reluctance of the Government of Bombay to *concede the request for the installation of the* second unit at Trombay is based on the presumption that the demand will not grow at a rate at which past and current experience shows that it would and that the Koyna project could be speeded up to generate power by 1957. In view of this consideration, the Government's contention seems to be that the second unit will have to be closed no sooner than it is completed. It is stated that, if the second unit is closed, under the Electricity (Supply) Act, any generating plant forming part of a grid system which remains idle will have to be allowed its depreciation and maintenance charges plus a net return of 5 per cent. on the capital employed. This, according to the Government of Bombay, will result in unnecessarily burdening the consumers.

*This line of argument does not sound con*vincing. The technical advisers to the World Bank, who recently examined the Trombay scheme, have expressed satisfaction with the load growth estimates made by the Tata hydro experts. According to Mr. Tata, the "unstaggering" of factory hours, for which there is persistent demand from labour, will alone require about 38,000 kw. Thus, the installation of only 50,000 kw. in Trombay, as directed by the Government of Bombay, will, until Koyna begins to generate power, leave a totally inadequate margin of only 12,000 kw. to meet the balance of unsatisfied demand, to provide against plant breakdowns and monsoon failures. This is besides the further demand which is already building up. Be that as it may, whatever may be the date on which the Koyna project is brought into operation, the cost to the consumer of providing the overheads and the return on the second Trombay unit would be no more than 0·6 of a pie per kw. hour, according to the estimates of the Company's experts. This, as Mr. Tata said, is certainly a negligible premium to pay as insurance against the heavy losses which would be caused to the city and the State if there were to be a recurrence of power shortage, particularly as the extra cost would have to be borne for only a few years until the rising demand absorbs the full capacity of the Koyna and necessitates re-commissioning the thermal units. It is, furthermore, a premium which the textile and other industries of Bombay have, according to Mr. Tata, expressed their willingness to pay.

In view of all this, it is ununderstandable as to why the Bombay Government is reluctant to give permission for establishing the second unit as demanded by Tatas. Surely, the risk that the Government takes is negligible and even that cost of risk will be borne by the power-consuming public, the bulk of which is ready to pay it. The investors also are prepared to take the risk and so too the financiers, namely, the World Bank. Both these parties have a much greater stake than the Government. The World Bank would not have consented to finance the project, unless it was sure that it was a good risk. It is true that the World Bank's loan will carry the guarantee of the Government of India, but the latter does not, it would appear, mind doing so. In fact, the Planning Commission is believed to be satisfied with the project as proposed by the Tatas. Does the Bombay Government think that it is a more competent body than the experts of the Tatas, the World Bank and the Planning Commission? How is one to believe that a Government, which could not implement a simple scheme for sinking tube wells, can successfully carry out a highly complicated hydro-electric scheme that Koyna is and that too within so short a period as three years? The more one thinks about this issue the more is one convinced that nothing but pure cussedness, if not vendetta, must be responsible for the Bombay Government's refusal to see eye to eye with the Tatas.

TRADE MARKS LAW COMMITTEE

There is a no more nefarious form of industrial brigandage than the infringement of trade marks and sales of spurious goods. And yet the evil has persisted in this country with a remarkable resilience, worthy of a better cause. Indeed, if the time, money and infinite ingenuity, often displayed by the men who are engaged in stealing another's trade marks and in the manufacture of spurious goods, were utilised in the manufacture of quality products, it would make a significant difference to India's industrial potential. As there is no indication that such a constructive attitude will be taken by the perpetrators of these crimes, it is necessary that the Government itself should take the initiative in making the Trade Marks law more stringent than now. The commercial community has made repeated representations about *the need for a change in the law on this subject.* It is accordingly gratifying to note that the Government has now appointed a committee to review the law in India bearing upon trade marks and merchandise marks on goods and to suggest changes and modifications considered necessary, particularly to ensure effective remedies against infringement.

The Committee, which will have its headquarters at Bombay, will consist of Mr. K. S. Shavaksha, Registrar of Trade Marks (Chairman), Mr. Raman Bhai B. Amin and Mr. K. T. Chandy, members. Mr. A. Alagiriswami will be the Secretary of the Committee. The Government has obtained the services of Mr. C. P. Whyman, an expert from the U.K., who will act as Adviser to the Committee. The Committee's terms of reference are:

(i) To consider and report whether any, and if so, what changes in the existing law and practice relating to trade and merchandise marks are desirable; (ii) to consider particularly the provisions of the Trade Marks Act, 1940, and the Merchandise Marks Act, 1889, as well as of the Indian Penal Code and the Drugs Act, 1940 and other laws in their relation to infringement and fraudulent imitation of trade marks and merchandise marks, and to suggest ways and means of dealing more effectively with such anti-social activities; (iii) to recommend what measures should be taken to safeguard the registered owners of Indian marks in foreign countries; (iv) to examine the working of the Trade Marks Registry and the services rendered to the public and to recommend such changes as may appear desirable; and (v) to consider and report on any other matter incidental to the administration of the law of trade marks and merchandise marks bearing on the development of Indian trade and industry.

A whole group of ancillary industries, such as printing of counterfeit labels, reconditioning of used containers and fabricationing of spurious containers, has grown up as a result of the evil to fight which the Committee is asked to suggest measures. Well-known trade marks are similarly counterfeited. Unregistered marks, resembling closely some well-known marks, are used to palm off the goods under a false name. That this is a crime as much against the owners of trade marks as against the public which is lured into buying false goods is too obvious to need any elaborate condemnation. There is no doubt whatever that the offences under the Trade Marks Act should be severely punished. But the most difficult question which the Committee will have to tackle is whether the offences could be made cognisable in order to enable the police to act without complaint from an aggrieved party and without a warrant from a magistrate. This would involve the question of setting up a proper administrative machinery that would be able to discharge its responsibility under the law. In any case, there is urgent need to prevent those who attempt at shining under borrowed trade marks from harming both the owners of the marks and the general public.

SUGARCANE RESEARCH

A resolution seeking to divest the Indian Central Sugarcane Committee of the responsibility for technological research in the development of sugar and its by-products, adopted at a special meeting of the Committee held in New Delhi on Monday last, is certainly a step in the right direction. For the responsibility that hitherto rested on the Committee was so heavy —it covered research into all aspects of the sugar economy, both the industrial and the agricultural sides—that it could not naturally devote adequate attention to sugarcane development. It is no wonder, therefore, that, although it is more than nine years—in June, 1944 to be precise—since the Committee was started, no appreciable progress has been registered in the sphere of sugarcane development. Not only does the yield of cane per acre continue to be low, but the sucrose content also is very poor. It is worthwhile to recall, in this connection, that, at the time of the establishment of the Committee, it had been felt that the Committee would be a body which would exclusively look after cane research and development work. Viewed thus, the latest move of the Government of India to absolve the Committee of all responsibility for sugar research must, indeed, be welcomed.

The aforesaid move is a sequel to the Government's decision to form a Development Council for sugar under the Industries (Development and Regulation) Act, 1951. This Council will accordingly take over the task of technological research in the development of sugar and its by-products. The rest of the functions relating to research and development of *sugarcane, gur* and *khandsari* will continue to be performed by the Sugarcane Committee. These include agricultural research in *sugarcane* cultivation such as production, distribution and propagation of improved varieties of cane. The *Committee*, which will remain a body incorporate registered as a society, will have a President nominated by the Union Government. It will, besides, consist of the Agricultural Commissioner to the Government of India, Director of I.A.R.I., Directors of Agriculture (U.P., Bihar, Punjab, Madras and Bombay), Cane Commissioners in U.P. and Bihar, 13 representatives of cane growers nominated by State Governments, 3 representatives of *gur* and *khandsari* interests nominated by the Centre, 3 members of Parliament, one representative each of the Ministries of *Finance* and Railways and the Sugar Development Council, and such other members as the Centre may appoint from time to time.

This *move* has, however, not found favour with a section of sugar interests. "The move," to quote Sardar Lal Singh, M.P., for instance, "is a death-warrant for the sugar industry." This criticism is based on the fear that the harmonious and cordial relations that now exist between the cane growers and millowners will be marred, since the two interests are hereafter likely to pull in different directions. The interests of cane growers and millowners, it is emphasised, are closely linked together, for the salvation of both these classes lies in the increase of cane yield and higher recovery of sugar.

This apprehension is unwarranted. For the mere separation of functions relating to sugar and sugarcane research between the Committee and the Council will not lead to any clash between the two interests. There is no reason why these bodies should not occasionally meet and thrash out their common problems. Similarly, there should be no difficulty in the Committee scrutinising the technical problems of the Coimbatore and Bhadruk Institutes. As Mr. P. A. Gopalakrishnan, Joint Secretary to the Union Food and Agriculture Ministry, rightly remarked, in the course of his address at the recent special meeting of the Committee, the Government's move is no death-warrant for the sugar industry at all; on the other hand, it is a step for its further development.

COMPENSATION FOR UNEMPLOYED

The Industrial Disputes (Amendment) Bill, which seeks to replace the Ordinance, promulgated on 24th October last, providing for payment of compensation to workers laid-off and retrenched, is being considered in detail in the House of the People, as we write these lines. Moving the Bill for consideration on Monday last, Mr. V. V. Giri, Union Labour Minister, stated that the fact that the provisions of the Bill had been made the subject of an ordinance did not mean that they were suddenly conceived and hastily put into execution. They all, he stated, had been discussed threadbare on numerous occasions by those who were concerned with them. The subject of retrenchment, for instance, was at least four years old and had been discussed at tripartite and five-partite meetings ever since 1949. The subject of lay-off, too, had been under discussion and study for a fairly long period. At the last session of the Standing Labour Committee, held in July, representatives of employers and workers came to an agreement regarding lay-off and were anxious that it should be given statutory authority as quickly as possible. The Labour Minister declared that lay-off must be considered an inevitable feature of industry and that the *industrialists had to look* after the workers in times of lay-off, as they did a machine when it went out of order. The rate of compensation, he said, had been restricted, so that the burden on the industrialists might not be too great in this respect. In the course of the debate, Mr. Giri also disclosed that he was bringing forward an amendment to provide compensation in the event of lockout in an industry.

The debate on Monday disclosed general support to the Bill from all sections of the House, although labour representatives felt, as is only to be expected, that its provisions did not go far enough and the representatives of the industry complained *against the hardship* it would cause to the industries in general. Dr. Lanka Sundaram (Independent—Madras) criticised the definition of lay-off as being faulty. Mr. S. S. More (U.S.O.—Bombay) characterised the Bill as a "feeble attempt" to redress the grievances of workers. Mr. Thakur Jugal Kishore Sinha (Praja-Socialist—Bihar) wanted bonus to be considered as part of wages in calculating the percentage of compensation to workers. Mr. Khandubhai Desai (Congress—Saurashtra) stated that the Bill had laid down only the minimum requirements which an employer should fulfil before lay-off or retrenchment and he hoped that it would act as a deterrent to inefficiency and incompetence in management. Mr. S. Singh (Congress—U.P.) wanted the Bill to apply to permanent employees in seasonal factories also. Further, the Bill, he said, should apply to establishments employing even 20 workmen and not 50 as proposed. Mr. G. D. Somani (Independent Parliamentary Group—Rajasthan), speaking on behalf of the industry, said that industry had borne many burdens cheerfully in the past and, if during a period of recession industry said it was not in a position to bear any additional burden, it should not be misunderstood. A millowner or factory owner suffered much more than any other interest, if he had to close down his factory or curtail production. The difficulties of industry would be further aggravated by the Bill at a time when it needed relief to tide over the crisis. He wanted the Government to make it clear that once compensation was paid under the Bill, it should not be open to any party to raise the matter again under any other Act.

Replying to the debate, Mr. Giri explained that the provisions about lay-off and retrenchment would apply both to the public and private sectors. Even after the Bill was enacted, he said, a worker was entitled to go before a tribunal to question the need for lay-off or retrenchment and, if there was need, the quantum of such lay-off or retrenchment. He said that the present legislation was a deterrent against employers seeking to lay-off or retrench workers. He said that, too often, he had found that whenever the employers intended to effect economy they tried to lay-off or retrench workers. The penalties provided now would make the employers hesitate before taking a decision on retrenchment.

Our views on this question have been clearly stated in an earlier issue of this journal. Suffice it to say that there is nothing in the elucidation given by the Labour Minister to alter our opinion. The one great adverse outcome of this measure will be retardation of industrial development of the country, for the measure will act as a strong disincentive to the expansion of the existing industrial units and to the establishment of new ones. New ventures need careful nursing and, should it become necessary to effect economies, the provision of gratuity calculated at 15 days' average pay for each completed year of service or part thereof in excess of six months will be found to be a significant additional liability. Those who seek to promote new concerns will naturally hesitate before doing so. The case of the existing concerns which, on account of the changed economic circumstances, are unable to continue to keep in employment surplus labour will be no different. Not only have they to suffer losses but also to meet this fresh burden of compensation.

OFF THE RECORD

(By "ROVER")

IF for nothing else, I welcome the Colombo Plan and the latest conference held to examine its working recently in India, for bringing two important members of the Commonwealth —India and Canada—closer together. To us in this country, America has almost exclusively meant North America, and North America outside the U.S.A., was just a geographical expression, having neither meaning nor significance, even to the educated and the well-informed citizens of India. We knew little about Canada, except as a country where a few thousands of our Sikh brethren who had migrated at some time, settled and prospered. For the rest, she was overshadowed by the solid economic and technological achievements of the States, but more so by the U.S.A.'s more strident, compelling and less self-conscious propaganda about its way of life. Canada's own advance in these spheres was almost, if not quite, as noteworthy as that of the U.S.A., but like a beautiful and accomplished but shy maiden, she never chose to push herself in the forefront in international or even Commonwealth affairs. There were additional reasons for Canada adopting this attitude. Though in the Commonwealth, in foreign and economic policy she was not of it; she had closer geographical and cultural ties, in spite of the Ottawa Agreement, with the U.S.A. Her association was almost exclusively confined to the U.K.; for the rest of the British Colonial possessions or the Commonwealth, its relationship was unsubstantial and nebulous.

It was the Colombo Plan and Canada's readiness to contribute to it from her plenty, which brought her more intimately in touch with the general run of citizens in India and Pakistan. The Bombay State Transport Corporation has good reason for entertaining a tender regard for Canada, inasmuch as its fleet will soon be enlarged by a large number of vehicles from this far-off country. The B.S.T., because of its ever empty coffers, was in no position to pay cash immediately for this windfall. In addition to this, some of our important multi-purpose river valley projects have been generously assisted with the gift of equipment by Canada under the Colombo Plan. And we must also recall, with a due sense of gratitude, that soon our railways will stand to benefit by a generous supply of eleven million dollars' worth of sorely needed boilers and locomotives.

Our country's comparatively primitive transport system is the one branch in its economy in enriching which Canada has helped, to a certain extent, our efforts to help ourselves. At the same time, one cannot but help criticise adversely the Government of India's unfortunate choice of utilising a good part of the Canadian aid in the form of assembled buses for the Bombay State Transport. It was a singularly unwise choice, at a time when the country's infant automobile industry was struggling hard to establish itself and when unemployment in the country was spreading misery far and wide. Our gratitude to Canada, however, should be none the less on that score.

The recent Colombo Plan Conference brought Mr. James Sinclair, Canada's Minister for Fisheries, on a prolonged tour of our country. Mr. Sinclair's praise for the progress made by us since the dawn of independence was as generous as his country's contribution to the Plan. He voiced this recently at a Press conference at the residence of Canada's High Commissioner in our capital. It was good of him to see only the new spirit in our villages, shutting his eyes to the appalling squalor, poverty, disease and ignorance. He could not have helped noticing these features of our rural life, though life in the cities for millions is no better. Coming from a rich and prosperous country, with a standard of life almost the highest in the world for its citizens, as can be easily discerned from his revelation that the Sikhs, settled there and working almost exclusively on comparatively humble jobs, were earning as much as about a hundred rupees per head in daily wages. Mr. Sinclair must have taken a good measure of the physical degradation of human lives in the parts of the country which he visited during his extensive travels in the North and the failure of the official efforts so far to effect any appreciable change in this sordid picture. But considerations of courtesy and his obligations to his hosts naturally prevented him from referring, even by implication, to our drawbacks and our more obvious blunders.

I am stressing this point here, because our rulers, completely ignoring the dissatisfaction and discontent prevailing in the country resulting from the depressingly poor achievements of the Government on the economic front, are apt to feel complacent and even elated by such praise from guests from abroad. Both by early training and his predominantly international outlook, as well as by his preoccupation with foreign affairs, our Prime Minister, though one of the greatest living patriots, is inclined to be a little oversusceptible to praise from such quarters. There is no great harm in his doing so, so long as he does not lose count of the ugly reality in the country and does not forget that the final judgment on any Government's policies can come only from its electorate and not from the casual courtesies of guests and visitors from abroad.

Family Planning or Famine and Pestilence

For those who have eyes to see, ears to hear and a head to understand what their eyes see and their ears hear, condensed as it is and less voluminous than in the past, the first volume of the Census Report for 1951, published a couple of weeks ago, brings confirmation of an impending catastrophe for our country, which had been hinted at and drawn attention to repeatedly by several of the more thoughtful students of public affairs and economics. There is nothing new in the figures revealed by Mr. R. A. Gopalaswamy, Registrar General and Census Commissioner, in 1951. Most of these were known to our leaders of public opinion and those who have more specifically accepted the responsibility of ordering the affairs of the country. The value of Mr. Gopalaswamy's contribution as a statistician lies in the significance he draws from the correlation of these figures and their projection into the future and in issuing a clear warning to the authorities without mincing words.

The author of this report has not spared the susceptibilities of many a highly placed politician to whom, no less than to a blushing over-refined and wrapped-in-cotton-wool virgin of tender years, anything even distantly referring to the birth of a baby is highly embarrassing. Mr. Gopalaswamy has trod upon quite a few august toes with their sensitive Gandhian corns with a courage which is rare in these days of degenerate and "yes"-saying bureaucracy. From the cold but merciless logic of his desert action and the cool, daring and deliberate way he has pressed his conclusions, I can see that he has not done so inadvertently, or because he allowed his enthusiasm to run away with him. Taking a long view and with the interest of his country at heart, he has considered it worthwhile to take a risk of earning not only the disapproval but possibly even the displeasure of his masters, by uncompromisingly stating that, as it is, we are shockingly overpopulated and that, unless urgent steps were taken to stabilise the population at 45 crores, which we are certain to reach by 1969, millions would perish through the operation of harsh, classical Malthusian checks of famine and pestilence. The step which he advocates for such stabilisation at a given stage is that of an active and efficiently executed national programme of family planning which would bring a hot blush not only to the already lined cheeks of our Minister for Health but even sufficiently tanned ones of the Prime Minister himself or the more wrinkled and bronzed visage of the Chief Minister of Madras.

As I hope to have occasions in the future of reverting to this subject of supreme importance to the Nation, I do not propose to add anything to or comment upon the line of argument advanced by Mr. Gopalaswamy in his report. All I would say at this stage is that from the official reaction indicated so far by the head of the Government is to ignore, if not dismiss, Mr. Gopalaswamy's grim warning as unduly alarmist. To my mind this attitude of indifference is more alarming than the Census Commissioner's prognostication, because the rest of the fatuously adoring ministerial crowd at the Centre and in the States is likely to take its cue from the Prime Minister, to whom they have surrendered all initiative and the fundamental democratic privilege of thinking for oneself and forming one's own independent opinion on grave national issues. For them the most comforting political doctrine is: "After us the Deluge."

CLIMATE FOR DEFICIT FINANCING CONSIDERED FAVOURABLE

BUSINESS IN PARLIAMENT PROCEEDS BRISKLY

(From A Special Correspondent)

NEW DELHI, *24th November*

DELHI LETTER

MR. Chintaman Deshmukh, Finance Minister, once again reiterated in Parliament the Government's fiscal policy during the balance of the Planning period in the course of the discussion on the unemployment problem. His declaration that "there is need as well as scope for increasing the rate of investment in the economy" is of considerable significance. The Government of India is now of the view that the climate for resorting to "deficit financing" has become considerably favourable. People living in urban areas are likely to be benefited by the present downward trend in foodgrain prices, while in the villages the living costs are likely to remain at a lower level, since the disparity between the free market and controlled prices in foodgrains has narrowed down appreciably. Since nearly 75 per cent. of India's population still lives in rural areas where nearly 70 per cent. of the money is spent in foodstuffs, it is believed in Government circles that any extra expenditure by way of deficit finance will not have pronounced effects on the general commodity price level affecting the villages. Once the food supply position becomes plentiful, the effects of deficit finance on the price level will not only be minimised but will be beneficial on the whole to the general economy of the country. Mr. Deshmukh, therefore, seemed to appear, confident that the time had come for the Government to accelerate the pace of spending on development projects. He envisaged that development expenditure in 1954-55 and 1955-56 would aggregate Rs. 625 crores a year as against a little under Rs. 300 crores a year for the first two years and Rs. 415 crores in the current year. One can, therefore, expect that when he presents the budget proposals at the end of February next, the allocations to various schemes will show a substantial increase over those provided during the current year.

Business in Parliament has been proceeding rather briskly. Debates and discussions on various Bills and amendments have been largely constructive and to the point. Parliament was able to pass the Rehabilitation Finance Administration (Amendment) Bill on the 17th inst. without much further discussion and took up immediately the Sea Customs (Amendment) Bill. The latter, just like the former, was intended to replace the Ordinance promulgated during the recess. The Bill empowers the Government to grant a drawback of import duty on raw materials contained in manufactured goods exported abroad and makes provision for allowing the manufacture of goods in bond. The immediate purpose of this Bill has been to benefit the textile industry and to improve its competitive capacity in overseas markets where Indian cloth and piecegoods have been facing increasing competition from Japan and other textile exporting countries.

The Coir Industry Bill occupied the attention of the House for nearly two days. The importance of this measure would appear to have received little recognition from members of Parliament hailing from northern parts of the country with the result that the proceedings of the House came to a standstill owing to lack of quorum. The total revenue that will accrue to the Coir Board by the imposition of a cess of one rupee per cwt. will be about Rs. 12 to Rs. 15 lakhs per year on the basis of exports during the last three years. Coir yarn has a wider market than coir mats and mattings. The latter are largely imported by the U.K. and to some extent by the U.S.A., Australia, New Zealand, etc. Best customers for coir yarn are Holland, West Germany, the U.K. and many Continental countries such as Belgium, France, Switzerland, Denmark, etc. It is stated that the abovementioned countries prefer coir yarn to mats and mattings, because the manufacture of coir products from yarn is generally being carried on by old women, disabled soldiers, etc., and, therefore, imports of coir mats and mattings are being discouraged by the levy of high import duties.

The Minister for Commerce, Mr. D. P. Karmarkar, introduced a Bill in Parliament providing for the levy and collection of an additional excise duty on *dhotis* issued out of mills in excess of the quota fixed for the purpose. The duty will be on a graduated scale ranging from two annas per yard to eight annas per yard on the quality of *dhotis* so issued. This measure is intended to safeguard the interests of the handloom industry. Mr. Krishnamachari, Minister for Commerce and Industry, moved a resolution in the Lower House seeking its approval for the levy of an export duty at Rs. 62-8 per cwt. on coffee, which came into effect from 10th October.

Among the other Bills introduced in Parliament this week, mention may be made of the Ancient and Historical Monuments and Archæological Sites and Remains Amendment Bill as passed by the Council of States. There was an inconclusive debate on this Bill. Another Bill introduced in Parliament related to the Industries Disputes (Amendment) Bill seeking to provide for payment of compensation to workmen in the event of their lay off or retrenchment. After some debate this Bill passed the first reading but detailed discussion was postponed since the Labour Minister, Mr. V. V. Giri, stated that he proposed to move some amendments which had not yet been circulated and members demanded time to study and table amendments, if necessary. In the Council of States the Deputy Minister for Labour introduced the Employees' Provident Funds (Amendment) Bill, 1953, which seeks primarily to remove the defects in the Employees' Provident Funds Act, 1952, which the working of the Act has brought to light. One of the amendments provides that the Central Government may make the provisions of this Act applicable to the factories, the majority of whose employees and the employer are agreeable to it.

Special significance must be attached to the latest bilateral trade agreement with Czechoslovakia. This is not a new agreement with that country; for similar agreements were entered into with it by India during the post-war period. Despite these pacts, the trade between the two countries did not develop as much as one would have desired. In the pre-war period, Czechoslovakia was a prominent exporter of mill-work and machinery to India, but it went into background during the last few years, simply because it was engaged in implementing its post-war development programme. Now that it has signed a bilateral trade agreement denotes that this country is anxious to resume its pre-war position as an exporter of machinery to India.

The present agreement is also significant in that it augurs well for India to develop trade with the Soviet bloc countries. It is suggested that during the last few months after the passing away of Mr. Stalin, the Soviet Government itself has been devoting considerable attention to the release of goods for purpose of internal consumption. It is reported that the country appears to be eager in pleasing the ordinary citizen in respect of innumerable consumption of goods by making them available not only in plenty but also at cheaper rates. The exclusive concentration on the production of capital goods is reported to have given place to equal attention to consumption goods industries. It is, therefore, likely that Soviet Russia itself will be entering into a bilateral agreement with India, with a view to increasing the mutual trade relationship which has been practically at a standstill during the last two years. It may be mentioned that, in 1950-51 and in the previous year, India had a bilateral agreement with Russia in regard to tea. Thereafter, there was exchange of Indian goods such as castor oil, jute goods, etc., with Russian wheat. Any new agreement with Russia may be on the model that has been entered into with Czechoslovakia. As such, India can be able to sell some of its products such as, tea, castor oil, jute goods, coir products in exchange of Russian machinery, etc. Perhaps, thereafter, it is possible for India to enter into bilateral trade with the other Soviet bloc countries. If such agreements take place, it will provide a fillip to India's export trade in the coming months, besides giving some stimulus to many of the country's export industries.

TOKEN STRIKE COMES TO BRITAIN

ONE-SIXTH OF LABOUR FORCE INVOLVED

(From Our Own Correspondent)

LONDON, *21st November*

ON 2nd December all the engineering workers in this country will lay down their tools and absent themselves from work for 24 hours. They are not going to "strike"—they are merely not going to work for a day—and they will have no objection to putting in overtime after their return to work, at the appropriate wage rates, if required, in order to make up some of the work lost. This action, declares a right-wing commentator, "will have been the work—the planned and calculated work—of the British Communist Party. It is interesting to note that Communist Parties abroad have also been calling one-day strikes. It is difficult, however, to see what a one-day strike by the confederation is expected to achieve."

LONDON LETTER

"It is nonsense," protests a Socialist commentator, "to connect them, as some commentators have been doing, with Communism. They were a regular weapon of Continental Trade Unionism long before Communism was heard of; and the engineers' case for a wage advance is intrinsically strong."

It was the Amalgamated Engineering Union, one of the largest in the country, whose National Committee decided at the beginning of this week to call the strike, and later, in the week, they carried with them the thirty-nine union membership of the Confederation of Shipbuilding and Engineering Unions, though against the opposition of the representatives in the Confederation of the two powerful general unions, the Transport and General Workers' and the General and Municipal Workers' Unions. If it were true that the whole thing had been engineered by Communists—who have a small representation on the National Committee of the A.E.U.—it would be a real feather in their caps, and if it were to lead to a satisfactory sequel for the unions, then the Communists would be able to take all the credit. But to ascribe this action to the Communists is to suppose that without their influence, the engineering unions would have done nothing and that, therefore, the whole matter can be dismissed as Communist troublemaking to which too serious attention should not be paid.

This would be to underestimate the real feelings of the rank and file. These have been getting hotter and hotter under their dungarees ever since the rejection in the summer of their claim for a 15 per cent. wage increase. Negotiations have gone on with the Employers' Federations sporadically, but no headway has been made at all. The engineers do not want to strike—though some of the skilled workers whose premiums over standard rates have declined since the war, are in favour of much more drastic action than at present proposed—but neither are they prepared to accept this total rejection of their claims. The case could be taken to arbitration, but again the engineers are not particularly hopeful of the outcome; they pin their faith to getting some sort of compromise out of the employers, and they hope that the action they propose will demonstrate the seriousness with which they view the situation.

Something like two million workers, one-sixth of the labour force of the country, is affected by this decision and if the whole two million absent themselves from work that day it may, hope the unions, show the employers that their official decision has the hundred per cent. backing of the rank and file and that they could do worse if they wanted. In fact, the unions are hoping that, having declared their intentions in advance, they may be able to have further discussions with the employers forthwith—since the latter will suffer more than the men—and even arrive at a solution before the deadline. The timing of the strike has been very skilful, since no one will be better off, if it is held and if anything is to be done to avoid it, it can be done in the time allowed. On the other hand, if nothing is done by the employers either before the strike or after it, then the hands of the unions will be forced towards severer action—and that could only mean a real instead of a token strike.—*All Rights Reserved.*

DISINCENTIVE EFFECTS OF HEAVY BURDEN OF TAXATION

APEX TRADE BODY'S REPLY TO TAXATION COMMISSION

THE reply submitted by the Federation of Indian Chambers of Commerce and Industry, the apex organisation of the Indian Commercial bodies, to the questionnaire issued by the Taxation Enquiry Commission is as comprehensive as the questionnaire itself. Apart from the detailed manner in which the Federation has dealt with the questions posed by the Commission, the chief merit of the Federation's reply lies in the general observations it has made on the fiscal system, both as part of its introductory remarks and as regular replies to the first part (the general part) of the Commission's questionnaire.

The Federation prefaces its reply by emphasising the fact that the basic problem in an underdeveloped country, like India, is the scarcity of capital and the slow rate of capital formation. Indeed, this point is repeatedly—and very rightly—emphasised throughout the memorandum submitted by the Federation. From this, it draws the general conclusion that the taxation policy, or for that matter, the general economic policy of the Government, must be directed towards assisting capital formation. Taxation is thus not a mere means of obtaining revenue but a method by which saving, investment and consumption could be stimulated. In this connection, it draws attention to two defects—the numerically small section from which a disproportionately large tax revenue is collected and the high rate of taxes. The former defect has resulted in a "reduction of savings of these classes" which support the capital market, invest in industries and generally utilise their savings for productive investment. In another context, the Federation urges that the conflicting claims of increased investment and sustained or increased consumption should be so adjusted as to facilitate an "optimum rate of development." Referring to the other defect, namely, the high rates of taxation, it says: "Even for the purpose of maximising total tax yields, a low and reasonable level of taxation, instead of penal and unreasonable rates, is better."

Taxation is often conceived as a measure of reducing inequalities in income. This argument has received so much emphasis these days in this country that, as the Federation pertinently observes, it has tended to "obscure dispassionate thinking and to disregard facts." In an underdeveloped country, an attempt to reduce inequalities of income becomes "more a sharing of scarcity rather than of plenty." The problem in a backward economy is not so much "one of distribution of a given income as that of production of increased income." No absolute or unqualified duty is cast upon the State to remove inequality in the distribution of wealth. The Constitution emphasises, as part of the Directive Principles of State Policy, the need for securing that the "operation of the economy system does not result in the concentration of wealth and means of production to the common detriment." The Federation holds that the words "common detriment" are significant, and adds: "Inequalities in income are not necessarily objectionable if they accelerate economic development and thereby enable, as they do, the implementation of another important directive principle, namely, to provide opportunities for all citizens to exercise the right to an adequate means of livelihood."

Private Sector

From the point of view of stimulating national economic development, the private sector deserves special consideration. This is because a much larger number of people are dependent upon the private sector for employment than on the Government. Through a calculation, based upon the data furnished by the National Income Committee, 1948-49, the Federation reaches the conclusion that the number of people, employed directly by the private sector engaged in mining, manufacturing, banking, insurance, commerce, transport and communication, is 28 million as against 3.6 million in Government services and one million in State enterprises, including railways. The private sector thus accounts for 75 to 80 per cent. of the total non-agricultural employment. A 10 per cent. increase in the public sector would provide employment only to about 3 to 4 lakhs of persons, while a similar increase in the activities of the private sector would mean additional non-agricultural employment for nearly 30 lakhs of people.

From a long-term point of view, the real solution to the problem of unemployment and underemployment in the country, it is held, can come only with an increase in the avenues of non-agricultural employment. There is an annual increase in India's population to the tune of 4.5 million. Of this increase nearly 40 per cent. (based on the assumption that the proportion of working population to the total population will be what it is) or 1.8 million, will belong to the ranks of those for whom employment will have to be provided. In addition to providing employment for this number, jobs will also have to be provided for the surplus population now depending on land. The aim should be to absorb 2.5 million persons each year. Even if 25 per cent. of this number are to be provided with jobs, the problem will be one of absorbing five lakhs of persons. This would require additional capital investment. The Bombay Plan estimated it at Rs. 1,500 per worker. At current price levels it would be Rs. 5,000 per worker. It would then mean that "approximately Rs. 250 crores annually would be needed by way of capital in the manufacturing sector alone and, as a large part of the manufacturing activity is in the private sector, the additional requirements of the private sector for a programme of this size will be quite large." These figures, the Federation hastens to add, are merely "illustrative" of the magnitude of the problem, and not "precise" calculations.

Direct Taxes

It is against this background that one must consider the question whether the fiscal system permits the retention of adequate resources by the private sector. Both indirect and direct taxes have adversely affected economic incentive. A case in point, so far as indirect taxes are concerned, is export duties. Taxes, like the export duties, it is pointed out, cut the very root of the normal functioning of competitive industries which are deprived of their legitimate resources which they could utilise in times of need. To show how the burden of the direct tax (income-tax) affects the assessees, the Federation points out that the proportion of revenue from income-tax to total tax revenue has increased from 22.9 per cent. in 1938-39 to 37.6 per cent. in 1953-54 (Budget estimate). And income-tax in India covers a population of 6¼ lakhs out of the total population of 36 crores. Moreover, since the number of persons who are covered by direct taxation is small, the Government seeks to make up the low yield of taxation in the lower brackets by placing higher burdens on the persons in the upper income brackets. Referring to the disincentive effect of this policy, the Federation says:

"In India so far as the higher income groups are concerned, the burden of taxation is as high as in other advanced industrial countries and in fact the progression has been more steep than in any other country on incomes between Rs. 50,000 and Rs. 1,00,000. Also, at levels above Rs. 1¼ lakhs, the rates are higher than in all other countries, except in the U.K. Now, by and large, the higher incomes are entrepreneural incomes and they are not secure like salaried incomes in permanent posts. It is only after the major portion of the shares of a company are taken over by the promotors and other big investors that the smaller investor thinks of risking his capital in the enterprise. As such, there is greater justification that the higher incomes should get more tax relief in the interest of greater investment in productive enterprises. Further, in any business, and more so in an underdeveloped economy, the *entrepreneur* starting productive activity is a pioneer who stakes a great deal in the hope of a return. If, through hard work and good fortune, he reaps a high profit in India, he has to pay a sizable chunk of it to the State. For instance, if his total income is above Rs. 1¼ lakhs a year, he will be paying as much as 82 per cent. on the highest slab to the State.

"Another fundamental fact which is generally overlooked is that, as contrasted to Western countries like the U.K. and U.S.A., an average person in India who earns has to support a much larger number of persons including distant relatives. Thus, his burden is much heavier and a higher rate of taxation affects him much more. The discouraging effect of a steeply rising rate of tax, accentuated by abrupt changes in the marginal rates, reflects itself in the unwillingness to take risks and encourages a tendency to play safe. *Entrepreneurs* become unwilling to launch out in new fields and investors are not forthcoming for risky ventures. The pioneering spirit is stifled. Moreover, the existence of personal, as well as corporate, taxation weakens the ability of a business to weather adverse times, because when the profits are high a large slice of it is taken away by the State, with the result that, when times are lean, the business is left with inadequate financial resources to fall back upon. As a result, in a weakened financial position the rate of mortality in business becomes high and, to that extent, the risk of failure deters new entrants."

Proportion to National Income

The Federation is anxious to rebut the argument that the total taxation in India is comparatively small since it amounts only to 7 to 8 per cent. of the national income. Explaining why this argument is fallacious, it says:

"Firstly, total taxation as a proportion of national income by itself does not prove anything, because what is important is the distribution of a given tax-burden and its consequences on saving and investment, production and employment and incentives. A tax system is good or bad according to its results and, in India, it has been found that the present burden of taxation is proving a hindrance to the development of the economy as a whole. Secondly, comparison with other countries differently situated is also meaningless. A tax system has to suit the particular requirements of a country. Because an advanced industrial country can afford to divert to the State 20 or 30 per cent. of its national product, it cannot be said that a similar course of action can be taken by an underdeveloped country. Thirdly, in an underdeveloped economy, the proportion of national income which is accessible to tax collection is relatively small, because (a) there is a significant proportion of the national product which is self-consumed by the producer, viz., the agriculturist, and does not enter into the market economy, and (b) the average level of consumption in the community being low, the rates of taxation cannot be high and broad-based. Consequently, for a given proportion of national income to be realised in the form of taxes, the real burden of such taxation on certain sections of the community is very much higher. In India, this has taken the form of very high rates of direct taxation on a small section of the population which, at the same time, also bears a considerable proportion of indirect taxation, such as Central excises and customs. Further, in any contingency which requires additional resources for Government, fresh burdens tend to be placed on the same small section of the society."

The present structure of direct taxation, according to the Federation, is both unduly complicated and heavy in its incidence. It says:

"At present, the maximum rate of income-tax on slabs of income exceeding Rs. 15,000 is four annas in the rupee, with a surcharge of 5 per cent. and, below the limit of Rs. 15,000 the rate is graduated, increasing from nine pies in the rupee to four annas in the rupee. In the case of persons earning over Rs. 25,000, there is also, in addition to the income-tax at four annas plus surcharge, a super-tax. The rates of super-tax vary from three annas in the rupee to 8¾ annas in the rupee on incomes exceeding Rs. 1¼ lakhs. There is also a surcharge of 5 per cent. on the super-tax rates. So, on incomes exceeding Rs. 1¼ lakhs, the total income-tax and super-tax works out to 12¼ annas in the rupee, plus a surcharge of 5 per cent.

"In the case of a company, income-tax is levied at a flat rate of four annas in the rupee, with a surcharge of 5 per cent., and in addition Indian companies pay super-tax of two annas nine pies in the rupee. So the total rate of tax on distributed profits of companies will be slightly less than seven annas in the rupee. Our tax structure is complicated by the imposition of two kinds of taxes, *income-tax and super-tax* and by the differentiation between certain allowances which will be available only for income-tax and certain other allowances which will be available both for income-tax and super-tax. Further, the super-tax paid by companies is also not available for rebate to the shareholder when the income of the company is distributed to him, though in the ultimate analysis the company is only an association of individuals who are the shareholders of the company and the income of the company merely belongs to the shareholders. All this has the effect of indirectly increasing the ultimate burden on individuals by indirect means such as those mentioned above. The tax structure should be modified so that there is only one tax on both individuals and companies which will avoid not only the complications of computing income and granting rebates and allowances, but will also directly give an idea of the incidence of the tax on particular slabs of income. There is further the need to reduce the element of progression in income-tax and lower the maximum rate leviable on the highest slab of income."

Suggestions for Reform

Many suggestions have been made by the Federation in order to render the incidence of taxes less heavy than now. The suggested modifications in the Indian tax system are:

(1) Broadening the base of the tax system by bringing within the orbit of taxation commodity taxes like salt tax and excise duties on liquor; (2) lowering of the rate of direct taxation on the higher income slabs and reducing the element of progression in direct taxation over certain ranges of income; (3) special concessions in the form of lower taxes, higher depreciation allowances, etc., for new industrial investments; (4) abolition of Section 23A; (5) a change in the scheme by which the benefits at present allowed to new industrial undertakings such as exemption from tax, higher initial depreciation allowances, etc., for a period of five years from their inception so that the benefits are made valid for five years after production commences. (This would enable industrial undertakings to reap the full benefit of the concession because otherwise the first two or three years might be lost in construction of factories, installation of *machinery*, etc., and the present benefit can be enjoyed only for a short period); (6) exemption of investments made in approved industrial undertakings from estate duty; (7) exemption of that part of the income invested in approved industries from income-tax or subjecting that part to a lower rate of tax; and (8) abolition of or reduction in export duties in so far as these duties hinder exports and affect production.

Besides the direct and indirect taxes, the Government's attitude towards profit levels in industries is held as a discriminatory factor. Not only is the rate of return allowed to certain industries, low, but there is no uniformity in the rates of return permitted by the Government. The rates for electricity undertakings has been fixed at 5 per cent. on the capital base. For purposes of textile control, the Government had, in the past, permitted a return of 3 per cent. on working capital and 6 per cent. on gross block. For the paper industry, the Tariff Board permitted, in 1948, a rate of 4 per cent. on working capital and 8 per cent. on block. The return allowed by the Tariff Board on block and working capital in the case of superphosphate, tin plate, pig iron, steel and raw rubber have all been different. The Board revised its policy in 1951, when it allowed 4 per cent. on working capital and 7 per cent. on gross block. In the case of the Tata Iron and Steel Company, the Government has turned down the Commission's recommendation for an increase in the rate of return on block from 8 per cent. to 10 per cent. Nor is this the end of the story of lack of uniformity in the permitted rates of return on capital. Some industrial tribunals have based their awards on a rate of 2 per cent. on working capital and 6 per cent. on paid-up capital. The inadequacy of all those various rates of returns on capital, the Federation points out, is "all the more paramount when it is borne in mind that the current cost of replacement of fixed assets is many times over the original cost incurred in acquiring those assets."

CONVERTIBILITY OF CURRENCIES

NATIONS SHOULD ADJUST THEIR ECONOMIC POLICIES TO REALISE THIS OBJECTIVE

[Ever since the establishment of the International Monetary Fund eight years ago, the issue of convertibility of currencies has been discussed threadbare by financial experts in the Press and on platform. All are agreed on the need for free convertibility of currencies. But it is only on the way in which this objective is to be achieved that there is great divergence of views. Some experts lay stress, for instance, on the setting up of huge stabilisation funds and lower American tariff rates as the prerequisites for currency convertibility. In the opinion of others, however, it is not so much these as the ability and willingness of nations to observe the requirements of true stability in currency values that are of fundamental importance. This is precisely the view expressed by the Guaranty Trust Company of New York, in the course of an interesting article entitled "The Outlook for Currency Convertibility," published in its latest monthly, Guaranty Survey. In view of the importance of the subject, we reproduce below the aforesaid article.—Ed.]

EIGHT years ago, the International Monetary Fund was created for the purpose, among others, of assisting "in the establishment of a multilateral system of payments.... and in the elimination of foreign exchange restrictions." The 1953 Annual Report and the address by Mr. Ivar Rooth, Managing Director, deal largely with that objective. The Fund declares itself ready to consider "what part it can effectively play" in promoting currency convertibility.

This new emphasis is encouraging, because it reflects the progress towards international financial balance since the days when, as Mr. Rooth recalls, the meetings were held in an environment of crisis and disturbance that "made it difficult to think beyond the immediate problem of how to meet the pressing needs of the day." Yet the outlook for convertibility would be more promising, if this progress had taken place with less American financial aid, and if less reliance were placed on further financial assistance and on unilateral action by the United States in lowering trade barriers and stimulating foreign investment; also, if it were made clearer how lasting convertibility is to be reconciled with other national objectives.

Reasons for Inconvertibility

There is no doubt as to the desirability of the aim. Inconvertibility is a heavy drag on trade and investment. In dealing with countries with inconvertible currencies, every contemplated transaction involves prior consideration of the prospect for payment in the currency desired by the exporter or lender. Many mutually advantageous transactions are rendered impracticable, and many others can be carried out only at prices that are burdensome to the country with an inconvertible currency. Such a country often imports with so much difficulty and expense that its supplies are restricted, its costs of production and costs of living are forced upward, its competitive position in world markets is impaired, and its whole economy is distorted and weakened.

Why has the restoration of convertibility taken so long? The answer depends partly on point of view. The familiar reply is that the physical destruction and economic dislocation caused by the war created an abnormal demand for foreign goods in many countries and, at the same time, reduced the ability of those countries to pay for the goods by exporting. In particular, there was an urgent need for goods from the United States, because this was the only large industrial nation the productive capacity of which had not been impaired by the war. The result was a persistent disequilibrium in balances of international payments, especially the "dollar gap" in payments between the United States and other countries. This chronic unbalance made general currency convertibility impossible, since it would have quickly drained away reserves of gold and dollar exchange.

Conflicting Objectives

From another point of view, convertibility has not been achieved, because it has been subordinated to other objectives. First, in an effort to make the "terms of trade" as favourable as possible to themselves, most countries tended to fix the exchange values of their currencies too high. This mistake was partly rectified by the general devaluation of 1949. Yet the "dollar gap" continued. This gap was simply a reflection of the fact that most currencies were overvalued in relation to the dollar. Their exchange rates were relatively higher than their internal purchasing power. Costs and prices in those countries, translated into dollars through the exchange rate, were so high that they made the countries profitable markets and weak competitors. In attempting to maintain these artificial rates, nations resorted to barter, exchange controls, multiple rates, import and export licences, quotas, and other devices. Convertibility under such conditions was obviously out of the question.

These difficulties were aggravated by the insistence of many countries upon living standards and social programmes which they were in no position to afford. In pursuance of such programmes, budgets were kept out of balance, money supplies were expanded, and wages were raised without regard to changes in productivity. The resulting inflation naturally widened the disparity between internal purchasing power and exchange rates, and made the problem of international payments more difficult than ever.

Similar practices were followed in reconstructing war-damaged industries and in developing backward nations. Investment programmes were drawn up and financed without sufficient regard to limitations in available supplies of labour and materials. Again, the results were inflationary, and international disequilibrium was made worse.

Proposed No-par Currencies

Some commentators on international economic affairs have gone so far as to maintain that the whole job of post-war financial rehabilitation was begun at the wrong end. According to this view, convertibility could have been achieved quickly if national authorities had not chosen fixed exchange rates as a prior objective. The original mistake, these critics believe, was the "pegging" of the rates, which created an artificial stability, not warranted by underlying conditions, and thus led to inconvertibility and all the other restrictions and barriers that were found necessary.

In a free market, supply and demand balance, because the price is right. The market for foreign exchange is no exception. An exchange rate is a price, and its proper function is to maintain a balance between the supply of a currency and the demand for it. Even now, according to some spokesmen for this school of thought, fluctuating exchange rates would be preferable to continued inconvertibility or to the measures that would be found necessary to maintain convertibility at fixed rates.

Such views, of course, run counter to traditional thinking on monetary affairs. A currency that has no fixed value in terms of money metal, or of currencies convertible into money metal, is regarded as a "soft" currency in the worst sense. It has ceased to be even a nominal standard of value. It undergoes a continuous process of devaluation and revaluation. Even inconvertibility and the other restrictions that go with it are usually accepted as lesser evils than this.

Yet it cannot be denied that, in an age of "managed" currencies, fluctuating exchange rates have a logic which they lacked in the days of the international gold standard. Adherence to the gold standard deprived nations of control over their internal price and wage levels. These levels had to remain approximately in line with those in other countries. If they got seriously out of line, they caused disequilibrium in the balance of payments, a flow of gold, and an internal credit readjustment that forced prices back into line.

Such readjustments sometimes entailed temporary recessions in business activity and employment. Hence they were incompatible with any national "full-employment commitment," as well as with wage and agrarian programmes that involved price manipulations, and with social-welfare schemes that upset national budgets. In short, nations came to demand a degree of sovereignty over their internal economic affairs that was inconsistent with the requirements of the gold standard, or, in fact, with any set of lasting parities among currencies.

The natural result of these tendencies was an era of currency devaluations. Historically, the devaluations of recent years have, of course, been partly due to war and other compelling emergencies which perhaps no amount of gold-standard orthodoxy could have withstood. Even without such extraneous factors, however, the refusal of nations to "play the game" according to the old rules must have destroyed the exchange stability that formerly existed. Successive revisions of exchange parities are the unavoidable consequence of currency "management" directed at internal policies rather than international currency considerations. From a regime of successive devaluations or revaluations, it is only a step to a regime of no-par currencies.

Fixed Parities Still Required

It seems clear that the world is far from ready for such a final step into monetary confusion. Fixed currency parities still command world-wide respect and adherence. The nations desire convertibility at a firm rate. But are they prepared to pay the price? Or are they aiming at a set of mutually incompatible objectives?

Current discussions of the question of convertibility are not reassuring on this point. Such discussions contain too much talk of huge stabilisation funds (presumably to be financed by the United States) and too little of the ability and willingness of nations to observe the requirements of true stability in currency values. Some advocates of early convertibility at the expense of the American tax-payer would do well to recall the recent comment by the Managing Director of the International Monetary Fund: "The primary responsibility for establishing and maintaining convertibility in any country must rest . . . on that country." If short-term aid is needed, the Fund exists for that purpose, to say nothing of the normal facilities provided by the world's banks. If these are not enough, it seems reasonable to conclude that the world is not yet ready for convertibility.

A similar lack of realism appears to exist with respect to the trade policies of the United States. Repeated demands are made for lower American tariff rates. Many Americans are in full agreement with this view. Successive United States Government commissions have recommended more liberal trade policies. The latest of these boards, which is to submit its report early in 1954, is generally expected to repeat this recommendation.

Reciprocity in Trade Policies

Too little is said, however, about foreign tariff barriers. The often-repeated argument that international trade is a two-way street works both ways. Economic health demands general trade liberalisation, not a free-trade United States in a protectionist world.

It seems necessary to assume that convertibility implies a regime reasonably free from trade restrictions. It would be easy to establish nominal convertibility and accompany it with such rigid trade controls that international

FORGING AHEAD

TRADITIONALLY a largely agricultural country, India is now, and very wisely, the scene of much vigorous industrial activity. Her iron and steel industry is a leading example. Here, as in so many other industries in India, Hollerith is playing an important part.

The Tata Iron and Steel Company, where Hollerith was introduced in 1929, relies on Hollerith machines and methods for the efficient satisfaction of all main accounting requirements. These include Factory and Sales accounting, accounting for the Costing Department and Labour Shops, and the control of Stores and Stockyards. Hollerith also provides an essential link between Sales Control and Production.

TATA IRON & STEEL COMPANY
Distinguished user of
HOLLERITH AEGD
ELECTRICAL PUNCHED CARD ACCOUNTING

IT is never too soon in the growth of an industrial concern to investigate the possibilities of Hollerith electrical punched card accounting and to seek the advice and help which is offered freely by the Hollerith organisation. Many small and medium sized firms, as well as the larger, find it profitable to use Hollerith. If you would like to consider Hollerith, ask us to call and see you—without obligation.

PAKISTAN'S TEXTILE INDUSTRY

TWO-MILLION SPINDLE TARGET HELD UNWISE

A NOTABLE feature of the textile developments in recent years is the growth of the textile industry in countries which never figured prominently in the world's textile map in the past. To this class of countries belongs Pakistan which, on the eve of its birth in 1947, possessed only 177,418 spindles and 4,824 looms. Since then, this young State has made remarkable progress, and possesses to-day about 379,882 spindles and 7,960 looms (in operation at the end of 1952). On the basis of the machinery already imported, it is estimated that the number of spindles will go up to 1 million by April, 1954. The country is now working towards a target of 2 million spindles. Reviewing the progress of the industry, in the course of an interesting and comprehensive article on the subject in the *Journal* of the Pakistan Central Cotton Committee, Mr. Naseer A. Shaikh, Managing Director of the Colony Textile Mills, Multan, says that, although the progress attained so far, is really commendable, the whole position should be "reviewed realistically, so that further development may be made on right lines."

In his article, Mr. Shaikh discusses, with commendable sense of realism, three aspects of the textile development in his country—the implications of textile target to the country's cotton economy, the question of the target itself, and the place of technical education and technological improvement in the textile economy of the country. If the target of 2 million spindles were reached, the industry would need, he calculates, about 1.58 million bales of cotton of 400 bales each, on the assumption that one spindle produces, during 300 working days in a year, 13.5 oz. of 22s yarn per day of three shifts and that there is a loss of 20 per cent. during processing. Now, the production of cotton in Pakistan has been of the order of 1.6 to 1.8 million bales. And the Pakistan Central Cotton Committee has adopted a target of 2 million bales, which is likely to be reached by 1957. In Mr. Shaikh's opinion, the attainment of the textile and cotton targets, namely, 2 million spindles and 2 million bales, will affect the country's foreign exchange position, because the country will be left with less surplus cotton for export. He says:

"It is evident, therefore, that, if the target of spindleage is achieved, Pakistan will cease to be a major cotton exporting country. There will be only a few lakhs of bales which would be available for export. This will affect the foreign exchange earnings of the country.

"At present, cotton contributes about 43 per cent. of the total foreign exchange earnings of the country. As the cotton exports will steadily dwindle during the next five years, the foreign exchange earnings will have to be made up from some other sources to rectify the balance of payments position. It may, however, be stated that some saving of exchange would be effected by a reduction in the present import of yarn and cloth, and there is a possibility that some foreign exchange could be earned by the export of cloth. On the whole, alternative sources of foreign exchange will have to be found and serious thought must be given to this situation from now onwards."

The next question to which Mr. Shaikh addresses himself is whether the country could afford a two-million spindle target. The present production of cloth and yarn in the country is about 100,000 bales and 75,000 bales (400 lbs. each), respectively. Even now, potential production of yarn is higher at about 240,000 bales. When the target of 2 million spindles is reached, it would be possible to produce 2,373 million yards of cloth, made from 22s count yarn. This would mean, for the 76 million people of Pakistan, a *per capita* availability of 31 yards per year. But this quantity is far in excess of the actual *per capita* consumption of cloth in the country, which he estimates (on the assumption that 30 per cent. of the yarn is used for purposes other than making cloth) at 9.1 yards. It appears "almost inconceivable," he argues, that the consumption of cloth will increase to any considerable extent in the next five years, thanks to the low level of income and the current shortages of food. This argument leads him to the conclusion that the cloth requirements of the country would be "amply satisfied with about one million spindles for a long time to come."

Since it might be argued that a textile industry with 2 million spindles would permit surplus cloth to be produced for export purposes, and that the export of cloth is preferable to the export of cotton, Mr. Shaikh proceeds to meet the argument by emphasising the economic and technical difficulties in the way of building up a prosperous export trade. He says:

"Export of cloth is not an easy matter, and our industrialists and traders have had so far absolutely no experience in this line. For export of cloth an intensive study of the foreign markets, tastes of people, etc., is very essential and, if we are to have an export trade in cloth, such a study must begin at once.

"It must be emphasised that social affinities and cultural relationships are at best a very poor substitute for economic consideration, and we must not be under any misconception that we will be quickly able to build up an export trade in cloth in the Middle East and North African markets. Here again, a realistic approach to the problem is required. We will be competing in these markets against highly industrialised, economically and politically stronger competitors from Manchester, New York, Tokyo and Bombay. Very hard and painstaking work is required if we are to win a foothold for our surplus cloth in these markets. Moreover, we will have to diversify our yarn and cloth production for export purposes, but we are not planning our industry for such a diversification. Practically all mills which have already been erected, or are being installed, are producing 20s yarn. Our low quality grey and bleached cloth will be a poor competitor against, say, Japanese longcloth, prints and other fine varieties. Thus, if we are planning for exports, we will have to go in for fine counts, and install bleaching, dyeing and printing machinery from now onwards. We will also have to import, not only proper machinery for this purpose, but also the necessary know-how and train our workers on these lines. We must realise that there are duck and dimities, cord fabric and cambrays, tapes and tapestries, silk and synthetics, fibres and fabrics in an endless variety that make even sunsets seem monotonous.' We should be ready to compete in such a world to win new markets."

Mr. Shaikh rightly warns the industry that it should not rest content with the progress it has made. The industry's progress was due to the "Government patronage," in the shape of a favourable import policy and modification of tax system and to the readiness of the people to patronise the Pakistani product. The industry should, he points out, tackle the problem of technical education for the prospective recruits. It is also urged to "break away from the bread and butter 20s and apply its mind to the production of finer counts for better quality fabrics." He emphasises that both the human and mechanical problems should be solved without delay. On the "human" front, there is the need for creating fresh amenities for workers in the shape of better houses, free medical aid and free education for children. On the mechanical front, he urges the need for "labour-saving devices like automatic looms, vacuum stripping, pneumophlis, large-package spinning, high speed winding and warping, etc." There is no doubt that when Mr. Shaikh's sage advice is heeded and the suggested improvements take place, the Pakistan textile industry will have greatly consolidated the notable progress it has made so far.

These trends in the textile situation in the country across India's borders should convince textile circles in this country that it is unwise to count upon Pakistan as an outlet for their products, except, perhaps, for certain specialised quality fabrics. Not only is Pakistan likely to reach very soon a state of self-sufficiency in cloth but might even be prepared to launch an export drive. Given more modern equipment than what this country's textile industry possesses and a more realistic labour policy, Pakistan's textile industry might conceivably offer some stiff competition to Indian textile producers in the foreign market, because of its superiority in cotton supplies. Such a healthy competition is really to be welcomed if it results in greater awareness of the need for modernisation and re-equipment on the part of the mill industry in this country.

U.K. RAW COTTON COMMISSION

ITS WINDING-UP WILL NOT AFFECT COLONIAL COTTON

WITH the second reading which the Cotton Bill received in the British House of Commons on Wednesday last week, the U.K. Government's policy of returning raw cotton to private trade has been carried a stage further. The Bill, it will be recalled, seeks to modify the functions of, and finally to wind-up, the Raw Cotton Commission. The proposed termination of the functions of the Commission and the resumption of the Liverpool cotton futures market would seem to have aroused doubts in the minds of some regarding the prospects for colonial cotton. It is feared, for instance, that, since the Liverpool Cotton Exchange contract will be based on American cotton, raw cotton growing in the Commonwealth countries, especially in the Colonies, will be adversely affected. This fear is, however, considered by the Government spokesmen to be somewhat exaggerated, as witness the following remarks of Mr. D. Heathcoat-Amory, Minister of State, Board of Trade:

"Any possible risk to Commonwealth cotton would come, not from the fact that there is only an American contract for futures, but from the removal of the dollar restrictions. There again all the evidence is that there is very little to fear and every hope that the use and the prosperity of Commonwealth cotton will go steadily ahead. I have no doubt that, if the demand for the use of Commonwealth cotton is there—and there is every evidence that it will be—then adequate stocks will be held."

Proceeding, Mr. Amory observed that it would be a great tragedy if anything went wrong in the Colonies and in the Commonwealth, as they all wanted to see production there steadily moving ahead. In his opinion, there was no reason why the cotton interests should be adversely affected. For the quality of cotton growths had steadily improved over the past two years and to-day there was every evidence to show that these growths could sell, and sell successfully on their own merits. Moreover, the colonial marketing boards were to-day much better off than they had been some years ago. In fact, they were in a position, he said, to stand on their own feet and continue their development work. The two biggest cotton-producing colonies, Nigeria and Uganda, had through their marketing boards, expressed themselves as quite happy about the future in regard to the arrangements made.

Even though the Liverpool Cotton Exchange contract will be on American cotton—not seven-eighths but fifteen-sixteenths middlings—it is said to be a good hedge for other non-American cottons and is almost exactly what the Raw Cotton Commission is providing. Again, this single American cotton contract is what the Exchange will have to start with. But it is hoped that the contract will be extended later; other cottons will be tendered either for the same contract or for separate contract. The Liverpool Cotton Association has promised to examine the position twelve months after it begins to function, in order to see whether it will be possible to introduce some alternative contracts or the tendering of other cottons.

Incidentally, the Minister sought to drive home the fact that the Raw Cotton Commission was forced by events to throw overboard its system of pricing based on average costs and to sell at replacement prices. The accounts of the Commission last year, it may be interesting to note, showed a loss of £25 million. The accounts for the year just ended are also expected to show a loss "very nearly as great."

EXPORT OF RAW WOOL

The Government of India's decision to release a further quantity of raw wool for export, announced on Tuesday last week, is in keeping with the assurance given by the Union Minister for Commerce and Industry during his recent visit to Bombay. To be precise, it will be recalled that, on 12th September, 1953, the Government announced that export of raw wool would be licensed to actual shippers upto 20 per cent. of the shipment effected by them during the first half of this year. The announcement evoked much protest from wool exporters. They argued that the raw wool supply position in the country was quite comfortable and that the quota allowed for export was too inadequate to prevent accumulation of heavy stocks and falling prices. They accordingly urged the Government to grant a further and more liberal quota for exports. The latest decision of the Government, referred to at the outset, is a sequel to this plea.

Under the new policy, export licences will be given, on application, to actual shippers upto 60 per cent. of the shipment effected by them during the six months ended June, 1953. The licences will be valid for shipment till the end of February next. The shippers who might not have made any shipment during the first half of this year but who had exported during January-June, 1952 or January-June, 1951 will also be considered for export allotments.

The release of an additional quota for raw wool export has been welcomed by the trade. But the change in the procedure for licensing exports, that is, granting licences on the basis of actual shipments in previous periods, instead of the "first come first served" principle, has been criticised by it. In the course of a communication addressed to the Union Commerce and Industry Minister, the All-India Wool Trade Federation, for instance, has lodged a strong protest against the change in export policy. It has sought the intervention of the Minister to respect the unanimous demand of the trade by adhering to the "first come first served" principle of licensing, especially when the quantity released for exports is sufficiently large to allow smooth working of the said principle.

U.K.'S CLOTH OUTPUT MOVES UP

PROBLEM BEFORE PRIVATE IMPORTERS OF COTTON

(From A Special Correspondent)

MANCHESTER, 17*th November*

MANCHESTER LETTER

BOTH in production and manpower the ravages of 1952 are slowly being repaired, although output remains hampered by the diminished labour force and Lancashire's productive capacity is restricted by the amount of machinery standing idle. Latest figures show that the number of operatives available for spinning and weaving employers has touched 285,000 compared with the low point of barely 260,000 16 months ago. There is still a 35,000 gap to be bridged before the November, 1951, labour force is reached.

Cloth output managed to retain its momentum at the beginning of last year rather longer than yarn production but it has been correspondingly slower in its revival. As the table below shows, however, the weekly average achieved in September was the highest for 18 months before the drift of workers from the mills had its inevitable effect:

Month	*Production (In 000 linear yds.) Weekly average*		*Manpower in Spinning, Doubling and Weaving*	
	1953	1952	1953	1952
January (5)	46,640	55,220	274,830	313,030
February (4)	49,100	55,480	275,340	304,130
March (4)	50,600	52,820	276,090	293,170
April (5)	48,070	42,330	277,730	281,370
May (4)	50,930	42,750	277,790	270,210
June (4)	50,930	36,390	277,970	265,050
July (5)	35,450	27,190	279,380	262,800
August (4)	50,700	39,000	282,620	263,250
September (5)	51,600	40,350	285,070	265,880

The number within brackets against each month, shows the number of weeks in the month.

Output of cotton and rayon piecegoods in the first *nine* months of this year is already substantially in excess of the cloth turned out in the corresponding period in 1952. Production amounted to 1,918 million linear yards against 1,691 million yards last year. A further upward trend can be anticipated in the final quarter of the year.

Yarn Position

Spinning mills seem to have found less difficulty in building up their labour force than weaving sheds. Manpower in spinning and doubling now stands at 145,650 against the low point of 132,000, while workers in weaving number 139,420 against 130,620.

The level of yarn production has settled down at a little above the 20,000,000-lb. mark—a full 2,000,000 lbs. below the average recorded in the autumn of 1951. A comparison between the output of particular types of yarn now being spun in relation to the position two years ago shows how output of purely cotton yarn has shrunk while rayon and mixture yarns have expanded to an appreciable extent:

Output
(In lbs.)

	Week ended	
	31-10-1953	24-11-1951
Cotton yarns	14,920,000	18,340,000
Cotton waste yarns	2,110,000	2,130,000
Spun rayon yarns	2,360,000	1,740,000
Cotton and rayon mixture yarns	750,000	280,000
Other cotton mixture yarns	50,000	30,000
Other waste yarns	190,000	120,000
Total ..	20,380,000	22,640,000

Raw Cotton Stocks

The chief problem facing private importers of raw cotton, which is to be finally freed next year to coincide with the long-awaited reopening of the Liverpool futures market, is the rebuilding of sufficient stocks to satisfy the immediate requirements of Lancashire mills.

The Raw Cotton Commission as a bulk buyer has always maintained much larger supplies for spinners than were really necessary. The equivalent of nine months' stocks for the mills has been held until private buying was reintroduced last year. Merchants in other countries rarely maintain stocks equal to more than four or five months' supply. Losses incurred by the Commission have been the result.

Private buyers in Liverpool and Manchester are already stepping up their imports in preparation for next year's take-over. Arrivals on private account since the beginning of August have amounted to 188,000 bales against 217,000 bales procured by the Commission. Merchant firms are turning again to the traditional sources of supply in Lancashire. Out of some 92,000 bales reaching Britain from the United States nearly 89,000 bales have been privately obtained.

Free enterprise shippers are also bringing bigger supplies of Brazilian and Indian cotton to Lancashire but are leaving the bulk purchases of African crops to the Commission for the time being.

Empire cotton supplies are creating some controversy in Lancashire as opponents of free buying allege that private merchants will no longer be interested in cotton grown in the Sudan and Central Africa. The millowners have found the quality of these growths suitable as substitutes for many other types and negotiations are going on between the spinners and Liverpool and Manchester raw cotton merchants to ensure that these supplies are maintained.

Liverpool Futures

An appeal to Lancashire spinning firms to give the fullest possible support to private raw cotton merchants in their attempts to build up supplies in preparation for the reopening of the Liverpool futures market has been made by Mr. Dudley Windel, a Director of the Liverpool Cotton Association.

"The market will only develop broadly when the spinners realise that it is in their own interests to support it on a broad basis," he said at a Manchester Press Conference.

Mr. Windel predicted that the Liverpool market would be reopened between April and June next year in readiness for the time when the Raw Cotton Commission is wound-up at the end of August. He expressed disappointment at the response so far from small spinning firms, and called for more confidence to be shown in the prospects for obtaining "free" cotton.

Many of the big combines were arranging to secure their supplies from overseas shippers, he said, and it would be difficult to build up large quantities of spot cotton, without prior knowledge of the requirements of the mills. He urged spinners to come forward and state their needs to enable merchants to estimate their forward supplies and arrange shipments accordingly.

"The Liverpool futures market has given the Lancashire cotton industry a faithful and efficient service in the past," he declared, "only interrupted by two world wars. The industry now has to make up its mind whether it still wants to be spoonfed in a feather-bed, or whether it wants to free itself from interference. If we are given the support of the spinning industry we can provide it with a service equal to what we gave before the war and certainly better than the Raw Cotton Commission gave the mills."

Mill Recruits

A "Lancashire-mills-for-Lancashire-folk" policy was urged by Col. J. Douglas Riddick, Chairman, in his address to the annual meeting of the Household Textiles Association, representing 400 firms, in Manchester.

Declaring that the shortage of operatives in Lancashire was causing much anxiety, Col. Riddick said: "It is my earnest hope that difficult as it seems at present we shall find ourselves equipped with an adequate labour force of people born and bred in Lancashire." A substantial number of workers in spinning and weaving mills were not British by birth and suggestions had been made that more of these people might be recruited. He added:

"We all know there are snags in the employment and the unemployment of these people, but this must not stop our acknowledging that those who have already worked here have been keen and good at their job. They have also worked well with our local operatives.

"But all the same I still hope that we shall be able to staff Lancashire mills with Lancashire folk and everything that can be done should be done to assure our industry of a continuing labour force of keen and efficient operatives with its new entrants recruited from school-leavers."

Raw Cotton Imports

Imports into the United Kingdom last week aggregated 31,083 bales, chief arrivals being American 7,333 bales, West African 5,972 bales, Pakistan 4,669 bales and Brazilian 3,464 bales.—*All Rights Reserved.*

Report for the Year Ended 30th September, 1953

The Hyderabad State Bank advance rate remained unchanged at 4 per cent. per annum.

The Bank's exchange rate continued at Rs. 116-10-8 per cent., but with effect from 1st April, 1953, O. S. Currency was not issued except in accordance with the instructions of the Government of Hyderabad.

The Securities Market remained featureless except for some activity towards the end of the year.

The assets and liabilities of the Mercantile Bank of Hyderabad Ltd., now in voluntary liquidition, were taken over by the Hyderabad State Bank from the 1st April, 1953.

Offices of the Bank were opened at Sultan Bazar and Mahbubgunj (in Hyderabad City), General Bazaar at Secunderabad, and at Hanam Street, Bombay, as from 1st April, 1953, to replace the Offices of the Mercantile Bank of Hyderabad Ltd. A Pay Office of the Bank was opened at the Secretariat Buildings, Hyderabad, as from 19th August, 1953.

With effect from 1st April, 1953, the Hyderabad State Bank ceased to be the Bankers to the Government of Hyderabad, and the Agreement executed on 6th Dai, 1352 F., was terminated. A fresh Agreement between the Government of Hyderabad, the Reserve Bank of India and the Hyderabad State Bank provided for the Hyderabad State Bank to act as the Agent of the Reserve Bank of India in Hyderabad State for the conduct of Government and Treasury business.

Mr. Pingle Venkatrama Reddy was elected Vice-President of the Board of Directors under Regulation 36(3) of the Hyderabad State Bank Act.

On the expiry of his term of office, Mr. M. R. Patny was re-elected as a Director of the Board under Regulation 35(2) of the Hyderabad State Bank Act.

Mr. Ramaswamy Aiyer, Financial Adviser to the Government of Hyderabad and Mr. T. K. Ramasubramaniam, Chief Officer, Department of Banking Development, Reserve Bank of India, were nominated as Directors of the Board under Section 16(3) of the Hyderabad State Bank Act vice Messrs. Dilsukh Ram and Mohamed Ahmed Mirza as from 1st April, 1953.

Mr. N. C. Sen Gupta, I.C.S., Deputy Secretary, Ministry of Finance, Government of India, was nominated as a Director of the Board vice Mr. Ramaswamy Aiyer as from 18th June, 1953.

Raja Pannalal Pitti was elected a Director of the Board under Section 16(5) and Regulation 38(5) of the Hyderabad State Bank Act with effect from 18th September, 1953.

Messrs. V. K. Dhage & Co., and Messrs. Sastri and Shah were re-elected Joint Auditors of the Bank for the year. They have jointly carried out the audit.

The net profit for the year ended 30th September, 1953, amounts to O. S. Rs. 19,10,267-11-4 which, with the sum of O. S. Rs. 1,59,126-14-3 brought forward from the year ended 30th September, 1952, makes a total of O. S. Rs. 20,69,394-9-7. This sum the Directors have decided to disburse as shown in the Balance Sheet. The balance of O. S. Rs. 4,75,394-9-7 in the Profit and Loss Account in the Balance Sheet is to be allocated as below:

	Rs.	a.	p.
To payment of a dividend at 5 per cent. per annum free of Income-tax ..	3,75,000	0	0
To carry forward to Profit and Loss Account for the current year ..	1,00,394	9	7
Total ..	4,75,394	9	7

The Balance Sheet of the Bank as on 30th September, 1953, the statement of the Profit and Loss Account for the year ended 30th September, 1953, together with the Report of the Auditors are annexed.

By Order of the Board,
K. P. R. MENON,
Managing Director.

Balance-sheet as at 30th September, 1953

CAPITAL AND LIABILITIES	O.S. Rs. a. p.	O.S. Rs. a. p.

RESULTS OF HYDERABAD STATE BANK SATISFACTORY

NOTABLE RISE IN DEPOSITS

THE Hyderabad State Bank (Managing Director: Mr. K. P. R. Menon, Hyderabad-Deccan) has had another year of satisfactory working during the twelve months ended 30th September, 1953. The Bank's deposits have registered considerable expansion, showing, as at the close of the year, a rise of over Rs. 2 crores, as compared with those at the end of the previous year. This improvement in resources has been judiciously utilised so that the gross income has gone up by Rs. 5.85 lakhs to a record level of Rs. 61.03 lakhs and the profit has been nearly maintained at the previous year's level. Though the allocation to the reserve fund has been reduced, the sum that has been transferred from out of the year's profit has been large enough to bring the reserve fund equal to the paid-up capital of the Bank. The dividend has been maintained at 5 per cent. per annum, to which level it had been reduced last year from 6 per cent. (made up of a dividend of 5 per cent. and a bonus of 1 per cent.) paid for 1950-51 and 1949-50.

It will be noted from the table published in the third column that the rise of Rs. 7.32 lakhs in interest and discount earned has been offset by the decline of Rs. 1.57 lakhs in commission and exchange earned, the increase of Rs. 5.66 lakhs in interest paid on deposits and borrowings and the rise of Rs. 1.06 lakhs in expenses. The rise in expenses is accounted for mainly by salaries and allowances which have gone up by Rs. 1.07 lakhs. It will be observed that the provision for taxation, which had been raised by Rs. 1.75 lakhs last year, despite the shrinkage in profit, has been further stepped up by Rs. 1.50 lakhs, although the profit has suffered a small recession again. The provision for taxation set aside out of the profit for 1952-53 is, it will be noted, double that provided three years ago, while the profit has fallen by over Rs. 5 lakhs during this period. This seemingly anomalous position is probably due to the fact that the Indian Income-tax Act has now been made applicable to the Hyderabad State, while, in earlier years, the Bank had the benefit of lower income-tax under the State Income-tax Act. The reduction in the allocation to the reserve fund from Rs. 7.50 lakhs to Rs. 5 lakhs has become inevitable in the face of the small decline in profit and the larger allocation to tax provision. It is, however, gratifying to find that the Directors have, in the last four years alone, added a sum of Rs. 38.75 lakhs, that is more than half the paid-up capital to the reserve fund to bring it in line with the paid-up capital, while keeping the dividend distribution at the modest level of 5 to 6 per cent., in contrast to the much higher rate paid by leading banks in other States.

As already observed, the deposits have expanded by Rs. 2.03 crores, thus making good, to some extent, the recession that occurred in the previous year. A part of the increase may have been due to the absorption of the Mercantile Bank of Hyderabad Ltd. with effect from 1st April, 1953, but the major portion of the expansion reflects the growing popularity of the Bank. This is further evident from the fact that it is the public deposits that have gone up and not those of the Government. The latter have, in fact, gone down. A break-up of the public deposits shows that the bulk of the rise has been in fixed deposits which have jumped up from Rs. 88.15 lakhs to Rs. 2.69 crores. There has been an expansion in current accounts also, but such has been modest from Rs. 6.15 crores to Rs. 7.10 crores. There has been a sizable rise in savings bank deposits too, from Rs. 58.88 lakhs to Rs. 76.67 lakhs, to be precise. The fall in Government deposits is indicative of the continued strain on the Government's financial resources. The rise in fixed deposits must have enhanced the Bank's ability to provide finance for the agricultural and business community of the State which is dependent on the Bank. Advances and bills discounted and purchased are lower by only Rs. 73.32 lakhs, but, consequent on the rise in deposits, their ratio to deposits is only 50 per cent. There has been a notable decline of Rs. 4.61 crores in investments, with the result that the ratio of investments to deposits has gone down from 44.3 per cent. to 10.7 per cent. The decline in deposits, however, has been nearly offset by a rise of Rs. 3.13 crores in cash balances. Following this, the ratio of cash to deposits is as high as 48 per cent. which is, perhaps, the highest level maintained by any bank. The Chairman of the Bank will, perhaps, explain in his annual statement to the shareholders the reasons for this excess liquidity.

A notable event of the year under review was the change in the Bank's status, consequent on the Reserve Bank of India becoming the banker to the State Government with effect from 1st April, 1953. From this date, the Hyderabad State Bank has nominally ceased to be the banker for the State. We advisedly say "nominally" because the Bank is still doing the Government and Treasury business, though only as the agent of the Reserve Bank of India. Another event of importance during the year was, as already mentioned, the taking over by the Bank of the assets and liabilities of the Mercantile Bank of Hyderabad Ltd. as from 1st April, 1953.

To sum up, the progress of the Bank during the year under review has been encouraging. The deposits of the public with the Bank have staged a handsome rise. Advances have looked up. Earnings have been higher and the dividend has been maintained. It is true that the net profit has been a shade lower than that for the previous year, but that is due more to the higher incidence of taxation than to any fall in the Bank's turnover. The reserves have been strengthened; these now stand at a level which is equal to the paid-up capital. All these are commendable achievements considering that the Bank's activities are mainly confined to an area which is industrially backward and which has had unsettled political conditions for quite a good number of years.

The following comparative table provides in a nut-shell the progress of the Bank in the last three years:

(In lakhs of O.S. rupees)

	For the year ended 30th September			
	1953	1952	1951	1950
Interest and discount earned	50.95	43.63	42.45	42.02

REPORT OF THE AUDITORS.

TO THE SHAREHOLDERS;

OF THE HYDERABAD STATE BANK.

We, the undersigned Auditors of the Hyderabad State Bank, elected under Regulation 53 (1) of the Hyderabad State Bank Act of 1941 (1350 F.), do hereby report to the Shareholders upon the Balance Sheet and Accounts of the Bank as at 30th September, 1953 (30th Aban, 1362 F.).

We have examined the above Balance Sheet as at 30th September, 1953 (30th Aban, 1362 F.), and the Profit and Loss Account for the period ended upon that date with the accounts and vouchers relating thereto and with the Returns submitted and certified by the Branch Managers which Returns are of Head Office and incorporated in the above Balance Sheet, and report (i) that we have obtained all the information and explanations we have required and that they have been found to be satisfactory; (ii) that the transactions of the Bank which have come to our notice have been within the powers of the Bank; (iii) that the Returns received from Branch Managers have been found adequate for the purposes of our audit; (iv) that in our opinion the Balance Sheet and Profit and Loss Account are drawn up in conformity with the law; (v) that in our opinion the Balance Sheet is a full and fair one and is properly drawn up so as to exhibit a true and correct view of the state of the Bank's affairs according to the best of our information and explanations given to us and as shown by the Books and Returns of the Bank; (vi) that in our opinion the Profit and Loss Account shows a true balance of profit for the period covered by the account; and (vii) that in our opinion Books of Account have been kept by the Bank as required by law.

SOME PROBLEMS OF COAL INDUSTRY

ASSURANCE AGAINST NATIONALISATION NEEDED TO PERMIT DEVELOPMENT

THE presidential address of Mr. Darab Cursetji Driver to the Eighth Annual General Meeting of the Coal Consumers Association, held in Calcutta last week, was, as usual, thought-provoking. It dealt with the various problems facing the coal industry and the consumers of coal and suggested remedies to them which deserve consideration at the hands of the authorities concerned. A significant feature of his speech was his analysis of the problems not from the consumers' angle alone but from the point of view of the industry, in particular, and the nation, in general.

At the outset, Mr. Driver gave expression to a feeling of (smug?) satisfaction by stating that Government was "seized of the problems of the coal industry and trade" and that it was "moving towards their rationalisation." The problem of rationalisation, according to him, rested on three legs. These were:

"(a) Regional supply of coal from the nearest source practicable to destination with consequent saving in freight to the consumer and wagons to the railways; (b) preparation of coal including proper grading, pricing according to its calorific value, etc., and where practicable beneficiation or washing of coal, improving its quality and giving it consistency in ash percentage thus enabling coal of a definite quality to be channelled to the consumers through a Marketing Board which would determine the right type and grade of coal for each industry; and (c) adequacy of transport."

Theoretically Sound

In theory, this is a perfectly sound suggestion which has been endorsed by several experts in the past. The problem of solving this problem is, however, its implementation. Who is to administer this rationalisation scheme? Apparently, a Government body, perhaps with the assistance of some unofficial advisers. Is the Government competent to administer such a complicated measure of control, the implementation of which requires initiative, foresight and rectitude? Inefficient administration of controls will, it is needless to add, result in encouragement of complacency among coal producers, high cost to consumers and disincentive to efficient coal miners. It will also provide no inducement to railways to improve their services and augment their capacity. Even the administration of the limited forms of controls now in force leaves much to be desired, as witness the remarks of Mr. G. A. S. Sim, Chairman of the Bengal Coal Co., Ltd., published in this journal ere now. Mr. Driver himself is aware of the weaknesses of this Government. Here is what he thinks of the Government's ability:

"The bureaucratic machinery works slowly, suffering secretarial delays at Delhi—change of ministers and staff, lack of interest and knowledge about things outside their secretarial routine, the sorry-go-round of files from one overworked official hesitating to decide to another, etc."

It is against this background one must view the suggestion for rationalisation in production and distribution of coal. When one does so, one will admit that it is very unrealistic to talk of rationalisation on the lines quoted above. The best way to serve the cause of consumers (and the country) is to let them have the free choice regarding the type, quality and source of supply of the coal they require. In these days of transport bottlenecks, no consumer would be so foolish as to buy coal from distant collieries, if he could get the right type of coal from a colliery nearer to him.

Movement of Coal

Mr. Driver, however, does not seem to mind the defects in the bureaucratic administration of controls. He would appear to have resigned himself, in a fatalistic manner, by saying that these defects are inevitable. Mr. Driver welcomed the decision of the Coal Board, with effect from 1st July, 1953, that no movement of coal, except selected A and B grades and coke, could be permitted from Bengal and Bihar coalfields to areas which could be best supplied from Madhya Pradesh or Vindhya Pradesh or Singareni (Hyderabad) collieries. Paying a compliment to the Coal Board on the way in which it has been enforcing this control, he observed: "That this restrictive measure is worked with discretion and elasticity in special cases speaks well of the realistic and practical outlook of the Coal Board."

That the wagons capacity should be increased has been the cry of coal producers and consumers for a long time past. Although there has been considerable progress in this direction, it is not enough. Referring to this point Mr. Driver said: "It is poor comfort to the consumer and the collieries who have suffered owing to the serious shortage of wagons to be told by statisticians that, in May, 1953, the number of wagons available for all traffic was 227,722, as against 216,883 in May, 1952, and that, in Jharia and Raniganga coalfields, for the six months of 1953, the average daily number of wagons loaded was 3,105, as against the guaranteed minimum of 2,900." He supported the suggestion of Lala Karam Chand Thapar, President of the Indian Chamber of Commerce, to make available 500 more wagons per day than those that were being allotted now. If the average turn-round of wagons is 9 days, an addition of 500 wagons to the daily pool will require 4,500 additional wagons. As for the finance for finding these wagons, Mr. Driver suggested that the Government could make a special grant of Rs. 6 crores. "It will be a happy idea," he said, "if the Government continued to give this special grant of Rs. 6 crores for a number of years, till, besides wagons capacity, sufficient loco, line, junction and yard capacity are built up to help transport. In this connection, he urged the Government to encourage the Indian manufacturers to increase their wagon-building capacity to three shifts by guaranteeing them orders for wagons for the increased shift for a number of years and by helping them to meet the additional capital expenditure for this purpose in all possible ways. He suggested, for example, that, as the relatively cheaper Indian steel might not be available for the extra shifts, the manufacturers should be allowed to import steel for the purpose, the difference between foreign and Indian prices being refunded from the Steel Equalisation Fund.

Washing of Coal

Encouragement of washing of coal serves a double purpose. First, it leads to an improvement in the quality of inferior quality coal and enables proper fixation of the price according to grades. Secondly, as washed coal will be free from a considerable percentage of ash, it will save wagon-space. At present, coal exported to Japan is being washed there. Mr. Driver suggested that instead of coal being washed down to about 12 per cent. ash in Japan, it should be washed in India itself by the Japanese who should act as washing contractors to collieries specialising in export to Japan. This is a good suggestion and it is to be hoped that the authorities will explore all possibilities of getting the co-operation of Japanese to implement it. The advantages will be a higher price for the washed coal, more employment to people in India and popularisation of Japanese method of washing coal.

In order to encourage Managing Agents of larger collieries to go in for beneficiation of coal and other mechanical aids to rationalise production of coal, Mr. Driver suggested that the Government should consider making a declaration that it would not nationalise the coal industry for the next 30 years. There is considerable force in this suggestion, for it is obvious that, so long as the threat of nationalisation hangs like a Damocles' sword, it will not be possible for the managements of coal companies to raise the large capital needed for financing these costly plans. If the Government could give a similar guarantee to foreign-owned oil refineries, there is no reason why it should not do so in the case of a basic industry as the coal.

Freight Rates

Mr. Driver also dealt, among others, with the question of freight rates charged by railways and coastal steamers. He suggested, at the outset, that some concession in freight should be allowed to coal carried on full train-loads. Then, the President highlighted the difficulties of the consumers in South India. Coal in some places in the South, he pointed out, was costing Rs. 70 per ton. It is stated that, owing to the high cost of coal, cement manufactured by the Dalmia Cement (Bharat) Ltd. in South India is Rs. 12½ higher per ton than for the cement made by those companies in the vicinity of coalfields. Consequently, Mr. Driver suggested that a committee of enquiry should be appointed to look into Indian coastal shipping freights and report to the Government as to why coastal sea freights, which before the war were less than the corresponding rail freight rates, were so high and what improvement could be expected. If the coastal freights could not be reduced, he wanted to know why Indian railways should not, from their profits, give a subsidy towards equalisation of sea freights and rail freights to the South and Saurashtra. Mr. Driver also urged a reduction in railway freight rates from pitheads to the port of Calcutta, with a view to helping the coal trade to maintain its competitive power in overseas markets. This would have to be done, he asserted, on the ground that the cost which was determined by the amenities provided for labour could not be reduced.

Control Prices

Another question of importance to which Mr. Driver alluded was the frequent violations of control prices of low-grade coals by the collieries concerned. Owing to large stocks at pitheads, these producers are willing to sell at distress prices. Mr. Driver said that the main beneficiaries of this discount were the middlemen. His solution to this problem was as follows:

"To legalise such breach of the control prices by reducing the control prices is one way of dealing with the problem, but a better way would be to declare the prices of Grades II and III etc. and slack as ceiling prices and let the proper price, in the present condition of unreliability of grade designations, be determined by negotiation between the consumer and the colliery. This will give much more elasticity to the prices for low-grade coal than the proposal to reduce the fixed prices and it will also provide an incentive to the collieries to be more careful about the quality and condition of the coal they supply. This may be tried out as an experiment and, if the experiment fails, it is much easier for the Coal Board to declare the ceiling prices as fixed prices rather than to increase the prices once reduced. When the time is ripe to do away with the other phases of control, the approach to decontrol should be made step by step in a spirit of trial and error, with sufficient notice in advance. We are sure that the ultimate decontrol in this fashion can be safely left in the hands of the Coal Board who already by their cautious policy of two steps forward, one step backward, have given proof of their practical sense and realistic outlook."

Mr. Driver made a passing reference to the question of relief to retrenched workers. At present, workers in collieries get a bonus equivalent to 4 months' wages. He suggested "that labour should be given two months' bonus on the basis of attendance and, out of the money equivalent to the remaining two months' bonus, one month's wages should be contributed per year on behalf of each, the worker and the employer, towards building an unemployment relief fund for the benefit of retrenched workers for a period of time." Thus, the benefit of four months' bonus will still go to the workers themselves without the employer benefiting by any part of it. He also suggested that a part of the Coal Mines Welfare Cess of about Rs. 74 lakhs, contributed every year by the coal consumers, might be utilised to feed the fund, apart from any special grants the Government might be pleased to make.

COAL RAISINGS, DESPATCHES AND STOCKS

The raisings and despatches of coal during the month of September, 1953, from all fields in India were approximately 2,971,516 tons and 2,576,515 tons, respectively. The stocks of the different grades of coal in Bengal and Bihar coalfields stood at 3.13 million tons approximately on 30th September, thereby recording a fall by 0.02 million tons from the level reached on 31st August, 1953.

CULTIVATION OF QUALITY JUTE

EXPORT COMMITTEE SUBMITS REPORT

THE Export Committee, set up in February last, by the Government of India to go into the problems of raw jute is reported to have submitted its findings to the Government of India on the 22nd inst. The Chairman of this Committee was Mr. K. R. Damle, Additional Secretary to the Government of India in the Ministry of Agriculture, and President of the Indian Central Jute Committee. On the Export Committee served Mr. I. G. Kennedy, Vice-President of the I.C.J.C., Dr. H. K. Nandi, Director of Agriculture, West Bengal, Dr. J. S. Patil, Director of Agriculture, Bihar, and Mr. B. C. Kundu, Director, Jute Agricultural Research Institute, Calcutta. Mr. K. C. Basak, Director, Economic Research, I.C.J.C., Calcutta, was the Member-Secretary of the Committee. The Committee was to enquire into the possibility of increasing the acreage under jute in zones where superior qualities could be grown, and of reducing the acreage where only inferior qualities of jute were grown. The Committee was also to give estimates of the probable costs of the various measures suggested by it and to indicate how the cost should be met.

The appointment of the Export Committee was a sequel to the warning uttered by leaders of the jute industry against the dangers of rapid increase in the area sown to jute in the post-Partition years without a proportionate increase in the outturn. While year after year the acreage under jute made rapid strides since 1948, under the "grow-more-jute campaign" no improvement was noticed either in yield per acre or in quality. An investigation conducted by the Indian Jute Mills' Association revealed that a good deal of the increase had come from areas where soil conditions, rainfall and water supplies just available for retting led to the cultivation of jute, low in yield and unsatisfactory in quality. Cultivation and expansion of these areas would be justified, it felt, only when abnormal prices and acute scarcity conditions prevailed and not when prices were low and demand was poor. It was also noticed that there were still extensive areas in India where soil, climatic and water conditions would make it possible for a high and increasing jute yield to be obtained from the land. When the Government's attention was drawn to these findings of the I.J.M.A., it appointed the Committee mentioned above for making a thorough study of the problem of jute cultivation.

Inadequacy of Good Seed

According to Press reports, the Committee appears to have made some notable suggestions. Although there is very little new in them to add to the information already known, the fact that they have received renewed attention invests them with added importance. Mention must be made, among these, of the suggestion to inaugurate a drive for improving the quality of jute. The Committee has pointed out, in this connection, that the total quantity of improved variety of seed produced annually in India is barely 3,000 maunds which is sufficient for sowing only 30,000 acres. As against this, the country's requirements of good seeds for cultivating the 19.5 lakh acres are nearly 200,000 maunds. The inadequacy of good seeds experienced by the jute grower has been a hardy annual and, although the question has been figuring practically in every session of the Indian Central Jute Committee, the progress made in eliminating the shortage has been almost negligible. The State Governments concerned, too, are responsible for this unhappy situation. In view of this indifference, the Export Committee's suggestion that State Governments should take up a specified area every year for the introduction of improved variety of seeds deserves full support.

With a view to seeing to it that no other type of jute except improved varieties would be permitted to grow, the Committee has suggested the need for enacting a Jute Seed Act by the State Governments. Under this Act, the Governments are required to declare the specified areas as "protected areas" for sowing good quality seeds. To begin with, two districts in each State should be declared, it says, as "protected areas" and the State Government should undertake the supply of improved jute seed to the growers in the specified area in exchange for the local seed produced by the growers which should be destroyed by the Government. In this context, the Committee has recommended the setting up of eight State farms of 300 acres each, three in West Bengal, three in Bihar and one in Uttar Pradesh and one in Orissa. The I.C.J.C. should also establish a seed farm for the production of nuclear stock of seeds.

As a long-term measure, the Committee has suggested that a detailed soil survey should be undertaken by the jute growing States with the object of concentrating jute cultivation on soil suitable for producing quality jute. It has, however, taken care to add that the drive for improving quality jute need not await the results of such a survey and the areas which are already known to have good soil should be brought under intensive cultivation and, with the progress of this survey, more and more areas should be brought under intensive cultivation.

Attention to Manure and Water

The suggestions noted above are on accepted lines and, therefore, should be implemented without delay. A point, however, needs to be stressed here. Mere supply of good seeds does not completely solve the growth of good variety jute. It should be supplemented with technical advice regarding the right type and measure of manure to be administered to each acre-plot. This is absolutely necessary, because experience shows that the use of good seeds, unaccompanied by adequate doses of manure and water has not yielded the expected results, thereby giving scope for cases where even the quality of the best seed supplied has been doubted by the farmers. The history of growing Coimbatore cane in India offers many instances of this type.

With regard to the extension of jute cultivation in Uttar Pradesh, the Committee has advocated a cautious policy. The problem in U.P. is that of effecting improvement in the quality of jute that is already grown in the State. The general standard of jute grown in the State is stated to be poor and, therefore, the State Government is advised to confine its attention to encouraging cultivation of jute in areas where there is sufficient rainfall for the growth of jute and where retting water is freely available. This advice is applicable to other States also where poor quality jute is being grown at present.

BIG RISE IN INDIA'S GUNNY CLOTH EXPORTS

Japan's re-entry as a buyer for the first time in the post-war era into the market for gunny cloth and a considerable decline in U.S. imports are the highlights of India's export trade in this commodity during January-August, 1953, according to the Indian Central Jute Committee.

Gunny cloth shipments during these eight months amounted to 913.5 million yards, indicating a remarkable improvement over 694.2 million yards and 775.8 million yards despatched, respectively, in the similar period of 1952 and 1951.

The Middle East and the Continental countries took less of Indian gunny cloth relative to the quantity purchased in the corresponding months of the previous year, while the Commonwealth countries and South America took more.

The biggest rise is indicated in the Argentine intake amounting to 264.170 million yards during January-August, 1953, as against 34.692 million yards and 200.868 million yards, respectively, during 1952 and 1951.

The U.K. purchased 83.287 million yards in 1953 as compared with 63.299 million yards in 1952, while Australian purchases doubled to 21.582 million yards from 10.943 million yards in 1952. Despatches to Canada slightly improved to 67.620 million yards from 64.097 million yards in 1952.

The U.S. offtake dropped to 384.505 million yards from 453.756 million yards in 1952 and 304.482 million yards in 1951. The decline this year has been largely due to consumer resistance to high price of jute manufactures.

ACCENT ON QUALITY CONTROL AND TESTING

Efforts by the jute industry to increase output and improve quality were mentioned at the annual meeting in Dundee of the British Jute Trade Research Association. Captain W. F. Keay, Chairman, said that in the past year 840 inquiries had been dealt with. An important development in the industry was that firms were now becoming much more conscious of quality control and testing methods, and had in a number of instances installed their own quality control and testing equipment.

Mr. H. Corteen, director of the Association's laboratories, said a market for a product was by no means secure for all time and the inability of a product to fulfil its purpose satisfactorily might open the way for alternatives.

DEVELOPMENT OF ROAD TRANSPORT

REDUCTION IN TAXES ON MOTOR VEHICLES ESSENTIAL

READ together, the addresses of Mr. M. R. Masani, President of the Indian Roads and Transport Development Association, and Mr. Lal Bahadur Shastri, Minister for Railways and Transport, at the twenty-fifth annual meeting of the Association, held in Bombay last week, give a clear account of the views of private *entrepreneurs* on the development of roads and road transport and the Government's policy thereon. Mr. Masani selected for special comment problems relating to restrictive licensing policies, desirability of scrapping Chapter IV of the Motor Vehicles Taxation Act, 1939, threat of nationalisation and crippling burden of taxation, in order to show how these have been vitiating the progress of the implementation of a safe and sound road policy calculated to develop rapidly the country's economy. Mr. Shastri, for his part, touched on every one of these problems, in his own inimitable way, and pointed out how the Government could not follow a course different from the one it was following in the existing circumstances.

Prefacing his address with a review of the existing conditions of roads, Mr. Masani described how deplorably low was the road mileage in India, as compared with that in the industrialised West. India, he said, had less than one-fourth of a mile of road per square mile of territory and, of this, only a trifle was available for all-weather use, while the U.S. had one mile and the U.K. two miles of good motorable road for every square mile. He further said that, while the U.S. had over 85,000 motor vehicles per lakh of population, and Britain and France over 3,600, India had only 93. The relative backwardness in India reflected in these figures is certainly a deplorable situation, especially when one bears in mind that the development of the nation both in the industrial and agricultural sectors is entirely dependent on the free availability of transport facilities. After all, has not a great writer once said that "transport is civilisation?"

Restrictive Licensing Policies

Mr. Masani then dealt with the problems facing the development of transport. The first of them, he said, was restrictive licensing policies under the Indian Motor Vehicles Act of 1939. This Act, according to him, had during its 12 years of operation caused severe fragmentation and discouragement of road transport. The restrictions, provided for in the Act, such as the cutting of each State into numerous regions and the adoption of a procedure for the issue of permits under which it was well-nigh impossible in many States for new vehicles to be put into operation, might at one time have been helpful to railways. But they could not any longer perform that function now under almost a different set of circumstances. Between the pre-war years, when the railways were running with a partial load, and the present day, when they were surfeited with traffic, there was a world of difference. Consequently, Mr. Masani was of the considered opinion that the restrictions only retarded the nation's march towards a better standard of life of the people. He, therefore, urged the deletion of Chapter IV of the Motor Vehicles Act. Mr. Shastri, however, did not think so. For, in dealing with this question in his speech, he thought the demand for deletion of the chapter was "sweeping" in character. He said that rail-road co-ordination was only one of the several objectives of the chapter and it was difficult for him to agree with a suggestion which can result, according to him, "only in chaotic competition among private operators and the ruin of many without any advantage to the public."

