"For Commerce, though the child of Agriculture, fosters his parent
Who else must sweat and toil and gain but scanty fare."
William Blake

VOL. LXXXVIII. No. 2238 | BOMBAY, 9 JANUARY, 1954 | PRICE Rs. 1/8

TASK BEFORE FORWARD MARKETS COMMISSION

To legislate in haste and to implement at leisure has been one of the features of the present administration at the Centre. There have been numerous instances of this nature, especially in the sphere of industrial relations. There have also been instances where legislations have been introduced after considerable deliberation—a good point by itself—but their implementation has been as slow as, if not slower than, that of legislations rushed through. The Forward Contracts (Regulation) Act, 1952, belongs to the latter category. It took more than two and a half years to draft a Bill and introduce it in Parliament in final form. Parliament, of course, quickly got through this measure. Thus, the Bill was placed before it on 1st August, 1952 and, before the year was out, the measure was on the Statute Book, having received the President's consent on 26th December, 1952. But the implementation of this legislation began only after eight months. The first step in this direction, namely, the appointment of the Forward Markets Commission, was taken on 24th August, 1953. Even then, the Commission was not fully constituted, in that, whereas the Act provides for a Commission of three members, the Government appointed only two members, one of whom being on a part-time basis. This member has a multitude of functions to perform and it will be a wonder if he is in a position to devote adequate time to carry out the onerous task that awaits the Commission. It is not surprising, therefore, that, though four months have elapsed since it was established, the Commission has done precious little towards implementing the main provisions of the Act and that it is still preoccupied with preliminary work.

Very recently, on 15th December, 1953, the Act was amended in order to enable the Chairman to attend to other work also. The real object of amending the Act thus was to utilise the services of the Chairman as a member of enquiry committees working in fields not unconnected with the commodities in which the Forward Markets Commission is interested. This change is justifiable, but it is to be hoped that the Chairman will not be burdened with too many enquiries, thereby leaving little time for his main work. In any case, if he is asked to undertake these additional duties even during the initial stages, it will only delay the commencement of the Commission's main activities. With speculative elements once again active in a number of commodity markets, especially in oilseeds, bullion and cotton, any such delay will be deplorable. It is needless to add that, if the large dose of deficit financing that is contemplated by the Government is not to have any untoward effect on the country's economy, or if reports of a possible slump in the U.S. are not to be exploited by unscrupulous operators, speculation must be kept under check. As this is the main task before the Commission, all the important forward markets must be brought under its jurisdiction without any further loss of time and the Commission itself should be fully equipped and kept in readiness to strike wherever excessive speculation manifests itself.

Now that the Commission is still busy with its preliminary work, it is, perhaps, not too late to expatiate a little on the nature of the task that lies before it. At the outset, it must be mentioned that the Forward Markets Commission is not, as its name might imply, an autonomous body. It is a purely departmental body, entirely subservient to the Ministry of Commerce and Industry. Indeed, except in Chapter II of the Act, there is scarcely any reference to the Commission at all; everywhere, there is reference only to the Central Government. It is just possible that the Government will delegate many of the powers under the Act to the Commission. Nevertheless, as was pointed out by us on an earlier occasion—*vide* page 377, *Commerce* dated 10th August, 1952—it is regrettable that the Commission should have a relatively obscure place in the Act. When this control measure was first mooted, it was envisaged that the Commission would be the Indian confrere of the Commodity Exchange Authority in the U.S., with full powers to act on its initiative, instead of having to take orders from the Secretariat manned by personnel ignorant of the techniques of forward markets.

The functions of the Commission are now purely advisory. These, however, extend over a wide field, covering all aspects of forward trading, such as recognition of, or withdrawal of recognition from, any forward markets. The Commission is required to study the working of the forward markets continuously and make recommendations to Government from time to time, with a view to improving the organisation and working of forward markets. It is also required under the Act to collect and publish statistical and other data regarding the working of forward markets. Thus, the Commission has a big task before it, most of which is of technical nature. If it is to discharge its functions effectively and efficiently, it must have adequate staff of the right type. It must have on its staff a large number of persons having fairly extensive knowledge of the practical and theoretical aspects of futures trading, with special reference to India. Inevitably, a part of the staff will have to be recruited from those business firms and associations which are at present engaged in forward trading. From such information as we have received, we find that this is not being done and that the opportunity provided by this new department is being availed of to provide berths for those who have been or are likely to be retrenched in other Government Departments. The Commission and those who are interested in its proper functioning will do well to note that one of the severe limitations of regulation of futures trading by the Bombay Government all these years has been the absence of adequate and specialised staff to deal with the problems of futures trading. This is the main reason why the elaborate legislation framed by this State Government has failed to make any worthwhile impression on the futures markets in Bombay. It is imperative, therefore, that the Commission should correct this lacuna before it is too late. Another suggestion which we should like to make, in this connection, is that some members of the expert staff should be deputed to the Commodity Exchange Authority in the U.S. which has had over 25 years' experience of statutory regulation of futures markets. Indeed, it would be very advantageous if one of the members of the Commission itself could make a brief study tour in the U.S. and note for himself how the C.E.A. functions.

Forward markets are found in many commercial cities and towns in India. It will not, therefore, be possible for the Commission to control all of them from Bombay. It will have to open regional offices in such important trading centres as Calcutta, Kanpur, Madras, Indore, etc. These regional offices should maintain close touch with the markets in their respective areas and report the day-to-day developments to the headquarters of the Commission expeditiously, so that action can be taken without delay whenever necessary. It would also be desirable to nominate the officers of the regional offices to the governing boards of the various forward markets. This will provide an additional and fruitful source of contact with the trading bodies.

The very first task of the Commission is to determine the commodities and the areas to which the Act should be made applicable. The best thing to do will be to make the Act applicable commoditywise to the whole of India. It should be obvious to anyone that piecemeal and areawise enforcement of the Act will render it largely ineffective; indeed, it will defeat the purpose of having an all-India legislation. In the case of commodities such as cotton, oilseeds and bullion, the Act must be applied to the whole of India at the same time. In order to facilitate this, the by-laws of all the associations must be uniform. We have no doubt that the by-laws of the futures markets in Bombay will, in spite of the short-comings of these markets, serve as a model, even as the forward markets legislation of the Bombay Government has served as a guide for framing the Central Act under review. There may have to be some variations in the minor by-laws, in order to suit local needs, but there should be uniformity in such important respects as the period of settlement, the penalties for non-fulfilment of contracts, emergency situations and margins to prevent overtrading.

The next important problem to be solved by the Commission is the number of forward trading associations it should allow in any one commodity both in the country as a whole and in any one important trading centre. The number of trading organisations that should be permitted in any one commodity in the country as a whole will depend upon the area of production and distribution. In such commodities as cotton and bullion, for instance, there will have to be more than one centre in the country. At present, futures trading in cotton is allowed in Bombay only, but this has led to considerable dissatisfaction in other centres and quite a lot of unauthorised futures transactions are taking place in these centres. In respect of a commodity like jute, however, it is not probably necessary to have more than one centre, as the cultivation of jute is more concentrated in a particular region than that of other commodities. So far as any one centre is concerned, it will be a good rule to recognise only one association. Multiplicity of associations for forward trading in any one

centre is unnecessary and harmful. If this principle is accepted, then it may be necessary to amalgamate the various associations of similar character functioning in many places. In carrying out this task, the Commission will be subjected to heavy pressure from interested parties, who will urge, in the name of democracy, the need for giving scope for the members of all and sundry associations to join the new one. The Commission, therefore, should be cautious when it tackles this problem. It should use its discretion and take into account only those organisations which have been serving the interests of genuine trade. Further, it should prescribe a rather rigid code of conduct and fairly high financial standards for membership, in order to prevent the smaller fry and irresponsible elements from becoming members.

Must all the commodities be given the facility of forward trading? On this question, the Commission will, perhaps, have to do some fresh thinking and see whether futures trading is really necessary for all of them. It will also have to consider whether the grant of permission for futures trading is not necessary in respect of those commodities in which such trading is banned now. It is of the utmost importance that the Commission should consider these issues without prejudices and preconceived notions and take an independent stand, irrespective of the views that the Government might have held in the past. It will be out of place to mention, in this connection, that conditions do not remain static for ever. A situation may arise where forward trading will have to be banned or suspended in the general interests of the economy. In all such cases, the Commission should act with flexibility and promptness. This will, of course, be difficult, considering that the Commission is mainly an advisory body.

The Commission will have to steer a middle course between complete regimentation of the various futures markets and the grant of a large measure of autonomy to them. The experience in Bombay, particularly with reference to the bullion market, has been such that it is very risky to leave any large measure of discretion to the governing boards of these markets. In other words, many of the important provisions in the by-laws of associations conducting forward trading should come into force automatically and the governing boards should not be allowed to tamper with them from time to time. Some, however, are of the view that this process should not be carried too far, since, in that case, there would be no need at all for a governing body. Here is thus a matter where the Commission should vary the pattern, according to the character of the associations and the urgency of a particular situation.

It cannot be too strongly emphasised that the Commission should enforce the provisions of the Act strictly. For this purpose, it will have to carry out regular and surprise checks over the operations of the markets. The staff of the Commission must periodically check the trading and account books of the members to see that the by-laws of the associations are being scrupulously observed. This task requires not only a large but an able and honest staff. It is admittedly difficult to build up a staff of this character, but it is not impossible to do so, provided appropriate men are selected and paid a decent wage. Yet another problem to be tackled by the Commission is the question of delegation of powers to the various State Governments. Really, this is a matter for the Central Government to decide, but the Commission will have to do some hard thinking, so that it may be able to guide the Centre correctly. If, however, our earlier suggestion for the establishment of regional offices of the Commission is accepted, there seems to be little need for any delegation of powers to State Governments. This is not to say that consultation with the State Governments is not necessary. Such consultation is essential and, perhaps, one of the ways of ensuring this is to nominate representatives of the State Governments to the governing boards of the various forward trading associations located in the respective States.

It will be clear from the foregoing observations that the Commission has a difficult and delicate task. But, given an adequate and efficient staff, it should not be difficult to administer the Act in such a way as to promote the general economic well-being of the country. It is necessary to emphasise, even at the risk of repetition, that the Commission should be free from prejudices and approach its tasks objectively. The problems that arise from time to time should be tackled in a practical manner, but without compromising on fundamental principles such as those relating to the sanctity of contract.

RAILWAY TRANSPORT

If the recent accidents on the rail tracks have served to bring one aspect of the railway administration, namely, the great leeway that has yet to be made up in the rehabilitation of our railway equipment, there is another, no less disturbing, aspect, the continuing inability of the administration to meet the growing demand for transport, which deserves the immediate attention of the authorities. It is gratifying to note that, in a memorandum entitled "Rail Transport Problem," the Federation of Indian Chambers of Commerce and Industry has examined the whole range of issues covered by the railway administration. Like its immediate predecessors, the memoranda entitled "Impediments to Industry" and "Reply to the Taxation Enquiry Commission's Questionnaire," the Federation's note on railways is notable alike for its close attention to details, for its critical review of the problems and, above all, for the many constructive suggestions for improvement it carries.

The Federation's note is based on what might well be called "case studies" of proved instances of the adverse effect of imperfect transport availability, high freight rates and other defects of railway administration. Without identifying itself with any of these case studies, the Federation has summed up, neatly enough, the major difficulties of the users of the railways. These handicaps include "non-availability of wagons, restrictions on bookings over long periods, delays in transport, insufficient movement of "smalls," time-lag in the placing of indents and the availability of wagons, congestion at certain junction-points, inadequate transhipment facilities at broad-gauge and metre-gauge inter-changes, inadequate line capacity over certain routes, pilferage and loss of goods in transit, delays in settlement of claims, and general deterioration in the efficiency of the service." This is a formidable list. Even so, it is by no means complete; it does not include, for instance, the damage done to users by high freight rates.

But most of these defects flow from either lack of transport equipment and administrative inefficiency or unwise rate policy. Now, the Federation's suggestions for the improvement of rail transport fall into three groups. The short-term measures that need to be undertaken without delay, the increase in transport facilities needed to cope with the rise in production and the railway rate policy. To the first group belong the Federation's suggestions for certain mechanical improvements in the railways. In order to overcome transhipment difficulties at points, such as Agra and Sabarmati, the Federation has suggested the introduction of the conveyor system. To relieve congestion of traffic at certain junction-interchanges, such as Moghul Sarai and Waltair, it has suggested better co-ordination in the movement of empties and loaded wagons and increase in the transportation capacity at these points. The line capacity in certain routes, south of Waltair, for instance, is held insufficient. Increase in line capacity is, therefore, suggested. Since the movement of oil in tins and drums in ordinary wagons is both "expensive and uneconomic," the Federation recommends that the supply of tanker wagons to carry oil should be increased. Again, certain new lines, it is stated, should be opened to ensure "through flow of traffic." Thus, the metre-gauge system of the South and the North should be linked up. Likewise, the colliery areas should be connected with the South-Western and Southern metre-gauge systems, in order to provide an alternative route to the traffic *via* Waltair.

Although these suggestions are grouped under "short-term measures," it is recognised that "their implementation will take some time." Meanwhile, the authorities are urged to improve operational efficiency and the administrative system. That the operational efficiency of the railways has not been fully restored to the pre-war level is clear from the fact that the turn-round of wagons is about 10 to 11 days, as against the pre-war average of nine. Besides the physical shortages in equipment, administrative delays constitute another cause of the slow movement of goods. In this connection, the Federation underlines the need for "greater initiative and drive at the higher levels and greater energy and understanding at the lower levels."

Ultimately, all transport problems resolve themselves generally into a question of adequacy of carrying capacity. Although much could—and indeed, should—be done to improve administrative and operational efficiency, the fact remains that the problem could be solved only through augmenting transport capacity. The Federation subjects the pace of expansion of this capacity and the projected programmes to a close scrutiny. There is, as is well known, backlogs of replacement arrears in railway equipment of all kinds, locomotives, coaches and wagons. This represents the aftermath of the depression of the thirties, the war and the Partition. The Five-year Plan attempts to make up for two decades of past neglect. It is also well to bear in mind that more transport capacity will be needed to carry the larger volume of goods through the increase in industrial and agricultural production now taking place. The Federation calculates that the increase in steel capacity by one million tons, for which provision has been made in the Plan, will alone require an increase of 10 per cent. in the wagon capacity of the railways. When the whole Plan, (the Government projects and the expected increase in the private sector) materialises, it will call for a vast increase in transport capacity. Then, there is the much vaster and the almost neglected problem of extending the route mileage so as to open up the interior of the country to trade and commerce. In the light of all this, the Federation feels that the allocation of Rs. 400 crores, made in the Plan, is inadequate for the country's transport needs. It is of the view that there should be a minimum allocation of Rs. 100 crores more per year for each of the remaining 2½ years of the Plan period.

It is thus clear that the railways will be compelled, in the near future, to expend large sums on replacement and extension of transport equipment. Despite the increase in freight and passenger needs, the sums set apart for this purpose are not as large as the situation demands. This is due, as the Federation points out, to the fact that most of the increase in the revenues of the railways has been taken up by increase in working expenses. Between 1948-49 and 1953-54 budget estimates, gross earnings have increased from Rs. 213.1 crores to [illegible] crores and working expenses have [illegible] from Rs. 173.3 crores to Rs. 221.2 [illegible] Rs. 272.5 crores. The Federation rightly asks whether it is a "judicious" policy, on the part of [illegible] to utilise the increase in revenues [illegible] for it is a expense. If the authorities were aware of the railways, to bolster up urgency of the need for replacement and expansion, such an increase in the working expenses, the Federation feels, would not have been so readily incurred. We have in the past emphasised the point that it would be better in the national interests for the railways to go slow with welfare measures for the workers, till the more urgent needs of the railways have been met.

The Federation makes certain very critical observations on the "rate policy" of the railways. It contends, in the first place, that the rates have been increased, from time to time, without any scientific examination of the effect of these increases on trade and industry. Secondly, short-distance traffic has, despite relief given in isolated cases, been adversely affected by the system of telescopic rates, the retention of short-distance charges and the standardised terminals the incidence of which is heavy on short-distance traffic. It rightly questions the justice of retaining short-distance charges when it was precisely to obviate the disproportionately high cost of short-distance hauls that the telescopic rates were introduced. Thirdly, it emphasises the need for special rates. It observes that, while the rationalisation and simplification of rates structure is desirable, a rigid rate structure is unsuited to the needs of an economy that is still to develop. The rates should be conceived as an "essential weapon by which transport policy can be geared to the needs of an expanding economy." This raises issues which have never been satisfactorily settled in any country. The question whether it would be preferable for the inevitable burden of higher transport costs to be borne by the particular section of the community or by the Exchequer—that is, by taxpayers as a whole—is a live issue even in countries which are well to the fore in speed, technical efficiency and economy of operation. But, if India is to remain viable as a manufacturing and exporting country, it will be necessary to soften the rigour of the rate structure. How this relief could be given and what general principles should govern the grant of this relief are questions that might well be examined by a committee of officials and non-officials, for the setting up of which the Federation has made a special plea.

Acc. No. 19239

BULL LIQUIDATION IN EQUITIES

OUTLOOK FOR U.S.–TROMBAY POWER SCHEME–SOVIET GOLD SALES–SYDNEY CONFERENCE

THURSDAY, 5 P.M.

THE New Year was greeted by the share markets in no optimistic mood. A feeling of uncertainty assailed the operators, when they assembled to commence their business after the Christmas and New Year holidays. Two factors caused a certain amount of concern among them. One was the sudden revival of reports from London that a strong recession in the U.S. was likely during 1954. The other was the proposed U.S.-Pakistan military aid agreement. It was feared that this agreement might compel India to step up its defence expenditure and bring about a setback in India's relationship with the United States. These at any rate were the excuses given by the bulls for liquidating their large commitments in Tata Iron and Steel shares. As a result, these scrips have sustained a sizable fall since we surveyed the market in these columns three weeks ago. Fundamentally, the decline in equity values represents nothing more than a correction of a fairly heavy overbought position that had been built up in the last two months of 1953. Attendant effective movement had begun even before [illegible] case of last year and continued even after the [illegible] encement of the New Year. The bulls found [illegible] or the present, the saturation point had been [illegible] The [illegible], for there was, to use market jargon, export dullow up" from the public. They, therefore, [illegible] orters of] to book whatever profit was possible. [illegible]aund a[illegible]

[illegible]ste of h[illegible]

[illegible]harged R[illegible] two factors that are said to have oppressed [illegible]'s seem to be a little bit exaggerated. The [illegible]ity of a recession in the U.S. is no new [illegible] The It has been the subject matter of endless [illegible]xport ession for several months now. The result of [illegible]icers debate is inconclusive. The U.S. economists [illegible]n and Administration have been contending that, though 1954 may not equal the all-time record of 1953 in economic activity, the outlook for 1954 is by no means so bleak as has been made out by some. It is rather surprising, therefore, why British commentators suddenly started placing too much emphasis on the darker side of the American picture. There seems to be a political motive in this, considering that this publicity started just on the eve of the Commonwealth Economic Conference at Sydney. The object may be to bring about a closer trade relationship between the Commonwealth countries and to provide an explanation for enlarging the trade of this area with the Communist countries in the East. There is nothing objectionable in aiming at these objectives, but it is dangerous to raise the scare of a depression in the U.S. Economists and businessmen know very well that a country *can* be easily talked into depression. And there is no doubt that even a mild depression in the U.S. is sufficient to give a rude shock to the economy of many free countries in the world. For the U.S. is the dominant economy of the free world. It may account for only 6 per cent. of the world's population, but it commands about 40 per cent. of the world's total income. Further, recent experience has shown that oscillations in the level of American business tend to be multiplied several times in their relative impact on the level of American imports, of which a substantial portion is accounted for by the sterling area. It is, therefore, important that no one should indulge in loose talk of depression in the U.S.

* * * *

In saying all this, we should not be misconstrued to mean that there would be no deterioration in American economic wealth. That it is uncertain is not denied. Nor is the prudence of being cautious about the future questioned. What is sought to be discouraged here is that caution should not be allowed to degenerate into fear or panic. It was only three weeks ago that a leading British economist, while analysing the outlook for the U.K. in 1954, remarked thus: "No serious recession is in sight in the U.S. The reasons for that view are, first, the inherent vitality and resilience of the American economy; secondly, the fact that the [illegible]ding budget deficit is opening up to act as a cushion for any deflationary force, and, thirdly, the strong instinct of self-preservation which inspires politicians no less than ordinary human beings. The Republican Administration in the U.S. will not wish to herald its return to power by ushering in a depression and will take the appropriate vigorous remedial measures if the need arises." It is on this assumption of the maintenance of a satisfactory level of business activity in the U.S. that he felt that one could take a "reasonably cheerful view of the prospects for the British economy in the coming year (1954)." Surely, there has been no material setback in the American climate since these lines were written to justify a pessimistic view.

* * * *

Even conservative opinion in the U.S. is of the view that there are several factors in the present situation which "militate against any precipitate drop in business volume in early 1954." The same section, however, says that "beyond the early part of 1954, the outlook is much less clear." Thus, the Company of New York, published by the Guaranty Trust *Guaranty Survey*, says:

"To a very large extent, the course of developments in the latter part of the year and thereafter appears to depend on how quickly adjustments now under way in particular industries can be effected. If such adjustments are completed in good time, and the groundwork for recovery thus made ready, the view that the recession will be mild is likely to be borne out. On the other hand, if the need for adjustment should prove greater than industry analysts now estimate, with the result that the process of correction were extended, the forces of recession might tend to reinforce one another, causing a sharper ultimate drop in general activity than the present consensus holds probable. While this is simply a formal truism, it seems worthy of mention as a reminder at present, in view of the almost uniform content of business forecasts. Moreover, the truism serves to point up the fact that the widespread expectation of a mild rather than a severe recession rests on the belief that required adjustments are neither complex nor of great magnitude. While a good case can be made for this view, the evidence can hardly be deemed conclusive."

The conclusion that emerges from the foregoing quotation is that no recession is just round the corner and that the outlook beyond the early part of this year is unpredictable.

* * * *

The implications of the United States' move to strengthen the military might of Pakistan to the Indian economy are undoubtedly serious, but not alarming. The whole thing is still only tentative and let us hope that President Eisenhower will honour his earlier declaration that he would not do anything that would cause hysteria and unrest in the countries surrounding Pakistan. Even if he fails to do so, it is not going to spell ruin to our economy. It is true that the U.S. has been rendering substantial assistance to India in the economic sphere and that it will be unrealistic to proceed on the assumption that India can count upon the continuance of this aid, if it protests too much and treats the signing of any defence agreement by the U.S. with Pakistan as a hostile act against it. Nevertheless, there need not be any insuperable difficulty in implementing the Five-year Plan, provided a realistic readjustment is made in the Government's fiscal, industrial and social policies. By giving up prohibition alone, India can reduce its dependence on U.S. financial aid to a very large extent.

* * * *

Of far greater importance to the share markets are the economic policies of the Government. Will our authorities be realistic enough to provide adequate freedom of action and incentives to the private sector to expand its activities or will they persist with their present policy which has caused a sense of frustration among business men? Frankly speaking, we do not know the answer to this poser. The Ministers in charge of Food, Finance and Industry seem to realise the importance of private enterprise, but they are apologetic in whatever they do for it. Moreover, what little they do comes only under pressure of circumstances and not out of conviction in the merits of private enterprise. In fact, there is no exaggeration in saying that private enterprise, which is synonymous with money economy, is simply tolerated, because there is no alternative at present. If any proof of this were needed, it could be found in the speeches delivered from time to time by the Prime Minister and some of his colleagues; it is there even in his speech at Jalgaon last week. This state of affairs, under which the profit motive is derided, may have no immediate effect on the share markets, but it is certainly not conducive to a vigorous growth of the country's economy.

* * * *

So far as the short-term outlook for the share market is concerned, there is no cause for pessimism. Tea, jute, sugar, paper, steel, cement and even textiles are said to be faring well. Once the technical position of the markets is corrected, as it has nearly been done, a mild recovery, accompanied by steadier undertone, can be looked for. There are reports, considered fairly reliable, that the Government is now inclined to be a little more liberal on the issue of return on capital employed in the context of fixing the retention prices for steel. It seems likely that the Government will accept the Tariff Commission's viewpoint of 10 per cent. as the reasonable gross return on capital employed. It is also reported that the Government's decision in regard to cement prices will be announced in a few days. The principle of differential prices and equalisation fund now in vogue in regard to steel may be adopted for cement also. While the consumer will pay a uniform price, the producers will get different ex-factory prices for their products. The bigger and the old, well-established units will get a somewhat lower price, while the new and small units will be given a higher price. While full details are not known, it is believed that the price which the A.C.C. will get will be a rupee or two less than the present price per ton.

* * * *

It is reliably learned that the experts of the World Bank will mediate on the difference of opinion between the Tatas and the Bombay Government in regard to the capacity of the Trombay thermal station. These experts are expected to be here before the end of this month. They will visit the site for the Koyna project and carefully examine the load estimates of the Tatas and the Bombay Government. It is believed that the World Bank will not be averse to giving some assistance to the Bombay Government for implementing the Koyna project, if it is satisfied with the soundness of the scheme.

MARKET GOSSIP

An interesting development in East-West trade relations is the sale of Soviet gold to Britain. No reliable estimate of the actual sales of gold by the U.S.S.R. is yet available. In the last five weeks, a large quantity of gold, estimated at between 65 and 70 tons, has come from Russia into the U.K. The first shipment of 5 tons, which came in November, was sold to a bullion firm in London. It is not known whether the firm, in its turn, sold the gold in the free market or sold it direct to the Bank of England. It is quite possible that the firm sold it to the Bank, since the premium for free gold has been largely reduced. Since the Bank does not publish its bullion transactions, no estimate of its bullion dealings can be given.

* * * *

It has been known for a long time now that the U.S.S.R. has large quantities of gold, and also that its gold mines do yield substantial gold. The Soviet Union's gold production was recently estimated at about 9,500,000 ounces a year, or more than double its pre-war output. The Soviet authorities, it is stated, have made great efforts to increase the yield of existing mines, as well as to exploit new mines. Soviet stocks of gold are estimated at between 150 and 175 million ounces. The U.S.S.R., however, has no use for gold, since it believes entirely in "managed" currency, in the totalitarian sense of that word. And yet, this has not prevented that country from accumulating large reserves of gold or from exploiting new mines. This perference for gold, which is opposed to the country's political and economic system, is probably dictated from strategic considerations. The authorities, it is stated, believe that gold would be useful in the event of an emergency like war.

* * * *

Be that as it may, the reason for Russia's gold sales has been the favourite theme of financial commentators in Europe and the U.S. Some of them have seen in these sales, which must tend to depress gold prices, a fresh attempt to embarrass the U.S. Perhaps, this is a too far-fetched view. In any case, gold sales to the U.K. will serve to strengthen that country's gold reserves. Why should the Soviet Union strengthen the economic position of an ally of the U.S.? Maybe, the simpler explanation is the true one. Soviet Russia is in need of consumer goods which it can hope to gain by the sale of its gold to the West. Formerly, it was chary of buying consumer goods from the West. This policy has changed. The main reason for this change in import policy, it is stated, is given in *Izvestiya*, according to which, the Soviet Union has now grown sufficiently wealthy to permit import of even non-essential luxuries. At any rate, those who are closely acquainted with Russian economic affairs have admitted that, in recent months, the Soviet authorities have been taking steps to expand their purchases of less essential goods. But it is stressed that, in the main, these purchases are to be paid for by exports of Russian petroleum, timber and agricultural machinery. These exports have presumably been insufficient to pay for the imports of consumer goods from the West. The Soviet bloc's balance of payments with the sterling area group of countries has shown a fairly pronounced deterioration over the past year or two as a result of the slump in sales of Russian grain to the U.K. The extent of this deterioration will be clear from the fact that, over the first ten months of 1953, Soviet shipments of grain to the U.K. were running at an annual rate of only £4 million, as against £40 million in 1952. This should have meant a considerable decline in the Soviet Union's sterling exchange earnings, which, in turn, has compelled that country to dip into its gold reserves to pay for its essential imports from the sterling area.

* * * *

The Commonwealth Finance Ministers' Conference, which commences its deliberations at Sydney tomorrow, is certainly meeting under better auspices than the earlier Conference. At the end of 1952, when the last Conference was held, the Commonwealth was just beginning to show signs of recovery from the all-pervasive trade recession, witnessed in the first quarter of that year. Peace prospects are less uncertain than they were then. Again, the resumption of East-West trade seems less distant now than it was at the time of the last Conference. An outstanding result of the last Conference was the impetus it gave to the idea of "Commonwealth development." The new Commonwealth Development Finance Company, set up by U.K. Government has, it is stated, now reach of a stage when it can take part in financing suitable ventures. But there are, of course, many problems which continue to be intractable as ever—convertibility of the pound, and free and multilateral trade, for instance.

* * * *

The Conference will discuss, it is presumed, the Commonwealth economic plan drawn up in London in 1952. The plan, the details of which are not known, is designed to increase Commonwealth and Empire production. Although convertibility of the pound might be discussed, it is unlikely that there will be the same sense of urgency as there was at the last Conference. In any case, some progress has been made towards this end. Convertibility on current accounts has made greater strides in the past year than was expected. The Commonwealth view seems to be that, before the pound could be freed, inflation must be held in check, the Commonwealth's economic resources should be better developed, and the U.S. and the I.M.F. should adopt more generous creditor policies. The Sydney deliberations, it is believed, will emphasise—rather re-emphasise—the continuing need for curbing inflation and for promoting sound economic development.

* * * *

The Conference is also expected to discuss the severe competition now being met in traditional British markets from countries like Japan and West Germany. Mr. R. A. Butler, Britain's Chancellor of the Exchequer, will tell the other

(*Continued on page 55*)

TRADING IN SHARES RESTRICTED

VALUES DRIFT LOWER

(From Our Own Correspondents)

BOMBAY, *7th January*

THE sharp reaction that set in on the Bombay Stock Exchange during the penultimate week of the year just ended did not persist long. For a distinctly improved tone came to be witnessed just before the market closed for the Christmas and New Year holidays. The improvement was due to anticipations of a rise in the production in Tata Iron and Steel Co. and Indian Iron and Steel Co. during December, expectation of an increase in the retention price of steel produced by the I.I.S.C.O., and good domestic and foreign offtake of piecegoods. Rumours regarding issue of bonus shares by several companies, such as the A.C.C., also fanned the bullish fervour of the market. The buying support that ensued, as a consequence, lifted up the values of most of the scrips. The closing quotations as on 24th December, 1953, stood very much higher than those a week before.

The bullish enthusiasm, however, failed to be in evidence in trading on the opening day for the New Year, namely, 4th January, 1954, as operators preferred to await the U.S. official announcement on the proposed Pakistan-U.S. military aid pact. Another restraining factor was the expectation of lower bank profits for 1953, thanks to shrinkage in demand for credit. Fears regarding high contango and large deliveries in the next settlement too acted as a damper, and operators showed little inclination to extend commitments. Trading was, therefore, greatly restricted and values tended to decline.

The downward trend in values persisted till the close today, although the market tended for a while to pick up some strength, following encouraging statements of the Union Finance Minister at Calcutta on the eve of his departure for Sydney, denying the possibility of any change in the existing taxation structure until the findings of the Taxation Enquiry Commission were made available to the Government by about September, 1954. The market also noted with interest his further statement that the scope for private enterprise would have to be expanded even beyond the target set by the Five-year Plan. But prices could not move up because, profit-taking at every rise pushed them down. On balance, therefore, quotations today were lower than those on the 19th ultimo.

During the period under review, steel shares gave the lead to the market. Tata Preferreds, which closed at Rs. 1,998-12 on 19th December, 1953, gradually improved to touch Rs. 2,028-12 early on 24th December. On the opening day for the current year (4th January), the scrips were marked down to Rs. 2,003-12. They receded further to Rs. 1,977-8 yesterday. After recovering to Rs. 1,993-12 today, the scrips finished lower at Rs. 1,986-4. Tata Ordinaries improved from Rs. 341-8 to Rs. 346 on 24th December. They reacted to Rs. 336-4 yesterday but closed at Rs. 337-4. Indian Irons remained fully steady, with its quotation advancing from Rs. 26-2½ on 19th December to Rs. 26-6½ on 24th December. They, however, staged a retreat and finished at Rs. 25-4½ *ex-div.*

During the period since we reported last, textile scrips have recorded all-round losses. Bombay Dyeings, after rallying from Rs. 397-8 to Rs. 401-4, receded to Rs. 393-2. The net loss over the period under review was Rs. 4-6. Simplex rose from Rs. 155 to Rs. 155-8 but declined to Rs. 151-8, Central Indias dropped Rs. 6 to Rs. 393-2 and Sholapur Rs. 5 to Rs. 147-8. Swadeshis shed Rs. 4-4 to Rs. 267-12 and Ahmedabad Advances Rs. 3-12 to Rs. 138-12. Tata Mills and Centurys lost Rs. 3-8 and Rs. 3-4 to Rs. 50-8 and Rs. 277-12, respectively. Indores and Standards declined by Rs. 2-8 each to Rs. 95 and Rs. 303-4, respectively. Gokaks were lower by Re. 1-8 at Rs. 242-8 and Finlays by a rupee at Rs. 256. Hindusthans, however, proved an exception and evoked special support, their value advancing by Rs. 95 to Rs. 3,600. New Greats hardened by Rs. 4-8 to Rs. 170-8, due to scarcity of stocks. Kohinoors too were a shade higher at Rs. 295-8.

Bank shares ruled quiet with minor losses in almost all the counters with the exception of Bank of Barodas. The latter shares put on Rs. 5-8 to Rs. 109 on expectation of higher dividends. Imperial New shares and Fully Paids, however, gave way, the former from Rs. 450 to Rs. 443-12 and the latter from Rs. 1,845 to Rs. 1,840. Indias and United Commercials lost a rupee each to Rs. 155 and Rs. 44, respectively. Centrals finished As. 4 lower at Rs. 63-12 and new shares also lost a like amount to Rs. 66-12.

In the insurance section, Orientals suffered a loss of 175 points to Rs. 7,235. New Indias slided down from Rs. 43 to Rs. 40. India Mercantiles declined by Re. 1-4 to Rs. 37-4. Vulcans, however, improved by As. 8 to Rs. 11-9.

Electric shares presented a mixed pattern. Tata Powers were transacted Rs. 10 lower at Rs. 1,340. Ahmedabad Electrics shed As. 5 to Rs. 112-13. Andhra Valleys, on the other hand, scored a gain of Rs. 17-8 to Rs. 1,230. Tata Hydros were fully steady at Rs. 137 and Surats at Rs. 128-12.

In the miscellaneous section, values were generally well maintained. Following rumours regarding capitalisation of reserves Bombay Burmahs forged ahead from Rs. 348-12 to Rs. 362-8. Digvijay Cements elicited special buying enquiries and spurted by Rs. 9 to Rs. 95. Walchandnagars advanced by Rs. 5 to Rs. 163-12. Belapurs hardened by Rs. 4-8 to Rs. 248-8 *ex-div.* On expectation of higher dividend, Shivrajpurs firmed up by Rs. 4-4 to Rs. 72-8. Killicks and National Rayons rose by Rs. 3 each to Rs. 157-8 and Rs. 138, respectively. Associated Cements strengthened from Rs. 184-12 to Rs. 1,868 on the reported receipt of sanction by the Controller of Capital Issues for issue of bonus shares. Tata Chemicals were wanted As. 11 higher at Rs. 11-11 and Wimcos were better at Rs. 200, as against Rs. 199-6. British India Corporations were a shade higher at Rs. 13-8. Premier Constructions, on the other hand, staged a retreat from Rs. 118-8 to Rs. 114. Tata Oils shed As. 4 to Rs. 32-12. Indian Coppers were neglected at Rs. 2-11½.

• • • •

Calcutta Stock Exchange

CALCUTTA, *6th January*

A cautious attitude on the part of operators, and restricted turnover were the main features on the Calcutta Stock Exchange during the period under review, that is from 16th December, 1953, to 6th inst. The volume of business was affected on account of holiday considerations, but even after reopening for the New Year buyers are showing less enthusiasm. The international situation has become very clouded and has, therefore, not been helpful to long-term commitments. On the one side, the growing difficulties over Korea and the remote possibility of a real understanding among the big powers would encourage the speculative elements, and on the other, the reports about the proposed U.S.-Pakistan military pact have cast a gloom over speculators, as the possibility of shifting the battlefield of the cold war to this sub-continent would mean a complete stoppage of economic progress, added outside pressure on Kashmir, increased expenditure on defence, and the resultant inflation. Till a clear picture of the extent of the aid and its implications emerges from authoritative sources, a hesitant tone would characterise trading on the Exchange. No doubt, the market has taken note of the remark of the Finance Minister, Mr. Chintaman Deshmukh, that the proposed pact would not jeopardise the completion of the Five-year Plan, as external assistance still to be received was not a big amount. But the market knows that if the cold war is brought nearer India, the country's economy would naturally be affected whether the Plan is completed as per schedule or not.

Mr. Deshmukh's confidence about the future is justified by the economic progress made last year. Market circles are agreed that the country's economy has been made stable, although the Finance Minister's report that economic conditions improved in 1953 is dismissed outright. No doubt, industrial progress was satisfactory; but trading conditions deteriorated visibly. It was the latter event which created more unemployment, pushed the problem to the forefront, affected the incomes of many, and in turn kept the consumer goods industries in anxiety about accumulation of unsaleable stocks. One redeeming feature of this situation, however, is the Government's repeated regard for giving private enterprise every chance for investment. But if, in spite of this, the market is lethargic, it is due to lack of action in New Delhi to transform into reality what it says and apparently desires, and also due to a desire of operators to await the budget proposals, hoping that they will contain something good for the commercial community.

Sectionwise, there was little of note among jutes. Howrahs at one time touched a low of Rs. 24-1, as against an opening of Rs. 25-1 and during Monday were still lower at Rs. 23-15. The loss was due to the lower dividend of As. 10 for the half-year ended September, 1953, as against As. 14 previously. Anglo-Indias were hammered down to Rs. 198. Deltas were wanted at Rs. 230 and Kinnisons were unchanged at Rs. 201. At Rs. 173 Orients lost Rs. 13 and Standards gave way to Rs. 131 from Rs. 139. Other shares also recorded a losing tendency and this was due to the general weakness, as advices from the jute goods market were encouraging and nothing had happened to change the improved outlook for the industry.

Business was poor in coals. Equitables were pulled down to Rs. 30-10 from Rs. 31-8 and Burrakurs to Rs. 8-4 from Rs. 8-11. However, East Indias after being lower at Rs. 25-3 recovered to Rs. 26-2. Raneegunges hovered around Rs. 11, and Central Indias realised Rs. 5-8. Bengals were easy at Rs. 501, and Talchers were wanted at Rs. 2-8.

Fair support was given to the engineering section, where Texmacos improved to Rs. 9-11 from Rs. 9-2, however easing today to Rs. 9-4. Jessops received a good measure of support at Rs. 25-7, but subsequently receded to Rs. 25. On moderate buying, Braithwaites were lifted to Rs. 13-9 from Rs. 13-2. Kumardhubis were sought at Rs. 8-4. Indian Irons were subjected to profit-taking, which took down the rate to Rs. 24-15 from Rs. 25-4. The subsequent recovery to Rs. 25-8 was not sustained and the realisation today was Rs. 25-3.

A mixed trend was in evidence in the miscellaneous section. Thus, while Rohtas Industries were raised to Rs. 11-3 from Rs. 10-11 and Indian Cables to Rs. 20-4 from Rs. 19-12, Rallis were sent down to Rs. 59-4 from Rs. 62-4 and National Tobaccos to Rs. 10-3 from Rs. 10-8. After receding to Rs. 36, Midnapore Zamindaris made a partial recovery to Rs. 37. India Steamships were steady throughout the period despite a recession subsequently to Rs. 7-1 from Rs. 7-4. Titaghur Papers were quiet at Rs. 35-8. Sone Valley Cements came in for business at Rs. 6-15. Jardine Hendersons were traded at Rs. 114, as against Rs. 116-8 earlier. Martin Burns were fractionally better at Rs. 19-9.

Although the general dullness affected the volume of transactions in the tea section, occasional enquiries provided a number of features. Thus Dehra Duns gained to Rs. 210 from Rs. 207, Hasimaras to Rs. 31-10 from Rs. 31-4 and Jayabirparas to Rs. 30 from Rs. 29-8.

Madras Stock Exchange

MADRAS, *5th January*

The performance of the Madras Stock Exchange during the past three weeks, since we reported last on 15th December, 1953, has been encouraging. Activity in the market has broadbased, with the turnover being fair. Textile scrips have been again in the le reports of good overseas demand for piec Consequently, prices have continued t up and, in fact, disclose generally sizable over the period under review. The plantation has, however, presented a mixed Tea scrips have met with good support, o pects of better demand for tea leaves fr U.K. and the Continent in the ensuing But, in rubbers, only some selective sup has been visible and fair gains are seen balance. Coffees have, however, presented a dull trend, while the miscellaneous scrips have been active.

During the period under report, the textile section evinced sustained interest. Coimbatore Cottons gained Rs. 7 to Rs. 167, and Dhanalakshmis Rs. 6 to Rs. 200. Buckinghams were higher by Rs. 5 at Rs. 134-8. Vasantas and Rajalakshmis put on Rs. 4 each to Rs. 172 and Rs. 85, respectively. Coimbatore Pioneers improved from Rs. 127 to to Rs. 130 and Metturs from Rs. 216 to Rs. 218. Premiers were enquired at Rs. 85, as against Rs. 83. Krishna Rajendras rallied Re. 1-12 to Rs. 53 and Lakshmi 'A' Re. 1 to Rs. 41. Pankajas, however, eased from Rs. 59 to Rs. 53. Coimbatore Spinnings and Radhakrishnas 'B' lost Rs. 1-8 each to Rs. 36 and Rs. 79-8, respectively. Rangavilas were lower by As. 8 at Rs. 45 and Loyals As. 4 at Rs. 19.

Among plantings, tea scrips led the rest. Nonsuch Teas were higher by Re. 1-8 at Rs. 32-8 and Peermades As. 8 at Rs. 27-12. Coonoor Teas gathered As. 4 to Rs. 25-12 and Chembras As. 3 to Rs. 3-3. Udayagiris rallied As. 2 to Rs. 6-14. Coorg Teas were fractionally higher at Rs. 6-2½. But Mysore Plantations lost an anna to As. 11. Highland Produces were done at Rs. 11-14 ex-div., as against Rs. 12-4 *cum-div.*

Rubbers came in for selective enquiry. Peninsulars gained As. 10 to Rs. 10-2 and Nenmenys As. 4 to Rs. 9. Vellmalais put on As. 3 to Rs. 2-11. But Valkundams and Rajagiris lost As. 6 each to Rs. 16-2 and Rs. 10-6, respectively. Anandams eased from Rs. 8-12 to Rs. 8-8 and Cochin Malabars from Rs. 7-1 to Rs. 6-15.

Among coffee scrips, Coffee Lands were done at Rs. 7-11 *ex-div.*, as against Rs. 8-12 and Consolidated Coffees at Rs. 13-12 *ex-div.*, as against Rs. 17-7 *cum-div.* Puthuthotams gained an anna to Rs. 3-3, while Mysore Coffees lost a similar amount to As. 12½. Nil Neergundis were also lower by an anna at Rs. 3-9.

Trading in the miscellaneous section saw Aluminium Industries disclose a gain of As. 12 at Rs. 12-10, and Parrys As. 5½ at Rs. 4-5½. Spencers gathered As. 4 to Rs. 15 and Mysore Chemicals & Fertilisers As. 3 to Rs. 9-4. Ellore Electrics shot up by As. 9 at Rs. 10-4. Rallis, however, lost Re. 1 to Rs. 60-12 and Mysore Tobaccos As. 6½ to Rs. 11-2.

RESERVE BANK APPOINTED BANKERS TO SAURASHTRA GOVERNMENT

The Reserve Bank of India has been appointed sole bankers to the Government of Saurashtra from 1st January, 1953. The agreement reached between the Government and the Bank is on the same lines as the agreements already executed between the Reserve Bank and the State Governments of Hyderabad, Mysore, Madhya Bharat and Travancore-Cochin. The Reserve Bank will now conduct the banking remittance and exchange business of the Government of Saurashtra, receive and keep in deposits its cash balances, manage its public debt, issue its loans and grant ways and means advances.

The question of appointing the State Bank of Saurashtra as the Reserve Bank's agent in the State will be considered in due course. For the interim period, the Imperial Bank of India, which is at present conducting the Treasury work at Rajkot on behalf of the Government, will function as the Reserve Bank's agent at that centre. At other centres, the Treasury work will be conducted by the State Government departmentally or by the Bank of Saurashtra under existing arrangement between the Bank and the State Government.

NEWS IN BRIEF

THE Government of India has decided to extend the free licensing of wool waste for shipment for six months upto 30th June, 1954.

The National Instruments Factory at Jadvapur, Calcutta, produced tools valued at Rs. 18.15 lakhs in 1952-53, as against Rs. 14.02 lakhs in 1951-52.

The Union Minister for Communications has hinted that postal rates, except in the case of postcards, will be increased in the next financial year.

So far, 63 new industrial undertakings with a total capital of approximately Rs. 18.5 crores have been licensed under the Industries (Development and Regulation) Act, 1953.

The Government of Madras is planning an integrated development of fisheries in the river Cauvery and its tributaries, and in the Mettur, Bhavanisagar and Amaravathi reservoirs.

The Budget session of the Union Parliament will commence on 15th February, 1954, and is expected to last till 14th May. The General Budget is scheduled to be presented on 27th February.

The Government of India has decided to extend the period of shipment of the unutilised portion of the export quotas allotted to established shippers of castor oil upto the end of January, 1954.

The Rajasthan Government has reduced the export duty on vegetable oil by 50 per cent. Exporters of til oil will have to pay only Rs. 3 per maund as inter-State duty, instead of the erstwhile rate of Rs. 7 per maund. Mustard oil will be charged Re. 1-8 per maund.

The Government of India has decided that the export of mustard oil and rapeseed oil should be licensed freely upto the end of June, 1954. This means that the export policy in regard to these two oils for the half-year ended 31st December, 1953, is being continued for six months more.

The U.P. Government has fixed a target of 500,000 maunds of quality jute for the next two years to meet the requirements of jute mills of U.P. High grade fibre is being grown in large quantity and it is likely that the jute deficiency of the State will be overcome within this period.

The Andhra Government has decided to approach the Government of India for exploring markets abroad for accumulated stocks of low grade tobacco in Guntur. It will also seek a graduated rebate on excise duty on lower grade tobacco in order to stimulate its purchase by cigarette manufacturers.

According to an investigation conducted by the Geological Survey of India, reserves of refractory clay, estimated at 367,000 tons are available in the Korba coalfield area of Bilaspur District, Madhya Pradesh. The clay is mostly fine-grained and light to buff grey in colour. It is also said to have good plasticity.

The Salt Cess Act, passed by Parliament during the last session, has come into force with effect from the 2nd inst. The Act provides for the levy and collection of cess at As. 2 per standard maund on salt produced in a private factory and at As. 4 per maund on salt manufactured in a salt factory solely owned or solely worked by the Central Government.

The Government of India has withdrawn, with effect from 30th December, 1953, the guarantee given to cotton textile mills in April, 1952, to purchase Indian cotton of 1951-52 crop from Scheduled Banks at certain stipulated prices. The guarantee has been withdrawn, as the Government thinks that the purpose for which the guarantee was given has been adequately served.

The budget of Andhra State for the second half of the current financial year has shown a deficit of Rs. 51.58 lakhs on revenue account and Rs. 330 lakhs on capital account, thus disclosing a gap of about Rs. 382 lakhs between the total expenditure and the resources. The State Government has asked for a loan of Rs. 375 lakhs immediately to enable it to carry out the urgently needed irrigation and power schemes.

The Government of India has decided, after having reviewed the position in the light of available transport capacity, to license the export of iron and manganese ores to both established shippers and mine-owners from the Port of Calcutta during the quarter January-March, 1954, on the same basis as for the quarter ended 31st December, 1953, the licensing procedure for which was announced on 2nd September, 1953.

Indian railways. These [illegible] 2,500 were to hold (W9 type) locomotives. [illegible] earthenware of [illegible]. Further, the [illegible] in existence 2,500 broad-gauge [illegible] three purchases will be made under the provision of the Union Ministry of [illegible] sultation with the appropriate [illegible] agencies.

The rupee expenditure—Rs. [illegible] meeting the cost of ocean transpo[illegible] ducts. The Government will also set up showrooms to publicise Indian exportable products in Belgium, the Philippines and Ceylon.

India, Ceylon and Canada have agreed to launch a joint tea propaganda in Canada from the middle of the current year. Negotiations by the two producer countries were conducted with trade circles in Canada on a Governmental level. A part of the expenses will be borne by Canadian trade. This is the second country in which the joint scheme has been agreed upon, the first being the U.S., after India withdrew from the International Tea Market Expansion Board in 1952. Similar negotiations will be initiated to cover European countries.

• • • • •

From Abroad

The International Monetary Fund has agreed to a change in the par value of the Paraguayan currency from six to 15 guaranies for one U.S. dollar.

After a period of 14 years, the London grain market opened for free trading on the 4th inst. The market was closed at the outbreak of war in 1939 when the Government took over the buying of grains.

Tea suppliers in the U.K. have raised the price of many well-known brands of tea by 4d. per lb., with effect from the 4th inst. The common reason advanced for the increase is the steady rise in world prices during last year.

The U.S. Agriculture Department has concluded a barter deal under which $2.2 million worth of Government-owned farm surpluses will be exchanged with Western Europe for 5,400 metric tons of superphosphate and 30,000 tons of ammonium sulphate for Korea.

The industrial output of Russia during 1953 increased two and a half times over the 1940 level. The output of steel was more than 38 million tons, coal 30 million tons, oil 52 million tons and electricity 133,000 million kilowatt hours. Chemical production was three times and machinery equipment 3.8 times over 1940.

The world output of leaf tobacco last year is estimated by the U.S. Agricultural Department to have gone up by 94.08 million lbs. to 7,323.89 million lbs. farm sale weight. As compared with the average for 1947-51, the 1953 production is 90 million lbs. more.

The International Materials Conference, which was set up in February, 1951, to recommend allocations of strategic materials after the outbreak of the Korean war, will be dissolved at the end of this month. The Commodity Committee of the Conference was dissolved in September last, but the central group has continued its organisation.

The Export-Import Bank of the U.S. has extended a loan of $8.8 million to Brazil to complete the standardisation of the Santos-Jundiai Railway, so that it can interchange with two other Brazilian railways. The Brazilian National Development Bank will guarantee the loan, which will bear interest of 4 per cent, and be repaid in seven years beginning on 15th December, 1956.

The proposal for a Pakistan-Egyptian joint enterprise for processing jute in Egypt has gone far ahead of the blue-print stage, according to the leader of the Egyptian Trade Mission to Pakistan. The possibilities of joint enterprise in insurance, banking, jute industry, shipping, cotton textiles, tea and hides and skins are being considered.

Nearly 100 oil wells were reported to have been drilled in north-west and south-west China during 1953. The factory buildings for Peking's first cotton mill were completed by the end of 1953 and production is scheduled to start before May Day this year. Construction of a second cotton mill in Peking with 123,000 spindles and 2,400 looms will begin in March, 1954.

The British Overseas Airways Corporation carried during 1953 about 287,100 passengers, an increase of 5 per cent. over 1952 passenger traffic, according to preliminary figures issued by the airline. Cargo carried during the year, including mail, increased from 9,379 tons to 9,460 tons. Revenue miles flown were up by 3 per cent. to 33,029,000, as compared with 32,069,950 in 1952.

The total tonnage of oil tankers completed in the U.K. during 1953 is expected to be about 660,000—approximately the same as in 1952—according to estimates just published by the Petroleum Information Bureau in London. The importance of these orders to shipbuilders is indicated by the fact that tankers will account for 50 per cent. or more of the total tonnage completed in U.K. yards this year—expected to be approximately 1,250,000.

A combined Light Industries Fair and Heavy Industries Fair will be held in Hanover, West Germany, from 25th April to 4th May, 1954. The Hanover Fair will once again resume the character of an industrial fair of primary importance, where particularly the idea of exports trade is furthered. Another advantage of the Fair is that its timing has been adjusted to the overall schedule of national and international European fairs, which have always exhibited technical articles and general merchandise side by side. The buyer from abroad will, therefore, be afforded an opportunity to have a comprehensive review of German production of capital as well as consumers' goods.

A committee of Turkish bank directors has agreed upon a scheme for forming a new bank to finance new industries in Turkey on the same lines as the existing and very active Industrial Bank of Turkey. The bank will start with an initial capital of £T50 million, which will be increased gradually to £T100 million. The banks represented on the committee are the Industrial Development Bank, the Ish Bank, the Ottoman Bank, the Ziraat (Agriculture) Bank and the Turkish Express Bank. Its head office will be in Istanbul and its objects will be the undertaking and financing of important works for the promotion of the industry and general economy of the country.

The B.O.A.C. is hoping to instal search radar equipment in its Comet 2 jet airliners when they come into operation on the South Atlantic route later this year. Experiments which were begun nearly two years ago have reached an advanced stage, and the main problem now is one of [illegible] weight of the equipment. Such equipment, [illegible] purpose of which will be to detect obstacles [illegible] as mountains and other aircraft in flight as well as bad weather, will [illegible] tional safety factors. In the normal course [illegible] should be unnecessary, since an experienced [illegible] knows the height of any [illegible] weigh it is passing and, with its [illegible] recording instruments, maintains [illegible] above them to avoid any danger. [illegible] is largely when the human element [illegible] ture in the form of navigational [illegible] liner goes off course and is forced [illegible] by bad weather at the same time [illegible] aids as radar are likely to be [illegible]

PERSONAL

MR. J. R. D. Tata, Chairman of Messrs. Tata Sons Ltd., left for Geneva on a five-week business-*cum*-holiday trip to Europe and England.

Mr. Rahim Karim Mistry, a business man of Bombay, has been appointed Honorary Consul for Turkey in Bombay by the Government of Turkey.

Dr. B. V. Narayanaswamy Naidu, Chairman, Forward Markets Commission, has been appointed an additional member of the Jute Enquiry Commission.

Mr. S. R. Vasavada and Mr. K. P. Tripathi have been elected President and General Secretary, respectively, of the Indian National Trade Union Congress for the year 1954.

Sardar Datar Singh, Additional Secretary to the Central Food and Agriculture Ministry, returned from Rome after attending the F.A.O. meeting held there recently.

Mr. R. L. Coghlan, Managing Director, Bombay Company Ltd., and Vice-President of the Bombay Chamber of Commerce for 1953-54, has been elected President of the Chamber for the year 1954-55.

Mr. G. R. Kamat, I.C.S., Joint Secretary, Ministry of Finance, Government of India, left for London *en route* to Washington to take up his appointment as Executive Director of the International Bank for Reconstruction and Development.

Mr. C. D. Deshmukh, Union Finance Minister, left Calcutta this week for Sydney to attend the Commonwealth Finance Ministers' Conference. During the absence of Mr. Deshmukh, Mr. T. T. Krishnamachari, Minister for Commerce and Industry, will look after the Finance portfolio.

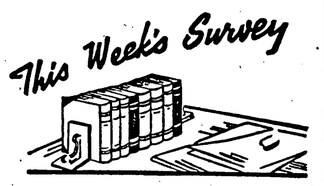
"COMMERCE" 1929

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, *5th January*

Old and the New

The years, as they come, bring with them many things to our advantage. As they leave, they take many things away. To this effect wrote the gentle Horace. But the advantages of what we are pleased to call "the post-war period" have been few and far between; the disadvantages, financial and otherwise, have been manifold and emphatic. The slump in trade, commencing eight years ago, still continues; and we have discovered, to each succeeding year, that the losses of the roundabouts do not infallibly imply a profit on the swings. The old year has drawn to its conclusion, nevertheless, in hopeful fashion. The outlook is brighter; trading conditions are on the mend. But no merchant, no businessman, no matter how sagacious he may be, can justly claim his full share of the awards until he has taken ample cognisance of the many pronounced changes whereby Father Time is completing his revenges. While saying farewell, with but few regrets to the "year that's awa'" we wish to deliver a brief homily upon the subject of the mutations that have taken place and are still taking place in almost every walk of life, in trade, in commerce, in the world's finance, in the social habits and customs of the people. In doing so, we take our text from the ninth chapter of Ecclesiastes, verse eleven: "The race is not to the swift, nor the battle to the strong, neither yet bread to the wise, nor yet riches to men of understanding, nor yet favour to men of skill; but time and change happeneth to them all."



ECONOMIC CONFERENCE

ALTHOUGH India's contributions to the literary field and the field of pure science have won great recognition, there has been little original work in the field of pure economic studies. That the best talents in the country prefer a non-University career might serve to explain this fact. Perhaps, the inferior political status from which the country suffered till recently prevented bold economic thinking. But all this cannot be offered as a full explanation, nor as an excuse. The fact must be faced that economic research has not proceeded beyond the fact-finding stage, and even here, it is neither full nor suited to the needs of the country. Indian talent, the Union Minister for Commerce and Industry, Mr. T. T. Krishnamachari, deplored, in his address at the All-India Economic Conference at Jaipur, has not "exerted itself to any large extent to put down its thought in writing." Disagreeable as this must be to many of our academic men capable of doing outstanding work, it is the truth. And it will, perhaps, serve to stimulate these men to greater endeavour.

In any new line of economic thinking, which the academic men in this country might wish to pursue, they would, perhaps, do well to bear in mind the consideration that it is "dangerous" to apply "theories formulated either in the abstract, or with an abstract background, or on the basis of ideas evolved in terms of the absolute." This is a salutary warning, for, many ideas, borrowed from the West, are often propounded with an air of originality. This seems true particularly of the Keynesian ideas. It would be wrong, of course, to eschew light from other lands. But it would be equally wrong to shine in borrowed feathers, especially when the feathers do not suit the Indian climate. In this connection, Mr. Krishnamachari said: "The Keynesian approach undoubtedly gives us courage and hope to tackle the problem before us, but it also raises doubts whether that approach without severe modifications would be much good for us." He rightly affirmed that Keynesian ideas have not the same meaning to a country where industrialisation has made very little progress.

Whether they call themselves Keynesians or not, many economists in this country do hold views which are socialistic or very near it. Perhaps, this is to be attributed, as Mr. Krishnamachari hinted, to the dependence of the economic ideas on the prevailing socio-political climate. This again might serve to explain the socialist ideas, but cannot certainly provide the proof for the validity or even the applicability of these ideas to the Indian context. There is an insufficient recognition of the fact that the country owes what little economic progress there has been to private initiative and effort. These economists believe not only in State-ownership of industries but also in economic controls. Perhaps, they will do well to remember that controls have, by and large, failed in this country, and whatever justifications there were before for their adoption have practically disappeared. In other words, they have outlived their utility. As Mr. Krishnamachari cited, in this connection, the instance of textile decontrol which was ordered by the Government in the interests of the consumer. After all, retail trade in India works on a small margin of profit. This explains why the co-operative movement is unable to make headway in this country. Obviously, the consumers prefer to pay the small margin rather than do without the services of the retail trade.

Since "pure" socialism is ruled out both on political and administrative grounds, the Government has chosen a middle path—mixed economy. Like most compromises between extremes, it seems to enjoy the Imperial Nemesis of gave way, the neither. At any rate, it is not free and the latter from in this connection, Mr. Krishna- and United Comm Rs. 155 and Rs. 44, As. 4 lower at Rs. often mentioned as the devising a like amount to F of a mixed economy. No one has In the insuran the proportions of the mixture. loss of 175 points he that with any estimate of the down from Rs. 43 ealth being comparatively modest declined by Re. ie meaning in the acquisition by ever, improved by elements of private interest in in- Electric sha dly, while such a move might have Tata Powers we. Rs. 1,340. Ahme Rs. 112-13. Andh

definite significance in a highly industrialised country, it can have no great significance in a country where all the major industries could be counted on the fingers in one hand. A rapid increase in the public sector, where *prima facie* such increase has to be undertaken by means of deficit financing, has for the time to be ruled out without some compensatory effort simultaneously undertaken in the direction of mopping the money in the hands of the private sector. This can be done in two ways. One is by inducing some investment in industries. The other is to obtain such money for Government loans. The latter, however, is limited by the low yield offered by Government securities. Government thoughts are at present directed towards finding solutions for this apparent impasse in the capital market, with a view to accelerating industrialisation. I would ask you, in dealing with the Keynesian theory in its application to underdeveloped countries, to look at this problem as it affects our immediate needs from the point of view that is capable of producing results."

The quoted passage must show at least one aspect of the complicated nature of the country's economic problems, and also how unwise it is to rely on any particular brand of economic philosophy—socialist, Keynesian or any other. A more rigorously pragmatic approach, with much less reliance on purely theoretical considerations, will perhaps yield better results.

In his presidential address, Mr. S. Kesava Iyengar deplored the "inadequate deliberation and hasty decisions" on major economic issues. He cited two instances, prohibition and land reforms; two no more appropriate instances could have been cited. He pointed out how prohibition has cost the country Rs. 200 crores—an amount which would have "tangibly" financed the Five-year Plan. Referring to land reforms, he rightly affirmed that the healthy middle class was bound to deteriorate and agricultural production suffer on account of the theoretical concept of ceilings on holdings. He rightly criticised the Centre for "assuming more and more powers" on internal economic development. But he did injustice to his sense of realism by suggesting that the States should be allowed the initiative in policy-making and that the Centre should limit its activities to national problems like defence, communications and foreign affairs. It is a pity that he did not examine the implications of his suggestion, for it might easily lead to a bewildering complexity of economic policies.

PROF. VAKIL ON INDUSTRIAL POLICY

Government's industrial policy came in for sharp, but very pertinent, criticism by Prof. C. N. Vakil in a speech at the All-India Economic Conference, Jaipur, where he reviewed the working of the "mixed economy," now recognised as an important plank of the Government of India's economic policy. He said that the policy was penalising consumers without any considerable gain to the country. There was no clear line of demarcation between the two sectors—private and public. Nor was there any means by which the public could judge whether the State undertakings were economical. In the absence of "timely information" about the undertakings, it was difficult to offer "informed criticism." Without such criticism, there was the danger that the undertakings would lose all incentive for improvement.

Prof. Vakil criticised the Government for yielding to vested interests in certain spheres. He cited, in this connection, the Government's refusal of permission to start new textile and sugar factories. A big soap concern "was being refused extension of its plant under pressure from less efficient manufacturers." Restriction on production of goods, superior in quality and cheaper in price, was, Prof. Vakil declared, inconsistent with the aim of raising living standards. A similar attitude, as is now becoming clear, is in evidence in the Government's attitude towards small-scale industries which are sought to be subsidised at the expense of large-scale industries. Prof. Vakil rightly criticised this policy, too. He said that cottage industries should not be kept alive by "spoon-feeding" but by improving their technique which at present was extremely crude. Encouragement to inefficiency, he suggested, was not the way to solve the unemployment problem. In this connection, he made a notable suggestion when he said that small-scale industries should be assisted by the Indian research institutes, so that there would be a continuous process to find new devices to suit their requirements.

Government's labour policy too is no more helpful than its industrial policy. Labour legislation in India, as Prof. Vakil said, is more elaborate than in any other part of the world. Far from promoting industrial peace it encourages "unending litigation." Capital-labour disputes are being solved by raising the price levels, thereby sacrificing the consumer i... This process is repeated year after year.

All this is valid criticism. It is a pity that few economists raise their voice of protest against Government's policies in the same forthright manner in which Prof. Vakil chose to criticise it. After all, the country looks to economists—non-partisan, as they are—to offer both constructive and objective criticism of Government's policies and to make a dispassionate evaluation of the results of the working of these policies.

FREEDOM FOR COARSE GRAINS

What may undoubtedly be called the Government of India's New Year gift is the complete decontrol of coarse grains—*jowar, bajra*, maize, barley and other millets—and gram, with effect from the 1st inst. The announcement marks one more significant step in the direction of the Centre's policy of restoring freedom for foodgrains. It was just a little over a month ago—on 24th November, 1953, to be precise—that the Government of India announced its decision to abolish controls on coarse grains (and wheat). It, however, emphasised that inter-State barriers would continue as before. These barriers have since been removed, except in the case of Saurashtra, Madhya Bharat and the 11 districts of Uttar Pradesh, namely, Gorakhpur, Gonda, Bahraich, Basti, Mirzapur, Jaunpur, Ghazipur, Ballia, Deoria, Azamgarh and Banaras. Exports from these areas will not be permitted, but there will be no restriction on import of coarse grains from outside. Coarse grains can now move freely through trade channels without the necessity of import or export permits.

That it is now most opportune to remove the controls on coarse foodgrains and gram should be evident from the fact that the production of these articles has registered a marked improvement, the quantities actually produced in 1952-53 being 17.4 million tons and 3.77 million tons, as against 15.7 million tons and 3.25 million tons, respectively, in the previous year. What is more, the improvement has been not only maintained but also enhanced during 1953-54, as the following figures relating to acreage under cultivation show:

(Thousand acres)

Crops	Average of preceding 5 years' 1st estimate (1948-49 to 1952-53)	1952-53 adjusted 1st estimate	1953-54 1st estimate
Jowar	22,588	24,800	26,192
Bajra	20,760	23,154	26,514
Maize	8,184	7,764	8,464
Ragi	4,867	4,698	4,771
Total ..	56,208	60,127	65,941

The rise in production has also been reflected in a rapid fall in prices of coarse grains (and gram) in nearly all parts of the country, especially in the surplus areas. The majority of even those States which used to be deficit are now said to be self-sufficient. With the decontrol now effected, the consumer would be saved from the incidental charges which the Government would have otherwise incurred on procuring foodgrains.

The only foodgrain which is still subject to control is rice. Although the supply position of this cereal in the country has improved considerably, it is still not so easy as to justify complete derationing. With favourable weather, improvement in cultural practices, and intensive cultivation with the aid of fertilisers, etc., one may expect that the improvement in rice supply position will gather further momentum. If this happens, Mr. Rafi Ahmed Kidwai, Union Minister for Food and Agriculture, will be able to see his much cherished desire, namely, complete decontrol in another two years' time fulfilled.

DYESTUFFS INDUSTRY

The Tariff Commission is now enquiring into the claim for protection and assistance to the dyestuffs industry, based on the ground that it is of comparatively recent origin and still in the initial stages of its growth. Consequently, the industry finds it difficult to face competition from powerful foreign rivals with long years of experience and technical knowledge behind them. Moreover, the industry has to depend on the use of imported intermediates, as the production of basic chemicals is not properly establi... of th... M. I... court... enqu...

claim for protection is justifiable. The first enterprise in this line was the Associated Research Laboratories, Bhatgar, which started production of fast dyes in 1940 on a very small scale. Since then, it has expanded its production in volume as well as in variety. In 1947, the Atul Products Ltd. was established. Recently, a number of factories have sprung up. The dyestuffs industry, as established at present, however, covers only a small portion of the entire field of dyestuffs, its output being confined to a limited number of dyes produced from imported intermediate products. The total installed capacity and actual production of different types of dyes is as follows:

Production.—Azo dyes, 2,117,672 lbs.; Sulphur Black 1,000,000 lbs.; Rapid Fast Dyes, 400,000 lbs.; Rapidogen dyes, 152,000 lbs.; Fast Colour Salts, 996,800 lbs.; solubilised vats, 150,000 lbs.; and others 79,000 lbs. *Installed capacity.*—Azo dyes, 967,359 lbs.; Sulphur Black, 204,475 lbs.; Rapid Fast dyes 28,689 lbs.; Rapidogen dyes, 21,065 lbs.; Fast Colour Salts, 98,511 lbs.; Solubilised Vats, 38,594 lbs.; and others 4,300 lbs.

It is clear from the above that actual production lags far behind installed capacity. The exact demand for the various dyestuffs is difficult to assess, in the absence of proper statistics. But judged by the amount of imports of dyestuffs, there is no doubt that there is sufficient scope for the industry to grow. Thus, India's imports of dyestuffs aggregated 19.5 million lbs., valued at Rs. 15.4 crores in 1947-48, 13.7 million lbs. at Rs. 12.3 crores in 1948-49, 7.5 million lbs. at Rs. 7.9 crores in 1949-50, 14.0 million lbs. at Rs. 11.9 crores in 1950-51, 15.3 million lbs. at Rs. 14.3 crores in 1951-52 and 7.2 million lbs. at Rs. 7.5 crores in 1952-53.

The main question before the Tariff Commission is the determination of the quantum of protection required by the industry. This would require a comparison of the fair ex-works prices of the indigenous dyestuffs with the c.i.f. prices and the landed costs of corresponding dyestuffs. But certain peculiar difficulties are involved in the comparison which are not present in similar cases with regard to other industries. First, there is no standard nomenclature for dyes; dyes of similar chemical constitution but manufactured by different companies go under different trade names. Again, there are no recognised standards of concentration of dyestuffs, so that concentrations are described by trade in relation to various standards which differ from country to country. This difficulty does not, however, arise so much in the case of Azoic dyes, because the concentrations are generally found to be directly comparable with imported products. There is also one more difficulty, namely, that the c.i.f. prices may not reflect the actual costs of production in foreign countries, as it is possible to regulate the prices of individual dyes or groups of dyes with compensatory changes in the prices of other dyes or groups.

The next question to be determined by the Tariff Commission is the extent of assistance needed by the industry through abolition or reduction of import duties on raw materials and intermediates. This involves an examination of the extent to which such duties enter into the cost of production and fair ex-works prices of indigenous dyestuffs. There is also need to enquire into the selling prices of dyestuffs and selling arrangements.

Yet another factor to be considered relates to quality. Here opinions differ. The producers claim the quality of their dyestuffs to be generally satisfactory. But some consumers allege that the ... not up to the standard of imported products specially pointed out in the ...stuffs are: (a) Direct dyes and ...standardisation, and (b) indigenous ... improvement in respect of stabi... maintenance of strength, which at ...rom batch to batch, and shade ...

$20 MILLION U.S. AID TO INDIA

...e first operational agreement between India ...he U.S. under the Indo-U.S. Technical Co... ...on Programme for 1953-54 was signed on ... ...ecember last. The project which is to be ... financed under this agreement related to the rehabilitation of Indian railways and involves a joint cost of $20 million and Rs. 9.2 crores. The allocation of $20 million for this project is part of the total authorisation of $77.1 million as assistance to India by the U.S. Government for the current financial year. Of this amount, a sum of $65.5 million is earmarked for economic aid and $16.6 million for technical aid. In addition, there is a provision of $12 million for meeting the expenses of technical, engineering and other services in support of the programme.

This agreement is significant in that it is for the first time that direct economic aid, as distinguished from technical aid, is being provided to India by the U.S.A. It is, therefore, considered as a landmark in Indo-U.S. technical co-operation.

Under the agreement, India will acquire from outside sources rolling stock and equipment for Indian railways. These include 100 broad-gauge (WG type) locomotives, 2,500 metre-gauge and ... broad-gauge freight wagons. The ... 2,500 broad-gauge freight wagons. The ... purchases will be made under ... supervision of the Union Ministry of Railways in consultation with the appropriate U.S. Government agencies.

The rupee expenditure—Rs. 3.2 crores—is for meeting the cost of ocean transport and the rolling stock, handling expenses, construction and assembling of wagons and for transportation within India.

The agreement is expected to meet the present deficiency in railway rolling stock and equipment in India. The Indian railway system was subject to severe strain during the war and in subsequent years. In the Five-year Plan, rehabilitation of the railways has been given considerable importance, nearly a fifth of the total expenditure on the Plan having been assigned to it.

The Reserve Bank of India has refused licence to the National Bank of Bengal Ltd., Calcutta, for carrying on banking business in India. Accordingly, this Bank will have to go into liquidation.

OFF THE RECORD

(By "ROVER")

ONE step after another to spoon-feed the handloom industry in the country is proving unavailing. The plight of the handlooms, by all reports, continues to be as great as ever before, in spite of the textile industry being further crippled and the consumer being victimised to an increased extent, with each unnatural and uneconomic step which the Government of India is being goaded into taking by the few States where handlooms abound and where the mechanised textile industry does not count for much. At every step in this direction, the Government were warned that they were chasing a mirage and that no cottage industry could be stabilised or strengthened by creating conditions bordering on unreality. The only result of these successive steps has been to demoralise the handloom weavers and to encourage the day-dreamers in the Congress Party, who regard the rehabilitation of this industry as a spiritual and not as an economic issue, to make more extravagant demands, which cut across not only all economic laws but important principles of constitutional law. They now appear to be determined, if necessary, to sacrifice the economic unity of the country by once again restoring the chaotic condition of each State becoming a law unto itself.

Some recent developments point to the fact that the States of Andhra and Madras are engaged in persuading the Government of India to allow them to prohibit the imports of mill-made *dhotis* and *saris* into their territories from the other States in India. I was aghast when I read, at the end of December 1953, that the Andhra Government was seriously examining a suggestion to enforce such a ban temporarily till the accumulated stocks of handloom cloth were disposed of. Mr. S. B. P. Pattabhirama Rao, the Andhra Minister for Education and Industries, when pressed by the Opposition, blurted out that "if we had powers, we would have already enforced it." He however, fought shy of disposing the nature of the State Government's representation to the Centre on the plea that the matter was still under correspondence.

No such scruples seem to have deterred Mr. C. Subramaniam, the Madras Finance Minister and the pet of Rajaji, from asserting in the State Legislative Council that the handloom industry in Madras could survive, only if the manufacture of *dhotis* and *saris* was completely reserved for the handlooms and that his Government would press the Union Government to prohibit the import into the Madras State of mill-made *dhotis* and coloured *saris* for affording protection to the handloom industry. In fact, in winding up the debate on the Appropriation Bill in the Council, he went even further and said that Madras State had got its handloom industry which required protection and so it wanted to be left alone with regard to the import of mill-made cloth. What Madras wants now is not merely a complete reservation of the field for *dhotis* and *saris* in the country as a whole, but a ban, so far as Madras is concerned, on the imports of all mill-made cloth from other parts of the Union. Though an attempt was made later in the Assembly by Dr. U. Krishna Rao, Industries Minister, to draw a veil over this indiscreet and untimely revelation we all know that what Mr. Subramaniam thinks has greater force and value in Madras than what Dr. Krishna Rao states openly and officially.

Andhra and Madras harbour no great industries and so are in a position to make such preposterous demands on the country. Let us hope that the Central Government, which has often in the past bowed to the pressure and machinations of individual States in this matter, will draw a line somewhere and tell them bluntly that India is one country, which cannot be carved up into little pockets aspiring to economic independence and self-sufficiency. By its weak policy of humouring the States, the Centre inflicted, for several years, an untold amount of distress in the matter of foodgrains for millions of people in several parts of the country. Madras wants other parts of the country to send it food even at a sacrifice, but it would ban imports of cloth from other States. Once we give in on this point and countenance the principle of putting up barriers against the free flow of inter-State trade, it will not be long before we find ourselves in the chaos of regulations governing exchange of goods and raw materials between State and State and duties imposed on such imports and exports. Tomorrow we shall have another State asking for stopping import of *gur* or sugar into it, to give protection to the local *gur*-makers. There will be no end to these internal conflicts and all our efforts at building up a planned and integrated economy for the country would be set at naught.

I suppose the textile mills are quite capable of looking after their interest and, if they are not or if they fail to eliminate quickly some of their internal weaknesses, waste and corruption, they would deserve to lose a good part of the public sympathy and support. My interest in this question is that of the consumer of cloth and still more emphatically that of a citizen of the country. In this controversy, little regard is being paid to the interest of the consumer, who needs must have cloth at a reasonable price. He is being condemned unheard to use dearer cloth, not for a temporary period but for all eternity, because, in spite of all the aids and incentives, handloom cloth could never be as cheap as mill-made textiles. But naturally enough, my concern for preserving and promoting the unity and integrity of the country, especially in these days when the threat of external danger is real, is greater.

Anything which divides and weakens the country and sows seeds of future disintegration should be a matter for alarm for us as citizens. It is in this light that I regard the latest move of Madras and Andhra as highly mischievous. The Finance Minister of Madras can afford to talk airily and unconcernedly that his State had only two or three weaving mills and that the few remaining specialised in spinning yarn. The industry as a whole which paid forty crores to the Treasury, sustained a number of other industries and a vast trade and earned about a hundred crores in foreign exchange, enabling the Centre to import rice for Madras, did not seem to matter to him in the least, just because the bulk of it was situated outside his State. But I, being a responsible citizen of India, cannot afford to be as indifferent to its fate or to the integrated welfare of the country as a whole as a State Minister.

Planned Parenthood : Bombay to Non-co-operate

I have always maintained that, however galling it might prove to our manly pride to be ruled over publicly by women, they certainly make better Ministers than men. As it is, under the comforting social fiction of man being the head of the family, most men in the privacy of their homes are completely squashed under the thumb of some wily woman or other—a wife, mother, sister or daughter. Though it may hurt our age-old vanity, we might as well translate this state of domestic slavery to public and political slavery, provided the rod is wielded not by a mirthless and austere fellow man but by a soft-spoken woman.

Man, once elevated to office and the power and authority which go with it, is inclined, in most cases, to be pig-headed and uniformly and unimaginatively harsh, as citizens of States like Bombay know to their cost. On the other hand, whatever office she adorns and howmuchsoever power she acquires, a woman retains her ancient privilege of changing her mind without rhyme or reason, when the fancy takes her. A man is always rightly afraid that, however wrong and injurious a policy he may have adopted, if he relents and tries to reverse it, it would certainly be taken as a sign of weakness and diminution of his dearly loved power over his fellow men. A woman, on the other hand, can change her mind as often as she likes, without yielding an inch of her charm or authority. Under feminine rule, therefore, there is always a ray of hope left for deliverance from the strangling hold of wrong and ruinous policies, which are more likely to be adopted by our Ministers inexperienced in the art of governance. Under her special prerogative of sex, a woman can effect a change where a man would only foolishly dig in his toes.

Now, take the case of our Central Health Minister, Rajkumari Amrit Kaur. Both because of the innate modesty of her sex and more especially so because of her civil state, she was for a long time opposed to the policy of family limitation, which is the only right policy for our country eaten up not by locusts but by a huge army of babies born every year. But with the grace with which most women yield to pressure, she has at last been prevailed upon to inaugurate at least a modest beginning of this benevolent policy. In fact, it is now reported that Rajkumari Amrit Kaur's Ministry is determined to press forward with this new policy. This is all as it should be and quite in keeping with the political thesis advanced by me at the outset of this piece.

My observations draw further strength from the fact that Bombay is the only State in the Union which has refused to participate in the Central Health Ministry's programme of popularising birth control measures and providing family planning services. Even when the citadel in New Delhi has fallen, and fallen so gracefully, to the Planning Commission led in the final assault by that wise senior statesman, Mr. V. T. Krishnamachari, its Deputy Chairman, Mr. Morarji Desai, the Bombay Chief Minister, true to the cause of masculine stubbornness, has decided to fight his enemies to the last ditch. You see his nature knows no yielding, as demonstrated previously on many an occasion, in his clinging to his similar policy of prohibition even though it might edge his State ultimately to the brink of bankruptcy and bootleggers' rule.

His opposition to the use of contraceptives remains so stubborn that his Government is actually reported to have been reluctant to allow Dr. Rao Krishna Rao, Assistant Director of the Haffkine Institute at Bombay, to serve even as a member of the Family Planning Research and Programmes Committee presided over by Lt.-Col. C. K. Gopalakrishnan, Director-General of Health Services. This, besides being extremely petty-minded, which the case of the Bombay Government, is not to be wondered at, is actually preposterous. If the Bombay Government is determined to die the last ditch, why should the country be denied the assistance it might get from advice and knowledge of Dr. Rao, or decided to go ahead on the path of progress Bombay behind to stagnate in its Chinese-like die-hardism in a lost cause?—*All Right.*

NEW YEAR GREETED BY AUSPICIOUS WINTER RAINS

BUDGET PROSPECTS ANALYSED

(From A Special Correspondent)

NEW DELHI, *5th January*

DELHI LETTER

THE New Year was ushered in in the Capital amidst welcome winter rains, considered very auspicious in these parts. 1953, too, it may be recalled, began in similar circumstances, and the fact that the country safely passed through that year lends some support to that view. At this time of the year, rains are very essential for the *rabi* crops in North India and it is now fairly certain that production of wheat and other coarse grains will be very satisfactory in the coming months, imparting in turn considerable stability to the general price level in the country in the coming months. Now that the country is in the period of reconstruction and development, this auspicious beginning is a good indicator that the Government and the people will be able to overcome all hurdles and achieve notable progress during the new year. The Finance Minister was, therefore, on the safe side when he displayed commendable optimism on the general economic situation in the country at the Press Conference before he left for attending the Commonwealth Finance Ministers' Conference at Sydney.

The budget section of the Finance Ministry of the Government of India has been busy for the past few weeks, preparing preliminary estimates for the forthcoming budget year, namely, 1954-55. By the time Mr. C. D. Deshmukh returns from Sydney, some time in the third week of this month, it is expected that a draft budget will be ready for him. Unlike the budgets of the last few years, the budget for 1954-55 is not likely to bring any excitement to the stock markets, especially in the sphere of taxation. Since the Taxation Enquiry Commission has now been conducting investigations into the incidence of taxation and allied problems, the Government is not likely to alter the tax structure in the country during the balance of the first Plan period and it is possible that the recommendations of this Commission will be given effect to only from 1956-57, the year when the second Five-year Plan will commence. Generally, Government will be primarily concerned with the implementation of the first Five-year Plan during the next two years. Emphasis will, therefore, be on expenditure and the regulation thereof rather than on the revenue side during the next two budget years.

Revenue Position Better

In regard to revenue, the Government's position is not disheartening. Prospects are that the Government will more than realise the budgeted figure of Rs. 439.26 crores for 1953-54. During 1952-53, the Government was able to secure a surplus of about Rs. 11 crores in customs revenue over the anticipated figure. In the current fiscal year (1953-54), it was able to collect about Rs. 76 crores during the first six months, as against the budget estimate of Rs. 170 crores. Since the second half of the fiscal year is considered as a relatively busier season, and, as Government has slightly liberalised imports of certain revenue-yielding sectors, the revenue from customs may be expected to come to the anticipated figure and, perhaps, something more, despite the fact that the Government effected many changes in export duties. Even before the presentation of the last budget, export duties on sackings were reduced from Rs. 175 to Rs. 80 per ton and in regard to hessians the duty was brought down from Rs. 275 to Rs. 120 per ton in mid-September. After reduction in these duties, exports of jute goods began to recover appreciably and this improved trend must partially counterbalance the way reduction in the revenue yield from this prefer[illegible]. In regard to cloth, Government abolished the 10 per cent. *ad valorem* duty on medium with[illegible]s cloth in September and this action gave [illegible] fillip to exports of cloth on all sectors, with the result that even here the adverse effects on [illegible]nue will not be appreciable. Despite heavy [illegible]tion in the export duties on vegetable oils, a [illegible]ment is not likely to realise the budget [illegible] of Rs. 2 crores, owing to the sharp fall down[illegible]orts of these products. In regard to declined[illegible] of export which are a source of [illegible]ever, im[illegible]venue, such as tea, manganese ore, [illegible] Elec[illegible] Government is likely to realise [illegible] Tata [illegible] Rs. [illegible] Rs. [illegible]

something more than the original anticipated figure. At present, the share of export duties in the customs revenue is about 29 per cent. and this position will still decline in the next year in view of the emergence of a buyers' market all the world over. In regard to import duties, increased imports of sugar in which India has now begun to experience short supplies as a result of the rise in interpal consumption, will augment revenues in this sector. It is, therefore, possible that total customs will go up to about Rs. 175 crores, showing an increase of about Rs. 5 crores over the budget figure.

Central Excise

In the first six months of 1953-54, Central excise revenue amounted to Rs. 45.73 crores, as against Rs. 94 crores anticipated in the budget. As the second half of the fiscal year is usually associated with larger collections under this head, it is possible that the yield from this source will go up to Rs. 100 crores. During the first half of 1953-54, income and corporation taxes amounted to Rs. 58.17 crores, as against Rs. 63.61 crores in the same period last year. Although the receipts under this head have recorded a moderate decline over the corresponding period last year, the receipts will move up appreciably in the coming months due to the vigorous steps that the Government has been taking in stepping up collections. For the current year, the total revenue from these taxes is estimated at Rs. 159.18 crores. It may be noted that the total arrears of income-tax at the end of September last were placed at the high figure of Rs. 184 crores, out of which arrears for the years 1951-52 and before amounted to Rs. 110 crores and those for 1952-53 Rs. 42 crores. It is, therefore, possible that the collection of these arrears will continue to swell the Government coffers during the next few years. At the same time, many major industries have been doing very well and in some other sectors production has been gradually increasing. During this year, the jute and tea industries have been able to achieve considerable stability and the profit margins of the cotton mill industry are reported to be satisfactory on the whole. In view of all this, it is likely that both income and corporation taxes during the current year will exceed last year's actuals of Rs. 182 crores. The increased returns from these sources will more than compensate the non-realisation of the debt due from Pakistan which during the last two years has amounted to Rs. 18 crores. Taking all these into account, the total revenue for 1953-54 will go up to about Rs. 450 crores.

Next Year's Budget

For the forthcoming fiscal year 1954-55, revenue receipts are not likely to show any sharp setback. Import duties will be maintained at a high level since Government will so adjust its import policy as to secure sufficient revenue from this source. The returns from export duties will, however, recede to about Rs. 40 crores or even below due to a substantial reduction in many of these duties. Since the trend of industrial production has continued to be on the upgrade, the revenue through income and corporation taxes, as also Central excise, will not only remain stable but also show some rise. In consequence, the budget estimate of total revenue for next year will be between Rs. 450 and Rs. 460 crores.

On the expenditure side, the Government of India will be spending substantially heavier sums during the next budget year and also in the subsequent year. It has already been spending nearly Rs. 200 crores per annum on defence. The Kashmir problem is still dragging on. Besides, the proposed U.S.-Pakistan military pact will probably force India to incur additional expenditure in building up some essential defence industries. As a result, there is not likely to be any decline in this item. Since Government is determined to accelerate the pace of the Five-year Plan, increased allocations will have to be made for this purpose. Further, as State Governments have been unable to augment their revenues anticipated by them originally, it is the Centre that has to provide funds for maintaining the tempo of their economic activity. Mr. C. D. Deshmukh has already hinted that the total development expenditure during the next two years will be of the order of Rs. 1,239 crores. Hence during the next fiscal year, about Rs. 600 crores will be earmarked for various development projects as against Rs. 420 crores in 1953-54, Rs. 323 crores in 1952-53 and Rs. 262 crores in 1951-52. The financing of these projects will be done from revenues, public savings, foreign help and also through recourse to deficit financing whenever such a course becomes a necessity. During the first two years of the Plan, the deficit financing was relatively small, at the rate of Rs. 40 crores per annum. During the current year also, it will not show any appreciable rise if one takes into consideration the various indicators such as note circulation, Central Government deposits with the Reserve Bank, sterling balances, etc. Now that the economic conditions in the country have become considerably stable and inflationary pressure has been under control, the climate for resorting to deficit financing has become more favourable than ever. During the next year, greater interest will be evinced by Government in the implementation of various industrial projects, as the food problem has been nearly solved. The multi-purpose projects, rehabilitation of railways, etc., have been progressing more or less according to schedule. The community development projects will also yield more striking results from now onwards. All these indicate that the country will show greater economic progress during 1954-55.

CENTRAL SOIL CONSERVATION BOARD

The Government of India has set up a Central Soil Conservation Board with headquarters at New Delhi, with Dr. Panjabrao Deshmukh, Union Minister of Agriculture as Chairman. The functions of the Board will be

(i) to organise, co-ordinate and initiate research in soil conservation on various types of lands put to different kinds of land-use, such as agriculture, forestry and grazing;

(ii) to assist the States and river-valley projects (a) in drawing up their schemes of conservation, (b) in the enactment of legislation required for the purpose, and (c) by rendering technical advice as may be required from time;

(iii) to act as a clearing house for information on soil conservation and as a store-house of experience gained in various parts of the country;

(iv) to arrange for the training of technical personnel of the upper, as well as the middle grade required to implement soil conservation schemes;

(v) to provide such assistance as may be required in carrying out reconnaissance and detailed surveys in accordance with the standards laid down for the sake of uniformity throughout the country;

(vi) to recommend financial assistance for soil conservation schemes and river-valley projects on a long-term basis;

(vii) to co-ordinate inter-State soil conservation projects, and

(viii) to undertake such cognate measures as are considered germane and relevant to the pursuance of the aims and objects of the Board.

TATA LOCOMOTIVE AND ENGINEERING COMPANY, LIMITED

NOTICE

The public are hereby notified that the pamphlets issued and published by Messrs. India Investors, Delhi, offering shares of the above Company for sale have been issued and published without the authority of the above Company. The Company is not responsible for any statements or representations made in the said pamphlets. The issued shares of the Company have been fully subscribed and there are no shares available for allotment by the Company now. Intending purchasers are advised that these shares are available for purchase on recognised Stock Exchanges at current prices which are round about Rs. 95 per share.

For and on behalf of
TATA LOCOMOTIVE & ENGINEERING COMPANY, LIMITED
TATA INDUSTRIES LIMITED,
MANAGING AGENTS,
S. MOOLGAOKAR,
Director.

Dated 16th December, 1953.

PAKISTAN NOTES

NEW IMPORT POLICY ANNOUNCED

U.S. GRANTS $22 MILLION ECONOMIC AID

CONSUMERS in Pakistan have reason to feel gratified at the new import policy of the Government of Pakistan for the current half-year. For, under the new policy, imports have been liberalised. A number of items in the range of consumer goods which were not licensed in 1953 have been added to the list of importable goods. Some of the principal additions are cycles and parts and accessories thereof, clocks and watches, chinaware, glassware, fents, woollen fabrics, pencils, tooth paste, tooth brushes, cheese, cigars, and pipe tobacco, etc. The import policy has been liberalised not only by bringing these additional items on the licensable list, but also by licensing several essential items upto the O.G.L. level. It is, for instance, proposed to issue import licences upto the full O.G.L. level for drugs and medicines, petroleum and petroleum products, books, newsprint, X-ray films, surgical instruments (other than those manufactured in Pakistan), chemicals, dyes, dyeing and tanning substances, etc.

The liberalisation of import policy should not, however, be taken to mean that Pakistan's balance of payments position has improved. It is true that the third quarter of 1953 witnessed a favourable balance to the tune of Rs. 92 lakhs, as against a deficit of Rs. 40.56 crores in the corresponding quarter of 1952. But this is only a temporary phenomenon. For exports from Pakistan are reported to be at a low level. This, coupled with larger imports now envisaged, will, it is feared, result, once again, in the maladjustment in the country's balance of payments. As it is the foreign assets of Pakistan are very low; they amount to Rs. 81.32 crores as on 18th December, 1952, which compares very unfavourably with Rs. 150.52 crores in the beginning of 1952.

Guiding Principles

Be that as it may, the new import policy of the Pakistan Government has been based on the following four principles as enunciated by the Minister for Commerce, Mr. Tafazzal Ali, in the course of his first Press conference at Karachi the other day:

(1) Expenditure on imports on private and government account should be within the estimated earnings of foreign exchange for the period with a small cushion for possible fluctuations and building the exchange reserve.

(2) Import of industrial requirements should be as liberal as possible so that the pace of industrialisation is not affected.

(3) Where indigenous production of an article is sufficient or near-sufficient, foreign exchange should be conserved by not allowing its import.

(4) Consumer goods which are not strictly essential and are sometimes classed as "luxury goods" should be permitted import to a limited extent to cater to the demand of the tourist traffic of foreigners in Pakistan.

A striking feature of the new policy is that nearly 70 per cent. of foreign exchange has been earmarked for imports of industrial requirements such as machincry, spare parts and basic raw materials. The rest is mainly earmarked for essential consumer goods, a minor percentage being reserved for non-essential articles.

Reviewing the import policy, Mr. Tafazzal Ali indicated that, until such time as inherent equilibrium in the balance of current payments was achieved, large-scale liberalisation of imports might not be possible. He, however, expressed confidence that Pakistan would increasingly cease to import those articles the indigenous production of which was progressively increasing both in quantity and quality. Mr. Ali said:

"This confidence is justified will be clear from the fact that articles that we used to import in large volume in the past, but which we no longer import, because indigenous production is now nearly equal to demand. Take, for example, manufactures, of which average annual import under Open General Licence used to be of the order of Rs. 2.20 crores. Today, we have sufficient but have started exporting. Similar with edible oils, cement, [illegible] metal lamps, sulphuric acid, confectionery, biscuits, woollen [illegible] electric fans, brushes, buttons, [illegible] it will not be long before we [illegible] in a number of other articles [illegible] cycles, sewing [illegible], earthenware, [illegible] matches, woollen fabrics, etc.... [illegible] increasing domestic production will result in foreign exchange savings, which could be used for the import of goods which are not, or may not, be available locally and for rebuilding our foreign exchange reserve. I am confident that, with foresight, planning and efficient administration, we can with our resources, maintain the economy of the country on an even keel."

Proceeding, the Minister said that the attainment of equilibrium in balance of payments had been at the expense of considerable sacrifices imposed on the consumer who had perforce to be deprived of many articles to which he had grown accustomed in the past; for the reduction of expenditure on imports had to be commensurate with the fall in earnings from exports. The extent to which imports had to be restricted could be gauged from the fact that Pakistan's total foreign exchange earnings in the year 1952-53 (July-June) were Rs. 134 crores, as against Rs. 219 crores in the year 1951-52 (July-June). In spite of constant efforts to expand exports which would be intensified—no material change in the country's ability to earn foreign exchange in the coming year could yet be foreseen. For Pakistan's capacity to earn foreign exchange depended preponderantly on its agricultural production, the value of which could not be appreciably stepped up very fast. The rapid industrialisation that was presently taking place could not immediately make any significant contribution to foreign exchange earning, though it would help reduce import expenditure on articles of which there was substantial domestic production and thereby make relatively more exchange available for expenditure on other import needs. Real improvement in the external payments position would ultimately depend upon adequate development of resources and the expansion of efficient agriculture and industry.

In conclusion, the Minister expressed his anxiety to see that trade with the neighbouring countries having a common land frontier was rationalised and stimulated to the mutual advantage of Pakistan and its neighbours. He also wanted to pave the way for stability in commercial relations with the major overseas trading partners. To quote him: "The development of trade with Muslim countries with whom we have religious and cultural ties is also engaging my attention. The problems connected with promotion of the inter-zonal trade between East and West Pakistan, general export promotion, and formulation of our shipping and tariff policy will receive high priority."

A recent report from Karachi avers that a proposal to evolve a fresh basis of payment for import and export between Pakistan and the Middle and Far Eastern countries is under the consideration of the Government of Pakistan. The proposal is a sequel to the need for meeting a part of the sterling shortage in the area. Several of these countries, it is reported, have expressed the desire to have "rupee account trade" with Pakistan. If this proposal is accepted, a rupee account will be created for imports into Pakistan from the Middle East and Far Eastern countries. Pakistan rupees earned by each country will then be credited to the country which, in turn, may use it for buying Pakistan goods.

U.S. Aid

Pakistan will receive from the U.S. $22 million economic aid during the fiscal year ending June, 1954, under an agreement signed between the representatives of the Governments of the two countries at Karachi last week. This grant brings the total U.S. contribution to Pakistan's development so far to $44 million. During the years 1950-51, 1951-52 and 1952-53, Pakistan received economic aid worth $600,000, $10 million and $12 million, respectively.

Out of the latest grant of $22 million, about $19 million are to be made available for the provision of equipment and technical assistance for the existing projects and for additional projects mutually agreed upon by the two Governments. The balance will be spent on salaries and expenses of technicians sent to Pakistan, as also on the training of Pakistanis abroad. Pakistan has agreed to meet the rupee expenditure on development projects financed by the U.S.

(Concluded from next column)

American export competition will undoubtedly be intensified in a slump and drive this country to expand its trade with the "East"—using the word in a political sense. So there are possible squalls ahead and, as sailors do in such circumstances, this country can only keep a keen lookout for them and be prepared to cope with such trouble as arises when it comes.—*All Rights Reserved.*

OUTLOOK FOR NEW YEAR

SQUALLS QUITE POSSIBLE

(From Our Own Correspondent)

LONDON, *2nd January*

LONDON LETTER

AS if to ensure a Happy Christmas to Britain's Chancellor of the Exchequer, the last news just before the holiday was that 1953 was to show an all-time record industrial production. 1952, Britain's year of minor recession, gave an index figure of output of 113, as compared with the 117 of 1951; the forecast for 1953 is 119. Moreover, the autumn trend is moving strongly upwards; October gave a reading of 128, compared with the pre-summer decline peak of 123. Yet the Treasury has been quick to point out that the whole upswing has been in home consumption goods and that the country had still better look to its export trade before sitting back in complacency.

Why should this warning be sounded? Undoubtedly because, across the Atlantic, business affairs are taking a very different turn. There, after a first half-year which rode well above 1952, the industrial output curve took a plunge right away from normal. The March peak figure was 243 which was 10 per cent. higher than a year earlier and the differential was still being maintained in August when the index stood, in spite of the summer dip, at 235. But, after that, production, instead of going on upwards, dipped unseasonably downwards, crossed the 1952 curve in October and in November hit 228, well below the level of the previous year.

Expressed in dollars, the value of America's gross output which had risen to a peak of $372,000 million annual average in the second quarter of 1953, dropped, for the first time for many years, in the third quarter to an annual average of $369,000 million and in the fourth quarter to an annual average of $365,000 million. It looks as if the year will finish at $367,000 million and a forecast by American economists is that the decline will continue through 1954. But they put this decline at no more than 5 per cent. which would give a gross product for the U.S.A. of $347,000 million which is virtually the same figure as for 1952 and 5 per cent. higher than for 1951. Clearly, if this is all that is going to happen, the effects, whether internally for the U.S.A. or externally, are not going to be very serious.

But the other major economic indices do not look very healthy; wholesale prices have been running consistently lower through the year (as compared with this country where they have been stable with some tendency to strengthen) reflecting a reduced demand for commodities in general. The demand for consumer goods, normally at its strongest in the autumn, has this year been relatively weak, while investment in new plant and equipment is estimated to be down some 8 per cent. and new housebuilding to be down some 10 per cent. The de-stocking of commodities which has been going on, and which has accounted for the fall in gross output, can only too easily, in the volatile American economy, develop cumulatively and lead into a slump. In those circumstances, would the Administration have the courage to run a huge budget deficit—*à la* Keynes—which is the only way in that country to produce the recovery in demand that would arrest a slump?

What of the effect on this country if an American slump does in fact develop? First, of course, to feel the cold wind of reduced buying would be the raw materials of the sterling area, the cocoa, wool, tin and rubber which bring in substantial dollar earnings. But there is good reason to suppose that the process of reduced buying has already gone some way—prices of these basic commodities are far below their levels of a year ago (though it may be a little naive of the *Economist* to suggest that prices have fallen so low that they cannot fall any further) and have been reflected in the slower tempo of the build-up of this country's gold and dollar reserves. On the other hand, an American slump will drop the prices of other commodities entering into international trade and still further improve Britain's terms of trade, already moving in this country's favour for a year past. Moreover, sterling is psychologically, as well as materially, stronger now than at any other time since the war and less likely to be a target for speculative attack if America does go "bad". But

(Continued in previous column)

INDUSTRIAL FINANCE CORPORATION

ENQUIRY COMMITTEE'S FINDINGS

A PERUSAL of the three documents placed before Parliament towards the close of last year, namely, (a) the Report of the Industrial Finance Corporation Enquiry Committee, (b) the views of the Board of Directors of the Corporation, and (c) the Government of India's Resolution on the Report, together discloses that the Corporation has been vindicated of the charges levelled against it in Parliament in 1952, when the Industrial Finance Corporation (Amendment) Bill was under discussion. It will be recalled that, apart from the charges of nepotism and favouritism, there were others which included (1) failure to encourage industries in the backward regions, (2) preference shown to well-established large-scale industries overlooking the interests of small- and medium-scale industries, (3) grant of loans for purposes not falling within the framework of the Five-year Plan, (4) partiality towards industries earning good profits and to companies which could raise loans in the markets, (5) failure of loanee companies to increase production or to raise installed capacity, (6) incompatibility of efficiency with high expenses. On these, as well as on a few other charges which would be dealt with presently in detail, the Committee has found no evidence to justify them. And wherever the Committee has made certain unfavourable observations, the replies of the Directors of the Corporation are convincing.

The Industrial Finance Corporation Enquiry Committee was appointed, it may be recalled, in December, 1952, under the chairmanship of Mrs. Sucheta Kripalani, to enquire into certain specific allegations, particularly nepotism and favouritism in the grant of loans by the Corporation. Other members of the Committee were Mr. V. B. Gandhi, Mr. Sri Narayan Mehtha, Mr. P. A. Narielwala, Mr. R. Suryanarayan Rao and Mr. G. Basu. Mr. S. K. Sen, Deputy Secretary, Ministry of Finance, was Secretary of the Committee. Its terms of reference were:

(1) To verify whether, in general, care has been exercised by the Corporation in the grant of loans;

(2) to review the policy followed by the Corporation in the grant of loans with due regard to the objectives of the Industrial Finance Corporation Act and the directions issued by the Government; and

(3) to make recommendations for improvement in the working of the Corporation.

Corporation Exonerated

It is comforting to note that the findings of the Committee have not established the charges of nepotism and favouritism, as alleged in Parliamentary discussions. This is also indicated by the Government resolution on the recommendations of the Committee. While exonerating the Corporation from these charges, the Committee has made some unfavourable observations to the effect that loan applications in which the Chairman or other Directors took interest received more expeditious and liberal treatment. Commenting on these observations, the Government resolution states: "The material on which these remarks are based is not given in the Report, although the Committee has made certain observations in its examination of individual cases, which might suggest that some favour or leniency was shown. The Government have had every one of these cases most carefully examined and find it difficult to accept the view expressed by the Committee, especially in regard to liberality of treatment, meaning thereby larger loans or easier conditions not justified by business considerations. Government have no hesitation in agreeing with the Committee that the charges of nepotism and favouritism against the Corporation have not been proved."

These clear cut observations are welcome, inasmuch as they will help restore the fair name of the Corporation, the reputation of which had been at stake ever since the Corporation was bitterly attacked in Parliament. The Government, however, has not announced its decision on a number of general recommendations made by the Committee in connection with a specific loan granted to the Sodepur Glass Works, as they are still under its consideration. The delay in announcing its decision on this question is inexplicable, for more than seven months have lapsed since the Committee submitted its report—on 7th May, 1953, to be precise.

The Government's resolution referred to above contains also its decisions on the recommendations of the Committee. Before taking up these, it is necessary to refer here to the Committee's views on some of the allegations enumerated at the beginning of this article.

No Bias Against Small Industries

A scrutiny of rejected loan applications by the Committee has revealed that the Corporation has no bias against industries established in backward regions, as was alleged in Parliament. It is pointed out, in this context, that the Corporation was constituted not for promoting industries in different regions but to deal with such applications as are received by it from time to time. Further, the Committee's examination has not revealed any discrimination on the part of the Corporation against small industries in favour of larger industries. In fact, it had granted a loan of Rs. 50,000 to a chemical works. The Committee says that "unless small and medium industries approach the Corporation for a loan, the Corporation could not sponsor applications from such industries."