The President then dealt with the second impediment retarding the development of road transport, namely, the threat of nationalisation. Recalling the decision of the Government of the U.K. to hand back road-haulage to private operation and the inclination of the Planning Commission to discourage further incursions of the State into the field of road transport, Mr. Masani warned against the dangers of a further move towards nationalisation, without watching the results of such nationalisation in areas where it had already been taken. He opined that it might take a decade for any valid conclusion to be reached. Meanwhile, as the fear of a further extension of nationalisation had been applying a severe brake to free enterprise, as seen in the unwillingness of the road operators to go in for fresh capital investment in this sphere, Mr. Masani called for a firm declaration by the Government in unequivocal terms, that those who had invested in road services would have their capital safeguarded by the State. Referring to this issue, Mr. Shastri did not wish to enter into a discussion on the subject. He, however, pointed out that the Five-year Plan only envisaged a gradual expansion of nationalised passenger transport services in most of the States and that there was still considerable scope for private operators to run such services in large parts of the country. In the sphere of goods transport, he remarked that the State Governments had not so far made any noticeable inroads. He, however, revealed that, in reply to the recent enquiries from the Planning Commission, the State Governments had generally stated that their policy was to allow freight transport largely to be handled by private enterprise. It is unfortunate, however, that the Minister could not clear the air of the threat of nationalisation and his other observations did not go a long way in relieving the anxiety of private enterprise. Consequently, road transport in India will continue to remain starved of capital, as with threats of nationalisation no one would venture to risk his capital.

Crippling Burden of Taxation

The third stumbling block to which Mr. Masani referred was the crippling burden of taxation. He pointed out that, while an average motor vehicle in the U.S. paid $50.00 or Rs. 240 in taxes, in India, the unfortunate vehicle paid only Rs. 1,900! The anomalous situation created by the high level of taxation is evident by the fact that India's railways carried traffic at an average rate of 10 pies per ton-mile, whereas on motor transport, the Government taxation alone accounted for 18 pies to 24 pies per ton-mile. It is alleged, for instance, that the cost to Tata Chemicals of carrying their main products, such as bleaching powder and the like, from their factory to certain points in India, particularly around Calcutta, is often near enough to and sometimes greater than the cost of transporting them from Europe to such places. Surely, with high transport costs, many Indian industries cannot hope to thrive. This has been one of the main contentions of every industry. Mr. Masani, therefore, was right in expressing surprise as well as disappointment at the non-implementation of even the modest tax reliefs recommended by the Motor Vehicles Taxation Enquiry Committee. On the contrary, the Governments of Bombay and Madras, the two States for which the Committee had recommended lowering of taxes, have, instead, thought it fit to increase taxation further. Mr. Masani's remarks in this context are quite appropriate. He said that the heavier taxation in Madras had caused "stagnation in motor transport," as compared with the position in the other States. He held that, if the incidence had been lower, the number of vehicles and consumption would have expanded so much that the total revenue would have been greater than that yielded by the prohibitive taxes on the existing small volume of traffic. Thus dealing with this aspect, Mr. Masani observed:

"The annual motor transport revenue of India was less than Rs. 35 crores in 1949 and on that revenue depended primarily the country's ability to finance the Nagpur Road Plan. On the basis of the transport revenue of 1949 and the requirements of the Nagpur Road Plan, the M.V.T. Enquiry Committee's recommendations for immediate tax reliefs had to be modest, but the Committee wanted that, when more money became available in the public fisc, these taxes should be substantially reduced. The principles of a rational and permanent scheme, as embodied in the M.V.T.E. Committee's report, are these: The road-user should contribute reasonably to the general revenue of the country, such as through a 30 per cent. *ad valorem* duty on motor vehicle components and motor fuel. The level of total taxation should then be decided by adding to this contribution the rent, i.e., the legitimate share of road costs to be borne by motor transport. This would then result in the total incidence being governed by the volume of transport and the magnitude of the road bill. I must point out here that, from Rs. 35 crores in 1949-50, the revenue from motor transport has gone up to Rs. 57 crores to-day. The circumstances in which the level of taxes then recommended by the Committee were 'to be considerably reduced' have, therefore, now come into being. Under to-day's conditions, the rates would work out, on this basis, to 75 per cent. of what the Committee considered fair in the conditions obtaining in 1950. The Union Government, I submit, should insist on such a scale being adopted by the States. If there are any insuperable difficulties, the remedy is for motor transport taxation to be made a Central subject with a guarantee that the Union Government would distribute the total yield on the above principles. Action on these lines, the Association is convinced, cannot brook delay."

It is, however, interesting to hear from Mr. Shastri that the Ministry of Transport substantially agreed with a number of recommendations of the M.V.T. Enquiry Committee. But his justification of the heavy tax burden on motor vehicles on the ground that the State Governments with their multifarious development programmes in hand were finding it difficult to forgo a part of their present revenue is not fully convincing. For the States cannot expect to finance a greater part of the huge expenditure by means of taxing heavily only one or two sectors of the economy, particularly road transport. It was, however, to their credit, when he said that they had not turned down these proposals and that they basically agreed with the soundness of the policy enumerated by the M.V.T. Enquiry Committee. He assured, however, that the matter was still under consideration and held that decisions on matters of this kind could be arrived at only within the framework of the Constitution and with the consent of the State Governments and that this democratic process was necessarily slow. He felt that the final decision in regard to this matter would have to wait until the Taxation Enquiry Commission submitted its recommendations.

Referring to the stagnation in motor transport in Madras owing to high level of taxation, referred to by the President, Mr. Shastri drew the attention of the Association to the assessment of the Government of Madras of the position in the State as given in the following statement.

"The reputation which Madras State now enjoys as the State that collects the heaviest tax from motor vehicle operators perhaps ignores certain levies in other States such as octrois, which have been condemned in the strongest terms by the Motor Vehicle Taxation Enquiry Committee. Further, Madras State spends on roads more than 50 per cent. over and above what they collect as taxes of all kinds from motor vehicles. The low cost of operation per mile of motor vehicles in South India, which is the envy and the admiration of operators in other States, is due at least partly to the quality of the roads provided by the State. It does not appear quite correct to say that the number of public transport vehicles in this State has fallen recently, or that the new tax has reduced goods vehicle operation. What has actually happened is merely that permits which did not really correspond to vehicles actually on the road have been eliminated. On the other hand, figures obtained from the oil companies show that the sale of petrol is about twice what it was three years ago and that the sales of diesel oil have increased more steeply. There is no doubt, therefore, that the volume of motor transport has steadily risen and that its growth has not been retarded in this State by taxation or by any other reason."

The State Government's note above is indeed very encouraging. But may not one ask whether it could not have presented a still brighter picture had it paid attention also to the question of keeping the tax on motor vehicles at a level which is commensurate with their capacity to bear? For is it not a fact that the motor vehicle there is the heaviest taxed?

Road-Rail Co-ordination

The brochure on the aims and activities of the Indian Roads and Transport Development Association, brought out on the occasion of the Silver Jubilee, suggested a scheme for road-rail co-ordination. Under the scheme:

(a) Traffic on routes upto 100 miles would *normally move* by road, with freedom for railways to move traffic in full wagon-loads within this distance, if spare wagons were available after meeting long-distance needs;

(b) traffic on routes longer than 300 miles would normally move by rail, the freedom of road transport to operate on such routes being subject to the following conditions:

(i) that rates charged were not lower than equivalent railway rates,

(ii) that only selected and well-organised operators were given permits, for long-distance routes, and

(iii) full records of traffic were maintained, and

(c) routes falling between the 100 and 300-mile limits would be a free zone, with scope for healthy rivalry between road and rail services, the consumer being the sole judge as to which agency of transport was suitable for his requirements.

While on this scheme, Mr. Shastri held that its acceptance would involve "a modification of the Code of Principles and Practice regarding road transport formulated by the Transport Advisory Council." He wanted the Association to bear in mind that the Code of

MUTUAL LIFE OFFICES ASK FOR EXEMPTION FROM TAX

DISTINCTION BETWEEN "SURPLUS" AND "PROFIT"

THE mutual life offices in India have been contending for a long time now that they have been wrongly treated, for purposes of income-tax, on the same basis as proprietory insurers. Their main contention is that, as they do not trade for profit and as their activities are founded on the principle of "mutual" benefit, they should be treated on a par with the co-operative insurance companies which are exempted from income-tax. These arguments have been reiterated by the Association of Mutual Life Offices in India in the course of the memorandum which the Association has submitted to the Taxation Enquiry Commission.

Tracing the history of the taxation of mutual insurance companies, the Association points out how the companies remained exempt from income-tax till 1939. It may be mentioned, in this connection, that the Indian Government's attitude was apparently then based upon the decision of the House of Lords in *Styles' case*. In 1933, the British Parliament attempted to rope in mutual insurance companies for purposes of income-tax, for it enacted legislation to the effect that "profit or surplus arising from the transactions of the company or society with its members would be taxable as profits or gains in all cases where they would have been taxable as such if those transactions were transactions with non-members." The Indian Government, too, changed its attitude when it found that the British Parliament had made mutual insurers liable to tax. In 1939, it changed the law so that mutual insurers were brought within the scope of the income-tax law.

British Practice

This has been the position since 1939, although during this period a great change has taken place in the British practice which has exempted mutual life offices from income-tax. The change in British practice has been caused by the decision of the House of Lords in *Inland Revenue Commissioners* vs. *Ayrshire Employers Mutual Insurance Association Ltd.*, 1948, wherein their Lordships emphasised the distinction between "surplus" and "profits" and held that the "surplus was not profit within the meaning of the Income-tax Acts but merely represented the extent to which the contributions of those participating in the scheme had proved in experience to have been more than was necessary to meet their liabilities" and that the "balance or surplus was the contributors' own money and returnable to them." Commenting upon Parliament's attempt at taxing the mutual life office, Lord Macmillan stated in his judgment that it had "not the meritorious object of preventing evasion of taxation but the less laudable design of subjecting to tax as profit what the law has consistently and emphatically declared not to be profits." Notwithstanding this unequivocal judgment, which has, since it was delivered, been the main prop on which the *Indian mutual insurers' case rests*, the Indian Government has continued to tax mutual insurers.

No Profit

To revert to the Association's memorandum. The Association has emphasised that mutual insurers are "not, in fact, companies trading for profit but associations, the members of which have joined together to help one another mutually for the purpose of insurance." It is for this reason, the Association points out, that the co-operative insurance societies are exempted from income-tax. It adds:

"The special position of mutual associations in this matter has also been recognised in the Insurance Act; during the passage of that Act, the opinion was expressed that mutualisation was the first step towards nationalisation, implying recognition to the fact that such associations were not run for profits. Further, the members of the mutual insurance societies belong overwhelmingly to the classes who are themselves not liable to income-tax on their own income. The relief given from income-tax for insurance premiums (section 15 of the Income-tax Act) is in their case illusory. On the other hand, their small savings through insurance are taxed indirectly by the taxation of the surplus of mutual insurance companies. If these investments took any other shape involving a deduction at the source, they would be entitled to a refund. Such taxation, therefore, we respectfully submit, tends to discourage the habit of insurance, which should be fostered in our country in the interest of the lower income groups.

"We also respectfully submit that neither basic premiums nor the specific bonus loadings in the case of with-profit policies are an accurate measure of the cost of insurance but only estimates with a margin of safety. Further, the specific bonus loadings are not those which are expected to emerge in future valuations. If this were so, with-profits policies would cease to be attractive. It is our contention that the bonuses declared by mutual societies are steady and gradual releases of premiums collected in excess of the necessary amount as shown by the subsequent actual experience. Such returns of excess payment should not be treated as profits liable to tax. The position of mutual companies in this respect is somewhat different from that of propietory companies. The quantum of bonus given by the proprietory companies is dictated by business considerations of attracting an increasing number of customers and thereby increasing their trade profits and not by their nature and constitution. The mutual societies by their very nature cannot make any profits, since they trade with no outsider and as in co-operative insurance societies any excess charge made is returned to the members in the shape of reversionary bonuses. We may also be permitted to point out that this position is recognised under English and American law where mutual societies are exempt from taxation.

"May we also respectfully submit that the present taxation of mutual insurance companies is an anomalous attempt? All the reasons that lead to the exemption of co-operative insurance societies from tax also apply to mutual companies. We therefore urge that this anomalous position may be rectified and that the mutual companies be exempted from taxation in the same way and to the same extent as the co-operative insurance societies."

Bombay High Court's View

It is to be hoped that the Taxation Enquiry Commission will give a sympathetic consideration to the Association's plea for exemption from income-tax which, in addition to the fact that it is based on principles of economic justice, derives its strength from the British and American practice in relation to the taxation of mutual insurance companies. Although the Income-tax Investigation Commission, which examined the case for exemption of mutual insurers from income-tax, did not commit itself to a definite recommendation on the subject, it emphasised that it was "doubtful" whether there could be "any profits" arising out of the business by mutual life insurance companies. The Bombay High Court remarked, in another context, that it was "not a very laudable intention of the Legislature to have taxed mutual companies." These considerations will, it is to be hoped, weigh with the Taxation Enquiry Commission in deciding upon the mutual insurers' plea for exemption from income-tax.

INSURANCE IN NORWAY

The compulsory mutualisation of all proprietary life assurance companies in Norway has been recommended by the Royal Commission which was appointed by the Government in 1947 to investigate the future of life insurance in that country. Among other terms of reference was one which empowered the Commission to examine three alternatives: (1) to keep the present organisation unaltered; (2) to reduce the number of insurance companies to two companies transacting different kinds of life assurance business; (3) to nationalise the life assurance companies. After thorough investigation, the Commission unanimously declares that nationalisation of the companies is neither necessary nor desirable. A majority of the Commission makes the reservation that the question must be reconsidered if the future organisation and management of the companies is not altered, that is, if the companies are not transformed into mutual companies. The Commission has drafted, in a special Bill, provisions for solving the legal and practical questions which arise in connection with the transformation of the proprietory insurance companies into mutual organisations.

A minority of the Commission finds that no special Bill is necessary to enforce mutualisation and that the Insurance Inspection Board, which is already functioning in Norway, is enough to enforce such transformation. The minority, however, suggests that life offices might be allowed to exist as proprietory companies. After referring to the important role which proprietory insurers have played in the past, the minority points out that a proprietory company can procure the necessary capital for its foundation more easily than a mutual company.

Although the Commission is thus split on the question of compulsory mutualisation, it is unanimous in paying tributes to the Norwegian insurance industry. It is unanimously of the opinion that life assurance in Norway has reached a high standard, both as compared with other branches of industry in Norway and as compared with life assurance in other countries. The companes have been given credit for having passed through two world wars and other severe economic crises, not to mention the heavy fall in the rate of interest during the last 15 years, without their solvency being impaired.

TRITON INSURANCE CO., LTD.

A sizable improvement in premium income and profit level shared by all the three departments—fire, marine and miscellaneous—has been recorded by the Triton Insurance Company, Ltd. (Managing Director: Mr. G. M. Mackinlay, Calcutta), for the year ended 31st December, 1952. The net effect of this encouraging performance is that the overall profit has more than doubled to Rs. 2.51 lakhs. The dividend has been comfortably maintained at 35 per cent.

In the fire department, the net premium income amounted to Rs. 17.97 lakhs, as against Rs. 15.11 lakhs in 1951. The net losses paid and outstanding were somewhat higher at Rs. 5.31 lakhs. The department yielded, during the year under review, a profit of Rs. 2.31 lakhs as against Rs. 1.90 lakhs in the previous year.

The net premium income in the marine department improved by Rs. 0.9 lakh to Rs. 15.33 lakhs. Claims were higher at Rs. 9.76 lakhs as compared with Rs. 7.80 lakhs in the previous year. The chief feature of the working of the department is that, as against a loss of Rs. 8.210 in 1951, it was able to show a small profit of Rs. 12,575 during the year under review.

In the miscellaneous department the net premium income improved from Rs. 1.16 lakhs in 1951 to Rs. 1.26 lakhs in 1952. Claims, paid and outstanding, rose from Rs. 0.38 lakh to Rs. 0.43 lakh. The department recorded a profit of Rs. 0.53 lakh, as against Rs. 0.49 lakh in the preceding year.

After charging expenses of management and providing for taxation, depreciation and sundry items, there was a balance of Rs. 2.51 lakhs, which, together with Rs. 0.35 lakh, brought in from the previous year, makes a total of Rs. 2.86 lakhs. The payment of 35 per cent. dividend will absorb Rs. 2.01 lakhs, leaving a sum of Rs. 0.85 lakh to be carried forward.

Announcement to Clients of THE NATIONALE HANDELSBANK N.V.

An agreement has been reached between

NATIONALE HANDELSBANK N. V.,
AMSTERDAM
and
THE BRITISH BANK OF THE MIDDLE EAST
LONDON
(Established in London 1889)

concerning the business of the former's branches within the Republic of India.

Under this Agreement the Nationale Handelsbank N.V. agree to relinquish the assets and liabilities of their Bombay and Calcutta branches to The British Bank of the Middle East who will thereby assume in full the obligations and responsibilities of the said branches of the Nationale Handelsbank N.V.

Therefore, in accordance with this Agreement, the Nationale Handelsbank N.V., Bombay and Calcutta, herewith announce that, as from 31st December, 1953, they will discontinue operating as a Banking Company in the Republic of India.

The British Bank of the Middle East announce that as from 1st January 1954 they will assume in full the responsibilities and liabilities of the Bombay and Calcutta branches of the Nationale Handelsbank N.V. and will continue to render to their customers the good services and facilities formerly enjoyed.

The offices of The British Bank of the Middle East will be those at present occupied by the Nationale Handelsbank N.V., viz.,

BOMBAY: 314, Dadabhai Navroji Road, Fort.
CALCUTTA: 1, Royal Exchange Place (East).

Nationale Handelsbank N.V. **The British Bank of the Middle East.**

NEW KAISER-I-HIND SPINNING AND WEAVING CO., LTD.

LALA KAILASHPAT SINGHANIA'S ADDRESS AT ANNUAL MEETING

PLEA FOR REMOVAL OF DUTIES ON CLOTH

DESCRIBING the present situation in the textile industry as gloomy, Lala Kailashpat Singhania, Chairman of the New Kaiser-I-Hind Spinning and Weaving Co., Ltd., pleaded, in his address to the shareholders of the Company, at their Annual General Meeting held in Bombay on 18th November, 1953, for the abolition of export duty on coarse cloth, as also the excise and additional excise duties on all varieties of cloth. It was only then, Lala Kailashpat felt, that mills would be able to market their goods at prices which would leave some small profit to them. He also drew the attention of the shareholders to the effect of the production control on the working of the Company's mills. The multi-point sales tax, he contended, had practically ruined the trade in Bombay State. He, therefore, urged the Government of Bombay to do away with this measure.

The following is the full text of Lala Kailashpat's speech:

"GENTLEMEN,

"The balance-sheet as at 31st March, 1953, and the profit and loss account for the year ended 31st March, 1953, as also the Directors' report pertaining thereto, have been in your hands for some time and with your permission I shall take them as read. I now propose to make a few observations on the working of your mills during the year under review.

"As you are aware, the year 1952-53 has been one of considerable difficulty to the textile industry. The prices have been going down from month to month and it was becoming increasingly difficult to market the goods at prices which were remunerative to the mills. Your mills are equipped for making *saris* and *dhotis* specially for Bengal, Bihar and U.P. markets, but, in view of the steep fall in the demand of these items in September-October, 1952, it was necessary to switch over to other lines like sheetings, chaddars, longcloth, sucies, prints, etc., which were hardly paying. Due to the steep fall in prices of prints and other fancy cloth, it was not possible for us to employ our recently installed printing and mercerising plants profitably. The decontrol of distribution and prices of the remaining items of cloth also did not help. The incidence of the additional excise duty on cloth, which the Government of India levied with effect from 15th February, 1953, further worsened the position. On top of all this, your mills were compelled to use foreign cotton, which is much costlier than the Indian varieties, in view of the fact that the quota of the Indian cotton allotted to us was not sufficient for running the two shifts for the whole year. The prices at which the goods made out of foreign cotton were sold, were such that they hardly left any profit. Since 25 per cent. of your mills' capacity was engaged on foreign cotton, the overall picture regarding profits for the year compares unfavourably with that of the last year.

Restriction on Production

"During the year under review, the Government of India imposed restrictions on the production of *dhotis* by mills with a view to helping the handloom industry. As your mills have always been making very popular qualities of *dhotis*, this restriction on production of *dhotis* has adversely affected the profits of your mills. Your mills had also to consume and carry forward the high-priced American and East African cottons. This too has affected the net result of the working of your mills.

"In view of the difficult situation created by the fall in demand and continuous fall in prices, combined with irksome restrictions on production and other adverse factors, every possible effort had to be made to make the working of your mills as economical as possible. The repairs and renovations of machinery in both the spinning and the weaving departments were carried out according to plan, and air-conditioning and humidity control systems were perfected, and the stores consumption was rigidly controlled. Utmost economy was also effected in the employment of labour by introducing rationalisation wherever possible. It was recognised that the shift from the sellers' market to buyers' market meant our producing quality goods, if we were to compete successfully, and I am glad to be able to say that the quality of your *saris* and *dhotis*—the main items of your manufacture—is now such that there are hardly any other comparable *saris* and *dhotis* in the market and as such our products are able to fetch much better prices. All this resulted in better working at lower cost and it is on account of this factor that it has been possible to show a profit of Rs. 11,43,127-15-8 for the year under review. As stated above, this profit is much less, as compared to that of last year, but you will readily agree that the same is in keeping with the lower trend of textile profits in the year when some of the mills have even sustained losses and the profits in the case of other mills for the year are much lower than those of previous years. Even this result would not have been possible but for the improved production figures which, in turn, reduced our cost of production. In fairness to labour employed in your mills I must say that the workers gave us full co-operation and did a fine job in bringing up production and reducing waste in all departments. Your Directors have all along followed a policy of keeping good and friendly relations with your labour, knowing full well the value of contented labour, which policy, as you will see, has shown good results in the year under review.

Burdens on the Industry

"I have already referred in my last year's speech to the fresh burdens the industry has been called upon to bear. Apart from any relief in these various burdens, like Employees' Provident Fund, Employees' State Insurance, multi-point sales tax, excise duty, etc., the Government of India, as stated above, imposed an additional excise duty for giving help to the handloom industry. This has further aggravated the situation. The multi-point sales tax has practically ruined the trade in Bombay State, as will be seen from the fact that, in the days of slump, there are huge stocks in the mill godowns. If there had not been the multi-point sales tax, the accumulated cloth stock with the mills would have been held by thousands of dealers and the condition of the cloth market would not have been as demoralised and precarious as it is today. I only hope that the Government will take a lesson at least now and do away with this levy of multi-point sales tax which, apart from cutting across the profits, also serves to reduce the volume of business by eliminating the various 'buffers' that the trade serves between a manufacturer and the consumer.

Export Trade

"The textile production in the country is at its highest level. With the reduced purchasing power of the consumer and with various imposts which go to increase the cost of the cloth to the ultimate consumer, huge stocks of cloth have accumulated with all the mills. The situation is very gloomy indeed. The only way to keep up this high production is to export more and more out of India. The exports in the current year have not been as anticipated, mainly because the consumer overseas is not prepared to pay the high cost of manufacture of Indian cloth together with the export duty. The export duty on medium cloth has been recently removed by the Government and some business is taking place in medium varieties mainly with the U.K.; but the Government

TAXATION SYSTEM IN INDIA

REFLECTIONS ON SOME OF THE QUESTIONS RAISED BY ENQUIRY COMMISSION—IV

(By R. K. DALAL, B.Com., F.S.A.A., F.C.A.)

THE Commission wants to know (question 76) whether the principles underlying the assessment under section 34 of the Income-tax Act need any modification. Section 34, as readers are aware, deals with income escaping assessment.

The principles underlying this section are that the Government should not lose its revenue on account of incomes escaping their tax due to deliberate or innocent omission or by giving larger reliefs not warranted by the Act. This safeguard is found in most tax systems of the world and is not objectionable, so long as its operation is made fair and equitable and not capricious and arbitrary. The periods within which the assessment can be reopened are rightly made four years in case of ordinary escapement due to error, mistake, misjudgment, etc., and eight years in case of fraud and deliberate understatement of income by the assessee.

But there are one or two aspects which need careful and sympathetic consideration. Where books and records are called for after four years or eight years as the case may be, how long should the assessee be expected to maintain his old records so as to provide against the contingency of an action under section 34? And absence of records for any of the past years even so late as eight years or four years may entail rejection of the accounts for the year under question and arbitrary estimate which, in nine cases out of ten, is a leap in the dark to the dire disadvantage of the assessee.

Failure to Submit Returns

Under section 34(1), if an assessee fails to make a return in response to a public notice under section 22(1), the period of limitation prescribed is eight years and in any other case four years. In practice, it is found that action under eight years' rule is taken against a non-resident, residing outside the jurisdictional area under the Indian Income-tax Act, who fails to make a return in response to the notice under section 22(1). It is not, perhaps, appreciated that a non-resident staying outside the jurisdiction of the Act cannot be seized of the fact of the public notice given within the jurisdictional area. In such a case, the legal position should be that his responsibility for omission to file a return can only arise if he does not respond to a particular notice given to him under section 22(2). Failure to give such a notice does not entitle the Income-tax Department to resort to the provisions of section 34(1) and apply the limitation of eight years to an assessment. This matter also needs to be clarified by an express provision in section 63.

There is an English case (*Whitney* vs. *C.I.R.* (10 T.C. 88) at 105-108) in support of the view that a non-resident is not under an obligation to give a voluntary notice that his income is liable to super-tax. In order to make him liable, the Court held that the Commissioner must give him specific notice. The Court further held that, if the non-resident had no obligation, there was no failure on his part. Similarly, here, if under section 22(1), there was no obligation upon a non-resident to make a voluntary return, unless direct notice was served on him under section 22(2), the period of limitation contemplated in section 34(1) (a) does not apply, for there is no failure to make a return. Such cases must be governed by section 34(1) (b) and the period to issue notice under section 34 must be limited to four years only.

The provisions of section 34 giving powers to the Income-tax Officer to issue a notice within eight years in case of failure on the part of the assessee to submit return in response to the public notice is rather harsh. The time limit should be four years, instead of eight. In case of failure to disclose full particulars, it should be made clear that the failure intended to be penalised is one which is wilful, deliberate and not innocent.

Another aspect of this section which is keenly felt by the assessee as being inequitable, harsh and unfair is that, while incomes which have escaped tax can be reassessed and revised even after four or eight years, incomes which have been obviously overtaxed cannot similarly be agitated, except in an appeal to be filed within a prescribed period. Often a reasonable deduction is overlooked both by the Department and the assessee; a claim which is otherwise valid, is not pressed at the time of assessment but subsequently realised when it is too late; an over-assessment last year comes to light because of dissimilar treatment given to the item this year by a new Income-tax Officer. In these circumstances, right of revising past assessments in the light of action this year should be given to the Income-tax Officer—if necessary with the previous authority of higher officer who must be strictly instructed to act judicially and sympathetically and not arbitrarily and capriciously with an ultimate eye on revenue aspect of revision.

Assessment Procedure (Question 77)

The assessment procedure can be simplified by simplifying the tax system in such a way as to enable the ordinary assessee to act by himself. Secondly, sympathetic liaison officers should help the small assessees to understand the way in which returns should be made up and their rights and responsibilities. The quick disposal of their assessments and provision for easy payment of tax should be the responsibility of these officers. The system which needs an expert's assistance only in big complicated cases and those of upper brackets of taxpayers who can afford to employ them is to be commended rather than the one which needs an expert at the elbow in every small or big case of assessment. Further, the personnel should be sympathetic, judicial and helpful—anxious to collect revenue quickly and promptly but not unmindful of the difficulties of the taxpayer. Above all, the personnel must instil confidence in the taxpayer both about the authorities' fairness and incorruptibility, instead of fear complex that prevails now, with corruption alleged to be rampant in its ranks. The rate should be one instead of three rates as now—one for salary, the rate of the year in which tax was deducted; the earned income rate, and the unearned income rate involving abstruse computation which no one can check and verify easily without several calculations. Any improvement in this direction will at once help bring about a reduction in the large personnel now engaged to collect the taxes.

In order to reduce cost of compliance with the regulations, the Income-tax Officers should always be ready to guide the assessee and should try to give whatever reliefs due to the assessee under the Act, even if the assessee has omitted to do so. There should be no attempt on the part of the Income-tax Officer to reject the result as shown by the books of the assessee, unless there are serious defects in the accounts. Sufficient opportunity should be given to the assessee to prove his book result. Mere fall in gross profit by itself should not be the ground for rejection of accounts.

Appellate Tribunal (Question 78)

Should the Appellate Tribunal have powers to enhance assessments in the same manner as Appellate Commissioners have? Certainly not.

The Tribunal has rightly been not given powers of enhancement like the powers of the Appellate Assistant Commissioner. Why should the Government vest such executive powers in the Tribunal when the Commissioner of Income-tax has been given wide powers of revision where the assessment is to the disadvantage of the revenue? How does this square with justice when the appellate authority, finding over-assessment on the face of the record, is unable to give any relief on the ground that he cannot travel beyond the scope of the grounds of appeal? In fact, the power of the Appellate Assistant Commissioners to enhance assessment should also go, if the Commission is desirous of making them a judicial body, anxious to do justice instead of remaining in the good books of the higher authority for pay, promotion and transfer by confirming assessments or enhancing them with an eye to improve and better their prospects. It is no use trying to impress upon the public that the Appellate Assistant Commissioners are judicial officers anxious to do justice to the assessee, when experience points the other way and the ever mounting number of appeals to the Tribunal attest the irrefutable fact. Few Appellate Assistant Commissioners have dared to displease the Department or to give relief in large cases where he knows the Department is likely to file an appeal against his order. He is always anxious to find out whether, if he decides the appeal in favour of the assessee, the Department will go in appeal. One cannot expect independent judicial temperament from such personnel manning now the appellate posts. The fact is so crystal clear that he who runs may read, if he so intends, instead of shutting his eyes or blinking at facts. In short, not only that no power should be given to the Tribunal for enhancement of tax, but the existing power of enhancement vested in the Appellate Assistant Commissioners should also be taken away if the judicial temperament is to be developed and not the executive-cum-judicial that obtains at present.

Sufficient power has been given under the Act for enhancement of assessment right from the Income-tax Officer to the Commissioner of Income-tax. The Appellate Tribunal should not be given power of enhancing assessment like the Appellate Assistant Commissioner. If the power is given to the Income-tax Appellate Tribunal to enhance the assessment, it will lead to great uncertainty and there will not be any finality of the assessment even after a number of years. If, however, power for enhancement of the assessment is given to the Tribunal, it should also be given power to reduce the assessment in similar circumstances where there is over-assessment in its opinion. But such a power to the Tribunal would mean the reassessment of the income, which is not desirable in the interest of justice looking to the judicial nature of the proceedings before the Tribunal.

(To be continued)

(Concluded from previous page)

should also remove the export duty on coarse cloth to make it attractive to buyers of the countries of the Indian Ocean who are our main purchasers of coarse and medium cloth. The Government should also, in fairness to the industry and the consumer, remove the excise and additional excise duties on coarse, medium, fine and superfine cloth. It is only then that mills will be able to market their goods at prices which will leave some small profit to them. As it is, with to-day's cloth prices and huge accumulation of stocks, I wonder whether any mill will be able to make any worthwhile profits during the current year.

"With these words, gentlemen, now I propose 'That the audited balance-sheet and profit and loss account of the Company for the year ended 31st March, 1953, together with the Directors' report thereon, be and they are hereby adopted.'"

U.K. CYCLE MAKERS TO GIVE EVIDENCE BEFORE INDIAN TARIFF COMMISSION

The British Motor Cycle Manufacturers' Union have decided to represent the views of British cycle makers at the next enquiry into the continuance of protection to the cycle industry in India, to be taken up shortly by the Indian Tariff Commission. This decision was announced by Mr. H. M. Palin, Director of the Union, at the Eighteenth Cycle and Motor Cycle Show opened in London on the 14th inst.

Announcing the decision, Mr. Palin stated that India held the seventh place as a buyer of British cycles. He pointed out that recently the Government had imposed severe restrictions on British cycle imports and hoped that they would be eased soon. "Quite apart from restrictions for economic reasons," he continued, "we have to surmount a 60 per cent. protective import duty in the Indian market, a duty designed to protect and help the Indian bicycle manufacturers who, with the assistance of British factories, have established a growing manufacturing industry. Here, again, there is always a tendency for the local manufacturer to demand of his Government a large measure of protection which, when the industry is in its infancy, may often be justified. To expect this protection to continue indefinitely, however, is unreasonable. There is a vast market for bicycles in this great sub-continent—a market adequate to accommodate both Indian and the imported product."

Mr. Palin further pleaded that a reduction in the Indian protective duty will go a long way towards reducing costs and prices of cycles to the Indian consumer and thought that it would not harm the Indian industry which "is now well established on its feet and with which we are already co-operating." He urges the British makers of cycles to concentrate on lowering costs and prices so as to enable them to expand their market in India.

The value of cycles imported into India from the U.K. rose from Rs. 1.84 crores in 1950-51 to Rs. 3.53 crores in 1951-52. In the following year, however, it declined to Rs. 3.14 crores. In the four months ended July 1953-54, cycle imports into India amounted in value to Rs. 67.63 lakhs as against Rs. 1.34 crores in the same period a year ago. It is this fall of 50 per cent. in imports which must have prompted the British cycle industry to send its representative to India for representing its case before the Tariff Commission.

The latest notification issued by the Chief Controller of Imports, Madras, says that licences issued to established importers of cycle parts for July-December 1953, are not valid for importing cycle bells, cycle lamps, cycle carriers and cycle grips.

THE TATA POWER COMPANY, LIMITED

SPEECH DELIVERED BY THE CHAIRMAN, MR. J. R. D. TATA, AT THE ANNUAL GENERAL MEETING OF THE COMPANY ON WEDNESDAY, THE 25th NOVEMBER, 1953.

GENTLEMEN,—The year under review may be characterised as satisfactory from the operating and financial viewpoints, but one of retarded progress so far as future planning and expansion are concerned. The effects of the low 1951 monsoon were felt during the first five weeks of the year, after which the satisfactory rainfall of the 1952 season made it possible to discontinue the rationing of electricity introduced in the previous dry season. However, staggering of mill and factory holidays had to be retained and the "Power Pool," set up during the previous year, continued to function and contributed towards the maintenance of normal electricity supply throughout the 1952-53 dry season.

Since I addressed you on the last occasion, the two new railway generating units of 12,000 kw. each have been put into operation and the railway power plant is now capable of meeting all rail traction requirements. The first of the three 18,000-kw. units of the Bombay Government's Chola plant was started up for a short run early in September this year, and it is expected that this unit will be in commercial operation by the end of 1953, followed by the other two units at intervals of about two to three months each. It is understood that the Bombay Government is agreeable to having its plant operated as part of the Tata Grid system and negotiations are proceeding for the purchase of the station output, which will be passed on, without profit, to our consumers.

I indicated last year that the new Trombay plant, along with a new receiving station to serve the southern portion of Bombay Island, would probably be in operation during the first half of 1956. This forecast was based on the assumption that orders could be placed for the principal items of plant about the beginning of 1953. Unfortunately, the delay on the part of the Government of Bombay in finalising the documents for the extension of the Hydro licences and for the new licence for the Trombay thermal station and the difference of opinion which has prevailed between Government and ourselves in regard to the capacity to be installed at Trombay have prevented us from completing negotiations with the World Bank and, until recently, from placing firm orders for plant. It is, therefore, now unlikely that the Trombay plant can be brought into regular operation before the end of 1956.

I am sorry to have to report that our efforts at convincing the Government of Bombay of the need to install both generating units of 50,000 kw. each, one immediately after the other, have failed. Government have adhered to their decision to grant permission for the installation of only one unit in the first instance, leaving the question of the second unit for later consideration.

I do not propose to take the time of this meeting by discussing the details of this unfortunate controversy, but, in fairness to the Hydro Companies, I feel I must mention at least some of the basic facts.

Our case and the facts on which it rests are quite simple. It is recognised by all, including the Government of Bombay, that there is a large pent-up demand from industry and other consumers which could not be met in previous years. This demand exceeds the whole capacity of the Bombay Government's new plant at Chola.

It is also admitted that the "un-staggering" of factory hours for which there is a persistent demand from labour would require about 38,000 kw. Thus, the installation at Trombay of only 50,000 kw., as directed by the Government of Bombay, will until Koyna begins to generate power, leave a totally inadequate margin of only 12,000 kw. to meet the balance of unsatisfied demand, the further demand which is already building up, emergencies such as would result from plant breakdowns and a possible monsoon failure. Hence our recommendation for the installation of two units totalling 100,000 kw. at Trombay.

The Government of Bombay's decision, on the other hand, is based on two main assumptions, namely, that the demand will not grow at the rate at which our past and current experience shows that it will, and that the Koyna Project can be built at such a speed that it will generate electricity by 1957. The Government of Bombay, therefore, contend that, if a second unit is put up at Trombay, it will have to be shut down almost as soon as completed and as, under the Electricity (Supply) Act, any generating plant forming part of a grid system which has to be kept idle is to be allowed its depreciation and maintenance charges, plus a net return of 5 per cent. on capital, the electricity consumers would be unnecessarily burdened with such charges.

Both these assumptions are controverted by our own experience in building and operating large hydro-electric plants over a long period of years, as well as by the advice of our own experts and of our technical consultants whose competence is undisputed.

In any case, whatever may be the date on which Koyna is brought into operation, the cost to the consumer of providing the overheads and return on the second Trombay unit would be no more than .6 of a pie per kw. hour. This is indeed a negligible premium to pay as insurance against the heavy losses which would be caused to the City and the State by a recurrence of power shortage, particularly as the extra cost would have to be borne for only a few years until the rising demand absorbs the full capacity of Koyna and necessitates the re-commissioning of the thermal units. It is, furthermore, a premium which the textile and other industries of Bombay have expressed their willingness to pay.

Our recommendation to Government in favour of installing 100,000 kw. of capacity at Trombay, over a period of about three and a half years, took all these and other factors into account and represented the carefully considered view not only of our own technical staff but also of our consulting engineers abroad, of the technical advisers of the World Bank and, we believe, also of the experts of the Government of India. The Government of Bombay's rejection of the unanimous advice tendered by such a formidable array of experts is a matter which arouses deep concern on many counts.

It will, we are convinced, result in a continuance until about 1960-61, of the power shortage from which Bombay and the area covered by our licences have suffered for so many years; it will impede the normal economic growth of the City and the State of Bombay; it will necessitate the maintenance, or resumption, of the system of staggering factory hours which causes inconvenience to thousands of workers; it will increase the ultimate cost of the project by about Rs. 50 lakhs; finally, it represents a gamble on rainfall which, if it proves wrong, may result in severe loss to industry and distress to labour in the State.

Your Company and its sister companies have in the past been unjustly blamed for the power shortage which has plagued the people and industries of the State since the end of the war. I consider it a duty, therefore, to sound this note of warning and to state for the record that the responsibility for any loss in production, wages, etc., which may be suffered by the people of the State of Bombay as a consequence of the present decision, will rest elsewhere than on the Tata Hydro-electric Group.

Before I leave this subject, I would like to refer to the provisions of the Electricity (Supply) Act, 1948. That Act contemplated the establishment of an Electricity Board charged with the duty of promoting the co-ordinated development of the generation, supply and distribution of electricity within the State. The Board was to be an autonomous body consisting of persons with administrative and commercial experience and specialists such as electrical engineers and accountants. The position that has arisen in connection with the Trombay Project emphasises the necessity of setting up such a Board at an early date.

With regard to the question of finance for the Trombay Project, you are aware that the Central Government and the shareholders of the three Hydro Companies have approved of increases in capital to the aggregate extent of Rs. 3 crores and invitations to the shareholders of the three Companies have been sent out for subscribing to the new capital.

Preliminary negotiations with the World Bank were initiated originally on the basis of a two-unit plant and the voluminous data required by the Bank were submitted, analysed and approved. However, as the Bombay Government has ruled against the installation of a second unit, fresh data on the basis of a single unit are in the process of being compiled and submitted to the World Bank. The negotiations for the loan have, therefore, been delayed. I may add that it was not possible for the Companies originally to apply for a loan on an alternative basis of two units or one, as the Bank would not have entertained such an application based on conflicting data in respect of such matters as the demand for power, the availability of supplies from Koyna, financial statistics and servicing of the loan, etc.

In the context of the heavy financial requirements of your and other companies in the Tata Hydro Group, to finance capital expenditure at Trombay and elsewhere, I wish to take this opportunity of endorsing the remarks made by the Chairman of the Federation of Electricity Undertakings of India in his recent speech in which he has urged the Government of India to sanction, without further delay, an increase in the basic standard rate of 5 per cent. allowed as a return to power supply companies under the Electricity (Supply) Act. There is an undeniable case in favour of such an increase and, in view of our own urgent need to raise additional funds for expansion purposes, I sincerely hope that the Government of India will come to an early and favourable decision in the matter.

New tariffs for electricity supply, which I indicated last year were being designed to take care of higher operating costs, have not yet been finalised, in the absence of a clear indication what the power and energy from the Government plant at Chola would cost and the basis on which payments would be made. As an interim arrangement, however, a general 12½ per cent. increase has been applied to all industrial consumers from 1st May and to the distributing licensees from 1st June, 1953. The resultant increase in gross revenue on this account for the remaining period of the year amounted, in the case of this Company, to approximately Rs. 2,23,000. It will be appreciated that the effect of this interim increase will only be felt during the current year. The cost of the Government and railway power will be passed on to all consumers in the shape of a thermal surcharge. Thereafter, the new tariffs will be designed when all the governing factors are known.

Our rights and obligations under our licences and the rights and obligations of the various distributing licensees, including the B.E.S. & T. Undertaking, under theirs have been the subject of a discussion between the Association of Electrical Undertakings, Bombay Province, representing those licensees and ourselves. In view of a possible conflict of interests, as the areas of the two sets of licences cover the same territory, a general understanding has been reached that there will be mutual consultations between our organisation and the distributing licensees in the case of large-scale consumers within the territory so as to avoid, as far as possible, a duplication of capital costs and so as to co-ordinate the supply to the public in the general interests of the public and in the most economic manner. We believe that the consultation so initiated will be continued and will help towards establishing a sound and healthy system of electrical development within the territory.

It is with pleasure that I record our appreciation of the valuable services of our officers and staff throughout a difficult year.

I now beg to move the first resolution before the meeting.

WORLD DEMAND FOR PAPER

The world demand for paper and pulp will increase heavily during the next few years, if peaceful progress is not interrupted, according to Professor K. T. Streyffert, head of the Institute of Forestry in Stockholm. He has been in charge of a large-scale investigation into the problem, carried out under the auspices of the U.N. Food and Agriculture Organisation in Rome. Professor Streyffert emphasises that Sweden and other pulp-producing countries in Europe can count on a widening of their export markets, especially in South America, where the rapid cultural and industrial expansion is continuously creating new demands. Although many of the less developed countries have started to build up forest industries of their own in order to utilise local resources, progress is relatively slow and supplies are lagging far behind the demand.

Indian Cycle Industry Makes Impressive Progress

HIGH LEVEL OF PROTECTION JUSTIFIED

Consumers Benefit Through Larger Supplies and Lower Prices

HIND CYCLES' NOTABLE CONTRIBUTION

THE question of continuing the protection to bicycle industry was taken up for consideration by the Indian Tariff Commission on the 26th and 27th inst., when a public enquiry was held. A survey of the industry's progress, its problems and its needs will, therefore, be appropriate. This has been very ably done by the Cycle Manufacturers' Association, Calcutta, representing the major sector of the industry, in its memorandum to the Tariff Commission.

A study of the memorandum shows that the industry has made commendable progress and justified the high level of protection granted to it. The credit for this goes, in large measure, to the Hind Cycles Ltd., the biggest and the pioneer unit, with a rated capacity of 180,000 cycles a year. This unit, which began its operations well over a decade ago, has made rapid strides in recent years, especially after the protection granted in 1949. It to-day manufactures almost the whole cycle; to be precise, it is producing 95 per cent. of the parts required for making a bicycle. It hopes to cover even the balance of 5 per cent. in the near future. In 1951-52, this Company produced 130,053 bicycles, as against the Tariff Commission's estimate of 84,000 and the country's total output of 192,000 bicycles.

Some of the achievements of the industry are the following: There has been an impressive expansion in the size of the industry and in its production. The wages paid by the industry per worker are the highest in the country. The average earning of a worker employed by the Hind Cycles, for instance, is Rs. 194 per month. The prices of Indian-made cycles are strikingly cheaper than the imported cycles. The quality, too, compares favourably, as evidenced by the expanding demand for such cycles and the repeat orders received from Nepal. The major portion of the profit earned has been ploughed back and utilised for expansion. Despite the increase in production costs, the ruling prices of cycles are lower than those in 1949, a positive proof of the fact that the industry has been endeavouring to pass on the benefit of protection to the consumer, an achievement which few post-war protected industries can claim.

As regards the future, the industry apprehends intensive competition from abroad and has put forward some facts to justify this fear. It, therefore, wants a higher level of protection. Besides this, it wants a restriction on imports of bicycles, as well as components, on the ground that there is a large unutilised capacity in the country. Another suggestion put forward by the Association under reference is that the Sen-Raleigh Industries Ltd. and the T. I. Cycles of India Ltd. which have been established to make cycles in this country in collaboration with British cycle manufacturers, must be directed by the Tariff Commission to carry out their manufacturing programme according to the schedule approved by the Government at the time when they were started, so that the objective of encouraging a full-fledged cycle industry may be realised at an early date.

Text of Memorandum

The following is the text of the Association's memorandum (referred to above) to the Tariff Commission:

"The present protection to the bicycle industry was granted in the year 1949. As a result of the recommendation of the Tariff Board, the protective duty of 24 per cent. was raised to 60 per cent. in case of imports from the United Kingdom and to 70 per cent. in case of imports from other countries. From the facts given below, we are convinced that but for this protection, the cycle industry would not have progressed to the extent it has done during the period 1949-52.

"The bicycle industry has registered a substantial progres in quantity, quality, price and other factors such as payment of labour charges and supporting ancillary industries. The production has increased during this period by about 200 per cent. There has been a progressive reduction in prices of cycles and cycle parts, in spite of overall increases in prices of raw materials, labour, stores, etc. The quality has been accepted as completely satisfactory by the trade and the consumers. The industry has not only fulfilled the expectations of the Tariff Board and the Government of India, but has also passed on the advantages of protection to the consumer.

"Besides achieving substantial increase in production, reduction in price and improvement of quality, the bicycle industry can be proud of achieving remarkable progress in other spheres, such as payment of wages to labour and supporting ancillary industries.

"To substantiate the above statements, we give below certain facts and figures of production, quality, price and other important aspects, such as labour earnings and offtake of supplies from ancillary industries:

Year	Production: Total	Production: Hind Cycles only
1949	67,000	62,548
1950	1,01,136	99,544
1951	1,20,266	1,06,202
1952	1,92,000*	1,30,053

* Approximately.

(Please refer to Chart No. 1).

"As the Tariff Commission is, perhaps, aware, the Hind Cycles Ltd. and the Hindustan Bicycle and Industrial Corporation, Ltd., the only two plants for manufacturing complete cycles, have been manufacturing more than 95 per cent. of the parts required in the bicycle. To this list of components, the Hind Cycles has added the manufacture of free-wheels in its own workshop and has also put up an automatic plant for manufacture of bicycle chains. This plant is under erection and it is hoped that the chains will be offered to the market before the end of 1953. Rated capacity of the Hind Cycles Ltd., is more than 1,80,000 a year. The Hindustan Bicycle and Industrial Corporation Ltd., has not been able to achieve even half of its capacity due to want of demand.

"The Sen-Raleigh Industries Ltd. and the T.I. Cycles of India Ltd. have started assembly of bicycles and have already put their products in the market. Their programme is to manufacture progressively various components of bicycles and it is expected that both of them will be manufacturing the majority of parts with the capacity of about one lakh of bicycles per year in the near future.

"The Atlas Cycle Industries Ltd. has also put its 'Eastern Star' brand bicycle in the market and this Company's latest report indicates that they have also a programme of manufacturing components for their bicycles.

"The India Cycle Co., Ltd., have also put their bicycles in the market, but besides the complete bicycles, of which they are manufacturing frames, chain wheels, cranks, handle bars etc., they are manufacturing lamps and bells in large quantities.

"Messrs. Shah Industries Ltd. of Bombay and the Indian Cycle and Wire Industries of Delhi have started manufacture of spokes and nipples and the market is getting sufficient supplies of spokes and nipples from these two parties.

Steel Balls

"The National Bearing Company, Ltd., Jaipur, and the New Haven Steel Ball Corporation, Bombay, have both started manufacture of steel balls required in a bicycle and the cycle market is getting their supplies from both these sources in sufficient quantities.

"The Indo-Belga Engineering Company, Ltd., Ahmedabad, is manufacturing hubs and pedals on the basis of 500 pairs per day. Their capacity is to manufacture 1,000 pairs per day of both these items, but due to decreasing demand, the production is not maintained on the rated capacity of their plant.

"The New Haven Steel Ball Corporation Ltd., besides the plant for manufacturing steel balls, has got a number of Grindlay automatics, with a capacity to manufacture all turned parts, such as hub axles, hub cones, pedal cones, pedal axles, bottom cups, fork rings, etc., in mass quantities, but the Company has not been able to run even half the capacity due to paucity of demand.

"Messrs. Nundy and Company of Calcutta have started manufacturing various types of mudguards and it is expected that they will also start manufacture of rims in a short time.

"The Gobindo Sheet Metal works are also engaged in manufacture of various small components.

"The parts manufacturers of East Punjab are manufacturing various parts such as hub axles, hub cups, bottom cups, pedals, mudguards, forks, chain adjusters, seat pillars and most of the other small parts, but their production programme has to be adjusted according to demand. Due to heavy imports, many of these units have been compelled either to suspend or close manufacturing activities.

"The rated capacity of manufacturers of small parts is more than the requirements of the country, particularly in case of hubs, pedals, mudguards, forks, B.B. cups, hub axles with nuts and pedal axles, but the expected development and expansion of production have been held up due to very slack demand in the market.

Accessories

"The India Cycle Company, Ltd., Calcutta, are manufacturing bells and pumps. Messrs. Surajan Singh Mehtab Singh, Delhi, are producing battery lamps, oil lamps and reflectors for cycles. Similarly, the Metal Goods Manufacturing Company, Ltd., of Banaras, are also manufacturing bells. There are several other small factories producing bells, lamps and carriers.

"The Hind Rubber and Cycle Company, Bombay, Narsons Cycles Ltd., Calcutta, Senco Engineering Works, Calcutta, United Overseas Corporation of Calcutta, and several other small parties are manufacturing handle grips, both rubber and bakelite, and pedal rubbers. Messrs. Melhotra and Company, Delhi, have started manufacture of saddles in Delhi.

Tyres and Tubes

"Cycle covers and tubes are being manufactured by Dunlop Rubber Company, (India) Ltd., Firestone Rubber Company, Ltd., and India Rubber Company, Ltd., in sufficient quantities. Rated capacity of manufacturers of cycle accessories is more than sufficient to meet the requirements of the country; but the expected development and expansion have been held up due to lack of sufficient demand in the market.

"From the above facts, it will be seen that the cycle industry is now manufacturing complete cycles and all the components and accessories and the Hind Cycles Ltd., the biggest manufacturing plant, is completely independent of imports so far as components are concerned. It will, therefore, be seen that India is now manufacturing all the parts and accessories of bicycles.

Parts in a Bicycle and Those Manufactured in India

"We give below the list of parts required and manufactured in India:—

"Frames, forks, handle bars, pedals, rims, hubs, mudguards, chain wheels, cranks fire-wheels, chains, spokes and nipples, and small components such as bottom brackets, highdraw bars, breaks, B.B. rods, cranks, chain adjusters, cottor pins, all nuts and bolts and steel balls, bells, pumps, carriers, handle grips, pedal rubbers, brake rubbers, and tyres and tubes.

Quality

"The quality of Indian bicycles has now improved to such an extent that it can compare with any foreign bicycles of similar range. This is substantiated by various facts, viz., (1) that, in spite of maximum imports in the years 1951 and 1952 in the history of the cycle trade in India, the Hind Cycles Ltd. has been able to sell more than a lakh of bicycles in each of these years. From the available records of trade in the country, this has been found to be exceptional in so far that the maximum sales of any one brand of even a popular foreign bicycle has not reached this figure in any of the previous years; (2) there is a persistent demand from the dealers all over the country for stamping each and every part with the name of 'Hind'; and (3) there is a good response and repeat orders from Tibet to the initial quantity of export made to that country.

Price

"The Indian cycle industry has exercised a definite check on prices of its product, in spite of fluctuations of prices in the market of foreign bicycles depending upon the fluctuations in imports. In fact, the Hind Cycles Ltd. has progressively **reduced its prices** from 1948 to 1952. (See chart No. 1 on page 1010). We give below the table of prices since 1948 to 1952, together with discounts allowed to the trade and net prices to the trade:—

	Gross price			Net price
1948 ..	Rs. 130/-	f.o.r. destination less	2%	Rs. 127.4
1949 ..	Rs. 130/-	,, ,, ,,	8½%	Rs. 118.1875
1950 ..	Rs. 125/-	,, Bombay ,,	10½%	Rs. 114.375
1951 ..	Rs. 135/-	,, ,, ,,	13½%	Rs. 116.775
1952 ..	Rs. 135/-	,, ,, ,,	13½%	Rs. 116.775
1953 ..	Rs. 135/-	,, destination ,,	13½%	Rs. 118.500

Spare parts	Net price 1948 Rs. a.	1953 Rs. a.	
Hubs	5 8	6 0	per pair.
Handle bars	20 0	18 8	per pair.
Pedals	5 8	3 8	per pair.

"The number of available cycles and cycle parts in the years 1951, 1952 and 1953 being more than the actual demand of the country, the trade, as well as the manufacturers, had to sell cycles and cycle parts below their landed cost. Some of the less-known brands of foreign bicycles, which were imported in huge quantities in the year 1950 and 1951, had created a crisis in the market, with the result that such brands of bicycles, though of foreign make, were sold below landed cost. In case of components, there was a time in the market when articles like spokes and nipples and chains were sold much below landed cost and importers had to suffer great deal of losses in these items.

Ploughing Back

"The bicycle industry has followed the pattern recommended by the Government of India and Tariff Commission of ploughing back the profits in expanding the capacity of their unit resulting in substantial increase in production and employment. The table below shows the total block, labour employed and their average earnings from 1949 to 1952. These figures of average earning, etc., are taken from the Hind Cycles Ltd., which, being the major manufacturing unit, provides representative example.

Year	Block: Additions in the year Rs.	Block: Total Rs.	Number of workmen employed	Average earnings per month Rs. a.
1949	8,10,108 5 4	42,60,042 9 0	950	133 3
1950	2,90,902 4 4	45,51,340 11 9	1,070	158 11
1951	8,98,171 4 9	54,40,205 2 11	1,147	179 9
1952	6,11,663 6 3	60,60,789 8 4	1,233	194 0

Labour

"The above figures of average earning of the labour and its progressive increase show that the wage of a daily paid workman in the cycle industry is the highest in India, as will be seen from the attached graph. (See chart No. 2). In the major producing unit of complete bicycles, namely, the Hind Cycles Ltd., about a dozen daily paid workmen are paying income-tax, and further, more than 440 workers are the shareholders of the Company.

"From the above facts and figures, it will be seen that the cycle industry has not only justified the protection given to it, but has not taken undue advantage of shortage in some period and the protective duty, but, instead, has passed on the advantage of this protection to the public, which is corroborated by the fact that the prices have been kept at the same level; nay, in a way, they have been reduced, even though prices of all raw materials and labour have gone up and there have been increases in prices of most of the manufactured articles in the country.

Tariff Board Targets and Actual Production

"We give below the targets worked out by the Tariff Board for the various periods and actual production of the Hind Cycles Ltd. :—

	Tariff Board estimates	Actual production
1949-50	55,000	67,543
1950-51	70,000	99,544
1951-52	84,000	1,30,053

Imports

"The table below shows the imports of cycles and cycle parts yearwise for 1948-49 to 1952-53:—

	Complete cycles	Cycle parts Rs.
1948-49	2,61,302	1,50,94,000
1949-50	2,66,148	1,50,19,000
1950-51	1,60,491	90,42,000
1951-52	2,83,100	1,44,30,000
1952-53	2,56,491	1,39,50,000

CHART NO. 1

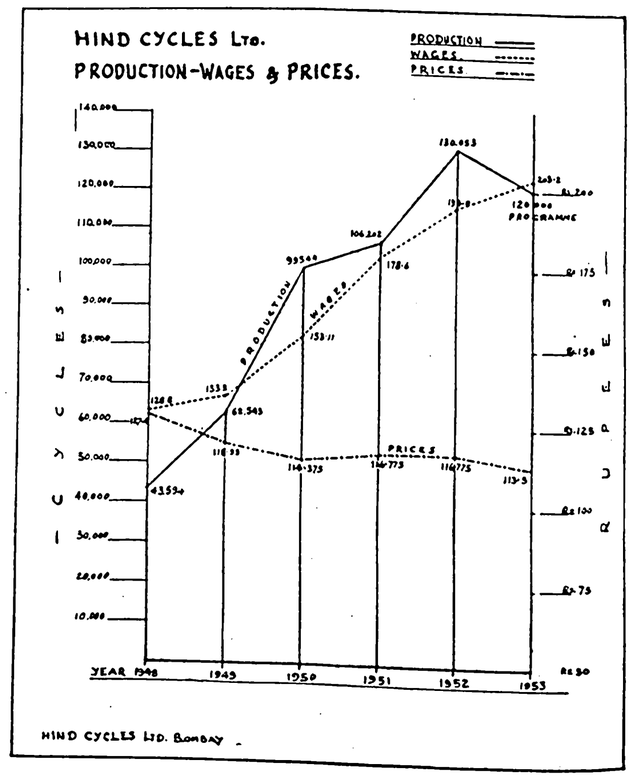

CHART NO. 2

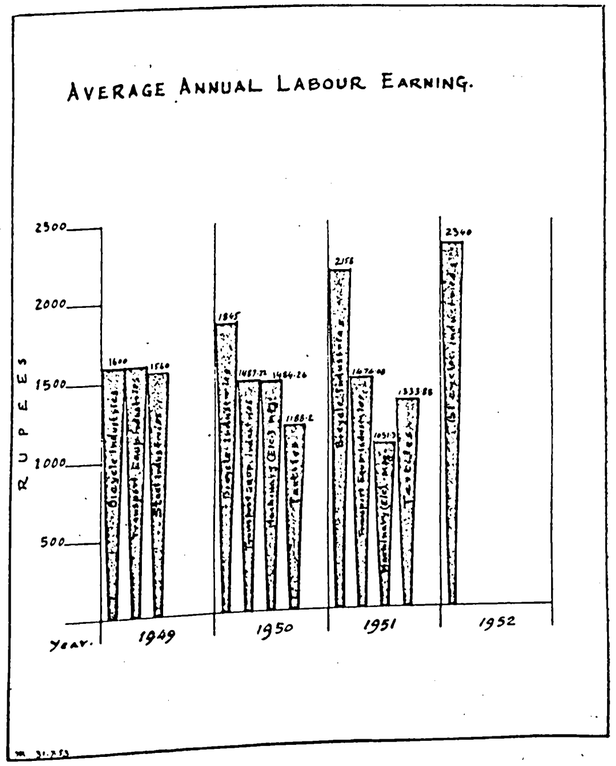


Stock of Indigenous Product

"The cycle factories have to carry large stocks of unsold cycles and parts, which will be seen from the fact that the Hind Cycles alone had to carry, and is still carrying, heavy stocks. A stock of 23,995 bicycles was carried in 1949 and of 37,423 bicycles at the end of 1952. This has made it obligatory on the cycle industry deliberately to reduce the production and it will be seen from chart No. 1 that, as against the production of 1,30,000 bicycles in the year 1952, the Hind Cycles Ltd. had to reduce its programme to 1,20,000 in 1953. This had to be done by closure of the third shift and by discharging about 200 workers. The Hindustan Bicycles of Patna had to suspend production and is now engaged only in nominal production. The manufacturers of parts had also to face the same crisis. The Indo-Belga and the New Haven Steel Ball Corporation Ltd. had also to curtail various items of their production. The cycle industry expected to develop and expand its production in such a way as to fulfill the targets set out by the Planning Commission, but it is found that, due to paucity of sales, the production, instead of being increased, had to be deliberately reduced.

Price Trend

"It will be seen from chart No. 3 that, as soon as the number of available cycles and cycle parts reaches a figure of about 3 lakhs, not only the prices have a tendency to sag, but it is found that there is very poor movement of goods and, in spite of offering cycles and parts at very low prices, there is no buyer in the markets. Reduction of price is not so much a cause of worry to manufacturer, but complete want of demand affects the morale and enthusiasm of the manufacturers, who are compelled to suspend, reduce or close production. In the first half of 1953, even though import licences are only on restricted basis, the prices have continued to reach lower levels and the offtake compared to production is poor.

Sales Difficulty

"From the above tables, particularly the figures showing closing stocks, it will be seen that even though an Indian manufacturer improves the quality, so as to be on par with foreign product and even though the price is progressively being reduced, it is difficult to sell such standard articles and it results periodically into heavy accumulation of stocks. Bicycles and bicycle parts are considered to be articles essential for use of the common man and as such, an acceptable quality article should have a ready sale, because of its suitable price and standard quality. In the case of the bicycles industry, in spite of these facts, sales have always been sporadic and this uncertainty about the disposal of bicycle parts is a feature, which affects adversely the development and expansion of production on desired lines.

"This has been amply proved by the fact that one of the two complete bicycle units has to be closed down and the other had to close one shift and reduce production due to accumulation of heavy stocks. The position of manufacturers of parts is so precarious that a number of units, including well organised ones, had to suspend their production.

Causes

"We are of opinion that besides the low purchasing power of the country, imports of bicycles and bicycle parts have played a decisive part in the development of the industry, both complete cycles and cycle parts. The estimates of consumption by the Tariff Board have, acording to us, proved to be on the higher side, because from chart No. 3 it will be found that, as soon as the number of bicycles available in the market reaches a figure of about 3,00,000 total, the prices sag to such an extent that not only the indigenous manufacturers, but even importers have to sell their goods practically at par and in some cases even below landed cost, as will be seen from the following table:

	1951				1952				
	May	*Aug.*	*Dec.*		*Mar.*	*June*	*Dec.*		
	Rs. a.	Rs. a.	Rs. a.		Rs. a.	Rs. a.	Rs. a.		
Hercules	.. 221 0	207 0	204 0		202 0	185 0	195 0		
Phillips	.. 209 0	193 0	197 0		190 0	175 0	193 0		
Hind	.. 140 0	135 0	130 0		125 0	118 0	110 0		
Hubs	.. ..	..	14 8		13 8	12 12	10 14		
Pedals, Phillips	.. ..	..			7 4	6 4	5 14		
Spokes	..		6 12		6 4	5 10	5 12		
Chains	.. 3 2	3 6	3 2		3 2	2 12	3 0*		

* Hardly any buyers.

Conclusion

"From the facts and observations given above, we are of the opinion that the bicycle industry would have been effaced out of existence but for the protection granted by the Tariff Board in 1949. We are further of opinion that, in view of (i) exceptional behaviour of the cycle industry of passing on the advantages of protection to the trade and consumers and substantive expansion of production and improvement in quality, (ii) poor demand due to purchasing power being lower and (iii) possibility of producing sufficient number of bicycles and bicycle parts in the country, the present protection of 60 per cent. protective duty on imports from the U.K. and 70 per cent. on imports from countries other than the U.K. must be continued for a further period of three years.

"It has been agreed in all quarters that expansion of and support to cottage and small-scale industries is the only way to create more employment. The question of employment is to-day looming large in all deliberations of the Government and is a source of serious anxiety to all concerned. As stated above, expansion of small-scale industries is one of the few methods by which employment can be increased.

In a recent conference at Delhi, manufacture of bicycle parts and small watches have been considered to be two of the items, which should necessarily be taken up as items of development of small-scale industries and community projects also.

Protective Duty Must Be Raised

"It has been admitted that nucleus for development on these lines is existing so far as the cycle parts manufacturing is concerned. We are, therefore, of opinion that, in order to give impetus not only to achieve full production of existing firms, but to encourage expansion of manufacture of cycle parts, the protective duty on all cycle parts must be increased to 80 per cent.

"From the figures and charts given above, it will be seen that there have been violent fluctuations in prices and offtake of cycles and cycle parts. As shown in the graphs and figures, the policy of import licence is instrumental for the downward trend in the expansion of this industry, both complete cycles and cycle parts. We are, therefore, of the opinion that the Tariff Commission should include quantitative restriction of imports on the basis of consumption and production, as a measure of protection, the ultimate target being complete elimination of imports of cycles and cycle parts. We are firmly of opinion from the experience of the last ten years that industrial development of India cannot proceed on desired lines (which in themselves are moderate), unless the State takes such measures as to ensure disposal of industrial production. The usual method followed by even the highly industrialised countries like the U.K., the U.S.A., the U.S.S.R., Germany and Japan is the adjustment of and ban on imports of articles manufactured in the country.

Quantitative Protection Essential

"We are of opinion, therefore, that quantitative restriction of imports as a measure of protection is not only essential, but unavoidable in the present circumstances, particularly when, on the one hand, the purchasing power is dwindling, while, on the other, the cost of living index in the industrial towns is on the increase. The unavoidable feature of paucity of demand resulting from this ever increasing cost of living, which is reflected in the manufacturing cost of the articles cannot be remedied, unless a bold policy of quantitative restriction of imports is followed in case of an industry which has a rated capacity and which has justified its existence and which can claim preferential treatment on the basis of its exceptional behaviour during the last protection period. On the other hand, we are of opinion that, if protection by way of duty is not accompanied by restriction on imports, not only will there be a complete dislocation of the Five-year Plan but its development will also deteriorate to lower production resulting in further unemployment.

Prices May Be Controlled

"In order to allay the fears of the possibilities of price increase in case of quantitative restriction of imports, we are of opinion that the bicycle industry will welcome a strict price control on the basis of cost worked out by the Tariff Commission.

"We request the Tariff Commission to consider and attach appropriate importance to the other important sector of this question. We are of opinion that the trade, meaning the established channel of trade, is bound to be one of the important sections which would influence the development of this industry, because, as stated above, it is not so much the price, but want of offtake through organised channels which has been responsible for the downward trend in the expansion of the bicycle industry in the years 1952-53.

"We suggest that, in consultation with the importers and cycle dealers of the port towns of Bombay, Calcutta and Madras and non-port towns like Delhi, Kanpur, and Nagpur, the Allocation Scheme sponsored by the Hon'ble Shri T. T. Krishnamachari, should be expanded. We are of opinion that this can be done by extending the scheme so as to cover the entire production of all the four or five manufacturing units and allocating their products to established dealers and importers on the basis of their offtake in previous years. This scheme should provide for uniform prices and rates of discounts so as to satisfy both the importers and the small dealers in the mofussil. This scheme should further provide for inducing the manufacturers to market their production only through the normal trade channels. This, in our opinion can be the only substitute for shrinkage of trade, which is bound to result due to restriction of imports. We, however, beg to submit that any steps in this direction be taken only in consultation and agreement with the trade.

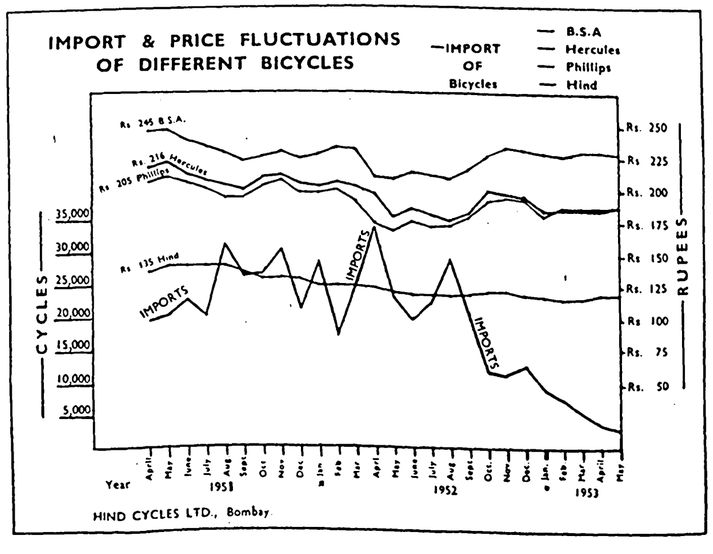
Co-ordinate Supply of Components

"We suggest that a machinery be set up to co-ordinate supply of indigenous components to manufacturers of complete bicycles, the scheme, of course, providing for proper standardisation and inspection and approval by the manufacturers of complete bicycles.

"We are of opinion that the time is ripe for setting up the Development Council under the Industries (Development and Regulation) Act for the bicycle industry.

"Adequate provision should be made for obtaining equal facilities of importing essential stores, raw materials and components to all units engaged in production of cycles and cycle parts.

CHART NO. 3



A Welcome Development

"Before concluding, we would like to make mention of a new development which has taken place since the report of the last Tariff Board enquiry. Two well-known British firms have finalised arrangements with Indian concerns to put up plants for manufacture of cycles and cycle components. We have to submit that this development is the result of the protection granted to the cycle industry by the Government. It is a welcome sign from the point of view of the industrial development of the country. More technical know-how to the bicycle industry will be forthcoming and India will be in a position to manufacture in sufficient quantities all her requirements in cycles and cycle parts during the period of the first Five-year Plan. We suggest that facilities to expedite their programme of progressive production be given to these firms by allowing imports of machinery, so that, as per scheme drawn out by the Government at the time of giving permission to these two firms, they may be fully equipped to start and carry out manufacturing programme of all components required in the bicycle.

"The Five-year Plan has included in the targets of production the above two firms, which had submitted their programmes of production. The very fact that they have been included in the targets of production implies that there will be actual genuine production of parts on the basis of a programme, which would enable the country to be self-sufficient in manufacture of cycles and cycle parts and not only mere assembly from imported components.

Excessive Imports Given

"We are compelled to make the above observations in view of the fact that the Government of India in July-December, 1953, period has given import licences to these firms on the basis of Rs. 12 lakhs for every quarter, which means that import licences on the basis of 72,000 bicycles for each unit will be given to them. Further, these import licences have not any conditions attached with regard to the import of any particular parts. It was agreed, in a joint conference of the manufacturers and the Government, that imports of components will be allowed to such firms on the basis of their programmes of production, ultimately to result in tapering off the imports, so as to enable these firms to manufacture most of the components in their factories. Import licences were so far given on that basis, but, as stated above, import licences given for July-December, 1953, period have omitted in all cases restrictions on particular part or parts. We feel that such a licensing system would induce the manufacturers to rely more on imports of components than concentrate on genuine manufacturing activities. We are further supported in our apprehension by the fact that British manufacturers have recently reduced their prices by 10 per cent. for components.

"Liberty to import any components, combined with this offer of reduction in prices by British manufacturers, will naturally result in the import of even those components, which are programmed to be manufactured by these units. If this is allowed to happen, the aims of the Five-year Plan to increase wealth by increasing production and thus offering more and more employment are bound to fail. The Five-year Plan aims in certain industries (in which the bicycle industry is included,) to achieve self-sufficiency during the Plan period. The executive action, similar to one stated above, is likely to have effect quite contrary to the aims of the Plan. We request the Tariff Commission therefore, to look into this matter thoroughly, wih a view to encouraging expansion of genuine manufacture of bicycles and bicycle parts in the country and not merely make available and put on the roads more bicycles irrespective of the fact whether they are manufactured in the country or made out of components imported from abroad.

"We submit the above observations, with a view to impressing upon the Tariff Commission the necessity of executing their policy of expanding and helping genuine production in place of mere assembly plants, multiplication of which the country has been witnessing during the last few years in various industries.

Domestic Cycle Industry Can Do The Job

"The Five-year Plan aims at achieving certain targets of production in various industries, with a view (1) to making India self-sufficient in certain cases and thus be independent

INDIAN COPPER CORPORATION LIMITED

ADDRESS OF SIR ANTHONY J. ELKINS AT ANNUAL GENERAL MEETING

ADDRESSING the Twenty-ninth Annual General Meeting of the Indian Copper Corporation Ltd., held at the Royal Exchange Hall, Royal Exchange, Calcutta, on Wednesday, 25th November, 1953, at 11-30 a.m., the Chairman, Sir Anthony J. Elkins, C.B.E., said:—

"From 1st January, 1952 to 5th April, 1952 your Company was under the management and control of the London Board, and for the remainder of the year under the management and control of the present Board of Directors and the Managing Agents in India.

Accounts

"The properties of the Company continue to be well maintained, and adequate depreciation has been provided. There is little to comment on in the balance-sheet, but, as you will have observed, the total current assets exceed the current liabilities and tax reserves by £1,247,176, which is a satisfactory figure. Stocks of manufactured products, although still high, were reduced by £121,825, as compared with the figures shown in the previous year's Accounts.

"The profit for the year of £687,180 before providing for taxation and depreciation is less than last year's record figure, but the decrease has been largely counterbalanced by an appreciable saving in taxation, as a result of the transfer of control to India.

"The circular shaft has now been almost completed but, in order to maintain ore reserves, mining operations at greater depth must be continued. For this reason the sum of £185,000 has been allocated to general reserve as against £175,000 last year.

"After giving full consideration to the increasing costs of mining at greater depths and also the uncertain prospects due to fluctuations in the metal market, your Directors recommend a dividend of 12½ per cent. free of income-tax payable by the Company.

Copper Leases—Operating Results

"A detailed review of the year's operations is given in your General Manager's report, which can be seen during office hours at the Company's Head Office.

"The main features are briefly summarised in the Directors' report. The ore treated in the mill was 48,838 short tons below the previous year which was the second highest figure recorded, and the production of refined copper decreased by 1,004 long tons.

"The rolling mill production was decreased, as compared with the previous year, by 3,218 long tons on account of poor market conditions.

"Towards the close of the year, when there was a restricted demand for the Company's products in India, permission was obtained from the Government of India to export 2,000 tons of copper ingots.

Development

"The total footage developed increased by 853 feet, with an increase in the percentage of payability copper content and stoping width as compared with the previous year's results, due to a larger proportion of development being made through favourable payable ground in the Mosaboni Mine.

Ore Reserves

"The increase of 224,404 short tons now brings the total estimated ore reserves to a record figure of 3,448,795 short tons. The ore reserves at both Badia and Dhobani Mines decreased, while Mosaboni Mine, where development results continue to be satisfactory, more than made up the deficiency.

"The main development for the ore reserves was again at the North Badia section of the Mosaboni Mine, but as development in depth of this comparatively new ore shoot has now caught up with the old Mosaboni Mine, further ore reserves can only be opened up by the general deepening of the mine.

"The main development at Badia was around the eighth and ninth levels to the north, but results continue to be disappointing.

"At Dhobani Mine, development is suspended, although the mine continued to produce a small tonnage of payable ore during the year, but this will cease in 1953.

Sales

"During the year, there was a heavy fall in metal prices, including zinc, but copper prices held up fairly well. The average selling prices during the year were:—

	Per ton
Copper ingots	£241
Rolled brass	£270
Yellow metal circles	£281
Rolled copper	£275
Copper circles	£285

Kyanite

"Despatches increased by 3,254 tons as compared with the previous year.

"Export prices increased from £22 to £28 per ton up to September, but thereafter they fell to £25 per ton by the end of the year. Even this price has not been maintained, and the current price is £20 per ton.

Labour

"Conditions deteriorated during the year under review, and the Mosaboni Mines Union separated from the Works Union before the end of the year. Shortly after the close of the year, there was a strike resulting in a complete cessation of production from 28th February to 5th June, 1953, the effects of which will be reflected in the accounts for 1953.

Staff

"I wish to place on record my appreciation of the willing co-operation of the staff at the mines and works during the year under review.

"The General Manager, Mr. E. R. Dempster, was on leave during the year, and Mr. N. A. B. Hill, the Mine Superintendent, acted for him in his absence."

- Extra 'K'-members and fish plates for strengthening the frames.
- 34 to 39 passenger seats, as required.

PROTECTION TO HURRICANE LANTERN INDUSTRY

QUALITY OF PRODUCTS NEEDS IMPROVEMENT

THE hurricane lantern industry has put forward its case for continuance of protection for a further period of three to five years. This claim was taken up for consideration by a panel of three members of the Tariff Commission on the 16th inst. The three members were: Mr. B. N. Adarkar (Chairman of the Panel), Mr. C. Ramasubban and Mr. B. N. Das Gupta. Protection was first given to the industry upto 31st March, 1949, by converting the then existing revenue duty of 30 per cent. *ad valorem* into a protective duty at the same rate. In successive stages, protection was granted up to 31st December, 1953.

The present position of the industry, as described by Mr. Adarkar in his opening remarks, reveals several notable features. At present, it is, doubtless, playing an important role in the economy of the country. It has enjoyed protection for a period of more than seven years which is, indeed, a fairly long one. It has also made good progress during this period. Both the installed capacity and production have shown marked increases. In 1949, there were 12 units with a total rated capacity of 3 million lanterns. There are at present 10 major units, of which five are located in West Bengal, two in Delhi and one each in Bihar, U.P. and Bombay. Their total installed capacity, according to Mr. Adarkar, is estimated variedly between 4.26 million lanterns and over 6 million lanterns. The actual production of these ten units increased from 1.7 million lanterns in 1948 to 2.8 million lanterns in 1950, 4.0 million in 1951 and 3.5 million in 1952. The output of lanterns during the first half of the current year was 2.0 million. The capital invested in the industry, as estimated by the Planning Commission, is Rs. 50 lakhs and the number of persons employed is 3,000. The Planning Commission is of the opinion that, after implementation of the existing programme, further expansion of the industry would not be necessary until 1955-56, if the units worked on more than one shift per day. The Commerce Ministry is stated to have decided not to encourage the starting of new units.

Domestic Demand

The domestic demand for hurricane lanterns was estimated by the previous Tariff Board at 6 million lanterns per annum for undivided India. The Board, which reviewed the position in 1949, put it at only 3 million lanterns. The present Tariff Commission has received estimates varying from three million to five million lanterns. The Commerce Ministry has estimated the demand for 1953-54 and for the subsequent years, namely, 1954-55 and 1955-56, at 4.5 and 5 million lanterns respectively. The Lantern Manufacturers' Association puts the figure at 3 million. The Planning Commission expects that it would be 5 million lanterns by 1955-56 which excludes its separate estimate of one million lanterns for export. Mr. Adarkar's references to consumption based on imports may also be mentioned here. "If the estimate of demand," he said, "is based on the actual quantity available for consumption, i.e., production plus imports minus exports, then, on an analysis of figures for the last three years, i.e., 1950, 1951, 1952, it would work out to 3.2 million, 4.2 million and 3.4 million lanterns, respectively, giving an average of about 3.6 million lanterns." This is, we may note here, lower than the rated capacity of the 10 major units, estimated at 4 million.

Quality of Products

As for the quality of the products manufactured, the same old story of low standard quality which is common to most protected industries is repeated in the case of the lantern industry also. Although the quality of products of some of the larger units is stated to be fairly satisfactory, the attention of the Commission has been drawn by consumers and importers to certain existing defects. These defects have been broadly classified by Mr. Adarkar. He stated, in his speech referred to above, thus: "The constructional defects of the indigenous lanterns are shown by (1) leakage of oil tanks, (2) loose stoppers, (3) the levers for raising or lowering wicks getting out of order, and (4) the top lid portion getting spoiled early. The finish of the indigenous lanterns is also stated to be inferior to that of imported lanterns. Further, the performance of indigenous lanterns is stated to be below the standard prescribed by the Directorate General of Supplies and Disposals." We are further told that the candle power of the indigenous lantern is never beyond five and the period of continuous burning not more than 12 hours, although the specifications provide for a candle power of six and burning capacity of 15 hours, with ½ pint fount capacity.

Closely related to the question of quality of the lamps is the availability and quality of raw materials required by the industry, namely, tinplate, black sheets and steel wires. The quantity of the first and the last available are stated to have been sufficient for working only one shift. The supply of metal sheets is still inadequate for working even one shift. This difficulty can be overcome by switching over to the use of tinplate. The Iron and Steel Controller is stated to have given the assurance that the industry's full requirements of steel plate would be met. Steel wires, too, can be supplied from indigenous sources. But the freight charges are considered to be heavy; the railways will have to look into this question.

Position Regarding Exports

The industry has considerable scope for exporting hurricane lanterns. The principal export markets at present are Malaya, Ceylon, Burma and Persian Gulf countries. Exports of hurricane lanterns from India have been on O.G.L. since April, 1949, for all permissible destinations. Hurricane lanterns are also included as one of the exportable items in the trade agreements with Burma, Iraq, Egypt and Finland. But with all the defects mentioned above, one wonders whether the industry will be successful in establishing markets for its products in the overseas countries and hitting the export target fixed by the Planning Commission. It would be interesting to know the progress that has already been made by the industry in this direction. Unfortunately, Mr. Adarkar gave no indication of the exports of lamps in his speech. The foreign trade statistics of India also throw no light on this question.

The industry is undoubtedly of considerable significance to the economy of India. It merits all reasonable forms of assistance. It has demanded continuation of protection for a period of five years. It has contended that, since it has still to face consumers' prejudice against its products, protection is essential to enable it to consolidate its position, increase production and bring down costs. This demand requires very close scrutiny, as in spite of more than seven years of protection, the quality of the products of most concerns leaves much to be desired. The industry should be made to realise the need for maintaining standards of efficiency. This can be done through two or three ways. In the first place, token imports should be allowed to sharpen the efforts of the industry at improving its quality and keeping down selling prices. Secondly, while continuing protection for at least another three years, the industry must be encouraged to sponsor research calculated to enhance its competitive ability by means of reducing its costs and improving its quality. The authorities should use their influence to enable the industry to get the right quality of raw materials and stores, if these are in short supply and difficult to be had. Concessions should also be given to it by way of a reduction in railway and shipping freights. If at the end of three years, the industry fails to rise to the expectations of the country, the Government will have to consider seriously whether it will be worthwhile to continue the protection to the industry.

PROTECTION TO PENCIL INDUSTRY TO END AFTER NEXT DECEMBER

The Government of India has decided to terminate the tariff protection granted to the Indian pencil industry as from 1st January, 1953. The decision is a sequel to the recommendation to that effect made by the Tariff Commission following an enquiry into the position of the industry conducted in February this year.

In submitting its recommendation for the withdrawal of protection to the industry, the Tariff Commission has taken into consideration various aspects of the industry's position. In the first place, the rated capacity of the industry is very much above the actual production. The present capacity of the industry is estimated at 8 lakh gross per annum at the end of 1953. Allowing for an increase of 20 per cent. over the demand estimated in 1950 on account of spread of literacy since then, the requirements of pencils of the country are placed at 6 lakh gross per annum, consisting of 4.5 lakh gross of black pencils, 90,000 gross of copying pencils and 60,000 gross of coloured pencils. This demand might progressively increase at the rate of 10 per cent. per year. As against these requirements, actual production in 1952 amounted to 1.29 lakh gross black lead pencils, 11,334 gross coloured pencils and 9,835 gross copying pencils only.

Secondly, the Commission is of the opinion that there has been a definite improvement in the quality of the indigenous pencil during the last two years. If the services of a technical expert, under the Point Four Programme, can be obtained for the industry, significant progress in producing superior quality pencils can be expected, the Commission says.

As the industry is experiencing some difficulty regarding the supplies of slat, the Commission has emphasised the need for establishing a slat industry as soon as possible for meeting the requirements of the pencil industry.

Thirdly, the fair ex-works prices per gross, inclusive of profits of indigenous pencils, are sufficiently lower than the c.i.f. prices of imported varieties. The lowest c.i.f. prices and the ex-works prices per gross of various types of pencils are as follows:

	Per gross	
	Imported c.i.f. prices	*Fair ex-works prices*
	Rs. a. p.	Rs. a. p.
Black lead pencils ...	16 0 0	7 15 8
Coloured pencils ...	13 0 0	14 14 3
Copying pencils ...	15 9 0	13 14 8

A further allowance of 15 per cent. in the case of black lead pencils and 25 per cent. in the case of coloured and copying pencils has been made for consumers' prejudice.

At the existing rate of import duty of 66⅔ per cent. on all types of pencils, the Commission considers that there is no case for protecting the industry. Consequently, it has recommended that "protection to the industry should be allowed to lapse on 31st December, 1953, when the present period of protection expires." In making this recommendation, it has, however, presumed that the Government will continue the floor c.i.f. prices as well as the high rate of duty levied under the Finance Act, 1953. Since any reduction in the existing rates of duties without reference to the cost of production might seriously affect the interests of the industry, the Government has been requested carefully to examine the position of the industry, before any decision is taken to effect a downward revision in the existing level of import duty.

The Tariff Commission has further recommended that effective steps should be taken to restrict imports, as it is led to believe the existence in the country of large stocks of pencils partly owing to smuggling from Pakistan and from the foreign pockets in the country. It feels that there would be no need to import pencils for the whole of 1954. Import licences should be made valid, it says, only for black lead pencils whose c.i.f. price is not less than Rs. 16 per gross and coloured and copying pencils whose c.i.f. value is not less than Rs. 20 per gross as at present.

All facilities and assistance which the industry is at present receiving from the Government, including patronage for its products, but excluding facilities for importation of lead, should, in the opinion of the Commission, be continued.

In accepting the above recommendations, the Government has made it clear that, if at any time the import duty is substantially reduced, it will be open to the industry to ask for further enquiry by the Tariff Commission.

As regards the Commission's suggestion on the restriction of imports, both qualitative and quantitative, the Government has decided that the policy would continue to be announced each half-year taking into account all the circumstances prevailing at the time of announcement, including those to which the Commission has drawn attention.

PARLIAMENT PASSES TWO BILLS FOR HELPING INDUSTRY

Two Bills of considerable importance to industry in this country were passed by Parliament last week. One was the Sea Customs (Amendment) Bill and the other the Coir Industry Bill. The former Bill provides for payment in approved cases of drawback of import duty paid on the raw materials contained in manufactured goods exported abroad. It provides also for allowing the manufacture of goods in bond. It seeks to replace an Ordinance embodying the provisions promulgated by the President of India some time back.

The Coir Industry Bill provides for the control by the Union Government of the coir industry and for that purpose the establishment of a Coir Board, and for the levy of a customs duty on coir fibres, coir yarn, and coir products exported from India.

Moving the Sea Customs (Amendment) Bill, Mr. A. C. Guha, Deputy Minister for Finance, stated that the Bill was intended to improve India's export trade. It became necessary, he said, because India was no longer just an exporter of raw materials. During recent years, it had become an exporter of finished goods also. Almost all industrial countries had similar provisions. In India it was welcomed by most of the commercial organisations, particularly those interested in textile industry, art silk industry and plastics industry, because it was intended to give immediate relief to these industries. In recent years exports of textiles had gone up considerably but this year the prospect of textile exports was not bright and, therefore, it was necessary to give some help to exports of textiles and that was why there was urgency of having the Bill.

Continuing, the Minister stated that the benefits provided for in the Bill would not be given automatically to all concerned. The Government would frame certain rules and regulations for this purpose. He said that all the interests concerned would be consulted before finalising the rules.

Some members of the opposition desired that a schedule of industries to be benefited by the provisions of the Bill should be attached to it. And one member wanted the Government to make it clear that the foreign refineries now being set up in India would not be allowed to demand the relief proposed in the Bill on the imported crude oil that might, after being refined in India, be exported.

Replying to the debate, Mr. Guha said that it was difficult correctly to assess the loss of revenue on account of implementing the provisions of the Bill. It might be nearly Rs. 3 crores annually, but, ultimately it would not be a loss as the country stood to gain by other channels such as higher exports and more earnings of foreign exchange.

The House then passed the Bill. Promotion of exports being the main objective of the Bill, it should considerably help development of industries. But it will be ineffective if it is administered in the usual bureaucratic way by leaving large discretionary powers to customs officials. Care should be taken to see to it that the rules framed are simple and easy of interpretation. Further, every efforts should be made to make drawback payment of duty as quickly as possible.

Coir Industry Bill

The debate on the Coir Industry Bill revealed that the Bill had the general support of the House, with some members pressing that the measure should be passed forthwith. Fears were expressed that, if the industry, which was now a cottage industry employing five lakh people, were mechanised, such might lead to unemployment.

Replying to the debate, Mr. Karmarkar, Minister for Commerce, stated that no steps would be taken for mechanisation, if it harmed the cause of the cottage industry. He said that labour would be represented on the Coir Board to be set up under the Bill. Mr. T. T. Krishnamachari, Minister for Commerce and Industry, who also spoke on the Bill, assured that the office of the Board would not be located in New Delhi. As the setting up of the Board was a new venture, he wanted the Chairman of the Board to be under the control of the Government. The Vice-President of the Board would be elected by the members of the Board.

Two official amendments, widening the definition of groups and interests from among whom representatives to serve on the Board, to be nominated by the Government, were accepted by the House. The interests concerned will include growers of coconuts, producers of husks and coir yarn, and persons engaged in production of husks, coir and coir yarn and in the manufacture of coir products.

in Madras... they know that

more motorists use triple-action Mobiloil

than any other motor oil in the world!

The people of Madras, endowed with an enviable gift for pronouncing long names, are also noted for their proficiency in mathematics. The Madras motorist, for instance, has no hesitation in saying 'Mobiloil' as he pulls in at the sign of the Flying Red Horse; and on adding up his accounts, he readily proves that Mobiloil reduces his running costs.

Like his fellow motorists all over the world, he knows that Mobiloil is a *Heavy-Duty* oil, giving greater protection than regular or premium-type oils – and can see for himself that it ...

SAVES ON WEAR *by lubricating properly at all temperatures;*

SAVES ON REPAIRS *by preventing harmful carbon deposits in the engine;*

SAVES ON PETROL *by preventing acids eating away the metal parts, which causes loss of power.*

Stop at the sign of the Flying Red Horse

The Flying Red Horse is the sign of helpful service for your car. Go there for regular Mobilubrication – the *complete* motor service – and for Standard-Vacuum products backed by 87 years of leadership in the oil industry.

STANDARD-VACUUM OIL COMPANY

PRIVATE ENTERPRISE IN INDIA

ITS ROLE IN INDUSTRIAL DEVELOPMENT

(By D. C. KOTHARI, President, Hindusthan Chamber of Commerce, Madras)

THE role that private enterprise has to play in the economic development of our country has undergone a few changes even in the first few years of our political independence. It was natural that, in the first flush of the enthusiasm of our newly won freedom, we should be distrustful of the institutions that were left behind as a legacy of foreign rule. But just as we have adopted the idea of a democratic set-up for our political life from the British, so also we have chosen the system of private enterprise and the freedom of the individual to do business with as much latitude as is consistent with the economic aspirations of a free country. It has also come to be recognised in all progressive democratic countries that the Police State of the nineteenth century, which mainly concerned itself with the maintenance of law and order, should give place to the concept of the Welfare State of the twentieth century. But, in the early stages of this renascence, if I may say so, we saw a wave of socialism and the dogmatic idea that private enterprise had no part to play in the industrial and business life of our country. But, fortunately, this idea has now given place to the view that both the public and the private sectors, as they are now called, are complementary to each other and both have their respective spheres of operation and role to play.

But the acceptance of this view has not been easy, for the impact of socialist ideas, the consciousness of rights and privileges, and the urgent necessity for a powerful State in a period of transition have all retarded the progress of free trade and private enterprise. This is because a revolution has occurred in the ways of thinking of our people; no longer is it accepted that what was good for our fathers and grandfathers is necessarily good for us. Thanks to the Congress and the fight for freedom, there is now an awareness in the minds of our people of their rights and privileges. It is a process of thought that is, perhaps, not visible on the surface, but, while there are certainly undercurrents from which we cannot get away, and of which the thinking men of our country in all walks of life have become conscious and are adapting themselves to, the major events of history have not been looked at in their proper perspective by the generations in whose time these events took place or by the generations who are affected by these changes. Hence, in the context of history, it will be necessary to appreciate that India, in the last five years, has undergone a major political and economic change such as we have not had for many hundreds of years.

Advantages of Private Enterprise

It was natural, therefore, to suspect, at the time of our independence, anything that stood for the gain or profit of a few, and in the minds of many, the whole system of private enterprise stood for nothing else but the economic exploitation of the many by a few. But, as I shall show presently, judging by the experience of America, Britain and other countries, private enterprise is not necessarily private aggrandisement. In fact, it is a system which has not only been mainly responsible for the economic advancement of these countries but has also been of great benefit to the people at large. For instance, the use of science even before the recent war by American industry had been immense. It employed more than 70,000 research workers in about 4,000 laboratories at an annual cost of Rs. 1,500 crores. The total expenditure on research alone has risen to more than 500 million dollars. The research thus carried out by large-scale industry has benefited mankind, especially in the fields of medicine, dietetics, etc., and has made it possible for people to live a better and more satisfying life. It is well, therefore, to ponder here over the immense advantages which mankind has derived from institutions like the Bell Telephone Company, and the Rockefeller Foundation. But here one might turn round and say that, if the industrialists are interested in scientific research, it is not because of a sense of service to humanity. While it is granted that it may not entirely be out of a spirit of benefaction, it cannot be gainsaid that private industry has often to lose more than what it gains by undertaking research on its own, for research is in the nature of a gamble and the amount of risk that is involved is rarely commensurate with the returns from such expenditure.

Unless, therefore, we believe in a completely totalitarian system of government for our country at the cost of individual liberty, in which case the whole of our political set-up must become different, we cannot but accept the fact that the private and public sectors must play their respective parts in the progress of the nation. If we thus proceed on the assumption that the private sector of our economy is not only necessary but desirable, it is pertinent to enquire into its achievements in the past and its outlook for the future. The Five-year Plan has laid down certain targets for both the public and private sectors. Here, there is a complaint that the private sector has not come up to expectations entertained in the Plan. But, on an analysis of all the facts, one will only find that it is the factors beyond the control of the private industrialist that are to be blamed and not the entrepreneur.

Savings

A large part of the savings of the people have been taken away by the public sector to the detriment of the other. Under the Five-year Plan, a sum of Rs. 1,800 crores has been earmarked as the public expenditure on industries, leaving only a sum of Rs. 173 crores to be spent by the private sector. As the capacity of our people to save is limited, it is not surprising that the flow of capital into industries has been slow, although, when one examines the performance of risk capital in this country, as I shall show later on, one will see that private enterprise has nothing to be ashamed of regarding the rate of progress. The annual income of the bulk of our population is only in the region of a little less than Rs. 400 crores per annum, and the bulk of risk capital for industries comes from the middle class. With the increase in the cost of living, it is not surprising that there has been very little saving from the middle class. In fact, the hardship of this class is so acute that, over the last few years, a process of disinvestment has become visible.

Another contributory factor to the present economic difficulties and apathy for further saving and investment is the lack of sufficient purchasing power among the masses. This has been mainly due to the drought during the last five or six years in many parts of the country. But this year, owing to good rainfall throughout the length and breadth of the country, it is hoped that food imports will be restricted and, consequently, the purchasing power in the hands of the people in the country will increase. It is also a well-known fact that pumping out of money from the market, by the Governments for their major irrigation and other projects, has resulted in scarcity of capital and this, coupled with the high cost of living, has also been responsible for starving the flow of savings into the capital market.

To-day the Government of India generally welcomes foreign capital, and, although the reaction of Indian industrialists to foreign capital has been mixed, the feeling is, on the whole, one of co-operation. But they feel that foreign capital should be restricted only to spheres where Indian industry is not able to operate for want of technical personnel and in which large investments are required. It is generally agreed that Indian industrialists can operate with an amount of ease where investments are not very large. This field should, therefore, be reserved for indigenous enterprise.

To revert to the record of private enterprise since independence. It is estimated that, between the years 1946 and 1951, the total amount invested in industry by industrialists is about Rs. 500 crores; this does not include money invested in capital goods. If we take the rate of investment, namely, 7 per cent. of our

(Continued on page 1028)

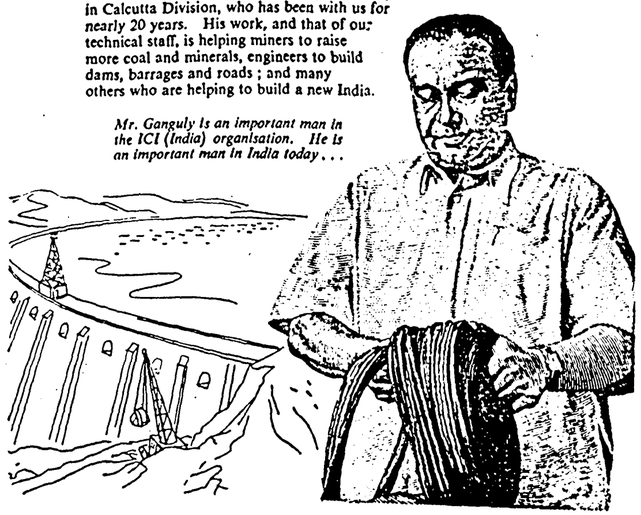
Explosives Clear the Way

Many of us think of explosives as linked with war and destruction. Yet everywhere, and especially in India today, the boom and echo of explosions mark the birth of construction projects. The building of dams for irrigation and power supply, the opening up and operation of mines, the extension of communications . . . all these constructive activities call, at some time or another, for the planned use of explosives.

With the ever-widening uses to which they are put, explosives give rise to difficult and tricky problems that must be tackled cautiously yet boldly. The explosive experts in our Technical Service Department have accumulated experience that is impressive as much for the variety of projects covered, as for the dissimilar conditions encountered. No wonder they are able to help our customers to use the right explosives for obtaining desired results with safety and accuracy.

In the work of these explosive experts, valuable service is rendered by Mr. B. C. Ganguly, our Senior Magazine-Keeper in Calcutta Division, who has been with us for nearly 20 years. His work, and that of our technical staff, is helping miners to raise more coal and minerals, engineers to build dams, barrages and roads ; and many others who are helping to build a new India.

Mr. Ganguly is an important man in the ICI (India) organisation. He is an important man in India today . . .



. . . contributing to India's progress and prosperity

Notices

THE BELAPUR COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT THE Thirty-fourth Ordinary General Meeting of the Belapur Company, Ltd., will be held on Tuesday the 1st day of December, 1953, at 4-00 p.m. (S.T.), at the Registered Office of the Company, Royal Insurance Buildings, Veer Nariman Road, Bombay, to transact the following business:—

1. To adopt the Directors' Report and Audited Statement of Accounts for the year ended 30th September, 1953.
2. To sanction payment of a Dividend.
3. To confirm the appointment of Mr. Krishnaraj M.D. Thackersey as a Director.
4. To elect Directors in place of Sir Joseph Kay, K.B.E., and Mr. Bhagwandas C. Mehta, who retire by rotation but are eligible for re-election.
5. To appoint Auditors for the current year and fix their remuneration.

The Transfer Books of the Company will be closed from the 2nd day of *November*, 1953, to the 1st day of December, 1953, both days inclusive.

By Order of the Board of Directors,
W. H. BRADY & COMPANY, LTD.,
JOSEPH KAY,
Managing Director,
Managers.

BOMBAY, 4th *November*, 1953.

N.B.—The Dividend when declared will be made payable through the Bank of India, Ltd., Bombay, on and after the 24th day of December, 1953. The Dividend Warrants will be posted to those Shareholders whose names stand on the Company's Register on the 1st day of December, 1953.

To the Shareholders of the Belapur Co., Ltd., and in particular to:

Mr. William Abel.
Mrs. Dhanbai Dinshaw Gandevia and Dr. Dinshaw Bhicaji Gandevia.
Messrs. Rajabali Hason Paroo and Sons Ltd.
Mr. Abbasbhai Dawoodbhai Vasi.

THE ONDAL COAL COMPANY LIMITED

AT A MEETING OF THE BOARD OF Directors held on the 13th November, 1953, the following Dividends were recommended to be paid for the half-year ended 30th June, 1953, without any deduction for Income-tax paid by the Company. On Preference Shares—6¼ per cent. per annum, on Ordinary Shares—20 per cent. per annum.

By Order of the Board,
F. W. HEILGERS & CO., LIMITED,
Managing Agents.

CHARTERED BANK BUILDINGS,
CALCUTTA.

THE CHURULIA COAL COMPANY LIMITED

AT A MEETING OF THE BOARD OF Directors held on the 13th November, 1953, a Dividend of 6 pies per Share was recommended to be paid for the half-year ended 30th June, 1953, without any deduction for Income-tax paid by the Company.

By Order of the Board,
F. W. HEILGERS & CO., LIMITED,
Managing Agents.

CHARTERED BANK BUILDINGS,
CALCUTTA.

THE KESAR SUGAR WORKS LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Twentieth Ordinary General Meeting of the Shareholders of THE KESAR SUGAR WORKS LIMITED, will be held on Thursday the 17th day of December, 1953, at 4-30 p.m. (S.T.), at the Registered Office of the Company, 45-47 *Apollo Street*, Fort, Bombay, to transact the following business:

(1) To adopt the Directors' Report and Audited Statement of Accounts for the year ended 31st July, 1953.

(2) To sanction the payment of Dividend to Preference shareholders.

(3) To elect Directors in place of Shri Tulsidas Kilachand and Shri Navinchandra Mafatlal who retire by rotation, under Article 143 of the Articles of Association of the Company, but being eligible, offer themselves for re-election.

(4) To appoint Auditors for the current year and fix their remuneration.

(5) To transact any other business that may be brought forward by the Chairman.

The Transfer Books of the Company will be closed from 3rd day of December, 1953, to 18th day of December, 1953 (both days inclusive).

By Order of the Board of Directors,
For and on behalf of
THE KESAR SUGAR WORKS LTD.,
For KILACHAND DEVCHAND & CO.,
AMBALAL KILACHAND,
Partner,
Managing Agents.

BOMBAY, 16th *November*, 1953.

N.B.—Preference Share Dividend when declared will be made payable at the Registered Office of the Company on and after the 18th day of January, 1954. Dividend Warrants will be posted to those Preference shareholders whose names stand on the Register on 17th day of December, 1953.

Shareholders are requested to kindly notify any change of address.

THE BORREA COAL COMPANY LIMITED

AT A MEETING OF THE BOARD OF Directors held on the 13th November, 1953, the following Dividends were recommended to be paid for the half-year ended 30th June, 1953, without any deduction for Income-tax paid by the Company. On Preference Shares—6¼ per cent. per annum, on Ordinary Shares—20 per cent. per annum plus As. 8 Bonus per Share.

By Order of the Board,
F. W. HEILGERS & CO., LIMITED,
Managing Agents.

CHARTERED BANK BUILDINGS,
CALCUTTA.

THE STANDARD COAL COMPANY LIMITED

AT A MEETING OF THE BOARD OF Directors held on the 13th November, 1953, a Dividend of 20 per cent. per annum was recommended to be paid for the half-year ended 30th *June*, 1953, without any deduction for Income-tax paid by the Company.

By Order of the Board,
F. W. HEILGERS & CO., LIMITED,
Managing Agents.

CHARTERED BANK BUILDINGS,
CALCUTTA.

WATERFALL ESTATES, LIMITED

MADRAS

NOTICE IS HEREBY GIVEN THAT THE Tenth Ordinary General Meeting of the above Company will be held at the Registered Office of the Company, Oriental Buildings, Armenian Street, Madras, on Friday the 18th December, 1953, at 4 p.m., to transact the following business:—

(1) To receive and adopt the Directors' Report and Audited Statement of Accounts of the Company for the year ended 30th June, 1953.
(2) To declare a Dividend on Preference and Ordinary Shares.
(3) To elect Directors in the place of Mr. C. M. Kothari and Mr. K. Venkatarama Iyer who retires by rotation and are eligible for re-election.
(4) To appoint Auditors and fix their remuneration.

The Transfer Books of the Company will be closed from *Friday the 4th December, 1953*, to Friday the 18th December, 1953, both days inclusive.

By Order of the Board,
KOTHARI, MEHTA & CO., LTD.,
Managing Agents.

MADRAS, 18th *November*, 1953.

Note.—The Directors have recommended a dividend of 6 per cent. on the Preference Shares and 12½ per cent. on the Ordinary Shares which if passed at the meeting will be paid on Saturday the 19th December, 1953, to those shareholders whose names are on the Company's Register on the 18th December, 1953.

BENGAL JUTE MILL COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT THE Adjourned 22nd Ordinary General Meeting of the Members of the Company will be held at the Registered Office of the Company at 8, Dalhousie Square East, Calcutta, on Friday the 18th December, 1953, at 5 p.m. for the purpose of considering the undisposed items specified in the Notice dated the 14th May, 1953.

By Order of the Board,
For and on behalf of
BENGAL JUTE MILL CO., LTD.,
SOORAJMULL NAGARMULL,
Managing Agents.

8, DALHOUSIE SQUARE EAST,
CALCUTTA, 18th *November*, 1953.

INCREASING OFFICE EFFICIENCY

A 10 per cent. increase in efficiency amongst office workers has been recorded in Sweden by many business houses who have introduced a daily break for gymnastic exercises for their staffs. The idea was first tried out by the head office of the Facit concern in Stockholm in 1942. Since then, more than a hundred other business houses in Stockholm have followed suit. After sitting for some time at a desk or a typewriter, everybody likes to get up and stretch his legs. "We thought we would organise it," declared Facit's personnel chief. At the stroke of three each afternoon, the girls leave whatever they are doing and go into the office dining room in winter, or on the roof terrace in summer, for a ten-minute bout of physical training. This is performed to the accompaniment of music and under the supervision of a trained gymnastic leader specially engaged for this purpose by the firm. Doctors studying the incidence of office fatigue and the malady known as "typist's cramp" say that a break of this kind helps to relieve the monotony of office routine and freshen up the mind and body for further effort when they are beginning to feel most tired.

The laboratories of the Facit concern, which is the biggest exporter of office machines in Europe, spent many years collaborating with famous psychologists, doctors, engineers and experts in order to find ways of improving office equipment and to eliminate office fatigue. One of the first results of their efforts was the birth of the Facit calculator—the only 10-key calculator in the world—and the office posture chair. This was followed by a series of experiments on the "Halda" typewriter to determine the colour least liable to cause eye strain, after which the present sea green was decided upon. The latest Facit aid to office comfort is the "Halda teaching typewriter," a machine which trains typists to conserve their energy by hitting the keys lightly and rhythmically. In general, the typist hits the keyboard 20 times too hard. Too heavy a tap on the "teaching typewriter" will light up a warning red electric eye, and faulty wrist work will stop the machine altogether. This idea is the invention of Sven Sieurin, head of the Facit Institutes, Sweden's largest day school for adults spread over the whole country. Nearly 8,000 Swedish typists will be trained each year on the new Halda training device.

PROFIT OF INDIA STEAMSHIP DROPS FROM PREVIOUS YEAR'S RECORD

RESERVES, HOWEVER, STRENGTHENED SIZABLY

A SHRINKAGE of Rs. 11.39 lakhs in the gross profit, that is, from Rs. 76.27 lakhs to Rs. 64.88 lakhs, is disclosed by the audited accounts of the India Steamship Co., Ltd. (Managing Agents: Messrs. Lionel Edwards Ltd., Calcutta) for the year ended 31st March, 1953. This fall from the record profit of the previous year has been inevitable in the context of the decline in the movement of cargo and the reduction in freight rates on some of the commodities forced upon the Conference Lines to meet tramp competition. The provision for depreciation has been maintained at the previous year's level, but an allocation of Rs. 5 lakhs has been made to taxation reserve. The addition to the general reserve has had to be cut from Rs. 20 lakhs provided last year to Rs. 18 lakhs, but it will be admitted that even this provision is quite substantial. The dividend on ordinary shares has, however, not been affected; it has been maintained at the modest level of 5 per cent. per annum, free of tax.

The following table provides an idea of the Company's progress during the year under review, as compared with those in the previous two years:

(In lakhs of rupees)

	For the year ended 31st March			
	1953	1952	1951	1950
Freight earning ..	393.48	384.46	275.76	201.90
Other income	2.57	0.93	3.63	3.99
Expenses	331.17	309.13	253.37	197.79
Gross profit ..	64.88	76.27	26.02	8.09
Managing Agents' commission ..	6.61	7.76	..	..
Depreciation	23.13	23.08	21.01	21.45
Taxation	5.00	..	..	..
Net profit (+) or loss (—) ..	+30.14	+45.42	+ 5.01	—13.36
Transferred to general reserve ..	18.00	20.00	..	..
Dividends—				
5% cum. preference ..	1.25	3.75*	..	..
Ordinary	11.25 (5%)	11.25 (5%)	..	..
Carry forward	1.91	2.26	—8.16	—13.17

* For the three years ended 31st March, 1952.

Despite the reduction in the freight rates noted above, the freight earnings have gone up to a record level of Rs. 393.48 lakhs, a rise of Rs. 9.02 lakhs over the year. This small increase in freight earnings has been achieved as a result of the careful management of the Company's fleet and the fair measure of patronage received by the Company from shippers at both ends in the overseas trade, in which the Company has established itself and has been maintaining a satisfactorily regular service. If the Company has not been able to increase the freight earnings by as much as it had done in the previous year, it was because of the shrinkage in the total volume of freight available and of the cut in freight rates. Though the diminution in the volume of cargo movement was not acute, as it had been feared once, the Directors report that it was distinctly felt by the Company.

The increase in freight earnings and in other income has, however, been more than offset by the sharp rise of Rs. 22.04 lakhs in expenses. The increase in operating costs is on account of the delays and detention in some of the foreign ports and in more than one of the Indian ports and the rise in fuel charges. It will be noted from the above table that in the last three years alone the Company's expenses have gone up by over Rs. 1.33 crores. During the year under review, salaries and wages account for a rise of Rs. 4.48 lakhs, charter hire for Rs. 6.03 lakhs, coal, oil, stores, etc., for Rs. 11.25 lakhs, and repairs, maintenance, surveys and insurance for Rs. 4.37 lakhs, while port charges have gone down by Rs. 2.20 lakhs and freight commissions, brokerage and rebates by Rs. 2.44 lakhs. The Company is not liable to pay income-tax for the year under review, as it enjoys the benefit of initial depreciation allowances for taxation purposes. However, as the initial period when the Company will be free from income-tax demand is approaching its end, the Directors have set apart a sum of Rs. 5 lakhs for income-tax reserve. After making such a provision, the net profit stands at Rs. 30.14 lakhs, disclosing a fall of Rs. 15.28 lakhs, as compared with that for the previous year. Many may wonder how the Directors have been able to maintain the dividend and transfer a sizable amount to the reserves, despite such a sharp fall in net profit. It will not, however, be a surprise, if it is recalled that a part of the previous year's net profit was utilised to write off the loss brought in from the preceding year, as also to pay off arrears of preference dividend. There being no such liability in the year under review, the Directors have been able to provide as large a sum as Rs. 18 lakhs to the general reserve and yet maintain the dividend on ordinary shares.

During the year under review, eight ocean-going vessels, seven of which belong to the Company's fleet and one chartered, were fully employed by the Company on regular liner service in the India-U.K. Continental run. Being a member of the Coastal Conference, the Company had been anxious all these years to have some vessel employed exclusively in the coastal trade, but it had not been possible for the Company to either charter a vessel at the prevailing high rates which were uneconomical, or acquire a vessel, in view of the high cost. In the year under review, however, the Company diverted one of its overseas vessels exclusively to coastal trade and chartered a vessel for deep-sea trade, thus keeping eight vessels on the regular liner service as stated above. In addition to reserving one vessel for coastal trade, the Company used the regular ocean-going vessels also to carry some coastal cargo and this enabled the Company to maintain its standing in the coastal trade.

The latest balance-sheet of the Company shows that the reserves and surplus stand at Rs. 76.90 lakhs, as against a paid-up capital of Rs. 2.50 crores. The Company fully redeemed the debentures amounting to Rs. 25 lakhs, that fell due this year. Provision for taxation amounts to Rs. 5.82 lakhs. The gross block of the value of Rs. 3.92 crores has been written down to Rs. 2.65 crores. The current assets aggregate Rs. 1.64 crores, of which cash balances alone account for Rs. 80.47 lakhs, and cover the current liabilities and provision for taxation, amounting to Rs. 1.02 crores, by a wide margin of Rs. 62 lakhs.

The outlook for the Company for the current year is satisfactory, as will be seen from the following observations of the Directors:

"During the current year, there has been a further shrinkage in freight movement and consequent severe competition; the Company may, however, be able to maintain a relatively satisfactory position in the trade, mainly owing to the patronage of shippers, Indian and overseas. The Ministry of Transport has continued to take a conspicuous interest in the development of Indian shipping and its policy of making loans available at reasonable interest for the increase of the fleet will, it is expected, produce tangible results during the current year so far as your Company is concerned."

HUKUMCHAND JUTE CUTS DIVIDEND

After paying a dividend of 6⅔ per cent., that is, Rs. 5 per share of Rs. 7-8, for two successive years, the Directors of the Hukumchand Jute Mills Ltd (Managing Agents: Messrs. Ramdutt Ramkissendass, Calcutta) propose to reduce the distribution to the shareholders to 40 per cent. or Rs. 3 per share for the year ended 31st March, 1953. This cut in dividend is in tune with the recession in the Company's earnings for the year. The trading profit, which had touched a high of Rs. 91.86 lakhs in the previous year, has dropped to Rs. 51.07 lakhs in the year under review. The net profit shows a decline from Rs. 33.45 lakhs to Rs. 18.75 lakhs.

The drop in the earnings of the Company is inevitable, owing to the difficult trading conditions that prevailed during the year. As the Directors observe in their report, the general recession in prices of both raw jute and finished goods which started during the previous year continued during the year under review also. The situation arising out of this recession in prices was further aggravated by the lack of export demand, particularly for heavy goods. Even the reduction in the export duty on sacking from Rs. 175 to Rs. 80 per ton with effect from 28th February, 1953, did not result in any increase in the export demand during the rest of the year under review. Almost throughout the year, the Directors add, there was a lack of parity between the prices of raw jute and those of finished goods.

The sale proceeds for the year have declined from Rs. 8.69 crores to Rs. 4.83 crores and other income from Rs. 11.88 lakhs to Rs. 5.92 lakhs. Closing stocks stand at Rs. 4.02 lakhs as at the end of the year, as against Rs. 6.15 lakhs. Manufacturing and trading expenses have recorded a drop from Rs. 7.52 crores to Rs. 4.29 crores. Managing Agents' remuneration takes up Rs. 10.16 lakhs, as against Rs. 18.48 lakhs. A sum of Rs. 5.67 lakhs has been provided for depreciation on block, as compared with Rs. 5.87 lakhs. In consonance with the decline in earnings, the provision for taxation has been reduced from Rs. 34.50 lakhs to Rs. 20 lakhs. The allocation to the general reserve has been cut from Rs. 7.75 lakhs to Rs. 6 lakhs. The 7 per cent. dividend on preference shares absorbs Rs. 2.80 lakhs and the ordinary dividend Rs. 12 lakhs, as against Rs. 20 lakhs a year ago. The sum left to be carried over is Rs. 1.87 lakhs, which compares with Rs. 3.92 lakhs brought in.

The financial position of the Company is quite satisfactory, as will be seen from the following synopsis of its latest balance-sheet:

Liabilities	Rs.	Assets	Rs.
Capital ..	70,00,000	Gross block ..	2,27,97,431
Reserves and surplus ..	41,87,203	Less—Depreciation ..	1,45,97,431
Debentures ..	25,24,658		
Provision for taxation ..	21,48,578	Net block ..	82,00,000
Liabilities ..	1,00,45,274	Stocks ..	11,82,801
		Stores, spares, etc. ..	3,08,906
		Debts, deposits and advances ..	66,75,309
		Investments ..	57,41,418
		Cash ..	37,97,279
Rs.	2,59,05,713	Rs.	2,59,05,713

It will be noted that the reserves and surplus stand at a satisfactory level, the bulk of which has been built up in the last six years, the gross block has been well written down and the current assets exceed the current liabilities by a large margin. It may be pointed out that out of the total investments of Rs. 57.41 lakhs, as much as Rs. 45 lakhs constitute deposits with banks and, therefore, actually represent cash balances. If this sum is thus treated as cash, then the total cash balances will amount to Rs. 82.97 lakhs.

TAX CLAIM AGAINST DELHI ELECTRIC SUPPLY AND TRACTION CO., LTD.

The Government of India's claim against the Delhi Electric Supply and Traction Co., Ltd. (incorporated in England and now in liquidation) for £120,000 (about Rs. 16 lakhs) on account of income-tax due from the Company on the purchase price paid by the Government when it took over the undertaking in 1947, has been dismissed by the London Court of Appeal.

The Government of India, it may be remembered, had pressed its claim before the Chancery Court in London, after the liquidators had rejected the Indian Government's claim. The Chancery Court dismissed the claim on the ground that no action could be taken in England to enforce the payment of Indian Government tax for reasons explained in a previous issue of this journal (*vide* page 239, *Commerce* dated 8th August, 1953). The Indian Government appealed to the London Court of Appeal against this decision. In upholding the lower court's decision, the appeal court said that there was weighty authority for the rule that courts could not be used as a means of collecting taxes imposed by another State. There was much to commend the rule on general principles of justice and convenience, though there might be hard cases and this might be one. In modern conditions, the appeal court thought, good arguments might exist for some relaxation of the rule as between the Commonwealth States, but that was a matter to be regulated by executive action.

MACHINERY MANUFACTURERS CORPORATION

The Machinery Manufacturers Corporation Ltd. (Managing Agents: Messrs. Mahindra and Mahindra Ltd., Bombay), has had another year of adverse results during the twelve months ended 31st March, 1953. It has incurred a loss of Rs. 7.49 lakhs, before making any provision for depreciation, as compared with a similar loss of Rs. 8.08 lakhs for the previous year. The year's loss brings the total accumulated loss upto the end of the year to Rs. 26.83 lakhs, besides arrears of depreciation and dividend on preference shares.

The circumstances that have led to such a loss during the year under review are fully explained in the Directors' report for the year, published elsewhere in this issue. It will be gathered from this report that the inadequacy of orders and accumulation of unsold stocks necessitated the complete suspension of assembly of cars from October, 1952 onwards. It was not until July, 1953, that a definite improvement in the flow of orders was noticed. The Directors, however, took steps in the meantime to keep the idle plant capacity engaged at least partially by manufacturing ancillary products and executing outside machining jobs.

The sale proceeds show a decline from Rs. 13.20 lakhs to Rs. 9.27 lakhs, while the value of closing stocks is up at Rs. 17.22 lakhs, as against Rs. 14.52 lakhs a year before. Expenses are slightly lower at Rs. 2.08 lakhs, as compared with Rs. 21.59 lakhs in the previous year.

In view of the extreme paucity of orders, the financial position of the Corporation became strained. The overdraft facilities with the Bank having reached their limit, the Corporation had to look for other avenues of finance and an appeal was, therefore, made to the Government of India for assistance. The Government approved and finalised the terms of capital investment in the Corporation and took up 25,000 special cumulative preference (4½ per cent. tax-free) shares of the Corporation. This has raised the total paid-up capital of the Company to Rs. 78.42 lakhs. The sum of Rs. 16.12 lakhs outstanding against bank overdraft at the close of the previous year was repaid during the year under review and at the close of the year there was no outstanding liability on this account. The balance due to the I.F.C. of India, together with the accrued interest thereon, amounts to Rs. 55 lakhs.

The outlook for the Corporation during the current year is promising, as will be seen from the Directors' report referred to earlier.

Points From The Chair

Exports Should be Stepped Up

"THE textile production in the country is at its highest level. With the reduced purchasing power of the consumer and with various imposts which go to increase the cost of the cloth to the ultimate consumer, huge stocks of cloth have accumulated with all the mills. The situation is very gloomy indeed. The only way to keep up this high production is to export more and more out of India. The exports in the current year have not been as anticipated, mainly because the consumer overseas is not prepared to pay the high cost of manufacture of Indian cloth together with the export duty."

LALA KAILASHPAT SINGHANIA,
New Kaiser-I-Hind Spg. & Wvg. Co., Ltd.

Quest for Productivity

"I do not suggest that firmer Commonwealth relationships offer a full answer to Britain's particular economic problems. The rising curve of home production, which lately has shown an encouraging increase, points the way. Managements, by and large, are maintaining pressure for both cost-reducing machines and methods, if only to stay in business, but we have far to go yet in increasing productivity and reducing costs to catch up with our most formidable competitors; and here the attitude of some factory workers is more relevant. The main difficulty, as I see it, is the lack of effective incentives. The motives of human behaviour may be complex, but not when they directly involve our sense of personal loss or gain. This is a vital part of the human mechanism the world over, if not its mainspring, and we subjugate it at our peril."

IVAN STEDEFORD,
Tube Investments Ltd.

Natural Rubber in a Serious Position

"The recent special meeting of the Management Committee of the International Rubber Study Group has issued a Press *communique* in which it is stated that recent price developments are placing the natural rubber industry in a serious position. Certain remedies or suggestions for dealing with the problem have been listed and are being set out for the information of, and possible action by, member Governments. It is earnestly hoped that these Governments will take serious note of the findings presented and will fully realise the urgency of the situation. In particular, the United States Government must assume a large measure of responsibility for initiating action to alleviate the present distressing conditions. A great deal will depend on the policy adopted in the operation of their Government-owned synthetic rubber plants before the sale of these in 1955, and on the methods used in stockpile rotation."

P. B. L. COGHLAN,
Sungkap Para Plantations Ltd.

International Sugar Agreement

"One of the objects of the new international agreement is to ensure equitable and stable prices of sugar in the world market. This is a matter of importance to Commonwealth producers, particularly in so far as the marketing of their free sugar is concerned, but it remains to be seen whether the quota arrangements under the agreement, which are designed to achieve this purpose by maintaining a price between minimum and maximum limits, will be successful. At the present time, the price has fallen well below the minimum level which the agreement will seek to maintain."

G. VERNON TATE,
Caroni Ltd.

Economy of South-east Countries

"It is impossible at present to foretell how the economic factors in the territories in which we operate are going to affect our business. In Malaya, the present low prices of rubber and tin, if they continue, are bound to have an everincreasing depressing effect on its economy. The same factors materially affect Indonesia, with which country Singapore and Penang normally do a large export business. Borneo is also affected by the price of rubber, but has other minor products which support its economy. Siam, in addition to being affected by the price of rubber and tin, has political uncertainties which are liable to cause anxiety to traders. The basic commodity of Siam is rice, and if that commodity follows the same path as nearly all other raw products, the economy of the country is bound to be seriously affected."

C. R. AKERS,
Borneo Co., Ltd.

Linseed Position in U.K.

"The oilseeds handled by us during the year were exclusively on Ministry of Food account. Those oilseeds on the 'free' list are of a type requiring special treatment by the solvent extraction process and this we do not operate. One exception is linseed, but, because of an obligation to purchase linseed oil from Government stocks at fantastic prices before being granted the necessary import licence for seed, it has been an impracticable proposition. This restriction is likely to operate for another six months; meanwhile, home-produced linseed oil and cake must remain in short supply, and consumers will be compelled to buy their requirements in foreign oil and the bulk of their requirements in foreign oil and imported cake of doubtful quality."

JAMES E. FARGUS,
Chambers and Fargus, Ltd.

QUESTION HOUR IN PARLIAMENT

Unemployment

THE Planning Commission has received from the various State Governments their preliminary assessment of the urban and rural unemployment problem in their States and their proposals for strengthening the State plans in the field of small-scale and cottage industries, vocational and technical training, road development and in other directions. As has already been stated, it is proposed to expand the Five-year Plan to the extent of about Rs. 150 to Rs. 175 crores. Within these broad limits, the detailed proposals from the States and the Ministries are being examined by the Planning Commission in consultation with the Ministries concerned. After all the decisions have been reached, the Government will present to Parliament a statement of schemes which are finally approved and other action taken towards the study of the problems of unemployment and the expansion of employment opportunities. The following is a list of proposals from States relating to cottage and small-scale industries, which are at present under consideration.

Assam.—(i) Starting of training institutions for manufacturing of implements used by agriculturists and by the tea industry, and (ii) setting up of handloom, bell-metal, pulp for paper and cardboard and compressed fibre industries.

Orissa.—(i) Increased aid to individuals and groups for setting up small industries under the State Aid to Industries Act, and (ii) setting up of a training-cum-production centre for some new industries.

Punjab.—(i) Loans to deserving individuals or groups for starting new cottage industries, (ii) establishment of a technical service unit for small-scale industries, (iii) development of lac industry in Kangra and Hoshiarpur districts, (iv) quality marking for hosiery and agricultural implements, and (v) marketing of handloom goods.

Uttar Pradesh.—(i) Development of handloom industry, (ii) development of tanning and leather industry, (iii) development of cottage industries in the eastern districts of Uttar Pradesh to relieve chronic scarcity conditions, and (iv) formation of co-operatives for brick-klin industry.

West Bengal.—(i) Starting of work-cum-training centres for the industries, such as, local industry sports goods, durries and carpets, wood, pottery, cane and bamboo products, (ii) training of 500 young men every year as trade apprentices in the various industrial undertakings, and (iii) development of small engineering industries.

Mysore.—(i) Mat-weaving, (ii) pottery, (iii) manufacture of ceramic ware and porcelain articles, (iv) leather tanning industry, (v) production and utilisation of glass articles and bangles, (vi) manufacture of simple mathematical instruments, and (vii) loans to educated unemployed for starting new industries.

P.E.P.S.U.—(i) Starting of 10 cotton spinning and weaving centres for development of khadi industry, (ii) sericulture, (iii) finishing plant for handloom industry, (iv) central cycle parts workshop, (v) sewing machine parts workshop, (vi) footwear and leather goods, (vii) leather tanning, (viii) glass industry, and (ix) sports goods industry.

Saurashtra.—(i) Organisation of co-operative societies for small-scale and cottage industries, such as, bidi making, weavers, palm *gur* industry, *chatai*, *moonj* and broom making, and (ii) neem oil industry.

Bhopal.—(i) Opening of training-cum-production centres, (ii) opening of a polytechnic, and (iii) increased aid to existing industries under the State Aid to Industries Act.

Delhi.—(i) Increased aid to cottage and small-scale industries, (ii) *khadi* development scheme—increased aid to recognised private body, (iii) scheme for intensive propaganda, (iv) establishment of a commercial showroom and an industries museum, (v) development of handloom industry, (vi) establishment of Delhi Industries Emporium, and (vii) training-cum-production centres.

Kutch.—(i) Constitution of a Cottage Industries Board, (ii) staff for Industries and Commerce Department (to be constituted), and (iii) deputation of an officer to Mysore to study the development of cottage industries.

Manipur.—(i) Creation of an Industries Department, and (ii) increased provision for development of cottage industries in the Plan.

Tripura.—Increased provision for development of cottage industries in the State plan.

Vindhya Pradesh.—Opening of training-cum-production centres in each District.

Minister for Planning

Fertiliser Manufacture

The Government of India has accepted the recommendation of the fertilisers mission to establish the manufacture of urea and ammonium nitrate at Sindri.

• • • •

Steel Plant

The German firms of Krupps and Demag, which will be associated in the company that will undertake the setting up of a steel plant in India, will receive a fixed fee of about Rs. 2 crores. The advance party of engineers from the German firms has arrived in Delhi. The experts will visit possible sites for the location of the plant and make their recommendations. The salary and allowances of resident engineers, as well as travelling allowances, will be separately borne by the company, in addition to the basic payment of consultants' fee.

—Production Minister

Industrial Development

The idea of an Industrial Development Corporation is one amongst several proposals which are now under consideration for accelerating industrial development.

• • • •

New Undertakings

Sixty-three new undertakings with a proposed capital investment of Rs. 1,844.85 lakhs have been licensed so far under the Industries (Development and Regulation) Amendment Act, 1953. In 15 of these undertakings, there will be foreign participation. It will not be in the public interest to give the names of foreign concerns participating with individual firms.

• • • •

Manufacture of Tractors

Several proposals have been placed before the Government to manufacture tractors and tractor-drawn implements. None of them has taken any definite shape, except Ferguson tractors, which are now assembled in India from parts imported in completely knocked down condition. It is expected that 50 per cent. of the components of the Standard Vanguard engine, which is used in a Ferguson tractor, will be produced by the end of 1954, according to a scheme submitted by Messrs. Standard Motor Products, Madras.

—Minister for Commerce and Industry

Betelnut Import Licences

No Government officer is involved in the matter of issuing betelnut import licences to 29 firms, which have misrepresented facts. Show-cause notices were issued to all the 29 firms. The licences granted to three firms, which had not replied to the notice, have been cancelled and further issue of licences to them have been suspended. Twenty-three firms which failed to produce, on one pretext or the other, the requisite documents to substantiate their turnover have been debarred from getting further licences. The remaining three cases are still under examination.

• • • •

Rubber Self-Sufficiency

India is now self-sufficient in rubber. No import licence has been issued for raw rubber in 1953. The Government has not decided anything final about the setting up of a rubber development scheme and another research institute.

• • • •

Export of Aluminium

The future export policy in regard to aluminium sheets and circles is now under the consideration of the Government. Export of aluminium sheets and circles was licensed freely for export upto the end of October, 1953. The Government was satisfied that the needs of the country were taken into account before export was allowed. The total production of aluminium sheets and circles in 1952 was 4,852 tons and in the first nine months of this year it was 3,850 tons, as against the installed capacity of 8,000 tons.

—Minister for Commerce

"Pool" of Engineers

The Government of India has under consideration a scheme for the formation of a "pool" of experienced engineers at the Centre. Proposals are also being formulated for the training of engineers at the major river valley projects under construction.

Bhakra Dam

The only change in the schedule of the construction of the Bhakra Dam is the postponement of the diversion of the river from this winter to the next. The Government of India has been assured by the construction authorities that this will not affect or delay the final date of completion of the project.

—Minister for Irrigation

Bhattacharya Committee's Report

As a result of the consideration of the report submitted by the team of officers headed by Mr. P. C. Bhattacharya, assistance is being given for a number of minor irrigation schemes under the grow-more-food programme in both the States of Andhra and residuary Madras and for contour bunding schemes in Coimbatore District in the latter State. A programme of permanent improvements for scarcity areas in Andhra, costing about Rs. 5 crores, during the period of the Plan, for which the Central Government will advance loans, is also at present under consideration.

—Finance Minister

Exchange Rate of Indian Rupee

The rate of exchange of the Indian rupee in Nepalese currency fluctuates from time to time and is now about Rs. 100 (Indian): Rs. 160 (Nepalese).

• • • •

Foreign Trainees Under the Colombo Plan

Two hundred and seven foreign students have so far been provided with training facilities by the Government of India at Indian institutions under the Colombo Plan. Six Indian experts have been sent to foreign countries under the Colombo Plan.

—Parliamentary Secretary to the —Finance Minister

Indian Agriculturists for British North Borneo

The Government of British North Borneo has formally withdrawn a year-old invitation to India to send 10,000 agriculturists for settlement in that British colony. The lack of public support in North Borneo to the scheme and the inability of the Government of North Borneo to meet the considerable expenditure involved resulted in the withdrawal of the scheme.

—Prime Minister

ANOTHER DEFICIT YEAR FOR MACHINERY MANUFACTURERS CORPORATION

DYER MEAKIN BREWERIES REPEATS DIVIDEND

Machinery Manufacturers Corporation Ltd.

THE directors of the above Company (Managing Agents: Mahindra and Mahindra Ltd., Bombay) submit the audited accounts of the Company for the year ended 31st March, 1953.

The textile industry in India faced near-slump conditions throughout 1952. Textile mills in Bombay State and South India, two of the main markets for the Company's main product, were further adversely affected by the power cuts imposed during the year. The Company received orders for only 115 cards during the year ended March, 1953, inclusive of 12 and 15 cards from China and Pakistan respectively. Partial recovery from slump condition was noticeable during January-March, 1953, when enquiries opened up. Since July, 1953 there has been a definite improvement in the flow of orders and the directors report that orders for 240 cards were confirmed during the 6-month period since April, 1953 and more enquiries have become active.

During the year 1952-53, only 57 cards were manufactured and assembled at Sonai Works, Calcutta. Inadequacy of orders and accumulation of unsold stocks at the factory resulted in progressive restriction being continued on the assembly of cards, leading to complete suspension from October, 1952 onwards. Production of components were also similarly restricted. Manufacture of ancillary products such as monoglide pumps against a specific contract and execution of outside machining jobs enabled partial utilisation of the idle plant capacity and afforded employment for key personnel of the factory and thereby obviated the necessity of resorting to large scale retrenchment measures. In February and March, 1953, when a few card orders were received necessary steps were taken to resume production and for the 5-month period between May and September this year, the factory manufactured 117 cards. Prospects for the remaining months of the current year are promising.

The staff were actively engaged in exploring the possibility of undertaking suitable heavy engineering works with a view to utilise the plant and engage personnel continuously and fully during periods when orders for the main product, i.e., carding engines, suffer a setback thereby minimising the recurrence of problems which arose during the period under review. The Board has decided to commence manufacture of 37" cards in order to meet the specific requirements of a number of mills in India, particularly as replacements for the above size of cards were represented to be large. Necessary patterns and jigs and fixtures are at present under preparation.

During the period under review, the activities of the sales staff of the Corporation were mainly directed towards affording servicing facilities to mills who had installed m.m.c. cards during 1951 and 1952, and also to overcoming the prejudices of millowners and technicians to the increased use of m.m.c. cards. Important groups of mills in various centres were contacted periodically and trial installations made. After thorough trials and rigid tests by progressive mills the m.m.c. card was found to be equal in construction and performance to imported machines.

The licensing policy covering import of cards restricted import to one against three purchased locally during the year 1952. The policy notification announced in March, 1953, imposed a ban on imports of 40" cards while application from mills for import of other sizes continued to be entertained. This resulted in a temporary setback in sales as mills felt that import of 37" and 38" cards would be freely permitted. Representations were made to the Government that the manufacture of cards of 37" width was under active consideration and in July, 1953 a total ban on import of cards other than 45" was announced. This announcement was of considerable assistance in clarifying Government policy and the directors are indebted to the Commerce and Industry Ministry for prompt action.

The Corporation's associates in U.S.A., H. and B. American Machine Company closed down their textile machinery manufacturing activities in May 1952, and the 20-year sales-cum-manufacturing agreement was dissolved by mutual consent. In July, 1952, the Corporation negotiated and finalised a similar agreement with Whitin Machine Works, Whitinsville, Massachusetts, U.S.A., successors to H. and B. American Company's textile machinery business. This change has enabled the Corporation to delete the royalty clauses and obtain free and exclusive rights to H. and B. designs in India.

The Government of India, approved and finalised the terms of capital investment in the Corporation and 25,000 special cumulative 4½ per cent. (tax free) shares were allotted to them on receipt of a cash payment of Rs. 25,00,000.

The current year's trading has resulted in a net loss of Rs. 7,48,896 (loss of Rs. 8,08,124) to which has to be added the sum of Rs. 19,34,673 (Rs. 11,26,549) carried forward from previous year making a total of Rs. 26,83,570 (Rs. 19,34,673) to the debit of profit and loss account. No depreciation has been charged in current year's accounts. The directors are unable to recommend payment of any dividend on cumulative preference shares. The fixed assets of the Corporation valued at Rs. 92,91,862 are adequately insured.

Relations between the management and the workers remained cordial during the year. From time to time the developing gloom in the Company's affairs was explained to workers' representatives, which was much appreciated by them and as a consequence their sincere co-operation in production efforts was secured.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	78,41,925	Block ...	85,55,614
Reserves ...	9,216	Work-in-progress ...	4,06,611
Liabilities ...	66,05,899	Stock-in-trade	3,91,460
		Stores, loose tools, etc. ...	15,04,628
		Debts, deposits and advances ...	4,66,675
		Other assets	2,22,774
		Goods-in-transit ...	1,902
		Investments	21,639
		Cash ...	2 02 167
		Profit and loss account. ...	29 83,570
Rs.	1,44,57,040	Rs.	1,44,57,040

Dyer Meakin Breweries Ltd.

The directors of the above Company (Secretary: Mr. K. G. Khanna, Solan Brewery) submit the audited accounts of the Company for the year ended 31st March, 1953.

The profit for the year, after writing off depreciation, amounted to Rs. 5,00,797 (Rs. 5,81,405), from which must be deducted a provision against the Company's estimated liability for taxes on these profits, amounting to Rs. 1,75,000 (Rs. 1,75,000) and to which is added the balance of profit and loss account brought forward from last year of Rs. 5,409 (Rs. 12,907) making a total, available for distribution of Rs. 3,31,206 (Rs. 4,18,712). This amount the directors recommend should be disposed of as follows:—

Dividend at As. 8 (As. 8) per share (10 (10) per cent.), free of income-tax Rs. 1,62,063 (Rs. 1,62,063), gratuity to staff for 1952-53 Rs. 90,000 (Rs. 90,000), transfer to general reserve Rs. 50,000 (Rs. 1,25,000), transfer to dividend equalisation fund Rs. 10,000 (Rs. 25,000) and transfer to charity fund Rs. 3,000 (Rs. 3,000) leaving to be carried forward a balance of Rs. 16,143 (Rs. 13,649).

The net profits declined from Rs. 5,81,405 in the previous year to Rs. 5,00,797 during the year under review. This is due to the fact that there was a general slump in the market and the Company could not completely escape from its effects. There has been a change over from a sellers market to a buyers market and also there were very many imports from abroad of beer and liquors during the year which brought the prices considerably down. However, the directors report that despite competition from imported as well as indigenous products, coupled with the fact that the purchasing power of the consumers has shown declining tendencies, the working of the Company for the year under report ended with satisfactory results.

Transport conditions continued to be easy, and, in spite of heavy imports of foreign liquor, the demand for the Company's principal products, such as Beer, No. 1 Whisky and XXX Rum continued to remain on the same level.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	16,20,630	Block ...	11,77,009
Reserves ...	14,30,780	Work-in-progress	12 558
Provision for taxation ...	1,95,231	Stock-in-trade	21,73 840
Liabilities ...	18,82,177	Stores and spare parts	7,72,035
Profit and loss account ...	3,31,206	Debts, deposits and advances ...	9,62,177
		Investments	93,261
		Cash ...	2,67,078
Rs.	54,60,024	Rs.	54,60 024

Kalapahari Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half year ended 31st August, 1953.

After bringing in Rs. 13,000 (nil) from provision for taxation account and providing Rs. 16,500 (Rs. 7,500) for depreciation, and Rs. 3,000 (Rs. 20,000) for cesses and Rs. 5,000 (Rs. 50,000) for taxation, there is a balance of Rs. 56,556 (Rs. 1,01,357) at the credit of profit and loss account, from which the directors recommend payment of a dividend at Re. 1 (Re. 1-12 including bonus of As. 12) per share Rs. 35,000 (Rs. 61,250) leaving to be carried forward Rs. 21,556 (Rs. 40,107).

Raisings during the half-year were 30,805 tons as compared with 37,227 tons during the previous half-year and depatches were 32,164 tons as against 40,505 tons.

Since the acquisition of a further area of Ghusick Seam, reference to which was made in the Company's report for the half-year ended February, 1951, development through the thick dyke which divides the new area from the original workings has been proceeding with a view to the new area coming into production before working places in the original colliery should become restricted. In fact access was obtained to clean coal during the half-year according to programme but unfortunately an predictable feeder of water was struck which has delayed production from the area. The effect of this is reflected in the raisings figures given above and in the results for the half-year and on this account the directors have been unable to recommend the payment of any bonus to shareholders.

The work of sealing off the feeder of water is in progress and it is hoped that if this is successful and no further such feeders are struck, development of and production from this new area may be commenced. Meantime, the colliery is dependent on production from the remaining working faces in the original area.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.

Seebpore Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 30th June, 1953.

After providing Rs. 87,000 (Rs. 85,000) for depreciation and Rs. 58,500 (Rs. 96,500) for taxation and cesses and after transferring to capital reserve Rs. 1,33,462 (nil) being the profit in investment account on realisation of the Company's investments, there remains a balance at the credit of profit and loss account of Rs. 70,876 (Rs. 76,724) out of which the directors recommend payment of a dividend on 4,000 5 per cent. non-taxable cumulative preference shares Rs. 10,000 (Rs. 10,000), and dividend of As. 14 (Re. 1) per share on 40,000 ordinary shares Rs. 35,000 (Rs. 40,000) leaving to be carried forward Rs. 25,876 (Rs. 26,724).

Raisings were 69,928 tons as compared with 73,523 tons in the previous half-year and despatches were 51,645 tons as against 88,132 tons.

The Company's Pretoria Colliery, which has been worked for half a century, has now reached the stage of exhaustion in the Poniati and Koithi Seams but the more recently developed Lachipur Colliery is now in full production.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	6,80,000	Block ...	13,40,134

Bhalgora Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. H. V. Low & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 30th September, 1952.

After meeting all expenses and providing Rs. 41,000 (Rs. 20,000) for depreciation and after transferring Rs. 49,850 (nil) from general reserve fund and Rs. 40,000 (nil) from taxation reserve and including the credit balance of Rs. 7,192 (Rs. 39,978) brought forward from the last account, there is a balance of Rs. 45,529 (Rs. 27,192) at the credit of profit and loss account and from this the directors recommend payment of a dividend of As. 2 (As. 2) per share free of income-tax leaving a balance of Rs. 25,529 (Rs. 7,192) to be carried forward.

During the year under review 68,938 tons of coal were raised and 46,213 tons despatched as compared with 70,201 tons raised and 74,402 tons despatched during the previous year.

The directors report that the Company has purchased the Aerial Ropeways of the Standard Coal Co., Ltd., for stowing sands in the Company's mines.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	15,97,000	Block ...	14,62,020

Liabilities ...	2,18,304	Debts, deposits and advances ...	6,26,388
Profit and loss account ..	45,528	Cash ...	50,028
Rs.	25,55,440	Rs.	25,55,440

Mutira Electric Supply Co., Ltd.

The directors of the above Company (Chairman: Mr. G. D. Bhagat, Calcutta) submitted the audited accounts of the Company for the year ended 31st March, 1953.

The Government order restricting the installation of new services is still in force. An application for the extension of the licensed area of the Company was made some time in July, 1951, to the Secretary to the Government of Uttar Pradesh, for electrification of the area of the Krishna Nagar Town. Sanction for the said extension is expected very soon. However, the matter has been taken up by the District Relief and Rehabilitation Officer, Mathura, and the electrification of the town is now taken into operation.

The following table shows the comparative position of progress for the past three years.

Half-year ended	Units sold	Revenue Rs.
30th September, 1950 ..	14,65,757	2,39,034
31st March, 1951 ...	12,92,621	2,35,618
Year ended 31st March, 1952	28,88,283	4,92,633
Year ended 31st March 1953	29,76,633	4,95,829

After complying with the provisions of the Electricity (Supply) Act, 1948, and making adequate provisions for liabilities there remains a balance of Rs. 51,941 (Rs. 58,702) including Rs. 16,720 (Rs. 23,103) brought forward from the previous year, which the directors recommend be disposed of as follows:

Payment of a dividend at 6 (6) per cent. per annum free of income-tax Rs. 41,982 (Rs. 41,982) leaving to be carried forward to next year Rs. 9,959 (Rs. 16,720).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	6,99,850	Block ...	4,93,693
Reserves ...	1,27,966	Stores, tools, etc. ...	1,83,762
Provision for taxation ...	93,014	Debts, deposits and advances ...	1,65,913
Liabilities ...	3,53,998	Investments	4,23,311
Profit and loss account ...	51,940	Cash ...	60,089
Rs.	13,26,768	Rs.	13,26,768

Rajagiri Rubber and Produce Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. A. V. Thomas & Co., Ltd., Alleppey) submit the audited accounts of the Company for the year ended 30th June, 1953.

The total estimated crops for the year under report were 5,50,000 lbs. for Rajagiri and 7,50,000 lbs. for Shaliacary (total 13,00,000 lbs.) to be produced at an average cost of 58.50 cents. The actual crops harvested were 5,76,000 lbs. on Rajagiri and 7,96,823 lbs. on Shaliacary totalling 13,73,423 lbs. at an average estate cost of 55.46 cents per lb. The average sale price realised was 129.97 cents as compared to 122.12 cents for the previous year.

The net profit for the year after allowing for depreciation and after providing a sum of Rs. 3,00,000 (Rs. 2,65,000) for income-tax, amounted to Rs. 5,57,685 (Rs. 4,53,926). Adding the previous year's carry forward of Rs. 31,102 (Rs. 25,420) to this profit, the total amounts to Rs. 5,88,788 (Rs. 4,79,346). Out of this, the preference dividend paid for the year absorbed Rs. 1,35,600 (Rs. 1,35,600) leaving a balance of Rs. 4,53,186 (Rs. 3,43,746), which the directors recommend be disposed of as under:—

Payment of a dividend of 15 (15) per cent. on ordinary shares Rs. 2,02,500 (Rs. 2,02,500), transfer to replanting reserve (making Rs. 2,00,000) Rs. 1,00,000 (Rs. 60,000), transfer to staff pension fund (making Rs. 40,000) Rs. 10,000 (Rs. 10,000), transfer to general reserve (making a total of Rs. 3,00,000) Rs. 50,000 (Rs. 40,145), and bonus on ordinary shares at As. 4 (nil) per share Rs. 33,750 (nil), leaving to be carried forward to next year Rs. 56,936 (Rs. 31,101).

The application to the Central Government for according sanction for the renewal of the managing agency with Messrs. A. V. Thomas & Co., Ltd., on the terms already notified by notice dated 26th May, 1953, calling the extraordinary general meeting, has been favourably considered and the consent sought for has been accorded.

The Central Government in according the above consent have directed the Managing Agents not to take any buying or selling commission from the Company and this they have agreed to. In accordance with the consent, it is believed that the arrangements in contemplation would be completed and before the directors report again, the amounts of the Company now lying in credit with Thomcos Bank Ltd., would have been transferred to a Scheduled Bank.

Estimate for 1953-54: A total crop of 11,70,000 lbs. of rubber—5,20,000 lbs. from Rajagiri and 6,50,000 lbs. from Shaliacary—is estimated to be harvested during 1953-54 season at a cost of 62.13 cents per lb. The above estimate, it will be noted, is less than the estimate and actual crop for last season, but this is due to an anticipated shortfall in crop through cessation of tapping on Sundays which became necessary this season.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	36,10,000	Block ...	36,41,857
Reserves ...	4,10,000	Stores, etc. ...	70,567

Liabilities ...	2,00,496	Debts, deposits and advances ...	1,70,179
Profit and loss account ...	4,53,186	Investments	10,000
		Cash ...	11,04,059
Rs.	52,51,477	Rs.	52,51,477

Brooke Bond Estates India Ltd.

The directors of the above Company (Managing Agents: Brooke Bond India Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 30th June, 1953.

The net profit for the year before providing for taxation amounted to Rs. 1,20,264 (Rs. 8,47,763). Deducting from this taxation reserve (income and sales tax) Rs. 90,817 (Rs. 3,01,000), the net profit after taxation amounted to Rs. 29,447 (Rs. 5,46,763). After adding net balance brought forward from the previous year after payment of last year's dividends and appropriations to reserve Rs. 87,990 (Rs. 1,23,663) and bungalow insurance provision written back Rs. 52,109 (nil), home passage Rs. 8,430 (Rs. 2,430), taxation Rs. 1,51,510 (nil) and general reserve Rs. 65,000 (nil), there was a total of Rs. 3,94,495 (Rs. 6,72,865). This balance, the directors disposed of by paying a dividend at the rate of 6 (6) per cent. per annum, less income-tax at the current rate on the preference shares, absorbing Rs. 1,54,875 (Rs. 1,54,875), paying a dividend at 5 (10) per cent. on the ordinary shares without deduction of tax, absorbing Rs. 1,75,000 (Rs. 3,50,000) and transferred to capital reserve being excess of insurance claim over written down value of bungalow destroyed by fire Rs. 52,109 (nil) leaving a carry forward to next year of Rs. 12,511 (Rs. 87,990).

The crop harvested amounted to 33,36,422 lbs. of manufactured tea and shows an increase of 3,14,494 lbs. compared with the previous year. Again this year weather conditions were very favourable for crop and, in particular, 1953 season had a very good start. Since then, however, there has been some falling off due to lack of rain. The crop estimated for 1953-54 is 31,60,000 lbs.

The year 1952 saw one of the most serious financial crises that have taken place in the history of the tea trade. In the directors' report for the year ended 30th June, 1952, reference was made to the depression existing in the Tea Market and the generally much lower level of prices then ruling.

The rapid slump in tea prices which subsequently took place was not, in the directors' opinion, due primarily to any large overproduction of tea, but to a surplus of the lower grades of tea, and the cumulative effect of bulk buying during the war, with controls over the free market. From the beginning of the 1953 season, prices have very much improved and indications are that this year's results will be much more satisfactory.

Having regard to the serious financial crisis in the trade, the directors feel that the Company's results for 1952-53 may be considered satisfactory: nevertheless, in view of the small profit earned for the year, the managing agents have agreed to forgo half their managing agency commission for the year ended 30th June, 1953.

Whilst economies were effected wherever possible these have not been carried out at the expense of the labourers, the directors that full employment was offered to the estates' labour throughout the year.

The directors have recommended the withdrawal of Rs. 65,000 from the general reserve and the payment of the usual preference dividend and an ordinary dividend of 5 per cent. without deduction of tax. The directors mentioned that a preference shareholder has questioned the practice of the Company in deducting the standard rate of income-tax from the preference dividend. The directors have always understood this to be the correct procedure, but the Company is arranging for the ruling of the Court to be obtained. The general condition of all estates continues excellent and work on the new areas proceeds satisfactorily. On the whole the management has succeeded in preserving good relations with labour.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	70,00,000	Block ...	56,44,447
Reserves ...	9,05,082	Stock-in-trade	7,63,707

Rs.	89,05,568	Rs.	89,05,568

Thacker and Company, Ltd.

The directors of the above Company (Chairman: Mr. W. W. Russell, Bombay) submitted the audited accounts of the Company for the year ended 31st March, 1953.

The accounts after providing adequate depreciation on the fixed assets, the profit on the year's working amounted Rs. 30,559 (Rs. 30,332), to which was added the balance brought forward from previous year of Rs. 3,145 (Rs. 3,483) and E.P.T. post-war refunds less tax Rs. 19,253 (nil), making a total of Rs. 52,957 (Rs. 33,815). From this sum the following appropriations were made:—

Employees' retiring gratuities reserve Rs. 4,950 (Rs. 5,670), reserve for bad and doubtful debts Rs. 4,450 (Rs. 5,000), reserve for dividend equalisation fund Rs. 15,000 (Rs. 5,000), interim dividend at 6 per cent. free of income-tax Rs. 9,000 (nil), proposed dividend at 10 (10) per cent. free of income-tax Rs. 15,000 (Rs. 15,000) leaving a balance of Rs. 4,557 (Rs. 3,145) to be carried forward.

During the year, the Company celebrated its 75th anniversary. The Company having been incorporated in 1878, the directors have included in the dividend paid and proposed to be paid a bonus to shareholders of 6 per cent. free of income-tax in order to mark the event.

Accounts in brief were as under:—

Parekh, Solicitor, "Hari Nivas," Ghodbunder Road, Khandivli, Bombay.

MONEY MARKET DULL

(From Our Own Correspondent)

BOMBAY, 25th *November*

The short-term money market ruled dull during the week under review. Supply of funds was plentiful, but demand was meagre, with the result that the turnover was poor and money rates eased further. Inter-bank call money among the Exchange banks and big Indian banks, which had stood at 1 per cent. with lenders, actually moved down to ¾ per cent. early in the week and remained steady at that rate for the rest of the week. The corresponding rate among the smaller Indian banks also declined, slightly from 3 per cent. to 2½ per cent. House money as placeable at 2½ per cent. Short-term deposits were bid at 2½ per cent. for one month, 2¾ per cent. for two months and 2¾ per cent. for 3 to 6 months.

After a period of 2½ months, the tenders for the three months' Government of India Treasury Bills were reduced from Rs. 1.5 crores to Rs. 1 crore this week. The response was a little more encouraging than in the previous week, evidently on account of the easiness in the money market. Thus, the amount offered this week was Rs. 1.56 crores, as compared with Rs. 1.98 crores against tenders for Rs. 1.5 crores last week. The average rate of accepted tenders was Rs. 2-6-10 per cent. per annum, as against Rs. 2-7-0 per cent. in the previous two weeks. Tenders for next week are for the same amount, namely, Rs. 1 crore.

A contraction of Rs. 8.19 crores in notes in circulation and a rise of Rs. 8.92 crores in notes held in the Banking Department are the only features in the currency section, as disclosed by the statement of affairs of the Reserve Bank of India for the week ended 20th November, 1953. In the Banking Department, deposits of the Central Government have recorded a fall of Rs. 6.56 crores, while those of other Governments an increase of Rs. 3.06 crores. Following the rise of Rs. 2.35 crores noted in the previous week, there has been a further rise to the tune of Rs. 12.61 crores in deposits of banks, thereby reflecting the lack of trade demand for funds on banks. Cash balances are higher by Rs. 8.93 crores, while there has been no notable variation in balances held abroad. Ways and means advances to Governments are higher by only Rs. 59 lakhs, while other loans and advances are lower by Rs. 36.25 lakhs and investments by Rs. 1.06 crores.

The change in the complexion of the short-term money market during the first post-Diwali week is duly reflected in the Scheduled banks' statement for the week ended 13th November, 1953. Demand deposits have gone up by Rs. 11.39 crores in contrast to the decline of Rs. 18.28 crores noted in the previous week. Time deposits are lower by Rs. 1.63 crores. A drop of Rs. 1.86 crores in borrowings from the Reserve Bank and of Rs. 3.31 crores in those from the Imperial Bank is also noted. Advances disclose a fall of Rs. 1.24 crores and bills purchased and discounted Rs. 4.10 crores. Cash on hand and balances with the Reserve Bank have together shown an expansion of Rs. 7.37 crores and balances with other banks in current account Rs. 1.65 crores.

A broadening of demand for 3½ per cent. National Plan Bonds, due to proximity of interest payment, and some small enquiries for medium-dated loans at quoted rates were the only notable feature of trading in the Gilt-edged market during the week under review. The volume of business was still small. 3½ per cent. N.P. Bonds rebounded from Rs. 98-13 to Rs. 99, though some transactions were reported to have passed at Rs. 99-0½ also. 3 per cent. 1986 Conversion Loan had business at no better a rate than Rs. 81-15. 3 per cent. 1970-75 remained stagnant at Rs. 86-6, 3 per cent. 1966-68 at Rs. 90-1, 3 per cent. 1964 at Rs. 92-8 and 3 per cent. 1963-65 at Rs. 92-9. 3 per cent. 1959-61 had enquiries at the unchanged rate of Rs. 96-1. 3 per cent. 1958 and 3 per cent. 1957 were maintained at Rs. 98-1 and Rs. 98-5, respectively.

TEA PRICES IRREGULAR

(From Our Own Correspondent)

CALCUTTA, 24*th November*

Although demand was strong during yesterday's export auction, when offerings consisted of 68,000 chests, prices were notably irregular. Thus, while C.T.C. Assam fannings and brokens were taken at firm rates, a poor reception was accorded to Darjeelings, of which the prices of leaf grades lost as much as As. 2 from last rates. Steady demand for common B.P.Ss. and whole leaf grades raised their prices by almost half an anna. A gain of half an anna was noted in the price for the commonest varieties. The rates were: best Assam C.T.C. B.P. Rs. 2-1 to Rs. 2-2, clean black pekoe Re. 1-14-6, medium Assam B.P. Re. 1-13-6, and clean common B.P. Re. 1-12-9.

A very bright feature during last week's sale for internal consumption, when dusts offered amounted to 14,509 packages, was Darjeelings, of which the flavoury sorts realised values above brokers' valuations. Other offerings were also met with strong demand, and bright liquoring Dooars and best C.T.C. Assams were favoured by buyers. Black teas fit for export were wanted at hardening rates. Prices for common varieties and medium Assams gained by one anna. The rates were: best Assam C.T.C. Re. 1-14-6 to Re. 1-15, medium Assam grainy Dusts Re. 1-10 to Re. 1-10-6, and medium Dooars Re. 1-9-6 to Re. 1-10. The leaf market was also steady and offerings aggregated 628 packages.

BULLION STEADY

(From Our Own Correspondent)

BOMBAY, 25th *November*

A steady tone was displayed by the bullion market during the week under review, especially in the gold section. Activity in the silver section was rather at a low ebb and price fluctuations were narrow. Paucity of demand and the move on the part of the Government of Bombay to clear the uncertainty regarding the proposed amendment to the by-laws of the Bombay Bullion Association restrained trading. Operators seemed to wait for the outcome of the meeting of the Board of Directors called for to-morrow.

Gold was a little more cheerful, due to a decline in arrivals of smuggled gold, thanks to the vigilance of the Customs authorities, as reflected in the recent seizure of some contraband gold from a dealer and to good demand in the ready position, particularly from Calcutta side.

Market circles were surprised at the sudden move of the Bombay Government to clear the position regarding the proposed changes in the by-laws of the Bullion Association which have been hanging fire for some time past. The Finance Minister of Bombay invited the representatives of the Board of Directors of the *Association for a* meeting on Monday and is understood to have told them that they should decide whether they intend amending the by-laws or not and submit its decision to the Government before 5th December. A meeting of the Board of Directors will be held to-morrow to discuss the issue and take a decision. It is not known what prompted the Government of Bombay to intervene now, when no dispute has arisen or a deadlock in trading has come. In recent weeks, trading has been fairly smooth, without any hectic activity by one section or the other of the traders and without any wide variations in day-to-day prices.

Silver for forward delivery (23rd November) opened the week at Rs. 152-7 and advanced to Rs. 153-8 on Monday before the settlement ran out on that day at Rs. 153-3. Opening at Rs. 152-15, forward silver for the next settlement (23rd December) moved up to Rs. 154-2 on Monday and finished the week lower at Rs. 153-6.

Ready silver (.996 Mint) began at Rs. 152-7 and touched to-day Rs. 154, before it closed at Rs. 153-2. The floating stocks of silver are placed at 2,600 bars. The daily average offtake is about 10 bars.

Forward gold (21st November settlement) commenced at Rs. 83-1 and rebounded on the opening day to Rs. 84-5, on short covering induced by better offtakes and smaller pace of arrivals. There was a slight reaction from this level to Rs. 83-15 on Saturday when the settlement ran out. Trading in the next settlement (21st December) began for the week at Rs. 82-8 and closed to-day at Rs. 83-9.

Ready gold opened at Rs. 83-9 and finished at Rs. 84-1. The floating stocks are reported to be 20,000 tolas. The daily average arrivals were 4,000 tolas and the offtake was 5,000 tolas on an average.

The following comparative table shows the trend of the market during the week under review:

	25-11-53	Highest	Lowest	18-11-53
GOLD	Rs. a.	Rs. a.	Rs. a.	Rs. a.
Ready (.99 fine Mint)	84 1	84 9	83 1	83 9

STALEMATE IN KIPS

(From Our Own Correspondent)

MADRAS, 23*rd November*

There has been no change in the kip market at Madras or the U.K. If the stalemate continues for a week more, selling is likely to follow on a small scale for financial reasons, which will damp the steady outlook for the tanners. There were more enquiries for medium and heavy weights in cow hides and 1½/2 lbs. in buff calf, but prices locally have ruled 1d. to 2d. above U.K. levels.

In the tanned skins section, there has been good clearance of stocks. In the December London tanned skins auctions, 615,000 goat skins and 320,000 sheep skins have been offered for sale. In view of the large quantity of goat skins available, prices are likely to decline to some extent.

LINSEED FIRM

(Messrs. A. Bradley & Co.)

CALCUTTA, 23*rd November*

Activity in the linseed market has been on a somewhat better scale. The undertone of the market rules firm and prices have been generally well maintained. Despatches to this centre have improved and trading has been fairly brisk mainly for ready goods, owing to keen enquiries from local crushers. Sellers for forward deliveries still maintain a cautious attitude. The oil section remains firm. There has been a fair local demand and the main feature is scarcity of supplies. Latest quotations are: November Rs. 19-14 and December Rs. 19-8 per maund.

COTTON BUOYANT

(From Our Own Correspondent)

BOMBAY, 25th *November*

The cotton market has passed through another week of buoyant conditions. Under the impetus of continuous bull support and persistent short-covering, values of cotton forged ahead. The chief factor which imparted strength to the market was the hectic activity in the spot section, following reduced arrivals in terminal markets. The bullish fervour was fanned further by renewed expectations of lower cotton crop and repeated encouraging advices from cloth markets. On top of these, there was the resurgence of support by put and call option dealers.

I.C.C. cotton for February delivery opened the week at Rs. 629-8. After improving to Rs. 632-8 the same day, it reached to finish lower at Rs. 626-8, due to profit-taking at higher levels and hedge selling. The reaction, however, was short-lived, for, on the following day, the market picked up considerable strength and the contract staged a remarkable recovery. Not only was the initial loss completely erased but the closing quotation stood higher than the opening rate. The improvement persisted till almost the close to-day, the closing rate being Rs. 652-8. At one time, it had even touched Rs. 659. The net gain over the week was 23 points. I.C.C. May contract moved in sympathy with the February contract. The contract opened at Rs. 635-8 and, after receding to Rs. 632-8, gradually rose to Rs. 660, but finished a shade easy at Rs. 654-12. The net gain over the week was Rs. 19-4. The spread between the two contracts narrowed down to Rs. 2-4 at the close to-day, as against Rs. 6 early in the week.

The following is the trend of prices in the forward market during the week under review:

	Opening	*High*	*Low*	*Closing*
I.C.C. Feb. ...	Rs. 629½	659	626½	652½
I.C.C. May ...	Rs. 635½	660	632½	654½

There was a further broadening of activity in the spot market and values continued to move upwards. Mills lent good support, especially for Jarillas, Khandesh and Berar fine. Offices were interested in Bengal cotton. The following are the latest available quotations for the Sewri market:

Bengal *Deshi* Rs. 610, Berar *Jarillas* Rs. 730, Khandesh Rs. 770, Vijay Rs. 800, Oomra *Deshi* Rs. 660 and Moglai Rs. 640.

Cotton circles are evincing keen interest in the forthcoming meeting of the Export Advisory Council scheduled to be held in New Delhi on Sunday next. Although the Textile Commissioner recently stated that there would not be any downward revision in export duties on cotton, some are somewhat inclined to feel that pressure may be brought upon the Commerce and Industry Ministry at this meeting. Whether or not the Minister will yield to this pressure and, if so, to what extent, is, however, anybody's guess.

There has been an all-round rise in cotton prices in the Karachi market. The rise is attributed to short-covering by exporting houses, and buying by other merchants who are induced by expectations of a further increase in prices. Australia is reported to have evinced keen interest in N.T. raw ginned cotton; a sizable quantity has already been purchased. France, Belgium and the U.K. are also said to be interested in Pakistan styles. The Continent has purchased fairly good quantities of old crop 289F roller.

According to the second official forecast of the 1953-54 Pakistan cotton crop, the area under cotton cultivation is estimated at 3.12 million acres. Of this, 2.70 million acres represent area devoted to American seed and 423,000 acres to *Deshi* varieties.

The latest available quotations for the Karachi market are: Punjab Deshi Rs. 62 to Rs. 64, 4F. Punjab R.G. Rs. 61-8 to Rs. 62-8, S.G. Rs. 66 to Rs. 67, L.S.S. Punjab R.G. Rs. 66, S.G. Rs. 71, N.T. R.G. Rs. 67, S.G. Rs. 73, 289F Punjab R.G. Rs. 70, S.G. Rs. 76-8, Sind *Deshi* new crop Rs. 64 and old crop Rs. 59-8.

The Alexandria cotton market witnessed slightly easier conditions. Thanks to restricted foreign demand, spot premiums over official selling prices, particularly for Ashmouni and Giza 30, have staged a retreat. The decline in prices would have been more marked but for the recent revival of export demand for Karnak from the U.K., India, France and Switzerland. The Egyptian Government has still not taken up for active consideration any proposal for the reopening of the Alexandria futures market, though there are rumours of the reopening of the market next year, in view of the fact that the British Government has decided to resume the Liverpool futures market. Latest private estimates place the 1953-54 Egyptian cotton crop at more than 6.3 million cantars, which compares favourably with the official estimate of 5.93 million cantars. The increase in yield now expected is attributed to favourable weather conditions during the month of October, 1953.

Two-sided movements in prices characterised the trading in the New York cotton market during the week under review. Thus, spot and near delivery cottons registered improvement, while distant deliveries suffered losses. The improvement in the former was induced by two bullish factors, namely, active enquiries from domestic mills and renewal of trade demands against the recent sale of 27,700 bales to Spain. The downward trend in the prices of later deliveries reflected selling against December purchases.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

(In cents per lb.)

	24-11-53	17-11-53	10-11-53
Spot	33.83	33.55	33.70
December	33.16	32.88	33.03
March	33.45	33.34	33.42
May	33.57	33.63	33.62
July	33.39	33.46	33.41

Exports of cotton from the U.S. continue to run well behind the last season's total to date. The shippers say that the total shipments of 2 million bales this season compared with the Agriculture Department's estimate of about 3.2 million bales. The U.S. Export-Import Bank has announced that it will insure the storage of U.S. cotton (and cotton mill waste) in sixteen foreign countries, pending purchases by foreign mills, against the risk of loss from war and expropriation.

ART SILK YARN FULLY STEADY

(From Our Own Correspondent)

BOMBAY, 25th *November*

The art silk yarn market presented a highly irregular trend this week. It remained fully firm during the first two sessions, on broadening of activity in the rayon fabrics and cotton yarn markets. There was, therefore, heavier offtake of yarn in the ready section which induced operators in the forward section to enlarge their dealings. Consequently, values of yarn forged ahead. But the upward trend was somewhat halted on Monday and Tuesday, when the market put on a sagging tendency on expectation of an early announcement of import policy for the coming half-year. To-day, however, the sentiment turned for the better, following renewed bullish advices from the fabrics markets. Values of art silk yarn, as a result, staged a remarkable recovery, thereby making good a substantial part of the previous losses. The closing quotations were higher than those a week before. The undertone of the market was fully steady.

In the forward section, 150D November contract opened the week higher at Rs. 719, as against Rs. 707. After rallying 16 points to Rs. 735 on Saturday, the contract receded to Rs. 720 yesterday. The loss was made up to-day when the quotation stood at Rs. 726. Similarly, December contract began the week with a rise of 15 points at Rs. 725. It improved to Rs. 741 on the 21st inst., and, after losing Rs. 16 during the subsequent two sessions, finished the week at Rs. 732. The spread between the two contracts, which had narrowed down to Rs. 3 last week, widened to Rs. 6 at the close to-day.

The ready section was fully steady practically throughout the week. 120 Italy and 150 Italy gained an anna and a half to Rs. 3-14-6 and Rs. 3-10-6, respectively. 150 Japan advanced by a like amount to Rs. 4-1-6. 120 Japan rose by an anna to Rs. 4-3.

The staple fibre yarn section exhibited conditions similar to those in the art silk yarn market. Following depletion of floating stocks and postponement for two weeks of decision regarding the opening of forward trading in January contract by the Yarn Merchants' Association, short sellers were squeezed considerably and staple fibre yarn prices moved up. November (40 x 2) contract, which has dealt at Rs. 762 last week-end, staged an impressive rise of 28 points to Rs. 790 on the 21st inst. On Monday, however, the section gave way, on account of lack of demand in the ready section, and values suffered a break. The downward trend persisted yesterday and to-day also, the closing quotation being Rs. 760, which is Rs. 2 lower than that a week before.

The table below gives the prices of art silk yarn and staple fibre yarn quoted to-day, as compared with those on the 18th and 11th inst.

	25-11-53	18-11-53	11-11-53

GROUNDNUTS IMPROVE

(From Our Own Correspondent)

BOMBAY, 25th *November*

For another week in succession the different sections of the oilseeds market continued to present a mixed trend. The generally firm trend noticed last week in the groundnuts section persisted during the major part of this week also. Evidently, this was due to rumours that the groundnuts crop would not be as heavy as expected. The up-country *vanaspati* interests were also in the market with a view to making substantial purchases. As a result, the prices shot up. But at the high levels selling pressure ensued and the prices had to stage a retreat. The downward trend was not, however, such as to erase the earlier profits. Consequently, closing quotations disclosed considerable gains over the week. The linseed section ruled steadier on speculative enquiries and the prices staged a sizable rise. In the castorseeds section, there was a mild bull-bear tussle and prices experienced wide fluctuations. The week-end quotations were, however, higher than those at the end of last week. Spots ruled bright and recorded generally good improvement.

In the groundnuts section, Bold December-January delivery which opened at Rs. 28-6, as against Rs. 28, shot up to Rs. 30 on the 21st inst., on speculative covering. Thereafter, it gradually declined to close at Rs. 29-4. February-March delivery fluctuated between Rs. 31 and Rs. 29-4, before finishing at Rs. 30-2. Khandesh quality gathered As. 10 to Rs. 31-12. Groundnut oil exmill put on As. 12 to Rs. 17. Railway receipts were done at Rs. 16-12, as against Rs. 16. November, December and January deliveries changed hands at Rs. 16-8, 15-14 and Rs. 16, as against Rs. 15-12, Rs. 14-14 and Rs. 15, respectively. Sellers were not wanting in groundnut oil at about £125-10 for January-February delivery and at £123-10 for February-March delivery, but buyers were scarce. H.P.S. groundnuts continued to be offered at £91 per long ton c.i.f., but little business was reported done owing to uncertainty of licensing position.

The linseed section ruled better despite virtual absence of overseas advices for linseed oil. This was purely due to the strong technical position of the market. Bold ready advanced from Rs. 25-8 to Rs. 26. October-November delivery gained As. 8 to Rs. 26 and February-March Re. 1-2 to Rs. 22-10. Linseed oil was quiet at Rs. 14-8. American linseed oil was quoted on the Continent and the U.K. at about £73 per long ton c.i.f.

In the castorseeds section, the futures witnessed considerable fluctuations. Thus, May delivery, which opened steady at Rs. 106-4, fluctuated between Rs. 115-12 and Rs. 105-10, before closing at Rs. 113-6. Ready F.A.Q. improved from Rs. 25-12 to Rs. 26-4. Higher levels attracted profit-taking and prices declined to close lower at Rs. 25-12, the same as at the end of last week. Madras rallied Re. 1 to Rs. 27-8. Castoroil B.S.S. lost As. 8 to Rs. 16-4. But Oil I Pressure gained As. 6 to Rs. 16-2 and Commercials As. 4 to Rs. 15-4.

The following table shows the prices of oilseeds and oil on the 25th inst. as compared with those at the end of the previous two weeks.

SUGAR STEADY

(From Our Own Correspondent)

BOMBAY, 25th *November*

Steady conditions prevailed in the Bombay sugar market during the week under review. Two important factors were responsible for the steadiness. First, there were rumours that there might not be any more imports until April-May next year. Secondly, demand from the interior and Hyderabad, Malabar and Madras sides was distinctly encouraging. Buying support that ensued as a consequence helped maintain sugar prices more or less at last week's levels. Thus, in the forward section, *Magsar* delivery was fully steady at Rs. 84-12 (per bag). *Kartik* delivery was quoted at Rs. 87-8, although, towards the close, it was lower at Rs. 85. In the ready section, medium and large grain sugars were unaltered at Rs. 94, to Rs. 95 and Rs. 98, respectively. Small grains were not quoted, as no stocks were available. British refined sugar improved from Rs. 85 to Rs. 85-4.

Arrivals of indigenous sugar during the week under review were smaller, being 5,600 bags, as against 10,000 bags in the previous week.

The Union Food Ministry has invited fresh tenders for British refined sugar per s.s. *St. David*. The last date for the submission of tenders is the 27th inst. Details regarding the tenders so far submitted are not known. From the reports made available, however, it is gathered that tenders have been submitted in large numbers. In view of this, an allotment of more than 200 bags per s.s. *St. David* is considered to be improbable. In the meantime, the Food Ministry has confirmed reports that tenders per s.s. *Luciana*—this had been diverted to Madras—are being transferred to s.s. *Norton*. Both s.s. *Norton* and s.s. *St. David* are expected to arrive in Bombay during the second week of next month. S.s. *Cyclops* arrived on the 21st inst. and s.s. *Fiducia* is expected on the 27th or 28th inst. Forward sales in this sugar are being made at Rs. 84-8 per 2 cwts.

The Central Food Ministry would appear to have still not made up its mind regarding further imports of sugar. This is not surprising, considering the fact that the world sugar markets are at present weak with a general decline in prices.

PEPPER LOOKS UP

(Messrs. Parekh & Co.)

BOMBAY, 25th *November*

The pepper market which appeared to have been marking time during the last week, took an upswing, and prices continued to rise during the week, under pressure of New York buying and owing to reserved attitude of the growers, the lowest and the highest touched being Rs. 1,650 and Rs. 2,100 respectively at Alleppey and Rs. 1,410 and Rs. 1,660 at Bombay for December delivery and $0.78 and $0.91 per lb. c. & f. New York for December shipment in the ASTA section.

Stock of old crop in the hands of growers as on the 1st November is said to be very small, all exaggerated former estimates having proved wrong. When New York, after having waited in vain for a bottom, came out as a buyer, particularly for November and December shipments, exporters in India were unable to meet them, as growers withdrew their sales. They were unwilling to sell more than a few candies even at a good price like Rs. 2,100 which is about Rs. 450 higher than the lowest seen during the first week of November.

New York is reported to have paid as high as $0.93 for November and $0.88 for December as against $0.82 for November and $0.78 for December during the first week of November, January-Feb-March which was once sold at as low as $0.76 is now in demand at $0.87 with few sellers.

New crop arrivals of light berries are being readily absorbed by Calcutta and Bombay for their local consumption. It will take some time before the fully developed peppers arrive in the market and, in the meantime, if New York buyers continue to enquire for nearby shipments, as they are doing now, the market is likely to go still higher in view of the scarcity of old pepper in the market.

Following are to-day's nominal quotations: Ready delivery Rs. 260-75 per cwt., December Rs. 1,620-40 and February Rs. 1,590-1,610 per candy of 5½ cwts.

JUTE GOODS VALUES RECEDE

(From Our Own Correspondent)

CALCUTTA, 24*th November*

Quiet conditions during the week under review not only arrested the upward movement in prices of manufactured goods but wiped out a part of the recent gains. Bears and bulls fought a hard battle. Business with foreign buyers did not come up to expectations as, in view of the fall in prices, it was their turn to be reserved. Mills were not alarmed by the change in market trend this week as they had already sold much of the ready goods and booked as much forward business as possible when prices were up. They believed that the fall would prove only temporary. Therefore, mills were also reserved. All things considered, in a rising market a reaction is necessary for checking the upward movement. Prices are maintained at reasonable levels attractive to the foreign buyer.

It is generally expected that sales this month would not come up to earlier expectations, but that demand would, more or less, be equal to production. More business with the United States is expected, and this would probably be only after December when shipping of most of the Argentine's requirements would have been completed. Regarding sacking too, no anxiety is felt, as, by transfering more looms to hessian, output has been brought down to a level which is equal to demand. There are, however, reasons to believe that as months go by mills would have to produce more sacking than at present. Australia's heavy stocks are on the decline, and with increased foodgrains production, it would have to replenish its stocks sooner or later. Prices were steady last Tuesday, and mills were interested sellers. There was some profit-taking in the bazar and ready 40" 10 oz. hessians closed at Rs. 49-4 and B. twills at Rs. 105-4. Bear-bull activity on Wednesday forced prices down, and while B. twills at Rs. 105-4 picked up the ground lost earlier in the session, hessians 40" 10 oz. could recover only up to Rs. 48-12, the December position, bearing a discount of Re. 1 and the January-March delivery Rs. 2-12. The downward movement persisted on Thursday, and gathered further momentum owing to selling pressure. Business with Great Britain for December-March deliveries could not stop the recession, which saw 40" 10 oz. hessians at Rs. 48-8 and B. twills at Rs. 104-8. Reports from New York were encouraging; but in addition to the selling pressure the slow nature of shipping affected sentiment further on Friday and B. twills were pulled down to Rs. 102-6 and hessians to Rs. 47-6. Conditions were no better over the week-end, when a decline to Rs. 101-4 for ready B. twills made the price-difference for forward goods almost insignificant. Hessian 40" 10 oz. was offered at Rs. 47-2. Yesterday, the rate was fractionally better at Rs. 47-8, so that the loss during the period came to Re. 1-12. B. twills were unchanged at Rs. 101-4, the recession on balance being by Rs. 4.

Although quieter conditions prevailed in the raw jute market also, losses were fractional and less marked compared to the recession in the prices of jute goods. This disproportionate decline was due to the reserved tendency shown by operators who were encouraged in their attitude by the reduced imports and expectations of higher prices. Growers' attention is on the harvest of the paddy crops, and any visible increase in arrivals of jute is expected only after the paddy harvest is completed. Even though this is the situation, the desire of mills to stock as much raw material as possible is justified by the changed outlook for the jute industry, irrespective of this week's corrective decline in the prices of jute goods. However, as the fall in raw jute prices was disproportionate, mills had to cut down purchases, the attitude of sellers remaining unaffected. Indian northern bottoms were only As. 8 lower at Rs. 28, middles recording a similar recession at Rs. 31. Dhubri bottoms changed hands at Rs. 28-8, and bimli f.a.q. at Rs. 24-8. Assam upper middles and bottoms were priced at Rs. 30-8 and Rs. 27-8 respectively, as against Rs. 31 and Rs. 28 a week ago. Other latest quotations are: Daisee middles Rs. 33-8 and bottoms Rs. 30-8, jungli middles Rs. 28 and bottoms Rs. 25, Murshidabad middles Rs. 29 and bottoms Rs. 26, Uttar Pradesh middles Rs. 28-8 and bottoms Rs. 25-8, Orissa middles Rs. 31-8 and bottoms Rs. 28-8, and Pakistani northern middles Rs. 33 and bottoms Rs. 29.

RICE SUPPLIES COMFORTABLE

(From Our Own Correspondent)

HAPUR, 23*rd November*

There has been continued improvement in the overall food position in the country and prices almost everywhere have maintained a downward trend. For the first time since 1943, no foodgrain was imported into the country from abroad during the week ended 11th November, 1953, and it was also expected that there were to be no foodgrain imports during the coming two weeks. Recently, India was importing only wheat from Canada and the United States. No rice was being imported.

PRIVATE ENTERPRISE IN INDIA

(*Concluded from page 1018*)

national income, this would be considered as a very good achievement, especially when we view it against the background of the many difficulties which had to be faced in this period. It is common knowledge that this was an era of stress and strain. The partition of the country had created a crisis for two of our major industries, namely, jute and cotton textiles. The industry was working ceaselessly and had no time for replacements. Further, due to heavy imports of food, little foreign exchange was available even for urgent replacements. Thanks to inflation, the cost of replacements became very heavy. Labour relations were strained and Government policy was uncertain, as then talk of nationalisation was thick in the air. Taxation was at a very high level, which left almost no scope for saving. Labour welfare measures increased the labour costs and the awards of the various industrial tribunals were very discouraging. Neither did the various controls help matters. If, in spite of all these handicaps, private enterprise was able to invest a large amount, surely capital could not be described as having been on strike, as some have been uncharitable enough to say so. Indeed, a study of the progress of some of the major industries owned and managed by private enterprise will easily show that it has acquitted itself very well, despite the heavy odds against them. In fact, the phenomenon facing the country to-day is one not of increasing production but of finding markets for the products of the various industries which have already been established. If, therefore, many of the industries are not producing to the limits of their installed capacity, it is not because they cannot or will not produce but because they have not sufficient markets to consume their products.

The Government of India's policy statement in 1948 regarding industries and the further statement made by the Prime Minister and other Ministers of the Centre have clarified the situation in regard to the role of private enterprise. It has been accepted that the public sector should be interested in the basic key industries of our country, leaving the rest of our industrial field to be developed by private enterprise. The assurance given by the Government in regard to allowing private enterprise full scope for a number of years to come are encouraging, but the regulations by the Government in this regard are considerable and irksome. There is, however, a great deal yet to be done by the Government and the public, if the sector left to private enterprise is to be developed on the scale which we see in America, Britain, Australia, Japan and other countries.

The Biggest Problem

The biggest problem of our day is capital formation. In this connection, I cannot help feeling that the present rate of taxation is very high. On incomes of Rs. 25,000 and over, income-tax and super-tax, which are now levied, are higher than what are prevailing in the United States. No doubt a number of tax concessions have been offered by the Government, by way of extra depreciation allowances, etc. But a great deal is yet to be done in this direction. Unless a substantial reduction is made in the incidence of taxation, it is difficult to see how there can be any large capital formation.

I wish to stress the importance of industrialisation from the point of view of solving the unemployment problem which we are facing on a large-scale to-day. There is a popular misconception that large-scale industrialisation will lead to a fall in employment. But this is quite erroneous and is based on fragile grounds. For large-scale enterprises, while cheapening the cost of goods to the consumer, create ancillary employment and provide scope for many subsidiary industries. Coal mining in Germany, for example, has given rise to no less than 10 to 15 other subsidiary industries. Further, industrialisation is the only means for achieving a balanced economy and we cannot for long continue to be a predominantly agricultural country, depending on the vagaries of the seasons for our progress.

Enlightened self-interest will dictate that private enterprise must do its best for the country. The history of industrial development of the U.K. and the U.S. is there for us as an object lesson and our industrialists can be trusted to plan our country's future economic advancement properly. Already, the cotton textile industry has expended by way of fresh capital Rs. 30 crores, the iron and steel industry Rs. 15 crores, the engineering industry Rs. 10 crores, the chemical industry Rs. 8 crores and various other industries like jute, woollen, silk and the paper industries, Rs. 4 crores each; coal mining has added another Rs. 8 crores to its capital expenditure. Other minor industries have also come up. Thus private enterprise in India has played the part expected of it. If given proper understanding by the public and encouragement by the Government, it will, much sooner than expected, plan our industrial advancement on proper lines and utilise our natural resources. We have an advantageous position in the economy of South-East Asia and can easily become the leaders of industry in this part of the world if only we work on right lines.

STOCK & SHARE QUOTATIONS

Abbreviations:—D=Deferred shares. P.O.=Preferred Ordinary shares. Y=Accounts published yearly. H=Accounts published half-yearly. P=Company has Preference shares. T=Company has Debentures. N=Nominal quotation. x.d.=Ex-Dividend. c.d.=Cum. Dividend. I=Interim Dividend. F=Dividend for first half of the year.

Shares:—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery, and all other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends.—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year, they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly, dividends shown are for their financial year. Where, however, the accounts are closed half-yearly, dividends are shown separately for the respective half-years.

* Including bonus. a Sales and amount written off. (k) Investments. ‡ For ten months ended 31st December 1951.

(j) Made up of an interim dividend of Rs. 1-12 per share on 1,20,000 shares and final dividend of Rs. 1-10 per share on 2,40,000 shares of which 1,20,000 shares are bonus shares.

* The following explanatory notes relate to the abbreviations and marks shown on page 1036 in the debentures section:—

‖ Option to repay on six months' notice, on any interest date after 31st December, 1951, at 102 per cent. Also redeemable out of a cumulative sinking fund of 1½ per cent. per annum (commencing in 1938) by drawings at 102 per cent. or by purchase at or 102 per cent.

(a) Option of repayment at any time at 3 per cent. premium.

(b) Bearer bonds of Rs. 1,000 each repayable at par.

(c) Bearer bonds of Rs. 1,000 each repayable on 31st July, 1958.

(d) Bearer bonds of Rs. 1 000 each with option of redemption in whole or in part at par on 30th June, 1952 or on any subsequent interest date at one month's notice.

(e) Returnable on or after 31st July, 1950, at Rs. 102-8 or at par after 31st July, 1955 on six months' notice in each case.

(f) Bearer bonds of Rs. 1,000 each with option of redeeming on 3 months' notice at ½ per cent. premium after 1st March, 1954, but before 1st March, 1957, and 1 per cent. premium on or after 1st March 1957.

(g) Option of redemption on or after 1st July, 1949, at par.

(h) Option of repayment at any time at par at any time on or after 30th June 1947 on six months' notice.

MARKET GOSSIP

(Concluded from page 987)

back as in 1948, this journal advocated in vain the tapping of this source for raising the funds needed for economic development. Now the Federation of Indian Chambers of Commerce and Industry has, it is interesting to note, suggested, in its reply to the Taxation Commission's questionnaire that the "matter of obtaining revenue through organising State lotteries and crossword puzzles may also be considered"; this suggestion is made as a reply to the Commission's question about the sources of non-tax revenue. To revert to Lord Piercy's suggestion, its chief merit lies in the fact that it does not envisage lottery, pure and simple, but seeks to combine the chief attractive qualities of a lottery, namely, large prizes, with enduring investments such as insurance policies and low-yielding securities.

• • • •

Britain now seems to fear the loss of some of its potential export markets. The country is viewing with serious concern the loss of momentum in its post-war export drive. The trouble with its export business is not that it is declining, but that it has not made the progress that it should. The latest Treasury *Bulletin for Industry* has reminded the country of the dangers of allowing further deterioration in its export position. Between 1950 and 1952, when the volume of world exports rose by 7 per cent., there was a drop of 5 per cent. in the volume of British exports. And the reduction in Britain's share in exports of manufactures by the ten main exporting countries fell from 26 per cent. to 22 per cent. Again, the volume of the U.K.'s exports in the first half of this year did not show any increase, because it was about the same as the average in 1952. But the exports of other countries registered an increase. Thus, there was a rise of 6 per cent. each in the exports of Germany and the U.S. and of 5 per cent. in those of Japan. Exports in the third quarter of the current year, too, showed no appreciable increase, their volume being only very slightly higher than in the first half-year. The stagnation in exports is chiefly accounted for by the slow and steady decline in the exports of the metal and engineering industries.

• • • •

The concern over the stagnant export position found full expression at the meeting of the National Production Advisory Council held last week. Mr. R. A. Butler, who presided over the meeting, stated that the special efforts made to sell more to the U.S. were creditable, but they were not matched by equal achievements in most other markets. "It is doubtful," he remarked, "whether Britain is sufficiently competitive. U.K. exporters tend to be slower than their competitors in adjusting prices to changes in world markets. In many important non-sterling areas, we seem to have lost ground to competitors pretty steadily over the past two years." He warned that "a continuance of rising imports, unaccompanied by rising exports, would threaten the balance of payments." Regrets were also expressed at the loss of Indian locomotives' market to Germany, Austria and Japan. The loss of this traditional market for the U.K.'s locomotives is attributed to Japanese and German bids at considerably below British offers.

• • • •

Wherever British exporters turn their attention, they encounter competition from Germany and Japan. Germany seems to compete effectively with the U.K. as regards price, quality and delivery. Again, Germany has been making a big effort to capture markets in Canada, the Middle East and even in some Far Eastern countries. In certain respects, this is true of Japan also. Stimulated thus by intensified competition, vigorous efforts are now being made by British manufacturers to explore the possibilities of recovering markets hitherto neglected or at least not fully exploited. Their efforts seem worthy of study by Indian manufacturers, especially those who are keen on increasing their sales in the Middle East countries. The Indian manufacturers have to bear in mind that they have hard days ahead of them in these markets. They must be prepared to meet keen competition in some of the goods produced by them such as drugs, light engineering products, soaps, textiles, foodstuffs, paints, etc. A British Trade Mission, it is stated, is at present in the Middle East, particularly in the oil-producing regions which have plenty of foreign currency, but which seem to be taking keen interest in German capital goods and German technicians. The mission expects to cover under its present itinerary, Baghdad, Kuwait, Syria, the Lebanon and Saudi Arabia. The main object of the mission is to explore the scope for a substantial expansion of British exports to these countries and secure contracts for development work.

• • • •

Apart from this Mission to the Middle East, another group of British business men is shortly to proceed to Moscow to discuss the export of U.K. goods to Soviet Russia. The move is prompted by the encouraging experience gained recently of dealings with Russia. Russians seem to be keen on stressing quality and technical performance more than anything else. No "escalator" clauses are allowed when prices are discussed. They appear to be keen also on the delivery date. Supplies have to be fitted into their development programme. In order to emphasise the importance they attach to early prompt delivery, they insist on penalty clauses. Payments, it is stated, are both prompt and trouble-free and are made in sterling or dollars and individual companies receive credits in London. In the circumstances, British firms feel that there is scope for expansion of its exports to Russia.

INDIAN CYCLE INDUSTRY MAKES IMPRESSIVE PROGRESS

(Concluded from page 1013)

of imports; (2) to increase the real wealth of the country by increasing production; and (3) in the process of expansion to provide increasing employment to her nationals. We submit that the cycle industry can achieve these tasks as set out by the Planning Commission, provided sufficient care and vigil are kept in guiding the development of the industry, so as to ensure expansion of genuine production of the indigenous units and also of units started here in collaboration with foreign manufacturers.

"India, in its drive for industrial development, not only requires the technical know-how, but also financial collaboration. But any collaboration with foreign countries, which does not produce real wealth in the country, has to be discouraged; more so, when the indigenous manufacturers have put in all-in efforts for achieving the phenomenal success, in spite of heavy odds during the war. We request the Tariff Commission to bear this aspect of the development of the bicycle industry in mind, while considering the overall picture of the development of the industry.

"We further request the Tariff Commission to examine the targets of production and consumption of the Five-year Plan in the light of the experience of the trade and the industry, particularly the phenomenal slackness of demand of cycles and cycle parts witnessed during 1952-53. If the estimates of consumption are found to be on the higher side, the targets of production should also be revised accordingly."

ENGINEERING

(Concluded from page 1004)

Principles was essentially based on a recognition of the fact that, in the case of most commodities, road transport would cease to be an economic proposition beyond a distance of 150 miles. This matter, however, would have to be gone into carefully, before any changes were made in the existing practice, and he assured that the Transport Advisory Council would be prepared to make any necessary adjustments in the Code, if the results of these investigations warranted them.

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent Who else must sweat and toil and gain but scanty fare."
William Blake

VOL. LXXXVII. No. 2234 BOMBAY, 5 DECEMBER, 1953 PRICE Rs. 1/8

IMPEDIMENTS TO PRODUCTION

NO subject has occupied so prominent a place in public discussions as the one which the problem of unemployment has claimed for itself. Countless columns have been filled, marathon speeches made, and elaborate enquiries held—all in an effort to describe, diagnose and remedy this chief economic malady of recent years. No specious argument is, therefore, needed to justify the memorandum on the subject by the Federation of Indian Chambers of Commerce and Industry, which has sought to examine the causes why the private sector, which has been assigned a prominent enough place in the Five-year Plan, has not been able to expand sufficiently wide in order to absorb a good number of job-seekers. We must say that it has explained the causes of the stagnation in the private sector of the Indian economy very well.

The memorandum opens its case for the private sector with a well deserved tribute to its achievements. The average annual investment during the 1946-51 period was of the order of Rs. 90 crores. Marked increase has taken place in industrial production. Some industries, notably sugar and textiles, have actually reached the targets fixed under the Plan. Many new industries have been developed in the post-war years. All this has been achieved by private enterprise. The Federation gratefully acknowledges the fact that this achievement has been assisted by the generous help provided by the Government through concessions to new undertakings, financial accommodation in times of emergency, and helpful tariff policy. It also ackowledges the help given by the Government-sponsored credit institutions like the Industrial Finance Corporation.

All this has not, however, enabled the private sector to expand its activities. The Federation rightly insists that the main obstacles in the way of rapid industrial progress are the volume and pace of welfare legislation, and the unimaginative industrial awards. Welfare legislation has taken many forms, the most recent being the Employees' State Insurance, Provident Fund and industrial housing schemes, not to mention the law relating to retrenchment of surplus labour. The Federation calls attention to the inequity of the Health Insurance Scheme, under which the employers in most parts of the country are compelled to contribute their share of expenses, even though the Scheme itself is in operation only in a few centres. The Federation questions, as we did a few weeks ago, the economic appropriateness of the provisions relating to retrenchment of personnel, which require the employer to pay the "prescribed gratuity to retrenched workers, without reference to any other benefit that the workers may be enjoying by way of provident fund, pension, etc.," for the obligation to pay gratuity reduces any benefits that might otherwise accrue to the concern through retrenchment. This is one obligation which the Government itself does not care to take upon itself, when it effects retrenchment. The Federation demands no more than the application to the private sector of the principle recently enunciated by the Prime Minister who said, in the course of his defence of retrenchment in the Government that it was "impossible to keep people who had absolutely no work." The net effect of all this welfare legislation is that the industry is caught between high and rigid cost structure, on the one hand, and the buyers' resistance, on the other.

Closely allied to the question of retrenchment of surplus labour is the problem of industrial discipline. During the pendency of a dispute, an employer is prevented from taking any action against a worker without prior permission of the Tribunal investigating the dispute. Sometimes no permission can be obtained even after three to four months and the employer has "to keep in employment a defiant employee during this interval." Surely, no industrial discipline can be maintained in this context. The Federation's suggestion that the employer should be permitted to suspend the worker until the case is finally decided deserves the attention of the Government.

The Federation spotlights three aspects of the Government's labour and price policy—the incorrect basis for awarding bonus, the vicious principle involved in conceding the workers' demand for a share in a concern's reserves, and finally, the lack of recognition of the need for an adequate return on capital. The concept of bonus has undergone a radical change in recent years. Originally, it was treated as an *ex-gratia* payment. The Industrial Tribunals have now conceded the right of the workers to demand it; some of them have even held that it is in the nature of a deferred wage. In deciding the actual quantum of bonus, the Tribunals have varied the formula so as to base the bonus sometimes on gross profit, sometimes on net profits, sometimes on dividends paid; some have ignored even these bases and declared a bonus on merely "sociological and psychological considerations." It was at one time believed that the setting up of the Appellate Tribunal would bring some uniformity into this new legal world of bonus awards. But this hope has not materialised, since the "different benches of the Appellate Tribunal have given different and contradictory decisions on similar issues."