The allegation that the Corporation's policy in granting loans is not integrated with the Five-year Plan has also been examined by the Committee. The Committee, in this connection, admits that the Corporation had to deal with applications as they came in and so it was difficult for the Corporation to adhere to any rigid priority list. Nevertheless, the Committee suggests that, in future, the Corporation should conform to the set-up of the Five-year Plan. The Government, too, in its resolution has accepted this suggestion.

Another serious charge was that the Corporation was granting loans only to big and well-established concerns. The Committee for its part says that this is partially correct, but feels that such must have been due to the desire for ensuring the safety of the Corporation's money and for putting the available funds to productive use. The Directors of the Corporation, in commenting on this observation, have stated that the Committee has quoted no specific instance to establish the existence of prejudice in favour of big business. They observe: "In actual fact, the Corporation has never been short of resources. Therefore, no application for a loan which was found to be otherwise sound had to be refused for lack of reserves. All applications, big or small, whether for particular group of industrialists or not, whether from established or new industries, whether any Director of the Corporation was connected with it or not, were dealt with on their merits." They further add: "A large number of applications from big business were received because of the comparative smallness of the business world in India, on account of which there is much more inter-connection within its various parts than is, perhaps, the case elsewhere."

High Cost of Operation

On the question of incompatibility of efficiency with expenditure incurred by the Corporation, the Committee opines that the cost of working would surely come down with the larger utilisation of the funds. The high cost is also partly due to employment of technical personnel required to assist it in deciding loans. Besides, the Committee feels that the rates of interest charged by the Corporation are reasonable.

In its report the Committee has suggested that it would be advantageous to have a whole-time paid Chairman for the Corporation, instead of a Managing Director as at present. It is of the view that the Chairman should be assisted by a General Manager and a Secretary in the matter of day-to-day working of the Corporation, leaving the overall policy and general superintendence of the Corporation to the Board of Directors. The paid Chairman, the Committee says, "should not necessarily be an industrialist, but he should be a man with mature experience in the field of production, management and finance." While accepting this suggestion in the principle, the Government points out that the Act will have to be amended in order to give effect to it.

Another suggestion made by the Committee is that the Board of the Corporation should meet at important centres and that there should be regional panel of advisers out of which a few could be selected *ad hoc* to deal with each loan application. The Government has agreed with the former suggestion. As regards the latter, however, the Government feels that the Corporation should obtain advice on a functional rather than a regional basis. To secure proper consultation with industry, the Corporation has appointed, it says, a Textile Advisory Committee, and is considering the appointment of similar other functional committees for different groups of industries. In the absence of the full text of the Report, it is not clear on what grounds the Committee has advocated the appointment of regional panels. One cannot, therefore, readily appreciate the need for the panels, if the same purpose for which they are meant is served, possibly in a better way, by the functional committees. The procedure, now in vogue, of obtaining advice from the latter bodies may be given a trial for some more time, in order to know how far the bodies would be helpful in deciding loan applications expeditiously and impartially.

Interlocking of Interests

The Government has accepted the Committee's recommendations that a Director of the Corporation who has any interest in an industrial concern which has applied for a loan should disclose his interest in the loan. The Corporation too, it is stated, has accepted this suggestion. The Government has also agreed that the particular director should withdraw from the meeting when the application in which he is interested is under discussion.

Among other recommendations of the Committee was one which precluded from the eligibility for loans of a company whose director or a partner or a shareholder was also a Director of the Corporation. That this suggestion is most impracticable and inadvisable is evident from the Government's comments on it. It is common knowledge that nearly 60 per cent. of the share capital of the Corporation is contributed by banks, insurance companies, co-operative banks, etc., which have a right to return six out of the 12 Directors on the Board of the Corporation. These Directors are likely to be shareholders or Directors or partners in managing agency concerns of some of the applicant companies. The total exclusion of all such companies from eligibility for loans from the Corporation would cause hardship to such companies. The adoption of the suggestion may not even be practicable, unless the entire character of the Corporation is changed and the capital composition radically altered. The Government is, therefore, justified in not accepting the suggestion. In order to deal with such cases, the Corporation has agreed, we are told, to reserve them for consideration by the full Board on which sit the Government Directors whose presence will act as a safeguard in granting loans. Further, the Government has decided that such cases should also be referred to it.

Commenting on the Committee's suggestion that the Government should issue directives to the Corporation on the principles to be followed by it, the Government pertinently observes that the Industrial Finance Corporation represents a new experiment in the field of industrial finance and principles could be evolved and practices established, only in the light of actual experience. Moreover, two senior officers of Government have been serving as Directors on the Board of the Corporation who act as liaison between the Government and that body. For this reason, no directives, it is stated, were issued in the past on one occasion in 1948. In the light of the experience now available, the Government, however, observes that it would issue directives embodying its decisions to the Corporation.

Loans in Excess of Rs. 50 Lakhs

The Committee had suggested that any individual loans in excess of Rs. 50 lakhs should be referred to Government for sanction. Commenting on this suggestion, the Government points out that only recently the law was changed to empower the Corporation to grant loans in excess of Rs. 1 lakhs. Government sees no reason in changing the law again, especially when no such loans exceeding Rs. 50 lakhs have been granted by the Corporation so far. The Government has, however, agreed that all loans in excess of Rs. 50 lakhs should be reported to it.

Although the Government and the Committee do not see eye to eye on certain points, it must, in fairness to the Committee, be said that it has done its job well and that it fully deserves the tributes paid by the Government. In the course of its resolution, the Government says: "The Government of India considers that the Report of the Committee is of great value in clearing some of the misconceptions about the working of the Industrial Finance Corporation. The recommendations of the Committee should go a long way toward improving the working of this institution and a new experiment in the field of industrial finance in this country so that it may play a fruitful and vital part in the development

BANKING COMPANIES (... ACT OF 1953

PROVISIONS AFFECTING DIRECTORS TOO ONEROUS

(Contributed)

AN article, entitled "Law for Quick Disposal of Bank Liquidation Passed," published in the issue of *Commerce* dated 12th December, 1953, gave an account of the passing of the Banking Companies (Amendment) Bill by the House of the People last month. The provisions of the Act for the simplification of the process of liquidation of banks are unexceptionable. But the same cannot be said of the provisions dealing with the liability of bank directors. The above article, however, disposed of the latter provisions in a short paragraph. In view of their importance and the adverse effect which they may produce upon the progress of banking in this country, they are considered here in some detail.

Every citizen of India, thinking rightly, desires that banking in the country should be conducted on sound lines and would not desire any protection to dishonest or even apathetic bank directors. At the same time, to ensure satisfactory progress of banking in the country, it is necessary to see that men of integrity, standing and substance are not deterred from accepting the position of directors, by making the position too onerous for them. It is to be feared that some of the provisions of the Act mentioned ... will produce such a deterrent effect.

Section 45-G of the Act provides that, where an order has been made for the winding-up of a banking company, the official liquidator shall submit a report stating whether, in his opinion, any loss has been caused to the banking company since its formation by any act or omission (whether or not a fraud has been committed by such act or omission) of any person in the promotion of a banking company or of any director or auditor of the banking company; that, if, on consideration of this report, the High Court is of opinion that any person who has taken part in the promotion of the banking company or has been a director or an auditor of the banking company should be publicly examined, it shall direct the attendance of such a person, director or auditor at a public sitting fixed for the purpose; that the official liquidator shall and any director or contributory may, either personally or through a lawyer, take part in the examination of such person examined shall answer on oath all such questions as the High Court may think fit to allow to be put to him; and that notes of the examination shall be taken down in writing and shall be signed, after reading, by the person examined and may thereafter be used in evidence against him in any proceeding, civil or criminal, and shall be open to inspection of any creditor or contributory.

Valuable Safeguard Violated

The above provision for using the notes of the examination in evidence against a director in any criminal proceedings violates a valuable safeguard provided by the law of criminal procedure for the fair trial of an accused person, namely, that the accused cannot be subjected to any examination or cross-examination and that the prosecutor has to establish his case without the assistance of any admission he may be able to obtain from the accused, if the latter is examined and cross-examined. The necessity of this safeguard in criminal proceedings becomes clear, when we consider how often an honest witness is led by a clever, cross-examining counsel to make statements that are untrue as well as prejudicial to the interests of the witness. Grave injustice would be caused to a witness, if an untrue statement made by him under the stress of cross-examination is used against him in his trial for an offence. The directors of a banking company in liquidation, who are examined in accordance with the provisions of the above section of the Act, would have to face cross-examination by the liquidator or his counsel and it would be unjust to them to use statements made by them in cross-examination as evidence against them in criminal proceedings.

Further, the provisions would defeat the very object of the examination, namely, to elicit ing from the directors all information that ... not be obtained from the records of the banking company concerned or from other sources. The provision that the answers given in such examination may be used as evidence in criminal proceedings against the directors giving the answers is sure to compel them to give as little information as possible in their answers and thereby to defeat the object of the examination.

The next section, that is, 45-H, of the Act provides that, where an application is made to the High Court under section 235 of the Indian Companies Act against any promoter, director, manager or officer of a banking company, for repayment or restoration of any money or property and the applicant makes out a *prima facie* case against such person, the High Court shall make an order against such person to repay and restore the money or property, unless he proves that he is not liable to make the repayment or restoration either wholly or in part: provided that, where such an order is made jointly against two or more such persons, they shall be jointly and severally liable to make the repayment or restoration of the money or property.

Most Unjust Presumption

In so far as the above section provides that, on a *prima facie* case being made out against a director or officer in an application under section 235 of the Indian Companies Act, the onus should lie on him of proving his innocence, the section makes no departure from the law already in existence. Even under such law, a person who, in any civil proceedings, has, *prima facie*, been shown to be liable, is held by the Courts to be liable, unless he disproves his liability. But the above section goes much further than the well recognised principle that, on a person being shown to be *prima facie* liable, the onus of proving the absence of his liability is on him. The above section means that, if an act of misconduct on the part of a director is established, he is to be presumed to be liable for any amount of loss which the applicant, who would generally be the liquidator, chooses to allege as the loss caused by his misconduct, unless the director proves that he is not liable to make the repayment either wholly or in part. The provision that the loss alleged by the liquidator should be presumed to be the actual loss until the contrary is proved seems to be most unjust. The law provides for various presumptions to be made in various circumstances, but there has not hitherto been any law in India so unjust as to make the extent of a presumption depend on what the person claiming the benefit of the presumption alleges.

Further, where a claim against several directors is based on several acts of misconduct committed at different times, all of them may not have been responsible for all the acts and some of them may not even have been directors when some of the acts were committed. But the above section does not make it clear that all of them are not to be presumed to be responsible for the loss resulting from the acts. Any such presumption would be very unjust.

Section 45-I provides that every director or other officer of a banking company which is being wound-up shall give such assistance to the official liquidator as he may require in the realisation and distribution of the property of the banking company and that, if the director or other officer fails to do so, he shall be guilty of contempt of court. The language of this section is so wide as to give the liquidator the power to require a director or other officer of the banking company to do even the clerical work necessary for realising and distributing the property of the banking company. The work of a director may require his presence for considerable periods at a place distant from the place in which the liquidator's office is located, but he must place himself at the beck and call of the liquidator to give him such assistance as he may require.

Again, the section does not indicate to which of the persons who have been directors and officers of the banking company in liquidation at various times during its existence, its provisions are to apply. It is not clear whether it is to apply to every one who has been a director or officer of the company at any time during its existence, although he may have ceased to occupy that position long before the commencement of the liquidation, or whether it is to apply only to those who were directors or officers at the commencement of the liquidation.

It is to be feared that the above sections of the Banking Companies (Amendment) Act, 1953, will tend in practice to discourage honest and respectable persons of good standing from acting as directors of banking companies, but that they will not deter unscrupulous adventurers, possessing no stake, from acting as directors or abusing their powers. A director of a banking company, who deals fraudulently with his company's funds and thus accepts the risk of being prosecuted under the laws which have been already in existence, will not be deterred from committing the fraud by the above sections of the amending Act. But an honest person will be unwilling to become a director on account of these sections of the Act.

Effect of New Act

An important result of this new enactment will be that the boards of directors of banks will have to meet much more frequently, as the directors will find it necessary even to go into such details of the day-to-day working of their banks as should, properly speaking, and for the smooth working of the banks, be at the discretion and within the authority of the Managing Directors or General Managers. Experienced and competent men, who are busy with their own activities, will not be able to spare the time for the numerous board meetings of banks, which may have to be held at least thrice every week. But it is necessary for banks in India to have such experienced and competent men, possessing integrity, standing and substance, as their directors, because banking in India is still in the early stages of development and because deposits, which are the stock-in-trade of banks, depend upon the reputation of their boards of directors. The danger, therefore, is that the result of the new Act will be the opposite of what is intended by it. It appears that even old-established and best-conducted banks are perturbed by this new piece of legislation, because they are afraid that it may deprive them of the services of some experienced, competent and reputed men as directors.

This legislation seems to be based upon the experience of unsatisfactory working of a number of non-Scheduled banks. But it will very adversely affect all Scheduled banks, although a large majority of them have been working in a satisfactory manner. In this connection, it is important to note that most of the business and deposits of the Indian banking system are in the hands of Scheduled banks, although their number is much smaller than that of non-Scheduled banks. It is true that, in a few cases of recent failures of Scheduled banks, the lack of proper attention on the part of the directors towards the affairs of the banks have been, to some extent responsible for the failures. But the inclusion of drastic provisions in the new Act on account of a few cases of this type will adversely affect the quality and standing of the boards of directors of even sound and well-established Scheduled banks and is likely to defeat the very object of the legislation.

There is no need for such drastic provisions, because the Reserve Bank has been already possessing adequate powers for exercising proper control over banks by means of inspection and licensing. It carries out periodic inspections of all banks. If from a scrutiny of the numerous returns which it receives regularly from all Scheduled banks, it suspects that some of the doings of a few banks may not be satisfactory,

With the continuance of tariff protection to the sericultu.e industry for five more years, the duration of the total period of protection, inclusive of the period for which protection is now granted, comes to 24½ years. The sericulture industry, it will be recalled, was first granted protection in 1934 for a period of five years ended 31st March, 1934, on the basis of the recommendation of the Tariff Board which conducted an enquiry into the industry in 1933. Another enquiry was conducted in 1938, but, owing to the outbreak of war, the Government could not take action on the Board's report. The protective duties then prevailing were, therefore, continued from time to time till the end of March, 1949. In the latter half of 1948, the Board conducted an enquiry and recommended continuance of protection upto 31st March, 1952, which was accepted by the Government of India. On the recommendations of the Board, the Government revised the duties on raw silk and silk yarns four times during the years 1950 and 1951, in order to adjust them to the variations in the c.i.f. prices of imported raw silk. It also extended the period of protection till the end of 1952.

Recent Enquiry

As the Tariff Commission could not conduct, before 31st December, 1952, the necessary enquiries into the continuance of protection, it recommended an *ad hoc* extension of protection by one year, that is, up to the end of 1953, pending a detailed enquiry and submission of its report thereon to the Government during 1953. This recommendation was accepted by Government. The recent enquiry by the Commission was in accordance with sections 11 (c), 13 and 15, under which it can investigate the working of protection granted to an industry. The continuance of protection by Government for five more years is a sequel to this enquiry.

The Tariff Commission's recommendation for extending the period of protection to the sericulture industry is based on the ground that the industry will take some more time to consolidate and improve itself. To quote the Commission: "Efforts have to be directed as part of a long-term programme towards increasing the output of (mulberry) leaves per acre and improving the quality of cocoons, raw silk, etc. To enable the industry to formulate and implement schemes of improvement, it is essential that the industry should be assured of protection for a reasonably long period."

...dering the magnitude and the economic ...portance of the sericulture industry, the continuance of tariff protection for five more years may no doubt be justified. But the point is whether protection itself will ensure stable conditions in the industry. As already noted, the Indian sericulture industry has been enjoying tariff protection for such a long period as 19 years. Naturally enough, one would expect a remarkable development of the industry in the field of both production and quality. But this expectation has not been fulfilled, as witness the following remarks of the Tariff Commission:

"On an overall view, we have to state that, while improvement has been recorded in some directions, the industry has not progressed as much as one would expect it to have done during nearly two decades of protection. The production of raw silk has not improved sufficiently. The proportion of filature silk is still very small. The quality of indigenous production is not yet higher than the International 'D' grade."

The aggregate output of raw silk amounts to only 2 million lbs. per annum, which falls short of the estimated demand by over 2 million lbs. and of the self-sufficiency target by as much as 8 million lbs. Moreover, cocoons in India yield a length of 400 to 500 yards only, as against 1,094 yards in Japan. Again, 16 lbs. of cocoon are required to produce one lb. of silk, while in Japan only 7½ lbs. are required. It is no wonder, therefore, that raw silk prices in India should have all along remained very high. It is this high level of prices that has been responsible for a considerable reduction in the consumption of pure silk.

What is this state of affairs due to? It is due, in a large measure, to lack of technical efficiency and proper organisation of the industry. The attainment of a high level of efficiency in the Japanese sericulture industry has been rendered possible by sustained scientific research. After all, it must be remembered that it is through scientific and technological research that production can be improved, thereby augmenting output, improving quality and lowering production costs. Indeed, as Mr. T. Swaminathan, Textile Commissioner to the Government of India and Chairman of the Central Silk Board, rightly emphasised at the Board's meeting held in Bombay recently, research work—both on the mulberry tree and on the silk-worm—and co-operative organisations of marketing of cocoons and raw silk are the directions in which work has to be done urgently with a view to reducing prices. The specific recommendations that the Tariff Commission has made in this respect are as follows:

"Research, particularly in respect of mulberry cultivation and breed of silk-worms, is of vital importance to the development of the sericulture industry. The Central Silk Board should, therefore, go ahead with its proposed scheme of setting up regional research stations with emphasis on the above two aspects and implement it as early as possible. For co-ordinating research activities of these regional stations, a central research station should also be established at a convenient place."

All this requires adequate finance. The resources available with the Central Silk Board are stated to be insufficient for the purpose. Mr. Swaminathan, for instance, appealed for larger sums of money being placed at the disposal of the Board. The Tariff Commission also has stressed this aspect. It says: "The Government of India should increase their grants to the Central Silk Board so as to enable the Board to extend increased financial assistance to the Central Sericulture Research Station, Berhampore, and to the Research Institute in Mysore. ... The Governments of the various silk-producing States should encourage ... would be their States by increased financial ... The statement of the Union Minister ... Commerce and Industry, Mr. T. T. Krishnamachar made at the recent meeting of the Board, tha... he would give "sympathetic consideration" to the Board's requirements, with a view to securing all-round improvement of the sericulture industry and the essential reduction in the price of pure silk is, indeed, reassuring. Incidentally, it may be noted that the Board has approved of the demand of Rs. 25 lakhs for developmental and organisational work of scientific and economic nature, besides a sum of Rs. 20 lakhs for granting loans to State Governments for organising markets, and improving and renovating equipment. Further, it has constituted a small committee to examine, in detail, the measures necessary for stabilising the industry on an integrated all-India basis. The Board has also suggested to the State Governments that they should hold buffer stocks of imported silk, in order to bring down its price and, indirectly, the price of indigenous silk.

Quantum of Protection

To revert to the Tariff Commission's recommendations in respect of the quantum of protection. Since a large part of the indigenous filature silk corresponds to the international 'D' grade, the Commission feels that the quantum of protection required by the industry should be based on the c.i.f. price for that grade. Accordingly, the duty required to bridge the gap between the fair ex-works price (inclusive of allowance for contingencies) of Rs. 31 per lb. of Indian filature raw silk and the landed cost ex-duty of Rs. 24-0-8 per lb. will be 30 per cent. *ad valorem* exclusive of surcharge. As already noted, this recommendation has not been accepted by the Government. It is not clear what considerations have weighed with the Government in arriving at this decision. Perhaps, it feels that any downward revision in import duty on raw silk will hit hard the indigenous raw silk producers. There is no doubt that there is some truth in this contention. But, at the same time, the Government should not overlook the interests of weavers and consumers of raw silk who have been paying very high prices. Further, the quantum of reduction in rate of duty which the Commission has suggested is not so drastic as to result in considerable imports to the detriment of the domestic industry.

The Government of India has also not accepted the Commission's recommendation for a downward revision in import duty on silk fabrics. Evidently, Government must be of the view that silk fabrics are articles of luxury and can, therefore, bear a high level of import duty. Revenue considerations too might have weighed with Government.

DEVELOPMENT OF HANDLOOM INDUSTRY

Further loans and grants for the development of the handloom industry in the different States have been sanctioned by the Central Government out of the Rs. 4 crores earmarked for the development of the industry during the financial year 1953-54.

A loan of Rs. 1,18,750 to the Saurashtra Government has been sanctioned. The Madhya Pradesh State Government has been granted a loan of Rs. 11,37,500, of which Rs. 11,00,000 will be advanced to co-operative societies to provide working capital and Rs. 37,500 will be loaned out to 2,000 weavers for financing their share capital to enable them to join co-operative societies. Another sum of Rs. 4,56,517 has been sanctioned to the Madhya Pradesh State as a grant out of which Rs. 3,50,000 is for payment of rebate on sale of handloom cloth in respect of purchases of not less than Rs. 5 in each case from co-operatives and State-owned depots. A grant of Rs. 2,32,158 has been sanctioned for payment to the Uttar Pradesh Government. A grant of Rs. 1,29,120 has been sanctioned for payment to the Bombay State Government.

A further loan of Rs. 1,62,100 has been sanctioned for payment to the Bombay State Government. Grants totalling Rs. 53,800 and loans amounting to Rs. 1,00,000 have been sanctioned to the Mysore State Government for the development of the handloom industry in that State.

The total of grants and loans sanctioned up to date during the current financial year is Rs. 2,55,85,331. This includes Rs. 1,31,47,231 by way of grants and Rs. 1,24,38,100 by way of loans.

EXPORT OF RAW WOOL

It was announced on 16th November, 1953, that shippers of raw wool who might not have made any shipments during January-June, 1953, but had exported during January-June, 1951, or January-June, 1952, would be considered for export allotments. It has now been decided that such shippers should also be granted export allotments up to 60 per cent. of the shipments effected by them during the period January-June of 1951 or 1952.

In a Press note dated 6th October, 1952, the Government of India had announced that exports of wool waste would be licensed freely for shipment upto 31st December, 1953. As a result of a further review, the Government has decided to extend the free licensing of wool waste for shipment up to the end of June, 1954.

TRADING IN LIVERPOOL COTTON FUTURES
PAKISTAN INVITED TO SEND TRADE DELEGATION TO U.K.

(From Our Special Correspondent)

MANCHESTER, 28th December, 1953

MANCHESTER LETTER

MANY representatives of foreign cotton organisations are expected to be present when the Liverpool futures market reopens on 18th May, 1954.

The opening has been timed to coincide with the International Cotton Congress being held at Buxton to mark the Golden Jubilee of the International Federation of Master Cotton Spinners' and Manufacturers' Associations.

Announcing the news, the Liverpool Cotton Association said that before the date of opening a large amount of work had still to be completed both in finalising details and making statutory changes in the Association's articles and rules.

Mr. A. J. Kentish Barnes, the Association's President, has appealed to members for their support and co-operation, warning them that "any delays caused by failure to pass the necessary resolutions might have serious consequences."

Clearing Contracts

A number of extraordinary general meetings of the Association will be called during the coming months. The proposed new system for clearing futures contracts is to be discussed next week, when an opportunity will be offered to interested members to obtain clarification of any points they wish to raise.

A meeting will be held, a month later, to adopt the principle of clearing all contracts for ...tures delivery through a clearing association ...nd empowering the directors to proceed with ...e necessary arrangements. At the same time, the new American cotton delivery contracts will ...e submitted for adoption. Details of these con...cts will be forwarded to members of the ...ociation within the next few days.

Mr. Barnes, in a circular to members, ...ed out that it was not possible to meet the ... of all in the very many matters concerned ...he opening of the market. "Some of the ...ements proposed may indeed have to be ...d as experimental," he added.

...members, however, were urged to recognise the importance of unanimous decisions to inspire the confidence of the whole trade in the success of the enterprise.

Anglo-Pakistan Trade

Pakistan cotton interests are to be invited to send a delegation to Lancashire to discuss with British cotton industry leaders "lines of immediate action to their mutual advantage."

The newly constituted Lancashire-Pakistan Cotton Committee, set up by the Cotton Board to study what can be done to promote increased use of Pakistan cotton in Lancashire mills, decided to issue the invitation at its first meeting.

Sir Raymond Streat, Chairman of the Cotton Board, who is also Chairman of the Cotton Committee, said it was hoped a delegation would be able to visit Lancashire early in 1954. "It is hoped by encouraging the offtake of Pakistan cotton we shall progressively secure better terms for Lancashire exports to Pakistan," he declared.

Sir Raymond said he believed that trade relations between Britain and Pakistan were of great importance. No section of this relationship was more important than the importation of Pakistan cotton to Lancashire and the export from Lancashire of yarns and piecegoods.

"Increase Efficiency" Call

The importance to the Lancashire cotton spinning industry of shift working, greater efficiency and redeployment have been outlined by Sir John Reynolds, Chairman of Combined English Mills, one of the largest mill groups.

Sir John told the annual meeting of the Company that if every spindle in Lancashire of 30 years of age had to be replaced by a modern spindle, the capital cost to Lancashire would be astronomical and impossible to carry in a harshly competitive market.

"Employers and unions alike must work towards far fewer spindles producing equal, if not greater, weights of yarn by increased efficiency, by redeployment and by the introduction of shift work," he declared. He added: "If we can jointly achieve this end, then a proper balance of capital cost to production can be arrived at and Lancashire will retain its pre-eminent spinning position."

Referring to the advent of the Liverpool futures market, Sir John said it was not likely that the transition from the Raw Cotton Commission's cover scheme to a free Liverpool futures market could be carried through without considerable teething trouble. He said: "Fortunately the trade is at the moment well hedged with reasonably good yarn order books which will prevent any excessive weight of spinners' hedges falling on the new Liverpool market." Nevertheless, he thought that the opening of a market which must at once allow merchants to sell cotton "on call" Liverpool for prolonged periods ahead would be difficult and not easily carried into effect without patient co-operation by the spinning trade and all other potential market users.

Soviet Wants Textile Plant

Types of machinery required for Russian textile mills are to be studied by a team of experts from the Lancashire and Yorkshire textile machinery industry which is to visit Moscow early in the New Year.

Industry leaders are hopeful that the visit will lead to an increase in exports of textile machinery to Iron Curtain countries, but until the team returns from Moscow it is impossible to assess the likelihood of Russian orders being placed in Britain.

News of the mission to Moscow was given by Platt Brothers (Sales), the large textile machinery combine with headquarters at Oldham. It follows, the firm stated, the recent tour of Lancashire and Yorkshire textile plant manufacturing centres by members of a Russian trade delegation and Russian technicians. The Russians are understood to be interested in both cotton and wool textile machinery.

In 11 months this year, Britain's textile machinery industry has exported plant worth over £37,000,000—but only a small amount of it has gone to Iron Curtain countries.

Japan Calls The Tune

A reminder that although order books in Lancashire may be well filled and trade reasonably satisfactory for producers, Japan is drawing steadily ahead in the export field, has been given by the statisticians at the Cotton Board. Dealing with conditions in the international textile sphere during the third quarter of this year, their latest survey points out that by volume the Japanese mills are now well ahead of their export rivals. India and Lancashire shipped roughly equal quantities, leaving the United States a long way behind in fourth place.

Taking cotton and rayon cloth exports together, the situation at the end of nine months was that Japan had exported 945,000,000 square yards, Lancashire 635,000,000 yards and India 493,000,000 yards. The total for the United States for eight months was 569,500,000 yards.

Nor have the gains made by Japan in export trade been at the expense of its home market. Production of yarn and cloth has reached a level very little short of the rate achieved in 1939, and there is no reason to suppose that this trend will be changed. In rayon cloth alone Japanese exports are by volume at least twice as large as those from any other country.

The Position Nearer Home

By delving deep into figures, the Cotton Board has drawn some conclusions about recent developments in Lancashire. Yarn output is said to be running at about 9 per cent. below the peak reached before the 1952 slump. Cotton yarn alone is 16 per cent. lower than the 1951 level but spun rayon and mixture yarn output has increased by 57 per cent. Yet, according to the review staple fibre seems to have reached the limits of its advance, at least for the time being, as output of spun rayon yarns has been stable for some weeks, whereas cotton yarn production has been steadily increasing.

Rather similar circumstances are apparent in the weaving trade, as cloth output in October was also about 9 per cent. below the post-war peak level. Again, cotton fabrics had declined by about 13 per cent., while rayon and mixture cloth production was about 2 per cent. higher. But the increase in output of cotton cloth since the beginning of the year has been much more pronounced than the expansion in rayon goods.

Raw Cotton Imports

Imports into the United Kingdom last week aggregated 16,635 bales, chief arrivals being 8,273 bales American, 2,384 bales Pakistan and 1,455 bales Brazilian.—*All Rights Reserved.*

PROSPECTS FOR U.S. COTTON

ACREAGE CONTROL APPROVED

THE U.S. Government has, since the beginning of the 1953-54 season, shown increasing concern over the increase in the cotton supply in that country and the possible repercussions of such a heavy supply on the price levels, in particular, and the cotton economy, in general. In accordance with the legislative provisions of the price support programme in the U.S., a national marketing quota of 10 million bales (500 lbs. gross weight) and a national acreage allotment of 17.9 million acres was declared in October, 1953. These measures were, as the law requires, submitted to the farmers' vote. In a referendum held in December, 1953, the farmers have approved the marketing quota for cotton and have thereby earned the right to claim support price of 90 per cent. parity.

The law requires that a national marketing quota and a national acreage allotment must be proclaimed whenever the "total supply" exceeds the "normal supply." The official calculation of these which preceded the declaration of marketing quota was as follows:

(In million bales of 500 lbs. each)

"Total supply", 1953-54—	
Stocks as on 1st August, 1953.	5.1
Production 1953-54	15.3
Imports 1953-54	0.1
	20.5
"Normal supply", 1953-54—	
Domestic consumption, 1953-54	9.4
Exports 1953-54	3.2
	12.6
Add 30 per cent. reserve	3.8
	16.4
Excess of total supply over normal supply	4.1

In determining the national marketing quota, the following calculation was made:

(In million bales of 500 lbs. each)

"*Normal supply*," 1954-55—	
(Assumed equal to "normal supply" for 1953-54)	16.4
Carry-over stocks as on 1st August, 1954 ...	7.9
Calculated marketing quota 1954-55	8.5

Thus, the marketing quota, according to the calculation made above, would require only 8.5 million bales to be grown in the 1954-55 season. But a 10-million bale quota was set for that season. This is because the law provides that the national quota shall be not less than 10 million bales, even though, under the present formula, a greater reduction is indicated in order to establish the correct relationship between supply and demand next season. The law also prescribes that the quota should receive the approval of the farmers. If the latter do not approve this restriction, the price support will fall to 50 per cent. of parity; in other words, it will become inoperative.

Escape Clauses

As already stated, the farmers, however, have approved of the quota restrictions. But many members of the U.S. Congress, it is learned, have expressed concern over the present situation and will press for revisions in the present Act to provide some increase in acreage allotments. The Act, as it now stands, provides only two escape clauses whereby the Secretary can order an increase in acreage allotments above those prescribed in the legal formula. The allotment may be increased if it becomes evident that it will fail to produce a normal supply or if there is a noticeable increase in exports so as to alter materially the supply-demand situation. Neither of those provisions can be invoked in the context of the present state of the U.S. cotton economy.

The chief difficulty about marketing quotas is that the farmers would be compelled to turn from the commodity, for which quotas are prescribed, to others on which such restrictions do not exist. Thus, an artificial restriction of output in one commodity reappears as a surplus in other commodities. Since many commodities enjoy the benefit of the price-support programme, the U.S. authorities would still be required to support the prices of surplus products. Be that as it may, the fact remains that, even if the cotton output is restricted to 10 million bales in the 1954-55 season, the total supply of cotton during the season would still be higher than the so-called "normal supply." Thus, the supply in the 1954-55 season would aggregate about 18 million bales (production of 10 million bales together with the carry-over stocks of 8 million bales) as against the "normal supply," as calculated above, of 16.4 million bales. The adjustment of supply and demand in the U.S. may, therefore, extend over more than one season.

Against this background, it will be easy to appreciate the suggestions which have been made for increasing the exports of cotton. Already the Government has worked out a scheme—though of limited applicability—of selling cotton against the national currencies of importing countries. Some interests are advocating the need for an outright export subsidy, which would, of course, mean an additional burden on the general taxpayer. But this suggestion has not so far found favour with the U.S. authorities. Another suggestion that has been made is a two-price scheme, under which the farmers would be permitted to sell a portion of their cotton at world prices and they would be compensated for the difference by a tax collected from American spinners and manufacturers. This scheme is, naturally enough, opposed by the U.S. textile industry. It, therefore, remains to be seen what measures the Government will adopt in order to rectify the surplus position in raw cotton.

COTTON CONTROL

An important issue was raised by Mr. Purshotamdas Thakurdas, President of the East India Cotton Association, when he questioned, in the course of his address at the recent annual meeting of the Association, the need for retaining the control on cotton. At one time, the control on cotton might have been necessary as a "corollary" to the control on cloth prices. Now that there is no control on the price of cloth, it is difficult, as he rightly emphasised, to justify the retention of the control on the price of cotton. He pointed out how, in many countries, the authorities are either relaxing or removing the control on raw material grown by the domestic cultivators. He hoped that the Minister for Agriculture, Mr. R. A. Kidwai, will soon give a correct lead in this matter.

It is difficult to explain the reasons which have prompted the Government to retain the control on cotton when it has removed the control on cloth. If the Government is afraid that the mills might, in the event of decontrol of cotton, be compelled to pay higher prices for their raw material, it is necessary to point out that the industry already enjoys a certain measure of protection in the shape of a complete ban on exports of the varieties of cotton which it needs. Thus, cotton growers are completely at the mercy of millowners. It is true that there will be keen competition among the mills for the available supply of cotton which is less than the requirements of the industry as a whole. As a result of this some marginal mills might find it difficult to buy their cotton requirements as cheaply as they are able to do at present. But this is a risk which must be taken. In any case, it is not the function of cotton control to assist uneconomic units in the textile industry. If the industry deserves assistance, the Government should give it in ways other than at the sacrifice of the cotton grower. Even today he is getting for his produce much less than world prices. In short, no extenuating argument can be pleaded for the retention of control on cotton when the control on cloth has been abolished.

(Concluded from next column)

pressed over the "growing textile inventories in this country and the export outlook". Japan, it is stated, continues to expand its yarn production.

FREE WORLD'S OUTPUT IN 1953

PROVISIONAL ESTIMATES

IT is somewhat difficult to present, at this time of the year, an accurate estimate of world cotton production for the 1953-54 season, since the estimates of output in different cotton-growing countries will take some time more before they are finally formulated. Even so, it is interesting to note that the preliminary estimates, made by the International Cotton Advisory Committee, place the current season's cotton crop of the free world at 28.8 million bales (of 478 lbs. each) or roughly equivalent to the level of the 1952-53 output. But the Committee's figure for the current season is based upon the November estimate of the U.S. cotton output which has been exceeded by the December estimate by nearly 0.4 million bales. This means that the free world's cotton output could be placed higher at 29.2 million bales, as against 28.8 million bales in the 1952-53 season.

In the countries outside the U.S., the cotton output in the current season is placed at a level somewhat lower than in the 1952-53 season. Thus, the output in these countries is estimated at only 12.9 million bales, as compared with the last season's estimated output of 13.6 million bales. The Committee discusses the cotton outlook in the free world in terms of the prospects in the Northern and Southern hemispheres. The two important cotton-growing centres of the Southern Hemisphere are Argentina and Brazil. Planting of cotton, it is stated, is well under way in Argentina and early indications are that the acreage may be expanded somewhat in the current season. Reports from Brazil, on the other hand, are stated to be "conflicting", but, in general, "some reduction in cotton plantings is expected as compared with 1952-53." So far as the Northern Hemisphere is concerned, the only significant reductions as compared with last season are in Egypt and Pakistan where production may go down by 800,000 bales and 300,000 bales, respectively. Prospects have improved in Mexico, where the crop "may be only fractionally under last season's 1,250,000 bales." Referring to India, the Committee says that "production is presently estimated at 3.3 million bales but some trade sources predict an even higher total outturn this season." Cotton acreage is expected to be larger than last season's area in Uganda but is likely to remain the same as last year in Sudan. Private reports from Turkey expect a possible decline in cotton production this season due to reduced acreage.

Turning to the prospects for cotton consumption, the Committee observes that, "at the beginning of a new season, statistical considerations relating to cotton consumption are often complicated by seasonal factors. But it is a fact that, compared to this time a year ago when the textile industries in many countries were only then emerging from a prolonged recession, free world cotton consumption, on the basis of the figures for the first two months of the 1953-54 season, is now running at a somewhat higher rate. In the U.S., however, the daily rate of cotton consumption over the first three months of the present season is slightly lower than the daily average for 1952-53. Available statistics on cotton consumption in Western European countries, it is stated, "seem to reflect the more settled state of the textile industry in this part of the world and in most instances, the 1952-53 rate of consumption has continued into the present season." In India, the Committee notes the concern which has recently been ex-

GREAT EASTERN SHIPPING COMPANY, LIMITED

SPEECH OF MR. A. H. BHIWANDIWALLA AT ANNUAL MEETING

PLEA FOR MORE LIBERAL ASSISTANCE FROM GOVERNMENT

ADDRESSING the shareholders of the Great Eastern Shipping Co., Ltd., at their Fifth Annual General Meeting, held in Bombay on 24th December, 1953, Mr. A. H. Bhiwandiwalla, Chairman, called for "an imaginative and bold outlook and courageous approach" on the part of the industry and the Government, if the country were to have a sizable mercantile marine. For a speedy expansion of the Indian tonnage, he said, the Government should give loans on more liberal terms, namely, a reduction in the rate of interest and longer period of repayment. The expansion of Indian shipping was attended with risks and the industry was, he added, willing to take these risks, provided the Government gave certain assurances. One of these was that no interest would be charged before the shipowners were able to provide for depreciation, as allowed by the income-tax authorities, out of their earnings. Mr. Bhiwandiwalla also desired that, while fixing the prices of ships built at the Hindustan Shipyard, the Government should take into consideration the world competitive prices, instead of the U.K. parity price.

The following is the full text of Mr. Bhiwandiwalla's speech:

"GENTLEMEN,

"As usual, I have the privilege of addressing you at this annual meeting and placing before you a review of some of the problems of the shipping industry, in general, and your Company, in particular.

All-round Progress

"The report and accounts which have already been circulated are in your hands for some time now and will have shown the satisfactory progress made by the Company during the last five years since its inception. Some of the features of this progress can be stated here briefly. The deadweight tonnage has increased from 10,680 during the first year to 35,646 as of today. The gross freight earnings have risen from about Rs. 40 lakhs in the first year to about Rs. 90 lakhs during the year under review. Your figure also compares well with the gross operating earnings of about Rs. 93 lakhs made during the previous year. Your ships lifted a cargo of 440,128 tons during the year under report, as compared with 152,763 tons lifted in the first year. In the first year, dividend at 5 per cent. was declared. Thereafter, the dividend has been steadily maintained at 10 per cent. Although issue of bonus shares by capitalisation of reserves and issue of partly paid shares have entailed additional dividend payment, the rate of 10 per cent. has been maintained. The profits have also been maintained at a higher level, although the progressive increase in profits does not look so spectacular, because of the provision of considerable initial and normal depreciations during the period of rapid expansion. However, the higher depreciation provision in the initial years not only make for relief in taxation in the comparatively good period but also require lower provision of depreciation in later years which may or may not be as good as the present times. This, in my opinion, will tend to maintain a compartively stable rate of dividend. It is hoped that you will also appreciate the policy of the management in ploughing back the profits for expansion and thereby increasing the earning capacity of the Company. The paid-up capital of Rs. 40 lakhs and the loan liability to Government of about Rs. 27 lakhs total up to Rs. 67 lakhs, while the cost of your fleet at present is Rs. 162 lakhs. I am glad to be able to say that your fleet at the current market prices can be valued at as much as, if not more than, the original cost at which the ships were acquired regardless of the considerable depreciation provided for and set aside.

Government Assistance to Shipping Industry

"The successful implementation of the Five-year Plan will take the country far on the road to economic well-being and prosperity and the Government is rightly anxious for the success of the Plan. This anxiety on the part of the Government is also, I am glad to say, manifest in regard to the planned expansion of the shipping industry. The Planning Commission envisaged the attainment of six lakhs gross registered tons by 1956. This target compares unfavourably with that of 20 lakhs gross registered tons recommended by the Shipping Policy Sub-Committee a few years ago, having regard to the long coastline of about 3,500 miles, volume of coastal and international trade, contribution of freight receipts to the nation's balance of payments position and, above all, defence and strategic considerations. A gross registered tonnage of 6 lakhs is, however, the practicable minimum requirement which must be achieved before 1956, at all events. If the country is to have a sizable mercantile marine, an imaginative and bold outlook and courageous approach, both on the part of the industry as well as the Government, is called for. Your Company very keenly shares the anxiety for expansion of Indian tonnage. It has participated in a general way in the deliberations of the Consultative Body of Shipowners and has also discussed its own plans for expansion with senior officials of the Government. The shipping industry has requested the Government to liberalise the terms of loans to be granted by the Government for purchase of tonnage. Especially reduction in the rate of interest and longer period of repayment are very urgently called for to speed up expansion of tonnage. From the available indications at present, it appears that the Government has awakened to the necessity of liberalisation of the extent and terms of loans.

"It is very difficult to forecast the future. The speedy expansion by Indian shipping companies is not without risks. The shipping industry is willing to take these risks, but it is for the Government to assure the industry that these risks will not be allowed to jeopardise the industry's future. One of the ways of doing this is to give categorical assurance that no interest would be charged before shipowners are able to provide, out of their earnings, for depreciation as allowed by the income-tax authorities. If the Government wishes to accelerate additions to tonnage, in order that an adequate merchant marine can earn valuable foreign exchange and can also serve as a second line of defence in emergencies, it is but fair that heavy burden of interest payments before providing for adequate depreciation is not thrown on the industry, in case the future, for no fault of the industry, turns out to be unfavourable, because of international circumstances. It is hoped that the Government will give this assurance and impart a fillip to the expansion of tonnage.

Hindustan Shipyard

"As I pointed out to you last year, shipping companies are being subjected to indirect pressure, in order that they may place orders with the Hindustan Shipyard. This pressure has increased this year. It is fully appreciated that the yard must be kept busy and placed on a stable footing. By agreeing to pay the difference between the cost of building at the yard and U.K. prices, the Government has accepted the principle that Indian shipowners should not be required to pay more for their ships than others. It is now essential that the Government should adopt the concept of a world parity price instead of U.K. parity price in fixing the prices of ships built at the Visakhapatnam Yard. Not only the prices in the U.K. but also the competitive prices prevailing in other shipbuilding countries, such as Holland, Germany, Denmark, Sweden, Japan, etc., should be taken into account in determining the selling price of ships.

"May I also suggest that, as Indian shipping companies have already started placing orders with the Hindustan Shipyard, they be allowed representation on the Board of Directors of the yard. This can be achieved, if the Government nominates a few Directors on its Board as representatives of the shipping industry. This will not only ensure better co-ordination between shipbuilding and shipping industries but also create confidence among the shipowners that their interests will be fully safeguarded. Being better acquainted with the needs of the shipping business they will be able to influence the policy and programme of the yard so as to serve the interests of shipping in a better way. Their business experience and commercial outlook may also help in reducing the cost of production and increasing the business efficiency of the yard.

Coastal Conference

"The Scindia Steam Navigation Company's resignation from the Indian Coastal Conference as a protest against malpractices resorted to by some steamship companies constitutes a development of a magnitude which cannot pass unnoticed. Your Company strongly disapproves of malpractices and unhealthy tactics and is in favour of supporting any move which will eliminate such tendencies harmful to Indian shipping. It is not, however, by going out of the Conference, but by making the Conference more effective, that such malpractices can be checked and put a stop to. The manifestations of unhealthy competition which is not widespread, but restricted to a few erring members of the Conference, can be completely eliminated by devising suitable ways and means and enlisting the Government's support in curbing the unfair practices. It is earnestly hoped that a solution on these lines would emerge, as a result of discussions between the members of the Conference, and result in the withdrawal of the resignation by the Scindia Company. I would also appeal to the Scindia Company not to press their resignation and remain in the Conference, so that a more effective Conference can maintain self-discipline and a fair code of conduct.

Trade Between India and Persian Gulf

"As some of you may be aware, a long established British Line has monopolised the carrying trade between India and the Persian Gulf. It is desirous of preserving this monopoly for all time to come. Any other Line wishing to enter this trade is threatened that its entry into this trade will be resisted by all means. The British Line argues that, since it has served this trade in the past, it cannot allow anyone else to participate in the trade. It is hoped that the Line concerned will realise the untenable position of a British Line monopolising the trade either emanating from or destined to India and allow Indian Lines to share in this business. The Government of India is already committed to the principle that 50 per cent. of the imports and exports of the country must be carried in national bottoms and any monopoly which tries to exclude Indian interest cannot be allowed by the national Government. The Government of India cannot be expected to remain aloof, if a powerful British Line with huge resources tries to oust Indian Lines from this legitimate Indian trade by cut-throat competition. The British, as a race, are known for their hard-headed business realism and it is hoped that the Line would allow a fair participation to Indian Lines desiring to cater for this trade.

Coastal Employment

"With an increase in our tonnage and contemplated expansion by purchase of more ships your Company can reasonably hope to get an increasing share in the carriage of Government cargoes. In my opinion, your Company's share in the carriage of coastal trade during the year 1954, should be increased to about 25 per cent. Although our fleet is comparatively small, our tramping activities and the gross earnings in tramp trading were the highest amongst Indian companies last year. Tramping is a sale of freight on a highly competitive basis. In the past, we had to carry out many tramp voyages because employment on the coast, especially in regard to availability of Government cargoes, such as coal, was restricted. It is felt that Lines with bigger fleets and greater experience should branch out in overseas trades and give more scope on the coast to new entrants like us. After all, the coastal trading is a nursery in which new small companies can develop and, after acquiring the necessary experience, extend their activities to competitive overseas trades. In years to come, your Company's turn to look to foreign trading in order to make room on the coast for new entrants will come. It is the only way to develop a number of sizable and economic units in the shipping business. It is no secret that protected coastal trading is 'softer'

(Continued on page 25)

EXPANSION OF SUGAR INDUSTRY

VAST SCOPE IN SOUTH INDIA

REVIEWING the developments in the Indian sugar industry during the 1952-53 season, we observed in our 1953 *Annual Review Number* that, in the next few years, the rated capacity of the Indian sugar industry would be found to be too inadequate fully to meet the domestic requirements. This conclusion was based on three premises, namely, rapid rise in population, migration of people from villages to urban areas and improvement in the general standard of living. This view seems to be widely shared by a large section of the sugar industry and trade. Mr. A. G. Bandi Gowda, Chairman and Managing Director of the Mysore Sugar Company, Ltd., for instance, remarked, in the course of his address at the twentieth annual general meeting of the Company held at Bangalore the other day, that "the unexpected and somewhat distressing development of India importing sugar from abroad" should open the eyes of all concerned with the development and well-being of the industry to ponder and see how best the periodical crisis that faced the industry could be avoided.

Evidently, Mr. Bandi Gowda must have had in mind the need for augmenting the indigenous sugar production with a view to doing away with imports of foreign sugar at the cost of precious foreign exchange. The mere availability of sugar in foreign countries at a cheap price should not be the main reason for importing sugar, though there is need for improving the efficiency of sugarcane production. Imports are justified only as a temporary measure for keeping the price of sugar within reasonable limits, that is, limits which are within the reach of the common man. The real solution lies in expanding production of sugar at lower prices. This requires not only adoption of methods for increasing the per acre output of high sucrose content cane but also an expansion in the productive capacity of the industry in those areas of the country which are best suited for growing cane.

Low Target

It may be noted here that, considering the increase in the "sugar-tasting habit of the people of this country," the target of 1.55 million tons in the rated capacity fixed for 1955-56 by the Planning Commission is rather low. The force of this contention would be realised better, if it were to be remembered that the sugar industry is a seasonal one, the level of output being influenced, to a considerable extent, by conditions obtaining on the agricultural side. To quote Mr. Bandi Gowda:

"My own reading of the situation is that fluctuations in production and consumption of sugar are inevitable. The sugar industry is a seasonal one. Its dependence on agriculture is so complete that it has very little freedom in the matter of utilisation of raw material or regulation of production. The state of sugarcane cultivation and its supply, which, in turn, depends upon monsoon conditions and irrigation facilities, the supply and demand of *jaggery* and its price level—all these factors have such an intimate bearing on the sugar industry that there is no wonder that it is often unable to maintain steady conditions or proceed on a planned basis."

The scope for expanding the sugar industry, especially in the tropical area of South India, is very good. This is so for two reasons, namely, favourable climatic conditions for cultivation of sugarcane and wide gap between actual production and requirements. That the tropical conditions of South India are more suitable for cane development than the sub-tropical climate of North India will be clearly evident from some of the figures furnished by Mr. Bandi Gowda about his own sugar factory. The recovery percentage of sugar in cane crushed by the Mandya factory during 1952-53 was as much as 11.37—in the previous season, it was still higher at 11.61—which compares very favourably with the averages of 9.75 and 10.03 for U.P. and Bihar. The duration of the crushing period was 195 days, as against 118 days in both U.P. and Bihar. The maximum figure for the whole of India was 196 days. The rate of daily crush was maintained at a high level and, on many days, it touched the 1,800-ton mark.

As already noted, South India is heavily deficit in sugar. As Mr. Bandi Gowda pointed out, there is scope for expanding the industry in this part of the country. The latest proposal to establish a sugar factory in Shimoga District in Mysore State is, therefore, to be widely welcomed. The proposed factory, it may be noted, is quite different from the one which the Mandya Sugar Company was interested in promoting.

Considering the need for augmenting sugar output, the efforts of the management of the Mysore Sugar Company to implement the scheme for expansion are indeed commendable. According to the Chairman, the scheme envisages rearrangement of the existing machinery, erection of new ones and large-scale alterations incidental to the expansion scheme. It also envisages installation of an additional boiler and a new turbine. Most of the additional machinery ordered for the purpose has already been received. With the successful implementation of the scheme—this is expected to be over by July, 1954—the cane-crushing capacity of the factory will be increased to 2,000 tons per day. The factory, it is stated, will then easily handle not less than 400,000 tons of cane and produce about 45,000 tons of sugar per annum. Indeed, as Mr. Bandi Gowda claimed, the Mandya factory will be the largest single sugar-producing unit in the whole of India and will be able to make a substantial contribution towards meeting the sugar requirements of South India.

SUGARCANE PRICES

The all-India average price of sugarcane (including co-operative societies' commission, transport charges, etc., but excluding cane cess) paid by the factories during the month of November, 1953, was Re. 1-8-2 per maund, as against Re. 1-6-3 paid in the corresponding month in 1952. This increase in price is the result of the upward revision in the minimum price of sugarcane from Re. 1-5 to Re. 1-7 per maund effected by the Central Government. The portion of the total price actually received (cash or deferred or both) by the grower was Re. 1-6-7, which is As. 2 higher than the price received a year before.

The following are the average prices of cane (per maund) paid by the sugar factories in the different regions during November, 1953, as compared with the corresponding month in the previous season:

	Delivery at Factory		Actually received by grower	
	Nov. 1952	Nov. 1953	Nov. 1952	Nov. 1953
	Rs. a. p.	Rs. a. p.	Rs. a. p.	Rs. a. p.
All-India	1 6 3	1 8 3	1 4 7	1 6 7
U.P. ...	1 6 10	1 8 3	1 4 5	1 6 7
Bihar ...	1 5 6	1 7 6	1 4 2	1 6 0
Bombay	1 7 6	1 9 0	1 5 0	1 9 11

SECOND ESTIMATE OF SUGARCANE

The all-India second estimate of sugarcane crop of 1953-54 places the current year's acreage and production at 4,101,000 acres and 5,100,000 tons (in terms of raw sugar or *gur*), as against the adjusted second estimate of 4,228,000 acres and 4,990,000 tons, respectively, for 1952-53. The current year's estimate thus shows an increase of 2.2 per cent. or 110,000 tons (in terms of *gur*) production over last year, in spite of decrease of 3.0 per cent. or 127,000 acres in area.

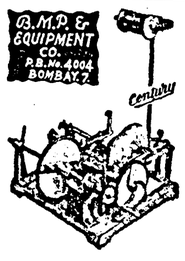
The standing crop has been reported to be good in Uttar Pradesh, Madras and Andhra, and these States have mainly contributed to the increase in production. Bihar has reported a decline both in area and production, mostly due to adverse weather conditions.

SUGAR PRODUCTION AND STOCKS

The opening stock of sugar with factories in India on 1st November, 1953, was 196,000 tons, as against 496,000 tons on the corresponding date of the previous season. Arrivals of foreign sugar in November aggregated 36,000 tons and 156,000 tons are expected to arrive in December, 1953 and January, 1954.

Out of the stocks with the mills, 45,000 tons of sugar were despatched during the fortnight ended 15th November, 1953, as against 39,000 tons a year before. The closing stock on 15th November, 1953, was 154,000 tons, as against 464,000 tons on the same date last year.

The total production of sugar during the first fortnight of November, 1953 was 3,000 tons, as against 7,000 tons during the corresponding fortnight of the previous season.



LIGNITE IN SOU[TH]

CHANCES OF DEVELO[PMENT] PROMISING

THE paper presented by Mr. A. R. Na[rayana] Rao, Superintending Engineer, M[adras] Electricity Department, and a member [of the] Lignite Expert Committee, on lignite deposits in South Arcot, to the annual general meeting of the Institute of Engineers (India), Madras Centre, held on 27th December last, gives a fund of *information* on the possible influence of economic exploitation of lignite in South Arcot on power and industrial development in South India. Mr. Rao is of the considered view that the lignite deposits are a godsend and that they require imaginative exploitation to be of the maximum benefit to South India. He has catalogued the important by-products that can be obtained out of lignite and their utility for various purposes.

The lignite bed is situated in South Arcot District in a place called Neiveli. The area so far proved to contain lignite, according to the paper, is 100 sq. miles and the average width of the prospected field is about 6 miles and its length 17 miles. The thickness of the bed varies from 13 feet to 90 feet, the mean thickness being about 37.75 feet. The estimated total quantity of lignite is about 2,000 million tons. The lignite occurs between clays of soft sandstone, known as Cuddalore sandstone, and exhibits itself in four different forms, namely, peaty, woody, brown coal or lignitic and coaly. The lignite field is bounded on the north by the river Gadilam, on the west by the Manimuthar and on the south by the river Vellar.

The progress on the pilot scheme, to obtain necessary data for mining lignite, has been encouraging so far; a depth of about 60 feet has been reached and nearly 40 per cent. of excavation made. The original fear of serious water percolation has not been experienced. The scheme, estimated to cost Rs. 80 lakhs, involves an open excavation of an area of about 600 ft. by 600 ft. at surface and 100 ft. by 100 ft. at the lignite level, the sides stopping down in steps of 20 ft. to 30 ft. wide. A 100 ft. by 100 ft. lignite bed will yield about 20,000 tons.

By-products

The important by-products are char (after carbonisation), lignite tar, pitch, lignite [wax], montan wax, china-clay, among others. The char looks like charcoal and easily burns in domestic stoves; it has good staying power, can also be used as fuel for charcoal burning, can be powdered and burnt as pulverised fuel in a boiler. It can be transported in briquette form over long distances by rail for burning in different types of furnaces or boilers. Provided good road surfacing material and its present value is about Rs. 400 per ton. Lignite oil is similar to crude oil. The oil, by fractional distillation, can yield about 50 per cent. of itself as creosote oil and other lighter oils. Creosote oil is useful for wood preservation and, with hydrogenation process, for the manufacture of petrol. It will also be a basic raw material for many chemical industries. Montan wax is extensively used for electrical insulation. It is also used as a basic ingredient in furniture polish and ammunition manufacture. The present selling price in America of this material is about Rs. 1,000 per ton. China-clay can be utilised in making high quality refractory bricks, procelainware and electrical insulators. Good china-clay is in demand by the textile, paper and rubber industries.

The paper discloses that, by mixing a suitable quantity of lignite with the concentrate iron ore of the Salem iron ore hills, situated about 100 miles from Neivell, it is possible to get a mixture which can be easily briquetted. And these briquettes, subject to low temperature carbonisation, are stated to facilitate the reduction of iron ore to almost pure iron. Raw lignite is also suitable for being powdered and burnt in rotary cement kilns.

The economic exploitation of lignite deposits will help generate electricity in quantities larger than now. The generation of thermal power in South India is limited, because of high cost of transport of coal. Fortunately, the lignite deposits are almost near the heart of the centre of gravity of the load on the Madras grid. This will result in prosperity to the community by the development of industries that will follow the availability of power. It is gratifying to note that the establishment of a large super thermal power station at Neivell, of the order of about 200 million watts, is already envisaged and is under consideration.

FUTURE OF NATURAL RUBBER

VIEWS OF SOME LEADING FOREIGN PLANTERS

THE world price of natural rubber No. 1 R.S.S. spot wound up the year 1953 at 17¼d. per lb., as compared with a low of 16d. touched in the latter part of October last. Although the year's closing was a little better than the lowest for the year, it shows a sharp fall from the corresponding price of 26½d. per lb. for 1952. This loss in value has had a serious effect on the economy of South-East Asia in general and on rubber producers, in particular. The recovery since October last was the result of Indonesia's move to resume sale of rubber to Communist China. The pace of recovery was accelerated further by the optimism of traders that the U.S. authorities would put into effect the suggestion made in the U.S. and the rubber-producing countries of South-East Asia for suspension of the U.S. Government's stockpile rotation programme and for expediting the sale of synthetic plants to private industry.

The basic cause of most of the trouble of natural rubber during 1953 is attributed to the reactivation of the alcohol plants at the end of 1952, the high cost output of which was sold at the price of petroleum G.R-S at the rate of about 10,000 tons a month till they were closed down again in August. Commenting on this, Sir Eric Miller, Chairman of the Board of Directors of Messrs. Harrisons and Crosfield Ltd., told the shareholders of the Company, at their recent annual general meeting, that had this extra weight of synthetic not been pushed on the market, the natural rubber producers would have had that much extra buying of natural rubber which would have prevented the price from becoming so depressed and have put the stock position on a much healthier level ere this.

Sir Eric Miller's address also contains some noteworthy observations about the future of natural rubber. Referring to the assurance given by American rubber manufacturers in May last and reaffirmed in October about the consumption of natural rubber in the next twelve months, Sir Eric pointed out that the actual demand was not as yet sufficient to take care of the quantities of rubber coming to market from day to day. "In a falling market," he added, "it is natural for consumers to eat into stocks and to keep their purchases of new material to the barest minimum. That is why, when they find business is holding up better than the prophets had forecast, we are liable to see a much stronger buying wave than is at the moment apparent. This phenomenon is not peculiar to the rubber industry."

The lower price and greater freedom of usage have, however, had their effect on the relative proportions of natural and synthetic rubber being used by American manufacturers. The consumption of natural rubber in the U.S. during the first half of 1953 was 39.6 per cent. of the total U.S. absorption. By October it rose to 44 per cent. and, according to Sir Eric, it would before long reach 50 per cent. This switch-over has taken place, despite the fact that oil extended synthetic is available at several cents a pound less than G.R.S. Sir Eric did not expect the swing-over from one to the other to happen overnight, but once it had been made, it was likely to be of some duration, until the differential of cost moves too far the other way

Another factor on which the outlook of natural rubber depends is the future of U.S. synthetic plants. The U.S. Government has already appointed a Commission to direct the sale of the U.S. Government's synthetic plants to private industry. The Commission announced that it would accept bids from 25th November, 1953, to 27th May, 1954, for 27 of the plants. The Commission would spend seven months negotiating with bidders to arrive at final offers. It would submit its report, along with the contracts, to the Congress before 31st January, 1955. The Congress may veto any or all of them, but contracts neither vetoed nor withdrawn will become effective on 30th April, 1955, provided they cover sale of sufficient capacity to produce 500,000 long tons annually of G.R-S synthetic rubber and 43,000 tons of butyl synthetic. Thus, it looks as if the natural rubber industry will have to wait another eighteen months before it can take the measure of any free-enterprise synthetic competition, as distinct from the present Government-owned industry.

There seems to be some speculation about the cost and selling prices of natural rubber when the synthetic rubber plants are handed over to private industry. Some knowledgeable people expect them to rise, but Sir Eric Miller does not seem to be so dogmatic. For he said that it depended on many factors which were by no means static. He added: "There is, of course, the possibility that satisfactory contracts for the sale of facilities covering the stated minimum production, may not be concluded, in which case presumably the U.S. Government would continue to be responsible for the synthetic industry. In that event, one can hardly conceive private enterprise setting up production facilities with its own money in competition with the U.S. Government."

In spite of the present critical situation in the rubber industry, there is a section of planters which holds that natural rubber has a bright future. Thus, in his address to the shareholders of the Anglo-Indonesian Plantations at their annual meeting held recently, Mr. G. C. Denham, Chairman of the Company, said:

"Despite the present grievous position of the rubber industry we feel that it still has a future and that the demand for natural rubber will materially increase in years to come, when vast undeveloped countries will be well-roaded and be users, to an enormous extent, of motor transport. If the past is indicative of the future, there should be an ever-increasing demand."

A similar sentiment was expressed by Dr. W. E. Cake, an Executive Director of Malayan American Plantation, in a statement issued in Sydney a few weeks back. According to him, the world price for raw rubber would rise by about 25 per cent. in the next six months. He expected the world demand for raw rubber in the next six months to force the price up from the present 19 cents to 24 or 25 cents a pound.

The views of Sir Eric Miller, Chairman of Messrs. Harrisons and Crosfield, Ltd., on this subject, are also identical. He said: "We have been interested in the production of natural rubber for 50 years and our faith in it is undimmed by any claims made for general-purpose synthetics." Explaining his reading of the future for latex, he remarked:

"The offtake of concentrated natural latex is growing apace in all consuming countries and the merits of foam rubber upholstery are so outstanding that I look for further steady expansion in its use. The research teams working in the industry, of whom those employed by manufacturers far outnumber those employed on behalf of producers, are busy all the time to improve existing and to find new uses for rubber in solid or liquid form. It would be a thousand pities, if the present financial stringency in South-East Asia were to result in any serious curtailment of expenditure on research for and development of new uses. The graph of world consumption of rubber over the years shows that minor fluctuations are speedily ironed out and that there is no stopping the progressive steady rise in the use of this versatile material."

In conclusion, it may be mentioned here that the U.N. experts, who recently explored the possibilities of expanding trade between Asia and Europe and whose findings were released early this week, are of the view that world demand for rubber will continue to increase, accompanied by an expansion in synthetic rubber production as well. In order to meet this competition, natural rubber producers, according to them, will have to resort to considerable investments to secure increased yields, and improvement in production marketing.

PROMOTION OF ... SALES IN U.S.

RESULTS ENCOURAGING

THE promotion programme for burlap in the North American Market, sponsored and financed by the I.J.M.A. through the Export Council, seems to have yielded some good results. The Burlap Council, it will be recalled, was organised in New York, following the recommendations of a delegation of the I.J.M.A. which toured the U.S. a few years ago. It was formed "to embrace the help of domestic importers and manufacturers of burlap and burlap products in a long-range promotion programme to restore burlap to its rightful place as a versatile and cheap textile in the American economy." While the programme is entirely financed by the I.J.M.A., it has the active co-operation of the representatives of burlap importers, bag manufacturers and the second-hand bag industry in the U.S. in formulating and directing details of the effort.

In its promotion programme, the U.S. Burlap Council seems to have been considerably assisted by (a) the improvement in the competitive capacity of burlap following the Government of India's reduction in the export duty on hessians from Rs. 375 to Rs. 120 per ton, (b) increase in supplies of jute goods, and (c) the vigorous publicity drive conducted by its public relations branch in the U.S. According to Mr. William A. Nugent, Vice-President of the Council, the combined effect of these factors seems to have yielded good results in regaining the American market. He observes: "By 1952 a sharp recovery was shown by consumption of 825 million yards including 75 million yards on Government account. This represented a gain of 52 per cent. over the low point of 1951. This trend has continued during the current year (1953) and when final figures are compiled, the 825 million total for last year should be equalled. With a substantially lower demand for Government consumption, this year commercial consumption will show a gain of 11 per cent. over last year."

The significance of this recovery will be evident to those who are aware of the importance of U.S. market to the Indian jute industry. This market accounts for about 64 per cent of the burlap output of mills. It has a close bearing on the economy of India as a whole, inasmuch as it accounts for about 26 per cent. of India's total dollar earnings. In addition, its effect on industrial employment in India may be appreciated by the fact that the jute mills employ about 300,000 people which is equivalent to approximately one-tenth of the industrial population of India. Beyond this, the cultivation of jute is a vast agricultural enterprise in India, and the mills in Calcutta consume the great bulk of this agricultural output.

The consumption of burlap in the U.S. market depends largely on packaging for agricultural purposes which accounts for about 80 per cent. of the fabric imported. The remaining 20 per cent. is used in a wide range of industrial furniture, upholstery, draperies, the automobile industry, concrete curing blankets and other industrial users of yard goods. In the packaging field, the development of the multi-wall paper bag has been a serious and growing competitive development which got its start largely because of an abnormal price advantage.

The programme now being conducted by the Indian Jute Mills Association through the Burlap Council to recover the lost U.S. market involves a national advertising campaign in both trade and farm publications. These publications draw the attention of consumers to the fact that supplies are again abandant and prices have returned to virtually pre-war levels. Emphasis is being laid on the economic and physical advantages of burlap as a cheap heavy duty textile for the consumer. Literature stressing the economy of proper handling and care of empty burlap bags has been offered to consumers through advertisements in leading farm papers. Studies are being initiated for successful exploitation of industrial markets which require special varieties of jute fabrics. The Burlap Council has also taken positive steps to maintain goodwill with consumers and its trade relations activities have been conducted with this in view.

Farm women are also being taught how to wash, dye and make things out of empty burlap bags in a wide range of brilliant colours. Eight-page illustrated booklets on this novel handi-

(Continued in previous column)

(Concluded from next column)

craft are being distributed among them. This campaign is being conducted by the Council in partnership with Park and Tilfor Co., manufacturers of "Tintex Dyes." Commercial television is also being used for the purpose of educating the domestic consumer regarding the use of jute fabric for home decoration purposes.

Nevertheless, jute goods are still on trial in the U.S. In this context, the words of Mr. Nugent are worth noting. Reviewing the position of burlap, he says: "The future of jute in the American market and its prospect of keeping abreast of the spectacular expansion of the American economy is on trial in the court of competition. The verdict will be rendered by consumers, and their decisions will be reached on the basis of the ability of the jute industry to keep pace with American marketing methods and the constantly changing requirements of American consumers for new and better products."

TROMBAY THERMAL PROJECT

CONTROVERSY REGARDING CAPACITY STILL PERSISTS

THE statement of Mr. M. M. Naik Nimbalkar, Minister for Public Works, during question hour in the Bombay Legislative Assembly, on 22nd December last, that the Tatas were responsible for the delay in the grant of licence for the Trombay Thermal Project, came as a surprise to us. More so, his allegation that it was the Tatas who raised the unfortunate controversy regarding the capacity of the thermal station and that it was they who wanted to modify the original agreement, providing for the installation of only one unit of 50,000 kw. and the second unit at a later stage, according to requirements. He further declared that the Government would grant permission for the immediate installation of the second unit, provided Tatas were willing to forgo the compensation for it, if and when it were to remain idle following the implementation of the Koyna Power Project.

To those who are intimately aware of all the developments in general, the absurdity of the Minister's statements will be apparent, but laymen are likely to be misled. The Managing Agents of the Tata Hydro-electric Companies, therefore, did well in issuing a statement explaining the whole position. It will be seen from this statement that, as early as in June, 1952, the Government of Bombay had agreed to the installation of a thermal station at Trombay, with a maximum capacity of 100,000 kw. The first unit was to be of 50,000 kw. and the subsequent unit or units were to be ordered and installed "according to the requirements of the system, and in consultation with the Government." Tatas were asked to proceed with the preliminary arrangements for the execution of the project in anticipation of formalities being completed. They, accordingly, engaged consultants, selected the site and planned the station. Application was made to the Government of India to sanction additional capital needed and to sponsor a loan from the World Bank. In August, 1952, the Tata Hydro-electric Companies sent to the Government for approval a draft notification for the extension of the hydro-electric licences of the Companies up to 1975, as this formed an integral part of the agreed arrangement and was necessary for enabling the Companies to raise additional equity capital. In November, 1952, the Companies sent to the Government for approval a draft licence for the thermal station. In January, 1953, the Government convened a meeting, where agreement was reached on the principal provisions of the Trombay licence and the extension of the hydro-electric licences. Tatas contend that it is clearly stated in the agreed minutes of that meeting that the arrangement referred to in June, 1952, was reaffirmed and that, in carrying out the arrangements, Tatas requested the Government's approval to the installation of a second unit, because "the requirements of the system" could, in their opinion, be satisfied only by setting up this second unit by 1957.

Final Agreement

We are told by Tatas that, at no stage during these discussions, or subsequently, was the agreement regarding the capacity of the Trombay Station modified. Nor did Tatas ask for any modification. It is true that the Government sought to alter the agreement regarding capacity in its revised draft of the Trombay licence. But, when these documents were finalised, at the Companies' instance, the provision regarding the capacity contained in the original agreement of June, 1952, was restored.

It will be seen from the foregoing account that the dispute over the size of the Trombay Station has arisen, because the Government of Bombay changed its mind subsequent to the understanding reached in January, 1953. Mr. Naik Nimbalkar's statement is not clear as to why the Government did so. In any case, it is hard to believe that the Bombay Government is more competent than the experts of Tatas, the other electrical undertakings in the country, the World Bank and the Planning Commission in estimating the future power-load in the Bombay-Poona region. Neither the past actions of the Government, nor the present administrative talents of the powers-that-be in this State, inspire confidence in their ability to deliver the goods in time. That the Government is merely burking the issue is clear from its failure to answer in detail the various points raised by the Federation of Electricity Undertakings.

That Tatas were in no way responsible for the delay will be evident further from the following facts:

It was only in October, 1953, that the Government's revised drafts of the two licences were received. This was 14 months after the Companies had submitted their draft for the modification of the hydro-electric licences of the Tata Companies, 11 months after forwarding the draft of the Trombay licence and nine months after the meeting of January, 1953, at which outstanding questions concerning the Trombay licence and extensions were settled. The licence and the agreement were actually signed and isued in November, 1953. Why did the Government take such a long time to do this? If it had sent its revised drafts, within a reasonable time, after the meeting of 19th January, 1953, the licence could have been finalised at least six months earlier than was done. Thus, the delay was clearly due to the Government's go-slow policy.

The Minister's statement that the Government was willing to grant permission for the immediate installation of the second unit, if Tatas were willing to forgo the compensation on that unit, while it remained idle on the advent of Koyna hydro-electric power, is a mis-statement, for, as Tatas rightly point out, there is no question of their asking for any compensation. As readers are aware, all electrical undertakings are rigidly controlled by the Electricity (Supply) Act, 1948. Under the provisions of the Act, an electrical undertaking must so arrange its tariff as to limit its profit to a net return of 5 per cent. In practice, however, this 5 per cent. has been found too low to attract fresh capital for expansion.

Standing Charges

The Act provides that, where companies work under a grid system and if certain units have to be closed down, the standing charges of those units, including the cost of maintaining the units as standby and the above 5 per cent. return, have to be met out of the general tariff of the grid. The Government's proposal would mean that, though the companies would have to meet the interest charges on the World Bank loan for financing the second unit, maintain the plant as a standby, incur depreciation and other charges on it, they would not be permitted to recover any of these charges in supplying electricity. If the companies were operating under a system of private enterprise, where they could charge a proper economic rate for electricity and provide adequate reserves, one could understand such a proposal, but the present conditions and the regulations of the Supply Act rule out this possibility. Indeed, the proposal lacks an understanding of the present-day difficulties in obtaining fresh capital for expansion, particularly in the case of electrical companies. No share capital will be available to the Companies on the basis outlined by Government. What makes the proposal even more unreasonable is that, even if the demand for the second unit were completely established and the second unit were operated for a number of years before Koyna came into existence, the Companies would have to forgo these standing charges for the time the unit remained closed. It is worth noting here that Tatas readily accepted the proposal of Government that, as and when Koyna power was available, the thermal units such as Trombay should be closed down, even though the integrated tariff rate of the Tata electric system might be lower than that of Koyna. Moreover, since the consuming public have accepted the need for the second unit and are willing to bear the cost of it, it is difficult to understand Government's opposition.

The dangers of the present dog-in-the-manger policy of the Government will be evident from the following quotation from the statement issued by Tatas:

"The Tata hydro-electric system has been overloaded for the last several years, with the result, that the normal overhaul of generating units at the hydro-electric stations has had to be deferred, with a consequent risk of a major breakdown. The only solution is to provide adequate thermal reserves. A single unit of 50,000 kw. will not meet the growth of current demands, much less provide this reserve. Unless, therefore, even at this late stage, there is a reconsideration of Government's decision, it appears that the power shortage from which Bombay has been suffering will continue till 1960-61. This shortage has already resulted in the denial to industries of power for their schemes of expansion and has prevented new enterprises, which would have provided additional employment to a substantial number of workers, being set up in the region. Further, the Government's policy also represents a gamble on rainfall and, if that proves wrong, it might easily result in a severe loss to industry, distress to labour and inconvenience to the general public."

It is high time, therefore, that the Government listened to the advice of experts and revised its policy as suggested by them.

RESEARCH IN ENERGY

NEW BUILDING FOR TATA INSTITUTE

LAYING the foundation-stone of the building to house the Tata Institute of Fundamental Research and Atomic Energy Commission, India, in Bombay, last week, Mr. Jawaharlal Nehru, Prime Minister, emphasised the importance of carrying out research in the use of atomic energy for peaceful purposes. Deploring the secrecy surrounding every nation's plans to develop this energy, he held that too much of secrecy in science was "not a very good thing." So far as the Institute was concerned, he declared that there was going to be no secrecy about the work carried on in it, except in an emergency and to the extent necessitated by its commitments with other countries with which it has entered into working arrangements. Explaining this point further, he said that other countries, which were more advanced in developing this energy, wished to keep the development a secret and, if India wanted to have any association with them, India too would have to keep it secret.

The importance of developing atomic energy for peaceful purposes needs no emphasis, as the prospects of exhaustion of the more easily exploited sources of energy, such as coal and oil, are within sight. It is clear that, unless new sources of energy and more economical ways of using them are discovered, it will be difficult even to maintain, if not improve, the existing standards of living in future. The hope that scientists would be able to make such discoveries is sustained by the rapid advance of science during the past half century, particularly by the great progress made in gaining knowledge of the structure of matter and of the conditions necessary for the release, and control, of nuclear energy. It is stated that the nuclear energy produced by 100 tons of uranium or thorium would be sufficient to produce all the power required by the U.K.

The release and control of nuclear energy has ushered in the greatest of the revolutions. Before it, the Industrial Revolution, which is far bigger than all the several major revolutions that have taken place in countries, such as the U.S., France, Russia and China, seems to pale into insignificance. Unfortunately, the danger of nuclear energy being used for tearing up, instead of for the benefit, of humanity is very real, as is evident from the irresponsible way in which people have been talking of piling up atomic bombs and using them in war. To quote the memorable words of Mr. Nehru:

"I am surprised of the casual way people talked of war. I am still more surprised of the casual way in which people talked about the atomic bomb in times of war. I know they do not understand what they are talking about. Those terrible forces are coming more and more under the control of men. Unfortunately, man who controls it cannot control himself. Either he controls himself and controls the other, or the other controls him and he vanishes. I do not know what will happen to the future. Anyhow, it is up to us to try to understand these forces."

Sharing Secrets

Almost all the important countries in the world have been developing this energy. The U.S. leads the rest. It is followed by the U.K., Canada and France, among the free countries. India, too, has done some notable work and this has received recognition; in the field of research relating to cosmic rays, this country has an excellent record. It is stated that the recent shift of opinion in the U.S. from maintaining atomic secrets to sharing them with other nations will help co-ordinated development of the energy. It is gratifying to note that India has been invited to the Congress, sponsored by the American Institute of Chemical Engineers and University of Michigan, to consider peaceful uses of atomic energy. Belgium, Canada, the U.K., France, Italy, the Netherlands, Norway and Sweden are other invitees to the Conference.

The Tata Institute is a major one, where India provides an opportunity to develop fundamental research, which is important in view of the constant changes taking place today in human knowledge. Mention must be made, in this connection, that the titanium factory at Trivandrum, which had remained closed for some time, has commenced work again. A reactor is expected to be set up within two or three years in India. A uranium-cum-thorium factory is expected to be working even earlier.

The Institute is a joint enterprise of the Tata Trust, the Government of Bombay and the Government of India. The readiness with which the Tata Trust came forward to finance this research bespeaks of the House of Tatas' tradition of fostering pioneering work not only in the field of industry, but also in that of science. Paying a well-deserved tribute to Tatas, Mr. Nehru observed:

"I would like to say a word about the work the Tata Trust has done for the advancement of science. Their stand is commendable in many ways. They are taking interest in the advancement of science. They have no profit motive whatsoever in their pioneer schemes."

An even more handsome tribute to Tatas was paid by Dr. S. S. Bhatnagar, Director of Scientific Research, he said:

"We have been blamed for connections with the Tatas in this project by some to whom richness of any kind is an obsession. I am of the opinion

organisation can be considered because it gives large capital sums ...ses in the world. Their pioneering ...omote scientific and technical measures country led to the establishment of this e as well as to many other activities of a nature."

UPGRADING OF MANGANESE ORES

...f the several methods employed for the ...e before ...n of ores, froth flotation is often employed ...tion ...e beneficiation of the low grade manganese ... The optimum conditions for the flotation of ...h ores vary from sample to sample and condi...s have to be standardised for individual sam...s. The conditions of flotation have been stand...ised by the Indian Institute of Science, Banga...e, for the beneficiation of a finely divided ...e, from Keshapur, having a siliceous pyrolusite ore manganese content of 39.9 per cent. Using oleic acid, sodium silicate, eucalyptus oil, and a pulp density of 30 per cent. solids in an alkaline medium, a product having 53.1 per cent. manganese is obtained. This represents a recovery of 88.5 per cent. manganese. The same conditions also worked satisfactorily for another sample of siliceous pyrolusite ore from Amritapur mines.

Manganese is one of the important materials for the modern steel industry. About 95 per cent. of the ore mined annually is used for metallurgical purposes and the remaining 5 per cent. (mostly high quality ore) is utilised in chemical dry cell glass and other industries. Though India exports large amounts of manganese ores, and occupies a high position among the manganese-producing countries in the world, the estimated reserves of high grade ore left over are not more than 15-20 million tons. The bulk of the other ores available is of poor grade and cannot be employed in industry as such. Low grade manganese ores are generally found associated with clay, silica, iron, calcite, and garnet as the chief impurities. The choice of the method of beneficiation, therefore, depends a great deal upon the nature and the mode of occurrence of the impurities in the ore.

NEW STANVAC OFFICE BUILDING

The opening ceremony of the new office building, at Bombay, of the Standard-Vacuum Oil Company, will be performed by Mr. Morarji Desai, Chief Minister, Bombay, on the 15th inst. The new home of the Stanvac, rated as one of the most modern office buildings in Asia, has many new features designed to provide nearly 480 Indians and 37 overseas staff the best possible working conditions. It incorporates several innovations to be fabricated and used in India for the first time, of which a few outstanding examples are the horizontal louvres of specially cast asbestos cement sheet, galvanising and bonderising the frames of steel windows and manufacturing of recessed troffer units for the electrical system. A major item of interest will be a scale model of the Stanvac Bombay Refinery as it will look when completed in July, 1954.

The Government of India is examining programmes submitted by automobile firms for the production of baby cars in the country, with the object of fixing a target figure. Many new schemes and proposals are understood to have been received.

A Planned Programme with a Future

From the start of our modern, fully equipped plant in 1947, we drew up a planned programme of manufacture by progressive stages of complete trucks and cars in India.

First, side by side with assembling of automobiles, came the manufacture of component parts such as radiator, muffler, propeller shaft, leaf springs both rear and front, all steel cab, etc. This involved considerable research in designing, skill and experience in tooling and making of dies, jigs and fixtures.

The next step is the manufacture of all vital components such as ENGINE, TRANSMISSION, REAR AND FRONT AXLES AND CHASSIS FRAME. To manufacture all these components, indeed in the making of the entire truck and car, as much indigenous material as possible is being used. What is more, highly technical operations such as designing, tooling, casting and machining are being done by skilled Indian craftsmen sent by us for specialised training to America and the U.K.

By the end of 1955, according to this planned programme, Indian made vehicles will come out of our factory to meet the ever-growing demand from road transport, bus operators, national projects and defence. Thus, through direct employment, utilisation of indigenous raw material, promotion of ancillary industries, savings in foreign exchange and development of skill, we will be contributing to national progress and prosperity.

TAX PROBLEMS OF LIFE COMPANIES

PLEA FOR EXEMPTING POLICYHOLDERS' PORTION OF SURPLUS

THE assessment of life assurance companies for the purpose of taxation presents several problems of an intricate nature, in view of the fact that these companies differ materially from purely profit-making business concerns, in that they are essentially co-operative organisations, engaged in spreading individual risks to a group of persons. Briefly, insurance implies, as the Indian Life Assurance Offices' Association points out in its reply to the Taxation Enquiry Commission's questionnaire, a "co-operative effort on the part of all policyholders to pool together a portion of their resources for the payment to any one of them who might die earlier." This factor alone should compel the authorities to view the "profit or surplus of a life insurance company from an angle different from that of a profit or gain of any other trade or business." In the light of this consideration, the Association has examined the basis on which insurance companies are taxed at present and suggested some methods whereby relief could be afforded to the companies.

At present, the profits and gains of life assurance business are computed as either (1) investment income *less* expenses of management on a quantified basis, or (2) the annual average of the valuation surplus *less* four-fifths of the part of the surplus paid to, reserved for, or expended on behalf of the policyholders, whichever is greater. The Association submits that the second of these two methods, under which most life offices are taxed at present, is "inequitable, technically defective and contrary to the fundamental principles underlying the levy of income-tax." In this connection, the Association contends that the surplus of an insurer, revealed by actuarial valuation, is not really in the nature of "income" or "profit" but represents largely what should be treated as a return of extra premium charged to policyholders. Explaining its stand on this question, the Association says:

"It is the contention of our Association that this return of extra premiums charged to policyholders should not and really could not form part of the surplus for the purpose of taxation. The amounts distributed among the policyholders are contributed fully by the policyholders themselves either in the shape of extra premiums charged by the companies for 'with-profit' policies on the basis of an assumed minimum bonus or in the shape of extra premiums charged by the companies for safety purposes by assuming:

(1) mortality heavier than that experienced or likely to be experienced by the policyholders;

(2) rate of interest lower than that expected to be earned on the life assurance fund; and

(3) higher expenses than those actually incurred or likely to be incurred.

"Naturally, therefore, at the time of the valuation of life business these extra premiums which have been charged to the policyholders as a safety margin come out as surplus.

"The 'surplus' disclosed as a result of the actuarial valuation cannot, therefore, be defined to be income, profits and gains of the life insurance business. The sources from which the surplus arises are no other than the extra premiums which the policyholders have paid due to the reasons stated above. This being the fact, the surplus of a life insurance company cannot be called its profit or gain at least in so far as the question of return of the portion of the surplus to the policyholders is concerned. It is, therefore, unjust to tax any portion of such surplus paid to, or reserved for, or expended on behalf of policyholders and it is even more unjust when we take into account the fact that the vast majority of the policyholders belong to income groups below the tax attracting level."

British Practice Cited

The Association has further strengthened its case for the total exemption of the policyholders' portion of the surplus from taxation by a reference to the recognition given to a similar point of view of the British insurers in the U.K. Thus, in 1920, the Royal Commission on Income-tax in the U.K. held that the "actuarial surplus as ascertained by periodical valuations is not a true measure of 'trading profits' as that term is used in applying the income-tax." As a result of this finding of the Commission, the law relating to income-tax in the U.K. was amended, so that the practice of assessing life insurance companies on the basis of interest *less* expenses of management or the valuation surplus (whichever is larger) was replaced by the present scheme under which the assessable income is interest *less* expenses of management or that part of the valuation surplus which is utilised for the benefit of persons, other than policyholders, whichever is larger. The Association has, in effect, pleaded for a similar treatment being accorded to insurance companies in this country, in so far as the assessment of the companies for income-tax purposes is concerned. The only "correct, equitable and practicable method" of taxation of life insurance offices, according to the Association, is to exempt the entire portion of the surplus paid to, reserved for, or expended on behalf of the policyholders.

Ceiling Rate For Tax

Yet another important point made out by the Association is the need for a ceiling to the rate of tax levied on life insurance companies. Tracing the history of the "steep" rise in the rates of income-tax and super-tax in the last decade, the Association points out that the rate of tax was increased from 42 pies in the rupee in 1939-40 to 45½ pies in 1940-41, to 56 pies in 1941-42 and to 63 pies in 1942-43. The Association requested the Government to fix a ceiling rate for income-tax for insurance offices, and to fix it at the rate prevalent in the year 1940-41, that is, 45½ pies in the rupee. Although the Government accepted, in 1943-44, the principle of fixing a ceiling rate, the rate itself was fixed at a high level, namely, at 63 pies in the rupee. Some relief was given in 1946-47, when the ceiling rate was reduced 60 pies. But even this relief was negatived by the Government which later, in the year 1951-52, increased the rate to 65.4 pies in the rupee, which rate prevails now.

The Association urges that, inasmuch as the insurance companies are compelled to invest a portion of their funds in Government or other approved securities, Government has a "moral responsibility" to see that compliance with the law in the matter of investments does not cause financial embarrassment to life insurance companies. Indian life offices, it is further contended, have found it difficult to earn a fair rate of interest by reason of the fact that they are subject to high rates of tax *vis-a-vis* insurers in many other countries, such as the U.K., the U.S., Canada, Australia, New Zealand and Ceylon. The companies have, therefore, been compelled to effect an upward revision of their premiums. Also, they have not been able to build up reserves to the extent necessary to meet the extraordinary strain resulting from the continued fall in the rate of interest and the increase in administrative expenses. The Association argues that, if a ceiling were fixed for the rate of tax on the life offices, insurers could make their policies more attractive by quoting lower rates of premium.

Estate Duty

The Association has suggested two important modifications in the Estate Duty Act in so far as it concerns insurance. The Act grants exemption from the duty in respect of insurance policies to the extent of Rs. 5,000 on the life of the deceased. The Association urges that this limit should be increased to Rs. 30,000. The Act grants a similar exemption in respect of policies or other moneys set apart for the marriage of dependent female relatives of the deceased person. The Association urges that the limit of exemption for insurance policies should be raised to Rs. 10,000 and that the scope of the exemption should extend to the education of dependent male children. Again, the Association urges the deletion of section 14 of the Act, which envisages the subjection to duty of policies, taken out for the benefit of a nominee or assignee, partly paid for by the deceased and partly by the donee or assignee. Proceeding, the Association says:

"This section has been almost bodily lifted from the corresponding English Act but the vast difference between the conditions obtaining in the two countries has been overlooked. In this country, the large majority of gifts of life insurance policies are made for the benefit of the wife and/or minor children of the policyholder. While in the United Kingdom it is fairly common for the wife to have separate property and separate income wherewith she would be in a position to pay the premiums on a policy gifted to her by her husband, in India it would hardly be the case. Even in the case of policies where a nomination or assignment in favour of a donee was made two years before the death of a policyholder, the premiums subsequent to the date of gift will in not less than 90 per cent. of the cases be paid actually by the policyholder himself with the result that the exemption laid down for gifts in section 9 will not be available to policies of life assurance. My Association, therefore, submit that section 14 of the Estate Duty Act should be deleted."

The need for the liberalisation of limits of exemption from tax on premia has been emphasised by the... The present limits of exemption, as known, are one-sixth of one's income, to the maximum of Rs. 6,000 in the case of individual and Rs. 12,000 in the case of a Hindu family. The Association has suggested that these limits should be increased at least to one-fifth of the income with a maximum of Rs. 10,000 for individuals and Rs. 20,000 for Hindu families. In this connection, the Association observes:

"The reasons for the above suggestion is that the present proportion of one-sixth of one's income for exemption deprives the middle class and the higher middle class of a large portion of this benefit. The average income of this class is fairly low, yet that is the class from which savings have to be drawn out and the best way of drawing out the savings is to induce them to take out insurance policies by offering a slightly increased proportionate exemption from income-tax on premia on life insurance policies. We believe that increasing the exemption from income-tax on premia on life insurance policies upto one-fifth of one's income would go a long way in this direction. In view of the fact that the purchasing power of the rupee has gone down materially since the year 1939, the present top limits of Rs. 6,000 and Rs. 12,000 do not take into account the changed economic conditions and the high cost of living now prevailing in the country. The increased limits for exemption suggested above will stimulate the incentive amongst the upper middle class to effect savings by investing more sums in the purchase of life insurance policies, thus making available increased funds for investments in Government securities and approved securities and in the nation-building activities, as also in fighting inflation."

Increase in Price Levels

This is a point of view which has been emphasised by more than one trade body in this country. Thus, the Bombay Chamber of Commerce deplored, in its reply to the relevant question in the Commission's questionnaire, that, although the general price level has increased several times it was in 1939, the limits of exemption of insurance premia from tax have remained "static" since that year. Arguing the case for liberalisation of these limits, the Chamber said:

"All of the arguments favouring a substantial increase in the abatement are so widely known as not to require repetition. Attention is, however, directed to the findings of the recent U.K. enquiry into the quantum and effect of the investment of insurance companies' funds. Insurance companies are the largest investors in Government loans and in addition invest a substantial part of their funds in private enterprise which they do not seek to control. The State enjoins on the subject the duty to save but Pelion in the shape of higher rates of taxation, coupled with reduced reliefs, is piled on the Ossa of higher living costs; there is no margin for saving and, indeed, the incentive to work and to save is destroyed. There is no better system of saving than that which is canalised to State loans and private enterprise through insurance companies and provident funds; that, once embarked upon, it acquires an element of compulsion may make it better still. This is a wrong to be righted as quickly as possible. There must be a substantial degree of liberalisation."

The demand for liberalisation of these limits has been put forward by the Federation of Indian Chambers of Commerce and Industry, too. The Federation rightly points out that "in view of the absence of welfare schemes and beneficial measures by the State in respect of unemployment, ill-health, old age or early death, it is necessary in India to lay stress upon thrift and saving so that the dependents might not be in distress when the wage-earner is dead." Again, the liberalisation of these limits, as the Federation points out, will, in the long run, mean a gain to the national economy, since such will help facilitate the growth of insurance companies, the funds of which will be available for the development of the country. In view of the fact that this demand, when conceded, will benefit all the concerned parties, the insurers, the insured and the State, it is to be hoped that the Commission will take a helpful decision on this question.

LIFE ASSURANCE IN U.K.

The increasing popularity of U.K. life assurance policies overseas is reflected in figures just published by the Life Offices Association and associated Scottish life offices. The published figures cover the business for 1952 of 78 life assurance offices, accounting for 99 per cent. of all U.K. life assurance business. These figures show that about one-sixth of new sums assured under individual policies were written overseas, and reveal a progressive increase in foreign business. At the end of 1949, sums assured and written abroad (excluding group assurance business) amounted to £408 million; in 1950 the figure was £458 million; in 1951 £524 million. The latest figure for the end of 1952 is £600 million.

Business is also being done overseas in staff pension and life assurance schemes. Premiums received in 1952 from both home and overseas on these policies amounted to about £86 million, or 32 per cent. of the total premium income of £268 million. In 1950, the figure was £70.5 million, or 30 per cent. of the total of £243 million.

THE MYSORE SUGAR COMPANY, LIMITED

PROCEEDINGS OF THE TWENTIETH ANNUAL GENERAL MEETING

MR. A. G. BANDI GOWDA ON OUTLOOK FOR THE COMPANY

THE Twentieth Annual General Meeting of the Mysore Sugar Company, Limited, was held at the Company's Registered Office at Bangalore on Wednesday 23rd December, 1953, at 4 p.m. The following is the text of the speech made on the occasion by Sri A. G. Bandi Gowda, B.A., B.L., Chairman and Managing Director of the Company, in moving the adoption of the report and accounts:

"I have great pleasure in welcoming you to this the twentieth ordinary general meeting of the shareholders of the Mysore Sugar Company, Limited. My pleasure is all the greater, because this year marks the completion of 20 years in the life of your Company and we have reason to look back with pride on the Company's record of progress during these two decades.

The directors' report and audited statement of accounts have been in your hands for some time and, with your permission, I shall take them as read. A new feature in the accounts circulated to you this year is the inclusion of a table of statistical information about the results of working and progress of the Company since its inception in 1933. I am sure this table will be found interesting and useful. Before I formally move the adoption of the report and accounts, I shall make a few observations of a general nature and about the results of working of the Company during the year under report.

"For the sugar industry in India, the year that has passed may be characterised as one of surprises. Sugar production which reached the peak level of 14.9 lakh tons in the season 1951-52, dropped to 13.2 lakh tons in 1952-53. As against this fall in production, demand for sugar registered a rise of nearly 40 per cent., from 11.3 lakh tons to 16 lakh tons, during the same period. These two contrary features of a fall in production and a rise in consumption and the efforts made to bridge the gap and bring down the price level by resorting to import of foreign sugar, in contrast to the earlier policy of export of Indian sugar, constitute the story of the sugar industry in 1952-53. Imported foreign sugar is now being freely sold in the country along with indigenous sugar and this state of affairs is expected to continue for some time more, as it is apprenended that production during the current year will drop still further. Thus, we witness to-day the unexpected and somewhat distressing development of India importing sugar from abroad after a long interval, during which period a mighty industry has grown within the country. This is a sign which should open the eyes of all concerned with the development and well-being of the industry to ponder and see how best the periodical crises that face the industry can be avoided. My own reading of the situation is that fluctuations in production and consumption of sugar are inevitable. The sugar industry is a seasonal one. Its dependence on agriculture is so complete that it has very little freedom in the matter of utilisation of raw material or regulation of production. The state of sugarcane cultivation and its supply, which, in turn, depends upon monsoon conditions and irrigation facilities, the supply and demand of jaggery and its price level—all these factors have such an intimate bearing on the sugar industry that there is no wonder that it is often unable to maintain steady conditions or proceed on a planned basis.

Satisfactory Results

"Coming now to the working of the Company, I am glad to state that the year 1952-53 proved to be a favourable one and we were able to obtain satisfactory results, in spite of the fact that the closing months of the year saw a total absence of water in the Visvesvaraya Canal, because of drought. This had the effect of curtailing the duration of the milling season and forcing the closure of our factory much earlier than originally scheduled. Assured of abundant cane supply, the factory commenced crushing on 12th July, 1952. Very soon it became evident that there would be no water for continuing manufacturing operations beyond the month of December. Fortunately, a few unexpected showers in December came to our rescue and it became possible to carry on milling upto 4th February, 1953. During this period of 195 milling days, a quantity of 2,45,500 tons of sugarcane was crushed and 27,962 tons of sugar was produced. As in the previous year, the rate of daily crush was maintained at a high level and, on many days, it touched the 1,800-ton mark. It is gratifying to record that the various measures adopted for better regulation of harvest and for ensuring greater co-ordination between harvesting, transporting and milling of cane and the changes introduced in mechanical and chemical controls contributed to our obtaining a fairly high percentage of recovery of sugar from cane. Our recovery for the whole season averaged 11.37 per cent., which compares very favourably with the all-India average of 9.97 per cent., and is only slightly lower than the record of 11.61 per cent. touched by us in the previous season. In order to lessen the liability on the part of the Company to purchase all the contracted cane, in the face of the deteriorating water-supply position, your Directors followed a policy of release of the cane from contracts with the object of enabling the ryots to make the best use of the cane by converting it into jaggery. In this way, about 1,300 acres of cane were utilised for manufacture of jaggery. But for the crisis in water-supply, the whole of this cane would have been crushed in the factory, with resulting increase in sugar output by nearly 4,000 tons.

"The total quantity of sugar sold during the year was 2,95,535 bags of 2 cwts. each and the gross realisation from such sales amounted to Rs. 2,45,54,064. A part of the year's production fell within the season 1951-52 and was sold in accordance with the control policy applicable for that season. The rest of the production, from 1st November, 1952, pertained to the next season and was free from price and distribution control. The sugar policy for the season 1953-54 remains unchanged, except for the fact that the price of sugarcane has been raised from Re. 1-5 to Re. 1-7 per md. Simultaneously, the temporary additional excise duty of Re. 1-6 per cwt. levied on last season's sugar is withdrawn. A welcome feature of the new policy is that the price of sugarcane is fixed and notified a year in advance. Thus, it is notified that the existing price of Re. 1-7 per md. will be the price for the 1954-55 season also. This advance fixation of cane price is particularly helpful in our case as the Mandya Factory is the earliest to commence crushing every year, and we need not have to wait until October to know what the cane price for the new season would be.

Working of Farms Unprofitable

"You will see from the accounts placed before you that the trading operations of the Company during the year 1952-53 have resulted in a gross profit of Rs. 42,51,426-0-9. The decline in profit, as compared to last year, is chiefly due to lower sugar production and consequent reduced sales. The profit from the distillery section did not come up to last year's level, while the losses in the confectionery and oil mill sections have been greater than in the previous year. Apart from these two sections, which have not yet been stabilised, another section which is eating into our profits and the working of which has begun to cause anxiety to your Directors is the farms, owned and cultivated by the Company. By reason mainly of the heavy overheads and the steadily rising labour costs, the farms are not able to stand on their own legs financially, though there is a comparative increase in the production of both sugarcane and foodgrains. Your Directors have taken up for earnest consideration, the question of effecting economy in expenditure and increasing efficiency in the farms and generally to put the working of the farms on a sound footing. As a first step in this direction, it has been decided to close down four of the uneconomical units which offer no scope for profitable working.

"After providing for depreciation to the extent of Rs. 5,70,355-11-5 and after making provision of Rs. 16,00,000 for taxes, the net profit comes to Rs. 17,73,396-8-5. Including the sum of Rs. 8,27,296 5-1 brought forward from the last year's profit and loss account, the amount of profit available for distribution stands at Rs. 26,00,692-13-6. It may be stated that this is the highest amount of distributable profit which we ever had at our disposal.

"Your Directors are fully aware of the sense of disappointment in the minds of the shareholders at the repetition of the same rate of dividend year after year, regardless of the profits, and their persistent demand for raising the level of dividend. This year, the large and influential sections of shareholders have made strong representations in support of the claim for a higher rate of dividend. While I do not wish to repeat what my predecessors and I have said in the past about the advantage of a conservative and uniform dividend policy, I think it would be relevant, if I draw attention to the basic fact that this Company cannot be compared with other companies in the private sector. It should not be forgotten that this is a company which owes its origin and its present position to the initiative and guidance of the Government of Mysore, who continue to shape and control its policy. A rise in the level of dividend, however much the profits and other considerations from the point of view of the investing public may justify, is a proposition that runs counter to the declared policy of the State. Your Directors have, therefore, regretfully to recommend payment of dividend at the usual rate of 20 per cent. This will absorb Rs. 4,35,856. The current year threatens to be an adverse one, because of the repercussions of the drought conditions of last year. It is therefore, only prudent that we carry forward all the available surplus of profit to the next year's account so as to offset the anticipated loss. Our reserves have reached a stage when they no longer stand in need of augmentation. Indeed, if anything, they call for a reduction and a corresponding readjustment of capital structure. In keeping with the present day trends. But, this again is a matter which vitally touches Government policy and will require very careful consideration. Your Directors have already sounded the Government of Mysore, and intend pursuing the matter further.

Outlook Bright

"The outlook for the future is quite bright although your Company is now passing through an anxious period, with the factory rendered idle for practically the whole of this year for want of cane. But even this enforced idleness is not without its usefulness. As shareholders are aware, we have taken up on hand a scheme for the expansion of our factory, so as to make it a balanced unit of 2,000 tons capacity. Most of the additional machinery ordered for this purpose has been received. Taking advantage of the present long off-season, the rearrangement of the existing machinery, erection of new ones and large-scale alterations incidental to the expansion scheme are all being pushed through. These are expected to transform the entire factory. When these are completed and the factory goes into production for the 1954-55 season, in July next, it would, in all essential respects, be the 2,000-ton factory. When the expansion scheme is fully implemented with the installation of an additional boiler and a new turbine, the factory would easily handle not less than 4,00,000 tons of cane and produce about 45,000 tons of sugar per annum. The Mandya factory would then become the largest single sugar-producing unit in the whole of India and would be able to make a substantial contribution towards meeting the sugar requirements of South India. During the current year, an area of 9,400 acres has been planted with sugarcane, under contract for supply to the factory, and the next crushing season promises to be a normal one.

"In this connection, I would like to make a passing reference to the position of the sugar industry in South India, consequent on the partition of the State of Madras. While the new Andhra State starts with nine sugar factories, Madras is left with only three factories. The transfer of a greater part of the Bellary District to Mysore has brought the sugar factory at Hospet within the State of Mysore. Although, in a narrow sense, Mysore State was surplus in sugar even with one factory, taking South India as a whole, the region is heavily deficit in sugar and there is scope for expansion of the industry in this part of the country. In this view, the latest proposal to establish a sugar factory in Shimoga District, in the Mysore State, is to be welcomed. The proposed factory, I may add, is quite different from the one which your Company was interested in promoting and about which I had referred in my previous years' speeches.

"A new chapter in industrial relations between your Company and its employees may be said to have opened with the compromise arrived at last week, before the Hon'ble Labour Appellate Tribunal of India. Certain disputes between the management and labour were pending before the Industrial Tribunal, as I had mentioned in my speech last year. The Tribunal gave its award in September, 1953, and both parties preferred appeals on the award. After the Appellate Tribunal began hearing the appeal at Bangalore, compromise move was initiated and I am glad to state that both parties were able to come to an amicable and satisfactory settlement and submit the same to the Tribunal for its decision. It is to be hoped that this settlement, which is to be in force for a period of two years, will re-establish cordiality and lead to an era of better relations between the management and labour, to the mutual benefit and advancement of both parties.

"Realising the urgent need for providing additional houses for labour, your Company has sought the assistance of the Labour Housing Corporation of Mysore, to put up at Mandya a separate colony of a thousand houses, under the subsidised labour housing scheme of the Government of India. I am glad to state that the Government of India have been pleased to sanction the construction of 496 one-roomed single-storeyed tenements costing approximately Rs. 13 lakhs. Your Directors take this opportunity of expressing their thanks to the Governments of India and Mysore and the Labour Housing Corporation for their prompt and sympathetic assistance in this behalf. While on the subject of housing for employees, I would like to mention that, as a result of initiative taken and financial assistance rendered by your Company, the employees in the head office at Bangalore have been enabled to have a colony of their own houses in the newly formed Jayanagar Extension in Bangalore.

Chairman's Farewell

"Gentlemen, before I close this speech, allow me to strike a personal note. This will probably be the last occasion on which I will have the privilege of addressing the shareholders of this Company, for within the next few months, my term of office is expected to come to an end. I think it will not be inappropriate, if, on this occasion, I say a few words to draw attention to the all-round progress made by the Company during the period of five years of my association with it as Chairman and Managing Director. The year 1951-52, in particular, proved to be a notable one for the Company. During that year sugar production reached 37,155 tons, the recovery of sugar improved to 11.61 per cent. and the gross profit amounted to Rs. 71.77 lakhs. These records are unprecedented in the twenty years' history of the Company. The Company's financial position, in spite of two droughts within a short space of 3 years, has been considerably strengthened and its reserves now total Rs. 90 lakhs. The condition of the cane growers has materially improved and they now receive over a crore of rupees every year by way of value of cane supplied to the factory. The benefits and amenities provided for the workers have been steadily on the increase and their welfare is receiving constant attention. I have the great satisfaction that I was able to push through the expansion scheme of the factory. When this scheme is fully implemented, it will raise the Mandya Factory to a foremost position among sugar factories in India and will lead to increased earnings. I am grateful to the Government of Mysore and the shareholders of the Company for the opportunity given to me to serve the Company and I assure you that even after I retire from my present office, I shall continue to take interest in the progress of the Company and strive for its advancement.

"In conclusion, I deem it my duty to express my grateful thanks to my esteemed colleagues on the Board for the valuable advice and guidance that they gave me. The able manner in which the General Manager and all ranks of officers and workers in the Factory and Offices at Mandya, as also the Secretary and staff in the Head Office at Bangalore, continued to discharge their duties, deserves special mention. The very satisfactory results achieved during the year under report are, in a large measure, due to their hard work and willing co-operation. Last, but not least, the Company is deeply grateful to the Honourable Ministers and the several Departments of the Government of India and of the Government of Mysore for their sympathy and support."

The meeting was attended by a large number of shareholders who spoke in appreciative terms of the efficient management of the Company during the year under report. After the Chairman furnished the information required by some of the shareholders, the motion for the adoption of the report and accounts was unanimously passed.

Approval was also conveyed to the declaration of dividend at 20 per cent., free of income-tax.

Sri V. T. Krishnamoorthy, the retiring Director, was re-elected uncontested.

Messrs. Brahmayya & Co. and Messrs. B. K. Ramadhyani & Co. were appointed as Auditors for the year 1953-54 on a remuneration of Rs. 1,500 each.

The meeting terminated with a vote of thanks to the Chair.

V. M. LINGIAH,
Secretary.

food' than highly competitive overseas trades. It is but fair that those with far better experience should take their vessels out of the coast to enable new-comers to develop and stand on their feet. It is hoped that both Government and the Lines concerned will view this suggestion in its proper perspective and act on it.

Plans for Expansion

"As you are aware, due to inflated cost of ships, I had informed you last year that our future plans were uncertain and our policy was to 'wait and watch'. That policy had paid us. The prices of second-hand ships prevailing in early 1953 have dropped, as expected. The ship acquired by us in September, 1953, namely, the m.v. *'London Artisan'*, at a cost of about Rs. 40 lakhs, would have cost us about Rs. 60 lakhs, if the purchase had been effected earlier.

"It is proposed to acquire, with the assistance of the Government, two more ships in 1954. Your Company may also place an order for a ship with the Hindustan Shipyard. If the order is placed, the ship will be delivered in 1956. Although most of the expansion is being financed out of Government loans and current earnings, the financial commitments make it necessary that the unpaid balance of Rs. 10 lakhs on 2 lakhs partly paid shares be called up. Your Board has, therefore, decided to make a call in the immediate future. This will raise the paid-up capital of the Company to Rs. 50 lakhs.

"Before I conclude, I would like to thank the officials of the Transport Ministry, including the new Director-General of Shipping, Mr. N. M. Buch, and his assistants for their invaluable help and assistance extended readily in various ways. You will also, no doubt, like me to appreciate the good and steady work put in by the shore as well as the ships staff.

"May I now request you to adopt the report and the audited accounts for the year ended 30th June, 1953."

CONSOLIDATED COFFEE ESTATES (1943) LIMITED

MR. IVOR BULL'S FAREWELL ADDRESS TO SHAREHOLDERS AT ANNUAL MEETING

GOVERNMENT OF INDIA'S POLICY ON COFFEE CRITICISED

A NOTE of warning that incorrect policies of the Government would bring nemesis with devastating swiftness was struck by Mr. Ivor Bull, Chairman of the Consolidated Coffee Estates (1943) Ltd., in his address to the shareholders of the Company at their Tenth Annual General Meeting held at Pollibetta, Coorg, on 31st December, 1953. He singled out three instances of such incorrect policies in regard to the coffee industry, all within the short space of two years. A fourth one, which had just arisen, related to the issue of fair return to the grower for his produce. The Government's decision on price to the grower was characterised by Mr. Bull as "arbitrary and incorrect," which, he said, was causing distress to growers in all districts. He wanted the Government to refer the question of fair return to the coffee grower to an independent tribunal.

Mr. Ivor Bull availed himself of this opportunity to review the progress made by the Company during the last ten years and commended the policy followed by it all these years, which had stood the Company in good stead.

The following is the full text of Mr. Bull's speech:

"GENTLEMEN,

"On behalf of my fellow Directors I present to you the balance-sheet and profit and loss account for the year ended 30th June, 1953, and the Directors' report for the same period.

"As it is the tenth anniversary of the founding of our Company and as it is the last time that I shall have the pleasure of presenting these accounts to you personally, I am including additional particulars of our work and progress in my address which I trust you will find of interest.

"I am glad to inform you that, as a result of a very heavy coffee crop and a useful pepper crop, the year has again been a successful one.

"The dividend which your Directors have been able to recommend is 15 per cent. as against 18 per cent. last year. There are so many uncertainties related to the marketing of coffee in India today, and so many commitments have still to be met that it would have been imprudent to recommend a higher rate; also the 1953-54 coffee crop, though it is expected to be our second highest crop, will be some 300 tons lighter than the record crop covered by this report.

"Rs. 10 lakhs have been transferred to general reserve for the reasons which I have given above. Rs. 1 lakh have been transferred to the debenture redemption fund and in July we were able to purchase Madras and Mysore State Loans against this reserve, whilst the balance carried forward to next year is much the same figure as the balance brought in from last year.

"In the profit and loss account we have valued our coffee at Rs. 2-2 a point, against a valuation of Rs. 2-9 a point last year. Coffee prices ran up to undesirable levels in 1952, and a fall in prices was, therefore, necessary, but, in my opinion, the pendulum has now swung too far the other way, and I shall refer to this later. We have always left what we believed was a reasonable reserve in our valuations against eventualities and we have followed the same course again this year; otherwise, our accounts would have been distorted.

"Apart from the dividend, the main things which interest shareholders must be the crop, the condition of the estates, our expenditure, both revenue and capital, our financial position and the market for our products. I propose to deal with each of these in turn.

Record Crop

"The crop at 1,938 tons was our highest by no less than 480 tons. This reflects the greatest credit to all on the estates. I must confess that I had always hoped to harvest a 2,000-ton-crop whilst I was still in charge of the Company, but someone else must now have this pleasure. The pepper crop was useful, the cardamom crop fair and the paddy and orange crops on the whole poor.

"In the coming season, we expect a more than useful coffee crop. We had at one time hoped for the same sort of crop as we have just harvested, but the prolonged drought scorched up much of our robusta (as well as spoiling our paddy and oranges) and the showers, when they did come, were late, and in many cases backing up rains were lacking. Taking all in all, therefore, we are not faring badly. Pepper should be about an average crop. Oranges will be a useful, though late, crop on some of our estates, cardamoms fair, but the paddy harvest this year will be a bountiful one, and nearly double that of last season.

"The estates, I am glad to report, are in excellent condition; the prospects for next year are correspondingly good, and it is possible that I may have missed the 2,000-ton crop by only one year. The potential for an even larger crop than that is there, if only our blossom showers and the following-up showers, which can be equally important, do not let us down.

"We are beginning to reap the reward for the patient work of replacing old coffee which was commenced by our predecessors, the Consolidated Coffee Estates, Ltd., a sterling company, and has been continued by ourselves.

Profitable Period Ahead

"When we purchased these estates in 1943, they included 246 acres of arabica and 700 acres of robusta, all seven years of age or younger, representing a replanting of old coffee, most of it during the depression. In the past ten years, we ourselves have replanted or opened up 660 acres of arabica, 645 acres of robusta, and have purchased 125 acres of good young robusta, thus over one-third of our acreage is made up of young coffee. I believe that the clearings and replantings of today are definitely better than those of ten years ago. New techniques of planting, raising cover crops, raising shade, manuring, pest control and soil preservation have been adopted, and better seed material is now available. It is a heartening thought that much of this young area has still to come into profit.

"The older coffee also has responded well to the more generous treatment we have been able to give it in recent years.

"The references to plantation crops are brief in the Five-year Plan; but there is a comment about the tea industry which is completely apposite to coffee today:

"'A remarkable fact about tea plantations is that, while the area under tea has remained unchanged for over a decade under International Agreement, production has increased by about 43 per cent. over this period. This incidentally brings out that, where sufficient capital is invested, yields can be increased appreciably.'

"Unless the coffee industry is permitted to accumulate and reinvest sufficient capital to bring its estates into an economic condition, the yields of Indian coffee will remain the lowest in the world.

"Our pepper has helped us splendidly. Here we are reaping a reward for a policy of planting pepper, and maintaining our vines, during a period when the pepper market was very depressed. The average crop for the first five years since 1943 was 45 tons, and for the second five years 79 tons. Our crop increased at a time when pepper prices also increased, and has been of such value during the last five years that it has more than paid our ordinary dividend during this period. The value of our pepper during these five years was Rs. 32,61,300, while the cost of our ordinary dividend for the same period was Rs. 29,89,200. I do not pretend that your Directors have related these two items together when considering their dividend policy. On the other hand, they have realised that these very high pepper receipts are in the nature of a windfall, much of which should be ploughed back into the company. They have given us courage to accelerate our labour and staff housing and welfare schemes, and to commence introducing amenities such as piped supplies of water and electric light, which are taken for granted in cities, but which were completely lacking on our estates, and indeed are still lacking on most coffee estates.

"Pepper prices are now well over the peak, but this is a commodity we can produce relatively cheaply and we shall endeavour to make up for the fall in prices through an increase in our crops. Newer methods of propagation and maintenance show promising results.

"Oranges, to which we had attached great hopes, have disappointed us. The five years' drought, from which the whole of South India suffered, injured the trees wherever these were being grown without a cover crop of coffee, and even in the more favoured places many trees have 'frenched' and must be uprooted. We have installed machinery to supply overhead irrigation to one block of oranges, and have hopes that this may provide an answer to the short life of the loose-skinned Coorg orange in rainfall districts like ours. Lemons, limes, grape-fruit and tight-skinned oranges are all much hardier, and we have planted a fairly large acreage of all these fruits in our young robusta coffee, so that various types of juices may be available for our fruit juice factory.

"The dry years, which have upset our Coorg oranges, have also checked any real development of our cardamoms.

"Our paddy crop this year, as mentioned earlier, and in spite of late rains, will prove an excellent one. Much work has been put into the improving of our fields, their water supplies, the methods of cultivation and the selection of types of paddy to grow particularly on our more difficult high fields, and all these must, in due course, be reflected in our crops.

Estate Expenditure

"When we come to our expenditure, I regret to say that our overall estate expenditure again shows a considerable rise. Part of this due to the cultivation of a larger acreage, most of it is due to a policy of doing more in sive work on our estate, in the belief that t will enable us to harvest larger crops; for only logical way of meeting our ever rising co is through increasing our yields, and all thoughts and endeavours go to this end, appear to be accompanied by a measure cess. In calculating average crops it is to work on a six years' average, so tha hazards of the weather may be cancelle and allowance made for the two- or thr cycles, in which, coffee bears its high crops. When we purchased these e average arabica yield was 2.01 cwts. and robusta 4.27 cwts. For the last these averages are 4.08 and 5.46, respec

"It is obvious that there is scope for improvement in both these figures, particularly when our large area of young coffee comes into bearing.

"The expenditure per acre on our coffee has risen from Rs. 220-6 in our first season to Rs. 667 in the season just concluded.

"Our capital expenditure has gone largely to rehousing our uncovenanted staff and labour, and last year Rs. 3,34,835 were spent under this heading.

"Increasing crops necessarily involve the spending of more money on enlarging our drying grounds and coffee stores and improving our pulp-houses. The application of additional fertilisers after the monsoon, has called attention to our shortage of manure stores. It is not possible to run lorries into many of our estates after the monsoon and fertiliser must, therefore, be transported as an upload during the crop season and stored on the estate till required from August onwards.

"In the last few years our estates have been largely mechanised as regards transport, spraying and the supply of water. Mechanisation should lead to economies, but its great advantage is the assistance it gives us in carrying out our work at the proper time, and correct timing is the key of most agricultural operations. What is not always realised is that once mechanisation is decided on, many other things automatically follow; the metalling of the main roads through our estates, otherwise our tractors cannot run, the provision of extra accommodation not only for the tractors and implements but also for the driver and where there is much machinery, for a mechanic. We have found tractors to be definitely preferable to lorries on our estates, and we are using them to an increasing extent for cultivating our paddy fields.

"Ten years ago, the value of the stores and spare parts on the estates as at 30th June was only Rs. 2,67,772. Today, it has increased to Rs. 12,64,945, all of which has had to come from our reserves. The largest item is grains, which shows an increase of over four lakhs, for, in 1943, it was unnecessary to lay in a year's supply of food for our labour as we have to do today. In addition, due both to the delays in the making of payments from the Pool, and to the cut in size of these payments, we have to try and maintain higher fluid cash resources to enable us to meet our day-to-day expenditure.

"A policy of restraint in declaring dividends has assisted us to carry out these and other improvements. The total profits we have earned since 1943 are Rs. 1,37,10,232 of which 37 per cent. only has been distributed by way of dividends, 10.6 per cent. paid or reserved for taxation, 16.58 per cent. has been spent on the rehabilitation and rehousing of our staff and labour, and the remainder has been ploughed back into our business.

Marketing of Coffee

"The marketing of coffee in the past year has, as in the previous four years, been governed by factors, many of which are irrelevant to the marketing of an agricultural commodity. In the earlier years, the insistent directives from Government were to maximise exports even at the expense of the consumers; for coffee was judged to be a luxury and the country was said to be in dire need of foreign exchange. In spite of advice that this would seriously affect internal prices, this policy was persisted with, and matters came to a head in 1952 when coffee prices soared to unprecedented heights. Now, in a most curious way, growers are being blamed for the result of a policy that they have always opposed. Then, for a period, the rightful needs of the consumer were at last recognised. Now the pendulum has swung to the other extreme; a low return has been arbitrarily fixed for the producers, and as prices are now presumably low enough for the consumer, most of the considerable profits on exporting coffee are being piped off to the Central Exchequer by means of an export duty of Rs. 62-8 a cwt., neither the producer nor the consumer benefiting in any way from this arrangement.

"Incorrect policies bring their own nemesis with devastating swiftness. With coffee there have been three such instances within the last five years; namely,

(a) The export policy of Government in as mentioned above, resulted in a rise in internal prices which was unprecedented;

(b) The halving of the quantity of coffee offered in Pool auctions in December, 1952; be a record by the failure to hold Pool auctions year running, resulted in coffee prices rising recovery, whilst the Board was left with no and the to meet even the initial payments to These recs when they delivered their coffee to years' Pool; and

(c) The lack of any internal or export sales policy in 1953 has resulted in the accumulation of vast and deteriorating stocks of coffee, mostly robusta, which could have been exported, but must now be consumed in India, and, once again, the Board are unable to meet their commitments to the growers.

"Now, a fourth instance has arisen regarding what constitutes a fair return to the grower for his produce. An arbitrary and incorrect decision has been taken and this is already causing distress to growers in all districts. This distress is increased today, as the Board's borrowing powers are quite inadequate to finance the holding of their huge stocks and at the same time enable them to meet even the normal first payments made to growers when they deliver their coffee to the Pool. Any grower without good credit is puzzled how to find the finance for the maintenance of his estate, to pay for his fertilisers which should be delivered by crop lorry within the next few months and to pay for his grain stocks. In Coorg, these are normally purchased direct from the threshing yards. Such decisions must in the end be corrected, but, in the meantime, much unnecessary hardship is caused. This matter is most urgent, and it would afford relief all round, if, as the Coffee Board has already requested, it could be settled by some independent tribunal, at as early a date as possible. As the Central Government will receive over a crore of rupees from the industry this year, the request is eminently reasonable.

"The statement of Dr. Punjab Rao Deshmukh in October is pertinent:

"'I fear that our attempts at the marketing of agricultural produce have all an atmosphere of isolation from the rural community, as it often appears to be an attempt to impose things from above. No structure which is not based on the co-operation of the parties concerned can be durable or expected to stand by itself.'

Call for Co-operation and Goodwill

"There are no marketing difficulties concerning coffee which cannot easily be resolved, if the advice of those who grow and market coffee is sought in a spirit of co-operation, goodwill and understanding.

"The decision to impose an export duty was passed by Parliament in November, and in the course of the debate in the two Houses the unwished for honour of being singled out for discussion fell on our Company, and the novel suggestion is reported as having been put forward by the Minister that 'The Consolidated Coffee Estates will get only Rs. 250 (an acre) and nothing more and a small man may also get Rs. 250.'

"Some small men are most efficient growers, whilst some of the larger estates are poorly cultivated. It is not clear whether what the Minister proposes is assistance to the small grower or to the inefficient.

"We welcome any proposals which will increase the welfare of the small planters, but, if it is desired to devise production disincentives for our own Company, we trust we will be permitted to devise them ourselves.

"The increase in our coffee area is due to two things, the ploughing back of a substantial part of our savings and our having obtained Rs. 23,33,000 of additional capital from the public, most of which came from our own shareholders.

"So far our policy has been to go in for more and still more intensive cultivation of our land. As a result of this, the employment *per acre* over ten years has increased as follows:—

	Per cent.
Managers	17
Staff	108
Artisans	768
Labour	100

"Our use of fertiliser per acre has increased by over 400 per cent.

"Our use of chemicals per acre by over 250 per cent.

"We could reduce our expenditure under any of these main headings, and our crops and profits would then fall till we reached the figure permitted by Government, but I hope that such a policy will never be forced on us.

"I am reminded of a famous cartoon of the time of the Franco-Prussian War. The French had just introduced the newly invented mitrailleuse or machine gun to their army, and a French soldier is shown looking up from his gun over a field strewn with corpses. Underneath is the caption:

'Hullo! The battle is over, I must
Have turned the handle too quickly!'

"This appears to be the difficulty which has arisen not only with our Company, but with other growers who by efficient methods, have succeeded in obtaining even higher yields. We have gone ahead too quickly and achieved too great success in our battle for the economic production of coffee.

"We had never viewed our policy from this light before. The urge throughout the Five-year Plan is to increase production, to increase employment, to save capital and to reinvest it. All these things we have done. These views are summarised in a nutshell in the People's Edition of the Five-year Plan thus:

"'An increase in the stock of capital—accompanied by knowledge of how to use it to best advantage—will lead to an increase in the community's output of goods and services and so to a rise in its material well-being. This may be put shortly in the phrase, 'the key to economic progress is capital formation'.'

"I trust that a more balanced and dispassionate view of the whole coffee industry may yet prevail.

"I may be excused if I quote again a remark of Sir Russell Kettle, extracted from *Capital*, which I quoted three years ago to you:—

"'We are not concerned with the political aspects of company profits, but, in view of the controversy which rages round this subject, there should be a proper appreciation of facts. Profits are a material factor in creating and maintaining employment; they encourage new ventures and the expansion of trade; they enable fresh capital to be raised and national wealth to be augmented; they provide a material proportion of taxes to defray Government expenditure, including expenditure on social services, and they are the source of income on the invested savings of numberless individuals of moderate means. The myth that companies are owned by a comparatively few wealthy and avaricious shareholders dies hard. Those who regard the earning of profits as a social evil or even as a crime might reflect upon the consequences which would follow their suppression or dissipation.'

"Surely, there is much wisdom in this quotation.

Burden of Taxation

"I do not know whether or not coffee is India's most heavily taxed agricultural commodity, but it must come close to it. Our own estates will have directly met or provided no less a sum than Rs. 14,41,371 to the Central and State Governments as a result of last year's working.

"Such contribution from our 6,767 acres of coffee comes to Rs. 213 an acre, made up as under:

	Per acre Rs.
1. Land tax	2
2. Agricultural income-tax	59
3. Excise duty (on 1,686 tons sold internally)	105
4. Export duty (on 252 tons, our proportion of the 3,000 tons exported)	47
Contribution per acre ...	213

"This omits the income-tax payable on our dividends and the income-tax payable by our staff.

"All this from land which would, otherwise, yield no revenue, and, if untended, would hardly provide grazing, and of which at least another three lakhs acres still lie neglected and fallow in our hills.

"It is difficult to understand why there should be such controversy about one relatively small Company, when there is enough abandoned waste land in the Malnad to support another 40 companies our size. Surely, instead of this sort of unprofitable unpleasantness, goodwill should be created to develop this vast neglected asset.

"It is appreciated that when this development does take place, as some day it must, though conditions can never be more favourable than they are today. Governments will draw up their own plans of action. Nevertheless, although, there are many skilled planters whose estates yield better crops than ours, it simplifies the arithmetic, if we calculate the direct benefit the country would receive if this area were cultivated by companies similar to our own and providing similar taxation. Then the Central and

NEW ESTATE DUTY LAW IN INDIA

New Publication for Businessmen and Property Owners

"TAXATION'S ESTATE DUTY MANUAL, 1954,"—by Shri R. Bhargava, Editor-in-Chief, "Taxation," assisted by Mr. R. P. Hedley, Incorporated Accountant, London, deals with the entire law with the help of practically worked out examples. In three parts in one volume, it contains commentaries on the Act, latest U.K. Case-law reference, corresponding U.K. and other allied Indian Acts, Rules, and their illustration by examples, Charts, Tables and other useful Appendices.

Pages over 700. Royal Octavo size. Neatly printed and well-bound.

Price Rs. 17/8

75 per cent. edition booked in pre-publication orders.

State Governments would reap a taxation reward of Rs. 5½ crores annually, and coffee exports of 80,000 tons worth Rs. 50 crores and more would make coffee India's fourth most important export. Consumers could then be subsidised to a degree which has not been conceived today, and, at the same time, very adequate encouragement could be given to producers. This is an ultimate object, but, even on a comparatively slower rate of development, we should be able to export at least 24,000 tons of coffee worth Rs. 17 crores within a period of 15 years, if the encouragement to do so was given.

"As far as we are concerned, I do not believe that it is fully appreciated that we are a rupee company, that 86 per cent. of our share capital is owned by Indians, that, although we employed no Indian covenanted staff in 1943, today we employ seven against eleven Europeans, and a further three Indians are employed in non-officer grade posts on salaries alone exceeding Rs. 300 a month. An inaccurate statement even on this matter was furnished to Parliament; that is why I mention it now.

"More important is the fact that we have no fewer than 1,400 shareholders. In other words, each of our shareholders own on an average something less than five acres of coffee. If the habit of investment is to be encouraged, should not these people be encouraged also, provided that no anti-social policy is involved? Many of them depend on their dividends for their living, and in good faith, we have to do our best for those who have supported and relied on us.

"No place for coffee was found in the Government of India's first Five-year Plan. One reason might very well be the oddity of an agricultural subject being placed in the commerce portfolio, but this means that an additional responsibility was placed on growers to ensure that all aspects of developing their industry were carefully studied. We can make many excuses for failing to put forward our case, but the blame lies with us, and planters must see that it is not repeated.

"To return to our Company, at Kushalnagar there was an increase in the quantity of coffee cured from 1,092 tons the previous season to 2,054 tons in 1952-53. This was a splendid achievement. Our fruit juice factory is still in the pilot stage, and we have had to wait for certain machinery to enable us to proceed with our production. The quality of the products manufactured is excellent.

"In March, of next year, I shall be leaving India on my final furlough, for my employment by the Company will cease finally next September. Your Directors have given very careful consideration to the arrangements which will have to be made after my departure. Mr. R. C. Paterson, who is at present both our Secretary and one of our Directors, will take my place as head of the Company. Mr. D. H. Dasappa, a Director and one of the most knowledgeable coffee planters in Coorg, has kindly agreed to act as Visiting Agent for our estates. Two of our senior Managers, one in North Coorg and one in South Coorg, will see that his instructions are properly carried out. We hope to strengthen the planting side of the Directorate by persuading a well-known planter to join the Board. The Directors of the Company have requested me to pay one more visit to India in two and a half years' time, and to report on the estates, which I hope I shall be able to do, though in a private capacity.

"We have succeeded in building up a splendid coffee team in our Company, and I have no doubt at all that, whatever our achievements have been in the past, those of the future will put them in the shade.

"And now it only remains for me to thank my fellow Directors for the help and guidance they have given me throughout the year.

"I must congratulate our Managers and all those employed on the estates, in the curing works and at our head office for the splendid results achieved by their labours during these years, and also thank them for the loyal and unfailing support they have at all times given to me."

OUTLOOK FOR WORLD COFFEE

Assuming normal weather conditions, production of coffee during 1953-54 is expected to show a slight rise, over that in 1952-53, that is, 2,380 thousand metric tons, as trees planted since the end of the war have come into bearing. In Brazil, the early indications are favourable. In other Latin American countries and in Africa, the upward production trend is likely to continue, although the increase in exportable supplies may not be very large. Stocks, in practically all producing countries, are down to the minimum operating needs.

Assuming continued high levels of economic activity in the chief consuming countries, the demand situation of the past years is likely to continue in 1953-54. Since no major increase in supplies is to be anticipated, prices are likely to remain comparatively high.

So far as the long-term outlook is concerned, the market prospects for coffee appears to be favourable. While prices may decline slighty, if supplies increase appreciably, all indications point to the continuation of the demand trend of the past few years. In the high consuming countries, the post-war gains in *per capita* consumption have been solidified, and the coffee drinking habit appears to be spreading in many countries in which pre-war *per capita* consumption was very low. What is less certain is the outlook for the intermediate period of a few years. If some very optimistic current reports on production prospects during 1956-58 are borne out, it is possible that the expansion of production may be more rapid than the growth of demand, which might have substantial price effects.—*Extract from F. O. Report.*

cement builds the bridge

from plan to reality

Rising from the blue-print of the Five Year Plan the India of tomorrow is gradually taking shape. Great changes have already been wrought in our political and social structure to prepare the way to our economic betterment, and a start has been made on the great projects which will give us more food, more power, more employment and better homes.

The Associated Cement Companies, the largest producers of Cement in India, are proud to contribute to this mighty programme of nation building by providing more and more Indian cement for the construction of roads and bridges, dams and canals, houses, factories, schools and hospitals.

The Five Year Plan— some targets

* 20,600 miles of new roads
* Irrigation to produce 76 lakh tons more food each year
* 14,65,000 lakh kilowatts additional electric power
* 42 lakhs of new houses
* Schools for 3 crores of pupils
* 48 more hospitals, 948 more clinics

A Record of Achievement— a measure for the future

Between 1947 & 1953 the ACC have almost doubled their output to serve the country's increasing needs.

TRADE BETWEEN ASIA AND EUROPE

U.N. EXPERTS ON PROBLEMS OF ITS EXPANSION

A JOINT Study* by the Secretariats of the Economic Commission for Asia and the Far East (E.C.A.F.E.), Economic Commission for Europe (E.C.E.) and Food and Agricultural Organisation (F.A.O.) on trade between Asia and Europe, made public this week, points out the advantages of expanded trade between Asia and Europe and suggests measures to help bring about an increase in that trade. The U.N. Study examines the history and setting of trade between the two regions over recent decades and considers methods by which Europe can assist the countries of Asia and the Far East in their common aspirations for economic development and improved living standards. At the same time, it considers ways in which Asia and the Far East can assist Western European countries to solve their post-war economic problems. After stressing that both the volume and the composition of trade between the two regions depend on the levels and structure of world demand and external finance available, as well as on the size and economies of production, the Study urges the need for a readjustment of world trade and payments. It offers three types of "desirable" adjustments:

(1) Increased exports from Asia and the Far East to the United States combined with a smaller increase in imports from this source. "The resulting dollar surplus could then, in turn, be used for larger Asian purchases in Europe, thus contributing to Europe's dollar problem," the extent of the dollar earnings spent in Europe depending "on the ability of European countries to supply the Asian import needs at competitive prices."

(2) An increase in Europe's own dollar earnings in the United States and the rest of the dollar area with a simultaneous shift in European imports of raw materials from dollar sources to Asia and the Far East. Generally speaking, "the longer-term prospects of such shifts to Asian sources of supply appear to be fairly good, if increased production and reduced costs are achieved under conditions of reasonable stability in demand and prices."

(3) Substantially greater capital movements to supplement merchandise balances. "From the point of view of trade expansion," says the Study, "national policies in Asian countries for the encouragement of investment into new or widening avenues rather than simple substitution for existing foreign investment would appear to be more constructive."

Things Asia and Europe can do by Themselves

The Study suggests practical steps which the Asian and European countries themselves might take to facilitate trade between them. These measures include: increased efforts to expand sales, for example, by sending governmental or private trade missions to countries in Asia and the Far East, studies of their specific import needs and technical and economic means of meeting them, the development of joint enterprises and direct investments by European firms, increased diversification of export commodities as well as greater standardisation and control of quality and packaging of Asian export products, and simplified customs procedures and trade regulations and administration.

While trade between the countries of Asia and those of Europe is important to each, the respective roles of their mutual trade is not the same for the two regions. Although Europe has provided markets for nearly one-third of the exports from Asian countries and has been the source of supply of a similar proportion of their imports, trade with Asian countries has accounted for a relatively small share—about 7 per cent. —of the total exports or imports of European countries.

One of the most striking developments revealed by the Study is the marked decrease of some 25 per cent. in the volume of Western Europe's imports from Asia (not counting Japan) as compared with the pre-war level. On the other hand, Western European exports to those Asian countries exceeded the 1938 level after 1948 and were nearly equal to the 1928 total in 1951 and 1952, an increase of approximately two-thirds since 1938.

The leading European trader, generally accounting for about one-half of the total trade between the two regions, has always been the United Kingdom, followed by France, Germany and the Netherlands. Apart from the trade shift of the mainland of China towards the U.S.S.R. and the other Eastern European countries since 1949, the Eastern European countries, including the U.S.S.R., have played an insignificant part in trade between Europe and Asia and the Far East.

Japan's Position

The post-war position of Japan, an Asian country but a direct competitor with Europe in other Asian markets, has considerably changed. In the pre-war period, about two-thirds of the Japanese foreign trade was with Asia and the Far East and over 60 per cent. of this was with China and Korea. By contrast, in 1951 China's share of Japan's trade declined to less than 1 per cent., and the resumption of this trade is dependent upon political developments. Japan has taken various steps to strengthen its position in the other Asian markets, but the immediate results of these efforts, which were partly frustrated by internal inflation, have not greatly changed Japan's relative position up to 1953. Japan's dependence on imports from the United States has increased, without a corresponding increase in exports to that country.

Figures in the Study show that, in the immediate post-war period, Asian trade had failed to keep up with the expansion in world trade, with the result that Asian exports by 1952 had dropped to about 10 per cent. of world exports, as against about 15 per cent. in the years 1928 and 1938, while Asian imports just maintained their share (12 per cent.).

In the 1920's, countries in Asia and the Far East formed part of a global network of multilateral trade and payments. The region had a consistent export surplus with the United States and Continental European countries and a deficit with the United Kingdom. This pattern of trade and payments was disrupted by the world depression and the Second World War dislocated it further. Until the end of 1949, Asian countries recorded considerable deficits on merchandise trade, and the raw materials boom after the outbreak of war in Korea, although causing temporary improvements in the terms of trade, was short-lived and not accompanied by such changes in international capital movements as would facilitate the return to convertibility and the old system of trade and payments.

Adjustment Prospects

For many reasons, including the increased importance of the dollar area and the low level of United States investment abroad, the U.N. Study states that a return to the "traditional" trade patterns of the 'twenties is difficult. With the decline in demand for silk and with the problematic long run future of rubber and tin, the prospects for any substantial increase in Asian exports to the United States are somewhat uncertain, and the extent of dollar earnings being spent in Europe depends on the ability of European products to compete in the Asian import market.

Another type of adjustment towards a more rational pattern of world trade would be an increase in Europe's own dollar earnings with a simultaneous shift in European imports of raw materials from dollar sources to the Asian region. The Study believes there is considerable room for such a shift: the possibilities of increased exports of fats and oils, oilseeds, tobacco and cotton to Europe appear to be condesirable and the longer terms prospects appear to be fairly good if increased production and reduced costs in Asia are achieved.

Just as the international network of trade of the 'twenties depended on capital movements to offset current surpluses and deficits, the new patterns of trade will require capital movements to supplement merchandise trade, the U.N. Study stresses. Financial assistance will be needed not only from the International Bank and the Monetary Fund, but also from national bodies such as the United States and Japanese Export-Import banks and the recently established Commonwealth Finance Corporation. In the interest of developing trade between Asia and Europe, it is essential that financial assistance by countries of Europe, both by Governments and private or public financial institutions, should be forthcoming in greater amounts.

Composition of Asian Exports

In all cases, the problem is to seek a sound basis for developing future trade between the two regions. The Study examines in detail past trade and prospects by commodities and by direction and volume of flow. A few agricultural and industrial raw materials and food products are shown to dominate exports from Asia. Thus, rice accounts for about 80 per cent. of the value of exports from Burma; 90 per cent. of exports from Pakistan have been made up of jute, cotton, tea, wool, hides and skins. About 80 per cent. of Malayan exports consist of rubber, tin, oilseeds and oil, and 75 per cent. of Indonesian exports have been petroleum, rubber and tin. Over 80 per cent. of Philippine exports are covered by sugar, copra, vegetable oils, and abaca. Tea, rubber, copra, and oil form more than 90 per cent. of the entire exports of Ceylon, while Thailand's rice, rubber, and tin exports account for 80 per cent. of the country's total exports. The principal Asian commodities for export in order of importance are rubber, jute and jute products, fats and oils, tea, rice, cotton and cotton products, tin metal, petroleum, tobacco, and pepper. While Asian countries are highly dependent on exports for the purchase of essential goods abroad, it is a measure of their poverty and low level of economic development that their share in world trade is unduly small: the region, which is the home of about half of the wold's population, accounts for only 10 to 12 per cent. of world trade. These figures are extremely low, even if allowance is made for the fact that China and India are exceptionally large national units.

Striking developments in the post-war period have been the increased importance of rubber, tea, and, to a lesser extent, jute and jute products, and the very considerable decline in the relative importance of petroleum products and rice. The other principal export commodities are oils and oilseeds, tin metal and concentrates, tobacco, pepper and silk. The overall decline in the volume of exports in the post-war period is related primarily to a reduction in Asian production, though it has also been affected by increases in consumption in the Asian countries (the population in the region outside China has increased by 23 per cent. since pre-war), as well as by competition from alternative supply sources and from new products. More recently, however, prospects have appeared to be more favourable, as in the case of tin and jute after 1951, and, in the long run, there are good prospects for production increases through improvements in farm practices.

For commodities such as rubber, jute, tea, rice, tin and tungsten, for which Asian countries are the major sources of world supply, future export possibilities are dependent mainly upon the general growth of the economies of industrialised countries, the development of new uses for the commodities as well as the effect of synthetic or other substitutes. For rubber, in particular, the growth in world demand is expected to continue, but considerable competition will be met from synthetic rubber. For rice, increased sales to Europe appear to be practicable, but the main result of an increase in rice production would probably be to reduce imports of grains into the region rather than an expansion of exports. For other commodities, Asia's share of the world market is relatively modest and lower than pre-war, owing primarily to production decreases. For coffee and tobacco, it appears quite probable that, if production were expanded, it could find ready markets in Europe as substitutes for dollar imports. In the opinion of U.N. experts, the export demand for other products, including hides and skins and carpet wool, could be stimulated through quality improvements. So far as cotton is concerned, the requirements of Asian countries will probably absorb the additional quantities produced. Present demand for tea may be maintained, if not increased.

Greater Market Stability Needed

One characteristic of this export trade has been the extreme instability of export proceeds resulting from the wide variations both in prices and in quantities of exports, and from the concentration on a relatively small number of export commodities. The results of international efforts with respect to the stability of these proceeds have been discouraging; nevertheless, the U.N. experts feel that such efforts deserve a more prominent place in the policies of Asian supplying countries as well as of importing countries. On the other hand, European countries may help in many other fields, such as tariffs, price policies, ocean transport charges and other matters directly affecting the marketing of Asian products.

The instability in Asia's import capacity in the past had serious effects on its standard of living and economic development. This instability is shown by the behaviour of post-war imports into the Asian countries and by their violent short-run fluctuations, explained mainly by the fluctuations in export proceeds but also by the priority given to alternating emergency measures of a stop-gap nature, such as improving the supply position or rectifying the pay-

PROGRESS OF RAILWAYS LAST YEAR

EXPANSION IN ROLLING STOCK VERY LIMITED

(By F. C. BADHWAR, Chairman, Railway Board)

THE year 1953 will be memorable in the history of the Indian railways. Their centenary was celebrated on 16th April, 1953, a hundred years after the Bombay-Thana line was opened to traffic—the first railway line in Asia. The year that is just over was also the first complete year of the working of the reorganised six-zoned railway system. Another landmark was the abolition of practically all the first class, from 1st October, an initial step towards a reduction in the four passenger classes that have prevailed for many years on the Indian railways. A further notable development during 1953 has been the replacement of the old local advisory committees and the Central Advisory Council for Railways, by railway users' consultative bodies. Finally, the various federations of organised railway labour have, as the result of enlightened leadership, merged into one single body, the National Federation of Indian Railwaymen.

The commencement of the second century of their existence finds the railways busy in the rehabilitation of their rolling stock, track, signalling and other major assets. Like the systems of other war-affected countries, the Indian railways have had to concentrate for some years on problems of post-war reconstruction. Their position, in this respect, is more difficult than that of more industrially advanced countries; but earlier planning and standardisation policies had facilitated a clear visualisation of high priority needs and the steps necessary to meet them.

Although the situation with regard to the physical condition of assets has appreciably improved, enabling a steadily increasing volume of traffic to be handled and thus assisting the expanding economy of the country, the heavy backlog of accumulated war-time and earlier renewals, and the heritage of a too large proportion of over-age and obsolete equipment, have compelled concentration on the completion of major rehabilitation programmes and made it necessary to allot second priority to schemes of fresh development, the construction of new lines and augmentation of rail capacity on saturated sections.

Emphasis on Rehabilitation

The railway plans have been integrated into the country's first Five-year Plan, which provides for a total expenditure of Rs. 2,069 crores over the period 1951-56. Railways have received a substantial allotment of funds under this, namely, Rs. 400 crores, out of which a sum of Rs. 320 crores is expected to be contributed by the railways themselves from the difference between their gross earnings and their total working expenses during this period.

Although the emphasis is laid on rehabilitation, certain schemes of development necessary to progress the major projects of the Five-year Plan have been taken in hand. During the first two years of the Plan period, railways have spent Rs. 150 crores and during the remaining period, that is, the current and the two succeeding years, the balance of Rs. 250 crores is expected to be distributed as follows:

	Rs. crores
Rehabilitation, including steps to attain self-sufficiency in respect of important components ...	183
Operating and technical improvements and amenities for passengers and staff	83
Additions and expansions to holdings of rolling stock and on new lines, including works already in progress	30
Miscellaneous	4

The main preoccupation of the Indian railways at the present time is, as mentioned earlier, with their rehabilitation programmes. The magnitude of this task can be assessed from the fact that, despite the new equipment placed in service by 31st March, 1951, out of the total stock of 8,209 locomotives, 19,193 coaching vehicles, and 199,094 wagons on the line on 31st March, 1951, the numbers that were over-age but had to be retained in service were 2,654 locomotives, 6,895 coaching vehicles and 47,256 wagons. In other words, on 1st April, 1951, 32 per cent. of the locomotives, 36 per cent. of the coaching vehicles and 24 per cent. of the wagons were of pre-First World War vintage, but were retained in use to meet the rising demands of traffic. By 31st March, 1956, the end of the Plan period, about 13 per cent. more locomotives, 16 per cent. more coaching vehicles and 13 per cent. more wagons are expected to become over-age, and it is to meet this situation that the Railway Board has considered it essential to revise original plans based on the resources then expected to be available, for the procurement of new rolling stock.

Production in India

During the period 1951-56, the Indian locomotive works are expected to produce about 440 complete engines, besides boilers and other spare parts. The limited capacity of domestic production, in the context of the present large requirements, makes it necessary to resort to imports for a few more years. The foreign procurement programmes of the Indian railways, during the Plan period, will include about 850 to 900 new locomotives. As regards coaching vehicles, the estimated output of indigenous production is about 4,500 and this will have to suffice for the present.

In the case of wagons, about 40,000 are expected to be obtained from Indian manufacturers and some 18,000 from abroad, including those under foreign aid arrangements. Although these figures do not cover the full requirements for rehabilitation, the infusion of new stock in these quantities and the resulting reduction in the over-age equipment which will be removed from service, are expected to produce substantial improvements. To accelerate the supply of coaching vehicles and to achieve self-sufficiency in a reasonable time, a new and modern coach-building factory is under construction at Perambur, near Madras. This is expected to be in production in a few years and should make the Indian railways completely independent of imports as far as passenger coaches are concerned.

New Lines

The programme and construction of new lines, in view of the limited resources—the worst bottleneck at present being steel and other construction materials—have necessarily to be more modest. In addition to the restoration of certain lines, dismantled during the war for releasing equipment and materials for war zones, a few new lines of a developmental character have been taken in hand. One of these, completed last year, is the Deesa-Gandhidham link, required to serve the new major port of Kandla on the west coast. Work on the Quilon-Ernakulam metre-gauge connection on the Southern Railway has also been started.

During the next year, it is expected to make some progress on the following new lines:

(a) The Khandwa-Hingoli metre-gauge link, 186 miles, expected to cost Rs. 7.50 crores, to connect the northern and southern metre-gauge systems.

(b) On the Eastern Railway, rail connection from the Gua-Barabil iron ore area to Manoharpur on the main Calcutta-Nagpur line, 31 miles, for the movement of iron ore for steel works expansion schemes.

(c) The Champa-Korba line, 22 miles, is being constructed to open up valuable deposits of good steaming coal.

(d) Gandhidham-Kandla link, 7 miles, to the port of Kandla.

(e) Gop-Katkola link, 21 miles, in Saurashtra.

The surveys of seven other projects are also included in the programme for 1953-54. These are:

(a) A possible alignment along the west coast, taking off from near Diva on the Bombay-Poona line and running south to connect eventually with Mangalore.

(b) Electrification of Calcutta suburban sections and between Calcutta and the Raniganj-Jharia coalfields.

(c) A line from Mangalore towards the Mysore Railway metre-gauge system.

(d) A rail connection to Etah in U.P.

(e) A rail connection to Chandigarh, the new capital of the Punjab.

(f) Possible rail connections to Tildanga-Khajuria-Malda line in West Bengal.

(g) A line from Fathepur to Churu in Rajasthan.

There are a large number of other schemes under examination, but most of these are still in the exploratory stage.

Traffic Stabilising

The importance of rehabilitation is due to the magnitude of the traffic which Indian railways are required to handle. Fluctuations now appear to be stabilising at what may be deemed normal levels. Passenger traffic appears to have reached a peak in 1950-51, although earnings did not decline immediately because of slight fare enhancements introduced in the following year. Though there has been a comparative decrease in the number of passengers originating, and in the passenger mileage, the present levels as compared with corresponding pre-war figures, are 170.13 per cent. higher under passengers originating, and 125 per cent. higher under passenger miles.

Goods traffic, on the other hand, has been responding satisfactorily to increased industrial activity, and there have been increases both in the tonnage lifted and in goods earnings. In a sense, the slight decline in passenger earnings, taken in combination with an increase under goods, is now tending towards the pre-war ratio between passenger and goods traffic. In recent years, the ratio of passenger earnings to the total had been nearing that of goods earnings.

It is anticipated that passenger traffic will eventually stabilise somewhere around its present levels and goods traffic will register a gradual but steady increase. With growing industrial production and the impact of the major Five-year Plan projects, there can be no justification for pessimism regarding the increase in goods traffic which the railways will be required to handle in the near future. The growth of population, specially in the larger cities, forecast by the latest census figures, also makes it necessary to plan for increased facilities for passengers.

Improving Efficiency

The Indian railways have so far had to rely largely on improvements in organisational and operational efficiency to meet the increased current demands of traffic, as expansion of their rolling stock fleets was restricted. The nature of the improvement effected in transportation, during the last financial year for which figures are available, is indicated below by a comparison with the previous year:—

	Broad-gauge		Metre-gauge	
	1951-52	1952-53	1951-52	1952-53
Train miles				
Passenger and proportion of mixed (in millions) ..	58.85	59.76	35.20	35.81
Goods and proportion of mixed (in millions) ..	50.10	50.83	19.99	20.40
Freight train loads	487	514	187	205
Average wagon load ..	16.4	17.0	7.79	8.51
Wagon miles per wagon day ..	40.9	42.1	32.4	32.9
Net ton miles per wagon day.	409	404	197	200

The Railway Board is accelerating all rehabilitation programmes and concentrating the available resources on improving the "weakest links" to obtain the optimum performance from existing assets and installations before taking up expansions or new projects in any numbers.

Associating Public Opinion

A very important development during the year has been the establishment of railway users' consultative bodies on all the railways, and at the Centre, to consider matters relating to the facilities provided for the public and the general performance of the railways. These bodies have taken the place of the old local advisory committees attached to the different railways, and of the Central Advisory Council for Railways consisting of members of Parliament.

The present organisation has a three-tier pattern with divisional or regional committees, zonal committees at the headquarters of each railway, and the national council at the Centre. Representation on these bodies is on a much broader basis than was the case with the old advisory committees. All important local interests, from the public and the railway users' points of view, have been represented on the divisional or regional committees.

On each regrouped railway there are three such committees, a senior railway officer, such as a Divisional Superintendent, acting as the chairman. Members of the zonal committees at the headquarters of each railway are appointed by the Minister for Railways and Transport to represent various interests, including the State Governments, trades associations, agriculture, passenger associations, industries and any special interests. The General Manager acts as chairman at meetings of the zonal headquarters committees. The divisional or regional committees elect one of their non-official members to represent them on the zonal committee. Thus, at meetings of the zonal committees, opportunity is afforded for discussing the problems of the different areas within the jurisdiction of each railway.

EIGHTEENTH ANNUAL MEETING OF THE MALABAR STEAMSHIP COMPANY, LTD.

ADDRESS OF MR. P. S. VALLABHDASS

THE Eighteenth Annual General Meeting of the shareholders of the Malabar Steamship Company, Ltd., was held in Bombay on 31st December, 1953. In the course of his address to the shareholders, Mr. Pratapsinh Shoorji Vallabhdass, Chairman, pointed out the necessity for replacing the chartered vessels in the coastal trade by at least serviceable second-hand vessels acquired at a price not above the amount spent on charter hire. Another problem on which Indian coastal shipping companies situate in Bombay are deeply concerned is the inadequacy of dry-docking facilities in Bombay Port, as a result of which coastal steamers face undue delay and loss of working days. Mr. Vallabhdass suggested that the Government should include in the development schemes for the two Bombay docks provision for an additional dry dock.

The following is the full text of Mr. Vallabhdass's speech:

"GENTLEMEN,

"It gives me great pleasure to welcome you all to this eighteenth annual general meeting of your Company. The Directors' report as well as the balance-sheet and profit and loss accounts of the Company for the year ended 31st March, 1953, have been supplied to you already and I trust you have read them.

"You may have noticed that, with the addition of the s.s. *Janeta*, our gross income went up to Rs. 36,16,265-15-3 which was more than double that for the previous year. The increase in the gross profit was comparatively small and came to Rs. 5,79,148, i.e., Rs. 1,15,635 above that for the previous year. The main reasons for it are explained in the Directors' report, copies of which have been furnished to you. We have, however, provided Rs. 3,10,000 for depreciation of the fleet and have proposed a modest 6 per cent. dividend to ordinary shareholders along with the usual 6 and 5 per cent. dividends, respectively, to holders of six and five per cent. preference shares of the Company.

"The publication of the first Five-year Plan, as approved finally by the Planning Commission, was one of the most important events of the year under review, and we are gratified to note that the Commission have provided Rs. 6 crores for the acquisition of additional tonnage by Indian-owned coastal shipping companies in order to make the country's coastal reservation effective. The Commission have also expressed their considered opinion that, in view of the prevailing prices, 50 to 75 per cent. of the additional tonnage will have to be purchased second-hand from outside India.

Chartered Vessels Should be Replaced on Indian Coast

"As you are all aware, the Indian coast is still served by certain chartered ships which cost the country about a crore of rupees as charter hire from year to year. A national Government led by the President of the Planning Commission may be expected to take urgent steps to stop such an avoidable loss of valuable foreign exchange especially when Indian-owned companies are willing and ready to co-operate with the Government to secure serviceable second-hand tonnage to replace chartered vessels at a price not above the hire amount frittered away from year to year. Such action would be in consonance with the Government's decision to reserve the Indian coast purely to Indian-owned ships.

"We have represented to the Government of India through the Director General of Shipping for a Government loan to buy fairly modern built second-hand coastal tonnage some months ago. It is a pity that this modest request of ours still remains entangled in the usual red-tape, though every official whom we have met so far has shown his readiness to support it. I am afraid, at the rate at which Government machinery is moving in this important matter, India may not be able to fulfil, by 1956, the target of 315,000 g.r.t. fixed by the Planning Commission for India's coastal shipping.

"The Hindustan Shipyard may take some years to develop into an economic unit, though not reach the level of the shipbuilding yards of Europe or Japan. As it is, we understand, the yard has on hand orders to keep it busy up to 1956. So it is difficult to imagine how the placing of new orders with the yard at this stage can help Indian coastal trade, which urgently needs some 50,000 tonnage, to make the country self-sufficient, at least in our home waters. We have, however, agreed to place an order also with the Hindustan Shipyard for a suitable new building for the coast.

"In this connection, it is interesting to note that some of our more influential brethren are receiving Government encouragement to build new ships outside India. For ourselves, we would prefer to rely on the Hindustan Shipyard for new construction. As a business man connected with one of the oldest Indian shipping concerns, may I also suggest, in all modesty, that the proper place to locate the head office of the Hindustan Shipyard Ltd. is either at Visakhapatnam, where construction work is carried out, or at the port of Bombay, where most of the Indian shipping companies, which the Shipyard is expected to serve, are located. I admit, I am unable to appreciate why the hutments at Shah Jehan Road in the midst of the ruins of old Indraprastha should have been selected as the registered head office of the Shipyard. This arrangement, unfortunately, prevents us from frequent contacts with the Managing Director of the Shipyard, which, I think, are desirable in the best interests of all concerned.

Dry-docking Facilities at Bombay Inadequate

"Inadequate dry-docking facilities at Bombay is also a source of anxiety to Indian coastal shipping companies having their head offices at this port. Coastal steamers trading over the West Coast of India have to depend upon one of the two Bombay dry docks for urgent repairs, survey and renovations required from time to time. At present, our steamships face undue delays and consequent loss of working days before they get the use of the dry dock. This reduces the modest profit margin available in coastal shipping business, and makes it less attractive to the private investor.

"If the Government of India's plans to attract private capital for the much-needed growth of our coastal shipping are to bear fruit, early steps are necessary to provide it with modern conveniences including better dry-docking facilities to Indian coastal vessels, and one of the two dry docks at Bombay should be reserved for such steamers. I would suggest further that, in the development schemes for the Princes and Victoria Docks of Bombay which are under the consideration of Government for some time past, provision should be made for an additional dry dock, and Government plans to build a dry dock at Visakhapatnam might also be speeded up.

"We appreciate the expansion of training facilities recently provided for naval engineers at Bombay and Calcutta, and hope that the engineers turned out by these institutions will worthily fill the gap in the merchant navy for well qualified Indian nationals as engineers.

Indian Shipping and Oil Refineries

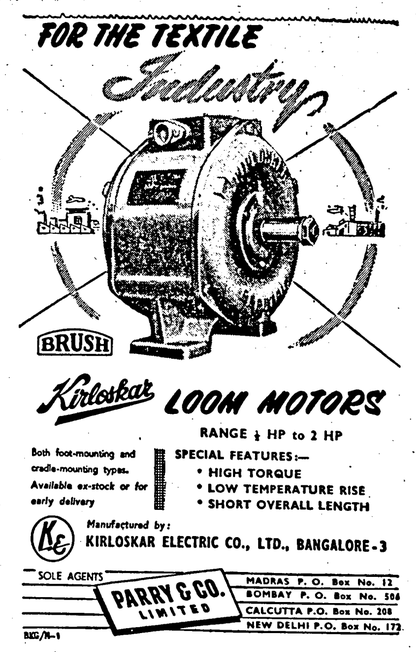
"Your Directors are looking forward for avenues of advancement of your Company, as opportunities arise. You may have read reports about the arrangements recently entered into by the Government of India with certain foreign firms for the establishment of oil refineries. It is a matter of regret that the interests of Indian shipping were left out of consideration, if not disregarded, during these negotiations. In view of the declared policy of the Government of India, we hope they will see to it that the products of the refineries are transported over the Indian coast in Indian-owned tankers. We shall be glad to co-operate with our national Government in this matter.

"We are thankful to the Director General of Shipping and his Deputy and Assistant Directors, as well as the Principal Officer, Mercantile Marine Department, for the co-operation and guidance received from them from time to time.

"In fact, there is a feeling among the Indian shipping companies that it will be more helpful to national shipping, if greater reliance were placed on the expert advice available from these officers. This will enhance their usefulness and may help to curtail red-tapism to reasonable proportions, thereby saving us the time and trouble often spent in waiting upon busy Delhi chiefs to settle details about matters, of which the policy has already been decided upon by the Government of India and the Legislature.

"I trust the above observations of mine will be taken in the friendly spirit in which I have ventured to offer them; for we all know that the advancement of the Indian mercantile marine is the common goal of our National Government and ourselves.

"The staff of your Company working on ships, as well as on shore, and at our branch offices have worked throughout the year with tact, diligence and devotion to their duties, and with your permission, I shall be happy to convey your thanks to them for their co-operation in the activities of your Company during the year under report."



CONTROL OF PUBLIC EXPENDITURE IN BRITAIN

HOW PARLIAMENTARY POWERS ARE EXERCISED

(By OSCAR R. HOBSON)

PUBLIC expenditure in Britain falls broadly into three categories. There is first the expenditure in respect of public administration, defence and social services and National Debt, over which Parliament—to be precise, the House of Commons—has direct control. Secondly, there is the expenditure of local authorities—town and county councils and similar bodies—which have taxing and spending powers in respect of local services such as housing, education, drainage and roads. And, thirdly, there is the capital expenditure of certain public boards or authorities or councils, notably those governing the nationalised industries, which have the right to borrow from the Exchequer or under Treasury guarantee.

So far as central Government expenditure is concerned, the most effective form of Parliamentary control is exercised before the expenditure comes to the notice of Parliament. It is, in fact, exercised by the Cabinet, which, on the advice of the Chancellor of the Exchequer, lays down the policies leading to expenditure, and so sets limits to the activities of the spending departments of the Government.

The control circuit starts in October of each year, when the Treasury sends out a letter to the departments of State requesting them to submit their estimates of expenditure for the financial year due to begin on the following 1st April. These estimates are drawn up in great detail under separate "votes" and "heads" and "sub-heads" of votes, with the active co-operation of Treasury officials, and, before they are submitted to Parliament in February, they require the approval of the Treasury. Parliament's (House of Commons') consideration of the estimates begins at this point and continues through the spring and early summer. It is carried out by the House sitting in Committee of Supply on 26 days allotted to debating the various votes. Irrespective of whether they have been fully discussed or not, all votes must be passed at the end of the time allotted for their debate.

A Defect

In the circumstances, anything in the nature of systematic examination of the various heads of expenditure is quite impossible, and, in fact, it frequently happens that most of the time assigned to a particular vote is taken up by discussing matters of purely subsidiary importance. This is a defect inseparable from any system which involves debate by a House of 600 members working in the highly-charged atmosphere of party politics. In some degree it is remedied by the more detailed review conducted by the much smaller Select Committee on Estimates composed of 28 members drawn from all political parties. This Committee picks out for itself the votes it wishes to investigate, but, like the House itself, it has no time to examine the whole range of public expenditure.

This is the procedure applicable to the departmental estimates drawn up each year, in the light of earlier legislation and Cabinet decisions and established practice, to meet the country's administrative needs in the following year. But there is another body of expenditure to which it does not apply. This is the "Consolidated Fund" expenditure, which relates to recurring obligations under legislation which has continuing effect. The largest and most important of these Consolidated Fund services is the interest on the national debt. Also charged direct on the Consolidated Fund are the salaries of the judges and certain other high officials who are responsible direct to Parliament and cannot be dismissed except on a resolution passed by both Houses.

Among these officials is the Comptroller and Auditor-General, who has the main responsibility for what may be called the second stage of parliamentary control of public expenditure, namely, the checking of expenditure as it occurs, to make sure that no money is spent which has not been authorised by Parliament, and that all money spent is spent on the exact purposes authorised by Parliament. In each department, there is an officer charged with this duty of ensuring that all disbursements conform strictly to the terms of the relevant vote and head and sub-head; and at his elbow, as it were, are the officers of the Comptroller and Auditor-General's Department (the Exchequer and Audit Department), without whose authority no payments can be made.

Finally, reviewing of public expenditure after it has been incurred is another House of Commons body, the Public Accounts Committee of 15 members appointed each session. This Committee, which has wide powers of examining officials, conducts its reviews with vision and thoroughness, and not infrequently, discovers and reports examples of waste and inefficiency. But, of course, its services are necessarily in the nature of shutting the stable door after the horse has been stolen. Its *post facto* investigations have, nonetheless, a considerable deterrent effect on departmental expenditure.

Control By the Treasury

All central Government expenditure is amendable to the disciplines described above, of which that wielded by that "watchdog" of Parliament, the Treasury, is undoubtedly the most effective. In a mechanical sense, the control system, developed over the past three centuries, if not perfect, works smoothly and well. The canalising arrangements—by which Parliament finally sanctions all expenditure by a single Act, the Appropriations Act, similarly sanctions all taxation by a single measure, the Finance Act, while all receipts and all disbursements pass through the Consolidated Fund (reflected in the Exchequer account of the Bank of England)—could not easily be bettered.

If what may be called the higher arts of constructive control have hardly been developed to the same pitch as the mechanical checks and safeguards, that must be put down to the tremendous demands which successful planning makes on imagination, foresight and judgment.

Local Expenditure

As with central Government, so with local government expenditure, the routine machinery of control has been developed to a high standard of efficiency by long experience and by the legislation defining the powers and duties of the councils and their officers. One point, however, needs to be stressed in this connection, namely, that, while theory and tradition grant wide measures of autonomy to the local authorities in respect of services within their areas, the progress of events in the last few decades has gone far towards restricting that autonomy in practice and, in a large measure, placing local authority expenditure under the direct control of Parliament.

This has happened, on the one hand, through the great growth of what are called the social services, and, on the other, through the shortcomings of the local taxing (or "rating") system which is based on the assessment of property value, and not on the ability to pay, of the local residents. The effect has been that Parliament has found it necessary to take direct responsibility for an ever-increasing share of local public expenditure and, by a system of Exchequer "grants," to place it on the shoulders of the taxpayer as distinct from the local ratepayer.

These central Government grants now represent some 40 per cent. of the total expenditure of the local authorities, with a corresponding reduction of their independence and their power to respond to the individual wishes and needs of the local population. Local government in Britain is, one feels, in a stage of transition which must either give place progressively to greater centralisation or must be revivified by a drastic reform of local taxing methods.

Finally, there are the newcomers into the realm of "public finance," the nationalised industries, notably coal, transport, electricity and gas. The intention of Parliament was and is that these corporations should be functionally and financially autonomous, subject to the general directive laid down in the Acts setting them up, that, "taking one year with another," they shall cover current expenditure by revenue.

But they are required to raise the funds needed for capital expenditure either by direct loan from the Treasury or by loans raised on the market with Treasury guarantee. In either case, they come under Treasury control, since they must, of course, satisfy the Treasury as to the desirability of the objects for which they seek finance. Thus, the decision as to which nationalised boards shall be allowed to raise capital and the amount they shall be allowed to raise becomes, in effect, a direct responsibility of the Government.—*Exclusive to "Commerce."*

COLONIES' STERLING BALANCES

"The accumulated savings of the Colonies will be of great value in enabling them to face the future with confidence and to press forward with schemes of basic development upon which their continued economic and political progress so much depends," thus observes the White Paper, *Memorandum of Sterling Assets of the British Colonies*, published in London recently. The *Memorandum* summarises the benefits which are accruing to dependent territories from their increased sterling balances. These balances rose from £670 million at the end of 1949 to £1,222 million at the end of 1952, representing an increase of 80 per cent.

The bulk of the expansion of reserves took place in the Malayan area, the increase being from £3 million to £80 million. West Africa held the second place with a rise from £22 million to £61 million, and East Africa's balances increased from £20 million to £42 million. These vast reserves, the *Memorandum* points out, "can be withdrawn at will, and there is no question of their being blocked."

The White Paper has been issued to explain what these sterling assets are; they are, it stresses, part of the financial reserves of the Colonial Governments and peoples. "Like other countries, the Colonies need to hold reserves as an insurance against falls in export earnings, as savings for future investment, and to maintain the exchange value of their currencies. As a general rule and in the short run, the reserves rise in times of prosperity and fall in times of recession, but, as the Colonies become more developed and their national productivity increases, they should show a long-term upward trend."

The main components of the sterling assets—they are kept in London because of its great facilities—are: Colonial Government funds 36 per cent.; funds backing Colonial currency 30 per cent.; Colonial Marketing Board reserves 12 per cent.; and Colonial funds with U.K. banks 22 per cent.

Describing the purposes to which the moneys under each of these headings are devoted, the *Memorandum* reveals that sterling in Colonial Government funds alone is marked for eight main objects. In addition to meeting a wide range of calls made on it as working capital, this section provides development and renewal funds, a sinking fund against loans, as well as reserves for pension and provident funds and for deposits placed in savings banks.

The *Memorandum* points out that, while the dependent territories issue their own currency, sterling backing must rise and fall according to demand. This demand differs widely between areas, as it is principally influenced by whether the main output from the zone is seasonal or spread over a full year. Marketing boards in these territories are bodies which are not subject to direction by the British Government, and have, as their main aim, the maintaining of steady prices for products. They, therefore, build up reserves in good years for price assistance in bad years, and so such funds have to remain, in part, "liquid" to meet immediate calls. Nevertheless, the *Memorandum* states that "the reserves having reached a level which is considered more than adequate for price stabilisation, Colonial Governments and marketing boards have been able to invest an increasing proportion of their total reserves in local development schemes."

The *Memorandum* gives a detailed review of the many influences which may exert pressure on the future course of sterling assets. "One important factor," it states, "will affect the future level of the Colonies' sterling assets—the rate at which increased uses can be found for local investment of these reserves. As colonial economies become more broadly based and thus able to support financial institutions of their own, so will opportunities increase for local investment of many of the resources now going into external reserves. Already, Colonial Governments are investing more of their reserves locally, and it may be expected that this process will continue."

The *Memorandum* concludes that the Colonies have good reason for satisfaction in their present sterling reserves. To quote it: "They have been able, during a few exceptional years of favourable terms of trade, to increase their reserves against future recession, while they have increased their consumption, expanded their physical assets and carried out general plans of economic and social improvement with the help of outside capital, most of which came from the United Kingdom."

Quality Controlled

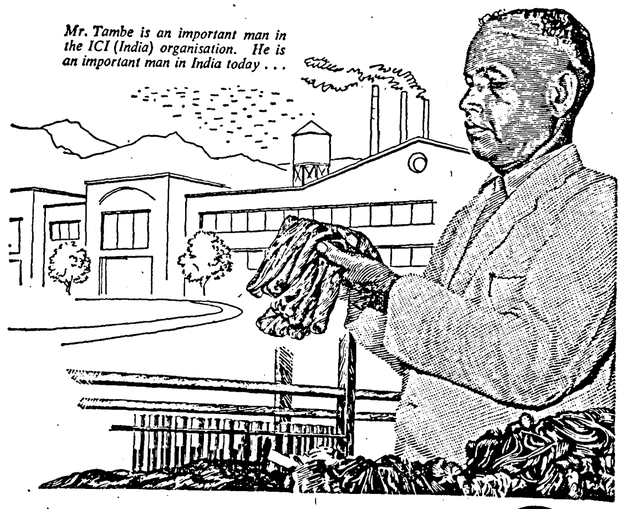
A vast range of dyestuffs and pigments is needed by textile dyers and printers, paper and leather dyers and paint makers in the manufacture of their products.

The one common demand of all these users is unvarying quality. Unvarying in colour strength and shade; in physical and chemical properties; in water-solubility, and in fastness.

To ensure perfect uniformity of quality we have a Colour Standardising Plant in Bombay, perhaps the largest in the East. Here all shipments of dyestuffs and pigments are first carefully tested, and then standardised before being sold to customers.

Mr. G. K. Tambe whom you see here, supervises the work of our Colour Standardising Department. In the course of 32 years of service, he and his Department have tested and standardised tens of thousands of tons of dyestuffs of numerous varieties needed for diverse uses in India's many industries.

Mr. Tambe is an important man in the ICI (India) organisation. He is an important man in India today . . .



. . . contributing to India's progress and prosperity

NEW PUBLICATIONS

The Indian Cotton Textile Industry—an Economic Analysis. By Dr. S. D. Mehta. Published by the Textile Association (India), Ganesh Bhuvan, Suparibaug Road, Parel, Bombay 12. Price : Rs. 12.

AS the title itself suggests, this publication is devoted to an economic analysis of the cotton textile industry in India. The book contains the results of research and investigation which its author, Dr. S. D. Mehta, conducted into the wide and varied aspects of the industry—structural, market and allied, and financial. The part dealing with the structural aspects of the Indian cotton textile industry contains an elaborate account of the equipment patterns, wage situation and organisational set-up. A reappraisal of the handlooms forms a special feature of the book. The basic facts about the yarn and cloth markets, the mills and the markets, the role of distributive agencies, and final demand patterns constitute the subject matter of Part II. In Part III, the author has examined the financial aspects of the industry, including the sources of mill finance, the relation between the size and profitability of units, and problems of financial management.

All these aspects have been dealt with in a lucid and comprehensive manner, with the help of a number of charts and statistical tables. The importance of the study lies in the fact that it is based on firsthand knowledge of mill routine and practices in the different centres of the cotton textile industry which the author acquired during the investigation. Indeed, as Mr. H. P. Mody, one of India's leading industrialists and business men, has rightly pointed out in his preface to the publication, Dr. Mehta "has made an exhaustive study of the industry, and the pages are a witness to the ability and thoroughness which he has brought to bear upon his task." The publication will, therefore, be immensely useful not merely to those connected with the cotton textile industry and trade but to research students in the field of cotton textiles.

Considering the keen controversy that persists in regard to the role of mills and handlooms in the cotton textile economy of India, the need for a clear insight into the real issues pertaining to the handloom sector cannot be overemphasised. Dr. Mehta has done well, therefore, to examine the question dispassionately. It is noteworthy that he takes strong exception to the policy of reserving markets for handlooms. The pertinent observations which he has made in this connection are worth reproduction. He says:

"The fact must be faced, and the earlier it is done the better, that the bulk of the handlooms must yield ground, in any normal market, to more mechanical forms of weaving. Any attempt to foster the expansion of handlooms is a retrograde step, which will only aggravate the difficult problems of social policy that must arise when a reduction of the dimension and type we envisage is getting through, precipitated by political events like partition. The human considerations involved no doubt underscore the gravity of the situation, but perpetuation, behind legislative sanctions, of the present levels of human dependence on handlooms is only capable of acting as a palliative, unless it was so drastic as to be utterly unacceptable in the interests of the entire country. A planned and orderly elimination of the surplus human material acquired during the war and later years, and encouragement of weavers' children into other occupations would form the first plank in any such process; active encouragement should be preferred to all those who are willing to leave, concentrating attention on weavers who are engaged in the production of fabrics that are, taking all—technical and economic—considerations into mind, likely to suffer most directly from mill competition, direct or indirect; dovetailing of these schemes, and offering incentives for new factories and industries to be opened out in the affected towns or regions will be of two-way benefit. The need for such a programme, spread over a period of 10 years or so, is urgent, and compelling."

This is candid criticism. Coming as it does from a disinterested research worker, and not a person with any vested interest, it deserves the attention of the authorities. That the industry's attitude towards the question is the same as the author's will be clear from a perusal of the memorandum submitted by the Federation of Indian Chambers of Commerce and Industry to the Textile Enquiry Committee in July last, that is, a few months after the publication of his thesis. It must, however, be said to the credit of the author that he published his thesis quite a few months before the Federation submitted its memorandum to the Committee.

Standard of Living in India and Pakistan, 1931-32 to 1940-41. By R. C. Desai. Publishers : The Popular Book Depot, Lamington Road, Bombay 7. Price : Rs. 20.

This work is one more in the traditional line of an Indian economic problem being taken up in Great Britain, with the inevitable sojourn in India for investigation and with the usual array of the names of Cambridge economists who have chosen to guide such a piece of research. But it is an important work, both as to its achievements and as to the usefulness of the problem handled. It carries the analysis of national income from the angle of consumer expenditures and presents the distribution of this expenditure over the whole decade, 1931-32 to 1940-41. We have had very few sustained efforts on an all-India basis for the measurement of national income, until we come to the efforts of the National Income Committee.

The book begins with the estimates of production in the various sectors of the economy and shows the limitation of census of production and the "added value" estimates. The remaining two parts of the work (Chapters 7 to 17) are, however, devoted to the other approach (consumer expenditure) so as to include a total of exchange values; but they are exclusive of all the services not rendered for monetary rewards. For this purpose, valuations have had to be made not merely for the net retention for consumption but utilities involving expenditure from personal incomes.

For the purpose of calculations, the district in each Province has been taken as a basic unit and, despite some well-known limitations, discerning use of the data contained in the Revenue Reports of these has been made. Undoubtedly, as in all attempts at calculating incomes, these computations have meant numerous guesses and the difficulties of imputing values to the sum total of utilities at every stage, but the consolidated tables (p. 260 to 270), with the additional note on reliability (table 112), bear an eloquent testimony to the success with which the author has been able to build a consolidated picture of the consumer expenditure on 15 important items for the whole decade since 1931-32. The work concludes with linking up of earlier estimates of national income, more especially Dr. Rao's for 1931-32, and with useful comparisons of group expansion of consumer expenditure between the U.K. and India for 1938 and its variations during the period covered.

We welcome the work as a useful example of tool for the students of economics and as filling up a big lacuna for the calculations of national income as regards an extremely important decade for policy makers. The publishers have endeavoured to make the work as attractive as possible; but the price of the book will severely limit the number of its buyers.—*M.C.M.*

Impact of Science on Society : Volume IV, No. 2: Summer 1953. Published by the United Nations Educational, Scientific and Cultural Organisation, Paris. Price: $0.75. Annual subscription: $2.50.

The best hope of avoiding cycles of depression and developing a stable economic system lies in the use of a special electronic device, the "analogue computer," which can cope with any degree of complexity and can use "feed-back" to control oscillations. The construction of such a machine is proposed by Mr. Arnold Tustin, Head of the Department of Electrical Engineering at the University of Birmingham (England), in the summer issue of *Impact of Science on Society*, a quarterly publication of the Department of Natural Sciences at U.N.E.S.C.O. in Paris.

Economic laws are based on cause and effect just as definitely as are the laws of physical science and some of them are just as reliably established. But the laws of science are simple and usually connect only two things as cause and effect, such as gravitation and the falling apple. But economic affairs are a maze of interrelated causes and effects, and a consequence often changes its own cause, as when a full stomach kills hunger. This "feed-back" of information and influence from the effect to the cause is the basis of many electronic control mechanisms. A simple example is the automatic thermostat that controls room temperature. More complex is the automatic aircraft pilot. Electronic computers can now take into account very complex relations between separate feed-back circuits. Some automatic factory control systems in the chemical industry are almost as complicated as a national economic system, yet they keep the production line going smoothly, without variations of pace or breakdowns.

The permanent success of any economic system needs similar stability and must avoid violent oscillations and the ups and downs of business cycles. The case is analogous to that of the automatic pilot which corrects any deviation in the flight of a plane by a shift of the rudder in the opposite direction. But it is important that this correction be not overdone so that the plane wobbles back and forth or even becomes unstable. This is done electronically by making the "feed-back" control so sensitive that it catches any deviation almost before it is noticed by the pilot.

What Professor Tustin proposes is the construction of a system of electronic circuits to stimulate the complicated interrelations of economic factors, such as the bank rate, open market buying and selling, variation in Government spending, in taxes and in credits. No machine can control the economic system, but it can be used to study the instability factors by analogy and to determine which factors are most likely to go off course and how they affect other factors. If the machine is a good analogue of the economic system, it should be swift and easy to learn from the machine where and when corrective controls can be most effectively applied. Such a machine would cost some $100,000 (between £30,000 and £40,000) and might take 10 years to design, adjust and perfect. But it offers a unique method of analysing a problem which is too complicated for the human brain.

Investors' Encyclopædia, 1952-53. Compiled by Messrs. Kothari and Sons, Share, Stock and Exchange Brokers, Oriental Buildings, Armenian Street, Madras 1. Price : Rs. 20 (plus Rs. 3 for packing and postage).

There is only a limited number of publications of the kind under review. But most of them confine themselves to a restricted field, in that they generally cover the companies the shares of which are quoted on one or other of the three Stock Exchanges in the country, namely, Bombay, Calcutta or Madras, and a few other prominent companies the shares of which enjoy a wider market. The publication under review is, perhaps, a notable exception, inasmuch as it is only one of its kind to cover almost all the joint-stock companies in India, irrespective of the fact whether their shares are quoted in all the principal Stock Exchanges or not.

The *Investors' Encyclopædia* is in its seventeenth edition and has rendered very useful service to investors in India all these years. The publishers have taken the present opportunity to add a number of companies in each section. They have spared no pains to rearrange the matter so as to eliminate any possible discrepancies in the reading and tabular matter and to give additional information wherever necessary. The review of each industry, which forms the introduction to the relevant section, has been brought up to date and serves as an invaluable guide to investors in each section. The chapter on income-tax and super-tax rates for the current year in India, Pakistan and the U.K., the agricultural income-tax rates and the stamp duties in various States of India, which is an inseparable part of any guide book on investment, has been revised. As in the previous editions, a very comprehensive and general review of the economic progress of the country during the past year and the outlook for the current year have been provided.

A drawback of the earlier editions of the publication under review was its bulk. This has been removed in the present edition by printing the matter on thin paper, so that the size has been nearly halved.

Report of the Bombay Chamber of Commerce, 1952. Published by L. D. Boult, Secretary, Bombay Chamber of Commerce, Ballard Estate, Bombay. Price : Rs. 15.

The *Report of the Bombay Chamber of Commerce*, 1952, will, as before, be of immense use to the business community in India. Authoritative and useful information on the developments during the year, in the field of industry, commerce, trade, banking, insurance and labour continues to be an outstanding feature of the *Report*. The inclusion of the various Acts passed by, and Bills pending passage before, Parliament and the Chamber's constructive and helpful suggestions thereon will make the *Report* a record of ready reference for the business community in India. The value of the publication has, this year, been enhanced by the addition of a number of charts giving quotations for a wide range of commodities which figure prominently in the internal and external trade of India.

PROTECTION OF INDUSTRIES IN INDIA

WORK OF TARIFF COMMISSION IN 1952-53

THE first Annual Report on the activities of the Tariff Commission, covering, as it does, almost the period since its inception on 21st January, 1952, up to 31st March, 1953, published recently, is undoubtedly an impressive record of performance of the protected industries in India. Not only does the Report contain a review of the work done by the Commission and an account of its duties and functions but also the history of tariff protection for several industries, the cases of which were taken over by the Commission. A section is specially devoted to new references to the Commission and the enquiries held by it during the year. A somewhat fuller account of the case of industries on which Government resolutions were issued during the year is provided in another section. One of the chapters gives a general review of the progress of protected industries during the year in its fourfold aspects, namely, production, sales, stocks and wholesale prices.

A perusal of the Report discloses that the Commission has scrupulously attached adequate weight to every aspect of protection while making its recommendations. Among the general principles taken into account in arriving at decisions are the quantum of output, the quality of the product and the price charged for it, technological improvements and scientific research, training of personnel, the use of indigenous resources, and, in the case of embryonic industries, the time within which they should start production. The Commission's work in this respect would, however, appear to have been considerably handicapped by the non-availability of accurate statistics and inadequacy of personnel, especially expert personnel. Despite this handicap, a serious one at that, considering that important decisions affecting the economy of the country as a whole have to be taken, the Commission must be said to have acquitted itself in the discharge of its duties quite creditably. This, however, does not mean that we are extending an unqualified support to all the policies pursued by the Commission. There have been serious differences of opinion between the Commission and some of the major industries in regard to fundamental issues relating to protection, such as the period of protection, the quantum thereof, the rate of return allowed in respect of those industries the products of which are subject to price control, etc. In this connection, readers' attention must be drawn to the series of well-reasoned articles contributed to this journal in the second half of last year by Mr. Padamji Ginwala and to the reactions of the automobile industry to the Commission's recommendation. The fact that almost all recommendations of the Tariff Commission has been found acceptable to the Government and that no serious differences of opinion have arisen between them may give rise to misgivings about the independent character of the Commission. But there have been, in recent months, instances where the Government and the Commission have not been able to see eye to eye on some important issues, as, for instance, the Government's refusal to accept the Commission's recommendation for a higher return on capital employed in the case of the Tata Iron and Steel Company, Ltd., and for protection in regard to the sericulture industry. These instances, which are in refreshing contrast to the developments during the period of its predecessor, the Tariff Board, show that the Commission has a mind of its own.

Number of Enquiries Covered

Over a period of nearly two years since the Commission started functioning on 21st January. 1952, the Commission has completed 36 enquiries of which 26 were connected with claims of industries for protection and assistance and nine into cases of fixation of prices. In addition, the Commission was entrusted with an enquiry of an unusual type, namely, the determination of a fair ratio between the ordinary shares of the Steel Corporation of Bengal Ltd. and the Indian Iron and Steel Company, Ltd.

A perusal of the list of industries, the claims of which for protection or continuance of protection were examined by the Commission, reveals that the industries represent a fair cross-section of India's industrial structure. Eight of them, viz., automobile, ball bearings and steel balls, woodscrews, hurricane lanterns, transformers (power and distribution), bicycles, dry batteries and motor vehicles belong to the engineering group. Another eight, namely, glucose, hydroquinone, titanium dioxide, calcium lactate, fountain pen ink, bichromates, dyestuffs and para-aminosalicylic acid belong to the chemicals and allied group. Three more, namely, sericulture, woollen hosiery and flax goods are of the textile group. Preserved fruits and sago are food processing industries. Ferro-silicon is a metallurgical industry. The remaining four, namely, plywood and tea chests, pencils, buttons and coated abrasives may be classified as other industries.

In the case of the woollen hosiery industry, the Commission did not recommend grant of protection. In five cases, namely, dry battery industry, pencil industry, fountain pen industry and ferrosilicon industry, the Commission found that continuance of protection was not necessary. It did not recommend reduction of import duty on meta-aminophenol as claimed by the manufacturers of para-aminosalicylic acid. In 13 cases, including that of plastic buttons, grant of protection or assistance or continuance thereof was recommended. In the remaining cases, either the enquiries were held very recently or decisions were in the process of finalisation.

Claims of Automobile Industry

The biggest enquiry held by the Commission during the year was in connection with claims for protection of the automobile industry. This industry presented a complicated medley of interests and even after collecting and sifting a mass of information and views the determination of the best method of assisting the industry was by no means easy. For several months the Commission thought over the problems, assisted by a German expert and two Indian technical advisers. It is stated that "the Commission's conclusions and recommendations embodied in its report represented the best possible solution which, though not free from certain calculated risks, would nevertheless lay the foundations of a vital industry which has been appropriately described as the mother of engineering industries." Since the publication of the Government Resolution accepting most of the Commission's recommendations, the Commission has initiated investigation into a number of automobile ancillary industries which must constitute the base for the main industry.

Price enquiries conducted by the Commission during the period under review related to five commodities, namely, steel, cement, tin plate, raw rubber and superphosphate. The case of steel is interesting. In pre-war years, this industry received protection on the recommendation of the Tariff Boards, and the consumer of steel bore a part of the burden. But, in the post-war years, the prices of its products have been regulated on the recommendations of the Tariff authorities, and have been lower than what the consumer would have had to pay for imported steel.

The two reports relating to price enquiries which attracted wide attention were those relating to (a) the determination of the ratio between the ordinary shares of the I.I.S.Co. and S.C.O.B. and (b) the fixation of fair retention prices of steel of the T.I.S.C.O. In the former case, the report of the Commission paved the way for the merger of the I.I.S.Co. and the S.C.O.B. and for the grant of a large loan of 31.5 million dollars by the World Bank to the I.I.S.Co. for carrying out its expansion programme. In the case of the Tatas, the Commission had treated the Company's collieries as a part of the steel works and allowed depreciation and return on the colliery block. Secondly, a return of 10 per cent. on block was recommended as against 8 per cent. recommended by the previous Tariff Boards, subject to the proviso that the amount of extra 2 per cent. return less taxation should be earmarked for modernisation and expansion. On both the issues, the Government chose to differ from the Commission. The Government did not accept the recommendation for the grant of 10 per cent. return on block as it had decided to grant a special loan to the Company for financing its expansion programme on favourable terms. The question of treatment of the colliery block for purposes of computing the cost of steel was referred back to the Commission for further investigation, and the Commission has already completed its enquiry into the matter.

Tin Plate and Rubber

As regards tin plate and raw rubber, the Commission revised the prices in an upward direction, while its report on cement prices is stated to be still under the consideration of Government. An enquiry into the fixation of prices of rubber tyres and tubes has been taken up on reference from Government. The Commission held an enquiry into the prices to be paid to the producers of superphosphate during the period 1st January to 15th August, 1952. This was the last enquiry, and the Government has terminated the pool arrangements with regard to superphosphate.

Besides the enquiries into the various industries, the Commission's activities included research into specific problems, compilation and issue, albeit in a restricted form, of statistics relating to protected industries. The Commission's research studies included analytical notes on the incidence of 30 per cent. increase in the railway freight on coal/coke, on the fair ex-works costs of production of certain protected industries and on the trend of wholesale and retail prices of protected commodities in order to find out if there were any cases of excessive price-charging. Unfortunately, the Commission has not clearly stated the results of this investigation. Of course, in one place, the Commission has stated that "complaints from consumers against protected industries for taking advantage of protection to charge high prices were remarkably few." But one would like to know whether the Commission's investigation revealed that the absence of complaints was really due to lack of exploitation by protected industries or to the fact that the vast majority of consumers are not vocal enough to voice their grievances effectively.

SULPHUR PRODUCTION IN INDIA

The annual requirements of sulphur in India are of the order of 60,000 tons. Of this, some 35,000 tons are used in the manufacture of sulphuric acid. Sulphur is a strategic chemical required during both war and peace. Unfortunately, India is lacking in direct sulphur resources. Sulphur is, however, found in certain pyrites but so far no serious attempts have been made to organise indigenous sulphur as a national industry. Consequently, it was quite appropriate that this aspect of the question received emphasis at the sixth annual session of the Indian Institute of Chemical Engineers, held on 30th December last at Hyderabad. Presiding over the session, Dr. G. P. Kane, President of the Institute, gave a very interesting account of how in other countries persistent efforts had been made to meet sulphur shortage.

Pointing out the necessity of organising the sulphur industry in India, Dr. Kane said that the possibility of achieving at least partial self-sufficiency in sulphur within a reasonable time appeared real, but it awaited the necessary effort. He considered that proper results would not be achieved by private enterprise, because the cost of sulphur produced by chemical means might be somewhat higher than the present landed cost. But sulphur being a civilian and defence need, it was, he thought, the duty of the Government to ensure that the security of the State was not jeopardised by complete dependence on imports. If it was necessary that the consumer should receive sulphur at approximately the present landed price, he said, the industry might need a small subsidy. Such subsidy, he felt, would be a small price to pay for the guarantee of sulphur supplies in an emergency.

Dr. Kane drew the pointed attention of the audience to the possibilities of producing sulphur with the assistance of the oil refineries which are being established in India. "Plans are under way," he observed, "for setting up three oil refineries, two of which will be installed in Bombay with a combined capacity of 2½ to 3 million tons of petroleum crudes. This will offer scope for production of sulphur. Thus, production of elemental sulphur need not remain a pious hope. The dependence of chemical industries on imported basic raw material could be removed only by making a vigorous effort to produce sulphur in the country."

Dr. Kane then gave an account of the measures taken to meet the sulphur shortage in the U.K., Germany and other countries. Well-known methods such as substitution of pyrites or anhydrite for sulphur was difficult in India as the required conditions were not satisfied. Even if fresh deposits of these minerals were discovered, he said, the capital required for their exploitation would be very large. The price of acid was to be maintained at a reasonable level and hence alternative cheap sources of raw material had to be looked for. Another material from which sulphur could be produced was, he said, hydrogen sulphide. Besides, the cheap process of exploitation of pyrites developed in Norway, Spain, and Portugal could also be examined. However, an interesting possibility was the production, by double decomposition, of hydrogen sulphide from chloride which was available cheaply at marine salt works in India. For each ton of salt manufactured from sea water, he stated, 1½ tons of bitterns were discarded and this could form a successful source for winning sulphur. Experimental work in evolving a process showed that a single salt works, with an annual capacity of three lakh tons salt, can supply raw materials for production of 5,000 tons of sulphur per year.

Taking *per capita* consumption of sulphur as the index of prosperity of a country, Dr. Kane incidentally pointed out that the consumption in India was 0.4 lb., in the U.K. 30 lbs. and in the U.S. 75 lbs.

IMPORT POLICY FOR JANUARY-JUNE, 1954

The import policy for January-June, 1954, announced on 30th December last, is modelled, more or less, on the lines of the policy for the second half of 1953. The few changes which have been made in it are intended to help sustain the tempo of industrial and agricultural development in India. Steps have, accordingly, been taken to facilitate larger imports of industrial equipment and raw material. This change should provide relief to some of the indigenous industries which had to curtail production, owing to serious competition from imported products. For, under the new import policy, import quotas of 34 items have been stepped down in order to conserve foreign exchange on goods which can be easily produced in larger quantities. These include such items as table fans, card cans and jams and jellies, lead pencils and hand-knitting wools, cod liver oil and duplicators and also a large variety of engineering stores, as, for example, iron and steel screws (other than machine screws), brass, lead and copper wrought and copper wire. It is to be hoped that the opportunities thus provided for expanding sales will be put to good advantage by the concerned Indian producers to improve the quality of their products and try to offer them at reasonably lower rates to consumers.

A number of stores such as electric motor starters, some drugs, medicines and chemicals, and a few kinds of mathematical instruments has been detached from the main serial numbers and importers are required to establish separate quotas from these items.

The share of newcomers in the import trade of the country has been expanded under the new import policy. A number of new items has been added to the list of these importers. Although imports of betelnuts have been dropped, those of machine cloth, palm oil, coconut oil, cigars, domestic refrigerators, watches, water and oil colours, and musical instruments, etc., are now licensable to newcomers. The procedure for the issue of licences has been simplified and those who obtained licences in the previous half-year will, on the production of their old licences, be issued with fresh licences of equal value.

For established importers, provision has been made for grant of additional licences for increased imports of machinery, active finishing agents and scientific and optical instruments.

A few changes have also been made in the procedure for the grant of licences. These are intended to give increased facilities to importers. Importers will now be able to obtain their licences even for mutiple items on production of quota certificates, if they are unable to present the licence for the previous licensing period.

Again, the import licences for most kinds of fabrics, some varieties of papers, most kinds of arms and ammunition and almost all types of moulding powders have been made interchangeable.

The issue of capital goods licences for jute and hemp machinery has been decentralised.

Rules relating to the grant of minimum value licences have been liberalised, and small importers will be given licences for reasonable values to enable them to effect imports in convenient units.

SELF-SUFFICIENCY IN TRANSPARENT PAPER

India has reached self-sufficiency in non-moisture-proof transparent paper. By the middle of 1954, the country is expected to attain self-sufficiency in the heat-sealing and moisture-proof varieties of transparent paper as well.

The Travancore Rayons Limited, the only manufacturers of transparent paper in India today, will, with a view to meeting the growing demand, be able to double its existing capacity of non-moisture-proof transparent paper of 80,000 reams a year when their new plant goes into operation in February, 1954.

Because of its transparency, strength, and lack of odour, transparent paper made from cellulose is much superior to ordinary packaging papers and is considered an ideal wrapping material for a large variety of products such as cereals, pharmaceuticals, cosmetics, textile piecegoods, etc.

As a second stage of its development scheme, the Travancore Rayons Ltd. is also planning to produce annually 160,000 reams of transparent paper in the heat-sealing, moisture-proof variety (including printing and bag-making). This plant, scheduled to be in production by the middle of 1954, will largely help remove our dependence on foreign sources for this material so essentially needed to meet the specialised requirements of the cigarette, confectionery and other important industries.

IMPORTS FROM PAKISTAN

The Open General Licence No. XXVI which was issued in terms of the Indo-Pakistan Trade Agreement of August, 1952, permitting the import of certain commodities from Pakistan, was extended, from time to time, and was valid upto 31st December, 1953. Though the trade agreement expired on 30th September, 1953, the Government of India have considered the question of continuance of this Open General Licence and have decided to retain, on an Open General Licence, all the items of interest to the people living on the border. The revised Open General Licence which bears No. XXXIV came into force as from 1st January, 1954. The commodities included in the new O.G.L. are: poultry; fish, fresh and dried; milk and milk products (excluding milk: powdered, condensed or preserved); vegetables, all sorts (excluding potatoes); eggs; crude and indigenous drugs and medicines including herbs, but excluding *morabbas* and *gulkand*; firewood and kapok.

Notices

BENGAL NAGPUR COTTON MILLS LIMITED

NOTICE IS HEREBY GIVEN THAT THE One hundred and thirteenth Ordinary General Meeting of the Members will be held at the Registered Office of the Company, No. 4, Bankshall Street, Calcutta, at 4 p.m. on Wednesday the 13th January, 1954, for the following purposes:—

(1) To receive and adopt the Directors' Report and the Audited Accounts for the half-year ended 30th June, 1953.

(2) To declare Dividends on the Preference and Ordinary Shares.

(3) To elect a Director.

(4) To appoint Auditors and to fix their remuneration.

The Transfer Register will be closed from the 6th January to the 13th January, 1954, both days inclusive.

By Order of the Board,
SHAW WALLACE & COMPANY, LTD.,
Managing Agents.

CALCUTTA, 12*th December*, 1953.

THE RELIANCE JUTE MILLS COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT THE Ninety-fourth Half-yearly Ordinary General Meeting of Shareholders of The Reliance Jute Mills Co., Ltd., will be held at the Registered Office of the Company, No. 4, Clive Row, Calcutta, on Friday the 29th January, 1954, at 11-55 a.m., for the following purposes:—

(1) To receive and adopt the Directors' Report and Audited Accounts for the half-year ended 30th September, 1953, and the Balance Sheet as at that date.

(2) To declare Dividends.

The Share Transfer Books of the Company will be closed from 15th January to 29th January, 1954, both days inclusive.

By Order of the Board,

FIVE-YEAR PLAN AND RURAL IMPROVEMENT

MR. V. T. KRISHNAMACHARI SUMS UP ISSUES

A REVIEW of the many problems which face agricultural India was made by Mr. V. T. Krishnamachari, Deputy Chairman, Planning Commission, in his presidential address at the Conference of the Indian Society of Agricultural Economics, held recently at Jaipur. Appropriately enough, he chose for his address the title "The Five-year Plan and Rural Improvement" for the title sums up the gist of a speech in which he dealt with the basic problems of rural India, including unemployment and underemployment, the land problem, the role of the Five-year Plan and the National Extension Organisation in the task of rural improvement, and, above all, the importance of research in agricultural economics. He sounded a note of warning when he said that any failure, on the part of the administrators and popular leaders, to reorganise rural life will mean the "destruction of the values which we all cherish." He, therefore, pleaded, in effect, for energetic action, designed to improve India's rural economy.

Rural Problem

In order to bring out the magnitude of the rural problem, Mr. Krishnamachari first referred, in his speech, to the growth in population and the consequent decline in the cultivated area per head. Quoting the results of a sample survey conducted by the authorities of the 1951 Census, he pointed out how between 1921 and 1951 there was a decline in the *per capita* cultivated area from 111 cents to 84 cents, the double crop area from 13 cents to 10 cents and the irrigated area from 18 cents to 14 cents. The decline in the *per capita* area held by the people in the rural sector is the more important, because it affects a very wide section of India's population, namely, the agricultural population, numbering 249 million, or 69.8 per cent. of the total population. Of the 249 million, 71 million are self-supporting persons, 31 million are "earning dependents" and 147 million are non-earning dependents. Again, the 71 million self-supporting persons consist of owner-cultivators (45.7 million), tenant cultivators (8.8 million), cultivating labourers (14.9 million) and agricultural rentiers (1.6 million). Commenting on these figures, he said:

"The figures show not only the disproportionately large part of the population which agriculture has to support but also the relatively low proportion of workers. There is also the fact to be remembered that the land cultivated by a family, small as it is, does not lie in compact holdings, but is often dispersed as isolated plots in different parts of the village. The broad picture thus emerges of over 70 million families cultivating about 250 million acres of land, only about 20 per cent. of which is double crop or irrigated area, distributed in fragmented holdings and supporting large numbers of 'non-earning' dependents, many of whom continue on the land as they have nowhere else to go and make only a nominal contribution to agriculture."

Dependence on Monsoon

"The land problem is further complicated by reason of the fact that about three-fourths of the area of the country depends on the monsoon, which is confined to only three to four months in the year, even when it is regular. About 30 per cent. of the land area of the country consists of scarcity tracts, with a rainfall of only 10 to 30 inches. From October to June there is practically no rainfall except in some areas which benefit from both monsoons. This long rainless stretch of eight months has a "most depressing effect on the rural economy." Over 75 per cent. of the cultivated area, agriculture is thus possible only for four to five months in the year; in the rest of the area, which is irrigated, it is possible for double the period. This restricts employment opportunities in the rural regions. This proplem is rendered more difficult by the annual addition of three millions to the country's population. All this must serve to bring out the "colossal volume of the unemployment and under-employment" in the country. The Plan seeks a solution for this problem in two directions:

(1) Recommendations are made for the widest possible application of research to agriculture in a broad sense including animal husbandry, fisheries, etc. The intention is to promote a system of intensive farming and the evolution of a diversified economy by means of co-operative effort. This is assisted by the provision of irrigation and power facilities on a scale hitherto unprecedented, as these afford the readiest means of lengthening the period of employment in agriculture and increasing production.

(2) The Plan seeks to provide occupation for the surplus labour force on the land by encouragement of industries—occupations subsidiary to agriculture, cottage and small-scale industries, large-scale industries and tertiary occupations.

Multi-purpose Projects

The authors of the Plan have provided for the improvement and extension of irrigational facilities, so that the abject dependence on the monsoon could be minimised. Summing up the financial and other implications of this aspect of the Plan, Mr. Krishnamachari said:

"In the programme are included multi-purpose projects for irrigation and hydro-electric power, large and medium irrigation projects and minor irrigation works. On the first two classes of projects, about Rs. 560 crores are to be spent. I may mention, for purposes of comparison, that the book value of all major works in India at the time of Partition was Rs. 110 crores. Quite recently, about Rs. 40 crores have been added to the Plan for medium irrigation projects to give permanent protection to scarcity affected areas, thus bringing the total expenditure to Rs. 600 crores. For minor irrigation works over Rs. 110 crores are provided. Then there is a programme of tube-wells. To the 2,500 tube-wells that existed when the Plan commenced, 5,000 are to be added in the five-year period which will irrigate 1.5 million acres. The irrigation schemes in the Plan will add about 17 to 18 million acres to the irrigated area by the end of 1955-56 and another 9 to 10 million after they are completed. It should be added that, under irrigation and power, the Planning Commission has recommended a 15-year programme which would double the area under irrigation and increase electrical energy about five times and that a Technical Committee has been set up to examine projects for inclusion in the second Five-year Plan."

Census Report

No increase in irrigational facilities will, by itself, solve the problem of rural unemployment or of raising living standards so long as population continues to increase at a rapid rate. In this connection, Mr. Krishnamachari quoted approvingly from the Census Report which urged a combined approach to the food and population problems through measures designed to increase agricultural productivity from the present level of approximately 700 lakh tons to 940 lakh tons and to reduce "improvident maternity" from over 40 per cent. (its incidence at present) to under 5 per cent. Emphasising the relevance of control on population to the solution of the rural economic problem, Mr. Krishnamachari said:

"I think all of us will agree, without committing ourselves strictly to the statistical data and to the definition of 'improvident maternity,' that no increase can be achieved in the present standards of living, which are so low as to constitute a serious menace, unless the growth of population is controlled. This is eminently a matter in which non-official bodies like yours can assist by studies and propaganda and creating an informed public opinion and I hope that, in the coming year, the Association will devote special attention to this subject."

National Extension Service

Mr. Krishnamachari next dwelt on the broad principles which the authors of the Plan have taken into account in formulating a solution for the problem of raising the living standards in the rural areas. They have stressed the importance of the co-operative principle, of self-help and of the State's efforts designed to bring about social justice. Since the Plan can succeed best only in an atmosphere of active and purposeful co-operation, the Government has laid the greatest possible stress on the working of the National Extension Organisation. Explaning the scope of this body, Mr. Krishnamachari said:

"In essence, the National Extension Organisation is both official and non-official both have to work together. Programmes for improvements should be made after the widest discussion with the agriculturists who should feel a sense of proprietorship in them. An important part of the set-up is the village level worker who is the link between the villager and the development departments, a friend and a guide to whom he looks for advice and for the supplies and services needed for implementing programmes. It should be again emphasised that the whole movement is based on self-help: the active interest and support of the people should be enlisted in the task of bettering their own condition. To facilitate the introduction of the new order of things, the Central Government has undertaken to assist State Governments with grants of half the additional cost of setting up extension staffs and also to make every effort to find by the end of the Plan period short-term credits for Rs. 100 crores a year, medium-term credit of Rs. 25 crores a year and long-term credit of Rs. 5 crores a year through the Co-operative movement and other agencies. The National Extension Organisation is expected to cover 120,000 villages—nearly one-third of the settled villages in the country—by the end of 1955-56. The training of the staffs has been commenced and in the Plan over Rs. 100 crores have been allotted for giving effect to this programme and an additional development programme in selected areas for a three-year period. These are over and above the amounts included for promoting the Grow-more-food campaign."

Agricultural Research

Considering that India is essentially an agricultural country, and its economy is rooted in the land, one would naturally expect the country to give some guidance in the sphere of agricultural economics. It is a pity that this guidance is conspicuous by its absence. Whether in the matter of field studies and factual data relating to agricultural economy or in the matter of advanced theoretical research, the work done in this sphere is negligible. Surveying the work done in the sphere of agricultural economics, Mr. Krishnamachari said:

"I think it is correct to say that, speaking broadly, agricultural economics in India is still in its infancy. It is only recently that some of our universities have established chairs or readerships for teaching and research in agricultural economics. The problems of agricultural economics are varied, and they are difficult because one has to take into account not only general casual relationships in the field but also the entire institutional framework in which these relationships operate. On many aspects of the problem data are lacking. I do not refer merely to statistical data relating to such matters as cultivated area, production and prices but also to mental attitudes, incentives and disincentives, etc. In saying this, I do not ignore the intensive studies conducted in the past by individual economists or research centres. But these were isolated efforts confined to a narrow range of problems. In recent years, however, systematic studies have been and are being undertaken under Government auspices or with Government assistance, the conclusions derived from which will advance our knowledge of problems connected with agriculture in India. I refer to the enquiries conducted by the National Income Unit, the National Sample Survey, the survey by the Labour Ministry of the condition of agricultural labour and wage levels, and the enquiry into all aspects of agricultural finance which has just been completed by the Reserve Bank of India. The material collected in these enquiries is being sifted and when reports analysing them are published, there will become available data of much value to agricultural economics on which policies can be formed and action taken. Your own society, I must not fail to mention, has been doing excellent work in spite of its limited resources in finance and in research personnel, and the record of work you have done shows how much the efforts of a single energetic person like your President, Mr. Manilal Nanavati, can achieve.

"But there is still a vast field remaining to be explored. Throughout its work the Planning Commission found that on vital matters it had no reliable information on which to base valid conclusions. It therefore decided to set up a Research Programmes Committee of well-known economists, practically all of whom are connected with the Association, for advising on a programme of research which will be of assistance in development policies, to arrange for their conduct by universities and research organisations on a carefully thought out plan, and to collect and study the results. The Committee met some time ago and, as a result of its deliberations, researches will now commence all over India on three general categories of subjects: (1) Land reform and co-operation; (2) employment, savings and investment; and (3) regional development.

"The Planning Commission has every confidence that these studies will maintain a high level of thoroughness and objectivity and that as time goes on, they will cover a wider range of subjects so that a realiable volume of verified knowledge will become available to students of Indian agricultural economics. I may also mention that the Evaluation Organisation, recently set up under Professor Karve, for studying programmes and methods in community projects and national extension areas is also undertaking fundamental studies of rural problems which will yield results of great value."

If agricultural economics in this country is thus a barren desert it would be apt to describe the Indian Society of Agricultural Economics as a pleasant oasis, for the Society has some research work to its credit. Given greater co-operation, goodwill and encouragement, it should be possible for the Society to extend its sphere of usefulness. But the work that still remains to be done is so vast, and the problems in this field so varied that it is the duty of the Central and State Governments, as well as the Universities, to devote more attention, resources and energy to studies and research in this subject, which, as Mr. Krishnamachari rightly suggested, has suffered, "like our agriculture itself, from long neglect."

The 12th All-India Cattle Show will be held at Bahadurgarh in the Rohtak district of the Punjab from 23rd to 28th March, 1954. All the important breeds of cattle from the different regions will be exhibited, some of the interesting features of which will be a milk-yield competition, a draft test for bullocks, an auction sale of cattle and a meeting of cattle-breeders from all over the country. The 9th All-India Poultry Show will also be held, in conjunction with the Cattle Show, from 25th to 27th March. It is also proposed to organise an agricultural exhibition along with the Cattle Show

ASSOCIATED CEMENT'S PROFIT DROPS FROM RECORD LEVEL

DIVIDEND, HOWEVER, REPEATED

WHEN the Directors of the Associated Cement Companies Ltd. (Managing Agents: Cement Agencies Ltd., Bombay) announced more than a month ago their decision to maintain the dividend for the year ended 31st July, 1953, at 9.5 per cent., which they had paid for the previous two years, the shareholders had little inkling that the Company's profit for the year would have retreated from the record level touched the year before. The audited statement of accounts for the latest year show that the gross profit has declined from Rs. 4.10 crores to Rs. 4.03 crores. Even this recession in profit does not reflect the true trading results. For a considerable portion of the drop in gross profit has been covered by the sizable rise in income from sources other than the sale of cement. But for the increase in "other income," the gross profit would have recorded a greater recession than that noted above.