Investors have been scared by these decisions. Last week, we showed how the Nagpur textile award goes counter to all accepted notions of economic equity. This award only carries the questionable assumptions in many previous awards, which have denied, in various degrees, the right of the management and the shareholders over reserves to their absurd limits. The Federation rightly calls attention to the recent decision of the Tribunal in the dispute between the workers and the Madras Electric Tramways Ltd. to allocate 50 per cent. of the unused reserves of the Company among the workers. It is needless to labour the Federation's case that these awards have an "adverse effect on the future reserves and incentives to expand industrial undertakings." This is far too serious a matter to be treated lightly. If this attitude is not corrected in time, it might well spell ruin of all corporate finance in the country.

If the bonus awards have thus vitiated the industrial atmosphere by their wrong emphasis on the division of reserves and their divergent interpretation of the principles that should govern the quantum of profits to be distributed to workers as bonus, the Government's attitude towards the return on capital is not calculated to inspire confidence among investors. Those who have read Mr. Padamji Ginwala's illuminating series of articles on the subject, contributed to *Commerce* (*vide* issue dated 15th August, 1953), will readily appreciate the Federation's contention that the "paucity of return, or more broadly, ideas of what is considered to be a fair return on capital, have serious repercussions on the incentive to invest." The Federation reinforces its case in this matter by a reference to the plight of the electricity industry, which finds the omnibus limit of 5 per cent. return on capital at base too inadequate to raise additional capital, and to the Government's rejection of the Tariff Commission's reasonable recommendation of a slight increase in the return on the Tata Iron and Steel Company's gross block. The Federation rightly argues, as did Mr. Ginwala in *Commerce*, that the rate of return at 8 to 10 per cent. on gross block, which was adopted by the earlier Tariff Boards, cannot possibly hold good now when the income-tax on companies has increased nearly threefold from As. 2½ to As. 7 in the rupee.

Although one might expect from a memorandum of this kind a particular emphasis on taxation, the Federation wisely refrains from making extended comments upon this question, on which it has already submitted a comprehensive note to the Taxation Enquiry Commission. Nevertheless, as no discussion on the subject of impediments to industrial expansion will be complete without a reference to taxation, it points out how informed opinion in the country now feels that the present burden of taxation is "acting as a serious impediment to industrial development." It also mentions how the States' sales tax laws interfere with inter-State trade, and tend to throw out of employment many small traders who are engaged in the distributive trades.

Transport difficulties continue to dog the economic progress in the country, despite the notable improvements achieved in this sphere. The Federation refers to the immediate problem of relieving congestion which is found in a few strategic points along the railway track and also to the delay in inter-zonal movements. It attributes the latter difficulty to the "disproportionate wagon holdings in various zones, based as they are on the basis of track mileage covered and not on the basis of transport density." The inadequacy of transhipment facilities at certain centres, where there is a change of gauge, is also cited as a continuing bottleneck. These are immediate problems which deserve to be solved without delay. The long-term problem of extending the railway mileage, which has remained practically unchanged since 1939, in face of the increasing tempo of economic activity, ought necessarily to receive the Government's attention at the earliest possible moment, if transport must keep pace with changes in production and population. In fact, the inadequacy of rail transport has imparted a premium to coastal freight rates.

There used to be a time when movement of goods through ships used to be cheaper than through railways, but now it is the other way about. Normally, the gap between the demand for railway transport facilities and their availability could be filled by motor transport, as, in fact, it has been done even in countries which have a more advanced railway system than India. Unfortunately, the use of this device is denied to this country through an unwise policy of nationalisation of road transport, and of imposition of excessive burden of taxation on motor vehicles. If road transport is encouraged by suitable measures, it would, as the Federation says, give relief to the railways and also help create sources of employment. Although the latter aspect of the motor transport industry has been repeatedly emphasised by the private sector of the industry, and has now won recognition from the Planning Commission, it is deplorable that there should be little change in State Governments' attitude towards this industry.

So much for the difficulties of established industrial concerns. The new concerns are faced with a different set of problems, no less onerous than those of their earlier competitors in the field. Before a new concern is floated, the promoters have to contact numerous authorities at the Centre and the States, and their applications move back and forth, like a shuttlecock, from one authority to another. The small *entrepreneur* in the interior does not even know the "complicated procedural details," so that he is particularly handicapped. In certain western countries, it may be mentioned in this connection, there are special officers who will not only instruct and guide the prospective factory-owner in regard to official regulations to which he has to conform, but also give him technical guidance (on locational problems, for instance) and any other help he may need. Here, private industry has not only to fend for itself but should consider itself lucky, if it is allowed to do even that. Small wonder, then, that only a few brave spirits survive the initial stages of official recognition of their pioneering effort.

Procedural details are not, of course, the only details with which an industrial pioneer has to contend. His early efforts at establishing a concern are handicapped by the need, as in some States, to provide housing for a certain proportion of his employees. When he crosses this hurdle, and creates the roads and other facilities by his own efforts, the municipal limits of the city which adjoins the factory centre are arbitrarily extended to bring his factory within the purview of the municipal territory so that he could be charged for the civic services which he has himself laboured hard to create. The surprise is not that many new undertakings are not started. The real surprise is that there are still a few left, who have chosen to brave the rigours of the climate for new undertakings in this country.

The Federation has not, however, stopped at merely pointing out the handicaps. It is gratifying to note that it offers a few specific suggestions, apart from its general demand for a revision of taxation policies, simplification of administrative procedures pertaining to regulation of industries, and a realistic policy in matters of return on capital and in labour problems. In the first place, it suggests that special concessions, in the shape of exemption from sections 16 and 18 of the Industries (Development and Regulation) Act and from section 91B of the Indian Companies Act, might be granted to certain types of industries of national importance; these concessions have been granted to the foreign oil companies in the country. Secondly, it urges that every industrial unit should be permitted to build up a development fund on a voluntary basis out of its profits. This amount should be tax-free, but the Government might stipulate that the fund could be spent only with its permission. Thirdly, the income-tax law (section 23A) should be modified to exempt from its purview such amounts as are invested in new productive channels. This will enable private companies to seek fresh channels for investment. Fourthly, any new undertaking with a capital of Rs. 5 lakhs or less, should be exempted from tax for five or six years; a schedule of industries and the areas eligible for concession may be prepared. This will facilitate the development of backward areas.

The chief merit of the Federation's memorandum lies in the fact that it has brought together the points which have been repeatedly urged by the trade and commercial bodies in the country. None of the points raised by the Federation is, therefore, new. But it has done a real service by bringing them together, which enables private enterprise to vindicate itself before the bar of public opinion. This service is more than ever necessary, since there is much uninformed criticism of the role of the private sector in India's national economy. With the grant of adult suffrage and the suppression of special representation to trade and commercial interests in the legislatures, there is urgent need to educate the new masters, the legislators as well as the lay public, who are the final arbiters of the country's destiny, so that they may learn to appreciate the industry's special problems. Much yet remains to be done in this direction.

WHITHER LAND POLICY ?

INDIA'S bid to achieve simultaneously the twin aims of land policy seems unlikely to lead it anywhere near its goal. Such land reforms as have been initiated, or contemplated or already carried out, aim at two things. One is economic, in that it aims at increasing agricultural production and the other social, inasmuch as it aims at reducing disparity of wealth among rural population.

This mix up of economic and social aspects of the Government's land policy may have an unsettling effect on the plan for keeping the nation from starvation. While growing numbers and recurrence of famines all these years have been pressing the need for raising agricultural production, public attention in rural areas is being diverted to the slogan "Land for the landless," as is evident from the move to fix ceilings on landholdings. It is believed by a section of public opinion that the interests of agriculture will also be served by providing land for the landless from out of large landholdings. The resulting fear of losing their land has perturbed landowners who instead of being busy with plans for development of land, are engaged in holding conferences or leading deputations to Governments in order to safeguard their interests.

This diversion of interest from land improvement, which is in much evidence in the South, is most unfortunate. It is true that the principle of land to the tiller is sound, in that ownership provides a psychological incentive to produce more. Hitherto this principle worked to a considerable extent in the case of the owner cultivator, big or small. Now that land reforms aiming at "pinning a farmer to a family unit and the owner to a ceiling limit," are afoot, this theory will not work so efficaciously as is generally believed. As already stated, agriculturists owning large areas of land are being disheartened. Further, by redistributing land from this group to landless labourers, production may suffer in two ways. First, the landless labourer may not have the resources to develop the land and to take to intensive cultivation. Secondly, the breaking up of large areas of land into small farms may not be conducive to application of modern methods of cultivation necessary for raising the yield per acre and bringing down the cost of agricultural operations. This is a danger from which the country should be safeguarded. This can be done by a judicious revision of such of those reforms as are likely to tell on increased food production and involve big issues such as payment of compensation for lands acquired in excess of ceiling and rehabilitation of such lands. These issues have been clearly brought out in a memorandum submitted by the Tanjore Mirasdars to the Government of Madras. A relevant extract from it reads thus:

> "The principle that ownership and cultivation should coincide as enunciated by the Subramaniyam Committee has to be accepted with limitations. Its validity does not extend to all conditions of agriculture. For example, in the case of petty holdings, a feeling in the mind of the tiller that he is also the owner thereof by itself does not mean anything. For, in agriculture, the wherewithal, the money, the energy and the skill are what count and not a mere sense of ownership. In fact, it is only in the case of bigger holdings that the sense of ownership stimulates enterprise."

Comment on the above is superfluous. While thus there is need to go slow in regard to the implementation of the social aspects of land policy, it must be emphasised that this alone will not suffice to bring about an increase in agricultural production through intensive and extensive cultivation. This aspect was very well stressed by Dr. V. K. R. V. Rao at a public meeting in Hyderabad early last week. He said that a mere transformation of the landless labourer into a peasant proprietor would not enable him to utilise that opportunity without adequate resources. He enumerated three factors which are necessary to help him, namely, (*a*) ready availability of credit, (*b*) assurance of a guaranteed price for his produce, and (*c*) educative propaganda to break his conservative methods of cultivation. The last of the three factors is self-explanatory. The importance of the first factor will be evident from the fact that agricultural undertaking in the country requires a working capital of well over Rs. 1,000 crores a year. The need for the second factor will be clear, if it is borne in mind that, unless the farmer is given such an assurance, he will be haunted by the fear of falling prices, a fear that will act as a disincentive to increased production. It is high time that the country devoted some serious thought to these factors.

ECONOMIC DEVELOPMENT OF CHINA

THE civil war in China came to an end in 1949, when the Central People's Government was established. Since then, the country has made notable progress. The new Government had many difficult problems to tackle—inflation, reduced production, both agricultural and industrial, with all that these meant for the national budget, and a disorganised transport. By slow degrees, the Government has succeeded, according to the *Economic Bulletin of Asia and the Far East*, prepared by the U.N. Economic Commission for Asia and the Far East, in stabilising prices, balancing the budget and restoring the transport services. In 1952, agricultural and industrial production (except coal), it is stated, reached or exceeded the pre-1949 peak. By 1952, yields of all food crops were reported to have exceeded, by 10 per cent., the pre-1949 peak, while cotton production had risen by 56 per cent. Again, the index number of industrial production (Base pre-1949 peak =100), representing the output of 33 major industries, rose to 126 in 1952, whereas it was only 56 in 1949. The index number of the output of "investment goods" moved up between 1949 and 1952 from 30 to 116, while the index number of consumer goods rose during the same period from 70 to 132. The Five-year Plan for industrialisation, fixing the targets for 1953 and 1957, envisages increases in production of capital goods, especially heavy engineering equipment.

The two major changes in China's economic set-up, as is only to be expected of the Communist Government in the country, have been the socialisation of land and nationalisation of industries. By the end of September, 1952, land reform was officially reported to have been carried out in areas, with a total population of 300 million. It would appear that over 90 per cent. of the rural population has benefited by land reform, including the population in areas where land reform was carried out before 1949. Under the land reform scheme, the Government, it is claimed, has distributed 117 million acres of land which represents one-half of the total cultivated land. Peasants have gained through the land reform to the tune of 50 million tons or one-third of the 1952 output, which they would otherwise have had to give to the landlords. But they have, on the other hand, had to pay a land tax averaging 19 per cent. of agricultural income in 1950.

In the industrial sphere, the Government has carried through several nationalisation schemes. By October, 1952, nationalisation extended to about 80 per cent. of heavy industry and 40 per cent. of light industry, according to official reports. The Government operates all the railways and about 60 per cent. of the coastal steamships. It controls 90 per cent. of China's foreign trade, 50 per cent. of the wholesale trade and 30 per cent. of the retail trade. The State encourages production of export commodities and of capital goods and discourages production of non-essential items.

Despite the significant improvements that have taken place, there are, it is stated, quite a few bottlenecks. Land distribution, for instance, has brought in its wake problems of efficient farming on scattered holdings. The Government has found it difficult to order joint use of draught animals and agricultural tools which is necessary under socialisation of land. Nor have the problems raised by the best use of pooled resources and proper division of proceeds been solved yet. Again, the bottlenecks encountered in the industrial sphere in connection with the "timely supply of manpower, materials, spare parts and equipment have led in many cases to waste and inefficiency." A balanced account of Chinese economy should, therefore, take note of the Government's achievements as well as its failures. And more particularly, it should take note of the cost at which these improvements have been made, on which the Press summary of the *Bulletin* throws little light.

BOOMLET ON STOCK EXCHANGES

WHEAT FUTURES IN LIVERPOOL—SOME THOUGHTS ON FOREIGN TRADE

THURSDAY, 5 P.M.

THE Stock Exchanges have witnessed another week of extremely bullish conditions. Equities have hardened further, with some of them registering handsome gains. It looks as though the markets are in the midst of a boomlet. For the first time, after 27 months, Tata Deferreds have crossed the limit of Rs. 2,000; a peak of Rs. 2,036-4 was touched by them to-day, before they finished at the round figure of Rs. 2,030. The rise over the week is as high as Rs. 67-8. A large turnover in Tata Ordinaries also has been reported. It is not easy to explain the reasons for the robust optimism prevailing in the share markets. One thing, however, is clear. The sentiment has completely changed. There is scarcely any one who talks of mandi now. Every one has become *teji* minded and it looks as though the end of the present phase is not yet in sight.

MARKET GOSSIP

• • • •

The change in sentiment has come about at a time when there are no floating stocks of popular scrips. Tata Steel shares, in particular, are said to be receiving the attention of a few big operators who hope to squeeze an operator believed to be still short. It is also stated that a speculator, who has lost heavily in cotton, found it necessary to cut off his short-sales in Tata Ordinaries in order to limit his loss. This operation is believed to have occasioned a smart rise in this scrip. There are, however, others who hold the view that the market is steadily readjusting itself to a lower level of yields in the belief that interest rates will decline in the course of the next 12 months.

• • • •

While the share markets are strong, the bullion and commodity markets are quiet to weak. In bullion, there has been a sizable fall in prices for reasons explained in the relevant market report published elsewhere. After the hectic rise last week, raw cotton is a shade quiet; this is but natural. Oilseeds are distinctly weak again, with groundnuts losing more than other seeds. The main reason for the weakness of this commodity market is the disinclination of the Government to allow exports of groundnut. At the Export Advisory Council meeting early this week, Mr. T. T. Krishnamachari clearly stated that, as far as he could see, export of groundnut oil would not be allowed next year, unless and until prices came down appreciably. He was of the view that internal consumption of groundnut oil had definitely gone up and that it would be risky to permit exports of it now. There is good reason to feel that the Minister is right. Even at current prices, groundnuts and groundnut oil are high enough and the fall that has taken place in the past few days has not yet reflected itself in retail prices to any perceptible extent. If the consumer is to get any relief in his cost of living, the price of this cooking medium must register a further substantial fall and stay at the low level for a fairly long period. Moreover, groundnut oil itself is a raw material. Instead of allowing it to be exported, it is better, if it is processed into *vanaspathi* and exported. This will enable the *vanaspathi* industry to utilise a part of its existing idle capacity, thereby providing some scope for employment.

• • • •

Among the textile scrips, Century has received considerable attention in the past few days. One of the reasons attributed to this is the expectation on the part of some that the Company will shortly issue bonus shares. Our enquiries reveal that this is mere wishful thinking. The profits of the Company for the current year, however, are said to be quite good.

• • • •

The Directors of the Consolidated Coffee Estates (1943) Ltd. have proposed a dividend of 15 per cent. for the year ended 30th June, 1953, as against 18 per cent. for 1951-52 and 20 per cent. for 1950-51.

• • • •

It is reliably understood that the Central India Spinning, Weaving and Manufacturing Co., Ltd., has decided to appeal against the bonus award of the Madhya Pradesh Industrial Court for workers for 1951-52 which was commented upon in our last issue.

• • • •

There have so far been no outstanding developments in the short-term money market. The undertone is steady and inter-bank call money is nominally quoted at ¾ per cent., but there are no lenders at that rate. There are signs that soon the market will be active. Some banks have been experiencing a sizable demand for funds during the past few days. The volume of floating money is very small, indeed so small that once the seasonal demand starts gathering momentum, the inter-bank rate may jump up suddenly. The movement of agricultural crops has been on a fairly large scale. The turnover in the cloth market continues to be satisfactory, though the upward trend in prices has come to a halt for the time being.

• • • •

After a break of 14 years, Liverpool resumed futures trading in wheat on Tuesday this week. Details of the exact terms of the contracts are still lacking. In the initial stages, however, trading in wheat futures will be confined to the delivery months of May and July, 1954. No decision seems to have been taken so far with regard to restarting operations in maize and barley. But it is understood that the London Corn Exchange is making arrangements for re-opening futures trading in barley from 4th January next.

• • • •

The resumption of futures trading in Liverpool is according to plans made several months ago. In May this year, the U.K. Government turned over the import trade in wheat to private hands. This enabled the Liverpool Corn Trade Association to decide, in August last, in favour of reviving wheat futures market as from the 1st inst. The re-opening of the market this week marks, therefore, a concrete step forward towards freedom for grains.

• • • •

The commencement of futures trading in wheat has been well timed. Plentiful supplies of wheat in world markets—the chief pre-requisite for futures trading—should augur well for the success of the Liverpool move. There is a surplus of wheat in nearly all wheat-growing countries. Wheat production in the U.K. itself has steadily expanded. Although in 1952-53, acreages of most crops were smaller, there was a striking improvement in yield on account of improved use of fertilisers and greater mechanisation. Britain has increased its food production by 51 per cent. over the pre-war level and this is likely to go up to 60 per cent. by 1956. The country is also well stocked in wheat. Consequently, there is no need to make hurried purchases at running rates.

• • • •

It is, of course, too early yet to say anything about the probable trend of prices in the Liverpool futures market. The view held within the trade is that business in the next few months is likely to be within narrow limits. For control has not yet been completely lifted, thanks to the ever-present currency problems, though the Government has promised all help, so that the market may function smoothly. Again, the market has remained closed for 14 years and the disuse of the mechanism of trade has rendered it rusty. The Ministry is well stocked with controlled wheat and it will not be before June next that these stocks will be liquidated. Till then, activity is likely to remain restricted in futures. Further traders are unable to assess the effects of the U.S. price support policy and Britain's withdrawal from the International Wheat Agreement. These have combined to make the world wheat position obscure. In the circumstances, a cautious tendency is expected to mark the trading in wheat futures on the Liverpool Corn Exchange for some time to come. Leaders in the trade would, however, appear to be confident of being able to restore the market to its former status as an international market for grains.

• • • •

The trend of India's export trade is very disappointing. The statistics provided by Mr. T. T. Krishnamachari, in the Export Advisory Council meeting held at New Delhi on Sunday last, fully confirm this view. The average monthly exports in 1951 was Rs. 65 crores; they declined to Rs. 53 crores in 1952; they were lower still at Rs. 42 crores in the first nine months ended September, 1953. The extent of all will be even more striking, if the absolute totals are taken into consideration. Thus, during the first three quarters of this year, the value of exports was no more than Rs. 380 crores, as compared with Rs. 475 crores in the corresponding period of 1952 and Rs. 590 crores in that of 1951. The last mentioned year was doubtless an abnormal one and it would not be reasonable to expect realisation of the levels seen in that year. But 1952 was a year of recession and the fact that it has not been possible to maintain the level recorded even in that year is really something over which the country ought to be concerned. But it does not appear to be so. The frequent statements made by the authorities that, over the year, India's sterling balances are intact and that the country has been having a surplus in its balance of payments account, instead of a deficit as is envisaged in the Five-year Plan, have been mostly responsible for this feeling of complacency. Every country in the world is striving hard to accumulate its foreign exchange reserves while circumstances are favourable to do so. But, in this country, such a development is being derided for no other reason than the fact that it is not in accordance with what many have come to regard as the economic Bible of India, namely, the Five-year Plan, which is full of incorrect estimates and contains quite a few doctrinaire principles.

• • • •

How is it that, in spite of a marked fall in exports as indicated above, India's foreign exchange resources, amounting to a little over Rs. 700 crores now, are the same as those in the beginning of the year? The answer is simple. In the first place, there has been a fall in imports, too. The average monthly imports in the seven months ended July, 1953, were only Rs. 50.32 crores, as against Rs. 78.83 crores and Rs. 65.64 crores in the corresponding periods of 1952 and 1951, respectively. Secondly, the fall in exports has been virtually counter-balanced by income from other sources, such as invisible exports and loan receipts. Actually, on trade account, there was a net deficit of Rs. 63 crores during the first nine months of 1953. Surely, this is not such a satisfactory state of affairs as to encourage one to think in terms of allowing large imports or to take things easy in regard to export promotion. In saying this, we do not mean that imports should be curtailed; far from it. Foreign trade is a two-way traffic. Any restriction on import trade will sooner or later have an adverse reaction on export trade also. On the contrary, the aim should be to export more and import more. It is only an expanding foreign trade that will have a healthy effect on the internal economy of a country.

• • • •

Viewed thus, the contraction in India's imports is also an unhealthy development. The fall in imports has been due to a reduction in imports partly of foodgrains and partly of capital goods. The former is undoubtedly a welcome development, while the latter is not. The fall in foodgrain imports reflects the increase in the domestic production of foodgrains. There is a school of thought in this country which feels that no cut in imports of foodgrains should have been effected, on the ground that they are a medium through which foreign aid could be conveniently absorbed. We do not subscribe to that view. Even in spite of the rise in foodgrain prices in the 1952-53 crop year, Indian foodgrains were cheaper than imported grains. Further, a rise in prices of foodgrains need not be grudged, as it increases the purchasing power of agriculturists and thereby their capacity to consume goods produced in this country. Moreover, unless the farmer is ensured a better price for his crop, he will not be in a position to pay the higher taxes he is expected to, in order to meet the cost of irrigation, and other rural development programmes. The policy of expanding India's food production, with the ultimate object of achieving self-sufficiency, is, therefore, a sound one and the Government should pursue it vigorously. If foreign aid is to be absorbed, other media should be found. And there are, in our view, undoubtedly other means through which such aid could be taken. The field of transport, in which the country is greatly deficient, for instance, can absorb a sizable amount of foreign aid, if it is forthcoming. Foreign aid can also be utilised for facilitating imports of capital goods. In fact, it was with a view to enabling the country to buy more capital and durable goods that it was being urged to import less food and grow more of it. Accordingly, it is surprising to find that some should criticise the Government, especially the Food Ministry, for having succeeded in realising that object.

• • • •

The drop in imports of capital goods is undoubtedly a disquieting feature of India's import trade and Mr. D. P. Karmarkar, Minister for Commerce, was perfectly right in describing it to be so. This development reflects the setback which industrialisation has suffered in this country. It is, however, not enough if a Minister of the Central Government merely admits this setback. He should go into the causes responsible for it and exert his influence over his Cabinet colleagues to remove them. In this connection, we would like to invite Mr. Karmarkar's attention to the leading article in this issue in which we have indicated the impediments to industrial expansion.

• • • •

To return to the subject of exports. That exports must be stimulated by all possible means needs no emphasis. The present comfortable position in regard to India's balance of payments will not last for ever. When development expenditure gathers momentum, more imports will be necessary to keep inflation under control. Again, the country must be prepared to meet any unforeseen developments in world trade by having a sufficient amount of foreign exchange reserves. Every country is now taking steps to raise its exports. Competition will, therefore, be much keener than what it is now. That the Government is aware of this, to some extent, is evident from the speeches of Mr. Karmarkar and Mr. Krishnamachari at the meetings of the Import and Export Advisory Councils which received very wide publicity in the daily Press. In their speeches, the Government spokesmen have stressed the need for establishing Export Development Councils for all the important commodities that figure in our export trade and for establishing Export Credit Guarantee Scheme. They have exhorted the manufacturers and exporters to improve their marketing methods. The former, in particular, have been advised to pay special attention to raise the quality of their products. These are all doubtless important, and there remains much to be done by business men in these directions. But, if India is to succeed in its export drive its goods must be competitive in price also. It is, therefore, necessary for the Government, industrialists and workers to take concerted measures for bringing down the cost of production.

• • • •

Unfortunately, the Government's spokesmen did not say anything on this all-important subject. On the contrary, Mr. Krishnamachari's remarks on export duties suggest that the Government will not give them up until much harm is done to our export trade. Here is what he said:

> "I would like you to remember that removal or reduction of export duties can only help where price is the main obstacle and where it is clear that, at a lower price, a larger volume of exports would take place. Where, however, the overseas demand is not likely to respond to a reduction in price, or a reduction in price is not likely to take place, the position would be different. Many suggestions have been received pressing for blanket reductions in export duties. But, in all such cases, Government have to be satisfied that the exporter himself is prepared to reduce his profit margins and that the reduction in prices will tend to stimulate exports. Our experience in the past has been that exporters put up prices directly after reductions in duties are announced. Such persistent claims for reduction in duties do not help either exports or exporters and often tend to discourage the overseas buyers from book-

BOOM IN EQUITIES

TATA ORDINARIES IN GOOD DEMAND

(From Our Own Correspondents)

BOMBAY, 3rd December

CONDITIONS reminiscent of the boom period of 1951 were witnessed on the Stock Exchange during the week under review. Activity broadened considerably and, in brisk speculative dealings, equity values made spirited rallies. Particularly on Friday last there was a burst of activity initiated by the decision of the Directors of the Associated Cement Companies, Ltd., to maintain the dividend at Rs. 9-8 and to issue bonus shares in the ratio of one share for every five shares held, subject to the sanction of the Government. In the new account, which opened on Monday, the bullish enthusiasm was sustained under a wave of buying orders, backed up by short-covering. Steels, textiles and the miscellaneous group vied with each other to assume leadership of the market and in the race scored handsome gains.

In the steel section, Tata Deferreds opened on a steady note at Rs. 1,965. In subsequent hectic dealings, strident advances were made to cross the Rs. 2,000-mark for the first time after over two years and touch a high of Rs. 2,015 on Tuesday this week. At the high level there was a sharp reaction to Rs. 1,998-12 early on Wednesday, ascribed to the pressure in textiles and the weakness of bullion. But this recession was short-lived, as under a flurry of buying orders, they soon moved up to a high of Rs. 2,036-4 to-day, the highest since 23rd July, 1951. The closing, however, was done lower at Rs. 2,030. In the early part of the week, movements in Tata Ordinaries were narrow, confined to a range of Rs. 336-8 and Rs. 341, but in the last two days operators in steel shares concentrated their interest on Tata Ordinaries. Buying orders from Calcutta also were particularly strong, with the result that the scrips spurted to a high of Rs. 349 to-day before closing at Rs. 347. Indian Irons also participated in the general upswing, recording a rise from Rs. 25-10 to Rs. 26-9½.

Textiles were very active. Under hectic buying most favourites scored impressive gains. Bombay Dyeings were boosted from Rs. 394-6 to Rs. 406-4, but encountered pressure attributed to uninspiring advices from the cloth market, resulting in a decline to Rs. 398-2. They, however, regained stability aided by the strength of steels and closed at Rs. 404-6. Kohinoors advanced from Rs. 297-8 to Rs. 304-8, and, after drifting back to Rs. 290, recouped to Rs. 301. Central Indias rallied from Rs. 170 to Rs. 175. Centurys were conspicuous with a gain of Rs. 10 to Rs. 291 on sustained buying enthusiasm. Finlays recorded an improvement of Rs. 3 at Rs. 268, Gokaks Rs. 5 at Rs. 256, Indore Malwas Rs. 2-8 at Rs. 102-8 and New Greats Rs. 3 at Rs. 167. Sassoon Spinnings came to the forefront and scored a gain of Re. 1-8 to Rs. 28-8. Simplex struck a bright note and advanced by Rs. 4-8 to Rs. 158-8. Standards made a modest gain of Re. 1-14 to Rs. 316-4. Svadeshis jumped from Rs. 263-8 to Rs. 271-8. Tata Mills moved ahead by Rs. 2-8 to Rs. 52-8. Bradburys changed hands Rs. 25 higher at Rs. 765.

Activity in bank shares was relatively at a low ebb and the undertone was steady. Imperial Bank Fully Paids experienced some buying and moved up by Rs. 22-8 to Rs. 1,855. Contributories were quiet with a small loss of Re. 1-4 to Rs. 458-12. Central Banks were dull at Rs. 63-12, while their new shares were wanted Re. 1-4 higher at Rs. 67-12. Barodas were a fraction lower at Rs. 107-8. Bank of Indias were maintained at Rs. 155-12. United Commercials were marked up by As. 8 to Rs. 38.

Insurance shares were quiet. Empire of Indias shed Rs. 10 to Rs. 620. Jupiters were a fraction lower at Rs. 6-9½. Indian Mercantiles dropped As. 4 to Rs. 38-8. New Indias kept steady at Rs. 39-12. Orientals were better by Rs. 10 at Rs. 6,920.

Investment buying in the Tata Hydro Group was again a feature in the public utility section and small gains were recorded. Andhra Valleys moved ahead from Rs. 1,300 *cum-div.*, to Rs. 1,255 *ex-div.*, their Rights from Rs. 196-4 to Rs. 200 and Coupons from Rs. 40 to Rs. 45. Tata Powers appreciated from Rs. 1,400 *cum-div.* to Rs. 1,367-8 *ex-div.*, their Rights Rs. 252-8 to Rs. 271-4 and Coupons from Rs. 50-8 to Rs. 54-4. Tata Hydros gained Rs. 3 to Rs. 138-8 *ex-div.*, their Rights Rs. 5 to Rs. 31-8 and Coupons Re. 1-8 to Rs. 11. Ahmedabad Electrics were wanted Re. 1-4 higher at Rs. 114-11. Bombay Suburbans were quiet at Rs. 123-12.

Following the announcement of the Directors' decision to issue bonus shares in the ratio of 1:5, in addition to maintaining the dividend at Rs. 9-8, Associated Cements, among the miscellaneous shares, spurted from Rs. 183-12 to Rs. 189-12, but closed a shade lower at Rs. 187-4. Belapurs surged forward from Rs. 263-8 to Rs. 274, but backed away to Rs. 265, following the Chairman's remarks at the annual meeting that the outlook for the current year was not bright. Bombay Burmahs were marked up from Rs. 353-2 to Rs. 367-8 early in the week, but shaded off to Rs. 357-8. B.I.Cs. were steady at Rs. 9-6. National Rayons picked up from Rs. 127 to Rs. 130-4, but heavy profit-taking brought them down to Rs. 124-8. Tata Chemicals continued to be in favour and rose from Rs. 10-9 to Rs. 11-7. Tata Oils put on As. 8 to Rs. 34-8. Walchandnagars appreciated by Rs. 9-6 to Rs. 158-2 on expectations of better results. Wimcos added Re. 1-4 to Rs. 200. Premier Constructions were keenly bid and gained Rs. 10-12 to Rs. 113-4, on speculative buying inspired by anticipations of higher dividend. Alcocks hardened by Rs. 2-8 to Rs. 330. Indian Coppers were quiet at Rs. 2-14½. Shivrajpurs were steady at Rs. 69-8.

• • • •

Calcutta Stock Exchange

CALCUTTA, 2nd December

Activity on the Calcutta Stock Exchange was somewhat better this week than what it was last week. The undertone was fully steady and prices were well maintained on bullish advices from Bombay. Tea scrips were particularly in the limelight, the operators' interest being whipped up by marked improvement in the prices obtained in the London and Calcutta auctions. The belief that tea gardens were earning profits on their sales of tea, resulting from reduced costs, lent further support to tea scrips. Consequently, the upsurge witnessed in tea shares since last month continued unabated during the week under review. Jute shares also evoked buying support, following good recovery in jute goods prices. Trading in the coal section, too, was active, enquiries being mainly from bargain-hunters. There was renewed investment buying in selected miscellaneous shares which registered gains.

Among tea shares, Eastern Cachars recorded a handsome gain of Re. 1-7 to Rs. 5-1. Ethelbaris, Tukvars, and Hansquas advanced, by Re. 1-6 each, to Rs. 8-10, Rs. 9-8 and Rs. 16-14, respectively. Sonai Rivers moved up from Rs. 7-2 to Rs. 8 and Batelis from Rs. 14-13 to Rs. 15-6. Hattikhiras were higher by As. 6 at Rs. 14-12, Dhelkapats by As. 4 at Rs. 13-13 and Tengranis by As. 2 at Rs. 24-6.

In the jute section, Nationals picked up As. 7 to stand at Rs. 25-1. Bengals gathered As. 6 to Rs. 16-2. Presidencies gained As. 2 to Rs. 5-5. Kamarhattys, however, were subjected to speculative selling and suffered a loss of Rs. 4 to Rs. 189. Similarly, Deltas were subdued at Rs. 230, as against Rs. 232 last week.

Coal shares registered an all round rise in prices. Thus, Bengals rallied Rs. 2 to Rs. 502. Raneegunges hardened by Re. 1-6 to Rs. 11-9. New Beerbhooms and Burrakurs put on As. 9 and As. 7 to Rs. 19 and Rs. 8-15, respectively. Bharat Coals rose by As. 5 to Rs. 6-2 and Central Indias by As. 3 to Rs. 5-9. South Karanpuras gained a like amount to Rs. 10-7.

Quotations for engineering shares were generally well maintained. Indian Irons witnessed erratic fluctuations under the influence of a bull-bear tussle. After suffering a loss of As. 7 to Rs. 24-12, they moved up, in response to firm advices from Bombay, to finish the week at Rs. 25-4. Textile Machinerys met with special buying enquiries and recorded a handsome gain of As. 14 to Rs. 8-11. Jessop & Cos. and National Irons put on As. 4 each to finish at Rs. 25-4 and Rs. 5-8, respectively. Marshalls were better by an anna at Rs. 5-13. Bhartia Electric Steels were fully steady at Rs. 10-12 (c.t.) and Braithwaites at Rs. 12-14.

Buying enquiry in the miscellaneous section was of a selective type. Rallis Indias were dealt at Rs. 67, as against Rs. 66-8. Martin Burns and Rohtas Indias gathered As. 4 each, the former to Rs. 19-12 and the latter to Rs. 9-14. Shaw Wallaces and B.I. Corporations were higher by As. 2 each at Rs. 11-6 and Rs. 9-6, respectively.

• • • •

Madras Stock Exchange

MADRAS, 1st December

For yet another week, the Madras Stock Exchange presented distinctly bright conditions. The textile section was in the lead, with favourites coming in for good attention, on reports of better offtake of piecegoods at the various consuming centres and encouraging overseas advices. The upward trend noticed in plantings persisted generally this week also. Among them, teas were the brightest, on good demand from the U.K. and other overseas centres. Rubbers too came in for considerable enquiry. Coffees were, however, quiet. But miscellaneous scrips were in good shape. As a result, business done in the market was encouraging and share values over a broad front recorded sizable gains on balance.

The textile section presented livelier conditions. Favourites continued to enjoy good buying support. Coimbatore Pioneers shot up from Rs. 119 to Rs. 125, and Buckinghams from Rs. 121 to Rs. 126. Venkateshas gathered Rs. 5 to Rs. 75. Bangalore Woollens changed hands at Rs. 285, as against Rs. 282-8. Krishna Rajedras gained Rs. 2 to Rs. 50-8. Vasantas and Balasubramanias 'B' rallied Re. 1 each to Rs. 165 and Rs. 60, respectively. Travancore Rayons were higher by As. 9 at Rs. 7-4 and Rajalakshmis As. 8 at Rs. 79. But Rajapalayams lost Rs. 2 to Rs. 74 and Radhakrishnas Re. 1-8 to Rs. 163.

Among plantings, teas, as indicated earlier, evinced keen interest. There was some follow up even at rising rates. Thus, Udayagiris crept up from Rs. 4-6 to Rs. 5-8 and Devasholas from Rs. 18 to Rs. 19. Peermades climbed up by As. 8 and closed at Rs. 26-12, and Waterfalls by As. 5½ and finished at Rs. 3-11. Kalasas advanced by As. 2 and finished at Rs. 11-6. Parksides were done at Rs. 15-4 ex-div., as against Rs. 15-8 cum-div. But Emerald Valleys lost an anna and finished at Rs. 4-7. Chembras were fractionally lower at Rs. 2-5.

Rubbers also were in good demand. Malankaras were higher by Re. 1-8 at Rs. 109. Nenmenys and Travancore Rubbers gained As. 4 each to Rs. 8-12 and Rs. 13-14. Vaikundams put on As. 2 to Rs. 16-4. Velimalais were slightly higher at Rs. 2-7 and Cochin Malabars at Rs. 7. But Rajagiris lost As. 4 to Rs. 12-8 cum-div. and Be Bes lost an anna to Rs. 2-5. Pullangodes were fractionally lower at Rs. 3-0½.

Little interest was noticeable in coffee shares. Only Coffee Lands gained an anna to Rs. 10-13. Others were quoted a shade lower. Consolidated Coffees lost As. 2 to Rs. 18-2. Nil Neergundis eased from Rs. 3-14 to Rs. 3-12. Puthuthotams were lower at Rs. 3-4, as against Rs. 3-5. Kadur Coffees was unchanged at Re. 1-8.

The miscellaneous section witnessed bright conditions. With relatively more enquiries, sentiment hardened, and quotations showed sizable improvement. Binnys shot up from Rs. 114 to Rs. 120. Central Scientifics hardened by As. 6 and closed at Rs. 5-10. Mysore Papers improved by As. 9 to finish at Rs. 15-6 and Spencers As. 4 to close at Rs. 14-12. E. I. D. 'B' Sugars gained Re. 1 to Rs. 23-8 and India Sugars As. 8 to Rs. 23. Radio and Electricals, however, lost Re. 1-3 to Rs. 3-12 and Mysore Gold an anna to Rs. 2-13.

Notices

THE BOMBAY BURMAH TRADING CORPORATION, LIMITED

NOTICE IS HEREBY GIVEN THAT THE Ninetieth Ordinary General Meeting of the Shareholders of the above Corporation will be held at the Registered Office of the Corporation, No. 9, Wallace Street, Fort, Bombay on Thursday the 17th December, 1953, at 4-15 p.m. (S.T.), for the purpose of transacting the following business:—

I.—To receive and adopt the Directors' Report and the Audited Accounts for the year ended 31st May, 1953.

II.—To sanction the declaration of a Dividend.

III.—To confirm the appointment as Director of Mr. R. L. Coghlan in place of Mr. L. F. H. Goodwin, resigned.

IV.—To confirm the appointment as Directors of Sir Jamsetjee Jejeebhoy, Bart., and Mr. Arvind N. Mafatlal.

V.—To elect Directors in place of Sir Cowasji Jehangir, Bart., G.B.E., K.C.I.E., and Mr. R. L. Coghlan, who retire by rotation but who are eligible for re-election.

VI.—To appoint Auditors for the current year and to fix their remuneration.

By Order of the Board of Directors,
WALLACE & CO.,
Secretaries, Treasurers & Managers.

The Transfer Books of the Corporation will be closed from 7th December, 1953, to 28th December, 1953, both days inclusive.

BOMBAY, 25th November, 1953.

SUTLEJ COTTON MILLS LIMITED

NOTICE IS HEREBY GIVEN THAT THE Nineteenth Ordinary General Meeting of Sutlej Cotton Mills Ltd., will be held at Imperial Bank Building, Bank Street, Fort, Bombay, on 30th December, 1953, at 5 p.m.

(a) To receive and pass the Directors' Report and Audited Accounts for the year ended 31st March, 1953.

(b) To declare a Dividend which is payable on application to the shareholders when declared.

(c) To elect Directors.

(d) To appoint Auditors for the current year and to fix their remuneration and

(e) To transact any other business that may be brought forward.

The Share Transfer Register will be closed from 17th December, 1953, to 30th December 1953, both days inclusive.

By Order of the Directors,
BIRLA BROTHERS LIMITED,
Managing Agents.

DELHI, 27th November, 1953.

NEWS IN BRIEF

THE Employees' State Insurance Scheme will come into effect in Bihar from April, 1954.

The Government of India has accepted the Tariff Commission's recommendation to give protection to the Indian plastic buttons industry against imports from Japan only.

The West Bengal Legislative Assembly passed, last week, the Estates Acquisition Bill, which seeks to abolish zamindari in the State within a stipulated period.

The Government has decided to take over the Barsi Light Railway on 1st January, 1954. The Company will be paid compensation as soon as possible, but it is unlikely that accounts will be fully settled before 30th April, 1954.

The Government of India has sanctioned a short-term loan of Rs. 35.83 lakhs to the Hyderabad Government for purchase and distribution of 5,000 tons of ammonium sulphate and 4,780 tons of super-phosphate during 1953-54.

The Kashmir Government has under consideration an insurance scheme for labourers. Under the scheme, contractors will be asked to contribute to a capital fund of insurance at a fixed percentage of wages of each labourer employed by them.

The Government of India has accepted the Tariff Commission's recommendation that the protection granted to the ferro-silicon industry need not be continued beyond 31st December, 1953. If, however, the industry finds itself, at any time, unable to meet foreign competition, it may apply to the Government for a fresh examination of its case.

The Standing Committee of the Employees' State Insurance Corporation, at its meeting held in New Delhi last week, recognised the need of implementing the State Insurance Scheme as extensively as possible in 1954 and urged that all the parties concerned—Government, employers and workers—should accord their unstinted support for this purpose.

The Rajasthan Industrial Advisory Council, which met at Jaipur in July last, has submitted its recommendations to the State Government with regard to the setting up of an industrial finance corporation, as also to explore possibilities of industrial survey of Rajasthan. The State Government has accepted the recommendations of the Advisory Council, and has appointed a committee to draw up detailed proposals for setting up an Industrial Finance Corporation for Rajasthan.

A plea to reduce the import duty on watches was made by M. Charles Javet, Marketing Director of the Federation of Swiss Watch Manufacturers, at a reception held in Delhi last week. Watches, he said, could not be regarded as a luxury and should not be taxed as such. The high import duties gave rise to smuggling and this affected honest dealers, as well as the reputation of the watches. The only way to eliminate the evil, he said, was to reduce the import duty and allow imports in reasonable quantities.

Electricity generated by 629 public utility power stations in India during August this year was 587.8 million kw.h., of which 468.9 million kw.h. were sold to ultimate consumers. These figures include the data for the two new undertakings serving Baruipur and Jamuria towns in West Bengal. As compared with July, there was a decrease of about 0.2 million kw.h. The corresponding figures of output and sale for August, 1952, are 531.6 million kw.h. and 428.7 million kw.h. and for August, 1939, 213.1 million kw.h. and 177.4 million kw.h., respectively.

The Government of India is considering a proposal to throw open the postal life insurance scheme to certain categories of the public. This proposal is part of the steps that are being taken to popularise the movement. During 1952-53, 9,993 policies of an aggregate value of Rs. 2,44,43,500 were issued. Provision has now been made for grant of loans on policies, facilities of automatic paid-up policies, raising the limit of insurance to Rs. 30,000, liberalisation of rules of medical examination and throwing open the fund to Defence Services personnel.

The prices of certain petroleum products have been reduced with effect from the 2nd inst. The reductions have been made possible mainly by the greater availability of these products from nearer sources and the fall in freight rates. The reductions vary according to the different areas of supply. They are: kerosene from As. 6½ to As. 9 per unit of eight gallons, motor spirit 6 pies per gallon in areas supplied from Visakhapatnam and Calcutta, vapourising oil 3 pies per gallon, high speed diesel oil from 1 anna to 1 anna 3 pies per gallon, light diesel oil from Rs. 3 to Rs. 4-7 per ton, and furnace oil from Rs. 3-11 to Rs. 6-2 per ton.

The Food Ministry is likely to withdraw the permission given to the vanaspati industry to use groundnut oil, linseed and sesame oils, instead of groundnut oil in the manufacture of vanaspati. The permission was given a few months ago, owing to the failure of the last groundnut crop and consequent rise in the price of groundnut oil. It is said to be much easier now and the use of other oils may be withdrawn when the groundnut crop is received. Another reason for withdrawal of the permission is that the use of mustard oil by the industry is likely to raise its prices and cause hardship to people in West Bengal and Bihar.

A bench-mark survey to record economic and social conditions at a certain point of time in the Community Development Project areas, followed by two surveys at intervals, aimed at measuring the changes effected in the same areas by the operation of the Community Development Programme, is proposed to be undertaken by the Programme Evaluation Organisation (Planning Commission), Government of India, in the 25 project evaluation centres spread over India. Principal fields in which data are to be collected in these surveys are: (i) production, (ii) income, (iii) resources, organisation and efficiency (with special reference to employment), and (iv) standard of living.

From Abroad

It is estimated that the output of German shipyards will be 20.25 per cent. larger than in 1952, which was 503,000 g.r.t.

The imports of aluminium by the U.S. are expected to reach a new high of 3,360 million lbs. in 1953. Domestic production capacity is estimated to reach only 2,600 million lbs. by the end of the year. This excludes some high-cost capacity which is called into use only in times of emergency.

The largest United States tax-exempt bond sale of 1953, namely, Indiana Toll Road Commission's $280 million issue, will probably take place on 17th December. From 350 to 450 firms from all over the U.S. will participate in the sale and distribution of revenue bonds, which carry maturities upto 40 years.

The American Independent Oil Company has completed its fourth well in Kuwait-Saudi Arabia neutral zone and is preparing to develop the field intensively. The deliveries of crude oil are expected to start in about six weeks. Tests indicate that the new wells will produce at a rate of about 4,500 barrels a day. The initial strike in what appears to be a major oil producing field was made in April last.

The F.A.O. Conference held at Rome recently set up a special 10-Nation Committee to combat the threat of locusts in the Middle East. The membernations are Egypt, Iraq, Jordan, Lebanon, Syria, Saudi Arabia, Turkey, the U.K., France and the U.S. Besides, it consists of locust experts from the F.A.O. The Conference was told that locusts were spreading northwards through the Arabian Peninsula invading the area east of Israel to Iraq.

Ten rubber-cushioned freight cars have been purchased by the Eric Railroad, a leading American railway line, for use in the continuing search for ways to reduce possible damage to shipments. The 10 experimental cars will be used in regular freight service to carry commodities that are susceptible to damage in transit. The cars have rubber-cushioned underframes. The rubber-cushion supplements the standard gear for absorbing the impact effect in train and yard-handling of freight cars.

Seventy factories are to be set up for the development of Punjab (P), under a Five-year Plan, at an estimated cost of Rs. 40 crores. Industrialisation of the province under the plan, prepared two years ago, would have been much faster but for the lack of capital, shortage of power and want of experienced personnel. An industries' facilities promotion committee is understood to have been formed. It will acquire land, procure raw materials, machinery, arrange power resources, railway sidings and marketing facilities.

For the seventh month in succession during 1953, imports by the U.S. in September exceeded those of the corresponding month of 1952. Imports during September, 1953, aggregated $926 million, as against $841.5 million in August, 1953, and $876.6 million in September, 1952. This increase was due to larger American receipts of coffee, crude rubber, copra and petroleum. The U.S. exports also increased during September, aggregating $1,235 million (including $203.7 million of economic and military aid), as against $1,184.6 million in the previous month and $1,227.6 million in September, 1952.

According to a preliminary estimate made by the U.S. Department of Agriculture, the world production of rough rice in 1953-54 (August-July) will be about 359,000 million lbs., as compared with 357,000 million lbs. in 1952-53 and 335,000 million lbs. in the average pre-war year. The acreages under rice have increased in many parts of the world and, in most countries, large crops are being harvested or are in prospect. The largest rise in production in the surplus countries will be in the "rice bowl" of Asia—Burma, Indo-China and Thailand—where the total output is estimated at 44,700 million lbs., an increase of 4,200 million lbs., over last year's total.

Coal miners in the United States received during the year ended 30th June, 1953, a record of more than $138 million in pension, medical and other benefits. Officials of the welfare and retirement fund of the United Mine Workers, the leading union of coal miners, reported recently that 226,421 miners and their families received assistance. The largest outlay went to 50,055 miners, who received pensions of $100 a month. The fund, organised in 1949, is financed by coal-operators at the rate of 40 cents for each ton of coal mined. During the year, the fund received $131,482,786 in royalty payments and interest from Government securities. As on 30th June, the fund had a balance of $92,024,732.

PERSONAL

MR. A. C. N. Nambiar, India's Envoy to Sweden, who had gone to New Delhi for consultations, has left Bombay for Geneva.

Mr. K. S. Sundra Rajan, Commissioner of Income-tax, Hyderabad, has assumed charge as Commissioner of Income-tax, Bombay.

Mr. Ali Asghar Hekmat, Minister without Portfolio in General Zahedi's Government, Iran, has been appointed Iran's Ambassador to India.

Mr. C. T. Whyman, officer in charge of the Trade Marks branch of the Patent Office, London, has arrived at Bombay on a four-month tour of India, under the Technical Co-operation Scheme of the Colombo Plan.

Mr. V. P. Varde, Managing Director, Bombay Central Co-operative Bank, has left for Geneva to attend the forthcoming session of the Experts Committee of the International Labour Organisation on Co-operation, as India's delegate.

Mr. B. K. Banerjee, Section Sales Manager, Caltex (India) Ltd., Calcutta, who had gone to the U.S. for training under Caltex's Technical Training Programme, which is designed to give advanced technical experience to Indian employees, has arrived in Bombay.

Lala Yodh Raj has vacated his office as Chairman and General Manager of the Punjab National Bank Ltd., after being associated with it for 28 years. Mr. B. N. Puri, hitherto General Secretary of the Bank, has been appointed General Manager by the Board of Directors, with effect from 1st December, 1953. Mr. Puri has been with the Bank for 25 years and has held several responsible positions. He has acted as General Manager on a number of occasions when Lala Yodh Raj went on leave.

"COMMERCE" 1928

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, 8th December

Income-tax Posers

To the individual, income-tax is no more popular than, say, customs duty on personal effects, but it is a known fact that as many persons try to evade the one as the other. Within recent years, the income-tax authorities have closed many an avenue of evasion and their vigilance does lead to some at least of the defaulters being brought to book, but no publicity seems to attach to the cases they have to decide, which, according to the point of view, is perhaps fortunate. It comes, therefore, as a source of surprise that the Committee of the Bengal Chamber of Commerce should have been called upon to adjudicate in what appears to be a trivial question, but one that affects practically all firms in this country who are in the habit of importing men from home. Salaries for newcomers covenanted out to India invariably commence from the date of departure from home, hence, in the case of assistants who are sent all the way by sea to Calcutta, the first month of service is spent on the briny. Apparently, this has been reckoned as affording a problem where income-tax is concerned and the Committee of the Bengal Chamber have had to consider, whether it is necessary to deduct income-tax from the first month's salary of a new assistant who does not arrive in Calcutta until the beginning of the second month on his agreement; the position thus being that, although the salary for the first month is paid here, the assistant was not resident in India in the period, to which it is applicable. The Committee duly replied that it is quite clear that income-tax should be deducted. Section 4(1) of the Income-tax Act provides that the Act shall apply to "all income, profits or gains, as described or comprised in section 6, from whatever source derived, accruing or arising, or received in British India," etc. Section 6 prescribes the heads of income which are chargeable to tax, and one of these is "salaries."

The new U.S. Farm Price Programme is nearly complete. It is stated that the Programme provides for the continuation of all existing price supports for almost all commodities. Supports for most of the crops including corn, wheat, foodgrains and dairy products are expected to average slightly lower than at present and price supports for wool, rice and a few other products will be higher. The Programme, it is stated, also calls for a two-priced system for wheat, cotton and rice. According to the two-priced system, a portion of the crop consumed domestically will be supported at high levels, while the balance moving into export channels will find its own levels.

An agreement establishing a joint American-Canadian committee on trade and economic affairs has been signed between the U.S. and Canada. The purpose of the Committee is to deal with anything that might adversely affect trade between the two countries. Consequently, most of its work initially will concern American tariffs, which from time to time cause rifts in trade relations. During the past year, the American embargo on Canadian dairy products has caused irritation in Canada, and has evoked protests from the Canadian Government. Concern has also been expressed on possible increase in American tariffs on Canadian lead and zinc. So far, most grievances have been on the Canadian side, and are attributable to the attitude of the U.S. Congress rather than the Administration.

EUROPEAN STEEL PRICES

THE High Authority of the European Coal and Steel Pool is faced with a major crisis. The steel producers have challenged the legality of the recent decision of the Authority to suppress the price ring for steel exports to countries outside the six-nation common market. The exporters argue that the regulation of export prices does not mean that they have formed a "cartel"; they would call it a mere "arrangement." Nobody is certain that compulsory suppression of the cartel will be upheld by the Pool's High Court of Justice to which lies an appeal from the decisions of the High Authority.

There is a cleavage between the Belgian and Luxemburg interests on the one hand, and the German interests on the other, regarding the future of the alleged cartel. Strong Belgian and Luxemburg interests have been suggesting that the cartel should be allowed to continue. Mr. Pierre van der Rest, spokesman of the Belgian steel industry, says that the industry cannot afford to sacrifice its liberty to arrange the price for exports outside the common country. Nothing that has happened so far, he maintains, shows that the cartel has done any damage to the smooth working of the steel market inside the six-nation territory. Consequently, he is of the opinion that, unless such damage was proved, there would be no justification for declaring the cartel illegal. It is also pointed out that the Belgian and Luxemburg steel industries have to rely on exports to cover a large proportion of their overhead costs.

The German steel interests, however, argue that the export cartel, by putting up the export prices, had been profoundly disturbing the financial balance inside the Pool. It has, therefore, suggested that the cartel should be suppressed under Article 65 of the treaty as "interfering with the free play of internal competition." The French and Dutch attitudes are not yet fully defined. The Italians, who take little part in international steel trade and who are not, therefore, members of the export cartel, are apparently neutral. The cleavage between the view of Germany and that of Belgium and Luxemburg interests reflects the fact that Germany exports only a small proportion of its steel output and can, therefore, afford to sell it cheaply.

The question of suppression of the export cartel and the fixation of maximum and minimum prices have been made much more difficult by uncertainty of steel prices inside the Pool itself. It is true that steel-producing companies have duly published their price schedules. But, it is understood that, although technically bound by these schedules, the steel companies are allowing considerable rebates with a view to getting more business. A part of the rebates are justifiable under the Schuman Treaty, which entitles the steel companies to sell in one another's markets at prices corresponding to the delivery price of nearest producers, thus providing for deduction of transport costs in selling to distant markets. It appears, however, that the rebates given have in practice gone beyond this allowance. The companies are enabled to give liberal rebates, because they deduct the expensive rail transport cost, while steel is actually despatched cheaply by inland water ways. In certain cases, the average current quotations are stated to be about 10 per cent. below the quoted schedules.

Thus, the High Authority is faced with a very complex problem of suppressing the European steel export cartel and determining the maximum and minimum prices for exported steel. It is, however, gratifying to note that, as these lines are being written, the Advisory Committee to the Authority is holding preliminary consultations at Luxemburg to determine, at the very outset, whether price fixing for exportable steel is opportune and, if so, what should be the level of maximum and minimum prices. The Committee, which represents producers, consumers and labour interests will also express its views on the question of limiting rebates to the difference between transport costs of the supplier and his direct competitor, after reviewing the decisions already in force regarding discrimination, the publication of price schedules and the conditions of sale. It is true that, although the Authority is bound to consult the Committee, it is not necessary to follow its advice. But it is held that its advice will not be generally flouted.

SALES TAX IN BOMBAY

The Bill to amend the Bombay Sales Tax Act, 1953, has emerged from the Select Committee of the State Legislative Assembly with some important changes. The limit of turnover for the purpose of liability to pay tax has been raised from Rs. 15,000 to Rs. 25,000. But, in the case of dealers who import goods from places outside the State, and those who manufacture or process goods for sale, the limit of turnover will be Rs. 10,000 (provided that the value of the goods imported, manufactured or processed is not less than Rs. 2,500). The "sales tax" and "special goods sales tax" proposed in the Bill to be levied at the first stage of the sale have been combined into a single tax at suitable rates, called "sales tax." Similarly, the "purchase tax" and "special goods purchase tax" proposed in the Bill have been combined into a single tax, called "purchase tax."

The Select Committee has introduced some provisions which seek to liberalise, as well as simplify, the original Bill. Thus, the provisions relating to the levy of sales tax have been liberalised to allow deductions from the turnover in respect of exports. A new section has been inserted to provide for the grant of authorisation to registered dealers for the purpose of facilitating the export of goods outside India or to other States. Such authorisation will be granted to dealers whose turnover of sales of goods exported in a year has exceeded Rs. 50,000. A new sub-section has been added to the effect that rules made under the section should provide, *inter alia*, that, in the case of a dealer who manufactures or processes any goods for sale, a set-off shall be allowed against the sales tax payable by him on the purchase of goods used in the manufacture or processing.

A notable feature of the revised Bill is that schedules B, C, D and E of the original Bill have been combined into one Schedule B, showing all taxable goods and specifying the rates of sales tax, general sales tax and purchase tax against each item of goods. Again, the Schedule A, which gives the list of tax-free goods, has been enlarged so as to include betel leaves, chillies, chilly powder, tamarind and turmeric, flowers, edible tubers, and sugarcane. The items which have been exempted from sales tax but made subject to general sales tax at the rate of three pies in the rupee are: artificial silk yarn, raw silk and silk yarn, raw wool, wool tops and woollen yarn (other than knitting yarn) and staple fibre yarn. Sales of bullion and specie are made subject to sales tax of one-fourth per cent. and general sales tax also at the same rate.

The general structure of the Bill, namely, its two-point character, however, remains unimpaired. Although the Bill, as it now emerges from the Select Committee, may have something to commend it for acceptance, the expediency of introducing a Bill of this kind has been rightly questioned by the leading spokesmen of trade and industry. Mr. Ambalal Kilachand, President of the Indian Merchants' Chamber, emphasised that, both in the long-term interests of the trade of this State and for the sake of simplicity in tax structure, the case for "restoring the single-point basis is on strong grounds." If the Government is not inclined to accept this suggestion, it would do well at least to maintain the *status quo* in the sphere of sales tax, albeit at slightly lower rates, till the Taxation Enquiry Commission, which is engaged in examining all aspects of India's fiscal problem, submits its report. If the Commission were to emphasise the need for changing the two-point sales tax structure, the Government would be urged to make the necessary change. And if it then decides to change, as, indeed, it must, unless it does not mind incurring the displeasure of the Central Government and/or the public, it will have made an unnecessary experiment in the two-point system for a short period.

RELIEVING UNEMPLOYMENT

The Central Government has adopted certain measures to relieve the suffering among the middle class people through insufficient income. The establishment of the Family Welfare Centre at New Delhi, under the auspices of the Central Social Welfare Board, is a step designed to augment the limited income of the middle class families. It is true that the scheme is restricted in scope. Even so, it deserves the attention of social welfare workers. Under this scheme, gainful employment is sought to be provided, on a part-time basis, to the womenfolk of middle class families (within the income group of Rs. 60 to Rs. 260 per month) at their homes or in a nearby factory. For this purpose, it is proposed to establish a match factory on a cottage-industry basis. Nearly 500 families from the surrounding locality are expected to be provided part-time employment by way of producing some of the components required for the manufacture of match boxes. The factory is to be run by a co-operative society which will market the products with the assistance of the Central Government.

The above scheme is no doubt modest in approach, but, on that score, its significance should not be belittled. For there is no single remedy for the distress of the middle class and the problem has to be tackled from different directions. Surely, the family welfare service is, as Mr. T. T. Krishnamachari, Union Minister for Commerce and Industry, aptly remarked, while inaugurating the Delhi Centre, one of the directions in which the problem can be tackled. The establishment of the Delhi Centre, it is to be hoped, will be the precursor of a large number of similar centres all over India.

The Central Government's scheme for assisting the State's educational efforts is designed to give more direct aid, in order to relieve unemployment. Financial sanction has been made by the Government for the recruitment of 16,000 rural teachers and 670 social education workers by eleven States. The salient features of the financial provisions of the scheme are:

The period of Central assistance in this scheme is for three years and the Centre will contribute 75 per cent., 50 per cent. and 25 per cent. of the salaries of the teachers in the first, second and third year of the scheme, respectively, the States contributing the remainder. After the three-year period, the States will have to maintain the schools out of their own resources. In the case of new social education centres, the Centre will contribute 50 per cent. of the salaries or honoraria to the teachers and the expenditure on contingencies upt a certain maximum till the end of March, 19 Proposals have been received from about 20 St and the present allocations have been made i case of the States whose proposals do not further discussion.

The Government of India has al steps to relieve the distress caused calamities in several parts of the cr cially in Bihar, Madras, Mysore a It has decided to give assista States to the extent of Rs. 2.66 crores during 1953-54. The assistance promised does not include assistance given in the form of issue of subsidised foodgrains and under other programmes like Grow-more-food and arrears of payment made in the current financial year on account of expenditure on scarcity relief incurred in the previous year. The said sum of Rs. 2.66 crores is the second part of the sum of Rs. 15 crores provided in the Five-year Plan for the three years commencing from 1952-53.

As readers are aware, the Central Government has been giving assistance for the implementation of the Five-year Plan in the different States. In the first three years of the Plan period, the Centre has given Rs. 27.61 crores by way of grants and Rs. 250 crores by way of loans. The purposes for which grants have been made include food, community projects, basic and social education, cottage and small-scale industries, assistance under Article 275(1) of the Constitution, natural calamities and special development grants to Part B States. Larger portions of the loans to States have gone to river valley projects, development schemes, rehabilitation and minor irrigation works.

INDO-RUSSIAN TRADE PACT

The Government of India has this week signed a trade agreement with Russia, as was visualised in our Delhi Letter last week. In fact, for a considerable time now, there were rumours of a possible trade pact between the two countries. A definite indication of the signing of a pact was given by Mr. T. T. Krishnamachari, Minister for Commerce and Industry, at the meeting of the Export Advisory Council last Sunday. He said that, along with the trade agreement would also be a balance of payments agreement. Payment would be, he said, in rupees and settlement of balance might be in sterling.

India's trade with Russia has all these years been on a limited scale. In fact, the volume of trade has been so small that it must be described as negligible. In such trade as did take place, however, India enjoyed a favourable trade balance. India's exports in the fiscal year 1952-53 amounted in value to Rs. 85 lakhs, as compared with Rs. 667 lakhs and Rs. 134.08 lakhs in 1951-52 and 1950-51 respectively. Goods imported from Russia were valued at Rs. 24.17 lakhs in 1952-53 and Rs. 138.2 lakhs and Rs. 22.9 lakhs in the preceding two years respectively. Exports in the four months, namely, April-July, 1953, amounted to Rs. 8.6 lakhs, while no goods were purchased from Russia in this period. These figures refer mostly to tea, jute goods, tobacco and shellac purchased by Russia on a barter basis.

The news of a trade pact with Russia has been received well by both the tea and jute goods markets in India and prices have hardened in both. This is because it is now known that deals with Russia will not be on a barter basis but will be paid for in rupees. Russia seems to be interested in good tea leaves for blending with common teas purchased elsewhere. Russian requirements of packaging materials are confined mainly to gunny bags.

While it is easy for Russia to buy in the free market at prices dictated by forces of demand and supply, it is rather difficult for other countries to purchase from Russia, for it is stated that the costs of production in Russia bear no relation to free market prices. Unless Russia starts giving quotations which are competitive to those in free markets for similar commodities of equal quality and measure, there are little chances of Russia increasing its sales in India. So far as payment for imports of Russian goods is concerned it has been officially announced in India that the U.S.S.R. is prepared to accept Indian rupees if any importer of Soviet goods offered to pay for the imports in Indian currency. The Government of India has also expressed its willingness to help importers if they experience any difficulties on account of exchange or import controls. It is, therefore, now a matter for the private trade to settle with the Russian authorities the terms on which it is prepared to buy goods from them.

BOGRA BANKERS' AND PLANTERS' CORPORATION

The Reserve Bank of India has served a notice the Bogra Bankers' and Planters' Corporation Hill, West Bengal, informing the Bank that rms of the first proviso to sub-section (2) of 22 of the Banking Companies Act, 1949, a o carry on banking business in India can- anted to it. The refusal of a licence makes try on the part of the Bank to cease the business of banking, as defined in b) of the Act, and it would not, there- r for it, among other things, to ac- money from the public.

OFF THE RECORD

(By "ROVER")

ALL the early apprehensions about the trend of affairs in the new State of Andhra are unfortunately proving to be true. There was a tendency in some political quarters to pooh-pooh these as nervous misgivings on the part of habitual pessimists, especially by those who saw a bright political future and chances of ministerial office for themselves only if the country was cut up into small territorial units, giving unlimited play for parochial intrigues and appeal to local passions and prejudices. How strong a hold regional and communal considerations have on the minds of even those, who could be considered as politically and socially more advanced sections of the citizens, has been well illustrated in the sordid and humiliating display regarding the choice of a capital for this new State. There could be nothing more stultifying and humiliating for the political future of a newly established State than the utter absence of discipline and ordinary proprieties of public life which characterised the scramble for office and power which preceded the formation of the Cabinet and which followed the inauguration of the State Legislature.

The State of Andhra was ostensibly demanded and formed for securing greater happiness and well-being of the Andhras and an accelerated rate of development of the poor economy of the region. As the short record so far shows, very few, if any, in the State Government or the Legislature seem to have given any thought to these or any of the larger issues which face an infant political unit. The fluidity with which parties and groups have split and reformed and the frequency of crossing and double-crossing on the part of some individuals, for motives which can do no credit to a public man, point to a state of affairs and a future which should serve as a timely warning both for the country as a whole and for those regions which are clamouring for being set up as independent States. What could one say of a Legislature which votes Rs. 500 per mensem as salary for Ministers and Rs. 600 for its Chief Parliamentary Secretary? This Gilbertian situation may be highly entertaining, but it certainly cannot be regarded as highly edifying. If the hungry people of Andhra stand in need of any entertainment, there are other sources to which they can look for it. From its political leaders, they have a right to expect more sober and dignified attitude than they have displayed so far after the Andhra State came into existence.

The Spirit of "Swadeshi" or Slavery?

In a monarchy, there would always be people who are more loyal than the king himself. The Congress Party in our country can also boast of members who are animated by a similar mentality. There are no limits to which they would not go to promote their pet fads or to demonstrate their attachment and devotion to some aspect of the Party's general policy. There is little scope left for back-benchers in the Party to use prohibition as a useful publicity stunt. Even if one were to clamour for the most extravagant measures in the Bombay State Legislature to prevent use of alcohol by the citizens, there is little possibility of anyone being able to outbid the State's Chief Minister by way of fanaticism, unless it was to ask for capital punishment for all prohibition offences.

But one fad is as good as another and in the armoury of the Party in power there is no dearth of fads. Besides, the choice at any given time to be effective has to be shrewd and carefully made. The limelight is playing at present not on prohibition but on handlooms and other cottage industries. Scared by the menacing increase in the statistics relating to unemployment, the country is going hell for leather for boosting these at any cost to the taxpayer and the consumer. Eager and ambitious minds have, therefore, now all turned to seeking political recognition from party leaders by suggesting new ways and means of making the otherwise unsaleable handloom and cottage industry products widely used, if need be, by pressure on those who are so placed as to be the least able to resist it. This has now become such a familiar feature of our public and political life that we have ceased to laugh at or be entertained by the Don Quixotes in our midst. In fact, we have come to dread this fell tribe in the post-independence era.

The State Legislature in Bombay is to meet next week. The political season in the State's capital will be soon in full swing. This is a time for those among our legislators who possess fertile and inventive brains to earn as much publicity as possible. One of the ways for doing this is to send resolutions for discussion during the forthcoming session. Apart from its political value so far as one's party and constituency are concerned, there is an element of excitement about this, which so many of us seek at the racecourse or in filling up forms for crossword or squareword puzzles at a heavy cost. There is a ballot to decide the priority of place for the resolutions sent in by the members and as the time allotted for unofficial resolutions is very limited, only a few of those given notice of have a chance to be debated and fewer still to be actually pressed to a division. The member who is lucky in this draw has possibly the same thrill as the owner of a horse which wins the race or secures a second or third place. Even the also-rans, however, have an advantage, inasmuch as the Press is obliging enough to mention in its columns the resolutions which are likely to interest the public.

I notice that Mr. K. B. Patel, a Congress member of the Bombay State Legislative Assembly, has tabled a resolution recommending the Government to make it compulsory for all its servants to wear clothes made of hand-spun and hand-woven cloth. In this resolution, Mr. Patel has further recommended that the Government itself should use only *khadi* for the uniforms of all such Government servants who are supplied with these. In addition, the resolution given notice of also wants the Government to use only hand-made paper and similar other articles in use in Government offices. Mr. Patel is reported to hold that the steps recommended by him will encourage cottage industries, in general, and the handloom industry, in particular, and that they would also foster a spirit of *swadeshi* among the officers and other employees of the State, besides helping to relieve unemployment.

So far as use of cloth by Government offices is concerned, I think there is already a general directive to all heads of offices to give preference to *khadi* or handloom cloth, wherever practicable and convenient. It is the proposed compulsion for all Government servants to wear nothing but *khadi*, that is intriguing. This is not the occasion for entering into the controversy regarding mill-made and handloom cloth and the liberal subsidies and aid in other forms being provided for the latter. That is a larger economic issue which need not be considered for the time being. What is involved in the drastic step proposed in Mr. Patel's resolution is the individual and civil liberty of those from amongst the public who are employed by the Government. Are Government servants to be reduced to the status of slaves who are denied even the choice of the kind of cloth they use for covering themselves? I do not know if the slaves, when slavery was legal and formed an accepted part of the social structure, were dragooned to the extent of using cloth, ouside that supplied by their owners free of cost, favoured only by their masters.

This whole idea is so preposterous and fundamentally anti-democratic that one is shocked to know that there are amongst the followers of Mahatma Gandhi, who would want, in all seriousness and sincerity, to turn the independence for which he fought all his life into an instrument of serfdom and slavery. And as to fostering the spirit of *swadeshi* amongst Government servants, apart from the anomaly involved in identifying *swadeshi* with goods produced in a particular manner, why should the class of Government servants be singled out for this purpose? If Mr. Patel were not so wholly preoccupied by his personal fad, he would soon realise that driving people like cattle under coercion along this path is the surest way of killing and not fostering the spirit of *swadeshi*, which we all want to encourage. But, perhaps what Mr. Patel has in view is not the spirit of *swadeshi* but the spirit of slavery. If it be the latter which he wants to encourage, his resolution will certainly be very effective.—*All Rights Reserved.*

BUSINESS MEN COMPLIMENT COMMERCE AND INDUSTRY MINISTRY

TREND OF FOREIGN TRADE OUTLINED

(From A Special Correspondent)

NEW DELHI, 1st *December*

THE Commerce and Industry Ministry received, on the whole, a good number of bouquets from the representatives of the commercial community at meetings of the Import and Export Advisory Councils held here this week. Mr. T. T. Krishnamachari, in particular, was the recipient of many encomiums for the drive and sagacity he had been displaying in safeguarding and fostering the external trade of this country. The meetings provided a good forum for the exchange of ideas between Government spokesmen and the leading members of trade and industry. The discussions were made easier by the preparation of the agenda and other relevant papers in such a manner as to facilitate the understanding of the mutual problems and difficulties, besides supplying information on the progress of the export trade during the first three quarters of the year.

DELHI LETTER

The Commerce and Industry Minister, Mr. Krishnamachari, took the opportunity to make some important announcements on the measures that his Ministry was contemplating to promote the export trade of the country, both from the short- and long-term points of view. He pleaded for the early establishment of export promotion councils, with a view to concerting measures to deal, in an organised manner, with the problems concerning the export trade of the country. A beginning should be made with the textile industry which, according to the Minister, should set up an export promotion council to undertake detailed and continuous market research and to institute, in collaboration with the Cotton Textile Committee, a body to supervise the quality of textiles exported to foreign countries. He drew the attention of the members to the importance of self-help and remarked that "unless the trading and industrial interests themselves set up appropriate organisations to do propaganda, to conduct market research, to promote standardisation and quality control, and to do a lot of other things that are necessary to persuade foreign buyers to buy our goods, we will find it very difficult to reach our goal."

The Minister was in favour of decentralisation in regard to the setting up of export organisations for individual commodities which should function in and around the ports from which the export business of that commodity took place. He also mentioned the fact that a Deputy Secretary had been solely charged with the task of export promotion. The Minister announced that Dr. Narayanaswami Naidu, who was now connected with the Forward Market Commission, would ultimately be made the Commodity Adviser for the Government and industry as a whole. Dr. Naidu would be asked to advise the Government as to how commercial intelligence could be toned up.

Another announcement made by the Minister was in respect of groundnut oil. He pointed out that exports of groundnut oil had come down appreciably. He stated that, as internal consumption had gone up appreciably, exports could not be allowed.

Imports

The average monthly imports during the first nine months of 1953 amounted to nearly Rs. 49 crores. For the first half of the year, the total imports came to Rs. 294.22 crores and the figure for the third quarter was Rs. 148.94 crores, the aggregate figure being Rs. 441.16 crores. The value of exports recorded a substantial decline, the total for the nine-month period being Rs. 380.03 crores. The adverse trade gap for this period amounted to an appreciable sum of Rs. 61.13 crores. Most of the imports have been necessary for maintaining the economy of the country on an even keel. In the third quarter, nearly 14 per cent. of the imports was millwork and machinery, while the share of the industrial raw materials was as high as 52 per cent. Essential consumer goods absorbed 31 per cent. of imports, while the non-essential consumer goods took up as little as 3 per cent. only. Since the Government has been anxious to maintain a stable exchange position, it is not in favour of radically altering the import policy, except to the extent necessary to encourage the import of machinery and industrial raw materials, with the object of stimulating industrialisation and employment. It will watch carefully the industrial production trend in the country and impose restrictions on items of imports which are produced internally in sufficient quantities of satisfactory quality.

Exports

On the export side, India's main commodities have been maintaining, on the whole, a satisfactory trend, but the decline in the prices of these goods, particularly jute manufactures, have been bringing less exchange to this country. The recent measures such as the abolition of the duty on medium cloth are stated to have provided some stimulus to exports. In the first ten months of 1953, exports of mill cloth amounted to 535 million yards and those of handlooms are estimated at about 46 million yards. On this basis, it is possible that total exports in 1953 may aggregate about 740 million yards, as against the target of 1,000 million yards fixed early in the year. In the international export markets, Japan has been able to hold sway. For instance, in the first seven months of 1953, Japan was able to export 471 million yards, as against the U.K.'s 410 million yards for the same period and India's 394 million yards for the eight months of 1953. Regarding the yarn export policy, exports would be permitted by the mills with a view to enabling them to clear the yarn in case it were to accumulate with them. Any further liberalisation of the policy is not contemplated. In regard to raw cotton also, Government is of the opinion that it is preferable to permit export of finished goods rather than the raw material.

Jute and Jute Goods

The supply position in respect of raw jute to the mills is stated to be satisfactory, despite the fact that the current season's crop is estimated at about 35 lakh bales. During the 1952-53 season, the jute mills received 40.30 lakh bales of raw jute from India and 12.87 lakh bales from Pakistan. During the first quarter of the 1953-54 season, receipts from India and Pakistan amounted to 7.76 lakh and 5.40 lakh bales, respectively. Exports of jute goods have now begun to show an improved trend and, in the third quarter, the average monthly exports worked out to nearly 69,000 tons, as against 55,000 tons in the previous half-year. In the first nine months of 1953, exports came to 538,650 tons, as compared with 737,478 tons in the whole of 1952. Indian jute goods are becoming competitive and it is noteworthy that the industry has been carrying on its publicity work in the U.K. and the U.S.A., in order to educate consumers in the superiority of jute goods over other packing materials. The successive reduction in the export duty, as well as a sharp fall in the prices of these goods, has provided some stimulus to exports and it is expected that, in the coming months, the quantum of exports of jute goods will improve.

Oils

The Government of India has been following a restrictive policy in certain oils with a view to safeguarding the interests of consumers in India. In 1952-53, exports of groundnut oil amounted to 67,613 tons and seeds 12,696 tons. In 1953-54 the quantity exported so far amounts to 1,396 tons and 2,649 tons, respectively. With a view to bringing down the prices of edible oils, the Government adopted a liberal policy for the import of copra, palm oil, coconut oil and cottonseed oil. From July to 10th October, the total value of licences issued in respect of the above amounted to the high figure of Rs. 9.5 crores. There has been a substantial fall in the exports of linseed oil, due to the disparity between Indian and international prices. During 1952-53 about 68 tons of linseed and 29,463 tons of oil were exported. During the first six months, total exports of linseed oil hardly amounted to 2,661 tons. The export trend in respect of castor oil has also been downward, on account of the price factor. For instance, in 1952-53, the quantity exported was 4,311 tons of kernel and 38,286 tons of oil. During the first half of 1953-54, exports of castor oil were 15,728 tons only. In respect of mustard oil also, Pakistan has begun to buy very sparingly. In 1952-53, India exported 8,674 tons of oil, while in the first half of 1953-54 the quantity amounted hardly to 81 tons.

NEW EXPORT DRIVE

HOW TO DO IT?

(From Our Own Correspondent)

LONDON, 28*th November*

IN October last, British exports hit the figure of £227¼ million and trade and industry declared this was good. For, in 1952, the monthly average was £215 million and this fell during the first quarter of this year to £208 million and only rose in the second quarter to £210 million and, in the third quarter to £211¼ million. As compared with these figures, October was undoubtedly good. The President of the Board of Trade even admitted that there was an upward trend, yet the Chancellor of the Exchequer, so confident at the Conservative political conference in October, showed a lack of confidence merging on the lugubrious about the trade figures, when he recently addressed the National Production Advisory Council. "Exports", he declared, "were disappointing"—and Britain had been losing ground steadily for the past two years in her markets outside North America.

LONDON LETTER

What more do the October figures show about our exports? Textiles and clothing are up, cottons as well as woollens. Engineering goods have not done so well as earlier in the year, but have improved on recent figures; other manufactures generally all show a good improvement even when allowance is made for the extra working day, as compared with the immediately preceding month. Analysed regionally, the October exports to the sterling area were 9 per cent. higher than during the third quarter (which in this case was already the highest of the year) and exports elsewhere were 6 per cent. over the third quarter.

The reason for the Chancellor's lack of enthusiasm on these good results is to be found in his realisation that, ever since 1950, Britain has been falling behind her competitors: her share in manufactured exports by the ten major countries used to be 26 per cent. and is now 22 per cent.; in chemicals and woollens we hold our own, but, in our specialised machinery and car industries, we are falling behind. The monthly Treasury *Bulletin for Industry*, which gives this information, goes on to give the answer "the big increase in world exports of manufactures . . . was in engineering products and . . . we could not take our share of this increase, because we could not produce enough steel and were sharply increasing our rearmament programme."

Neither Germany nor Japan, the chief gainers in manufactured exports in recent years, had such handicaps. This year, the U.K. steel production is some 10 per cent. up on 1952, but the arms handicap remains. However, an important contract of interest to India—for locomotives—was lost to Germany and Japan on price grounds, though this is not generally a problem facing British exports.

The Chancellor has pointed out that increased British productivity is being absorbed in higher deliveries on the home market. The surplus on the balance of payments is not threatened—it is better than last year so far—but it will be if exports do not improve and imports go on expanding in volume unaccompanied by the saving grace of price falls. The Government, indeed, feels that its latest gestures on O.E.E.C. (freeing 75 per cent. of imports from O.E.E.C. countries from quotas) and its return of meat to private import, are about as far as it can go at present in inviting perhaps larger imports. Hence the new drive beginning for yet more exports.

However, here economics border on politics—there are some who say too much is demanded while arms expansion continues, others who say that Germany should be permitted to rearm as soon as possible to make her carry the handicaps and reduce some of the pressure on British forces, and yet others who say that that course may handicap Germany, but it will set up such tension in Europe that the U.K. will feel no relief.

So Mr. Butler by-passes these arguments and safely calls for more production. The Trade Unions' reply that it is a difficult policy for which to raise enthusiasm while industrial dividends increase and while wage rates remain [illegible] per cent. behind the cost of living. Thus, export drive leads back to the wage negotiat[illegible] and no clear policy emerges. The Governme[illegible] quite definite that exports must go ur[illegible] equally definite that this must be dor[illegible] freely operating and negotiating indus[illegible] Opposition, casting about for a policy [illegible] ning to wonder if some good fishin[illegible] had in such turgid waters.—*All Ri*

AMERICAN LETTER

FEELING OF LACK OF LEADERSHIP GAINING GROUND

CONTRADICTORY STATEMENTS BY CABINET MEMBERS CAUSE CONFUSION

(From Our Own Correspondent)

NEW YORK, 26*th November*

THE Eisenhower Administration is entering a critical period in its existence. When Congress reconvenes in January, the President will have to use all his persuasive powers to get and maintain the necessary political support for whatever programme may emerge at the council tables. So far, the public in the United States is a bit confused by the new Republican policies. That confusion is non-partisan and it is quite justified. It stems from a lot of conflicting statements which have been made over a period of months by different Cabinet members. The American public is not accustomed to that. The basic idea of the Eisenhower Administration, like that of the Conservative Party in the United Kingdom, has been removal of controls and as much freedom as possible.

A member of the Cabinet told me the other day, for example, that the President is encouraging every one of his lieutenants to express their own opinions and that none of their speeches are cleared by the White House, unless the speaker himself is doubtful if his statements conform to policy.

The net result has been unfortunate, despite the very best of intentions. To mention just one instance—the President himself made a speech in which he said no sacrifice is too great for the citizens of the U.S. for defence of his liberties. Rightly or wrongly, the conclusion was drawn immediately that there would be no tax reduction and that the speech was a sort of a trial balloon.

That was the acknowledged procedure in previous Administrations and a furore developed throughout the country because tax reductions have been among the major political commitments of the Republicans. The Secretary of the Treasury had to set the record straight subsequently and assure everybody that there would be tax reductions.

Another example was the recent speech of Attorney General Brownell blaming ex-President Truman for hiring Harry Dexter White for an important job, despite the fact that he was an alleged Communist spy. That again created an uproar and the President, who worked under Truman, had to take the sting out of the accusations of the Justice Department by telling his Press Conference he was certain Mr. Truman had not done any such act knowing all the facts.

Another incident leading to popular confusion was the speech by Air Secretary Talbot in Spain that the U.S. would stockpile atom bombs at Spanish bases which was repudiated the following day by Secretary of State Dulles. It now turns out that the Talbot statement was garbled by translating the original English into Spanish and back into English again.

That is difficult to understand for the man in the street who only sees that one Cabinet member almost constantly repudiates a fellow member. In fact, what is emerging, rightly or wrongly, is a feeling of lack of leadership. This feeling is intensified by the rolling adjustments in the economy. Farmers are up in arms over the drop in farm prices, even though their income and savings are still great. Also, hard goods of all sorts do not sell as well as previously, but the general level of activity continues to be excellent.

While the general employment level is hardly changed, much overtime work has been cut out and some reduction in weekly working hours has taken place. That does not strike a sympathetic cord in popular psychology, because it is very well remembered that the last [illegible]epublican Administration was in the saddle [illegible]ing the depression years of the 1930's. The [illegible]ent Administration, therefore, is definitely [illegible]al. Nearly everyone applauds, of course, [illegible]lity aims of dollar stability, but nearly [illegible]ole, too, forgets emotionally that a price [illegible] paid for discontinuing the inflationary [illegible]

[illegible]jectives are running up against the [illegible]ractical politics in which this Administration is not too expert yet. While the integrity of the dollar is being preserved which is certainly of long-range, but somewhat invisible, benefit to the economy as a whole, the former opportunities for labour to demand higher wages on the basis of higher prices are now missing.

In fact, a labour-management peace has prevailed throughout this Administration which is most salutary, naturally, but the plain fact of the matter is that the average man likes wage increases. He has been used to them. He does not understand inherent economic relationships and the increase in living costs has been taken in stride as an inevitable evil of this industrial civilisation.

There seems to be an awakening to these facts of life at Washington. One of the great economic purists in the Administration, Dr. Randolph Burgess, former Chairman of the Executive Committee of the National City Bank, now Deputy to the Secretary of the Treasury, has already reversed his tight money policies.

Despite all talk of debt reduction he went so far as to say the other day, if income and production continues to rise because of a growing population, in the end the public debt will not seem so big, which is not too far removed from the beliefs of the late Lord Keynes.

So far as the Harry Dexter White episode is concerned and his appointment to the International Monetary Fund, I knew White when he was in the U.S. Treasury. He was an extremely keen and able man, with an unfortunate agressive personality which made him not too well liked in many quarters, regardless of his politics.

One of the encouraging aspects for overseas countries, so far as Washington thinking is concerned, is that determined efforts are being made to formulate a more liberal foreign trade policy. The President's own committee, headed by Clarance Randall of Inland Steel, is hard at work on its report. Even more importantly, another privately sponsored group, headed by Mr. Coleman of Burroughs Adding Machine, is now entering upon a large-scale public information programme to sell the people on the advantages of freer trade in the interest of a healthy and peaceful world. It is only that kind of programme which, by pressure from the grass roots, will eventually persuade Congress to act. There is no particular issue over customs simplification, but the question of tariffs continues to be hotly debated, particularly in periods when business volume is falling and the cry for protection of home jobs and industries is apt to fall on responsive ears, regardless of the overall economic merits. It is the latter that the current Administration is primarily concerned with.—*All Rights Reserved.*

PAKISTAN NOTES

IMPORTS OF TEXTILES

EXPORT EARNINGS FALL

THE Government of Pakistan's decision to import, on its own account, cotton textile worth Rs. 4 crores from Japan and other countries has raised a chorus of opposition among practically all sections of the Pakistani business and commercial community. Vigorous protest against the decision has been lodged by the two important commercial bodies in Karachi, namely, the Textile Merchants' Association and the Pakistan Chamber of Commerce. The protest is on the score that the purchase of cloth on Government account tantamounts to State trading, which utterly disregards the role of private enterprise in the country's economy. The Textile Merchants' Association of Pakistan has set up a ten-man committee to launch a campaign against State trading. The Association has urged the Pakistan Government to revise its decision and allow private traders to import cloth.

The reaction of the Government to the above [illegible]ples is not known. From Press reports available, however, it is gathered that there is no possibility of the Government reconsidering its decision. An indication of this is provided in the statement of Mr. N. M. Khan, Controller-General of Prices and Supplies, Government of Pakistan. The chief consideration which has weighed with the Government in deciding to import cloth on its account, according to Mr. Khan, is that it prevents speculation in trade licences, which will not help in bringing down cloth prices to a reasonable level. There are about 3,000 importers competing with one another. They are likely to take much longer time to strike a deal with foreign exporters than a Government agency.

The criticism of traders against State trading has been refuted by the officials. The decision to import cloth on Government account, it is pointed out, is only an emergency measure "which may not be necessary again." Since it is not the intention of the Government to by-pass the trade, it is held wrong to criticise particular action.

The Government's decision to import cloth is sequel to the need for bringing down the cloth prices which have risen by about 200 per cent. during the last one year, thanks to deterioration in the supply position. To what extent the Government will succeed in its efforts will, however, depend on the question whether purchases will be made at a cheap price and whether there will be prompt delivery. Since Japan and the U.K. are said to be not in a position to meet the Pakistani requirements earlier than January, 1954, the Government of Pakistan has naturally turned its attention to India. The authorities, it is reported, have already entered into correspondence with Indian mills with regard to price, quality and delivery of goods. Cotton textile circles in Bombay feel that India can ship substantial quantity of cloth to Pakistan. Much, of course, depends on the price factor. To the extent that the Government of India has allowed drawback of duty paid on foreign cotton used in the manufacture of cotton cloth meant for exports, the export price of Indian cloth has been lowered.

Balance of Payments

There was a slight setback to the improvement in the Pakistan balance of payments position during the quarter ended September, 1953, as compared with the previous quarter. Thus, despite a fall in payments for imports from Rs. 34.65 crores to Rs. 33.69 crores, the surplus was reduced to Rs. 92 lakhs, as against Rs. 1.47 crores. The reduction was due to a fall in receipts from exports from Rs. 36.18 crores to Rs. 34.60 crores. Nevertheless, the position during the quarter under review compares favourably with that in the corresponding quarter of 1952, which witnessed a wide deficit of as much as Rs. 40.56 crores, receipts and payments accounting for Rs. 24.74 crores and Rs. 65.59 crores, respectively. This improvement has been the result of tight import policy of the Pakistan Government.

These favourable trends in the balance of payments position in the past few months do not mean that Pakistan has turned the corner. For exports from Pakistan continue to be at a low level, while imports are expected to be larger thanks to the all-round rise in the commodity prices. As it is, the foreign assets of Pakistan are very low; they amount to Rs. 81.33 crores as on 13th November, 1953, as against Rs. 150.52 crores in the beginning of 1952.

That apart, the surplus in the balance of payments of Pakistan during July-September, 1953, was accounted for by O.E.E.C. countries (Rs. 5.59 crores), Japan (Rs. 5.92 crores) and India (Rs. 1.27 crores). On the other hand, Pakistan had deficits with the U.K., the U.S. and Canada, amounting to Rs. 10.08 crores, Rs. 1.56 crores and Rs. 18 lakhs, respectively. As compared with the third quarter of last year, jute earned larger foreign exchange, the actual receipts for jute exports being Rs. 13.41 crores, as against Rs. 10.79 crores. Cotton earnings, on the other hand, fell by Rs. 2.60 crores to Rs. 13.66 crores. Total payments on profit account amounted to Rs. 17.06 crores, as against Rs. 43.57 crores. Gold and sterling reserves rose by Rs. 6 lakhs. Foreign investments amounted to Rs. 4 crores.

As noted above, Pakistan had a surplus balance of payments with India. Payments were Rs. 2.60 crores and receipts Rs. 3.87 crores. Payments included Rs. 1.03 crores for private imports.

COMMONWEALTH MINISTERS TO MEET AT SYDNEY

CONVERTIBILITY OF CURRENCIES STILL A PROBLEM

THERE are scarcely five weeks more to go for the Commonwealth Finance Ministers to meet at Sydney. Preparations for this Conference are now well advanced. During the past few days, the Commonwealth High Commissions in London have been busy collaborating with each other in the preparation of statistical brief for the Conference, which, as already reported, is scheduled to meet from 8th to 15th January next. The countries taking part in the Conference will, as usual, be Australia, Britain, Ceylon, Central African Federation, Canada, India, New Zealand, Pakistan, and South Africa. Mr. C. D. Deshmukh, Finance Minister, and Mr. M. V. Rangachari, Joint Secretary, Ministry of Finance, will represent India at the Conference.

The preparatory data collected by the financial and economic experts of the Commonwealth High Commissions in London relate to a number of items on the agenda of the Conference. The most important item expected to be discussed by the Conference is the balance of payments prospects of the sterling area for 1954. The Conference can be expected to examine the progress made by the member countries in regard to their plans for achieving freer trade covering the widest possible area. In the last Conference, Britain made a move for establishing a bank for financing economic development in Commonwealth countries. Action taken in the matter and the progress made so far will also be considered by the Conference. The trend of discussions on these problems will, of course, depend on the position of the various Commonwealth countries as revealed by the briefs that are being prepared in London.

Review of the balance of payments position, examination of plans for freer trade and the consideration of the prospects for developing Commonwealth economic resources, all these are only incidental to the main problem, namely, convertibility of the pound sterling. With a view to achieving this goal, a master plan was drawn up in the Conference of Commonwealth Ministers held last December. The Plan visualised two conditions for its success, among others, namely, (a) the provision of a long-range Commonwealth credit and investment, supported by British capital, and (b) American support through investments in the sterling area and through agencies like the International Monetary Fund. It is now common knowledge that no progress worth mentioning has been made in this direction. The Plan is to-day no nearer realisation than it was when first mooted last year.

British Plan

The I.M.F. meetings held in September last only served to emphasise the fact that the Fund, being bound by its Articles of Agreement, cannot be of as much help as the British Plan expected from that end. Again, as regards U.S. support, the position continues to remain vaguer than ever. Unfortunately for the Plan, the American Administration has not so far announced its economic policy, particularly on the principle of "trade and not aid," enunciated by Mr. R. A. Butler, Chancellor of the Exchequer. And British financial experts now see a great deal of uncertainty in American plans. They point to such factors as (a) the shift in emphasis from Europe to Asia by the Eisenhower Administration, (b) the keen controversy in the U.S. about the American tariff policy, and (c) the Governmental caution inspired by official predictions of five to ten per cent. recession on the market in the next 12 months, and interpret them to mean that hopes of any tangible help from the U.S. in the near future are somewhat forlorn. In addition, the speeches of British Ministers in and outside Parliament are quoted to show that official circles in Britain do themselves not rule out the possibility of an economic recession in the U.S. and that they are actually making plans not to be caught unprepared.

All these speculations apart, the real question is: Are the Commonwealth countries inherently strong enough to make the pound convertible now, without American assistance? Only those who are blind to facts can answer this poser in the positive. For convertibility presupposes the existence in the sterling area of a large volume of gold and dollar reserves. This is not so at present. The present size of reserves of the area is still considered to be inadequate to undertake the responsibility of convertibility. This is amply borne out by the significant remarks of Sir Roger Makins, Britain's Ambassador in the U.S., at the recent meeting of the National Foreign Trade Council in New York. He said that the economic position of Britain was "still precarious." The country was making progress in pursuing the goal of a more liberal economic system and was by persistent effort, keeping its head above water. He added that "a high spring tide would easily engulf us and we are still far from dry land."

Exceptional Factors

Sir Roger referred also to the fresh collective efforts at liberalising economic systems initiated by the Commonwealth countries as well as by others. As a result of efforts of these countries, the balance of current account between the dollar area and the rest of the world had, he said, evened up and that some rebuilding of reserves in the non-dollar area had taken place. But that was due to a number of exceptional factors such as the U.S. demand for goods for stockpiling, high level of American military expenditure abroad, and a twist in the European terms of trade in favour of Britain. An unfavourable turn in any of those factors would, in the precariously low level of reserves, he said, administer a setback and cause disastrous damage.

Continuing, Sir Roger stated that the European countries and particularly Britain were doing as much as they could to remove trade restrictions in the light of their balance of trade position. But it was not, however, a European but a free world problem. "We cannot be satisfied," he remarked, "until trade flows as freely between the dollar area and the other monetary areas of the world, as it does within those areas. This requires a large and steady flow of dollars to the non-dollar world, not dependent on special measures such as aid or extraordinary military expenditure. The ultimate controlling factor must be the U.S. which, as the largest creditor nation, is dominant in the economy of the world."

Laying stress thus on the importance of U.S. assistance to world recovery, Mr. Makins enumerated certain important conditions necessary for the success of a system of freer trade and freer currencies. These, in the words of Sir Roger, are:

"There must, for example, be adequate reserves in the form of gold and dollar holdings, or credit facilities, which will allow the principal trading countries to whether minor and temporary balance of payments deficits, without being forced into premature restrictions on imports, or severe deflation. Both are apt to be contagious.

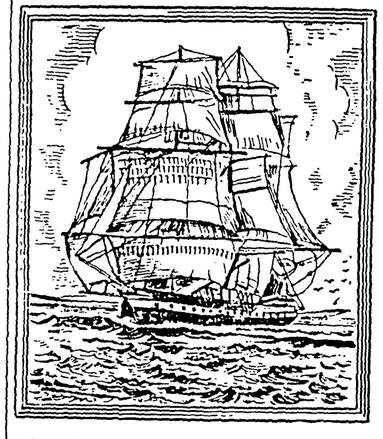
"One of the principal reasons for the difficulties in the sterling area since the war has been that the level of reserves has been inadequate to absorb swings in the balance of payments which were not large in relation to the total transactions of the area, but were just too great for the existing reserves to deal with.

"Secondly, all countries involved will have to do their best to avoid major fluctuations in internal activity, since these fluctuations inevitably disturb the pattern of international payments.

"Thirdly, creditors and debtors alike must be willing to take the steps which are necessary to correct any disequilibrium which may appear."

None of the three essential conditions can be fully satisfied now. The Commonwealth countries have, of course, as their objective, the achievement of these essential conditions. Some measure of progress has, no doubt, been made, but it has enabled them, as Sir Roger stated, only to keep their heads above water. They can certainly do better and do it quickly, if the U.S. comes forward to discharge its obligations as the largest creditor country of the world not by just giving doles but by readjusting its domestic and foreign economic policies in such a way as to stimulate the volume of world trade. A fresh approach is, therefore, necessary to prevail upon the U.S. to recognise the importance of its role as the creditor country of the world. The ensuing Commonwealth Conference at Sydney may be expected to make a new move in this connection.

Centuries of overseas trade



For well over two centuries Lloyds Bank has served the needs of merchants trading abroad and, today, business men know that they can rely upon Lloyds Bank for its shrewd and friendly advice on all matters relating to overseas trade and upon its integrity for their protection in all financial transactions.

Let LLOYDS BANK look after *your* Overseas interests

LLOYDS BANK LIMITED. INCORPORATED IN ENGLAND LB/G/51—1953

TRAINING IN CO-OPERATION

The Central Ministry of Food has, in consultation with the Reserve Bank of India, decided to appoint a Central Committee for formulating plans and organising and directing arrangements in regard to the training of the personnel employed or to be employed in the co-operative departments and institutions in several States. The training arrangements will broadly consist of two types as follows:

(i) Those for which assistance will be given to the State Governments on a grant-in-aid or other suitable basis for the organisation and expansion of arrangements for the training of co-operative personnel employed in the subordinate ranks in the Government departments and co-operative institutions in the States, and

(ii) those for which arrangements are to be made for providing necessary facilities for the training of personnel employed in the higher and intermediate grades of the co-operative departments and societies.

The responsibility for the training of the higher and intermediate personnel, that is type (ii) above, has been assumed by the Reserve Bank of India. The Government will be primarily responsible for the provision of facilities for the training of the subordinate personnel.

In regard to the training of the higher and intermediate grade personnel, the Committee will function as a committee of the Reserve Bank of India, while in regard to the training of the subordinate personnel, it will function as a committee of the Government of India.

The terms of reference of the Committee in so far as it functions as a Committee of the Government of India, will be:

(i) to survey and examine the existing facilities in the different States for the training of co-operative personnel and invite schemes from the State Governments for the organisation and scope for expansion of arrangements for the training of subordinate personnel employed in Co-operative Departments and societies;

(ii) to submit proposals to the Government of India for grants-in-aid to the States, based on the requirements of the States in the direction indicated above;

(iii) to lay down the conditions under which such grants-in-aid should be disbursed;

(iv) to call for such reports, information or reviews as may be necessary from the State Governments regarding the details of working of and the expenditure on the schemes for which aids are administered under these terms of reference; and,

(v) to advise generally the Government of India in regard to the steps to be taken to promote co-operative training and education in the country.

RUSSIA SELLS GOLD

Russia is reported to have shipped 17 tons of gold worth $15 million by plane to London. According to Press reports, officials and bullion trade believe that Russia was short of sterling. movement of gold is due to the desire to sterling for the purchase of consumer goods the Sterling Area in order to meet the dema these in Russian and other Iron Curtain co Russia's gold stock is one of the worl jealously guarded monetary secrets, but sources estimate it at $2,000 million a with the world total of $36,400 millio Russia. Russian silver and platinur European markets last month a reports of increased gold sales.

GOLD SMUGGLING INTO INDIA PERSISTS

GOVERNMENT NEEDLESSLY LOSING REVENUE

(FROM A BULLION DEALER)

THE smuggling of gold into India has become a regular trade, especially from the year 1949, when the free market in gold came into existence on the continent of Europe, in the Middle East and in the pockets of free markets for currencies in the East, as, for example, in the Portuguese territories of Goa and Macao, Bangkok and French Pondicherry in India. It is estimated that, of the total world production of 25 million ounces in the year 1951, only 7.4 million ounces went into the vaults of the Central Banks. Of the remaining 18 million ounces, 8 million ounces were consumed in arts and industries, while 10 million ounces went into hoards. About 30 per cent. of these 10 million ounces, or 3 million ounces (equivalent to approximately 8 million tolas) of gold, found their way to India chiefly through the Middle East. The estimates for 1952 show that no less than 12 million ounces were consumed in private hoards throughout the world.

There has been an official ban on imports of gold into India since March, 1947. All the gold that is estimated to have been consumed in India, therefore, arrived into this country in an illegal way. These arrivals were direct to the coastal ports by fishing boats, or through foreign pockets on Indian soil like Goa and Pondicherry, as well as from the neighbouring States through land frontiers. Such a large amount of smuggling of gold naturally involved payment in dollars. This required either buying of dollars in black markets at a premium over the official price, against the sale of rupees or export of merchandise in an unofficial manner. All this has been resulting in a loss of duty to the Government of India not only by way of import duty on gold, which is at present Rs. 12-8 per tola, but also by way of export duty on recorded exports of commodities.

On account of the recent drop in prices in the free markets for gold, the temptation to smuggle gold into India has become strong again. The very fact that there was an approximate arrival of about 150,000 ounces of gold into India within two months after 15th September, 1953, when the monsoon was over on the west coast of India, reveals the volume of such transactions, in spite of the fall in profit for the smugglers, due to a drop in the Bombay price of gold from Rs. 87-8 ruling on 15th September to Rs. 80 on Diwali day, that is, on 6th November, 1953.

Demand for Gold

The Government of India must be quite aware of this situation, but the Finance Department at New Delhi, as well as the authorities of the Reserve Bank of India, who are in charge of imports of bullion, believe that gold is not an article of necessity and, therefore, its import should not be permitted. The masses of India, however, think otherwise and they have reasons to do so. It is generally estimated that the rate of investment in bullion in India is of the order of Rs. 40 crores per annum. This cannot be considered as abnormal, considering the vastness of this country with a population of 35 crores. It comes to about Re. 1 per capita investment. With the national savings of this country estimated at Rs. 7 per capita per annum, only 14 per cent. of the savings find investment in bullion. Further, out of the annual national income of Rs. 9,000 crores, only Rs. 40 crores are invested in gold. To put this differently, out of a per capita national income of Rs. 255, only a rupee seeks investment in bullion. In the present uncertain economic state of affairs in the country, this cannot be regarded as something abnormal. The following extract from the Annual Market Review of 1952 of Messrs. Samuel Montague and Co., Ltd., gives a clear account of the reasons that justify such a demand for gold:

"So long as the world political situation re- mains as it is, and so long as the present economic situation maintains a system of currencies that are part blocked frozen, bilateral and inconvertible, e twin spectres of war and devaluation will re- n. The only hedge known to most Europeans all Asians against this dual calamity is the g of gold, and at the present price, it is ed a small insurance premium to pay."

the demand for gold in India can be con- s something natural and normal, as the ieves it to be, the question as to what lone to satisfy this demand becomes nt.

of gold encourages an unhealthy It is a fair estimate to say, on the basis of the gold arriving into the market, after allowing for domestic production, that the vigilance of the customs authorities has been able to detect only about 1 per cent. of the total arrivals by way of smuggling. Further, these authorities have lately tried to capture gold held by some of the regular dealers who are alleged to have purchased the same from smugglers. It is doubtful whether it is fair to lay hands on dealers who buy any gold internally in the country once gold has found its way into the country, unless a definite link is established between the smuggler and the dealer. Such action by the authorities hampers genuine dealers from entering into any bona fide transaction, as he is unable to distinguish gold already in existence in India from gold smuggled into the country. Further, this encourages growth of a chain of mushroom dealers who gain prominence at the expense of the genuine traders. They take enormous risks, because they have nothing to lose. They thus dominate the bullion trade. The result of all these scare-provoking actions is that the smuggled gold finds buyers all over the country and the spread of the disease of handling such gold becomes more widespread. In order to escape the vigilant eyes of the prevention authorities, smuggled gold is being taken directly to centres of consumption. Of late, the genuine upcountry demand for gold in South India, for instance, is being satisfied out of such arrivals at the centre of demand rather than from regular markets like Bombay. If this trend continues, the importance of Bombay as the main bullion market will decline.

Imports Necessary

When such is the position, a remedy is necessary. If imports are regularly permitted, they will bring income by way of import duty. Further, as this business will be handled through regular dealers, the Governments will get taxes by way of income-tax, sales tax, stamp duty and so on. One of the objections raised against imports of gold is the loss of foreign exchange resources. But this is no argument at all, as, even under smuggling, foreign exchange is being lost, albeit indirectly. It should, however, be possible to minimise the loss of foreign exchange by fixing a limit for the foreign exchange to be made available to gold importers. Even this loss of foreign exchange to the country can be compensated by the authorities reintroducing the system followed during the war years, under which they took away a part of the profit on imports of silver. This will bring them some revenue which they badly need. Alternatively, the Government could import gold on its own account and sell it at a premium internally. It can thus regulate imports and get revenue out of profits.

Objection to this suggestion is raised on the ground that, under the gold policy of the I.M.F. no member-country can consciously allow trading in gold at a price higher than that fixed under the agreement. This objection can be overcome by clarifying the existing state of affairs in India to the I.M.F. and impressing upon it the necessity for imports, as was done by South Africa on the question of sale of gold at a premium in the years 1950-51, as well as by France, the Government of which has been allowing free imports of gold into the country for some years now. The example of France can be studied with some profit to this country. Imports of gold have helped the authorities a great deal to restore confidence in the franc in recent years. The price of gold was at a very high premium in France in 1950 and 1951. At present, it has come down considerably, as the hoarding appetite of the French peasants has been fully satisfied. To-day, the chief buyer of gold in France is the Bank of France itself. Incidentally, the Bank has conducted a highly profitable trade by buying bar gold, and selling Napoleons and Lois coins (gold coins) to the French public.

In many countries, the Government supplies the trade needs of gold in semi-processed form as, for instance, in the U.K. and Ceylon. The objection from the I.M.F. can be met, if the Indian Government first decides to change its lack of gold policy. Instead of following a policy of "do nothing," which has resulted in an encouragement to unlawful trading over the genuine trade, the Government of India should take a more realistic view of the situation and press for a modification in the I.M.F.'s general regulations to suit this country's needs. It must be emphasised, in conclusion, that delay on the part of the Government in taking a decision on the aforesaid lines will result in a diminution of the advantages that can be had by allowing imports. The only persons who are taking full advantage of the Government's policy of inaction and making handsome profits are the foreign smugglers and their accomplices in the country.

THE BANK OF BARODA LTD.

(Established 1908)

are

glad to announce that their

Two Branches

will be shortly opened

at

KAMPALA & MOMBASA

(British East Africa)

MATHEW S. D'SOUZA,
General Manager.

LALA YODHRAJ—AN APPRECIATION

Commenting on Lala Yodhraj's resignation from the Punjab National Bank Ltd., Mr. A. N. Bali, Economic Consultant of the Bank, in the course of a communication to us, says:

"The appointment of Lala Yodhraj as the General Manager, and Chairman of one of the 'Big Five' banks of India in 1943, at the comparatively young age of 37¼ years, had taken his countrymen by surprise. Joining as a clerk in 1926, he had worked in different capacities in Quetta, Karachi and Calcutta and risen to the highest position in the Bank in less than seventeen years. The controlling interest in the shares of the Bank then vested with a friend of his—a Rana of Nepal. In less than a year, after becoming the General Manager and Chairman, he succeeded in purchasing for his group this control from the Rana, in the face of keen competition from a millionaire. During this race for control, the fully paid-up shares of the Bank at one time were quoting at Rs. 410 per share, as against its nominal value of Rs. 100.

"Lala Yodhraj was easily the youngest among the chairmen of the biggest banks in India and there were not wanting many old and wise heads that were full of misgivings about the change. But the phenomenal progress made by the Bank under his guidance soon dispelled these fears and Lala Yodhraj succeeded in establishing his reputation as a thoroughly practical banker and an expert in handling investment and financial problems. The total working capital of the Bank in 1942, before he became its chairman, was a little over Rs. 17¼ crores. This total, when his resignation from the Bank was accepted on 18th November, 1953, was a little over Rs. 79 crores. The reserves of the Bank in 1942 amounted to Rs. 20 lakhs. These now amount to Rs. 1 crore. The total number of the Bank's Offices in 1942 was 79. It is now above 300.

"The magnitude of progress made can be judged by the fact that the partition holocaust of August, 1947 had dealt a blow to the Bank, the effects of which are still being felt. But for this severe retardation, the Bank must have been rubbing shoulders with the leading banks of South-East Asia."

BANK TO ENGAGE IN HIRE PURCHASE

For the first time in Australian financial history, a leading trading bank, the English, Scottish and Australian Bank Ltd., (E.S.A.B.) is to engage in hire purchase finance.

It will shortly establish a special department for hire purchase of domestic goods like refrigerators and furniture. At present the Commonwealth Bank assists in the purchase of motor cars and trucks, agricultural machinery and equipment, but does not extend credit for purchase of household goods. The E.S.A.B. and states that the decision to enter the domestic finance field had been approved by its Directors in London. It plans to purchase the goods from dealers and then hire them out to the purchasers. The hirer will become directly responsible to the Bank, through the local branch, which will arrange the transaction.

The General Manager, Mr. E. G. Wilson, states that production, growth and general needs of development warranted an extension of normal trading bank facilities in a direction that has proved itself in other parts of the world. American banks cater to more than 40 per cent. of the hire purchase transactions, in that country, and the demand is growing.

ROLE OF TEXTILE INDUSTRY IN FRANCE

OUTLOOK CONSIDERED TO BE NOT BRIGHT

CONSIDERING the way in which events have been moving on the international textile front, it is not surprising that the textile producing units in France have been taking vigorous measures to raise their competitive capacity. The Government of France also has been actively assisting the units in this direction. From those one should not, however, rush to conclude that France will, in the near future, emerge as one of the most powerful competitors in the world textile markets. For there are several handicaps which are hampering the progress of the French textile industry. Indeed, the outlook for the industry is considered to be not quite bright. This, at any rate, is the conclusion arrived at by Mr. E. W. Meiklereid, C.M.G., U.K. Minister (Commercial) at Paris, the author of *France-June, 1953, a publication of* the U.K. Board of Trade (Her Majesty's Stationery Office, London. Price: 5s. net). The chapter on textile industry in France in this book of about 175 pages will be of special interest to textile men in this country.

A factor of permanent significance to the French textile industry has been the steady expansion of the indigenous textile industries in many of France's former markets, a development that has made itself felt in France since the early 1930's. In addition, Japan and Germany are gearing themselves for capturing as big a slice in the world trade in textiles as possible. Among the other adverse factors are lack of adequate capital and modern equipment, slackness in internal demand resulting from diminished purchasing power and consumer resistance in the face of generally falling prices, high prices of French products vis-a-vis those of other exporting countries, heavy dependence on imported raw materials, and high level of wages to women labour (women are paid equal wages with men).

The textile industry has historically ranked as one of the major industries of France, its importance being next only to the steel industry. The industry covers about 10,000 firms employing some 13,000 artisans and 600,000 labourers.

Cotton Textile Industry

There are at present 1,300 cotton textile producing units in France, providing direct employment to over 200,000 persons. Of these, spinning mills account for 368, with 70,000 persons employed, and weaving mills for 900, with 75,000 persons employed. A characteristic feature of the industry is the predominant role of women in the labour force. Thus, as much as 68 per cent. and 59 per cent. of the employees in the spinning and weaving sections, respectively, are women. The annual turnover of the cotton textile trade is of the value of 258 milliard francs (1 milliard=1,000 million).

At the outbreak of the Second World War, the machinery of the cotton textile industry was generally regarded as insufficient and largely obsolescent. The number of spindles and looms then existing was 11.3 million and 192,000, respectively, these being 5 per cent. and 10 per cent. less than in 1931. The war destroyed about 1.18 million spindles and 13,000 looms, while stagnation during war years prevented the proper maintenance and renewal of the remaining part of the equipment. Consequently, production of cotton goods dwindled considerably, which necessitated large imports from abroad at the cost of much precious foreign exchange. This was one of the factors responsible for the disequilibrium in the franc area's balance of payments. It was no wonder, therefore, that particular attention was devoted to the rapid rehabilitation of the French cotton textile industry in the Monnet Plan. The programme aimed at (1) restoring cotton textiles production to the 1938 level and eventually to the 1929 level, and (2) adjusting the volume of output to the requirements of the French Union.

The implementation of the programme, however, was not quite satisfactory, thanks to several disquieting features referred to above. The number of spindles in use in 1951, for instance, was actually les than in 1946, being 8.94 million, as against 9.5 million. The number of looms, on the other hand, rose, but by only 17,000 to 182,000. Nevertheless, by 1951, the French cotton textile industry had attained a production level which was above the 1938 spinning level and 1929 weaving level. This achievement was the result partly of the special productivity drive launched by the industry and partly of the abnormal post-Korean war demand for cotton goods.

The following table gives the production and exports of cotton goods in recent years as compared with 1938:

(In thousand metric tons)

	1938	1947	1950	1951	1952
Production—					
Yarn and thread ..	250	204	251	271	256
Fabrics*	159	134	168	164	150
Exports—					
Yarn and thread ..	9	4	8	10	7
Fabrics†	45	33	56	59	56

* Excluding hosiery, lace, tulle, net, etc.
† Including linen but not hosiery, lace, tulle, net, etc.

The bulk of the cotton textile exports from France, it may be noted here, goes to the protected markets of Overseas France.

As already noted, the French cotton textile industry is greatly dependent on imports of raw cotton. With a view to reducing this dependence and saving foreign exchange, the industry and the Government are making efforts to raise cotton production in the French Union, especially in French North Africa, the Cameroons and Morocco. An important feature of the French cotton economy is the section which concentrates on novelties for the Parisian *haute couture*, which, in 1952, was granted a Government subsidy on condition that it used at least 90 per cent. of French cloth. Imports of cotton, especially from the U.S., have declined in recent years, although a large proportion still comes from abroad. The quantity of cotton actually imported in 1952 was 246,000 metric tons, of which the share of U.S. cotton was 63,900 tons, representing more than 26 per cent. of the total.

Woollen Manufactures

Just as the cotton textile industry, the woollen industry also has been experiencing difficult times. Not only production has gone down in recent years but exports also have receded, as will be evident from the following table:

(In thousand metric tons)

	1938	1950	1951	1952
Production—				
Combed wool ..	63	75	54	57
Wool yarn	118	127	120	110
Woollen fabrics ..	80	80	80	73
Exports—				
Combed wool ..	23	35	31	18
Wool yarn	11	22	16	10
Woollen fabrics ..	4	12	9	4

Technically, the industry's chief drawback is the preponderance in it of small-scale organisations, especially in weaving. The Monnet Committee considered, when it studied the industry, that concentration would not be easy to carry out. Other difficulties in increasing productivity have been those general to the textile industry, such as a high proportion of out-of-date machinery, lack of credit for new large-scale capital investment and a heavy burden in the form of social and fiscal charges, all of which make for high costs and high prices—a matter of especial concern to an industry so dependent on exports. Measured, however, by the number of combing machines (3,010 in 1951) and spindles (1.9 million combing and 890,000 carding in 1951) and looms (43,450 in 1951) in use and by its output, the industry still ranks high among the world's wool industries.

Artificial Textiles

The position in the sphere of artificial textiles, too, has been none too satisfactory. Thus, the outpupt of rayon and staple fibre goods during 1952 was only 41,304 tons and 34,956 tons, as against 57,110 tons and 49,624 tons, respectively, in the previous year. These figures, however, compare favourably with those in prewar years when the production of rayon goods amounted to 28,000 tons and that of staple fibre goods to 5,600 tons. Exports of these items also have declined from 12,750 tons and 8,451 tons in 1951 to 8,004 tons and 5,628 tons, respectively, in 1952. The corresponding figures for 1938 were 4,744 tons and 1,079 tons.

The artificial textile industry in France gives employment to about 27,000 persons and ranks as the second most important dollar earner (after lace). It also provides material for the silk and tyre manufacturing industries, besides being useful as a substitute for cotton and wool.

Silk Industry

Production of silk goods, too, has suffered a fall. The quantity of silk (and rayon) fabrics and ribbon actually produced in 1952 was 20,800 tons and 1,020 tons, as against 25,500 tons and 1,500 tons, respectively, in the previous year. There are about 1,400 firms possessing 26,400 looms and more than 500 jobbing weavers possessing over 32,000 looms. The industry, together with the associated ribbon industry and other auxiliary trade, employs nearly 68,000 persons. Value of turnover was 100 milliard francs in 1951, of which exports accounted for 42 milliard francs.

Synthetic Textiles

In contrast to the general trend, the synthetic textile (*nylon* and *nhovyl*) industry in France has registered a remarkable progress. The annual capacity of the industry was 150,000 tons in 1952, the number of factories being 30. The actual production during the year was higher than that in 1951 by 12.5 per cent. The industry is still relatively young and flexible. It is concentrating attenion on introduction of new techniques in manufacture and publicity campaign in the home market. Measures of assistance have been accorded by the Government in the form of export subsidies, suppression of export licensing on staple fibre and import restrictions on foreign products.

DEBATE ON COTTON TEXTILE POLICY

The Government of India's cotton textile policy in so far as the handloom sector is concerned, was once again subjected to vehement criticisms in the House of the People last week, the opportunity being provided by the debate on the *Dhotis* (Additional Excise Duty) Bill, 1953. Most of these criticisms, however, were a mere repetition of those made on the floor of Parliament bn previous occasions. There was, for instance, the same old criticism that the Government had failed to take such measures as would remedy the ills of the handloom industry. The several suggestions made for improving the conditions in this sector were also the same, namely, complete reservation of *dhotis* and *saris* exclusively for the handlooms nationalisation of the whole cotton textile industry, and the like. These criticisms and suggestions stem not so much from economic considerations as from political considerations. Indeed, it looks as though the handloom product has become a political commodity, with plenty of votes to back it.

In their anxiety to better the lot of the weavers, many members of the House tried to paint a very depressing picture of the conditions in the handloom industry. One of the members went even to the extent of saying that "the distress among handloom weavers in the South has been so great that there have been cases of suicide; some of them wrote letters to Mr. C. Rajagopalachari before committing suicide." These observations are clearly exaggerated. In any case, the solution of the problems confronting the handloom industry lies, not in placing a burden on the mill sector of the textile industry, but in the adoption of measures which will set right the defects in the very structure of the handloom industry. Viewed thus, the view expressed by such a responsible member as Mr. N. V. Gadgil, namely, that nationalisation of the textile industry is the only way of tackling the problem, is absurd. How ridiculous is the argument put forward by Mr. Gadgil in support of his thesis will be evident from a perusal of the following remarks of his:

"If the object of the Bill is to give additional protection and encouragement to the handloom industry, the present measure is least likely to achieve it. If the prices are attractive, the mills will pay the additional duty and produce more. Looking at the duty from the angle of the consumer, the only effect of it is to raise prices. In the course of the last six years, the consumers and labour have suffered, but in no case have the millowners suffered. It has been calculated by Mr. Khandubhai Desai that, when cloth was decontrolled in 1948, the millowners pocketed Rs. 200 crores extra. Last month, when I visited Ahmedabad, I was told by 'people in the know of things' that the result of the additional levy will be less competition for the bigger mills. In other words, whatever Government do in order to help the downtrodden man, the result is that the upper dog gets the benefit. This has been the history of the handling of the textile industry by this Government.

"The only way of tackling the problem is to eliminate competition between handloom and millmade manufactures. The time has now come when the textile industry must be nationalised. The production of the textile mills and the entire handloom production should be taken over by the Government and the prices pooled. They can also reserve a sphere for the handloom products either in terms of territory or of quality. Just as in Poona, some good rice is sold only along with some bad rice, Government can insist that a person who buys ten yards of mill-made cloth must also buy two yards of handloom cloth. In some institutions, Government can also pay a portion of the salaries of their employees in the forms of coupons to be exchanged against cottage industry products. So long as you allow competition in the open market between the handlooms and the mills there is no possibility that both will survive. Ultimately the handlooms will go to the dogs."

There is neither logic nor common sense in these observations of Mr. Gadgil. The suggestions, if accepted and implemented, are bound to have serious consequences not merely in the future of cotton textiles but in several other sectors of the industrial economy as well. The indirect and direct effect of the pooling of prices of mill and handloom products, for instancecy would be undue rise in prices of cotton textiles, leading to the idea of reservation too. Mr. Ri

CRITICAL ESTIMATE OF RAW COTTON COMMISSION'S SERVICES

PROSPECTS FOR TEXTILE EXPORTS HELD DIM

(From A Special Correspondent)

MANCHESTER, *24th November*

MANCHESTER LETTER

THE Cotton Bill which has been submitted to Parliament as a means of ending the monopoly of the Raw Cotton Commission and paving the way for the re-establishment of a cotton futures market in Liverpool, has passed its second reading and will now be dealt with in the committee stage. There was a long debate in the House of Commons at which supporters and opponents of the scheme put forward their respective views, which were largely as predicted.

Supporters of the Raw Cotton Commission are apprehensive about the events which they believe will follow its dissolution. On the other hand, the protagonists of free trading are equally confident that their efforts will lead to more competitive conditions in line with the needs of the industry as a whole.

Time alone can provide the answer as to which side is correct. Yet even at a later date it will be difficult to assess the relative performance of the prevailing system—for instance, if private trading had been functioning when American cotton ran short in 1950, would supplies have been adequately maintained? Equally, how would Liverpool and Manchester merchants have fared during the downward trend of prices in 1951-52?

On the subject of the Raw Cotton Commission's losses in the last couple of years, estimated at more than £40,000,000, there seem to be some misconceptions. Despite these large deficits, they must be offset against the profits which had accumulated during the days of the wartime Cotton Control and the earlier trading period of the Commission. A reserve fund of over £35,000,000 had been built up and although the final accounts of the Commission on winding-up will probably show a debit balance, the figure may not be quite so alarming as it is sometimes made to appear.

Anxiety Unrelieved

While the politicians in London have been discussing their aspect of the raw cotton controversy, in Lancashire there has been no slackening in conjecture about the effect of the full-scale reintroduction of private trading. Reference has already been made to the foreseeable difficulties which may well afflict the Egyptian spinning section when the Raw Cotton Commission's system of obtaining Sudan and other substitute growths is no longer available for the mill's. Some commentators are very depressed at what may happen.

The Government's view that Empire cotton growers will have no trouble in disposing of their products does not improve the situation. Lancashire is clearly unhappy about the position of small mills which may have neither the resources nor the facilities to maintain adequate stocks of the particular types of cotton they require. This is all the more important in that they produce the high grade yarn on which rests the basis of the quality cloth trade which is so vital in the present competitive era.

Within the industry there is a considerable fear that Government officials do not recognise the time factor which is essential to the organisation of future supplies of cotton. Arrangements of this kind are necesssary more than a year ahead if the growers and distributors are to be assured of a reasonable return for their products and services. The Raw Cotton Commission has performed this function for the trade and once it disappears the possibility of acquiring sufficient cotton from such areas as the Sudan becomes extremely questionable.

Union View

Leaders of all the Lancashire cotton trade unions have asked Mr. Harold Wilson, M.P., former Socialist President of the Board of Trade, to re-draft parts of his 25,000-word policy "blueprint" which he has drawn up at the request of the unions.

It is believed that the Government's decision to wind-up the Raw Cotton Commission and restore private enterprise buying of raw cotton for Lancashire mills was a major factor influencing the need for revision.

Mr. Wilson was present when the Legislative Council of the United Textile Factory Workers' Association held a special meeting in Manchester to discuss with him a number of points concerning his draft document—the first overall statement of cotton union policy for 10 years.

Stressing that no disagreements had arisen between himself and the union officials, Mr. Wilson said after the meeting that his document had been fully considered and he would be doing some redrafting in the light of points raised. A further meeting would be held at a later date to discuss the revised document.

The cotton trade unions have supported the principle of State buying of Lancashire's raw material and many of their officials had not anticipated that the Government would make a firm pronouncement for the winding-up of the Commission and the restoration of the Liverpool Futures Market at this juncture. Since Mr. Wilson began the drafting of the document in February it is considered that recent developments in the field of raw cotton buying have dictated the need for revision.

Production Censuses

The Manchester-based Cotton and Rayon Merchants' Association, which represents 1,000 firms, has criticised the censuses of production and distribution as "unnecessary."

The Association announced that in response to a request for its views, it had told the Government committee on the censuses that they were of no use to the textile converting and merchanting trades. "There is a strong feeling among converters and merchants that the time taken and the expense involved in completing the forms could be put to far better use," it declared.

The trade was subject to rapid changes in fashion and by the time census information was published circumstances may have changed completely and the information might be misleading.

Yarn Output

Lancashire spinning mills achieved their highest output of cotton and rayon yarn for 21 months in the first week of November.

Cotton Board returns showed that the mills spun 20,520,000 lbs. of single yarn—140,000 lbs. more than in the previous week and over 3,000,000 lbs. more than in the corresponding week of 1952. The industry gained 66 full-time and 110 part-time operatives during the week.

Overseas Trade Struggle

Exports, like production, often tend to rise in the final quarter of the year but the trend of cloth shipments from Britain last month did no more than maintain the average for 1953 as a whole. Overseas trade in cotton goods is still constricted by numerous handicaps provided by foreign countries and the prospects for increasing activity do not seem bright.

During October shipments of cotton cloth amounted to 58,189,000 square yards, valued at £7,226,535. By the end of nine months total exports had almost reached the level at the same stage in 1952 but the latest figure pulls the total back slightly to 583,224,000 square yards, against 587,180,000 square yards to the end of October last year.

Leading consumers of Lancashire-made cloth have been (in square yards, with 1952 comparisons): West Africa 117,631,000 (137,692,000); Australia 75,089,000 (65,013,000); South Africa 72,076,000 (47,728,000) and East Africa 24,620,000 (17,498,000).

Cotton yarn exports last month showed a sudden expansion, being over 1,000,000 lbs. higher than in any previous month this year and at 4,545,000 lbs. were the highest total since October, 1951. The value at £1,866,645, was the best since the early part of last year. To the end of October yarn shipments totalled 34,045,300 lbs. compared with 29,602,000 lbs. in the same period of 1952.

Chief buyers of cotton yarn from Britain so far this year have been (with 1952 comparisons): Australia 4,709,900 lbs. (2,437,600 lbs.); Irish Republic 4,019,000 lbs. (2,541,400 lbs.); Canada 3,471,100 lbs. (1,722,300 lbs.) and Germany 2,095,400 lbs. (952,900 lbs.).

There was a sharp increase in arrivals of grey cloth in Britain last month, imports of 6,292,000 square yards bringing the total to the end of October to 60,113,000 square yards, against 139,232,000 square yards in the same period last year. Main sources of supply were India with 1,728,000 square yards in October and Japan with 1,504,000 yards.—*All Rights Reserved.*

Speaking in the House of Commons, Mr. Heathcoat-Amory, Minister of State to the Board of Trade, stated that safeguards against the Raw Cotton Commission's stocks being thrown suddenly upon the market would be taken. He added that it was too early yet to say what methods would be used to sell the stocks.

WORLD COTTON SUPPLY POSITION DURING 1953-54

SIZABLE INCREASE PREDICTED

ALTHOUGH it is certainly too early to hazard an estimate of the world supply position in the current (1953-54) season, the estimates of the probable cotton production during the season in many countries have become available, so that it has been possible for the International Cotton Advisory Committee to give a tentative estimate of the cotton supply position during the season. The Committee places world supply for the 1953-54 season, based on information available till 23rd October, 1953, at 52.6 million bales (of 478 lbs. each) as against 50.6 million bales in 1952-53 and 47.3 million bales in 1951-52. If the supply position in the Communist countries (U.S.S.R., China and Eastern Europe) were excluded, the supply for the current season is placed at 43.7 million bales, as against 42.1 million bales in 1952-53 and 39.2 million bales in 1951-52.

It is thus clear that the overall supply position during the current season will, as now estimated, be larger than in the last season. This is true whether the supply position is considered in relation to the Free world only or in relation to the world, as a whole, that is, inclusive of the Communist countries. The following tables give the supply position in the Free world, as well as the world taken as a whole, for the 1953-54, 1952-53 and 1951-52 seasons:

Cotton Supply in Free World

(In million bales of 478 lbs. each)

	1951-52	1952-53	1953-54
Supply—			
Stocks, 1st August	10.6	13.3	15.5
Production	29.6	28.8	28.2
Total	39.2	42.1	43.7
Distribution—			
Consumption	25.2	25.9	..
Destroyed	0.1	0.2	..
Exports to Communist countries	0.6	0.5	..
Stocks, 31st July	13.3	15.5	..
Total	39.2	42.1	..

Cotton Supply in World

(Including U.S.S.R., China and E. Europe)

(In million bales of 478 lbs. each)

	1951-52	1952-53	1953-54
Supply—			
Stocks, 1st August	11.6	14.9	17.0
Production	35.7	35.7	35.6
Total	47.3	50.6	52.6
Distribution—			
Consumption	32.3	33.4	..
Destroyed	0.1	0.2	..
Stocks, 31st July	14.9	17.0	..
Total	47.3	50 6	..

It will be clear from the table above that the increase in the supply position is due not to any anticipated increase in production in the current season for which a somewhat lower output is indicated but to the increase in stocks carried over into the season. Thus, the world output is placed at 35.6 million bales, as against 35.7 million bales in the 1952-53 season. The Free world's output for the current season is similarly estimated lower at 28.2 million bales, as against 28.8 million bales in the 1952-53 season. But, in the world as a whole, and in the Free world in particular, the stocks, as at the beginning of the current (1953-54) season, were higher than at the commencement of the 1952-53 season; in the former, they were 17.0 million bales, as against 14.9 million bales a year ago and in the latter group of countries they were 15.5 million bales, as against 13.3 million bales.

A further analysis of the position of cotton stocks (as on 1st August, 1953), reveals that they were higher than a year ago in the net exporting countries whereas they were lower than on the same date in 1952 so far as the net importing countries are concerned. Thus, the stocks in net exporting countries as on 1st August, 1953, were 10.4 million bales, as against 7.2 million bales in the corresponding date in 1952. In the U.S. and Brazil, which belong to this group of countries, stocks increased from 2.8 million bales to 5.6 million bales and 1.4 million bales to 2.0 million bales, respectively. In other net exporting countries, there was a slight decline in stocks from 3 million bales on 1st August, 1952, to 2.8 million bales on the same date in 1953. Among the net importing countries, India and the U.K. together accounted for a major portion of the decline in stocks. In India stocks declined on 1st August, 1952, and 1st August, 1953, from 2.0 million bales to 1.4 million bales and in the U.K., from 1.3 million bales to 1.0 million bales. In other net importing countries, they declined from 2.8 million bales to 2.7 million bales.

Since the supply position for 1953-54 given above represents only the information received upto 23rd October, 1953, it does not include the latest estimate of the U.S. crop. It is based on the 8th October estimate of the crop, which placed it at 15.59 million bales. But the later estimate (8th November forecast) places the crop at 16.09 million bales. This suggests that the Free world's supply position will be somewhat larger than what is indicated by the Committee. Even so, it is difficult to hazard a precise estimate, because the final estimate of the U.S. crop may not be the same as that of the November estimates—already there are reports that, owing to bad weather in November, the 8th December forecast will show a drop—and also because there may be significant variations in the crops of other countries, notably India. Thus, the Indian crop for the current season, which was formerly being confidently predicted at 4.2 to 4.3 million bales of 400 lbs. each, is now being placed at a much lower level, about 3.8 to 3.9 million bales.

Apart from the changes in crop estimates, which are likely to be made in the near future as fuller information becomes available, the principal difficulty in estimating the current season's crop now is that, in the Southern Hemisphere, crops are being planted only now. But the Committee says that, unless there is a major decline in this season's crop in South Brazil, production in the Free world is again likely to exceed 28 million bales. This estimate includes, as already stated, only the October estimate for the U.S. crop which has since been revised upwards.

So far as the cotton crop in the Free world, outside the U.S., is concerned, the Committee says that it is "presently expected to decline by half to one million bales as compared to last season's record of 13.6 million bales." Both Egypt and Pakistan indicate a smaller crop. In Egypt, the official estimate places the crop at 1,255,000 bales—a decline of 800,000 bales—which is the smallest crop since the end of the war. Most varieties are affected but particularly Karnak, the output of which is likely to be more than halved. This means that world production of extra long staples this season is likely to be under one million bales, as against 1.4 million bales in 1952-53. Private sources predict a decline of a quarter of a million bales in Pakistan. Turkey may maintain its 1952-53 crop output. But production in many of the smaller Asiatic countries as well as in Uganda, it is stated, is likely to increase again this season. But a lower crop is predicted for North Brazil. In fine, the increased carry-over on 1st August, 1953, is expected to offset the relatively small decline in estimated production this season, so that the world supply, as already stated, is likely to be 1 to 2 million bales larger than in the 1952-53 season.

IMPORT DUTY ON COTTON

Cotton and textile interests in India, as is well known, have been demanding that the import duty on cotton should be either abolished or relief given in respect of the duty, at least so far as exports of cloth made from imported cotton are concerned. The Textile Commissioner to the Government of India announced recently that the Government had decided to grant drawback of import duty on cotton used in exported cloth. A notification in the matter has been issued under the provisions inserted by an Ordinance promulgated recently and subsequently confirmed by Parliament by passing the necessary legislation.

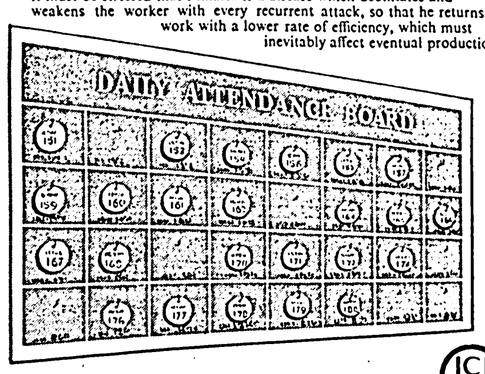
The Government has decided to allow, with effect from 26th November, 1953, drawback of duty on foreign cotton used in the manufacture of cotton cloth with both warp and weft yarns of counts 40s and over and of VOF cotton yarn of counts 40s and over when such cloth or yarn is exported out of India. The rules, now framed, provide for the entire import duty on raw cotton used in such cloth or yarn, i.e., at As. 2-1-1/5 per pound on the net weight (i.e., gross weight less tare, namely, weight of paper, packing, etc.) of such cloth or yarn exported with a deduction of 15 per cent. in every case to cover the average weight of sizing material contained in such cloth or yarn.

The Government has also under consideration a scheme of refund in respect of cotton cloth and yarn manufactured partly from imported and partly from indigenous cotton.

absenteeism in your establishment

The problem of maintaining labour efficiency in any industrial establishment is closely allied to the attendance rate which obtains. This attendance, again, is directly tied to the general health level of the labour employed, and in the vast majority of cases, absenteeism is directly attributable to sickness.

Malaria is today the biggest single cause of sickness, and, therefore, of absenteeism in India. Apart from the scattered days of absence, it must be stressed that Malaria is a disease which debilitates and weakens the worker with every recurrent attack, so that he returns to work with a lower rate of efficiency, which must inevitably affect eventual production.



'Paludrine' prevents Malaria

No employer of labour today can afford to ignore the concrete proof offered by the consistent use of 'Paludrine' the world over by employers of labour, in order to reduce absenteeism caused by sickness. Give your workers a regular dose of 'Paludrine' and prove to yourself that it can, in your establishment, directly reduce absenteeism, raise health standards and benefit your business in terms of production and profit. Apart from this, labour is not slow to appreciate such benefits when they are made available, and goodwill too is built on such operations

We shall be happy to co-operate with you in implementing a scheme for 'Paludrine' Protection in your establishment. Special rates are available for bulk purchases. Please write today to the nearest office of :—

SHOLAPUR SPINNING AND WEAVING COMPANY, LIMITED

CENTRAL AND BOMBAY GOVERNMENTS' ASSISTANCE COMMENDED

SIR VITHAL N. CHANDAVARKAR'S SPEECH

ADDRESSING the seventy-eighth Ordinary Annual General Meeting of the Sholapur Spinning and Weaving Company, Ltd., held on Monday, 30th November, 1953, at Bombay, Sir Vithal N. Chandavarkar, Kt., Chairman of the Board of Directors, gratefully acknowledged the assistance given by the Central and the Bombay State Governments which have "always been ready to help the mills out of financial difficulties." He referred to the installation of the two humidification plants for the carding and spinning block in the "C" Mill and the installation of a similar equipment in weaving department of the mill, which was under way, and stated that when the entire plant was completed there would be a "marked" improvement in the efficiency of the mills and a "consequent reduction in the cost of production."

The following is the text of Sir Vithal Chandavarkar's address:

"GENTLEMEN,

"The annual statements of accounts have been in your hands for more than three weeks and I propose to take them as read.

"The working of the mills during the year under report has resulted, as disclosed by the balance-sheet, in a loss of Rs. 11,82,705-6-2, subject to depreciation, for the year under report; but I would like to point out that the real working loss subject to depreciation works out to Rs. 23,94,687-0-8 made up as under:—

	Rs.	a.	p.
Loss as per profit and loss account	11,82,705	6	2
Credit taken in respect of unpaid and unclaimed balances	6,08,942	2	6
Net credit taken in respect of E.P.T. refund	6,03,039	8	0
	Rs. 23,94,687	0	8

"The Directors regret that, after two years of profit, they have to present a balance-sheet with such a large loss. The loss has been largely due to a number of factors beyond the control of the management.

"Realisation of sale of cloth and yarn was less by Rs. 68,75,000 compared to last year. The price of cloth as realised this year was at the rate of Rs. 2-13-4 per lb., as against Rs. 4-3-5 per lb. of last year.

"The export margin this year was Rs. 9,82,000, as against Rs. 25,62,000 of last year, although a larger quantity of cloth was packed for export this year.

"Miscellaneous income was less by Rs. 84,000, as compared to that of last year, due mainly to reduction in the following items:

Sale of coal ash less by Rs. 24,000.

Sale of stores empties less by Rs. 49,000.

"In this year, particularly, we had to bear additional burdens in the shape of:

	Rs.
Contribution to State Insurance Fund more over last year by ...	49,000
A new burden in the shape of contribution to Employees' State Provident Fund	1,53,000
Administrative charges in respect of State Provident Fund	9,000
	Rs. 2,11,000

"On the receipt side, there was an increase
out Rs. 67,000 from the sale of electrical
to the city electrification department
t year, because we sold 1¼ lakhs units
n last year and also due to the rate
w the mill being a little more than

ds the debit side of profit and loss
n consumption is less by
nly due to the fact that cotton purchased during the year was on an average at a lower rate as compared to previous year.

Stores Consumed

"There was an increase of Rs. 4,72,000 in stores consumption over last year due to some extent in increase in production of cloth from 73,00,000 lbs. to 84,00,000 lbs., in the current year. Moreover, as a result of reorganisation of the dyeing and bleaching department we were able to turn out more cloth in finished condition than last year.

"There was an increase of Rs. 1,23,000 over last year under the item 'coal consumed.' This was due to the withdrawal of rebate in railway freight. We had to pay Rs. 38 per ton this year as against Rs. 32 last year.

"Interest is more by Rs. 2,77,000 over last year, due to increase in borrowings from Rs. 109 lakhs of last year to Rs. 144 lakhs during the current year and due to Rs. 52,000 paid on account of interest to ex-selling agents, Messrs. Jhajharia Dhandhania & Co., as a result of the confirmation by the Supreme Court of the decree passed by the Bombay High Court.

"There is a reduction in insurance charges to the extent of Rs. 52,000.

"The working of the city electrification department shows an apparent loss of Rs. 36,885. Actually, this department has made a working profit of Rs. 38,408. The deficit of Rs. 36,885 shown in the accounts is due to debits to this account not relating to current year which are as follows:—

	Rs.
Arrears of depreciation for 1948-49 and 1949-50	37,609
Under-charge of 1950-51 for power supplied by mill to this department	34,196
Contingencies reserve of 1950-51 ...	3,488

"At present, our installed capacity is 86,048 spindles out of which 65,420 are working two shifts in the 'C' Mill and 20,628 spindles in single shift in the 'B' Mill. We are also working 1,012 looms in two shifts in 'C' Mill and 1,222 looms in one shift in the 'B' Mill.

"In my last year's speech, I had referred to the orders placed by the Board for new boilers and turbo set. These orders are now being executed and we have begun to receive deliveries against the orders in instalments. Plans have also been prepared for erection of a building to house the new boilers.

Increase in Efficiency

"The installation of the two new humidification plants for the carding and spinning block in the 'C' Mill has been completed and the plants are working satisfactorily. Materials have also arrived for the humidification plant for the weaving department of the 'C' Mill and the plant will be ready for working in two or three months. When the entire installation of the humidification plant is completed, it is expected that efficiency will materially improve with a consequent reduction in the cost of production.

"I regret very much that I cannot hold out hopes of better results for the current year. It is too early to say what the results will be and my statement is based on the working results of the first five months of the current year.

"I ought to refer to the labour unrest in the mills, caused by the strike of the blow room workers of the 'C' Mill in October, 1952. Although the strike lasted for about three weeks, it upset completely the working of the whole mill. Department after department had to be played off owing to the shortage of back process. As the matter is still *sub judice* before the Wage Board, I cannot refer to the pros and cons of the strike in detail. Suffice it to say that the strike was declared illegal by the Labour Court of Sholapur.

"In my last year's speech, I had referred to the contribution of Rs. 50 made by the mills to the Patients' Relief Association of Sholapur who have one of their dispensaries in one of the chawls of the mill. This contribution of Rs. 50 was made to the Association this year also.

Governments' Help

"The Board of Directors and the shareholders have every reason to be very grateful to the Governments of India and Bombay. Both the Governments have always been ready to help the mills out of financial difficulties. Apart from the Government guarantee to the loans from the Bank of Baroda against stock and block assets, the Governments have themselves advanced from time to time further moneys during the year, to the mills. As at the end of the financial year of the Company on 31st March, 1953, the amount of the loan due to Government was Rs. 37 lakhs. To-day, the amount has mounted up to Rs. 94 lakhs.

"I must also express my thanks and gratitude to my colleagues on the Board. I am glad to inform you that Mr. T. Swaminathan, I.C.S., Textile Commissioner to the Government of India, has been nominated by Government as an additional member of the Board. Unfortunately, owing to his presence being urgently required at Delhi, he could not be present at this meeting. Mr. Tulsidas Kilachand is also unable to be present to-day on account of his parliamentary duties at Delhi.

"Both Mr. K. L. Panjabi, I.C.S., who was in charge of the Development Department during the year under report and Mr. Dehejia, I.C.S., of the Finance Department, have been very helpful not only to the Company but also to me personally.

"In conclusion, I have to thank our Technical Advisers, Messrs. B. D. Kulkarni and B. Ganapath Rao and the members of the staff both in Sholapur and in Bombay for their very valuable co-operation."

TEXTILES

(Concluded from page 1048)

machari, the Union Minister for Commerce and Industry, did well, therefore, to dismiss these suggestions outright as being most destructive. Significantly enough, Mr. Krishnamachari remarked:

"The consumer will have to pay higher prices, and in taxing the consumer, one has to take into account his purchasing power. There is no difference of opinion on my side that the uneconomic worker must be kept alive. Some people may say that he must be kept alive for all time as an uneconomic worker. I am prepared to keep him alive until such time as I can give him an economic wage. My ambition is that, instead of 10 annas, the workers who are now in the handloom industry must be able to earn three rupees or five rupees a day, like workers in some other industries. It might be that, ideologically, some are against machines and others in favour of machines. I agree with the view that the figure of 800,000 does not represent the labour which depends on the mill industry. There are a lot of others who produce cotton and gin it, those who supply coal and other necessities for the mills and the people who distribute the mill goods.

"I can make handloom weaving an economic one. I would like the handloom weaver to stay there. Otherwise, I would like to find for that weaver other employment. That is all the difference that exists on my side. Everybody agrees that the handloom weaver should not be allowed to die. I have been asked what the result of the restriction is. In Madras, the quantum of mill-made *dhotis* available has been brought down from 5,100 bales a month to about 1,000 bales. Therefore, the device might be clumsy, but, it is effective. In the overall picture, production before the restriction has averaged at one time 50,000 bales, as against 45,000 which is the optimum needed. This has gone down to 29,000 bales after the restriction."

Be that as it may, the *Dhotis* (Additional Excise Duty) Bill seeks to replace the Ordinance—issued on 26th October last—by which an extra excise duty is levied on *dhotis* packed by mills in excess of 60 per cent. of the average monthly production during 1951-52. Explaining the need for the additional duty, Mr. Krishnamachari said: "In West Bengal, there has been certain amount of misbehaviour on the part of the mills. The remedy would have been to prosecute them, but the Government feels, on more mature consideration and after consulting the State Ministers, that it will be better to have a self-adjusting mechanism by which there will be a restraint on production beyond the quota."

Although the Government's reluctance to take punitive action against the mills is understandable in the light of the labour situation in the State and of the need for maintaining textile production, it is regrettable that it should have sought to solve the problem by imposing an additional excise duty. After all, it must be remembered that the incidence of the duty will be borne, not by the mills, but by the consumers. As. Mr. G. D. Somani pertinently averred, the present measure goes against the interest of the consumer.

COMMONWEALTH SUGAR PRICE REDUCED

WILL RESUMPTION OF FUTURES TRADING BE FEASIBLE?

THE developments in the sphere of sugar trade in the U.K. and the Commonwealth sugar-producing countries were of very little interest to India until recently. This was only to be expected, for the country was not dependent upon outside sources for its sugar requirements, as the indigenous production was more or less sufficient to meet the demand. The position has since changed; thanks partly to a decline in production and partly to an appreciable rise in consumption. India has, once again, become an importer of sugar. The need for securing adequate sugar supplies at as low a price as possible has, therefore, become urgent now. Naturally enough, the changes that have lately occurred on the U.K. sugar front assume special significance.

Following a comfortable supply position, the British Government abolished the sugar control on 1st October, 1953. This was soon followed by its decision to resume futures trading in sugar in the near future. Very recently, two important decisions relating to sugar for 1954 were announced by the Government. First, the price of sugar which the U.K. will purchase under the Commonwealth Sugar Agreement—signed in London towards the end of 1951—has been reduced from £42 6s. 8d. to £41 per ton. Secondly, the period of the Agreement has been extended by one more year, that is, upto the end of 1951. These decisions are a sequel to the talks held by the British Food Ministry with the representatives of the Commonwealth sugar producers—Australia, British West Indies, South Africa, Mauritius and Fiji. Under the Agreement, it will be recalled, the U.K. Government has undertaken to buy sugar up to certain quotas or targets. Each supplying territory obtains a fixed price each year for two-thirds of its quota. The rest of the sugar produced can be sold at the world market price, plus the benefit of tariff preference at £3 15s. per ton.

A Welcome Decision

The extension of the Commonwealth Sugar Agreement, however, is not of much practical significance, inasmuch as it pertains to a long period of eight years and does not, in any way, alter the contents of the Agreement as such. As regards the reduction in the price of sugar, the decision of the British Government will doubtless be welcomed by consumers who have all along been paying a high price. This reduction has been rendered possible by a downward trend in the cost of sugar produced in Commonwealth countries, following a decline in the prices of sugar bags, fertilisers and other supplies. Even so, the price of sugar to consumers in the U.K. will be higher than the world market price, which is now £28 12s. (c.i.f. U.K.), by as much as £12 4s. per ton or more than 1d. per lb.

In view of this wide gap, doubts are being expressed by sugar interests in the U.K. regarding the feasibility of implementing the Government's policy of returning the sugar trade to private hands. It is pointed out that the quantity of Commonwealth sugar sold to the U.K. (and also Canada) on the basis of the open market price is relatively small. The aggregate quantity of sugar produced in the aforesaid five Commonwealth countries during 1952-53, for instance, was 2,758,000 tons and the total annual export quota amounted to 2,375,000 tons (including the quota of export to New Zealand). The quantity left with the exporting countries for the free market was thus 413,000 tons. Among the other obstacles to the return of the sugar trade to private hands are heavy stocks of raw sugar held by the Government and difficulties with regard to sterling convertibility. Referring to these factors, the United Terminal Sugar Market Association has made the following observations:

"The report that the terminal sugar market is due to open on 1st January, 1954, is quite premature. It is the desire of the market to open as soon as possible, but, at the present stage, the details and the timing are merely under active consideration. Traders hope that it will be possible to resume some form of trading early next year and schemes are being put forward and considered, but it is by no means assured yet that they will go through. The functioning of the market, which, before the war, was one of the U.K.'s leading international commodity centres, is closely linked with the question of sterling convertibility. Heavy official stocks of raw sugar and the wide gap between U.K. and world prices arising from undertakings under the long-term Commonwealth sugar supply agreement present obstacles to the resumption of futures trading."

Meanwhile, the U.K. export trade in refined sugar is said to be meeting stiff competition from Continental refiners. This, in turn, limits the U.K. demand for raw sugar purchased privately to cover refined sugar export business. In view of the heavy official stocks of raw sugar used for meeting the domestic consumption, this private trade has come to be of particular importance to Cuba now.

LICENCE FEES FOR SUGAR FACTORIES

Considering the series of disquieting problems now confronting the sugar and other industries in the State of Bombay, the contemplated move of the Government to enhance the licence fees for factories by as much as 20 per cent. is, indeed, deplorable. It was only last year that the Government had raised the fees by about 25 per cent. as compared with the rate in 1950. There is absolutely no justification whatever for a further increase in the existing licence fees. After all, according to the strict principles of public finance, a fee, unlike a tax, should be levied, not as a source of revenue to the Exchequer, but as income for a specific purpose. The factory licensing fee is only meant for covering the cost involved in seeing that factories get themselves registered as required by the provisions of the Factories Act. Invariably such fees are nominal and are not frequently changed. If any Government were to enhance such fees unduly, it would give rise to the impression that the Government has become so bankrupt of resources that it would grab everything on which it can lay its hands.

It is no wonder, therefore, that the Bombay Government's move has been greatly resented by all industrial units, especially the sugar industry. In the course of a communication addressed to the Government, the Deccan Sugar Factories' Association points out, for instance, that the levy of licence fees cannot be used for the purpose of gaining income from it. If the licence fees are to be "arbitrarily" increased at such short intervals and at such high rate without any justifying necessity, it would, the Association observes, create a feeling of uncertainty which would have a most harmful effect on the working of factories.

There is considerable force in these observations. The burdens that the Government has imposed on the sugar industry in the form of taxes and cesses are already heavy. And any additional burden will only mean a further rise in the cost of sugar manufacture which is at present high in all conscience. The consumer of sugar has all along been eagerly expecting a reduction in price, which is possible only when cost of production is reduced. Surely, the surest way of bringing about such reduction is the downward revision in tax imposts. Instead of doing so, the Government of Bombay, it is most unfortunate, has thought of imposing more and more burdens, utterly disregarding the most urgent need for stepping up the level of consumption, what in the present context of growing unemployment. It is to be hoped that wiser counsels will prevail on the authorities and that not only the move to enhance licence fees will be dropped but even the existing schedule will be revised downwards.

Be that as it may, we give below, for purposes of record, the new schedule of licence fees proposed to be adopted by the Government:

Maximum No. of persons to be employed on any day during the year	*Quantity of h.p. installed (Max. k.p.)*				
	Nil	*Upto 10*	*Above 10 but not above 50*	*Above 50 but not above 100*	*Above 100*
	Rs. a.	Rs. a.	Rs. a.	Rs. a.	Rs. a.
Up to 20 ..	7 8	19 12	37 8	75 0	112 8
20 to 50 ..	18 12	37 8	56 4	93 12	150 0
51 to 100 ..	37 8	45 0	75 0	112 8	187 8
101 to 250 ..	93 12	112 8	187 8	281 4	375 0
251 to 500 ..	187 8	225 0	375 0	562 8	750 0
501 to 750 ..	281 4	337 8	562 8	843 12	1,125 0
751 and above..	375 0	450 0	750 0	1,125 0	1,500 0

SUGAR PRODUCTION AND STOCKS

The opening stocks, production, despatches and closing stock of sugar in India during the fortnight ended 31st October, 1953, were 258,769 tons, 720 tons, 66,529 tons and 192,960 tons, respectively. The figures for the corresponding fortnight of the previous season were 502,811 tons, 4,772 tons, 39,475 tons and 468,108 tons.

The total production and despatches of sugar for the season 1952-53 amounted to 1,317,681 tons and 1,602,897 tons, as against 1,489,377 tons and 1,127,986 tons during the previous season.

Production during the fortnight, being 720 tons of sugar pertaining to season 1953-54, has not been included in the to-date production of 1952-53. The to-date production for the season 1953-54 amounts to 1,399 tons.

The Government of India has decided to release for free sale all sugar produced by factories during the 1953-54 crushing season (up to the end of 30th November, 1953).

PRODUCTIVITY IN COAL MINES

I.L.O. REPORT REVIEWED

THE fifth session of the Coal Mines Committee of the International Labour Organisation is in session at Dusseldorf, Federal Germany, as these lines are being written. Representatives of workers, employers and Governments of 17 coal-producing countries, including India, are participating in this conference. The main agenda before the conference relates to productivity of workers in coal mines. The I.L.O. has prepared a report on productivity in the various coal-producing countries, with a view to facilitating discussions at the session on the subject under reference.

The importance of the session to India needs no emphasis, especially because the output of the Indian worker per man-shift is very low, as compared with that in the U.K., the U.S. and many other countries in the West. It is common knowledge that there are several reasons for the low *per capita* output. The important, among others, are (*a*) inefficient management, (*b*) old worn-out machines, (*c*) unscientific utilisation of the mines, (d) absence of proper ventilation and proper working space, (*e*) absence of proper sand stowing arrangements, (*f*) want of proper pumping facilities, (*g*) failure to utilise the mines to their full capacity due to either lack of finance or unwillingness to invest money required for development of work for various reasons, (*h*) absence of healthy relationship between the management and the workers, (*i*) absence of proper facilities for training workers and the managers, (*j*) absence of any relationship between workers' output and their earnings, and (*k*) defective layout, including defective haulage system. If the present discussions on productivity were to have at least some effect on improving the output of the colliery workers in India, it would have served its purpose, so far as India is concerned.

Psychological Aspects

The I.L.O. report on productivity points out that technical progress and improvement are essential for improving productivity. But they are not, asserts the report, a panacea for all productivity problems in coal mines. For the use of better technical methods and the implementation of organisational programmes depend essentially on human ability and willingness. Consequently, the psychological aspects of the problem deserve special consideration, more so because they have long been neglected by some countries. This observation of the report is pertinent for, after all, "only the workers' time can be purchased, but his loyalty and co-operation must be earned." In other words, beyond paying for hiring another's time, there is much the employer can do to win the full co-operation he needs for productive operation. It is needless to emphasise, in this connection, that the road to good labour relations is, however, not a one-way street: responsibility does not rest entirely on the employer; the worker, too, must be as willing and keen to give as he is to take.

A brief review of the working of coal mines in the various countries of the world discloses that the bituminous coal-mining industry in the U.S., which operates in the shallowest conditions, ranks highest from the standpoint of increased output per man-shift, whereas Belgium, which has the deepest workings, has the lowest output of all European countries. The output per man-shift in the Netherlands is the highest of all West European countries. The overall output per man-shift in France in 1952 was 104 per cent. of the corresponding output in 1935. In Federal Germany, however, the output of underground miners was hardly 70 per cent. of what it was in 1936. The output in Japan in 1951 was only 58.4 per cent. of what it was in 1934-36. In the U.K., the overall output has remained practically the same over the last quarter of a century.

What is this variation in productivity of colliery workers in the different countries due to? The productivity and prosperity of the U.S. coal mining industry is due essentially to the "disciplined and understanding attitude of American miners and the consideration they receive from their employers." A productivity experiment conducted in two collieries in F has shown that the basic reason for the difference in productivity of the U.S. and F to be found in "the difference of en The I.L.O. report says: "It has no ble to transplant in Belgium the of all who are concerned with U.S.—managers and workers,

trations and equipment manufacturers—which is one of the major reasons for the high productivity in the U.S. The most effective technological methods in a country may fail in another, if the importance is overlooked of the spirit that prevails among workers which is the essential basis of productivity and which very often necessitates a special adaptation of the method used."

Output Bonus

There is a temptation to ascribe the magnificent rise in productivity of coal workers in France to technological measures, for output per man-shift in that country has risen, following the improvement in equipment. Alluding to this tendency, the report warns against overlooking the "importance of labour factors." It remarks that the output bonus methods have to some extent contributed towards increasing productivity. It is, however, significant to note here that the output bonus system in West Germany has failed, because a considerable part of the bonuses has been swallowed up by progressive taxes.

The output per man-shift in the Netherlands is the highest of all West European countries, in spite of the fact that natural conditions in the country are less favourable than those in many other countries. This clearly means that the adverse natural factors to a large extent can be offset by human effort. So far as the U.K. is concerned, the I.L.O. report observes that, having regard to the special difficulties facing that country, the productivity results achieved by British collieries can be considered as "excellent." It adds that the psychological aspect of productivity problem is particularly important in the U.K.

The I.L.O. report has devoted particular attention to joint consultation between employers and workers with a view to increasing productivity. In this connection, it makes the following pertinent observation:

"Wherever joint consultation has been organised at the level of the coal industry as a whole, it has proved extremely useful in the application of modernisation programmes and has greatly facilitated the recovery and reorganisation of coal mines. . . . It is desirable that there should be joint consultations in all levels of the coal industry. The primary condition for the functioning of consultative bodies is that contacts should be made at all levels, and that they should reach the miner himself, who works at the coal face. . . . In order to convince miners of the need for increasing productivity, however, the misunderstandings which persist as to the meaning of the concept must still be removed. It should be explained to the miners that the ultimate goal of productivity is not only to increase output per man-shift but also improve their own lot. . ."

The report has devoted a whole chapter to the effects of increased productivity on the living conditions of colliery workers. The following are some of the points that have emerged from its study:

(1) There seem to be good reasons for concluding that, in general, increased productivity has not resulted in reduced safety. On the other hand, the introduction of modern equipment entails new dangers, such as the risk of accidents due to mechanical or electrical causes. The industry is, however, giving its attention to the matter.

(2) It is beyond doubt that technical devices and modern methods have, as a general rule, made it possible to increase the miner's output without imposing extra fatigue upon him; on the contrary, mining has been made less arduous and disagreeable.

(3) It is understandable that productivity measures provoke redundancy among mine-workers, if they are not accompanied by a policy of increased production. The slowing down of production should, therefore, be avoided as much as possible.

UTILISATION OF SLACK COALS

Non-coking coal slacks constitute valuable fuel for thermal power stations equipped with chain grate stokers, according to an investigation on the utilisation of slack coals from State railway collieries conducted by the Fuel Research Institute, Jealgora. The investigation was undertaken at the instance of the Railway Board and the tests included complete analyses, washability studies, coking characteristics, and briquette making. They have disclosed that about three-quarters of the total slack coal from Bokaro and Giridih fields are of the coking type and contain 17 to 25 per cent. ash. The best manner of utilising the coking slacks is to wash them and carbonize the cleaned products to high class coke. The cokes from Giridih coals, which contain little sulphur and phosphorus, may be suitable for the manufacture of carbide and ferro-manganese.

Non-coking slacks, constituting the remaining quarter of the total, appear to be suitable for briquetting. The slacks are comparatively low in ash do not need washing. Hard briquettes with satisfactory water-proof properties can be ed from them after adding pitch or partially tar (5 to 10 per cent.) as binder. The of binder may be reduced by using blends ing and coking slacks. The comparacost of binder (pitch) renders briquette- Carbonization of briquetted coals very may reduce the overall cost to The economics of briquetting warrant idy.

ANNUAL MEETING OF BELAPUR CO., LTD.

TIME NOT OPPORTUNE FOR ISSUE OF BONUS SHARES, SAYS SIR JOSEPH KAY

THE Thirty-fourth Ordinary General Meeting of the shareholders of the Belapur Company, Ltd., was held in Bombay on 1st December, 1953. Sir Joseph Kay, K.B.E., Chairman of the Company, who presided over the meeting, in moving the Directors' report and statement of accounts for adoption, drew the attention of the shareholders to some of the salient features of the Company's results for the year under review which, he said, was a satisfactory one. In his brief survey of the various developments of the season, he referred to the Government's new sugar policy and indicated the outlook for the Deccan sugar factories in general, and the Company in particular, for the current year. Thus, he observed:

"The Indian sugar year was marked by certain notable features, but, in spite of some reduction in production, combined with the fact that Government attempted to lower selling prices, the year may be regarded as having been a fairly satisfactory one.

"Figures show that production of finished sugar for all India fell by 11.2 per cent., as compared with the previous year, but the large carry-over of some 5,00,000 tons from that year made the quantity available over 18,70,000 tons, or 13.2 per cent. more than the previous year, so that, in the early part of the season, the Government gave permission for the export of 2,00,000 tons, in addition to 50,000 tons of *gur* and 10,000 tons of *khandsari*, and decided to allow a subsidy of Rs. 2 per maund; but this was short-lived, for, within two months, the Government, in view of scarcity of supplies in several parts of the country, suddenly banned exports of both sugar and *gur* and, surprising as it was, decided, towards the end of the season, on a policy of importing large quantities of sugar, in order—so it was stated—to defeat hoarding and to bring down prices to the ex-factory price fixed by them of Rs. 27 per maund. It appears to me that the Government had overlooked the increase in internal consumption which had taken place, following the increase in recent years in the sugar-tasting habit of the peoples of this country.

"The decline in the quantity of cane crushed was some 14½ per cent., due to some reduction in the cane crop and larger quantities diverted to the manufacture of *gur*; the reduction of the sugarcane crop, as compared to the previous year, was 13.3 per cent. for all India and 25.8 per cent. for the State of Bombay. On the other hand, recovery percentage showed some improvement, the all-India figure being 9.97 per cent., as against 9.57 per cent. for the previous year, the corresponding figures for Bombay being 11.51 per cent. and 11.08 per cent., respectively.

"The Government's sugar policy for the coming season (1953-54) has been announced. The following are the main features thereof:

(*a*) Sugarcane price raised from Re. 1-5 to Re. 1-7 per maund.

(*b*) The special additional excise duty of Re. 1 per maund imposed last year to be discontinued.

(*c*) The practice of fixing minimum price for cane one year in advance adopted.

(*d*) No statutory control on the price or distribution of sugar, but releases of stocks from factories to be controlled, in the same manner as was done in 1952-53, with approximately 25 per cent. of the year's production to be treated as reserve stock from which the Government will make releases at controlled prices, if the market price of sugar rises unduly high.

"The outlook for ourselves and other factories in the Deccan is not so promising as it was a year ago, as crops are likely to be smaller, on account of restrictions in the quantity of irrigation water made available, combined with the necessity of our having to continue with the extensive growing of food crops, and which prevents our giving rest, once every three years, to land on which heavy cane crops are grown requires; it is feared that this constant use of land will, as time goes on, bring about soil deterioration."

In view of the rumours that are afloat in the share market about the possibility of the Government treating the bonus issue to shareholders as income from next year onwards, some of the shareholders desired to know whether the Directors had considered the question of capitalising a part of the Company's reserves and issuing bonus shares. In his reply, the Chairman stated that the Board had not applied its mind to any such proposal. He further indicated, in a very convincing manner, what the guiding policy should be in deciding to issue bonus shares. He said that he should feel assured that the Company would be able to pay a reasonable dividend after the capitalisation of reserves. When once he felt assured of that, he would place the proposal before the Board. But, at present, he was not quite sure that the Company would be able to pay a reasonable dividend on the increased capital, particularly in view of the immediate none too promising outlook for the Company, for the current year, as referred to earlier. He assured the shareholders that, subject to the above principle, he was not opposed to bonus issue as such.

A few shareholders wanted to know about the condition and life of the Company's plant and machinery and whether the Directors proposed to install any improved machinery. In reply to this query the Chairman said that the existing plant and machinery would last for 10 to 15 years. They were being well maintained and kept up to date, their overall efficiency being 83 per cent. He also added that the Company's plant and machinery were the best in this part of the world.

As in the previous year, shareholders evinced keen interest in the Company's housing scheme. They wanted to know the total cost of the scheme, whether the Company proposed to charge any rent, and why the Company should undertake the housing scheme, if it did not fetch any return. In his reply, the Chairman said that the Directors had not yet decided whether to charge any rent or not. There were certain difficulties in the way as, for example, the labour legislation. The Directors were still considering the question. Sir Joseph added that the housing scheme was not undertaken with a view to getting any return on the investment. In fact, no housing scheme, he said, could assure any reasonable return on the investment. The Company had undertaken the scheme with the object of giving more amenities and better mode of life to labour. The total cost of the Company's housing scheme was some Rs. 55 lakhs. The Company had so far provided a sum of Rs. 30 lakhs from out of the profits.

A few of the shareholders desired to know as to what extent the sale of imported sugar had affected or would affect Indian sugar. The Chairman replied that, so far, the sale of imported sugar had no effect on Indian sugar; he did not think that it would have any serious effect, unless much larger quantities than those now programmed were imported.

EXPORT DUTY ON COFFEE APPROVED

COMMERCE MINISTRY'S ANTIPATHY TO INDUSTRY UNWARRANTED

THE House of the People passed, last week, a resolution moved by the Commerce and Industry Minister seeking its approval of the Government of India's recent notification, imposing an export duty of Rs. 62-8 per cwt. on coffee, with effect from 10th October last. The Council of States also approved a similar resolution moved by the Commerce Minister. The speeches from the Ministerial side disclosed that the Government was firm in its convictions about the coffee situation and was not prepared to concede the demands of the growers to refer the whole question of fair prices to the Tariff Commission. It was also evident from the Commerce and Industry Minister's speech that an impression had been created in the Minister's mind that the growth of the coffee industry was lop-sided, and that an evening out of the growth could not be made by increasing the burden on the growers who made more profits and subsidising the small growers.

One of the members from Mysore in the Council of States opposed the imposition of the export duty. He wanted the entire benefit of the higher prices abroad should go to the small growers who numbered about 21,000. He reiterated the suggestion of the planters that the question of cost should have been referred to the Tariff Commission, which was an impartial body. Another member from Travancore-Cochin stated that the estimated revenue of Rs. 37.5 lakhs from the export duty was not enough justification for levying it. He felt that the levy would severely hit the small estate owners who would contribute 60 per cent. of this revenue. He, therefore, suggested that the proceeds of the duty should be placed at the disposal of the Coffee Board for distribution among the small estate owners. He accused the Government of trying to interfere with the working of the Coffee Board which had functioned effectively since it had been formed and had promoted the industry greatly. This, in our view, is a correct statement. There is no doubt that the Government has been interfering with the work of the Coffee Board in such a way that the Board would not be in a position to discharge its duties to the industry and consumers as effectively as it used to do in the past.

Development of Coffee Industry

The Commerce Minister, Mr. D. P. Karmarkar, in his speech in the Council of States, both at the opening of the debate and in the course of the debate, tried to justify the Government's handling of the coffee situation, but he was not convincing enough. He said that the Government was anxious to develop the coffee industry in the interests of both the consumers and the planters, but he did not say how the Government proposed to do it. According to the Commerce Minister, the difference between the Indian price and the world price was very high. The price of Indian coffee was Rs. 146 per cwt., inclusive of an excise duty of Rs. 21, a cess of Re. 1 and administrative expenses of the Coffee Board amounting to Rs. 7-4. The growers got about Rs. 117 per cwt. The price abroad, the Minister added, was somewhere between Rs. 360 and Rs. 400. Considering the large amount of money that would go into the hands of middlemen, if the export of coffee was allowed free of duty, the Government decided to impose a duty of Rs. 62-8 per cwt. In the case of coffee that was exported, there was no excise duty and the Coffee Board was, therefore, in a position to have a clear margin to that extent. The Minister added that the Government expected to get a revenue of Rs. 37.5 lakhs and that it had already collected Rs. 25 lakhs. The aforesaid statement is not completely correct and is misleading. To take, for instance, the Minister's claim that the price of coffee abroad is at a very high premium over the Indian price. It is true that the price of the arabica variety commands a premium of Rs. 200 per cwt., but the point is that the Government has not allowed the export of this variety. So the coffee industry does not get any benefit of this price. The Government has permitted the export of only robusta coffee, which fetches abroad about Rs. 100 more than the Indian price. The margin left to the Coffee Board is, therefore, not as wide as the Minister claims. Incidentally, the facts mentioned by Mr. Karmarkar clearly reveal that the consumer of coffee in this country is getting his requirements at 50 per cent. below the world price.

The Minister added that the Government was interested in the development of coffee, because it felt that it was necessary in the interest of the consumers and possibly later on, the development of a consistent export market. He asserted that the action which the Government was taking to mop up the difference between the internal and external prices of coffee, advanced the interests of all parties concerned. This is too vague a statement to carry conviction to any impartial observer. The Minister ought to have proved how the policy the Government is now following is in the interests of all concerned. On the contrary, this policy, by denying the industry adequate margin of profit, will retard the expansion of the coffee industry. It is detrimental to the economy of Coorg, Mysore and Travancore-Cochin, as it is these States that will suffer, if the coffee industry fails to expand.

In his reply to the debate in the House of the People, Mr. Krishnamachari, Commerce and Industry Minister, merely repeated the performance of his colleague in the Council of States. Thus, he said that it was the Government's intention to give a fair deal to the coffee producers and to protect the small producers among them. The Government was thinking of evolving some method whereby an additional burden would fall on the coffee producers who earned more profits and a rehabilitation allowance would be given to small producers. Although the details of such a scheme are yet to be worked out, the Government's move is most unsound; in fact, it is a retrograde step, inasmuch as it will amount to penalising the efficient unit to protect the inefficient unit. Such a policy will ultimately defeat its purpose of bringing down the consumer's price. It is only through a process of allowing the estates which earn more profits to conserve their resources and do extensive cultivation that the prices can be brought down. This does not mean that deserving small growers should not be given some assistance. What is sought to be emphasised here is that such should not be at the cost of the economic units. It should also not take the form of a subsidy, for experience throughout the world has shown that provision of subsidy only breeds more inefficiency and encourages complacency even among active units.

Referring to the levy of export duty, the Minister claimed that it had been levied in a fair manner. Whatever profits were made out of it would, he said, be equally shared between the Government and the Coffee Board. But it is not clear what exactly the Minister means by this. Does he mean that he proposes to share the proceeds of export duty itself with the Coffee Board? If so, how will the share of profit received by the Board be utilised? Will the producers derive any benefit out of it or will the whole profit be passed on to domestic consumers? We wish the Minister had thrown more light on this point.

Defending the action taken by the Government to deal with the coffee situation, Mr. Krishnamachari said: "So far as coffee is concerned, we are right on the saddle and we do propose to protect small planters; but we shall look to the interests of the consumers of this country primarily. Things are not quite so black as members opposite want to paint them, in order to condemn." Justifying the Government's interference in fixing coffee prices, Mr. Krishnamachari recalled how, between the years 1944-48, the consumers had actually subsidised exports, because consumption was lower than production. The export prices were lower than the local prices and the Coffee Board raised the local prices and made the local consumer pay the difference between the export prices and what was paid to the growers. In 1948, the price of plantation coffee was Rs. 90 per cwt. In 1949, it rose to Rs. 120, in 1950 to Rs. 135 and in 1952 to Rs. 180 per cwt. If the Government had not interfered with the price, it would have gone up further, the Minister claimed. "In charging high prices," the Minister added, "we are killing the home market. The foreign market is not stable for all time. For four years, the local consumer has stabilised the prices for export. There must be some little gratitude for this unfortunate consumer who belongs to the lower income group."

The trend of Mr. Krishnamachari's argument is fairly correct, but he did not reveal the whole story. He did not say, for instance, as to why the prices of coffee shot up to high levels in 1952. They did so, because the Government allowed exports of coffee, against the advice of the Coffee Board. Thus, it was the Government that was responsible for the rise in prices that year and not the Coffee Board. Again, the complaint of the coffee industry is not that the Government is interfering with its affairs, but that it is doing so without a proper understanding of the problems and the needs of the industry and in a manner prejudicial to the long-range interests of the industry, in particular, and the country, as a whole, in general. A typical instance of the Government's bungling is its refusal first to allow exports of coffee this year when stocks were accumulating and its subsequent readiness to allow exports. The time taken by the Government to understand the real situation was so long that, in the meantime, the coffee seeds that accumulated for want of demand suffered natural deterioration in quality, thereby resulting in a national loss. Again, it is true that, in the years 1944-48, the domestic consumer paid a higher price than the world price for coffee. But this has not been without its compensation. His contribution to ensure an economically stable price for coffee has led to a steady increase in the production of coffee from 17,300 tons in 1944-45 to 24,000 tons in 1952-53. This in turn is now responsible for the consumer being able to buy coffee at about 50 per cent. below the world price. In fairness to the coffee industry, Mr. Krishnamachari ought to have presented the other side of the picture too. It is a pity that he should avail himself of every available opportunity to run down the plantation industry which has done so well by the country.

ANOMALIES OF BRITISH JUTE CONTROL

BREACH OF G.A.T.T. PROVISIONS?

THE bold bid by our British contemporary, the *Economist*, at bringing to the surface the great injustice that is being done to the British consumer of jute goods by the continued control on raw jute and jute manufactures is creditworthy. Against the background of marked but gradual progress made towards freedom of commodities, the continuation of this harmful control comes into such bold relief that it can hardly escape notice. Only three commodities, it may be noted here, are now under control and jute and jute goods are one of them.

Jute and jute manufactures are duty-free commodities under the Ottawa Agreements Act, 1932. But war-time shortages which ushered in various controls covered these goods also. Under the Jute Control then initiated, the Government purchased these goods and pooled them with goods manufactured in Dundee for distributing them. The selling prices of home-produced and imported goods were the same, because it was only then that the products would become interchangeable during war-time conditions of irregular supply. This system of equalisation of prices introduced during the war, in fact, brought with it an element of protection not quite discernible then, as attention was concentrated more on winning the war. Like all other essential features of the control, it has continued ever since.

In the result the British Government, through its Jute Control body, is still the sole importer of raw jute from Pakistan and jute goods from India. It does not buy in bulk, but makes day-to-day purchases in the market. Its purchases of jute goods is confined only to what is needed after Dundee produced all that it can, and 60 per cent. of Britain's requirements are met from Dundee. The balance of 40 per cent. is, therefore, covered by purchases by Jute Control, mostly from India. The Control does not trade in home-made jute goods. This is left to private channels but it controls their prices. These prices are fixed on the basis of an agreement with the jute industry in Dundee, allowing a generous margin of profit. Imported goods are also sold at these levels. These latter are virtually very cheap. The *Economist*'s observations in this context are forceful:

"Imported goods are normally much cheaper than Dundee-made goods, and the Controls sells them at Dundee prices. The current market price of Indian hessian, for example, is about 85*s.* 6*d.* per 100 yards for 10 oz.×40" cloth delivered at Dundee, as compared with 110*s.* for similar home-produced cloth. The control, therefore, makes a handsome profit from its sales of imported goods, and pays this over to the Exchequer; the only exception to this norm of high profits—profits made in part at the expense of inflating the package costs of British exporters—is in heavy Indian-type sacking which is not made in Dundee."

Our contemporary points out further that, under the present system, there is no direct price competition between Dundee and the Indian industry, and adds that the absence of competition within the domestic industry obviously cannot be defended. If this is so, then why should controls on jute goods continue? Answering this poser, it says that it is "because the Government wants to protect the jute manufacturing industry in Dundee against competition from cheap Indian goods and because it is frightened that a switch to protection by way of tariffs would worry the Empire free traders, who are too short-sighted to understand the much more flagrant form of protection against Empire jute goods that at present exists." Further, this form of protection, as our contemporary candidly admits, is against the British obligations under the General Agreement on Tariffs and Trade which prohibits quantitative restrictions for purposes of protecting industries. It is a cardinal principal under G.A.T.T. that such restrictions should be used only as a means of conserving foreign exchange.

The presence of this "flagrant form" of protection is attributed to the findings of a Working Party on jute appointed by the Labour Government in 1946. This body found the cost of processing jute into hessian in India at £28 a ton, as compared with that in Dundee. It seems to hold that the gap between Indian and

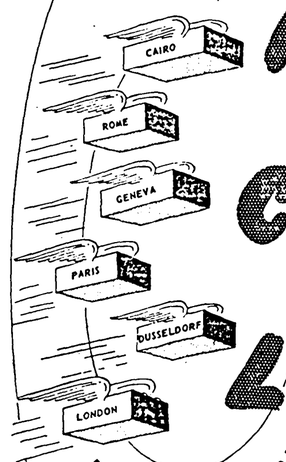
Freight rates are only *part* of your total shipping costs. You have to think of many other things too – packing, insurance, loading charges, dock dues, etc.
When you fly your cargo, these charges are either reduced or avoided altogether; so you *start* with a substantial saving.
IT COSTS LESS...



PUT Wings ON YOUR CARGO!
Insurance, for instance, is based on the *time* your goods are travelling. By air, they take only hours instead of weeks; so you save 90 per cent or more on the *premium*.
You save on handling costs, too. No warehouse charges, no dock dues, and the minimum delay in Customs.
Packing costs are cut right down, because your goods need less protection by air. They mostly travel with light cargo, and they are treated gently. A simple cardboard carton is enough, even for perishable goods.
Finally, we make standard reductions for bulk shipments of 100 lb. or more. And for many types of goods, we offer special reduced rates.
It's worth while to find out how much you save, when you fly your goods by A.I.I. Why not write to us today? Or give us a ring, and our representative will call on you.

DEVELOPMENT OF RAIL TRANSPORT

PERAMBUR COACH FACTORY TO GO INTO PRODUCTION BY 1956-57

LATTERLY, the question of stimulating the pace of expansion of, and improvement in, rail transport facilities has been receiving increasing attention. This is, indeed, encouraging, especially because, next to road transport, it is the railways that serve the bulk of the population in India. The main obstacles in the way of development of rail transport are shortages of locomotives, wagons and coaches. The track facilities are also found wanting not only in improvement but also expansion. The lack of road-rail co-ordination is yet another handicap. And any attempt at eliminating these defects in the larger plan for the development of an integrated system of transport, where each form of transport, namely, roads, rail, inland and coastal navigation and civil aviation, will play an appropriate and useful role in their own sphere of effective service, is welcome.

It will be recalled that it was on 3rd November that Mr. Jawaharlal Nehru, Prime Minister, addressing the conference of the Directors of the Railway Board and the General Managers of railway zones held at Delhi, stressed the need for self-sufficiency in locomotives, coaches and wagons within the country itself. He declared that dependence in these matters on outside help was a sign of weakness. He also referred to the need for providing adequate rail communications, with a view to opening the underdeveloped areas of the country for economic development.

Since then, there have been a number of developments. The Railway Board has placed orders, according to Mr. F. C. Badhwar, the Chairman, for 480 locomotives with Germany, Japan, Austria and Italy, at a cost of about Rs. 18 crores. Announcing this at a Press conference last week at New Delhi, he disclosed that Japan had received orders for 75 broad-gauge and 50 metre-gauge goods steam engines, West Germany for 100 broad-gauge wagons, 20 broad-gauge diesel shunters and 150 metre-gauge passenger steam engines and Austria and Italy for 60 and 20 broad-gauge goods steam engines, respectively. The locomotive manufactures from the U.K. have been unable to secure a share of these orders as their quotations have not been competitive. Mr. Badhwar also disclosed that it was still the intention of the Railway Board to try and obtain, by 31st December, an additional 250 to 300 locomotives under foreign aid programmes and negotiations in this regard had been proceeding.

Chittaranjan Locomotive Works

These engines are required in addition to all the ouput that can be obtained from the Chittaranjan Locomotive Works and the Tata Engineering and Locomotive Works. It is gratifying to note, in this connection that, despite the acute shortage of raw materials like steel and almost a complete lack of supporting industries, Chittaranjan has been progressing satisfactorily and will have manufactured 52 heavy-goods locomotives during the calendar year 1953. If the materials that still have to be imported are received in time, it is planned so to step up the output of the Chittaranjan works as to reach 70 of the same type of locomotives in 1954 and 90 in 1955. This rate of progress is certainly encouraging for a new locomotive works, which is aiming at producing in 1955 at the rate of 90 locomotives per annum. The Tata Engineering and Locomotives Company had also to face the same difficulties when it started and now it is making reasonable headway. These two Indian locomotive works are expected to turn out between them 200 complete engines, if not more, from 1956 onwards.

Mr. Badhwar further disclosed that the Railway Board had already planned orders for more than 76,000 wagons to be manufactured and delivered by 1959-60. Passenger coaches are being manufactured by the Hindusthan Aircraft Ltd. So far as the proposed Perambur coach factory is concerned, the Railway Board proposes to invite shortly tenders from all over the world for plant and machinery worth about Rs. 2 crores. A senior official has already left for Geneva in this connection. The factory, which will be the biggest in Asia and the second biggest in the world, is expected to go into production by 1956-57. It is expected to turn out 350 coaches a year when in full production. For the construction of the factory, a technical aid agreement has already been signed with the Swiss Car and Elevator Manufacturing Corporation, Schlieren, a Swiss firm of railway coach builders. The estimated capital cost of the Perambur factory is about Rs. 5 crores. The Railway Ministry is trying to find most of the equipment and materials from home resources. Only essential plant and machinery worth about Rs. 2 crores will be imported from abroad. After tenders have been invited, a financial expert of the Railway Board is likely to visit Europe to finalise arrangements. The technicians of the Schlieren Integral Coach Corporation are trained specially in the construction of anti-telescopic constructions capable of absorbing a great amount of shocks. These coaches, unlike those used on the Indian railways, will have no separate underframes; the body and the underframe will be built as one unit. Arrangements are also being made to increase the wagon building capacity in this country. By 1956, it is expected, India's capacity will be larger than that of Japan and, therefore, the largest in Asia.

Meanwhile, Mr. S. S. Vasist, member of the Railway Board (Transportation), has announced that the Government of India has been investigating into the possibility of greater co-ordination between rail and road transport in certain parts of the country. This might mean less revenue for railways in some cases or to road transport in others, but this, he said, was inevitable in the larger interests of the country. In saying this, Mr. Vasist has only reiterated the assurance given by Mr. Lal Bahadur Shastri, Minister for Railways and Transport, at the silver jubilee meeting of the Indian Roads and Transport Association on 21st November, 1953, that the suggestions regarding road-rail co-ordination put forward by the I.R.T.D. would be given fair consideration. While this reiteration is welcome, it remains to be seen how soon this policy will be implemented. In this country, the time-lag between the pronouncement of a policy and its implementation is so unduly large that it is useless to set much store by such statements.

CIVIL AVIATION

The progress of civil aviation in India, during the first half of 1953, as compared with that in the preceding half-year, was appreciably better. There was, according to the half-yearly report just released to the Press, an increase both in passenger and freight traffic. Thus, the Indian air transport companies, operating on scheduled services, carried 230,000 passengers during January-June 1953, as against 210,000 passengers in the previous half-year, an increase of 20,000. Freight carried was 48 million lbs., as compared with 47.4 million lbs., a rise of 0.6 million lbs. The number of miles flown and lbs. of mail carried was, however, unchanged at 9.9 million and 4.4 million, respectively. The overall load factor on scheduled services was 68.5 per cent. during the period under review, as against 67 per cent. during the preceding half-year. The unduplicated route mileage covered by air transport companies operating on scheduled services was 26,903 miles. The number of companies operating on these services was 9.

There was also an increase in the number of passengers flown by non-scheduled services, but freight carried and miles flown were lower. Thus, during the period under review, the services carried 54,139 passengers, as against 51,000 passengers, and 32.48 million lbs. of freight, as against 60.7 million lbs. in the previous half-year. The number of miles flown were lower by 0.56 million at 2.24 million. Fourteen Indian air transport companies (including those operating scheduled services) held permits for operation on non-scheduled services.

Thus, on scheduled, as well as non-scheduled, services, nearly 12 million miles were flown and 284,000 passengers, 80 million lbs. of freight and 4.4 million lbs. of mails transported during January-June, 1953. The corresponding figures for the previous half-year were 12.7 million miles, 261,000 passengers, 107.5 million lbs. of freight and 4.4 million lbs. of mail.

Night air services continued to operate satisfactorily during the period under review. Passengers flown were 13,343, freight and freight mails carried were 524,156 lbs. and 1,564,396 lbs. respectively. This gives a daily average of 74 passengers, 2,896 lbs. of freight and 8,643 lbs. of mails.

The most notable event during the period under review was the nationalisation of air services, following the enactment of the Air Corportation Act, 1953, which received the assent of the President on 28th May, 1953. The undertakings of the scheduled services were taken over by two State Corporations, namely, "Air India International" and "Indian Airlines."

The Government of India granted a loan of Rs. 25 lakhs to Air-India International Ltd. towards the purchase of two Super Constellation aircraft. A provisional payment of Rs. 3 lakhs was made to Bharat Airways Ltd., as subsidy to cover the losses incurred by the company in the operation of its scheduled services in the Calcutta-Singapore route during October 1951 to October 1952. Financial assistance to air companies was continued for the period January-December 1952 at the rate of As. 6 per gallon of aviation fuel consumed on scheduled air operations.

As many as 655 aircraft held current certificates of registration at the end of June, 1953. Of these, 167 aircraft held current certificates of airworthiness. The number of subsidised flying clubs continued to be 10. A new club in Rajasthan started activities, with its headquarters at Jaipur in March, 1953. There were 13 major accidents.

INDIAN FOUNDRIES

The Indian Iron Foundry Association, Calcutta, has, through a memorandum to Mr. T. T. Krishnamachari, Minister of Commerce and Industry, protested against the recent increase in the selling price of graded and low manganese foundry grade pig iron by Rs. 20 per ton. It has characterised the increase as "most unwise," especially because the demand for Indian foundry products is lacking in local markets and the products are virtually priced out of export markets owing to high prices. It has pointed out that, on the basis of the availability of 200,000 tons of foundry-grade pig iron for sale to foundries, according to Tariff Board estimates, the present increase will mean an additional burden of Rs. 40,00,000 which, it has maintained, is highly unjustifiable. There is, besides, the increase in the prices of off-grade pig iron ranging from Rs. 10 to Rs. 12, depending on percentage of sulphur content, which is estimated to burden the foundries further at least by Rs. 600,000, on the basis of the availability of 60,000 tons. The Association has held that, if there was any surplus pig iron with the Mysore Iron and Steel Works, it was only of a temporary nature and that this hardly justified an increase in the price of pig iron in general. It is the considered view of the Association that, if the cost of production of Mysore pig iron were high, the proper method of assistance should be provision of finance required for modernising the plants etc., which would go to reduce the cost of production. Further, it has pointed out that the price of certain grades has increased as high as 109 per cent. over that of 1939. Moreover, the existing prices have been unscientifically determined and that there is, therefore, the Association says, a good case for the determination of the prices of pig iron on a scientific basis, which will be conducive to an increase in the output of graded pig iron. In view of all these factors, the Association has urged the immediate withdrawal of the Rs. 20 per ton increase in the price of graded pig iron. It has also taken strong exception to the increase in the retention prices of pig iron produced by the Tata Iron and Steel Co., and the Indian Iron and Steel Co. Condemning this increase as a "flagrant abuse of executive power," it has held that the proper authority to decide the level of retention prices is the Tariff Commission.

WIND ENERGY FOR IRRIGATION

A windmill unit ordered by the Council of Scientific and Industrial Research (C.S.I.R.) from abroad has arrived in Bombay. It will be installed on a selected site in Rajasthan and is expected to start working early in 1954. It may be noted, in this connection, that foreign models of wind mills have to be modified to suit Indian condition Initial studies by the C.S.I.R. have shown that, for directly pumping water, multi-bladed rotors as used in windmill equipment in foreign countries where the average wind velocity is in the region of 12 to 15 miles per hour. The problem of using such windmills in areas where the wind velocity is not so high is essentially one of improving the efficiency of the rotor system and reducing the cost of construction so that it can be operated at low cost. This implies the use of indigenous materials such as bamboo for the The C.S.I.R. is working on this aspect and is expected to conduct field trials in Saurashtra, Madras, Rajasthan and before finally deciding on a programme of windmills for lift irrigation.

INSURANCE IN MYSORE STATE

GOVERNMENT TO LAUNCH NEW SCHEMES

CLOSE on the heels of the Central Government's decision to launch a new drive to make its Postal Insurance Scheme more popular than now comes the news that the Mysore State Government is contemplating a similar move in order not only to make its own insurance scheme more attractive to policyholders but also to extend the scope of the insurance business it is now transacting. The Mysore State Government, it is stated, is considering the question of starting new lines of insurance business, such as fire, marine, crop and cattle insurance.

The Mysore State Government has been running, for several years now, a life insurance business as part of the Government. Unlike the Postal Insurance scheme of the Central Government, which is applicable only to Government employees, the facilities of Mysore State Life Insurance are available to the citizens of that State. With a view to expanding the activities of the Department, the Government appointed a Reorganisation Committee to suggest how best the Department could widen its sphere of work. This Committee has now submitted its report to the Government. The Committee has suggested that the Government should obtain expert opinion as to whether it is legally binding on the Mysore Government Insurance Department to obtain a certificate from the Controller of Insurance to start fire insurance business or it could go ahead without waiting for such a certificate.

It has urged the Government to extend the scope of its general insurance scheme, now confined only to motor insurance, so as to include marine insurance, burglary insurance and railway insurance, air accident insurance, and also agricultural and crop insurance. The undertaking of welfare services, as is done in the U.S., is recommended by the Committee. It has particularly stressed the importance of inaugurating health insurance schemes in four places in the State, namely, Bangalore, Mysore, Kolar and Davangere. It has suggested that the scheme could be started in a modest way by levying a small load on life insurance premiums.

The Committee's other suggestions are: (1) to start a statistical branch in the actuarial, valuation and general section of the department; (2) to introduce non-medical insurance, subject to certain limits; (3) to start a scheme for the training of insurance agents; (4) to examine how best the services of village officers and revenue inspectors could be harnessed for rural insurance work; and (5) to adopt a system of triennial valuation to be made applicable to the official as well as public branches.

The Mysore Government has already taken some measures, in order to make its Insurance Department more active than now. It has created the post of a Joint Secretary, who will be responsible for all the field work, including the starting of pilot schemes under crop and cattle insurance. The accounting system in the Department has been mechanised at a cost of Rs. 3 lakhs. The Government has also increased the rate of interest on the Insurance Funds from 3½ per cent. to 4 per cent. with retrospective effect from 1st July, 1948, with a view to increasing the divisible surplus and declaring a higher bonus.

There is no doubt that the State Government's Life Insurance Department will be able to render more useful service to the citizens when the Committee's recommendations are implemented. But the Indian insurers have some very legitimate criticisms to offer in relation to the work of the Government-sponsored insurance departments, such as the Central Government's Postal Insurance Scheme, and the Mysore State Government's Insurance Department. In the first place, these departments are not subject to the Insurance Act, and therefore do not suffer from the same disabilities as the non-Governmental insurers do. Secondly, they are free from the obligation to pay income-tax. If they also pay the tax and compete with private insurers, the latter would have little cause to nurse a sense of grievance. As things are, these departments work, with an initial advantage, to the detriment of private insurers. Thirdly, these Government-sponsored insurance departments get at least a part of their insurance work done by Government servants. To the extent that this is done, they could afford to show a low expense ratio. But this represents a charge on the general taxpayer who pays a part of the cost of running the departments. Finally, it might be asked whether the Mysore State Government could legitimately grant four per cent. interest on the life funds—private insurers cannot earn this rate—and artificially buttress its Insurance Department's earnings. An impartial examination of these criticisms seems necessary both in the interests of the general public and non-Governmental insurers in the country.

Indian general insurance companies have been perturbed by the directive, issued by the Income-tax Department, requiring the companies to make payment of tax, on the profits due to the overseas treaty offices with which they have reinsurance connections. It would appear that in no other country profits accruing to non-resident companies from such transactions have been made subject to taxation. Indian insurers fear that this requirement would affect the reinsurance facilities available to them in foreign markets. It is learnt that they are taking up the matter with the Central Board of Revenue.

Under the Insurance Act, 1953, a Government export credit insurance plan is to be set up in the Republic of Ireland, and restrictions imposed by the 1936 law against foreign insurance companies will be partially relaxed. The Minister of Industry and Commerce is authorised to provide insurance to persons engaged in the manufacture or distribution of goods intended for export. Insurance is to be restricted to dollar exports for the present and the total liabilities under the Act may not exceed £2 million. The Act also enables the Minister to grant, under reciprocal arrangements, licences to foreign insurance companies to write fire, automobile, and accident insurance in Ireland. The Insurance Act, 1936 contains a provision prohibiting the granting of a licence to a foreign company which did not carry on insurance business in Ireland on 31st October, 1935.

(Concluded from next column)

of office machines is measured relative to salaries; most equipment cost four times as much in France as in the U.S. because of the lower salaries paid in the former country.