This is hardly surprising when, in an industry such as cement, the selling price of the manufactured goods is rigidly fixed, while the cost of production and other expenses are left free to rise. In the case of the A.C.C., for instance, production and sales during the year under review were, according to the Directors, higher than those in the previous year and considerably higher than those in 1950-51. But the profit is less than that for either of these two years. This will be clear from the following comparative table, which gives the salient features of the Company's working results for the last four years:

(In lakhs of rupees)

	For the year ended 31st July			
	1953	1952	1951	1950
Sale proceeds of cement	15,15.61	14,80.01	12,09.95	10,85.43
Stocks	32.15	37.62	35.99	41.27
Other income ..	58.21	39.33	40.99	37.32
Expenses	11,65.17	11,10.91	8,38.76	7,93.78
Gross profit ..	4,03.18	4,10.10	4,06.87	3,22.15
Managing Agents' commission	28.61	30.05	30.21	23.15
Provision for—				
Depreciation	73.84	66.69	54.93	51.23
Taxation	1,19.60	1,16.90	1,28.75	85.30
Net profits	1,81.23	1,96.46	1,92.98	1,62.45
Transfer to reserves ..	50.00	60.10	55.09	55.26
Transfer to bonus to employees	84.25	81.00	38.10	17.30
Dividend	1,00.37 (9.5%)	1,00.37 (9.5%)	1,00.37 (9.5%)	89.80 (8.5%)
Carry forward	3.70	7.09	2.09	2.67

It will be observed that, in the last three years, the sale proceeds of cement have gone up by Rs. 4.30 crores, thanks to the expansion in production. This increase in sale proceeds has been almost offset by the rise in expenses which amounts to as much as Rs. 3.71 crores. However, there has been an increase in other income by Rs. 20.89 lakhs, the increase during the year under review being particularly more marked than in the previous years, being accounted for mainly by the rise of Rs. 8.31 lakhs in sale of coal, power, water, etc., and Rs. 10.86 lakhs in dividends on shares. A break-up of the expenses for the year under review shows that, as compared with 1951-52, there has been an increase of Rs. 17.90 lakhs in salaries and wages, Rs. 20.17 lakhs in operation expenses, and Rs. 4.86 lakhs under loss on sale of investments. In addition, there has been a payment of Rs. 5.30 lakhs towards contribution to Government provident fund and charges, whereas there was no such payment in the previous year.

Consequent on the rise in costs, the Company made a representation to the Government of India for an increase in the selling price of cement. This matter was referred by the Government to the Tariff Commission before whom the Company placed its case. The Government's final decision on the matter is now awaited. The Directors point out, in this connection, that the speed with which the Company's programme of expansion, modernisation and rehabilitation can be implemented will depend upon the Government's decision regarding the selling price.

The provision for depreciation, at Rs. 73.84 lakhs, is only Rs. 7.15 lakhs more than that set aside in the previous year, in spite of the additions made to the gross block to the tune of Rs. 2.15 crores. The provision for taxation has also been stepped by Rs. 2.70 lakhs. The net profit shows a shrinkage of Rs. 15.23 lakhs. The Directors have cut the addition to the reserves from Rs. 60.10 lakhs to Rs. 50 lakhs. Thus, the amount set aside for plant reinstatement reserve has been reduced from Rs. 50 lakhs to Rs. 45 lakhs, and that for reserve for gratuities from Rs. 10 lakhs to Rs. 5 lakhs. No sum has been added to the works welfare and benefit fund to which a small sum of Rs. 9,600 was provided last year.

In addition to maintaining the dividend at 9.5 per cent., the Directors have decided to satisfy the insistent demand made by shareholders at their annual meetings in previous years for the issue of bonus shares, by capitalising, subject to Government sanction, the amount standing to the credit of premium on shares account and part of the reserve fund. A scrip bonus of one share for every five shares has been proposed and this will require a sum of Rs. 2.13 crores to be capitalised. The amount standing to the credit of premium on shares account is Rs. 1.75 crores and a sum of Rs. 38 lakhs will have to be drawn from the reserve fund which stands at Rs. 76 lakhs.

The Company's financial position, as seen from its balance-sheet on 31st July, 1953, is sound. As against a paid-up capital of Rs. 10.56 crores, the reserves and surplus stand at Rs. 5.48 crores, of which premium on shares accounts for Rs. 1.75 crores, reserve fund Rs. 76 lakhs, reserve for plant reinstatement Rs. 2.35 crores, reserve for gratuities Rs. 40 lakhs, investment depreciation reserve Rs. 17 lakhs and works welfare and benefit fund Rs. 1.25 lakhs. The reserve for taxation amounts to Rs. 2.84 crores. Current liabilities aggregate Rs. 3.28 crores. During the year under review, the Company's loan from bank, which had stood at Rs. 41.65 lakhs as on 31st July, 1952, was repaid. The gross block (excluding unallocated capital expenditure, machinery, furniture, etc., and loose plant and tools) aggregates Rs. 18.15 crores and has been written down by Rs. 7.14 crores. The current assets amount to Rs. 11.16 crores and provide ample cover to current liabilities and reserve for taxation. The Company's investments stand reduced from Rs. 2.81 crores to Rs. 1.57 crores, due to sale of a considerable part of its holdings in Government securities. Cash balances show an expansion from Rs. 88.82 lakhs to Rs. 2.13 crores.

An idea of the Company's expansion and modernisation programme which is already on hand and which is to be taken up can be gained from the following extract from the Directors' report:

"Satisfactory progress has been maintained on the modernisation and extension of the Shahabad Cement Works and half the planned additional capacity has already been obtained. It is hoped that the rest of the planned capacity will be obtained in the not too distant future. The construction of the new cement works at Sindri has been started and is making good progress. The expansion of the Kistna Cement Works and the quadruplication of the Bhupendra Cement Works of the Patiala Cement Company, Limited, have also been taken in hand. It has further been decided to construct a modern firebricks factory at Katni which is scheduled for completion in the middle of 1955. In addition to undertaking the above projects, the Company has embarked upon a large-scale rehabilitation and modernisation programme at several of its factories. Furthermore, flotation plants are being installed at Khalari and Sevalia Factories for enriching the raw materials. The Company's workshops for the manufacture of machinery are also being strengthened in order to cope with the increased volume of such manufacture."

The Company's negotiations with the Pakistan Industrial Development Corporation for the formation of a new company in Pakistan to take over the Company's undertaking in that country have not as yet been finalised. The Directors observe that the matter is being actively pursued by both the parties and a final decision is expected to be taken in the near future.

The Rs. 100 paid-up shares of the Company are being currently quoted at Rs. 186-12 *cum-div.* On an *ex-div.* basis, the yield on these shares works out to 5.4 per cent. per annum, free of tax.

GREAT EASTERN SHIPPING CO., LTD.

The Great Eastern Shipping Co., Ltd. [Managing Agents: Messrs. A. H. Bhiwandiwalla & Co. (Bombay), Ltd., Bombay] has earned a gross profit of Rs. 25.06 lakhs for the year ended 30th June, 1953, which is very nearly the same as that for the previous year at Rs. 25.14 lakhs. The net profit, at Rs. 6.71 lakhs, compares with Rs. 6.10 lakhs for 1951-52. The dividend has been maintained at 10 per cent. per annum, but this has taken up a larger sum of Rs. 3.50 lakhs, as against Rs. 2 lakhs, consequent on the increase in the capital by the issue of bonus shares in March, 1952, and by the issue of new shares a few months later.

The Company's freight earnings show a substantial rise from Rs. 93.45 lakhs to Rs. 170.28 lakhs but, if this is not reflected in the gross profit shown above, it is because of the sharp rise in expenses from Rs. 69.29 lakhs to Rs. 148.97 lakhs. Charter hire has gone up from Rs. 19.40 lakhs to Rs. 48.37 lakhs, stevedoring, claims, and other steamer charges from Rs. 13.57 lakhs to Rs. 26.58 lakhs, coal, fuel oil, etc., from Rs. 15.52 lakhs to Rs. 27.55 lakhs and other expenses from Rs. 20.80 lakhs to Rs. 46.47 lakhs.

The provision for depreciation has been reduced from Rs. 15.45 lakhs to Rs. 10.92 lakhs, while that for taxation has been raised from Rs. 2.60 lakhs to Rs. 6 lakhs. A sum of Rs. 3 lakhs has been transferred to the reserve fund, as against Rs. 4 lakhs provided last year. The dividend on the 300,000 fully paid-up (Rs. 10) shares takes up Rs. 3 lakhs and that on the 200,000 partly paid-up (Rs. 5) shares, which are entitled to dividend only from 1st January, 1953, Rs. 50,000. The undistributed surplus left to be carried forward is Rs. 75,897, as against Rs. 54,532 brought in.

During the year under review the Company operated four vessels owned by it and a few time chartered vessels. One of its vessels was laid up for special survey repairs at the repair yard for a period of 63 days and was not available for employment. During the year under review, the Company purchased a steamship for Rs. 6.57 lakhs and converted it in the current year from coal-burning to oil-firing. After this conversion and certain other alterations, the ship will be worth Rs. 9 lakhs. The Company has bought during the current year a motor vessel at a cost of Rs. 40 lakhs. The Government of India has advanced a loan of Rs. 26.66 lakhs for the purchase of this vessel. The Company has repaid to the Government of India the loan of Rs. 15.75 lakhs due to the latter in respect of the purchase of a ship, far ahead of the scheduled date, namely, 1st June, 1957, specified by the Government for the repayment of the last instalment.

The following synopsis of the Company's balance-sheet as on 30th June 1953, gives an idea of its financial position:

Liabilities	Rs.	Assets	Rs.
Capital ...	40,00,000	Gross block	1,22,23,144
Reserves and surplus ...	22,11,715	*Less*—Depreciation ...	39,29,435
Provision for taxation ...	21,80,000	Net block ...	82,93,709
Liabilities ...	39,78,272	Stores ...	2,446
		Debts, deposits and advances ...	18,25,893
		Investments ...	5,64,041
		Cash ...	16,83,896
	Rs. 1,23,69,987		Rs. 1,23,69,987

The Company proposes to acquire two more ships in 1954 and to place an order for one ship with the Hindustan Shipyard. Although most of the expansion is being financed out of Government loans and current earnings, the financial commitments make it necessary for the Company to call up the unpaid balance of Rs. 10 lakhs on the 200,000 partly paid-up shares. The Directors will shortly make this call, which, when paid, will raise the paid-up capital to Rs. 50 lakhs.

INDIAN PLASTICS LTD.

The year ended 31st March, 1953, proved to be another adverse one for Indian Plastics Ltd. (Managing Agents: Messrs. Birla Bros. Ltd., Bombay). Sale proceeds declined from Rs. 27.16 lakhs to Rs. 24.32 lakhs, while stocks of finished goods increased from Rs. 9.72 lakhs to Rs. 11.07 lakhs. The gross profit, at Rs. 1.64 lakhs, is almost the same as that (Rs. 1.68 lakhs) earned in the previous year. After providing Rs. 80,000 for depreciation (as against Rs. 1.01 lakhs), the distributable surplus (subject to taxation) is Rs. 95,230. The Directors have utilised Rs. 81,250 for reducing the arrears of preference dividend and have carried over the balance of Rs. 13,980 to the next year.

The working of the Company was very adversely affected by the slump during the year 1952. There was a sudden fall in selling prices and sales were affected considerably. With the cost of raw materials and wages remaining high, the reduction in selling prices meant considerable reduction in the profit margin. In some of the items of the manufactured articles, prices were reduced by 40 per cent. In these circumstances, though the production and sales were higher in quantity, the earnings have not shown any corresponding improvement it is noteworthy that, despite a falling market, the Company succeeded in pushing up sales in terms of quantities. This it was able to do because of the variety of its products and of its good sales organisation. The market for radios, however, suffered heavily. As a result of general business slump and increase in cost of living, the demand for radios tapered off. The Company could not, therefore, give effect to its scheme of expanding production. On the contrary, the production, had to be adjusted to the demand.

The following is a summary of the Company's latest balance-sheet:

Liabilities	Rs.	Assets	Rs.
Capital ...	49,93,375	Gross block	40,64,486
Liabilities ...	15,11,171	*Less*—Depreciation ...	6,36,410
Profit and loss account ...	13,980	Net block ...	34,28,076
		Stock-in-trade	11,07,102
		Stores ...	10,50,020
		Debts and advances ...	8,78,385
		Cash ...	54,942
	Rs. 65,18,526		Rs. 65,18,526

MALABAR STEAMSHIP CO., LTD.

A satisfactory increase in gross profit from Rs. 3.73 lakhs to Rs. 4.68 lakhs is disclosed by the audited accounts of the Malabar Steamship Company, Ltd. (Managing Agents: Messrs. Shoorji Vallabhdass Ltd., Bombay), for the year ended 31st March, 1953, as compared with that for the previous year. The dividend on ordinary shares has been maintained at 6 per cent. on a slightly higher capital.

The Company's earnings by freight have more than doubled from Rs. 15.26 lakhs to Rs. 34.74 lakhs. If, despite this rise in freight earned, the Company has not shown a comparatively larger profit, it is on account of the heavy expenses, particulary the repairing costs on one of the Company's vessels which was subject to the periodical general survey for about three months. Expenses have gone up from Rs. 18.14 lakhs to Rs. 37.71 lakhs, port and customs expenses, stevedoring and tallying charges, steamers' stores, coal and oil and upkeep and survey charges, all having risen considerably. The Directors point out that the Company could have shown better results if a greater degree of co-operation had been induced from the port and stevedore labour. They say that the present attitude of labour is "neither beneficial nor desirable in the larger interest of the shipping trade."

Provision for depreciation has been stepped up from Rs. 1.45 lakhs to Rs. 3.15 lakhs. The distributable sum (subject to taxation), including the surplus brought in from the previous year, is Rs. 1.25 lakhs which the Directors have utilised for paying dividend on the 5 per cent. redeemable preference shares and 6 per cent. non-redeemable preference shares (Rs. 61,053) and on the ordinary shares (Rs. 55,777), leaving a balance of Rs. 8,282 to be carried forward.

The following is a synopsis of the Company's balance-sheet as on 31st March, 1953:

Liabilities	Rs.	Assets	Rs.
Capital ...	20,59,839	Gross block	58,79,699
Reserves and surplus ...	10,09,626	*Less*—Depreciation ...	7,04,842
Reserve for taxation ...	2,24,924	Net block ...	51,74,857
Liabilities ...	38,23,252	Stocks and stores ...	1,18,730
		Debts, deposits and advances ...	12,22,168
		Investments	10,030
		Cash ...	5,66,856
		Goodwill ...	25,000
	Rs. 71,17,641		Rs. 71,17,641

The Company acquired, during the year under review, a modern British-built steamer which is reported to be giving an excellent performance. The Company hopes to acquire modern built ships in the current year for its regular wider range of service and is looking forward to maintaining and enlarging its interests in the coming years.

KOTHARI TEXTILES LTD.

The working of the Kothari Textiles Ltd. (Managing Agents: Messrs. Kothari & Sons, Madras) during the year ended 30th June, 1953, resulted in a small gross profit of Rs. 16,805, as compared with Rs. 2,05,882 earned in the previous year. It may, however, be noted that the above gross profit of Rs. 2,05,882 for 1951-52 had been arrived at after taking into account Rs. 2,15,817, being the net amount of refund of E.P.T. No provision for depreciation has been made this year, whereas last year a sum of Rs. 50,000 was set aside for this purpose. Explaining this, the Directors observe, in their report to the shareholders: "Provision made in the past for depreciation in 'A' mill was more than adequate, whilst the new mill 'B' (15,000 spindles, one combing set, four doubling frames) worked partially during the period under review. Two hundred looms also were installed and are working since about three months. Hence no provision is made for depreciation for the period under review."

The profit of Rs. 16,305 has been supplemented by Rs. 54,377 being the undistributed surplus of the previous year and Rs. 1.25 lakhs being the amount drawn from the dividend equalisation fund. From the total amount thus available, the Directors have distributed Rs. 72,000 by way of dividend on the 6 per cent. preference shares, and Rs. 1.20 lakhs on the ordinary shares at 5 per cent. (as against 7½ per cent.) for the previous year and have carried forward Rs. 3,682.

The adverse results for the year under review are attributed to several factors. Due to drastic cuts in the supply of electric current, the Company lost 36,040 man-hours of production, which was nearly 10 per cent. of its annual production. Secondly, the Company was forced to buy high-priced African and American cotton, while the yarn market faced a slump. Further, the Company's new spinning machinery, with doubling and combing sets, which was expected to be started in July, 1952, could not be worked till October, 1952, due to delay in delivery and transport, coupled with the short supply of power.

The outlook for the current year seems to be better. For the Chairman, Mr. C. M. Kothari, in his statement accompanying the accounts, confidently remarks that the causes which had contributed to the "unsatisfactory" results in the year under review have been removed. He adds: "There is (*a*) sufficient supply of electric current, (*b*) we have completely consumed the stock of high-priced American and African cotton and (*c*) last but not least, the demand for yarn is normal. Your mill has sold the yarn at reasonable rates to the end of November and there are no accumulated stocks. Considering the working of the mills from July onwards, I am optimistic that the coming year will prove satisfactory. The double-automatic looms are now working on a double-shift basis and the cloth manufactured has been well received by the trade."

FIRE * MARINE * ACCIDENT

ACCUMULATION OF CLOTH TELLS ON BENGAL-NAGPUR COTTON

FORT WILLIAM RESUMES DIVIDEND

Bengal-Nagpur Cotton Mills, Ltd.

THE directors of the above Company (Managing Agents: Messrs. Shaw Wallace & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 30th June, 1953.

The Company's profit for the half-year after inclusion of Rs. 15,831 (Rs. 19,940) brought forward is Rs. 74,185 (Rs. 2,75,545) and after adding provision for liabilities no longer required Rs. 23,808 (nil) there remains an available balance of Rs. 97,993 (Rs. *2,35,545). Out of this sum the directors recommend the payment of dividends free of income-tax on the preference shares at the rate of 7 (7) per cent. per annum Rs. 10,500 (Rs. 10,500) and on the ordinary shares at the rate of 5 (10) per cent. per annum Rs. 67,500 (Rs. 1,35,000) leaving to be carried forward Rs. 19,993 (Rs. 40,045).

Trading conditions.—The half-year opened with an accumulation of stock of finished goods. Demand increased but was insufficient to clear all accumulated stock as well as current production, which was well maintained. Prices, which started low as a result of the lull in demand immediately following decontrol, did not rise sufficiently quickly to match the steady rise in the cost of cotton, thereby keeping margins small.

Since the close of the half-year there has been an almost complete cessation of demand until recently, resulting in a further accumulation of stock, despite curtailed production, and even lower prices.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.

	Rs. 86,07,276		Rs. 86,07,276

Fort William Jute Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Bangur Brothers Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 30th September, 1953.

The net result after providing for depreciation reveals a profit of Rs. 8,11,513 (loss of Rs. 4,41,218) and reducing from it the previous loss of Rs. 4,98,601 (loss of Rs. 8,32,397) there remains a net credit of Rs. 3,12,912 (net debit of Rs. 7,75,693). The directors propose to make appropriation out of this sum as follows:—

Transfer to general reserve account Rs. 1,00,000 (*nil*), dividend on 10,000 7 per cent. cumulative preference shares for the half-years ended 31st March, 1952, 30th September, 1952, 31st March, 1953 and 30th September, 1953 at Rs. 3-8 per share, half-yearly Rs. 1,40,000 and dividend on 14,000 ordinary shares for the half-year ended 30th September, 1953, at Rs. 5 (*nil*) per share Rs. 70,000 (*nil*) and in carrying forward Rs. 2,912 (debit of Rs. 7,75,693).

In accordance with the working time agreement of the I.J.M.A. the mills worked 42½ hours per week with 12½ per cent. of the total looms sealed throughout the period under report.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	24,00,000	Block ...	28,94,315
Reserves ...	1,00,000	Stock-in-trade	30,16,462
Liabilities ...	53,60,536	Stores and spare parts	7,12,509

	Rs. 78,63,447		Rs. 78,63,447

Rameshwara Jute Mills, Ltd.

The directors of the above Company (Secretary: Mr. R. N. Banerjee, Calcutta) submitted the audited accounts of the Company for the half-year ended 31st March, 1953.

The accounts showed a profit for the half-year of Rs. 2,91,125 (Rs. 78,276). From this sum was deducted interest paid Rs. 15,545 (Rs. 44,369), retiral gratuities to workers Rs. 15,401 (Rs. 5,711), provision for forward loss Rs. 32,222 (nil) and provision for doubtful debts Rs. 26,437 (*nil*) leaving a balance of Rs. 2,01,520 (Rs. 28,046). To this amount was added transfer and sub-division fee Rs. 74 (Rs. 79) and interest received Rs. 462 (Rs. 462) leaving a net profit for the half-year of Rs. 2,02,056 (Rs. 28,587). After deducting loss brought forward from previous haf-year of Rs. 4,38,597 (debit of Rs. 3,58,136) the net loss carried forward amounted to Rs. 2,36,541 (debit of Rs. 3,29,549).

During the period the mill worked double shift as usual. The cost of production continued to be high mainly due to two reasons—firstly, the production was below the average level of production in jute mills operating in Bengal and secondly, due to the labour complement being much higher than what was necessary. At one stage it was felt that it would not be possible to run the mills profitably if the consumption of stores as well as the labour complement would continue on usual basis. As a matter of fact, with a view to bring down the labour ratio to looms to a reasonable level the management and the labour union representatives had a conference with the Labour Minister of the State. As a result of this conference the mill was allowed to work on the basis of alternate week working and stoppage. During this period there was congestion of manufactured goods in the godown.

With a view to bring labour complement to the required level, the management made several attempts to retrench workers but these attempts could not succeed during the period. As a result of this the labour ratio to looms in this mill was the highest in the country.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	27,00,000	Block ...	18,47,800
Reserves ...	58,659	Stocks ...	13,08,746

		Profit and loss account ...	2,36,541
	Rs. 44,82,316		Rs. 44,82,316

Bengal-Nagpur Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submitted the audited accounts of the Company) for the half-year ended 30th June, 1953.

After bringing in Rs. 18,000 (*nil*) from provision for taxation account and providing Rs. 20,248 (Rs. 19,000) for depreciation, there remained a balance of Rs. 14,105 (credit of Rs. 4,280 after paying preference dividend at Rs. 3-8 per share and As. 6 per ordinary share) at the debit of profit and loss account, which was carried forward.

Mining operations in No. 10 seam was abandoned just before the end of the half-year, owing to the workings becoming flooded. Production from No. 11 seam continues, but with the loss of No. 10 seam output raisings at the colliery are reduced. Plans for future mining at the Company's colliery are under consideration by the Board.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	3,37,500	Block ...	3,32,680
Reserves ...	5,07,662	Stores ...	3,739
Provision for taxation ...	31,592	Debts, deposits and advances ...	5,97,267
Liabilities ...	73,936	Cash ...	16,954
	Rs. 9,50,690		Rs. 9,50,690

Gillanders Arbuthnot and Co., Ltd.

The directors of the above Company (Managing Director and Chairman: Sir Anthony J. Elkins, C.B.E., Calcutta) submitted the audited accounts of the Company for the year ended 31st March, 1953.

The working for the year was a most difficult one, as the recession in trade to which a reference was made in the last report affected most aspects of the Company's business. The decline in the prosperity of the jute industry, the severe slump in the tea industry, the fall in commodity prices and the general contraction of purchasing power, have all contributed to the fall in the Company's profits. Tea has now made a remarkable recovery, but the overall situation is still not encouraging.

The profit and loss account shows a balance of profit of Rs. 20,07,378 (Rs. 32,20,152) to which was added the balance brought forward from the previous year of Rs. 2,07,524 (Rs. 1,99,978) making a total of Rs. 22,14,902 (Rs. 34,20,130). The provision required for taxation was Rs. 9,41,254 (Rs. 16,37,606), there was a balance for disposal of Rs. 12,73,648 (Rs. 17,82,524). Of this balance, a sum of Rs. 1,25,000 (Rs. 1,25,000) was utilised in paying in full the dividends for the year ended 31st March, 1953 on the preference share capital. The directors dispose the balance of Rs. 11,48,648 (Rs. 16,57,524), in paying a dividend on the 65,000 ordinary shares of Rs. 100 each at the rate of 7½ (10) per cent. without any deduction in respect of income-tax payable by the Company Rs. 4,87,500 (Rs. 6,50,000), transferred to contingencies reserve Rs. 3,00,000 (Rs. 6,00,000), transferred to reserve against depreciation of investments Rs. 1,00,000 (Rs. 1,00,000) and transfer to superannuation fund Rs. 50,000 (Rs. 1,00,000), leaving to be carried forward to next year Rs. 2,11,148 (Rs. 2,07,524).

The working of Gillanders Arbuthnot & Co. (Pakistan) Ltd., resulted in a loss of Rs. 4,08,543 (profit of Rs. 4,77,655), due largely to the policies of restricting credit and curtailing imports which were introduced by the Government of Pakistan during the year. After setting this loss against the balance of Rs. 6,32,337 (Rs. 4,64,191) at credit of the profit and loss account brought forward from the previous years, there remained a balance, at credit of Rs. 2,23,794 (Rs. 4,64,191). As, however, at the instance of the Pakistan Government, the Company had previously agreed to capitalise Rs. 6 lakhs of the balance standing at the credit of the profit and loss account as at 31st December, 1952, the effect will be to convert this credit balance of Rs. 2,23,794 into a debit balance of Rs. 3,76,206 (credit of Rs. 4,64,191). The organisation of the Company has been modified to meet the changed conditions and it is hoped that future results will be more favourable.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	90,00,000	Block ...	11,97,859

	Rs. 3,20,88,498		Rs. 3,20,88,498

McLeod and Co., Ltd.

The directors of the above Company (Chairman: Mr. C. L. Bajoria, Calcutta) submitted the audited accounts of the Company for the year ended 31st December, 1952.

The trading results for the year proved disappointing, the profit showing a substantial decline when compared with that of the previous year. The greatly reduced prices obtained for teas sold in 1952, accompanied by increased cost of production, adversely affected the revenue from the tea department and the steady fall in the prices of raw material and manufactured goods in the jute industry rendered trading conditions extremely difficult, resulting in less favourable earnings.

The profit for the year amounted to Rs. 10,51,331 (Rs. 28,21,843) from which was deducted reserve against doubtful debts Rs. 10,987 (*nil*) leaving a sum of Rs. 16,40,344 (Rs. 28,10,431). To this was added dividends forfeited Rs. 1,188 (Rs. 9,113), and balance brought forward from 1951, of Rs. 85,717 (Rs. 1,23,673) making a total of Rs. 17,27,249 (Rs. 29,43,217). Out of this amount, the directors made a provision for taxation amounting to Rs. 5,50,000 (Rs. 10,70,000) and set aside to general reserve Rs. 2,88,514 (Rs. 5,00,000) and to convertible notes redemption reserve Rs. 2,00,000 (Rs. 5,00,000) leaving a balance of Rs. 6,88,735 (Rs. 8,73,217). From this available balance must be deducted interim dividends for the year ended 31st December, 1952, declared paid on 1st July, 1952:

On 10,000 5 per cent. cumulative first preference shares, subject to deduction of tax (gross) Rs. 25,000 (Rs. 25,000) and on 40,000 5 per cent. cumulative second preference shares, without deduction of tax Rs. 1,00,000 (Rs. 1,00,000).

Second interim dividends for the year ended 31st December, 1952, declared paid on 2nd January, 1953—

On 10,000 5 per cent. cumulative first preference shares, subject to reduction of tax (gross) Rs. 25,000 (Rs. 25,000) and on 40,000 5 per cent. cumulative second preference shares, without deduction of tax Rs. 1,00,000 (Rs. 1,00,000) leaving a balance of Rs. 4,38,735 (Rs. 6,23,217). This amount the directors distributed as follows:

Dividend at 7½ (12½) per cent. per annum on 40,000 ordinary shares or Rs. 7-8 (Rs. 12-8) per share for the year ended 31st December, 1952 Rs. 3,00,000 (Rs. 5,00,000) and dividend at 2½ (7½) per cent. per annum on 50,000 deferred ordinary shares or As. 4 (As. 12) per share for the year ended 31st December, 1952 Rs. 12,500 (Rs. 37,500) leaving to be carried forward Rs. 1,26,235 (Rs. 85,717).

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	93,00,000	Block ...	18,67,654
Reserves ...	63,03,858	Stocks ...	9,08,412

Profit and loss account ...	1,26,235	Investments	2,14,96,044
		Cash ...	7,11,883
	Rs. 3,36,48,741		Rs. 3,36,48,741

Reliance Firebrick and Pottery Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the half-year ended 31st August, 1953.

After transferring Rs. 75,000 (Rs. 90,000) to reserve for replacements and providing Rs. 1,15,000 (Rs. 95,000) for taxation and Rs. 61,482 (Rs. 52,100) for depreciation, there was a balance of Rs. 35,243 (Rs. 47,379) at the credit of profit and loss account. The directors paid a dividend of As. 4 (As. 8) per share, absorbing Rs. 13,000 (Rs. 30,000) leaving a balance of Rs. 20,243 (Rs. 27,941) to be carried forward.

It is necessary to undertake a programme of replacement on capital account at the Works and this is already in hand. Notwithstanding reserves built up in the past, the Company is already dependant on loan finance for this capital expenditure programme and this must be replaced out of current profits.

Production for the half-year was lower by 840 tons, though sales were higher by 4,561 tons.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	6,00,000	Block ...	10,58,599
Reserves ...	8,62,360	Stocks ...	8,36,613
Provision for taxation ...	63,132	Stores ...	4,42,503
Liabilities ...	15,08,090	Debts, deposits and advances ...	6,84,906
Profit and loss account ...	20,243	Cash ...	31,204
	Rs. 30,53,825		Rs. 30,53,825

Bisra Stone Lime Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Bird & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the half-year ended 31st March, 1953.

Raisings of limestone at 4,65,456 tons increased by 19,881 tons over the previous half-year. Sales too at 4,52,661 tons showed a favourable increase of 20,433 tons on the previous half-year. Despatches improved but wagon placements were as usual short and irregular.

Raisings of dolomite increased from 11,271 to 16,648 tons during the period under review. Sales increased from 11,196 to 16,184 tons when compared with the previous half-year. This was due to the Steel Works reinstating certain orders which were suspended for the last three months of the previous period.

The output of lime at 5,82,225 showed a most satisfactory increase of 1,50,486 mds. over the previous half-year. Sales too increased from 4,14,282 mds. to 4,51,481 mds. due to the continued improvement of the wagon supplies for the Calcutta Market. The Company's lime has continued to increase in popularity among industrial concerns and it has also re-entered the Railway contract market for building and white-washing lime which was lost to it during 1952.

Subsequent to the period, a strike at the Indian Iron and Steel Co.'s works and the increase in the cost of winning the Company's limestone have rendered the prospects for the ensuing half-year less favourable. Negotiations with the Company's two major customers for an increase in the selling rate are, however, proceeding.

The profit and loss account after providing Rs. 50,280 (Rs. 44,711) for depreciation, Rs. 30,000 (Rs. 1,00,000) for taxation and taking Rs. 58,182 (Rs. 52,600) for quarry overhang reserve, Rs. 15,961 (Rs. 14,285) for workmen's compensation reserve, Rs. 32,000 (Rs. 16,000) for tax contingency reserve, Rs. 25,000 (Rs. 35,000) for mechanisation reserve, and writing off Rs. 443 (*nil*) for bad debts, and adding Rs. 15,680 (Rs. 25,235) brought forward from the previous half-year, showed a credit balance of Rs. 92,485 (Rs. 1,16,229) which the directors disposed of by paying a dividend of As. 14 (As. 14) per share (without any deduction for income-tax paid by the Company) Rs. 87,500 (Rs. 87,500) and carried forward Rs. 4,985 (Rs. 28,729).

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	10,00,000	Block ...	23,21,600
Reserves ...	22,36,815	Work-in-progress ...	60,013
Provision for taxation ...	13,212	Stocks ...	3,45,929
Liabilities ...	17,83,095	Stores and spare gear	5,71,567
Profit and loss account ...	4,985	Debts, deposits and advances ...	16,46,368
		Investments	13,069
		Cash ...	78,661
	Rs. 50,38,107		Rs. 50,38,107

N.B.—Figures within brackets relate to the corresponding period of the previous year.

PROGRESS OF RAILWAYS LAST YEAR

(Concluded from page 30)

The zonal headquarters committees also elect one non-official from amongst their number to the National Railway Users' Consultative Council, which also is composed of persons appointed by the Minister. The Secretaries of the Food and Agriculture, Commerce and Industry, Transport and Production Ministries, Members of Parliament, representatives of the coal, iron and steel, jute and cotton industries and of chambers of commerce and agricultural interests will also be given a place on the Central Council.

The divisional or regional and zonal headquarters committees are already functioning, and the National Council held its first meeting in October, with the Minister for Railways and Transport in the chair.

On the railway labour front, 1953 has been a year of co-operation and goodwill. Indeed, without these factors, it would not have been possible for the Indian railways to have produced the results narrated in the preceding paragraphs.

The working and living conditions of the staff must always be reflected in the efficiency of each aspect of railway working. The team of almost a million workers that "makes the wheels go round" on the Indian railways has done a satisfactory job of work during the centenary year.

COMPANY MEETINGS AND DIVIDENDS

BENGAL-NAGPUR COTTON MILLS, LTD. Half-yearly General Meeting, Calcutta, 13th January, 1954. Dividend: As. 4 per share. Transfer books closed from 6th to 13th January, 1954, both days inclusive.

ASSOCIATED CEMENT COMPANIES, LTD. Annual General Meeting, Bombay, 15th January, 1954. Dividend: Rs. 9-8 per share, payable on and after 21st January, 1954.

FORT WILLIAM JUTE CO., LTD. Half-yearly General Meeting, Calcutta, 25th January, 1954. Dividend: Rs. 5 per share. Transfer books close from 18th to 25th January, 1954, both days inclusive.

EQUITABLE COAL CO., LTD. Dividend of Re. 1 per share for the half-year ended 30th June, 1953.

HURRILADIH COAL CO., LTD. Dividend of As. 12 per share, for the half-year ended 30th June, 1953.

COFFEE LANDS AND INDUSTRIES (MYSORE) LTD. Dividend of 3 per cent., on ordinary shares, free of income-tax, for the year ended 30th June, 1953.

KOTHARI TEXTILES LTD. Dividend of As. 8 per ordinary share, for the year ended 30th June, 1953.

ALUMINIUM INDUSTRIES LTD. Interim dividend of As. 10 per ordinary share, for the year ending 31st March, 1954. Transfer books close from 14th to 28th February, 1954, both days inclusive.

GILLANDERS ARBUTHNOT & CO., LTD. Dividend of Rs. 7-8 per share, for the year ended 31st March, 1953.

MCLEOD AND CO., LTD. Dividend of Rs. 7-8 per ordinary share and As. 4 per deferred share, for the year ended 31st December, 1952.

OUDH SUGAR MILLS LTD. Dividend of Rs. 11 per ordinary share, free of income-tax for the year ended 31st July, 1953.

NEW SWADESHI SUGAR MILLS LTD. Dividend of Rs. 20 per ordinary share, free of income-tax, for the year ended 30th June, 1953.

INDIAN STEEL AND WIRE PRODUCTS LTD. Dividend of Rs. 3 per share, free of income-tax on ordinary shares of Rs. 10 each and Rs. 2 per share, free of income-tax on deferred shares of Rs. 2-8 each, for the year ended 31st March, 1953.

MYSORE KIRLOSKAR LTD. Dividend of Rs. 5 per share, free of income-tax, for the year ended 30th June, 1953.

MODEL MILLS NAGPUR LTD. Dividend of Rs. 7-8 per share, free of income-tax for the year ended 30th June, 1953.

ANAPARAI ESTATES LTD. Dividend of As. 4-4/5 per ordinary share, free of income-tax, for the year ended 30th June, 1953.

MERCARA RUBBERS LTD. Dividend of As. 4-4/5 per ordinary share, free of income-tax, for the year ended 30th June, 1953.

RAJENDRA COFFEES LTD. Dividend of As. 12 per ordinary share, free of income-tax, for the year ended 31st March, 1953.

A. V. THOMAS & CO., LTD. Dividend of Re. 1 per share, on ordinary shares of Rs. 10 each and Rs. 10 per share, on "B" ordinary shares of Rs. 100 each, for the year ended 31st December, 1952.

ANDERSON WRIGHT LTD. Dividend of As. 9-3/5 per ordinary share, for the year ended 31st December, 1952.

ANGLO-INDIA JUTE MILLS CO., LTD. Dividend of Rs. 5 per ordinary share, for the half-year ended 30th September, 1953.

MADHUSUDAN MILLS LTD. Dividend of Rs. 6-4 per "A" ordinary share and Re. 1-4 per "B" ordinary share, for the year ended 30th June, 1953.

UPPER GANGES VALLEY ELECTRICITY SUPPLY CO., LTD. Dividend of As. 7 per share, for the half-year ended 30th June, 1953.

NATIONAL INSULATED CABLE CO., LTD. Dividend of Re. 1 per ordinary share, for the year ended 31st March, 1953.

PORT CANNING AND LAND IMPROVEMENT CO., LTD. Dividend of Re. 1-8 per share, free of tax, for the year ended 30th April, 1953.

ASSOCIATED HOTELS OF INDIA LTD. Dividend of 2 per cent. on ordinary shares, for the year ended 31st March, 1953.

COMPANY REGISTRATIONS

TEKSONS LTD. (First Director: Mr. Tekchand C. Dolwani.) Business: Exporters and Importers. Authorised capital: Rs. 5,00,000. Private company. Address: Modi Chambers, French Bridge, Bombay.

NATIONAL STEAMSHIP CO., LTD. (First Director: Mr. Dilipsinh Shoorji Vallabhdas.) Business: Shipowners, Carriers and Shipping Agents. Authorised capital: Rs. 10,00,000. Public company. Address: 293, Hornby Road, Fort, Bombay.

R. A. FILMS LTD. (First Director: Mr. M. Usman Nadiadwala.) Business: Film Producers. Authorised capital: Rs. 5,00,000. Private company. Address: New Era Talkies Buildings, Malad, Bombay.

Points From The Chair

Development of Malnad

"IT is difficult to understand why there should be such controversy about one relatively small company, when there is enough abandoned waste land in the Malnad to support another 40 companies our size. Surely, instead of this sort of unprofitable unpleasantness, goodwill should be created to develop the vast neglected asset. It is appreciated that when this development does take place, as some day it must, though conditions can never be more favourable than they are today, Government will draw up their own plans of action. Nevertheless, although there are many skilled planters whose estates yield better crops than ours, it simplifies the arithmetic, if we calculate the direct benefit the country would receive, if this area were cultivated by companies similar to our own and providing similar taxation. Then, the Central and State Governments would reap a taxation reward of Rs. 5½ crores annually and coffee exports of 80,000 tons worth Rs. 50 crores and more would make coffee India's fourth most important export. Consumers could then be subsidised to a degree which has not been conceived today, and at the same time very adequate encouragement could be given to producers. This is an ultimate object, but even on a comparatively slower rate of development we should be able to export at least 24,000 tons of coffee worth Rs. 17 crores within a period of 15 years, if the encouragement to do so was given."

IVOR BULL,
Consolidated Coffee Estates (1943) Ltd.

Selling Price of Ships Built in Vizag

"As I pointed out to you last year, shipping companies are being subjected to indirect pressure in order that they may place orders with the Hindustan Shipyard. This pressure has increased this year. It is fully appreciated that the yard must be kept busy and placed on a stable footing. By agreeing to pay the difference between the cost of building at the yard and the U.K. prices, the Government has accepted the principle that Indian shipowners should not be required to pay more for their ships than others. It is now essential that the Government should adopt the concept of a world parity price instead of U.K. parity price in fixing the prices of ships built at the Visakhapatnam Yard. Not only the prices in the U.K. but also the competitive prices prevailing in other shipbuilding countries, such as Holland, Germany, Denmark, Sweden, Japan, etc., should be taken into account in determining the selling price of ships."

A. H. BHIWANDIWALLA,
Great Eastern Shipping Co., Ltd.

Inadequate Dry-docking Facilities

"Inadequate dry-docking facilities at Bombay is also a source of anxiety to Indian coastal shipping companies having their head offices at this port. Coastal steamers trading over the West Coast of India have to depend upon one of the two Bombay dry docks for urgent repairs, survey and renovations required from time to time. At present, our steamships face undue delays and consequent loss of working days before they get the use of the dry dock. This reduces the modest profit margin available in coastal shipping business, makes it less attractive to the private investor. If the Government of India's plans to attract private capital for the much-needed growth of our coastal shipping are to bear fruit, early steps are necessary to provide it with modern convenience including better dry-docking facilities to Indian coastal vessels, and one of the two dry docks at Bombay should be reserved for such steamers."

P. S. VALLABHDASS,
Malabar Steamship Co., Ltd.

Future of Tin

"As regards the future of tin, I have, in my annual addresses since the war, stated that the long-term outlook is good and if those who have continuously advocated the introduction of another Tin Control Agreement embodying restriction of production would profit from the experience of the last scheme and leave the industry alone, producers, consumers and Governments would all benefit. Anyone familiar with the tin industry should know that the consumption, price and production of tin are governed by world industrial production activity, in particular by American industrial production activity. As that activity varies, price stability within the tin industry is not possible."

G. W. SIMMS,
Sungei Besi Mines, Ltd., and Ayer Hitam Tin Dredging, Ltd.

Replacement Problem of British Shipowners

"There is no question that the most difficult problem facing British shipowners today is that of replacement, and surely the nation's fiscal policy should be redesigned so as to give the maximum help rather than hindrance to the British merchant navy, if its survival is important. In the first place, must depreciation allowances really continue to be based on first cost rather than on cost of replacement, which is now about three and a half times the pre-war? Secondly, I can see no valid reason why we should not be allowed to sell our older ships for the best price obtainable in world markets. Why is the old wartime restriction against selling to foreigners still kept in being by a Government pledged to restore freedom? Is air transport restricted against selling to foreigners? If not, why sea transport?

THE HON. J. P. PHILLIPS,
Court Line, Ltd.

STRINGENCY IN MONEY

(From Our Own Correspondent)

BOMBAY, 6th *January*

Conditions in the short-term money market during the major part of the three-week period, since our last report dated 16th December, 1953, were, fairly stringent. There was a sizable demand for funds for financing the movement of crops and for the usual window-dressing operations. Most of the banks had to call back their funds with other banks, in order to keep a high cash ratio at the end of the year. Consequently, there was a marked shrinkage in floating funds. Exchange banks had to draw fairly large amounts on their foreign offices to meet the withdrawal of their borrowings locally, while Indian banks looked for help from the Reserve Bank. Inter-bank call money among the Exchange banks and big Indian banks was bid at 3 per cent. upto the end of the year, but thereafter the rate eased a little to 2½ per cent.

Though there was no abatement of the demand for funds in the last few days of the New Year, the supply position eased a little following the flow of funds from Calcutta in the closing days of the year. The heavy callings on Calcutta from Bombay during these days resulted in a shortage of funds in that centre also, but this was met by sale of sterling. A leading Chinese bank was also stated to have given relief to Calcutta by releasing a large amount of funds. After the turn of the year, inter-bank call money among the Exchange banks and big Indian banks was quoted at 2½ per cent. The corresponding rate among the small Indian banks remained unchanged at 3 per cent.

Short-term deposits were keenly bid at a uniform rate of 2½ per cent. for periods of one to six months.

The sale of Rs. 1 crore of three months' Government of India Treasury Bills, which was resumed this week after a break of two weeks, brought an offer of a little more than Rs. 1.32 crores, as against Rs. 1 crore tendered two weeks back. However, the Government had to pay an average rate of Rs. 2-7-9 per cent. per annum, the highest so far paid since the sale of Treasury Bills was begun on 9th September, 1952, and 7 pies more than the previous highest of Rs. 2-7-2 per cent. paid in the second sale of December last.

The Reserve Bank of India's statement for the week ended 1st January, 1954, as compared with that for the week ended 11th December, 1953, shows an aggregate rise of Rs. 8.95 crores in notes in circulation, the rise in the last week alone being Rs. 6.63 crores. Notes held in the Banking Department have gone up by Rs. 1.41 crores. Total notes issued are higher by Rs. 10.36 crores, which are covered by an increase of Rs. 10 crores in foreign securities and Rs. 36 lakhs in rupees coin. In the Banking Department, deposits of the Central Government have, during this three-week period, improved by Rs. 21.21 crores, while those of the State Governments show no notable change. Deposits of banks have dropped by Rs. 9.06 crores. An enlargement of Rs. 1.45 crores is noted in cash balances and Rs. 2.21 crores in balances held abroad. Ways and means advances to Governments are lower by Rs. 1.38 crores, while other loans and advances are higher by Rs. 4.99 crores. Government Treasury Bills purchased and discounted show a sharp rise of Rs. 6.25 crores. There have, however, been no borrowings by banks against usance bills during the three weeks under review.

There has been an aggregate decline of Rs. 11.40 crores in demand deposits of Scheduled banks during the three weeks ended 25th December, 1953, as seen from the latest Scheduled banks' statement. Time deposits have also declined, but by only Rs. 60 lakhs. Inter-bank borrowings are lower by Rs. 3.84 crores. Borrowings from the Reserve Bank have gone up by only Rs. 76 lakhs and those from the Imperial Bank by Rs. 2.28 crores. Advances and bills purchased and discounted have risen by Rs. 10.32 crores, while investments are lower by Rs. 1.07 crores. Cash on hand and balances with the Reserve Bank have together dwindled by Rs. 13.85 crores and money at call and short notice by Rs. 3.86 crores.

The Gilt-edged market was featureless during the last three weeks, with business passing at a very low ebb. The stringency in the money market was one of the contributory factors for the lack of interest. The rumours about the possibility of a reduction in Bank rate, which had been one of the props of the market for some time, having subsided, there was a mild sagging tendency for sheer want of support. There was, however, no large selling pressure. 3 per cent. 1957 was unchanged at Rs. 98-6, though some business was reported done at Rs. 98-5½ also. 3 per cent. 1958 dropped As. 2 to Rs. 98. 3 per cent. 1959-61 stood at Rs. 96-2, though there were buyers at Rs. 96-1. 3 per cent. 1963-65 had buyers at Rs. 92-7½. 3 per cent. 1964 was marked down by an anna at Rs. 92-7. 3 per cent. 1966-68 found sellers at Rs. 90-3½. 3 per cent. 1970-75 attracted sellers at Rs. 86-8. 3 per cent. 1986 Conversion Loan stood As. 4 lower at Rs. 82-6. 3½ per cent. 1961 N.P. Bond was an anna lower at Rs. 98-14.

BRISK TRADING IN BUFF

(From Our Own Correspondent)

KANPUR, 2nd *January*

Conditions in the hides and skins market were tending to be somewhat confident during the week under review. New arrivals were quite steady and transactions in buff were brisk. Madras dealers were ready buyers of second grade cow and all categories of goat.

The latest quotations are: Wet salted cow 1st grade Rs. 320 to Rs. 360, 2nd grade Rs. 300 to Rs. 320 and 3rd grade Rs. 180 to Rs. 220 per score; wet salted buff 1st grade 1 lb. 9 ozs., 2nd grade 1 lb. 14 ozs. and 3rd grade 2 lb. 6 ozs. per rupee; sheep skins Rs. 300 per 100 pieces.

SILVER FLARES UP

(From Our Own Correspondent)

BOMBAY, 6th *January*

The bullion market closed the year 1953 on a steady note. Though the movements in values were irregular in both the metals during the two weeks preceding the closing of the year, there was a net improvement in values. Trading during the last few days of the New Year was sharply characterised by the sudden revival of bullish activity in silver, which touched today the highest level since 21st September last. Gold, however, remained dull, with minor variations in prices.

During the closing weeks of 1953, reports about the possibility of U.S.-Pakistan military pact, the grave political situation in Indo-China and expectations of an increase in offtake of silver during the coming months, the seizure of currency notes worth about Rs. 12 lakhs which were presumably meant for payment against smuggled gold, decline in arrivals of gold and better demand for gold in the ready section, all these induced a favourable sentiment. Frequent short-covering also aided the recovery. Operators were, however, cautious in extending their commitments due to uncertainties about the Government's decision on the proposed amendment to the by-laws of the Bombay Bullion Association. Moreover, reports of further sales of Russian gold to Britain also affected sentiment at one time.

Although the New Year opened on a cautious note, activity in silver soon broadened on fresh bull support and heavy bear covering following reports of satisfactory offtake from Delhi and expectations of increased demand on account of good crops. After an initial recovery, gold became subdued on larger arrivals in the last two days.

Silver for forward delivery (23rd December settlement) which opened at Rs. 150-10 on 17th December and moved up to Rs. 152-1 before the settlement ran out at Rs. 151-13 on 23rd December. January settlement began at Rs. 151-5 and advanced by stages to Rs. 152-15 on 22nd December. After a setback to Rs. 151-10 on 24th on exaggerated reports of large arrivals of Rajasthan silver, there was a swift recovery to Rs. 153-14. The bearish advices from other markets and selling by a prominent bear operator led to a decline in the rate to Rs. 152-4 on 1st January. But, thereafter, it quickly moved forward on fresh bull support and short covering and touched a high of Rs. 155-13 today, before closing at Rs. 155-6.

Ready silver (.996 Mint), which was quoted at a premium of As. 10 over the forward rate for the December settlement, came to be quoted on par with the current settlement. The floating stocks of silver are 2,400 bars. The daily average offtake was 15 bars.

Gold for forward delivery (21st December settlement) began at Rs. 80-10 and rose to Rs. 82-10 before the settlement ran out. Forward gold for January settlement commenced at Rs. 80-9 and, after moving irregularly, touched Rs. 83-6 on 26th December. Thereafter, there was a setback to Rs. 81-14 on the 2nd inst. In sympathy with silver, forward gold recovered to touch Rs. 83-3 before closing lower today at Rs. 82-8.

Ready gold opened at Rs. 80-11 and closed at Rs. 82-8, the highest rate touched during the period under review being Rs. 83-9. The floating stocks of gold are placed at 25,000 tolas. The daily average arrivals were 4,000 tolas, while the offtake was 5,000 tolas on an average.

The following comparative table shows the trend of the market during the week under review:

	6-1-54	Highest	Lowest	16-12-53
GOLD	Rs. a.	Rs. a.	Rs. a.	Rs. a.
Ready (.99 fine Mint)	82 8	83 9	80 10	80 15
Forward	82 8	83 6	80 9	80 13
Sovereign	56 8	56 12	56 0	56 8
SILVER				
Ready (.996 fine Mint)	155 6	155 13	150 11	151 15

New York Ready ..	85½c.	—	—	86½c.

KIPS FIRM

(From Our Own Correspondent)

MADRAS, 4th *January*

Arrivals of kips have been restricted and offtake moderate. It is believed that tanned stocks have been held up in the tannery, with a view to despatching to Madras when prices improve which is probable during the middle of the month. U.K. buyers have kept out of the market and are probing the market in order to buy cheaper. As there are no weak sellers, prices have ruled steady and the undertone is firm, especially for medium and heavy weight cow hides all grades and buff heavies. Demand for cow calf and buff calf has been poor.

In the tanned skins section, demand for goat skins has exceeded supplies. Sheep skins are being steadily cleared by the exporters for shipment to the U.K., the Continent and Japan. Prices in the raw skins market have ruled firm, due to tanners' purchases.

Shipments during December, 1953, were: To the U.K. 4,507 bales tanned cow hides, 391 tanned cow calf, 417 tanned buff hides, 375 tanned buff calf, 1,192 tanned goat, 1,324 tanned sheep and 3 bales tanned snake skins; to the Continent: 12 bales tanned cow hides, 2 tanned cow calf, 4 tanned buff calf, 295 tanned goat, 104 tanned sheep, and 10 bales drysalted goat; to the U.S.A.: 48 bales tanned cow hides, 2 tanned cow calf, 190 tanned buff hides, 46 tanned buff calf, 77 tanned goat, 305 drysalted goat and 8 bales tanned snake skins; to Japan: 153 bales tanned sheep skins.

COTTON FIRM

(From Our Own Correspondent)

BOMBAY, 6th *January*

What has happened in the forward cotton market during the last three weeks has baffled even many seasoned observers and operators alike. Fluctuations in prices have been heavy and the change in sentiment both pronounced and frequent during these memorable three weeks, when price rose to the highest level for the season to Rs. 705 and fell within two days by a little over Rs. 35. Surprisingly enough, when there was nothing in the general position to justify an early setback in price, the bulls chose to race with one another for unloading their contracts amounting to about 70,000 bales. Their fear for the approaching February delivery appears to have originated from the fact that most of the short-sellers had covered their sales at heavy losses and the sales against their purchases which remained were mostly from hedging by holders of ready cotton in the spot trade and against purchases by the mills. Some of the mills also helped indirectly in inducing bulls to liquidate by their price-fixing operations. In any case, this display of nervousness on both sides has placed the market in a somewhat healthier position and it is now hoped that, in view of the approaching delivery against February contracts, the market would tend to be steady with a narrow range of fluctuations.

Whatever be the future trend in the market during the coming weeks, it has succeeded in creating doubts amongst both the public and the authorities with regard to the usefulness of allowing unfettered freedom to forward trading in a country, where speculation is not kept within reasonable bounds. It has also scared away many small operators at least for some time. Some of the said supporters of forward trading are now hoping that the market will behave for some time at least in such a manner as not to invite the attention of the authorities towards its working. All the factors seem to favour the realisation of this hope, except that, tempted by the steady spot position, some big operators with an itch for cornering might not be able to resist the urge for forming a strong syndicate to take advantage of the spot position, by a fresh wave of collecting contracts in May delivery.

And this brings us to spot trading, which naturally is active at this time of the season. The tendency on the part of the producers to hold back cotton from the market in the hope of higher prices later on and a similar desire on the part of the small traders in upcountry centres is gradually weakening and though the arrivals in the upcountry markets cannot be said to be profuse, they show signs of gradual increase. The Vijay crop, which will take some time to come into the market, has been largely snapped up and the premia for this are likely to rule strong. Another factor helping the strength in the spot market is that consumers have been assailed by doubts about the quality of some of the styles this year. There is good bidding, therefore, for good quality cotton, which is reflected in the present premia for Gaorani 12 and Berar 197/3.

Export demand is negligible and likely to remain so, but a new tendency which requires notice in the spot market is the revival in mill interest for foreign growths. California, which was neglected for a long time, has come into its own and ready lots are being taken up by some of the mills. In spite of high prices, Egyptian cotton is also being sought and as there is little hope of securing anything comparable in quantity to the previous year's of East African cotton, as a good part of it is already sold, many eyes have turned towards Sudan. But there is not much hope of large-scale imports from this source also. Ultimately, it looks as if the country will have once again to fall back on U.S. styles, the prices of which have already shown a significant increase in the local spot market. The new import policy does not visualise large quantities of U.S. cotton being bought during the next six months and it is believed that licences will be issued very sparingly, the market having to depend mostly on the old unexpired licences the period of which has been extended still further. While imports from non-dollar areas are free as before, as pointed out above, sources left for such imports are not many.

In the forward section of the cotton market, I.C.C. February opened the week under review at Rs. 687 and moved up to Rs. 695 today before closing the day's trading session at Rs. 694½. I.C.C. May fluctuated between Rs. 692 and Rs. 670 and closed at Rs. 691½. The following is the trend of prices in the market over the week under review:

		Opening	High	Low	Closing
I.C.C. Feb.	(Rs.)	687	695	671	694½
I.C.C. May	(Rs.)	686½	692	670	691½

The following are the latest available quotations from the spot market:

Bengal *Deshi* Rs. 635; Berar *Jarilla* Rs. 800; Khandesh Rs. 845; Vijay Rs. 880, Oomra *Deshi* Rs. 710; Moglai Rs. 710.

An important event in the cotton world is the provisional fixing of the opening date of the Liverpool futures market on 18th May, provided necessary legislation for this is passed by the U.K. Parliament in good time. In the meanwhile the spadework for this is being undertaken.

The position at Karachi continues to be dull, as in previous weeks. Its customary clients seem to have turned their faces away from this market for the time being. They are awaiting the final issue of the U.S. export policy, because hopes are still entertained that some inducements either by way of subsidy or receiving payment in the currency of the country to which cotton is exported might be announced to lighten the load of the loan cotton in the hands of the U.S. Government. There is, however, growing opposition to this from the textile industry there. Liverpool has both sentimental and utilitarian regard for Pakistan cotton and it might absorb some quantity from Karachi later, when the hurdle of the U.S. policy decision is cleared. Japan and some of the Continental countries also will naturally come into the picture later on and though Karachi may have to wait tediously for a long time for clearing its stock, it is more or less assured of being able to do so during the latter part of the year. The following are the latest available quotations from the Karachi market:

Sind *Deshi* Rs. 67; Punjab *Deshi* Rs. 65½; 4F Punjab R.G. Rs. 62½ to Rs. 64; S.G. Rs. 68½ to Rs. 70; L.S.S. Punjab R.G. Rs 67½; S.G. Rs. 73; N.T.R.G. Rs. 68½; S.G. Rs. 73½; 289F Punjab R.G. Rs. 74½; S.G. Rs. 80½.

Unlike Karachi, Alexandria is making good headway with its export programme, though there has been a slight fall in the volume of enquiries during recent weeks. However, India, France, Germany and Italy have remained faithful, though with slightly diminished demands, to Egyptian varieties. Now that enquiries for Ashmouni and Giza 30 have diminished in volume, the spot premia for this are gradually giving way and more offers are being made by shippers in Alexandria to buyers abroad at gradually reduced prices of these varieties, especially that for Giza 30. The demand for Karnak continues as usual though this is also prone to favour more spot lots than future delivery. The volume of export till 19th December shows a decline of about 50,000 bales over the same period last year.

Prices have recovered to a great extent in the New York market. The general improvement in tone is due to increased spot demand. It is believed that with more cotton going into loan, there might be a tight supply position later in the season, which is inducing consumers to come forward to secure their requirements.

The following are the latest available quotations from New York as compared with those a week and a fortnight before:

(In cents per lb.)

	5-1-54	29-12-53	22-12-53
Spot	33.85	33.70	33.50
March	33.22	33.04	33.00
May	33.45	33.31	33.26
July	33.31	33.05	32.98
October	32.75	32.37	32.43

FLOOR AND CEILING PRICES FOR ART SILK YARN

(From Our Own Correspondent)

BOMBAY, 6th *January*

Fixation of ceiling and floor prices for art silk yarn for current delivery at Rs. 780 and Rs. 680 per package of 200 lbs., respectively, is the most notable event of the fortnight under review. This decision of the Yarn Merchants Association was a sequel to the marked rise in the prices of yarn, following the imposition of a ban on imports of double yarn in the current half-year as announced by the Central Government last week-end. The decision of the Association not to open the February contracts till the actual merger of the Association with the Bombay Yarn Exchange also aided the rise in prices. Consequently, January contract shot up from Rs. 721 on 19th December, 1953, to Rs. 747 on Saturday.

With a view to checking the rise in prices, as also to preventing any wide price fluctuations, the Yarn Merchants Association decided, at its meeting held on the 2nd inst., as stated at the outset, to fix ceiling and floor prices. This seems to have had the desirable effect in narrowing down the variations in prices. January contract was quoted at Rs. 749, that is, a rupee lower than the rate prevailing before the fixation of prices.

The ready section was irregular during the period under review. Thus, while 120 Japan and 120 Italy advanced by As. 9 and As. 7 to Rs. 4-10 and Rs. 4-1, respectively, 150 Japan receded from Rs. 4-5 to Rs. 4-2 and 150 Italy from Rs. 3-14 to Rs. 3-12.

The table below gives the prices of art silk yarn quoted today, as compared with those on 30th and 19th December, 1953:

	6-1-54	30-12-53	19-12-53
	Rs. a.	Rs. a.	Rs. a.
150 *January* (per case of 200lbs.) ..	746 0	727 0	721 0
120 Japan (per lb.)	4 10	4 7	4 1
150 Japan ,, ...	4 2	4 1	4 5
120 Italy ,, ...	4 1	3 14	3 10
150 Italy ,, ...	3 12	3 10	3 14

As already stated, the Government of India has banned the import of double yarn during the current half-year. But for this, the import policy is more or less on the lines similar to that followed in the previous half-year. The procedure for licensing imports of yarn by actual consumers and established traders, for instance, continues to be as heretofore. The import quota for 150 bright finish yarn continues to be 5 per cent. Quota for 120 bright finish, however, has been increased from 20 per cent. to 25 per cent. As is only to be expected, the Government's policy has been criticised by a section of traders which feels that a more liberal policy should have been adopted if serious affect all consumers, including silk mills."

Forward trading in staple fibre yarn continues to remain suspended. Prices of ready yarn are at present fully firm, due to scarcity of supplies and larger enquiries from consuming centres, following the ban on imports. The traders are greatly intrigued at the Government's decision not to allow imports of staple fibre yarn. Since yarns of counts 80/2, 140/2, etc., are not being produced in the country and as there is good demand, the Government should, it is felt, allow free import of at least these fine counts.

GROUNDNUTS RALLY AT CLOSE

(From Our Own Correspondent)

BOMBAY, 6th *January*

With the exception of the extension of the period of shipment of the unutilised portion of export quota of castor oil upto the end of January, 1954, and the continuation of free licensing of exports of mustard and rapeseed oils up to the end of June, 1954, there have been no other developments worth mentioning during the three weeks since our report on 16th December last. But even these developments had hardly any influence on the trend of trading in the oilseeds market. For, while the unutilised quotas of castor oil are small, there have been very little overseas enquiries for rape and mustard oils.

The trend in the oilseeds market has been influenced mostly by developments in the cotton market, which was subject to considerable speculative activity in recent weeks. As operators in both the markets are almost the same, the groundnuts section, which ruled quietly steady in the first week, following large arrivals of seeds, picked up strength in the subsequent week and staged a spectacular rise on manipulations by cotton operators. Early this week, however, it staged a small fall, on profit-taking, but only to shoot up again on speculative support. Bull grip on groundnuts was generally tight throughout the period under review. The prices, consequently, disclosed sizable gains over the period. Although the linseed section ruled in sympathy with groundnuts, it sustained minor losses over the period. The castorseeds section, however, depicted a somewhat different trend, in that it was generally easy. This was due to absence of any fresh export quota.

In the groundnuts section Bold F.A.Q., which opened steady at Rs. 32-8 on 17th December, shot up to Rs. 35 on the 24th. Thereafter, it staged a gradual decline to Rs. 33-8 on the 31st December. Subsequently, it improved to finish at Rs. 34-4 today. Khandesh quality, which opened at Rs. 33-8 as against Rs. 33-2, advanced to Rs. 36 on 24th December. Then, it declined to Rs. 34 on the 31st and today it was placed at Rs. 34-10. Bold December-January and February-March gained Re. 1-13 and Re. 1-7 to Rs. 34-7 and Rs. 34-10, respectively. Groundnut oil ex-mill and railway receipts were higher by As. 4 each at Rs. 17-8.

The shippers of groundnut oil who had entered into commitments in the Continent and the U.K. for export of groundnut oil in anticipation of export quotas, have now been perplexed, as the prospects for exports are dim. The buyers in the U.K. have already been reported to have demanded penalty for non-shipment of the oil.

The linseed section lacked strength of its own. Bold ready, which was done at Rs. 29-6 on 19th December as against Rs. 29-4 the previous day, improved to Rs. 31 on 24th December. Later, it declined to touch Rs. 28-8 on the 31st inst. Today, it was quoted at Rs. 29. February-March fluctuated between Rs. 26-6 and Rs. 24-6, before closing at Rs. 25-2. Linseed oil disclosed a gain of As. 2 at Rs. 16-2.

In the castorseeds section, May delivery, which was enquired at Rs. 119-12 as against Rs. 120-2, fluctuated between Rs. 121-8 and Rs. 110, before ultimately closing at the latter rate. Among spots, Madras quality lost Rs. 2 to Rs. 25 and F.A.Q. Re. 1-12 to Rs. 24-12. Castor oil B.S.S. eased from Rs. 16-8 to Rs. 14-10, First Pressure from Rs. 16 to Rs. 14-8 and Commercials from Rs. 15-4 to Rs. 13-10.

Among other seeds *Kardi* Bold was lower by Re. 1 at Rs. 24. *Niger* F.A.Q. was down by As. 4 at Rs. 28-4, while Madras gained As. 8 to Rs. 29.

Arrivals of various oils and oilseeds from 1st January to 31st December, 1953, as compared with those in the previous year were as follows:

(In cwts.)

	1953	1952
Groundnut	2,374,159	2,941,143
Castorseed	817,204	749,498
Linseed	144,247	263,333
Groundnut oil	729,408	1,481,524
Castoroil	250,632	261,221
Linseed oil	57,193	187,131

Exports of oilseeds and oil during the year 1953 were as follows:

(In tons)

Groundnuts	8,469
Groundnut oil	6,190.4
Linseed oil	620.9
Castor oil	23,825.6

The following table shows the prices of oilseeds and oil on the 6th inst, as compared with those on 24th and 16th December, 1953:

	6-1-54	24-12-53	16-12-53

SUGAR EASY

(From Our Own Correspondent)

BOMBAY, 6th *January*

Since we reported last on the 16th ultimo, the forward section of the Bombay sugar market has been easy, thanks to satisfactory supplies of indigenous sugar, following liberal releases by the Central Government. The expectation of a further release in the near future and large arrivals of imported sugar have also acted bearishly on the market. At the same time, the demand from interior centres has been slack. Sugar prices, therefore, have moved downwards. Business in *Magsar* delivery was terminated at Rs. 81-8 per bag, as against Rs. 82-8 three weeks before. *Posh* delivery was transacted at Rs. 81-12, as against Rs. 83-12. Foreign sugars too have tended to decline, owing to comfortable stock position and reduction in the imported price from Rs. 30 to Rs. 29-8 per maund. Thus, British refined sugar has receded from Rs. 84-84-4 to Rs. 83 per bag of 2 cwts. Mexican sugar is neglected at Rs. 40-4 per bag of 110¼ lbs. (net) and Cuban sugar at Rs. 36-8 per bag of 100 lbs. Many seem to feel that imported sugar prices will not register any upward trend and that the market must remain quiet, with prospects of further release of indigenous production in the very near future. The position of bulls in *Posh* delivery is, therefore, uncomfortable.

The ready section, however, has exhibited fairly steady conditions and prices have been well maintained. Small, medium and large grain sugars are now quoted at Rs. 93, Rs. 95 and Rs. 99 per bag, respectively. The corresponding quotations three weeks before were Rs. 93, Rs. 92-94 and Rs. 97. The indigenous *ex*-mill prices for medium and bold grain sugars are steady around Rr. 29-8 and Rs. 30-8 per maund, respectively.

With indigenous sugar being quoted at high prices, traders are reluctant to increase their commitments. Continued arrivals of foreign sugar are also acting as a damper. The traders are somewhat intrigued at the persistent dumping of bold grain sugar of Java and Czechoslovakia into Calcutta and Madras by the Union Food Ministry, despite the fact that there is no demand for such sugar, as these areas prefer purity to grains. The disparity between the prices of indigenous and imported sugars in Bombay is as wide as Rs. 12 per bag. This is really abnormal and must decline to a more reasonable level sooner or later if economic laws have any meaning.

The Union Food Ministry is understood to have decided to despatch about 1,000 tons of British refined sugar from the Bombay Port Trust docks to Delhi, with a view to selling it there at Rs. 30 per maund (*ex*-godown). This move, it is stated, is directed in order to bring down prices.

Tenders have been invited for East German beet crystal sugar per s.s. *Everest* which is expected to arrive in the third week of this month. It is reported that an allotment of 550 maunds is being made to each tenderer. This sugar resembles the medium grain sugar I.S.S. D-28. Later, if Cuban sugar per s.s. *America* and also of small parcels of British refined sugar per ex-s.s. *Indian Navy* and ex-s.s. *Tahsima* have already commenced. Cuban sugar per s.s. *Marcella* is scheduled to arrive in the Bombay Harbour early next week.

Gur prices have ruled steady. This is due partly to a fall in production and partly to seasonal demand on the eve of *Sankranti*. The fall in production is the result of inadequate supply of sugarcane in *gur* producing areas in U.P. and Bombay-Deccan. Market circles are optimistic that there is not much scope for *gur* prices to go down, for production is not likely to be as heavy as was anticipated earlier in the season.

LINSEED QUIET

(Messrs. A. Bradley & Co.)

CALCUTTA, 4th *January*

A somewhat quiefer tendency has developed in the linseed market and an appreciable decline in prices has been recorded. Supplies from producing centres are still very short, with the result that the general undertone of the market remains firm. Local sellers have shown slightly better interest, although buyers are less keen to pay higher prices. Only small quantities are reported to have changed hands. A sharp decline in linseed oil prices has followed a general weakening in the local demand, and trading has been very limited. Latest quotation is Ready Rs. 21-12 per maund.

PEPPER ARRIVALS INCREASE

(Messrs. Parekh & Co.)

BOMBAY, 6th *January*

After the Christmas and New Year holidays, the performance of black pepper at all terminal markets was disappointing in view of the increasing arrivals and poorer export enquiries. New York buyers are reported sitting back awaiting fresh developments anticipating lower levels in India under pressure of the movement of new crop. They are also reported to be awaiting the Presidential message on the State of the Union economics and the budget. There are sellers in the local market for January shipment at $0.85 and February/March at $0.84 but without interest except for stray short coverings. Some business in April/May/June in equal monthly lots was done at prices ranging from $0.85 to $0.83½ per lb. c. & f. New York. The general consensus of opinion of the market is that, with increasing arrivals, if the export demand remained as disappointing as today, the market would go lower.

The other disappointing feature of the market is poor demand from Calcutta and Bombay for light berries for local consumption, and the con-

STOCK & SHARE QUOTATIONS

Abbreviations:—D=Deferred shares. P.O.=Preferred Ordinary shares. Y=Accounts published yearly. H=Accounts published half-yearly. P=Company has Preference shares. T=Company has Debentures. N=Nominal quotation. x.d.=Ex-Dividend. c.d.=Cum. Dividend. i=Interim Dividend. f=Dividend for first half of the year.

Shares:—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share".

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December, respectively, Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery, and all other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends.—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year, they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly, dividends shown are for their financial year. Where, however, the accounts are closed half-yearly, dividends are shown separately for the respective half-years.

* Including bonus. a Sales and amount written off. (k) Investments. ‡ For ten months ended 31st December 1951.

(l) Made up of an interim dividend of Rs. 1-12 per share on 1,20,000 shares and final dividend of Rs. 1-10 per share on 2,40,000 shares of which 1,20,000 shares are bonus shares.

* The following explanatory notes relate to the abbreviations and marks shown on page 56 in the debentures section:—

‡‡ Option to repay on six months' notice, on any interest date after 31st December, 1951, at 102 per cent. Also redeemable out of a cumulative sinking fund of 1½ per cent. per annum (commencing in 1938) by drawings at 102 per cent. or by purchase at or 102 per cent.

(a) Option of repayment at any time at 3 per cent. premium.

(b) Bearer bonds of Rs. 1,000 each repayable at par.

(c) Bearer bonds of Rs. 1,000 each repayable on 31st July, 1959.

(d) Bearer bonds of Rs. 1 000 each with option of redemption in whole or in part at par on 30th June, 1952 or on any subsequent interest date at one month's notice.

(e) Returnable on or after 31st July, 1950, at Rs. 102-8 or at par after 31st July, 1955 on six months' notice in each case.

(f) Bearer bonds of Rs. 1,000 each with option of redeeming on 3 months' notice at ½ per cent. premium after 1st March, 1954, but before 1st March, 1957, and 1 per cent. premium on or after 1st March 1957.

(g) Option of redemption on or after 1st July, 1949, at par.

(h) Option of repayment at any time at par at any time on or after 30th June 1947 on six months notice

MARKET GOSSIP

(Concluded from page 3)

delegates of the Commonwealth how it is proposed to meet the new competition. Financial experts of the Commonwealth countries, now gathered at Sydney, are reported to have urged greater efforts during the coming year to increase the tempo of development in many Commonwealth areas. These officials are reported to have called for greater efforts, particularly from India, Pakistan and Ceylon, whose delegates were reported to be even more anxious than at the last Conference in London to accelerate the flow of capital into their countries. These areas, the experts were reported to have said, still face grave possibilities of recurring shortages of food, unless production can be speeded up in the next few years. Other topics, which will receive the attention of the Finance Ministers, include: (1) an examination of the Commonwealth's relationships with G.A.T.T.; (2) the system of imperial preferences under which Commonwealth countries gave each other favourable trading terms; (3) industrial and agricultural projects for the Commonwealth development, and the finance required for them; (4) the problem of gainful stable prices for the Commonwealth's main raw materials and dollar earners like rubber, jute and tin; (5) Britain's relationship with the European Payments Union; and, (6) progress of the £2,800 million Colombo Plan for the economic development of South and South-East Asia.

BANKING

(Continued from page 11)

it can hold fresh inspections before the next periodic inspections become due. If, as a result of the inspections, it finds that some of the doings of a few banks are not in accordance with sound banking practice, it advises the banks concerned to rectify the doings and keeps itself in close touch with the efforts of the banks to carry out its advice. It de-schedules banks or cancels the licences given to them, if they fail to carry out its advice. It can use these powers to bring about changes in the boards of directors of banks, if in any cases it regards such changes as necessary for protecting the depositors of banks.

Although the above dangers of the drastic provisions of the Banking Companies (Amendment) Act regarding directors were pointed out to Government by banking interests, the Government has insisted upon pushing this piece of legislation hurriedly through Parliament. In the interests of the progress of banking in India on sound lines, it is to be hoped that, if the Government finds that the dangers outlined above tend to materialise, it will have the good sense and the courage to go to Parliament again for softening the drastic provisions of the new Act affecting directors of banks.—*All Rights Reserved.*

TRADE BETWEEN ASIA AND EUROPE

(Continued from page 29)

ments position. The capacity to pay for imports was, however, maintained at a high level in relation to export earnings through releases of sterling balances accumulated during the war by the sterling area countries and through foreign aid.

In the field of textiles and other consumer goods, the underlying tendency for European markets in the Asian and Far Eastern region to shrink has been over-shadowed by acute shortages and the temporary disappearance of Japan as a competitor. Production is likely to increase further in the three huge centres of the textile industry—Japan, an old exporter, India, a new one, and China which will probably remain self-sufficient, at least in the field of cotton textiles, according to the Study. It is not often realised that the region as a whole is a major net exporter of textiles even when jute products are left out of account. The expansion of Asian textile production will, therefore, affect Europe partly by competition in the third markets such as Africa or South America.

Capital Goods Imports

Further expansion of the needs of capital goods depends on the pace at which development plans in Asia and the Far East can be got under way and this is determined, as has already been mentioned, by the future of the countries' terms of trade and the availability to them of foreign finance. In fact, imports of capital goods from all sources into the countries (excluding China and Hong Kong) have increased by more than 100 per cent. in volume since 1938. In 1951, 40 per cent. of these capital goods were transport equipment—railway material for India and road vehicles for all countries. Other important items were textile machinery, power generating machinery and engines and construcional machinery for road building. There is no great demand for labour-saving mechanised equipment for agriculture in these countries, most of which are faced with a huge problem of surplus rural population.

One important problem concerning exports of capital goods from Europe, closely connected with the problem of competition between European and United States exporters, is the question of technical adaptation of European engineering industries to the particular needs of the underdeveloped countries in Asia and the Far East. What is required in these countries is, the Study stresses, to economise the scarce amounts of capital available in such a way as to secure a maximum output per unit of capital invested rather than per man employed. Industrialisation depends to a large extent on deliveries of equipment from engineering industries. But, in Asia's special economic environment, development does not aim at saving labour but at employing it. In this respect, as a general rule, equipment from European industries, according to the Study, may have an advantage over that of the United States, though its advantage is probably less great than Japan's.

MARKET REPORTS

(Concluded from page 45)

sequent accumulation of stocks has exerted unhealthy influence on the market for exportable quality also. Though all pointers are for future lower prices, the bulls among the trade are banking upon the possibilities of further broadening of enquiries from Russia and better offtake from the Continent and New York in the near future, as they expect a pick up in business in view of low stock everywhere.

In the delivery section, in spite of support by bull interests, the market was not able to hold its own, the price having once again gone down from Rs. 1,600 to Rs. 1,520.

Following are today's nominal quotations:—Ready Rs. 230/250 per cwt., and February Rs. 1,520/40, and March Rs. 1,500/20 per candy of 5½ cwts.

JUTE GOODS MOVE UP

(From Our Own Correspondent)

CALCUTTA, *5th January*

The reopening of the markets for the new year on Saturday last was on a firm note. Foreign demand for jute goods was lacking; nevertheless, prices were held, following some covering demand by local dealers. This was not surprising, as usually some time elapses in the new year before export demand gathers momentum. One of the features during the period under review, i.e., from 15th December to yesterday, was the gradual rise in B. twills to Rs. 107-14 from Rs. 103-10, following the keen interest shown by foreign buyers, especially, from Australia. The rate however, began to give way, as advices from Sydney indicated satisfaction of the quantity so far bought, although more demand was expected. The rate was Rs. 106 last Wednesday, when the market closed for the old year. The market did not function on Thursday and Friday on account of New Year's Eve and New Year holidays respectively. There was no session also on 25th December, being Christmas Day. For the reason already stated, the rate picked up some strength last Saturday, and thus was fractionally better at Rs. 106-8. Firmness was again in evidence yesterday, when the quotation rose further by nearly one point at Rs. 107-6, the closure being still higher at Rs. 108.

During the period as a whole, business in hessians with America and the United Kingdom was on a moderate scale. Support was also derived from covering demand, and speculators continued buying in order to squeeze ready 40" 10 oz. hessians. The market derived enthusiasm from steady New York advices, and noted the pre

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent
Who else must sweat and toil and gain but scanty fare."
William Blake

VOL. LXXXVIII. No. 2239 BOMBAY, 16 JANUARY, 1954 PRICE Rs. 1/8

GOVERNMENT'S LABOUR POLICY

THAT the labour policy pursued by the Centre and the States is not conducive to the economic development of the country has been often reiterated by this journal, as well as by many others. Even the Planning Commission is believed to hold this view. But there are no signs of appreciation of this truth by those in authority. On the contrary, the latter seem to be determined to pursue their present policy which seeks to ensure for workers the best of both the worlds, more pay and less work. This attitude of the Government is clear from the speech of Mr. V. V. Giri, Union Minister for Labour, at the thirteenth session of the Indian Labour Conference, which concluded its three-day session at Mysore last week-end. Delivering a sermon to employers to move with the current and to adjust themselves to the requirements of the times, Mr. Giri remarked: "There is no use their (employers) repeatedly harping on the theme that labour costs have mounted in recent times. They have no doubt increased, but I see no point in ruminating over it. The old days, whether they were good or bad, are not going to return. Labour will no longer accept those conditions which they accepted *five or ten years ago.*" In another part of his speech, he asked: "Can it be seriously contended that (labour) cost is *excessive* in this country, as compared with what it is in other countries?" Criticising those who complained against "a spate of labour legislation," he contended that the Government had *not unduly* forced the pace in the matter of labour welfare and that, if anything, it had been "overcautious and somewhat slow in the matter of progressive welfare measures." In fact, he went a step further and asserted: "I must categorically refute the charge that the labour policy now being pursued is either wrong or disastrous." In support of this contention, he quoted certain statistics relating to industrial production and man-days lost which showed that, during 1953, while industrial conflicts had gone down, output had gone up.

If Mr. Giri genuinely believes in this line of argument, he needs to be warned that he is deluding himself. The pace of expansion in industrial production in 1953, as we conclusively showed in the leading article in our 1953 *Annual Review Number*, was slower than even in 1952, a year of slump. The statistics showing the number of man-days lost quoted by him for 1953 were not complete, in that they did not reflect the position in the latter half of 1953. Again, and this is *important*, they do not reflect the go-slow tactics adopted by workers. Further, the fall in conflicts was due not so much to the various labour legislations as to the full return of 'a buyers' market. Workers knew that the days when they could bully the employers for more wages and better amenities by going on strike were over. But all this is not so important as the fact that employment opportunities have not expanded to such an extent as to absorb the increasing population of employable age. The industrial production may have expanded, but the industrial productive capacity has not, with the result that unemployment is far more acute than in one's living memory. There is no gainsaying the fact that the Government's labour policy is as much responsible for this state of affairs as its other economic policies, in that it has discouraged *entrepreneurs* from starting new industries and expanding the existing ones. In its anxiety to provide for those who are already employed a standard of living and comfort which are not consistent with the general economic position of the country and which are not justified by the productivity of workers, the Government has, wittingly or unwittingly, ignored the interests of those for whom jobs have to be found and of the large body of consumers. Nobody contends that industrial labour in India is as well off as that of its confrere in many of the industrial countries of the West or the East. But it is obvious that this situation is due to the simple fact that India itself is not as rich as the other countries.

It is grossly unfair on the part of Mr. Giri to say, in effect, that employers are standing in the way of their workers being well paid and provided with amenities. This might have been true once and may be so even now with some of the employers; there are exceptions in all societies. But, really speaking, the blame must be laid elsewhere, chiefly at the Government's door and that of trade unions. Most of the employers do want to give a fair deal to workers, and they do not believe in cheap labour any longer. But they are unable to do so, because the Government and the labour unions are not willing to let them use modern and up-to-date machines. Who stands in the way of rationalisation of production and industry today? Those who have followed this stale controversy know the answer and Mr. Giri knows it very well. Evidently, it is not *convenient for him to admit it in public.*

All progressive employers quite appreciate that a contented labour force is an asset. It is a sign of the times that employers do not now demand a cut in the wages of workers or in their amenities. It is true that they complain of rigidity of labour cost, but they do not seek a solution for this through a reduction in wages. What they have been agitating for is rationalisation, so that they may have the wherewithal to ensure a decent standard of living. They want permission and facilities for modernising their factories with up-to-date equipment, so that production per worker can be raised, costs lowered and conditions for an expanding market provided. These, however, are denied by the Government and the trade unions alike, because they are not willing to face the temporary displacement of surplus labour. Permission for rationalisation is not easily given even where an employer is prepared to pay compensation for the displaced labour or is willing to keep surplus workers on the pay-roll till there is a reduction in the labour force through the normal course of retirement or death. Further, in its anxiety to keep the uneconomic cottage industries in production, the Government has placed restrictions on the efficient power units, thereby limiting its ability to sustain a prosperous labour force.

In a democratic country, where those who are in power have to depend upon the vote of the masses, especially of such a compact and organised section as industrial workers, for continuing to remain in power, the anxiety of Government to ensure stability of employment and high level of wages is understandable. But the powers-that-be should not confuse themselves to such an extent as to believe that rigidity is stability. "Stability," to quote an economic authority, "implies a natural and unforced evenness of behaviour in free markets, due to absence of need for drastic readjustments. Rigidity denotes an arbitrary immobility enforced by political or strong non-political authority regardless of needed changes. Stability is a normal result of healthy economic conditions. Rigidity is a consequence of artificial controls, designed to avoid the inconveniences or hardship of instability." The burden arising *from the rigidity of labour* cost, that is, the burden of maintaining those who are already employed at a high level of wages, is now being borne by those who are *unemployed, the vast body of consumers* and the shareholders who are the owners of business enterprises. The longer this state of affairs continues, the greater will be the hardship to the *community* as a whole. Unless this rigidity is ended by adopting the measure suggested above, namely, lowering of costs through higher productivity, there can be no hope of increased prosperity for the country. It is a simple law of economics that, so long as rigid labour costs inhibit price adjustments, no amount of pumping of purchasing power into the system will give rise to *expanding* production and employment. For rigidity begets instability, which, in turn, begets loss of confidence. To the extent prices can be reduced and turnover increased, production and employment also can be increased. And to the extent the Government's labour policy does not recognise this economic truism, that policy is wrong and, if this wrong policy is pursued for a long time, it will prove disastrous to the country. No amount of denials by Mr. Giri or anyone else, however vigorous they may be, will make it a perfect policy.

The Union Labour Minister made great play of the criticism, often heard, that the productivity or the per-man-hour output of the Indian worker is only a fraction of what it is in other countries. No serious critic of labour or the labour policy of the Government makes such an unqualified criticism. He is fully aware of the differences in the mechanical equipment of Indian factories and mines, in the managerial techniques and efficiency, and in the general backwardness of the Indian workers' education and training, as compared with those in such advanced countries as the U.K. and the U.S. He is also aware that, by application of better techniques through adoption of quality controls, productivity of workers can be substantially increased. Nevertheless, as a general rule, the efficiency of workers in this country is a little lower than that of those in other advanced countries, either because of lack of adequate education or because of climatic conditions and environments. Now this criticism cannot be called as one born of prejudice, as Mr. Giri appears to do, especially as he himself admits that there is *scope* for labour in India to increase its productivity through its own exertions.

The gratuitous advice given by Mr. Giri to employers to move with the times applies with equal force to the Government also. Instead of moving with the times, the Government is moving backward towards a bullock-cart economy by decrying mechanisation, by placing

a premium on inefficiency and by supporting the workers' demand for more pay and less work. Mr. Giri admits that the productivity of the Indian worker is low, albeit for no fault of his own. Why then does he oppose the employers' plea for creating suitable conditions under which the productivity of the worker can be raised? As against an average of four to six ordinary looms handled by one cotton mill operative in Britain, 32 to 78 automatic looms in the U.S. and a minimum workload of 48 automatic looms in Japan, the Indian worker handles on an average not more than two ordinary looms. Similarly, the maximum number of ring frame spindles handled by an Indian operative is only 380, as compared with an average of 800 in Britain, 1,200 in the U.S. and 2,400 in Japan. Mr. Giri makes no mention of such facts, when he compares the standard of wages, amenities, etc., that is provided in the advanced countries with that in India and proceeds to accuse employers of not being progressive. It is not uncommon for some in the Government to make private enterprise the scapegoat for their follies. It is a pity that even such an enlightened person as Mr. Giri should have chosen this as the main theme of his address at the tripartite conference at Mysore. Little wonder, therefore, that employers are losing their faith in such conferences.

U.S. FARM POLICY

IT has been clear for some time past that the U.S. Republican Administration would give the country's agriculture a "new look", reverse the soft policy of aiding agriculture indiscriminately and restore initiative and enterprise to this vital sector of American economy. In his State of the Union message to the Congress, the U.S. President, Mr. Eisenhower, emphasised that the well-being of America's 160 million people demanded a "stable and prosperous agriculture." He reminded the Congress that the agricultural laws, now in force, have successfully accomplished their war-time purpose of encouraging production of many crops. By implication, he suggested that the laws had outlived their war-time utility. That this view is correct will be evident from the huge surpluses of such farm produce as wheat, cotton, corn and vegetable oils, now concentrated in the hands of America's chief machinery for implementing the price support programme, namely, the Commodity Credit Corporation (C.C.C.). Small wonder, then, that the U.S. President, true to the principles of greater initiative and freedom of action for enterprise to which his party is wedded, has suggested changes in the farm price-support laws that will restore something of these qualities to American agriculture.

In order to appreciate the changes proposed and how the need for them came to be felt, it is necessary to take a look at the farm price-support programme which has been in existence, in one form or another, since 1933. The policy of price support for agricultural produce, in its present form, derives its sanction from the Agricultural Adjustment Act of 1938 and the Agricultural Act, 1949. These Acts and other agricultural regulations are based on the concept of "parity" which is designed to give the farmer a "fair price" and to provide some form of equality between the agricultural and non-agricultural sectors of the economy. Thus, it represents a relationship between the price the farmer pays for the goods he buys and the price he gets for his goods. The parity price is the support price effective for the marketing year beginning from 1st July of a calendar year. This is determined, in the case of an agricultural commodity, say, wheat, by applying to the average price for the seasons 1909-14 an index of prices, interest and taxes paid by farmers. This price would ensure that the farmer maintains his pre-First-World-War standard of living. Actually, it does more than that. For, the productivity of agriculture has greatly expanded since the First World War. The parity price for any particular commodity is the national average price for that commodity which can be translated by a table of margins into a price for a particular grade at a particular place.

The support price becomes operative only when there is a fall in market price, or a fall is apprehended. Normally, the farmer sells his wheat in the open market. Otherwise, he can contract in advance to sell his produce to the C.C.C. at the support price; he will then forgo the possibility of an extra profit if the market price rises higher. There is yet another alternative he may choose. He may put his produce "in loan" with the C.C.C., which will offer the support price for the produce pledged with it.

(Continued on page 59)

If the market price rises above the support price, he redeems the pledge and takes the profit. If the market price falls, he allows the C.C.C. to do what it likes with his produce.

The success of this policy from the long-range point of view implies effective control of output. The first safeguard in this direction is the proclamation of a national acreage allotment which must be large enough to give a prospective supply equal to 130 per cent. of a normal year's consumption and exports. This allotment is apportioned to States, then to individual farms. The penalty for non-compliance is that the offending farmer will lose his claim for price support. The second safeguard is a marketing quota. When the expected supply exceeds 120 per cent. of the normal supply, the Secretary proclaims marketing quotas which come into force, provided two-thirds of the farmers agree to this restriction. Farmers exceeding their acreage allotment will have to pay a penalty at a specified rate per unit of quantity produced on the excess acres. If the marketing quotas are rejected by the farmers, the support price falls to 50 per cent. of the parity price; it would, in effect, cease to operate.

The battle between those who advocate rigid price supports and those who oppose them has gone on ever since they came to be adopted. The supporters of the present system contend that agriculture is subject to exceptional risks, such as weather and insect pests, and is, therefore, entitled to expect special treatment. The other popular and well-worn arguments are: the average financial resistance of the farmer is low; he cannot adjust production to demand; the decentralisation of agriculture places him at the mercy of other markets; agriculture does not recover as fast as industry from a depression. In fine, it is the age old argument of the "poor" farmer who needs all the help the State can give to support his purchasing power. A powerful economic argument is that, when the farmer's purchasing power is maintained, the other sectors of the economy too would derive considerable benefit. Perhaps, what keeps the price support scheme intact is not the economic worth of these arguments—considerable, as it is—but the political argument. The farmer's vote counts. And no party can afford to disregard this fact.

The arguments against the present system have acquired greater validity in the present context of burdensome surpluses. Those who oppose the present system have always insisted that it encourages over-production and that it leads to regimentation of agriculture, since controls breed more controls. It destroys overseas markets for American farm products, by pricing them out of these markets. If the system equates supply with demand at all, it does so only by curbing both. Even if abundance is prevented through marketing quotas, it does not solve the problem entirely, since the farmers will grow commodities which are not subject to quotas but for which price support is available. In other words, to prevent over-supply in one sector is only to create a surplus elsewhere. Again, it is held that, since the controls on output apply to the efficient, as well as the inefficient, producers, the system seeks to subsidise the inefficient at the expense of the efficient. Other things remaining the same, the price-support programme will attract imports from overseas countries of the commodities which enjoy that advantage. In order to lighten the intolerable burden which such imports would impose on the C.C.C., the American administration is compelled to resort to import restrictions. If the U.S. is an exporter of the commodity for which rigid price supports above world parity exist, it can maintain its export trade only by granting export subsidies.

Thus, the system raises grave issues of internal and external economic policy. But the more immediate problem is how to relieve the C.C.C. of the heavy burden of price support which it is called upon to shoulder. Since 1933, when the price-support operations were initiated, the U.S. Government has lost $1,110 million. In the first four months of the current fiscal year, the C.C.C. has lost $63 million, which represents an annual rate four times greater than the loss in 1952-53. By the end of October, 1953, the stocks held by this organisation exceeded $2,500 million and outstanding loans were above $2,000 million. It is true that the C.C.C. has not always suffered losses. It has had its prosperous period too. During the period July 1941-June, 1946, it actually made a profit of $126 million. But this period coincided with a period of boom all over the world. Indeed, the C.C.C. would have been in a much worse plight than now, if the Korean war had not intervened to give a fillip to agricultural prices. It held then more than $4 billion worth of com... Korean boom assisted or... stocks. The C.C.C. can get ri... only if a similar emergency or se... failure occurs. Otherwise, the only way it... such it can be relieved of the burden is through fixing low production goals for commodities which would artificially push up prices—that is, through a complete regimentation of farmers.

That the C.C.C.'s operations run into millions of dollars should occasion no surprise. It performs a stupendous task. It has to support the basic crops—corn, wheat, cotton, peanuts and tobacco—at 90 per cent. of parity. Other farm products, notably, milk and wool, are supported at rates ranging from 65 to 90 per cent. A section of the American taxpayers rightly feels indignant at the C.C.C.'s losses which it has to pay for, especially because these moneys could be used to grant the tax relief it needs. Faced with the task of supporting increasingly larger quantities of agricultural commodities at an artificial level of prices, out of parity with the world's price levels, the American Administration is naturally inclined to invoke marketing restrictions for farm produce. A succession of large crops has also intensified the need for such restrictions. The recovery of agricultural production in Europe and in other parts of the world, and the continuing dollar shortage which prevents countries from buying American produce in sufficiently large quantities are other complicating factors. The net effect of these factors is that marketing quotas have been clamped on the next season's crops of wheat, cotton, tobacco and peanut.

Surely, to regiment agriculture in this way is to ignore the vital role of initiative and enterprise in this sphere. But what is even more reprehensible is that it cannot even be claimed that such regimentation solves the problem of surpluses in a satisfactory manner. Mr. Eisenhower assessed the situation aright when he said that, in spite of the acreage controls authorised by the present law, surpluses will continue to accumulate. Two alternatives, he said, confront the U.S. Administration: (1) to impose more rigid acreage restrictions and to impose them over a wider range of commodities, or (2) to permit the market price to have a greater influence on the planning of production by farmers, while continuing the assistance of the Government. He rightly rejected the first alternative on the ground that it would place every producer under the "domination and control of the Federal Government." He preferred the second alternative as a "sound approach." Accordingly, he has proposed a few changes in the support programme. The main changes are: (1) the present legislation which provides for mandatory rigid support will be allowed to expire; (2) after the 1954 crops, the level of price supports for the basic commodities will be related gradually to supply, in order to ensure greater stability of income; accordingly, the price support level will be varied one percentage point for every two percentage points of variation in the total supply; (3) the new system of parity prices will come into effect from 1st January, 1956; provision is made for moving from the old to "modernised parity" in steps of five percentage points of the old parity each year until the change from the old to the new parity has been accomplished; and (4) the Administration will remove the threat of the huge farm surpluses from current markets through such uses as school lunch programmes, disaster relief, aid to friendly nations and stock-piling of reserves; Mr. Eisenhower, however, made it clear that the destruction of these surpluses would not be "countenanced under any circumstances."

Such, in brief, are the main features of the new policy for agriculture, proposed by the Republican Administration. Although the details of the scheme are not now available in this country, it is clear that the Administration, without in any way impairing the principle of price support for agriculture, is moving away from a rigid price-support programme to a system of flexible price supports. The working of the new system will, naturally enough, be watched with interest. A commendable feature of the system is that, if the supply is short, higher support levels will encourage production, whereas, if the supply is much too abundant, a lowered price will stimulate consumption. An equally commendable feature is that the existing surpluses would be available for humanitarian purposes; the Administration is rightly opposed to destruction of these commodities. There is no specific mention of selling them for the natural currencies of the overseas buyers. This removes, to a certain extent, the threat of subsidised competition which many countries producing similar goods for export once feared.

TATA STEELS AGAIN FANCIED BY BULLS

BRITISH BANKS PAY HIGHER DIVIDENDS—TEA PRICES UNDULY HIGH

THURSDAY, 5 P.M.

THE undertone of share markets has improved to some extent. Over the week, modest gains are noticeable in a number of equities. Tata Steel Deferreds and Ordinaries have regained the favour of a few big speculators; at the same time, there has also been some selective buying in other sections too. There has been, for instance, an improvement in such counters as Bombay-Burmah Corporation, Belapur, Tata Hydro, Alcock Ashdown, National Rayon and a number of cotton textile shares. The view that there is not much room for a fall in equity values, expressed in these columns in the recent past, has been endorsed by the Finance Minister, Mr. C. D. Deshmukh. Market men have noted this statement of his with great interest. It has reinforced their conclusion that, in the coming two years, the Government would resort to heavy deficit financing, in order to implement the Five-year Plan. The fear of a business recession in the U.S. which seemed to weigh heavily with them last week has subsided and so also the anxiety caused by the proposed U.S. military aid to Pakistan.

MARKET GOSSIP

• • • •

The expectation that inflation would be the main plank of the Government's financial policy has induced speculators to look out for variations in notes-in-circulation disclosed in the Reserve Bank's weekly statement, published every Wednesday evening. The increase of over Rs. 22 crores in note circulation during the week ended the 8th inst., was invested with undue significance last night, overlooking the fact that, at this time of year, the currency circulation always expands and that the first week of every month invariably witnesses an expansion in the note issue, owing to payment of wages, salaries, monthly bills, etc. Anyway, it is not a healthy indication, if speculators try to base their operations on such flimsy and unreliable data.

• • • •

Another development of the week about which much was made in the share market is the withdrawal of the Reserve Bank from the Gilt-edged market. For some time past, the Reserve Bank had been a ready supplier of Government of India loans of all maturities, except the very short-dated ones. The object of these sales was to raise as much cash as possible, by disposing of a part of the securities held on Government account. In recent weeks, however, there was scarcely any demand for these loans, as banks found a ready outlet for their surplus funds in the seasonal demand for money from the trade. Taking advantage of the stringency of the money market and encouraged by the ready availability of scrip from the Reserve Bank, some of the operators began to sell short. In these circumstances, if the Reserve Bank had continued its sales, it would have engendered a quiet trend in Gilt-edged. The Reserve Bank, therefore, decided to suspend its sales; this was, of course, the correct thing to do. But some speculators seem to be reading into this action much more. They feel that this is a prelude to rigging up the market for facilitating fresh borrowing by the Government and that a downward change in the Bank rate is not far off. All this surmise is, in our view, unwarranted. It is unbelievable that the Government will follow both deficit financing and cheap money policy simultaneously. The Finance Minister may wish to have a buoyant stock market. Nevertheless, we do not think that he will try to realise this wish through such stunts as monkeying with the Bank rate at a time when he is contemplating to resort to created money.

• • • •

In this connection, there are a few indications to show which way Mr. Deshmukh's mind is working. In the first place, he raised no objection when the State Governments wanted to guarantee a minimum tax-free (not taxable, as was stated in our last issue, in regard to the T.-C. State Finance Corporation) dividend of 3½ per cent. on the shares of their Finance Corporations. There is no Government-guaranteed security in the market at present which offers 3½ per cent., free of tax, and which can be held by an individual without any restriction on the amount. It is true that the small savings bonds of the Government carry interest at 3½ per cent. free of tax, but there is a ceiling to the amount that any one can hold. An interesting point about the guaranteed dividend on the shares of Finance Corporations is that, so long as this minimum dividend is paid by the Government concerned, it is free from all taxes, including super-tax. This means that, so long as the Corporation does not make a profit or adequate profit to pay the minimum dividend, the holders of these shares in the super-tax grade have an advantage. Even in regard to institutional investors there are few securities which offer such a high tax-free yield. It is no wonder, therefore, that the shares of the Bombay State Finance Corporation were oversubscribed within a short time. Mr. Deshmukh would not have agreed to these liberal terms, if he were contemplating to follow a deliberate cheap money policy.

• • • •

The second instance which points to the same conclusion is the permission given by the Reserve Bank to a number of local bodies to float loans having a maturity of about 12 years, at rates which give a yield of 5 per cent., taxable. Recently, municipalities in the Madhya Pradesh State raised finance on these terms. It is true that these loans are for small amounts, but they are as good as State loans, inasmuch as they carry the guarantee of the State Governments concerned. These loans, according to our information, were readily taken up by insurance companies. At the moment, however, the market for them seems to have become saturated, as a few of the municipalities which have not completed their borrowings are unable to find much support.

• • • •

The shape of things to come in the current year will depend, to a large extent, on three important developments in the remaining days of this month. The first is the meeting of the All-India Congress Committee, scheduled to be held at Calcutta on the 19th inst. It remains to be seen whether Mr. Nehru will make any important pronouncements in this session. The second is the issue of Korean prisoners of war. Will the deadlock be resolved before the deadline, namely, the 22nd inst., or will the uneasy cease-fire there be broken, resulting in a resumption of the shooting war? More important than these two will be the Berlin Conference of the four big powers. There will be considerable relief to the world, if the big powers reach an understanding, at least on the principal issues. If Russia and the Atlantic powers part as friends after this Conference, it may lead to a considerable reduction in defence expenditure of these countries which, in turn, may mean lower prices for several commodities. It may also mean that the proposed U.S. military pact with Pakistan may not materialise. It is unnecessary, at this stage, to envisage in detail the possible outcome of a successful conclusion of the Berlin Conference. Suffice it to say that, since it is an event of great significance to the future of the world, it will be prudent to wait and see what happens at this Conference.

• • • •

Among the equities which have been continuously rising in the past few weeks, National Rayon stands out prominently. Even during this week, it has gone up by Rs. 5-8 and is now standing at Rs. 143-8. At one time today, it touched a high of Rs. 149-8. This is a Rs. 100 fully paid-up ordinary share on which the maiden dividend still remains to be paid. Market circles are optimistic that the Company will pay its first ordinary dividend this year and that it will be at least Rs. 8 per share. Even so, the value of this scrip is regarded by many as rather high, considering that there are several first class equities offering a much higher yield. According to one source, the rise in the value of the scrip is due to fairly large buying by interested parties. It is suspected that the management of the Company may be contemplating issue of additional equity capital, taking advantage of the market's fancy for this scrip.

• • • •

So far, four Indian banks have announced their financial results for 1953, which are referred to in detail elsewhere in this issue. It will be seen that the general trend of profits is downward, though dividends have been maintained. The results of the other banks may also be expected, more or less, to conform to this trend. The trend of profits of British banks, however, is in refreshing contrast to that of Indian banks. Aggregate net profits of the "Big Five" for 1953 are 6.6 per cent. higher than those for 1952. If the profits of the "Big Seven" are taken into consideration, an increase of 7 per cent. is seen. Five out of the "Big Seven" have stepped up their dividends, thereby following the lead given by the National Provincial Bank, which broke away 12 months ago from the pattern of long stabilised rates by raising its final dividend by 1 per cent. and thus paying 16 per cent. for 1952, instead of the customary 15 per cent. Again, the National Provincial raised its dividend by another 1 per cent. through the interim for 1953, with the result that the total is 17 per cent. for the whole of 1953, as against 16 per cent. for 1952 and 15 per cent. in 1951-52. That Barclays would pay a higher dividend of 16 per cent., as against 14 per cent. for the past two decades and over, was known even in October last, when it reorganised its capital and announced an increase of 2 per cent. in the dividend for 1953. Lloyds Bank, too, has followed the example of Barclays and raised its dividend by 2 per cent. to 14 per cent. Martins Bank was, in fact, the first to open the dividend season with an unexpectedly large increase of 2½ per cent.—that is, from 15 per cent. to 17½ per cent., a level higher than that prevailing even before 1931 (when the payment was reduced from 16 to 14 per cent.). This rise was far beyond the expectations of the market and, therefore, a big surprise. The District Bank has increased its dividend from 18½ per cent. to 20 per cent. The only two banks which have elected to follow the traditional policy of stable dividends are the Westminster and the Midland; the former has maintained its dividend at 18 per cent. and the latter at 16 per cent. Why has the majority of British big banks chosen to depart from its well-known policy of not varying its dividends? A clear answer to this question will probably be provided by the chairmen in their annual statements. Meanwhile, it is significant that these conservative and shrewd bankers have chosen to enhance the return to their shareholders, despite reports from London envisaging a slump in the U.S. Their action suggests that they do not take a pessimistic view of the future.

Buoyant conditions have been witnessed in the tea market, both in Calcutta and London. Over the calendar year 1953, both Clean Common Broken Pekoe and Medium Assam Broken Pekoe, to take only two qualities, have nearly doubled to Rs. 2-1 and Rs. 2-2, respectively. These prices represent the average for December, 1953. A year ago, gloomy reports continued to emanate from Calcutta, for the tea producers were wont to complain that the prices received were below cost of production. There has been a complete transformation of the position in tea for which the demand is now brisk. In the London market, a similar trend prevails. Last week, the price of common tea reached a record figure of 4s. a pound, as against 2s. 6d. a year ago.

• • • •

Why have tea prices advanced? Many reasons have been adduced to explain this really welcome event. There has been, according to Messrs. J. Thomas & Co., Ltd., a leading firm of commodity brokers in Calcutta, a general recognition by the trade that the consumption of tea in the U.K. has definitely increased during the past year. It would appear that the tea consumption in the U.K. has gone up by 20 million lbs. If this is correct, then the *per capita* consumption of tea in that country would be 10 lbs. Tea stocks in the U.K. have declined, over the year ended 11th December, 1953, by nearly 19 million lbs. to 99 million lbs. But this does not explain why tea consumption should have gone up, all of a sudden, in the U.K. Market observers in that country attributed this rise, in the first place, to the comparative dearness of coffee. Since the Brazilian coffee crop has been affected by frost, the prices of coffee have risen. Perhaps, some of the former votaries of coffee have now turned to tea. Incidentally, this is a warning to coffee producers in India, who must guard themselves against excessively high prices for their produce. Secondly, the derationing of sugar in the U.K. has made it possible for the tea-drinkers in that country to consume more tea than formerly. Thirdly, it would appear that the U.S., where the people are not known to be particularly fond of tea, has begun to import more tea. In 1953, tea imports into the U.S., it is stated, rose by 10 per cent. Fourthly, the traders over there are certain that, while the present stocks are low, there is no immediate prospect of fresh arrivals from India, at least, till September next. The fifth reason—and a very interesting one too—is that the growth of television parties is increasing the number of cups of tea which are drunk.

• • • •

Apart from these factors, the tea traders in India have derived encouragement from the fact that the North Indian tea crop shows a decline of nearly 23 million lbs. upto the end of November, and that there are prospects of large exports of tea to the U.S.S.R. Again, between 1st April and mid-December, shipments to Eire, it is stated, have more than doubled. Also, the demand for internal consumption is increasing. Referring to this factor and the prospects for tea, Messrs. J. Thomas & Co., Ltd., observe:

"Apart from the fact that the consumption in India is increasing, very much less tea has been sold ex-factory this year, compared to the heavy sales of 1952. These two factors have undoubtedly increased the demand in the Calcutta sales and, with a realisation that, unlike previous post-war years, in April-June 1954 little or no tea will be available, this demand is having to be concentrated in the few remaining sales left for the season 1953-54. It is reported that stocks of tea are very low throughout the country and this has caused all types suitable for India to be in very strong demand, especially whole leaf grades which have risen by about As. 6 per lb. during the past month. Stylish B.P.S. and dusts have also met keen support and prices have, as a consequence, risen considerably during the three sales of the month. Before ending this review, it may not be out of place to draw producers' attention to a factor, which next season may become a most important feature, namely, the renewed enquiry from Iranian buyers who, during December, have started again showing an interest in the few tippy teas which are available at this back-end of the season. Should conditions for trade with Iran improve and finance be so arranged that tea can once again be purchased by that country, a keen demand for tippy teas should develop next season, especially because Iran has been virtually out of the market for two years, and the stocks of tea in that country must be extremely low if there are any stocks at all."

• • • •

Although these developments are encouraging to a degree, it is perhaps well to bear in mind that, if tea prices continue to rise, there is bound to be a reaction. What is now believed to have happened to coffee might well happen to tea, though, it is true that, despite all the increases that have been registered in prices, tea remains the cheapest beverage of its kind. Again, tea producers must know that high tea prices will tempt the Government to cast its envious eyes on the industry. For one thing, the Government will be induced to increase the burden of labour welfare measures. Speaking at the recent session of the Indian Labour Conference, the Union Minister for Labour, Mr. V. V. Giri said:

"There have also been criticisms that the Plantations Labour Act, though enacted in 1951, has not yet been brought into force. While I greatly regret the delay, I am sure the house is aware of the reasons which prevented the prompt enforcement of the Act. The tea industry, which is the largest plantation industry, had to face a serious economic crisis and has only recently recovered from the shock. Plantations which had closed down have gradually reopened; prices have gone up and are promising. If there is no further deterioration in the fortunes of the industry, it should soon be possible to make a beginning with the implementation of the Plantations Labour Act." A meeting of the Plantations Committee is

EQUITIES RALLY AFTER EARLY DECLINE

UNDERTONE STEADY

(From Our Own Correspondents)

BOMBAY, 14*th January*

THE movement in equity prices on the Stock Exchange was narrowly irregular during the week under review. The recovery in prices witnessed on Thursday last week gained slight momentum early in the week, but this was not sustained for long. For a mild recession set in and persisted till Tuesday this week. This setback was, however, corrected when equities quickly responded to buying enthusiasm originating from the market's optimistic view of the country's economy. Cheerful trading, therefore, once again came to prevail towards the close. On balance, a wide range of equities emerged with sizable gains, over the week.

The improved performance of the market during the last two days seemed to justify the Union Finance Minister's view that "the rising trend in the prices of equities will get stabilised and will not witness a reversal." A section of the market seemed to interpret this as the Government's desire to stabilise economic conditions in the country for creating a very favourable climate in the investment market. Whether this view is right or not will be known only by the trend of prices during the coming months. But at present, judged by the week's performance, the market seems to have not yet been caught by pre-Budget fears. Its earlier apprehensions about the recession in the U.S. also appears to have receded by the U.S. President's State of the Union message to the Congress and the programme for disposal of farm surplus.

The outstanding development of the week so far as Tata Steel shares are concerned is the sanction given by the High Court of Bombay to the scheme for the conversion of the deferred shares into ordinary ones, as recommended by Mr. M. C. Setalvad, Attorney-General of India. A few dissenting shareholders, however, opposed the petition in the High Court, but the Court has rejected the opposition. The scheme has thus become an accomplished fact, although it is open to the opponents to the scheme to go in appeal.

In the steel section, Tata Deferreds opened the week with a smart rise from Rs. 1,986-4 to Rs. 2,000. In subsequent trading, however, they softened, on lack of support and scattered unloading, touching a low of Rs. 1,973-12 on Monday. Thereafter, the shares made a good recovery on sustained short-covering and fresh enquiries to touch Rs. 2,017-8 at one time today before closing at Rs. 2,011-4. Tata Ordinaries, after a mild break from Rs. 337-4 to Rs. 334, rallied to close at Rs. 341-4. Indian Irons were featureless, but the undertone was steady with movements confined to a very narrow range, the closing price at Rs. 25-4¼ showing no change over the week.

The textile section, on the whole, presented a very steady tone. Some of the scrips which remained in the background appeared on the scene to register smart gains over the week, reflecting thereby the market's appreciation of the trend of production and export of cloth. It is reported that the total production of cloth for 1953 amounted to 4,960 million yards, which is only 40 million yards short of the target fixed by the Planning Commission to be achieved by 1956. On the Stock Exchange, Bombay Dyeings came in for pressure early in the week, and the shares dropped from Rs. 393-2 to Rs. 386-14. A part of this loss was, however, regained when they closed at Rs. 391-14. Kohinoors moved down from Rs. 295-8 to Rs. 291-4, but latterly support was forthcoming to restore it to Rs. 296-4. Central Indias, Finlays and Gokaks each gained a rupee to Rs. 180, Rs. 257 and Rs. 243-8, respectively. Centurys advanced by Rs. 7-4 to Rs. 285, Edward Textiles by Rs. 7-8 to Rs. 257-8, Indore Malwas by Re. 1-4 to Rs. 96-4, New Citys by Rs. 2-8 to Rs. 170 and Simplex by Re. 1 to Rs. 152-8. Standards were taken up, by Rs. 6-4 higher, at Rs. 312-8 and Svadeshis, Rs. 2-4 better, at Rs. 270. Swans hardened by Rs. 2-8 to Rs. 335. Sholapurs rallied from Rs. 1,325 to Rs. 1,425 and Bradburys from Rs. 803-12 to Rs. 851-4.

Bank shares lacked support and prices tended to decline on expectation of lower profits. Barodas dropped Re. 1-8 to Rs. 107-8 and Imperial Fully Paids Rs. 5 to Rs. 1,835. Bank of Indias were a fraction down at Rs. 154-8 and United Commercials declined by Rs. 2 to Rs. 42. Centrals, however, closed As. 8 better at Rs. 64-4.

Interest in public utility shares was patchy. Ahmedabad Electrics were quiet at Rs. 112-3, while Amalgamated Electrics were unchanged at Rs. 10-8. Andhra Valleys put on Rs. 5 to Rs. 1,235. The shares have been placed on the forward list of the Stock Exchange. Tata Powers declined by Rs. 5 to Rs. 1,333, while Tata Hydros improved by Rs. 7-4 to Rs. 136. Bombay Suburbans added As. 10 to Rs. 123-12, while Surat Electrics reacted from Rs. 128-12 to Rs. 127-8.

In the miscellaneous section, Associated Cements were conspicuous with a decline of Rs. 6 to Rs. 180-8 on reports that Government may reduce the price of cement produced by the Company. Belapurs hardened by Rs. 2-8 to Rs. 245-8. Bombay Burmahs (Old) were in good demand and advanced by Rs. 16-4 to Rs. 377-8. B.I.Cs. were dull at Rs. 9-1, as also Indian Coppers at Rs. 2-11¾. National Rayons were well supported to go up from Rs. 138 to Rs. 149-8, before closing at Rs. 143-8 on profit-taking. Phaltan Sugars put on Rs. 2 to Rs. 101-8. The shares have been placed on the forward list of the Stock Exchange. Alcocks were marked up by Rs. 8-12 at Rs. 332-8. Scindias added As. 3¼ to Rs. 15-10¼ and Premier Constructions As. 12 to Rs. 114-12. Shivrajpurs were unchanged at Rs. 72-8. Tata Chemicals were a fraction lower at Rs. 11-3 and Tata Oils at Rs. 32-8. Wimcos were steady at Rs. 200.

Calcutta Stock Exchange

CALCUTTA, 13*th January*

Narrow price movements characterised trading on the Calcutta Stock Exchange during the week under review. The volume of transactions was again limited, as, in the absence of fresh incentives and any development which could remove the present uncertainty, prudent buyers preferred to keep quiet. What would happen in Korea in the near future is difficult to foresee, but, if from the present threats of both the opposing parties conflagration results once again, the view that hostilities would no longer be localised in Korea is held in certain market circles, whose activities always take into consideration a correct appreciation of immediate possibilities. Reliance is placed on renewed Indian attempts for peace, but in the event of a war economic progress in India would be affected. No doubt, the world situation is such as to encourage the speculative elements in the market, but recent experience of operators would indicate that it is better to proceed on realities rather than rely on speculative forces.

If the American military aid to Pakistan becomes a reality and if the extent of the aid is such as to affect Indo-Pakistani relations, anxiety would be felt over trade relations between the two countries. If jute supplies from Pakistan are affected, the raw material position for the jute industry would create some anxiety. Presumably, the operators had this in mind when they did not pay as much attention to jute shares as would have been justified by the news of satisfactory dividend recommendations in respect of the Bird-Heilgers group of jute companies. Already the Pakistani market for Indian manufactured goods is limited by import restrictions, but anxiety in this regard also will continue to be felt until the position regarding military aid to Pakistan is cleared.

But for the above factors, the market would have reacted in a better way to the news of satisfactory output for December for the Indian Iron and Steel Company, the encouraging results relating to cotton textile exports during 1953 enabling India to emerge as the second largest exporter, the prospects of increased steel imports as a result of American assistance and the possibility of an expanded market for Indian coal in Far Eastern countries. Indeed, the outlook for the major industries is good, but market enthusiasm would depend on an improvement of the Korean situation and clearer news from Pakistan.

In the engineering section, Indian Irons opened at Rs. 25-5 and for a time were fractionally better at Rs. 25-7 on expectations of an imminent announcement of an increase in the retention prices of steel, but subsequently gave way to Rs. 25-5. The maintenance of the improvement in production was noted with satisfaction, as in December the output of pig iron was 64,510 tons, steel ingots 43,080 tons and semi-finished and finished steels 41,740 tons, as against 61,240, 51,550 and 32,970 tons, respectively, in November. The expectation is that this improvement would be maintained in the coming months and that the dividend for the current accounting period would not be affected by the recent loss in production. Indian Galvanizings were steady at Rs. 15-10, and Braithwaites were attended at Rs. 13-9. Jessops receded from Rs. 25-7 to Rs. 25, but subsequently made good the loss. Kumardhubis were supported at Rs. 8-2.

Jutes were quiet, Howrahs being transacted at Rs. 23-15 *cum*-div. Fort Glosters gave way from a previous rate of Rs. 372 to Rs. 350. Indias were not better at Rs. 120, and Barnagores lost a point to Rs. 146. On the news regarding increased dividend, Northbrooks realised Rs. 19-10. Anglo-Indias were steady at Rs. 200, while Budge Budges at Rs. 147 accounted for a loss of 10 points.

In the coal section, Bengals were a shade better at Rs. 505, while East Indians declined from Rs. 26-2 to Rs. 25-8. Burrakurs were unaltered at Rs. 8-7 and Equitables at Rs. 30-12 were As. 2 lower. New Beerbhooms, after giving way from Rs. 18-13 to Rs. 17-15, realised Rs. 18-2. Raneegunges were quiet at Rs. 10-14.

A few features were provided in the miscellaneous section. In earlier transactions, Rohtas Industries improved from Rs. 11-4 to Rs. 11-9 but subsequently moved to Rs. 11-6. Orient Papers featured with a rise to Rs. 44-10 from Rs. 43-14. Titaghur Papers changed hands at Rs. 35-9 and India Paper Pulps receded from Rs. 182 to Rs. 178. Rallis India realised Rs. 60-4, Midnapore Zemindaries Rs. 36-8 and India Steamships Rs. 7-1, Martin Burns were traded at Rs. 19-9.

The feature in the tea section was a rise in prices during the last two sessions following the highly satisfactory results in the latest export and internal auctions. New Doors were taken at Rs. 390, and Hasimaras advanced from Rs. 31 to Rs. 31-14. Dhelakhats at Rs. 13-14 were better by As. 12 and Teen Alis firmed to Rs. 26-2. Other steady counters included Birparas, Rajabhats and Choonabhutis at Rs. 96, Rs. 20-8 and Rs. 279, respectively.

* * * *

Madras Stock Exchange

MADRAS, 12*th January*

The Madras Stock Exchange presented a fairly good appearance this week too. The upward trend, which had been in evidence in textiles for some weeks past, persisted, on continued reports of encouraging enquiries for piecegoods from overseas countries. In the planting section, reports of a record rise in the price of tea to 4s. a pound in the U.K., following increased consumption of tea there, created buoyant conditions in trading in tea shares. But coffee scrips came in for only selective enquiry, on sporadic speculative support. Rubbers and miscellaneous scrips were, however, somewhat dull, in the absence of any favourable development. On balance, textile and tea scrips registered good gains, while the rest disclosed a mixed show.

Favourites among textile shares continued to enjoy support. Lakshmis, Rs. 50 paid-ups, shot up from Rs. 82 to Rs. 86 and the Rs. 25 paid-ups from Rs. 41 to Rs. 42. Dhanalakshmis were higher by Rs. 2 at Rs. 202. Venkateshas put on a similar amount to Rs. 92 *cum*-right. Coimbatore Spinnings and Buckinghams rallied Re. 1-8 each to Rs. 37-8 and Rs. 126, respectively. Travancore Rayons gathered As. 8 to Rs. 7-5. Pankajas, however, lost Rs. 3 to Rs. 50 and Bangalore Woollens Rs. 2-8 to Rs. 285. Loyals were lower by As. 2 at Rs. 18-14.

Among plantings, teas provided the highlight, with prices generally recording notable gains over the week. Thus, Hailleyburias and United Nilgiris disclosed a gain of As. 8 each at Rs. 14-8 and Rs. 206-8, respectively. Chembras advanced from Rs. 3-3 to Rs. 3-7 and Chandramalais from Rs. 3-1 to Rs. 3-3. Waterfalls were done higher at Rs. 3-15 as against Rs. 3-12. Emerald Valleys, however, lost an anna to Rs. 4-6.

In the coffee section, Coffee Lands improved from Rs. 7-11 to Rs. 7-15 and Consolidated Coffee from Rs. 15-12 to Rs. 15-14. Nil Neergundis and Shevroys were, however, slightly lower at Rs. 3-8¼ and Re. 1-3, respectively. Kadur Coffee was quiet at Re. 1-8.

Rubbers lacked interest. Vaikundams eased from Rs. 16-2 to Rs. 15-14. Cochin Malabars, Teekoys and Thirumbadis were fractionally lower at Rs. 6-14¼, Rs. 6-11 and Rs. 3-2½, respectively. But Rajagiris gained As. 3 to Rs. 10-9. Kailas was slightly better at Rs. 3-8.

In the miscellaneous section, Cochin State Electrics gained Rs. 2-8 to Rs. 13 and South Arcot Re. 1 to Rs. 95. Mysore Sugar gained As. 8 to Rs. 44 and Mysore Chemicals and Fertilisers As. 4 to Rs. 9-8. Parrys were fractionally higher at Rs. 4-6. But Vanguard Life Insurance lost Re. 1 to Rs. 18. Rallis eased from Rs. 60-12 to Rs. 60. Mysore Tobaccos were lower by As. 4 at Rs. 10-14. Spencers were quiet at Rs. 15 and Indian Aluminium at Rs. 105.

THE BANK OF INDIA, LTD.

THE PROFIT OF THE BANK OF INDIA Limited for the year ended 31st December, 1953, subject to audit, including the sum of Rs. 6,36,553-4-6 brought forward amounts to ... ... Rs. 82,39,778 2 6

	Rs.	a.	p.
Provision for Income Tax and Super Tax	29,00,000	0	0
Interim dividend at the rate of 6 per cent. free of income-tax for the half-year ended 30th June, 1953	15,00,000	0	0
The balance available for distribution is Rs. 38,39,778-2-6			
The Directors propose to pay a final dividend at the rate of 8 per cent. free of income-tax making 14 per cent. for the year ...	20,00,000	0	0

HONGKONG AND SHANGHAI BANKING CORPORATION

The Hongkong and Shanghai Banking Corporation has declared, subject to audit, a final dividend of £3 per share, free of Hong Kong Corporation profits tax, for the year ended 31st December, 1953. The amount written off bank premises is H.K. $4 million and the sum carried forward is approximately H.K. $9,875,000.

NEWS IN BRIEF

THE Central Tractor Organisation will have reclaimed nearly one million acres of land by the middle of 1954.

The Uttar Pradesh Government proposes to implement a three-year plan for bringing 100,000 acres of land under the cultivation of improved varieties of cotton.

Under the "Own Your Telephone" scheme, up to the end of November, 1953, a sum of Rs. 3,82,98,000 was realised and 15,776 telephone connections were supplied.

A joint session of the Houses of Parliament will be meeting on 15th February, 1954. The Railway and the General Budgets will be presented on 17th and 27th February, respectively.

The Industrial Disputes (Amendment) Act, 1953, which provides for payment of compensation to workmen in the event of their lay-off or retrenchment, received the assent of the President on the 11th inst.

The Government of India has lifted the ban on forward trading in *gur*. The question of bringing this commodity within the purview of the Forward Contracts (Regulation) Act, 1952, is under the consideration of the Forward Markets Commission.

During the first year's working of Community Projects (October, 1952—September, 1953), the people's contribution towards the projects amounted to Rs. 1.51 crores, as against a total Government expenditure of Rs. 1.95 crores.

The Indian railways have an annual income of about Rs. 25 lakhs from privately-managed catering establishments, including refreshment rooms and vending stalls. The railways themselves manage 43 refreshment rooms.

A 42-mile gold belt, yielding 45 tolas of the precious metal for every 100 square feet, is reported to have been discovered along the Baitarni River in Orissa. The Indian Bureau of Scientific Research is busy sieving the soil in the Keonjhari hills near Mukandpur to assess the approximate quantum of gold in this area.

The West Bengal Government has decided to explore the industrial possibilities of the Gangetic silt and clay in the foreshore of the Hooghly. A special officer is being appointed for the purpose. Silt and clay that are deposited every year in the river may be profitably used for ceramic industry and for manufacturing bricks. The silt and clay, if properly organised industrially, will have a good market in Japan and some other countries.

An agreement between the Government of India and the Standard-Vacuum Oil Company for the joint exploration for petroleum and production of petroleum, if discovered in commercial quantities in West Bengal, was signed in New Delhi on 24th December, 1953. The agreement provides for a contribution of one quarter of the total expenditure by the Government and the balance by Standard-Vacuum. The aggregate contribution of the Government will not, however, exceed Rs. 2½ crores, unless the Government provides further contributions towards the continued expenditure on the project. Standard-Vacuum has given the assurance that, if commercial production of oil in sufficient quantities were to be established, it would consider the erection and operation of a refinery of a minimum capacity of at least 10,000 barrels per day. The Company will manage the joint operations. The Government and Standard-Vacuum will each nominate an official who will discuss from time to time the programme of the joint operation.

* * * *

From Abroad

The Republic of China has been admitted as a member of the International Civil Aviation Organisation.

Negotiations for a joint oil venture between the Burmese Government and the Burmah Oil Company are expected to conclude by the end of this month.

A trade agreement between Soviet Russia and Burma is expected to be concluded shortly. Under the proposed agreement, Burma is to export to Russia rice in return for coal and other products.

The Government of Southern Rhodesia has permitted limited imports of Japanese cotton and rayon piecegoods during the current half-year. The quantity permitted will be about 15 per cent. of the total imports.

The U.S. population as on 1st January, 1954, is estimated at 161,200,000. This is 2,700,000 more than the estimated population a year before and 10 million more as compared with the last general population census of 1950.

The World Bank is examining Ceylon's request for a loan of Rs. 10 crores (£7.5 million). The loan has been sought for implementing the Aberdeen-Laxapana hydro-electric project which will generate an additional 25,000 kw. for Colombo's electricity system.

The U.S. tobacco industry has formed an industrial research committee to study all phases of the use of tobacco and their possible effects on health. The Committee includes members drawn from the major cigarette manufacturing firms and associations of tobacco growers.

All the contracting parties to the General Agreement on Tariffs and Trade, excepting Australia, Brazil, and Peru, have signed the declaration extending the life of the G.A.T.T. tariff schedule, which expired on 31st December, 1953, to 1st July, 1955.

The aggregate world production of newsprint in 1953 was 10.88 million tons, as compared with 10.59 million tons in the previous year. Consequent on this improvement, the shortage in supplies was to the extent of only 3,000 tons—all in Japan—as against 47,000 tons in 1952.

The total amount of loans sanctioned by the World Bank during 1953 was $256.9 million, the number of loans and the recipient countries being 22 and 13, respectively. These transactions bring the total amount of loans sanctioned by the Bank to $1,780 million, representing 94 loans to 31 countries.

Twenty countries have agreed to extend most-favoured-nation treatment to Japan, pending the latter's accession to the G.A.T.T. The countries which have signed are Austria, Belgium, Denmark, Finland, Germany, India, Italy, the Netherlands, Turkey, the U.S., Chile, Sweden, Luxembourg, Haiti, Norway, Ceylon, Nicaragua, Dominican Republic, Burma and Uruguay.

The Australian Government is considering a proposal to relax the remaining import control on British goods with effect from April next. Accordingly, imports of most types of British goods will be restored to the level existing in 1951, that is before the controls were imposed. Imports of chinaware, textiles and engineering products will benefit considerably.

The third session of the E.C.A.F.E. Inland Transport Committee will be held in Kandy, Ceylon, from the 20th to 25th inst. At this session, the Committee will examine the reports of the Railway and Highway Sub-Committees. It will also review the activities in the field of inland waterways and consider the question relating to mechanisation of accounts in transport undertakings.

The British Government has announced reduction in the purchase tax on a number of articles, which is estimated to cost the Treasury about £2 million net per annum. The taxes on mirrors, goldsmiths' and silversmiths' ware, electrial goods, clocks and watches, garden ornaments, etc., have been reduced from 75 per cent. to 70 per cent. Taxes on fabric lampshades, washing machines, elastic fabrics, and certain tiles, strips and blocks have been lowered from 50 per cent. to 25 per cent.

Deposits of crude oil have been discovered by the West Australian Petroleum Pty. Ltd. (W.A.P.E.T.) in the Exmouth Gulf on the West Coast of Australia about 700 miles north of Perth. This has been announced by the California Texas Corporation which holds 80 per cent. interest in the W.A.P.E.T., the remaining 20 per cent. being held by the Australian firm A.M.P.O.L. Perforation tests at the well were completed recently and drilling for deep testing has now been commenced.

The Nepal Government has withdrawn certain facilities given to the traders in the payment of customs duty for goods imported into Nepal. Traders were hitherto allowed the facility to make payments for customs duty once a year to the Government Treasury, instead of making immediate cash payment. Under the new rules, payment for customs duty will have to be made at the Kathmandu Customs Office and at Gauchar airport, six miles from Kathmandu, immediately at the time of taking away the goods.

The rate at which the population of the world is rising is about 70,000 per day, according to the estimate made by the U.S. Population Reference Bureau. The world's population in 1933 was 2,500 million, which is 25 million more than in the previous year. This is expected to increase to about 7,000 million in the next 100 years. The average population density of the world is 47 persons per square mile. The density in Europe varies from 4 in Iceland to 831 in the Netherlands and that in the Western Hemisphere from 4 in Canada to 652 in Puerto Rico.

The British Iron and Steel Corporation has concluded a deal with the U.S.S.R. for the purchase of pig-iron for shipment over the next six months. The quantity is understood to involve a tonnage in excess of 100,000 tons of basic steel-making iron, low in phosphorus content. Although no actual details of the price paid are disclosed, it is understood that it compares favourably with U.K. domestic prices. These range from £16-12 to £17-19-6 per ton delivered, according to destination. It is believed to be the first post-war deal in pig-iron between the two countries. Official quarters say that the purchase represents a purely commercial transaction.

PERSONAL

MR. Tikaram Paliwal has joined the Rajasthan Cabinet as Minister for Finance, Public Works and Law.

Mr. Ismail Kamal, Egyptian Ambassador in India, has left for Cairo for consultations with the home Government.

Mr. Anand Mohan Sahay, Indian Commissioner in Mauritius, has been concurrently appointed Consul General for India in Madagascar.

Mr. A. N. Ghosh, I.C.S., formerly India's Commissioner in the Andamans, has been appointed Manager of the Government Electronics and Wireless Factory.

Mr. S. Foster, Secretary, Burmah-Shell Oil Storage and Distributing Company of India, London, who is on a tour to inspect the Burmah-Shell Organisation in India arrived in Bombay on Monday last.

Mr. Bindbasini Prasad, a retired Judge of the Allahabad High Court and a member of the Income-tax Commission, has been appointed President of the Bombay Bench of the Labour Appellate Tribunal.

Mr. John Davison Rockefeller, Chairman of the Board of the Rockefeller Foundation, is now on a visit to India to study the conditions in the country, particularly in the fields of agriculture and education.

Mr. B. Rama Rau will continue to be the Governor of the Reserve Bank of India for a further period of one year with effect from 1st July, 1954, when his present term expires.

Nawab Ali Yavar Jung Bahadur, India's Ambassador in Argentina, is to be appointed India's Ambassador to Egypt *vice* Mr. K. M. Panikkar who has been appointed a member of the States Reorganisation Commission.

Sir Jeremy Raisman, a former Finance Member of the Government of India and at present the Chairman of the Central African Federation Fiscal Commission, who arrived in Bombay this week, will be leaving for New Delhi today.

Mr. William T. Turner, who was until recently U.S. Counsellor of Embassy with the personal rank of Minister at Tokyo and has been appointed American Consul-General in the Bombay Consular area, arrived in Bombay from Cairo on Tuesday last.

Mr. Arthur C. Bartlett, Chief Information Officer in India for the U.S. Information Service, has assumed charge as Public Affairs Officer of the U.S.I.S. in Bombay, in place of Mr. Jack Y. Bryan who has been transferred to Bangalore.

Mr. P. V. R. Rao of the Indian Audit and Accounts Services has joined the Central Ministry of Information and Broadcasting as Deputy Secretary on special duty. Mr. Rao will study the problems relating to revenue expenditure and accounts and stores control in respect of the different stations of the All-India Radio and the Films Division.

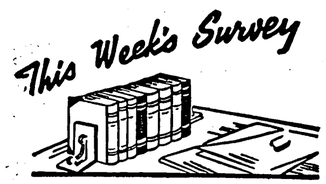
"COMMERCE" 1929

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, 12*th January*

Role of Tea

In one of our leading articles of last week, we were pleased to deliver a brief homily upon the great changes that have taken place, and are still taking place, in almost every walk of life—in trade, in commerce, in the world's finance, in the social habits and customs of the people. But, through lack of space, we made no reference to the important part that tea has played in these mutations. We may remedy the defect upon the present occasion, for we are called upon, in conjunction with Messrs. Brooke Bond and Company's annual report, to review the trend of the tea trade during the year that we have just left behind us. A remarkable and salutary alteration has occurred in the drinking habits of the British people since Peps wrote:—"And afterwards I did send for a cup of tea (a China drink), of which I never did drink before, and went away." Alcoholic drinks were the customary libations in those days, and, in the Georgian period, the trencher prowess of a social "big wig" was estimated according to the one, two or three bottles he was able to imbibe at a single sitting. It was even worse in Scotland, for Dean Ramsay tells us, in his reminiscences, that boys, called "cravat boys," were specially engaged in most big houses on festive occasions whose duty it was to loosen the cravats of the drunken guests as they fell from their chairs, helpless on account of their excessive potions. But, in these enlightened days, neither whisky nor beer nor port nor sherry, can be truthfully described as Britain's leading national beverages, their places having been largely usurped by "the cup that cheers but does not inebriate." The wave of voluntary temperance that has spread over England during the last few years has been appreciably encouraged, at all events, by the tea shops of Slater, Lyons, and the A B C, and it is our pleasurable reflections on this point that imparts an added zest to the task that now confronts us of reviewing the tea trade in 1927-28.



U. S. ECONOMY

PRESIDENT Eisenhower's "State of the Union" message, delivered last week, includes, as usual, a rapid survey of the U.S. economy. In view of the fact that many distracting critics have predicted dire disaster for the country's economy, it is heartening to note the quiet confidence with which he dealt with this subject. He emphasised that the Administration was determined to keep the American economy, when he described as one of the "wonders of the world," strong and to keep it growing. He was confident that the "transition from a war-time to a peace-time economy" could be completed without serious interruption to the country's economic growth. He derived this confidence from the fact that the country has just completed the "most prosperous year in its history," and from the fact that the "damaging effect of inflation on the wages, pensions, salaries and savings" had been brought under control. He would not, however, allow the country to rest on its laurels. Rather, he urged continued economic preparedness which was "fully as important to the nation as military preparedness."

Since the budget for the year ending June, 1955, which is scheduled to be presented on 21st January, 1954, will be the first Republican budget, it will arouse considerable interest. In his message, Mr. Eisenhower chose to give a broad picture of the present budgetary situation and also an outline of the changes. He recalled how the Republican Administration had effected severe reductions in the appropriations requested by the previous Administration. In the current fiscal year, the spending level has been reduced by $7,000 million. Incidentally, the Federal Government, it is stated, has some 183,000 fewer employees now. In the next fiscal year, it is predicted that there will be a further reduction of $5,000 million. Because of this cut in expenditure and despite the tax reductions, already made, and tax adjustments that would soon be proposed, the spending level would "move the new budget closer to a balance." In view of the "tremendous accumulation" of unfinanced obligations incurred by the Government under past appropriations the growth in the public debt, he said, could not be stopped.

Mr. Eisenhower promised that, as additional reductions in expenditure were made, it would be possible to effect further reductions in taxes. He recalled how the Administration had already reduced individual income-taxes and allowed excess profits tax to expire; these reliefs were given effect to from the 1st inst. He also emphasised that the tax system needed revision. It would appear that the groundwork for this revision has already been laid by the Treasury. Perhaps, those who are now engaged in the revision of the fiscal system in India, will derive some benefit from a study of the suggestions for tax reform made by the U.S. Treasury. The U.S. President said that, while corporation income-tax would be kept at the current rate of 52 per cent. for another year and the excise taxes too would be maintained, the Government proposed more liberal tax treatment for dependent children, widows and widowers with dependent children.

Explaining the objectives of the Government's tax policy, Mr. Eisenhower said: "We should now remove the more glaring tax inequities, particularly on small taxpayers; reduce restraints on the growth of small business; and make other changes that will encourage initiative, enterprise and production." These are praiseworthy aims. What will strike many people in this country as particularly laudable about them is the emphasis placed on the removal of "restraints on the growth of small business" which reflects the Administration's anxiety to protect the "small man" in business, to keep alive conditions of free competition, and to prevent the emergence of monopolistic economy so fatal to democracy.

SALES TAX ON INTER-STATE TRADE

The Government of Madras has done well to clarify the position of the dealers outside the State who have commercial transactions with that State. In a Press note, issued this week, the Government has outlined the scheme under which these dealers will be assessed for sales tax and the taxes recovered from them. Since the scheme is likely to be adopted by other States also it deserves wider publicity than it has apparently received.

The scheme has been devised to enable the State to exercise its right to collect sales tax from dealers who choose to sell their goods to that State, a right which is beyond dispute, in the light of the Supreme Court's judgment in *Bombay State* vs. *United Motors (India) Ltd.* It will be recalled that, in this case, the Court held that, in respect of inter-State transactions, only the State where the goods are delivered and consumed would be competent to levy sales tax. The Government of Madras has decided to levy sales tax on such transactions with retrospective effect from 1st April, 1953, the date on which the judgment was delivered.

After this judgment was delivered, the States began to exercise their right to collect tax from the dealers outside their jurisdiction wherever it was clear that they had sold goods to the taxing State. But the exercise of this right meant considerable hardship to the dealers, because not only was the tax demanded with retrospective effect but also several taxing States began to ask the dealers outside their State to produce their account books at the taxing States for assessment. Since the issues were complicated and no uniform procedure could be evolved without prior consultation, the Central Government took the initiative in convening at New Delhi a meeting of the officials of the Finance Departments of States. It would appear that certain interim arrangements were decided upon at this meeting. In pursuance of these decisions, the Madras Government has initiated, with effect from 1st January, 1954, a scheme for the recovery of sales tax. Explaining the scheme, an official press note says:

"All non-resident dealers who become liable to sales tax with reference to the Supreme Court judgment shall submit once in every quarter returns in respect of inter-State transactions pertaining to Madras State. Such returns shall be submitted by post in a form (to be prescribed) and shall be accompanied by a declaration furnished by the purchasing dealer in this State to whom serially numbered and authenticated forms of declaration will be issued in triplicate for the purpose. The returns should be submitted to such authority or authorities as will be specified by this State and who will deal with all non-resident dealers. Such authority or authorities shall assess the transactions of the non-resident dealer and if necessary, before making the assessment, examine the dealer's accounts at the headquarters of the Sales Tax Officer concerned in the State of the dealer's residence. The Sales Tax authorities of the dealer's State will also verify, in the course of their inspection of the dealer's accounts, whether any exports to other States have been made and if so, furnish the relevant information to the State entitled to tax such transactions. All final appeals against the order of assessment and all proceedings involving the exercise of revisional jurisdiction will be heard and dealt with at the normal headquarters of the authority in this State in whom such appellate or revisional powers vest. All the earlier appeals will be heard at the request of the dealer at one or more central places in the State of the dealer's residence. The tax due from non-resident dealers may be paid by crossed cheques, postal orders, or demand drafts and not necessarily at the treasuries in this State."

Although the aforesaid scheme has certain commendable features—for instance, it eliminates the need for the sellers in the sending State to appear before the sales tax authorities of the receiving State, since their accounts will be examined at the "headquarters of the sales tax officer concerned in the State of the dealer's residence"—it is really no great improvement over the present position. This is because the success of the scheme depends upon the submission of evidence of purchase by the purchasing dealers in the receiving State. When the scheme is adopted by all the States, it would mean that a seller from any particular State to the other States will have to obtain returns from the buyers in all those States. This would impose a very heavy burden indeed, considering that the purchasers may not always be keen on sending such returns to the sellers. From this point of view, the suggestion for the adoption of a system of purchase tax by all the States, which has been made by several commercial organisations, seems the only workable scheme for the collection of sales tax on inter-State transactions. This system deserves to be considered both for the sake of its simplicity and the ease with which taxes may be collected.

The success of the scheme will also depend upon the degree of co-operation of the authorities in the States. Be that as it may, it is not clear why other States have not issued similar Press notes to explain the scheme. It is to be hoped that they will lose no time in doing this, since inter-State trade has suffered on account of the uncertainties relating to sales tax on such transactions.

EXPORT OF COTTON TEXTILES

Reviewing the trend of India's export trade in mill-made cloth during 1953 in our *Annual Review Number*, we estimated the aggregate exports at 700 million yards. The preliminary figures relating to exports now available conform to this estimate. Thus, the quantity of cloth passed for shipment from India during the month of December, 1953, for instance, was 77.6 million yards—the highest for the past 17 months—which brings the total for the whole calendar year to 701.3 million yards. This figure compares favourably with the exports of 593.8 million yards in 1952, representing an increase of 16 per cent. But, as compared with the Buxton target of 1,000 million yards and the actual exports of 780 million yards in 1951 and 1,133 million yards in 1950, exports during 1953 are not so impressive. They were, however, not as bad as one had feared, thanks to the reduction in the export duty on coarse and medium cloth in January, 1953, and its final abolition on medium cloth in October, 1953.

The improvement in exports of mill-made cloth during the year under review, as noted above, helped India to occupy the second place among the cotton textile exporting countries, as against the fourth place to which it had been pushed down in the preceding year. India's aggregate exports of all kinds of cotton textiles in 1953 are estimated at 750 million square yards by the Textile Export Association of the United States. During the year, Japan held the pride of place as the world's largest exporter of cotton textiles, the quantity actually exported being 900 million yards. Last year, it may be noted, Japan occupied only the second place with exports amounting to 753 million square yards. The U.S., which enjoyed the distinction of being the largest exporter of cotton textiles in the world with 762 million yards to its credit in 1952, came to occupy the fourth place in 1953 with 600 million square yards. The reduction in textile exports from the U.S. thus was due to intensification of import restrictions in many foreign markets. In addition, three large markets in Latin America, namely, Cuba, Venezuela and Peru, cut their imports, while in the Far East competition from Japan and India resulted in reduced U.S. imports into Indonesia and surrounding markets. The U.K., however, retained its third place with exports amounting to 700 million square yards, despite this figure being 11 million yards less than in 1952.

To revert to India's exports of mill-made cloth during 1953. A feature of this trade was that nearly one-quarter of the year's total exports of medium cloth was passed for shipment in the last two months of the year, that is, in the period closely following the removal of the export duty in October, 1953. The variety-wise break-down of the 1953 figures, as compared with the previous year, are given below:

(In million yards)

	1952	1953
Medium	138.7	273.9
Coarse	168.1	260.7
Fine	264.4	152.5
Superfine	22.6	14.2
Total ...	593.8	701.3

It will be seen from the above figures that exports of medium and coarse varieties have registered a significant rise in 1953, while those of fine and superfine varieties have suffered a fall. The fall is the result of high level of prices, thanks particularly to the import duty of As. 2 per lb. of foreign cotton. With the grant, however, of the drawback of import duty on cotton used in cloth meant for export, recently announced by the Central Government, one can expect an improvement in exports of these varieties in the coming months, although much will depend on the trend of world trade.

TECHNICAL ASSISTANCE

At the forthcoming session of the Economic Commission for Asia and the Far East, which is scheduled to be held on 8th February at Kandy, Ceylon, the subject of technical assistance may be expected to evoke special attention, since the efforts of the Governments of the underdeveloped and undeveloped countries in the E.C.A.F.E. region at raising the living standards of the people have been frequently

hampered by the paucity of technical personnel. Despite the active assistance and encouragement given by the various United Nations bodies, the progress so far made has not been appreciable, thanks to limitation of funds. Thus, the U.N. Technical Assistance (U.N.T.A.A.), in its report on the technical assistance activities in economic development and public administration in the E.C.A.F.E. region, 1953, observes:

"Limitation of funds has prevented progress being made on several important projects and has delayed others—the increasing interest and understanding of the usefulness of a planned and co-ordinated programme of technical assistance shown by Governments of the region during the first years of the programme, and the heavier demands for this assistance addressed to all agencies cannot be matched by the availability of resources to meet them."

The limitation of funds was particularly felt during the year 1953. Owing to the lag in payment of contributions, it became necessary for the Technical Assistance Board to ask all agencies to curtail their programmes. Consequently, the allocation of funds for the E.C.A.F.E. region during 1953 was less than $1,195,000, which is just a trickle as compared with the actual requirements. New projects had, therefore, to be postponed or drastically reduced or set aside altogether. Considering all this, it is, indeed, gratifying to note that the 1954 programme in Asia and the Far East, including that under the Expanded Programme, submitted to the Executive Chairman of the Technical Assistance Board, envisages an increase in the allocation to $1,357,520. Of this, economic development, social welfare and public administration projects account for 78 per cent., 20 per cent. and 2 per cent., respectively.

It will be appropriate to review, in this connection, the technical assistance activities of the U.N.T.A.A. in countries of Asia and the Far East during 1953. According to the U.N.T.A.A.'s report, several Governments took advantage of the services made available through the technical assistance programme in the implementation of long-range development plans. The experts advised the Governments of the respective countries on the pattern, emphasis and time-table best suited to the country's problems and needs. Requests for technical assistance from seven different countries for the development of the power, water and mineral resources were complied with. There was also a large number of requests for assistance in the field of industrial expansion which indicates the desire of the countries to achieve a balanced economy by starting new industries, expanding the size of the existing ones, and improving the methods and organisation of those long established. The other spheres in which the U.N.T.A.A. provided technical assistance included housing and town planning, trade promotion, improvement of transport and communication, mineral resources development, and establishment and maintenance of sound statistical services. In addition to these projects in selected fields, technical assistance was provided by the U.N.T.A.A. in fields like co-operation, fiscal and monetary policy, community organisation, money and banking, and insurance. Besides providing technical assistance, the U.N.T.A.A. awarded a number of fellowships and scholarships for the training of personnel in the economically advanced countries of the West.

It will be evident from this brief survey that the U.N.T.A.A. has given due consideration to the recommendations of the Economic Commission for Asia and the Far East with reference to technical assistance matters, generally, and to projects of regional significance, in particular. If, however, the Administration has not been able fully to meet the requirements of the countries in the Asian and the Far Eastern region, it is due partly to paucity of funds, as already stated, and partly to the competing demands put forward by countries in other areas, as, for example, Europe, Africa and South America. It is precisely this factor which brings to the fore the need for launching, by the countries themselves, a bold programme of securing technical assistance on a mutual and better co-ordinated basis. It is to be hoped that this question will receive careful examination at the hands of E.C.A.F.E. when it meets at Kandy (Ceylon) next month.

(*Concluded from third column*)

contrary in the person of the Education Minister himself? Even though he was compelled to undergo such a tortuous course of training, it did not deter him from loving his country with great ardour. When a giant is driven to use a ten-ton steam-roller to flatten out a fly, one cannot help regarding such a waste of effort and energy as an outcome of passion and prejudice, whatever high-sounding name the authority indulging in such warfare might use to cloak its vendetta.—*All Rights Reserved.*

OFF THE RECORD

(*By "ROVER"*)

A FURIOUS wagging of the tongue has never been taken as a sign of the strength of a case so espoused or of those defending it in this manner. When a man in his extremity falls back on this weapon, it is not only that he uses it so clumsily as often to wound himself, but he makes himself and the cause he sets out to defend so ridiculous that it comes to be irritrievably lost. There is nothing more deadly and fatal for a public or a private issue than ridicule. It is because of this little wisdom, which I have garnered painfully through countless years of toil and sorrow, that I have been praying silently during the last few weeks that someone in the Government of Bombay would persuade Mr. Dinkarrao Desai, Minister for Law and Education, to hold his tongue in the controversy he has raised by banning the admission of children of other communities to what go by the name of Anglo-Indian schools. I have noticed that every time Mr. Desai opens his mouth and lets fall a few gems of wisdom on this question, he maybe unwittingly, puts his feet square into it. The surprising part of it all is that one who, before an unexpected turn of events catapulted him as a Minister in the State Government, was a legal practitioner for long years, should not have learnt his lesson once for all about the value of silence in advocacy on certain occasions. I used to have frequent skirmishes with him in these columns when he was in charge of Civil Supply in the previous Government, but I had felt relieved when Mr. Morarji Desai relegated him to the comparatively peaceful pastures of pedagogy. I believed then that there would be few opportunities for people like me to come into conflict with this otherwise amiable and good-hearted man and Minister, except occasionally over his patented process of carrying on a lucrative and monopolistic business in skimmed milk powder.

But just as there are people who feel lonely if they are out of a scrap or a dog-fight for long, there are ministers who feel their authority slipping away from between their fingers, if they cannot raise a storm and make themselves a centre of acrid controversy. Something in them seems almost to drive them to do or say something to draw on themselves the displeasure, if not the wrath, of a large number of people. They appear to labour under a subconscious belief that authority is not worth having, unless its exercise enables them to make life unpleasant for some of their fellow men over whom they are placed to rule. Unfortunately for the State of Bombay, Mr. Dinkarrao Desai does not happen to be the only specimen of this category of politicians in the present Government. Having had a long respite in a comparatively more comfortable billet, it is not surprising that this Minister should now be spoiling for a good fight. He has started this by hurling a heavy brick in the quiet and peaceful backwaters of Anglo-Indian schools in the State.

Though I have come by long and pleasant association to love the English language, I am no champion of the Anglo-Indian schools. I cannot forget that, in the past some of these were hot-beds of a singular type of snobbery, which some of us found rather annoying in those days. But times have changed and these institutions have become unexceptionably national in their outlook, maintaining at the same time a high degree of tuition and discipline, which, unfortunately, have tended to disappear gradually from other institutions. In any case, Mr. Desai and his Government are grievously in the wrong in holding that the present agitation against the official ukase prohibiting the use of English as the medium of education for non-Christian children has been launched by this class of schools in the State, as Mr. Desai tried to convey at Nadiad early this week.

If the discontent were primarily confined to this community or this category of schools, it would have died down no sooner than it was made vocal. In its strong, emotional partisanship for a favourite fad, the Government has failed to realise that a large number of thinking people outside this community and an influential section of the Press have combined to lend their support to this agitation. It is this force of enlightened public opinion which has fanned the fire of this controversy and but for this not unexpected backing, the voice of this microscopic section of the public, however right its outcry, would have remained merely a cry in the wilderness.

It is not as if those who oppose this step of the Bombay Government are anti-Hindi or ranged against the development of any of the regional languages. Many of us have long been disturbed by the unseemly crusade against the English language from various directions. In the first place, we had our quarrel only against the overlordship exercised by the British over us in our own country. That quarrel has been settled in a manner which is a lesson for the whole world. Today we are not only extremely friendly politically and in business and industry with Britain, but we have voluntarily chosen to remain within the Commonwealth. Even in those days of bitter struggle, we had no quarrel with the English language. Besides, this language now no longer belongs to the Britishers. It has become an international instrument of harmony and accord amongst various peoples of the world. Indian nationalism has never been so fanatically circumscribed as to exclude the concept of world citizenship. Hatred of people or things foreign had never been its distinguishing mark. That is the reason why Mr. Jawaharlal Nehru is today the most respected and loved citizen of this world, besides being the Prime Minister of our country.

The business community, too, though not directly interested in the world of learning or letters, has, because of its need for international contacts and advance in the knowledge of technology within the country, been silently worried over the narrow-minded attempts of some of the professional patriots to jettison English from its present place in the curriculum of schools. All this pent-up discontent against the many experiments of doubtful value in the sphere of education amongst the more enlightened sections of society has erupted all of a sudden in support of the stand taken by the Anglo-Indian schools against this move of the Government. The public, especially the thinking section of it, has a horror of any form of highhandedness and bigotry. They see in this policy of the Government both these dangerous elements and have naturally reacted strongly to it. When Mr. Dinkarrao Desai, in his long-winded rigmarole of a so-called explanation, forgot himself so far as to say that "the craze for the study of English must be completely eliminated from our midst," he gave away his case irredeemably.

A desire for acquiring useful knowledge could never be described as a craze. It is an insult to call an effort on the part of anybody to learn a language better a craze, as if it was something irrational and objectionable. It bespeaks not only abysmal ignorance but dark fanaticism on the part of anybody who derides such a desire by calling it a craze. Prejudice might have some play in framing political and economic policies of a Government. An element of this is, perhaps, inevitable in all such policies, especially in our country, where such prejudices of some of these people in high places have usurped the place of righteous principles. But there is no room for prejudice in the educational programme of any country, which does not aim at totalitarianism of one kind or another. And how deep-rooted this prejudice against this unoffending and highly cultivated language is amongst ministerial circles can be gauged from the fact that the number of children of non-English-speaking parents, which can be squeezed in the handful of Anglo-Indian schools using English as the medium of instruction, can be so small in our population of school-going age as to be almost like a drop in the ocean.

In the vast mass of Indian citizens with only a moderate income and a pitiably poor standard of living, there could only be a few families, which could afford to send their children to these small number of expensive schools. These few cannot affect the general character of national education or of its product. Why should a veritable war be waged against this tiny section of the people, to the extent of disregarding clear directions in the Constitution, prohibiting schools from exercising any discrimination in admissions on the ground of religion or language? Such light-hearted or irresponsible disregard of the terms of the Constitution would be justified only if these few more Indian children, who might receive their education through the medium of the English language, were likely to precipitate an emergency or a crisis in the country now or later.

How do these children constitute a threat to the country in face of the evidence to the

GOVERNMENT PREPARING TO MEET RECESSION IN AMERICA

LOAN FROM I.M.F. TO BE REPAID

(From A Special Correspondent)

NEW DELHI, 12th January

THE Commerce and Industry Ministry has already begun to take note of the fact that it might be called upon rather suddenly to devise such measures as may become necessary to minimise the adverse effects of any possible trade recession in the U.S. this year on the general economy of this country. For the present, it is still favouring the continuance of bilateral trade treaties for fostering the external trade and, as a result, it has been extending or renewing the existing agreements, with such modifications as are necessary in the changing economic conditions of the country. The Government is now holding talks for bilateral trade pacts with Italy, Norway and Sweden. It will soon conduct negotiations with West Germany also. Generally, the Ministry has already begun to note that India's trade trend with the European countries, excluding the U.K., has been tending to become considerably adverse against India. This adverse character has become particularly pronounced during the post-war period. Just before the outbreak of World War II, the European countries accounted for for about 16 per cent. of India's exports. Since the Partition, India's exports in respect of certain commodities have become either negligible or have completely disappeared. Raw jute, short-staple cotton, coffee, oilseeds, particularly groundnut, raw hides and skins are instances to the above point. It is on account of the incapacity of India to export these commodities on any appreciable scale that its adverse trade balance with West Germany, France, Belgium, Switzerland, etc., has become sizable in recent years.

DELHI LETTER

During 1952-53, India's adverse trade balance with the Continental countries (excluding the U.K.) amounted to Rs. 26 crores, total exports from and imports into India being Rs. 62 and Rs. 88 crores, respectively. Now that Government has been pursuing a positive industrial policy, it is likely that imports of capital goods might go up appreciably, particularly from West Germany. With a view to increasing its exports, West Germany, has now begun to encourage exports of capital, technical know-how, etc., to underdeveloped countries. It has now agreed to participate in the construction of a steel project in India and it is likely to adopt a similar policy by investing a portion of the capital in the establishment of a heavy electrical industry also. All these will mean imports of more capital goods from that country. The Government of India is, therefore, anxious to reduce the trade gap with some of these European countries by exporting more goods to them. It is from this angle that Government has begun to study in what directions India could step up its exports to these countries. In case the price level were to remain stable in the coming months, Government might consider favourably the export of vegetable oils, especially groundnut oil. Measures are being taken up to increase the exports of tea, tobacco, etc., to these countries. Coir products, cotton waste, coarse cloth, raw wool, art and artware, tanned hides and skins, etc., are some other commodities which could be exported more than at present.

Besides, Government will be calling fresh reports from our trade representatives on the question of trade promotion. With the emergence of a buyers' market most European countries, including the U.K., have begun to take many constructive measures to expand their export trade. In the U.K., the problems such as approach to export markets, commercial intelligence, market research overseas, standardisation and diversification of products, delivery conditions etc., are being studied afresh. The export promotion section in the Commerce and Industry Ministry has also been thinking on the above lines for some time past, although it has not yet translated these ideas into actual practice. What is required is that more attention should be paid by Government and the industry, with a view to increasing both production and quality of goods which could find an export market.

The question of finding expert personnel to be in charge of administration of the various Government Departments is now engaging the attention of the Government of India. The Government will be shortly setting up a public administration institute for purposes of pooling and exchanging information on this subject and Mr. Paul Appleby has already come to the Capital for giving proper advice to Government in this direction. Besides, this American expert will be touring various States for the purpose of advising them regarding administrative reform within their jurisdiction. At the same time, in view of the expanding Governmental activity in the economic sphere, Government is expected to take up shortly the constitution of an economic service, for manning various commercial concerns under Government control.

It is now certain that the Finance Minister, Mr. Deshmukh, will be making a definite announcement in his forthcoming budget speech regarding the buying back of "our rupees from the International Monetary Fund" to the extent of $100 million which the Government of India had borrowed from the International Monetary Fund some time in 1948, in order to overcome a temporary shortage of dollar currency. This decision to buy back is due to the increasing interest charges that Government has to incur in case this liability is continued. During the discussions at the Commonwealth Finance Ministers' Conference at Sydney, the Finance Minister might have taken the opportunity to apprise his compeer, the U.K. Chancellor of the Exchequer, about the Government of India's intention in this respect. In view of the fact that the sterling area's dollar and gold reserves have been considerably better, it is expected that Mr. Deshmukh might not find it difficult to implement his proposal. Another item which might cost some exchange to India is the possible settlement with Pakistan regarding sterling assets. According to one source from Pakistan, the Government of India might have to pay some Rs. 100 crores in respect of India notes returned by that country. Taking into account the instalments of public debt due from Pakistan as also the payments that have accrued from that country for military stores, outstanding bills paid to contractors, etc., India may have to pay nearly Rs. 75 to Rs. 80 crores both to the I.M.F. and Pakistan. However, the Government might consider the feasibility of settling the accounts with Pakistan by adjusting its payments against the outstanding rupee debt due from the latter. In view of the present political tension between the two countries, following the proposed U.S. military pact, the prospect of any immediate settlement of these economic problems with Pakistan appears to be remote.

STERLING AREA'S BANK BALANCE

NO ROOM FOR COMPLACENCY

(From Our Own Correspondent)

LONDON, 9th January

AFTER all, 1953 did finish with the Bank of England holding for the sterling area's account the healthy sum of £900 million in gold and dollars, an improvement of no less than £240 million on the account as it stood just a year ago at £660 million. This is no mean achievement for the year and in no way spoilt by the apparent gold loss in December of £15 million, since this was the result of the repayment of the Canadian and American post-war lines of credit of the annual charge of £65 million. Without this special payment, which must, of course, be regarded as spread over the year as a whole, December would have shown the gratifying gold gain of £50 million. It is also true that, of this sum, something like £18 million was due to special gold sales by the U.S.S.R., following upon sales in November of some £5 million, but these sales do no more than reflect a Russian requirement of sterling and are a legitimate part of the sterling area's gold and dollar income.

LONDON LETTER

The year has shown an interesting consistency in the growth of the gold balances, starting strongly, weakening in the traditionally poor third quarter, and then strengthening towards the close when the sterling area begins to make up the income lost in the earlier months. Nevertheless, in this general pattern, which is detailed quarter by quarter below, three major features emerge: first, that the second quarter was much poorer than might have been expected, reflecting the deterioration then taking place in Britain's export progress; secondly, that American defence aid accounted for nearly one-half of the total net gain over the year; thirdly, that the sterling area's balance with the European Payments Union has, in the second half-year, deteriorated to an alarming extent. Without an unhoped for favourable balance with the dollar countries, this weakness vis-a-vis Europe might have prevented the overall gain in reserves which has taken place.

Gain in Gold and Dollar Reserves

(In million dollars)

Source	Quarters 1st	2nd	3rd	4th	Total
E.P.U.	95	42	—19	—5	113
Other non-sterling countries	119	98	55	161	433
U.S. Defence Aid ..	106	61	83	57	307
Total ..	320	201	119	213	853
Less—Payments on U.S. and Canadian loans				.. ..	—181
				Net gain ..	672

One must always remember that, without American Defence Aid, more British resources might of necessity be diverted to exports to make up the lost overseas income, so that it is somewhat artificial merely to deduct that aid from the figures and show the balance as all that the sterling area has been earning from its own efforts. Nevertheless, if we do this exercise and also allow for paying the debt to America and Canada, there is a net gold gain on trade account of $365 million only or £130 million. Since the early part of the year, none of this gain has been coming from Western Europe, which has rather tended to be a source of gold loss, while the remaining sources of gold gain are those which are the most vulnerable to any American recession which may develop.

It is these elements in the situation which has prompted the words in the first communique from the Finance Ministers' Sydney Conference that "this improvement afforded no ground for complacency" and the phrase in Mr. Butler's statement that an aim of the Conference was to improve trade with Europe—by which he did not mean the too ready flow of European exports to the Commonwealth countries. There is no doubt also that this weakness of the sterling area's position with Europe is a conclusive argument against the still suggested "dash for freedom," that is, convertibility. In present circumstances, Europe and not the dollar area would be the fatal flaw in a convertible sterling.

AMERICAN LETTER

AMERICANS DO NOT EXPECT RECESSION

EMPLOYERS ANXIOUS TO AVOID RETRENCHMENT

(From Our Own Correspondent)

NEW YORK, 1st January

THE business and financial community in the U.S. applauds President Eisenhower's recent announcement that he is to hold conferences with Congressional leaders of both major parties with respect to developing a legislative programme. The importance of this is obvious, since whatever will be written in the statute books by Congress in the first six months of 1954 will have a decisive influence on foreign and domestic policy including business conditions.

While pessimism over the future has subsided somewhat, some indices of production, employment have been edging off from their previous peak. In many instances, this is salutary and, with lower taxes, it should not make any appreciable difference in overall industrial earnings.

The stock markets seem to have made such an interpretation of the future. They were amazingly firm. Irregularities in equity prices in the last few weeks of the year were primarily the result of tax selling which always occurs at that time of the year. In fact, in the opinion of most people, the general atmosphere in the beginning of 1954 could not be more auspicious in the prevailing circumstances. The war in Korea has come to an end, even though there is still active fighting in Indo-China. A Foreign Ministers' Conference seems now definitely in the making regardless of the fact that it has been postponed once. Holiday business in the United States was good, in some lines better than last year, in others a little less, in line with the greater competition which is developing. All this has produced an optimistic state of mind in America, where psychology is such an important factor, influencing all walks of life and all decisions with an immediacy unknown in other countries. One reason for it is not only rapid communications but the extreme news consciousness of the general public, even in the smallest hamlets.

Tax Deductions

Widely publicised, the tax deductions in effect as from 1st January have had another beneficial effect on public sentiment. Some 60 million tax payers will pay about 10 per cent. less in 1954 than they did in preceding years and the excess profits tax for corporations came to an end, too. However, Federal social security premiums will go up by ½ per cent. to 2 per cent. of annual salaries up to $3,000, so that, in the lowest pay brackets, this boost will offset lower personal income levies. The latter group is quite small, relatively speaking.

Business and financial management, which is fully conscious of the social and political implications a real recession might produce, is adopting a progressive course. Two examples may be cited in this connection. The American Bankers Association has circularised its 14,000 member-banks with a brochure on instalment lending. The literature points out, in effect, that nothing could accelerate a downturn faster than a severe curtailment of credit since credit supports manufacturing. Also, such companies as Standard Oil Company (New Jersey) and others have gone on record that they will maintain employment. In instances where volume falls, established policy now is more or less to cut a few hours off the work week, but keep everybody on the pay-roll just the same.

Such a farsighted procedure was virtually unknown in the depression years of the 1930's, when ruthless firing of help was the order of the day during the period of rugged individualism. It is a blessing for the United States and all those nations depending on her that a great feeling of social responsibility is now in evidence. It has been created through hardships, through legislation and through literature, stage plays and motion pictures. One result has been the universal demand for security to be provided either by the Government or corporations.

Both groups have taken the cue and pension plans in the last ten years have grown to about $17,000 million and they are growing at the rate of $2,000 million a year. That growth is likely to continue. Unions which, during the period of rising prices, had a logical reason for getting cash wage increases, now concentrate on asking for pension and other fringe benefits. This is acceptable to industry, too, owing to large corporate surpluses and the fact that pension funds can be built up out of income and carry with them appreciable tax benefits.

Most of the plans are drawn in such a way that a worker who leaves his employment for any reason whatever usually receives what he has paid into such a fund, in case of participating funds. It has become a great stabilising influence in many communities. In other words, a cushion has been built beyond personal savings and possible real estate holdings which assure the payment of rents, grocery and doctor bills to an extent that was unknown 20 years ago.

These are some of the reasons why any recession due to a cut-back in Government spending or supply and demand conditions is likely to be mild and so mild that a real effect on other countries is doubtful.

Savings

Savings continue to grow at a rapid pace, not quite so fast as earlier in 1953, but in sufficient volume to be impressive even in the farm States where income has shrunk owing to lower prices for meat and produce. Lower income in some fields also have been tempered by a stability in living costs. Indeed, in the last two months of the year, the cost of living index actually declined fractionally for the first time in many months.

The overall picture, therefore, is thoroughly reassuring to the average American and should be so in the rest of the world so far as America is concerned.

Some anxiety does exist, however, over the future of Asia. Vice-President Nixon's findings have been widely publicised. Fears of Communism gradually penetrating that part of the world are rampant and there seems to be uncertainty here just precisely where India and Prime Minister Nehru stand in this respect. Aid for Pakistan is another volatile issue as a result of these ramifications. Future Washington decisions, though, most likely will be based on the Communist rather than any other factor, it seems to me.—*All Rights Reserved.*

PAKISTAN NOTES

PAKISTAN'S ECONOMY IN 1953

CLOTH PRICES TO BE REDUCED

THE year 1953 will go down in the history of Pakistan as one of economic stresses and strains. The country, for instance, experienced a serious food situation, thanks to failure of the wheat crop, although the food shortage was relieved, to some extent, by the American wheat aid. The balance of payments position was none too happy, as a result of the shrinkage in the overseas demand for cotton and jute, the two staple export items of Pakistan. There was a marked fall in the foreign exchange earnings, which, during the year July, 1952 to June, 1953, amounted to only Rs. 134 crores, as against Rs. 219 crores in the previous year. This position is bound to persist for some more time, as witness the statement of the Pakistan Commerce Minister himself that, "in spite of constant efforts to expand exports which will be intensified, no material change in the country's ability to earn foreign exchange in the coming year can yet be foreseen."

Following the marked fall in earnings from exports, and with a view to arresting the adverse balance of trade, the Government of Pakistan adopted a "tightening-the-belt" policy. Thus, the Open General Licence cancelled in September, 1952 continued to remain suspended. No import licences were granted for several consumer goods in the first half of 1953. The restricted import policy resulted in scarcity of several consumer goods, particularly textiles, drugs and medicines. This, coupled with the food shortage, sent prices to dizzy heights.

In a desperate bid to check the price spiral, the Government of Pakistan imposed controls on prices of essential goods in June, 1953. This does not seem to have brought about the desired effect. To quote one report: "Price control has so far failed to check the sky-rocketing prices of consumer goods or to ensure proper supply and distribution of these goods to the people. As usual, the prices of almost all consumer goods have risen since the introduction of price control in Pakistan." To quote another report: "This (price control) was done in a half-hearted manner and no machinery for distribution was set up. The effect was disastrous; controls mainly succeeded in throwing the normal channels of trade completely out of gear." Viewed against this background, the liberalisation of imports, announced by the Pakistan Government for the current half-year, is indeed a step in the right direction.

Cloth Prices

An important decision, announced by the cotton mill industry in Pakistan recently, relates to the voluntary reduction in the price of cotton textiles to a level that existed in the early months of 1953. The decision is a sequel to the Government of Pakistan's directive to the mill-owners urging the latter to effect a downward revision in the prices of their products.

It will be recalled that cloth prices in Pakistan have registered a phenomenal rise in recent months. The extent of the rise over the calendar year 1953 according to one estimate, is as much as 200 per cent. Such marked increase in prices has been due to deterioration in the supply position. True, the indigenous production of cloth has improved of late, the monthly average rate of output during 1953 being 15.73 million yards, as against 14.51 million yards in 1952. On the basis of this figure, the aggregate output for the whole of 1953 may be estimated at 188.76 million yards, which compares favourably with 174.16 million yards in 1952 and 127.67 million yards in 1951. This, however, falls considerably short of the actual requirements of about 756 million yards on the basis of the per capita consumption of 10 yards. The gap in the indigenous production and requirements used to be covered in past years by imports, as witness the fact that, during the years 1950-51 and 1951-52, Pakistan imported cotton piecegoods worth Rs. 31.09 crores and Rs. 34.96 crores, respectively. But, during 1952-53, it imported only Rs. 8.9 crores worth of piecegoods. The decline in the imports of cloth in 1953 was due to the Pakistan Government's restrictive import policy; the Government not only curtailed the quantity of imports but also enhanced the import duty on textiles. Consequent on the drastic reduction in imports, the domestic supply position of cloth deteriorated and prices shot up.

Following this development and with a view to bringing down the cloth prices, the Govern-

(Concluded from next column)

ment of Pakistan recently decided to import, on its own account, cotton textiles worth Rs. 4 crores from Japan and other countries. The decision does not seem to have had any marked effect on the cloth position and prices continued to rule high. The Government accordingly urged the millowners of Pakistan to lower prices which has since been conceded.

Besides voluntarily reducing the prices of their products, the millowners of Pakistan have announced a scheme for the equitable distribution of cloth to consumers at reasonable prices. Under this scheme, 40 per cent. of the total production of cloth will be distributed through mills' own depots and 10 per cent. through fair price shops. The remaining 50 per cent. will be made available for distribution through normal trade channels.

Cement Industry

It is understood that the Pakistan Industrial Development Corporation has decided to purchase, at a cost of Rs. 5 crores, the two cement factories of the Associated Cement Companies of India situated at Wah in Punjab and Rohri in Sind. The aggregate annual installed capacity of the two units is placed at 300,000 tons. Negotiations are reported to be going on between the Corporation and the A.C.C. for the formation of a new company in Pakistan to take over these factories. The Corporation proposes to implement a Rs. 2-crore scheme for rehabilitating and expanding the two units.

CONVERTIBILITY OF STERLING STILL COMMONWEALTH'S GOAL

ITS ACHIEVEMENT, HOWEVER, DISTANT

THE proceedings of the Commonwealth Conference which has been in session in Sydney since the 6th inst. and which has not concluded at the time of writing, fully reflect "friendship, fellowship and a real sense of common destiny" among the countries of the Commonwealth. The consensus of opinion among those who spoke on the opening day favoured the view that the Sterling Area's economic position had improved considerably but there was no room for any complacency. The representatives gave their unstinted co-operation for enabling the Area to fight its own economic battles, although they saw that they could do much better, provided the U.S. adjusted its economic policies in such a way as to help increase its purchases from the outside world, including the Sterling Area and the Commonwealth countries.

The Conference would appear to have once again laid emphasis on keeping convertibility of sterling as its ultimate goal. In this context, it was generally agreed that, in the existing circumstances, little could be done at the moment to speed up the achievement of this objective in the absence of U.S. co-operation. As the key lay with the U.S., any big step towards convertibility must await the findings of the Randall Commission appointed by President Eisenhower and the Congress last year to report on U.S. foreign economic policy as also on any action to increase the world supply of dollars either by the reduction of American tariffs or by the provision of a guarantee fund to assist the pound sterling during the initial stages of free convertibility. The importance attached to this Commission's report evidently suggests that the present Conference may not take any major decision.

After the Commission submits its report to President Eisenhower the Commonwealth countries will have to meet again to review the position resulting from the recommendations. The crucial fact is the delay in the submission of this report. It is still not certain as to the date by which the U.S. President would receive it. The latest reports from Washington suggest that the Randall Commission had two sessions this week and considered a modified draft, providing for (1) a gradual and limited liberalisation of the foreign economic policy of the U.S., (2) Government aid to sections of American economy which might be seriously affected by such liberalisation, and (3) measures for encouraging American private investments abroad. These provisions suggest that the Committee might not be in favour of setting up a guarantee fund to assist sterling. All these are only newspaper reports on which much reliance cannot be placed. The real position at the moment is that one does not know yet to what extent the U.S. is prepared to underwrite convertibility of sterling, and if so on what conditions. Thus, the uncertainty about convertibility of sterling and other major currencies still remains.

U.S. Economic Policy

Evidence that the U.S. Administration is anxious to assist the Sterling Area is, however, not wanting. For its willingness has found expression in many statements made in the past by spokesmen of the Government. The latest of such expressions is found in the State of the Union message by President Eisenhower on the 7th inst. He said:

"In the practical application of our foreign policy, we enter the field of foreign assistance and trade. Military assistance must be continued. Technical assistance must be maintained. Economic assistance can be reduced. However, our economic programmes in Korea and in a few other critical places of the world are especially important, and I shall ask Congress to continue them in the next fiscal year. The forthcoming Budget Message will propose maintenance of the Presidential power of transferability of all assistance funds and will ask authority to merge these funds with the regular defence funds. It will also propose that the Secretary of Defence have primary responsibility for the administration of foreign military assistance in accordance with the policy guidance of the Secretary of State. The fact that we can now reduce our foreign economic assistance in many areas is gratifying evidence that its objectives are being achieved. By continuing to surpass her pre-war levels of economic activity, Western Europe has gained self-reliance. Thus, our relationship enters a new phase which can bring results beneficial to our taxpayers and our allies alike, if still another step is taken. This step is the creation of a healthier and freer system of trade and payments within the free world—a system in which our allies can earn their own way and our own economy can continue to flourish. The free world can no longer afford the kinds of arbitrary restraints on trade that have continued ever since the war. On this problem I shall submit to the Congress detailed recommendations, after our Joint Commission on Foreign Economic Policy has made its report."

The U.S. President's emphasis on the "creation of a healthier and freer system of trade and payments within the free world, a system under which our allies can earn their own way and our economy can continue to flourish," seems to have heartened the Finance Ministers at Sydney. Mr. R. A. Butler, U.K. Chancellor of the Exchequer, for instance, stated that he was profoundly heartened by these remarks. Mr. Robert Menzies, Australian Prime Minister, welcomed them as an expression of a policy of "live and let live."

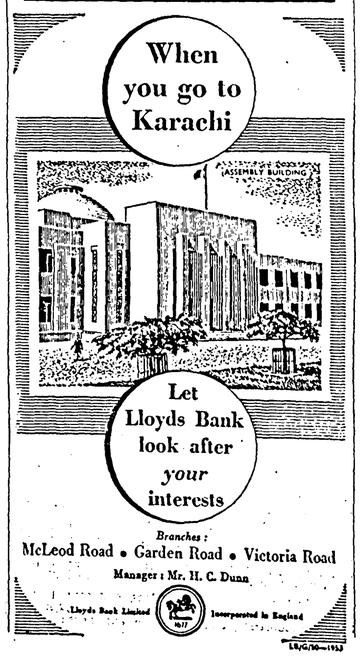
With uncertainty still hanging over the U.S. foreign economic policy, the Commonwealth Conference could not but devote more attention to the problem of stimulating the Commonwealth economic development. A prerequisite for such development is the avoidance of inflation in the Sterling Area countries. Many countries in the area can report good results in this respect. In the U.K., a higher and, now flexible, Bank rate has done good work in squeezing excessive purchasing power out of the economy. The cost of living has been virtually stabilised. The freeing of commodity markets has imparted more realism to the structure of prices. A high level of exports, too, has been maintained. Among other sterling countries, Australia has got over its 1951 "wool spree." The New Zealand economy is sound. India has overcome the inflation that caused much damage a couple of years ago, although prices have latterly shown a tendency to rise. The same, however, cannot be said of Pakistan, Burma, Ceylon and Malaya where the fall in prices of rubber, tin, cotton, etc., has created balance of payments difficulties and, therefore, the position of these countries deserves to be looked into with sympathy and understanding by the Conference.

The overriding necessity now is to avoid a backslide into the inflationary conditions which existed two years ago in most countries of the Commonwealth and which are still noticeable albeit in a slightly low degree in Pakistan, Ceylon and Malaya. The difficult nature of the problem will be evident from the fact that this objective has to be reconciled with the aspirations of countries like India which require speedy economic development. Mr. Butler, in fact, pointed out the problems that faced some of the British colonies, namely, (a) to develop and strengthen their internal resources to the highest possible level, (b) to develop still higher domestic production in order to reduce dependence on outsiders and to seek more production for export, (c) to press on with the development of new production sources, and (d) to raise the level of trade within the Sterling Area and also that with countries of Europe, the U.S., and Canada to the highest point to which it could be lifted. The solution to these problems lay in providing adequate capital. The U.S. last year spent about $2,500 million, but it is doubtful whether the aid will be maintained at this level this year. Britain invested £100 million in the Commonwealth last year, representing money raised in London but not necessarily spent. But this year the indications are that it might have to slash this amount by 50 per cent. This is attributed to the need for keeping up, at a high level, Britain's own productive capacity. This will necessitate, it is stated, increased capital expenditure for modernising British manufacturing techniques this year. This also means less money for the Commonwealth. This, in its turn, requires spending money on only such desirable projects which yield concrete results. The activities of the Commonwealth Development Corporation will, therefore, be confined to select the right kind of projects and allot funds for their implementation. British circles seem to have emphasised at the Conference that there will certainly be no lack of financial resources for implementing the right projects. From all this, it looks as though the underdeveloped countries of the Commonwealth cannot hope to get even that much of capital from Britain as was anticipated a year before and that only those projects which are considered absolutely important will receive assistance.

Resources of Commonwealth

Mr. Butler, however, emphasised on the opening day of the Conference that the development of Commonwealth resources should be a prior commitment for Britain. These resources are immense. The Commonwealth produces 50 per cent. or more of the world output of jute, manganese, nickel, rubber, tin, chrome, cocoa, and tea. But the Commonwealth is a net importer of most food products such as meat, wheat, dairy products, rice, maize, barley, and fruit. The Commonwealth is also a net importer of cotton, iron ore, zinc, aluminium, sulphur, forestry products and sugar. Irrigation and the development of communications would redress the balance of some food deficiencies. Advances made under the Colombo Plan to some countries would also work to that end.

Considerable attention seems to have been bestowed on trade problems also at the Conference. From the reported trend of discussions, it would appear that any alteration in the Commonwealth attitude towards the General Agreement of Tariffs and Trade is most unlikely. But some differences of opinion appear to have occurred on this question. Australia is anxious to scrap large sections of the G.A.T.T. in favour of increased emphasis on Imperial Preference. New Zealand which sells the bulk of its exports to the U.K. is supporting the Australian view. But Canada and India feel that continued Imperial Preferences are inconsistent with the goal of free convertibility. In view of the divergence of opinion, the *status quo* regarding Imperial Preference is expected to be maintained.



I.M.F.'S NEW POLICY FOR CURRENCY CONVERTIBILITY

The International Monetary Fund has adopted a new policy for encouraging convertibility of sterling and other currencies. This policy will make it easier, it is reported, for member-nations seeking free exchange of their own currencies with others to draw on the $3,500 million fund in convertible assets. Until now, a member-country could withdraw a portion of its gold and dollar contribution to the I.M.F. Any further credit granted was subject to review after a period of up to six months. Now the new policy eliminates this requirement of six-monthly review. It is understood countries seeking convertibility can now ask the Fund to set aside a part of its assets for a period of two years or longer. Arrangements for a period longer than six months will, however, be subject to negotiations between the I.M.F. and the member-countries concerned.

The Fund has also placed no limit on the amount members can borrow as a reserve to meet obligations arising from a decision to make their currency convertible.

The new policy marks, it is stated, a significant change in the U.S. policy. For, in 1952, when a similar change was proposed, the U.S. representative opposed it, and was not willing to extend the stand-by credit beyond six months. Now that the six-month provision has been relaxed to cover a period up to two years or even more, with the American vote favouring the new policy, the change is attributed to a shift in the American attitude towards convertibility. In this context, it is said that the U.S. position has changed, because the Eisenhower Administration has realistically decided to recognise that no country will undertake convertibility, if the I.M.F. is unwilling to give assurances of assistance for more than six months in future. The Administration now believes, it is stated, that the I.M.F. exists for the purpose of promoting convertibility.

It is reported that the above changes were made especially with a view to facilitating Britain making its currency convertible. Although the Fund is not committed to utilise all or even the major portion of its assets for securing the convertibility of the currency of a single country, some quarters believe that it might advance $2,000 million to Britain. British officials, however seem to feel that Britain cannot undertake the risk of convertibility without (1) a much greater reserve or stabilisation fund—possibly as much as $5,000 million, and (2) assurances that U.S. trade policies will be revised to give Britain long-term increased dollar earnings.

BANK PROFITS

If the preliminary results of working of banks in India during 1953 published so far are any indication, the past year can be said to have been a more unprofitable one for banks than 1952. It must, however, be said that there may be some exceptions to this general trend, as has been the case with one of the four banks which have so far announced their results. The four banks are: The Imperial Bank of India, the Bank of India Ltd., the Union Bank of India Ltd., and the Devkaran Nanjee Banking Co., Ltd. Of these three, the Imperial, the Bank of India and the Union have suffered a fall in their profits, the decline in the case of the Imperial being more pronounced than that of the other two. The Dena Bank has, however, reported a modest rise in its profit.

Imperial Bank of India

As usual, the Imperial Bank of India has now released its profit for the half-year ended 31st December, 1953, which, at Rs. 63.72 lakhs, shows a modest rise from that of Rs. 63.27 lakhs for the corresponding half-year of 1952. But with the addition of Rs. 63.10 lakhs being the profit for the first half of 1953, the total profit for the past year, at Rs. 126.82 lakhs, reveals a decline of Rs. 6.52 lakhs from that for 1952. This is in distinct contrast to the increase of Rs. 3.27 lakhs in the profit for 1952 over that for 1951. The undistributed surplus of the previous year brought in also shows a decline from Rs. 43.17 lakhs to Rs. 42.07 lakhs, so that the sum available for distribution has gone down from Rs. 176.51 lakhs to Rs. 168.89 lakhs. The following comparative table shows how the profits have been appropriated:

	1953 Rs.	1952 Rs.
Net profit	1,26,82,200	1,33,34,600
Brought forward ..	42,07,400	43,17,000
Total available Rs.	1,68,89,600	1,76,51,600
Transfer to pension funds.	5,64,600	5,44,200
Bonus to staff	40,00,000	39,00,000
Dividend	90,00,000 (16%)	90,00,000 (16%)
Carried forward	33,25,000	42,07,400
Rs.	1,68,89,600	1,76,51,600

Bank of India

The profit of the Bank of India Ltd. for the year ended 31st December, 1953, subject to audit, amounts to Rs. 76,03,225 which, as compared with that for 1952 (Rs. 77,50,937), shows a decline of Rs. 1,47,712. This decline, however, is smaller than that of Rs. 2,04,111 noted a year ago. The provision for taxation has been reduced from Rs. 31,00,000 to Rs. 29,00,000. The dividend is maintained at 14 per cent. tax-free (made up, as usual, of an interim distribution of 6 per cent. paid for the half-year ended 30th June, 1953, and a final one (8 per cent. now proposed) absorbing Rs. 35,00,000 leaving to be carried forward, subject to payment of bonus to the staff, Rs. 19,39,778, the corresponding figure of the previous year being Rs. 17,11,553.

Dena Bank

The profit of the Devkaran Nanjee Banking Co., Ltd., for the year 1953 amounts, subject to audit, to Rs. 6,90,200, representing an increase of Rs. 75,231 over that for 1952, in refreshing contrast to the decline of Rs. 41,628 noted a year ago. With the sum of Rs. 1,47,808 brought in from 1952, as against Rs. 1,38,594 the distributable sum is higher by Rs. 84,445 at Rs. 8,38,008. The transfer to the reserve fund has been maintained at Rs. 1,50,000, investment reserve at Rs. 50,000 and bank premises depreciation account at Rs. 25,000, while the provision for furniture depreciation account has been raised from Rs. 55,755 to Rs. 57,646 and that for taxation from Rs. 1,50,000 to Rs. 2,00,000. The dividend has been stepped up from Re. 1-12 to Rs. 2 per share (or 3½ per cent. to 4 per cent.) free of tax, utilising Rs. 2,00,000, as against Rs. 1,75,000. A sum of Rs. 1,55,362 has been proposed to be carried forward which compares with Rs. 1,47,808 brought in.

Union Bank

The Union Bank of India Ltd. has earned, during 1953, a profit of Rs. 6,79,090, which falls short of that for 1952 by Rs. 39,308. It is however, gratifying to find that this shortfall is negligible as compared with that of Rs. 1,74,068 noted a year ago. With the sum of Rs. 2,06,135 (as against Rs. 2,09,737) brought in, there is available for distribution Rs. 8,85,225, as compared with Rs. 9,28,136. The allocation to the reserve fund has been reduced from Rs. 1,75,000 to Rs. 1,50,000 and that for contingency account from Rs. 1,00,000 to Rs. 50,000. Premises account has been provided with Rs. 50,000, while, in the previous year, no allocation had been made. Provision for taxation has been maintained at Rs. 1,00,000, while that for paying bonus to staff has been raised from Rs. 72,000 to Rs. 80,000. Dividend is being repeated at 6¼ per cent. per annum which requires, as in the previous year, Rs. 2,75,000. The sum left to be carried over is Rs. 1,80,225, as compared with Rs. 2,06,135 brought in.

FINANCE FOR PRIVATE SECTOR

BOMBAY SHAREHOLDERS' ASSOCIATION'S SUGGESTIONS TO SHROFF COMMITTEE

THE Committee appointed by the Reserve Bank of India in October last to examine how increased finance, particularly bank finance, could be made available to the private sector through sources other than those which are under the consideration of the Taxation Enquiry Commission, is currently in session in Bombay under the chairmanship of Mr. A. D. Shroff. It is collecting evidence and is receiving several memoranda from various public bodies and associations. Among these memoranda, the note which has been submitted by the Bombay Shareholders' Association deserves special notice. In its note, which covers very wide ground, the Association has rightly emphasised that "favourable investment climate is a prerequisite for raising capital for the private sector."

The Association draws attention to the wide and varied field which the term "private sector" covers and says that it will be useful to be more specific about that term. Private industry can be broadly classified into three groups, namely, short-, medium- and large-scale. The finances required by these three sectors also fall into three classifications, namely, short-, medium- and long-term. The different sections of the private sector require finance, both short- and medium-, as well as long-term, and the Association submits that their difficulties should be looked into separately.

Short-term Finance

Generally speaking, the Association points out, the large units of the industry and trade are fairly adequately financed, so far as their working capital needs are concerned, by the existing banking system. In cities, working capital even for medium units is reasonably available. The problem is, therefore, one of finding adequate finances for the "small enterprise" in cities and large towns. At present, part of this is met by private deposits and indigenous bankers. The Association, therefore, feels that the *hundi* finance should be expanded, so that the small man's needs can be met adequately. One of the main reasons attributed by the Association for developing his source of finance is that *hundi* business is organised and conducted on fairly sound lines. The Association suggests that bank finance can be made available to small enterprise by encouraging and facilitating rediscounting of *hundies* through the Reserve Bank. At present, the Reserve Bank's bill market scheme excludes from its purview banks with deposits of under Rs. 5 crores and *hundies* under Rs. 1 lakh. The Reserve Bank can do much to encourage the *hundi* trade by offering to rediscount all *hundies* discounted by commercial banks, in lump sums with limits fixed for each bank. In this way, the Association says, the Reserve Bank can help integrate the indigenous banker into the country's organised banking structure.

On the analogy of short-term agricultural finance, which is provided through rediscount of agricultural bills of State Co-operative banks by the Reserve Bank at 2 per cent. below the Bank rate, the Association affirms that there is a cogent case for assisting small men in trade and industry with short-term finance. At present, the Reserve Bank limits rediscount facilities to trade bills maturing in 90 days, while, in the case of agricultural bills, the legal limit extends up to a maturity of 15 months and the limit in force is for 12 months. The Association suggests that, with adequate safeguards, the 90 days' limit for usance bill can be extended to 180 days. As for long-established shopkeepers who are unable to get bank finance for maintaining stocks, the Association points out that the field of commercial banks should be extended in respect of small loans, particularly because the branch offices of these banks can attend to local needs and also keep a vigil on such local firms. Such facilities can best be served, according to the Association, by the Reserve Bank, if it extends larger rediscounting facility in respect of small loans under a scheme agreed upon with commercial banks. In this connection, the Association draws attention to the "Blanket Participation Agreement" which prevails in the U.S. Under this Agreement, the banks which become parties to the Agreement obtain automatically from the Government 75 per cent. of loans advanced to small business enterprises. A limit is, however, placed on loans to any single borrower. Under such a scheme, the responsibility for, as well as the administration of, loans would rest with banks themselves, though a large part of the credit will be provided by the Reserve Bank which would not be burdened with any details. A similar scheme, with suitable modifications, according to the Association, could be adopted in India.

Taking again the analogy of agricultural loans, the Bombay Shareholders' Association refers to the recent amendment of the Reserve Bank of India Act, under which the Reserve Bank is permitted to grant medium-term agricultural loans for an amount not exceeding Rs. 5 crores, with a period of maturity up to five years. The Association sees no reason why similar extension of credit should not be made available to trade and industry. It notes, however, that a new avenue for medium-term finance to this sector has opened up, with the setting up of the State Finance Corporations, though such loans are limited to Rs. 10 lakhs.

In the matter of finding long-term capital, the Association finds that all the three classes of units of the industries—small-, medium- and large-scale—are in the same boat. All of them are handicapped by lack of available long-term capital, the main reasons being low level of income and the consequent lack of savings. Until recently, long-term finance was available only through the open market, but, in recent years, Government is supplementing such capital either by direct assistance or through specialised institutions. So far as small- and medium-scale industries are concerned, the finance available to them under the State Aid to Industries Acts is "very insignificant." As regards large-scale industries, the long-term capital available through the Industrial Finance Corporation and State assistance has largely been in the form of loan capital. What private industry needs, the Association's memorandum points out, is more venture capital or risk capital. In this direction, the Association feels that the Industrial Finance Corporation has a more important role to play than it does now. Thus, it says:

"Far little attention has so far been paid to devising ways and means by which the supply of new equity capital could be increased. For instance, though the Industrial Finance Corporation of India has been in existence for over six years, it has not extended its activities to underwriting new equity capital, even when such activity forms part of that Corporation. In order to develpp the market for equity capital, the Industrial Finance Corporation should consider sympathetially any proposals of underwriting new share capital. Formation of new industries and new companies would receive great impetus, if the Corporation actively underwrites ordinary share capital of such companies. The reference in the Corporation's annual reports that conditions are not yet favourable for underwriting is unacceptable, first, because the capital market must now be regarded as normal and, secondly, the Corporation's function is to encourage new enterprise and, therefore, it should underwrite even under adverse conditions, because that is the *raison d'etre* of its existence. In later years, the Corporation could liquidate its holdings in such share capital by placing the shares in the market, as and when market conditions are favourable."

Although the provision of long-term capital by commercial banks falls outside their field of activity, the Association is of the opinion that the view which regards such banking as totally unsound needs to be reconsidered. It, however, admits that, at the present stage of Indian banking, conditions are not favourable for any wholesale adoption of mixed banking. But, at the same time, it feels that "relationship of banks to industry must be reassessed with a view to accelerating industrial development." It says:

Relaxation Needed

"We would, therefore, suggest that, in order to enable banks to play some part in providing finance to industry, conditions may be so relaxed that banks are permitted to subscribe to selected private capital issues approved by the Government. For instance, in respect of all capital issues of Rs. 1 crore and over of new equity, as well as debenture capital, while granting permission, the Government may issue special sanction allowing banks, insurance companies, investment trusts and other institutions to subscribe to such capital, if they so desire.

"In respect of smaller capital issues under Rs. 1 crore, the capital market can well meet such demand independently without any specific Government support. But, where new issues are for Rs. 1 crore and over, without support from banking and other institutions, subscription to capital is not easy. The Government could allow investments by banks in such approved issues after full scrutiny and banks investing in such approved securities should be protected by recognising such investments as eligible assets on which the Reserve Bank could advance with adequate margin, not normally, but if and when circumstances make it necessary for banks to borrow against such investments. The commercial banks may also be permitted to advance to the public against such approved issues with suitable margin. Insurance companies should also be permitted to take up such approved securities by relaxing the provisions of the Insurance Act in regard to equity capital. At present, while granting sanction, the Controller of Capital Issues clearly mentions that the grant of sanction implies no responsibility on the Government regarding the soundness or profitability of the scheme concerned. We would suggest that an additional stipulation may be made by the Government recommending subscription to the particular issue by banks, insurance companies, investment trusts and other institutions, when it desires early development of the particular scheme. We realise that this would imply a full consideration on the part of Government about the prospects of such enterprise and its profitability, apart from its general importance in the national economy."

Alongside the encouragement given to new enterprises, there must also be expansion of existing enterprises. This, according to the Association, is possible by enabling them to make adequate profits and by requiring them to plough back a sizable part of such profit. It is noteworthy that the Association emphasises the consideration that, where the Government determines or regulates the pricing policy of industrial products, a "more liberal" attitude towards the concerned industries than what obtains at present is desirable in order to promote rapid development by the use of the "owned resources" of these units.

FACTS ABOUT COTTON MILL INDUSTRY

REDUCTION IN PRODUCTION COSTS, MAIN PROBLEM OF THE DAY

ALTHOUGH the origin of the cotton mill industry in India dates back to 1818, when the first cotton mill was set up in Bengal, it was not until February, 1854, that the industry's foundations were really laid, for it was only then that the first cotton mill in the island of Bombay was set up by one Mr. Cawasjee Davar. Next month will thus mark the completion of one century of useful existence by the Indian cotton mill industry. There are, however, some who contend that Mr. Davar established this mill in 1851 and not in 1854 and that the first centenary was actually over in 1951. Be that as it may, the progress of the industry during the last hundred years has been so remarkable that it certainly constitutes one of the most romantic chapters in the economic history of India. Nevertheless, the general public are so inadequately informed about the industry's past, and its impressive record of service to the country, and more especially, about the status which it occupies among the world's textile industries, that the publication, *Facts About the Cotton Mill Industry of India* brought out by the Millowners' Association, Bombay, deserves to be widely welcomed.

The Indian cotton mill industry ranks today as the single largest industry in the country. That the industry touches the economic life of the community at many points and holds the position of the greatest importance in the national economy will be evident from the following account of the latest position as given in the Association's brochure:

Capital invested	Rs. 104 crores
Total labour force employed	7,43,000

The cotton mills of Bombay City alone engage about 208,000 workers whose basic wage and dearness allowance amounted to Rs. 27.13 crores in 1952. The total disbursements, including bonus, employers' contribution to the workers' provident fund and health insurance, leave with wages and paid festival holidays, amounted to Rs. 33.12 crores.

The industry utilises practically the entire cotton crop of India, except about 200,000 bales of short-staple cotton which is exported, and, in addition, imports about one million bales of foreign cotton at an estimated cost of Rs. 100 crores.

It keeps millions of handloom weavers in occupation by supplying them nearly all the yarn they need.

It consumes large quantities of fuel, electricity, dyes and chemicals, mill stores, and sizing and packing materials valued at about Rs. 38 crores per annum.

The Government derives substantial revenues from the industry, which, on an average, contributed more than Rs. 10 crores per annum to the national exchequer in the period 1949-52 by way of income-tax and super-tax. It is estimated that, during the same period, the average annual contribution by the cotton mills of Bombay City was over Rs. 3 crores. In addition, the Government collects Rs. 20 crores by way of excise duty on mill cloth, of which a sum of Rs. 6 crores will be spent on the development of the handloom and *khadi* industry.

Besides these taxes and levies, the industry pays State and municipal taxes, which, in the case of the Bombay City cotton mills, amount to more than Rs. 62 lakhs a year, on an average.

Production and Exports

The total number of spindles installed in India is at present 11.42 million, while that of looms is 204,000; of these spindles and looms, 10.10 million and 187,000 are actually operating. The table below gives the trend of production and exports of yarn and cloth in the past twelve years:

(*Yarn in million lbs., cloth in million yards*)

	Production		Exports	
	Yarn	Cloth	Yarn	Cloth
1942	1,529	4,025	61	1,061
1943	1,684	4,749	23	568
1944	1,643	4,850	22	497
1945	1,643	4,712	15	466
1946	1,397	4,025	9	379
1947	1,319	3,810	10	269
1948	1,456	4,423	6	344
1949	1,330	3,805	38	509
1950	1,166	3,645	84	1,133
1951	1,295	4,188	27	780
1952	1,447	4,593	21	586
1953*	1,489	5,000	9	701

* Preliminary.

The cotton mill industry has been adversely affected by the Partition. Since a large part of the area producing cotton went over to Pakistan, India has been importing considerable quantities of cotton from abroad. On an average India has had to import annually one million bales of foreign cotton at a heavy cost, not only to make good the shortfall in domestic output but also to enable the industry to manufacture finer varieties of yarn and cloth. In view of this, the Association rightly emphasises the imperative need for achieving self-sufficiency in cotton. Thus, the Association says:

"It is of paramount importance that India should become self-supporting in her cotton requirements, not only to stop the heavy drain upon her resources, but also to liberate the cotton textile industry from dependence on capricious foreign markets. The agricultural section of the Five-year Plan envisages the production of 4.229 million bales of cotton in 1955-56. This target is by no means over-ambitious, since, with the completion of the great river valley projects, better irrigation facilities will become available to many of the cotton-growing areas in the country."

Considering that the industry is the target of unjustified criticism from certain quarters, according to which the industry has been charging inordinately high prices for cloth with a view to making large profits, the Association has done well in making a special examination of the cost structure. The figures cited by the Association reveal that the present high costs of manufacture are due to the all-round rise in the prices of cotton, coal, furnace oil and mill stores, and in the wage bill. The index of raw cotton prices, for instance, has gone up to 571 (Base: 1939=100). The indices of costs (with the same base) under furnace oil, wages, mill stores and wages are also higher at 533, 408, 400 and 341, respectively.

Taxes and Imposts

The high cost of manufacture in the cotton mill industry is also due to the many taxes and imposts, which have been levied by the Central and State Governments, as will be seen from the following figures:

(*In lakhs of rupees*)

Tax on production:	
(i) Cotton: Import duty	5,42.00
Sales tax (Bombay City mills only)	43.00
(ii) Coal: Increase in railway freight ...	1,80.00
(iii) Electricity duty (Bombay City mills only)	38.00
(iv) Import duty on furnace oil (Bombay City mills only)	31.50
(v) State and municipal taxes (Bombay City mills only)	62.37
(vi) Mill stores: Sales tax (Bombay City mills only)	20.00
Tax on consumption:	
(vii) Sales tax	11,00.00
(viii) Excise duty	20,00.00
Total ...	40,16.87

The above do not include import duty on mill stores.

The effect of these imposts on production costs is examined with reference to the cotton mill industry of Bombay City:

(*In lakhs of rupees*)

Cotton (import duty and sales tax) ...	2,29.00
Electricity duty	38.00
Import duty on furnace oil	32.00
Sales tax on mill stores	20.00
State and municipal taxes	62.00
Total ...	3,81.00

These figures do not include import duty on mill stores, for which no precise data are available.

DALMIA REFRACTORIES

Manufactured in moderate, high and super heat for all types of stationary and rotary furnaces; supplied according to your needs and specifications.

QUICK DELIVERIES.

DALMIA CEMENT (BHARAT) LTD.
DALMIAPURAM—(Trichy.)

On approved list of suppliers to Indian Stores Department, Governments, Railways and Municipalities.

It will thus be seen that raw materials, wages, fuel and stores have all increased three to five times the pre-war prices. Taxes on production and consumption alone account for Rs. 40 crores—a very low estimate indeed, as most of the items enumerated above relate to Bombay City cotton mills only.

How are the earnings of the industry spent? To this question the Association provides a very instructive reply. According to it, out of every rupee representing the income of a cotton mill company, raw cotton alone accounts for a little over As. 8, while wages and salaries account for about As. 4. Manufacturing expenses, including payment for stores, power and fuel and establishment charges, leave a balance of only As. 1-3, out of which the company has to provide for such varied items as depreciation, taxes, reserves and dividends. The figures below illustrate, in terms of percentages, how each rupee of gross income is being expended:

Raw cotton	52.01
Wages	24.36
Manufacturing charges	14.36
Taxes	2.57
Depreciation	2.22
Dividends	2.19
Reserves	1.17
Agents' commission	0.92
Total ...	100.00

It will be evident from the foregoing figures that factors beyond the control of the industry are responsible for the increase in the cost of cloth, not the managing agents' commission or the dividends to shareholders, which barely account for 0.92 per cent. and 2.19 per cent., respectively. The only way by which the industry can reduce its production costs is through modernisation of its equipment, much of which is in urgent need of replacement. According to the Planning Commission, there are 150 uneconomic units in the industry which must be given financial and other assistance in order to make them viable. On a conservative estimate, cotton mills in Bombay City alone need more than Rs. 100 crores to carry out their rehabilitation programme. The funds at the disposal of the mills, however, are insufficient, thanks to factors such as (1) inadequate depreciation allowances granted by the Government, (2) absence of inflow of new capital into the industry, and (3) defective machinery import policy of the Government in its anxiety to protect the indigenous machinery manufacturers.

Rehabilitation

Referring to these factors, the Association observes:

"Rehabilitation is thus not a luxury but a pressing necessity. The basic idea behind it is to reduce production costs, to improve the quality of mill manufactures and thus to stimulate higher consumption. The manner in which most of the leading textile manufacturing countries have set about this task should serve as an object lesson to us in this country. In Japan, more than 65 per cent. of the cotton mill equipment is new. Moreover, a large proportion of the looms installed in that country during the post-war period is automatic. As a result of this reform, it has become possible for the Japanese manufacturers to reduce production costs and to acquire the strongest possible competitive ability in foreign markets. Again, in the American textile mill industry as a whole, the average yearly expenditure since 1947 for new plant and equipment is estimated at more than 500 million dollars. Probably 40 per cent. of this enormous sum of money is spent by cotton mills alone, chiefly for rehabilitation rather than for additional plant. In other words, the cotton mill industry in America spends more than Rs. 95 crores annually for the sole purpose of rehabilitation! It is significant that, despite the fact that America leads the rest of the world in industrial progress, there does not appear to be any prohibition in that country on machinery imports.

"Instances of such enlightened industrial policy can be multiplied. France and Italy, themselves important machinery manufacturing countries of long standing, impose no ban on the import of textile equipment of a special nature. In Britain, another industrially advanced country, the Government is being pressed for the resumption of imports of machinery, duty-free, which cannot be purchased in that country. It is pointed out that such duty-free imports would help the industry 'to keep its equipment up-to-date and keep machinery makers in England on the alert.' The need for such a far-sighted import policy in India cannot be over-emphasised."

Rationalisation

In the present context of the growing tendency towards automatisation of machinery all over the world, the question of rationalising the methods of production in India assumes special significance. As against 4 to 6 ordinary looms handled by one operative in Britain, 32 to 78 automatic looms in the U.S., and a minimum work-load of 48 automatic looms in Japan, the Indian worker handles, on an average, not more than 2 ordinary looms. Similarly, the maximum number of ring frame spindles

PROFITS OF U.K. TEXTILE MILLS IN 1953

MANY DETAILS ABOUT COTTON FUTURES TRADING STILL TO BE SETTLED

(*From Our Special Correspondent*)

MANCHESTER, *5th January*

THE "delayed-action" effect of the 1952 slump in Lancashire's mills did not have its inevitable bearing on the results announced by public companies in the trade until last year. Consequently, the figures now put forward for 1953 must again be read in conjunction with the usual comments about the time-lag which must ensue in such matters.

MANCHESTER LETTER

The year just passed has seen a revival which at one time seemed unlikely to mature as quickly as it did, and unless there is a sharp change in conditions the figures showing profits and dividends at the end of this year will indicate a healthier state of affairs. Meanwhile, looking back to 1953, a sharp contraction in earnings, though not in dividends, must be recorded.

According to an analysis of trading results of cotton spinning and manufacturing firms, the average profit of 79 spinning mills during 1953 was £27,546 per company compared with an average of £55,154 for 83 companies in 1952 and £55.541 for 80 concerns in 1951. The average dividend paid by 82 spinning mills in 1953 was 20.14 per cent., against 21.51 per cent. for 87 companies in 1952.

The average profit earned by 21 concerns which combine spinning and weaving was £74,047 per company last year compared with £166,931 in 1952, and the average dividend paid was 17.06 per cent., against 19.03 per cent. For the whole of the 103 firms the average dividend was 19.52 per cent. last year, compared with 20.78 per cent. in 1952.

All these companies now have credit balances aggregating £13,335,410, an average of £129,470. In 1952, 104 firms had credit balances amounting to £11,651,320, an average of £112,032.

It is significant that the surplus carried forward has increased in every section, indicating the strength of the trade as a whole. In many cases, it has been possible to bring into the accounts quite considerable sums which had been set aside for tax provisions which are no longer necessary. This is a direct result of the administrative changes made early in the year.

Combine's Earnings Halved

Twelve months ago the results of the leading cotton spinning and weaving combines and their subsidiaries were said to have mirrored the fall in trade more effectively than some of the individual firms. The current figures show an almost identical trend to the single unit mills, as total earnings of the 12 main groups declined from £6,225,920 in 1952 to £3,170,163. The average profit made by these firms was £264,180 last year, against £518,826. Their average dividend was 11.94 per cent., against 12.44 per cent., and total credit balances amount to £6,012,496 against £5,453,375 12 months ago.

In the early part of the depression there was evidence that the weaving section was suffering more severely than the spinning branch. This was borne out in the financial results recorded a year ago. In the past 12 months the profits announced by manufacturing firms did not fall to the same extent as in spinning. An analysis of 28 weaving concerns shows total profits last year of £1,394,989, against £2,445,044 in 1952. This is an average of £49,821 per company, compared with £87,323.

Dividends paid by these manufacturing firms averaged 21.21 per cent. in 1953, against 26.47 per cent. in the previous year. Credit balances now total £3,334,533, against £2,585,445, an average of £119,090 per company, compared with £92,337 in the previous year.

During 1953, share bonus issues and capital repayments amounting to £1,396,216 were made by cotton companies. Repayments of £409,985 were announced by three spinning firms and £61,534 was returned to shareholders by one weaving concern.

Six spinning companies issued bonus shares aggregating £216,197 and three spinning and weaving firms capitalised £303,500 in this way. Bonus shares amounting to £405,000 were also distributed by three weaving companies. In addition, forthcoming bonus issues have been officially forecast by two of the leading mill groups, amounting to £2,269,851.

Reopening Date

It has now been officially decided that the Liverpool futures market will reopen on Tuesday, 18th May, provided the necessary legislation is passed in the meantime. The date has been fixed to coincide with the International Cotton Federation's Jubilee Congress at Buxton, and will enable representatives of foreign countries interested in the cotton industry to attend the ceremony.