Mr. Tattevin referred to the changes made in his own group of companies, with a view to cutting down office expenditure. These changes include: incorporation of the life assurance business with general insurance business; reduction of home office staff from 2,000 to 560, despite an 80 per cent. increase in volume of business; high degree of mechanisation of office operations; job study to develop efficiency in every detail; pay increases and quarterly bonus payments if scheduled progress is achieved; and enlistment of the co-operation of the workers in the development programme through a system of suggestion plans carrying rewards for usable ideas. That these changes have been implemented in France, shows that insurance workers have on the whole co-operated with the management, despite the serious labour unrest which has prevailed in that country in recent years.

EFFECT OF INFLATION ON INSURANCE

EXPERIENCE OF FRENCH COMPANIES

INSURERS are, as a class, respecters of conservative economic traditions. They have a wholesome horror of unorthodox economic policies, of excessive cheapening of money, and of inflation. Since they deal in long-term contracts, they would naturally like to see that a unit of money maintains its value, its purchasing power, over as long a period as possible. They also know that, although inflation may bring some spectacular gains in its initial stages, it soon tends to undermine the very basis of their activity. And yet, insurers in many countries have had to contend with the problem of inflation during and after World War II. Among them, France was one of the worst-affected. Even now, inflation is rife in France, though it has subsided in many parts of the world. How French insurers have attempted to solve the problems of inflation was outlined in an interesting address which Mr. Georges Tattevin, the chief of a group of French companies, delivered recently before the U.S. Life Office Management Association.

Inflation has adversely affected insurance companies in France in two ways. In the first place, the value of the assets, built over many years, has slumped in terms of real value. The assets of the largest French life assurance company, according to Mr. Tattevin, are only about 10 per cent. of the value of the assets of this company before World War I, if true values are used. The second effect of inflation—this is by far the most disastrous effect of inflation—is that people "are distrustful as to the future and they discard life assurance." The French, as is well known, have shown in recent years a marked tendency for hoarding gold which they regard as a good hedge against inflation. Surely, the people's loss of faith in insurance, as such, is the most regrettable part of the effect of inflation on insurance, but it is only natural, under inflationary conditions, that this faith should be lost. Thirdly, there has been a steep rise in the cost of operating insurance. This is because wages have risen six or seven times what they were in 1938 although the value of the average policy has remained practically unchanged.

The primary problem for the French companies is to reduce operation costs. This has been done in several ways. Some life assurance companies which had been independent units even when they belonged to a group of companies writing other lines of business have given up their independence and work more closely with other lines, in order to cut down their operating cost. Again, they have moved towards greater mechanisation of office work. French companies have not, however, mechanised their work to the same extent as American companies. This is because the operating cost

TAXATION SYSTEM IN INDIA

REFLECTIONS ON SOME OF THE QUESTIONS RAISED BY ENQUIRY COMMISSION—V

(By R. K. DALAL, B.Com., F.S.A.A., F.C.A.)

THE Commission, in its question No. 79, asks, "Do you recommend that an element of progression should be introduced in the corporation tax?" Now, corporation tax on companies, it is said, is levied for the privileges the company enjoys by reason of its incorporation, e.g., juridical existence, limited liability, etc. If that is the reason, one fails to see the propriety of its being regarded as additional tax on income. Logically such corporation tax should be allowed as a deduction instead of it, like income-tax, being treated merely as an appropriation of taxed profits. If, on the other hand, it is really an additional income-tax levied by the Government on its income, there is no logic in withholding credit to the shareholders on the distributed profits, like the income-tax. This is an anomaly which enables the Government to get the best of both worlds and leaves the poor taxpayer the worst of a bad deal.

Element of progression could be on the supposition that the corporation tax is really an additional levy of tax on income and not on its corporate existence. Introduction of progressive element could only be justified on this hypothesis. If, however, the argument that corporation tax is a tax on its corporate existence, is conceded, progressive levy is not warranted. What is required is its refund to shareholders as mentioned above.

Differential Rates (Questions 80 and 81)

Differential rates, according to the different types of corporate enterprises, will introduce further complication in the already complicated tax system. The present flat rate corporation tax should be continued. For small industries and cottage industries, partnership basis of assessment, namely, assessing the individual recipient, instead of the corporate entity, should serve the objective of relief without disturbing structure. The only change called for will be to introduce legislation to tax the entity through its members. Proprietory concerns should not be differentiated for assessment, if it is an incorporated entity, duly registered under the Companies Act. The restrictions imposed under section 23A of compulsory distribution of profit should suffice. About holding companies, the question that looms large is the double payment of corporation tax once by the subsidiary company on its own profits and again by the holding company on its dividend income from such subsidiaries. The claim for exemption of intercorporate dividend is justified on the ground that there should be only one tax levied on the income while it passes from the company to its individual shareholders. The holding company merely holds investments of its various subsidiaries; corporation tax on such passive flow of income, pending its ultimate distribution, is not justified.

Banks, Investment and Mutual Companies (Question 82)

In regard to banks, all profits or loss made by it should be regarded as arising under one single source, namely, business. The present practice of dissecting the business' profits into income arising under section 8, section 9, section 10 and section 12 should be discontinued, with a view to giving an additional impetus to development of banking institutions in India. The benefit will be that interest on Government securities will not be entitled to a limited allowance as at present under section 8, but it will get all the deductions stipulated under section 10. Further, property income will be taxed on real income, instead of the notional. The most substantial benefit will be achieved in its right to carry forward and set off losses. At present, set off between different heads of income is granted under section 24(1) in the year of assessment. If the resultant is a loss, then such loss is carried forward under section 24(2), but, because of separate heads, the loss carried forward is not allowed to be set off, if the only profit made in that year is, say, on account of interest on securities. Such income of the next year cannot be reduced, because carry forward is allowed under section 10 only and this income is under section 8. But if all the sources are amalgamated into one head, these difficulties will be obviated.

Investment Companies

Investment companies need a relief from double payment of corporation tax, once by the company which earns the income and again by the investment company which holds and distributes such income.

In case of investment companies, ordinarily, the investments should not be treated as stock-in-trade just as in the case of an individual investor. Where the investment companies dabble in shares and securities just like a dealer with a view to making profit and there are frequent transactions of sale within a very short period of purchase, such transactions, however, should be treated as business transactions and not in the nature of investment. Accordingly, profit or loss arising from such transactions should be treated as revenue profit or loss.

Dividends received by an investment company should be exempted from payment of corporation tax where the profits out of which such dividends are declared have borne corporation tax in the hands of the company paying such dividends.

Insurance Companies

The question of encouraging insurance companies to build up reserves against depreciation in value of their investments should be sympathetically considered. Any amount carried to such a reserve should be allowed as a matter of course. The assessing authorities should not consider that the allowance should be dependent on the fact whether depreciation has actually taken place or not. It should also be made clear that, if the depreciation is wiped out by a rise in value in a subsequent year within or after the same inter-valuation period, though in such a case if the subsequent appreciation has not been taken credit for in the accounts or in the actuarial balance-sheet, the depreciation written off should be allowed and should not be subsequently adjusted.

Mutual insurance companies have no shareholders. Their income is derived from contribution from its own members. The principle of mutuality is completely satisfied and, therefore, no attempt should be made to tax artificially a surplus which is not income but an excess premium contributed by the policyholders. While such profits do not satisfy the connotation of income, income received by such companies through interest on securities and other investments from holding properties, where the mutuality principle does not prevail, should be subjected to tax. In case of mutual and other insurance companies, the simplified method of taxation would be to tax on interest less expenses basis, as contemplated under the Schedule, rule 2(a).

If, however, total exemption is not thought of, a mutual insurance company deriving profits from its participating policyholders should be exempted from payment of tax in respect of such profits on the principle enunciated in *Style's case* and other similar decisions of the English Courts. Its profits arising from the non-participating policyholders alone should be subjected to tax.

The abatement under rule 3(a), in respect of such mutual insurance companies, should not be exclusive of income-tax or provision for income-tax. In case of such companies, there being no shareholders, the burden of tax falls ultimately on policyholders themselves and no attempt should, therefore, be made to ignore income-tax or provision for income-tax while arriving at the abatement under the rule 3(a).

At present, the abatement under rule 3(a) is being whittled down by the Department by various adjustments, e.g., depreciation admissible, appreciations in value of securities credited to reserve account but taxed by the Department in one year and transferred by the company to the revenue account in subsequent year and, therefore, excluded from surplus by the Department in subsequent year. The words in rule 3(b), "any amount either written off or reserved in the accounts" should not be interpreted to mean "any account" except "revenue account." Similarly, "any sums taken credit for in the accounts" should mean only "revenue account" and not any other account as being now interpreted to avoid complications in the assessment of life insurance companies.

Distributed and Undistributed Profits (Question 83)

The present differentiation between distributed and undistributed profits should be abolished. It has created complication, thrown additional work on the staff, resulted in delays, etc. Tax on the profits of the company should alone be imposed, without the refinement of an abatement on undistributed profits or an additional tax on distributed ones. Since it is advocated that this differentiation should be abolished, the question of restricting it to particular industries does not arise.

If, however, the present differentiation is to prevail, the provisions with regard to additional tax on excess dividends should be retained but the outer limit should not exceed the maximum rate of tax on a company. At present, when the maximum rate on companies is four annas plus 20 per cent. surcharge, the outerlimit of additional tax is fixed arbitrarily at five annas which is highly unfair. This is sought to be justified that it is in the nature of deterrent against distribution. It is further pointed out that Government is giving reliefs by way of initial depreciation, extra depreciation, etc., with a view to creating a replacement reserve and thereby conserving its resources and not to frittering away in the shape of dividends. Now, one can understand the argument if such abatements were given only to companies and not to other assessees like sole trader or a partnership. If these reliefs in their case is deemed to be unconditioned by any such restrictions expressed or implied, why should it be implied in case of companies only? Besides, when the additional tax was introduced in 1948, no such deterrent was thought of, although reliefs in the shape of initial, extra and double depreciation were introduced as far back as 1946.

If it is to be ensured that retained profits are applied only for productive purpose, the rehabilitation reserves so created should be earmarked and invested in Government securities and deposited with the Government to be released only for purpose of replacement of machinery, purchase of stocks or fulfilling the needs of working capital.

Operation of Section 23A (Question 83)

The operation of section 23A is very harsh, as it takes no account of the admitted need of the company for conserving profits for replacement, working capital, etc. It also does not take into consideration the fact that the company has already distributed a reasonable part of the profits based on its own trading results. The section, by providing that 60 per cent. distribution must be of an assessable income, stipulates that 60 per cent. of items disallowed shall also be distributed. This involves artificial distribution. In case of a property company, this entails artificial computation of profits which, under the company law, the company is prohibited from distributing. The test suggested for the operation of this section should be 60 per cent. of the profits shown by the company, as per its profit and loss account. As regards the mathematical formula, it is suggested that this should be removed and, instead, the section should be remodelled on the lines of the United Kingdom Act, where the provision is for distribution of a reasonable amount of profit, after taking into consideration the financial needs or commitments of the company.

In this connection, it may be recalled here that it was suggested before the Income-tax Investigation Commission

(i) that section 23A should be amended so as to provide that the 60 per cent. prescribed thereby should be 60 per cent. of the profits as shown in a company's account books;

(ii) that, in the case of banking companies, section 23A should be so applied as to make allowance for the share of the profits which, under section 277K of the Indian Companies Act, they are compelled to transfer to the reserve fund;

(iii) that, in determining the assessable income for the purposes of section 23A, public charges like municipal taxes, cesses, etc., which a company will be bound to pay, should be allowed as legitimate deductions, even though they may not be permissible deductions for purposes of assessment of income-tax;

(iv) and that, in calculating the distributable income, items actually disbursed but disallowed by the assessing officer should either be treated as having been distributed or should be excluded from the assessable income, because they are not in fact available for distribution.

As regards the first suggestion, the Income-tax Investigation Commission did not wish to accept it.

As to the second, the Commission observes that one of the purposes that section 23A had in view in excluding 40 per cent. of the profits from compulsory distribution was to enable the concern to build up a reserve. In the case of banking companies, the formation of such a reserve is upto a limit insisted on by the law, instead of being left to the discretion of the management. The margin of 40 per cent. is sufficient to

permit a banking company to comply with section 277K of the Companies Act, even while distributing 60 per cent. of its income as dividend. Where, however, 60 per cent. has not been distributed and, as a kind of penal consequence, an order has to be made to the effect that the undistributed portion of the assessable income shall be deemed to have been distributed as dividend, it seems to them reasonable to provide that such notional distribution shall be subject to the provisions of section 277K of the Companies Act. The penal consequence contemplated by section 23A is that the defaulting company should be treated as a partnership and that a declaration of dividend need not be insisted on. But it could not have been the intention to include such portions of the income as are precluded by law from being included in a declaration of dividend.

The third suggestion appeared to be reasonable to the Commission. An honest declaration of dividend cannot include amounts, which, under the law, a company is bound to pay for public charges. The mere fact that the Income-tax Act does not allow such items to be deducted when calculating the assessable income will not reflect on the reasonableness of the conduct of the company, nor does it seem fair to insist that even such public charges should be met out of the 40 per cent. excluded by section 23A. The Commission accordingly recommends that, in determining the assessable income for the purpose of section 23A, public charges should be excluded. The Taxation Enquiry Commission should bear this suggestion in mind.

In dealing with the fourth suggestion, it has to be remembered that, by referring to the "assessable income," the section has excluded all revenue expenses and permissible deductions. It is, nevertheless, possible that, by reason of difference of opinion or in method of calculation between assessing officer and the company's officers, the amount distributed may prove to be less than 55 per cent. insisted on by the second proviso to section 23A as a condition precedent for giving a *locus penitentiæ* to the company for escaping a penal order under this section. As such situations may arise even from honest difference of opinion, the second proviso to section 23A may be enlarged so as to include cases where the distribution actually made has fallen short of 60 per cent. of the assessable income by reason of the assessing officer determining the assessable income to be greater than it was according to the calculations made by the company.

Another feature of this section which requires review is the action taken by the Income-tax Officer under section 23A. It is not taken simultaneously with the assessment of the company. It is taken much later, even after years. This places the shareholders and the company in a very awkward predicament having to pay tax on an adjustment of this artificial income, although the company has declared no dividend. And further the company itself may find it difficult to meet the shareholders' liability as provided in the section on account of accumulated subsequent years' losses. It should be provided that the Income-tax Officer must take an action within six months of the completion of assessment and, if he fails to do so, no action should thereafter lie. In the United Kingdom Act, there is a provision allied to this and it should be copied.

If upon assessment it is found that, on account of add-backs, the company's distributable profit has increased and, therefore, the previous distribution is found deficient, the Income-tax Officer should be empowered to give opportunity to the company of a further declaration so as to make up the said 60 per cent. requirement.

Corporation Tax and Shareholders' Super Tax (Question 84)

Profits subject to corporation tax should be subjected to super-tax only after credit is given to the shareholder on account of not only income-tax but also corporation tax paid by the company. This is on the ground that corporation tax is an additional income-tax and should receive the same treatment in the hands of the shareholder.

Industrial Enterprises (Question 85)

Industrial enterprises undertaken by the Government or local bodies should not be subjected to tax, for they do not exist for individual benefit but for the nation. If, however, their enterprises compete with the individual business, i.e., if they do not enjoy a monopoly in them, some form of tax on their earnings would be justified, in order not to give them an unfair advantage in market competition of their products or services.

Evasion and Avoidance of Tax

Though the suggestion for the utilisation of services of chartered accountants (question 86) for determination of taxable income is an admirable one in itself, in the present atmosphere and context of tax avoidance by the taxpayer and the tax-grabbing practice of the Department, it is not likely to result in any very great advance on the present tenor of assessments.

Chartered accountants would be willing to co-operate with the Department with a view to expediting arrears, prompt settlement and making of fair assessment, but the dice is heavily loaded against them for the following reasons, among others:

(1) The taxpayer himself is not frank with the accountant he employs.

(2) He assesses the value of a chartered accountant more by the reliefs, convenience of payment, delays in or instalments in payment of tax which he is able to obtain through his consultant—or by the ability of his consultant to get quick disposal of his case without much scrutiny, by reason of his influence with the officer, his hand and glove relationship with the authorities and so on.

(3) He is not impressed by the legal acumen of his adviser for straightforward dealings with the Department which, in his opinion, yield poor dividends. It involves long and costly appeals, cross appeals, tribunal hearings and, on questions of law, High Court references. All involve trouble, expenses and uncertainty.

(4) He naturally wishes to avoid all these interminable delays and expenses by seeking an expert who is 'known' to the officer or who has his 'ear.'

(5) He does not mind expenses and costs if his fraud and manipulation are hushed up, with a little expense for services rendered.

(6) In his state of affairs, what chance has a chartered accountant to gain the confidence of his clients and secure quick and fair settlement with the officer?

(7) In the present mood, the Department makes heavy assesssment, extends the benefit of the doubt to itself instead of to the assessee, is never afraid to reject books on the smallest excuse, gives no consideration for the needs of a business and practice, disallows expenditure merely on the suspicion that it is in its opinion excessive (not collusive), calls upon the assessee to make immediate payments of large arrears of taxes, advance payments and in default levies unconscionable penalties, treats the assessee as if he were a proved tax dodger deserving no sympathy, gives curt treatment to assesees and their representatives, delays assessments which results in carry forward of loss and consequent delay in repayment of advance taxes or refunds, asks for accounts and documents 15 or more years old, levies gross profit at will, without consideration whether such gross profits are ever justified, all these and more have made the Department as unpopular as the tax itself. How could a chartered accountant expect a fair and unprejudiced deal?

(8) If a chartered accountant starts giving a certificate and through the negligence of the taxpayer or innocent omission of the accountant to detect something, suspicion will descend on the *bona fide* of the best of accountants. And, if something is ultimately established—not in the nature of dishonesty but omission—he will be faced with a report to the Disciplinary Committee of the Institute. And the worry and expenses of meeting and substantiating his innocence will outweigh the small fee he will earn by this procedure.

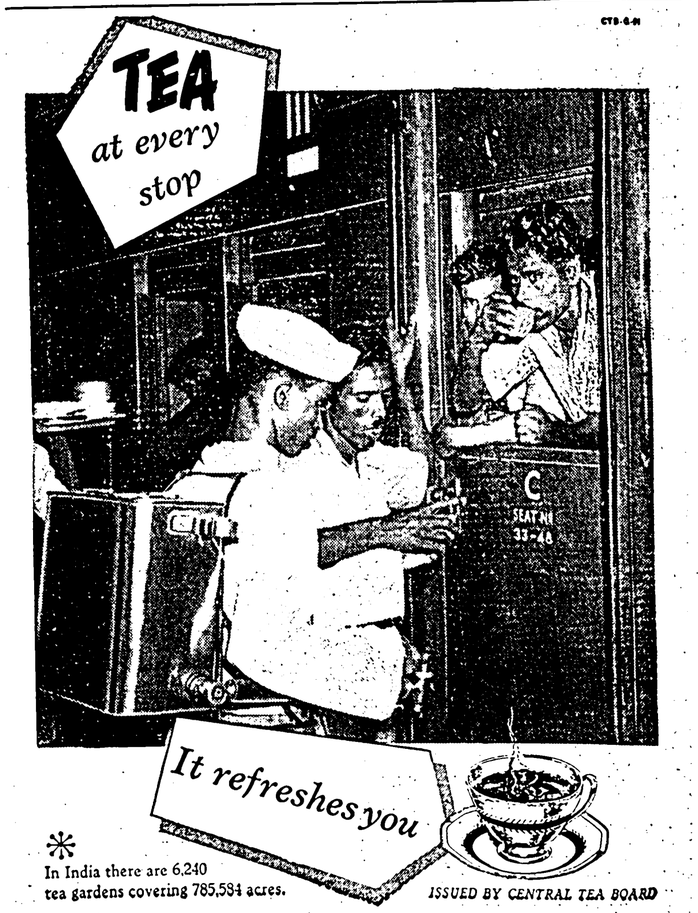
(9) Any complaint proceeding from authorities even if it be found groundless will have compulsorily to be referred under the Chartered Accountant Act to the High Court for disposal. One can imagine the cost, anxiety, worry and publicity attendant upon it.

(10) Unless the atmosphere to work in a friendly spirit of co-operation is established, any move for the greater use of the services of Chartered Accountants for assisting the determination of the taxable income of assessees is bound to fail.

(11) The Government must purge the Department of unwholesome elements of graft, corruption and inefficiency amongst its officers. And the public must come to regard payment of taxes as a legitimate burden to be promptly discharged for the amenities of a good citizenship.

In the present atmosphere of suspicion, prejudice and deliberate attempt of the taxpayer to avoid payment of legitimate taxes and the tax-gatherer's anxiety to collect as large a tax as he can, continuation of the present *status quo* will be the best thing.—*All Rights Reserved.*

(To be continued)



NEW PUBLICATIONS

India Without Illusions. By "Vivek." Published by New Book Co., Ltd., Hornby Road, Bombay. Price: Rs. 4-4.

THE author of this publication, "Vivek," needs no introduction. For nearly three years, between 1950 and 1953, he wrote regularly, week after week, for the *Times of India*. Although he is not a prolific writer nor a professional journalist, his writings have acquired a wide readership. There is a certain naturalness about his style, which makes all that he writes so pleasant to read. The reproduction of his articles in book form, entitled *India Without Illusions*, will, therefore, be welcomed by his many admirers.

This anthology seeks to present the author's views on three aspects of India's national life—India's foreign affairs, its internal political problems and its economic problems. It is difficult to sum up "Vivek." Speaking broadly, he is to the "right" in India's foreign affairs, a good liberal, in the best sense of that word, on domestic political matters, but alas, something of a bureaucrat where the country's economic questions are concerned. He is a staunch advocate of controls and planning. He is, at the same time, a perfect democrat. He may not, of course, hold popular views, though he is at all times with the people. It is this quality which makes his writings appeal only to a select public. But his arguments do certainly make an appeal.

On India's foreign affairs, he writes with a clear mind and a sure grasp. He is alive to the dangers of Communism, though he never overrates them. He says that the Communist view is that "no country is free, unless it is ruled by the communists." He is sharply critical of India's neutrality. There is much in the U.S., in the democratic West, that extorts his admiration. Nevertheless, he is disturbed by certain trends in the U.S., and warns against the dangers that must come through the failure of that country to "live up to its true principles, the best in its past and present."

"Vivek" is wisdom itself, when he writes on India's internal problems. He presses home the need for electing sound legislators, for clean administration for a certain pause in hasty "moral" legislation. He lays bare the failure of Prohibition. Prohibition, he shows, is a policy "based on false promises, unsuccessful in execution and most harmful to the general weal." He adds: "Ideology has its addicts, no less than drink. This is a plea for temperance in both." He warns too, against ideological innovations in the educational system, against the hasty replacement of English by regional languages. All this does not mean that he loves "inaction." He is for purposeful action, for he realises the basic strength and weakness of Indian nature when he says: "Not only does violent action not come to the Indian naturally but also, perhaps, even action itself, specially action, positive, concerted and widely organised."

Although the anthology has been done with great discrimination, it is to be feared that the articles which deal with economic questions may not possess the same enduring quality as the author's other articles. He insists that *laissez faire* is dead—though one may doubt whether it has been allowed to live at all, in this country—that State initiative is necessary, that an integrated system of controls is clearly indicated. One may not always find oneself in agreement with all that he writes on these questions. But no one will doubt that he is right when he pleads for both a clean administration and an honest merchant class.

Although "Vivek" praises, blames, inveighs, and criticises, as each of the many problems he has dealt with demands, he is essentially an optimist who believes that the country could, despite many obstacles, be set on the road to prosperity. His optimism stems from the consideration that the country is held together "firmly and strongly," the forces of "common nationhood" have been strengthened, the "liberal democratic, egalitarian spirit" of the times has been accepted, and the "defence forces, well-trained, well-aimed, non-political, have been kept at a high pitch of efficiency." Much has been done. And the causes that hold up progress could be removed by "integrity, wisdom, and courage on the part of those who govern." "Vivek" has consistently pleaded for these qualities in all his articles."

Direction of International Trade—Annual Issue. Joint Publication of the Statistical Office of the U.N., the I.M.F. and the World Bank. Available in India: Oxford Book and Stationery Co., Scindia House, New Delhi. Price: 50 cents (U.S.).

Considering the inadequacy of accurate and reliable statistical data regarding the trend of world trade in the years following the Second World War, the need for up-to-date information on the movement of international trade among different countries and regions cannot be overemphasised. This need has been amply met by the publication under review—*Direction of International Trade—Annual Issue*. The *Issue* is designed to present trade-by-country statistics, for the years 1937 and 1938 and for 1948-52.

The table for each country shows the value (in U.S. dollars) of the country's exports to and imports from its trading partners in the years 1937 and 1938 and for 1948-52, together with the annual average in the two-year period 1937-38, as well as summaries of the trade obtained by grouping the partners into geographical regions and into aggregates of current economic interest. Where the returns of a country showing its own import and export trade in any period are not available, "derivative" figures obtained from the trade returns of other countries have generally been tabulated, providing an approximate indication of the magnitude and direction of the trade of the non-reporting country.

The *Issue* contains two types of summary tables. A table, prepared by the International Monetary Fund for each of the areas described, shows the trade, with the whole area, of the reporting countries listed in the stub. The headings "exports" and "imports" refer to the exports and imports of the reporting countries. The totals aggregating several reporting countries are the sums of the figures shown for the reporting countries, except that estimates are included (*a*) when data available for some periods are missing for others, and (*b*) to include as "reporting" countries such as Argentina, the Netherlands, Antilles and Saudi Arabia. A matrix, prepared by the Statistical Office of the United Nations, shows the exports of the countries and regions specified in the stub to the countries and regions specified in the heading. A general note about the figures and a description of the regions are carried in footnotes.

The summary tables just described are produced to serve different purposes. Table I summarise the data contained in the country tables, using estimation only to fill obvious gaps. The matrix II, on the other hand, achieves the widest coverage possible. An estimate, based on the reported figures of its trading partners, is wherever possible, included for each country not itself reporting adequate data if the country's trade is at all important. In this way it is, for instance, possible to estimate and include the trade of Eastern Europe and China with the rest of the world (though not the trade of these countries with one another).

Indian Economic Problems. Edited by A. N. Bali, M.A., Economic Adviser to the Punjab National Bank Ltd. Published by Messrs. Atma Ram & Sons, Kashmere Gate, Delhi. Price: Rs. 8.

This book, *Indian Economic Problems*, is not a textbook, as many might think from its title, but it is a collection of thoughts on the economic problems of the country by a well seasoned banker. Prof. Bali has done a distinct service to the reading public in collecting together the thoughts of Lala Yodh Raj, Chairman and General Manager of the Punjab National Bank Ltd. As one who has guided the destinies of one of the "Big Five" of the Indian banking system, his views have the merit of being backed by seasoned experience. There is always a difference between the academic economist, who is fettered by his bookish theories, and the practical economist, who has to find a solution for a problem on hand rather than just give a theoretical dissertation on the pros and cons.

The present collection contains selected portions from Lala Yodh Raj's addresses at the annual meetings of the shareholders of his Bank, writings in various journals as well as portions from memoranda prepared by him at the request of institutions and Governments—State and Centre. He had, for instance, occasion to give the benefit of his knowledge to the Punjab Government on the problems that arose out of the Partition. He had prepared a small outline for the promotion of an industrial finance corporation for the Punjab. Both are included in the book. More than all these, his views on Indian banking are most valuable. Knowledge of comparable countries, combined with knowledge of the conditions which limit the applicability of comparison, is of value to us when considering our own problems. Discriminating and critical appraisal of one another's achievements is a significant feature of the book. Despite all the restrictions that the Reserve Bank might have imposed on him as a Director of a leading joint-stock bank, he has throughout a soft word to say about that institution.

The publication has been well planned into seven sections: the first deals with planning; the second contains a good description of banking theory and practice; while dealing with currency, he has expressed his views on cheap money policy also. The section on economic problems contains his current thought. The chapters on economic relations between India and Pakistan and food indicate some of the varieties of topics he dealt with from time to time. Although as many as 15 chapters are relegated to the miscellaneous section, they also contain some important subjects such as the industrial development in the Punjab, regulation of stock exchange and the need of exchange control between India and Pakistan.

Some of his observations are very pertinent. While dealing with the need for capital goods, he observes: "We waste most of our time in speculative arguments but do not plan production with the help of industrialists and increased employment in the country." Dealing with the need to make investment attractive to the "little man," he observes that "no useful purpose would be served by directly approaching him. He must be approached through institutional agents such as the banks.... A rise in the rate of interest is clearly called for." Dealing with the banking system, he suggests that integration of banks or amalgamation into bigger units should be freely allowed by the Reserve Bank and the bigger amalgamated units should be encouraged to open a network of branches in rural areas of the country. He is convinced that amalgamation alone will enable the banks to reduce their cost of banking service to pass on the benefit to the savers and borrowers of money.

MORE & MORE LEADING TEXTILE MILLS go in for TEXMACO AUTO LOOMS

because they are:

- Easy to install
- Simple to operate
- Efficient in performance
- Perfect in weaving

Here's how 96 TEXMACO AUTO LOOMS run satisfactorily in a big mill in Madhya Bharat.

Jiyajeerao Cotton Mills, Ltd.,

Rly Sta. Birlanagar, Central Rly.

3rd September 1953.

M/s. Texmaco (Gwalior) Ltd., Gwalior.

Dear Sirs,

We have pleasure in informing you that the ninetyain Automatic Looms which we had purchased from you in December 1952 are working to our entire satisfaction. All these looms are being worked three shifts and we are getting 90/95% efficiency. We may also mention that we did not experience any difficulty in erecting these looms. Besides, we are satisfied with the efficiency and working of these looms, we find their workmanship and quality equal to any foreign make loom of similar type.

For Jiyajeerao Cotton Mills Ltd.

Manufactured by:

TEXMACO (GWALIOR) LIMITED.,

Managing Agents: BIRLA BROS. (GWALIOR) LTD., P. O. BIRLA NAGAR, GWALIOR.

PROTECTION TO CYCLE INDUSTRY

CASE FOR CONTINUANCE EXAMINED

THANKS to the claim for continuance of protection put forward by the cycle industry, its problems have, once again, come to the forefront of public attention. The industry is already playing an important role in the economy of the country. And, with its size as a sub-continent and with the plan for economic development under implementation, India offers a great future to the cycle industry, provided good quality bicycles at low rates which are within the reach of the common man are produced. This point was forcefully expressed by Mr. M. D. Bhat, Chairman, Tariff Commission, last week, while opening the public enquiry into the continuance of protection to the industry. He said: "The bicycle industry has an important role in the economy of the country, and it should fulfil it by endeavouring to reduce all the deficiencies that may exist in its organisation, equipment and process of manufacture, always placing before itself, as its immediate aim, the attainment and maintenance of the highest international standards of quality and performance in its products."

Mr. Bhat's general round-up of the present position of the cycle industry in India makes pleasant reading in several respects. In 1949, there were only two units engaged in the manufacture of bicycles, one, the Hind Cycles Ltd. at Bombay, and the other, Hindusthan Bicycle Manufacturing Industrial Corporation Ltd. at Patna, in Bihar. Since then, three more units have appeared on the scene: (a) Sen-Raleigh Industries of India Ltd., Asansol: (b) T. I. Cycles of India Ltd., Madras, and (c) Atlas Industries Ltd., Sonepet. Each of these factories has an ultimate installed capacity of 100,000 cycles per annum on single-shift basis. Another unit, India Cycle Manufacturing Co., Ltd., Calcutta, which was one of the biggest units manufacturing spare parts, has also started assembling complete bicycles, and has a capacity of 10,000 cycles per annum. These four units are engaged in manufacturing-cum-assembling operations and their schemes of production have been approved, subject to certain conditions, by the Government. The extent to which the different units in the industry have made progress with the manufacture of components and parts varies considerably.

Total Capacity

The total capacity of all the six units in the industry is 449,500 cycles, according to the producers. The Ministry of Commerce and Industry has estimated the capacity at 417,500 cycles, and states that it is difficult to assess the rated capacity, as some of them have gone into production only recently. The actual production is, however, far below either of these two figures, though there has been a steady increase in recent years. The output of bicycles was 103,153 in 1950, 114,275 in 1951 and 196,950 in 1952. In the current year, upto July, 130,189 cycles were produced and on this basis the total output for the whole year may be placed at 223,179 cycles.

Apart from the development of the whole cycle manufacturing industry, a number of ancillary units engaged in the manufacture of components, parts and accessories, has also expanded. It is stated that there are 24 such units situated in Bengal, Bombay, Punjab and Delhi. The value of production by these 24 units, as estimated by the Development Wing of the Ministry of Commerce and Industry, amounted to Rs. 88.9 lakhs in 1951, Rs. 77.3 lakhs in 1952 and Rs. 27.3 lakhs in January-May, 1953. Besides, there are also several other units in Madras, P.E.P.S.U. and U.P. These units are producing such components as mudguards, frames, cones, brakes, pedals and races and also accessories such as carriers and bells. Unfortunately, full data regarding the ancillary units are not available. But Mr. Bhat's remarks on the development of this ancillary industry are worth noting here. He said: "Even such information as is available does, however, show that a kind of ancillary bicycle industry has sprung up in recent years and, while it has not been able to establish itself as a supplier of components and parts for original equipment to the main manufacturing units, it has achieved a position of importance as a supplier in the replacement market."

Domestic Demand

Although estimates of the size of the domestic market vary, even the most conservative estimate appears to be above the total rated capacity of the producing units, let alone their actual production which, as already mentioned, is less than half of the capacity. The Tariff Board enquiry held in 1949, estimated the domestic demand for bicycles at 350,000 in 1949-50, 375,000 in 1950-51 and 400,000 in 1951-52. The information now available with the present Tariff Commission reveals that most of the producers place the estimate of demand at 450,000. The Bombay Cycle Merchants' Association puts it at 600,000 cycles in 1953-54, rising to 650,000 in 1955-56. The All-India Importers' Association, Bombay, supports the figure of the Merchants' Association. The Ministry of Commerce and Industry places the demand at 500,000, pointing out, at the same time, that the demand cannot be taken as static, because it depends upon various factors such as the standard of living, the purchasing power of the people, the road construction programme, etc. The Planning Commission also seems to agree with the Ministry's figure. It further estimates that the total number of bicycles in India is about 1.5 million. Estimates have also been made of the requirements of components and parts for replacement by the trade. The value of such parts and components is placed at Rs. 3 crores.

Demand for Assistance

The industry has asked for continuance of protection and assistance for another three to five years. The grounds urged in support of its claim are that, as a result of protection, it has already recorded marked progress. Production has increased considerably; quality of the product has improved and there are good prospects of the industry showing expansion in future and meeting the entire requirements of the country. Withdrawal of protection at this stage, it is contended, will cause a setback to the industry, especially because the production costs are still somewhat high, owing to increase in the costs of labour and raw materials. Consumers' preference for imported products still persists and competition from low-priced imports from certain countries may be expected in the coming years. Continuance of protection, therefore, would help, it is claimed, consolidate its position. Besides, the manufacturers have also asked for help in the form of quantitative restrictions on imports on the basis of estimated consumption and production, drawback of duty on imported raw materials, reduction of freight rates on imported raw materials, better facilities for transport of raw materials and finished goods by rail, exemptions for raw materials and components used in the manufacture of bicycles from local taxes, early arrangements for the manufacture of steel tubes in the country, expeditious issue of licences for the import of certain items of stores and removal of the anomaly of a higher rate of duty on strips imported from countries other than the U.K. than on tubes.

Conflict of Interests

These claims for assistance by the industry deserve to be carefully considered by the Tariff Commission. Before coming to a final decision, the Commission will have to analyse the implications of a series of conflicts of interests to the country's economy and reconcile them. One of these relate to the existence of two different kinds of manufacturing units, namely, (a) the units which are manufacturing nearly the whole cycle, that is, those which are making as many as 93 per cent. of the parts going to make up a cycle and (b) the units engaged in manufacturing-cum-assembling operations. The latter units are reported to be building frames from imported tubes and fitting them with imported spares and components in order to make a whole cycle. These units have been established by indigenous enterprise in collaboration with foreign producers. One of the conditions under which the foreign producers were allowed to participate with Indian capital was that the permission to import components would be tapered off on the basis of production programmes laid down by the Government. But the whole cycle manufacturing units which are purely Indian-owned, have complained that the Government has not been keen on insisting on the observation of this condition. The failure on the part of the Government to do so would appear to have resulted not only in the postponement of achieving the manufacture of whole bicycle in the prescribed time but has badly hit the units engaged in the manufacture of certain spares and components in the country. There is, therefore, force in the contention that the Government should insist on the units sticking to a definitely bound phased programme of manufacturing the entire bicycle. As the foreign combines have with them the know-how, the technical skill and finance, there is no reason why they should not carry out, within the stipulated time, the obligations they accepted when they were allowed to take up cycle manufacturing in this country. This is a matter into which the Tariff Commission must go a little deeper and see to it that the country's plan for achieving self-sufficiency in cycles and cycle parts is fulfilled at an early date. The Government, for its part, will do well to ensure that import licences for spares and components issued to these combines are tapered off in proportion to the rate of manufacture of the components in their own factories specified in the phased programme.

Indian-owned Sector

With regard to the purely Indian-owned bicycle industry, it must be said that it is already over a decade old. It has been enjoying protection for more than six years now. It is also gratifying to note that there has been considerable improvement during this period in the quality of bicycles produced by this sector. According to the claims of one of the major producers of whole bicycles, it would appear that there has been good demand for his product, though there is still some consumers' prejudice. These considerations, coupled with its plans for raising the quality of its cycles further, entitle the industry to protection. But, while deciding the quantum of protection, certain points regarding quality and price should also be borne in mind.

With regard to quality of the Indian-made products, the data available with the Tariff Commission appears to be not very encouraging. This is evident from Mr. Bhat's remarks. In his address at the opening of the enquiry he observed:

"It is mentioned that the finish of the indigenous bicycle is inferior; the enamelling on the frame deteriorates after a few months, the lining peels off and breakages occur in the area of contact between the lugs and frame pipes. It is also complained that the indigenous bicycles are not of uniformly consistent quality and that the quality varies from one consignment to another. Other specific complaints are that the rims are made from mild steel, the forks, and frames are not strong enough; the movement of wheel is not free, steel used appears untampered, etc."

These drawbacks of the Indian-made bicycle must be viewed against the fact that the buyer of these bicycles in India belongs mostly to the middle and lower middle class which has little money to spare for carrying out frequent repairs and replacements. Nor can he be expected to afford to take chances by buying low quality bicycles simply because it is cheaper as compared with imported cycles, or cycles assembled from imported parts. For he can buy a cycle only once in his lifetime. Consequently, the industry has a duty to serve him by giving him a durable product which will stand the wear and tear of heavy use well. They will be well advised to use high quality material. If indigenous raw material is not suited for that purpose, no false sense of national prestige should be allowed to stand in the way of using imported raw material, until such time as good quality raw material is produced in this country. The authorities should leave no stone unturned to see to it that the manufacturers adhere to standards. The manufacturers should be insisted upon to introduce quality control also. 'As it will take some time to comply with these conditions, the Commission will do well to set a time limit of, say, three years. If at the end of three years the industry fails to rise to the country's expectations, it will forfeit the right to get protection.

Prices of Bicycles

Prices of the indigenous products vary considerably, but prices bear a relation to the quantum of protection given to the industry. And, therefore, the basis of prices charged by different producers requires a microscopic scrutiny at the hands of the cost experts of the Commission. In June this year, the selling prices of popular imported cycles were: Raleigh Rs. 287-4, B.S.A. Rs. 243-4, Hercules Rs. 195, and Phillips Rs. 210-4. As against this, the indigenous producers' prices to consumers are: Hind Rs. 145 (including seat), India Rs. 140, Atlas Rs. 147, Sen-Raleighs Rs. 175 and Hercules-India Rs. 169. These figures give a rough idea of the structure of prices in the Indian cycle market. It is seen from these rates that the prices of imported cycles are considerably higher than those of indigenous cycles. This is presumably on account of the heavy import duty on imports of whole cycles. Again, the rates of Hind and India cycles produced almost wholly from indigenous components are lower than the prices charged by either of the two combines. This difference is evidently due to the high duties on imported components used by the combines. And the cycle trade in the country is of the opinion that the rates charged by certain Indian producers allow for a wide margin of profit, rendered possible by the heavy duty of 73½ per cent. standard and 63 per cent. preference, *ad valorem*. In its opinion, the prices charged by the domestic manufacturers are higher than what they should be, considering the quality of the material used. In short, it questions the veracity of these manufacturers' claim that the industry has passed on the benefit of high protective duties to consumers. Consequently, it has urged a reduction in the import duty to 24 per cent. This contention of the trade also deserves close scrutiny. Of course, in any decision favouring reduction in duty, the Tariff Commission should bear in mind the prices quoted by foreign manufacturers. Recently, a 10 per cent. cut in export prices of cycles was made by the British cycle makers. As a buyers' market has already been in existence, any drastic cut in the existing rates might jeopardise the basic economy of the industry. Should, however, the present prices reveal the existence of heavy profit margins, measures should be suggested to have them brought down to reasonable levels, so that the poor consumer is not deprived of the benefits of the buyers' market.

Components and Spares

The problem of protection to the bicycle industry is complicated further by the presence of a large number of small unorganised units engaged in the manufacture of components and spares of bicycles. Before compelling the major producers of bicycles in India to buy parts from these units, small units must be reorganised on scientific lines and then should be enabled, through suitable measures for supplying their needs of raw materials, etc., to produce standardised parts in adequate quantities, so that the main producers of cycles are not handicapped by either lack of regular supplies or sub-standard components. Secondly, in lines where the units are capable of producing quality products according to specifications, the main producers may be asked to co-ordinate their methods of manufacture in order to accommodate the small units. As, however, no

ANOTHER YEAR OF RECORD RESULTS FOR INDIAN CABLE COMPANY

FINANCES GOOD—OUTLOOK BRIGHT

HEARTENING results are disclosed by the audited accounts of the Indian Cable Co., Ltd. (Managing Director and Chairman: Mr. A. R. Driessen, Calcutta) for the year ended 31st March, 1953. The turnover of the Company was again a record in its history, the earnings registering an impressive rise. The trading profit for the year amounts to Rs. 104.24 lakhs, the highest seen by the Company so far, and surpasses the previous year's record of Rs. 87.63 lakhs by Rs. 16.61 lakhs, or 18 per cent. The net profit, however, has recorded a small drop from Rs. 34.04 lakhs in 1951-52 to Rs. 31.59 lakhs. This fall in net profit is due to the larger allocations to depreciation and taxation. A decent sum of Rs. 8.36 lakhs has been set aside for reserves, though they represent a sizable decline from that provided last year. The dividends on preference (participating) and ordinary shares have been comfortably maintained at 10 per cent., made up, as in the previous year, of a dividend of 7½ per cent. and bonus of 2½ per cent.

The impressive results, as above, were the outcome of the Company's alertness to "take advantage of the accumulated consumer demand due to a long period of shortage." The following comparative table gives an idea of the marked progress made by the Company in recent years:

(In lakhs of rupees)

	For the year ended 31st March			
	1953	1952	1951	1950
Trading profit	104.24	87.63	70.34	69.98
Reserves	30.55	24.09	21.90	19.02

Depreciation	5.40	1.64	1.41	1.36
Taxation	36.40	27.04	15.57	15.70
Net profit	31.59	34.04	27.81	23.69
Transfer to reserves ..	8.36	12.50	15.29	17.47
Dividends—				
Preference (participating)	1.29	1.29	3.22	1.93
Ordinary	15.29	15.29*	7.07†	3.86
	(D. 7½% + B. 2½%)	(D. 7½% + B. 2½%)	(D. 15% + B. 10%)	(D. 15%)
Carry forward	18.94	9.30	4.73	0.58

* On the higher capital of Rs. 152.89 lakhs increased from Rs. 70.75 lakhs.

† On the higher capital of Rs. 70.75 lakhs raised from Rs. 15 lakhs in January, 1951.

It will be observed that the Company's trading result in 1952-53 has followed the pattern of the preceding favourable trading years. The impressive rise in profit has been achieved notwithstanding the steadily increasing competition and the losses incurred by the decline in the value of large stocks of raw materials which the Company had had to carry to be able to meet the obligations arising from the rate contracts for its products entrusted by the Government of India. There has been a sharp rise in establishment and other expenses, of which salaries and wages account for nearly Rs. 2 lakhs and compensation payable on cancellation of purchase contract for Rs. 1.70 lakhs. The increase in the provision for depreciation from Rs. 1.64 lakhs to Rs. 5.40 lakhs is in consonance with the substantial additions to the gross block made during the year. The provision for taxation has been stepped up by Rs. 9.36 lakhs to Rs. 36.40 lakhs, which represents more than a third of the trading profit. Commenting on the high level of taxation, Mr. A. R. Driessen, Chairman, in his statement to the shareholders, accompanying the Directors' report, says: "I can only join with other industrialists in issuing the warning that, whilst taxation on industry is maintained at its present high level, it becomes increasingly difficult to provide for the replacement of plant and the undertaking of additional capital expenditure so essential for the development of the Indian economy." This is evident from the fact that in the last three years alone, the provision for taxation has been raised by Rs. 20.70 lakhs, while the addition to the reserves has been cut by Rs. 9.09 lakhs to Rs. 8.36 lakhs.

In spite of the heavy burden of taxation, the Company has been pursuing the conservative policy of building up its reserves, "in order to be able to face with full confidence the lean years that inevitably follow a period of maximum trading in a sellers' market." The addition to the reserves this year is made up of Rs. 5 lakhs transferred to the general reserve and of Rs. 3.36 lakhs being the provision made for losses on forward purchases. The latter provision and the compensation payable on cancellation of purchase contract referred to earlier have been occasioned by the drop in prices throughout the world due to cessation of hostilities in Korea and the resulting changes in the position of the copper market. In view of the necessity to conserve the Company's funds to help meet the expenditure on the expansion plan (referred to later on in this review), the Directors have thought it fit to repeat the distribution to the shareholders at the same rate as in the previous year.

The financial position of the Company, as seen from its latest balance-sheet, is quite satisfactory. As against a paid-up capital of Rs. 163.77 lakhs, the reserves and surplus stand at the impressive figure of Rs. 123.72 lakhs. These reserves include a general reserve of Rs. 50 lakhs, contingency reserve Rs. 36 lakhs and basic stock reserve Rs. 13.33 lakhs. Provision for taxation amounts to Rs. 46.60 lakhs. Current liabilities aggregate Rs. 152.21 lakhs, having gone up from Rs. 40.91 lakhs at the end of the previous year, mainly on account of the increase in liability for goods from Rs. 11.11 lakhs to Rs. 73.90 lakhs and the borrowings from banks, which stand, as at the end of the year, at Rs. 36.02 lakhs, as against nil on 30th September, 1952. The borrowings from banks have been necessitated by the increases in stocks, unsecured book debts and the fixed capital expenditure. The gross block of the value of Rs. 111.09 lakhs, including the addition of Rs. 53.20 lakhs during the year under review, has been written down to Rs. 73.20 lakhs. The current assets aggregate Rs. 415.09 lakhs, comprising, in the main, raw materials and work-in-progress Rs. 221.72 lakhs, finished goods Rs. 32.74 lakhs and unsecured book debts Rs. 110.92 lakhs. They exceed the current liabilities and provision for taxation by a wide margin of Rs. 216.28 lakhs. Commenting on the large carry-over stocks, the Chairman says: "The necessity of carrying larger stocks arises, of course, from the expansion of the Company's activities, but, at the balance-sheet date, raw material costs were still at an abnormally high level. The level of inventory values is kept constantly under review and it is a paramount consideration of your Directors that they be kept at as low a level as possible without endangering the flow of production."

During the year under review, the Company installed and started operations of a hot non-ferrous rod-rolling mill. The establishment of this mill will, eventually, do away with the import of copper rod and mean more efficient manufacture of electric wires and additional sources of revenue. The Company has put on the market a new product under the name of Paramite agricultural cable and it is anticipated that this new product will add to the Company's reputation. The Company has plans to manufacture plastic wires and cables and it is expected that their production will be in full swing by the middle of 1954. Among the other projects in view is the erection of a complete new factory for the manufacture of paper insulated power cables upto 11 k.v. This will be the first factory of its kind in India. Production is expected to commence by the end of 1955 or the beginning of 1956. The Company is engaged in installing plants to produce synthetic enamelled winding wires to meet the ever-increasing needs of motor manufacturers and radio trade. Full production will begin by the end of next year.

The outlook for the Company is bright, as will be seen from the following observations of the Chairman:

"We are linked inevitably with the expanding electrical industry of this country. There can be no doubt that the major industries and Government projects of this country must utilise more and more electrical energy and that, in consequence, there must be a continued and ever-expanding demand for our products and, while conditions in 1953-54 are not likely to be as good as in 1952-53, which, in retrospect, together with the former years were, undoubtedly, years of very favourable trading, we face the future with full confidence in our ability to play a leading part in the development of electric power in this country and that, over any reasonable period, the demand for our products must not only continue but also increase.... Much, of course, remains to be done and you will appreciate that the Company's resources must be husbanded wisely to meet this expansion programme. It will, however, also be realised that these projects, when completed, will make this Company one of the pioneers of electrical development in India."

The Rs. 10 paid-up ordinary shares of the Company are being currently quoted on the Calcutta Stock Exchange at Rs. 19-2 *ex-div.* On the basis of this market value, the proposed dividend gives a yield of 5.2 per cent. per annum, tax-free.

In conclusion, we must say that the industrial project which this Company represents is a typical instance of what honest private enterprise has achieved in this country. Those who condemn the "private sector" or nurse a doubt about its ability to deliver the goods will do well to study the history of this Company. And for their benefit we give below a synopsis of its history:

"The Company was floated at Calcutta in 1920, as the first venture of its kind in India, with an authorised capital of Rs. 25,00,000. A factory site was chosen in the Bihar industrial area at Jamshedpur and the buildings were erected by 1922. Early in 1923, production commenced of the first India-made copper conductors and rubber-insulated cables. Against intense foreign competition and without the benefit of protection, progress was slow, but by the outbreak of World War II, India found herself in possession of a very useful and indispensable cable industry.

"From small beginnings, the Company has grown considerably, and the Tatanagar factory now stands in an area of 170 acres as a thriving township with well designed workers' housing, and medical, recreational and educational facilities for its 1,300 employees. Far-seeing post-war plans for expansion are now coming to fruition with the acquisition from the Government of India of their former 'D' Class Cable Factory, erected and operated by the Company during the war. Alongside this, a new non-ferrous rod-rolling mill went into production early in 1953, while, nearby, a spacious factory building to house the new paper-insulated power cable project is nearing completion. As a financial corollary to this expansion, the capital structure of the Company has had to be increased in recent years to an authorised capital of Rs. 2,00,00,000, of which Rs. 1,65,76,970 has been issued."

PHALTAN SUGAR'S EARNINGS LOWER

A decline of Rs. 2 lakhs in the gross profit, that is from Rs. 24.24 lakhs to Rs. 22.24 lakhs, is revealed by the audited accounts of the Phaltan Sugar Works Ltd. (Managing Agents: Messrs. Mafatlal, Apte and Kantilal Ltd., Bombay) for the year ended 30th September, 1953. The net profit records a sharper decline, from Rs. 16.19 lakhs to Rs. 10.94 lakhs. Consequent on this fall in earnings, the Directors have had to reduce the allocation to the reserves and the distribution to the shareholders. They propose to pay a dividend of Rs. 6 per share of Rs. 30, as against Rs. 8 paid for the preceding three years; but the present dividend is tax-free, whereas the previous dividends were taxable.

Sale proceeds of sugar show a decline from Rs. 110.42 lakhs to Rs. 103.04 lakhs. This is presumably due to the fact that, in common with many sugar factories, the Company must have sold the previous season's heavy carry-over stocks at below the controlled price fixed for the season's production. The closing stocks of sugar at the end of the year under review showed a fall from 39,048 bags to 13,999 bags and their value from Rs. 32.19 lakhs to Rs. 11.60 lakhs. Expenses have gone down from Rs. 86.39 lakhs to Rs. 81.24 lakhs, of which crop expenses account for a fall from Rs. 50.74 lakhs to Rs. 42.30 lakhs and cane cess from Rs. 5.56 lakhs to Rs. 5.26 lakhs, while excise duty account for a rise from Rs. 9.89 lakhs to Rs. 12.85 lakhs and other expenses from Rs. 20.20 lakhs to Rs. 20.82 lakhs. Managing Agents' remuneration has declined from Rs. 2.42 lakhs to Rs. 2.28 lakhs, depreciation on fixed assets from Rs. 4.88 lakhs to Rs. 4.03 lakhs. The provision for taxation has been raised from a mere Rs. 75,000 to Rs. 5 lakhs. This is evidently due to the fact that the Indian Income-tax Act is applicable to the Phaltan State following its merger with the Bombay State and the Company is liable to pay higher rate of taxation than before. Referring to this question, the Directors observe, in their report to the shareholders: "The Company was assessed at one anna per rupee as super-tax upto the assessment year 1953-54, in pursuance of clause 15 of the Merged States (Taxation Concession) Order, 1949. The accounts presented for the year under reference will be taxed at full rates of income-tax now applicable."

Out of the net profit of Rs. 10.94 lakhs the Directors have set aside Rs. 1 lakh for dividend equalisation fund, as against Rs. 5 lakhs transferred last year. While a sum of Rs. 1.65 lakhs had been added to the general reserve last year, no addition at all has been made to this reserve now. But the sum left to be carried over is as high as Rs. 4.87 lakhs, as compared with Rs. 92,883 brought in after paying a sum of Rs. 2.20 lakhs as bonus to employees for the year 1951-52.

The Company installed one additional three roller mill before the commencement of the season, thus increasing the capacity of crushing to a certain extent. The mill efficiency has also improved. "The factory worked quite well throughout the season," the Directors report, "and the sugar produced was of 28D quality and sold as per allotments from Government. The deliveries of sugar during the year were satisfactory. The recovery percentage of sugar was higher than in previous years and the sugar produced found a ready market as usual." The field of the crop for the season, according to the Directors, was higher than last year. The experimental work on new varieties of cane and manurial trials were continued during the year. The labour conditions were satisfactory, which helped the factory get a constant and steady supply of cane throughout the season.

The financial position of the Company, as seen from its latest balance-sheet, is comfortable. The reserves and surplus stand at Rs. 52.36 lakhs, which is about 105 per cent. of the paid-up capital of Rs. 50 lakhs. Such a strong reserve position has been built up even after capitalising as much as Rs. 40 lakhs of the reserves, thus raising the original paid-up capital from Rs. 10 lakhs to its present level of Rs. 50 lakhs. The provision for taxation amounts to Rs. 9.46 lakhs. The current liabilities aggregate no more than Rs. 13.32 lakhs. The gross block of the value of Rs. 109.01 lakhs has been written down by Rs. 54.16 lakhs. The current assets amounting to Rs. 70.30 lakhs cover the current liabilities and provision for taxation more than three times.

The Rs. 50 paid-up shares of the Company are being currently quoted at Rs. 96 *cum-div.* On an *ex-div.* basis, the proposed dividend gives a yield of 6.7 per cent. per annum, free of tax.

CANNANORE SPG. AND WVG. MILLS

The Cannanore Spinning and Weaving Mills Ltd. (Managing Agents: The Malabar Industrial Syndicate, Cannanore) earned a gross profit of Rs. 7.06 lakhs and a net profit of Rs. 3.77 lakhs for the year ended 31st March, 1953, and not Rs. 5.94 lakhs and Rs. 2.65 lakhs, respectively, as stated in our review of the Company's working results published in an earlier issue of *Commerce*. The Directors had provided a sum of Rs. 1.20 lakhs from out of the profit for 1951-52 to the raw material fluctuation reserve. As the loss on account of the fall in prices of American cotton amounted to only Rs. 1.12 lakhs, the Directors drew back the said sum of Rs. 1.20 lakhs to the profit and loss account for the year ended 31st March, 1953, and wrote off the actual loss of Rs. 1.12 lakhs.

COMPANY MEETINGS AND DIVIDENDS

BLUE MOUNTAIN ESTATES LTD. Annual General Meeting, Madras, 7th December, 1953. Dividend: As. 4 per share, free of tax, payable on 8th December, 1953. Transfer books closed from 16th November to 7th December, 1953, both days inclusive.

KESORAM COTTON MILLS LTD. Annual General Meeting, Calcutta, 7th December, 1953. Dividend: Re. 1-12 per share, free of income-tax. Transfer books closed from 24th November to 7th December, 1953, both days inclusive.

HINDUSTAN MOTORS LTD. Annual General Meeting, Calcutta, 10th December, 1953. Dividend: *Nil.* Transfer books closed from 20th November to 10th December, 1953, both days inclusive.

INDIAN CABLE CO., LTD. Annual General Meeting, Calcutta, 11th December, 1953. Dividend: Re. 1 per share (including cash bonus of As. 4 per share), payable on 11th December, 1953. Transfer books closed from 28th November to 11th December, 1953, both days inclusive.

PORT CANNING AND LAND IMPROVEMENT CO., LTD. Annual General Meeting, Bombay, 14th December, 1953. Dividend: Re. 1-8 per share free of income-tax. Transfer books closed from 25th November to 15th December, 1953, both days inclusive.

TINNEVELLY-TUTICORIN ELECTRIC SUPPLY CO., LTD. Annual General Meeting, Calcutta, 15th December, 1953. Dividend: Re. 1 per share. Transfer books close from 8th to 15th December, 1953, both days inclusive.

HINDUSTAN SUGAR MILLS LTD. Annual General Meeting, Bombay, 15th December, 1953. Transfer books close from 10th to 17th December, 1953, both days inclusive.

COAL MINING AND STATE MINERALS LTD. Annual General Meeting, Bombay, 16th December, 1953. Transfer books close from 11th to 21st December, 1953, both days inclusive.

MUKAND IRON AND STEEL WORKS LTD. Annual General Meeting, Bombay, 17th December, 1953. Transfer books close from 10th to 17th December, 1953, both days inclusive.

WATERFALL ESTATES LTD. Annual General Meeting, Madras, 18th December, 1953. Dividend: As. 4 per share, payable on 19th December, 1953. Transfer books closed from 4th to 18th December, 1953, both days inclusive.

BENGAL JUTE MILL CO., LTD. Annual General Meeting, Calcutta, 18th December, 1953.

MYSORE COFFEE ESTATES LTD. Annual General Meeting, Rayavaram (Pudukkottah), 20th December 1953. Transfer books close from 10th to 20th December, 1953, both days inclusive.

JAYASHANKAR MILLS, BARSI LTD. Annual General Meeting, Barsi, 21st December, 1953. Transfer books close from 10th to 31st December, 1953, both days inclusive.

KOLHAPUR SUGAR MILLS LTD. Annual General Meeting, Kasaba Bavada, Kolhapur, 27th December, 1953. Transfer books close from 15th to 27th December, 1953, both days inclusive.

INDIAN WOOD PRODUCTS CO., LTD. Interim dividend of Re. 1 per share, free of income-tax, payable on 18th December, 1953, for the year ended 30th September, 1953. Transfer books closed from 5th to 18th December, 1953, both days inclusive.

KOTHARI TEXTILES LTD. Dividend of As. 8 per share for the year ended 30th June, 1953. Transfer books close from 7th to 21st December, 1953, both days inclusive.

KARAIKKAL ELECTRIC SUPPLY CO., LTD. Dividend of As. 9-3/5 per share, free of tax, for the year ended 31st March, 1953. Transfer books closed from 5th to 12th December, 1953, both days inclusive.

COMPANY REGISTRATIONS

J. K. STEEL LTD. (First Director: Mr. H. S. Singhania.) Business: Manufacturers of Steel Hoops of all sizes, etc. Authorised capital: Rs. 50,00,000. Public company. Address: 7, Council House Street, Calcutta.

PANAMA LTD. (First Director: Mr. H. L. Malhotra.) Business: Manufacture of Safety Razor Blades, etc. Authorised capital: Rs. 25,00,000. Public company. Address: 18, Netaji Subhas Road, Calcutta.

SHREE LAKSHMI FLOUR MILLS LTD. (First Director: Mr. N. D. Agarwala.) Business: To Install, Establish Mills and Factories, etc. Authorised capital: Rs. 25,00,000. Public company. Address: 243, Upper Chitpur Road, Calcutta 3.

SUNDERDAS THAKERSEY AND BROTHERS LTD. (First Director: Mr. H. Thakersey.) Business: Importers, Exporters, and Manufacturers of Cotton Yarn, etc. Authorised capital: Rs. 10,00,000. Private company. Address: 4, Lucas Lane, Calcutta.

COMMERCIAL MISCELLANY (INDIA) LTD. (First Director: Mr. G. K. Agarwalla.) Business: Dealers in Hardware, Electrical Goods, etc. Authorised capital: Rs. 5,00,000. Private company. Address: 1, Stephen House, Calcutta.

A. N. LAHA AND CO., LTD. (First Director: Mr. A. N. Laha.) Business: Dealers in Coal, Paper, etc. Authorised capital: Rs. 5,00,000. Private company. Address: 2, Clive Ghat Street, Calcutta.

MADHU JAYANTI LTD. (First Director: Mr. J. Hargovindas Shah.) Business: Tea Planters, etc. Authorised capital: Rs. 3,00,000. Private company. Address: 13, Pollock Street, Calcutta.

ALLEN BERRY AND CO. (CALCUTTA) LTD. First Director: Mr. R. N. Maitra.) Business: Manufacturers, Importers and Exporters of Automobiles, etc. Authorised capital: Rs. 5,00,000. Private company. Address: 62, Hazra Road, Calcutta.

QUESTION HOUR IN PARLIAMENT

Estate Duty

THE revenue from estate duty in 1953-54 will be very negligible. The Act came into force only on 15th October, 1953, and since the time allowed to executors for submission of returns is six months from the date of death of an individual, no assessment is likely to be completed before the close of the financial year. As for the income from this source during the Plan period, it is not possible to give an estimate, as there are many indeterminable factors. The only thing that can be said at present is that the revenue from this duty will not be an inconsiderable contribution to the financing of development projects.

• • • •

U.K. Loan to India

The Government of India has still under consideration the British Government's offer to allow £5 million out of the U.K.'s capital subscription to the International Bank being lent by the Bank to India. There has been no offer of any direct loan by the U.K. Government to the Government of India. The Government of India has not taken any decision but the possible purpose for which it will be utilised will be the purchasing of equipment for the D.V.C. and the Indian Iron and Steel Company projects. There will be no conditions which will operate between the Government of India and the U.K. Government in regard to the loan. The rate of interest will be the rate which the International Bank is charging. It depends on the terms of the loan. Former loans carried 4½ per cent. interest repayable in 15 years and 4½ per cent. in other cases. India is earning 2.3 per cent. interest on its sterling balances and it has to pay 4½ per cent. to the Bank. The Government of India will take some time to consider whether it will at all borrow from the U.K.'s subscription to the International Bank.

• • • •

Aid to States

The Government of India has agreed to give in 1953-54 assistance to various State Governments to the extent of Rs. 2,66,07,000 to relieve distress caused by natural calamities. So far, a sum of Rs. 61,96,000 has actually been paid. The assistance promised, or given, does not include that given in the form of subsidised foodgrains and under other programmes like G.M.F. and arrear payments made in the current year on account of expenditure on scarcity relief included in the previous year. The provision of Rs. 5 crores provided in the Plan relates to the three years of the Plan commencing from the current year.

—Finance Minister

Burma Tariffs

The increase in duty on imports into Burma, following the new customs tariffs adopted by Burma after the termination of the Indo-Burmese Trade Agreement of 1941 on India's trade with the country is bound to have some adverse effect on trade. No precise assessment of the problem is possible at this stage, particularly as many other factors will have a large bearing on the subject. These factors include import control regulations, bilateral agreements, and the competitive strength of other exporting countries. An official copy of Burma's latest customs tariffs is not yet available but, as the Government understands, the following, among others, are the rates of duties *ad valorem* on some of the principal items of interest to India: tobacco unmanufactured, 50 per cent.; jute, rope and twine, hessian gunny cloth and sacking gunny bags, 25 per cent.; cotton hosiery and cotton manufactures, 30 per cent.; cotton piecegoods, 25 per cent.; cotton twist and yarn, 5 per cent. and cotton thread, 10 per cent.; groundnut oil, linseed oil and vegetable non-essential oils, 15 per cent.; coir yarn, 10 per cent.; and boots, shoes and footwear 30 per cent.

• • • •

Cottage Industry

A seven-man international team of experts in cottage and small-scale industries will be shortly visiting India to advise the Government on the development of small-scale industries in selected areas. The Ford Foundation has promised a grant of $92,000 in connection with the work of these experts.

—Minister for Commerce

Koyna Project

The question of taking up the Koyna Project is under consideration, but it is unlikely that it will be taken up during the current year. The estimated expenditure on the Project is Rs. 33 crores. The matter has been taken up with the World Bank authorities and a team of experts is expected to visit the site shortly.

—Deputy Minister for Irrigation and Power

Tourist Traffic Earnings

A sum of Rs. 45 lakhs is the estimated dollar earnings in 1952 out of tourist traffic. About 25,448 foreign tourist came to India during 1952.

• • • •

Railway Coaches and Wagons

During 1952-53, 791 indigenous coaches and 104 foreign coaches were put on the line, as compared with 673 indigenous coaches and 98 foreign coaches in 1951-52. As regards wagons in 1952-53, 6,377 indigenous and 6,611 foreign wagons were put on the line, while in 1951-52 the figures were 3,707 indigenous wagons and 671 foreign wagons.

During the half-year from 1st April to 30th September, 1953, the Indian railways placed 3,702 new wagons on the line, of which 932 were imported. During the year 1952-53, 2,193 overaged wagons were taken off the lines and scrapped.

—Parliamentary Secretary to Railway Minister

COMMERCE AND INDUSTRY

(Concluded from page 1064)

authoritative data are available regarding the number of units operating, the lines of manufacture undertaken, and their cost of production, a committee may be appointed by the Central Government, in consultation with the State Governments concerned, to conduct an economic survey of the units with a view to effecting co-ordination among the several sectors of the cycle industry.

Some of the producers have advanced claims for imposing quantitative restrictions on imports of cycles. This demand is difficult to be justified, as the industry enjoys even now almost a closed market, what with the tariff protective duties pitched as high as 73½ per cent. standard and 63 per cent. preference *ad valorem*. Stringent restrictions on imports do not provide scope for a reasonable measure of competition without which there will be little incentive among local producers to improve their quality. Further, as the indigenous output is far less than the total requirements of the country, consumers' interest will go by default. And a bicycle, it must be remembered in this connection, is a poor man's vehicle.

ESTABLISHMENT OF NEW INDUSTRIAL UNDERTAKINGS

Proposals for the establishment of new industrial undertakings and substantial expansions of existing undertakings under the Industries (Development and Regulation) Act, 1953, frequently involve also the issue of fresh capital for which consent has to be obtained from the Controller of Capital Issues, Ministry of Finance and/or the import of capital goods for which a licence has to be obtained from the Chief Controller of Imports and Exports, New Delhi. The consent for the issue of capital and the licence for the import of capital goods are, however, granted only after it is decided that a licence should be issued under the Industries Act. In order to reduce the time lag between the issue of the licence under the Industries Act, on the one hand, and the grant of an import licence or consent for capital issue, on the other, applicants are advised to make their applications for the import of plant and machinery and/or consent for the issue of capital, simultaneously with their application for a licence under the Industries Act, in the forms specifically prescribed for these purposes.

Applications for the import of plant and machinery should be sent to the Chief Controller of Imports and Exports, New Delhi, in the case of all machinery except textile machinery and to the Joint Chief Controller of Imports and Exports, Bombay, in the case of textile machinery, with a suitable note that a licence, under the Industries Act, has been applied for. Applications for consent for the issue of capital should be sent to the Controller of Capital Issues, Ministry of Finance, Government of India, with a similar note. Applications for a licence under the Industries Act should be addressed to the Secretary, Ministry of Commerce and Industry, Industries Act Branch, Government of India, New Delhi.

LICENSING OF INDUSTRIES

The Licensing Committee set up under the Industries (Development and Regulation) Act had, in the first 12 months of its existence (i.e. by September, 1953) considered 262 applications requesting licences for establishing new industrial undertakings or for effecting substantial expansion in existing ones. Of these, the Committee recommended 181 for the grant of licences under the Act, 11 were referred back to the applicants with certain comments and observations for them to put up revised schemes, and 34 were rejected.

Of the 181 cases recommended for the grant of licences, 49 related to cotton textiles, 24 to *vanaspati* and vegetable oils, 13 to heavy chemicals, including fertilisers, 12 to cement, 11 to machinery and equipment for the generation, transmission, etc., of electric energy, nine to rubber manufactures, nine to glass and ceramics, eight to pharmaceuticals and drugs, six to paper and paperboard and the rest to other industries.

Among the rejections, the largest number (10) related to the establishment of automatic looms for the manufacture of cotton textiles. The existing loomage in the cotton textile industry is, it is felt, sufficient to meet the entire needs of the country in respect of cloth. On the other hand, it is necessary to conserve free yarn for the handloom industry. Pending the report of the Textile Enquiry Committee, Government does not propose to encourage the establishment of fresh loomage.

Eight of the rejected schemes related to proposals for undertaking merely the final operation such as bottling and ampuling or tabletting of drugs imported into the country. Considerable doubt has been felt as to how far development of this kind is in the interests of the country both from the industrial and from the public health point of view. Here again, the Government proposes to take a final decision after the Pharmaceutical Enquiry Committee has submitted its report. Meanwhile, requests for installation of fresh capacity are being refused.

Nine of the cases rejected were for permission to introduce the solvent extraction process for treating oilcakes. Here there are two schools of thought. On the one hand, it has been urged that the introduction of this process would increase the availability of vegetable oils in the country, while, on the other, it has been argued that de-oiled cakes will lose much of their nutritive value as cattle feed. Certain investigations are now in progress at the Indian Veterinary Research Institute to test the correctness of the latter contention. In the meantime, Government have decided to sanction only a limited capacity for solvent extraction in the country and this has been distributed between the States after taking into account their production of oilseeds and oilcakes.

COORLA SPINNING MAINTAINS DIVIDEND DESPITE LOWER PROFIT

TELIAPARA TEA REPORTS BETTER RESULTS

Coorla Spinning and Weaving Co., Ltd.

THE directors of the above Company (Secretaries, Treasurers and Agents: Messrs. Cowasjee Jehangir & Co., Ltd., Bombay) submit the audited accounts of the Company for the year ended 31st March, 1953.

The accounts show a gross profit of Rs. 7,46,029 (Rs. 9,88,784) which when added to the balance of Rs. 7,721 (Rs. 3,938) brought forward from last year, makes a total of Rs. 7,53,751 (Rs. 9,92,721), and this amount the directors propose to dispose of as under:—

Payment of a dividend on 26,000 shares at the rate of Rs. 7-8 (Rs. 7-8) per share Rs. 1,95,000 (Rs. 1,95,000), transfer to machinery depreciation fund Rs. 3,00,000 (Rs. 1,50,000), building depreciation fund Rs. 30,000 (Rs. 40,000) and provision for gratuity Rs. 1,00,000 (nil) leaving to be carried forward Rs. 1,28,751 (Rs. 7,721).

During the year a net amount of Rs. 1,74,513 (Rs. 2,86,452) being the refund of excess profits tax less income-tax and corporation tax was received by the Company and this amount has been credited to reserve for taxation. During the year, the following machinery have arrived and are working satisfactorily:—

One cheese and beam dyeing plant, one renovation equipment for old cheese dyeing plant, twelve T. & S. twist ring frames, 424 spindles each, twelve variable speed motors for ring frames, one leesona winding machine, one high speed cone winding machine, one centrifugal pump, one air compressor, one damping machine and two 15 h.p. motors with starters. The directors further inform, that with a view to modernisation of the plant and machinery, they have recently placed orders for blow-room, spinning and sizing machinery of an approximate cost of Rs. 17,00,000 (exclusive of duty), most of which is expected to be delivered during the course of the next year.

The Mill buildings and machinery are insured for Rs. 1,01,75,850 (Rs. 89,23,800) and stores, cotton, stock-in-process and stocks of yarn and cloth have been insured for Rs. 44,36,600 (Rs. 59,52,700). The profits have also been insured for Rs. 8,00,000 (Rs. 12,00,000).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	26,00,000	Block ...	58,91,576
Reserves ...	47,97,127	Stock-in-trade	28,88,260
Provision for taxation ...	6,12,054	Stores, etc. ...	7,58,566
Liabilities ...	13,60,938	Debts, deposits and advances ...	4,83,814
Profit and loss account ...	7,53,751	Investments	73,800
		Cash ...	27,854
Rs.	1,01,23,870	Rs.	1,01,23,870

Teliapara Tea Co., Ltd.

The directors of the above Company (Secretaries: Messrs. Duncan Brothers & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st December, 1952.

The accounts showed a profit of Rs. 1,45,251 (Rs. 71,523) as follows: On transfer of this sum to profit and loss account and after sundry adjustments, there was a balance at credit of that account amounting to Rs. 1,88,245 (Rs. 1,73,590) of which the directors transferred Rs. 65,000 (nil) to revenue reserve. The directors paid a dividend of 7½ (2½) per cent. and carried forward Rs. 55,745 (Rs. 73,090).

The values of the Company's current assets and liabilities in Pakistan have been converted into Indian currency at the current rate of exchange, now recognised by the Government of India, and the resulting unrealised profit has been carried to an exchange suspense account. Since the close of the year under review sanction to remit to this country the net trading profits earned in Pakistan during seasons 1948 and 1949 was obtained from the State Bank of Pakistan, and a total of Rs. (I) 9,06,381 was received and credited to the Company's account in India in April, 1953.

The outturns produced and the average selling prices (Pakistani currency) realised compare with those of the previous year as follows:—

	Crop		Selling price (Per lb.)	
	1952 Mds.	1951 Mds.	1952 Rs. a. p.	1951 Rs. a. p.
Teliapara	8,432	8,680	1 1 6	1 0 1
Satchurie	5,385	5,535	0 15 6	0 14 3

Estimates for 1953 provide for a total crop of 12,500 maunds at an outlay of Rs. (P) 8,37,520 including inland freight and sale charges.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	9,00,000	Block ...	9,00,000
Reserves ...	13,56,270	Stores and supplies ...	1,62,690
Provision for taxation ...	71,785	Tea sales receivable ...	9,96,915
Liabilities ...	6,69,297	Advances and deposits ...	2,59,078
Profit and loss account ...	55,745	Investments	2,966
		Cash ...	7,31,448
Rs.	30,53,097	Rs.	30,53,097

Rajahbhat Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. McLeod & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st December, 1952.

The season's working resulted in a loss, before providing for depreciation, of Rs. 1,11,939 (profit of Rs. 2,18,705) to which was added adjustments account season 1951 Rs. 13,282 (nil), depreciation for 1952 Rs. 47,357 (nil) making a total of Rs. 1,72,578 (Rs. 1,28,624) from which was deducted E.P.T. post-war refund Rs. 6,307 (nil) and balance of profit brought forward from 1951 Rs. 25,072 (Rs. 21,695), leaving a balance at debit of profit and loss account to be carried forward to 1953 Rs. 1,41,199 (credit balance of Rs. 25,072) after paying 15 per cent. dividend on ordinary shares and transferring Rs. 13,552 to general reserve.

The saleable crop weighed out at 11,243 maunds against an estimate of 12,500 maunds and was disposed of at an average price of As. 19.26 per lb. The usual comparative statement for previous seasons is given below:—

Season	Crop	Average price per lb.
	Mds.	Annas
1951	12,307	24.95
1950	12,478	26.88
1949	13,227	23.68
1948	10,672	22.63

The estimate for season 1953 provides for a saleable crop of 11,560 maunds, at an all-in cost of Rs. 10,05,120.

The substantial drop in crop due mainly to unfavourable weather conditions and a fall of nearly As. 6 per lb. in the average prices realised, as compared with the previous season, have adversely affected the trading results.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	6,00,000	Block ...	6,61,009
Reserves ...	7,01,032	Stock of tea	5,12,633
Provision for taxation ...	92,994	Stores, etc. ...	3,48,384
Liabilities ...	4,66,060	Debts, deposits and advances ...	1,59,238
		Investments	1,505
		Cash ...	36,118
		Profit and loss account ...	1,41,199
Rs.	18,60,086	Rs.	18,60,086

West Coast Electric Supply Corporation Ltd.

The directors of the above Corporation (Managing Agents: Messrs. Chandrie & Co., Ltd., Madras) submitted the audited accounts of the Corporation for the year ended 31st March, 1953.

During this year the restrictions imposed by Government on power supply on account of the low water conditions in the Hydro-Electric reservoirs were more severe than last year. The 25 per cent. cut on consumption, which was imposed in September, 1952 was gradually enhanced to 66⅔ per cent. by March, 1953. Ban on connecting up new industrial loads was also imposed by Government. The restrictions were lifted however in July, 1953.

No major load developments could be undertaken during the year on account of acute shortage of power. However, with the limited resources and the available power, development was suitably regulated.

During the year, the directors were able to sell all the generating machinery in the Kallayi Power House. Though they were trying to sell these machinery since 1948, they succeeded in disposing them only now. Being old and obsolete machinery, a certain amount of loss was inevitable.

The full effect of lower rates for supply of energy, given effect to in the year 1951-52, in the Calicut and Cannanore-Tellicherry areas, is reflected in the revenues of the year. The 10 per cent. war cost surcharge levied on supplies to h.t. consumers was discontinued as per orders of the Government with effect from 1st April, 1952 and this has deprived the Company of a very large revenue. In spite of these adverse conditions, the working of the Corporation has been satisfactory.

As mentioned in their last report, the directors have taken on hand new schemes for extending electricity in the Company's area of supply. They have raised a loan of Rs. 7½ lakhs from the Madras Industrial Investment Corporation Ltd., Madras, and are availing the loan as and when necessary. In the meanwhile, a sum of Rs. 3 lakhs was obtained with which the debenture loan of Rs. 2½ lakhs was repaid. The balance was utilised for minor extensions.

The management's request to the Government, to increase their maximum offtake limit at Calicut and Cannanore was considered by the Government and orders were passed in July, 1953, increasing our maximum demand to 3,000 k.v.a. at Calicut and 1,750 k.v.a. at Cannanore and they have utilised them.

The net profit of the Company after providing for depreciation on assets Rs. 1,04,462 (Rs. 91,845), taxes on income Rs. 36,000 (Rs. 1,03,000), contingency reserve Rs. 6,648 (Rs. 11,674), writing off of intangibles Rs. 6,552 (Rs. 6,552) and charities and donations Rs. 7,000 (Rs. 875) amounted to Rs. 1,12,516 (Rs. 1,36,231). After adding the balance brought forward from the previous year's account of Rs. 38,366 (Rs. 37,223) excess appropriation for dividend as per last year's report Re. 1 (nil), adjustments based on Government audit report Rs. 5,037 (Rs. 1,669), and transfer of debenture security fund Rs. 4,500 (nil) there was a sum of Rs. 1,60,420 (Rs. 1,48,065). After adding appropriation as per Electricity (Supply) Act, 1948: from tariff and dividend control reserve of Rs. 3,901 (Rs. 38) and deducting reserve for proportionate rebate to consumers Rs. 3,045 (Rs. 11,604) there was a sum of Rs. 1,61,277 (Rs. 1,48,065). The directors paid an interim-dividend in April, 1953 for the year 1952-53 of Rs. 42,362 (nil) leaving an available balance of Rs. 1,18,915 (Rs. 1,48,065). The directors paid a final dividend of 2½ per cent. (total dividend of 5½ per cent.) less tax on preference shares and 6½ per cent. (total dividend of 10 per cent.) tax-free on ordinary shares, making a total of 5½ (5½) per cent. less tax on preference shares and 10 (10) per cent. tax-free on ordinary shares for the year 1952-53 which absorbed Rs. 67,362 (total dividend of Rs. 1,09,699) and the balance may be carried forward to next year's account.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	12,50,000	Block ...	19,36,886
Reserves ...	5,23,888	Stores and tools ...	3,36,735
Provision for taxation ...	1,14,597	Other assets	2,58,033
Liabilities ...	9,79,953	Debts and advances ...	2,64,912
Profit and loss account ...	1,17,039	Investments	48,353
		Cash ...	1,40,558
Rs.	29,85,477	Rs.	29,85,477

Kemp and Co. Ltd.

The directors of the above Company (Chairman: Mr. F. H. Mehta, J.P., Bombay) submitted the audited accounts of the Company for the year ended 31st March, 1953.

A sum of Rs. 1,02,937 was shown as carried forward in the last year's report. Deducting therefrom Rs. 8,147 being bonus paid in excess of provision made and Rs. 4,993 being sales tax assessments paid for 1946-47 and 1947-48, there was a balance of Rs. 89,797. During the year, a sum of Rs. 67,458 (nil) was received as refund of excess profits tax and Rs. 1,411 (nil) as refund of income-tax and corporation tax; and a sum of Rs. 10,928 was paid as bonus in excess of provision made. With these adjustments the balance in the appropriation account amounted to Rs. 1,47,738.

The accounts for the year showed a net profit of Rs. 1,75,762 (Rs. 1,40,354) after providing Rs. 1,06,436 (Rs. 1,01,363) for depreciation on plant and machinery, buildings, furniture, motor vehicles and equipment. This, with the balance of Rs. 1,47,738 (Rs. 1,72,583) carried forward from the last year made a total of Rs. 3,23,501 (Rs. 3,12,937) which amount the directors disposed of as under:—

Made provision for taxation (which, with the balance out of provision made last year comes to Rs. 93,559 and is considered adequate provision) Rs. 55,000 (Rs. 70,000), paid dividend on 5,999 (4,000) shares (Rs. 200 paid up) at 10 (10) per cent. or Rs. 20 (Rs. 20) per share Rs. 1,19,980 (Rs. 80,000), bonus to staff Rs. 65,000 (Rs. 60,000), and carried forward Rs. 83,521 (Rs. 1,02,937).

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	11,99,900	Block ...	14,46,992
Reserves ...	6,42,667	Stock-in-trade	7,56,288
Provision for taxation ...	38,559	Goods-in-transit ...	61,009
Liabilities ...	6,94,393	Debts, deposits and advances ...	4,72,116
Profit and loss account ...	3,23,501	Investments	78,617
		Cash ...	83,998
Rs.	28,99,020	Rs.	28,99,020

Bombay Safe Deposit Co., Ltd.

The directors of the above Company (Agents: Messrs. Forbes Forbes Campbell & Co., Ltd., Bombay) submit the audited accounts of the Company for the year ended 30th September, 1953.

The accounts show a profit of Rs. 76,959 (Rs. 79,340) to which is to be added the net carry forward from 1952 of Rs. 702 (Rs. 2,627) making a total of Rs. 77,661 (Rs. 81,967). The directors transferred to provision for income-tax and super-tax Rs. 28,000 (Rs. 30,000), staff gratuity fund Rs. 3,000 (Rs. 1,275) and depreciation fund Rs. 3,000 (Rs. 3,000) leaving an available balance of Rs. 43,661 (Rs. 46,202). From this amount the directors recommend payment of a dividend of Rs. 32 (Rs. 35) per share, free of income-tax, absorbing Rs. 38,400 (Rs. 42,000) and bonus to staff Rs. 3,700 (Rs. 3,500) leaving to be carried forward a balance of Rs. 1,561 (Rs. 702).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	2,40,000	Block ...	5,32,174
Reserves ...	4,78,000	Advances ...	12,564
Provision for taxation ...	30,647	Investments	2,68,367
Liabilities ...	73,037	Cash ...	52,240
Profit and loss account ...	43,661		
Rs.	8,65,345	Rs.	8,65,345

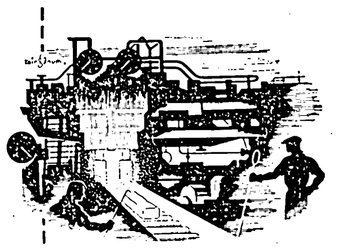
NICKEL ALLOYS



For more than a century Henry Wiggin have been pioneers in the production of high-nickel alloys, seeking always to be ahead of the engineer's demands for better properties. Continuous research for improved materials coupled with constant care and precision in manufacture ensure the high standing and international reputation of Wiggin high-nickel alloys. During the past year or so, world-wide demands have far exceeded the supply. But although some of our products are still not freely available we are doing our best to meet your requirements.

MONEL . . . corrosion-resisting alloy
NICKEL . . . in all forms
INCONEL . . . heat- and corrosion-resisting alloy
BRIGHTRAY . . . series of electrical resistance alloys
NILO . . . series of controlled expansion alloys
MANGONIC . . . stronger and more resistant than nickel in moderate sulphur-containing atmospheres
THERMOMETAL . . . for thermostatic devices
NICKEL ANODES . . . for nickel electrodeposition
OTHER NICKEL ALLOYS to meet special requirements

CALCUTTA, 24*th November*, 1953.

MONEY CONTINUES TO BE DULL

(From Our Own Correspondent)

BOMBAY, 2nd *December*

Extremely dull conditions were witnessed in the short-term money market during the week under review also. The demand for funds that usually comes during this part of the season for financing movement of crops was conspicuously small this week. The volume of business, therefore, shrunk considerably. Inter-bank call money was not usable and fetched no more than ¾ per cent. among the Exchange banks and big Indian banks. The rate in the corresponding week of last year, it may be recalled, was 2 per cent., such having risen from ¾ per cent. in the preceding week. Inter-bank call money among the smaller Indian banks was done during the week under review at 2¾ per cent., as against 2 per cent. a year ago.

The demand for funds in Calcutta also was not up to expectations and inter-bank call money rate declined to 2 per cent. at that centre. The unusable surplus funds were, therefore, returned to Bombay from where they had been taken earlier.

Short-term deposits were bid at 2¼ per cent. for one month, 2¼ per cent. for two months and 2¾ per cent. for 3 to 6 months.

An offer of Rs. 1.10 crores was made this week against the tenders for Rs. 1 crore of three months' Government of India Treasury Bills. The amount offered compared unfavourably with that of Rs. 1.56 crores made last week and so also the average rate of accepted tenders; this was a fraction higher at Rs. 2-7 per cent., as compared with Rs. 2-6-10 a week ago.

The Reserve Bank of India's statement for the week ended 27th November, 1953, shows a contraction of Rs. 4.20 crores in notes in circulation. This is the second week in succession to witness a decline. Notes held in the Banking Department, however, are higher by Rs. 4.94 crores. The consequent rise in total notes issued is covered by a corresponding rise in rupee coin. In the Banking Department, deposits of the Central Government have gone up by Rs. 3.34 lakhs, while those of the State Governments have sustained a fall of Rs. 5.77 crores. A rise of Rs. 7.71 crores is seen in deposits of banks. The Reserve Bank's cash balances show an increase of Rs. 4.94 crores, while balances held abroad are lower by Rs. 1.12 crores. Loans and advances to Governments have risen by Rs. 51 lakhs.

A rise of Rs. 3.84 crores in demand deposits and of Rs. 1.17 crores in time deposits is disclosed by the consolidated statement of position of Scheduled Banks for the week ended 20th November, 1953. Inter-bank borrowings are lower by Rs. 38.42 lakhs. Borrowings from the Reserve Bank show a small decline of Rs. 15 lakhs, while those from the Imperial Bank are up by Rs. 61 lakhs. Advances have gone down by Rs. 10.21 crores and investments by Rs. 2.41 crores. Cash on hand and balances with the Reserve Bank are higher by Rs. 10.64 crores, balances with other banks by Rs. 18.75 lakhs and money at call and short notice by Rs. 52.17 lakhs.

The Gilt-edged market was steady, though enquiry was halting. Selected issues received some attention from institutional investors. Although the volume of business was continued to be restricted, it was slightly better than in the previous three weeks. 3 per cent. 1957 was done an anna higher at Rs. 98-6, 3 per cent. 1958 was neglected at Rs. 98-1. 3 per cent. 1959-61 had business at the unchanged rate of Rs. 96-1. 3 per cent. 1963-65 dropped an anna to Rs. 92-8, while 3 per cent. 1964 found buyers and recorded a rise of an anna to Rs. 92-9. 3 per cent. 1966-68 stood at Rs. 90-2. 3 per cent. 1970-75 improved by an anna to Rs. 86-8. 3 per cent. 1986 Conversion Loan had sellers at Rs. 81-15. 3½ per cent. 1961 N.P. Bonds rose from Rs. 99 to Rs. 99-1, but closed to-day at Rs. 98-13 *ex-voucher*. Hardly any enquiry was noticed in State loans.

BRADFORD WOOL EASY

(From Our Own Correspondent)

BOMBAY, 1st *December*

The continued easier tendency in the primary wool markets has resulted in a general decline of prices for tops. There is a wide variation for merino qualities, as between one top-maker and another, and the average prices quoted show that the prices cannot be regarded as firm. With firm enquiries in hand, buyers would get a concession. By the amount of enquiries this week, however, we feel that more interest is being shown and we look forward to an improvement very shortly.

Current quotations (per lb. c.i.f. Bombay) for Bradford oilcombed tops are given below:

48s carded (Dec.-Jan., 1954) 84½d., 58s super (Dec.-Jan., 1954) 120d., 60s super (Dec.-Jan., 1954) 137d., 64s super (Dec.-Jan., 1954) 153d., 70s super (Dec.-Jan. 1954) 168d. Fibre (3D 4") (Dec.-Jan., 1954) 40½d., and 46/48s Scoured clothing wool (Dec., 1953) 74d.

For f.o.b. prices deduct 3d. per lb. The undertone of the market is easy.

STRONG DEMAND FOR SHEEP SKINS

(From Our Own Correspondent)

KANPUR, 29th *November*

Strong demand for sheep skins characterised the trading in the hides and skins market during the week under review. The demand was influenced by shortage of wool in the market which is felt all the more because of winter. Arrival of fresh goods was up to the average. Conditions in the buff sector were easy.

Latest quotations are: Wet salted cow 1st grade Rs. 300, 2nd grade Rs. 220 and 3rd grade Rs. 200 to Rs. 230 per score; wet salted buff 1st grade 1 lb. 12 ozs., 2nd grade 2 lbs. 6 ozs. and 3rd grade 2 lbs. 8 ozs. per rupee; goat skins 1st grade Rs. 280 to Rs. 310 and 2nd grade Rs. 240 to Rs. 250 per 100 pieces; sheep skins 1st grade Rs. 450 and 2nd grade Rs. 325 per 100 pieces.

BULLION WEAK

(From Our Own Correspondent)

BOMBAY, 2nd *December*

The bullion market exhibited a weak tone during the week under review, the weakness being more pronounced during the last two days. Over the week, both the metals recorded a sizable decline in prices, silver for forward delivery losing Rs. 3-9 per 100 tolas and forward gold Rs. 2-14 per tola. The difference between the highest levels touched at the opening of the week and the lowest levels reached to-day was Rs. 3-15 in silver (forward) and Rs. 3-5 in gold. (forward).

The main factor which adversely affected silver was liquidation by a leading bull operator, who sold out a considerable portion of his holdings. In spite of an improvement in offtake in ready silver, the market could not resist the onslaught of bull liquidation.

In gold, the confidence of operators was shaken by the impact of the recent raid in the city by the police in search of smuggled gold. There was, therefore, a scattering of the floating stocks of gold to other centres, with the result that demand from those centres dwindled. At the same time, arrivals in Bombay during the week were considerably larger than in the previous week, while demand was smaller. Bullion traders are agitated over the confiscation by the police of a certain quantity of gold which, the former contend, had been entered in their books as genuine transactions.

The Board of the Bombay Bullion Association considered on Thursday last the Bombay Government's directive to take a decision on the Board's proposal to amend the by-laws and communicate it to the Government before 5th December, 1953. The Board decided to place the proposed amendments to the by-laws before a conference of the Advocate-General and legal advisers of the Association. But the said conference has not so far been held, on account of the absence of the Advocate-General from the City. In the meantime, 70 members of the Association are stated to have sent a joint note to the Board stating that there is no need for amending the by-laws, as, in their opinion, the market has been working smoothly under the existing by-laws. The Board held a meeting to-day and also called some of the members who had sent the note expressing their opposition to the amendment. In view of this development, it is felt in market circles that the Board may seek to get the approval of the General Body for amending the by-laws, before the alternative amendments are considered and a decision taken thereon. It is also felt that the Board may not be able to take a decision before the 5th inst., as required by the Government. In spite of the aforesaid opposition by 70 members, there seems to be a feeling that the General Body would approve of the proposal to amend the by-laws. This feeling has led a few operators to the conclusion that the by-laws would be amended, which, according to them, would favour the bears. This is said to be the cause of the large bull liquidation in silver took place during the week.

To revert to the trend of prices. Opening at Rs. 153-6, silver for forward delivery (23rd December settlement) drifted down to Rs. 151-7 on Saturday last. After a recovery to Rs. 152-10 yesterday, the forward rate sagged to a low of Rs. 149-8 to-day before closing at Rs. 149-13.

Ready silver (.996 Mint) opened at Rs. 153-2, a discount of As. 4 under the forward. In the mid-week, the ready rate levelled up with the forward, but, at the close, commanded a premium of As. 6 to stand at Rs. 150-3, reflecting the pronounced weakness of the forward position and the strength of the ready position. The floating stocks are placed at 2,600 bars. The daily average offtake was about 20 bars.

Forward gold (21st December settlement) commenced at Rs. 83-11 and, after a momentary revival to Rs. 83-14, suffered a setback during the rest of the week. A low of Rs. 80-9 was touched to-day, but the closing was fractionally better at Rs. 80-11.

Ready gold opened at Rs. 84-3 at a premium of As. 8 over the forward. The closing rate to-day was Rs. 80-13, at which level the premium over the forward was no more than As. 2. This indicates the impact of the heavy arrivals and the absence of sufficient offtake. The floating stocks are reported to be 25,000 tolas. The daily average arrivals were 6,500 tolas, while the offtake was 2,500 tolas on an average.

The following comparative table shows the trend of the market during the week under review:

	2-12-53	Highest	Lowest	25-11-53
GOLD	Rs. a.	Rs. a.	Rs. a.	Rs. a.
Ready (.99 fine Mint)	80 13	84 6	80 11	84 1

New York Ready ..	85½c.	—	—	85½c.

FORWARD COTTON RECEDES

(From Our Own Correspondent)

BOMBAY, 2nd *December*

The cotton market presented a curious trend during the week under review. Despite several bullish factors, such as expectation of smaller arrivals of cotton from Madhya Pradesh (following the strike in cotton centres there as a protest against the additional levy of sales tax on cotton sent to other parts of the country), enlarged enquiries from professional quarters and larger buying by mills, cotton values suffered a setback. The chief cause for the setback was the weakness in the bullion market which affected the sentiment in the cotton market too. Leading bull operators unloaded their holdings. Prices of cotton drifted lower, the lowest levels for the week being touched to-day.

In the forward section, I.C.C. cotton for February delivery, which had touched Rs. 652-8 on Wednesday last, began the week with a hesitant tone at Rs. 648-8. After an initial rise of Rs. 9 to Rs. 657-8 on Friday, due to encouraging advices from the spot market, the contract gradually receded to Rs. 642 to-day. Lower levels, however, evoked some support and the contract finished a rupee higher at Rs. 643. The net loss over the week was Rs. 9-8. I.C.C. May contract moved in sympathy with the February contract. It opened at Rs. 650-8, as against Rs. 654-12 last week. After improving to Rs. 660 on the 27th inst., it gradually receded to Rs. 645-8 to-day before closing at Rs. 646-8, the net loss over the week being Rs. 8-4. The spread between the two contracts widened from Rs. 2 early in the week to Rs. 3-8 at the close.

The following table indicates the trend of prices in the forward market during the week under review:

	Opening	*High*	*Low*	*Closing*
I.C.C. Feb. ...	Rs. 648½	657½	642	643
I.C.C. May ...	Rs. 650½	660	645½	646½

The spot market was quite active. Business put through was fairly large and prices were well maintained. Renewed buying support and limited offerings lifted up the premiums of Khandesh and Berar 197/3. Prices of Vijay registered improvement followng good enquiries for forward deliveries. Ginners in up-country centres were reluctant to enlarge their dealings before cotton is actually in their hands and the premium for this quality, therefore, tended to stiffen. Despite poor demand from exporters, Bengals recorded a gain in values, in sympathy with the general rise in domestic cotton prices. Californian and East African cottons ruled dull. Some businesss was done in Egyption Karnak, the demand for which is expected to broaden as stocks of ready lots of Egyptians and Sudans in Bombay get depleted. The latest available quotations for the Sewri market: Bengal *Deshi* Rs. 610, Berar *Jarilla* Rs. 730, Khandesh Rs. 770, Vijay Rs. 790, Oomra *Deshi* Rs. 660 and Moglai Rs. 640.

Of great interest to the traders in foreign cottons is the Government's decision to permit, with effect from 26th November, 1953, the drawback of import duty paid on foreign cotton used in the manufacture of cloth and yarn meant for exports. The concession applies only to cotton cloth with both warp and weft yarns of counts 40s and over and of VOP cotton yarn of counts 40s and over. A scheme for allowing similar refund in respect of cloth and yarn exports manufactured partly from imported cotton and partly from indigenous varieties is still under the consideration of the Government.