In little more than four months, therefore, a lot remains to be done. The negotiations between the spinning trade and raw cotton merchants have reached a stage where the basic American contract on which trading is to take place initially has now been drawn up. Numerous details have still to be settled and the arrangements for establishing a clearing association are well in hand.

Exports Keeping Pace

With the publication of the November export returns, it is clear that total shipments of cotton cloth from Britain for the year 1953 will be very similar to those recorded in the previous 12 months. After a slow start the gap has gradually narrowed until at the end of November the figures were 648,269,000 square yards against 650,195,000 square yards in the same part of 1952.

In November, however, there was an improvement in the value of all cotton goods shipped overseas to £12,707,751, the highest figure since April, 1952. The aggregate total for the 11 months, however, at £121,700,732 was more than £15,000,000 below the corresponding figure a year previously.

The major part of this decline was accounted for by the drop in earnings from cloth exports, which at £80,272,200 were £13,000,000 down on the year. The average price obtained for cotton cloth was 29.72d. per square yard in the first 11 months of 1953 compared with 34.05d. per yard throughout 1952.

The main consumers of Lancashire-made cotton cloth to the end of November were (in square yards, with 1952 comparisons): British West Africa 132,425,000 (155,351,000); Australia 85,293,000 (70,081,000); South Africa 78,781,000 (53,597,700); British East Africa 28,266,000 (19,405,000); New Zealand 25,594,000 (29,192,000) and Malaya 24,377,000 (28,155,000).

Higher yarn shipments recorded in October were fairly well maintained in the following month. Exports amounted to 4,314,300 lbs., which brought the aggregate for the year to 38,363,800 lbs., valued at £15,550,418 against 32,418,000 lbs. worth £16,281,580. The average price per lb. of yarn sold abroad was 97.28d., against 119.25d. throughout 1952.

Chief buyers of cotton yarn to the end of November were (with 1952 comparisons): Australia 5,379,600 lbs. (2,655,200 lbs.); Irish Republic 4,320,500 lbs. (2,876,400 lbs.); Canada 3,774,200 lbs. (1,871,200 lbs.) and Western Germany 2,482,400 lbs. (1,059,200 lbs.).

Increased Purchases

After the severe curtailment of imports of cotton goods in the early part of the year there are signs that more foreign cloth is now reaching this country. In the past few months the quantities arriving have shown an upward trend and in November were the highest since the previous April.

They included only a bare 384,000 square yards of grey cloth from Japan, whereas the supplies from India amounted to more than 5,000,000 yards. This was nearly as much as had arrived from India in the previous 10 months, bringing the total of Indian fabric received during the year to 11,083,000 square yards. Japan in the 11 months supplied 37,973,000 square yards out of the total of 68,031,000 square yards, which compared with 142,028,000 square yards in the same period of 1952. The value of these goods was substantially reduced from over £24,000,000 to £4,673,368.

Imports of finished cloth also showed a slight rise during November to nearly 2,500,000 square yards. The total for the 11 months, however, was some 13,000,000 yards lower than in 1952 at 20,292,000 square yards, valued at over £4,500,000. Chief suppliers were Belgium, Germany and the Netherlands.

The same trend can be observed in the arrivals of cotton yarn, although the total for the 11 months was substantially lower than the previous year, being below 3,000,000 lbs., against over 7,000,000 lbs. in 1952 and more than 30,000,000 lbs. in 1951. The cost of these yarn imports was £656,800 against nearly £2,000,000 in the previous year and £10,000,000 in 1951.—*All Rights Reserved.*

SOURCES OF ERROR IN OFFICIAL COTTON CROP FORECASTS

A FEW SUGGESTIONS FOR REFORM

FEW aspects of the work of the Central Government are less inspiring than its forecasts of crop outturn. Many of these estimates are wide of the mark. They are generally well below the actual output. This applies particularly to cotton. Experience has shown that the trade estimates, which are almost always higher than the official forecasts, are much nearer the actual outturn, as determined by the statistics relating to ginning and pressing returns, exports and imports. How widely the estimates of the Government and the trade differ from each other will be evident from a reference to the official and non-official forecasts for cotton for the 1952-53 season. The official forecast placed the crop at 30.5 lakh bales of (400 lbs. each), while the non-official estimates ranged from 33.3 to 38.2 lakh bales. It should, therefore, be clear that, if official forecasts ought to be of any value they should be very much nearer the actual crop than now. In this connection, it is interesting to note that Mr. P. D. Gadkari, Deputy Secretary, Indian Central Cotton Committee, has reviewed, in the course of an article entitled "Improvement of Official Forecasts of Cotton Crop in India" in the Committee's journal, *The Indian Cotton Growing Review*, the sources of error in the official forecasts and also indicated the broad lines of reform that will improve the accuracy of these forecasts.

The official forecasts on cotton for each season are released in five stages at varying intervals of time, beginning from 15th August. The first forecasts, issued on 15th August, refers to acreage only and deals generally with the condition of the crop at the end of July or August. The second forecast, which is issued on 15th October, also refers to acreage only and relates generally to sowings made upto 1st October. The third forecast, which is made on 1st December, refers to acreage and production and deals with both early and late varieties of cotton and to conditions upto the beginning of December. The fourth forecast, issued on 1st February, also refers to acreage and production and deals with both early and late crop of the season and is based on fuller and more complete data as the harvest is in progress or nearly completed by that time in many States. The date of issue of the fifth and final forecast, which used to be 15th April, has now been shifted to 10th May, with effect from the forecast for the 1952-53 season. This change has been effected so as to utilise the results of the crop-cutting experiments on cotton conducted in the Bombay State. The final forecast also refers to acreage and production. It includes the final estimates of the crop in the tracts where the late variety is chiefly grown. The crop position of the early crop is also reviewed since the issue of the fourth forecast. There is, however, no strict adherence to these dates, there being considerable delay in the issue of the successive forecasts.

Trade Estimates

Apart from the absence of prompt and regular announcements of estimates, the chief defect of these estimates is their inaccuracy. Referring to this feature of these forecasts, Mr. Gadkari says: "The annual post-mortem examination of the official estimates of the Indian cotton production with the actual crop (as determined from the data pertaining to ginning, pressing, mill consumption, exports, etc.) conducted by the Indian Central Cotton Committee since 1934-35 indicated that the official forecasts are invariably underestimates." The estimates of cotton output, framed by some of the leading cotton trading firms, give, on the other hand, a more accurate picture of the actual crop. It is, therefore, necessary to investigate why these estimates are able to maintain a high degree of accuracy. In this connection, Mr. Gadkari says:

"The general high degree of accuracy noticed in the estimates of one or two prominent trade agencies is claimed to be due to the following features adopted by them:

"(a) The wide network of sub-agencies maintained by the firms is manned by experienced and seasoned staff who are familiar with every aspect of the crop, viz., soil, normal weather conditions, varieties grown, their peculiarities and normal yield of the area under their jurisdiction, having been posted at the same place for a number of years; (b) the sub-agencies' reports are considered very authentic, as they are based on firsthand information gathered during the crop inspection tours undertaken by their staff from the cultivators, merchants, ginning and pressing factory owners, Government agricultural assistants, etc. The personal visits for crop inspection work are considered very necessary, especially when the crop reaches flowering and fruiting stage, as the weather conditions obtaining during this period have a big say in determining the final yield prospects; (c) the central head office, in addition to following the weather reports of the sub-agencies week by week, maintains elaborate data regarding acreage, crop arrivals, weather reports of the previous years. All this information is pooled carefully by making checks and counter-checks at different stages of crop development through verification of the actual arrivals and weekly ginning and pressing figures."

It is to the absence of these features, such as the utilisation of trained staff and adoption of an elaborate system of checks and counter-checks, that the relative inaccuracy of the official forecasts must be attributed. It would appear that, until recently, the official estimate of annual production of cotton in all States were prepared on the basis of (*a*) area under cotton, (*b*) standard normal yields and (*c*) condition factor. In Madhya Pradesh and Bombay, this method was changed some years ago. The final estimates of the crop in these States are now prepared on the basis of the area under cotton and yield per acre as determined by crop cutting experiments conducted by official agencies. This change has not improved the accuracy of the estimates in respect of cotton in these States. This is due either to the complete figures of acreage not being available at the time of final forecast or to inaccurate estimates of per acre yield of cotton.

Acreage Data

If the acreage data are incomplete, then the output estimate will naturally turn out to be wrong. The figures of area used as a basis for arriving at production estimates at successive forecasts should be checked against the annual *girdwari* (settlement) in all States for the past 10 years or more. A study of how the cotton acreage estimates are made reveals that practices vary from State to State. Again, the reports, submitted by Taluk officers, are frequently incomplete. Also, some cotton growing States have been integrated with the Indian Union or amalgamated into larger units so that different administrative practices have not had time to set into one pattern. Moreover, the village clerks have far too many duties to perform, and do not evince keen interest in reporting acreage estimates accurately. Finally, no uniform method of estimation is followed in respect of all States; in some States, only the eye is the guide. These points will become clear from the following extract from Mr. Gadkari's study of the practices in different States:

"*Madras*: The forecast reports in the Madras State are based on the reports of the Taluk officers. Their reports are frequently incomplete, due to incomplete reporting by the *karnams* and the Revenue Inspectors. The discrepancy between the forecast reports and the final actual figures is stated to be due to this defect.

"*Madhya Pradesh*: The Revenue Department is responsible for the estimation of the area used for cotton forecasts in the State. The figures of acreage are first enumerated by the *patwaris*, who pass on that information to the Revenue Inspectors. The Revenue Inspectors check the information against local knowledge gained by them in their inspection tours and from the opinions of cultivators, and form corrected estimates of area under cotton in their respective circles. On receipt of the returns of forecasted areas from the Revenue Inspectors, the Deputy Commissioners base their estimates and correct them in the light of any information they may possess concerning the probable areas sown. On receipt of returns from Deputy Commissioners, the Director of Land Records frames the estimate for the State as a whole. The discrepancy between the forecasted and actual areas under cotton is stated to be due to the fact that the *patwaris* of the State are overburdened with other multifarious duties and, therefore, it has not been possible for them to furnish accurate and timely records of area.

"*Bombay*: The differences noticed between the forecast estimates and the actuals are largely due to lack of sufficient care on the part of *talatis* and sometimes due to inaccurate estimate on the part of *mamlatdars*. This inaccuracy cannot altogether be avoided in the case of the first three forecasts, since the revenue staff do not have a complete picture of the crop prospects by the time these forecasts are prepared. Inadequacy of the staff is another reason for the inaccurate estimation of cotton production in the State by the Revenue Department.

"*Mysore*: A study of the data on the acreage under cotton for the last ten years in Mysore State reveals that there are large variations in the figures given at different forecasts. In all cases, the method used for the estimation is eye estimate which, perhaps, may be the main cause for such variation. Inclusion of the area with late sowings also contributes to the variations."

It will be seen from what is stated above that the present methods of collecting statistics of cotton acreage, as Mr. Gadkari says, are "far from satisfactory and need to be reorganised on sound and scientific lines so as to arrive at better estimates of the crop at all the successive forecasts." Among the improved methods that are being tried, the random sampling method has deservedly attracted wide attention. In the Wardha district (Madhya Pradesh), a pilot scheme for estimation of the area of pre-harvest crop forecast by random sampling method is being tried, on the recommendation of the Indian Council of Agriculture Research, as an experimental measure. When the question of improving these estimates came up for discussion at the meeting of the Indian Central Cotton Committee, held in February, 1953, it was generally felt that the random sampling method, now being tried in the Bombay and Madhya Pradesh States, was the best method for determining the yield per acre of the cotton crop. It is to be hoped that this method will be adopted by all the States. But no method, however, scientifically perfect it may be, can yield accurate results if the persons who use it do not know how to use it or do not appreciate the value and significance of their work or do not have the time for doing this work.

TAXES ON COTTON

The East India Cotton Association has, in the course of its reply to the Taxation Enquiry Commission's questionnaire, brought out how heavy a tax burden cotton has to bear. The taxes payable are export duty on cotton, the import duty on foreign cotton, sales tax and stamp duty on cotton. It rightly holds that these taxes affect adversely the return to the grower.

Tracing the history of the export duty on cotton, it points out how it came to be imposed, in the first instance, on 26th October, 1946, at Rs. 20 per bale. Even at that time, the Association had suggested that the Government should "maintain contact with reality in order to see that the taxes did not hamper India's foreign trade in cotton." This duty was, however, doubled on 19th January, 1948, when the Association pointed out that the policy of using exports of India's raw material for revenue purpose, to the extent of Rs. 40 per bale, amounting to 11 per cent. of the value, in the case of raw cotton, would have "dangerous repercussions." Nevertheless, the duty was further raised from Rs. 40 to Rs. 100 per bale, with effect from 18th November, 1948, and still further to Rs. 400 per bale of 400 lbs. each by an ordinance promulgated on 8th November, 1950. The duty was reduced by 50 per cent. with effect from 16th March, 1952. The duty on Assam Comilla cotton was abolished altogether from 19th November, 1952, while that on Bengal Deshi cotton was reduced from Rs. 200 to Rs. 125 per bale. Export duties on other varieties of raw cotton allowed for export remained unchanged at Rs. 200 per bale.

The Association next traces the history of the import duty on cotton. The import duty on foreign cotton was first imposed at six pies (half an anna) per lb. in September, 1931. The Association protested against this levy as the principle involved in the levy of this tax on imports of raw material useful for indigenous industry which did not compete with the cotton grown in the country, was vicious and indefensible and, further, that ordinarily raw materials in almost all civilised countries in the world were imported free of duty. The duty was raised to one anna per lb. in 1939 in respect of those varieties of cotton which competed with Indian cotton. The duty was raised to As. 2 per lb. in 1942. A cotton fund has been created out of the duty so collected by the Central Government to be used for the benefit of growers. The Association urges that this fund should be wholly utilised for increasing the yield of cotton as well as for growing long-staple varieties by way of subsidy to growers.

Since cotton has been not only classified as an essential commodity but also brought within the Central Government's purview through cotton control measures, it is reasonable to expect, according to the Association, that any impost on cotton should also come within the purview of the Central Government. It, therefore, deplores that the State Governments look upon sales tax on cotton as a suitable item for taxation.

Yet another burden which cotton has to bear is the stamp duty. The Government of Bombay has imposed, with effect from 1st April, 1948, a stamp duty of As. 6 per unit of transaction in cotton, that is, As. 4 per unit of 50 bales with a surcharge of 50 per cent. Referring to this levy, the Association says:

"The Association protested on principle against the imposition of duty on forward transactions in cotton, inasmuch as the Exchanges dealing in raw materials are performing an important service to the agriculturists and the imposition of a duty on forward transactions must necessarily add to the cost of cotton, reflecting on its prices as well as result in diversion of business from Bombay to other places outside the State. It was further pointed out that the imposition of such a duty would severely handicap jobbing business without which no forward market could function properly.

Local authorities have also added to the burden on cotton which is thus subject to octroi duty. The Association urges that the duties or taxes levied by different States or Local Bodies should be examined

(*Continued on page 83*)

INDIA'S PRESENT FOOD SITUATION

HAS SELF-SUFFICIENCY BEEN ACHIEVED?

(By P. C. BANSIL, M.A.)

"FOOD for all" is the chief plank of the First Five-year Plan. Rightly so; the emphasis is well deserved in a country like ours where food is the major problem of a majority of our people and where an average individual spends as much as 50 per cent. of his income on food. This becomes all the more important when the recent Census Report traces our food shortage to the year 1920—described as the "Great Divide." The former Census Chief—the Indian Malthus—thus depicts a very gloomy and pessimistic picture of the future.

There is, however, no lack of reassuring reports from the side of the Union Food Minister, the man at the helm of affairs. No food is said to have been imported for the first time since 1943 from abroad during the week ended 11th November, 1953. The problem of the Government is not to import more, but to dispose of the existing stocks as the godowns all over the country are said to be "choke-full of wheat." Increased home production and internal procurement of rice, according to the Central Food Ministry, have at long last caught up with the demand of the deficit States, so that there will be no such imports of rice in future. As for the import policy recently announced, excepting for 1.5 million tons of wheat already committed under the International Wheat Agreement, no other foodgrain is expected to be imported this year.

These are some of the contradictory views held by the theorists like the Census Chief and the Planning Commission, on the one hand, and a practical man like the Union Food Minister, Mr. Rafi Ahmed Kidwai, on the other. Yet, the common man remains bewildered as to the correct position. Let us make an impartial study of our present food situation as students of economics and see for ourselves the correct position.

Net Production

The average annual production of cereals, including gram, as accepted by even the Planning Commission, is of the order of 49 to 50 million tons. As a result of bumper crops, the production in the year 1952-53 is said to have touched an all-time record, the total output being placed well over 53 million tons. Deducting at the rate of 12½ per cent. for wastage and seed requirements, we are left with a balance of some 46.4 million tons of foodgrains for human consumption. Besides this, we have some 9 million tons of subsidiary food like potato, sweet potato, tapioca, groundnut, coconut and banana, etc., most of them rich in carbohydrates. These cheap edibles constitute the food of many poor people who cannot afford costly cereals. Objection may, however, be raised by some over the inclusion of grams among the cereals which, for reasons best known to the Government, were excluded only some few years back. But our knowledge of food throughout the country, the constitutional analysis of gram and the views of experts on the subject, all stand on our side. While talking about gram, Dr. Dubey, in his book *Economic Geography of India*, says: "Barley and gram are two other winter grain crops which rank along with wheat as staple foodgrains of Northern India. Together they occupy about the same acreage as wheat in India."

Similar are the views expressed in the Report on the Marketing of Gram in India, which reads as follows:

"For human consumption, gram is used in the form of boiled whole gram, *atta*, *dal*, baisin and parched gram. Gram *atta* is consumed in large quantities, usually after mixing with wheat and/or barley *atta*, in the form of *chapaties* and is very popular in villages, particularly when the price of gram is lower than that of wheat. In urban areas gram also, specially in North India, gram and wheat *atta chapaties* are much relished."

It will thus be seen that our conclusion of a net production of foodgrains, excluding subsidiary foods that is available for human consumption, is certainly of the order of 46.4 million tons. There is every ground to believe that they are underestimated or at least not overestimated at any rate.

Let us now see the other side of the picture —our requirements. It was expected that that august body—the Planning Commission—will attach due importance to the problem of food which we have been fighting on a war footing, and evolve some scientific methods to find out our actual production and consumption levels so as to reach some fundamental conclusions. The importance of correct production and requirement figures is also explicit in the first Five-year Plan when the report says: "For this purpose, it is necessary to assess the trends in production and to see how they compare with requirements." It is, however, a sad commentary to find from their report which reads: "From a practical point of view, it is of no significance whether food production is or is not higher than is shown by the official data . . . What matters for practical purposes is that over the last six or even seven years, the country has imported on an average about 3 million tons of foodgrains." The Commission has thus miserably failed to indicate the exact position of production and consumption.

Requirements Estimated

The task, though difficult, is not so very tremendous that it cannot be attempted. Let us have a trial and see for ourselves, if we can reach some satisfactory conclusions by our independent efforts.

The experts on food have laid down the following amounts of carbohydrates for Indian diets for different people in different age groups engaged in different types of work:

Age group Years	Cereals Ounces
Below 2	0
2 to 3	1
3 to 4	2
5 to 7	4
8 to 12	6—10
13 to 14	10—12

Given the authoritative figures of our population according to the various age groups, we can find out how much of cereals we actually require to feed the nation, in order to estimate whether we require more of cereals or other protective foods. The normal amount of cereals for the urban population has been accepted as 12 ozs. and for the rural as 16 ozs. per head per day. Without finding adult equivalents, about which there is much controversy, we can study the position as it exists today on the basis of the data given above.

We can work on the basis of the 1941 Census because population figures by age groups are not available for the 1951 Census. Taking the average of three States, we find below that children below 12 form 36 per cent. of the population, as indicated in the table below:

		Percentage of age groups					
Province	*Population* (000's)	*Below 2 yrs.*	*2 to 3 yrs.*	*3 to 4 yrs.*	*4 to 7 yrs.*	*7 to 12 yrs.*	*Total*
Orissa	11,746.6	1.3	2.0	2.9	11.6	13	
Assam	7,969.2	2.8	5	3.0	13.5	13	
Bihar	36,545.8	1.9	5.2	3.3	12.9	13.4	
Total	56,201.6	6.0	15.2	9.2	38.0	39.4	
Average		2	5	3	13	13	36

From the available published data in respect of the 1951 Census, we find, that the number of children up to the age of 14 years form 38, that is 3 per cent. of the total. Our conclusion of 36 per cent. for children up to the age of 12 can, therefore, be taken as fairly correct.

Applying the same percentage to 1951, we get the following population distribution between children and adults:

Group	*Percentage*
Children upto 12 years	36
Adults—	
Farm (70 per cent.)	44
Non-farm (30 per cent.)	20
Total	100

The requirements of children for the various age groups as laid down by nutrition experts are given in the first table. Taking the consumption of cereals in India to be slightly more than the normal, we may reconstitute the age groups, after making a proper margin, as hereunder:

Age group Years	*Ozs. per day*
Below 1	0
1 to 3	1
3 to 4	2
4 to 7	4
7 to 12	10

Calculating at the rates given in the above table for children up to the age of 12 years, and fixing 16 ounces per head for the farm and 12 ounces for the non-farm adults, according to the third table, (treating all men and women above 50 as full adults for the purpose of consumption of cereals), our requirements for a population of 100 come to 11.3 tons a year. Raising this figure to 11.5 tons so as to make provision for waste, etc., and working out at this rate for 361.2 million people, India would require nearly 41.5 million tons of cereals.

The estimates of cereal requirements have also been made from time to time by various authorities on the subject. According to Dr. Baljit Singh, the cereal requirements for the whole of India in 1941, when the population stood at 389 million, was 46.6 million tons. Working on this basis, we require for a population of 361.2 million not more than 43 million tons, as against our estimate of 41.5 million tons. It may be mentioned that Dr. Baljit Singh had also taken into consideration the extra consumption required for marriages, etc. Mr. Pheroze Kharegat, the then Secretary of the Agriculture Department, calculated our cereal requirements in the year 1946 as 48 million tons. The population of India then was more than 400 million. The requirements for 361.2 million people on this basis would be of the order of 43 million tons.

The following table shows the requirements as worked out by Mr. J. C. Kumarappa, the Nutrition Advisory Committee and the Ministry of Food and Agriculture:

	Tons
Nutrition Advisory Committee—	
Vegetarian	41,354,000
Non-vegetarian	41,554,000
Food Ministry	37,511,000
J. C. Kumarappa—	
Vegetarian	47,490,000
Non-vegetarian	47,490,000

Our food requirements can also be calculated according to the actual issues of foodgrains from the Government stocks in the statutory rationed area. In an answer to a question by Pandit Bhargava, the then Food Minister Mr. K. M. Munshi, stated on 20th February, 1951, that the total issue from the Government stocks during the year 1951 for statutory rationed areas, whose population in that year was 45.36 million, was about 4 million tons. Population under statutory rationing may be considered as purely non-farm, although there are also labourers, etc., whose consumption of cereals is more than that of the urbanites. On this basis, the requirements of non-farm population, who number 61.8 million according to the 1951 Census, would be 5.5 million tons at the above rate. The requirement for the rest of the farm population of 299.4 million, whose consumption is normally 33 per cent. more than the urban, will be nearly 35 million tons. The whole of the Indian Union would thus require something like 41 million tons only for human consumption.

Delhi's Experience

This fact is again corroborated when a small and compact area like Delhi is taken as a unit, where there is statutory rationing and no smuggling from outside is permitted. (The black market, if any, is only from the stocks issued from the Government stores and smuggled by the dealers.) The average actual offtake of cereals per fortnight in the statutory area of Delhi, including Sahadra and Mehrauli, during the years 1950 and 1951 was 156,300 and 167,000 maunds respectively, and the population of the area was about 16 lakhs during both the years. We find that the consumption of urban population of 61.8 million and rural population of 299.4 million on this basis would be nearly 5.76 and 38 million tons, respectively. Total requirements would thus work out to 43.7 million tons. It must be emphasised here that the aforesaid calculations are on the basis of the actual issues from Delhi and include all sorts of wastage that we find in the cities. The accuracy of figures, however, cannot be doubted, because minute records of all the issues and receipts are kept.

This thesis can further be proved by a glance at the food balance-sheet Table issued by the Directorate of Economics and Statistics, Ministry of Agriculture, in their annual food *Bulletins* for the years 1951 and 1952, and reproduced below:

(In million tons)

	1951	1952
Gross—		
Cereal	41.8	41.8
Gram	3.6	3.2
Total	45.4	44.5
Net after deducting 12½ per cent.	39.8	39.0
Imports	4.6	3.5
Opening stocks	0.7	1.3
Gross total	45.1	44.8
Closing stocks	1.3	1.9
Net consumed (difference between gross total and closing stocks)	43.8	42.9

From what is stated above, we arrive at the inescapable conclusion that, as against our *net* production of some 45 to 46 million tons, we require only about 44 million tons or a little more than that for human consumption or that the country is self-sufficient in foodgrains. Maybe that there is some little percentage of people all over the country whose consumption level is more than 33 per cent., the urban level presumed by us. But, as against this, we have

(*Continued on page 83*)

INTERNATIONAL SUGAR AGREEMENT

ITS IMPORTANCE IN PRESENT CONTEXT

JUST 16 days have elapsed since the International Sugar Agreement came into force. It would rather be too premature to say anything categorical as to whether or not the Agreement will prove a success, for such depends on so many factors which cannot be easily assessed at present. The most important objective set before the International Sugar Council, the body which actually administers the Agreement, is stabilisation of sugar prices by preventing accumulation of huge surpluses and maintaining steady supplies in the "free" market. How far and to what extent will the Council realise this objective will be watched with great interest by the sugar trade all over the world.

One may, however, ask: Is not the International Sugar Agreement only of limited importance, considering the fact that the share of the free market (supplied mostly by the low-cost producers) in the world sugar trade and production is not much, being only 5 million tons out of the annual world exports of 12 million tons and production of 38 million tons? This is, indeed, a pertinent question. As readers are aware, the major portion of the sugar entering world trade is accounted for by high-cost producers, the sugar economy of which is influenced by what are called the protective arrangements. Thus, the U.K., the second largest importer of sugar next to the U.S., purchases most of its requirements from the Commonwealth countries under the protection of preferences and the Commonwealth Sugar Agreement. Similarly, the French Union and the Benelux have protective arrangements outside the free market. Even the U.S., the world's largest sugar importer, hardly comes into the free market, in that practically all its requirements are being met under preferential arrangements by Cuba, the Philippines, Puerto Rico and Hawaii.

It is thus evident that the free market is the residual source of sugar supply, "the market of last resort." Nevertheless, the changes in the supply of and demand for sugar in the free market have wide repercussions on the trend of world prices generally. Stability in world sugar prices, therefore, depends largely on the conditions in the free market. To quote the London *Economist*: "The scheme (International Sugar Agreement) . . . is an attempt to ameliorate—though only slightly—the balance of power between the unprotected low-cost market and the regulated preferential market. That must be its justification, so far as it goes."

World Sugar Economy

It is most appropriate to review, in this connection, the recent trends in world sugar economy. The year 1952-53 marked, as a recent report of the U.N. Food and Agriculture Organisation pointed out, a step towards stabilising the world sugar economy and weakening the war-engendered forces. Production of sugar in the non-dollar exporting countries registered a marked improvement for the first time since the end of the war, with the result that more sugar was available for export in 1953 from non-dollar sources. Asia's sugar production approached the pre-war level. Production increased in most self-sufficient or deficit countries, except those in Europe. Highly significant was the improvement in South America and Africa.

Reviewing the trend of consumption, trade and prices in the world sugar market, the F.A.O. observes:

"Although 1952-53 was a very good year from the standpoint of consumption, trade and prices, it also witnessed some problems. Some of these were due to general balance of payment difficulties, others to transition from the special conditions caused by the war. The post-war tendency to higher *per capita* consumption continued, especially in the countries of low consumption in Africa and Latin America, but at a diminished rate. Exports probably declined by 1 to 2 per cent. from the record high level of 11.7 million tons in the previous year, but were still about 18 per cent. higher than the pre-war average. The most important development was the increase in production by 2 million tons during 1951-52 which raised world output to about 45 per cent. above pre-war and led to the emergence of a surplus for the first time since the end of the war. Around 90 per cent. of the increase in carry-over stocks was concentrated in Cuba, but slight increases took place also in other dollar exporting countries.

"The rise of about 1.9 million tons in carry-over stocks adversely affected prices and recalled memories of sugar surpluses, but the measures taken by Cuba were effective in preventing a collapse. About 1.8 million tons were removed from supplies available for marketing and placed in a special reserve and it was announced that the 1952-53 crop would be limited by decree. World prices, instead of falling precipitously, declined gradually."

The following table indicates the fluctuation in sugar prices (in cents per lb.):

	World (f.o.b. Cuba)	*New York* Ex-duty
1934-38 average	0.96	2.22
1950	4.98	5.43
1951	5.67	5.56
1952	4.17	5.77
November, 1952	4.00	5.94
March, 1953	3.27	5.83
May, 1953	3.64	5.85
Latest	3.30	—

Although a real collapse of the world sugar market, which had been forecast in some quarters since 1948, has not occurred, deep concern is felt about the future of world sugar economy, especially of the free market sector. The chief problem is undoubtedly the intensification of efforts to raise production in the protected areas. It is precisely for these considerations that the actual working of the International Sugar Agreement will, as already stated, be watched with great interest.

Outlook

Be that as it may, commenting on the long-term outlook for world sugar, the F.A.O. feels that world production is likely to increase by 1 to 2 per cent. per annum and world exports will remain high over the next few years and substantially higher than the pre-war years. This conclusion has been arrived at by the F.A.O. after analysing the outlook on the following lines:

"While it is clear that 1952-53 marks an important stage of transition for sugar, the new pattern is not yet well defined and not all the forces coming into play can yet be assessed. The main question is the future position of Asia. Africa is launched on a trend to higher consumption and the most spectacular increases in *per capita* consumption during the last five years occurred in that Continent. In Asia, on average, *per capita* consumption is still only around 2.5 kilograms a year and future development will depend on many complex socio-economic factors. Technologically, resources for increasing production are available; whether economic forces will favour expansion remains to be seen. To achieve that end, considerable financial resources would be necessary as well as increases in acreage and emphasis on industrial development.

"In other continents, the post-war consumption gains are likely to be permanent and, given high levels of income and employment, the present trend will continue, although probably at a reduced rate.

"Production will continue to expand in self-sufficient and deficit countries, as well as in non-dollar exporting countries, particularly in the British Commonwealth and in the French Union. No dramatic developments comparable to the growth of the sugar industry of Java and Cuba after World War I are in prospect, but current forces will bring about a steady growth in many countries. Production resources and potentialities are perhaps not so favourable in other regions as in the Caribbean, but expansion programmes are assisted by special price arrangements, tariff preference, long-term contracts and other devices. In 1953, the United Kingdom paid the Dominion and Colonial sugar producers about 50 per cent. more than the world price and 70 per cent. more than the special Cuban contract price."

Whatever developments take place in the sphere of world sugar output and trade will affect India, because India has now become an importer of sugar. It is estimated that India will have to import sugar to the tune of 400,000 tons in 1954. Considering the highly comfortable supply position of sugar and the downward trend in prices in world markets, India should be able to obtain its requirements from the free market without any difficulty. The domestic industry, however, is unlikely to be adversely affected by these developments, as it is protected by the control which the Government exercises over the quantum of imports and the minimum price at which the imported sugar is sold to consumers. The chief beneficiary of any substantial fall in the cost of imported sugar will be the Exchequer, as it appropriates to itself the difference between the cost and the price at which it sells that sugar to dealers.

U.S. SUGAR QUOTAS FOR 1954

The aggregate American sugar quotas for 1954 have been set by the U.S. Department of Agriculture at 8 million short tons (raw value). This quantity is 400,000 tons less than what would be needed at the 1952-53 rate of disappearance, adjusted for increasing population. It is necessary to withhold this quantity, the Department says, in view of possible stockpiling during December and to establish stable prices at levels required by the Sugar Act of 1948. In the initial determination for 1953, a similar 400,000-ton allowance was made in establishing quota requirements at 7.8 million tons. The 1953 quotas are currently established at 8.1 million tons.

Distribution of sugar in the United States during the 12 months ended 31st October, 1953 amounted to 8.2 million short tons. In the 14-month interval between 1st November, 1953 and the end of the calendar year 1954, the population of continental United States is expected to increase by about two per cent. Apparent consumption, when adjusted for such a population increase, indicates a consumption of nearly 8.4 million short tons. Employment and consumer purchasing power are not expected to change greatly in 1954.

The Sugar Act of 1948 requires that consideration should be given to a supply of sugar that will maintain the relationship between current consumer prices and the prices of sugar that existed in 1947 when the United States was under a form of price control. U.S. consumption from domestic sources in 1954 is expected to amount to about 2.3 million tons. The rest of the 8 million tons will have to come from other sources, notably Cuba, Hawaii, Puerto Rico, and the Republic of the Philippines. The Philippines quota has been set at 974,000 tons nearly 75 per cent. of anticipated Philippine output during the 1953-54 crop year.

Recently, the Agriculture Department estimated that world production of centrifugal sugar would aggregate nearly 39.0 million short tons (raw value) for 1953-54. This would be eight per cent. higher than 1952-53, 644,000 tons more than the previous record set in 1951-52, and 37 per cent. higher than the pre-war average.

SUGAR PRODUCTION AND STOCKS

The opening stock of sugar with factories in India on 16th November, 1953, was 153,000 tons, as against 472,000 tons on the corresponding date of the previous season, but arrivals of foreign sugar up to the end of December, 1953 aggregated 143,000 tons.

Out of the stock with the mills, 46,000 tons of sugar were despatched during the fortnight ended 30th November, 1953, as against 27,000 tons in the corresponding period last year. The closing stock on 30th November, 1953, was 135,000 tons, as against 463,000 tons on the same date last year.

The total production of sugar during the season 1953-54 upto 30th November, 1953, was 33,000 tons, as against 45,000 tons during the corresponding period of the previous season. The total quantity despatched was 93,000 tons, as against 67,000 tons during the same period last year.

IMPORT OF RAW SUGAR

The Government of India proposes to import raw sugar from foreign countries for the purpose of refining it in the sugar mills in India as an experimental measure, according to Mr. M. V. Krishnappa, Deputy Food Minister, Government of India. The landed cost of raw sugar on Indian ports, excluding import duty would be about Rs. 15 per maund at the present prices. The cost of sugar refined from raw sugar would be about Rs. 20 per maund, excluding excise duty, as also transport charges of raw sugar from the ports to the inland factories.

The Government of India has decided to release for free sale all sugar produced by factories during the period 16th to 31st December, 1953.

PETROL FROM COAL

SYNTHETIC PLANT PROPOSAL REVIVED

THE proposal for the establishment of a synthetic oil plant in India for the manufacture of petrol from coal has been revived. It will be recalled that, early in 1952, the Government had a project report, but it could not go ahead with the scheme for various considerations. It is not clear whether the position has improved to such an extent as to merit the reconsideration of this proposal. Anyway, the Government proposes to call for up-to-date project reports very soon. The proposal, if implemented, is expected to provide an outlet for the high volatile non-coking slack coal of the Raneegunj coalfields and for the inferior coal of the lower seams in the Jharia fields. Mr. L. S. Corbell, President of the Geological and Metallurgical Institute of India, has suggested that the proposed plant should be erected in Khasi hills coalfields, as the tea gardens have found it cheaper to work on oil than coal, the transport cost of which has increased rapidly in recent years.

It is too early to forecast how far the proposal will fructify. For the manufacture of petrol from coal, despite improvements in synthetic processes and gradual development of outlets for the various by-products, is still a costly process. Extraction of petroleum from coal will be found profitable only when the price of imported petroleum at the spot of consumption is costlier than that of petrol produced from the synthetic plant. This is the main reason why the production of synthetic petrol still forms only a small fraction of world petrol output. The countries which are engaged in this manufacture do so for considerations of defence. Even this consideration will not be valid, if a country has a few allies among those that are producing oil. In this modern world, no country can afford to remain alone. It must choose and have some friends. This will not be impossible even in the present times of tension and division of the world into power blocs, for the division has largely been on ideological grounds.

Cost of Production

Be that as it may, where there are abundant local supplies of cheap coal, production of synthetic petroleum may prove to be a practicable and economic proposition. The constant research that is being made by Britain and various other countries may yield valuable results which may bring down the cost of making petrol out of coal.

There are very few countries in the world which have been planning investment on synthetic petrol plants, notable among them being South Africa. There is a plan to have a synthetic plant, estimated to cost £18,000,000, which can extract 200,000 tons of liquid fuel annually. It is held that, although this is a very heavy outlay, the outlay is considered justifiable by that country, because it feels that it can produce synthetic oil at a cheaper cost than imported petroleum into the interior of the country. Further, it feels that cost is no consideration from the point of view of defence. There seems to be a proposal to have a similar project in Southern Rhodesia also.

Meanwhile, continuous research is being made in different parts of the world for improving the efficiency of the basic Fischer-Tropsch process. Various modifications of this process are being experimented with, with varying success. Writing on the results of this research and commenting on the practicability of producing oil from coal, Dr. Trevor I. Williams, Deputy Editor of the scientific quarterly, *Endeavour*, London, recently observed:

"Although the results of much research directed at improving the Fischer-Tropsch process are not easily obtainable, even if not specifically secret, several important general trends can be discerned. In the United Kingdom, where much valuable experience in the operation of oil-from-coal plants was gained during the last war, important researches have been done in the Fuel Research Laboratory of the Department of Scientific and Industrial Research (D.S.I.R.). Particular attention has been directed to make the process less inflexible—at present one of its principal weaknesses —that is to say, having more precise control over the nature of the products formed, and particularly to form as by-products specific chemicals for which there is a good market.

Development of New Catalysts

"In the future, by-product manufacture for the rapidly-growing organic chemical industry is likely to be a factor of great importance for the synthetic petrol industry. Much attention is also being given to the development of new catalysts—the substances which, without themselves being consumed, promote the combination of the basic raw materials to form petrol. Originally made from cobalt, it is now found that those made from iron are both cheaper and more effective.

"The preparation of satisfactory catalysts is, however, an exceedingly complicated matter, as the extensive technical and patent literature testifies; in the United Kingdom, attention has been directed mainly to what are called 'fused-magnetite' catalysts, made by dry processes, as opposed to those made by wet processes in Germany and elsewhere. Iron scale from rolling mills has been found to be a satisfactory base for making catalysts. To be effective, catalysts must be activated by adding traces of other metals, such as potassium, to the iron, and the proper selection of these has been the subject of much research.

"In most Fischer-Tropsch plants, the gas is passed through a dry catalyst, but current D.S.I.R. research in Britain is being directed also to an alternative form in which the catalyst is suspended in fluid. An experimental plant of this type, with an output of some 50 gallons daily, is now undergoing extensive tests.

"Much research has been directed, too, towards reducing the cost of preparing the mixture of gases from which the petrol is made, for this is the principal factor in the cost of the process as a whole. Particularly important is the removal of sulphur compounds from the gas, for, if left in, these rapidly make the catalysts, which are expensive useless.

World-wide Interest

"It may prove possible to reduce costs still further by making petrol synthesis a part of a bigger scheme in which electricity would be generated from the surplus heat. Alternatively, it might eventually be possible to link a Fischer-Tropsch process with underground gasification of coal, although the latter is itself still very much in the experimental stage.

"Interest in the manufacture of oil from coal is international. German research has shown that blast-furnace gases may be used as a raw material; in Switzerland the Fischer-Tropsch process has been modified so as both to enrich ordinary town's gas and to yield liquid fuel; in France and Germany an accelerated rate of flow of gas is being experimented with to obtain a higher yield. In the big Brownsville plant in America—designed to produce 300,000 tons of petrol annually, and, no less important, 70,000 tons of valuable chemical by-products—the powdered catalyst is made to resemble a fluid by agitating it vigorously."

If petrol can be produced in India from its vast coal resources at a cost which will be cheaper than imported petrol, the proposal will be worth execution. This will help India to reduce its dependence on foreign sources, especially in times of war, when the prospects of their supplies being cut off or severely restricted are certain. It will also help develop the chemical industry on a broad foundation, the importance of which both in war and peace is beyond doubt. But it is better to wait for further developments in this regard, inasmuch as, even in countries well advanced in scientific research, no decisive conclusions seem to have been reached in regard to the process to be followed.

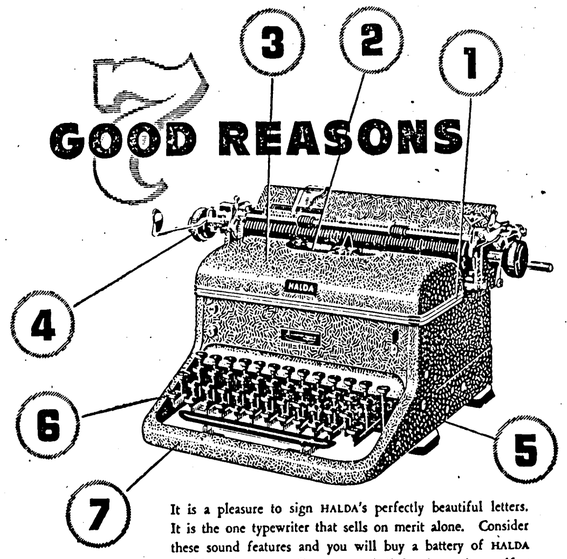
COAL STATISTICS FOR NOVEMBER 1953

During the month of November, last year, 839 collieries and 8 coke plants were working, according to the Chief Inspector of Mines in India. On an average, 317,380 persons were employed daily and 7,380,686 man-shifts worked. The overall percentage of absenteeism was 14.51. The output per man-shift for miners and loaders was 1.09 tons, for all persons employed in underground and open-workings 0.56 ton and for all persons employed 0.35. As much as 2,676,502 tons of coal were produced during the month. Further, 118,921 tons of soft coke, 189,954 tons of hard coke and 16,018 tons of other kinds of coke were manufactured. Despatches, during the month, accounted for 2,554,988 tons of coal, 121,089 tons of soft coke, 42,125 tons of hard coke and 4,761 tons of other kinds of coke. The coal stocks at the collieries on the last day of the month were reported to be 3,193,653 tons.

WAGON DEMAND FOR COAL TRANSPORT

The overall demand for railway wagons for the transport of coal has not fallen short of the supply of wagons for such transport, but the wagon offerings for down-country and the industrial area, from Bengal-Bihar coalfields had risen between September and November, 1953, to levels in excess of the current demands.

For some time during November and the early part of December, 1953, this applied also to the available railway transport capacity via Waltair and Ajni. There was no reduction in the demand for wagons due to the slight decline in production.



It is a pleasure to sign HALDA's perfectly beautiful letters. It is the one typewriter that sells on merit alone. Consider these sound features and you will buy a battery of HALDA machines for your office. 1. 49 ball bearings give swifter typing with less effort. 2. Accelerating type bars give maximum impact at cylinder approach. 3. Apart from lending beauty, the non-glare green colour of the HALDA is easy on the eyes. 4. Inter-spacing permits typing formulae and measurements, like H_2O and x^3. 5. Touch control gives individual adjustment. 6. Shift Key for 'Capitals' operates at lightest pressure. 7. Made from world-famous Swedish steel, the HALDA lasts longest. Ask Lathams for a demonstration.

RAW JUTE PROSPECTS FOR 1954-55

PAKISTAN TO INCREASE ACREAGE

THE final crop estimate of raw jute relating to the 1953-54 season, released by the Directorate of Economics and Statistics, Ministry of Food and Agriculture, Government of India, now turns out to be lower than earlier expectations. The area sown to raw jute in 1953-54 is 1,196,000 acres, as compared with 1,817,000 acres in the previous year. The output is placed at 3,128,000 bales (of 400 lbs. each), as compared with 4,605,000 bales in the previous season and 3.5 million bales estimated earlier in the season. As compared with the 1952-53 crop results, there has been a decline of 34.2 per cent. in area and of 32.1 per cent. in production.

The decline in acreage and production of jute has been reported by all the jute-growing States. It is, however, more marked in W. Bengal and Bihar and that is due mainly to unfavourable weather conditions and low prices of jute at the time of sowing. In parts of West Bengal and the U.P. the crop also suffered, it is stated, from floods and the attack of semilooper pest.

The output of jute, estimated at 3.1 million bales, is 1.9 million bales less than the total quantity required by jute mills in India on the basis of their present working arrangement. As the carryover from the last year's crop was about 1.4 million bales, the mills will have to rely on outside supplies to the extent of 0.5 or 0.6 million bales. But this excludes the needs that may be determined by quality considerations of raw jute.

Shortage of Supplies

While the total availability of raw jute in India during the 1953-54 season is no more than 4.5 million bales, the position in Pakistan appears to be none the better. For, owing to the deliberate policy of cutting down the output of jute adopted in 1952-53, production of raw jute in 1953-54 is expected to be only 2.5 million bales, as against 6.8 million bales in the previous season. Along with a carry-over of about 1.5 million bales from 1952-53, the total supply in that country would be about 4.0 million bales. The available jute supply from the two sources would thus be of the order of 8.5 million bales, as against the total world demand for 9.5 million bales. This tentative figure indicates the possibility of the world experiencing a shortage of one million bales during the year. Apart from this, there is also the question of quality jute being scarcer than in the previous year.

In this context, it is appropriate to refer to the observations on prospects for raw jute in 1953-54 made by Mr. M. M. Ispahani, in the course of his speech at the fourth annual meeting of the Pakistani Jute Association, held at Dacca on 19th December last. He stated that prospects of less jute being grown in 1953-54 had, at the end of March, the desired effect on the markets. Exports during April, May and June, 1953 rose to an unprecedented level. Prices steadied in April and, for the first time for seven months, rose above the E.P.C. minimum. The outlook had improved so much that the Jute Board considered it possible to release jute from the 13 lakh bales which it had purchased in 1951-52. "The season (1952-53), therefore, ended," Mr. Ispahani said, "on a most optimistic note. The overseas countries had purchased in all 40 lakh bales, while India had taken their promised 18 lakh bales. We had a large carry-over to bring forward and sell in 1953-54, but this was offset by the expected small new crop. The fact that jute had been cheap meant hardships to our cultivators, but it also had the effect of assisting us to maintain the markets for jute goods into the ground lost to substitutes."

The improved position noted at the end of 1952-53 continued, Mr. Ispahani said, in the current season. Except for a slight recession in September, 1953, prices had remained steady at a level which was satisfactory for both the producer and the consumer. Up to the end of November, 1953, the volume of exports had been satisfactory. Overseas offtake, according to him, was 16 lakh bales, and purchases from India were of the order of 8 lakh bales. He added: "We shall have just sufficient jute to satisfy world demand, and the carry-over into 1954-55 should, therefore, be negligible."

Mr. Ispahani proceeded next to deal with the determination of output of raw jute for 1954-55. He observed: "Our aim, as usual, should be to achieve that happy state where there is neither too little nor too much. Over-production would mean low and uneconomic prices for our cultivators, while shortage of jute, making prices high, would mean further irretrievable losses of jute markets, losses which Pakistan cannot afford. After careful consideration, my Committee have recommended that we aim to have at our disposal about 60 lakh bales, including carry-over for next season. The method of arriving at this figure has been made known to the Jute Board, who are, I believe, in general agreement with it."

Mr. Ispahani's speech makes two things clear. His statement that prices of raw jute steadied in April, 1953, and rose above the E.P.C. minimum, amounts to the confession that the jute support policy followed by Pakistan was a failure—a fact which the Government was chary to accept. Secondly, the Government has recognised the need for expanding the area under jute in the 1954-55 season and for giving up the policy of drastic curtailment in the acreage sown to jute which it followed last year.

WOOLLENISING JUTE

A programme for exploring new uses of jute cloth is reported to have been drawn up by the Expert Committee appointed last year by the Indian Central Jute Committee. This Expert Committee consisted of Dr. P. Pariya (M.P.) as Chairman and Mr. J. C. Ghosh, Dr. Venkataraman, Dr. D. M. Bose, Dr. W. G. Macmillan, Dr. P. B. Sarkar and Mr. C. R. Nodder as members. It was required to examine the reorganisation scheme which dates back to December, 1945, and to draw up a schedule of priorities, in the light of changed conditions in the jute goods market. The scheme, if accepted by the Government of India, would cost Rs. 2,00,000 annually to the Union Exchequer.

Under the scheme for exploring new uses of jute cloth, it is proposed to evolve a process of woollenising jute. While opening up a new field for jute, this process will benefit the common man, in that he will be able to buy cheap and fairly durable warm clothing manufactured from woollenised jute mixed with suitable proportions of Indian wool. The process aims at improving jute's strength and resistance to laundering and at perfecting its bleaching, dyeing and finishing qualities. Experiments will be carried out on weaving mixed fabrics with softened jute and cotton, bleached jute and staple for use as suitings, upholstery, etc.

The reorganisation scheme also provides for research on increasing the resistance of jute fabrics to weathering and of jute bags for holding acidic and hygroscopic commodities. If the experiment succeeds, jute goods will fetch, it is stated, a much more attractive price than now offered in the American market where cotton bags have made inroads.

The Committee has also recommended a scheme for manufacturing jute fabrics without weaving and spinning) by the use of synthetic plastics. Success of this experiment will bring about considerable reduction in the manufacturing cost of jute fabrics, as has been done in the case of canna fibre in Australia. It is also proposed to improve the electric resistance of jute fibre and the thermal insulating properties of jute, with a view to expanding the demand for jute in the manufacture of electric cables.

The implementation of the schemes recommended by the Committee deserves to be supported by the Government. Any success achieved is sure to give immense relief to the jute industry which is now struggling to dispose of its goods in markets where consumers' resistance and competition from other substitutes have become common. The industry, too, will do well to take up some of these programmes with its own research workers who are known to be doing good work.

BRAZIL BOOSTING JUTE PRODUCTION

Brazil has at present about 30 jute processing plants mostly concentrated in the States of Rio and Sao Paulo. Manaus has another, while a big plant with production target of 10,000 bags per day is in the process of construction at Contarem. It is being financed by a joint Japanese-Brazilian company.

Unconfirmed reports state that the U.S.A. is taking active interest in boosting raw jute production in this South American State which with a few year's sustained efforts can, it is believed, rival Pakistan as a supply source for both raw fibre and goods for the American market.

You think it can't? Planned lighting was installed by Philips in one factory which thereafter booked a production increase of 25%. Why? Because good lighting on the job obviously results in greater precision of work, fewer rejects, minimum wastage. But at the cost of high overheads? No, very much the contrary. Philips "T L" Fluorescent Lamps give three times more light than the ordinary bulb for the same current consumption. And . . . have long and efficient life.

Why don't you consult Philips Lighting Service Bureau for free specialized advice. Address— "Philips House", Calcutta 20.

POWER AND IRRIGATION IN MADRAS

PLANNING COMMISSION CONSIDERING FRESH SCHEMES

REPORTS from New Delhi indicate that the Planning Commission is considering the request of the Government of Madras for the inclusion of two more power, and five more irrigation, schemes in the Five-year Plan, so that work on them can begin during the present Plan period and continued in the second Five-year Plan. The sanctioning of these schemes is expected to avoid any hiatus in the execution of projects, by avoiding disbandment of the trained personnel.

The two power schemes suggested are the Periar and Kundah Hydro-electric Projects. These projects, as well as the extension to the Madras Thermal Plant Scheme, awaiting final sanction of the Planning Commission, it is stated, can be financed from out of the shortfall in expenditure in the present Plan period. The expenditure on them in the second Five-year Plan is not expected to involve any unmanageable commitments.

The proposed Kundah Power Scheme is for the generation of 75,000 kw. initially, at a cost of Rs. 17 crores, and ultimately 175,000 kw., at a cost of Rs. 31 crores. The Periar Scheme will also generate 75,000 kw. initially, at a cost of Rs. 6 crores, and 100,000 kw. ultimately, at a cost of Rs. 10 crores. This scheme is already reported to have received the approval of the Central Water and Power Commission.

Stressing the need for taking up these projects, the Madras Government is understood to have based its case on the ground that, having no other investigated schemes for power generation, there would be no commitments on the power side in the second Five-year Plan period, beginning from 1956-57, except the Periar and Kundah schemes, the usual transmission and distribution schemes and the acquisition of a few uneconomic licensee undertakings. The two schemes will involve, in 1954-55, an expenditure of Rs. 59 lakhs and in 1955-56 Rs. 184 lakhs to Rs. 185 lakhs or a total expenditure of Rs. 244 lakhs during the first Plan period. This will not, it is stated, cause any increase in the total commitments under the Plan.

It is further argued that, under the present Plan, out of a total outlay of Rs. 28.61 crores on power projects, a sum of Rs. 9.06 crores was to have been spent in 1951-53, but the actual expenditure was only Rs. 8.85 crores. Again, as against the estimated expenditure of Rs. 6.58 crores in 1953-54, the actuals are not expected to exceed Rs. 5.61 crores. During the remaining two years too, the outlay is stated to fall short of the amount contemplated in the original Plan, mainly because of the fact that work on the Madras Thermal Extension Scheme, which was scheduled to have commenced last year alone, is yet awaiting final sanction and also because the Madras Government is going slow with the acquisition of licensee undertakings. The savings under these two heads alone will be Rs. 2.5 crores. The margin available in the Plan, therefore, is estimated at not less than Rs. 3 crores. Even if the expenditure in the remaining two years for the two new power schemes were to be added, there would still be a shortfall of Rs. 56 lakhs in expenditure in the first Five-year Plan period.

The demand for the inclusion of these schemes in the Plan is further sought to be strengthened on the ground that, in 1955-56, when all the power schemes under execution are completed, even if all firm commitments for power were to be met, there would still be, in a normal monsoon, a shortfall of 35,000 kw., during the irrigation season, and 65,000 kw. during the non-irrigation season. If the new demands and fresh commitments were to be taken into account, the deficit would be large.

The five irrigation projects suggested to be included in the Five-year Plan are Amaravati, Vaigai, Krishnagiri, Kanniheripuzha and Sathanur projects. Of these, the Amaravati and Vaigai reservoir projects have, however, been already approved under the programme for improvement of irrigation in scarcity-affected areas and the question of Centre's assistance for them is still under consideration.

As regards other projects, it is stated that the Kanniheripuzha Project, estimated to cost Rs. 3.53 crores, would even out the bad distribution of fairly good rainfall in Malabar. The Krishnagiri Project, estimated to cost Rs. 1.84 crores, will provide irrigation facilities for 7,500 acres in Krishnagiri taluk of the Salem District. The Sathanur Project, estimated to cost Rs. 2.63 crores, will irrigate 20,000 acres in the Teruvannamalai and Chengam taluks of North Arcot District and Tirukovilur taluk of South Arcot District.

It is pointed out by the Madras Government, in this connection, that there are no major irrigation schemes fully investigated and ready for execution in the second Five-year Plan period. The financial commitments in the second Five-year Plan will, therefore, be modest and the carry-over will be only in respect of the Sathanur and Krishnagiri projects, if the latter two are started now.

The State Government is finally reported to have pointed out that the attempt to make the people Plan-conscious had succeeded in the State to such an extent that the people in every district wanted some scheme. The modest schemes suggested now would help in meeting such demands, thereby canalising the people's enthusiasm.

MOISTURE MEASURING EQUIPMENT

Moisture measuring equipment, which is accurate to within a quarter per cent. and takes only a few seconds to operate, will be exhibited by a British firm at the 1954 British Industries Fair when it opens on 3rd May. On the firm's stand in the Olympia (London) Section of the Fair will be a moisture meter, a condition meter, apparatus to test fatigue in wire, a micro-thermometer, and an instrument for determining humidity.

Most of the leading firms in the wool textile industry have installed the firm's moisture meters, and its instruments are going to many overseas countries, including the U.S., Australia, New Zealand, South Africa, Japan, Belgium, Holland and France.

A more recent development by the firm will also be exhibited. This is an electronic instrument for testing the condition of wool yarn and is claimed to be an entirely new testing method, based on changes in the dielectric constant of the yarn. The apparatus is designed to test closely-packed spools of yarn, where moisture content may be unevenly distributed along the length and might be well away from the surface of the package. A "magic eye" tuning indicator used in conjunction with a moving dial gives a precise result.

CANADIAN STEAM LOCOMOTIVES FOR INDIA

The Government of Canada has, at the request of the Government of India, agreed to give to India 120 steam W.P. type locomotives, as Canadian assistance to India under the Colombo Plan. The tentative schedule for the delivery of these locomotives to India is that deliveries would commence ten months from the date of the order and would be at the rate of six locomotives per month.

As in the case of Canadian raw materials, which are supplied to India under the Colombo Plan, the amount to be charged by the Government of India to the railways for these steam locomotives will be paid into a special development fund to be used for other economic development projects. The exact amount of the counterpart funds to be established, the administrative arrangements for its establishment and the projects for which it may be used will be agreed to later between the two Governments.

U.K. MELTING-SHOP CRANES FOR INDIA

An order worth just under £500,000 for melting-shop cranes for the Tata Iron and Steel Company's steelworks, at Jamshedpur, has been secured, in the face of competition from the U.S., and Germany, by a British firm of crane-builders (Adamson Alliance Group). The order is for two 250-ton ladle cranes, a 60-ton heavy crane with a 25-ton auxiliary hoist, and a 25-ton heavy crane of the steelworks type with a 10-ton auxiliary hoist. The cranes will be made by Joseph Adamson & Co., Ltd., of Hyde (Cheshire), and the Horsehay Company Ltd., of Wellington, Shropshire, which are connected in the operations of the Adamson Alliance Group.

WORLD PRODUCTION OF CRUDE OIL

World crude oil production in 1953 was higher by over 30 million tons at 634 million metric tons. The main production increases were in the Middle East (about 16 million tons), the U.S. (8 million tons), Canada (3 million tons), the U.S.S.R. and Rumania (5½ million tons). Production in Venezuela was 2½ million tons lower than in 1952. A somewhat smaller increase in world production is forecast for 1954.

M/s. Texmaco (GWALIOR) Ltd., Gwalior.

Dear Sirs,

We have pleasure in informing you that the ninetysix Automatic Looms which we had purchased from you in December 1952 are working to our entire satisfaction. All these looms are being worked three shifts and we are getting 90/95% efficiency. We may also mention that we did not experience any difficulty in erecting these looms. Besides, we are satisfied with the efficiency and working of these looms, we find their workmanship and quality equal to any foreign make loom of similar type.

GROWTH OF GENERAL INSURANCE IN INDIA

ROLE OF AGENTS AS HELPFUL GUIDES

THE Bombay Insurance Brokers' Association (President: Mr. Mangaldas M. Patel) celebrated its Silver Jubilee last month. Although the 25-year period, which it has completed, may not be a long one in the history of an institution, especially when compared with the hoary past of similar institutions in other countries, where insurance is much better developed than in India, it is a period which has seen many vicissitudes in India's economic history, with their inevitable repercussions on the history of insurance. The Association came into existence in 1927 when the First World War boom had ended, and has, since that period, witnessed the depression of the thirties, World War II, the Partition of the country, and a host of other events of considerable significance to the insurance business, such as the great explosion in Bombay in 1944.

In the history of the growth of general insurance, the brokers—agents, as they are now called—have played an important role. It was because many brokers were prepared to work for Indian insurance offices, they could grow from small beginnings into a big organisation, capable of extending their business operations even beyond the Indian frontiers. "Honesty and integrity of an insurance broker," as Mr. Arvindchandra A. Trivedi, Honorary Secretary of the Silver Jubilee Celebration Committee, says in an article contributed to the Souvenir of the Association, are of considerable value to both the parties concerned. At the time of underwriting the risks, the insurer does not know the nature of "material and/or moral hazard of the risks involved." He serves the insured persons too by assessing their requirements and protecting their interests.

Brokers' Services

Thus, the brokers' services are necessary in the interests of both parties, insurers and insured. It is through their services that general insurance business, as already stated, has come into its own at the present day. The history of this Association is, at least partly, the history of Indian general insurance itself. In an article contributed to the Souvenir, Mr. T. K. Desai, Deputy General Manager, the New India Assurance Company, Ltd., observes that, although Indian enterprise started taking active interest in life insurance business from the middle of the nineteenth century, one had to wait till the end of World War I to see the beginnings of Indian general insurance. Reviewing the beginnings of Indian general insurance at this period (the end of World War I), Mr. Desai says:

"Indian companies entered a new field which, up to that time, was a close preserve of foreign offices—mainly British and Colonial. The handful of Indian companies, which entered the field in 1919, did not allow their enthusiasm or ambitions to overlook the primary requisites which make for successful insurance undertakings. The companies were strongly financed. They secured the services of expert personnel. The building up of general insurance units, it was realised, was a lengthy process, and it did not permit of any departure from its basic principle of conservative underwriting policy, with caution as its watchword."

Early Beginnings

But the twenties were a difficult period for general insurance business all over the world. Because Indian general insurance came into existence at this period of world economic history, its progress has suffered somewhat through early troubles. Had the birth of Indian general insurance, as Mr. Desai points out, been followed by a period of trade buoyancy, the "progress and development of Indian general insurance would have reached far greater heights." Referring to the teething troubles of Indian general insurers, Mr. Desai says:

"The volume of business available to the Indian insurers in the twenties in their own home country was necessarily restricted. The economy was predominantly agricultural and the participation of Indians in the trade and industry of the country was also limited. The insurable values were also low and so was the premium income. The period witnessed some large claims. The fire at the Muljl Jetha Cloth Market, the riots following the visit of the Prince of Wales in 1921, the series of cotton and jute fires, throughout the decade, the conflagration at the Produce Yard in 1927, all tested, rather severely, the ability of Indian insurance to pay losses. The claims were met as they arose. Indian insurance thus came out of the trying twenties with enhanced confidence amongst the insuring public."

The *swadeshi* spirit of the thirties gave an impetus to Indian insurance, though the result could not be spectacular, because these years synchronised with the economic depression through which India was passing. The war years (World War II) saw a more rapid development of the Indian companies as also a significant increase in the number of Indian insurers. Many new composite companies were founded. There are now 79 Indian general insurers, with a premium income of over Rs. 11½ crores. General insurance in this country includes not only fire, marine and accident business but also aviation insurance and hull insurance. Subjecting the development of Indian general insurance to a critical scrutiny, Mr. Desai says:

"The development of Indian general insurance over its different classes or in different areas has not been quite uniform. There are reasons for this position. The Indian companies have naturally shown greater concentration on fire business on account of its steady profitability and its large size. Indian companies have, however, consistently shown increasing interest in marine as well as accident business and, today, Indian companies are no longer junior partners even in these lines of business. The development of Indian business was more rapid in Western India, but the position is getting more and more balanced from year to year. Today, almost every company operates on an all-India basis.

"A number of companies operate outside India. These operations are not confined to countries with an Indian trading community. Indian companies operate from Canada, on one side, to Fiji, on the other, and the operations are steadily growing to a global size. Units of Indian insurance provide their service in over 40 different countries."

Prospects

The industrialisation of the country and the increasing urbanisation that are now taking place will create greater opportunities for affording insurance coverage. Reviewing the prospects for general insurance business in India, Mr. Desai says:

"Indian general insurance has come to stay; though there are a number of young companies, there is an inherent strength which the market has acquired by adhering to old-established principles of sound insurance. The Indian companies are capable of providing efficient and economic cover for the country's needs.

"The business of Indian companies is growing at a rapid rate. The Indian companies, far from being junior partners in the market, do enjoy the patronage of the bulk of Indian business. It is regrettable that there are some Indian business houses which do not yet show appreciation of the remarkable progress made by Indian insurance. We should spare no efforts in persuading these elements to recognise the importance of supporting our well-established and successful industry. . . . Indian insurance commands not only confidence but respect of the international markets with which it has widespread relationships. The flag of Indian insurance flies over more than 40 countries of the world to offer the aid of Indian insurance service to the friends of India. In the international field, Indian insurance has shown a more active approach than any other organised Indian enterprise.

"This progress of Indian insurance has been achieved without securing any favourable position for Indian insurance either through discriminatory legislation or under active governmental support. It is a result of the trade's own efforts and initiative. There is great scope for further extension of the activities of Indian insurance both in our own home market and abroad. That scope will be enhanced in the coming era of planned progress."

Government's Role

In the task of improving and extending the general insurance business, the Government has a special role to play. Explaining this role, Mr. Desai says:

"Whilst the industry gets the utmost co-operation marked by a really sympathetic and imaginative approach from the two Government Departments that come into day-to-day contact with the trade, the Controller of Insurance and the Controller of Foreign Exchange, there is room for active assistance from the numerous Government Departments which follow the dangerous and illusory policy of self-insurance. At a time when Government is engaging itself to an ever-increasing degree in trade and industry, any withholding or withdrawal of business which normally belong to the indigenous market will cripple its strength and handicap its progress."

The insurance brokers, too, have a vital role to play in this development. There is at least one specific service which they ought to be in a position to render. This relates to the contribution they can make to the evolution of an economical schedule of tariff rates. In this connection, Mr. Ambalal A. Trivedi, a leading broker, in an article contributed to the Souvenir, says that Indian insurance must have its own tariff, with due regard to the existing conditions, for every specific class of insurance, of course, on parity with other foreign concerns of the same type and nature. In this task, he rightly believes that the Insurance Brokers' Association can play an effective role by "dint of their past knowledge and experience."

Again, by remaining honest in their dealings with the insurers and the insured, whom they serve, and by eschewing malpractices of all kinds, they will be able to promote the cause of insurance. Honesty, by itself, is not, however, sufficient, though it is, of course, absolutely necessary. What are equally important are knowledge and training. The brokers should be well-informed on matters connected with insurance, so that they could render real service to the insurers and the insured. Mr. Arvindchandra A. Trivedi rightly insists that the brokers should be trained "systematically and scientifically" in the art of canvassing and completing insurance business.

HEALTH INSURANCE SCHEME

The doctors of West Bengal have decided, it is learned, to boycott the panel system, which is to be introduced shortly in the State, under the State Insurance Act. The West Bengal branch of the Indian Medical Association has asked its members not to accept any post under the panel system, unless the Government brings down the number of patients to be placed under a panel doctor from 2,000 to 1,000 and relieves the doctors of the responsibility for the supply of medicines. And the demand is that zonal hospitals or wards should be opened in the existing hospitals. They have agreed to accept, for the present, a fee of Rs. 4 for a patient for a year, though it will mean a real income of only Rs. 2-13 when allowance is made for the cost of running the clinic. They have, therefore, stated that the question of remuneration for their services should be examined at a later date.

The State Government is of the opinion that a doctor can manage to have 2,000 patients on his panel, since he will have to attend to only 60 patients, 20 of them new, each day. This has been calculated on the basis of three per cent. sickness incidence as shown by the working of the Act in Kanpur. The Government thinks that a doctor can attend to these 60 patients in six hours, leaving him another six hours for private practice, as a doctor usually works for 10 to 12 hours a day. The doctors' plea that a panel practitioner will have to pay six visits a day has been rejected by the State Government on the ground that the actual working of the Act in Kanpur has shown that the visits by panel doctors averaged only one in two days.

As regards the medicine allowance of Rs. 2 for a patient per day of attendance, the Government points out that it has averaged only Re. 1-10 for each in Delhi. They do not favour shifting of the responsibility to the regional stores, because the doctors, in this case, would be tempted to prescribe costly medicines and drugs which has been the experience in the United Kingdom. The decision of the doctors to boycott the system has delayed the date of enforcement of the State Insurance Scheme in West Bengal.

NATIONALISATION OF INSURANCE

Emphasising that enterprise and competition are the "twin directive energies" that go to build any insurance business, Mr. S. Ramachar, General Manager, Hindusthan Ideal Insurance Company, Ltd., deplored, in the course of his speech at the Silver Jubilee celebrations of the Andhra Chamber of Commerce, all "irresponsible talk" about nationalisation of insurance. He added:

"The present Government has not the personnel with necessary experience to manage such a highly technical trade as insurance. The Government Administration is wooden, it lacks personal touch. Therefore, any industry that comes under the Government management does not grow. It will be extremely wrong on the part of the Government to think of nationalisation under the present circumstances. If they did so, they would check the progress of such a beneficial trade as insurance, a trade that provides the most important psychological and financial assistance to the individual and the industry—Security. No individual can be happy or work in peace without security and no business can grow without being assured of security in case of a catastrophe. I, therefore, hope that the politicians in their enthusiasm to catch votes will not indulge in irresponsible talk of nationalisation."

COMPULSORY INSURANCE FOR AIR TRAVEL

A scheme for the compulsory insurance of every passenger of the Indian Airline Corporation is likely to be finalised very soon, according to reports from New Delhi. The financial, technical and legal details of the scheme, it is stated, are being worked out by the authorities of the Corporation. The scheme contemplates, it is further reports from New Delhi. The financial, technical stated, that every passenger is automatically insured for the period of the journey as soon as he has bought his ticket. Although no decision has as yet been taken regarding the amount for which each passenger will be insured and the premium rate for the same, it is considered likely that such will be fixed at Rs. 1 lakh and Rs. 10, respectively. It may be mentioned, in this connection, that about 5½ lakh passengers travel by air in India every year, so that a premium rate of Rs. 10 per passenger will mean a total premium income of over Rs. 55 lakhs per year.

NEW PUBLICATIONS

Introduction to Rural Sociology in India. By Akshaya R. Desai. Published by the Indian Society of Agricultural Economics, 46,48, Esplanade Mansions, Mahatma Gandhi Road, Fort, Bombay. Price : Rs. 8.

IN the past, the need for a book of this type might not have been as great or urgent as it is today. For the book, *Introduction to Rural Sociology in India*, gives us an insight into the social aspects which ought to be borne in mind while bringing about changes in a rural economy. These changes are brought about by social, economic and political factors. Sometimes they are visible and sometimes they take place unnoticed, while deliberate attempts are also made by the State as well as social, political and economic institutions to bring about changes according to a desired pattern by means of reformation, or revolution or compulsion. In India, for instance, the Five-year Plan has been drawn up indicating the methods and means by which economic changes should be brought about to raise the standard of living of the people in the country. This Plan, while under implementation so far, has revealed that there has not been co-ordination among the various agencies, official and non official, and among the departments of Governments themselves. Lack of co-ordination of this kind is due to the tendency of concentrating attention on any one aspect or group of aspects of rural life, sometimes even without taking into consideration the bearing of social customs and practices on these aspects. It results either in the abortion or limited success of the programmes launched.

Apart from lack of co-ordination, other factors such as emotional approach, insufficient ability to assess results, absence of proper sociological perspective, attempts at doing far more than what is permitted by limited physical resources are also known to be responsible for failure or partial successes achieved by Government and other agencies in handling rural uplift schemes.

The utility of the book under review lies in assisting the agencies engaged in the task of rural reconstruction to avoid failure. Says the writer: "The present volume has the aim of, first, emphasising the vital need of studying the life processes of the rural society analytically and synthetically, and secondly, suggesting some of the appropriate lines of approach for such a study." An effort has also been made by the author to point out how a composite picture of the multi-sided rural life process has yet to be built up in India. In this work, he says, rural sociology has a role to play in helping scientific study of the rural society. And the author seems to have no doubt at all regarding its success. For he says: "Rural sociology, when it determines the programme of rural reconstruction, makes it scientific, conscious and organic and, therefore, fruitful. Rural sociology thereby becomes the indispensable guide to successful rural reconstruction." This bold assertion shows the author's faith in the subject, although one may not agree with his views in full.

The value of the publication has been enhanced by reproducing selections from various works on rural sociology by eminent scholars such as Zimmerman, Galpuri, Sims, Landis, Sanderson and a host of others each with a reputation of his own in the field. It has very useful lessons for those now engaged in the work of Community Projects. Persons connected with organisations such as National Extension Service, Bharat Sevak Samaj, etc., would undoubtedly benefit by a study of this volume. It will certainly widen their outlook and help them to have a correct grasp of the forces at work in the rural world.

The Economics of Chemical Production. By A. K. Madan. Published by Scientific and Technical Publications, Swastik Chambers, Carnac Road, Bombay-1.

Despite its somewhat misleading title, the book, *The Economics of Chemical Production*, is a valuable contribution to the literature on Indian chemical industry. The title may lead one to think that the author examines the economics of chemical industry in general. But what the book aims at giving—and succeeds eminently in giving—is a picture of the Indian chemical industry, particularly the economic aspects of the industry. The author, already familiar to Indian readers, through his earlier publication, *The Economic Prospects of Chemical Industries in India*, has examined, in a more detailed manner, the economic problems of the Indian chemical industry.

In its 11 chapters, the book deals with the capital investment in the industry, its location, its transport and labour problems, standardisation and marketing of products and the Government's economic and tariff policy. With his intimate knowledge of the industry, Mr. Madan gives a comprehensive account of the chemical industry and without allowing his account to be stiffened with too much technical details. His other book, *The Economic Prospects of Chemical Industries in India*, gives far more technical details, including the properties and uses of the different chemicals, and also a survey of India's chemical resources. Thus, the latest book is a good companion volume to its predecessor. Together, they ought to appeal to the specialist and the layman alike.

It is difficult to summarise the many suggestions which the author has made for the improvement of the chemical industry in India for they are not treated separately but are given where the discussion leads up to them. The basic responsibility of a chemical manufacturer, as Mr. Madan rightly insists, lies in "attaining maximum production efficiency and thereby reducing the production cost of the chemicals manufactured." He emphasises the importance of standardisation of products which he calls the "key" to the success of the industry. Manufacturers are urged not to remain content with the grant of protection but to strive for establishing the industry on sound lines. It is, however, interesting to note that the author stresses the fact that the Government's policy should not be "to own and manage chemical factories, since the technical problems of the industry call for a specialised knowledge and capacity for organisation which the existing civil servants may not be in a position to render." He, therefore, favours an organisation of the type of the Sindri factory, which combines both "the technical knowledge and ability of private enterprise and the adequacy of financial resources and prestige of the Government."

Economic Survey of Saurashtra. By Prof. C. N. Vakil, Dr. D. T. Lakdawala and Dr. M. B. Desai. Published by the Director, Information and Publication Department, Government of Saurashtra, Rajkot.

In this book of 663 pages, the authors have given the results of their research and investigation into the economic conditions of Saurashtra. The survey contained in the publication is very comprehensive and covers practically all aspects of the economic life of the State. It is divided into four parts dealing, respectively, with general conditions, rural economy, urban economy and surveys.

Part I, which is purely descriptive, gives an account of the natural environment of the State and population. In Part II, the authors make a study of the rural life in Saurashtra. The study covers agriculture and food supply, forestry, animal husbandry and fishery. Land tenures and problems, agricultural marketing and farm labour have been specially discussed. Part III is devoted to the examination of the position in urban areas. Among the topics included in the survey are industry, trade, transport, banking, public finance, and education and public health. Also dealt with are subjects like electricity, industrial labour and local self-government. Part IV confines itself to the surveys proper. Urban and rural survey, economic conditions of the rural classes, small-scale and cottage industries, and the State's economic plan constitute the subject-matter of this part. Included at the end is a note on the changes in the Five-year Plan and another on "Some new facts and figures."

The foregoing descriptive account will give one an idea of the detailed and comprehensive nature of the publication under review. Indeed, it contains a mine of information gathered and assimilated by such leading economists as Prof. C. N. Vakil, Dr. D. T. Lakdawala and Dr. M. B. Desai who have been ably helped by a host of research assistants and economic investigators. The many tables incorporated in the survey are a clear testimony to the fact that the authors of the publication have spared no efforts in their task. The publication is a useful addition to the literature on economic history and should serve as an invaluable guide to economic conditions in Saurashtra. It will also serve as a model for similar investigations in other States.

Yearbook of International Trade Statistics, 1952. Issued by the Statistical Office of the United Nations, New York. Available in India : Oxford Book and Stationery Co., Scindia House, New Delhi. Price: $4.

The figures relating to external trade, appearing in the *Yearbook of International Trade Statistics*, 1952, released by the Statistical Office of the United Nations, make possible an analysis of the importance of external trade. According to these figures, the production of goods for export in 1952 accounted for about 9 per cent. of the total production of goods and services in the world (excluding Albania, Bulgaria, Mainland China, Czechoslovakia, Eastern Germany, Hungary, Poland, Rumania and U.S.S.R.). In 1938, this proportion was about 7 per cent.

The proportion of foreign trade relative to the availability of goods and services for certain important countries in 1952 was: United Kingdom 33 per cent.; France 20 per cent.; Japan 20 per cent; India 11 per cent. Countries for which the importance of trade is high are: Southern Rhodesia (68 per cent.), Netherlands (59 per cent.), Belgian Congo (57 per cent.), Ceylon (55 per cent.), New Zealand (50 per cent.), Ireland (43 per cent.), and Belgium-Luxembourg (41 per cent.). The dependence of countries on foreign trade is generally greater in 1952 than in 1938, indicating a recovery of foreign trade from its relatively depressed condition in the immediate post-war period.

The *Yearbook*, which is the third issue in the series, contains 384 pages of statistics of the external trade of 70 countries (as against 52 in the second issue) covering 97 per cent. of world trade. For 25 of these countries (covering about 65 per cent. of world trade), the analysis by commodity of exports and imports is according to the United Nations Standard International Trade Classification. In addition, the *Yearbook* contains tables showing world trade according to regions and countries. Tables for individual countries include India, Burma, Ceylon, Indonesia, Japan, Malaya, Pakistan and Thailand. The figures for all countries are obtained from official sources published by the Governments of the countries concerned, from data supplied by the Governments for use in the United Nations *Monthly Bulletin of Statistics* or the United Nations *Statistical Yearbook*, and, sometimes in the case of data according to the S.I.T.C. from tabulations specially supplied by Governments for the purpose.

THE BRITISH INDIA GENERAL INSURANCE COMPANY, LIMITED

HEAD OFFICE:—MEHTA HOUSE, APOLLO STREET, BOMBAY
Chairman: FRAMROZE H. MEHTA, J. P. General Manager: M. S. DASTUR

PLEA FOR TRAINING PERSONNEL FOR INDUSTRY

A.I.M.O. TO HOLD S.E. ASIAN ECONOMIC CONFERENCE

THE dissatisfaction at the slow progress of India in the two most important spheres of welfare and wealth, namely, (a) education and (b) industrialisotion, expressed by Dr. M. Visvesvaraya, President of the All-India Manufacturers' Organisation, should impel administrators and business men in this country to take far more vigorous measures than they have done so far to make up the leeway. Presiding over the third quarterly meeting of the Central Committee of this body held at Bombay on the 10th inst., Dr. Visvesvaraya confined his remarks to education in so far as it applied to technical education and stated that the country's industrial progress was being arrested by the lack of technically trained personnel required to man the three tiers in our industrial concerns, namely, the technologist, the foreman, and the skilled worker or artisan. He wanted the last category persons to be trained by the million, so that their business habits are changed in order to make them acquire active, business-like and disciplined habits. Unless ambitious training schemes were launched and special schools and colleges or university of standing established, as was done in both Japan and Russia, there was no chance, Dr. Visvesvaraya opined, of the Five-year Plan making any appreciable headway in the country. These technicians were wanted for starting new industries as a means of fighting the growing unemployment and strengthening the defence industries in the country.

This emphasis on the need for building up technical education seems to have originated from the learned doctor's comparative study of business habits of the average Indian citizen *vis-a-vis* his confrere in America. In the U.S.A., the average citizen lives about 62 years and earns about Rs. 8,000 or more per annum, as compared with his counterpart here living only 30 years with an earning of about Rs. 240. In the U.S.A. the working population represents 52 per cent. of the total, as against 45 per cent. in India. The average American is intensely active, possesses ambition and a high sense of duty, and, above all, is imbued with team spirit. In India, people lead a quiet and inactive life, lack ambition and team spirit, and their sense of duty has yet to be developed. As the country is in its initial stages of development, healthy national policies have not yet been formulated. Dr. Visvesvaraya, therefore, pleaded that immediate attention should be given to develop the right kind of character and habits among the people.

With regard to the industrial development of the country, Dr. Visvesvaraya felt that many industries in India suffered for lack of steel. Development of the automobile, aircraft, locomotive and defence industries depended on steel and, therefore, there was a need, he said, for a steady supply of adequate quantity of steel. He did not understand the Government's policy regarding these big heavy industries. He did not see why the Government should buy aircraft and locomotives abroad, although it had the factories established in India. For quick promotion of large-scale industries, he suggested the establishment of two agencies in each State, one representing the Centre and the other representing the State concerned, for starting new industries in the States. As regards small-scale industries, he was glad to note that the scheme for rural industries suggested by the A.I.M.O. to the Government of Mysore was showing favourable results. We are told that the estimated value of industrial output in two districts, namely, Bangalore and Kolar, has risen from Rs. 7 lakhs in the first year of implementation to Rs. 2 crores in the fourth year. Details of the scheme are expected to be published shortly.

The speech of Dr. Visvesvaraya was followed by one from Mr. Morarji Vaidya who led a delegation of the A.I.M.O. to Middle East and Far Eastern countries. This speech is notable for spotlighting public attention on the necessity for organising a South-East Asian Economic Conference in India or in any other self-governing country for exchanging frank views on the common problems of countries of this region. The conference should consist of non-officials, economists, business men and bankers representing the various countries, namely, Ceylon, Burma, Indonesia, Malaya, the Philippines, Thailand and Japan.

The economies of most of the above are parallel in the sense that, with the exception of Japan and India, all other countries are dependent, at present, on the export of the same type of raw produce, viz., rubber, copra, tea, coffee, rice and some minerals such as tin. With the exception of rice which is purchased by India and Japan, other commodities are exported to the U.K., the Continent and the U.S.A. Consequently, the balance of payments position of these countries is dependent on earnings of foreign exchange from the exports to Western countries. On many occasions, it has been found that failure to export their produce to the U.K. or the U.S.A. handicapped their purchases from other countries such as India for lack of exchange resources. In order to overcome such an emergency, Mr. Vaidya posed three alternatives, namely, (1) the utilisation by India and Japan of the raw produce of the S. E. Asian countries especially rubber, copra and oil and sell plant and machinery to them for starting industries; (2) organisation of a co-operative or co-ordinated sale by all these countries including India of commodities such as tea, coffee and rubber to the Western countries without competition *inter se* among them; and (3) lastly, establishment of a South-Eastern Payments Union for pooling the resources of foreign exchange of this region and arranging for a Clearing House through which the surplus foreign exchange of one country could be made available to another. It is pointed out, in this connection, that Japan and the Philippines are the two countries which have a much easier dollar position than any other country in this region but run short of sterling. On the other hand, India, Ceylon, Malaya, etc., have a much easier position in sterling but are short of dollars. It is, therefore, felt that there is no reason why these surpluses and shortages could not be adjusted through a payments union. Such union would lead, we are reminded, to an increase in the volume of trade of the area to the benefit of the economies of the countries without having to wait for any action either from the I.M.F. or the World Bank.

It appears the proposal to start such a union was mooted in one of the meetings of the E.C.A.F.E. but had to be dropped on account of strong opposition from some representatives of Western countries. The Central Committee of the A.I.M.O. has, therefore, passed a resolution recommending the convening of an Economic Conference of countries in the Indo-Pacific Ocean region for considering the three alternative problems referred to above. The A.I.M.O. delegation is stated to have sounded the views of the business men and representatives of some of the Governments on the feasibility of holding a regional conference during its itinerary; and, according to Mr. Vaidya, all of them seem to have expressed their readiness to co-operate in holding a conference at some suitable future date. It is, therefore, now the responsibility of the A.I.M.O. to take further action in the matter. This conference, if convened would undoubtedly contribute towards knitting closer the economic relations of the countries of this region.

PROTECTION TO BICHROMATES INDUSTRY

The claim for continuance of protection to the bichromates industry was taken up for consideration by the Tariff Commission on 15th December last. The Commission's panel consisted of Messrs. B. N. Adarkar, B. N. Das Gupta and Mr. C. Ramasubban. This industry has been enjoying protection since 1946. In that year, the then existing revenue duty of 30 per cent. *ad valorem* on sodium bichromate, potassium bichromate and all chrome compounds was converted into protective duty. Besides, the industry has been enjoying a virtually sheltered domestic market owing to an almost complete ban on imports of bichromates since 1946, on balance of payments considerations.

Against an estimated annual demand of the order of 2,000 tons, the rated capacity of eight units of the bichromate industry is placed at 6,460 tons. Actual production was 2,021 tons in 1950, 3,183 tons in 1951 and 1,549 tons in 1952. It was 1,755 tons in the first nine months of 1953. The capital invested in the industry is stated to be Rs. 50 lakhs, and about 1,000 workers are employed directly by the industry.

As regards the quality of the indigenous product, it is stated that there has been improvement, and the product has been found to be generally satisfactory. The paint industry, however, has complained of a lack of standard purity, in that the large amount of sulphate ion content in the bichromate precipitates the soluble lead salts, used in the preparation of lead chromates, as lead sulphate. This means that the soluble lead salts get converted into insoluble lead sulphate which it is important to control in order to obtain correct shades. Some tanneries also have complained that the strength of indigenous bichromates varies from consignment to consignment.

The most crucial issue before the Tariff Commission is the question of costs, which is linked with that of fuller utilisation of capacity, on the one side, and the rates of consumption and prices of raw materials as well as the utilisation of by-products, on the other. The high cost of production is partly due to high prices of the raw materials it uses, namely chrome ore, sulphuric acid, lime or limestone and soda ash. The prices paid by the industry to some of these are stated to be higher than those paid by foreign manufacturers in their countries. To a certain extent, the high cost could be reduced by developing by-products of the industry.

The bichromate industry has asked for continuance of protection beyond 1953. The quantum of protection, it is suggested, may be so adjusted as to make the prices of Indian products to be lower than the landed cost of the foreign products by at least Rs. 2 per cwt. It has also asked for a complete ban on imports of sodium and potassium bichromates and chrome compounds for a period of 10 years. It has requested prohibition of imports into India of sulphur khaki dyes and vat khaki dyes and of any substitute which might replace indigenous bichromate. Other demands made include a ban on or restriction of exports of raw hides and skins, introduction of special freight rates for the transport of chrome ore and other raw materials and a host of other measures. One of the units has even asked for a subsidy of Rs. 5 per cwt. from out of the proceeds of a proposed cess on exports of raw hides. This long list of claims makes one lose faith in giving assistance to such industries as the bichromates industry which seem to be doing very little to improve their own efficiency and which need an endless number of props.

POPULARITY OF GRADED INDIAN TOBACCO

India earned Rs. 16.9 crores of foreign exchange through exports of tobacco during 1951-52. The earnings declined to Rs. 13.46 crores in 1952-53. Of these earnings, unmanufactured tobacco accounted for Rs. 14 crores and Rs. 11.9 crores in the two years respectively. The U.K. continued to be the principal buyer.

According to a brochure on the *Grading of Tobacco in India*, just released by the Agricultural Marketing Adviser to the Government of India, Indian tobacco appears to be gaining popularity in many countries and has already established itself, among others, in Pakistan, the Netherlands, Belgium, Egypt, Japan and Ceylon. This popularity is attributed to the enforcement of quality control on exports on the basis of Agmark grades. These grades for the different types of tobacco have become familiar in all the buying countries abroad. A good proportion of the trade now takes place on firm order, that is, the purchase money is collected by the seller through local banks on presentation of the shipping documents and a grading certificate issued by the Tobacco Inspectorate.

Statistics regarding the area and production of tobacco show that the area in 1949-50 was about eight lakh acres and the production 675 million lbs.

DEVELOPMENT OF INDUSTRIES

CORPORATION TO BE SET UP.

REPORTS emanating from New Delhi indicate that the Government of India has, in principle, approved the proposal for the creation of an Industrial Development Corporation, first mooted by Mr. T. T. Krishnamachari, Minister for Commerce and Industry, and vigorously supported by Lala Shri Ram in the course of his speech at the last annual meeting of the Industrial Finance Corporation. Since then, it has been talked about quite a lot, albeit in a vague fashion. It would appear that the proposed Corporation will be a statutory body, drawing its capital both from the Government and financial institutions such as banks and insurance companies. The State would, in the first instance, furnish a part of the capital for starting new industries which private enterprise is unlikely to start on its own. Such industries might be sold to private enterprise, after they have been demonstrated to be economic and profitable. The proceeds of such sales would be used, it is reported, for establishing further industries.

The Production Sub-Committee of the Cabinet, with the Prime Minister as its Chairman, will be responsible for the scrutiny and selection of the projects to be taken up by the Development Corporation.

It may be mentioned here that it was at the last meeting of the National Development Council which met early in October, 1953, that an announcement was made by Mr. V. T. Krishnamachari, Deputy Chairman of the Planning Commission, to the effect that an Industrial Development Corporation would be set up as part of the Five-year Plan. The acceptance now by the Government of this proposal is doubtless a step forward towards giving it concrete shape.

An important feature of the scheme, according to official circles, is that it is designed not to extend the public sector but to help stimulate the private sector of industry. It is stated that the Government is desirous of playing a more positive role in sponsoring new industries by tapping various industrial concerns, financial institutions, savings in rural areas and the like. The establishment of the Corporation is considered to be preparatory to the Second Five-year Plan, in which a more prominent place would be provided for industries than in the First Five-year Plan which laid great stress on the development of irrigation, agriculture and power. In this context, it is also emphasised that the Government has "no intention or haste to nationalise the existing industries which the private sector is handling." It would concentrate its energies, it is stated, on developing new industries and, therefore, there is no need to entertain any unnecessary apprehensions regarding nationalisation. The necessity for rapid industrialisation of the country in the second Plan period for both defence and development purposes underlines, it is stressed, the urgency for a long-term credit institution such as the Industrial Development Corporation, to be established shortly by the Government.

Another feature of the scheme is its suitability to implement the Government's avowed policy of mixed economy, in that the industries would be sponsored by the State, with or without private partnership, and then sold to the latter, as stated earlier. This method of 'self-liquidating investment' would not only enable the Government to start new enterprises without any further demand on public funds but places no limit, theoretically, on the total capital resources of the Corporation, as it promotes more new industries from the sale proceeds of earlier enterprises. It is also claimed that the scheme will avoid the inflation which will be an inevitable result of investments exclusively by the State on the entire range of contemplated industries.

From the above observations it will be seen that many merits have been claimed on behalf of the scheme. These claims, however, appear to be of a dubious nature, in that success will depend on the ability of the State to manage the undertakings started by it through the Corporation economically and profitably. Experience has invariably shown that State undertakings might be profitable, but not always economical. For profits yielded by these enterprises are known to be generally not commensurate with the resources spent on them. Consequently, the chances of disposing of these concerns rapidly to private operators may be both rare and remote.

COFFEE LANDS AND INDUSTRIES (MYSORE) LTD.

SEVENTH ANNUAL GENERAL MEETING

MR. IVOR BULL URGES ENQUIRY INTO COFFEE INDUSTRY

A VIGOROUS plea for a detailed and comprehensive enquiry into the condition in the coffee industry by an impartial body was put forward by Mr. Ivor Bull, Chairman of the Coffee Lands and Industries (Mysore) Ltd., in the course of his address at the seventh annual meeting of the Company held at Hunsur (Mysore State) on 31st December, 1953. Mr. Ivor Bull said that it was more than ever evident today that an enquiry covering the question of a fair return to the grower and the possibilities of developing the industry should be carried out "speedily and in a judicial, calm and dispassionate manner." He also urged the adoption of a consistent marketing and price policy for coffee.

The following is the full text of Mr. Ivor Bull's speech at the meeting:

"GENTLEMEN,

"As the Directors' report and the accounts have been with you for the statutory period, I propose, with your permission, to take them as read.

"Although the crop we have gathered is the highest in the Company's history, the profit unfortunately is the second lowest, and we have been able to recommend a dividend of 3 per cent. only. This is a disappointing result when the steady increase in the yield of our estates is remembered.

"Last year, in addition to transferring Rs. 52,030 to our dividend equalisation reserve, we were able to transfer Rs. 1,50,000 to general reserves. This year we have been unable to transfer any sum to general reserves.

Estate Expenditure

"Estate expenditure at Rs. 12,48,804 shows an increase of over Rs. 2 lakhs, as compared with 1951-52. Part of this increase is due to higher wages, but, with a heavier crop on the trees to be harvested this year, it was also essential to meet the cost of supporting the bushes with the additional fertiliser and spraying necessary to maintain their condition. The historic error in coffee growing in the past has been to use the proceeds of a heavy crop, after realisation, for additional expenditure on fertilisers. Meantime, the damage has been done. The only way to prevent the bushes from becoming exhausted is to support them before and during the period of crop strain. For obvious reasons, we have had to cry a halt to our rehabilitation programme this year, but we have given our coffee proper backing, and there is every sign that the estimate of 500 tons will be realised.

"For those who are only technically interested in coffee production, the result of the year's working is of considerable interest, although, for the shareholders, it is so disappointing.

Profit

"Our estates in Mysore are better than the average, our yield at 3 cwts. is higher than the average. We believe them to be carefully, economically and intelligently worked, yet the total profit per acre is only Rs. 12-9. From this minute profit, not only have dividends to be paid, but it is the only source from which money can be found for improving our labour quarters and introducing the many benefits devised under the Plantation Labour Act for labour. Actually, even if we could borrow the money and if we paid no dividend at all, the profit would be insufficient to meet even half the interest of the cost of rehabilitation. Where we have just succeeded in paying our way, there are many other Mysore and Madras estates which have suffered a severe loss.

"Our estates represent not merely a sample of a better-than-average Mysore estate but also a better-than-average Madras estate, and, unless a price for coffee which is fair to the producer is speedily fixed, there is little doubt that the famous arabica coffees of Mysore, the Nilgiris and the Shevaroys will go the same way as the indigo industries of Bengal, Bihar and Orissa.

"The arabica crop in both Mysore and Madras is declining, for in neither State has coffee fully recovered from the depression of the thirties. No separate figures are available for the arabica and robusta crops before 1941, but the six-yearly averages since then are given below:

Average Arabica Crop

Six seasons ended	*Mysore*	*Madras*	*Total*
	Tons	Tons	Tons
1946-47	5,999	4,142	10,141
1952-53	5,122	3,788	8,910

"This decline has taken place during a period of relatively stable prices. Now that prices have been forced down to a figure which is well below the average cost of production, the decline in the arabica crop will be greatly accelerated. Again for the observer, though not for our shareholders, this position regarding coffee on the average estate is curious.

Taxes

"On our own estates, the actual profit was only Rs. 33,723 last year, and yet we shall have directly met or provided no less a sum than Rs. 2,12,352 to the Central Government and Rs. 4,032 to the State Government, a total of Rs. 2,16,384 on 2,688 acres, or Rs. 80-8 per acre made up as follows:

	Per acre Rs. a.
Land tax	1 8
Excise duty on 351 tons of coffee at Rs. 21 per cwt.	55 0
Export duty on 53 tons (proportionate share of export)	24 0
Total	80 8

"The additional revenue which the Central Government is taking out of coffee is quite obviously strangling an industry which should be benefiting the whole of the Malnad areas of the States in the South.

"Although the effect of too low a return to the grower will upset the whole economy of large regions in the States, the fall in the Central revenues will be relatively so little that it may well escape notice. It is only the States which will really suffer, not the Centre.

Agreement Violated

"The reason why the good crop we have harvested has given such a poor return is a simple one. The return to the grower has been fixed arbitrarily at far too low a figure. In 1952, following an insistent directive from Government to export a large quantity of coffee, which inevitably left an insufficient supply for the internal market, prices shot up to unprecedented heights in August-October, though, in December last year, as I then reported to you, they had begun to reach more healthy levels. Now we are suffering from the rebound. An agreement was reached with Government in April last to reduce prices internally, and to subsidise the growers for such reductions by means of the export of 2,000 tons of robusta, for the price of coffee abroad is Rs. 140 to Rs. 250 per cwt. higher than in India. This agreement has not been observed, and now the benefit from exports, which was to have compensated growers for releasing their coffee in India at a price well below the cost of production, is being diverted, not even to the further assistance of the consumer but directly to Central revenues. There is a lack both of good faith and of logic in the new arrangements. From excise duty alone the Central Government will receive one crore of rupees from the coffee industry this season. The diversion of additional large sums to the Central revenues can only result in the death from starvation, of the goose which has been laying these golden eggs for them.

"Delivery of all coffee to the Board is compulsory. The low price fixed by Government is arbitrary and involves a loss to most growers. It is a nice matter for constitutional lawyers to work out whether an individual can be forced to part with his produce at a loss, when there is a profitable market on his doorstep.

"The finding of finance to work the estates has been troublesome throughout the year, mainly because of the low prices fixed, but largely because of the delay by the Board in making payments for the coffee delivered to them, the result of the attempt made by the Board, at the direction of Government, to hold stocks for which it had no finance.

Cleavage Between Government and Coffee Board

"The most disturbing result of recent Government policies is the complete cleavage which has arisen between the Government and the Indian Coffee Board. The advice of the Board on important and even unimportant matters is continually rejected and overridden. Yet the real knowledge of the coffee industry lies in Bangalore, not in Delhi. For years it was the Board that approached Government, again and again, to moderate their export programme, the effects of which would be disastrous for the consumer. All this is fully documented. It was only when disaster actually arose that Government's views altered and, in a strange and illogical way, the Board is now blamed for the inevitable result of Government's own policies. A frustrated countryside is now represented by a frustrated Board which can only watch, whilst mistake is piled on mistake. The failure to evolve any consistent marketing policy in 1953 is the main reason for internal sales shrinking from an anticipated 18,500 tons to only 15,500 tons.

Price Errors

"In 1952, although prices were completely out of hand for a long period, and although the releases for the December pool auctions were halved, internal sales reached 17,867 tons.

"The failure to implement the promise to export at least 2,000 tons of coffee as a preliminary step in May has aggravated the present stock position, so that no less than 8,500 tons of coffee which are urgently wanted abroad lie deteriorating and at heavy cost in the Board's godowns, even though the current crop which is being harvested is expected to be a bumper one. In spite of this, a decision regarding exports is being delayed till February.

"The result of the marketing errors prevents the Board from paying the growers for their coffee at the proper time. This adds to the cost of production, for the grower has now to find the finance and pay interest for it elsewhere. The harmful effects of the price errors will be numerous. Employment and production will be reduced, and the value of all estates will shrink. India could materially increase both her production and exports of coffee, but is prevented from doing so. The opportunity of earning additional foreign exchange is thrown away, and an opportunity to engage numbers of unemployed in the development of the large areas of land lying waste in our southern hills is lost.

Enquiry Into Coffee Industry

"The Indian Coffee Board, as long ago as last August, passed a resolution requesting Government to arrange for an enquiry into the coffee industry through the Tariff Board, such enquiry to cover not only what would be a fair return to the grower, but also the possibilities of developing the industry for which there is obviously such scope. This resolution received the support of planting associations in all districts. The request was refused, but it is more than ever evident today that such an enquiry should be carried out speedily and in a judicial, calm and dispassionate atmosphere. Growers are accused of stubbornness and many other things for persisting in this request, but the nature of the debate in Delhi, in which the export duty of Rs. 62-8 was passed through both Houses, shows clearly how essential it is that this problem, which affects so critically the fortunes not only of growers but also of districts, should be solved by an impartial body, and one free from all preconceived ideas and prejudices. Never was there a clearer need for the separation of the 'Judiciary' from the 'Executive.'

"Coffee presents a strange picture indeed today. World prices are high. Our rivals abroad are increasing their production, modernising their properties and building up their reserves against the day of stern competition which lies ahead. In India, on the other hand, the producer, and, in particular, the arabica producer is being squeezed out of business through erroneous policies and penal legislation, and, in what is designed to be a Welfare State, the sale proceeds of coffee are being diverted to the Central Exchequer to such a degree that no funds will be left with most estates to finance the welfare of their labourers. This diversion of the growers' funds to the Centre seems also to imply that the recent expressions of Governmental sympathy for the consumer is on the wane.

"Produce or Perish"

"The interest of the consumer and the producer can be combined, in fact, have to be combined, if both are to benefit, through an encouragement of production in India, an increase in exports from India and a sharing of the benefits arising from these exports. No plan for the development of our industry which could bring these benefits has ever been put forward by our Ministry, yet today India, as never before, has to produce or perish. The problem deserves attention which it should have received long before this.

"The main reason for the difficulties which have arisen so constantly between the producers and the Ministry must be put down to the mischance by which an agricultural subject is being dealt with by a Commerce Secretariat whose views have naturally always been related to the commercial exploitation of the fruits of our industry, never to the development of the industry itself. The trained agricultural approach which is so essential to solving our problems and which we would have received under different circumstances is inevitably lacking, whilst we remain as peculiarly placed as we are at present.

A Warning

"The differences between Government and growers represent the fulfilment of a warning given by Dr. Punjab Rao Deshmukh in October and are quoted below:

"'I fear that our attempts at the marketing of agricultural produce have all an atmosphere of isolation from the rural community, as it often appears to be an attempt to impose things from above. No structure which is not based on the co-operation of the parties concerned can be durable or expected to stand by itself.'

"As regards our estates, the result of our additional expenditure and the intensive work which has been done on them is really encouraging, and everywhere there is a real improvement to report. When reasonable and fair Government policies are again the order of the day, I am quite certain that our shareholders will have good reason to be satisfied with their investment.

"At Hunsur, they have had a very busy year. The crop cured was easily a record, and they expect to do better still in the coming season. The results of trading there also show an improvement.

Farewell

"This is the last year I shall be presenting the accounts and the reports to you and I am sorry that the former make such poor reading. As explained, the cause for this lies completely beyond our control, but, as the interest of all the States in the South are so deeply involved, I refuse to believe that our very real difficulties will remain for long unremedied.

"I must thank my fellow Directors for the thoughtful assistance they have always given to me, and our managers and staff for their excellent work in a year which has proved financially so disappointing to them."

(Concluded from page 71)

some 9 million tons of subsidiary foods, as detailed below, the major portion of which is directly consumed by the poorer sections of the population:

(Thousand tons, unless otherwise stated)

	1951-52
Crops	96
Papayas	895
Sweet Potatoes	1,682
Tapioca	1,850
Bananas	3,169*
Coconuts	1,701
Potatoes	3,037†
Groundnuts	

* Million nuts. † In terms of nuts in shell.

A confirmation of this conclusion is the keynote of the present food policy of the Food Minister, which has proved to be a complete success during its run of more than a year.

RESULTS OF MACNEILL-BARRY COAL COMPANIES DISAPPOINTING

STOCKS ACCUMULATE AND COSTS RISE

THE group of coal companies under the management of Messrs. Macneill and Barry Ltd., Calcutta, has had another period of disappointing results during the half-year ended 30th June, 1953. While raisings of coal during the half-year were higher than in the previous half-year, despatches were lower; consequently there was an accumulation of stocks. At the same time, the raisings and other expenses increased more than proportionately. The aggregate gross profit of the four companies, which had dropped from Rs. 43.82 lakhs in the half-year ended 30th June, 1952, to Rs. 31.50 lakhs in the subsequent half-year, has, therefore, shrunk further to Rs. 12.82 lakhs in the half-year under review, though the performance of individual companies vary. The total net profit for the latest half-year is no more than Rs. 1.17 lakhs, as compared with Rs. 8.77 lakhs and Rs. 15.15 lakhs, respectively, for the previous two half-years under comparison.

The dividend distribution of the Companies does not follow a uniform pattern. Thus, the Equitable Coal Co., Ltd., has pruned the dividend from 30 per cent. per annum, which it had paid for the previous two half-years, to 20 per cent. per annum, thus bringing it back to the level that prevailed five years before. The Hurriladih Coal Co., Ltd., has maintained the dividend at 15 per cent. per annum for the eighth half-year in succession. It may be mentioned here that, barring two half-years, the Company has repeated this dividend from the half-year ended 30th June, 1946. The Dhemo Main Collieries Ltd. and the West Jamuria Coal Co., Ltd., have passed over the dividend, the former for the second half-year in succession and the latter for the third half-year in succession.

Equitable Coal

To review the performance of individual companies. The raisings of the Equitable Coal Co., Ltd., amounted to 836,096 tons for the half-year under review, as compared with 830,430 tons for the previous half-year and 891,022 tons for the corresponding half-year of 1952. Despatches declined from 850,992 tons in the six months ended 30th June, 1952, 858,991 tons in the half-year ended 31st December, 1952, to 781,300 tons, due to deterioration in the wagon supply position. Stocks of coal at the collieries increased steadily throughout the half-year, at the end of which they stood at 171,782 tons, as compared with 114,986 tons at the close of the previous half-year and 145,547 tons as on 30th June, 1952. Sale proceeds of coal, which had declined from Rs. 483.54 lakhs for the half-year ended 30th June, 1952, to Rs. 395.42 lakhs for the six months ended 31st December, 1952, were further down at Rs. 396 lakhs. Cost of raisings and other expenses amounted to Rs. 393.94 lakhs, as against Rs. 368.02 lakhs in the previous half-year.

The gross profit for the half-year amounts to Rs. 10.26 lakhs, representing a drastic fall of Rs. 21.19 lakhs from that for the previous six months and of Rs. 27.78 lakhs from the profit for the corresponding six months of 1952. Managing agency remuneration has taken up Rs. 3.21 lakhs, as against Rs. 3.98 lakhs six months ago. Provision for depreciation has been reduced by half from Rs. 10 lakhs to Rs. 5 lakhs. No provision for taxation has been made, whereas, in the previous half-year, a sum of Rs. 5.50 lakhs was set aside. In fact, a sum of Rs. 2 lakhs has now been written back being the excess provision for taxation no longer required. No addition to reserves has been possible, while, in the previous half-year, Rs. 6.88 lakhs were utilised to supplement the various reserves. The 6 per cent. preference dividend has absorbed Rs. 12,000 and the ordinary dividend at 20 per cent. per annum Rs. 2.96 lakhs. After paying Rs. 18,504 to the Directors by way of commission, a sum of Rs. 2.82 lakhs has been carried forward, which compares with Rs. 2.11 lakhs brought in from the previous year.

Commenting on the results of the Company, the Directors observe:

"As foreshadowed in our last report, the Company's profits have been severely curtailed, mainly due to the cessation of demand from those temporary and distant markets which resulted from a world shortage of coal in recent years, and in which your Company participated to a very substantial extent. There is at present very little prospect of a revival of these demands."

Dhemo Main

The raisings of Dhemo Main improved from 72,897 tons for the six months ended 31st December, 1952, to 91,188 tons in the half-year under review, but the latter show a fall from 98,807 tons for the corresponding six months of 1952. The output, however, did not reach the level hoped for, according to the Directors. Unlike in the case of the Equitable Coal Co., despatches were higher at 87,029 tons than that of 71,993 tons for the previous half-year. They, however, compared unfavourably with 100,815 tons for the half-year ended 30th June, 1952. Stocks were considerably higher at 7,439 tons, as against 3,280 tons and 2,376 tons at the close of the previous two half-years. Sale proceeds of coal were better at Rs. 13.85 lakhs, as compared with Rs. 11.42 lakhs for the previous half-year, while expenses rose fractionally from Rs. 14.25 lakhs to Rs. 14.89 lakhs. The net result is a gross loss of Rs. 0.48 lakh. Though this compares favourably with the loss of Rs. 2.42 lakhs suffered in the previous half-year, it is nonetheless far from satisfactory. The Directors observe, in this connection, that the process of stabilisation of the underground workings at the colliery has continued, but conditions remain extremely difficult. After providing Rs. 39,129 (as against Rs. 33,062 for the previous half-year) for Managing Agents' remuneration, Rs. 57,386 (Rs. 57,386) for depreciation and Rs. 25,050 (*nil*) for sales tax, the Directors have written back Rs. 15,000 being the excess provision for taxation no longer required and withdrawn Rs. 1.50 lakhs (Rs. 3.50 lakhs) from the general reserve in order to wipe off the net loss and carry forward a small sum of Rs. 20,518 which compares with Rs. 24,455 brought in.

Hurriladih

The raisings and despatches of the Hurriladih Coal Co., Ltd., during, and stocks at the close of, the past three half-years were as follows:

(Tons)

	Half-year ended		
	30-6-53	31-12-52	30-6-52
Raisings ...	1,33,899	1,41,126	1,40,024
Despatches ...	1,34,263	1,53,382	1,30,646
Stocks	19,312	19,676	31,932

Raisings during the half-year under review were lower than in the previous two half-years. It was, however, possible to despatch the whole output with the result that stocks at the colliery as at the close of June last did not show any increase. The Company's production ceiling for the year 1953 was finally fixed by the Coal Board at 270,000 tons. The Directors consider that the colliery can be worked economically on this output. Any reduction in 1954, however, would, they say, have an adverse effect upon the Company's results. Sale proceeds show a decline from Rs. 22.50 lakhs in the previous half-year to Rs. 19.78 lakhs, as also expenses from Rs. 18.35 lakhs to Rs. 17.64 lakhs. The gross profit amounts to Rs. 2.48 lakhs, nearly the same as that of Rs. 2.53 lakhs for the previous six months. Managing Agents' remuneration has been cut from Rs. 60,756 to Rs. 53,954, while depreciation has been maintained at Rs. 32,435. A sum of Rs. 80,000 has been provided for taxation, as against Rs. 77,000. By taking credit for Rs. 13,818, being the provision for cesses no longer required, and bringing in Rs. 44,466, being surplus of the previous half-year, the Directors have been able to maintain the dividend at 15 per cent. per annum. This has absorbed Rs. 60,000. The Managing Commission on the dividend takes up Rs. 3,000, leaving Rs. 76,888 to be carried forward.

West Jamuria

Raisings of West Jamuria were higher at 76,189 tons, as against 70,784 tons and 71,946 tons, respectively, in the previous two half-years. The deterioration in the wagon supply position, however, had an adverse effect on despatches which, at 56,285 tons, compares unfavourably with 70,602 tons in the previous half-year and 69,289 tons in the corresponding half-year of 1952. There was, therefore, a sharp increase in stocks to 29,253 tons from 9,349 tons at the end of December, 1952 and 9,167 tons at the close of June last. Sale proceeds amount to Rs. 8.84 lakhs, as against Rs. 10.98 lakhs in the previous six months, while expenses show a rise from Rs. 10.81 lakhs to Rs. 11.34 lakhs.

The gross profit of the Company at Rs. 57,105 compares well with a loss of Rs. 6,217 for the previous half-year. Managing Agents' remuneration has taken up Rs. 26,594 (Rs. 31,950) and depreciation Rs. 41,441 (Rs. 41,441). After bringing in Rs. 5,814 and writing back Rs. 63,663, being the excess provision for taxation, the Directors have set aside Rs. 3,600 as provision for doubtful debts and have carried forward a surplus of Rs. 53,989.

The Directors report that since the close of the period under review, the wagon supply position has improved, resulting in a reduction in stocks. They add: "The Taltore seam at West Jamuria colliery has now been reached in both shafts. Development is proceeding as rapidly as possible and it is hoped to commence raising coal from this seam in January, 1954. Conditions continue to improve at Ackhalpur colliery and the prospects for the Company for the coming year are brighter than they have been for some time."

COFFEE LANDS AND INDUSTRIES (MYSORE) LTD.

It is a none-too-happy feature that the Coffee Lands and Industries (Mysore) Ltd. (Secretaries: The Consolidated Coffee Estates (1943) Ltd., Hunsur, Mysore State), the output of which during the year ended 30th June, 1953, was a record one in its history, should have earned in that year one of the lowest profits. Thus, whereas the Company's output of coffee during the year under review amounted to 404 tons 8 cwts., exceeding the previous record of 371 tons 17 cwts. in 1951-52, its gross profit aggregated only Rs. 2.47 lakhs, as compared with Rs. 5.32 lakhs, a drop of 53.5 per cent. Even in 1947-48, which was the leanest year for the Company in terms of both output and earnings, the Company could earn a gross profit of Rs. 1.55 lakhs on a crop of 168½ tons. This disappointing state of affairs was clearly due to factors that were beyond the control of the management.

Sale proceeds of coffee of the 1952-53 season amounted to Rs. 12.53 lakhs, as against Rs. 14.36 lakhs in the previous year. In addition, the Company received a sum of Rs. 1.35 lakhs, as against Rs. 1.26 lakhs, by way of profit on previous season's stocks. Receipts from Hunsur works where curing is done aggregated Rs. 3.48 lakhs, as compared with Rs. 2.53 lakhs in the previous year. Estate expenditure and other administrative expenses showed an increase from Rs. 13.01 lakhs to Rs. 15.14 lakhs. As regards appropriations, the provision for depreciation is higher at Rs. 1.11 lakhs, as against Rs. 1.01 lakh. While no provision for taxation had been made in the previous year, the Directors have set aside Rs. 35,350 for that purpose this year. The net profit amounts to Rs. 92,955, as against Rs. 4.22 lakhs for the previous year.

Commenting on the results for the year under review, the Directors observe in their report: "Were it not for the fact that there was a carry forward of profit on the previous year's stocks, the working of our estates for 1952-53 would have resulted in a loss, owing to the lower prices which have been fixed for coffee, this in spite of the fact that the crop for the year was the highest harvested to date." The Company received from the Indian Coffee Board on its crop Rs. 2-2 per point, as against Rs. 2-9 in the previous year.

After providing Rs. 45,000 (*nil*) for debenture redemption fund and paying the 5 per cent. preference dividend absorbing Rs. 52,030, the Directors could declare a dividend of no more than 3 per cent. as against 9 per cent. paid for the previous two years, absorbing Rs. 54,000 (Rs. 1.62 lakhs) leaving to be carried forward Rs. 90,358 (Rs. 1.54 lakhs).

The financial position of the Company can be judged from the following summary of its latest balance-sheet:

Liabilities	Rs.	Assets	Rs.
Capital ...	28,40,600	Gross block	30,95,909
Reserves and surplus ...	7,70,151	*Less*-Depreciation ...	3 71,255
Debentures ...	3,00,000		
		Net block ...	27,24,654
Provision for taxation ...	44,563	Stock-in-trade	10,04,850
Liabilities ...	13,22,251	Stores, spares, etc. ...	3,51,691
		Debts, deposits and advances ...	7,54,684
		Investments	25,940
		Cash ...	4,15,746
	Rs. 52,77,565		Rs. 52,77,565

TAXATION OF GOLD MINING COMPANIES

The tax problems of the gold mining industry have been discussed by Mr. M. A. Sreenivasan, Chairman of the Kolar Gold Mining Companies, in the course of his reply to the questionnaire issued by the Taxation Enquiry Commission. He has pointed out that gold mining in the Mysore State, where 95 per cent. of India's output of gold is produced, is probably the most heavily burdened industry in India. In addition to income-tax payable to the Central Government and a royalty, plus an additional royalty payable to the State Government, this industry has to make a further payment to the State called "contribution." This last mentioned levy, it is stated, absorbs 50 to 75 per cent. of the surplus over 6 per cent. on the paid-up capital. This levy is being collected in pursuance of an agreement between the Mysore Government and the Mining Companies executed in 1949. It would appear that, during the negotiations that preceded the said agreement, the Companies made representations that, if the industry was given the same treatment as other industries in the State and thus allowed to rehabilitate itself, and to intensify development, the Government would stand to gain a total sum by way of royalties and income-tax which would be several times larger, though spread over a longer period of years. During the longer period, the Kolar Gold Field and its population would be maintained together with the considerable indirect benefits and revenues derived by the State.

Excessive taxation prevents the exploitation of low grade ores. Mr. Sreenivasan has pointed out how the "pay-line—i.e., the grade of ore that just meets the cost of production—sternly and relentlessly decrees what shall be the ore that creates wealth and employment and what shall be condemned to lie buried fathoms deep for all the gold it may contain." The Mysore State, he observes, meets less than half of the annual demand for gold in India, the balance being met by smuggled gold. Every tola of gold produced helps to save foreign exchange, strengthens the nation's credit and also acts as a powerful anti-inflationary force. He has admitted that the effect has not been overwhelming, but it has not been insignificant either. Mr. Sreenivasan adds that "dwindling dividends of six, four and zero per cent. in a costly and hazardous enterprise which deals with wasting assets and must make provision for amortisation as well as continuous exploration, reveal the sorry state to which gold mining has been reduced in the Kolar Gold Field." He is of the view that "a fair and farsighted method" of taxing gold mining would be to have, in substitution of the numerous and onerous existing levies, only two, namely, (a) royalty payable to the State which is not *ad valorem* but is levied as a percentage of profits on a sliding scale (any *ad valorem* element may result in low grade ores being left unworked, which would be against the best interests of the State), and (b) income-tax payable to the Centre, according to revised system based on modern mining taxation practice in other countries where gold mining has been highly developed, and providing for depletion and amortisation allowances.

Points From The Chair

The Strange Picture of Coffee

"COFFEE presents a strange picture indeed today. World prices are high. Our rivals abroad are increasing their production, modernising their properties and building up their reserves against the day of stern competition which lies ahead. In India, on the other hand, the producer, and in particular the arabica producer, is being squeezed out of business through erroneous policies and penal legislation and, in what is designed to be a Welfare State, the sale proceeds of coffee are being diverted to the Central Exchequer to such a degree that no funds will be left with most estates to finance the welfare of their labourers. This diversion of the growers' funds to the Centre seems also to imply that the recent expressions of Governmental sympathy for the consumer is on the wane. The interest of the consumer and the producer can be combined, in fact have to be combined, if both are to benefit, through an encouragement of production in India, an increase in exports from India and a sharing of the benefits arising from these exports. No plan for the development of our industry which could bring these benefits has ever been put forward by our Ministry; yet today India, as never before, has to produce or perish. The problem deserves attention which it should have received long before this."

IVOR BULL,
Coffee Lands and Industries (Mysore) Ltd.

Control Over Tin will Retard Prospecting

"It is generally accepted by those best qualified to know, that the future of the Malayan tin industry will depend on the successful working of low-grade and, perhaps, deep areas. This is a matter of prime importance, not only to the mining companies but to the economy of Malaya as a whole and it is up to the Government to avoid entering into any arrangement which would again have the effect of preventing prospecting and new production. If Malaya is to maintain even its present relative position as a producer it is essential that the Government should take, as speedily as possible, all steps in their power to encourage not only the prospecting, but also the development, of new areas. There seems to be a considerable measure of inconsistency on the part of the Government; for, while stressing the necessity for prospecting, they are, at the same time, recommending the adoption of a control scheme which would, during the period of its operation, seriously retard the development of any new properties."

ERNEST V. PEARCE,
Malayan Tin Dredging, Ltd. and Southern Malayan Tin Dredging Ltd.

Development of Automatic Weaving

"The application of automatic weaving in the Lancashire cotton textile industry alone has risen from 26,000 to 42,000 looms in about five years. Automatic weaving in 1953 is about 13 per cent., as compared with 7 per cent. in 1948; this of total loom capacity. These figures are approximate; they illustrate a trend, and the indications continue favourable. . . . The loom is the integral part of a system that includes a wide and increasing range of ancillary machinery, and is an important section of the textile engineering industry that has made notable development in recent years.

JOHN HUNTER,
British Northrop Loom Co., Ltd.

Notice

SRI KRISHNARAJENDRA MILLS LIMITED, MYSORE

INTERIM DIVIDEND FOR THE HALF-YEAR ENDED 30th SEPTEMBER, 1953

AT THE MEETING OF THE BOARD OF Directors held on 26th December, 1953, the Directors have resolved to pay an interim dividend at the rate of Rupees two (Rs. 2/-) per share free of income-tax for the period of six months ended 30th September, 1953.

The transfer books of the Company will be closed from 31st January, 1954, to 3rd February, 1954, both days inclusive.

The interim dividend warrants will be posted on and after 22nd February, 1954, to all the shareholders whose names stand on the Register of members of the Company on 31st January, 1954.

By Order of the Board,
B. S. VISWESWARAIYA,
Secretary.

MYSORE, *26th December, 1953.*

MARKETING OF GROUNDNUTS IN INDIA

SOME SUGGESTIONS FOR IMPROVEMENT

FEW will deny that the revised edition of the *Report on the Marketing of Groundnuts in India*, published by the Directorate of Marketing and Inspection, Ministry of Food and Agriculture, Government of India (first published in 1940, which, however, included marketing in Burma also), is an interesting document. For it discloses how better returns can be secured to producers—this alone provides the stimulus for increasing the output of groundnuts—by effecting economics in distribution, cutting out wasteful practices and placing better quality seeds on the market. In this connection, the Report has highlighted the need for further development of oil-crushing industry. A striking feature of the Report is the review of futures trading in groundnuts, prior to its abolition in 1943, and suggestions for improving it, if the ban were to be lifted in future. This aspect of the Report is sure to attract considerable attention, as the Government has now established a new organisation, the Forward Markets Commission, for regulating forward trading in commodities in India including oilseeds. But a glaring snag is that the statistics on groundnuts contained in it are out of date, in that the latest figures relate to the year 1949-50.

A significant feature highlighted by the Report is the transformation in the trend of trade in groundnuts during the past four or five decades. Groundnut cultivation, which at the beginning of the century occupied only a minor position, has now assumed great importance and is playing a vital role in the country's economy. From being entirely dependent on export markets, virtually dictated to by exporters, groundnuts have, especially during the past decade, witnessed an increase in the internal utilisation from about 61 per cent. to 94 per cent. of total production. Such an increase has been made possible by a phenomenal development of the crushing industry in the country and ready market for the oil in the hydrogenated vegetable oil industry. This orientation in trade has also enabled the cake being retained in the country for manure or cattle feed. Unfortunately, the organisation of internal trade has progressed but little, despite the large increase in internal demand for groundnuts.

India is the leading country in the world in the production of groundnuts, accounting for over 26 per cent. Owing to their high fat and protein contents, groundnuts form a rich food. This explains its important place in the food budget of the Indian family. Despite its rich food content, the *per capita* consumption of 1.78 lbs. is very small. An increase in consumption can be effected by intensive cultivation of the crop by reducing the price charged to the consumer.

Improving Quality

The Report has recognised that this important industry needs to be placed on an efficient basis, with a view to deriving the maximum advantage alike to the producer and the consumer. It has, therefore, made a number of suggestions for improving the quality of nuts, as also for marketing the crop on scientific lines. With regard to improving the quality, the Report has recommended:

(1) Harvesting of mature nuts and proper drying and shelling;

(2) improvements in the crushing industry to produce oil of good and assured quality for export and internal consumption; and

(3) quality control of *kernels*, particularly H.P.S. types and oil through enforcement of compulsory grading under Agmark—intended for export to foreign countries.

For reducing the marketing costs and thereby increasing the cultivators' share in the consumers' price, the Report has proposed a serious of measures which include: (*a*) organisation of co-operatives, (*b*) distribution of improved seeds, (*c*) the pooling, decorticating, grading, storing, crushing and marketing of groundnuts and their products, and (*d*) the regulation of markets and market practices. Other steps recommended are standardisation of contract terms, improvement in storage and transport facilities and timely dissemination of market news.

In the section devoted to futures trading, the Report makes an interesting suggestion which deserves the attention of the trade as well as the Forward Markets Commission. It is suggested that, if the Government were to decide on withdrawing the present ban on futures trading in groundnuts, it would be advisable to have January, May and September as delivery months for settling futures contracts, instead of February, May and August as fixed by the trading organisations. The Report opines that this would help moderate the fluctuations in prices. The behaviour of February *delivery*, studied over a period of 12 years, has disclosed that it was subject to the maximum speculative activity, especially during earlier months of this contract, which commences in July. This is probably because the early arrivals differ widely in respect of moisture content. But the general rise in almost all the markets in January, and the subsequent tendency to fall in February, suggest that a January *delivery* will have the effect of smoothening fluctuations between January and February. This will also contribute to a more even distribution of the three deliveries over the year, as the interval between the August and February deliveries will be comparatively long. The shifting of August delivery to September is expected to help in moderating the fall in September by the arrivals of early varieties.

Futures Trading

The Report has brought out the relationship between the ready and "futures" prices over a period of years, in order to point out why a change in the delivery months as stated above is advisable. It observes:

"Before World War II, 'ready' and 'futures' prices generally moved close together and that, during the two periods, from July, 1933 to October 1934 and from August 1937 to September 1939, when average ready prices formed deep troughs, the average futures prices were invariably higher than the ready prices and apparently acted as a stabilising factor. The lower level of the February delivery quotations again exercised a stabilising influence, when ready prices soared high between July and October 1936. With the outbreak of the war in September 1939, the speculative tendency increased and the futures prices sky-rocketed. In 1940-41, when the ready prices registered a decline the futures prices maintained their high level and, except for a slight fall, appeared to be undisturbed. The futures prices during this abnormal period generally moved in sympathy with the ready prices, but the margin between them was as much as 5 to 7 times the ready prices.

"During the normal, i.e., the pre-war period (1931-32 to 1939-40), the February delivery was higher than ready on 136 occasions and lower on 105 occasions, that is, for every 8 occasions of futures being cheaper, they were dearer on 10 occasions. But, if 1931-32 and 1932-33 prices, when world prices of oilseeds were generally declining and February delivery prices appeared consistently below ready prices, are not taken into account, February delivery was dearer on 131 occasions and cheaper on 61 occasions, that is, for every one occasion of delivery being sold at a discount, a premium was obtained on two occasions. The May position was higher on 114 occasions and lower on 20 and August higher on 101 occasions and lower on 32. This shows that the futures market, apart from the stabilising influence, displayed, on the whole, a bullish tendency likely to encourage buyers for stock and was, therefore, advantageous from the point of view of cash prices.

"During the war period (September 1939 to June 1943), on no occasion the futures prices were below the ready prices. The stabilising influence of the futures did not operate during the abnormal times and the trade in futures became a mere gamble."

It may be noted that trading in groundnut futures is in respect of bold variety, which, in the pre-war period, formed only a quarter of the crop in Bombay State. This variety was probably selected for trading at a time when it formed a much bigger proportion of the production in Bombay. It is pointed out, in this connection, by the Report, that organised futures trading in Coromandels at Madras would help in bringing the influence of supply and demand and international values to bear more closely on Indian prices and would prove beneficial to producers.

COTTON

(*Concluded from page 70*)

carefully before they are imposed so that "agricultural commodities like cotton may be marketed more or less on a uniform basis as cotton is grown throughout the country."

There is no doubt that these duties do seriously impair, as the Association points out, the return to the grower. The Association urges that "the question which should be earnestly considered is whether raw cotton can bear all these duties." The question should be viewed against the background of the easier world supply position, on the one hand, and the need for increasing domestic cotton production in order to meet the growing demand for this commodity both from Indian mills and overseas importers, on the other.

INDIAN STEEL AND WIRE PRODUCTS MAINTAIN PROGRESS

ORIENT PAPER EARNS HIGHER PROFIT

Indian Steel and Wire Products Ltd.

THE directors of the above Company (Managing Agents: Messrs. Indra Singh & Sons, Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st March, 1953.

The net profit of the Company, after providing for income and super taxes and setting aside a sum of Rs. 20,98,023 (Rs. 12,92,290), on account of depreciation amounts to Rs. 13,68,386 (Rs. 13,44,755) and adding the amount brought forward from last year's account of Rs. 74,117 (Rs. 22,336) the total amount available is Rs. 14,42,503 (Rs. 13,67,091). Out of this, the directors have transferred a sum of Rs. 3,75,000 (Rs. 3,75,000) to reserve fund, leaving a balance of Rs. 10,67,503 (Rs. 9,92,091). Out of this sum the directors have proposed to declare dividends as follows:—

Dividend at the rate of Rs. 3 (Rs. 3) per share, free of income-tax, on 1,70,000 ordinary shares of Rs. 10 each, fully paid up, and at the rate of As. 4-9.6 (As. 4-9.6) per share on 26,580 ordinary shares of Rs. 10 each, paid up Re. 1 per share, absorbing Rs. 5,17,974 (Rs. 5,17,974) and a dividend at the rate of Rs. 2 (Rs. 2) per share, free of income-tax, on 2,00,000 deferred shares of Rs. 2-8 each, fully paid up, absorbing Rs. 4,00,000 (Rs. 4,00,000) leaving to be carried forward to next year's account Rs. 1,49,529 (Rs. 74,117).

There has been a slight deterioration in the working results for 1952-53. Once again during the year under report, the raw material prices were twice revised and enhanced by the Government and the cost of store materials went up considerably consequent on the Government of Bihar having compelled all suppliers all over the country to levy the Bihar sales tax on all stores consumed, in addition to the sales tax being paid on the raw materials for the last three years.

The reorganisation programme of the Rod Mill is nearing completion and the modernisation of the Wire Mills department including Nail Mills and Galvanizing Sections has been commenced and is being very actively pursued.

Relations with labour continued to be very cordial and harmonious. The directors have provided a sum of Rs. 4,75,000 for the year under report as annual bonus to be paid to the employees. The building of houses for the employees has been completed and now an additional 190 quarters are ready for occupation. The Company is building a school up to the Middle English standard for the children of its employees in close proximity of the residential colony and it is expected that this school will be ready shortly.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	22,26,580	Block ...	26,68,600
Reserves ...	1,65,38,593	Stock-in-trade	24,66,781

		Cash ...	1,09,59,429
	Rs. 3,14,76,285		Rs. 3,14,76,285

Orient Paper Mills, Ltd.

The directors of the above Company (Managing Agents: Messrs. Birla Brothers Ltd., Calcutta) submitted the audited accounts of the Company for the half-year ended 31st March, 1953.

After payment of the managing agents' remuneration, directors' remuneration and transfer of Rs. 20,00,000 (*nil*) to dividend equalisation account and providing for depreciation and taxation and taking into account the balance of the previous half-year, there remained a surplus of Rs. 8,22,942 (Rs. 7,64,206) which, the directors disposed of as under:—

Paid dividend on 20,000 preference shares at 5½ (5½) per cent. per annum, free of income-tax Rs. 55,000 (Rs. 55,000), dividend on 60,000 preference shares at 5½ (5½) per cent. per annum, subject to income-tax Rs. 1,21,688 (Rs. 1,21,688) and dividend on 4,19,500 ordinary shares of Rs. 10 each fully paid up at Re. 1 (Re. 1) per share free of income-tax Rs. 4,19,500 (Rs. 4,19,500) and carried forward Rs. 2,26,754 (Rs. 1,68,019).

The mills worked satisfactorily during the period.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	1,21,95,000	Block ...	2,57,57,294
Debentures	1,00,00,000	Stock ...	12,42,327

	Rs. 5,76,15,918		Rs. 5,76,15,918

Upper Ganges Sugar Mills, Ltd.

The directors of the above Company (Managing Agents: The Cotton Agents Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 30th June, 1953.

The profit and loss account, after payment of interest, managing agents' remuneration and providing for depreciation and taxation and taking into account the balance of profit of the previous year, showed a net profit of Rs. 3,21,668 (Rs. 3,32,529). The directors paid dividend on 12,000 cumulative preference shares of Rs. 100 each at 5 per cent. per annum, free of tax, Rs. 60,000 (Rs. 60,000), dividend on 15,000 cumulative preference shares of Rs. 100 each at 5 per cent., per annum, subject to tax Rs. 55,312 (Rs. 55,312), dividend on 80,000 ordinary shares of Rs. 10 each at Rs. 2-8 (Rs. 2) per share, free of tax, Rs. 2,00,000 (Rs. 1,60,000) and carried forward the balance of Rs. 6,356 (Rs. 57,216).

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	35,00,000	Block ...	34,11,553
Reserves ...	9,85,863	Stock-in-trade	73,11,470

Liabilities ...	90,16,067	Other assets	4,20,912
Profit and loss account ...	6,355	Debts, depositsand advances ...	18,28,887
		Investments	4,85,464
		Cash ...	1,20,723
	Rs. 1,42,79,375		Rs. 1,42,79,375

Oudh Sugar Mills, Ltd.

The directors of the above Company (Managing Agents: The Cotton Agents Ltd., Bombay) submitted the audited accounts of the Company for the year ended 31st July, 1953.

After providing for managing agents' commission, depreciation, taxation, etc., and taking into account the balance of the previous year there remained a sum of Rs. 9,16,774 (Rs. 5,51,464) at the credit of profit and loss account, which the directors disposed of in payment of a dividend on 77,485 ordinary shares of Rs. 100 each at the rate of Rs. 11 (Rs. 6) per share, free of income-tax Rs. 8,52,335 (Rs. 4,64,910), dividend on 36,100 4 per cent. taxable preference shares of Rs. 25 each at the rate of Re. 1 (Re. 1) per share less annas four and pies two for income-tax Rs. 26,699 (Rs. 26,699), dividend on 14,662 4 per cent. tax-free second preference shares of Rs. 25 each at Re. 1 (Re. 1) per share Rs. 14,662 (Rs. 14,662) and carried forward Rs. 23,078 (Rs. 45,193).

The sugar factory worked satisfactorily during the year though the cane crushed during the year was lower as compared to the previous year. The Vanaspati factory's working was also better as compared to the previous year.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	90,17,550	Block ...	1,68,14,215
Reserves ...	1,30,22,414	Stocks ...	73,48,151

Bharat Sugar Mills, Ltd.

The directors of the above Company (Managing Agents: The Cotton Agents Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 30th June, 1953.

The profit and loss account, after payment of interest, managing agents' remuneration, providing for depreciation and taxation and after transferring Rs. 1,50,000 (*nil*) to renovations and renewals account and taking into account the balance of profit of the previous year, showed a net profit of Rs. 2,52,119 (Rs. 2,84,180). The directors paid a dividend on 5,000 cumulative redeemable preference shares of Rs. 100 each at 5 per cent. subject to tax Rs. 18,437 (Rs. 18,437) and dividend on 1,50,000 ordinary shares of Rs. 10 each at Re. 1-8 (Re. 1-8) per share free of tax Rs. 2,25,000 (Rs. 2,25,000) and carried forward Rs. 8,681 (Rs. 40,742).

Accounts in brief were as under:—

New India Sugar Mills, Ltd.

The directors of the above Company (Managing Agents: The Cotton Agents Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 30th June, 1953.

The profit and loss account, after payment of interest, managing agents' remuneration, providing for depreciation and taxation, and transferring Rs. 2,00,000 (Rs. 7,50,000) to general reserve and taking into account the balance of profit of the previous year, showed a net profit of Rs. 3,78,102 (Rs. 3,57,263). The directors paid a dividend on 486 cumulative preference shares of Rs. 100 each at 9 per cent. free of tax Rs. 4,374 (Rs. 4,374), dividend on 10,000 cumulative redeemable preference shares of Rs. 100 each at 5½ per cent. subject to tax Rs. 40,562 (Rs. 40,562), dividend on 78,910 ordinary shares of Rs. 10 each at Rs. 2-8 (Rs. 2-8) per share free of tax Rs. 1,97,275 (Rs. 1,97,275) and carried forward Rs. 1,35,891 (Rs. 1,15,051).

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	18,37,700	Block ...	11,34,562

	Rs. 95,91,139		Rs. 95,91,139

Teekoy Rubbers (India) Ltd.

The directors of the above Company (Managing Agents: East India Agencies Ltd., Patna) submitted the audited accounts of the Company for the year ended 31st March, 1953.

The area of the Company's estate remains unchanged at 1,178 acres seedling rubber, 276 acres budded rubber and 416 acres reserve land. The crop obtained during the year was 4,73,909 (64,217) lbs. and the average price realised Rs. 130 (Rs. 126-8) per 100 lbs. Due to the increase in wages and other emoluments to labour fixed by the Government, the estate expenditure increased to Rs. 69 per 100 lbs. from Rs. 57-8 per 100 lbs. in the previous year.

The net earning of the Company after providing for all charges including depreciation and interest on debentures, was Rs. 2,03,551 (Rs. 2,55,187). To this was added the previous year's balance of Rs. 936 (Rs. 34,499) making a total of Rs. 2,04,488 (Rs. 2,89,687). Out of this amount, the directors paid the dividend at 6 per cent. per annum on preference shares for the year ended the 31st March, 1953 amounting to Rs. 36,000 (Rs. 36,000). This left Rs. 1,68,488 (Rs. 2,53,686) for disposal. The directors disposed of this sum by paying a dividend on ordinary shares at 9 (9) per cent. Rs. 90,000 (Rs. 90,000), transferred to reserve for taxes Rs. 70,150 (Rs. 87,750), and carried forward Rs. 8,338 (Rs. 936).

The price of rubber in the international market pivots upon the United States synthetic price. For years now, natural rubber has been competing with a Government-produced and priced synthetic. The decision of the United States Government to transfer the synthetic plants to private hands would pave the way for free competition between natural and synthetic rubber. It is however, universally agreed that the future world demand for rubber will be insatiable, absorbing all rubber that can be produced—both natural and synthetic. India has, as regards rubber, a closed economy, with the price fixed and import and export restricted. The present price of Rs. 138 per 100 lbs., will be in force for two years more.

Accounts in brief were as under:—

Provision for taxation ...	1,53,660	Debts, depositsand advances ...	16,662
Liabilities ...	9,76,837	Investments	1,12,181
Profit and loss account ...	8,338	Cash ...	1,13,727
	Rs. 32,38,135		Rs. 32,38,135

A. V. Thomas and Co., Ltd.

The directors of the above Company (Managing Director: Mr. A. V. Thomas, Alleppey) submitted the audited accounts of the Company for the year ended 31st December, 1952.

During the year, Company was able to work with considerably reduced overdrafts from banks. The income-tax assessment has been brought up-to-date but the Government have appealed against the order of the Appellate Assistant Commissioner of Income-tax wherein a sum of Rs. 60,856 has been allowed to the Company as capital profit or casual income which cannot attract tax. The question of taking over the assets and liabilities of Messrs. A. V. Thomas & Co., (India) Ltd., has been abandoned.

The profit and loss account showed a net profit for the year of Rs. 1,75,531 (Rs. 2,13,768). After providing for tax liability and the cumulative preference dividend already paid for 1952, the amount available for distribution amounted to Rs. 41,456 (Rs. 39,697) which the directors utilised in payment of a dividend of 10 (10) per cent. on ordinary shares of Rs. 10 each Rs. 20,000 (Rs. 20,000), dividend of 10 (10) per cent. on "B" class ordinary share of Rs. 100 each on 351 shares Rs. 3,510 (Rs. 3,510) and carried forward Rs. 17,946 (Rs. 16,187).

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	3,56,300	Block ...	4,41,790
Reserves ...	4,98,361	Stock-in-trade	1,81,568

		Investments	2,98,530
		Cash ...	1,25,089
	Rs. 22,39,255		Rs. 22,39,255

East Indian Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Jardine Henderson Ltd., Calcutta) submit the audited accounts of the Company for the year ended 30th April, 1953.

After making allowance for depreciation and full provision for taxation, the year's working has resulted in a net profit of £67,261 (£46,402) to which has been added the amount at credit of profit and loss account at 30th April, 1952, of £78,839 (£58,331) and surplus on provision for processes relating to previous years £1,949 (*nil*) making a total of £148,049 (£134,294). The directors have provided for taxation contingencies £12,315 (£10,455), leaving a balance available of £135,734 (£123,839). From this amount is deducted interim dividend for the year at As. 14 (Re. 1-10) per share on 2,40,000 (1,20,000) shares without any deduction for Indian income-tax paid by the Company on 31st July, 1953 £15,750 (£15,750) and final dividend recommended for the year at Re. 1-10 (Re. 1-10) per share on 2,40,000 shares, without any deduction for Indian income-tax paid by the Company £29,250 (£29,250) leaving a balance at credit of profit and loss account, to be carried forward, of £90,734 (£78,839).

Raisings for the year were 582,631 tons—a decrease of 15,162 tons on the raisings in the previous year. Despatches amounted to 550,754 tons compared with 544,401 tons in the year ended 30th April, 1952—an increase of 6,353 tons. The stock of coal at the collieries has decreased by 354 tons.

In the report dated 21st November, 1952, mention had been made about the Coal Mines (Conservation and Safety) Act, 1952 and the policy of Government of India to conserve metallurgical coal. One of the methods adopted for the purpose of conservation was pegging of output of metallurgical coal. In 1952, such pegging applied to selected A and B only. In 1953, this was extended to the next lower grades, viz., grade I and grade II.

The maximum output for the collieries of the Company, which produce only selected grades, was fixed at 600,000 tons in 1953 as against 601,000 tons in 1952. The Technical Advisory Committee of the Coal Board visited our collieries early in 1953 and inspected the workings and discussed the position with the Company's technical advisers.

The directors have received advice from the Coal Board that the Technical Advisory Committee has recommended that early steps should be taken by the Company for installing a stowing plant at Bararee Colliery. The recommendation of the Coal Board is receiving the attention of the directors and the colliery superintendent. Plans have been made out and tenders obtained. The estimated expenditure will be about £210,000. The recommendations of the Technical Advisory Committee for South Bulliari/Kendwadih Colliery are not yet to hand.

During the second half of the year under review, there was a certain amount of labour agitation in South Bulliari/Kendwadih Colliery where the Union recognised by the Company gradually lost the confidence of the workers and a new set of labour leaders endeavoured to establish a hold. Various demands were put up to the management which were considered unreasonable. A lightning strike took place at the colliery on 26th January, 1953. Finally, a strike notice was served on the management with the demands and the usual conciliation proceedings took place where the management expressed the view that the demands were unreasonable and without justification.

A strike started on 23rd February, 1953 and continued till 21st March, 1953 when Government of India referred some of the demands to the Central Government Industrial Tribunal at Dhanbad and prohibited the continuance of the strike. Work was resumed on 23rd March, 1953 and the raisings were normal in a short time. Later another of the demands were referred to the same Tribunal as a separate reference. The hearing of the two References have already taken place but the Awards of the Tribunal are not yet known. Both the strikes, viz., that on 26th January, 1953 and that from 23rd February, 1953 to 21st March, 1953 were held to be illegal under the Industrial Disputes Act by the Tribunal. Since resumption of work, labour relations at the colliery have been more satisfactory.

In July, 1952, the management decided to discontinue generating electrical power at Kendwadih Power Station for the collieries as it was considered more economical to purchase electrical power which was now available.

Accounts in brief are as under:—

HAWKER SIDDELEY GROUP LTD.

SIR THOMAS SOPWITH'S ADDRESS AT ANNUAL MEETING

THE Eighteenth Annual General Meeting of the Hawker Siddeley Group Ltd., was held on 6th January, 1954 in London.

During the course of his speech, Sir Thomas Sopwith, C.B.E., the Chairman, said:—

"The trading profits of the Group for the year ended 31st July, 1953, after deducting reserve for increased replacement cost of fixed assets, amounted to £5,033,744, as compared with £5,184,552 for the previous year. Both production and sales of the United Kingdom subsidiaries show an increase on last year. Our Canadian company, A. V. Roe Canada Ltd., has shown a very marked increase in production arising from its important contribution to the Canadian defence programme.

"Turning to the consolidated balance-sheet, you will observe that after the provision of £1,775,551 for depreciation, fixed assets show an increase of nearly £8 million. In addition to the acquisition of certain Crown assets in Canada, other substantial expenditure has been incurred in the United Kingdom. It is the policy of your Board to keep abreast of scientific and technical developments and constantly to modernise capital assets, so that our resources are in line with latest developments in production technique.

"With these considerations in mind, we have this year set aside an additional sum of £1 million out of the profits of the year to reserve for replacement of fixed assets and development, thereby increasing this reserve to £6 million. Last year, I said that high taxation restricted both expansion and replacement. Whilst your Board welcomes the reinstatement of initial allowances, this is merely a slight palliative in relation to the fundamental problem. Taxation allowances are still related to historical cost and take no cognisance of the increased cost of replacement. The already high level of taxation, without appropriate reliefs based on replacement costs, results in too large a slice of profits being taken away in taxation and it adds to the burden of industry faced with the constant renewal and improvement of capital equipment.

"Your Board is recommending a final dividend of 9 per cent., less tax, making with the interim dividend already paid a total dividend for the year of 15 per cent., less tax. This compares with a total distribution last year of 10 per cent., less tax. Whilst your Directors hope to maintain this dividend in future, I must sound a note of caution. Our enterprise is, as you know, a vital link in the free world's potential for defence and it is imperative that we must progressively replace our plant, if we are to maintain our position. This factor must always be in the forefront when we are considering our dividend policy and, indeed, it is only by constant replacement and improvement that we can hope to ensure continuation of future dividends."

Sir Thomas then moved on to discuss the many products and activities of the Group... the Vulcan Bomber, the Hawker Hunter, the Sea Hawk, the Gloster Javelin, the CF. 100 long range fighter, the Sapphire and Orenda jet engines, the Sapphire motor car, diesel engines, guided missiles, alloys, and Hawksley houses. He reviewed the current status of British aircraft and called for bolder research policy. He concluded with these words:—

"We are now moving rapidly into an age of new weapons, of atomic and thermo-nuclear power. Let us be bold. Let there be no hesitation. Let us stride into the future confident that we are already wresting from it that pioneering leadership which has ennobled us in the past."

The report and accounts were adopted.

COMPANY MEETINGS AND DIVIDENDS

SHANGRILA FOOD PRODUCTS LTD. Annual General Meeting, Bombay, 23rd January, 1954.

SOUTH KARANPURA COAL CO., LTD. Half-yearly General Meeting, Calcutta, 25th January, 1954. Dividend: As. 2 per share. Transfer books closed from 11th to 25th January, 1954, both days inclusive.

BIRDS INVESTMENTS LTD. Annual General Meeting, Calcutta, 25th January, 1954. Transfer books closed from 12th to 25th January, 1954, both days inclusive.

TREASURY BILL RATE HARDENS

(From Our Own Correspondent)

BOMBAY, 13th *January*

The week under review witnessed no significant change in the short-term money-market. The seasonal demand for funds continued to broaden, while there were no signs of the supplies enlarging, with the result that most of the banks had to seek the aid of the Reserve Bank of India or the Imperial Bank of India. The turnover was also small due to paucity of supplies. There was, however, no rise in the inter-bank call money rate, which remained unaltered at 2½ per cent. among the Exchange banks and big Indian banks and at 3 per cent. among the smaller Indian banks, with borrowers over.

Short-term deposits were keenly bid at 2¼ per cent. for periods ranging from 1 to 6 months.

For the second week in succession in the current year, the Government of India Treasury Bill rate rose to a record level of Rs. 2-7-11 per cent. per annum this week, an increase of 2 pies per cent. over the previous record of Rs. 2-7-9 per cent. paid last week. The amount tendered was a little over Rs. 1.21 crores, as compared with over Rs. 1.32 crores offered last week.

A rise of Rs. 22.61 crores in notes in circulation is the outstanding feature of the Reserve Bank's statement for the week ended 8th January, 1954, as compared with that for the previous week. Notes held in the Banking Department have dropped by Rs. 4.18 crores, with the result that the *total notes issued are higher by Rs. 18.43* crores. This rise is covered by an increase of Rs. 20 crores in foreign securities and a decline of Rs. 1.57 crores in rupee coin. In the Banking Department, deposits of the Central Government show a decline of Rs. 6.02 crores, deposits of other Governments Rs. 4.43 crores and those of banks Rs. 6.65 crores. Cash balances have shrunk by Rs. 4.27 crores and balances held abroad by Rs. 17.07 crores. Ways and means advances to Government have gone up by Rs. 80 lakhs and other loans and advances by Rs. 2.97 crores, of which Rs. 30 lakhs represent advances to Scheduled Banks against usance bills.

The Scheduled Banks' statement for the week ended 1st January, 1954, as compared with that for the previous week, records an increase of Rs. 3.13 crores in demand deposits and a decline of Rs. 37.61 lakhs in time deposits. Inter-bank borrowings are lower by Rs. 1.98 crores, while borrowings from the Reserve Bank are higher by Rs. 3.94 crores. Borrowings from the Imperial Bank show a drop of Rs. 53 lakhs. Advances and bills purchased and discounted have gone up by Rs. 4.84 crores. A decline of Rs. 7.39 crores is noted in investments. Cash on hand and balances with the Reserve Bank disclose an increase of Rs. 5.47 crores and balances with other banks in current account Rs. 3.10 crores. Money at call and short notice, on the other hand, has shrunk by Rs. 3.10 crores.

The Gilt-edged market was featureless, with hardly any developments of note. Conditions in the money market being stringent, the customary institutional investment demand was lacking. Most of the dated loans showed no variations in prices. The volume of business done was poor. The undertone, however, remained steady. 3 per cent. 1957 stood at Rs. 98-6, with no variation over the week. 3 per cent. 1958 were marked up by an anna to Rs. 98-1. 3 per cent. 1959-61 was dull at Rs. 96-2, 3 per cent. 1963-65 at Rs. 92-8, 3 per cent. 1964 at Rs. 92-7, 3 per cent. 1966-68 at Rs. 90-4 and 3 per cent. 1970-75 at Rs. 86-8. *3* per cent. 1986 Conversion Loan, however, came in for pressure and dropped 4s. 3 to Rs. 82-3. 3½ per cent. N.P. Bond was featureless at Rs. 98-14.

TEAS ACTIVE

(From Our Own Correspondent)

CALCUTTA, 12th *January*

Offerings during yesterday's export sale amounted to 56,400 chests. Very active conditions prevailed, and the best rise in prices were recorded. The strongest feature of the sale was B.O.P.s which realised prices As. 8 to As. 10 above brokers' valuations. Prices for fannings, medium broken and whole leaf grades were all very steady and were up by As. 7. Darjeelings were also in good demand, and prices improved by As. 3 to As. 4. The rates were: medium Assam B.P. Rs. 2-8 to Rs. 2-9, clean black pekoe Rs. 2-10 to Rs. 2-11, clean common B.P. Rs. 2-7, and best Assam C.T.C. B.P. Rs. 2-9 (nominal).

Steady conditions prevailed during last week's sale for domestic consumption. Prices were up as demand was strong. Dusts offered totalled 22,163 packages, of which the commonest varieties attracted the considerable attention of operators. Commons improved by an anna, and the improvement in the prices of other varieties ranged from ¼ to 1 anna above brokers' valuations. The rates were: best Assam C.T.C. Rs. 2-1 to Rs. 2-2, medium Assam grainy dusts Re. 1-14-6, and medium Dooars Re. 1-14. The leaf market was also buoyant, and prices improved by As. 2 above brokers' valuations. The quantity that was offered was 3,495 packages.

KIPS FIRM

(From Our Own Correspondent)

MADRAS, 11th *January*

The kip market has continued firm. U.K. importers have increased their prices by a penny to two, especially for medium and heavy kips, but the local market is still one penny above U.K. levels. Demand for buff calf has been insistent, but the prices have been 2d. below sellers' ideas. Enquiries for cow calf and buff heavies have been patchy.

In the tanned skins section, arrivals of goat skins have been small and shippers have been active buyers of the quantities arriving. There has been good clearance of sheep skins.

The next London auctions will commence on the 25th inst. About 525,000 tanned goat skins and 500,000 sheep skins are expected to be available for sale.

BULLION MOVES NARROWLY

(From Our Own Correspondent)

BOMBAY, 13th *January*

Narrow movement in prices characterised the trading on the Bullion Exchange during the week under review. The sudden revival of bullish activity in silver noted in the previous week persisted for a while early in the week under review, when the white metal touched a new high level for some *months. This, however,* was not sustained during the rest of the week, due to selling by leading bull operators. There was also some short-selling due to slow offtake both locally and from upcountry centres. There was, therefore, a break in prices from the week's best level. On balance, however, there was no notable change over the week.

So far as gold was concerned the most outstanding event of the week was the announcement by the Union Deputy Finance Minister, Mr. A. C. Guha, at a Press Conference on Thursday (7th inst.) evening, that the Union Government would shortly consider the question of disposing of the stock of refined smuggled gold with the Government mint worth about Rs. 2 crores. This statement gave a shock to the market on that day, but this happened late in the evening after the closure of the market. On the next day, however, the market quickly recovered, as operators felt that this was not the first time that such an announcement had been made and that even if the disposal were to materialise, it was not certain whether the gold would be sold to the public. The yellow metal was steady during the rest of the week, with movements confined to a narrow range, as arrivals and offtake were fairly even.

Silver for forward delivery (January settlement) began at Rs. 155-8 and appreciated to Rs. 156 on Friday. After sliding down to Rs. 154-14, forward silver came up to Rs. 155-9, but the closing was again lower at Rs. 155-3. Trading in the February settlement began yesterday at Rs. 156-3 and closed for the week at Rs. 155-14 today.

Ready silver (.996 Mint) was done at par with the forward rates for January settlement. The floating stocks of silver are estimated at 2,300 bars. The daily average offtake was no more than 15 bars.

Opening at Rs. 82-9, forward gold (January settlement) hardened soon to Rs. 82-15. In unofficial dealings, however, it came down to a low of Rs. 81-10. On Friday morning, official business was done at Rs. 82, but, as the week progressed, forward gold steadied up and closed at Rs. 82-13.

Ready gold was done at par with the forward rate almost throughout the week, but, at the close, it fetched a premium of an anna. The floating stocks of gold are reported to be 30,000 tolas. The *daily average arrivals were 6,500 tolas. The off*take was 6,000 tolas on an average.

The following comparative table shows the trend of the market during the week under review:

	13-1-54	Highest	Lowest	6-1-54

METAL PRICES ADVANCE

(From Our Own Correspondent)

CALCUTTA, 12th *January*

Steadier conditions were in evidence in the metal market during the week. Business put through was on a larger scale and was not confined to most of the principal base metals. This was so because consumers showed keen interest on considerations of manufacturing commitments. Against such a background, the somewhat poor advices from the United States relating to copper electrolytic had no effect whatsoever on the course of the local quotation which moved up from Rs. 166 to Rs. 172. The upward trend was greatly assisted by tightness in supply.

Virgin lead was also in good demand, and the price was for a time better at Rs. 65, but soon receded to the opening level of Rs. 64-8. Tin opened at Rs. 425 and was noted for an improvement by Rs. 8, but, as there was no fresh development in world markets to justify an upward trend, the local rate soon gave way to Rs. 423. Star metal antimony was unaltered at Rs. 210, and although imports of this metal are not permitted during the current licensing period of six months ending June, the price is not expected to show any visible change in the upward direction, as stocks are quite satisfactory. Mercury was priced at Rs. 560 a flask, but no business was reported.

LINSEED QUIET

(Messrs. A. Bradley & Co.)

CALCUTTA, 11th *January*

Despite generally firm undertone, the linseed market remains quiet and prices appear to be almost unchanged. Supplies from upcountry are very small, following restrictions on railway bookings, and sellers are rather hesitant, whilst buyers have not shown much interest, except at lower prices. The oil section is generally weaker, and the local demand has fallen considerably, despite lower offerings from sellers. Trading has been on a very small scale. Latest quotation is:— Ready Rs. 21-12 per maund.

COTTON STEADY

(From Our Own Correspondent)

BOMBAY, 12th *January*

There is little to write now about the forward market in cotton. In fact, there will be no point in writing anything about its behaviour, which in many respects is not unlike a *prima donna* who is moved by her moods and whose tantrums are incalculable and unpredictable. Whatever one writes about the trend in the futures market is likely to be rendered wrong and useless the next moment. The only known effective remedy for a young woman's hysteria is to let her alone and to ignore the malady. Possibly, this is the course followed by many a wise operator in Kalbadevi.

Let us, therefore, turn our minds to the spot market. Here at least there is some room for exercise of sober judgment. Gradually, the market's idea about the size of the crop has now definitely weered to a target below four million bales. Some cautious men in the trade would place it even at not higher than 39 lakh bales. Much will depend on the vagaries of the weather during the next week or two, though the present indications almost everywhere, apart from a uniform cry for more dew, are favourable. The present cold spell in Gujerat and in the North does not appear to have caused any appreciable damage to the standing crop. North and South Gujerat as well as Saurashtra are on the whole doing well. The output of Vijay in the Broach area is expected to be about 3,85,000 bales, while Surat will yield about 1,60,000 bales. The *Jarilla* crop with a little more dew will give a satisfactory yield. In the North, the cold weather seems to have helped the L.S.S., 320F, and 216F varieties. In the South, in Madras B1 and B2 zones, the staple varieties are progressing well and would do better with a little more rain. Nearer the Western coasts in Hubli and Dharwar, the condition of the crop is good, except for the Laxmi variety in some areas. This picture is certainly not as dismal as the market is trying to make out.

The present arrivals are, in most places, of a modest nature, whereas they should be much larger at this time of the year. There is an explanation for this. So much noise has been made during the last few weeks about the possibility of a much smaller crop than expected that producers are a little inclined first to hold on to a part of their cotton in hopes of better prices later on. This has also affected the quality of cotton which is arriving in the upcountry markets. There is a tendency to shift the poorer quality cotton and to take it up to the market, while retaining the better part of the crop at home. This is because the scramble, in which the mills engaged themselves during the last two weeks for Indian cotton, encouraged the cotton growers and the small traders in producing centres to believe that it was the best time to pass off poor quality cotton at remunerative prices. While this scramble on the part of the mills still continues, it is now getting a little selective and shrewd observers in the spot market believe now that the mills have bought a little more than their immediate requirements, this rush for buying will begin to taper off for some time. The domestic cloth markets are also fairly well replenished and a slight falling off in demand for coarse and medium cloth from this source can also be reasonably expected for some time. This would prevent the mills from acquiring cotton at the present rate. The busy season stringency in the money market will also begin to be felt now as more commodities come into the market, to reduce the buying fervour to a certain extent.

This is also noticeable in the diversion of the mills to imported cotton. East Africans are naturally greatly in demand and prices of Bushoas as a result firmed up by about Rs. 20 per candy on the opening day of this week. There is also renewed enquiry in Californians ready lots also at better prices. Egyptian Karnak for early delivery too is being sought after, especially by the Ahmedabad mills. Contrary to earlier expectations, India does not seem to have done badly about acquiring a good part of this year's East African cotton. It is now estimated that the purchases so far amount to about 1,40,000 bales and it is expected that we might obtain half of this quantity during the rest of the season, which would bring us over two lakh bales from this source.

Erratic conditions, with a steady undertone, characterised trading in the forward section of the local cotton market during the week under review. Thus, I.C.C. February opened the week at Rs. 696 and moved up to touch a high of Rs. 706 on 11th instant. Although it reacted to Rs. 690, on the following day, it recovered, on bull support, to Rs. 694 today. I.C.C. May fluctuated between Rs. 701 and Rs. 686½ before closing the week at Rs. 688½. The following is the trend of prices over the week under review:

		Opening	High	Low	Closing
I.C.C. Feb. ...	Rs.	696	706	690	694
I.C.C. May ...	Rs.	693	701	686½	688½

The following are the latest available quotations from the spot market:

Bengal *Deshi* Rs. 640; Berar *Jarilla* Rs. 780; Khandesh Rs. 845; Vijay Rs. 875; Oomra *Deshi* Rs. 700 and Moglai Rs. 695.

Karachi is practically out of the world picture at present. Perhaps, now that Sao Paulo stocks of surplus cotton have been fairly well absorbed by the Continental and U.K. buyers, their attention might turn towards Karachi in the coming weeks. However, a clearer picture for the disposal of Pakistan cotton will emerge only after American policy with regard to exports of this commodity is finalised. The following are the latest available quotations from the Karachi market:

Punjab *Deshi* Rs. 63 to Rs. 65½; Sind *Deshi* Rs. 67; 4F Punjab R.G. Rs. 63½ to Rs. 64½; S.G. Rs. 68½ to Rs. 70½; L.S.S. Punjab R.G. Rs. 68½; S.G. Rs. 74½; N.T. R.G. Rs. 68½ to Rs. 74; 289F Punjab R.G. Rs. 75; S.G Rs 81½.

At Alexandria, the emphasis during the week under review has been not so much on exports as on demand for local consumption. This has been fairly active both for Karnak and Ashmouni type. Now that the premia for the medium-staple Ashmouni and Giza 30 have come down considerably, foreign interest in these cottons might revive. In the meantime, moderately good business is going on with the U.S.A., U.K., India and the Continental buyers such as France and Switzerland. Japan too has been in the Alexandria market for some supplies. The Egyptian Government, though desirous of allowing some relaxations in the export trade, is naturally waiting for the U.S.A. policy announcement before giving expression to its own scheme. The present indications are that the authorities in Egypt are not likely to allow an increased acreage for cotton during the next season.

At New York, sentiment has naturally been ruling very firm. The forward market has been registering a rise almost every day during the week under review, with talks of building up a stockpile as a defence reserve. On the one hand, there is a talk of the biggest carry-over since the war at the end of this season; on the other, there are fears that there may be a tight supply position later in the season. The price trend will depend more or less on the varying emphasis which is placed from time to time on either of these two aspects and the changes which might be brought about later in the level of price support for 1955 cotton.

The following are the latest available quotations from New York as compared with those a week and a fortnight before:

(In cents per lb.)

	12-1-54	5-1-54	29-12-53
Spot	34.00	33.85	33.70
March	33.29	33.22	33.04
May	33.46	33.45	33.31
July	33.34	33.31	33.05
October	32.76	32.75	32.37

COTTON YARN LOOKS UP

(From Our Own Correspondent)

BOMBAY, 13th *January*

Steady conditions prevailed in the Bombay Cotton Yarn Market during the week under review. On encouraging advices from raw cotton and cotton piecegoods markets, yarn prices tended to look up. Improvement was particularly marked in yarns of 40 counts. Thus, Madura advanced by As. 8 to Rs. 26 per bundle of 10 lbs. Lakshmi and Meenakshi were also higher by As. 2 at Rs. 24-6 and Rs. 24-12, respectively. Among 10 counts yarns, J. Podar rose by As. 3 to Rs. 11-14. Colaba and Elphinstone were fully steady, the former at Rs. 13-2 and the latter at Rs. 12-8. 30 counts yarns also were steady, with Madura and Rajnagar continuing to be quoted, as last week, at Rs. 21-8 and Rs. 20-4, respectively, 20 and 80 counts yarns too were generally steady. Traders are somewhat of the view that the Central Government should grant some *ad hoc* quotas for exports of cotton yarns.

Dullness was the characteristic feature of trading in the art silk yarn market. In the absence of any encouraging development, business put through was greatly restricted and values fluctuated within a narrow range. Over the week, prices were more or less well maintained. Art silk yarn (150D) for January delivery opened the week at Rs. 746 and improved to Rs. 753 on the 7th inst. After receding to Rs. 748 on Saturday, the contract gradually rose to Rs. 751 today. At higher levels, profit-taking set in, and the contract finished a shade better at Rs. 745. In the ready section, 150 Japan lower at Rs. 4-4. 150 Italy was a shade gathered As. 2 to Rs. 4-4. 150 Italy was unaltered at Rs. 3-12½. 120 Japan was unaltered at Rs. 4-10. 120 Japan, on the other hand, lost an anna to Rs. 4.

The table below gives the prices of art silk yarn quoted today, as compared with those on the 6th inst. and 30th December, 1953:

	13-1-54	6-1-54	30-12-53
	Rs. a.	Rs. a.	Rs. a.
150 *January* (per case of 200 lbs.)	745 0	746 0	727 0
150 Japan (per lb.)	4 10	4 10	4 7
150 Japan ,, ...	4 4	4 2	4 1
150 Japan ,, ...	4 0	4 1	3 14
120 Italy ,, ...	3 12½	3 12	3 10
150 Italy ,, ...			

In the staple fibre yarn section, prices of Indian yarns (40/2) registered an improvement during the week under review. 40/2 century picked up an anna and a half to Rs. 3-14. Sitaram and New Great were done higher at Rs. 3-12½ and Rs. 3-13, as against Rs. 3-11 and Rs. 3-12, respectively, last week.

Traders in yarns are awaiting the amalgamation of the Yarn Merchants Association and the Bombay Yarn Exchange Ltd. An extraordinary general meeting of the two bodies has been convened to meet on 3rd February, 1954, when both the bodies will go into voluntary liquidation. A new association is expected to be registered by about the second week of next month.

GROUNDNUTS BULLISH

(From Our Own Correspondent)

BOMBAY, 13th *January*

The oilseeds market presented a mixed trend this week. Barring a few minor reactions on profit-taking at higher levels, the groundnuts section continued generally to rule bullish. The bull grip was so light that bears were almost nervous. Firmness in cotton, higher upcountry advices and low estimate of groundnut and *niger* crops, all combined to strengthen the long position of bulls. As a result, prices shot up and recorded sizable gains over the week. The linseed section, after an initial easiness, staged a recovery subsequently. There was lack of enthusiasm on the part of operators, despite free licensing of exports of linseed oil, on shipping bills, upto June, 1954. This was due to absence of overseas enquiries. The reports that the U.S. had sold linseed oil at £70½ per ton to the Continent and the U.K. dampened the enthusiasm of operators. In the castorseeds section, fluctuations were limited to a narrow range. Traders awaited the export policy for the first half of 1954. The statement of Mr. Eisenhower indicating that the U.S. had large stocks of vegetable oil was not conducive to push prices further up. Spots were quietly easy. The *niger* section put on an upward trend, following the free licensing of exports of the seed and oil, on shipping bills, upto end of June, 1954. But free licensing of *kardi* seed and its oil did not have any notable effect on the market. First, this is because there is no stock of the seed in the market. Secondly, February-March delivery in *kardi* seeds commenced only three days ago, and the demand for them from abroad is negligible.

The groundnuts section presented an excited appearance. The terminal markets were bullishly disposed of. The speculators who were long tried to maintain their position. The producers are reported to hold back their sales in anticipation of higher prices. The producers adopted this go slow policy, because they wanted to avoid the repetition of their experience. The prices continued to rise. Khandesh quality shot up from Rs. 34-10 to Rs. 36-4. Bold F.A.Q. which opened at Rs. 34-14, as against Rs. 34-4, shot up to Rs. 36, on the 8th inst. But, on profit-taking, it gradually declined to close at Rs. 35-10. But, over the week, it made a gain of Re. 1-6. December-January ruled generally firm and it disclosed a gain of Re. 1-3 at Rs. 35-10. February-March was higher by Re. 1 at Rs. 35-10. Groundnut oil ready and railway receipt rallied Re. 1-2 to Rs. 18-10 each. January, February and March were done at Rs. 18-10, Rs. 18-1 and Rs. 18-15, as against Rs. 17-14, Rs. 18-1 and Rs. 18-4, respectively.

The Government of Rajasthan is reported to have reduced customs duties on oil produced by oil mills by 50 per cent. It has reduced inter-State duty on export of *til* oil from Rs. 7 per maund to Rs. 3 per maund. Mustard oil will be charged Re. 1-8 per maund.

In the linseed section, better crop prospects and discouraging overseas advices neutralised the salutary effects of free licencing of exports of linseed oil. As a result, business reported done was very little and price fluctuations limited to a narrow range. After minor fluctuations, Bold ready closed the week at Rs. 29, the same as at the end of last week. February-March gained As. 2 to Rs. 25-4. Linseed oil lost As. 6 to Rs. 15-12.

In the castorseeds section, May delivery, which opened at Rs. 111-8 as against Rs. 110, oscillated between Rs. 114-14 and Rs. 111-14, before closing at Rs. 114-2. F.A.Q. lost As. 12 to Rs. 24 and Madras As. 4 to Rs. 24-12. Castor oil Commercial eased from Rs. 13-10 to Rs. 13-6 and I Pressure from Rs. 14-8 to Rs. 14-4.

Niger F.A.Q. shot up from Rs. 28-4 to Rs. 30 and Madras from Rs. 29 to Rs. 30-8. Despite discouraging overseas advices, the market is firm, because of prospects of a short *niger* crop. Ethiopia is reported to have offered *niger* seeds to the Continent at cheaper rates. *Kardi* February-March was steady at about Rs. 24-8.

The following table shows the prices of oilseeds and oil on the 13th inst. as compared with those on 6th January, 1954, and 30th December, 1953.

	13-1-54	6-1-54	30-12-53

SUGAR RECOVERS AT CLOSE

(From Our Own Correspondent)

BOMBAY, 13th *January*

The easy conditions that prevailed in the Bombay sugar market in the past three weeks persisted during the initial sessions of the week under review also. The chief bearish factors that affected the market were: (1) Further release of domestic sugar produced during the fortnight ended 31st December, 1953. (2) arrivals of another consignment of Cuban sugar per s.s. *Marcella*, and (3) definite reports regarding arrival of East German crystal sugar per s.s. *Everest* on the 14th inst. Selling pressure that ensued as a consequence resulted in a fall in prices. There was some distress selling in Cuban sugar at rates much below landed cost to tenderers, the quotation at one time having touched a low of Rs. 35-12 per 100 lbs. net, as against Rs. 36-8. In sympathy, British refined sugar eased from Rs. 84 to Rs. 82-8 per bag of 2 cwts. Indigenous sugar also suffered a loss, the quotation for *Posh* delivery declining by As. 8 to Rs. 81-4 per bag.

The downward trend, however, was somewhat halted in the later sessions of the week, when, on reports that no further imported sugar would be reaching Bombay before mid-March next, both foreign and indigenous sugar staged a recovery. Reports of higher prices for *gur* also strengthened this sentiment. Cuban sugar recovered to Rs. 36-6 per 100 lbs. and British refined sugar to Rs. 84-4 per bag, which more or less correspond to the previous week's closing rates. Among the indigenous sugar in the forward section, *Posh* delivery moved up to Rs. 82-4. Not only the previous loss was completely erased but the quotation was higher by As. 6 as compared with last week. *Maha* delivery, which had dropped to Rs. 82-8 early in the week, improved to Rs. 84. Over the week, spot sugar prices were generally lower. Small and large grain sugars lost a rupee each to Rs. 92 and Rs. 98 per bag, respectively. Medium sugar, however, was fully steady at Rs. 95.

Arrivals of indigenous sugar into the Bombay market during the week under review amounted to 16,000 bags.

With the deliveries of sugar per s.s. *Everest* in Bombay and arrivals of a couple of shiploads into Madras and Calcutta, import of about 250,000 tons, as originally programmed by New Delhi, will be completed.

UNCERTAIN TREND IN PEPPER

(Messrs. Parekh & Co.)

BOMBAY, 13th *January*

In the earlier part of the week, Malabar black pepper at Alleppey ruled steady at round about Rs. 1,900 under the pressure of buying by the exporters to cover their requirements for shipments by a couple of steamers due to sail for the U.S.A. during the week. Almost all the incoming peppers was taken up. In the later part, however, the market turned easy and the prices came down to Rs. 1,800, exporters having withdrawn. Arrivals at Alleppey during the last two days amounted to 400 *candies*, while sales failed to go beyond the poor figure of 100 *candies*. With such a sporadic demand from New York at this time of the season, when day-to-day arrivals in the primary centres are increasing, India may not be able to hold its own. The trade in India is reported to have been on the horns of a dilemma and is unwilling to take a definite view of the market either way; for if the merchants take a bearish view of the market and sell short, there is a fear of being caught at the time of shipment in case growers refuse to sell for one reason or another. Conversely, they are unwilling to go long, fearing the pressure of increased arrivals which, if not fully absorbed, may act as an unhealthy factor for the market. The present hand-to-mouth buying by the U.S. will keep New York market steady and the dealers there will be enquiring, though to a small extent, for goods by named steamers or for early shipment only, thus stopping the market to find a healthy level to attract free foreign buying. If the growers, misled by such foreign buying, continued to withhold sales during February-March, it is feared that they might miss the bus and may be forced to sell in competition when Sarawak and Lampong crops start moving during the month of May and onwards.

In the A.S.T.A. section, January was done from $0.86 to $0.87½, February from $0.86 to $0.85, March from $0.85 to $0.84 and April-May-June from $0.85 to $0.83, prominent sellers being long interests who accumulated contracts under the expectation of heavy purchases by Russia. Russia is reported to have purchased 400 tons only and the steamer from the U.S.S.R. which was to carry this parcel during January is now reported due at Cochin during the latter half of February.

The trend at New York is also reported uncertain in view of the fear of impending dock strike and under pressure of sales of unsold parcels of Malabar and Sarawak pepper.

In the delivery section, the market is weak as trade is expecting accumulation of stock in view of poor demand from Calcutta.

Following are today's nominal quotations:— Ready delivery Rs. 210-30 per cwt. February delivery Rs. 1,530-50 and March delivery Rs. 1,520-40 per candy of 5½ cwts.

TEAS FETCH HIGHER PRICES

(Messrs. Forbes, Ewart and Figgis Ltd.)

COCHIN, 9th *January*

The first dust sale of the new year, which was held on Monday, 4th January, comprised approximately 3,18,000 lbs. There was a very strong general demand and prices advanced As. 3 to As. 4 for all types.

Export Quota.—Business has been done at 38½ pies and there are sellers at this price.

Forthcoming auctions.—Dust Sale "B" will be held on Monday, 25th January, at 10 a.m.

The total offerings in Sale No. 1 which was held on Tuesday, 5th January, 1954, amounted to *approximately 13,25,000* lbs. *Quality* showed all-round improvement and there were some attractive, flavoury high-grown teas on offer. The sale opened to a very strong general demand with advances for all types. Commonest kinds were irregularly As. 2 dearer, as were low medium brokens and fannings. Medium and good medium brokens were As. 1 to As. 2 dearer, but similar fannings did not register the same advance. Best liquoring brokens and fannings were irregularly dearer and met with keen competition. Whole leaf grades, particularly O.P.'s, were As. 3 to As. 4 dearer and there was a much stronger demand for pekoes and flowery pekoes. The following were the quotations:—

	1954	1953
	Rs. a. p.	Rs. a. p.
Low-grown Travancore B.O.P.	2 1 6	1 2 0
Medium grown Travancore B.O.P.	2 3 0	1 8 0
Anaimallais B.O.P.	2 6 0	1 14 0
Best liquoring Nilgiri B.O.P. ..	3 3 0	3 2 0
Well made black leaf O.P. ...	2 7 6 to 2 2 0	2 1 0

STOCK & SHARE QUOTATIONS

Abbreviations:—D=Deferred shares. P.O.=Preferred Ordinary shares. Y=Accounts published yearly. H=Accounts published half-yearly. P=Company has Preference shares. T=Company has Debentures. N=Nominal quotation. x.d.=Ex-Dividend. c.d.=Cum. Dividend. i=Interim Dividend. f=Dividend for first half of the year.

Shares:—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery, and all other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends.—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year, they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly, dividends shown are for their financial year. Where, however, the accounts are closed half-yearly, dividends are shown separately for the respective half-years.

* Including bonus. † Sales and amount written off. (b) Investments. ‡ For ten months ended 31st December 1951.

* The following explanatory notes relate to the abbreviations and marks shown on page 100 in the debentures section :—

(a) Option to repay on six months' notice, on any interest date after 31st December, 1951, at 102 per cent. Also redeemable out of a cumulative sinking fund of 1½ per cent. per annum (commencing in 1938) by drawings at 102 per cent. or by purchase at or 102 per cent.

(c) Option of repayment at any time at 5 per cent. premium.

(b) Bearer bonds of Rs. 1,000 each repayable at par.

(e) Bearer bonds of Rs. 1,000 each repayable on 31st July, 1959,

(d) Bearer bonds of Rs. 1 000 each with option of redemption in whole or in part at par on 30th June, 1952 or on any subsequent interest date at one month's notice.

(e Returnable on or after 31st July, 1950, at Rs. 102-8 or at par after 31st July, 1955 on six months' notice in each case.

(f) Bearer bonds of Rs. 1,000 each with option of redeeming on 3 months' notice at 5 per cent. premium after 1st March, 1954, but before 1st March, 1957, and 3 per cent. premium on or after 1st March 1957

(g) Option of redemption on or after 1st July, 1949, at par.

(h) Option of repayment at any time at par at any time on or after 30th June 1947 on six months' notice.

MARKET GOSSIP

(Concluded from page 59)

scheduled to be held at the end of this month at which I hope, a suitable plan for the implementation of the various welfare measures contained in the Act will be drawn up."

* * * *

With the deliveries of foreign sugar, which have been effected in Bombay, and the prospective arrival of a couple of more shiploads, scheduled, for Calcutta and Madras, the Government of India would soon be completing its import programme of 250,000 tons of sugar. And yet, it is doubtful if these imports, on which the Government relied so much in order to bring the sugar prices down to a reasonable level, have served the purpose for which they were intended. The sugar factories continue to charge Rs. 29 per maund, and not Rs. 27 per maund, ex-mill, at which rate, it was once believed, they would be compelled by these developments in the sugar import front to sell their sugar. It is true that one reason why sugar prices have not fallen is the expected shortfall in production for the 1953-54 season. The output is estimated at 1,200,000 tons, as against 1,316,000 tons in the 1952-53 season. But this does not explain fully why the policy of importing sugar has not succeeded in effecting a sizable decline in the prices for domestic sugar. It seems clear that, if the Government wanted to utilise the imported sugar to force domestic prices down to a more reasonable level, it ought to have gone about the business in a more realistic manner. Had the Government marketed its sugar in the *gur*-consuming areas, there might have been a curb on *gur* prices and thereby on *gur* manufacture. This would have diverted larger quantities of cane to sugar mills which might then have been enabled to manufacture and market their sugar at lower levels. The Government chose instead to market the imported sugar at port centres. Since this did not penetrate to the interior, particularly to the *gur*-producing countries, there was no marked fall in *gur* prices. And past experience shows that, so long as *gur* prices rule firm, there can be no substained fall in sugar prices.

MARKET REPORTS

(Concluded from page 89)

London Market.—Monday, 4th January sale: Market 1d. to 1½d. dearer.

Wednesday, 6th January sale: Today's market 1d. dearer.

Colombo Market.—Active demand. High-grown brokens generally dearer, following quality. Mediums advanced 5 to 8 cents. Low-grown and commonest ten cents dearer.

Calcutta Market—Export.—No sale this week.

Dust.—22,000. Strong demand. Market opened firm to half an anna dearer all round, but strengthened as sale progressed. Commons strongest feature.

Export Quota.—There has been an easier tendency and business has been done at 36 pies.

Forthcoming auctions.—Sale No. 2 will be held on Tuesday, 19th January.

SLIGHT RECESSION IN JUTE GOODS

(From Our Own Correspondent)

CALCUTTA, 12th *January*

A slight recession in prices characterised trading in the jute goods market during the week under review. The undertone was, however, steady, as confidence in the outlook for the future was not lacking. Purchases of both sacking and hessian for export were poor this week, and this factor accounted for the decline in prices. There was no alarm among the stockists, as more activity was to be expected. An impressive increase in the consumption of jute goods during 1953 is reported from Great Britain also, where the attempts of mills to oust substitutes among large industrial consumers were crowned with success. As an index, Dundee reports have reached the beginning of the New Year with a backlog of plenty of orders. Although Dundee mills have raised production, installed more automatic looms and made a beginning in reducing output costs by revising the wage structure, it is reasonable to expect that Indian mills would also be benefited by the increase in British demand for jute goods. In a similar manner, the expected decontrol of jute goods in Britain is looked forward with interest by Calcutta exporters. Although the earlier news that Australia would withdraw control on the jute goods import trade has not yet become a reality, the anticipation that Australia would increase import of jute goods from India is considerably strengthened by the reported poor stocks of woolpacks and cornsacks held in Australia. These factors encourage the hope that no difficulty would be experienced to find buyers for all the sackings that the Indian mills would be producing. And it is to be remembered that output of sackings has been progressively reduced during the past year or so by transferring looms to hessians, after taking into consideration the fall in demand from the Far Eastern markets.

As regards hessians, large orders are expected from Argentina this year also. The increase in American burlap consumption for commercial purposes during 1953 is expected to be maintained, and the news that the Indian Jute Mills' Association would send another goodwill mission to the United States and that the Association was considering a possibility of having a technical unit in America to find new industrial uses for burlap encourages the hope that in hessian also marketing of production would be smooth and that unlike last year mills would not have to carry huge stocks. It is in view of these considerations that, although business this week was poor, the undertone in both hessians and sackings was steady.

Last Tuesday, ready hessians 40" 10 oz. opened at Rs. 46-4 from an overnight rate of Rs. 46-6. During the next two days, the price fell to Rs. 45-8 as the only business that was put through was a small quantity with British buyers. Buyers on behalf of the United States kept off the market, as prices for both spot and futures in New York were receding. In addition, there was pressure from the local *fatka*. Friday's fractional improvement to Rs. 45-9, following the publication of stock returns, according to which the reduction in hessians held by mills as at the end of December amounted to 200 tons, was not maintained over the week-end, when the quotation was Rs. 45-6. However, at this stage, some business was put through with America. Follow-up demand was lacking, and the sagging to Rs. 44-6 yesterday was not surprising, with the *f.o.b.* rate at Rs. 48-7. The eight ounce hessians were quoted at Rs. 36.

There was an unwelcome increase in stocks of sackings, as at the end of December, by 1,500 tons. This news was made use of by *fatka* operators to push down the rate of B. twills to as low as Rs. 104-12 from Rs. 105-14. However, covering demand soon not only made good the loss but caused a gain at Rs. 106-8. The rate on Saturday was fractionally lower at Rs. 106-4. Yesterday the rate was as low as Rs. 103.

The raw jute market trod a lethargic line, as support from mills was guarded and finalisation of business was only for small quantities. Mills are in no mood to make hasty purchases, as they expect no difficulties to buy at any time as much as they need. Reports of an imminent shortage are discounted, while it is felt that any sign of unusual interest from mills might put up prices. For all these reasons mills would buy as sparingly as possible, as any disturbance in the upward direction to the present competitive nature of quotations for jute goods would have unwelcome effects. In transactions, northern bottoms fell to Rs. 28-8 from Rs. 29, and Assam bottoms gave way to Rs. 27-8 from Rs. 29. Interest in *Bimli* f.a.q. continued but the rate realised was lower at Rs. 25. Indian NC cuttings at Rs. 70 a bale lost by Rs. 3. Other latest quotations: Dalsee bottoms Rs. 30-8, Murshidabad bottoms Rs. 26, Western bottoms Rs. 25-8, *Jungli* bottoms Rs. 25, Orissa bottoms Rs. 29-8, Uttar Pradesh bottoms Rs. 25-8, and Pakistani northern bottoms Rs. 28-8.

FOODGRAINS QUIETLY STEADY

(From Our Own Correspondent)

HAPUR, 12th *January*

The Government of India's decision to decontrol coarse foodgrains, millets and gram with effect from the 1st inst., has had general reactions on the markets all over India. The decision has been welcomed in trade circles and private trading in millets has already been taken in hand. Uttar Pradesh has given the lead and is being followed by Punjab and Andhra. Madhya Pradesh is being tapped for

VOL. LXXXVIII. No. 2240 BOMBAY, 23 JANUARY, 1954 PRICE Rs. 1,8

THE SYDNEY CONFERENCE

CONFERENCES of Commonwealth Governments, whether they are political or economic, have always been a colourless affair so far as the general public is concerned. No exciting developments or revolutionary decisions emerge from these high level talks. They cannot be otherwise, for such conclaves have no power to commit countries to any specific action, since each of the participating countries is a sovereign State. They merely exchange views and arrive at broad decisions on subjects of common interest. The seven-day Conference at Sydney, attended by the Finance Ministers of all the Commonwealth countries, was no exception to this special feature. If the reports that prevailed both before the Conference began and after were to be believed, the Commonwealth Ministers must have decided to abandon the G.A.T.T. and strengthen Imperial Preference, pitting the sterling area against the dollar area; they must have also taken a gloomy view of the outlook for international trade. But nothing of this sort has happened. Though we do not know what the Ministers spoke at the Conference, the lengthy joint communique issued by them—the full text of this is published elsewhere—reveals that they still believe in expanding world trade, in securing freedom from exchange control and import restrictions, in co-operating with the U.S. and in the continuation of the G.A.T.T. It also shows that they have dispersed in a spirit of subdued optimism. Indeed, in refreshing contrast to the crisis atmosphere that faced the Ministers when they met two years earlier, the Conference has ended in a note of confidence in the Commonwealth's ability to increase production and widen export markets.

The purpose of the Sydney Conference was to take stock, to consolidate, to reaffirm and to strengthen future plans. Its outcome is that at no time was the Commonwealth more united than at present in its determination to bring about freer trade and convertibility of currencies, to eschew restrictive practices, controls, etc., and to follow sound internal economic policies. The keynote of the Conference was struck by the Australian Prime Minister, Mr. R. G. Menzies, when he said: "We have freed ourselves from the false propaganda of 'sterling versus dollars,' 'Commonwealth versus the rest.'" The Conference has expressly reaffirmed all the objectives which the Ministers set for themselves in January, 1952, and amplified in December, 1952. It has again rejected the view that "any solution of our problems can be found in the creation of a closed system of discriminatory arrangements, which could lead only to chronic restrictions and recurring crises."

The Commonwealth Ministers did well to reiterate this view, for, in recent months, the failure of the U.S. to take energetic measures for enabling the rest of the world to trade with it more freely has engendered a feeling of despondency and strengthened the hands of votaries of Empire Preference not only in Britain but also in certain Commonwealth countries, such as Australia. While the delay on the part of the U.S. to clarify its attitude regarding access to its markets is regrettable, it would have been absolutely foolish if the Commonwealth had decided to pursue a policy of isolating the dollar area and achieving self-sufficiency for the sterling area as a whole. For the Commonwealth needs America as much as America needs the Commonwealth. Further, any stress on Imperial Preference at this stage would amount to weakening the hands of those liberal elements in the U.S. which are fighting for relaxation of tariffs and customs barriers. It would have also led to needless complications in the economic relationship of Commonwealth members with Japan and Continental countries, in fact, with all the countries that belong to the family of free nations.

There has, however, been a shift of emphasis in one of the chief objectives of the Commonwealth. Convertibility of currencies is no longer the immediate goal to be achieved at any cost. The emphasis is now on increased production, rapid development of Commonwealth resources but on sound economic lines, achievement of a surplus in trade not merely with the U.S. but with all non-sterling countries, and removal of import restrictions at least in regard to inter-Commonwealth trade. The significance of this change in emphasis is clear. The Commonwealth does not aim at self-sufficiency as a group, but it wishes to be solvent and self-reliant. Increased production is necessary to maintain employment, to expand exports and to raise living standards. If more cannot be exported to the U.S., an attempt should be made to export to other countries. Economic activity in the U.S. in 1953 was at its peak and it is doubtful whether it could be maintained at that level for ever. A slightly downward readjustment is, perhaps, as much in the interest of the U.S. as it is in that of other countries. Since the war, there has been a phenomenal rate of growth in the American economy based on armament programme which must, one day or another, pass its peak and stabilise at a normal level. It is, therefore, positively desirable that there should be a pause in U.S. economic expansion, so that a readjustment could be made, based on the more reliable, natural and long-term pattern of consumer demand. Accordingly, prudence demands that other countries should try to reduce their economic dependence on the U.S. by cultivating new sources of raw materials and outlets for finished goods.

Fortunately for the Commonwealth, as well as for European countries, there are some welcome signs of developing their trade with Russia and other Communist countries in East Europe. In recent weeks, this part of the world has shown an inclination to buy goods which the former countries are in a position to spare and for which it is prepared to make payment in gold. Russia wants food, agricultural raw materials, consumer goods, and plant and machinery for making such goods. Sceptics there are in plenty who feel that the scope for trade with the 'East,' by which they mean countries east of the Iron Curtain, is very little and that these countries have no surplus production to pay for imports. There may be something in what they say. But it is generally believed that Russia has plenty of gold and that it wants to increase the supply of such goods as clothes, boots and other things, so that the workers and farmers in the Iron Curtain countries may have the necessary incentive to increase their production. Some Continental bankers, too, feel that Russians are really embarking on a new commercial policy, brought about by the political necessity of satisfying the needs of the home market. This is a hopeful change in the Russian attitude which provides a chance for doing business. Whether or not it can amount to much does not matter. There is no reason why resumption of trade with Russia and the countries under its influence should not be regarded as part of the move for peaceful co-existence which the Berlin talks are designed to seek. Two points of contact with the Russians, as a British contemporary, the *Daily Herald*, admits, will be better than one. That the British business community also feels the same way is evident from the fact that a large delegation of textile machinery makers is now in Moscow negotiating for supply of textile machinery. The proposed deal is said to be one of the biggest in post-war years for the British textile machinery industry.

There are two more reasons for relegating convertibility of sterling as a distant objective. One is the prolonged uncertainty about U.S. foreign economic policy and the other the fact that the dollar and gold reserves of the sterling area are still not large enough to take the plunge. It is true that the I.M.F. announced, just before the issue of the Commonwealth Ministers' statement, its readiness to follow a more liberal policy in regard to providing accommodation to any member-country which is prepared to make its currency fully convertible. But this has not induced the Finance Ministers to alter their attitude towards the issue of convertibility. They cannot, of course, be blamed for it. In the first place, in the current half-year, imports of the sterling area are expected to expand by £160 million, as compared with the first half of 1953, while exports are anticipated to be lower by £30 million. Consequently, the Commonwealth's trade surplus is expected to go down from £430 million for the financial year ended 30th June, 1953, to £233 million for the year ending 30th June, 1954. The Ministers, therefore, feel that the sterling area's gold and dollar reserves must register a further substantial increase before the Commonwealth can begin to look at the problem of convertibility of sterling. Secondly, the Commonwealth must know in advance as to what policy the U.S. will follow in regard to its import trade. It is no use making sterling a convertible currency, unless the task of earning dollars is made less difficult than it is now.

It is significant that, despite the prospects of a fall in trade surplus, the Commonwealth Ministers have decided not to restrict imports. Admittedly, this decision is born of their experience that restriction of imports leads to a vicious circle and that the best way to build foreign exchange resources is to expand exports. And if exports are to be increased, production of goods must be stepped up at competitive costs. This realisation is fully reflected in the renewed emphasis made by the Finance Ministers on the intensive development of Commonwealth resources and on the need for pursuing sound economic policies designed to restrain inflation.

THE HOUSING PROBLEM

ALTHOUGH there are signs that the high tempo of building activity, which followed the close of the war, has slowed down, there is no immediate prospect, whether in the larger cities or in the smaller towns and villages, of the end of the shortage in accommodation. The problem is no doubt less acute than in the early post-war years, but is yet far from solution. The strident increase in the urban population (about 54 per cent.) during the 1941-51 decade, the movement of the rural inhabitants to the towns, the war-born restrictions and scarcity of materials which hindered housing construction, and the great migration of population following the Partition, have all combined to make the problem of housing more acute than ever. To these factors must be added the effect of the social changes, brought about by the continuing break up of the joint family system. The country needs, according to the Planning Commission's estimate, about 4.3 million houses. This number will be higher, if provision is made for the normal growth in population, and the number of old houses which will have to be replaced by new construction. If the total number is assumed at five million houses, the solution of the housing problem would mean, at a cost of Rs. 3,000 per house, an outlay of Rs. 1,500 crores, or about three-fourths of the total outlay on the Five-year Plan itself. Although no precision can be claimed for this figure, it should convey some idea of the magnitude of the housing problem.

It would, however, be wrong to think that the housing problem is essentially a matter of finance. It is as much a matter of men and materials. Indeed, through the more economic use of these two factors, it should be possible to make every rupee of housing finance go further than it does. It is, in this context, that the organisation of exhibitions, such as the International Exhibition on Low Cost Housing, now being held at New Delhi, acquires a value through the impetus it gives to more economic utilisation of housing materials. In the 70 model houses exhibited there, some of which have been sent by overseas countries, there is food for new thought on housing. Inaugurating this Exhibition, Dr. Rajendra Prasad rightly suggested that the cost of building material should be brought down and houses should be built on a large scale to meet the housing needs of the people. The value of this Exhibition has been further enhanced, as the Union Minister for Works, Housing and Supply, Sardar Swaran Singh, pointed out, by the decision of the International Federation for Housing and Town Planning to hold its South-East Asia Regional Conference in Delhi during the Exhibition. Gathered at Delhi now is a "galaxy of talented men and women from various countries" who ought to be able to make many valuable suggestions for reducing the costs of housing construction in India.

Any attempt at bringing down the housing costs must, naturally enough, tackle the three principal elements of the structure of housing costs—land, labour and materials. The land cost is high. Two issues are involved here. In the first place, there is need to prevent speculation in land, the purchase and hoarding of land with an eye to profit. Secondly, there is the problem of unused housing sites. Neither of these two problems has been satisfactorily solved so far. It is not easy for the Government or the local authorities to acquire open sites. There are always legal complications. And, in any case, it cannot be done without compensation, which is prohibitively high. Thus, there are owners of housing sites who will neither construct houses nor let others do the job. Since expropriation is out of the question and payment of compensation raises complex and onerous financial issues, the best that could be done would be to impose penal taxation on the recalcitrant landowners. Even if it is impossible to compel them to build houses, it should at least be possible to make it difficult for them not to build them. It should, however, be recognised that this is at best only a negative approach to the problem. A positive solution is to make it easy for the owner of the site to build, and to make it economically worthwhile.

Perhaps, a sizable reduction in building costs would induce many of these people to put their land to the use for which it is intended. In any case, what deters people from owning houses is the high cost of construction. Land is only one part—and a minor part, at that—of the housing problem. Labour and materials form the bulk of the constructional costs. Although there is no dearth of unskilled workers, skilled labour force is strictly limited. Wages are, therefore, high. In the rural regions, it should be possible to reduce labour cost to a minimum by encouraging group effort. The position is different in urban areas. Here, the problem is one of training labour for constructional work and also of improving the efficiency of the workers through mechanisation of at least a part of the manual labour involved. Here is a great field for time-and-motion studies, for securing efficiency in constructional engineering. The facilities for training men for jobs below the level of engineers are also limited. Short courses, with adequate emphasis on practical knowledge, ought to be provided in a large number of centres, perferably one at each district town.

Next to the creation of trained labour, the provision of cheap and efficient building materials is an important step towards the reduction of building costs. The scarce materials are cement, steel and teakwood. But these materials could be substituted by clay, sand, earth and timber, which are more freely available. The supply of other building materials, such as bricks, stone and lime, is, however, satisfactory, though it is necessary to bring down their prices too. This could be done by producing them in larger quantities than now. It might be necessary to use mechanical equipment for such operations as quarrying and stone-cutting, as this would ensure larger production of these materials and their availability at lower prices. A more helpful timber selling policy by the Forest Departments, and concessions in railway freight on building materials are other measures that would help bring down housing costs. Finally, there is need for organising an efficient building industry, which would not only help make available such unmanufactured or semi-manufactured items as stones, lime and sand at reasonable prices but also produce, on a mass scale and in standardised sizes, door and window frames, hinges, chains, sockets, nails, screws and door panes. Given adequate facilities, there is vast scope for a well-organised building industry in India.

A word about research. The search for new and more advanced techniques of cheap construction, as Sardar Swaran Singh said recently in a broadcast talk, must be a constant one. At present, research in building techniques is being carried on at the Central Building Research Institute, Roorkee, Forest Research Institute, Dehra Dun, and the Buildings and Road Research Station, Karnal, and in certain other institutions. A new body, the National Buildings Organisation, has been set up to pool all information relating to building materials and constructional practices, and to disseminate information about the results of research. The Government has also set up a "rural cell" and an "experimental unit" in the Ministry of Works, Housing and Supply, with a view to designing cheap model houses for rural and urban areas. What is necessary is that research should be conducted with an eye to its practical value. Apart from conducting research, there is need to disseminate even elementary information about construction of houses and provide some guidance in regard to building costs, with standardised plans, through popular pamphlets in all Indian languages.

COFFEE INDUSTRY

THE debate on the levy of export duty on coffee during the last session of Parliament revealed an inadequate appreciation, on the part of Government and some members of the House, of the difficulties of the industry. The demand made by coffee planters and a few members of the House to refer the question of fair price for the growers to the Tariff Commission did not bring a favourable response from the Government side. In fact, the Minister turned down the suggestion, in the course of his reply to the debate, on the ground that there was no conflict between the consumer and the producer. In the circumstances, the visit of some of the members of Parliament to the coffee plantations on the Bababudan range, the Udigere and Balehonnur estates and the Coffee Research Station a few days ago, is to be welcomed. The object of the tour was to study on the spot the various difficulties confronting the industry and to assess the possible help that could be rendered both by the State and Central Governments to improve the position of the planter. The personal visit of the members of Parliament should enable them to understand the industry's case in its proper perspective when the Coffee Bill is taken up for discussion in the next session of Parliament.

At a meeting of the planters and the visiting members of Parliament, Mr. Ramanna, President of the Indian Planters' Association, outlined the difficulties of the planters and said that the planters needed financial assistance, as the Indian Coffee Board had not paid their dues for the last year's crop in full. He also urged that fair prices should be fixed for coffee from the planters', as well as the consumers', point of view. The earnings from exports should, he added, go to the industry and not to the Exchequer.

In his reply to the planters' representations, Mr. Nijalingappa, M.P., on behalf of the touring parliamentarians, deplored that a proper assessment of the magnitude of the difficulties of the planters had not been made by the Central Government to help them in bringing down the cost of production. The Central and State Governments should not only formulate plans to grow more coffee per acre but also rehabilitate the lands that were being eaten up by jungle for want of proper care. He, therefore, urged that the Central Government should also think in terms of expanding coffee cultivation, for which lakhs of acres were available in Mysore, Coorg and the Nilgiris. This would also solve the unemployment problem to a considerable extent.

That the correctness of the Government's attitude to the coffee industry is being questioned not by planters alone is evident from the statement of Mr. Nijalingappa referred to above. The problem of bringing down coffee prices paid by consumers, which seems to be the sole object of the Government's policy, does not offer any short-term solution. It is necessarily a long-term one, in that the cost of coffee to consumers can be reduced only by increasing production. That there are vast potentialities for expanding the area under cultivation of coffee is clear from Mr. Nijalingappa's statement referred to above, as well as from the speech of Mr. Ivor Bull, Chairman of the Consolidated Coffee Estates (1943) Ltd., at the annual general meeting of the Company. Not only is there a vast area of abandoned waste land in the Malnad but the conditions also could never be more favourable than they are at present. As Mr. Bull rightly remarked, if this area is cultivated, as much as 80,000 tons of coffee worth Rs. 50 crores and more can ultimately be exported. Even on a comparatively slower pace of development, we should be able to export at least 24,000 tons of coffee worth Rs. 17 crores within a period of 15 years. Consumers could also be subsidised to a great extent. But all this development will be possible only if the grower is encouraged to produce more by being given a fair price for his produce. The Government should reward the more efficient producers of coffee, so that the sub-standard and inefficient estates may have a desire to improve themselves and produce good coffee. This means that it should drop the idea of penalising the more efficient and economic estates with the object of subsidising the inefficient estates.

The sooner the Government of India concedes the demand of the planters for an enquiry by the Tariff Commission and paves the way for a rapid development of the industry, the better. World prices of coffee are attractively higher. The long-term outlook for world coffee, as the F.A.O. pointed out ere now, is favourable. Although the supplies may increase and prices may react to some extent from the present levels, indications are stated to be not wanting that the upward trend of demand will continue. More and more people, both in India and abroad, are taking to coffee. Further, the range of goods which India can freely export is diminishing and, even in those that can always be expected to figure in our export list, there are some, such as cotton textiles, tea and jute goods, in which there is bound to be keen competition in the coming years. Prudence thus demands that India must steadily diversify the commodities and manufactures that participate in its export trade. From this point of view, coffee is a valuable product. In many export markets, Indian coffee has always been preferred to coffee from other countries, because of its fine flavour. But if it is to play this important role in India's economy, every effort must be made to increase its production right from now. In fact, we would even suggest its inclusion in the first Five-year Plan, although three years of this Plan are drawing to a close. In view of the vast scope that this industry offers for increasing employment in rural areas, especially in areas which are now lying waste, we do not see why it should not be included as part of the additions that are being made to the Plan. In this connection, we would invite the attention of the members of the Planning Commission to the article of Mr. Ivor Bull, published in our 1953 *Annual Review Number*, in which he has convincingly brought out the advantages of expanding production of coffee to the country, as a whole, and to the Malnad in the South, in particular.

BULLISH FERVOUR IN ALL MARKETS

EXPERIENCE OF ELECTRIC UNDERTAKINGS IN RAISING ADDITIONAL CAPITAL ANALYSED

THURSDAY, 5 P.M.

A STRONG bullish psychology has come to prevail on all Stock Exchanges, with Dalal Street continuing to provide the lead in this respect. Almost every scrip has gone up, and steels and textiles have been prominent. Today, before closing at Rs. 2,077-8, Tata Deferreds touched a peak of Rs. 2,082-8, the highest level to be seen since July, 1951, when the Korean war boom was on. Only 10 days ago, they were standing at a low of Rs. 1,975. Thus, a rise of over Rs. 100 has taken place within a short time. Similarly, during these 10 days, Tata Ordinaries have advanced by Rs. 18-8 to Rs. 352-8 and Indian Irons by Re. 1-1. Among textile shares, Bombay Dyeings have moved up by Rs. 20 and Kohinoors by Rs. 16. Belapurs have spurted by Rs. 10, A.C.C. by about Rs. 4, despite the discouraging prospects regarding the price for the Company's cement, Bombay Burmahs by Rs. 22 to Rs. 386-4 and Scindias by As. 9 to Rs. 16. These figures will give one an idea of the extent to which markets have become buoyant. Whatever gain has taken place in equities is mostly due to speculative activity. Almost all leading brokers report that investors are still apathetic and distrustful of the improvement that has occurred so far.

MARKET GOSSIP

* * * *

No rational explanation for the rise in prices is possible. The most important point is that the sentiment of professional operators has undergone a fundamental change. They are all feeling bullish, because they feel that inflation is inevitable, as the Government has decided to spend something like Rs. 1,200 crores in the next two years. In fine, therefore, inflationary psychology is the cause of the upward movement of equities. The continuous rise in notes in circulation during the four weeks ended 15th January, 1954, aggregating about Rs. 37 crores, coupled with the expansion in the Five-year Plan, has strengthened this psychology. While this is the general reason for the bullish fervour, there are other causes for individual scrips going up. In the case of Indian Irons, for instance, expectations of a sizable increase in the retention prices and encouraging production returns are sustaining the bulls.

* * * *

Besides these factors, there are a few more that are responsible for the smart rise in the shares of the T.I.S.C.O. In the first place, the Conversion scheme is a certainty, now that it has received the sanction of the Bombay High Court and the prospects of dissident shareholders appealing against this judgment are slender. Secondly, the leading speculator who has been holding a short-sale to the tune of 6,000 to 7,000 Deferreds has not chosen to cover his position. Some are of the opinion that this operator will have to cover his sales before the dealings in Deferreds on the Exchange are suspended. This view is based on the belief that it will be more difficult to square up these sales in the form of Ordinaries than in the form of Deferreds. Thirdly, the nuisance that was being created by the *Mahajan* market has disappeared; so long as this market allowed trading in Deferreds, there was a sizable amount of options which used to have a restraining effect on wide variations. Moreover, dealings in this market were generally on behalf of small operators who are usually content with small gains. And, fourthly, the rise in prices is justified by the attractive yield that these shares offer. Even at current market rates, the yields on Deferreds and Ordinaries work out to 5.54 per cent. and 5.95 per cent., respectively, assuming that dividends will be maintained at 1952-53 levels, which is not an unreasonable assumption.

* * * *

The improvement in textile shares is attributable to two things. It is believed that the financial results of most of the mills in Bombay Island for 1953 will be quite satisfactory and that some of the leading ones will even be in a position to declare a higher return to their shareholders. Three mills are being specifically talked about in this connection. These are the Bombay Dyeing, Kohinoor and Century. The gross profit of Bombay Dyeing is placed by market circles at Rs. 1 crore, as against Rs. 70 lakhs for 1952, and that of Kohinoors at Rs. 58 lakhs, as against about Rs. 24 lakhs. An increase of Rs. 5 and Rs. 2 per share in the dividends of these Companies has been taken for granted; indeed, some are anticipating a rise of Rs. 4 per share in the case of Kohinoor. No such figures are being mentioned about the Century, but it is widely believed that it will not lag behind the other two. It remains to be seen how far these optimistic expectations will be fulfilled. In any case, in respect of Kohinoor at least, the market may not have to keep guessing for long, because we understand that the management proposes to announce the results much earlier than in previous years.

* * * *

The second reason for the rise in textile shares is the encouraging trend of the cloth market. It is stated that export demand for cloth made out of Indian cotton is good and that mills have been able to book forward orders at fairly remunerative rates. The bookings for domestic market, however, have not yet come up to expectations, but it is generally believed that, with the cotton market consistently moving up, upcountry dealers would not wait for long, lest they should miss the bus. The piecegoods market is thus optimistic. Some of the leading millowners, however, still feel that the present rate of production is more than the demand, both internal and external, and that it will not be long before stocks once again accumulate to uncomfortable levels. We have no means of either confirming or rejecting this view. Suffice it to say, however, that a similar view held in regard to sugar a year ago was completely belied and that these millowners have been expressing this view ever since November last.

* * * *

That speculation is the chief cause for the current upward movement in shares will be clear from one or two instances. It was only a few days ago that Phalton Sugars were placed on the forward list. Before this scrip was added to the forward list, it was standing at well below Rs. 100 (Rs. 50 paid-up); today they touched a high of Rs. 115 and finished at Rs. 114-8. This shows to what extent facilities provided for forward trading enhance the value of a scrip. Likewise, there has been a rise of about Rs. 10 in the price of Minerva, Mysore Spinning and Digvijay Cement. This, too, has been in expectation of these scrips being promoted from the cash section to the forward section. Again, the large-scale activity that has been going on in National Rayons would not have been possible but for this scrip being quoted in the forward list.

* * * *

The bullish fervour is not confined to the share market alone. It has spread to all the markets. Bullion, oilseeds and cotton, all have been lively, with a handsome rise in values during the week under review. The present upward trend in these markets is but a continuation of what was seen in the beginning of December. After being quiet for a while towards the closing days of 1953, these markets have again been displaying a distinctly firm undertone. The following figures will show to what extent prices have gone up:

	3-12-53	31-12-53	13-1-54	21-1-54
	Rs. a.	Rs. a.	Rs. a.	Rs. a.
Groundnut

Silver forward	150 15	152 6	155 3	158 10

* * * *

It will be seen that, in the case of bullion, the rise in prices really began only after the commencement of the year. This was, however, inspired by the spurt in commodities and shares. The technical position of the bullion market has also been in favour of the bulls. It is stated that, in view of the higher prices that are being received by agriculturists and of the talk of inflation in the coming months, the offtake of both gold and silver will improve in course of time and that the floating supplies will be found insufficient. The stocks of silver in the country are negligible and, since imports are not allowed, there are no means of augmenting them, unless the metal that is already with the public in some form or other comes back to the market. In the case of gold, there has been an abatement in the flow of smuggled gold, following the unusual vigilance of the customs and police authorities during the past few days. But this may prove a temporary development. In any case, what is being caught by the authorities is just a fraction of the contraband gold that is successfully brought in. Well-informed market circles say that 5 to 6 lakh tolas of gold have been smuggled into the country since the last monsoon and, with all that, the price had gone down only to Rs. 80 per tola. The seasonal demand for both the metals should commence at any time now and continue right up to the end of May next. If by chance the smugglers' activity is seriously hampered by the authorities and the traffic in gold slows down, a further rise in the value of the yellow metal seems likely.