Surprise is expressed by cotton circles at the absence of reference to the export duty on cotton in the address of the Union Commerce and Industry Ministery at the meeting of the Export Advisory Committee held in New Delhi on Sunday last. Representatives of cotton interests put forward a plea for a reduction in the export duty on cotton, particularly of the Oomra type. Indian cotton, it was pointed out, was preferred in the U.S. to Pakistan short-staple cotton.

The Karachi cotton market has continued to remain fully steady. Prices have been well maintained, thanks to persistent short covering by export firms. The decision of the Pakistan Government to import Rs. 4 crores worth of cotton textiles from abroad would not appear to have had any effect on cotton prices. Cotton circles feel that the decision will not affect the demand for cotton from the indigenous textile industry, which, according to them, will continue. Evidently, this expectation is based on the ground that the cloth prices have gone up to such an extent that the imports of cloth will not bring about a drastic reduction in prices of cloth and, consequently, of cotton.

The latest available quotations from the Karachi market are: Punjab Deshi Rs. 64; 4F Punjab R.G. Rs. 61-8 to Rs. 63; S.G. Rs. 65-8 to Rs. 67; L.S.S. Punjab R.G. Rs. 66-8; S.G. Rs. 71; N.T. R.G. Rs. 67-8; S.G. Rs. 73; 289F Punjab R.G. Rs. 71 and S.G. Rs. 77.

Active conditions prevailed in the Alexandria market during the week under review. Buyers were particularly interested in Karnak medium to higher grades. Some support was also lent to Ashmouni by foreign and local consumers. The offtake, therefore, registered improvement. Export demand for most grades of Karnak has been fairly good, while that for Giza 30 continues to be poor. Exporters of cotton are reported to be now in a position to give a price discount of 4.25 cents to overseas buyers paying fully in sterling; entitlement sterling commands a premium of 5½ per cent. for December. But demand for sterling is said to be poor with May sellers. November delivery of Deutsche marks and U.S. dollars are quoted at a premium of 10½ per cent. and 7½ per cent., respectively.

Cotton prices in the New York market have been a shade lower in the past few days, as compared with the quotations at the close of last week. This was due to the renewal of liquidation in December position, which, in turn, was influenced by the issue of 30 additional transferable notices, together with hedging in 1954 March and May positions. There was scattered commission house selling of new crops on expectation of an upward revision in acreage allotment by the Congress. There were, besides, reports that the Administration's new farm programme might recommend the two-price system for cotton. Selling pressure that ensued as a consequence brought about a fall in prices. The fall would have been more marked but for fresh mill buying and covering by shorts.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

	2-12-53	24-11-53	17-11-53
Spot	33.55	33.85	33.55
March	33.26	33.45	33.34
May	33.40	33.57	33.63
July	32.22	33.39	33.46
October	32.46	—	—

Movement of cotton into the loan continues to be quite brisk. The quantity that has actually moved so far is estimated at 4 million bales. Should this continue in the coming weeks, floating stocks in the market will, it is expected, be depleted and ultimately a tight supply position may develop.

A rather pessimistic note about the trend of the seasonal cotton exports has been struck by private traders. The aggregate quantity of exports is estimated at not more than 2 million bales, which falls short of the official estimate by 1.2 million bales. In support of this view, they point to the low rate of exports in the past few weeks. There is a survival of rumours regarding possible export subsidy for cotton. Press reports aver that the question is under the examination of the Government. Officials' views are said to be somewhat divided. A section of traders feels that, in view of the definite statement of the Secretary of Agriculture, there will not be any such subsidy, at least till 1st August, 1954.

ART SILK YARN FINISHES LOWER

(From Our Own Correspondent)

BOMBAY, 2nd *December*

The marked improvement in the prices of art silk yarn witnessed last week gathered further momentum in the early sessions of the week under review. The sentiment of operators was favourably influenced by renewed enquiries for yarn following a perceptible rise in offtake in rayon cloth market. There were, besides, reports of an upward revision in prices of 150 deniers yarn supplied by the National Rayon Corporation to the members of the Silk and Art Silk Mills' Association, Bombay. These induced good support to the market and prices of yarn registered a further rise. The rising tendency, however, was shortlived. For, on Monday, the market developed a sagging tendency, on expectation of a liberal import policy for art silk yarn in the coming half-year. The expectation was based on the announcement of expansion in imports on private account made by the Commerce Minister at the recent meeting of the Import Advisory Council. There was, as a result, a wave of selling pressure causing losses all round. In the result, not only were the previous gains completely erased but the closing quotations to-day stood very much lower than those a week before.

Art silk yarn (150D) December contract opened at Rs. 732 and rallied 7 points to Rs. 739 on Friday. In the subsequent unloading by longs, it declined to Rs. 714 to-day. The net loss over the week was thus of the order of Rs. 18. January contract, trading in which commenced at Rs. 743 yesterday, was hammered down to Rs. 717 to-day. November contract terminated at Rs. 728 on Monday. Business in this contract opened at Rs. 698 on 1st October, 1953. The highest level touched was Rs. 735 on 21st November and the lowest level was Rs. 669 on 15th October. The net gain over the period of the contract was 30 points.

Prices of yarn in the ready section also suffered a setback. Thus, 150 Italy lost an anna to Rs. 3-9½. 150 Japan and 120 Italy were lower by half-an anna at Rs. 4-1 and Rs. 3-14, respectively. 120 Japan, however, proved an exception in that it remained fully steady at Rs. 4-3.

In contrast to the general trend in the art silk yarn market, the staple fibre section continued to present firm conditions, the chief bullish factor being the postponement of the decision regarding the commencement of forward trading in January and subsequent contracts by the Yarn Merchants' Association. Staple fibre (40×2) November contract shot up from Rs. 760 to Rs. 785 on Monday at which rate the contract terminated.

The table below gives the prices of art silk yarn and staple fibre yarn quoted to-day, as compared with those on the 25th and 18th inst.

Art silk yarn	2-12-53 Rs. a.	25-11-53 Rs. a.	18-11-53 Rs. a.
150 December (per case of 200 lbs.)	714 0	732 0	710 0
150 January (,, ,,)	717 0	—	—
120 Japan (per lb.)	4 3	4 3	4 2
150 Japan ,, ...	4 1	4 1½	4 0
120 Italy ,, ...	3 14	3 14½	3 13
150 Italy ,, ...	3 9½	3 10½	3 9
Staple fibre yarn			
2/40s November (per case of 200 lbs.)	785 0	760 0	762 0

As already noted, the arrangements between the National Rayon Corporation and the Silk and Art Silk Mills' Association for the sale of yarn by the former to the latter have been revised. Accordingly, the Corporation will deliver, during the first quarter of 1954, to the members of the Association 50 per cent. of the production of 120 deniers. The previous arrangements covered only 150 deniers. The price at which the 120 deniers will be sold is fixed at As. 5 higher than the price of Rs. 3-10 for 150 deniers.

OILSEEDS BEARISH

(From Our Own Correspondent)

BOMBAY, 2nd *December*

The announcement by the Minister for Commerce and Industry on the 29th inst. that there was not much possibility of exports of groundnut oil rest of this year as also next year, unless the prices came down appreciably, came to the market as a bolt from the blue. This news, coupled with dwindled *vanaspati* enquiries and reports of poor offtake of groundnut oil at up-country centres, unnerved operators. Stock holders and crushers too were anxious to reduce their commitments. A nervous feeling prevailed in the market. Consequently, selling pressure was let loose and prices of groundnut and groundnut oil staged a sharp recession. The linseed section was also bearish in sympathy with groundnuts and on absence of encouraging overseas advices for linseed oil. In the castor seeds section, under a mild bull-bear tussle in futures, prices fluctuated within narrow limits. Spots, however, ruled slightly easy. Overseas advices for castoroil were distinctly discouraging.

The shock created by the announcement of discontinuance of exports of groundnut oil was reflected in the sharp recession in prices. There was some attempt to hold up the prices, but it was in vain. Prior to the announcement, Bold ready which opened the week at Rs. 30-8, as against Rs. 30, had improved to Rs. 30-12, on expectation of liberal exports. But, subsequent to the announcement, it sank to Rs. 27-12, thereby disclosing a loss of Rs. 2-4 over the week. December-January delivery was done lower at Rs. 27-8, as against Rs. 29-4 and February-March Rs. 28-2, as against Rs. 30-2. Khandesh quality, ready new lost Rs. 2-12 to Rs. 29. Groundnut oil ex-mill and railway receipts eased from Rs. 17 and Rs. 16-12, respectively, to Rs. 15-4 each. December and January deliveries changed hands at Rs. 14-10 and Rs. 14-12, as against Rs. 15-14 and Rs. 16, respectively.

In the linseed section, Bold ready opened quiet at Rs. 26, but gradually declined to Rs. 24-8, thereby registering a fall of Re. 1-8. October-November closed on 30th November at Rs. 25-8, as against Rs. 26 on 25th November. February-March eased from Rs. 22-10 to Rs. 22. Linseed oil sustained a loss of As. 4 to Rs. 14-4.

The U.K. Treasury has reduced, with effect from 29th November, 1953, the rates of drawback of customs duty allowable on imported linseed used in the manufacture of exported linseed oil from £6 10s. to £3 15s. per ton and on imported linseed oil used in the manufacture of certain kinds of exported goods (paints, printer's ink, floor coverings, fishing nets, etc.) from £22 10s. to £12 10s. per ton. It has also amended the quantities of linseed oil to be taken into account in calculating the drawback allowable on exports of linoleum (other than printed linoleum), felt base, fishing nets, oil baize and leather-cloth.

The silence of the Commerce and Industry's Minister at the Export Advisory Council regarding the export policy for castoroil next year is interpreted variedly. Some interpret that the Government has not come to any decision, while others take it as an indication of an impending announcement providing for liberal exports of castoroil and reduction, if not abolition, of duty on exports. The duty on the oil is now Rs. 300 per ton. Owing to this different interpretations, prices fluctuated with a narrow range. May 1953 delivery opened at Rs. 112-3, as against Rs. 113-6. It moved between Rs. 111 and Rs. 117-10, before closing at Rs. 111-6. Madras quality declined from Rs. 27-8 to Rs. 26-8. Castoroil I Pressure was quoted quiet at Rs. 16-4 and Commercials at Rs. 15-4. The U.K. mills are selling castoroil I Pressure at £130 ex-mill. As against this the Indian offers at £135 per ton. C.i.f. November-December delivery has met with no buyers.

The following table shows the prices of oilseeds and oil on the 25th inst. as compared with those at the end of the previous two weeks.

	2-12-53 Rs. a.	25-11-53 Rs. a.	18-11-53 Rs. a.

TEA FIRM

(Messrs. Forbes, Ewart & Figgis Ltd.)

COCHIN, 28th *November*

The offerings in Sale No. 24, which was held on Tuesday, 24th November, amounted to approximately 16,00,000 lbs. Quality had shown some improvement, particularly amongst the medium and good medium teas. From the outset, there was a strong general demand for all types, mainly from exporters. Commonest kinds were fully firm, but low medium brokens and fannings advanced by 1 to 2 annas. Medium and good medium descriptions met with keen competition and were As. 2 to As. 3 dearer to buy. Best liquoring teas were well supported and were dearer, following

an improvement in quality. Whole leaf grades were steady and there was a slightly improved demand for Flowery Pekoes. The following were the quotations:

	1953 Rs. a. p.	1952 Rs. a. p.
Low grown Travancore B.O.P.	1 13 9	0 15 0
Medium Travancore B.O.P.	1 15 0	1 11 0
Anaimallais B.O.P. ...	2 2 0	1 14 6
Best liquoring Nilgiri B.O.P.	2 12 9	2 11 0
Well made black leaf O.P.	2 4 0	2 2 0

London Market.—Between 3/6d. and 3/10d. Market half penny to penny dearer, others fully firm.

Colombo Market.—Middle East types lower. Other lowgrowns firm. Very strong demand for useful liquoring teas. Mediums two to five cents dearer and dimbula type brokens five to fifteen cents dearer.

Calcutta Market—Export.—68,000. Good demand occasionally dearer, especially commonest and fannings.

Dust.—Strong demand. Market generally half an anna dearer. Black exportable types and commonest strongest feature. C.T.C. fairly steady.

Export Quota.—Sellers were scarce during the week, as a result of which the market has hardened to 25 pies.

Forthcoming Auctions.—The Auction dates for the remainder of 1953 are as follows:—

Dust sale 'X' Tuesday, 1st December; Dust Sale 'Y' Monday, 14th December; and Leaf Sale No. 23 Tuesday, 15th December.

The first sales in 1954 will be as follows:

Dust Sale 'A' Monday, 4th January, Leaf Sale No. 1 Tuesday, 5th January; Leaf Sale No. 2 Tuesday, 19th January and Dust Sale 'B' Monday, 25th January.

JUTE GOODS RALLY

(From Our Own Correspondent)

CALCUTTA, 1st *December*

The feature of this week (Tuesday to Monday) in the jute goods market was a revival of the upward trend in prices, following keen speculative activity. While the week's gains in hessian were slashed somewhat yesterday, the improvement in heavy goods was steadily maintained. News of the finalisation of a bilateral Indo-Russian trade agreement and the expectation that Russia would soon be in the market for considerable quantities of heavy goods after the signing of the pact (expected to take place shortly) fanned the enthusiasm of tired bulls, and the prices of the different varieties of sacking shot up and soon touched high levels. It is known that Russian requirement of packaging material is more for sacking than for hessian. Another reason for the change in outlook was the reported revival of foreign demand for sacking, particularly, from Australia and Africa. The Australian Government is understood to be soon lifting jute control, which means that its huge stocks purchased at high prices and regularly issued for commercial consumption at prices bearing no relation to the post-Korean war decline have exhausted, or nearly exhausted, and that imports through normal trade channels would be permitted.

All these new developments including the prospect of good business with Russia point out to the possibility that the cut in production by the transfer of sacking looms to hessian would have to be reconsidered by mills. No doubt, output in hessian has to be maintained at least at the current level, since foreign demand which has increased in recent months would have to be satisfied. Heavy demand from the United States is reportedly in the offing in view of the need for more burlap bags to pack a record crop of potatoes, and the campaign of the Indian Jute Mills' Association in America advocating burlap's superior utility and after-use as a packaging material is expected to meet with success. To meet the changed needs, therefore, the mills would have to resume normal working hours. This can be done, it is stated, if only the export duties on hessian and sacking are done away with, as only such an action would enable the industry to make Indian quotations further competitive and thus attempt to raise consumption in foreign countries.

Last Tuesday, lethargic conditions prevailed as foreign buyers were not interested in business while weak holders were keen to make offers. Early in the week, mills were off the market. Ready 40" 10 oz. hessians declined to Rs. 47-4 from an over-night rate of Rs. 47-8, and B. twills to Rs. 100-12 from Rs. 101-4. Subsequently on account of interest shown by buyers on behalf of Africa and Australia coupled with the prospect of good business with Russia, there was a bout of speculative enthusiasm, which took up B. twills to Rs. 104-2 and hessian 40" 10 oz. to Rs. 48-6. The reserved tendency on the part of mills helped to sustain the rates yesterday also. January-March sackings were in strong demand and B. twills whether for ready delivery or forward shipment were quoted at Rs. 105. Ready hessians 40" 10 oz. were, however, As. 8 lower at Rs. 48.

After an early quietness and a fractional easing in prices, the higher advices from the jute goods section lead not only to a recovery in the raw jute market but the closure yesterday was with a fractional gain in values for the period under review. Mills were in the market in the latter part and bought substantial quantities. Supervised northern bottoms changed hands at Rs. 27 and bimli f.a.q. after recording business at Rs. 24-8 recovered to Rs. 25-8. Northern middles gained to Rs. 31-8 after easing to Rs. 30-8 from Rs. 31. Similarly, northern bottoms were also higher on balance by As. 8 at

STOCK & SHARE QUOTATIONS

Abbreviations:—D=Deferred shares. P.O.=Preferred Ordinary shares. Y=Accounts published yearly. H=Accounts published half-yearly. P=Company has Preference shares. T=Company has Debentures. N=Nominal quotation. x.d.=Ex-Dividend. c.d.=Cum. Dividend. I=Interim Dividend. F=Dividend for first half of the year.

Shares:—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery, and all other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year, they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly, dividends shown are for their financial year. Where, however, the accounts are closed half-yearly, dividends are shown separately for the respective half-years.

* Including bonus. a Sales and amount written off. (k) Investments. ‡ For ten months ended 31st December 1951.

(1) Made up of an interim dividend of Re. 1-12 per share on 1,20,000 shares and final dividend of Re. 1-10 per share on 2,40,000 shares of which 1,20,000 shares are bonus shares.

* The following explanatory notes relate to the abbreviations and marks shown on page 1084 in the debentures section:—

H Option to repay on six months' notice, on any interest date after 31st December, 1951, at 102 per cent. Also redeemable out of a cumulative sinking fund of 1½ per cent. per annum (commencing in 1938) by drawings at 102 per cent. or by purchase at or 102 per cent.

(a) Option of repayment at any time at 3 per cent. premium.

(b) Bearer bonds of Rs. 1,000 each repayable at par.

(c) Bearer bonds of Rs. 1,000 each repayable on 31st July, 1959.

(d) Bearer bonds of Rs. 1,000 each with option of redemption in whole or in part at par on 30th June, 1952 or on any subsequent interest date at one month's notice.

(e) Returnable on or after 31st July, 1950, at Rs. 102-8 or at par after 31st July, 1955 on six months' notice in each case.

(f) Bearer bonds of Rs. 1,000 each with option of redeeming on 3 months' notice at ½ per cent. premium after 1st March, 1954, but before 1st March, 1957, and 1 per cent. premium on or after 1st March 1957.

(g) Option of redemption on or after 1st July, 1949, at par.

(h) Option of repayment at any time at par at any time on or after 30th June 1947 on six months' notice.

MARKET GOSSIP

(Concluded from page 1039)

ing orders by raising the expectation that, if he were to hold off from the market a little longer, the duty might be reduced."

The foregoing remarks show that the Commerce and Industry Minister has failed to realise the complete change that has taken place in the climate of world trade. The buyers' market is in full swing. The buyer is now in a position to demand supply of goods according to his ideas of price. He will adopt all tactics to get the goods at that price. He will wait, if necessary, or try alternative sources. It is, therefore, no use, criticising either the Press or the trade for advocating abolition of export duties. There is nothing that Government can do in such a situation, which is almost identical to that in which a country finds itself when its currency is overvalued and rumours of devaluation start. In these circumstances, the Government should gracefully bow and withdraw the export duties. Any profit which the exporter makes immediately after the withdrawal of these duties will be of a temporary nature. Even if he makes some, it will come back to the Exchequer in numerous ways. After all, export duties were not meant to be a source of revenue; they were designed to keep off the inflation that was rife in several parts of the world in recent years. By continuing them at a time when the buyer is in a position to dictate his terms and when other countries are subsidising their export trade in devious ways, the Government of India is, in effect, absorbing the deflation in other countries to the detriment of investment and employment in this country.

• • • •

Quite a few speakers at the meeting of the Import Advisory Council advocated restriction on imports, with a view to giving protection to domestic industries. Some tried to exploit the unemployment problem, which has received so much publicity now, to support this demand. These people are opposed even to token imports. They want a completely closed market for Indian industries, little realising that that will ultimately affect our exports and thereby cause more unemployment. There were, however, at least a few to oppose this view, which is quite popular with some of our industrialists. One of them very pertinently remarked that the unemployment problem should not allow them to forget the inflationary factor which would raise its head again when the expenditure under the Five-year Plan was stepped up, as was proposed by the Finance Minister. On this issue, Mr. Karmarkar stated the Government's position very clearly and correctly. He declared that protection through import controls was not a scientific remedy. Psychologically, too, the Government must help the Indian industrialists to develop self-confidence that they could successfully compete with imported goods from any part of the world. It is needless to add that this self-confidence cannot be created so long as the industries are sheltered by restriction on imports or by high tariff walls. Such protection can be justified only in exceptional circumstances, such as dumping, or in the case of industries of vital strategic importance.

JUTE

(Concluded from page 1054)

was due to lower Indian wages. For the preparation of these estimates it was unable to obtain cost data from Indian mills. It, therefore, seems to have arrived at this figure purely on the basis of guess-work.

Be that as it may, the position now is not the same as it was five years ago. The health of the Dundee industry has vastly improved since then, whereas that of its Calcutta confrere has gone down. The Dundee mills, for instance, have been able to increase their efficiency by means of modernisation through installation of new equipment of the order of £5 million, while most Indian mills have not been able to carry out replacement programmes for obvious reasons. In the circumstances, the costs of production in Dundee must have now been far less than those in 1948 when the Working Party stated that there was no prospect of a healthy jute industry in the U.K. without protection against Indian imports. It had also stated, it may be added here, that so long as it was the policy of the Government to protect the industry Dundee should be assisted. This recommendation has held good since then, and protection to Dundee has gone on merrily, though it is against the G.A.T.T. principle.

The Economist, of course, is not totally against the continuation of protection, for it admits that such is necessary for preventing unemployment in Dundee; it is opposed only to protection in its present form for several reasons. Protection to jute industry, in a country such as the U.K., long associated with *laissez faire*, goes against its very grain. Secondly, by providing a closed market, it kills incentive to produce efficiently by jute mills and keeps costs high. The burden on the consumer continues to be high and affects exports adversely to the extent these exports are packed with costly jute. Thirdly, it works against the expansion of trade with the Commonwealth countries, namely, India and Pakistan and, therefore, should be avoided. Lastly, as it is against the G.A.T.T., it should be modified in such a way as to be in line with Britain's obligations under this Agreement. This could be done, says the *Economist*, by entering into special agreements with the two countries. Now that the question has come up to the surface, it is likely to be taken up in the coming Commonwealth Conference at Sydney.

MARKET REPORTS

(Concluded from page 1073)

Rs. 28-8. Assam upper bottoms at first gave way to Rs. 27 from Rs. 27-8 but closed higher at Rs. 28, and middles advanced to Rs. 31 from Rs. 30-8.

FOODGRAIN PRICES DECLINE

(From Our Own Correspondent)

HAPUR, 30*th November*

The overall food position in the country continues to maintain a steady improvement and there has been some further decline in wholesale prices. In some areas the State Governments are issuing foodgrains at less than an economic price by meeting the losses themselves. The Government of India has given an assurance only to Travancore-Cochin that it would assist the State Government in meeting a part of the loss incurred by it in issuing rice at the present subsidised wholesale issue price of Rs. 17 per maund.

The present food policy of the Government of India was outlined by the Deputy Food Minister in the House of the People early this week. It has been decided to decontrol wheat and coarse grains, except that inter-State barriers will continue as hitherto. It is not proposed to disturb for the present the existing rationing arrangements for the distribution of rice. The rice supply position in the country has improved considerably, but it is still not so easy as to justify complete derationing of rice.

The first all-India estimate of rice for 1953-54 places the current year's area at 67,452,000 acres, as against 65,374,000 acres in the adjusted first estimate for 1952-53. This shows an increase of 2,078,000 acres or 3.2 per cent. in area over 1952-53. This increase in the acreage is shared mainly by U.P., West Bengal, Assam, Hyderabad, Mysore, Punjab and P.E.P.S.U. Food position in Uttar Pradesh has considerably improved, as in most other parts of the country. The stock position is sound. Following the withdrawal of rationing and control restrictions, the Government's commitments have lessened and there is expected to be a fair amount of saving under this head, which should go a long way towards reducing the anticipated deficit in the current year's budget. The procurement of rice up to 12th November, 1953 when the Government of India stopped it amounted to 16,500 tons. Actual deliveries so far have been 9,898 tons and the rest is still with the purchasing agents. The procurement of gram and barley for the austerity provisioning scheme for hill districts and eastern districts is, however, continuing and up to 12th November, 8,843 tons of gram and 7,728 tons of barley were procured.

TIN PRICES ADVANCE

(From Our Own Correspondent)

CALCUTTA, 1*st December*

The feature in the metal market during the week was increased activity in tin and an impressive rise in quotation. This was due to the expectation that the International Tin Conference might succeed in fixing a world price for tin, although America would not agree to this, because it stood to gain by entering into individual agreements with its main suppliers, i.e., Bolivia and Malaya. The proposal to build a buffer stock of 25,000 tons has been mooted in this Conference, and if this is accepted by the participating countries, its creation would require 18,750 tons to start with. This prospect could not but influence market trend, because if such a huge quantity were lifted there would be no surplus problem for this year at least, but an immediate tightness could result. There was keen activity in the local market, and the price at one time was higher at Rs. 429, as against the opening of Rs. 421. Consumers were not prepared to support the rise, and the price receded to Rs. 423. Mercury was quoted at Rs. 525, but business passing was little. Encouraged by foreign advices, electrolytic copper ingots gained from Rs. 162 to Rs. 164 and ready stocks continued difficult to locate. If the report that Chile would not place its copper in world markets, but would only sell to the United States, proves correct, world prices are expected to move up. The fire-refined material was priced at Rs. 149. Lead was quoted at Rs. 66 throughout. Electrolytic zinc eased to Rs. 53 from Rs. 54-8.

SUGAR SLIGHTLY EASY

(From Our Own Correspondent)

BOMBAY, 3*rd December*

Following expectation of large arrivals from northern and Deccan factories in the next few days, the Bombay sugar market exhibited slightly easy conditions during the week under review. The expectation was based on the Government of India's announcement releasing for sale the entire production of sugar in the mills upto the end of November during the current season. For want of support, therefore, sugar prices tended to decline. In the forward section, *magsar* delivery lost a rupee to Rs. 83-12 per bag. *Kartik* delivery was squared up at Rs. 85. *Posh* delivery was quoted at Rs. 84-12. In the ready section, large grain sugar was lower at Rs. 97, as against Rs. 98 last week. Small grain sugar was quoted at Rs. 91. Last week, this variety was not quoted, as no stocks were available. Medium grain sugar, however, was fully steady at Rs. 95. Some business has been reported in the current season's Deccan sugar at Rs. 92 to Rs. 93 per bag ex-mill. Imported sugar was subjected to heavy selling pressure, the rates for British and Mexican refined sugars being Rs. 84-12 per bag of 224 lbs. and Rs. 40-12 per bag of 110½ lbs., respectively.

It is reported that the Union Food Ministry has purchased 15,000 tons of East German sugar and 2,000 tons of Czechoslovakian sugar at £34-10 and £35-15 per long term, c.i.f., Bombay, respectively.

TEAS STRONG

(From Our Own Correspondent)

CALCUTTA, 1*st December*

Tea prices during yesterday's export auctions, when offerings consisted of 58,000 packages, made further impressive gains. Demand was strong, and buyers

MORTGAGING THE FUTURE

ONE more long speech on the problem of unemployment has been delivered. This happened last week-end. The place was the House of the People and the speaker was the Minister for Planning, Irrigation and Power, Mr. G. L. Nanda. Only a fortnight before, Mr. C. D. Deshmukh, Finance Minister, had stated the official reading of the situation in a very comprehensive manner. Nothing has happened since then to deserve another official exposition of the problem. To many this may appear to be too minor a point, which it undoubtedly is, generally speaking, to be mentioned in these columns. There is, however, a reason why we give so much prominence to it. This endless talk is a typical instance of the leisurely manner in which the problem of unemployment, which in reality is the same old problem of economic development of the country, is being tackled. There is a sense of urgency in the speeches made by most of our Ministers, but it is conspicuous by its absence either in their policies or actions. The result is that more words, instead of persons, are being employed. That seems to be the only solid achievement of this country ever since the problem of unemployment raised its head and drew the attention of the public. In saying this, we do not deprecate discussion of the problem. What we deprecate is too much discussion and too little action. Too much talk on the self-same problem, it is needless to add, tends to cloud and confuse the real issue. This is exactly what seems to be happening.

So obsessed have some become with the problem of unemployment that the urge to provide short-term, non-enduring solutions at the cost of the chief objectives of the Five-year Plan has become strong among officials. Take, for instance, the Government's new legislation in regard to payment of compensation to workers who are retrenched or rendered idle for some reason or other. Both Mr. Deshmukh and Mr. Nanda opposed the Communists' demand in Parliament for the creation of a fund of Rs. 50 crores for giving out doles to the unemployed. They did so on the ground that distribution of doles would not meet the situation facing the country and that no reward could be given for idleness. Is not payment of compensation to workers retrenched analogous to giving out doles? After all, in both cases, the expenditure involved is unproductive. The only difference here is that, instead of the State paying out doles, the employers (that is, investors) are asked to bear the burden. If payment of this compensation is sought to be defended on grounds of social justice, then why not accept the demands of the Communists?

The primary object of compelling employers to pay compensation for retrenchment, however, is not aimed at providing social justice to industrial workers but to deter employers from lightly resorting to retrenchment. This is quite clear from the statement of the Labour Minister in the Council of States on Wednesday this week. In other words, the Government does not wish to see the problem of unemployment aggravated by industries retrenching surplus labour. This is understandable and it may have the desired effect. But what about its repercussions on future trend of employment? As we have ere now pointed out, it will have a dampening effect on fresh employment opportunities and thereby act as a deterrent to the realisation of the objectives of the Five-year Plan. It will make our economy even more rigid than at present, in that employers will be chary of expanding their activities even when market conditions turn out to be favourable, because of the fear of having to pay compensation to workers, if a set-back were to occur again.

To give another instance of the type referred to above. Mr. Nanda has been saying in recent weeks that the Planning Commission has been reconsidering the river valley projects and other irrigation schemes, in the light of the need for providing employment to the unemployed. By this he means that the employment potential of the big river valley projects even during the period of their execution should be expanded by reducing the use of mechanical power in favour of manpower. It seems from Mr. Deshmukh's speech in Parliament on 22nd November, 1953, that even he concurs with this view in a way. But this is a very short-sighted view. In the first place, execution of river valley projects will not provide employment of a permanent and durable nature. Secondly, the main objects of river valley projects are to provide, (a) motive power which will lead to increased industrialisation, (b) water for bringing vast waste lands under cultivation and (c) shelter against flood damage which has been of a colossal nature. It is the realisation of these objectives that will provide sustained employment at a high level of wages and increase the real wealth of the country. If these very desirable and eagerly longed for objectives are to be realised as quickly as possible, it is obvious that the river valley projects should be completed with great speed, skill and efficiency. It is also necessary that expenditure on these river valley projects should be kept at as low a level as possible, so that the cost of power and water could be maintained at economic levels. The importance of this aspect of the issue cannot be overemphasised. Most of the river valley projects are in areas which are either undeveloped or underdeveloped. The capital cost of developing these areas will be very heavy and special incentives will have to be offered to *entrepreneurs* to migrate to these areas and take an active interest in developing them. It will, therefore, be essential to keep down the water and power rates at attractively low levels.

If Mr. Nanda's proposal to increase the employment potential of the river valley projects during their construction stage were to be implemented, the achievement of the aforesaid objectives would be greatly delayed and become costly. The availability of manpower in abundance is not an adequate reason for bringing about this undesirable result. Mr. Nanda himself has admitted, albeit on an earlier occasion, that there is not enough trained labour in the country that can efficiently do the work involved in the construction of huge river valley projects. Again, the benefits assured to labour are so many that the wage bill will be enormously high. In view of all this, what is required is the use of machines to the maximum extent possible, so that a permanent and enduring source of employment can be created as rapidly as possible and at the cheapest cost that can be had. To ignore this consideration is to advocate a retrograde step. It will mean mortgaging the future for the present. But we are afraid it is useless to try to convince Mr. Nanda and those who think like him of the advantages of resorting to mechanisation in the execution of irrigation and power projects and the disadvantages of employing more manpower in the execution of these projects. For they argue that finance is not the problem and that cheapness is not everything. In fact, in his speech at the symposium on river valley projects held during mid-November, Mr. Nanda was reported to have said that the case for mechanisation should be based on stronger ground than mere economy and that it was essential that available manpower should be made the best use of. If this principle is going to be the basis of the Government's policy on all major economic issues, as it seems to be, then this country will do well to realise that it cannot achieve in 10 years what other countries have achieved in 100 years.

The present unemployment problem is due as much to long-term factors such as growing population and arrested economic growth of this country over a very long period as to short-term factors such as defective fiscal and labour policy of the Government, recession in business activity, failure of monsoons in certain parts and excessive rains in other parts of the country, and several impediments to production discussed in these columns last week. To the extent the latter factors have accentuated the unemployment problem, a perceptible improvement in the situation can be brought about if the Government acts quickly on the lines advocated by us in our last issue. As Mr. Nanda is aware, the relief given to the textile industry early in November has improved the position in the textile industry and the cloth market to some extent. Here is an instance of what relief in taxation can do. If similar measures were taken, the prospects for employment would improve to a far greater extent than they would through measures taken to support uneconomic means of production and to compel employers to tolerate a state of affairs in which productivity per worker is low. The solution for unemployment caused by long-term factors lies in resolutely implementing the big projects envisaged in the Plan for developing our latent resources and in taking appropriate measures for restricting the growth of population.

FOOD AND AGRICULTURE MINISTRY

MANY fundamental issues have been raised and some far-reaching recommendations made by the Estimates Committee (Chairman: Mr. M. Ananthasayanam Ayyangar) which examined the working of the Food and Agriculture Ministry. The Committee finds that the administrative set-up of the Secretariat of this Ministry has been "created haphazardly on an irrational basis" and that there is "considerable duplication of work and overlapping of

functions." The Committee considers that some sections—the Ministry consists of 28 sections, in all—are "redundant" and could be abolished without any adverse effect on the efficiency of the Secretariat as a whole. It has, therefore, recommended, in some cases, the abolition of certain sections and the amalgamation, in certain others, of two or more sections into one. Since each recommendation has been backed by authentic evidence of redundancy, duplication and waste in expenditure, it is to be hoped that action on the lines suggested by the Committee will not be delayed by the authorities.

Economy measures, however, are not the only recommendations; nor are they the most important. The Committee has examined the work of the different research institutes under the control of the Ministry and has made a number of very useful suggestions. Referring to the work of the Forest Research Institute, the Committee says:

"The Institute has been in existence for nearly half a century and the expenditure (including non-recurring expenditure) on it is of the order of Rs. 41 lakhs per annum during recent years. The Committee, however, feels that the Institute, well-equipped as it is both in men and material, is not producing results of practical commercial utility commensurate with the enormous expenditure that has been incurred on it. Undue attention has been given in the past to researches of fundamental nature, of academic interest only, rather than to researches which are productive of results of practical and commercial utility aimed at enriching the forest wealth of the country. It is, indeed, regrettable that, even in cases where applied research had been initiated, little has been done to carry out the same to the developmental stage in order to assess their economic potentialities. To cite a few instances: the manufacture of camphor from *Ocimum (Tulsi)*, of starch from tamarind, the treatment of timber and bamboos against damage by insect pests, unfavourable weather and fire. Unless applied researches which promise to show practical results are 'followed up,' the continued existence of a costly Forest Research Institute will be hard to justify."

This is a powerful indictment of the work of the Institute and one which seems fully justified, in the light of the evidence adduced. The Committee rightly insists that while "beautiful buildings, costly equipment, big insect collections and museums may be fascinating and a source of pride," the country expects some "tangible results of economic utility." Indeed, this sentiment is repeatedly expressed and rightly forms the basis of the Committee's approach to the problems handled by the Ministry. Few will cavil at this approach, when it is realised that the plant and equipment, valued at Rs. 15 to Rs. 20 lakhs, imported four years ago by the Institute's authorities from foreign countries for the manufacture of paper, "have not been installed, and, in fact, some of the machinery has not even been unpacked."

The Committee has made three important recommendations in order to improve the Institute's work. In the first place, it urges the research officers to "devote more time to researches of applied nature" and the Government to provide facilities in order to determine whether the results are "commercially exploitable." Allied to this suggestion is the Committee's recommendation that the President of the Forest College and Research Institute should be a technical man, and not a non-technical man, as now. Secondly, it urges closer association of the industrial sector with the Institute. Thirdly, it urges reduction in expenditure per student in the Forest College. The annual expenditure per student comes to Rs. 6,675 and the students are charged Rs. 7,000 for the two-year course. This expenditure is certainly on the high side and the fees are much higher than for any other professional course of studies in the country. It rightly urges that admission should be made through open competition. This will attract the best students to the college and, if the level of fees, as the Committee suggests, is kept within the "reach of persons of average means," it should be possible for the college authorities to attract really able young men in the country.

Research in fisheries, as is well known, is now part of the work of the Agriculture Ministry, to which this task has been assigned on the ground that a well developed fishery industry will reduce the country's dependence on agriculture for all its food requirements. The research work on fisheries is now carried out through the Central Inland Fisheries Research Station, Barrackpore, Central Marine Fisheries Research Station, Mandapam, and Deep-sea Fishing Station, Bombay. The Committee finds that the work of the Barrackpore Research Station has suffered through "lack of adequate equipment and trained personnel," and of the Mandapam Institute through "limitations of finance and equipment." The Government will, it is to be hoped, remedy these defects. But the Committee's findings in respect of the work of the Deep-sea Fishing Station are really disturbing. It would appear that there is "practically no off-shore or deep-sea fishing in the true sense of the term or in any scale of commercial importance." It quotes the opinion of Dr. Hora, Director, Zoological Survey of India, who, in the course of his evidence submitted to the Committee, emphasised that deep-sea fishing in India was neither economical nor practical in the present circumstances. It would appear that the tropical seas are deeper than the North Sea where deep-sea fishing operations are successful, and also that the Indian seas contain far too many varieties of fish to build a regular canning industry. Although the Committee admits that it has not examined the whole subject in all its aspects, and that it, therefore, hesitates to come to the conclusion that deep-sea fishing should be abandoned altogether, it seems necessary that the whole scheme should be examined by the Government, in view of the strong views on the question expressed by the Director of the Zoological Survey of India.

Among the research institutes which come within the purview of the Food and Agriculture Ministry, the Central Rice Research Institute, Cuttack, established in 1946, is certainly one of the most important, in view of the fact that rice constitutes the weakest link in the country's food chain. But the Institute is a comparatively minor affair, financially speaking, for it costs the country less than Rs. 3½ lakhs a year, as compared with the recurring expenditure of over Rs. 15 lakhs on fisheries research, and of over Rs. 33 lakhs on forest research. Other research schemes, less essential from the point of view of immediate urgency to the country's national economy, claim and also receive larger funds. No wonder that the Committee finds that the Institute is "inadequately equipped in many respects." The Committee quotes, in this connection, the opinion of Mr. Stanley Clarke, who was deputed by the Australian Government in 1952 to investigate the supply of technical equipment from Australia under the Technical Co-operation Scheme. Mr. Clarke wrote:

"There is a strong bias towards higher university education and large and imposing institutions, irrespective of whether they are the most important needs of the country. On the one hand, there was the contrast of the new National Physics Laboratory costing £900,000 including an auditorium capable of seating 850 people. This Laboratory has been designed and staffed largely for fundamental work. On the other hand, there is the Central Rice Research Institute at Cuttack, completely starved for funds, working in old farm buildings with most inadequate equipment."

This is a sad, but true, commentary on the way research is being handled in this country. Although it might be wrong to describe the Central Government's research efforts as a costly show, all stage-managed for important visitors, there is no doubt that the country expects the Institutes to be more realistic in their work, if only to escape the charge that they are only costly appendages to the Government.

The Committee has examined the issues which arise out of the conduct of agricultural research in this country. The Indian Council of Agricultural Research (I.C.A.R.) was, as is well known, conceived as an apex body for the examination of all research schemes. The I.C.A.R. has an Advisory Board, a Governing Body and several scientific committees. These scientific committees, which are primarily responsible for the detailed examination of the schemes submitted to the Council and also for the review of the progress report of the schemes, meet for ten or fifteen days before the annual meeting of the Advisory Board and the Governing Body. The Estimates Committee rightly feels that, within the "limited time" at their disposal, these committees can hardly do "full justice to the schemes by conducting a detailed examination." In these circumstances, the I.C.A.R. cannot possibly exercise, in a satisfactory manner, its functions as a co-ordinating agency for agricultural research. In order that the I.C.A.R. may satisfactorily discharge this function, the Committee has recommended that this body should "periodically review the progress of work of all Research Institutes, with a view to assessing whether the nation's money is being well laid out and the schemes are yielding satisfactory results." The Committee has also suggested that the "Boards of Research and Extension, as also the Scientific Committees, should meet more frequently to scrutinise schemes and also to assess the results achieved." Some of the other valuable suggestions made by the Committee are: (1) prize awards should be made for the best research work; (2) the Vice-President of the I.C.A.R. should be an agricultural scientist; and (3) research results should be published in non-technical language for the benefit of the lay public. There is no doubt that, when these well-thought-out suggestions are implemented, the I.C.A.R. will attain its rightful place as the chief source of inspiration for agricultural research and the value of its contribution towards increasing the productivity of our land will considerably go up.

RAJASTHAN'S TAX PROBLEMS

ALTHOUGH the commercial bodies keep the Press informed of the representations they make to the Taxation Enquiry Commission, the State Governments and the quasi-governmental institutions, like the local bodies, do not seem to have cared to do so. The State Governments have certainly got something to say on this all-important question of the revision of the tax system in India. They are vitally concerned in this matter, for recent fiscal experience has shown that the States would find it extremely difficult to meet the financial requirements of the developmental programme. And it is, therefore, essential that the State Governments should let the public know their attitude towards fiscal reform.

In a way, the memorandum submitted by the Rajasthan Government to the Commission, a brief summary of which has appeared in a section of the daily Press, strikes one as eminently realistic and, at the same time, a model for similar representations by other States. The memorandum makes certain general observations, which are noteworthy, and also deals, as is only to be expected, with certain special problems of that State.

An equally realistic note is sounded on the question of prohibition. It says that the "moral gain," if any, achieved by the measure bears "no comparison" with the loss of revenue which could otherwise be utilised in "benficent activities designed to improve the general standard of living." Again, it is noteworthy that the memorandum recommends "complete uniformity" in regard to all aspects of the levy of sales tax—the system, the rate and exempted goods. It recommends centralisation of sales tax and distribution of the revenue from this source among the States. It is recognised that, if the matter is left to the States for decision, the "desired amount of agreement might be difficult to attain." This is by no means a new suggestion. Only, the willingness of the State to surrender its autonomy to the Centre, as far as the subject is concerned, is really commendable, for it obviously stems from larger considerations of general welfare of the country.

Referring to local finance, the Government says that local bodies should be given power to impose taxes on succession to property, estate duty, sale or purchase of newspapers, advertisement tax and terminal tax on goods or passengers carried by rail or road. These subjects, according to it, should be transferred from the Union to the State list or a "reasonable" share of the revenue from these sources assigned to local bodies on the basis of population.

The Rajasthan State Government, it is stated, raises more than 70 per cent. of its revenue from taxes. It would appear that there is no scope for expansion of taxation. Surely, a State like Rajasthan, which has not thrown away excise revenue, has greater right to complain of paucity of tax resources than many other States which have sacrificed revenue at the altar of moral reform. It is, however, recognised that the State can look forward to increase in revenue through land revenue, royalty, betterment fees and capital gains taxes when the projects, such as the Bhakra-Nangal and Chambal, are completed, and mineral resources of the State (mica, gypsum, etc.) are exploited. The State complains, in this connection, that the royalty fixed by the Central Government is too low for the State to get an adequate income. This deserves to be examined by the Central Government. But the State Government will, on its part, do well to see that the royalty rates are not fixed—at least, in the initial stages—at a level which will discourage prospecting and exploiting of new areas.

SHARE MARKETS STILL GOING STRONG

CUT IN BANK RATE UNLIKELY—INDIA TO IMPORT CUBAN RAW SUGAR

THURSDAY, 5 P.M.

THERE has been no important change in the undertone of share markets. The strong tone witnessed in the past few weeks still continues. This is particularly so in regard to Tata Iron and Steel shares. At one time during the week, there was a fair amount of profit-taking by the bulls, but towards the close there was a swift recovery, with the result that the closing rates of both the Deferreds and the Ordinaries are higher than those a week ago. Indian Irons, however, are a shade lower, following heavy liquidation by the speculator who was reported to have accumulated several lakhs of these shares. Knowledgeable circles feel that the decline of a few annas in the value of this scrip is negligible as compared with the large volume of sales that had taken place. Textile shares are a shade quiet, but this does not mean that there has been any perceptible change in the sentiment of operators in this section. Among miscellaneous scrips, Bombay Burmahs have been the favourite of the market this week. There are some who believe that this scrip will be one of the few that will take the place of Tata Deferreds when they are extinguished. B.B. Petrols have returned to the limelight again, on rumours that the Company has succeeded in finding a great fortune in oil somewhere in Africa. National Rayons have managed to retain the affection of a large body of speculators. There are strong reports that the Company will be in a position to pay the maiden dividend this year, market expectations varying between Rs. 8 and Rs. 10 per share. Some of the popular scrips such as Belapurs, A.C.Cs. and Scindias have registered minor losses.

MARKET GOSSIP

* * * * *

The general trend of the Calcutta Share Market also is cheerful, though turnover is tending to diminish somewhat. Jute shares have hardened further, following the revival of upward trend in gunnies. The possibility of Russia buying Indian tea has imparted fresh strength to tea scrips. Even coals and some of the engineering shares which had remained neglected all these days have been experiencing bargain hunting. There have, however, been no special features in the miscellaneous section which in Calcutta is a much bigger one than in Bombay.

* * * * *

Although the overall picture of share markets is optimistic, it would appear that much of the rise in equity values in recent weeks is due to speculative activity. This is not to suggest that the appreciation that has taken place is not warranted. But the rise has been rather too rapid and it must be well digested before the markets move up again. A continuous rise in values, it is needless to add, will make the markets unhealthy.

* * * * *

One of the reasons for textile shares being a shade quiet is the unloading by some of the institutional investors. It is understood that one of the small insurance companies, for instance, sold large blocks of Kohinoors, in order to book the profit and show a better balance-sheet as at the end of the year. A big insurance company is also believed to have realised its profit on a substantial holding of Tata Steel Ordinaries. If, however, this development is not reflected in their value, it is evidently because of the large volume of speculative activity that is going on in them. The *Mahajan* market has already started trading in them on a large-scale in the place of Tata Deferreds. Most of this business is in the nature of options, which, though absolutely illegal, is still flourishing. Another reason for the firmness of these shares is the keen avidity with which a leading firm of brokers, having good connections, bought them to-day.

* * * * *

Liquidation of investments in equities by insurance companies is quite understandable. In the current year, there has been keen competition among these companies for business. Despite the fact that rebating by insurers is illegal, it is common knowledge that this evil is very widespread. Naturally, some of the insurers must have tried to make profits in other ways. Booking the capital profit in their investments is one way. According to some in the market, quite a few insurance companies are said to have been dabbling in shares.

* * * * *

There are reasons to believe that the present upward trend in equities is being utilised by some of the leading former rulers of (Indian) States to liquidate their holdings. Unlike in the past, their income from equities is now subject to super-tax. It is but natural, therefore, that they should cut down these holdings to the minimum, for the larger the income from equities, the higher will be the super-tax. It may be asked as to what the Princes will do with the proceeds of these sales. They will most probably invest them in Government securities, as the interest on these are exempt from both income-tax and super-tax so far as they are concerned. Thus, the Government of India's new interpretation of an understanding with the Princes, arrived at during the war years in regard to taxes on their income, promises to bring a sizable measure of support to the Gilt-edged market.

* * * * *

There have been strong rumours of a reduction in the Bank rate before the year runs out. These rumours started first in Calcutta. They can, of course, be neither denied nor confirmed by official circles. At best, one can only state one's views on it. In our opinion, there is no justification whatever for lowering the Bank rate. There is no business recession in the country now. Bank credit is freely available and the rates of interest are not high. Nobody but speculators stand to gain by a reduction in the Bank rate at present. Moreover, much of the value of a change in the Bank rate will be lost, if it is made at a time when everybody expects it and thereby the change ceases to be a surprise. Since the advantages to be derived by an alteration in the Bank rate are mostly psychological, the change must be sudden and unexpected. In fact, so long as people act in expectation of a reduction in the Bank rate, there is no need to reduce it at all, for nothing much will be gained by doing so. In a way, therefore, rumours of a cut in the Bank rate suit the monetary authorities; they can sit quiet and watch the fun. These rumours, for instance, have not only toned up the equities but also the Gilt-edged market. Nowadays, there are no sellers in the Gilt-edged market. All the securities are well held. The Reserve Bank has been successful in selling quite a few crores worth of short-medium- and medium-dated loans at fractionally higher rates. The Imperial Bank of India alone is reported to have absorbed a couple of crores of 3 per cent. 1958.

* * * * *

The Food Ministry of the Government of India, according to reliable reports, proposes to import raw sugar from Cuba. It is at present said to be sounding the trade and sugar millowners. The tentative programme of the Government is to import at least 30,000 tons. The cost of this sugar at present is £30 per long ton, c.i.f. Bombay. This raw saw sugar will have to be refined by the sugar factories and then released for consumption. We are told that the Government has no objection to the millers regarding the Cuban sugar refined by them as part of their production for sale in the free market. Apparently, the Government feels that this method of importing sugar will be cheaper than importing refined sugar at present.

* * * * *

This new move by the Government seems to have perturbed some of the sugar factories in the Deccan. They feel that it will be cheaper for the U.P. and Bihar factories to buy the unrefined Cuban sugar, process it and sell it in competition with the Deccan factories. The cost of production of these factories is believed to be considerably higher than that of their Cuban confreres. It is not known to what extent this fear is justified, because the cost of moving unrefined sugar from the ports to the factory sites in U.P. and Bihar must be quite substantial. Further, if the factories in the Deccan, which grow their own cane requirements on scientific and modern lines, were to find it difficult to compete with Cuban sugar, the cane-growers in U.P. and Bihar would be hard hit to a much greater extent. It is unbelieveable that Mr. Kidwai will even dream of doing something which will place the cane-growers in his home State in a very disadvantageous position.

* * * * *

A keen debate is, however, going on in the sugar trade on the merits and demerits of allowing imports of raw sugar to be refined in India. Those who are opposed to such imports make the following points:

Sugarcane growing will suffer a serious setback, especially in the U.P. and Bihar. The farmers in these States will be forced to bring more land under foodgrains. The State Governments will lose a part of their revenue by way of cane cess. Even the sugar factories in the Deccan will suffer hardship, as they will not be able to stand the competition from refined sugar out of the imported product. State trading in imports of sugar will be perpetuated, which will, at some time or other, clash with the interests of private enterprise in sugar industry and trade.

* * * * *

Those who support the Government's move feel that it will have a salutary effect on sugarcane growers in U.P. and Bihar. It will compel them either to improve their efficiency or to switch over to other cash or foodcrops. It will help the industry to utilise its present idle capacity. It will enable at least a section of the industry to remain profitably employed after the crushing season is over. This will benefit not only the factories but also the workers employed by them. The consumer, too, will be assured, they contend, of regular supplies of cheap sugar throughout the year.

* * * * *

Some notable movements of capital from London are expected to take place in the next few months. In the last two months, Pakistan, Ceylon and Kenya have contacted the British authorities in order to arrange for substantial loans in London. Pakistan has been given a £10 million loan by the British Government. But the British authorities, it would appear, hold the view that the sterling countries should, generally speaking, raise their requirements from the capital market itself. Thus, the U.K. Government has permitted Ceylon to raise a loan of upto £25 million sterling within the next three years. Malaya is expected to raise a £6½ million loan in London in the near future. Kenya is another country which is in the queue for raising a loan in the London market. It may be recalled that the Commonwealth Economic Conference stressed, last year, the need for Britain to provide the finance for Commonwealth development. The flow of capital from the U.K. has not been significantly large. This is attributed to the fact that the British investors have, in recent years, felt that political conditions in some Commonwealth countries, notably South Africa, are not very favourable for fresh investment. Again, they have been deterred from making investments in Australia, which was formerly considered a good field, by the difficulties experienced by certain industries in that country and also by fears of devaluation of the Australian pound.

* * * * *

The U.S. has, as is well-known, been saying for some time past that, if other countries do not have the dollars with which to buy its surplus products, it will be prepared to sell them against the currency of the importing countries. The Export-Import Bank loans and outright aid are some of the techniques which the U.S. has adopted to enable the countries, short of dollars, to buy their requirements of American goods. The latest technique is that of authorising the foreign countries to pay for American produce in their own currencies. Reports from Washington suggest that several deals, on the basis of this new currency arrangement, are likely to take place in the near future under the guidance of the U.S. Foreign Operations Administration (F.O.A.). The F.O.A.'s (not to be confused with F.A.O., a U.N. organisation) planning target calls for the shipment of $130 million of commodities to Europe; the U.K. alone is expected to take up 45 per cent. of the total amount. Oilseeds interests in this country will be interested to know that the U.K. will acquire, under this arrangement, $8 million worth of American lard, and Germany $5 million worth of soyabeans and cottonseed oil. France too is expected to apply for cottonseed oil. Other prospective transactions include cotton to France and wheat and barley to Japan. The U.K. will buy $5 million worth of prunes. These are only a few of the commodities the transactions of which are now forecast; they will be followed by sales of a similar nature in due course.

* * * * *

The economic impact of these transactions has, naturally enough, occasioned a lively controversy in the British Financial Press. To the raw material producing countries, the F.O.A.'s operations must mean reduced markets for their own surplus products. Even to the importing countries, the advantage of this arrangement is somewhat obscure. It is asked, for instance, why the U.K. should buy American goods—these goods have become unsaleable because of the U.S.'s unrealistic farm price support policies—and thereby divert its import trade from its normal sources (generally Commonwealth countries) to the U.S. Again, many feel that, if the U.K. has the sterling to pay for its imports from the U.S., it could as well spend it in buying Commonwealth products, for that will enable the Commonwealth countries to acquire the necessary purchasing power with which to buy British goods. Again, the purchase of Commonwealth goods is free from the restrictions which attach to the purchase of American goods, namely, that the American goods should not be resold and that a portion of the goods should be carried in American vessels.

* * * * *

Some of these criticisms have been answered by those who support the new approach in the U.S. foreign economic policy. It is thus contended that the F.O.A's operations are not intended to disrupt normal economic channels. It is pointed out that there is a statutory mandate forbidding sales by the U.S. that would disturb the buying country's usual pattern of imports from the U.S. and other countries and that the F.O.A. could not approve of a sale that would cut into normal shipments by the U.S. or any of its allies. Incidentally, it is not clear whether this clause will entitle India to protest against any possible ill-effects that the U.S. sales operations might have on India's export trade with the countries to which the U.S. is prepared to send its surplus products. Be that as it may, there is not much force in these criticisms, for there can be no export of these goods by the U.S. without adversely affecting the exports of other countries in such goods.

* * * * *

The criticism that the country which buys American produce under the plan will, in any case, have to spend its own currency and that the arrangement constitutes no additional advantage to the country concerned has been countered by the argument that the U.S. will utilise the currencies so acquired to promote the defence effort of the countries themselves. It is thus argued that the arrangement will, in fact, result in a gift to the buying country. Explaining the significance of this arrangement, Mr. R. Maudling, Economic Secretary to the British Treasury, said that it was not true that the U.K. was buying American commodities "simply because the payment asked for is in sterling, not dollars." He added that it was a "gift," inasmuch as the sterling proceeds would be made available by the U.S. to the U.K. Government "primarily for the support of the U.K. defence effort." But it is not clear whether other countries will get this advantage.

* * * * *

These innovations in payments arrangements cannot, it should be clear, provide a permanent solution to the problem of farm surpluses, whether in the U.S. or in any other part of the world. In this connection, an interesting suggestion for the establishment of buffer stock schemes for primary commodities in order to even out short-term fluctuations in commodity prices has been made by Professor A. J. Brown, Leeds University, in the current issue of the *District Bank Review*. Prof. Brown says that the demand for primary commodities is too volatile to be controlled by monetary means. Monetary stabilisation, he says, can most easily be thought of as depending upon buffer stocks operated by an authority who would buy or sell at prescribed

UPWARD TREND IN SHARES HALTED

TEXTILES REACT

(From Our Own Correspondents)

BOMBAY, *10th December*

THE rising *tempo* in the share market noted for some weeks past having persisted, equities touched the week's highest on the opening day. The sharp rise attracted profit-taking and, therefore, a moderate reaction was noticed in the two subsequent sessions. Equities disclosed minor losses over a broad front. Since yesterday, however, under the influence of several helpful factors, the market has resumed its upward trend, with the result that steel shares have recovered a portion of the losses suffered early. In the textile and miscellaneous sections, as operators were inclined to be cautious, the shares lacked strength and values were generally a shade lower. The undertone of the market, however, remained steady.

In fairly large and active dealings, equities displayed a very cheerful sentiment on the opening day of the week. Under the inspiring leadership of Tata Defds., on which the bulk of the activity was focussed, the main body of shares touched fresh high levels, Tata Deferreds reaching a peak of Rs. 2,047-8. The sharp rise, however, lacked follow-up. A spell of scattered professional selling and profit-taking which followed caused almost the entire list to wilt. Advices from Calcutta also assisted the downward trend which continued till Tuesday, in which process, a considerable part of the previous week's gains was wiped out. During the last two days, however, the sentiment changed for the better. Under the lead of steel shares, recovery gathered momentum on active short-covering and speculative support, induced by better advices from Calcutta, strength of commodity markets and better outlook for cotton textiles.

Despite the mid-week recession, steel shares were in good form, favourably influenced by the production results of the Tata Iron and Steel Co. and the Indian Iron and Steed Co. for the month of November. The output of steel by Tatas amounted to 68,400 tons, a drop of 100 tons from that in October. However, considering the fact that November was a shorter month and the output during that month was a near record for the current financial year of the Company, the results were considered good. The output of steel by the Indian Iron and Steel Co. in November amounted to 32,970 tons, an increase of 1,740 tons over that for the previous month. On the Stock Exchange, Tata Defds. opened the week at Rs. 2,031-4 and soon made a strident advance to Rs. 2,047-8. In the subsequent reaction, the shares were taken down to Rs. 2,005 on Tuesday, before rallying to Rs. 2,041-4 to-day, in sympathy with Tata Ordinaries and on heavy short-covering. The closing was a fraction lower at Rs. 2,040. Tata Ordinaries were marked down from Rs. 347 to Rs. 340-8, but rebounded to close at Rs. 349-8, on considerable support from professionals. Indian Irons disclosed a loss of but As. 4 at Rs. 26-5½, although they had touched a low of Rs. 25-11½ earlier.

In tune with the general upward trend during the earlier part of the week, textiles, suffered a setback, but towards the close the report that export of cloth during November reached a monthly record high of 68.7 million yards for the eleven months of 1953, revived a mild buying support which did not help the shares to make good the earlier losses. The export figure for November was better than the previous record of 64.5 million yards touched in May, 1953, and brings the total for the eleven months to 623.7 million yards, as against 553.9 million yards for the corresponding period of last year. Bombay Dyeings dropped from Rs. 404-6 to Rs. 395, but gained ground to Rs. 402-8 at the close. After moving down from Rs. 301 to Rs. 292-8, Kohinoors recovered to Rs. 297, but drifted at close to Rs. 295-12. Central Indias disclosed a loss of Re. 1-8 at Rs. 173-8, Centurys Rs. 5 at Rs. 286. Finlays Rs. 7-8 at Rs. 260-8. Gokaks Rs. 6-8 at Rs. 249-8 and Indores Rs. 2-8 at Rs. 100.

A rise of Rs. 2-8 to Rs. 40-8 in United Commercials was the highlight in an otherwise featureless banking section. Early in October last, the shares had stood at Rs. 36 and since then they had been slowly creeping up before staging a sudden rise this week, as stated above. Imperial Fully Paids were up by Rs. 5 at Rs. 1,860. Contributories were unchanged at Rs. 458-12.

In the insurance section, Orientals were favoured on expectations that the mutualisation proposal would soon materialise. Consequently, they appreciated by Rs. 180 to Rs. 7,100. New Indias attracted support at Rs. 39-12 and went up to Rs. 41-8. British India Generals were quiet at Rs. 13-2 and Vulcans at Rs. 11-2.

Electricity shares came under selling pressure and quite a few shares showed losses. Ahmedabad Electrics declined by As. 15 to Rs. 113-12 and Amalgamated by As. 13 to Rs. 10-7. Andhra Valleys moved down by Rs. 10 to Rs. 1,245, their Rights by Rs. 2½ to Rs. 197-8 and Coupons by Rs. 6 to Rs. 39. Tata Powers dropped Rs. 10 to Rs. 1,357-8, their Rights Rs. 8-12 to Rs. 262-8 and Coupons Rs. 3-4 to Rs. 51. Tata Hydros were steady at Rs. 139, while their Rights lost Rs. 2-8 to Rs. 29 and Coupons Rs. 2 to Rs. 9.

Barring a few select scrips, the miscellaneous shares, as a group, were quiet. A.C.Cs. were uninspiring, recording a drop of Re. 1 to Rs. 186-4. Belapurs reacted from Rs. 265 to Rs. 261-8. Bombay Burmahs receded from Rs. 357-8 to Rs. 351-4 early in the week, but rallied to Rs. 362-8 on strong speculative support. Scindias declined from Rs. 16-4½ to Rs. 15-12, but closed a shade better at Rs. 16.

• • • •

Calcutta Stock Exchange

CALCUTTA, *8th December*

An irregular tendency was displayed on the Calcutta Stock Exchange during the week under review. Earlier in the week, the volume of transactions showed an impressive increase, quotations being marked higher, but subsequent profit-taking reduced gains. Teas, however, came to the limelight again and prices improved. The inclusion of tea as an item of export to Russia in the Indo-Soviet Trade Agreement was welcomed, and traders expect that Russia would buy more tea from this country than usual. In addition to this factor, the improvement in prices during the export auctions, coupled with the stronger demand, made tea shares all the more attractive. Coals were an interesting section this week, and this was so, not because there was any interesting development in the export market, but because some of the counters, which had touched very low levels in recent weeks, were considered "good buy," and in the result an upward movement set in. Jutes were, however, noted for their lethargy and this was due to the wide fluctuations in the prices of jute goods, mainly sacking, and also to lack of sufficient business with foreign buyers. No doubt, prospects for the jute industry were never in question, but fears were entertained from the unhealthy movement in prices which kept off foreign buyers. Jute trade circles feel that prices of jute goods should not be permitted to move up, so that opportunity would not be afforded to Continental producers to undercuote Calcutta.

There have been encouraging signs of the revival of outside buying support, with the changed outlook for jute, tea and cotton textile industries and allied activities. The Government's attempts to create more employment opportunities in order to lessen the rigours of the unemployment problem mean, directly and indirectly, more industrial activity. However, whether there would be a marked increase in investment activity in the country remains to be seen.

In the coal section, Burrakurs were raised from Rs. 8-13 to Rs. 9-6, but subsequently receded to Rs. 8-12. A strong feature was Dhemo Mains which, at Rs. 9-14, recorded a gain of As. 11. East Indians rose from Rs. 24-15 to Rs. 25-14. South Karanpuras hardened to Rs. 10-14, and Ranegunges, although lower at Rs. 11, were, nevertheless, steady.

Although support to jute shares was restricted, the section was not devoid of features. The limited buying, as witnessed this week, should be considered only a temporary phase as more demand for jute goods is expected and it is possible that more production would be needed. This expectation should have cautioned the more prudent holders who refrained from making offers and it was noted that some quotations not only maintained recent gains but touched higher values. Thus, Deltas were priced at Rs. 233, Barnagores at Rs. 164, and Indias at Rs. 131. Howrahs were held at Rs. 25-4, while Kinnisons, after being lower at Rs. 201, gained to Rs. 205.

Mixed conditions were in evidence in the engineering section, where Indian Irons, after being higher at Rs. 25-12, eased to Rs. 24-15. On the other hand, Texmacos were further taken up to Rs. 9, but to-day's closing was at Rs. 8-15. Burn & Cos. gained Rs. 2 to Rs. 340. Jessops were fractionally lower at Rs. 25, as were Indian Standard Wagons at Rs. 66. Kumardhubis changed hands at Rs. 8-6 and Marshalls were wanted at Rs. 6-4.

The tea section recorded an impressive increase in the volume of transactions and several features were provided. There was, however, occasional profit-taking and some of the recent gains were partially lost. Thus, Patrakolas came back from Rs. 175-8 to Rs. 170, Hantaparas from Rs. 190 to Rs. 188, and Gungarams from Rs. 225 to Rs. 223. Although there were no spectacular rises in the miscellaneous section, rates were more or less maintained. B.I. Corporations changed hands at Rs. 9-7. Rohtas Industries were wanted at Rs. 10-2.

• • • •

Madras Stock Exchange

MADRAS, *8th December*

The Madras Stock Exchange revealed a steady trend during the week. Textile scrips continued to be active with favourites receiving major attention of the operators. This was because of persistent encouraging advices from the piecegoods markets. Among plantings, teas proved to be the bright spot on support by operators induced by improvement in the prices of tea leaves at the recent London and Calcutta auctions. Rubber shares came in for selective enquiry, as operators were hesitant to commit themselves on conflicting rumours about floating stocks of rubber. Activity in coffee scrips was checked on disappointing dividend announcements by Coffee Lands and Consolidated Coffees and reduction in the price of coffee. Miscellaneous scrips evoked little support.

Favourites among textile scrips came in for some enquiry. Buckinghams shot up from Rs. 126 to Rs. 129 and Bangalore Woollens from Rs. 285 to Rs. 287-8. Venkateshas and Coimbatore Pioneers were higher by Rs. 2 each at Rs. 77 and Rs. 27, respectively.

Among plantings, teas were in good demand. Devasholas advanced from Rs. 19 to Rs. 20, thereby registering a gain of Re. 1 over the week. Haileyburlas and Peermades rallied As. 8 each to Rs. 14 and Rs. 27-4, respectively. Udayagiris put on a similar amount and finished at Rs. 8. Parksides gathered As. 6 to Rs. 15-10. Twyfords and Nonsuch Teas gained As. 4 each to Rs. 12-12 and Rs. 31, respectively. Waterfalls improved from Rs. 3-11 *cum-div.* to Rs. 3-15 *cum-div.* The Directors have proposed to issue bonus shares at one share for every two shares held. Nelliampathy were done at Rs. 2-5 *cum-div.*, as against Rs. 2-5½ *ex-div.* The Directors have maintained the dividend of 12½ per cent. on ordinary shares for the year ended 30th June, 1953.

In the rubber section, Travancore Rubbers put on As. 6 to Rs. 14-4 and Teekoys an anna to Rs. 7-10. Cochin Malabars were done higher at Rs. 7-1, as against Rs. 7. Rajagiris changed hand at Rs. 10-14, *ex-div.*, as against Rs. 12-8 *cum-div.* Malanakaras, however, lost As. 8 to Rs. 108-8.

Coffee scrips presented an easy trend. Coffee Lands were enquired at Rs. 9 *cum-div.*, as against Rs. 10-13, *ex-div.*, on the announcement of a lower dividend of 3 per cent. for the year ended 30th June, 1953, as against 9 per cent. in the previous year (free of income-tax in both cases). Consolidated Coffees changed hands at Rs. 17-2 *cum-div.*, as against Rs. 18-2, following the announcement of a dividend of 15 per cent. for the year ended 30th June, 1953, as against 18 per cent. in the previous year (free of income-tax in both cases).

In the miscellaneous section, Rallis declined from Rs. 67 to Rs. 64. Deccan Sugars (Rs. 25 paid-ups) eased from Rs. 22 to Rs. 21-8. F.A.C.Ts lost As. 5 to Rs. 3-9 and India Cements As. 2 to Rs. 15-4.

IRON AND STEEL PRODUCTION IN NOVEMBER, 1953

The output of iron and steel by the Indian Iron and Steel Co., Ltd. and Tata Iron and Steel Co., Ltd. during November, 1953, as compared with the previous month is as follows:

	Indian Iron		*Tata Iron*	
	Nov. 1953	Oct. 1953	Nov. 1953	Oct. 1953
Pig Iron ...	61,240	55,880	100,300	99,500
Steel Ingots ...	41,550	30,670	95,800	94,000
Steel ...	32,970	31,230	68,400	68,500

NEWS IN BRIEF

THE twenty-first annual general meeting of the Employers' Federation of India will be held at Bombay on 17th December, 1953. Sir Homi Mody will preside over the meeting.

The Madhya Pradesh Government has exempted agricultural associations from payment of sales tax on sales through cotton pools of improved varieties of cotton upto 28th February, 1954.

Between 15th August 1947 and 15th August 1952, 399 miles of new railway lines have been laid in India. The longest lines are the Hadgaon-Adilabad line 76.31 miles and the Assam rail link 76.24 miles.

The all-India second estimate of sesamum, 1953-54, puts the area at 4,393,000 acres, as against 4,219,000 acres in the corresponding adjusted estimate of last year, thereby showing an increase of 174,000 acres or 4.1 per cent.

The Air-India International Corporation has received a loan of Rs. 25 lakhs from the Government of India to finance part of the expenditure on the purchase of two super-Constellations for the Corporation's overseas service.

The all-India first estimate of *bajra*, 1953-54, puts the current year's area at 26,514,000 acres, as against 23,154,000 acres in the adjusted first estimate for 1952-53. This shows an increase of 3,360,000 acres or 14.5 per cent. in area over 1952-53.

The Government of Madras will take up a comprehensive land reform Bill after the Malabar Tenancy Bill now pending before a Joint Select Committee is disposed of. The Committee's report will be ready for presentation to the legislature at the next session.

An international planning team of seven foreign experts has just undertaken a study tour of India, at the invitation of the Government of India, in order to assist the Government in drawing up a programme of development for village and small-scale industries in the country.

The Public Relations Officer, Income-tax Department, Bombay, notifies that the instalment of advance payment of tax under section 18A—more popularly known as "Pay as You Earn Scheme"—falls due on 15th December, 1953. All those assessees on whom notice has already been served, are requested to make the payment on or before the due date.

The special committee appointed by the Rajasthan Government for the fixation of ceilings on agricultural holdings has decided to make an assessment of what should be an economic holding for an average family, before determining the ceilings. Accordingly, it has set up a six-man subcommittee to go into the whole question and make sample spot surveys of villages in selected areas.

With effect from 1st April, 1952, interest on post office savings banks accounts, standing in the joint names of two depositors, both of whom are living, is admissible, under the usual conditions, at the rate of two per cent. per annum, on balances not exceeding Rs. 20,000 and at the rate of one and half per cent. per annum on the remainder of the balance, not exceeding the prescribed maximum limit.

The Textile Export Promotion Committee will be inaugurated in Bombay on 18th December, 1953, by Mr. T. T. Krishnamachari, Minister for Commerce and Industry. The functions of this body are: (1) to conduct market research, (2) depute trade representatives to important markets, (3) appoint correspondents in less important places and (4) take necessary steps to institute systems of inspection.

A *communique* issued by the Food and Agriculture Ministry, Government of India, says that State Governments have sufficient stocks of fertilisers in their depots and the Centre also have stocks at Bombay and Sindri to meet all demands from States. This *communique* is a sequel to complaints of shortage of fertilisers received from different parts of the country.

The Government of Mysore will constitute shortly a State Industrial Finance Corporation in Mysore. The Government of India has expressed its readiness to give financial assistance for the establishment of the Corporation, in accordance with the general policy enunciated recently. Structural details of the Corporation will be furnished to the Government of India in due course. The Corporation will start functioning within the next one or two months.

The final agreement between the Government of India and the West German steel firms, Demag and Krupps, on the proposed Rs. 72-crore steel plant, is expected to be signed about the middle of this month in New Delhi. The final recommendation on the site will be made by the two firms after a second and a larger team of German experts, expected in India in January, scrutinises all factors, such as the availability of raw materials, iron ore, labour conditions and transport facilities.

The Kunzru Committee which has been appointed to enquire into the prevalence of corruption on the railways, and started functioning since October last, has almost completed the first phase of its work. Comprehensive questionnaires have been sent out to State Governments, Railway Administrations, Labour Unions, etc. About 3,500 copies have had to be issued to meet demands from individuals and organisations interested in rail transport. The last date fixed for the receipt of replies is 31st December, 1953.

The Government of India sanctioned, in the month of November, a sum of Rs. 6,50,020 under the Subsidised Industrial Housing Scheme, 1953-54, for the construction of 404 tenements. Of this amount, the Mysore Labour Housing Corporation will get Rs. 2,48,400, divided equally as loan and subsidy, to build 92 one-room single-storey tenements at T. Narasipur for the workers of the Mysore Silk Filatures Ltd. A subsidy of Rs. 27,120 has been sanctioned to Messrs. Jenson and Nicholson (India) Ltd. for constructing 48 two-room single-storey tenements near their factory premises at Naihati (West Bengal). The Rohtas Industries Ltd., Dalmianagar, Bihar, and the Praga Tools Corporation Ltd., Hyderabad (Deccan), will secure grants of Rs. 2,82,500 and Rs. 92,000, respectively, for building tenements near their factory premises at Dalmianagar and Secunderabad. In both these cases, the subsidy has been calculated at 25 per cent. of the total cost of construction and the loan at 37½ per cent.

From Abroad

The Ceylon Cottage Industries Department is expected to buy Indian spinning frames worth Rs. 20 lakhs for producing yarn out of locally grown cotton.

Exports of wheat and wheat flour from Canada during the crop year 1952-53 amounted to 385.9 million bushels (in terms of wheat), second only to the record of 407.6 million bushels exported in 1928-29 and some 8 per cent. above those of 1951-52.

The B.O.A.C. plans to open a new Comet service from London to East Africa next April when, for the first time, jet-liners will operate to and from Nairobi. Services will be twice weekly in each direction between London and Nairobi and calls will be made at Entebbe.

The U.S. Government will be faced with a deficit of at least $7,500 million next year, unless expenditure is cut, according to the Under-Secretary of the Treasury. The deficit can be as much as $9,250 million, he estimates, if Congress refuses to extend the corporation and excise taxes.

According to reports reaching the U.S. Department of Agriculture between 300 and 500 million lbs. of surplus milled rice will be available for export from Pakistan's rice crop in 1953-54. Rice acreage in Pakistan has steadily increased in recent years, and the weather this season has been generally favourable.

Canadian wheat supplies in 1953-54 will amount to 966.5 million bushels, an increase of 61.4 million bushels over those in 1952-53, if the current forecast of production is realised. The supplies during 1953-54 will be the second largest on record, being exceeded only by those of 1942-43 when they reached 980.4 million bushels.

The Foreign Operations Administration, U.S., has made two allotments to Britain for an aggregate sum of $55 million for purchases of agricultural commodities, including cotton and dried prunes. One allotment of $35 million will be for providing dollar funds for various agricultural commodities including cotton. The other allotment is to be used only for purchase of surplus American agricultural commodities.

The Government of Ceylon has reduced the price of sheet rubber to local producers from Re. 1-20 cents fixed earlier to Re. 1-10 cents for R-M.I.A. No. 1 quality. Proportionate reductions have been made in the case of lower grade sheets. These prices will be effective from 21st December, 1953. The new prices are aimed at checking producers from switching over from crepe rubber to sheet rubber.

The General Services Administration, the buyer of crude rubber for the U.S. stockpile, has decided to give immediate consideration to the recommendations of its Rubber Advisory Committee, which met on the 2nd inst., to examine the U.S. stockpile rotation policy. This policy has been attacked both in the U.S. and the rubber-producing countries of South-East Asia.

PERSONAL

MR. B. N. Nanda, Indian Commissioner-designate to the West Indies and British Guiana, sailed for Trinidad on Friday last.

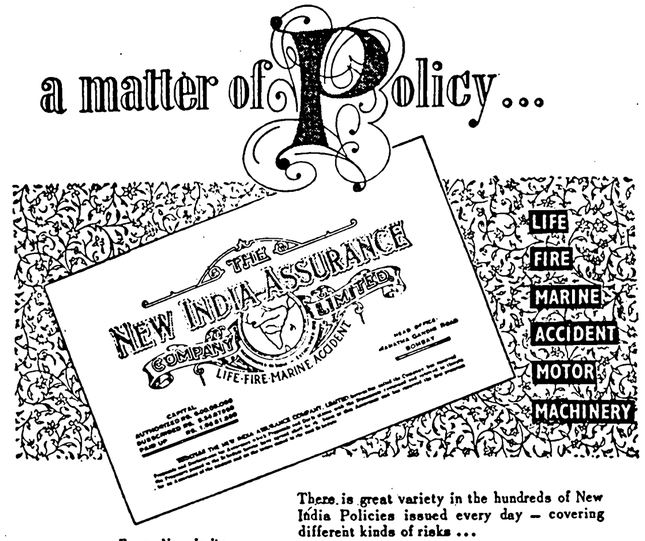
Mr. C. B. Marshall, Vice-President of the Standard-Vacuum Oil Company, arrived in Bombay from London on Tuesday this week.

Mr. V. P. Varde, Managing Director, The Bombay State Co-operative Bank Ltd., Bombay, who had been to Geneva to attend the meeting of the Experts Committee of the I.L.O. on Co-operation, has returned to Bombay.

Mr. M. N. Dalal, an industrialist of Bombay and Chairman of the Motor Vehicles Taxation Enquiry Committee, has been appointed Sheriff of Bombay, in succession to Dr. K. A. Hamied.

Mr. Chintaman Deshmukh, Finance Minister, Government of India, will lead the Indian delegation to the Commonwealth Finance Ministers' Conference to be held in Sydney on 8th January, 1954. The other members of the delegation are: Mr. M. V. Rangachari, Joint Secretary, Ministry of Finance, Mr. J. J Anjaria, Economic Adviser to the Finance Ministry, Mr. S. Boothalingam, Joint Secretary, Commerce and Industry Ministry, Mr. V. Doraiswamy, Under-Secretary, Finance Ministry, and Mr. Ramaswamy of the Reserve Bank of India.

a matter of Policy...



Every New India Policy Provides

STABILITY
SERVICE
SECURITY

There is great variety in the hundreds of New India Policies issued every day — covering different kinds of risks ...

But all these policies have one thing in common. They are all backed by the *security* that results from ...

Vast Resources; Sound and Progressive Management; and Prudent Investment of Funds.

The New India Assurance Co., Ltd.,

MAHATMA GANDHI ROAD, BOMBAY

M.L.8603

LABOUR POLICY

IF reports from New Delhi are to be believed, the Planning Commission seems to be convinced that all is not well with the present labour policy of the Centre and the States. It is actually reported to have entrusted a Committee of Central Government Secretaries with the task of conducting preliminary enquiries into the effects of the policy on industrial costs and employment. Although belated, this action is welcome. For it is common knowledge that too much emphasis on welfare aspects and a virtual neglect of the productivity of the worker in the recent labour legislations of the Centre and the States have done serious harm to industrial activity in the private sector. These have prevented the employers from taking risks more than they might otherwise have taken. The fear that wages might take up the greater part of shrinking profits, as a result of increased labour amenities, and the safeguards against retrenchment have restricted the scope of employment opportunities and discouraged risk capital. The trade unionists have taken a narrow view of the interests of the members of the trade union and have been endeavouring successfully to protect the rights of employed workers to the jobs they hold at present, without considering the effect of this policy on fresh employment and production costs. This has created a very anomalous situation. By preventing retrenchment in certain factories, for example, it may not be possible to run the factories as economic units and the only alternative in such cases is to close the whole show. This has already happened in several cases. Again, in the case of a bank which was formed recently by the amalgamation of four small units, the difficulty of retrenching about 800 surplus workers has defeated the very object of amalmagation, namely, the economic working of the bank.

It is, therefore, necessary that the whole labour policy should be reconsidered. It is true that the worker should be provided with a remuneration and facilities that assure him at least a reasonable standard of living. But this principle should not be carried so far as to increase production costs and to price the products out of the markets. In such cases, the only principle that should be followed is "what the traffic can bear" and not prescription of wage levels and other amenities which cut right at the root of the new industries and thus eliminate what little chances there might be for increasing employment in the country. It is also true that, where workers cannot be given a decent living wage, wage levels must bear a reasonable relation to the market value of the product of labour. At the same time, the return on investment should not be neglected. The problem, therefore, is one of striking the golden mean between the investors' and workers' interests. It is to be hoped that the Committee, which has been asked to examine the labour policy, will deal with all the aspects of this important problem.

LOWER TEXTILE COSTS URGED

Elsewhere in this issue, we have made a reference to the problem of promoting India's export trade in cotton textiles. It will be seen from that survey that, unless energetic and rational steps are taken to enhance the competitive capacity of India's cloth in world markets, the chances of the country maintaining a high level of exports are extremely slender. This is the view which is widely shared by practically all sections of cotton textile industry and trade. In the course of his address at the recent annual meeting of the Delhi Cloth and General Mills Co., Ltd., held in New Delhi on Sunday last, Lala Shri Ram, one of India's leading millowners and Chairman of the Company, clearly pointed out, for instance, that, "if we are to obtain the maximum possible advantage of our natural facilities in respect of cotton textile exports, it is necessary that we should bring down costs of production."

That the present structure of manufacturing costs in the cotton mill industry is unduly heavy is to well known to need special mention. Caught between high tax imposts, on the one hand, and series of official restrictions, on the other, not to speak of high labour charges and low productivity, the industry has not been able to reduce its production costs. At a time when new and vigorous efforts are being made by Governments in other countries to lower cost of production by giving active encouragement to their textile industry, restrictions continue to be placed in this country on the mills. How else can one explain the continuance of the "absolute embargo" on the setting up of new looms in mills? Lala Shri Ram did well, therefore, to draw particular attention to this aspect. Said he: " .... it is inadvisable to restrict the loom capacity of mills on the assumption that we shall cater only for the internal market and for a limited volume of exports. There is, in my opinion, no justification for an apologetic or timid outlook in this matter. This, however, has nothing to do with the problem of the handloom, which is an internal one."

It is not the restriction on loomage alone that is hampering the efforts of mills to reduce costs; there are the restrictions on the production of certain qualities of cloth and the imposition of a punitive cess. Lala Shri Ram felt that these restrictions were unwarranted. In his characteristic way, he remarked: "The cue has been taken by ignorant critics, and the country is inundated with self-contradictory propaganda, for example, asking mills to reduce prices and also complaining that mills are undercutting the handloom, or trying to restrict or handicap mills looms, on one side, and objecting, on the other, to the closing of mills."

Lala Shri Ram made a few notable observations on the problems of the handloom industry. He said:

"There was a substantial increase in the number of handlooms during the war; many of them, reportedly, were dummies for earning yarn quotas for the black market. The handlooms, which actually worked, had a good time, thanks to the shortage of cloth and the controls and various new burdens imposed on the mills. Easy money, as in other cases, demoralised the handloom weavers, whose old habits of work have been lost. They are unable to produce qualities comparable with mill products. Latterly, when the seller's market disappeared, the handloom was unable to adjust itself to the new conditions. I am confident, however, that a place can be found both for the mills and the handlooms (not for an unlimited number of either nor for dummy handlooms). While it is a matter of doubt whether and to what extent handlooms will benefit from the various levies on the mills, it is not a matter of doubt that, by adding to the costs of the mills, the result is an additional burden on the consumer, who can ill-afford it, because of his already low purchasing power."

Anyone who has cared to follow the developments in the sphere of cotton textile industry and trade since the war will fully appreciate Lala Shri Ram's contention that the net effect of the Government's textile policy is to add to the consumers' burdens. It is to be hoped that the Cotton Textile Enquiry Committee will take note of these observations and determine, in a dispassionate manner, the place of the mills, the handlooms and the power looms in India's national economy.

SOUTH-EAST ASIA'S RICE SURPLUS

The U.S. Agricultural Department has forecast a bumper rice crop in South-East Asia during the current season. The season's crop, taken together with the carry-over from the old crop, is estimated to provide for export in 1954 "quantities of rice sharply above those of the year before and considerably larger than in any year since World War II." The new crop of Burma is estimated to yield 1.5 million metric tons for export in 1954 and the carry-over supplies on 1st January are expected to be 600,000 to 700,000 metric tons. The large carry-over is based on expectations of a drop of one million tons in exports during 1953 as compared with that of the previous year. The 1953 crop of Thailand is expected to yield 1.4 million tons for export. The carry-over on 1st January, 1953, will be at least 400,000 metric tons. Rice exports of Thailand in 1953 will be less than 1.3 million metric tons. It is believed that Indonesia also will harvest a rich crop, leading to an exportable surplus running to several hundred thousand tons. Thus, the three larger rice exporters of Asia will have considerable quantities of exportable surplus. The rice importing countries also, with the single exception of Japan, are expected to have a good rice crop in 1953-54 and, consequently, their dependence on imports will be less marked. Japan will, however, import about 1,600,000 metric tons, that is, 700,000 tons more than the import target set last year.

The surplus rice position thus created in South-East Asia is already reflected in Asian markets. Asia's rice importing countries are determined to resist the purchase of old crop rice beyond their minimum requirements at the existing prices. The price at present is secondary to quality. And sales can be effected if shipments of acceptable quality can be obtained at current price levels, according to the U.S. Agricultural Department. But there is no surplus of good quality rice at all and present sales by Asian countries are, therefore, having little or no effect on the demand for U.S. rice. Nevertheless, the rice exporting countries of Asia, however, show no inclination to yield much in price or to meet the demand for re-conditioned rice. Rice imports by Japan—this is an important factor in the world trade in rice—will depend on the relative cheapness with which it can buy South-East Asian rice.

PLANS FOR EXPANSION OF TOBACCO DEVELOPMENT

The Indian Central Tobacco Committee seems to have drawn up an ambitious programme for developing tobacco cultivation. From the account given by Mr. Dimle, Chairman of the Committee at its ninth annual meeting held at Madras last week, it is clear that it is devoting considerable attention to the work of passing on the result of research to the actual field. In this connection, the Committee will be greatly helped by the success achieved by the Tobacco Research Institute, Rajahmundry, in some of its work. Thus, the Institute has worked out manurial schedules, and it is now possible for the Committee to recommend doses of fertilisers and the method and time of their application for the benefit of cultivators. A promising new variety—Chatham—which was under trial in the cultivators' fields, has shown encouraging results. Economic methods of curing with less coal have also been evolved. It is now proposed to invite ryots from each taluk to the Institute to watch the improved methods of cultivation adopted at the Institute farm. A demonstration unit from the Institute will also visit farmers' fields and conduct demonstrations on all phases of tobacco cultivation, handling and curing. This move will go a long way towards the development of tobacco culture in India.

In addition, the Committee has done well in adopting other measures calculated to help the development of tobacco cultivation. It proposes to hold crop competitions for flue-cured tobacco in East and West Godavari, Guntur and Mysore, and for bidi tobacco in Charotar and Nipani tracts of Bombay. Items of expenditure have been sanctioned for a number of approved research schemes. The *Hookah* and Chewing Tobacco Research Station will now be located at Pusa. Multiplication of bidi tobacco seeds, taken up at Anand, will be continued for a period of ten years. Similarly, extensions have been given to research schemes on bidi tobacco at Nipani (Belgaum) and *hookah* tobacco at Ferozepore. Investigations will also be conducted on the possibilities of growing flue-cured tobacco in paddy lands. Exploratory work on cultivation of high-yielding cigarette quality tobacco in four centres of U.P., and Jaffna variety in one centre in Travancore-Cochin State has also been undertaken under the ægis of the Committee. Popular pamphlets in regional languages will be published for the benefit of ryots to tobacco-growing centres. These measures are welcome and one would like to know from time to time about the progress made in each of the schemes. It is to be hoped that, at its next meeting, the Committee will review the progress so far made by it since its inception and thus keep the public informed of the extent to which the funds allotted to it have been usefully spent.

It is encouraging to note that the Committee has earmarked a sum of Rs. 1,00,000 for granting financial assistance to co-operative societies organised for tobacco growing and marketing. These societies can also get aid from the State Governments in the form of *taccavi* loans and credit from the Reserve Bank under certain conditions. While credit and assistance to the needy ryot are thus forthcoming, the State Governments should lose no time in diverting the aid where it is most needed.

A serious situation has arisen on account of accumulation of large stocks of Indian tobacco in foreign ports, resulting from unrestrained exports on consignment basis. The Committee, after examining the question, has recommended to the Government of India the imposition of a ban on such exports for a period of six months. Besides, it has decided to appoint an advisory committee to be in charge of the promotion of tobacco export to foreign countries. The decision is in accordance with the views expressed by the Commerce and Industry Minister at the recent meeting of the Export Advisory Council favouring the establishment of separate export councils for different commodities. Sales officers are also to be shortly appointed in the U.K. and on the Continent and in the Eastern countries for promoting sales of low grade tobacco lying unsold in this country. Meanwhile, the Committee has requested the Government of India to reduce the excise duty on low grades of flue-cured virginia tobacco with a view to stimulating the offtake of this variety. It has also recommended the abolition of the *ad valorem* export duty on cigars to give an impetus to increase exports of Indian cigars. These measures, if implemented vigorously, will surely give some benefit to the tobacco grower.

MR. KIKABHAI PREMCHAND

It is with deep regret that we record the sad demise of Mr. Kikabhai Premchand, a well-known figure among the city's leading commercial magnates. Although he lived, according to Indian standards, to a ripe age—he was 71 when he died last week—there is no doubt that the ranks of sagacious business leaders are so thin in this country that any loss from its ranks leaves a great void that cannot be easily filled. Born in April, 1883, Mr. Kikabhai was educated in St. Xavier's High School. But he obtained his real education in the hard school of experience, for he entered business early in life, and lived to make a real mark in that field. A Director of many concerns, including the company which owns this journal, and Chairman of the Industrial Investment Trust, which he started, Mr. Kikabhai won recognition both from the public and the Government as a leader of rare business acumen. Knighted in 1931, he became the Sheriff of Bombay in the following year.

Deeply religious in outlook, Mr. Kikabhai was known to spend long hours every day in prayer and worship. Many institutions have benefited from his munificence, the chief of them being the Sir K. P. College of Commerce at Surat, and the Sanatorium at Poona.

Mr. Kikabhai belonged to that generation of business leaders who have no love for a soft life and who believe in hard work, perseverance, thrift and wise investment as the chief economic virtues. Perhaps, he, like many other leaders of his generation, failed to acclimatise himself to the changes in economic thought in the last two decades. He was sharply—and understandably—critical of the Government's economic policies. But he was not, on that account, a gloomy prophet. It was only last year that he said he found it "hard to subscribe to the view expressed in certain quarters that the industrial outlook in India is bleak," and urged the Government to "adopt a more realistic policy towards industrial problems." If he was critical of the Government, he was equally outspoken against the activities of the operators in the city's markets, who, he urged on one occasion, should realise that "unbridled speculation leads to inevitable crash." He was essentially a believer in private enterprise and he made no secret of it either. "I do not despair of the future," he said, two years ago, "if only the Government would leave private enterprise to function as in the past." In his death, the city has surely lost a person who could expound the virtues of this most ancient economic philosophy with conviction, and with that all too rare quality nowadays, the courage of conviction.

STATE FARMS FOR JUTE

Eight State farms are to be established in the country for producing improved varieties of jute seed, it is learnt. This follows the recommendation of the expert committee appointed in March last to suggest ways of improving the quality of Indian-grown jute.

According to a Press Note issued by the Indian Central Jute Committee, the principal recommendations of the Expert Committee have been accepted by the Union Government, and a scheme has been drawn up on that basis. Three of the proposed State farms will be located in West Bengal, another three in Bihar and one each in Orissa and Uttar Pradesh. Interest-bearing loans are to be granted to the States for this purpose, and the initial losses are to be shared by the Centre and the States concerned equally.

It has been further decided to start a Centrally-financed farm under the Indian Central Jute Committee to produce a nucleus stock of seeds for distribution among the State farms. A three-year scheme has been decided upon to construct 8,200 new tanks and repair 4,300 old tanks for supplying retting water to jute-growers. The Centre has also agreed, it is learnt, to provide improved agricultural implements for distribution among the jute-growing States.

OFF THE RECORD

(By "ROVER")

ANY other authority, with the unenviable record of the State Government of Bombay in the field of providing electric power for the growth of industry, would have hesitated long before engaging itself in a fresh controversial issue of first class magnitude in this sphere. After the sorry mess it made in the case of the North Gujerat and South Gujerat Grid Schemes and the almost fatal crisis it created in the Bombay-Poona area, first by its inability even to understand the seriousness of the impending crisis and then in the handling of it, one would have hoped that some sane elements in the Cabinet would assert themselves and prevent it from taking up a stand with regard to the capacity of the proposed thermal station at Trombay, which might lead to a fresh, and perhaps more disastrous, situation than the one this area faced during the last two years. The economic loss resulting from this shortage of electric power as computed by one of the most competent economists in the country, comes to 100 crores of rupees. From this, one is led to conclude that either such elements do not exist in the Government or that, if they are there, they are powerless against the combined influence and authority of the wild ones, who, to satisfy their own unfathomable urges, are prepared to gamble on the rainfall year after year for several years.

The most amusing part of this controversy as to whether the installed capacity of the Trombay Station should be 50,000 kw. or 100,000 kw is the Bombay Government's confidence in its ability to complete the Koyna Project by 1957. Apart from this robust optimism based on no solid foundation, another point for my unstinted admiration in this Government's stand is the indomitable courage of conviction it is showing in flying against the considered advice of all those who have examined and studied this project in both its technical and economic aspects. It is no secret that the Government of India and the Planning Commission are for two sets generating 50,000 kw. Not merely the Tata group of hydro-electric companies who are putting up this project, but the Association of Electric Undertakings in the State are emphatically of the opinion that the capacity should be 100,000 kw. right from the outset. Technical experts here and those consulted abroad are unanimously for installing two sets. The industrial community in the area is clamouring for a higher margin of safety and considers the extra cost involved as not only justifiable but negligible in comparison to the risk involved. The World Bank after due examination has shown its readiness to finance the project as proposed by the Tatas. It takes a rare degree of courage to resist the combined weight of such authoritative opinion. It is a pity, however, that such robust optimism and such reckless courage are not yoked to a cause worthy of them.

Indo-Soviet Trade Pact

I wonder what has come over our once enterprising and well-informed business community after independence. I grant that the politicians and the officials between them have done everything they could, during these six wasted years, to kill the spirit of initiative and enterprise, which inspired it when the struggle for independence was being waged. This community now seems to have lost even the desire to study and evaluate important world economic currents and to keep itself well-informed about political developments abroad, which were likely to affect the pattern and structure of world trade and industry. Perhaps, the harnessing of our country's economy to that of the United Kingdom, which in its turn was intimately affected by international affairs, made it necessary for industrialists and business men in this country then to keep their eyes skinned to what was happening abroad. Now they seem to have become parochial in outlook and easily satisfied with their own limited concerns.

But for this indifference, very possibly engendered by having to work within the limits prescribed by controls and restrictions at every turn, the complete ignoring of the implications and possibilities of the Indo-Soviet trade pact by industry, commerce and the various forward markets would be difficult to explain. Except for some not very illuminating comment on it in the high-brow section of the weekly Press and a passing and almost casual reference to it in the rest of the newspapers, I have not seen even a slight ripple in the business world caused by this significant event. No business man I have come across, since this pact was concluded early last week, has so much as mentioned, or taken note of, it as a development which might have, in the long run, repercussions on the country's economy or our business relations with the outer world. What had led to this attitude, I imagine, was the general belief amongst business circles that trade between our country and any of those behind the Iron Curtain in Eastern Europe was possible only on a Government-to-Government basis and that private enterprise, as such, did not come into the picture.

Whatever be the genesis of this attitude, I suggest that somebody with a proper knowledge of politico-economic international affairs, should undertake a comprehensive study of the provisions of this new trade pact in terms of its effect, immediate and distant, on the country's industry and commerce and the part the business community could play in exploiting any possibilities it might open out for the country's trade. At the same time, one has not to lose sight of the debit side of the balance-sheet, in the form of any modification or deterioration, in our politico-economic relations with the Commonwealth and other sterling area countries and those having hard currencies. In any case, the business community in the country must arrive at a considered opinion about the various terms of the pact and the rather complicated machinery proposed in it for payment of goods exchanged under it, after noting the reactions of those abroad with whom it has been customary for them to trade for generations.

Rajaji's Ministership

Like King Charles's head, Mr. C. Rajagopalachari's name cannot keep itself, for one reason or another, out of newspaper headlines. Bengal and Madras have long been recognised as the problem States of the Union. They became all the more so after the last general election. Not unlike a prima donna, Mr. Rajagopalachari emerged (as some of his friends like to put it, he was bodily dragged) out of the last of his oft-repeated total eclipses, to save his home State from the political chaos it was threatened with. The Congress High Command, to put it mildly, was not very enthusiastic at the time about this reappearance of a top-ranking leader, who had, for all practical purposes, been banished from New Delhi a little while ago. Some shrewd observers of political affairs felt then that Mr. Rajagopalachari's come-back was motivated more by a desire to score a victory over the Party clique in New Delhi, which had found him inconvenient and incalculable, than by any real desire to save Madras. This sounded then as a cynical way of putting it, but these observers have now been fully vindicated by the very obvious reluctance of the Madras Chief Minister to quit office even after he has accomplished the ostensible purpose for which he gave up his cherished desire to study the scriptures in the peace and quiet of the beach at Madras. In fact, a situation has now arisen, when, perhaps, his lingering in office might create once again the same or a similar danger, which threatened his Party and the State of Madras, when he was invited to form the State Government.

In politics, time plays strange pranks with its victims. Its dispensations are often so full of irony that one is apt to turn cynical and view long-range human affairs with an unbecoming levity. Mr. Jawaharlal Nehru, the President of the Congress, had his own misgivings about so controversial, resourceful, clever and influential a figure as Mr. Rajagopalachari heading a Government in one of the most important States. These misgivings were not without a good deal of justification. In fact, but for Mr. Rajagopalachari's consummately skilful and stubborn lead, the State Governments would have easily fallen in line with many of the wise and long-range economic policies of the Centre. He often spearheaded the revolt of the States in this respect to the immense chagrin and discomfiture of the Central Finance Minister. In most cases, Mr. Rajagopalachari's stand was wrong and against the overall interest of the unity and economy of the country as a whole. The most charitable view critics can take of his attitude on such occasions in the past is that provincialism has always a greater pull for those who have to maintain their authority in the narrow sphere of State affairs and intrigues. Those not so generously inclined towards Mr. Rajagopalachari could claim, with some show of justice, that it was not a matter of choice between the State and Union interests for him at all but that what guided the Chief Minister of Madras in his subtle defiance of New Delhi many a time was to pay out old scores to men in the country's capital, who had manœuvred his exit from there so as to have smooth running for themselves and their group.

The passage of time has reversed the position completely. The Congress President required a lot of persuasion and pressure to agree to Mr. Rajagopalachari being asked to be the Chief Minister. He put forward certain conditions, which, he believed, would not and would not be satisfied. But the love for office and power amongst party groups in Madras was so deep-seated that these conditions were satisfied and there was no option left to Mr. Nehru but to agree to the highly undemocratic manner in which Mr. Rajagopalachari's return to active politics was staged. The irony of the situation lies in the fact that it is the same Mr. Nehru, who insisted on unanimity on the part of Congress legislators in Madras for Mr. Rajagopalachari's entry into the State Government by the backdoor, who is now valiantly prepared to stifle, by the sheer weight of his personal influence and authority, the majority opinion against the leader of the Congress legislative party there, to retain Mr. Rajagopalachari in office against all democratic principles.

This should not be interpreted, however, as implying that Mr. Rajagopalachari's continuing in office at Madras at present would not be in the interest of the State. Considering the motives activating his recent opponents, one must concede that, if Mr. Rajagopalachari quits office at this stage, reaction would be rampant in any new Government which might be formed there. All I want to imply is that this favourable aspect of the situation cannot, for the sake of intellectual and political integrity, be allowed to cloud the democratic principle involved in the bullying of a large group in a State legislature party set-up, by the head of the Party, as also to cover up the unpleasant fact that so long as Mr. Rajagopalachari is at the head of affairs in Madras, economic integration of the country will not be easily accomplished. The irony of the situation is tempered and even neutralised, to a certain extent, by the fact that it is equally humiliating for Mr. Rajagopalachari, who once forced New Delhi's hands to give its reluctant consent to his being Chief Minister because of the unanimity of his choice by the State Party, that he should to-day be reduced to seek support from the Party High Command for remaining in office against the wishes of a large section of his own erstwhile backers.—*All Rights Reserved.*

PLANNING MINISTER ON UNEMPLOYMENT

INDO-SOVIET TRADE PACT SIGNED

(From Our Own Correspondent)

NEW DELHI, 10th December

THE debates in Parliament this week were more of a routine kind, barring a few which were of a constructive nature. Mr. G. L. Nanda, Minister for Planning and Irrigation and Power, supplied some details in regard to the tackling of the unemployment problem. According to him, Government would not be influenced by any dogma or prejudice in their development policy which would be adjusted to changing conditions. It approached the subject from three angles: first to expedite the implementation of the development schemes which were already a part of the Plan; second, to undertake suitable revision and adjustments so as to strengthen and supplement the existing Plan at various points, and thirdly to propose new programmes for increasing employment, especially in urban areas. Out of the proposal to increase the target of the Plan by Rs. 150 to Rs. 175 crores, about Rs. 45 crores are earmarked for the rehabilitation of displaced persons over and above the balance of Rs. 6 crores in the existing Plan, particularly in the development of refugee townships which had now become centres of chronic unemployment. Road development has claimed Rs. 10 crores and other expansion schemes relating to Ports, Survey of India, etc., another Rs. 15 crores, in all Rs. 70 crores. Schemes likely to confer benefit on chronic famine areas are expected to absorb another Rs. 40 crores and about 12 States are likely to benefit from this allocation.

DELHI LETTER

Besides the above, State Governments were, according to Mr. Nanda, asked to consider additional schemes relating to small-scale and cottage industries, establishment of additional thermal capacity, road transport services, vocational and technical training. A sum of Rs. 5 crores is to be set apart from assistance to States in establishing State Finance Corporations, primarily for providing assistance to small-scale and cottage industries. Another sum of Rs. 2.5 crores is earmarked for the installation of thermal power sets. A new line of development proposed is to establish work camps in big irrigation and power projects where anyone willing to work can go for getting himself gainfully employed. With the co-operation of industry, arrangements are to be made for imparting practical training through suitable apprenticeship schemes.

Cottage and Small-scale Industries

Mr. Nanda's approach to the problem of cottage and small-scale industries is from the human angle. He stated that the Centre was determined to make full use of Rs. 15 crores originally allocated towards the expansion of cottage industries. In this connection, he mentioned the setting up of organisations like the *Khadi* and Village Industries Board and the Handloom and the Handicrafts Board. Perhaps, the development of cottage industries will be greatly facilitated by the present study tour undertaken by a team of seven foreign experts under the Ford Foundation scheme. This team is stated to be composed of experienced men, each an expert in his own line such as rural marketing, co-operative movements, technical know-how about small industries, etc. It will at first tour most of the Community Project centres, as well as some centres of specialised industries in East Punjab, U.P., Bihar and Bengal and, after a thorough study, will make recommendations for immediate action to deal with these problems. After this report, Government would be setting up a multi-purpose institute of technology for village and small industries. This institute will be entrusted with the task of conducting research directed towards solving technical problems related to production and business methods, undertake continuous market analysis of all effective demands, provide training to village artisans, organise marketing facilities and market news service, assist in obtaining investment opportunities and credit facilities and in developing co-operatives.

Rural Credit

Another highlight in Parliament debates this week was provided by Mr. A. C. Guha, Deputy Finance Minister, who revealed that Government was contemplating the establishment of an Agricultural Finance Corporation. He did not reveal details regarding the above, but pointed out, in the course of his speech on the Reserve Bank Amendment Bill, that Government desired to expand rural credit facilities and strengthen the existing organisations for this purpose. Under the existing provisions, the Reserve Bank, he said, had been advancing money to the extent of Rs. 12 crores annually to the State Co-operative Banks for seasonal agricultural operations. This present Bill would widen the scope in this sphere, to include animal husbandry, so that funds might be available for the production and marketing of commodities such as butter, cream, ghee, gur and milk and processing like hulling of rice and ginning and pressing of cotton. The Deputy Minister stated that he wanted to provide short-term and medium loans to State finance corporations and co-operative banks to help small-scale industries. A limit of Rs. 5 crores had been placed for loans to State co-operative banks. In the case of the Industrial Finance Corporation a limit of Rs. 3 crores had been placed on medium loans. There was no limit for short-term loans to the Corporation. Finally, he declared that the Reserve Bank was having an enquiry into the entire rural credit system and when its report was available, the Reserve Bank and the Central Government would formulate its policy regarding the provision of more agricultural credit as a whole.

It is politics more than economics that has been engaging the attention of Parliament members this week. I mean the confabulations that have been going on between the U.S.A. on the one hand, and Pakistan on the other, in regard to the proposed military pact between them. The Government of India and leading members of Parliament have been keenly watching these latest developments with considerable anxiety. If such an alliance were to be concluded, the cold war from which India has been anxious to keep herself away these years will be brought very near to its frontiers. It is somewhat inexplicable against whom Pakistan desires military protection. Since the Partition, both India and Pakistan have not been able to get on well and, although India has many times offered a non-aggression pact, it is Pakistan that has been summarily rejecting it on the plea that all the issues affecting both the countries should be settled simultaneously. Apprehension is felt in this country that Pakistan will hereafter adopt a bellicose attitude towards India, especially on the Kashmir issue. This will mean that India must have to spend more money on defence and this will upset the implementation of the Five-year Plan according to schedule. During his five-day stay in this country last week, Mr. Richard Nixon, the U.S. Vice-President, must doubtless have been apprised of this country's views on the proposed military pact. Mr. Nixon gave expression to several friendly sentiments towards this country during his sojourn here. It was noted with satisfaction when he declared that he would return to the U.S.A. with the conviction that it would be completely erroneous to think that India was leaning towards the Communist ideology, that India must remain free, independent and strong, economically and otherwise, and that American aid would be provided generously to accomplish this purpose. All the same, military aid by the U.S. to Pakistan will have considerable repercussions not only on India but all over Asia.

There is neither optimism nor pessimism regarding the latest Indo-Soviet Trade Agreement here. In one respect this agreement is different from the rest concluded in recent years, for it is felt that there will be considerable scope for the development of trade between the two countries for mutual benefit. This agreement also signifies the fact that, just as India has been anxious to maintain friendly

1. **DUAL PURPOSE ON-AND-OFF THE HIGHWAY**
Combines long, smooth wear in highway service with extra traction and pulling power on unimproved roads.

2. **48-65% DEEPER TREAD**
New, long-wearing, cut-resisting tread rubber gives longer non-skid mileage.

3. **TOUGH RUGGED TRACTION BARS**
Give added stability on the highway, dig in and take hold for extra traction off the road.

4. **CONTINUOUS CENTRE RIBS**
Assure safe, positive stopping power and longer even wear. New tapered grooves keep tread free of stones and pebbles.

5. **SUPER GUM-DIPPED CORD BODY**
Prevents tyre growth, tread cracking and separation, and provides for extra retreads. 60% stronger bond between cords and body rubber.

IMMEDIATE PROBLEMS OF INDIAN SHIPPING

MAGNITUDE OF THE PROBLEM OF FINDING FINANCE INDICATED

(By M. A. MASTER)

TWO problems of immediate and vital importance were discussed at the recent meeting of the Consultative Committee of Shipowners. One was the acquisition of additional shipping tonnage during the period of the Five-year Plan. The other was the building up of a nucleus of a tanker fleet. Let us examine how they can be solved.

While the Government of India placed before the country, in 1947, the minimum target of building up two million tons gross of shipping in five to seven years, the Planning Commission has laid down the maximum target of 600,000 tons gross to be reached by 1955-56. Mr. Lal Bahadur Shastri, Minister for Transport, remarked at the meeting that the target laid down by the Planning Commission was, indeed, a very modest one and that the Government were most anxious that it should, therefore, be achieved during the Plan period. There can be no doubt that even this very modest target can only be achieved, if there is initiative and enterprise on the part of shipowners, and effective encouragement and generous financial assistance on the part of the State.

As the coastal trade has been reserved since 1950 and as even to-day a number of ships has to be chartered to meet the requirements of that trade, the Planning Commission has laid down that it was imperative to place an additional 175,000 g.r.t. on the coast and in the adjacent trades. This will include 60,000 g.r.t. for replacing old, obsolete and economically unserviceable ships.

As regards the overseas trades, the Planning Commission has visualised the acquisition of 40,000 g.r.t. for enabling the Eastern Shipping Corporation to fulfil its obligations in the African and the Far Eastern waters, and 70,000 g.r.t. for the Scindia and the India Steamship Companies to carry out their existing commitments in their overseas services between India and the U.S.A. and between India and the U.K. and the Continent. It is, therefore, not the expansion of our shipping business or the need for building up new shipping services which have influenced the decision of the Planning Commission in laying down the target of 600,000 g.r.t. They must have realised that the country's fundamental need was to acquire that tonnage immediately to fulfil her existing commitments in starting and maintaining the services which Indian shipping was building up. There is, therefore, no idealism which has actuated the Planning Commission. They have not approached the question even from the viewpoint of enabling India to acquire her proper place amongst the maritime nations of the world. Although they were aware of the fact that India's existing tonnage was hardly half per cent. of the tonnage in the world, they have not shown the slightest enthusiasm to encourage India to keep pace with the race for acquiring additional tonnage going on in the world. They have been overwhelmed with the limitations of the resources of the country and have consequently asked India face stern realities and do nothing more than acquire such tonnage as is immediately needed to fulfil her existing commitments and obligations. Will India be able to acquire even this modest tonnage during the period of the Plan? That is the crux of the question. That is the problem of serious and vital concern.

Will Finance be Sufficient?

It is estimated by the Planning Commission that the acquisition of 275,000 g.r.t. (165,000 g.r.t. for the coastal and the adjacent trades, and 110,000 g.r.t. for the overseas trades), will require finance to the tune of Rs. 29.7 crores. Will that finance be sufficient for that purpose? Let us examine the position.

So far as the coastal trade is concerned, four ships aggregating 20,000 g.r.t. have already been built and delivered since the beginning of the period of the Plan, by the Vishakapatnam Shipyard. They have cost the shipowners Rs. 2,11,00,000. Further, two ships aggregating 10,000 g.r.t. have already been launched at Vishak and will be delivered early next year. Shipowners have contracted to purchase them for Rs. 1,18,00,000. Vishak Yard has already booked orders for five cargo ships and will shortly be booking an order for one passenger vessel, aggregating 25,500 g.r.t, and they are expected to be delivered during the period of the Plan. Shipowners will have to pay about Rs. 5,65,00,000 for these ships. It will, therefore, be noted that the Yard will be constructing and delivering 12 ships for the coast during the period of the Plan with an aggregate tonnage of 55,500 g.r.t. at a cost of about Rs. 8,94,00,000.

As regards the overseas trades, the Eastern Shipping Corporation has placed orders for the construction of two ships of about 11,200 g.r.t. with the Vishakapatnam Shipbuilding Yard and one ship of about 7,200 g.r.t. with a shipbuilding yard in Germany. They will cost about Rs. 3,08,00,000. Further, that Corporation has purchased one motor vessel of 4,509 g.r.t. from abroad and two passenger ships of about 17,101 g.r.t. from the Scindia Company. That will cost them about Rs. 2,97,00,000. The Corporation will thus be acquiring six ships of about 40,010 g.r.t. at a cost of Rs. 6,05,00,000.

The existing position, therefore, is that 14 ships will be constructed at Vishakapatnam during the period of the Plan—12 for the coastal and two for the overseas trades—aggregating to 66,700 g.r.t. Further, one ship will be constructed in the German yard and three ships have been purchased for the overseas trades, aggregating 28,900 g.r.t. The total cost of all this tonnage comes to Rs. 14,99,00,000.

It will, therefore, be noted that arrangements have already been made for adding 95,510 g.r.t. to the shipping tonnage of the country. In order, however, to reach the figure of 600,000 g.r.t., during the period of the Plan, further 44,500 g.r.t. will have to be constructed at Vishakapatnam for the coast, 65,000 g.r.t. will have to be acquired for the coast from abroad, and orders will have to be placed for the construction or acquisition of 70,000 g.r.t. for the overseas trades. In other words, arrangements have yet to be made for the construction or acquisition of 179,500 g.r.t. to reach the total figure of 275,000 g.r.t. to be acquired during the period of the Plan.

As regards 65,000 g.r.t. to be purchased for the coastal trade from abroad, the Planning Commission has estimated that they will cost Rs. 6 crores. We may accept that figure for our present purpose, although if second-hand ships of not more than five years of age are bought, they might cost more. As regards the additional tonnage of 44,500 g.r.t. to be constructed at Vishakapatnam, they will not cost less than Rs. 5.50 crores (calculated on the basis of the cost of ships already sold and are under construction). As regards 70,000 g.r.t. to be acquired for the overseas trades, it is difficult to say whether the estimate is based by the Planning Commission on the cost of construction of new ships for the trades or not. We must remember that these ships will be required by the Indian Liners. These ships must, therefore, be suitable in every way for the services which they have to maintain. We shall not, therefore, be wrong in estimating that the minimum amount required for the construction will be about Rs. 12,50,00,000. We do not think that we shall be able to build up an efficient Indian merchant navy by the purchase of second-hand ships for this purpose, unless we are able to acquire suitable ships already under construction or other appropriate tonnage not more than five years of age. It will, therefore, be noted that the total finance which would be needed for the construction or acquisition of 275,000 g.r.t., as visualised in the Plan, will come to Rs. 38,99,00,000 (Rs. 14,99,00,000 for ships already purchased or under construction plus Rs. 6,00,00,000 for acquisition of second-hand ships for coastal trade, from abroad plus Rs. 5,50,00,000 for further ships to be constructed at Vishak plus Rs. 12,50,00,000 for overseas tonnage required). We shall, therefore, require about Rs. 39,00,00,000, as against the amount of Rs. 29.7 crores estimated by the Planning Commission. The problem, therefore, is how to find this finance.

Loans for Tonnage Acquisition

We are thankful to the Government for providing Rs. 10.5 crores under "shipping" and Rs. 4.51 crores under "shipbuilding," or, say, about Rs. 15 crores in all to be advanced to shipowners by way of loans to enable them to acquire the tonnage that they need.

Out of the total finance of about Rs. 39 crores which we shall need for constructing or acquiring 275,000 g.r.t. as mentioned above, Rs. 7,20,00,000 will have to be found by the Eastern Shipping Corporation in which the Government holds an interest of 74 per cent. Although the Planning Commission stated in their report that that Corporation would not seek a loan, for acquiring the tonnage it needs, the Government have already sanctioned the advancement of a loan to the extent of Rs. 1,65,00,000 to enable the Corporation to finance its requirements. The net position, therefore, is that private enterprise will need Rs. 31.79 crores for financing the cost of the tonnage it will acquire. The amount of loan available against that finance will be Rs. 13.35 crores. Private enterprise will have, therefore, to find about Rs. 18.50 crores by way of fresh capital to finance the cost of tonnage which it will have to acquire.

The terms on which the Government have decided to advance loans are not attractive. Loans will have to be repaid within a period not exceeding 10 years. The rate of interest for the loans to be advanced for the acquisition of coastal ships will be 4¼ per cent., that for the acquisition of overseas ships will be 2½ per cent. It is reported that, at the recent meeting of the Consultative Committee, shipowners pleaded for a longer period of repayment for the loans to be advanced to them and for making a substantial reduction in the rate of interest on the loans given for the acquisition of coastal ships. The Government, in announcing the National Shipping policy, in 1947, assured the country that they would give such financial assistance to Indian shipping as has been given by the U.S.A. and the U.K. to the shipping of their country. The terms on which the Government proposed to advance the loans are, however, far more stringent than the terms on which the U.S.A. and the U.K. have advanced such finance to the shipping of their country. We would, therefore, most earnestly request Mr. Lal Bahadur Shastri, Transport Minister, that he would be pleased to go to the farthest extent possible in raising the amount of the loans to be advanced, in increasing the period of repayment, in reducing the rate of interest to be charged and in advancing the maximum possible percentage of the cost of acquiring tonnage. The shipowners will also, we hope, realise their responsibility and give to the Transport Minister, as requested by him, definite and concrete indication of what their plans of expansion would be, if the concession asked for by them were to be conceded. Without such active co-operation between the shipowners and the State, it will be impossible to reach even the target of 600,000 tons during the period of the Plan. We would, therefore, earnestly urge the shipowners to respond fully to the gesture of goodwill and encouragement made by the Transport Minister, so that he may call another meeting of the Consultative Committee early next year for finalising the steps which should be taken both for the aquisition and for financing the tonnage which the country has to acquire as laid down in the Plan.

It is understood that responsible people connected with the Vizag Shipyard have been urging the Government that shipowners should not be allowed to place orders for the construction or purchase of the ships which they require for the coastal trade in foreign countries. As a general proposition we would strongly support such a policy for the development of the shipbuilding industry of the country. It will, however, seriously retard the development of an Indian merchant navy, if shipowners were prevented from acquiring ships from abroad even when the Vizag Shipyard is not in a position to build the ships they need during the period of the Plan. That is the present position. Taking the most favourable view, the Yard will not be able to construct more than 66,000 g.r.t. out of a lakh of tons which the Planning Commission has laid down that it should build during the Plan period. We would, therefore, earnestly appeal to the Transport Minister to examine this aspect of the question in the light of the existing circumstances and make such other arrangements for the acquisition of tonnage as the situation may justify.

Nucleus of a Tanker Fleet

As regards the building up of a nucleus of a tanker fleet, we regret to say that the assurances given by the Government to the three Oil Refineries, for enabling them to carry the refined products around the coast of India in tankers regardless of flag, have made the position extremely difficult for Indian tankers to participate in the carriage of that trade. Private enterprise will have no place in carrying that trade, although the coastal trade has been reserved to Indian ships. The only right which has been left to the Government, when they acquire tankers, will be the right of discussion with the Oil Refineries for participating in the carriage of that trade. This is an extremely unfortunate position for India. Although the Oil Refineries will be bringing nearly 37.2 lakhs tons of crude oil to India, Government have not arrived at any arrangement with them to enable Indian tankers bringing even a single ton of this huge quantity of oil to India. It is inexplicable that, while the Government insist upon a stipulation that a substantial quantity of the cargo, to be moved as a result of trade agreement with a foreign country, should be carried in Indian bottoms, why they have not thought it fit to make any arrangement for the carriage of a fair quantity of crude oil in Indian tankers, in spite of the fact that they have given the Oil Companies very generous and favourable terms for establishing their refineries in this country. It is, however, a matter for satisfaction that both the shipowners and the Transport Minister realise the need and place of tankers in any well balanced mercantile marine. We, therefore, cherish the hope that, even at this late hour, and despite the assurances given to the Oil Companies, Mr. Lal Bahadur Shastri will, with his conviction of the vital need for India to build up a tanker fleet, with his spirit of optimism and with his power of persuasion, be able to arrive at such an arrangement with the Oil Companies as will enable Indian tankers to bring a fair quantity of crude oil from abroad and to carry their legitimate share of the refined products around the coast.—*All Rights Reserved.*

(Concluded from previous page)

relations with all countries in the political sphere, it is equally desirous of fostering good trade and commercial relations with them in the economic sphere. The importable items from Soviet Russia are nearly 40 in number, which include, among others, crude petroleum, chemicals, dyestuffs, a variety of machinery for mining, electrical, agricultural and other industries. In the coming years, India is not likely to be a heavy importer of foodgrains, unless there is famine, but it will continue to import sizable quantities of machinery, mineral oils, some chemicals, dyestuffs, etc. For the present, India has been importing plant and machinery around Rs. 90 crores per annum and mineral oils about Rs. 80 crores. Chemicals, dyestuffs, iron and steel goods and some non-ferrous metals account for nearly Rs. 70 crores per year. These goods form about 50 per cent. of India's trade and in these, Russia can establish lucrative trade relations with this country, provided it is able to quote competitive rates. In case it does so, it will go some way to improve the terms of trade which have been running against India during the last many months. On its part, India can sell tea, shellac, coarse wool, vegetable oils, in case of improved supplies in the country, jute goods, coir products, etc. If Russia becomes an important buyer of the above goods, the indigenous industry will benefit to a great extent in the coming years. The general opinion in the capital is inclined to be cautious and hence time alone will show how far both countries are able to establish good trade relationship.

LAW FOR QUICK DISPOSAL OF BANK LIQUIDATION PASSED

HAS RESERVE BANK BEEN RESPONSIBLE FOR FAILURES?

THE House of the People passed, on the 3rd inst., the Banking Companies (Amendment) Bill. The Bill, which replaces the Ordinance issued on 24th October last, aims at simplifying the process of liquidation of banks. This will ease the difficulties of depositors of banks that crashed during the post-war and post-Partition periods. The urgency for the Bill will be evident from the fact that, during 1926-51, 351 banks in India suspended payments. The amount of their outside liabilities, of the order of Rs. 92 crores, occurred from 1947 onwards. Out of the 351 banks, as many as 321 were taken into liquidation. Schemes for arrangement were sanctioned in respect of the remaining 30 banks by Courts. The liquidation proceedings in all cases dragged on for an undue length of time, because the liquidator of each bank had to file as many suits as there were debtors on their files and in several courts all over the country. This procedure meant delay. And delays caused expenses. Consequently, the depositors stood to lose whatever was left of their deposits at the time of liquidation. The Government, therefore, appointed a Committee, in 1950, for submitting recommendations for the removal of defects in the existing winding-up procedure for liquidated banks. These recommendations were embodied in the Bill mentioned at the outset.

Moving for consideration of the Bill in Parliament, the Deputy Minister for Finance, Mr. A. C. Guha, stated that the most important amendment of the present law was the proposed appointment by a High Court of official liquidators and of special officers who could be authorised to seize the assets, books, etc., of banks in liquidation. Under the existing conditions, liquidators attended to only that bank which had good assets and promised good profits. The other banks, which did not offer any lucrative returns, were ignored, with the result that depositors of such banks suffered. Again, liquidators got their share of profits in the form of commission, even though the depositors on whose behalf they were supposed to work and whose interests they were supposed to guard, did not get a penny. The Government, therefore, considered it an obligation to carry out the necessary changes in the present law relating to liquidation procedure. It could not sit idle, he said, when every day lost meant more misery to the poor depositors.

Objectives of Bill Favoured

The discussion on the Bill was held at intervals and lasted four days. In these discussions the Government of India, the Reserve Bank of India, High Courts and Directors of banks in India, all were the targets of bitter criticism. One revealing feature was that the consensus of opinion fully concurred with the objectives of the Bill, namely, expediting liquidation proceedings, although there was difference of opinion on details.

Some members held the view that the Government was responsible for the misfortunes that had overtaken the depositors of the banks in liquidation. It was said that it had woken up a little too late to discharge its responsibility and that the present measure was only a "face-saving device." The hurry with which the Bill was hustled through, without giving time to the members to study it, was also criticised. The fact that the guillotine was applied without even giving a chance to the Deputy Financial Minister to reply to the debate substantiated the charge.

There was some force in the criticisms levelled against High Courts, particularly the Calcutta High Court. The High Court was accused of not having discharged its duties properly towards banks in liquidation. West Bengal had been the worst sufferer of the recent failures of banks, and the High Court, it was pointed out, did not act expeditiously in order to safeguard the interests of creditors. It was held that, if the present liquidators of these banks were continued, it would be a calamity. Even the Committee which enquired into their working had denounced the persons appointed as liquidators as being dilatory and useless. That these criticisms have some basis is evident from the fact that, in the case of 82 banks in liquidation in West Bengal, amounts returned to depositors aggregated only Rs. 17.64 lakhs, while the expenses of liquidation amounted to Rs. 89.81 lakhs!

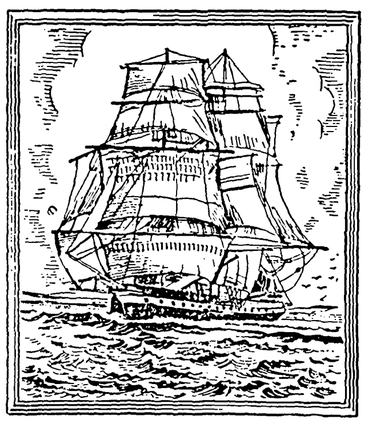
The most irrelevant part of the debate was the attempt made by some members to blame the Reserve Bank for the miserable plight of the depositors of banks in liquidation. The unwarranted blame laid at the door of the Reserve Bank is not at all surprising to those who are familiar generally with the ill-informed criticisms of some of our parliamentarians. One member, for instance, suggested that in every case the Reserve Bank should be appointed as the official liquidator, forgetting the fact that the Reserve Bank itself, being one of the creditors in most cases, cannot act both as liquidator as well as creditor.

Another member said that the Reserve Bank was guilty of never helping the Non-scheduled banks to prosper. He had learnt that industries in Calcutta appointed a committee to go into the question of finance being made available to them from banks. The Committee found that the small industries could not get any finance as the small banks had all gone. They had to borrow at 15 per cent. interest and sometimes borrow money even from the Kabulis. The present situation, he contended, was very tragic, in that the smaller banks could not stand against the competition of bigger banks and "the vigorous rules of a heartless, merciless Reserve Bank." Continuing, he said: "It is high time that the Reserve Bank was advised to function nationally and to think in national terms and not in the terms borrowed from England and the U.S. about banking business and credit. The Reserve Bank must function with a soul."

That the above criticism of the Reserve Bank is not based on a clear understanding of the position of the Bank will be evident from the fact that a large number of banks went into liquidation before 1949 when, for the first time, the Banking Companies Act was passed. The powers granted to the Bank even under this Act were not adequate to enable it to discharge its duties in time. Consequently, the Act had to undergo modifications on several occasions, and the fact that a further amendment is to be made to the Act in the present session of Parliament indicates that the Bank, being powerless, had to wait till it was sufficiently armed with legal powers to move in the matter. Besides, in the short span of three years, the ground it has covered in improving banking practices should bring it every credit. Since March, 1950, when it initiated regular inspection, until the end of last year, it had completed inspection of as many as 360 banks. And certain banks were inspected for more than one purpose. Licences were issued to 21 Scheduled banks and 63 Non-scheduled banks. It arranged amalgamations of weaker banks. Those which followed unsound practices were directed to suspend operations. About 174 companies were declared as non-banking companies or went out of business. Action was also taken on banks which failed to conform to the rules laid down by the Act. Although these activities by themselves do not complete the list, they are enough to indicate that our members of Parliament are not justified in condemning the Bank, as they did in the course of the debate. Rather, what is most surprising is the fact that the accusations were allowed to go unanswered by the Deputy Finance Minister, who according to Press reports, is understood to have stated that the views expressed by the member concerned about the working of the Reserve Bank would receive proper attention at the hands of the Government. This apologetic reply is regrettable, indeed.

Another issue which figured prominently in the debate was the liability of directors. The Bill provides no limitation of period in certain cases of liabilities while in others the period is limited to 12 years in respect of recovery of arrears. It was considered "unjust and unfair" not to place any limit, because after the lapse of time, the director concerned might not have any evidence on which he could contest the claim. Replying to this criticism, Mr. Guha stated that "if the provision appears to be somewhat harsh, members would do well to read the report of the Banking Enquiry Committee. If the directors have squandered money entrusted to them by depositors, they should be made to suffer. I think this is a sort of emergency legislation to meet an emergency created by some modern form of anti-social activity within society." The harsh provisions in the Bill also cover the honest directors, but, so long as the directors follows sound practice of banking, there is hardly any need for fearing them. The way in which some banks have been handling depositors' money justifies the enactment of these provisions.

Centuries of overseas trade



For well over two centuries Lloyds Bank has served the needs of merchants trading abroad and, today, business men know that they can rely upon Lloyds Bank for its shrewd and friendly advice on all matters relating to overseas trade and upon its integrity for their protection in all financial transactions.

Let LLOYDS BANK look after *your* Overseas interests

LLOYDS BANK LIMITED. INCORPORATED IN ENGLAND 18-G-51—1953

CHARTERED BANK'S CENTENARY

What was a hundred years ago an idea of a small body of merchants and Members of Parliament in London has since bloomed and grown into one of the biggest banking institutions in the East serving the commerce of several lands. The Bank referred to here is the Chartered Bank of India, Australia and China. Begun under the inspiring guidance of Mr. James Wilson, M.P., the founder of the *Economist*, London, and one of the earliest Finance Members of India, the move resulted in the sponsors receiving a Royal Charter on 29th December, 1853, for carrying on banking activities in the Australian colonies, British India, China and other parts of the Eastern Archipelago. Permission was granted by the British Treasury to commence business on 23rd February, 1858. The Bank's first branch in the East was opened at Calcutta on 12th April the same year. Five days after followed the branch in Bombay. Thereafter, the Bank expanded its activities and opened offices in Java, Siam, Sumatra, Burma, Indo-China, Ceylon, the Philippine Islands and Japan. As the nineteenth century drew to its close and sails gave way to steam in the Eastern seas, the volume of international trade increased rapidly, and a number of new and important industries rose in all countries served by the Bank. Agencies were also opened in Hamburg and New York. By the outbreak of the First World War, the Chartered Bank had been well established in almost all the Eastern territories it serves now. The Bank can look back with pride at its great achievements during the past 100 years of its meritorious service to the mercantile community in the East.

Glowing tributes were paid to the Chartered Bank on the occasion of its Centenary Celebrations on the 7th inst. at the Vallabhbhai Patel Stadium, by H.E. the Governor of Bombay, and Mr. Pranlal Devkaran Nanjee, Chairman, Indian Banks' Association. The latter said, while speaking at the celebration: "The Chartered Bank was, as you know, the first English bank to come here and, having opened its branches in the important cities of the country, it has set an example of how good banking should be carried on. If to-day, we have Indian banks in our country which could compare favourably with the best and the largest banks of the world, it is due to the qualities they possessed and banks like the Chartered Bank have given us an example of maintaining these high qualities and we are, therefore, indebted to them, and particularly to this Bank."

That the Chartered Bank deserves the handsome tribute paid by the President of the Indian Banks' Association is evident from the way in which it has served this country all these years. The picture of its role in building the economy of India presented by Mr. H. C. MacColl, Manager of the Bombay office of the Bank, is refreshing. The Bank's experts have served on the several Commissions appointed by the Government of India from time

INTERNATIONAL PAYMENTS POSITION

HOW TO BRING ABOUT A BALANCE?

[One of the questions which have been engaging very wide attention of world financial experts since the end of the war is the problem of achieving a balance in international payments. Despite active steps taken by the International Monetary Fund, the progress in the direction of establishing a multilateral system of payments and eliminating foreign exchange restrictions has been none too satisfactory. This is the result of a clash of interests between the deficit and the surplus countries; both have failed to take adequate and effective measures to solve the problem of balancing world payments. It is clear, therefore, that, if the various currencies are to be made freely convertible, it is important that all the countries should adopt sound monetary policies which seek to eliminate and avoid inflation through "strong budgets and tight credit." This was precisely the thesis which Mr. Ivar Rooth, Managing Director of the I.M.F., put forward, in the course of his address at the 39th National Foreign Trade Convention in New York recently, excerpts from which are published on this page.—Ed.]

THE International Monetary Fund and the National Foreign Trade Council share a common interest in expanding the volume of the world's trade. This is in your interest as business men, it is in the national interest of every member of the Monetary Fund, and it is essential to the peace, the prosperity, and the social and political stability of the world.

The Fund's interest is primarily in the world payments problem and the exchange policies that govern world trade and payments. I shall direct my remarks principally to the most important single problem which stands in the way of restoring a payments system based on convertible currencies. This is the persistent balance of payments surplus of the United States and the persistent dollar deficit of the rest of the world. This problem has been held at bay throughout the post-war period by extremely generous aid from the United States Government, especially to those countries which suffered severely in the war and are now co-operating in the restoration of the economic structure of the Free World. It is clear, however, that the solution to the problem cannot be found in the continuation of United States aid. This aid is at best a scaffolding to assist in the erection of a permanent structure. Let us see then what has already been done in the erection of this structure and what tasks still lie before us.

Two Extreme Views

Opinions on this differ sharply. On the one hand, there is an extreme attitude that there is no good reason why the world should not put its dollar payments in order. Those who take this view cite the fact that United States imports now pay for about twice as much exports from the United States as before the war. Under such circumstances, the deficit countries ought to be able to earn enough dollars, directly and indirectly, to pay for a volume of imports suited to their economies. The implication is that the payments problem persists, because they, the deficit countries, refuse to take adequate measures to solve it.

On the other hand, there is an extreme attitude that the payments problem is intractable and can never be solved. The dollar problem is said to have existed in one form or another since the First World War. And its persistence is variously attributed to such factors as the rapid increase in productivity in the United States, the recurrent recessions and depressions in the United States, the recurrent booms in the United States, the development in the United States of substitute products for major imports, as nylon for silk and synthetic rubber for natural, erratic stockpiling policies in the United States, too low a dollar price of gold, excessive protectionism in the United States, or the unwillingness of Americans to invest abroad. And the conclusion is that the dollar problem will persist because you, the surplus country, decline to take effective steps to solve it.

Right Measures Wanted

I believe that these extreme views are unjustified and that they do positive harm. The pessimists say that, as the dollar problem will not be solved, there is no reason for taking unpleasant measures to try to solve it. The fact is a great deal has been done to meet the problem. In 1947, the world's dollar deficit on goods and service transactions was almost $12 billion. The indications are that, excluding military aid shipments from the United States, the dollar deficit in 1952 will be about $2½ billion. And the import restrictions in deficit countries are now considerably less severe than they were in 1947.

It should not be expected, of course, that the goods and service gap will be completely closed, as part of it is more or less permanently covered by capital outflow from the United States plus private donations. Moreover, a substantial proportion of the remaining deficit is attributable to increased defence expenditure in Europe and to the disruption of East-West trade. Each of these elements is part of the cost of the common defence of the Free World. Let us hope that a separate solution will be found for them. I believe that the greater part of the problem has been met, and I see no reason for assuming that the remainder cannot be met by the right measures.

Role of the U.K.

Let us consider what has been done by the United Kingdom, the second trading country of the world and the heart of the sterling area, that accounts for more than one-fourth of total world trade. Two major factors have been responsible for most of the British post-war payments problem. In 1938, the net earnings of the United Kingdom from overseas investments (excluding oil, shipping and insurance) paid for a volume of imports that would, at present prices, cost about £750 million. In 1951, the net earnings of the United Kingdom from overseas investments paid for less than £100 million of its imports. Here is one single factor that caused a deterioration in Britain's current payments of £650 million, or about $1,800 million.

A second major factor has been the great rise in the prices of foodstuffs and raw materials, Britain's principal imports, relative to the prices of manufactured goods, Britain's principal exports—that is, the change in the terms of trade against Britain as compared with the pre-war period. If, between 1938 and 1951, the prices of the United Kingdom imports had only risen in the same proportion as the prices of United Kingdom exports, their cost in 1951 would have been less by nearly £1,050 million, or nearly $3 billion. Allowing for £200 million of duplication between them, these two factors, both beyond Britain's control, have together involved a deterioration of £1,500 million, or over $4 billion, in its payments between 1938 and 1951.

What has Britain done to face this problem? Its most significant action is found in an increased volume of exports. These exceeded the pre-war volume by 80 per cent. in 1951, that is, by an amount valued at over £1,200 million, or $3½ billion.

European Countries

In much the same way European countries have met a considerable part of the payments problem. In 1947, the volume of exports of France, Belgium, the Netherlands, Norway, and Denmark was below the 1937 volume. These same countries are now exporting between 60 and 70 per cent. more than before the war. In 1947, the dollar deficit of Western Europe was about $5¼ billion on goods and service transactions. In 1951, omitting military aid shipments, it was about $2 billion.

The improvement in European payments is not a temporary phenomenon. It reflects a real improvement in the whole economic environment of Western Europe. Industrial production in Western Europe is between 40 and 50 per cent. greater than in 1947. I believe that it could be increased further, and without the addition of new capital equipment, by the more intensive application of known techniques and perhaps a further shift towards incentive systems for remunerating labour. The structure of prices in Europe is also more competitive now than it was five years ago, due principally to the 1949 devaluations. And, now monetary policy in most European countries is better directed towards avoiding inflation and restoring a balanced payments structure.

So far, I have spoken of the world payments problem as if it were a European dollar problem. In fact, the payments problem is not confined to Europe. Nor is it exclusively a dollar problem. My reason for emphasising Europe's dollar payments is that this problem is so complex. The payments difficulties of other regions, no less than Europe's, must be solved if balance is to be restored in world payments. Their problems, however, would be easier to solve, if a solution had been found in Western Europe.

Structure of International Payments

Even before the war, the payments situation was unsatisfactory. It was kept in tenuous balance by tolerating unemployment in some industrial countries—especially the United States—and stagnation in the raw materials countries. It was a frail structure shored up by devaluations, exchange controls, bilateral clearing arrangements, and in some instances, by default on international obligations. The war brought about vast disruptions that further weakened the structure of international payments. There has, however, been a great expansion in production and trade in the post-war period. But, unfortunately, we have not yet got a strong and stable pattern of international payments.

The most important reasons for this, I believe, will be found in the great changes that have taken place during this generation in the objectives of national economic policy. Throughout the years, there has been a great increase in the degree of responsibility which nations have assumed for their domestic incomes and employment, and full employment policies have been pushed particularly hard in some of the deficit countries of Europe. In many of the raw materials producing countries, rapid development, with emphasis on industrialisation, has become a political and social necessity which Governments must heed. Too little attention has been paid to encouraging domestic savings in either industrial or raw material producing countries. The objectives of full employment and economic development are good in themselves, but the policies designed to achieve them have sometimes been pushed so far that they have served, not so much to contribute to the attainment of the objectives themselves, as to promote inflation.

Inflation

It is now generally recognised that inflation tends to result in payment deficits. When demand is inflated beyond what can be met by current production for the home market, or from imports financed by current exports or foreign loans or assistance, the excess demand will be used to bid away goods from export markets. It will also spill over into larger imports than the country can pay for. If the inflation persists, it will unbalance the structure of prices and make it difficult for the country to compete in world markets. Inflation may even reduce home employment opportunities by cutting off the means of payment for raw materials. Fortunately, many countries are now aware of the fact that a sound financial policy is an indispensable condition for a strong payments position and continuing high-level employment. The recent improvement in the payments positions of certain European countries is largely attributable to the renewed emphasis on credit policy.

In the raw materials exporting countries, the policy of rapid development has often been supported by inflationary finance, which here also has had the effect of attracting resources to home markets and discouraging exports. The supply of foodstuffs and raw materials for export from non-dollar regions has generally not increased commensurately with demand. Sometimes it has not increased at all. On the other hand, with increased production in the United States and Canada, the dependence on dollar sources of supply has increased, and this dependence has been accentuated by the falling off in East-West trade.

This persistence of the dollar payments problem is a natural consequence of excessive emphasis on full employment and rapid development. The payments problem, in turn, has led to exchange restrictions. Some persons are even willing to accept as permanent a situation in which the demand for imports is continually swelled by inflationary domestic policies and is continually held in check by exchange restrictions. I believe that we should not accept such policies as permanent.

Free Convertibility of Currencies

I believe, on the contrary, that we should aim at a system of balanced, international payments at a high level of trade, carried on under competitive conditions, free from restrictions and discriminations, and with prompt remittance of import payments and current earnings. Under such a system, the currencies of the great trading countries would be freely convertible. Countries could export, say, for sterling, and know that they could use the proceeds to import from any part of the world. Traders could export to any country and know that they would be paid promptly in accordance with the credit terms that they have agreed.

We are still some way from achieving such a payments system. Yet I believe that we shall achieve it. As examples of its advantages, let us look at the United Kingdom and some countries in Latin America. I believe that it is in the interest of the United Kingdom to work for the restoration of the convertibility of sterling. The higher prices which must be paid in inconvertible sterling raise the cost of its imports and handicap its producers in competing in world markets. With inconvertible sterling, the traders and financiers of the United Kingdom cannot fully perform their customary role as merchants and bankers to the world.

Some countries in Latin America are in substantial arrears in paying for their imports. These countries pay a heavy price for this delay and uncertainty in remitting for their current obligations. Exporters add a large premium in the prices they charge to cover interest and risk. Foreign investment in such countries is also discouraged and their economic development is slowed down.

Many of these countries are now seeking ways of putting their houses in order. This cannot be done by setting up new machinery and devising

FOREIGN TRADE IN COTTON TEXTILES

EXPORT PROMOTION SHOULD BE VIGOROUS, SAYS COMMERCE MINISTER

INDIA'S foreign trade in cotton textiles has suffered considerably in the past two years, thanks to the revival of a buyers' market in these goods the world over on a permanent basis. An indication of this is provided by the fact that cotton textiles, which were once the largest earner of foreign exchange, have now been pushed down to the third place, next to jute goods and tea. In view of this change in the world textile trade and the need for maintaining a high level of exports, so essential for the stability of the indigenous textile industry, the time has, indeed, come for the Government, the industry and the trade to take concerted measures to deal with problems of export promotion. A further expansion in exports of textiles, it must be mentioned here, requires, as Mr. T. T. Krishnamachari, Union Minister for Commerce and Industry, rightly emphasised, in the course of his address at the recent meeting of the Export Advisory Council, "hard work and concentrated attention on the many problems that await solution."

The Central Government's decision to permit free licensing of exports, and to reduce export duty on coarse and medium cloth (the latter has completely been abolished with effect from 24th October, 1953), has no doubt been responsible for the improvement in cloth exports in recent months. The quantity of cloth that is likely to be exported during the calendar year 1953 is estimated at 700 million yards, which compares favourably with 593 million yards in 1952. This figure, however, still falls considerably short of the target of 1,000 million yards chosen by the representatives of this country at the Buxton Conference and accepted by the Government. Moreover, the small improvement in exports that is now noticeable will certainly not endure for a long time in the face of import restrictions imposed by the Governments of several countries and the fierce competition from Japan.

It is, therefore, gratifying to note that Mr. Krishnamachari reiterated the suggestion for the formation of a non-official export council which will be exclusively concerned with the promotion of textile exports. Said he: "I am hoping that the industry and exporting bodies will soon join together to establish the Export Promotion Organisation on a permanent basis. I would like this organisation to conduct market research, depute trade representatives to important markets, appoint correspondents in less important ones, and also to take steps to institute systems of inspection on a voluntary or compulsory basis."

The work of the proposed organisation will surely be watched with considerable interest, not merely by the Indian cotton textile industry and trade but by the overseas importers as well. How far and to what extent this new organisation will achieve the purpose for which it is proposed, namely, maintenance of a high level of exports, will depend on its set-up. In this connection, the All-India Exporters' Association has made a few pertinent suggestions, in a communication addressed to the Textile Commissioner. In view of the importance of the subject, we reproduce below the suggestions of this body:

(1) It has been very correctly suggested that the proposed body should be non-official in character and should be free from restraints of official routine.

(2) Members constituting the Council should be nominees of the textile industry and trade associations engaged in the export trade; but no section of interest should have any predominant voice.

(3) The Council should not be merely of an advisory nature; its decisions should invariably be implemented by the Government.

(4) The personnel should be composed of persons having expert knowledge and experience of textile problems in regard to both manufacture and exports.

(5) A technical expert, conversant with qualities of various types and categories of cloth and yarn and an experienced man with close study of foreign trade problems, having no personal interests in the day-to-day trading, should be included in the personnel.

(6) The body should be allowed to frame its own rules and regulations in regard to procedures and functions of meetings. In fact, it should have a status of an autonomous body like the Tariff Commission.

(7) Appointments of representatives in important markets should be made by this body. The Government may recommend names of persons, who, in their opinion, would be eligible for the posts.

(8) In order that the reports collected from the study tours of these representatives may be made available to exporting houses and manufacturing concerns, a weekly or fortnightly bulletin may be published under the aegis of this Council, consolidating and editing such reports in suitable forms.

(9) Manufacturers and exporters may be advised to advertise their products through local embassies in respective markets or through export journals or local papers.

Whatever may be the measures taken by the proposed organisation, they will, by themselves, not stimulate the demand for Indian cloth in overseas countries. For much depends on the export policy of the Government. There are still several restrictions which the Government has imposed on exports of cloth. The retention of the export duty on coarse cloth is an instance in point. If the competitive position of Indian cloth in world markets is to be enhanced, export prices must be lowered by abolishing the export duty. It is, indeed, a pity that Mr. Krishnamachari should have refused to abolish the duty. There is also the need for allowing exports of mill-made *lungis* and pseudo-fine cloth which are at present banned.

Exports of Yarn

To revert to Mr. Krishnamachari's address at the Export Advisory Council. Dealing with exports of yarn, he declared, once again, that the Government of India was not out to establish any export trade in cotton yarn. For the Minister said that "all the yarn that we produce will be required by textile mills and by handloom weavers." The Government would, however, permit exports of small quantities now and then "to meet temporary situations of overstocking in mills." This principle has, as is well known, been followed by the Government of India in its yarn export policy for the current half-year. Under this policy, quotas have been fixed for mills (or their nominees) which have supplied a portion of the yarn produced by them to handlooms; the supply of yarn is fixed on the basis of supplies made by the mills to the handlooms in 1950-51 *plus* 25 per cent. of production resulting from any new spindles installed since the year. But it is not clear what quantity of yarn will become available for export on this basis.

WORLD WOOL POSITION

A rather pessimistic note about the international trade in raw wool has been struck by the U.S. Department of Agriculture, in a preliminary report on world wool conditions published in the weekly publication, *Foreign Crops and Market*. Says the Department: "...it is doubtful if the present large clip would be entirely marketed at the prices now prevailing." This view is based on the fact that the marked rise in world production of wool has not only not been followed by a similar improvement in offtake, but the offtake has actually suffered a sharp drop. The 1953 world wool output is estimated at 4,410 million lbs. (grease basis) which is an all-time record. The output is 80 million lbs. above the previous year's record of 4,330 million lbs. and 210 million lbs. above the record of 4,200 million lbs. attained in 1942.

The improvement in wool output witnessed in 1953 is in keeping with the steady uptrend since 1947, that is, the year which witnessed the post-war low of 3,700 million lbs. Most countries are now at, or exceeding, their pre-war levels of output, the chief exceptions being the U.S., Canada, Western Germany and the U.K., where economic conditions "do not appear to be as favourable for the production of wool."

On a clean basis, the world wool output during the year under review aggregates 2,540 million lbs. The bulk of this, 2,080 million lbs. to be precise, is accounted for by apparel type. The output of coarse or carpet type amounts to 460 million lbs.

Wool output in all the main producing countries is expected to be slightly above that for the last season, which, as indicated, was at a record level, largely as a result of an increase in wool output in Australia.

This increase, it is stated, was made possible by the sharp reduction in rabbit numbers, because of the disease, myxomatosis, and the subsequent improvement in the quality and quantity of pastures. In that season, wool production went up, as a result of increased yields per fleece, by nearly 20 per cent. while sheep numbers rose by only 4 per cent. Increases are noted in New Zealand for the past three seasons and production is now considerably above the pre-war and war-year averages. Output in the Union of South Africa in 1952 was above pre-war for the first time since the war and another substantial increase is estimated for the current clip. Increases in that country have been made possible by generally better feed and weather conditions.

World wool prices have strengthened steadily since the low point in April, 1952, and production was encouraged. At the same time, consumption and forward buying by mills has been stepped up, and, in the past 15 months, the trade has absorbed for the most part the large 1952 production *plus* the carry-over from 1951 in South America, the principal exceptions being the accumulation of about 100 million lbs. weight under the U.S. price support operations and some additional build-up in the U.K. strategic stockpile.

MORE AND BETTER WOOL FOR COTTAGE INDUSTRY

Arriving from Australia shortly are over 200 sheep consigned to the Uttar Pradesh Government. This is a part of a gift of sheep and equipment, costing $20,000, provided by the Food and Agriculture Organisation of the United Nations to supplement the Government's development plans. There are 50 ewes and 20 rams of each of three well-known breeds, Polwarth, Corriedale and Border Leicester. After acclimatising there for three months, 50 per cent. of the rams will then be transferred to selected flock-owners. The remaining ewes and rams will be used in a breeding programme for both pure and crossbred progeny for ultimate further distribution.

A heavier fleece on each sheep is one of the most important objectives of achieving a higher yield of wool with no corresponding increase in the numbers now grazing the U.P. hills and foothills. The lower-yielding indigenous sheep will be replaced by improved breeds as the scheme spreads from the main and subsidiary breeding farms. The other inherent characteristics of the foreign breeds will be utilised to improve the quality of the local wool and make it more suitable for hand-processing into the different manufactures of the cottage industry.

The sheep farm has been under development since April this year, and the necessary building construction for farm personnel and the night housing of stock is complete. Fodder trials have already been carried out with the small flock of indigenous (Bikaneri) ewes which are established there, and instruction in modern husbandry methods has been given to personnel and local shepherds. The U.P. Government recently purchased equipment for a wool testing laboratory to provide facilities for scientific checking of the practical results obtained outside. The two F.A.O. advisers in this joint project are Mr. G. R. Upward and Mr. H. Newton, both Australians and of well-proven ability in their specialised fields. It is envisaged that this Government farm will be not only a practical breeding station, but also an instructional college in sheep husbandry, fodder growing experiments, wool grading and the simpler methods of wool processing.

4¼ PER CENT. DEBENTURES

ISSUE PRICE Rs. 99-8-0

Guaranteed by the Government of Andhra.

THE ANDHRA CO-OPERATIVE CENTRAL LAND MORTGAGE BANK LIMITED

110/111, Armenian Street, MADRAS, 1.

Telephone: 2624 Telegrams: "ANMORBANK"

PAID-UP CAPITAL AND RESERVES Rs.26.81 LAKHS

President: SRI B. V. SUBRAHMANYAM, B.A., B.L., M.L.C.

4½% 1964-74 Debentures, Issue limited to Rs. 60 lakhs. The price is Rs. 99-8 per cent. The issue is open for subscription till 15-1-1954 and will be closed earlier when subscriptions amount to approximately Rs. 60 lakhs. Full amount to be remitted with application,

Current yield 4.271% and Redemption yield 4.287 per cent.

Other particulars and application forms can be had from the Secretary or from any Banker or Broker.

The debentures are Trust securities under the Indian Trusts Act and are also approved Securities under the Insurance Act 1938, and the Banking Companies Act of 1949. A Redemption Fund will be constituted to pay off the debentures on maturity.

M. DATTATRAYULU,
Secretary.

TRENDS IN WORLD TEXTILE TRADE

DECISION TO RESTORE FREE MARKET IN COTTON CRITICISED

(From A Special Correspondent)

MANCHESTER, 1st *December*

MANCHESTER LETTER

NOT for the first time thinly-veiled threats about the margin which exists between the Lancashire cotton trade's earning and spending capacity have been made on behalf of the Government. On this occasion, Mr. R. A. Butler, Chancellor of the Exchequer, has added his words of exhortation to the industry to increase its exports to avoid becoming a "net loser of foreign currency."

What exactly would happen in such circumstances was not made clear by the Chancellor but it is no new thing for Lancashire to be warned about the need to expand shipments overseas. Government spokesmen have been doing it persistently since the war.

Those who spend their working lives dealing with textiles are fully aware of the situation and exporters are far from satisfied at the results of their efforts in recent years. There are a multitude of reasons why international trade has failed to broaden and it is significant that Lancashire is not alone in its apparent inability to increase the volume of goods sold abroad.

Competition has grown ever more fierce since the revival of overseas countries from the after-effects of war, in particular, Japan and Germany. Foreign countries which were formerly large importers of yarn and cloth not only now make their own goods but in some instances produce a surplus which they in turn try to dispose of abroad. Domestic industries, newly created, often call for protective tariff barriers and the system of import restrictions and rising duties has become a veritable jungle for prospective exporters to explore in the past few years.

It is perhaps odd that Mr. Butler should choose this moment to compare the export earnings of the cotton industry with its cost in imports. Much of its raw material supplies meant dollar expenditure, he pointed out, but made no reference to the probability that under the reversion to full-scale free buying of the raw material even larger quantities of dollar cotton will be procured. This has been admitted by the President of the Board of Trade.

Private Cotton Buying

A violent attack on the decision to restore full-scale private enterprise buying of raw cotton and abolish the Raw Cotton Commission has been made by Mr. Charles Schofield, General Secretary of the 20,000-strong Operative Spinners' Amalgamation, in his quarterly report.

Mr. Schofield, who is a part-time member of the Raw Cotton Commission and a cotton union expert in this field, declares:

"The spinning section is now faced with a gamble the like of which has never before been witnessed. All the signs and portents show that confusion and chaos will surround the trade, the outcome of which may very easily be serious and permanent.

"This rough-shod riding over an industry still fighting the after effects of war-time concentration is unworthy of people who profess to have the industry at heart."

The proposals of the Government were shrouded in a mist of uncertainty and contained all the elements of speculation, both political and industrial. Questioning whether supplies of raw cotton to Lancashire mills could, in future, be maintained smoothly and in adequate quantity, Mr. Schofield declares:

"Fair warning is now given that in the event of unemployment arising a most serious view will be taken. At this early stage nothing more need be said about this aspect of the situation."

He added that the financial machinery necessary to insure against price fluctuations would have to be established, which as far as could be foreseen would be totally inadequate and accompanied by financial risks "which, to say the least, may be embarrassing, and to say nothing of the capital which would be tied up in carrying stocks."

Stock Position

It was well known that during the past 12 months of private trading the "free market" had carried only a very small quantity of stock on which spinners could draw to meet changes in trade. No evidence has been forthcoming that merchants would build up stocks in the future. "Indeed it would be surprising were they to do so in view of current prices," says Mr. Schofield. "It would appear, therefore, that the trade will be compelled to extend the principle now practised in the existing free market of direct-to-mill shipments."

To meet the difficulties, the spinner, Mr. Schofield said, would be obliged to carry a stock himself in order to ensure continuity of running, the cost of which would be "unthinkable" to the majority of firms in the industry. He added: "With American cotton at approximately £60 per bale, consumption of 100 bales per week and a replaceable stock equal to ten weeks' consumption, the spinner will have to set aside the sum of £60,000, or alternatively to pay interest on that amount if he can persuade his banker to loan it to him."

It was the intention of Liverpool merchants, according to Mr. Schofield, to have one futures contract only and the only cotton tenderable against that contract would be United States cottons. He said:

"Other American-type cottons will presumably be tied to U.S. values in some way not yet clear. From this it would appear that dollar expenditure on raw cotton will increase, thus adding to the country's dollar-sterling difficulties.

"The effect of this on the consumption of Colonial cottons may be very serious indeed. Much time and effort has been devoted in recent years to the development of the Colonies, to encouraging the Colonial peoples to work for a higher standard of life. This action of the Government can only be viewed by the Colonial peoples with considerable apprehension.

"It would be tragic indeed if it should work out that these cottons are neglected and the interests of the native producers brushed aside as of no consequence."

Textile Machinery Trade

Up to the end of October shipments of British textile machinery have shown a sharp contraction by volume this year and will, in all probability, be smaller than at any time since 1947 when the full year's totals are recorded. Earnings from these goods, however, remain persistently high and the average cost per ton of plant has never been exceeded. For the 10 months exports were 1,404,570 cwts., valued at £34,113,316, against 1,875,652 cwts. worth £41,826,433 in the corresponding period of 1952. The average price obtained for exported machinery this year has been £486 per ton, against £448 throughout 1952.

Although smaller shipments have been sent to the Indian sub-continent, this area remains by far the biggest buyer of British textile plant, India has already taken 262,374 cwts. and Pakistan 144,625 cwts. The other leading consumers have been Italy with 114,587 cwts. and Brazil 114,049 cwts.

The decline in exports has affected all the different classes of machinery, although spinning, which is the largest producer, shows the most substantial drop in overseas trade. In this section, foreign buyers have taken 803,466 cwts., against 1,083,643 cwts. last year. Weaving machinery shipments have fallen from 299,593 cwts. to 244,014 cwts., and finishing plant from 120,290 cwts. to 84,474 cwts.

International Cotton Talks

Criticism of the "time-wasting procedures" adopted at the Washington conference of the International Cotton Advisory Committee, attended by delegates from 29 nations, was expressed by Mr. C. Henniker-Heaton, Director of the Master Cotton Spinners' Federation, when he returned to Manchester from the United States this week.

Commenting on the Washington discussions on an international cotton price agreement, which resulted in a decision that the time was not appropriate for negotiations, Mr. Heaton said the British delegates opposed the form of agreement suggested because they believed it would lead to prices being stabilised at a high level.

On the other hand, the idea of maintaining raw cotton prices at reasonable levels was clearly beneficial to textile producers, since primary producers would be assured of a regular income with which to purchase finished textile goods. Far-sighted cotton growers realised that if cotton prices remained too high their raw material would be priced out of the market. Competitive conditions for the growth of raw cotton were therefore the best.

Referring to raw cotton prices generally, Mr. Heaton said the general feeling was that they should be lower than they had been and that they should compare more favourably with the prices of other fibres. But there was no reason for a very sharp break in prices if growers made sensible use of the statistics available.—*All Rights Reserved.*

MILLS' COTTON CONSUMPTION HIGH IN 1952-53 SEASON

STOCKS HELD ESTIMATED TO LAST 3⅜ MONTHS

THE high level of productive activity in which the Indian textile industry was engaged during the cotton year ended 31st August, 1953, is reflected in the record level of cotton consumption in that year. Thus, the mills consumed during the year 1st September, 1952, to 31st August, 1953, about 4.46 million bales of 400 lbs. each, as against 4.07 million bales in the previous year. Never since 1945-46, when mills consumed 4.56 million bales, was this level of consumption witnessed in this country. Stocks with the mills at the end of the season under review were, however, lower at 1.26 million bales, as against 1.65 million bales a year before.

The increase in cotton consumption was primarily in that of Indian cotton, which increased from 2.98 million bales to 3.61 million bales. The consumption of foreign cotton, on the other hand, declined from 1.08 million bales to a record low level of 0.85 million bales.

The following table gives the consumption of Indian and foreign cotton, in terms of the different varieties of cotton during the years 1952-53 and 1951-52:

Mills' Consumption of Cotton

(In bales of 400 lbs. each)

	From 1st September to 31st August	
	1952-53	1951-52
Total Indian cotton	3,611,630	2,987,453
Of which :		
Bengal Deshi	166,182	123,834
Jarilla	1,484,701	1,152,240
L.S.S.	152,656	121,520
Broach Vijay	329,715	261,329
Surti	135,879	98,169
Wagad	143,050	186,932
Farm	121,696	150,741
Jayadhar	159,309	171,640
Laxmi	102,881	41,256
Cambodia	115,375	170,454*
Karunganni	106,598	110,585
Rajapalayam	39,083	..
Total Foreign cotton	848,786	1,084 018
Of which :		
Pakistan cotton	955	4,185
Egyptian cotton	198,648	157,524
Sudan Egyptians	58,359	62,706
East Africans	215,902	162,868
U.S.A.	367,316	678,829
Grand total (Indian and foreign) ..	4,460,416	4,071,471

* Includes Rajapalayam cotton

It will be seen from the table above that Jarilla lead other varieties of cotton consumed by the Indian mills, the consumption of this variety improving from 1.15 million bales to 1.48 million bales. A notable feature was the perceptible rise in the consumption of Bengal Deshi, a short-stapled variety of cotton, from 123 834 bales to 166,182 bales. There has been a slight decline in the consumption of superior varieties of Indian cotton, such as Cambodia and Karunganni, also. Among foreign cottons, the intake of U.S.A. cotton suffered the heaviest decline. Thus, the consumption of this cotton moved down from 678,828 bales in the 1951-52 season to 367,316 bales in the season under review.

An analysis of cotton consumed in the States of the Indian Union shows that the Bombay State leads, as is only to be expected, the other States as the largest consumer of cotton. The chief cotton consuming States of the Indian Union are shown in the following table:

Cotton Consumption in States

(In bales of 400 lbs. each)

States	From 1st September to 31st August	
	1952-53	1951-52
Indian Union	4,460,416	4,071,471
Of which :		
Bombay Island	1,235,416	1,032,234
Ahmedabad	629,785	625,309
Bombay State (other areas) ..	406,663	379,112
Bombay State	2,271,864	2,036,655
Madhya Bharat	271,363	252,570
Rajasthan	58,572	56,668
Ajmer-Merwara	39,320	40,107
Uttar Pradesh	354,605	332,595
West Bengal	177,309	133,951
Madhya Pradesh	169,443	156,361
Madras	604,641	502,803
Mysore	97,985	89,445

It is noteworthy that the consumption of cotton in both the Bombay and the Madras States had improved in the season under review over the levels touched in the previous season, despite the shortage of power and certain other difficulties which the mills in the States had to contend with.

A study of the position of the mills' cotton stocks, as on 31st August, 1953, shows that it was less comfortable than at the end of the 1951-52 season. This is true of the stocks position of Indian as well as foreign cotton. The following table gives the chief varieties of cotton held by the mills at the end of the 1952-53 and 1951-52 seasons:

Stocks of Cotton

(In bales of 400 lbs. each)

	Stocks as on 31st August	
	1953	1952
Indian cotton	1,013,315	1,239,529
Of which :		
Bengal Deshi	41,182	83,471
Jarilla	305,532	484,725
Gaorani	63,350	96,223
Vijay	120,787	75,569
Surti	38,629	41,596
Wagad	70,540	39,233
Farm	54,513	67,845
Jayadhar	29,867	86,536
Laxmi	52,315	34,468
Cambodia	34,557	62,303*
Karunganni	35,408	43,088
Foreign cotton	246,241	391,047
Of which :		
Pakistan	601	1,485
Egyptian	70,763	41,891
Sudan Egyptian	28,663	11,173
East African	92,111	47,040
U.S.A.	43,197	281,379
Total stocks (Indian and foreign) ..	1,259,556	1,630,576

* Includes Rajapalayam cotton.

When the stocks are related to the level of the mills' consumption of cotton in the season under review, it will be found that the period of availability of these stocks is only 3⅜ months. This is by no means a very comfortable level of stocks. At the end of the 1951-52 season, the period of availability of stocks, it may be mentioned, was 4¼ months, on the basis of the then prevailing level of consumption.

M. P. COTTON MARKETS CLOSED

The cotton markets in Madhya Pradesh have remained closed from the 1st inst., as a protest against the levy of sales tax on cotton by the State Government. A new amendment to the State's Sales Tax Act requires every trader to register himself and to give a guarantee that he will re-sell the goods only in Madhya Pradesh. Otherwise, he will have to pay sales tax at 6 pies in the rupee. The levy works out to as much as Rs. 23 per candy. Direct purchase from the cultivator is exempted from sales tax. Agricultural associations which arrange for the marketing of improved varieties under the "pool system" are also exempted.

The entire cotton trade in the State has been paralysed by the closure of the markets. And the closure of the markets at the present time, when cotton begins to be marketed, has affected the cultivators, the traders and the mills' agents. At an emergent meeting of the Madhya Pradesh Chamber of Commerce, held this week, the Executive Committee of the Chamber urged the State Government to postpone the Sales Tax (Amendment) Act, 1953, by which the new levy on cotton has been imposed, on the ground that this amendment "infringes Article 286 of the Constitution, inasmuch as it amounts to indirect tax on inter-State transaction."

The closure of the cotton markets in Madhya Pradesh forms the subject matter of a communication addressed by the President of the East India Cotton Association, Mr. Purshotamdas Thakurdas, to Mr. R. A. Kidwai, the Minister for Food and Agriculture, Government of India. The President says that, owing to the strike in the M. P. cotton markets, the "best time for marketing cotton is being lost to the growers." He has urged that, in this matter, the Central Government should, "in fairness to the growers, exercise their power and decide what they think right." He warns that any prolongation of this dispute is "bound to have very serious effects" on the marketing of cotton not only in Madhya Pradesh but also in the rest of the country.

RECENT TRENDS IN MONETARY POLICY

INFLATION SHOULD BE AVOIDED AT ALL COSTS

(By E. M. BERNSTEIN)

THE changes that have occurred in the world economic situation since 1950 and 1951 are striking. While these changes have occurred in a period when there was a revival in the use of monetary policy, it is not possible to attribute all the changes that have taken place to the use of such measures.

The boom in raw material prices that began with the Korean War would, in any case, have come to an end when there was wider realisation that the fears of raw material shortages were unfounded. The large dollar deficit of July, 1951 to June, 1952 would, sooner or later, have had to be reduced, since countries could not continue to draw down reserves. Nevertheless, monetary policy prevented even greater distortions and facilitated an orderly return towards stability.

Without imputing entirely to monetary policy, the greater internal and external stability of the past two years, it is worth noting what these achievements are. Wholesale prices reached a peak in most countries from March, 1951 to January, 1952 and have since receded nearly everywhere. In general, the turning point came earlier in the raw materials countries with sound monetary policies and in the industrial countries that took strong measures to restrain credit in 1950 or very early in 1951. The turning point came later in countries heavily dependent on imports, in which domestic prices lagged behind spot prices of foodstuffs and raw materials in export markets. The turning point also came later in industrial countries that delayed taking action to restrain credit until the summer of 1951 or later.

Payments Position

The relation of monetary policy to the payments position of countries is equally striking. The rest of the world paid $2.7 billion of their reserves to the United States from July, 1951 to June, 1952. It could add only $2.1 billion to its reserves as a consequence of transactions with the United States from July, 1952 to June, 1953, including American aid. Raw materials countries that applied restraining monetary policies in 1950 and 1951 were able to retain a considerable part of the reserves they accumulated during the boom. Industrial countries with effective monetary policies were able to build up reserves during the period of the Korean boom and to retain these reserves after the boom had terminated. The industrial countries that lost reserves in 1950 and 1951 and then took effective monetary measures showed large gains in their monetary reserves early in 1952.

Monetary policy also contributed to a solution of the payments problem in other ways.

First, the monetary restraints came just in time to prevent cost from rising to levels that would have impaired the capacity of some countries to compete in world markets. Countries that made prompt and vigorous use of monetary policy have price and cost levels very close to those of the major dollar markets.

Secondly, economic readjustments have been induced by monetary measures which will continue to help in the solution of the payments problem. There is one characteristic of monetary policy which makes it transcend in effectiveness any direct controls. Monetary policy is pervasive; it acts on the whole economy. In contrast, controls must always be stricter than the need for the restrictions they impose, because excess demand, restrained at one point, flows over or breaks through at innumerable other points.

Finally, the use of monetary policy in recent years has strengthened confidence in currencies. It can no longer be assumed that the value of money will move uninterruptedly in one direction—downwards. People are again encouraged to save and to keep their savings in national currency, instead of seeking refuge in gold and dollars.

Inflation and Payments

The experience of the past three years shows that monetary policy is an indispensable part of any programme for dealing with the payments problem. Any country that has inflation, however mild, can strengthen its payments position by ending the inflation. And as persistent inflation must ultimately raise prices and costs, a country that fails to deal with its inflation problem will in time undermine the exchange rate for its currency. A very considerable part of the payments problem that confronts the world to-day has its origin in a persistent current inflation and in the accumulated effects of the inflation of the past.

There is a mistaken view that it is not the absolute degree but only the relative degree of inflation which affects a country's payments. This seems to mean that, if all countries have an equal degree of inflation, say, an equal proportionate excess of demand over current output, payments will somehow be in balance. Even if the rest of the world has the same degree of excess demand as the United States, it may very well be confronted with a serious dollar payments problem. That is because not all countries respond equally to inflation either in their export-import trade or in their price-cost structure. Any inflation is a threat to the balance of payments of a country with a weak payments position.

Need for Other Measures

Monetary policy cannot, by itself, solve problems which have their origin in other forces affecting the international economic position of a country. It cannot solve payments problems arising from a loss of important export markets. It cannot solve payment problems arising from the loss of major import sources. These are problems that require fundamental changes in the structure of the world economy and in the pattern of world trade. Whatever the solution, it can in the end be applied only in an environment free of inflation, in which monetary policy encourages the adaptation of the economy to its real international economic position rather than freezing it to a pattern suited to the past.

Much has been done with monetary policy in the past three years. More can be accomplished by a vigorous use of monetary policy in the future. The greatest barrier to an effective monetary policy has probably been ideological in character. It is a mistake to assume that full employment and economic development must be based on inflation. Economic adjustment with stability is more likely to result in high levels of employment and rising standards of living than a policy of unlimited credit bolstered by controls. Economic development with stability is more likely to create broader work opportunities and more efficient methods of production than a policy of inflationary financing of investment. Governments are now beginning to understand this. That is why there is more reason for optimism on the payments problem than at any time since the end of the World War.—*By Courtesy: International Monetary Fund.*

Power and Progress with CUMMINS

The beauty, grandeur and tremendous power of a waterfall; the harnessing of which will introduce a new prosperity.

Another outstanding source of dependable power is CUMMINS Diesel Engines fitted to earthmovers, cranes and other industrial applications. With a rating of 50-600 h.p. CUMMINS Diesels have built up a world wide reputation for performance and dependability. Their exclusive fuel system is designed for greater economy and maximum efficiency.

WORLD SUGAR SUPPLIES COMFORTABLE

WILL REGULATION SCHEME BE MODIFIED?

IN about three weeks' time, on 1st January, 1954 to be precise, the five-year world agreement on sugar will become fully operative. The agreement was signed in London on 24th August, 1953, after over six weeks of deliberations by the participating countries at the International Sugar Conference. It seeks to achieve two important objectives, namely, (1) to stabilise sugar prices by preventing accumulation of huge surpluses and maintaining steady supplies in the "free" market, and (2) to give those countries that depend on it a share of any expansion in world consumption of sugar. Now that it is becoming increasingly evident that world sugar supplies would be plentiful during the current year, sugar interests the world over would anxiously watch the possible outcome of the actual working of the regulation scheme proposed under the agreement.

The sugar supply position during the current (1953-54) season would appear to be so comfortable as to result, once again, in the accumulation of stocks in the major sugar-producing countries of the world. If the present estimates relating to world production turn out to be correct, the season will witness a record sugar output, the quantity expected to be actually produced being 38.21 million tons (English), which compares very favourably with the previous season's output of 35.71 million tons. This, together with the large carry-over of 10.92 million tons brought in from the 1952-53 season, brings the total available world sugar supplies for the season under review to more than 49.12 million tons, as against 44.41 million tons for 1952-53. Assuming that the annual rate of increase in consumption is about 3 per cent., the aggregate world consumption of sugar may be estimated at 38.28 million tons. The stocks of sugar at the end of 1953-54 would, therefore, be of the order of 10.84 million tons, which is about the same level as in 1952-53.

Fall in Sugar Prices

The easy availability of sugar is reflected in the gradual fall in prices in world markets during the past few months. The price (f.a.s.) of Cuban sugar in the world market is now as low as 3.10 cents per lb., as against 3.77 cents in May 1952 and 4.70 cents in the beginning of 1951.

The renewed weakness in the world market for sugar makes it obvious that the international regulation scheme will have to be considerably modified even before a trial is given to operate it. Under the agreement, it will be recalled, the basic sugar export quotas for individual countries will have to be varied if the ruling market price for sugar rises above or falls below, respectively, the maximum and minimum levels, laid down in the agreement. The ceiling and floor rates are 4.35 cents and 3.75 cents per lb. f.a.s. Cuba, respectively. Now that the world market price (3.10 cents) has fallen below the minimum fixed, the basic export quotas have accordingly to be reduced in order to stabilise the price. But difficulty lies in determining the extent of reduction. An agreement on this issue should naturally be based on the principle of compromise, on the one hand, between the two vital interests in the world sugar trade—exporters and importers—and, on the other, among the exporters themselves. This is precisely the question that is at present being actively considered by the Statistical Committee of the International Sugar Council. If no agreement is reached on the quantity to be cut within ten days of the commencement of the agreement, the aggregate basic tonnages themselves (amounting to 5.31 million) will be cut by 5 per cent., that is, to 5.10 million tons.

Reviewing the recent trends in the world sugar market, the London *Financial Times* makes the following interesting observations:

"It is still by no means a foregone conclusion that the number of ratifications will match the number of signatures to the pact, and some informed circles fear that some countries may ratify subject to reservations endangering the successful working of the scheme. Whether the quotas will be made sufficiently low to be realistic is still in doubt. From the viewpoint of producing countries, the problems likely to be raised by restriction of output are serious. Cuba, for instance, has already restricted her crop to 5 million tons, as compared with a production capacity of around 7 million tons. Although anxious to see the world price of sugar supported, she must always consider what any further restriction might mean in hardship to the sugar workers and consequent danger of labour troubles."

India's Interest in the Agreement

India has now become an importer of sugar. The country is to import 200,000 tons this year and the quantity to be purchased next year, that is, 1954, is estimated at 400,000 tons. As an importer, therefore, this country cannot be a disinterested observer of developments in the world sugar markets, particularly the working of the world marketing scheme for sugar. But since prices have gone below the floors fixed by the world sugar agreement, the agreement is now no more than of academic interest to this country. For India is not a party to the agreement and as such is not bound by its provisions. It is free to buy in the free market in which, as already stated, plentiful supplies of sugar would be available during 1954. India can certainly purchase 400,000 tons which it needs from the "free" market without any difficulty and at substantially low prices.

SUGAR IMPORTS

In reply to a question on imported sugar, the Deputy Food and Agriculture Minister laid the following statement on the table of the House of the People:

About 32,400 tons of imported sugar arrived at Indian ports up to 30th September, 1953. A further quantity of 62,600 tons of sugar has arrived in India up to the end of November. The imported sugar is being sold to the State Governments to the extent required by them for distribution through ration or fair-price shops. The next preference is being given to co-operative societies and the balance is being sold to merchants. Only the West Bengal and Travancore-Cochin Governments have asked for allotment of imported sugar on Government account. Sugar received at Bombay, Madras and Bhavnagar is being sold to co-operative societies and to merchants by inviting tenders.

WASHING OF COAL

MUKHERJEE COMMITTEE SUBMITS INTERIM REPORT

THE latest reports from New Delhi indicate that the Coal Washeries Committee, with Mr. J. N. Mukherjee as Chairman, set up by the Coal Board in January last, to examine and report on problems relating to the establishment of coal washeries in India, has submitted its interim report. This Committee was expected to go into the problems of the advantages of having central washeries, disposal of middlings, relaxation of controls on coal purchased by central washeries, encouragement of washing by private collieries and the like. For a fuller account of the Committee's views on these and allied problems, one has to await the publication of the report, as the Press report mentioned above confines only to the main recommendations of the committee. Among others, the Committee is reported to have recommended that:

(1) Coal preparation for home consumption and export on a large scale should be undertaken;

(2) the basic price structure of coal should be determined on the basis of useful heat units;

(3) the ideal plant for washing Indian coal should consist of a heavy medium plant for cleaning plus 1" coal and a jig for cleaning the minus 1", along with any crushed middlings from the heavy medium plant;

(4) as the washability features of Indian coal show that it is cheaper to wash the superior grades, washing of coal of all grades should be undertaken under one financial authority, so that profits and losses are balanced;

(5) a bonus of As. 8 to Re. 1 should be paid for washed coal having 10,800 to 12,130 useful heat units and a higher bonus for coal with heat units between 12,360 and 12,820;

(6) central washeries, which are more economical than individual units at the mines, should be organised under a central coal marketing organisation;

(7) (a) a central coal utilisation and marketing organisation should be created by an Act of Parliament. The organisation should have power to purchase and sell coal, exercise control over price and distribution of coal and also operate coal mines for the purpose of conservation or for amalgamation of small collieries. It should guarantee a fixed price structure to coal producers, subject to Government control and concurrence. It should fix zonal price structure for the sale of coal.

(b) the organisation should have a capital investment of Rs. 5 to Rs. 6 crores. Fifty per cent. of the share capital should be held by the Ministry of Railways and the Ministry of Production and 25 per cent. by coal mines directly participating in the working of coal washeries; the remaining 25 per cent. should be held by the public as deferred shares. It should be controlled by a Board of Directors, partly nominated by the Government and partly by the industry, according to the proportion of shares held by them. The Chairman should be appointed by the Government. The Chairman of the Coal Board should co-ordinate the activities of the organisation as well as those of the coal producing and consuming industries;

(8) a cess of As. 4 per ton might be levied on all despatches of coal, as marketing surcharge, for meeting the expences of inspection, grading, distribution as well as for financing other capital projects;

(9) the Fuel Research Institute should reorientate its programme of coal survey and carry out, at first, a rapid quality survey of coal in working areas;

(10) selective mining without complete stowing should be totally prohibited; and

(11) in mining of coal, strict scientific rotation should be observed.

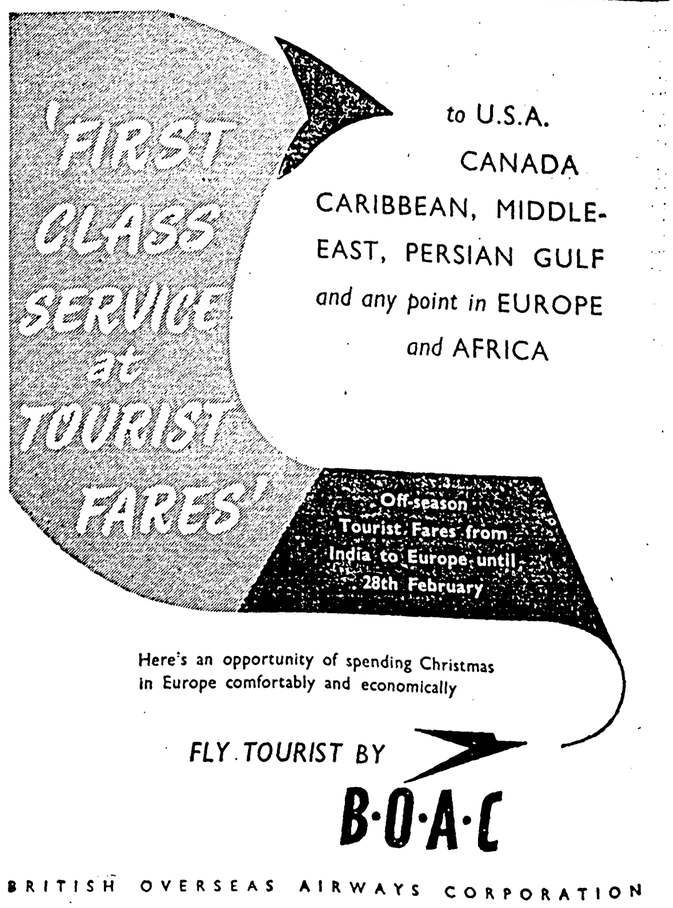
Detailed comments on the above recommendations have to be deferred till a copy of the Committee's report is available to the public. Meanwhile, a few general observations may be made here. It is clear that the Committee has recognised the need for establishing washeries as early as possible. This is in line with expert opinion in the country which has all along been emphasising the advantages which would accrue by installing washery plants. The Committee has done well in recommending the establishment of central washeries, because the small collieries, which with their limited finances cannot afford to have their own, can take advantage of these washeries. The suggestion that the washing of coal of all grades should be undertaken by one financial authority so that profits on the washing of superior coal might be set off against losses on the washing of inferior coal needs, however, further careful examination. The bonus recommended for washed coal will serve as an incentive to collieries to wash their coal. The recommendation that the present price structure of coal should be so revised as to reflect the relative fuel values of the various grades is, however, quite appropriate, and its implementation is long overdue.

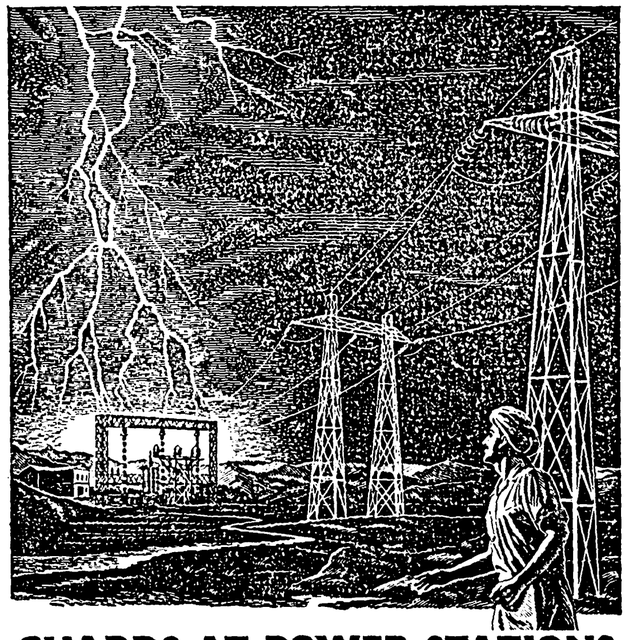
The washing of coal through washeries is beneficial in a number of ways and its advantages are enormous. It will help India export higher grades of coal and thereby recover the vanishing markets. In fact, the decline in exports of coal is chiefly due to the fact that India is not supplying the grades of coal required by overseas' customers. So long as the South and South-East Asian markets did not get higher grades of coal from any other source, they tried to do with whatever grade they got from India. Now that China, Australia and South Africa have entered these markets, the position has changed radically. These countries have been offering higher grades of coal and that too at competitive rates. If India is not to lose the position it still holds, let alone improving it, it will have to make a major effort to supply higher grades of coal and herein lies the utility of washing coal. Another significant advantage of the washing of coal is that washed coal relieves wagon shortage to some extent, as its ash content will be less and this results in savings in freight which will be reflected in the ultimate selling price of coal.

COAL STATISTICS

It is reported that as many as 824 collieries and 7 coke plants were working during the month of August, 1953. Ten mines were reopened. The output of coal from the various collieries in August was 2,746,918 tons. This was 85,698 tons less than that in the same month last year. Soft coke produced was 124,726 tons, hard coke 121,355 tons, and other kinds of coke 14,405 tons. Total despatches during the month under review were 2,506,039 tons of coal, 129,852 tons of soft coke, 41,439 tons of hard coke and 3,615 tons of other kinds of coke. Pithead stocks at the end of the month were 3,645,600 tons, including 1,558,995 tons of slack.

The daily average number of persons employed in the coal mines was 326,212 persons, which was 16,509 persons less than that in July 1953. The number of man-shifts worked was 7,915,461. The overall percentage of absenteeism was 13.82 in all coal mines. The output per man-shift for miners and loaders was 1.04, for persons employed in underground and in open workings 0.56 ton and for all persons employed above and below ground 0.34 ton.





GUARDS AT POWER STATIONS

Outwitting the thunderbolt is a task achieved by G-E Engineers. When a few million volts of lightning hit a transmission line, a high-voltage wave goes galloping along the wire. If it were allowed to surge into the power station or into the transformer at the end of the line, sparks would fly and expensive apparatus would be damaged. So G-E Engineers have built traps for this extra surge. They are called LIGHTNING ARRESTORS. They don't stop lightning, but merely shunt it out of the way to ground and harmlessly dispose of it.

G-E's THYRITE Station Type LIGHTNING ARRESTORS are on guard duty at most of the large power systems in India, namely, Tata Hydro, Mysore Government, the Madras Grid, Punjab Government, Damodar Valley Corporation and at several new projects under construction.

General Electric is the largest electrical manufacturing organization in the world with a production range of 200,000 different items—from tiny switches to giant generators, from lamps to locomotives. Inaugurated 75 years ago in U.S.A., when its parent company was first established, General Electric's unlimited resources, skill and research have been used and are available to India for the development of her natural resources.

DELHI CLOTH AND GENERAL MILLS COMPANY, LIMITED

SIXTY-FIFTH ANNUAL GENERAL MEETING

SIR SHRI RAM'S CALL FOR A BOLD DECISION REGARDING TEXTILE EXPORTS

ADDRESSING the shareholders of the Delhi Cloth and General Mills Co., Ltd. at their Sixty-fifth Annual General Meeting held in Delhi on 6th December, 1953, Sir Shri Ram, Chairman of the Company, said that the time had come for the country to take a bold decision in regard to its cotton textile exports. He was confident that a permanent export market could be built up, notwithstanding the competition of powerful rivals like Japan. He felt that the difficulties of textile mills, "formidable" as they were, had been increased by the Government's policy in respect of handlooms. Referring to the sugar industry, he said that it was a "matter of humiliation" that the country needed imported sugar, even after 20 years of control over production and other controls extending over a period of 10 to 15 years.

The following are extracts from Sir Shri Ram's speech:

"FELLOW SHAREHOLDERS,

"... With your permission, as in past years, I will take the Directors' report as read. You will have observed with pleasurable surprise that notwithstanding the very difficult conditions during the year, the profit before taxation was about Rs. 175 lakhs, as against about Rs. 123 lakhs in the preceding year. This was because, in the first instance, we had no heavy losses in cotton this year, as we had, in common with other mills, in the earlier year; secondly, we fared better in Lyallpur than in the last year.

"The good results of the year must not, however, give us a feeling of complacency. The loyalty of our staff, their intelligence, skill, sense of duty and willingness to do hard work and adaptability to changing conditions, all of which are our most valuable assets, are no doubt with us, and will continue to be with us, gathering, as time passes, added value; but even with all this, unless their is purchasing power—whether in this country or abroad—to buy our goods, we cannot be happy. Fortunately, the policy of the Government of India in respect of taxation of exports has been, to some extent, corrected recently. There is still an export duty of 10 per cent. on coarse cloth. The excise duties also remain, though on a reduced scale. We are grateful to the Government for the grant of rebate of import duty on cotton used in exported goods.

Efforts to Develop Exports

"The steps we have already taken to develop our exports will be seen in the number of countries to which we export, as shown in the display pages of the balance-sheet and Directors' report; but there are many hurdles ahead, and we are continually sending out our senior staff to study foreign markets. Japan is intensifying its efforts on export. Its productive capacity is rapidly increasing; for example, as against 3¼ million spindles and 2 lakhs looms in 1949, it has 7¼ million spindles and 2¼ lakhs looms in 1953. Japan is already a formidable competitor and will be a bigger one in the future.

"In my opinion, the time has come for our country to come to a bold decision in regard to our cotton textile exports. Notwithstanding the competition of powerful rivals, like Japan, I am confident that we can build up a permanent export market, particularly in respect of coarse and medium cloth made out of our own cotton. We can grow short-staple cotton cheaply. We have a very intelligent labour force capable of turning out skilled work. Even as regards fine and superfine varieties, we can, with some effort, build up an export market. I am glad that the Hon'ble Minister for Commerce and Industry is all out to help exports. If we are to obtain the maximum possible advantage of our natural facilities in respect of cotton textile exports, it is necessary that we should bring down costs of production, and, in this view, it is inadvisable to restrict the loom capacity of mills on the assumption that we shall cater only for the internal market and for a limited volume of exports. There is, in my opinion, no justification for an apologetic or timid outlook in this matter. This, however, has nothing to do with the problem of the handloom, which is an internal one.

"Our difficulties, formidable as they are, have been increased by the Government's policy in respect of handlooms. Apart from other burdens imposed on us in recent years, to which I referred last year, and which cumulatively amount to a few annas a yard of cloth, our production of certain qualities has been restricted and a punitive cess imposed on us. The cue has been taken by ignorant critics, and the country is inundated with self-contradictory propaganda, for example, asking mills to reduce prices and also complaining that mills are undercutting the handloom, or trying to restrict or handicap mills looms, on one side, and objecting, on the other, the closing of mills.

Handloom Problem

"The handloom problem is a big and difficult one. We have no reliable statistics about handlooms, the last authoritative enquiry being nearly ten years' old; and only a few estimated figures are published from time to time. There was a substantial increase in the number of handlooms during the war; many of them, reportedly, dummies for earning yarn quotas for the black-market. The handlooms, which actually worked, had a good time, thanks to the shortage of cloth and the controls and various new burdens imposed on the mills. Easy money, as in other cases, demoralised the handloom weavers, whose old habits of work have been lost. They are unable to produce qualities comparable with mill products. Latterly, when the sellers' market disappeared, the handloom was unable to adjust itself to the new conditions. I am confident, however, that a place can be found both for the mills and for the handlooms (not for an unlimited number of either, nor for dummy handlooms). While it is a matter of doubt whether, and to what extent, handlooms will benefit from the various levies on the mills, it is not a matter of doubt that, by adding to the costs of the mills, the result is an additional burden on the consumer, who can ill-afford it, because of his already low purchasing power. Anyway, let us wait for the report of the Kanungo Committee, which, let us hope, will set out the true facts and help in a proper solution of the present problems both of mills and of handlooms.

"Incidentally, the present policy of the Government, placing an absolute embargo on the setting up of new looms in mills, places at a disadvantage those States in which the textile industry is not already developed. I am thinking of States like Assam, Orissa, Bihar and the Punjab. It is common experience that spinning mills as such are not remunerative. The result of the Government policy, therefore, will be that few mills will spring up in these States, which will continue indefinitely to be dependent on other States for the supply of both cloth and yarn. A via media would, I suggest, be to allow spinning and weaving mills in these States, but to earmark for the handlooms a somewhat bigger share of mill yarn than in mills already existing.

"Coming back to our working during the year, I am glad to say that, in spite of the increased difficulty of sales during the year, we were in a position to do fairly well because of our marketing organisation with our network of retail depots and our agents all over. ... The number of retail depots now is 130, exclusive of 22 depots for garments only.

Days of Easy Sales and Good Profits Gone

"The days of easy sales and good profits, however, have come to an end, and we can survive only on the basis of the highest value to the consumer for the lowest cost. Nevertheless, I am not pessimistic, so far as our own mills are concerned; for just as we successfully faced the long continued depression of the thirties, when most other mills in the country had to pass over dividends and also to reduce wages and we were one of the small minority who did not, we shall, I am sure, conquer our present difficu'ties also. The present situation is really a challenge to our staff and to the management, who, I am sure, will readily accept it and not relax until the battle has been won. But even the utmost efforts of the staff will not avail against the severe competition that is in the offing, unless we have the most modern and helpful machinery facilitating work and reducing costs. ....

"With every passing year, I am getting to be more pessimistic about our sugar factories. The price of cane (which forms 60 per cent. of the cost of sugar) is regulated by Government, and, as you know, the price is paid by weight irrespective of the sugar in the cane. The cultivator naturally grows varieties and uses fertilisers so as to get the maximum weight of cane per acre without regard to its sugar content. The State Government levies a cess for the purpose of improving cane, but most of the cess is used by it to augment its general revenues. The wage bill is rigidly controlled by Government—both numbers of staff and rates of wages—and we cannot discharge a single worker without the sanction of a Government authority nor even slightly reduce wages or even fix bonuses ourselves. Not even 10 per cent. of the cost of production is in our control, and it is a tribute to our technical staff that within this limited sphere, which alone is subject to our control, they have shown the highest standards of technical efficiency. It is, however, a matter of humiliation that after more than 20 years of production and 10 to 15 years of varied control by Government, the country needs imported sugar.

"Our chemicals side is doing well and also steadily expanding. We are extending our caustic soda plant and also propose to extend our sulphuric acid capacity. The D.D.T. factory, at one time intended to be a joint venture of ourselves and the Government of India will now be a wholly Government business, and we shall merely supply certain materials to them. ...

Purchasing Power Should be Raised

"Speaking generally and without special reference to our own factories, I have no doubt in my mind that the only effective method, under existing conditions, of augmenting purchasing power in this country is to bring down the cost of living, and more particularly the cost of food, which is about 60 per cent. of the cost of living of the less prosperous classes. This can, and should, be brought down gradually in stages, so regulated that there is no adverse effect on the production of agricultural or factory production, and, on the contrary, there is a salutary effect. With a lower cost of living and greater purchasing power, we shall have increased production all round, leading to reduce costs of production and still further increased consumption and so on. This circle of progress would definitely benefit the poorer classes far more than the richer ones. In short, the country should adopt a low cost and low price economy, instead of a high cost and high price economy. ...

"You will be glad to know that recently we started a system of inviting suggestions from our workers for better working, and we received some suggestions of very great interest. We give prizes regularly for approved suggestions ... I need hardly say that the value of this system lies not only in the monetary economies effected or in the improvements of the qualities of work, but in the increased and deeper interest which every one takes in his work and in the stimulus which it gives to persons of ability. ...

Technical School

"The opening of a technical school for the children of our employees is under consideration. The working of our hospital, which we are still continuing for the families of workers (for the Government scheme does not provide for workers' families), has improved. The Company's *Gazette* is changed out of recognition, and not only do workers take greater interest in it, but they are regular contributors to its columns. *Janamashtami* celebrations in the Swatantra Bharat Mills were on a high level; and, for the first time, *Ramlila* was celebrated in the D. C. Mill area on a magnificent scale, enjoyed daily for nine days by well over 50,000 spectators, mostly workers' families, friends and relations, with perfect arrangements and regulated by volunteers from workers. This celebration earned encomia from several distinguished guests. I am glad that workers are taking so much interest in these activities and I am sure that the Company will do its best to help them.

DEVELOPMENT OF BOMBAY PORT

HOW TO FINANCE IT?

THE Bombay Port Trust authorities are confronted with one of the toughest problems in undertaking the financing of the major development schemes of Bombay Port. It is common knowledge that the major development schemes of this Port fall under two categories, namely, (1) those which are in connection with modernisation of the port and (2) those connected with the establishment of the oil refineries. According to present estimates, the former costs about Rs. 13 crores, and the latter Rs. 8 crores, excluding the cost to be incurred in removing the ammunition from Butcher Island. Thus, the aggregate finance required is Rs. 21 crores. So far as modernisation of the Port is concerned, the Government of India is prepared to give a loan of no more than Rs. 4.17 crores, while the cost of the developmental scheme runs up to Rs. 13 crores. The problem facing the Port Trust, therefore, is: How to raise about Rs. 4 crores required during the period of the Plan and Rs. 4 crores thereafter? It is true that the Port Trust has been asked to raise wharfage charges to find the finance needed. But is it advisable? The existing economic conditions do not appear to warrant the adoption of such a course. This is evident from the convincing case presented, on behalf of the Trustees of the Bombay Port, by Mr. M. A. Master, to the Minister for Transport, Government of India, at an informal discussion held during the latter's visit to the city last month.