* * * *

Among oilseeds, the sharpest rise has taken place in groundnuts. Since the beginning of December, this commodity has risen by about 28 per cent. The chief explanation for this lies in the fact that the latest crop estimates are appreciably lower than those made at the beginning of the season, while the demand from consumers is running at a fairly high rate. Further, the movement of crop in certain regions is a little late and, where it has started, the farmer is holding on to his produce in expectation of still higher prices.

* * * *

In the case of cotton, too, the reason is that the crop has failed to come up to earlier expectations. As against 42 to 43 lakh bales forecast in November, the latest estimate places the crop at no more than 39 lakh bales. Leaving 2 lakh bales for export, the quantity available for domestic consumption is only 37 lakh bales, as against the mills' current rate of consumption of about 38 to 39 lakh bales per annum. The entire statistical position of this commodity is described elsewhere in this issue. It will be seen therefrom that cotton is in a strong position and the rise in the price of futures contract merely reflects it. Indeed, considering that mills are buying 25/32" Jarilla, the basis of the contract, at a premium of Rs. 70 to Rs. 75, it can be argued that the futures market does not fully reflect the real position of Indian cotton as it is today. In other words, it cannot be seriously contended that the Rs. 100 rise that has taken place in I.C.C. during the past two months has been due to excessive or unhealthy speculation.

* * * *

Tea markets are still ruling firm. At the London tea sales last week, prices averaged 4s. 4.9d. per lb., as against 4s. 1.04d. previous week and 3s. 2.84d. a year ago. Another notable feature was the closing of the gap between the prices of quality and common teas. Prices realised in the latest Calcutta auctions were a fraction lower than those in the previous auctions, but the general undertone was firm. Final estimates of the North Indian 1953 crop, made available after we went to press last week, reveal a total of 491 million lbs., as against 508 million lbs. anticipated earlier in the season. This shortfall of 17 million lbs., however, has been partly made up by the South Indian gardens which have produced 8 million lbs. more than expected. Tea circles in Calcutta feel that, while a general shortage is unlikely, there may be a shortfall in some grades which is likely to cause a certain amount of inconvenience to blenders.

* * * *

The Shroff Committee, which is investigating the credit difficulties of the private sector, will stand to benefit by a study of the very impressive survey of the financial straits of electricity companies, made by the Federation of Electricity Undertakings of India. Although the survey was made by the Federation, in order to emphasise the importance of the early enhancement of the standard rate of return to electricity companies, now fixed at 5 per cent. of the capital employed, it will serve as a model for similar investigations in other sectors of private enterprise. The Federation had asked, from some of its member-companies, information about the capital they needed in the last two years, how it was raised, the terms of issue and extent of response, the efforts made by the companies at getting its capital needs from the Industrial Finance Corporation, and the success thereof, the additional capital requirements during the next three years and the form in which they proposed to raise the money they needed. This survey was conducted by the Federation in response to the Government's directive to show "specific instances State-wise where electricity undertakings have tried to raise funds but have not succeeded." The Federation has classified the information received from 79 of its member-companies. This information is revealing in the sense it confirms the claim, which the Federation has consistently made, for a reasonable increase in the statutory return on the capital of the electricity concerns.

* * * *

In the last two years, the unsatisfied balance of capital requirements of these concerns has been of the order of Rs. 170.84 lakhs. And in the next three years, they need an additional capital of as much as Rs. 2,560.33 lakhs. Their total capital requirements yet to be raised are stated to be of the order of Rs. 2,678.68 lakhs. The Federation's survey reveals that many companies have had to resort to borrowing at high rates of interest in order to get the necessary capital. Some companies have been able to get their capital requirements only because their proprietors or managers have chosen to advance the required sums of money to them. A few companies have, however, been able to meet their requirements by drawing upon their internal reserves. One company states that, although it has paid a dividend of 5 per cent. to the shareholders regularly for the last 17 years, it was only with utmost difficulty that it was able to get the new capital subscribed—and then, it could get only a part of the needed capital. Another company found, in 1948-49, that not even one of its ordinary shares, which were open to the public for subscription, was taken up. Some companies are nervous about raising additional capital, because their shares, which are already being quoted below par, would decline further in the market. Even the Industrial Finance Corporation has not always been helpful; this is not a criticism of the Corporation, which ought to act as any bank would act towards a client whose profits are strictly controlled by the Government. In some instances, the Corporation insisted upon a guarantee from the concerned State Government for repayment of the loan in the event of the undertaking being nationalised.

* * * *

The remarks, made by the companies, show how profoundly disturbed they are about the prospects for raising money. "No hope of raising capital," "at a loss to determine ways of raising additional finance," "present shareholders are unwilling to subscribe further," "no likelihood of raising any capital," "no hopes of raising capital by shares and will have to resort to borrowings at high interest"—these are some of the observations made by the companies on their prospects for obtaining fresh finance. One company sums up the causes of this *malaise* by saying that it must be traced to low standard rate of return, fear of nationalisation, and prevailing high rates at which money is being raised by the Centre and various State Governments.

* * * *

In the course of a communication to the Government of India, the Federation calls the former's attention to the survey and points out that "no different picture would emerge," even if the

SHARE MARKETS BUOYANT

TEXTILES WELL FAVOURED

(From Our Own Correspondents)

BOMBAY, 21*st January*

WITH equity values forging ahead, conditions akin to a boom were witnessed on the Stock Exchange during the week under review. Activity was broadbased and, in lively dealings, almost the entire list of shares seemed to participate in the boom. In fact, many shares made strident advances and touched today the peak levels for the year so far. The rallying in steel shares noted last week gathered further momentum this week on resurgence of fresh speculative interest. The favourable outlook for textile mills as indicated by the broadened internal and overseas demand for cloth and the reported rise in price of cloth in the domestic markets brought forth large-scale support to textile shares which made notable headway during the week. There were also some counters in the textile and miscellaneous sections which had remained in the background in the past, but which received particular attention at the hands of speculative operators for special reasons.

Thus, the support to steels, textiles and miscellaneous shares paved the way for the all-round bullish sentiment in the market, which was sustained by firm advices from cotton, bullion and other commodity markets. Besides, the rising trend in notes in circulation and the decline in the overall unfavourable balance of trade during the period April to October, 1953, as compared with that in the corresponding period of 1952, as disclosed by the latest trade statistics, indicated the possible appearance of inflationary tendencies in the country. Emboldened by these favourable factors and in the absence of any unfavourable developments, bulls wielded an upper hand and tightened their grip over the market. The short-covering which followed caused prices to shoot up. The market closed on a firm note.

In the steel section, Tata Deferreds opened the week at Rs. 2,016-4 and advanced to Rs. 2,051-4 on Tuesday this week. After a mild reaction to Rs. 2,036-4 on that day, due to lack of follow-up and profit-taking, the upward trend was resumed, on fresh speculative buying and heavy bear covering, to surpass the 1953 peak levels and touch a high of Rs. 2,082-8 today before closing at Rs. 2,077-8. Tata Ordinaries were avidly bought and they registered a remarkable rise of Rs. 11-4 to finish at Rs. 352-8. Indian Irons were well supported to close with a gain of As. 15½ at Rs. 26-4.

The textile section was very active, for reasons already stated. Bombay Dyeings came in for good attention after being neglected in the previous two weeks. There was a revival of rumours regarding a bonus issue by the Company. The shares, as a consequence, looked up by Rs. 18-2 to Rs. 410. On expectations of a higher final dividend, Kohinoors were picked up keenly, thereby causing a rise in the value of these shares from Rs. 296-4 to Rs. 309. Central Indias strengthened from Rs. 180 to Rs. 186-8, Centurys from Rs. 285 to Rs. 295, Finlays from Rs. 257 to Rs. 266 and Gokaks from Rs. 243-8 to Rs. 255. Indu Ordinaries gained As. 5 to Rs. 11-8½, Indore Malwas Rs. 5-10 to Rs. 101-14 and Lakshmis Rs. 10 to Rs. 550. New Greats were taken up, Rs. 4 higher, at Rs. 174. New Citys, Rs. 7-8 higher, at Rs. 175 and Podars, Rs. 6-4 better, at Rs. 137-8. Sassoon Spinnings picked up Rs. 2-4 to Rs. 30-4 and Sholapurs Rs. 90 to Rs. 1;520. Standards were in keen request and rose by Rs. 15 to Rs. 327-8. Due to scarcity of sellers, Svadeshis move ahead by Rs. 12 to Rs. 292. Swans added Rs. 6-4 and closed at Rs. 341-4, Tatas Rs. 3-4 at Rs. 54-8 and Vishnus Rs. 3-12 at Rs. 143-12. Among the counters which received special attention were Minervas which rose by Rs. 9 to Rs. 101 and Mysore Spinnings which moved up by Rs. 10-10 to Rs. 157-8 on rumours that these shares would shortly be placed on the forward list. Simplex was a notable exception to the general trend, in that it declined by Re. 1-8 to Rs. 151.

Bank shares were quiet and trading was limited. Barodas lost Re. 1 to Rs. 106-8, Centrals Rs. 2-4 to Rs. 62 and their new shares Re. 1-4 to Rs. 65-8, Imperial Fully Paids were done at Rs. 1,790 *ex-div.* (dividend Rs. 40), as against Rs. 1,835 *cum-div.* last week, and the Partly Paid-ups at Rs. 435 *ex-div.* (dividend Rs. 10), as against Rs. 443-12 *cum-div.* Indias were a fraction down at Rs. 154-4. United Commercials were a shade better at Rs. 42-4.

Interest in insurance shares was restricted to a few counters. Indian Mercantiles were taken up, As. 12 better, at Rs. 38. Jupiters hardened by As. 10 to Rs. 7-8. New Indias were dull at Rs. 39-12. Vulcans were a fraction lower at Rs. 11-6. Orientals were unchanged at Rs. 7,235.

In the public utility section, Andhra Valleys were in good demand and as a result rose by Rs. 27-8 to Rs. 1,262-8. A similar rise was seen in Tata Powers which finished at Rs. 1,362-8. Tata Hydros were well held at Rs. 136. Ahmedabad Electrics strengthened by Rs 2-3 to Rs. 114-6. But Bombay Suburbans were a shade lower at Rs. 123-8 while Surats were unchanged at Rs. 130.

Activity in the miscellaneous section was very lively and several leading counters registered marked gains. Despite the unfavourable outlook for cement price, A.C.Cs. were favoured and at Rs. 174 *ex-div.* they compared well with Rs. 180-8 *cum-div.* last week. Belapurs forged ahead by Rs. 8 to Rs. 253-8. Bombay Burmahs advanced by Rs. 8-12 to Rs. 386-4. Scindias added As. 5½ to Rs. 16. Alcocks gained Re. 1-4 to Rs. 333-12. B.I.Cs were quiet at Rs. 9-0¼ and Killick Industries at Rs. 157-4. B.B. Petrols attracted good support and gained As. 8 to Rs. 2-12½ and Indian Coppers changed hands As. 14 higher at Rs. 2-13¼. National Rayons continued to be favoured and added Rs. 3-4 before closing at Rs. 146-12. Following the placing of the shares on the forward list, Phaltan Sugars were in demand to go up by Rs. 13 to Rs. 114-8. Premier Constructions had business, Rs. 3-12 higher, at Rs. 118-8. Shivrajpurs were quiet at Rs. 71-8. Despite heavy offerings, Tata Chemicals put on As. 4 to Rs. 11-7. Tata Oils gained, Rs. 3-8, to close at Rs. 36. Walchandnagars were wanted at Rs. 172-8, as against Rs. 162-8. Wimcos hardened by Rs. 7-8 to Rs. 207-8. Digvijay Cements came in for considerable attention on rumours that the shares would be placed on the forward list. Consequently, the shares appreciated by Rs. 9-8 to Rs. 104. Automobile shares continued to be well favoured, Hindustan Motors moving up by As. 10 to Rs. 6-9½ and Premier Automobiles by Rs. 2-4 to Rs. 56.

• • • •

Calcutta Stock Exchange

CALCUTTA, 20*th January*

Although the volume of transactions was limited, a note of steadiness was discernible on the Calcutta Stock Exchange during the week under review. Partaking in the steadiness was the tea section, in which, after the easier conditions witnessed in Monday's export auctions, a small reaction set in. This cautioned operators and thus put down the volume of business. Selected counters in the miscellaneous section were taken at improved rates, and paper shares were shown special attention. Coals would appear to be coming out of the recent dullness as attention is pointed to the prospects for increased exports of coal. Attention to jutes was guarded but selected scrips were sought at higher rates. Although the outlook for the jute industry is good, this week's depressed conditions in the jute goods market made operators less active.

Sectionwise, coals were shown better attention. At Rs. 3-1 Talcher added As. 9. Raneegunges were done at Rs. 11. Burrakurs changed hands at Rs. 8-8. But Bengals were lower at Rs. 505. East Indias were in demand at Rs. 25-6 and Central Indias received good support, and in the process, were raised to Rs. 6-9 from Rs. 5-10. Pench Valley looked up at Rs. 23-10, and New Beerbhooms at Rs. 18-3 were one anna higher.

In view of the improving trend in the exports of cotton piecegoods, textiles were noted for a longer volume of business. New Victorias, at Re. 1-10, were As. 2 higher. Dunbars were raised to Rs. 170 from Rs. 160, while, Bowreahs at Rs. 270, recorded a 10-point recession. Kesorams hardened to Rs. 21, Elgin Mills being quiet at Rs. 15-14.

A feature in the jute section was the recovery in Fort Glosters to Rs. 385 from Rs. 350. Indias were for a time better at Rs. 124, but subsequently lost the improvement to Rs. 121. Orients eased to Rs. 172 from Rs. 176, and Nellimarlas to Rs. 10-12 from Rs. 11-2. In transactions of small lots, Ballys rose to Rs. 163 from Rs. 159. Nationals invited attention at Rs. 23-12 and afterwards improved to Rs. 24-2, and at Rs. 221 Deltas scored one point. After being lower at Rs. 23-4, speculative Howrahs were put up at and realised Rs. 23-8. Budge Budges were traded at Rs. 149, Champadanies at Rs. 142 and Unions at Rs. 169-8. Birlas rallied from Rs. 13-4 to Rs. 13-14.

A few features were provided by the tea section. Choonabhutis at Rs. 292 added Rs. 13. Patrakolas were steady at Rs. 166 as were Hantaparas at Rs. 188. At Rs. 391, there was no addition in Banarhats, while Nagri Farms were fractionally higher at Rs. 23-4 and Jayabirparas at Rs. 21-2. Bishnauths changed hands at Rs. 34-10.

There were only narrow movements in Indian Irons earlier, and for most time, the quotation was sticking at about Rs. 25-8; to-day, however, there was a spurt to Rs. 25-13. Good attention was shown to Texmacos which, as a consequence, gained to Rs. 9-13 from Rs. 9. Continuing the upward trend, Indian Galvanisings moved up to Rs. 15-15 and Braithwaites hardened to Rs. 13-14. Jessop & Cos. realised Rs. 25-8 and Kumardhubis were offered As. 2 higher at Rs. 8-4. Britannias at Rs. 23-15 lost As. 3. Another feature to-day was the strength in Marshalls which were put through at Rs. 6-8 as against Rs. 5-15 at the beginning of the period.

Among paper mill shares, Titaghur sadvanced to Rs. 36 from Rs. 35-9, and Orients on good demand spurted to Rs. 46-8 from Rs. 44-10. Shree Gopals at Rs. 20-4 were As. 5 higher, but India Paper Pulps continuing the recession touched a low of Rs. 176-8. In the sugar section, interest was restricted, Champarans giving way to Rs. 23-10 from Rs. 23-12 and Carews to Rs. 6-14 from Rs. 7-1. Balrampores were put through at Rs. 7-7. A small improvement was noted in Champarans at Rs. 19.

A strong feature among miscellaneous industrials was Bathgates which on interested buying moved to Rs. 2-2 from Rs. 1-11 but subsequently lost the gain in its entirety. India Steamships were bought at Rs. 7-4, and Rohtas Industries at Rs. 11-9 put on As. 5. Indian Cables were picked up at Rs. 20-1, and at Rs. 108-8, Indian Alluminiums showed a gain of one point. Shaw Wallaces came to business at Rs. 11-7, and Metal Boxes at Rs. 19-7. Indian Coppers were enquired at Rs. 2-13 and Sone Valley Cements at Rs. 6-15.

• • • •

Madras Stock Exchange

MADRAS, 12*th January*

Activity on the Madras Stock Exchange this week was somewhat brisk and broadbased. The higher advices from the Bombay stock and commodity markets were responsible, to a considerable extent, for the relatively more enlarged activity. Favourites in the textile section looked up, on continued reports of steady export enquiry for Indian piecegoods. Among plantings, teas were again in the limelight, on good demand for tea leaves from the U.K. and the Continent. Coffee shares also met with fair enquiries and saw fractional improvement in values. Miscellaneous scrips too were not wanting in interest. As a result, business done in the market was encouraging and prices moved generally upward.

In the textile section, Dhanalakshmis shot up from Rs. 202 to Rs. 208. Coimbatore Spinnings advanced from Rs. 37-8 to Rs. 41 and Bangalore Woollens Rs. 285 to Rs. 287-8. Travancore Rayons were higher by As. 11 at Rs. 8, and K. Rajendras by As. 8 at Rs. 54-8 *cum-div.* Lakshmis (Rs. 50 paid-up) improved by As. 8 to Rs. 86-8 and 'A' (Rs. 25 paid-up) by As. 12 to Rs. 42-12. Maduras changed hands at Rs. 39-4 *cum-div.*, as against Rs. 38-12 *ex-div.* The Directors have recommended the maintenance of 20 per cent. (tax-free) dividend on the ordinary shares for the year ended 31st December, 1953, subject to audit. Pankajas, however, lost Rs. 5 and closed at Rs. 45.

Among plantings, the uptrend witnessed last week persisted this week also. United Nilgiri Tea disclosed a gain of Rs. 2-8 at Rs. 209. Talyar Teas hardened by As. 11½ and finished at Rs. 9. Hailey-burias and Parksides put on As. 8 each and closed at Rs. 15 and Rs. 17-2, respectively. Highland Produces and Twyfords were higher by As. 6 each at Rs. 12-4 and Rs. 12-12, respectively. Peermades improved by As. 4 to finish at Rs. 28 and Udayagiri As. 2 to close at Rs. 7.

Rubbers also met with some enquiry. Midlands were up by As. 11 at Rs. 12. Rajagiris improved by As. 5 to Rs.10-14 and Peninsulars As. 4 to Rs. 11. Cochin Malabars advanced by an anna and a half to Rs. 7 and Teekoys As. 2 to Rs. 6-13. Thirumbadis were done Rs. 3-6 *cum-div.*, as against Rs. 3-2½ *ex-div.* The Directors have recommended a dividend of 30 per cent. on ordinary shares for the year ended 30th September, 1953, as against 25 per cent. in the previous year.

Among coffee scrips, Coffee Lands were better by As. 5 at Rs. 8-4, Consolidated Coffee As. 4 at Rs. 16-2. Periakaramalais (tea and coffee) gained As. 4 to Rs. 7-14 and Neelamalais (tea and coffee) As. 7 to Rs. 5. Nilgiri Neerugundis, however, were fractionally lower at Rs. 3-8. Kadur Coffee was quiet at Re. 1-8.

Miscellaneous scrips came in for selective support. Binnys shot up from Rs. 120 to Rs. 121. India Cements improved by As. 13 to Rs. 16 and Mysore Gold As. 9-3½ to Rs. 3-9¼. Mysore Papers were done higher at Rs. 15-14 as against Rs. 15-8 and Bangalore Transport Rs. 11 *ex-right*, as against Rs. 13-12 *cum-right*. E.I.D.B. sugars, however, lost As. 4 to Rs. 23-14 and F.A.C.T. an anna to Rs. 3-7.

While reviewing the trend on the Madras Stock Exchange for the week ended 12th January in *Commerce* dated 16th inst., we stated that Cochin State Electrics moved up by Rs. 2-8 to Rs. 13. Explaining the rise in prices of these shares, Messrs. Maconochie & Co., Madras, write as follows: "The quotation for these shares was marked up to Rs. 13 during the period not because of buyers, but because of the fact that the Company called up the balance of Rs. 2-8 per share. Formerly, the shares were Rs. 7-8 paid, and they were quoted at Rs. 10-8. Now that the balance of Rs. 2-8 has been called up, the shares are Rs. 10 fully paid up. The market quotation for them also was correspondingly increased to Rs. 13."

THE UNITED COMMERCIAL BANK LTD.

The following *communique* was issued by the General Manager of the United Commercial Bank Ltd., on 21st January, 1954.

The profit of the Bank for the year 1953, subject to audit, including the amount brought forward from last year's accounts is Rs. 24,52,320-7-3. Out of this sum, the Directors have made the following appropriations:—

	Rs.	a.	p.
1. Provision made for taxes ...	9,50,000	0	0
2. Donations paid for public and charitable purposes ...	50,000	0	0
3. Transferred to reserve fund	5,00,000	0	0
	Rs. 15,00,000	0	0
4. Balance	9,52,320	7	3
	Rs. 24,52,320	7	3

Out of the above balance, the Directors propose to recommend to shareholders at the next general meeting payment of dividend at Rs. 2 per share, free of income-tax, which will absorb Rs. 8,00,000, leaving Rs. 1,52,320-7-3 to be carried forward to the next year's accounts.

The securities and investments of the Bank appear in the accounts on 31st December, 1953, at or below market rate ruling on that date.

NEWS IN BRIEF

ACCORDING to the latest estimates, the Indian coffee crop for the season 1953-54 will be slightly above 25,000 tons.

Indian railways are today hauling a 100 per cent. greater passenger load and 64 per cent. greater freight load, than they did 30 years ago in undivided India with about 1,300 fewer locomotives.

The Indian Central Tobacco Committee, constituted by the Government of India, has appointed an advisory committee to consider ways and means of disposing of Indian tobacco, particularly carrying out effective propaganda for it in foreign countries.

The U.P. Sugarcane Growers' Co-operative Federation has decided to withhold supply of sugarcane to sugar mills in the State from 1st February, unless the supply rates are enhanced from the present rate of Re. 1-7 per maund to Re. 1-12.

The Tripartite Industrial Committee on Plantations will meet in Calcutta on the 30th and 31st inst., when the question of implementing the Plantation Labour Act of 1951 and extending lay-off compensation benefits to plantation labour will be considered.

The sixty-ninth session of the Indian Central Cotton Committee will be held in Bombay on 3rd and 4th February, 1954. Questions relating to improved methods of cultivation and development of better varieties of cotton and cotton research will come up for discussion.

The Government of Bombay has announced that the present prices of cement at Rs. 71 per ton loose f.o.r. destination, with additional packing charges at the flat rate of Rs. 11-9 per ton of packed cement, also f.o.r. destination, will continue to be operative in Bombay State for a further period of three months from 1st January, 1954.

The first regular shipping between India and Japan by an Indian line will be inaugurated this month by the Eastern Shipping Corporation, Bombay, when the 8,000-ton *State of Andhra* arrives in Yokohama on the 21st inst. The ship will carry 3,000 tons of scrap iron, in addition to general cargo from India, Singapore and Hongkong.

The Assam Oil Company is using three different types of geophysical survey, employing the latest exploration methods known to petroleum scientists, for oil prospecting under the Brahmaputra Valley alluvium. If the survey indicates the presence of favourable geological structures, detailed prospecting will be undertaken to delimit the areas for possible testing by drilling.

The Government of India is considering a request from Italy for an air transport agreement between the two countries. Meanwhile, the Government of India has asked for full details of the Italian commercial civil aviation programme of air services to and across India and the type of aircraft to be used. It is reported that Italy intends to operate an air service from Rome to Tokyo across India.

The Saurashtra Government has announced that sales tax will be recovered from non-resident dealers with effect from 1st January this year on goods delivered in the State by them. Although, according to the interpretation given by the Supreme Court to clause 1 (a) of Article 286 of the Constitution, the State is entitled to levy sales tax on all inter-State dealings of non-resident dealers from 1st April, 1953, the Government does not propose to recover the tax with retrospective effect.

An agreement for the construction of 160 tube-wells in the Patiala and East Punjab States Union was signed on the 16th inst., between the P.E.P.S.U. Government and a group of French drilling companies. The agreement is part of the programme for 650 tubewells under the Indo-American Technical Assistance Programme. All the 160 tube-wells will be completed by 31st December, 1953, and are expected to irrigate about 65,000 acres of land and give an additional production of about 13,000 tons, annually.

The Government of India has decided to peg the production of selected A and B grade coking coals in 1954 at 7.4 million tons and to limit the output of Grade I and Grade II coals at the level of 1952. The production of selected grades of coking coals in the first 10 months of 1953 was 6.40 million tons, as against 6.41 million tons in the comparable period in 1952. The total output in 1953 is estimated at 7.3 million tons. The output of Grades I and II coking coals were 3.02 and 2.43 million tons, respectively, in the first 10 months of 1953. India despatched to Pakistan 48,988 tons of coal in December. The Pakistani Government has asked for 58,234 tons for January against the target quota of 81,000 tons.

From Abroad

The Sixty-second International Utrecht Trade Fair of Netherlands will be held from 30th March to 8th April, 1954.

Israel has been accepted as a member of the International Bank for Reconstruction and Development and the International Monetary Fund.

The textile division of the U.S. Rubber Co. is making available, on a nation-wide basis, a new synthetic yarn of 100 per cent. orlon.

Production of automobiles in the U.S. aggregated 6.14 million cars and 1.20 million trucks and buses during 1953. Car production was the second best on record.

The British tourist industry earned about £125 million in 1953, including fare payments to British carriers, an increase of 9 per cent. over the 1952 figure of £114.5 million.

An Australian firm is negotiating with Indonesia for the establishment of a glass-making plant in that country. At present, there is an inadequacy of glass factories in Indonesia.

According to the Netherlands Minister of Economic Affairs, only a very limited number of branches of production—mainly in the sector of the so-called basic industries—come into consideration for State control or even for permanent participation by the State.

The interest rates on bank loans and advances in Greece have been reduced from 12 per cent. to 10 per cent. per annum with effect from 1st January, 1954. Commission collected by banks for supplementary services to borrowers has also been lowered from 4 per cent. to 2 per cent.

A firm of sewing machine manufacturers in Holland has received an order from America for the supply of 50,000 electric sewing machines, with accessories of the value of about $3 million. The first machines have already been delivered. The whole order will be executed within two years.

The consumption of rubber by the U.S. during 1954 will decline from 1.33 million tons in 1953 to 1.28 million tons, according to estimates made by the Natural Rubber Bureau in Washington. The consumption of natural rubber, however, will be higher at 600,000 tons, as against 550,000 tons in 1953.

A British mission of twelve textile machine makers from Lancashire and Yorkshire is now in Moscow to negotiate an export deal with the Soviet Union. If the negotiations are finalised, the proposed sale of British textile equipment to Russia will, it is stated, be one of the biggest since the war.

A proposal is afoot to erect a new factory in New South Wales (Australia) for the extrusion of aluminium. It is stated that there is a substantial unsatisfied demand for aluminium extruded products, of which imports have recently accounted for more than half of the total Australian consumption.

An elaborate trade agreement for the period January-June, 1954 has been entered into between Sweden and Germany, replacing the provisional one concluded at the end of December, 1953. Under the agreement, Germany has agreed to import 125,000 tons of grains during the first six months of 1954 and Sweden, on its part, to grant import licences for German automobiles to the value of Kr. 50 million (£3.45 million).

The Government of the Federation of Malaya has set up a committee of eight members, six representing the tin industry and two the Government, to administer domestically in Malaya the proposed International Tin Agreement's provisions. The Government is proceeding on the assumption that the control scheme will come into operation in the second half of 1954. Malaya will contribute 36.61 per cent. of the planned buffer stock of 25,000 tons, either in cash or in metal.

The U.S. and Pakistan Governments have signed five operational agreements which envisage the former's financial assistance for the development projects in Pakistan. The projects include the Karnafuli multi-purpose project in E. Pakistan, fertiliser factory in the Thal Area (Punjab), timber extracting in Chittagong hill tracts, supply of chemical fertilisers, and plant protection. The respective U.S. contributions to these projects amount to $750,000, $3.5 million, $100,000, $4 million and $300,000.

Petroleum continues to constitute the largest item in international trade, exceeding the combined total of the next two most important items, coal and cereals. Thus, in 1952, the latest year for which figures are available, world trade in petroleum amounted to 214 million metric tons (124 million metric tons of crude oil and 90 million metric tons of petroleum products), coal 138 million metric tons and cereals 47 million metric tons. All the three items have increased considerably since 1950, when petroleum aggregated 168 million, coal 120 million and cereals 40 million metric tons.

The output of crude steel by the British iron and steel industry in 1953 increased by over 1 million ingot tons. The production amounted to 17,609,000 tons, as compared with 16,418,000 tons in 1952 and 15,640,000 tons in 1951. In every month of 1953, steel output was higher than that in the corresponding month of 1952. In December, the annual rate of production reached 17.62 million tons, as compared with 16.31 million tons in 1952. The year's increase was the largest in any post-war year, except 1948. The rise in production was much more than sufficient to cover the increase in home and export requirements. While exports rose from 2.61 million to 2.75 million tons and home deliveries from 13.9 million to 16.15 million tons, imports of ingots and semi-finished steel were cut from 1.82 million to 1.1 million tons.

PERSONAL

MR. A. D. Shroff, a Director of Messrs. Tata Sons Ltd., has been elected Chairman of the Indian Society of Advertisers Limited.

Mr. Navanitlal Shodhan and Mr. Chandulal Satia have been elected President and Vice-President, respectively, of the Gujerat Chamber of Commerce.

Mr. J. L. Raina, an Indian co-operative expert, has been deputed by the I.L.O. to visit Iraq and assist the Government in the development of co-operatives.

Mr. C. F. Cobbold, Governor of the Bank of England, will shortly visit India, Pakistan and Ceylon, with a view to paying a courtesy visit to the central banks of these countries.

Mr. Chimanlal B. Parikh, of Messrs. C. Parikh & Co., Bombay, has been elected President of the Indian Merchants' Chamber for 1954. Mr. P. M. Chinai has been elected its Vice-President.

Mr. G. H. Latham, Chairman and Managing Director of the Whitehead Iron and Steel Co., Ltd., has been appointed President of the British Iron and Steel Federation vice Sir Ellis Hunter.

Mr. R. A. Butler, Chancellor of the British Exchequer, and Sir Frank Lee, Permanent Secretary to the Board of Trade, will be arriving in New Delhi on Monday next on a brief visit.

Mr. Ram Nath, Deputy Governor of the Reserve Bank of India and Chairman of the Committee for setting up a central training institute for bankers, has left for London on a short visit.

Mr. D. N. Shroff and Mr. Murarji J. Vaidya have been re-elected President and Vice-President, respectively, of the Silk and Art Silk Mills' Research Association, Bombay, for the year 1954.

Mr. P. S. Kumaraswami Raja, a former Chief Minister of Madras, has been appointed Governor of Orissa vice Mr. Sayid Fazl Ali, who has been appointed Chairman of the States Reorganisation Commission.

Mr. R. K. Tandon, Consul-General for India in Pondicherry, has been appointed as Acting Commissioner in British East and Central Africa and Consul General in Belgian Congo in place of Mr. A. B. Pant, who has been transferred to the Union Ministry of External Affairs.

Mr. Randal Hugh Vivian Smith, Managing Director of Morgan Grenfell and Co., and Mr. Frank Cyril Hawker have been appointed to the Court of the Bank of England for four years from 1st March next vice Mr. H. A. Siepmann and Mr. H. C. B. Mynors who has been appointed Deputy Governor of the Bank.

Mr. C. C. Desai, High Commissioner for India in Ceylon, will be the leader of the Indian delegation to the third meeting of the Inland Transport Committee, the sixth session of the Committee on Industry and Trade, and the tenth session of the E.C.A.F.E. now being held at Kandy, Ceylon. The other members of the delegation are: Mr. F. C. Badhwar, Chairman, Railway Board, Mr. K. B. Lall, Chief Controller of Imports and Exports, Mr. S. N. Mishra, M.P., Mr. R. Venkateswaran, Under Secretary, Union Ministry of Commerce and Industry, and Mr. P. Basu, Assistant Director, Ministry of Irrigation and Power.

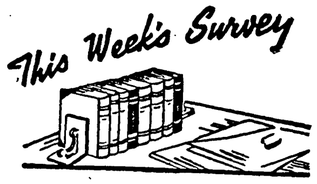
"COMMERCE" 1929

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, 19*th January*

Key to Rubber Position

The key to the rubber position, obviously, is demand. Estimates of consumption indicate the probability of a steady upward trend, one set of calculations, published by the author of the article that appears on another page, suggesting that, from 704,000 tons last year, world consumption will increase to 700,000 tons this year, and so on by stages to 888,000 tons in 1931. On the basis of these figures, the future may be regarded with a certain amount of optimism, so long as the industry is allowed to settle down to the new conditions which commenced on the first day of November last. Therein is represented the long view. The immediate future is more obscure, but, so far as can be seen, not without points of encouragement. The ability of the producers to throw large accumulated stocks on the market is limited by the fact that labour supplies and equipment have to be provided for output to expand and that must reduce the prospect of dumping to some extent. In the meantime, the statistical position improves. Stocks are declining, American consumption is rapidly rising. Germany is using more of the material. British manufacturers are, like Oliver Twist, asking for more. These developments are not the reflection of eight-penny or nine-penny rubber, but of lower prices, and it was reasonable to expect that consumption would receive a fillip from current rates. The opinion may be hazarded that the British-owned rubber estates can never again be so badly situated as they now are and that a resumption of their prosperity of the past may be anticipated within the next two years. In the meanwhile, it would be unwise to make too much of the favourable indications that have been placed this week on the records. We do sincerely think, nevertheless, that the industry is actually on the threshold of better times.



FIVE-YEAR PLAN

THE Planning Commission's review of the working of the Five-year Plan which completes its third year with the end of 1953-54 makes encouraging reading. Before the end of the current fiscal year, a sum of Rs. 1,000 crores will have been spent in carrying out the Plan, which would leave a sum of Rs. 1,069 crores to be spent in the next two years, exclusive of the sum of Rs. 150-175 crores, covering the recent expansion of the Plan. Considerable improvement has taken place in the last three years. Thus, food production has increased by 4.4 million tons. The index number of industrial production has moved up from 117 in 1951 to 134 in the first eight months of the year 1953. There are indications that this trend has been maintained in more recent months. The index number of wholesale prices, which stood at 433 at the end of 1951, receded to 393.6 by the end of October, 1953; it is even slightly lower now. The balance of payments position has improved. The deficit of Rs. 134 crores witnessed in 1951-52 has been converted into a surplus of Rs. 64 crores in the year ended June, 1953. The Commission claims three main achievements: (1) control of the price situation, (2) increase in production, both agricultural and industrial, and (3) establishment of a stable economy.

Without being necessarily hypercritical, one could possibly wonder whether those achievements could be ascribed entirely to the Plan. In some sections, the improvement which has been registered seems considerably short of the targets. Thus, the increase in area under irrigation (major as well as minor irrigation) is of the order of 4 million acres; it is still far below the target of about 20 million acres, the additional area to be brought under irrigation (major and minor works) during the five-year period. The next two years may see a quickening of the tempo of irrigation development, but we wonder whether it will be so high as to hit the target. So far as the improvement in the 'price' sector, by which is meant the decline in the price level, is concerned, it seems part of a world-wide trend. Further, while the price levels to-day are lower than they were in 1951, they are still substantially higher than they were a year before. What is more, the current level of cost of living is higher than even in 1951, with the result that it cannot be seriously contended that the people of the country are happier than they were before the commencement of the Plan.

Although production shows an overall increase, many industries have witnessed either a setback or no progress at all. The production of jute goods and raw jute, for instance, has declined; it should have been higher according to the Plan. Again, whereas there ought to have been an expansion in coal output, there has been a slight fall. Even such improvement as there has been in industrial and agricultural production cannot to be ascribed entirely to the Plan, for nature has been bountiful and, in an agricultural country, the prosperity of this sector determines the prosperity in the industrial sector. That the Commission has not been unmindful of the influence of these factors is borne out by its acknowledgment for the improvement in Indian economy to the part played by two factors—the "end of the Korean war" and the fact that "nature has been kind." Nevertheless, it is difficult to resist the impression that the Planning Commission has given more credit to the Plan than its legitimate due.

It is equally difficult to concede the Commission's claim that the stage is now set for a period of sustained and vigorous effort to rebuild the economy. In fact, judged from a psychological standard, the Plan must be held disappointing to a degree, for at no time was there more frustration among those engaged in the private sector than now, nor were employment opportunities scarcer. Although this too could be traced to world trends in commerce and industry, the Government's continued insistence on arrogating to itself all available financial resources in the country and its interference with the rights of free enterprise are potent causes for the marked slackness in the private sector. Even the revision of the Plan, as now contemplated, does not strike one as capable of meeting the demands of the present-day economic situation. The additional expenditure now contemplated is Rs. 150-175 crores. Of this amount, the Central Government will absorb Rs. 70 crores (inclusive of Rs. 40 crores for rehabilitation of displaced persons), relief work in scarcity areas to be administered by the State Governments Rs. 40 crores, and additions to the State Governments projects, Rs. 25 crores. The details of the programme for the balance of Rs. 15-40 crores are being worked out, though it is revealed that this sum will be mainly utilised for relieving urban unemployment. It should, therefore, be clear that the revision does not contemplate any aid to the private sector which remains, even today, the largest employer.

INDO-U.S. AIR AGREEMENT

The notice of termination of the Indo-U.S. Air Transport Agreement served by the Government of India on the U.S. on the 14th inst., with a view to concluding a new agreement, is a step in the right direction. For, the present agreement, which was concluded as far back as in November, 1946, has curtailed the scope of the economic development of Indian airlines operating abroad in their legitimate areas of activity. This is so, because the agreement, which was entered into at a time when there were no Indian airlines operating abroad, did not restrict the fifth freedom traffic (traffic destined for or coming from third countries). Since then—with effect from June, 1948, to be precise—the Indian airline, namely, Air-India International, has been engaged in carrying overseas traffic. Consequently, the unrestricted carriage of fifth freedom traffic by foreign airlines is making serious inroads into the traffic that should be legitimately available to Air-India International. In this connection, an official Press note says:

"During the last six years, a thick network of international air communications has come into being. A stage has now been reached, where opportunity should be made available to the underdeveloped countries to make some progress, and there will be no chance for them to do this under this type of agreement. There are at present 15 foreign airlines operating scheduled air services across India and exercising traffic rights in this country. Between them, they are operating as many as 74 services a week or over 10 services a day. These airlines are competing with the Indian airlines for the traffic embarked and disembarked in India to and from countries other than those of the non-Indian airlines."

The fifth freedom traffic for the foreign airlines constitutes, to the Indian airlines, third and fourth freedom traffic (traffic between countries of the origin of the airlines and India), on which the latter depend mainly for their economic operation. An examination of the traffic carried by the Trans-World Airlines (T.-W.A.) and the Pan-American Airways (P.-A.A.), the two U.S. airlines, which ply to and across India on scheduled air routes, has disclosed that the capacity provided and utilised by them has been far in excess of the requirements of traffic between the territories of India and the U.S. and that the bulk of the traffic carried on these services to and from India has been fifth freedom traffic, including, in the case of P.A.A., a large proportion of such essentially local or regional traffic as that between India and Pakistan. In short, the main point of contention between India and the U.S. relates to the need for the restriction of the fifth freedom traffic to a certain determined percentage of the third and fourth freedoms, since fifth freedom traffic is only incidental to third and fourth freedoms, which should primarily determine the capacities to be offered by both the countries.

The Government's move has come not a day too soon. It has followed the failure of sincere and continuous efforts on the part of India to arrive at a mutually acceptable formula with the U.S. in the past two years. Not only did the informal discussions held in November, 1951, with the U.S. proved abortive, but also the consultations held subsequently in New Delhi from May to August 1953.

The new agreement proposed to be concluded is sought to be based on those concluded by India with Australia and the Philippines in 1949 and with the U.K. in 1951 and the recent revision of the 1946 agreement with Netherlands which restrict the carriage of fifth freedom traffic. Negotiations for the new agreement with the U.S. have to be concluded one year after the date of receipt of notice by the Government of the U.S.; otherwise, the present agreement will automatically terminate. The new agreements will have to provide for an equitable share of traffic between the designated airlines of the two countries so as to facilitate Indian airlines to face international competition confidently, by determining the third and fourth freedoms of traffic belonging to India and restricting the fifth freedom. Provisions requiring periodical review of the working of airlines on these routes will also have to be incorporated. It is to be hoped that the U.S. will appreciate India's desire to gain its legitimate share in overseas air traffic.

STANVAC BUILDING

The great poet who sang that "a thing of beauty is a joy for ever" could not certainly have had any idea of what modern architecture could produce. The new building of the Standard-Vacuum Oil Company at Bombay—it is, in its own way, a triumph of modern architectural design—the opening ceremony of which was performed by Bombay's Chief Minister, Mr. Morarji Desai, on Friday last week, is undoubtedly a thing of beauty. The building is beautiful in respect of not only architectural design but also amenities and comforts it provides for the dwellers. The building is designed to provide maximum comfort for employees and the whole structure was conceived and executed with this goal as its central architectural theme. This seven-storey, sun-controlled new building, built at a cost of Rs. 35 lakhs, is a notable and outstanding addition to this premier city's constructional monuments. The sun-control device eliminates the glare of the sun at all times of the day. The two-inch layer of cork insulation reduces further the sun's heat and noise. In the design and construction of the building, it is certainly creditable that the management of the Standard-Vacuum Oil Company has endeavoured to incorporate many of the more recent developments employed throughout the world in affording man the greatest convenience and comfort in his place of work. The sun-control installation, air-conditioning, sound-proofing and colour schemes are part of the plan to enable each employee to work in an atmosphere "which is free from strain."

Equally creditable is the fact that the management has endeavoured to make the maximum possible use of local materials and to give a fillip to the Indian building trade. An idea of the extent to which Indian skills and materials have been used in the construction of the new Stanvac building can be had from the following brief description, as given by Mr. R. T. Burton, General Manager of the Company, in the course of his welcome speech on the occasion of the opening ceremony:

A Bombay firm of architects was employed for the general design of the building, exclusive of the main entrance, the sun-control feature and treatment of the superstructure on the roof. Bombay contractors have been employed throughout in all phases of construction. Labour cost represents a substantial proportion of the total cost in building construction and Stanvac's experience in constructing this building indicates that this factor has accounted for approximately 35 per cent. of the total cost. India produced cement to the extent of approximately 1,600 tons has been used throughout. Plywood panelling of matched teakwood, made to the Company's specification and used to the extent of approximately 40,000 square feet, was made in Uttar Pradesh. The black granite framing the main entrance was specially quarried, cut and polished at Bangalore. The steel window frames were designed and fabricated in Bombay—the first to be galvanised and bonderised for protection against weather. The recessed or flush type lighting fixtures were likewise designed and manufactured in Bombay. The vertical concrete louvres were pre-cast at the site in special moulds designed for the purpose and the horizontal louvres were specially made in Bombay of cast asbestos cement. The building has been equipped throughout with furniture designed and specially manufactured in Bombay for Stanvac's use.

With the opening of the new Stanvac building, another chapter may be said to have been opened in the history of Stanvac's association with India and its people in the last 60 years. The building is, as Mr. Burton claimed, a "further evidence of Standard-Vacuum's interest in the development of India and of our interests in the people of India." Reassuring is his statement that, "as in the past, it shall always be the endeavour of the Standard-Vacuum organisation to serve the best interests in India, which, we firmly believe, will coincide with the best interests of the Company."

Surely, these words represent a highly commendable attitude towards India's problems. Incidentally, they also show how unjustified are the carping criticisms that are sometimes made by a section of Indian opinion about foreign capital. Considering the shortage of capital in India, the investment of Rs. 35 lakhs over the construction of the building alone and several times this sum on the refinery by the Standard-Vacuum Company are welcome additions to this country's resources. That apart, the desire of the Company's management to provide its employees comfortable conditions of work deserves to be particularly commended. The business concerns in Bombay and other parts of India will do well to emulate the example of Stanvac and create conditions whereby, as Mr. Morarji Desai rightly emphasised, the workers' efficiency can be increased and strikes and discords avoided.

THE KALAHARI

In the present context of the need for augmenting food resources in this country and in the Commonwealth as a whole, the recommendations of a British mission, for bringing 50 million acres of idle grassland in the Western Kalahari (Central Africa) into full production will be read with interest. The mission, it may be noted, was sent some time in 1952 by the Commonwealth Relations Office and the Colonial Development Corporation to investigate the possibilities of economic development in Bechuanaland Protectorate. In its report just published in London, the Mission has put forward a large cattle ranching project which seeks to envisage breeding of 1 million more cattle in the Kalahari. It recommends that, in the first instance, a pilot farm should be set up, financed and managed by a managing company, on land made available by the Government. It also urges construction of roads and provision of adequate water facilities along the trans-Kalahari cattle routes. If these recommendations of the mission are implemented in right earnest, the Kalahari, one of the largest remaining virgin areas of the world, will soon be populated by large herds of cattle, which will bring prosperity to the inhabitants of Bechuanaland and, at the same time, make a major contribution to the food supplies of the Commonwealth.

Apart from the purely economic importance of the cattle ranching project, the mission has done well in emphasising the human aspect of the problem. The mission feels that the allocation of ranches after the pilot ranch's existence for five years should be made by a selection board to Africans or European farmers, without any particular separation of areas. "We think it important," to quote it, "that racial discrimination should be avoided and that *every man be treated according to his character and ability*" (italics ours). These are, indeed, highly significant remarks which should be more than sufficient to open the eyes of the South African advocates of racial discrimination.

MR. KARMARKAR ON STATE OF INDIAN ECONOMY

Availing himself of the invitation to attend the half-yearly meeting of the Merchants' Chamber of U.P., held at Kanpur on the 14th inst., the Union Minister for Commerce, Mr. D. P. Karmarkar, reviewed the economic position of India in 1953. The picture of the Indian economy drawn by him was encouraging. He had good reasons to believe that the record of 1952 in industrial production would be exceeded in 1953. In nearly 50 industries, the output in that year was better than in 1952. There was remarkable improvement in the supply position of cotton textiles, cement, salt and coal, which played a vital role in the economy of India. But he admitted that in some industries production was lower on account of labour disputes, power cuts, and lack of consumer demand. The general picture of industrial production was, however, bright.

Turning to commerce, Mr. Karmarkar stated that the Government's aim in the exercise of import control was to ensure the maximum availability of goods required for the country's economy within the limits of the availability of foreign exchange. The deficits were financed through the country's resources and releases from sterling balances. Besides, there was also improvement in the balance of trade figures for September, October and November, in that the net favourable balance of trade amounted to Rs. 15 crores. The new import policy announced last month aimed at sustaining the tempo of agricultural and industrial production by means of increased imports of essential consumer goods, industrial raw materials and plant and machinery. Considerable stability in import policy was attained by keeping unchanged the broad outlines of policy during the last two years.

Mr. Karmarkar, however, expressed concern over the fall in exports. The overall export trade declined from Rs. 767 crores in 1951 to Rs. 716 crores in 1952. While the figures were not available for the whole of 1953, the Minister felt that exports might not exceed Rs. 550 crores. The fall was due to the disappearance of boom conditions resulting in decline in values. The Minister, however, did not forget to enumerate the measures taken by the Government in order to make up for the loss in foreign exchange. These included reduction in export duties on certain commodities, allowance of drawback of import duty on imported raw materials used in goods exported, grant of a rebate of As. 2-1.1/5 per lb. of cloth and yarn of certain specified counts, relaxation of controls over certain export items and the organisation of the Export Promotion Department at the Centre. As the U.P. was famous for its handicrafts, the Minister reminded those connected with these industries of the help given to their products abroad through showrooms and exhibitions.

Although the measures adopted by the Government are welcome, these need to be supplemented by vigorous efforts by trade and industry to exploit old markets and explore new ones. Success in this direction can be ensured only by production of standard quality goods at competitive prices.

OFF THE RECORD

(By "ROVER")

IT appears to me as if the proverbial worm has turned. Considering the abuse, insults, infamy and threats heaped on its head, the ever-increasing distrust and vigilance with which it has been regarded, and the progressively tightening bonds with which the poor worm has been circumscribed, what is to be surprised at is that it did not turn even earlier. It speaks something for its endurance that it has survived this vile treatment, even though it might not have prospered and multiplied itself under it. It also speaks something of its meekness and humility of spirit, which would look more becoming in the case of its tormentors, who claim to monopolise the heritage of Gandhiji and speak in his name often when it suits their book, while ignoring all the time the really precious part of his teachings.

I do not know if this delayed display of a little spirit and a sense of self-respect is going to help it or to change matters, which have advanced too far to be easily set right. But I am glad and gratified that the meek worm has turned and expressed its sense of injury. It was not to be expected that it would show any resentment and it would have been extremely impolitic on its part to do so considering its helplessness. An expression of indignation would have been out of place and even ludicrous. Threats of not offering active assistance but even of sulking or going on strike would have been unpatriotic, apart from being suicidal. Its determination to prepare its case and present it to the public has struck just the right note. It has supplied the necessary evidence that a worm, though it be, the life force is still working in it and that it is still aware of other values besides that of acquisition. I should be all the more gratified if this new determination also leads the worm to cleanse some of the filth which has worked itself through its nutrition in its system, and which today constitutes its one great weakness. It is this element of corruption in its composition which has exposed it to the calumny and cruel treatment, of which it has been a victim during recent years.

The fact that such filth and worse today contaminates the other members of the body politic as well, should not be taken as a cause for comfort or put forward as a defence by it. History has taught us that the vices of those who wield power are not only overlooked but virtually applauded by being imitated by the multitudes, so long as the power lasts, even though this corruption in the long run might lead to their ultimate ruin and collapse. It will not help private enterprise to point to the beams in the eyes of its detractors or to ask only those who are free from sin to throw stones at the sinners. *It is always the guilty* who clamour most loudly for the punishment of those who are sinful in their eyes. Only in such a clamour could they drown both the accusations against themselves and the inconvenient and discomforting voice of their own conscience. Those moved by real piety or genuine righteousness never even dream of throwing stones at the sinful ones. They would cease to be truly pious the moment they did.

Of course, I am referring to the all too meagre reports appearing in the Press about the meeting of eminent Industrialists called, of all people, by that genial and laughter-loving soul, Mr. Homi P. Mody, last week. Militancy is the last thing one would associate with a man like Mr. Mody, though I have for long suspected unplumbed depths and untested strength in this shrewd business man and public leader. He has fought humbug and hypocrisy but always with the non-militant but more deadly weapon of his tongue. He is, perhaps, not so non-violent as he makes himself out to be, because extremely affable though he is, he loves to smite and scourge an opponent by way of a pointed story or a neatly turned joke. That such a man should abandon his pose of light-hearted tolerance and choose to lead a movement is a proof of the fact that the powers-that-be have gone too far in this game of bullying private enterprise and that its enemies amongst the power-grabbing political crowd have transgressed the mark in their defaming tactics.

If the world can accommodate a militant church, militant trade unionism, a militant peace movement and militant feminism, I cannot see any reason why anybody should look askance at a militant business community. However, the stand which private enterprise has decided to take at this meeting, under the guidance of Mr. Mody, is by no means either militant or aggressive. All that one could say about it is that it is mildly defensive and one which is dictated alike by enlightened self-interest and the economic needs of the country at the present stage of its development. Private enterprise would deserve to go down and be extinguished, if it did not courageously stir to clear its position and to remove prevailing misconceptions. The heavy load of calumnies apart, it is being tied hand and foot, on the one hand, and upbraided for not functioning vigorously, on the other. Considering the plight of the country's economy, it could not think of going further than this in its resistance or protest. Considering its own future existence and its own self-respect, it could not do less, unless it contemplated committing *hara-kiri*.

Not being an industrialist and not having been present at this momentous meeting, I cannot claim to know anything in detail about the decisions taken there. But we know enough, from the reports which have appeared so far, that for once, the leaders of this community, who are traditionally wedded to caution, moderation and discretion, discarded their matrimonial yokes and indulged in outspokenness, and in some cases even bitterness. But I have noticed of late not only this essay in candidness in varying degree at business men's gatherings, but a new note of desperation and even despair which has inspired them with some courage and made them challenge their critics and oppressors. We had an earnest of this from Mr. Mody himself at the meeting of the Employers' Organisation last month, when he indulged in some straight and serious talk. The All-India Manufacturers' Organisation also cast aside its fear when it openly indulged in some pertinent criticism of the official economic policies under the guidance of that intrepid fighter, Dr. M. Visvesvarayya. It has also been obvious for some time from his public utterances that not quite a negligible quantity of iron has entered the philosophic soul of Mr. J. R. D. Tata.

Since this historic meeting of Mr. Mody, when knights of industry decided to enter the lists, I have noticed a new mood and a new temper individually amongst some of the other leaders of this community, on one or two recent occasions. This informal gathering, in my opinion, was more representative than the Committee of the Federation of the Indian Chambers of Commerce and Industry and spoke with greater authority than the Federation ever could, if we look to the great names that figured in the list of those who honoured Mr. Mody's invitation. It is, therefore, but natural that it should have inspired the individual members of this community with a new courage and a new sense of determination to vindicate its position. Mr. Dharamsey M. Khatau is no firebrand. He has his head screwed tight on his shoulders. His address to the shareholders of the Associated Cement Companies at its annual general meeting a few days ago is a classic instance of this new spirit in the private sector and the revival of a sense of dignity amongst its leaders. Similarly, last Friday, I was vastly entertained by the homily to which Mr. B. T. Thakur, a sedate and discreet banking man from Calcutta not given to extravagant utterances, subjected the Finance Minister of the State of Bombay, when Mr. Thakur was presented with an address by the Shikarpur Shroffs' Association of Bombay. Dr. Jivraj Mehta presided over this gathering. It did me good to watch this reversal of the usual role of boringly platitudinous Ministers preaching to business men about selflessness, with which most of the Ministers I have come across have not even a passing acquaintance.

All this is to the good. I have but one warning to utter to those who are starting on this new and very necessary crusade. What matters in all such campaigns is for the billigerents to embark on it with clean hands. A mere disapproval of the black sheep in their camp cannot be enough. A more vigorous and a more pronouncedly aggressive attitude of driving out this perversely anti-social element, which is not as insignificant as business men try to make out, from their camp might prove a good preparation for the coming struggle, in which private enterprise proposes to engage itself for its defence. Without it, their *bona fides* will not be accepted unreservedly and their otherwise strong case will stand the risk of being prejudiced from the very start.

Those who will not subject themselves to self-discipline must accept it from without. And more than half the mischief which has disabled industry and crippled private enterprise, to a degree where it has ceased to be either private or an enterprise, has been wrought by the effort to impose an unnatural and artificial order in this field by an ignorant and unimaginative bureaucracy, directed and controlled by inexperienced and arrogant Ministers. It is idle to ask for an autonomous free enterprise as an equal force co-existing with the public sector in the country's economy, each supplementing and fortifying the other and each functioning within a clearly defined sphere of activity, unless the private sector gave proof of effective self-discipline. Nobody who is not disciplined could hope to remain free for long.—*All Rights Reserved.*

INDO-CEYLON CITIZENSHIP CONCORD HERALDS NEW ERA

TWIN BODIES FOR RIVER VALLEY PROJECTS

(From A Special Correspondent)

NEW DELHI, 19*th January*

DELHI LETTER

THERE was considerable satisfaction yesterday at both camps, Indian and Ceylonese, when a broad understanding was reached over the vexed problem of citizenship rights to the Indian settlers in that Island. This problem has defied solution during the last few decades, creating, in its turn, much misunderstanding and controversy. The credit for the latest understanding, doubtless, goes to a large extent to the statesmanship, foresight and realism of the Ceylonese Prime Minister, Sir John Kotelawala, and his colleagues who evinced keen interest in finding a way out to this question. On the Indian side also, Mr. Jawaharlal Nehru, Prime Minister, displayed commendable restraint, dignity and understanding, especially over the apprehensions and difficulties that swayed the Ceylonese delegation from time to time, and was successful in convincing the Ceylonese spokesman that a broadbased agreement between the two neighbouring countries which have been bound by close and inseparable cultural and social ties over a period extending from the dim dawn of civilisation to the present day, is not only essential but also necessary for the proper development of the two countries in the coming years.

An agreement has as a result of the understanding, been signed by the two Prime Ministers subject to the approval and ratification by the two Governments. It contains eight clauses dealing with different aspects of the problem. The Ceylon Government has promised to maintain a register of all adult residents who are not already on the electoral register. It has stated that it will expedite the registration of citizens under the Indian and Pakistani (Citizenship) Act so as to complete the disposal of pending applications within two years. The registered candidates will be placed in a separate register, particularly in view of the fact that the bulk of the citizens does not speak the language of the area in which it resides. Citizens whose names are placed in the separate electoral register will be entitled to elect a certain number of members to the House of Representatives. In regard to those persons who are not so registered, it will be open to them to register themselves as Indian citizens, if they so choose, at the office of the Indian High Commissioner. The present arrangement will be continued for a period of 10 years after which a fresh assessment will be taken of the whole problem. At the same time, both Governments are determined to suppress illicit immigration traffic between the two countries with close co-operation with each other.

The implications of the agreement are far-reaching. The agreement heralds a new era of economic and political relations between India and Ceylon. What is more, it sets up a pattern which in future will become a basis for the solution of similar questions. Since thousands of Indians have gone to distant lands in search of occupation at the invitation of the then colonial authorities, during the last one century, and since citizenship rights to these people are not being granted in the natural course of things, the agreement with Ceylon now provides an indication as to how a fair approach could be made to tackle this problem. It is generally believed that as a result of the above agreement, about five lakhs people will acquire full citizenship rights by the end of 1955. It is hoped that the Government of Ceylon will consider favourably, for purposes of registration, another three to four lakhs people for absorbing them eventually to full citizenship rights. The Ceylon delegation is reported to have given an assurance that their Government will not disturb this class of people from their present employment. Besides, there may be another one to one and a half lakh Indians who have been living in that country, holding Indian passports or travel documents. Citizenship for this class of people will not arise, unless they qualify themselves for this purpose in due course.

Although the problem of the status of Indian settlers in Ceylon has not been fully solved, the present agreement will go a long way to meet the desideratum. The Indian Prime Minister has put this succinctly when he stated that "one would be on sounder grounds to go a few steps now and a few steps later on." Sir John Kotelawala also responded to the above sentiment when he expressed thus: "Ceylon looks to India not only in the matter of settlement of the status of Indians in Ceylon but in other spheres as well for the understanding, goodwill and co-operation which a small country can expect from a land as large and as rich in men and materials as India undoubtedly is."

The Production Ministry of the Government of India has been placed in an unenviable position in the matter of deciding the location of the steel plant. Four States have been vying with each other for this honour; and in their anxiety, they have raised considerable controversy on this question, by pointing out that each particular State has greater advantages over the rest in point of economical production of steel, as also in the availability of various raw materials. They have already submitted detailed memoranda on this subject to the Central Government. The Madhya Pradesh Legislature has also passed a resolution that the proposed steel plant should be located within the State, failing which the Central Government should appoint an independent body to assess the merits and demerits of each State in this connection and pronounce its judgment. Meanwhile, another German delegation which was in the Capital this week, has now left for Calcutta to have some discussions with the Secretary of the Production Ministry. This delegation will submit its report shortly to the Government of India on the question of location of the plant. It is only after this that Government will be deciding the location. Perhaps this decision will be announced some time in the first fortnight of February. In view of the controversy, the Government of India is likely to consider favourably the publication of the observations of the German delegation on the location of the steel plant. After the decision of this question, the work in connection with the construction of the factory will begin in right earnest from April next.

The Government of India has proposed to set up a Committee of Engineers and a Board of Ministers concerned for the purpose of co-ordinating the organisation, development and execution of river valley projects. According to Mr. Gulzarilal Nanda, Minister for Irrigation and Planning, the Engineers' Committee of Co-ordination (Chairman: Mr. Kanwar Sain) will include representatives of the major river valley projects and one representative each of the States having medium projects. The Board of Co-ordination of Ministers will decide questions of policy and steps to ensure effective implementation of that policy. The proposal to set up the Committee and the Board follows the deliberations at the seminar of engineers held recently at Nangal. These two bodies are expected to constitute "an essay on co-ordination" in the words of Mr. Nanda.

The proposal to constitute the Board and the Committee, though belated, is nevertheless welcome. For such co-ordination will promote effective utilisation of the available resources and will also evolve uniform methods of tackling common problems. The Committee of Engineers will help utilise the technical skill and professional experience of the engineers for the benefit of the nation. After all, engineering is the art of economic application of science to social purposes. Any defect in the application will increase the social cost of the projects to the community and this, at a time when India is faced with a woeful lack of capital, will really be deplorable. Proper co-ordination will also help remove the hiatus in the execution of projects by avoiding disbandment of trained personnel as soon as a project is completed, who could be transferred to places where they are required. The success of these institutions will, however, depend, in the last resort, on the realisation by the engineers and ministers concerned of the tremendous responsibility they are entrusted with and of acting according to the highest ethical and technical standards of their professions.

DEVELOPMENT OF THE COMMONWEALTH

HAS BRITAIN GOT ENOUGH CAPITAL FOR IT?

(From Our Own Correspondent)

LONDON, 16*th January*

LONDON LETTER

THE Sydney Commonwealth Conference of Finance Ministers certainly covered the ground intended, as far as can be judged from the final *communique*. The two major decisions that emerged comprised a general objective and a practical approach. The general objective was to strengthen the sterling area for which purpose exports must continue to be expanded, expanded, expanded. The theme is ceaseless and expansion is to cover not only "traditional goods but everything else that can be sold abroad. The long-term purpose of this sterling strengthening (the published figures suggest a substantially reduced net balance of payments surplus for the sterling area in the current year, as compared with the preceding year) covers the convertibility of sterling. But though the International Monetary Fund is now pressing hard its convertibility propaganda, the Finance Ministers have sensibly reaffirmed that sterling must be much stronger and American intentions regarding access to her markets clarified before convertibility can be considered.

The practical approach was the decision to increase access to the London capital market to the Commonwealth countries "in support of general programmes of development"—that would, however, assist in improving the sterling area's balance of payments. In the course of the Conference, a good deal of Press talk has taken place about the great stream of finance now to be undammed from the U.K.—the price of which, to make the whole thing sound more realistic, was to be consumer austerity in this country. So Mr. Butler and his Australian colleague—a great believer in incentives for entrepreneurs and the practical limits on domestic austerity—had to come out into the open and forthrightly declare that the reports had been running ahead of practicability. There was to be no "bonanza," said Mr. Butler, and the British Government, though it believed in encouraging saving both for home and Commonwealth development, was not proposing any new austerity programme. Access to the London market was to be *easier*, that was all, for London had no unlimited sums to lend; the U.K. had itself to be served and then there were the claims of the Colonies as well as of the Commonwealth.

Naturally, one is obliged to enquire how much easier access to London is going to be. Whitehall is not aware of anything more than an intention to help Commonwealth countries as much as possible when they approach the British Treasury with requests to be permitted to borrow on the market, in the light of the purposes of the borrowing and the position ruling on the capital market at the time. Indeed, unless the Treasury were to make loans itself, there is little more that Whitehall can do.

But, subject to the market being able to provide the funds, there is to be one important change in the Treasury's approach to the borrower; that is to be found in the phrase above "general programmes of development." Indeed, Mr. Butler has made it clear that he prefers projects where the borrowing country is also substantially involved. This is a sound and refreshing approach, for, whereas hitherto the Treasury has wanted to know precisely into what British money was going, henceforth it will be satisfied with British participation in a general development project which, for instance, may assist in the purchase of equipment that may have to be imported. The view is now taken that the general development of the Commonwealth is the surest way of increasing their contribution to the resources of the sterling area.

Although the City has failed to answer its own question as to how much more borrowing may be permitted under this new approach, the Commonwealth countries can rest assured that the Sydney decision was not empty. The Treasury will be more liberal in authorising borrowing and undoubtedly the Government agencies such as the Export Credits Guarantee Department and the Colonial and Commonwealth Development Corporations will be better able to make their own contributions. The limiting factor will necessarily be the British balance of payments surplus, but beyond this the London market will be as free to the Commonwealth as to the domestic economy.—*All Rights Reserved.*

AMERICAN LETTER

BUSINESS ROLLING ALONG SMOOTHLY

BANK PROFITS HIGHER—EAST-WEST TRADE

(From Our Own Correspondent)

NEW YORK, 14*th January*

PRESIDENT Eisenhower followed in the footsteps of his predecessors in asking Congress to hike social security taxes and grant coverage to 10 million more persons in the U.S. and boost old-age and survivor benefits for all. His aim, he said, is to "reduce both the fear and incidence of destitution to the minimum". In this particular respect, the President will most likely have the support of nearly all Democrats in the Congress and of most of the progressive Republicans. It should also increase his popular support.

Meanwhile, business is rolling along satisfactorily. The consensus of opinion, expressed by chairmen of the leading banks throughout the country, is that 1954 may not be as good a year as 1953, but that it will approximate the results of 1952 and may be the second or third best business year in the history of the U.S. There do not seem any particular hardships ahead of the financial business. The era of extreme and artificially low interest rates is past and is unlikely to be re-established.

Improved profits over the preceding year have characterised 1953 bank statements and the expiration of the excess profits tax should help to accentuate this trend further. All will depend, however, on the general course of business. Commercial loans for the past six months have been appreciably lower than in the preceding 12 months' period. With lower taxes and increased take-home-pay for corporations and individuals, the demand for loans is apt to remain lower in the future, except that, in the first half of the year, about 90 per cent. of annual corporation taxes are being paid. This will necessitate some borrowing.

Earnings from securities should be better, owing to higher interest rates and small loans of all categories carrying the highest interest rates should continue at a high level. With the accumulation of savings which has been proceeding since the war years, a new philosophy is reigning in American minds. Families with, say, $1,000 to $4,000 in cash savings will no longer, as they did 10 years ago, take $1,500 to buy a new automobile. They rather keep the money in the bank and buy whatever they wish in the way of capital goods on the instalment plan. It has become a nationally established pattern.

Savings Habit

The savings habit is most likely to continue, regardless of the rolling adjustments in the economy. Pension plans alone are increasing at the rate of $2,000 million a year and are now estimated to total $17,000 million. All such funds should provide a steady flow into the U.S. financial system and help maintain volume and earnings, despite soft spots in the economy.

Labour strategy this year, in the face of stable and even fractionally declining living costs, seems to be to have security benefits increased rather than ask for higher cash wages. This general trend should work in the direction of stable financial markets.

Political Tension

However, in the volatile atmosphere of East-West tension, any suggestions about future developments cannot ignore the possibilities of further explosions which, in turn, could have a profound effect on American business and psychology. The final conclusions of the Foreign Ministers' Conference at Berlin may leave their marks on Congressional thinking during this session of Congress. Korea is still a trouble spot, as is Indo-China.

The position of India's Prime Minister, Mr. Nehru, and his country's attitude in Asian affairs and the question of aid to Pakistan continue to exercise public opinion in the U.S., more or less as a result of Vice-President Nixon's report after his world tour.

In fact, India's position is widely questioned in the U.S. There is great doubt here whether Indian official policy is actually anti-Communist or just "Asian" without regard to the East-West question. Also, whether Prime Minister Nehru aspires to leadership of all Asian nations as a matter of principle regardless of political consequences. There is no doubt that most of the Asian foreign policy decisions of the Eisenhower Administration will be based upon the Nixon report, rightly or wrongly.

So far, the domestic U.S. markets seem to take a sanguine view of what the Administration is trying to accomplish. Far-sighted business managements have adjusted themselves to the new concept of less Government control and greater competition. Others will not or cannot do so, without revising their own thinking and reorganising their operations. The net result is that, even within specific industries, some concerns will be making progress and expand, while volume in others will drop.

This is not exactly a return to the rugged individualism of a quarter of a century ago, but merely a departure from the overdone Government paternalism of the past two decades. This trend is not confined, of course, to the United States alone. In Great Britain, too, many controls have been removed and markets have been turned back from Government manipulation to private initiative. While this has not achieved overnight results, it has led to a gradual and substantial improvement.

Aided by internal measures, gold and dollar exchange balances have been rising to the point where U.S. aid, outside of military aid shipments, is a mere gesture.

East-west Trade

One of the hottest subjects at the present time is the liberalisation of East-West trade, outside of strictly strategic materials. Some of the most conservative business men have made the point that American refusal to do business has driven the satellites into closer alliance with the Soviet Union.

Thus, it is argued, U.S. embargoes have helped Moscow as much as they have impeded the Communist Government. There are many Russian and satellite raw materials which the free world could use to advantage. This viewpoint is advanced, among others, by the National Foreign Trade Council and the United States Council of the International Chamber of Commerce.

Such thinking is analogous to the liberalisation of business from controls both in Britain and in the United States and to President Eisenhower's proposal for a pooling of atomic energy information for peaceful purposes. It is a trend which cannot be dismissed. It could be one of the contributing factors making for high level employment and business activity.

One of the most encouraging indicators is that spending for new plant and equipment in the first quarter is estimated to reach $6,600 million, up 5 per cent. from a year ago. Also, new housing units expected to be built in 1954 should equal the 1.1 million houses, constructed in 1953. Industrial expansion and building have always been two of the mainstays of the American economy.—*All Rights Reserved.*

PAKISTAN NOTES

MINING IN PAKISTAN

IMPORTS OF TEXTILES

THE completion of the aerial survey of land by the end of this year marks a significant step forward in the direction of utilising the vast potential resources of Pakistan. The survey—started about two years ago—is being carried out by the Photographic Survey Corporation of Canada. Four more Canadian experts are reported to have already arrived in Pakistan to join the original team of nine Canadian geologists who have been responsible for the completion of the photographic survey of Baluchistan. The survey is claimed to be the largest ever conducted of Pakistan's resources, the total area covered being 165,000 square feet. The cost of the survey is $2 million which are drawn from a $10 million fund set up by Canada under the Colombo Plan.

While the aerial survey is important only from the long-term point of view, the Government of Pakistan has taken several active steps to promote the development of the mining industry in the country. These include various forms of concessions to mining industries, scheme for training of six mining surveyors each year, setting up of a Chair of Geology at the Punjab University, training of mining engineers in the Punjab College of Engineering and Technology, scheme for sending students abroad for training in geology and oil technology, and improvement in the means of communications in the mining areas. All these steps have resulted in the discovery of a number of new minerals and increased production of various minerals, as will be seen from the figures given below:

	1948	1952	January-June 1952	January-June 1953
Crude oil (10 million gallons)	17.02	55.43	24.67	25.96
Chromite (tons)	18,000	17,230	9,568	11,129
Coal (tons)	241,000	599,000	321,967	328,088
Limestone (tons)	346,900	672,400	333,199	411,847
Gypsum (tons)	14,150	28,850	13,753	12,469
Fire-clay (tons)	..	6,302	3,069	4,159
Silica sand (tons)	..	4,615	2,478	3,128

Exploration of and prospecting for new oilfields are being continued. Pakistan Petroleum Ltd., which has been carrying out drilling operations for oil at Sui in Baluchistan, has struck a field of natural gas which is expected to yield 1.1 million tons of furnace oil for the next 50 years on a very conservative estimate. The World Bank is understood to have agreed to finance 50 per cent. of the cost of the project estimated at £10 million. Fresh oil is also reported to have been struck in the Jhelum and Attock Districts in the Punjab. Further prospecting is being carried out in several other parts of East and West Pakistan.

Iron Ores

Renewed investigations on iron ore have been made in Chitral, Mardan and Abbottabad. The work with a magnetometer has proved a deposit of 7 million tons of iron ore in Chitral. Iron ores have been reported at 15 places in the Salt Range in Mianwali and Sargoda Districts; these ores, it is stated, have an iron content varying from 42 to 66 per cent.

The Pakistan Government has started, in collaboration with private interests, construction of a 3,500-ton caustic soda plant at Nowshera. The Pakistan Industrial Development Corporation is installing a fertiliser plant at Daudkhel which will produce 50,000 tons of ammonium sulphate per annum. The cost of this plant is estimated at Rs. 6.35 crores, of which the U.S. Technical Co-operation Administration will contribute Rs. 3.12 crores ($7 million). The factory is scheduled to be completed by the end of March, 1956. Plans have also been completed for the erection of a superphosphate plant along with a sulphuric acid factory at Lyallapur.

Self-sufficiency in Cement

The plans of the Pakistan Industrial Corporation for attaining self-sufficiency in cement supplies are well under way. The decision to purchase and rehabilitate the two cement factories of the Associated Cement Companies—a brief reference to which was made in last week's notes—marks the first major step in the direction. The indigenous production of cement in Pakistan is now running at an annual rate of 600,000 tons which is far below the country's requirements. Plans are accordingly under way for the setting up of two cement factories—one at Hyderabad (Sind) and the other at Daudkhel (Thal) with annual installed capacities of 120,000 tons and 100,000 tons, respectively. Preliminary investigation into these projects has already

(Continued in previous column)

(Concluded from next column)

been completed and the machinery and plant are on the way. The construction of the factories is expected to be completed in about two years' time. The cost of the Hyderabad factory is estimated at Rs. 1.7 crores. Of this, the Sind Government will subscribe 50 per cent. The Government of New Zealand has contributed Rs. 45 lakhs under the Colombo Plan. The cost of the cement factory at Daudkhel (Thal) is estimated at Rs. 2.5 crores. The bulk of this cost, namely, Rs. 1.8 crores, is being contributed by the Canadian Government.

Purchase of Japanese Textiles

Latest reports from Karachi indicate that negotiations between the Pakistan Government and the representatives of the Japanese firms for the purchase of textiles by the former on its own account have been concluded. An agreement is expected to be signed shortly. Under the proposed agreement, Japan will supply longcloth at As. 10-4 per yard. It may be recalled that, under the Pakistan-Japanese trade agreement, signed in April, 1953, Japan had agreed to sell cloth worth Rs. 5.5 crores. The purchase of cloth from Japan now envisaged is part of the Rs. 4 crores worth of cloth which the Government recently decided to import on its own account with a view to bringing down the prices which have soared high.

FINANCE FOR DEVELOPMENT OF PRIVATE SECTOR

VIEWS OF LEADING ASSOCIATIONS

THE points for discussion relating to provision of large-scale bank finance for the development of the private sector, circulated among financial institutions and business organisations by the Shroff Committee, have evoked replies from all the leading associations of industry, trade, banks and insurance. Apart from the replies sent by the Bombay Shareholders' Association, to the views of which a reference was made in our last issue, other well-known bodies such as the Bombay Exchange Banks' Association, the Federation of Chambers of Commerce and Industry, the Indian Merchants' Chamber, Bombay, and the All-India Manufacturers' Organisation, Bombay, have all submitted their views on this important question. Accordingly, the Committee now has plenty of material on the needs of the private sector and on how best they could be met. It will receive some more ideas when it visits other centres also. It is, however, to be hoped that this expert committee will not let itself be overwhelmed by the avalanche of suggestions and that it will have the equanimity of mind to put forward practicable proposals, consistent with the best traditions of commercial banking.

A perusal of the replies of some of the bodies referred to above discloses certain broad features which the Shroff Committee will do well to bear in mind, while arriving at final decisions. First, the replies place undue emphasis on the aid which the Reserve Bank could give to industries. Secondly, the replies seem to have been framed with a view to laying the blame for the present unsatisfactory position entirely at the door of the Government. Thirdly, while the insurance and banking laws have been modified with a view to eliminating certain dangerous tendencies in the sphere of banking and insurance, the Committee is now asked to liberalise them, so that more finance could be made available to the private sector. Lastly, one notes the absence of introspection on the part of most of these bodies, with a view to finding out to what extent the private sector itself would be able to help in augmenting the sources of finance needed by it. It is asked, for instance, as to why the private sector itself should not start a joint stock industrial bank with a large capital structure.

Specialised Banking Units

With these preliminary observations, it is proposed to outline here the various suggestions made by the organisations mentioned above. The Shroff Committee desired to know whether there was any need for starting specialised banking institutions for industrial purposes. The comments of the Exchange Banks' Association on this question are quite appropriate. The Association is of the view that the main conditions necessary for enlarging supply of bank credit to industries is increased deposits which would necessitate the growth of the banking habit throughout India. This can best be accomplished by the expansion of rural co-operative banks in districts where it would not be economic for commercial banks to operate. But it takes care to remind that it is still a common feature in this country for savings to be invested in gold and silver ornaments, etc., instead of in banks. The breaking down of this tradition can, however, only be gradual and no immediate augmentation of bank deposits can be expected from this source. The Association feels that there is need for starting specialised banking institutions for medium to long-term finance for industry. It considers that the supply of finance, other than short-term, should be by special institutions such as Industrial Development Corporations, Finance Corporations, Investment Trusts, etc. It opines that the supply of such finance does not come properly within the functions of a commercial bank and that the funds necessary to create such special institutions would require to be obtained from other sources or by assistance from the Reserve Bank of India. "A commercial banker would be departing," it says, "from one of the basic principles of bank lending were he to provide other than short-term finance."

One of the ways of augmenting deposits is to tap rural areas. On this subject, the Shroff Committee had asked for suggestions which would enable banks to open branches in undeveloped areas. Commenting on this point, the Exchange Banks' Association observes that labour legislation has undoubtedly led to increased costs of operation and this would tend to discourage the development of banking in undeveloped areas. The same views are held by the Federation of Chambers of Commerce and Industry (F.C.C.I.) and the Indian Merchants' Chamber also. The former, in addition, points out the other difficulties in the way of opening branches in rural areas. These are the need to maintain a larger cash balance, lack of adequate facilities for transfer of funds, greater cost of security arrangements, absence of earnings from remittances and bills and limited scope for bank advances except in those centres where there are big *mandis*. The Federation suggests that expansion of banking in rural areas would be greatly facilitated by a more realistic labour policy, adequate and free remittance facilities and, if necessary, an initial subsidy so as to cover working losses. There is also the question of evolving, it points out, a more convenient form of deposits and investments such as bearer bills which will induce persons to keep their savings in original banking centres.

Deposits

While the tapping of funds from rural areas is thus beset with a number of difficulties, the next question which arises relates to the other measures calculated to increase the resources of banks. One of the ways is to increase the non-rural deposits. The Federation, as well as the I.M.C., have made some interesting observations on this aspect. Incidentally, they all seem to have benefited by the articles on this subject contributed by Mr. Sadasivan and by a banker to our latest *Annual Review Number*. They observe that advance collection of income-tax, borrowings by the Government of India, State Governments and local bodies and diversion of funds from banks into Government Treasuries through the operation of States schemes for compulsory provident fund for industrial employees all have had the cumulative effect of drawing off natural accumulation of funds in the commercial banking sector. The Federation, in this context, draws attention to the fact that, in contrast with the experience of the commercial banks, the post office savings banks have recorded a spectacular increase in deposits. It feels that positive steps should be taken to assure expansion of deposits of banks and also to secure greater economy in the cash basis, thus releasing funds for credit expansion. The Federation feels that at least 50 per cent. of the uninvested balances of provident funds may be allowed to be deposited with commercial banks.

This tendency of the Government to force all available surplus funds to flow into its own obligations is considered to be partly responsible for the fall in bank deposits in India. The I.M.C. points out that, between the years 1948-49 and 1952-53, deposits of commercial banks were on the decline from Rs. 978.4 crores to Rs. 855.4 crores. This trend was in marked contrast with that in Pakistan where there was an increase in deposits from Rs. 107 crores to Rs. 148 crores during the period. The rise in deposits was more impressive in the U.S. where they rose from $78,383 million to $93,175 million. The Chamber feels that the Committee should go into the factors that have contributed to the fall in deposits of commercial banks.

Cash Ratio

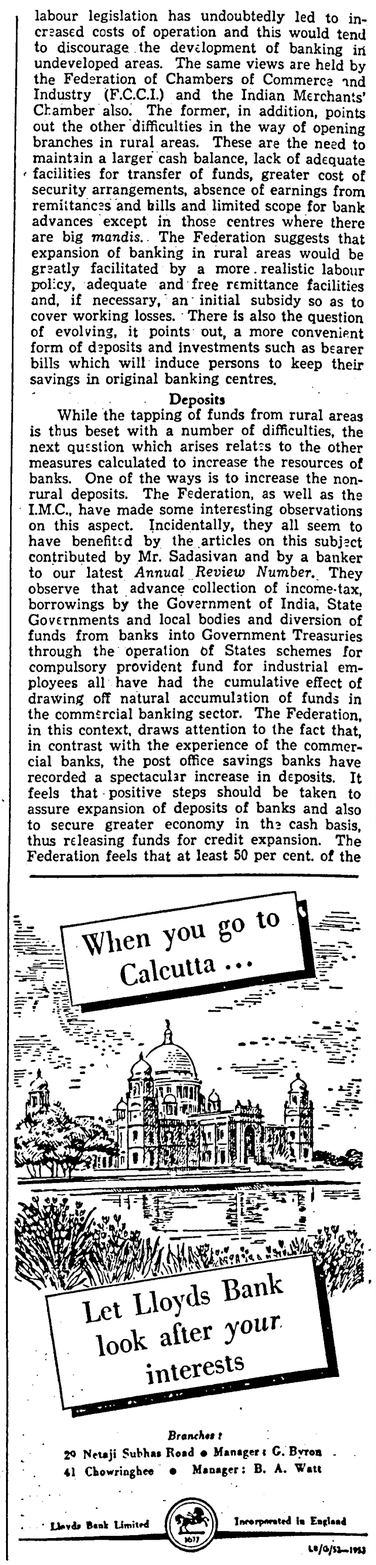
The question of augmenting the lendable resources of banks by reducing the present ratio of the Banks' cash to deposits has also received the attention of the Associations. The Exchange Banks' Association has answered this poser by a brief reply that it is inadvisable to reduce the ratio. But the Federation feels that there is some room for economy here, with the proviso that remittance facilities and tele-communications should be speeded up. Elucidating this point, the Federation remarks:

"At present, large cash balances have to be kept at widely scattered centres, because it takes one day to transfer funds even from Bombay to Calcutta and *vice versa* and longer in the case of mofussil centres. Quicker means of communication would enable the use of idle cash now lying in the vaults or branches of banks. There are also certain other suggestions which deserve consideration in this context. For instance, the moneys in transit should be treated as assets on hand for purposes of the returns sent to the Reserve Bank. Telegraphic transfers received from other places for credit of an account with the Reserve Bank or their agents should be credited on the same day, even if they are received late. This would release money for the maintenance of minimum cash balance without making the transit money blocked and also save the banks from paying interest charges. Further, it may be considered whether 2 per cent. and 5 per cent. of the statutory deposits which Scheduled banks are required to maintain with the Reserve Bank can be kept during the busy season in Government securities instead of in cash, thereby releasing such amount to banks towards the much needed financing of the industries and at the same time without impairing, in any way, the safety of bank deposits. Perhaps, 50 per cent. of the statutory deposits with the Reserve Bank could be in the form of Government securities throughout the year. Another suggestion is that the present facilities in the mofussil areas for exchanging smaller notes into notes of larger denominations should be increased, thus avoiding accumulation of small notes with the mofussil offices of commercial banks. If the Imperial Bank, as agents of the Reserve Bank, can enlarge their facilities for the exchange of small notes into big notes, the mofussil offices of commercial banks can work on a lower cash balance and the moneys thus realised could be remitted to the money market centres of Calcutta and Bombay and form the basis of additional bank credits. Further, the present restriction of free remittance facilities from the mofussil to Reserve Bank centres to once a week also results in accumulation of cash at the mofussil stations. This facility must be very much liberalised."

Touching on the question of telegraphic transfers, the Exchange Banks' Association suggests that, in order to counteract the delays in such transmission, the Reserve Bank should arrange to effect remittances for amounts of, say, Rs. 10 lakhs and over between the principal centres in India by telephone. Such applications for telephonic remittances would obviously have to be lodged, it says, with the Reserve Bank at a reasonable time and it is suggested that 11-30 a.m. should be the latest time up to which such remittances would be accepted. It is also suggested that remittances already in the Reserve Bank may be taken as held at destination for statutory requirements.

As regards the question of making the credit structure more elastic, the Federation, as well as the I.M.C., welcomes the scheme for rediscount of usance bills introduced by the Reserve Bank early in 1952. The former has suggested that not only should this scheme be made an integral part of the banking system but also that it should be further expanded so as to make it useful to a greater extent and to a wider sphere of industry. In this context, it emphasises the need for liberalising the conditions under which the Reserve Bank of India would discount the usance bills, so that smaller banks and industries could take advantage of the scheme.

The Federation draws the attention of the Committee to the practice of certain industrial concerns using *hundis* given by their customers for raising bank finance. The Federation feels that the extension of this practice should be encouraged, as there is no longer any stigma attached to *hundies*. It considers that it is also



desirable that short-term advances made by banks to industries against stocks-in-trade should be convertible into bills of nine months' duration and that such bills should be readily discounted by the Reserve Bank; in order to enable the latter to do so, it has advocated that the Reserve Bank Act should be suitably amended. Another suggestion made by the Federation is to explore the extent to which payments to be made by Government could be made in the form of bills which could be discounted by banks, and, if necessary, rediscounted by the Reserve Bank.

Industrial Finance Corporation

The Federation, the I.M.C. and the A.I.M.O. have acknowledged the utility of a financial institution such as the Industrial Finance Corporation of India in providing long-term finance. But they have suggested some changes in the scope and functions of this Corporation. The I.M.C. desires that the Corporation should be authorised to lend more than Rs. 1 crore to an individual applicant. The assistance extended by it so far is considered to be far below and short of the actual amounts applied for. Thus, in the four-year period 1949 to 1952, the Corporation loaned just over Rs. 14 crores, as against Rs. 32 crores applied for. Although opinion is divided as to whether the Corporation should be enabled to undertake promotion of new flotations, the I.M.C. wants that it should utilise its powers to underwrite new issues. The Federation, for its part, considers that the rate of interest charged on loans at 6½ per cent. is too high and deters even the most enterprising borrowers. Apart from this, it is stated that there are delays in dealing with the applications by the I.F.C. Besides, the fact that personal guarantees are required by the I.F.C. from the directors of the managed companies and managing agents which, it is pointed out, is difficult for public limited companies to comply with. Further, if shares of Central and State Finance Corporations are treated on a par with Government securities and freely accepted as collateral for loans by the Reserve Bank, banks would be in a position more freely to subscribe to the shares. The Federation has also suggested that the I.F.C. should circulate proposals for advances to industry among the leading commercial banks to ascertain whether they could participate in the loans to the extent of 5 or 10 per cent. Incidentally, if such participation were readily forthcoming, it might help the Industrial Corporation to ascertain whether such proposals are commercially sound. The A.I.M.O. suggests that scope of lending by the I.F.C. should be extended to private limited companies and proprietary or partnership industrial concerns.

Supplying more funds for the private sector for medium- and long-term requirements through Scheduled banks will be feasible, if the Reserve Bank agreed to lend against documents created on the basis of medium- and long-term advances made by banks to industrial concerns. Another method suggested is the grant of loans to commercial banks by the Reserve Bank along the lines adopted by the Bank in its grant to the extent of Rs. 5 crores to co-operative banks against intermediate finance ranging from three to five years

The Federation considers that resources available to the private sector could be increased, if the import trade is financed by means of D/A bills rather than by D/P bills and such D/A bills are accepted as eligible security for rediscount or advancing by the Reserve Bank of India. At present, the position is that most of the exports from India to European countries are on D/A terms, while in regard to imports into India, most banks insist on D/P terms. If D/A bills become the rule rather than the exception in the import trade of India, the Exchange Banks can assist considerably, it is stated, in making more finance available to the private sector. In order to encourage this method, the Reserve Bank should accept such bills for rediscounting purposes.

Foreign Aid

Apart from helping industry to obtain loans from the World Bank, the Government could also help private enterprise by earmarking a portion of funds arising out of foreign aid. It is pointed out that the counterpart funds were thus utilised in post-war Japan and played an important role in the financing of private industry.

In addition to the large-scale industry, there are small-scale units which too need credit facilities. The Federation states that no comprehensive statistics of the requirements of the small-scale industries are available. A survey conducted by the Bureau of Industrial Statistics, Calcutta, revealed that the credit available to these small units was less than that secured by large-scale industry. Of the total amount of credit, nearly half was supplied by moneylenders, 18.9 per cent. by banks and 30.4 per cent. by 'others' which included friends and relatives. The rate of interest ranged from 2 to 15 per cent. per annum. The rate, as a rule, was generally on the high side. The Federation states in this context: "In the case of large-scale units, while short-term finance is generally available, the intermediate and long-term finance is found to be short, particularly because of lack of response to equity issues. In the case of small units, however, it is not only the long-term finance which is inadequate, but even facilities for short-term credit do not exist on a sufficiently large-scale."

The Shroff Committee sought information as to whether the restrictions placed under the Banking Companies Act and the requirements the Scheduled banks had to comply with under the Reserve Bank of India Act retarded the development of banking in India, particularly, by increasing bank operations and narrowing the credit base. Dealing with this query, the Exchange Banks' Association observes that the restrictions as well as the requirements under the two Acts are in the interests of sound banking and, therefore, it would not seem prudent to relax them. Continuing, the Association says that with the increasing impetus of the Five-year Plan, commercial banks are called upon, more and more, to furnish guarantees to Government Departments in respect of which they are required to deposit Government securities with the Reserve Bank to the extent of 100 per cent. of the guarantees given. If the Reserve Bank were to reconsider the suggestion previously made that limits for each bank should be fixed for such guarantees up to which Government securities need not be deposited with the Reserve Bank, this would, in some measure, enable banks to increase their credit facilities.

The lien over these securities by the Reserve Bank is, the Association points out, sometimes not released for an unnecessarily long time after the guarantees have expired, owing to delays in Government Departments in advising the Reserve Bank that the release may be effected. Any assistance which the Reserve Bank can give in this respect will reduce the length of time banks' securities are tied up.

The Association has expressed its views on the question whether the present rediscount facilities offered by the Reserve Bank are adequate to encourage the Scheduled banks to extend the scope of their lending and investment policies consistent with the maintenance of their liquidity. It states that if the Reserve Bank's procedure is simplified, the rediscount facilities offered by it should be adequate to encourage the Scheduled banks to extend the scope of their lending and investment policies. It, however, considers that the method followed by the Reserve Bank is slow and cumbersome and should be re-examined by it with a view to expediting such transactions.

ASIAN MARKET FOR EUROPEAN TEXTILES

"SHRINKAGE IN EXPORTS WILL CONTINUE INEXORABLY"

DEVELOPMENTS in the world cotton textile industry and trade in recent years clearly indicate that the European textile markets in Asia and the Far East (A.F.E.) have suffered considerable irreparable damage. The share of Europe in the aggregate imports of textiles into the countries of the A.F.E. region is now approximately 44.5 per cent., as against over 70 per cent. in 1928. Four important factors have been responsible for this changed position. First, Japan, now deprived of its former possessions on the Chinese mainland, has come back as a major exporter. Secondly, shortages during and after the Second World War made it possible for the U.S. to introduce itself in the Far Eastern textile markets. Thirdly, India, from being the most important single market for European exports, has turned out to be a serious competitor. Lastly, China has, by and large, become self-sufficient in cotton textiles. A lucid account showing how all these factors have influenced the position of Europe in the textile markets of Asia and the Far East is contained in the *Study of Trade Between Asia and Europe*, which was recently released by the United Nations [copies obtainable from the Sales Section, European Office of the United Nations, Geneva (Switzerland) at 11s.], and a summary of it was published in an earlier issue of this *journal*.

The textile industry in Japan has registered a remarkable expansion, as witness the fact that the number of spindles in March, 1952 was as much as 6.5 million—it was higher still at 7.46 million as on 31st January, 1953—which compares very favourably with hardly 2.2 million in 1946. The expansion in spindleage has been followed by an appreciable increase in the output of textile manufactures, their index (base: 1932-36=100) rising from 23 in 1949 to 53 in 1951. Similarly, the volume index of exports has risen from 29 in 1949 to 41 in 1951. Incidentally, it may be noted that, during 1953, Japan held the pride of place as the world's largest exporter of cotton textiles, the quantity actually exported being 900 million square yards. Japan has largely replaced both the U.K. and India in Pakistan's textile imports. Indonesia comes next in importance as a market for Japanese goods. Exports to Hongkong and Malaya are largely for re-export to other Asian countries.

Prospects for Japanese Textile Exports

It is rather difficult to take a view of the prospects of further expansion of textile exports from Japan, for such hinges on so many factors. Alluding to this question, the United Nations report observes:

"An intensification of competition between European and Japanese textile exports in the E.C.A.F.E. markets is to be expected. But, while Japan enjoyed relatively favourable terms of trade in its recent export boom, a further expansion of its exports can probably take place only at the cost of deteriorating price relationships. Japanese price competition will probably be met by various attempts to apply discriminatory trade policies, but, given the low living standard in Japan and given the smaller number of overseas markets now politically dependent on European countries, such measures are likely to prove ineffective in the long run."

Textile Exports from U.S.

In the first few years after the recent world war, exports of U.S. textiles to Asian countries were very high. The year 1948, for instance, was the peak year for imports of American textiles. About half the total was accounted for by the Philippines. Malaya was the largest importer of American textiles. With the increase, however, in the supply of goods in Europe and Japan for export, U.S. exports have tended to decline of late. Indonesia is the only country in the region the imports of American textiles of which have so far increased steadily. This increase has its counterpart in a decline of imports from the Netherlands and the U.K., which in 1951, delivered no more than one-half and one-third, respectively, of the 1938 volume. On the other hand, Japan has succeeded in recapturing its Indonesian market. Under the free trade arrangements between the U.S. and the Philippines, the U.S. will probably be able to maintain its position in textile sales to that country, at least as long as the preferential treatment of its goods continues. It may be noted, however, that, though, in the post-war period, practically all Philippine import of textiles came from the U.S., before the war Japan had a considerable share of the trade. For the rest of Asia, the U.S. has been a marginal source of supply during years of shortage and there is nothing to indicate that a lasting position for American textiles has been established in these countries. It is reasonable to expect that Japanese competition will lead to a further reduction of American sales in the years to come.

India's Position

Referring to India's position in world trade in textiles, the report observes as follows:

"Even before the war, the output of cotton textiles in India surpassed the production of the United Kingdom or Japan, but even so, India (together with Pakistan) continued to import huge quantities of cotton goods, and exports (mainly to Burma) were on a relatively modest scale. During the war, however, the position changed radically; in 1941-42, exports of cotton tissues rose to 772 million yards, as against 177 million yards in 1938-39, while, in the same period, imports fell from 647 million yards to 182 million yards. By 1945-46, imports even shrank to a mere 3 million yards. In 1943-44, when production of cotton textiles reached its peak, the consumption of raw cotton was no less than 40 per cent. higher than in 1938-39. Notwithstanding this expansion of production, civilian consumption fell by more than half, since requirements for the armed forces absorbed 30 per cent. of total output of Indian cotton mills.

"In the first post-war years, Indian textile production declined because of lack of coal, worn-out machinery and industrial disputes, and in order to mitigate the shortage in the home market, the Government had to restrict exports and to increase imports. But, in 1948, and especially in 1950, the upward trend was resumed; India became the biggest single exporter of cotton goods to Asian countries in 1950. In the following year, exports again decreased somewhat, owing mainly to renewed restrictions for the benefit of the home market. In the beginning of 1952, the situation for Indian cotton exports again changed abruptly, the problem now being lack of outlets rather than the requirements of the home market.

"There are no prospects that India will again become an important market for European textiles. Nor can there be any doubt that India has come to stay as a major exporter of relatively cheap cotton goods, although the extraordinarily high figures of recent years may not again be reached. According to the Indian Five-year Plan, exports of cotton tissues would have to fall to some 600 million yards in 1955-56, that is to say, about half the record level of 1950. This reduction, together with the planned increase in production, would make possible an annual consumption of 16 yards per head, or about the same as before the war."

In some respects, the above account of the report is incorrect. It has, for instance, failed to mention the fact that the surplus of cloth which India has for export is chiefly the result of the Partition, which has deprived the Indian Union mills of a market for about 700 million yards. Again, it does not mention the fact that, if this sub-Continent is viewed as a whole, still a substantial quantity of cloth is being imported by it from Japan and the U.S.

China

Coming to China, the report points out that the development of China as a producer and importer of textiles is not unlike that of India. The rapid development of the Chinese cotton industry between the two world wars is indicated by the growth of the number of spindles from 1.5 million in 1919 to 5.5 million in 1936. This growth of home production was accompanied by a steady reduction of imports. In 1938, the only important market, almost wholly reserved for Japan, was Manchuria, which absorbed nearly one-third of Japan's exports to the E.C.A.F.E. region.

In the first post-war years, China's textile production recovered rapidly, but the output of cotton piecegoods in 1948 still remained 25 per cent. below that of 1936-38. In this period, China also ceased to be an important participant in world trade in textiles, either as an importer or as an exporter. The Central Peoples' Government further emphasised both the production of raw cotton and the reconstruction of the textile industry, and, in 1950, the output of cotton yarns and cotton tissues is reported to have surpassed the level of 1936 by 16 and 8 per cent., respectively. In 1951, exports of textiles to China and Manchuria amounted to only a fraction of the already low figure for 1938 and imports from Japan had practically ceased. This is, of course, to a large extent the result of political tension, but, even if the present political difficulties were removed, it is unlikely that Chinese textile imports would again increase to anything like their pre-war volume. The prospects are, therefore, that China will, by and large, remain self-sufficient at least in the field of cotton textiles, although a general normalisation of China's trading relationships with Europe might well open up some possibilities for imports of European textiles.

Basing itself on these developments, the U.N. report concludes that the shrinkage of European textile markets in Asia and the Far East will continue inexorably. According to the report, cotton textile production is expected to increase further in the three huge centres of the industry, namely, Japan, China and India. In addition, there are several other countries in the E.C.A.F.E. region which are also endeavouring to establish or expand textile industries. As the special post-war difficulties in the supply of raw materials are being overcome and since the textile industry requires comparatively less amount of capital and skilled man-power, the report does not find any reason as to why these efforts should not succeed.

Proceeding, the report states that the expansion in the textile industry in the Asian countries will affect Europe partly by competition in the third markets, such as Africa or South America. In its opinion, the E.C.A.F.E. region as a whole is a major net exporter of textiles even when jute products are left out of account. It may be technically easier for the European exporting countries, according to the U.N. experts, to prevent a further improvement in exports from Japan and India to the African colonies than to meet their competition in South-East Asia. Nevertheless, they are rather doubtful about the final results, since stronger competition in the E.C.A.F.E. countries will be the inevitable effect of keeping Japan and India out of the third markets.

Keener Competition

It will be seen from the foregoing account that the interests of Europe and Asia in the cotton textile trade are largely competitive. With the global volume of the trade likely to decline in the long run due to local industrialisation and advent of rayon, competition for the remaining markets for textiles will become sharper than now. In view of these, the U.N. experts feel that the extent to which resources should be utilised in expanding the cotton textile industry in India, Japan and the textile exporting countries of Europe should be carefully considered from the standpoint of the foreign exchange likely to be earned or saved.

Proceeding further, they observe that the shares of world trade in textiles held by European countries, on the one hand, and Japan and India, on the other, will depend to a large extent, on the geographic, cultural and political links, preferential treatment and currency regulations. Where political links have been loosened and preferential arrangements discarded, as, for example, in some parts of the Far East—these represent the largest world market for imported textiles—the play of free competition has tended to give India and Japan a fairer chance. On the other hand, the currency difficulties of sterling and other markets have tended to restrict competition. India, in the opinion of U.N. experts, has, as member of the sterling area, the widest market possibilities, but their exploitation depends on the supplies of textiles actually available for exports.

ITALIAN COTTON INDUSTRY

The Italian cotton textile industry is reported to be passing through very difficult times, as a result of shrinkage in exports in recent months. Thus, cotton yarn exports from Italy during 1953 were running at an average rate of 2.3 million lbs. per month, which compares unfavourably with 3.9 million lbs. in 1952 and 4.9 million lbs. in the years 1949, 1950 and 1951. Following such reduction in exports, the mills have curtailed output considerably. This is fully reflected in the increase in the number of spindles and looms lying idle and in the retrenchment of workers. Out of a total of 5,789,240 spindles existing in Italy, more than 1 million are idle. A proportionate number of looms is also not being operated. Several employees in the cotton industry have already been laid off and a further considerable number of workers are expected to be retrenched. How the slump in the export trade has hit the Italian textile trade is borne out by a recent report from Milan which avers that competition in the domestic market has become ruthless and is forcing prices down to so low a level that they are no longer remunerative.

The Italian Government has no doubt approved of several measures designed to help the exporting industries, but these are not considered to be effective. For the measures, it is stated, will not be applied for many months. Besides, they are "hopelessly inadequate." Two of the three measures approved already, namely, medium-term financing for exports and export credit insurance system, it is

(Continued on page 133)

PROSPECTS OF U.K. TEXTILE EXPORTS TO INDIA AND PAKISTAN

CLOTH OUTPUT MOVES UP

(By A Special Correspondent)

MANCHESTER LETTER

MANCHESTER, 12th January

FEARS that the present limit on Lancashire cotton goods shipped to India may have the effect of reducing the demand for Lancashire-made textiles when Indian import restrictions are lifted, were expressed by Mr. F. S. Winterbottom, Chairman of the India Section of the Manchester Chamber of Commerce at the annual meeting.

Exports of cotton piecegoods from the United Kingdom to India showed a further decrease in 1953, he said, and there was cause for regret that the Indian Government did not afford more liberal treatment to Lancashire's traditional textile exports. The increased rate of duty on shipments could not fail to have an effect on the volume of goods which would be purchased from Lancashire when restrictions were lifted.

Mr. Winterbottom said there was still a demand in India for some of Lancashire's specialities and the inability to keep marks and qualities before consumers in the market, despite their increased purchasing power, was extremely disappointing.

Discussing trade with Pakistan, he said official returns of cotton piecegoods exports in 1953 showed a "catastrophic decline." Pakistan had made considerable progress in expanding its spinning and weaving industry and Lancashire's export trade was greatly limited by the country's determination to supply as large a proportion as possible of its own basic textile requirements.

Purchase Tax

An appeal to the Government to make known its intentions over purchase tax on textiles without delay has been made by Sir Raymond Street, Chairman of the Cotton Board. Speaking at the end of a meeting of the Board, during which the Chancellor of the Exchequer's announcement of purchase tax concessions on a miscellaneous range of articles was discussed, Sir Raymond said Board members had found Mr. Butler's action "somewhat puzzling."

They had taken the view, however, that the case made to him recently by the various sections of the textile industry was "quite unaffected" by the latest revisions. The case for the textile industry was so important that they believed the Chancellor, who had personally acknowledged receipt of the representations, would deal with textiles separately.

But the Government should make known its intentions "at no distant date," added Sir Raymond. The principle of making purchase tax changes outside a budget had now been established and future policy towards a tax which exercised such a vital influence over the efficiency and production of the textile industry should be defined quickly so as to remove the "fog of obscurity" facing textile traders.

Synthetic Fibres

That Britain's national economy might demand increased use of man-made fibres in the future was suggested by Mr. R. W. Pennington, Chairman of the Rayon Weaving Association, when he opened a weaving exhibition sponsored by the Shirley Institute at Nelson.

Research on man-made fibres was, he declared, just as important and in some ways more important than for natural growths. He said: "I am not one of those who think that man-made fibres will ultimately displace natural fibres." And he added: "But I am certain that the future lies in the development of blends."

The textile industry would require research and still more research in the future, Mr. Pennington continued. Although this was a costly business the organisation of research to eliminate waste and duplication of expense and manpower would be an investment which, in the long run, would not only enable Britain's textile industries to survive but would pay handsome dividends as well.

Output Up

The output of cotton and rayon cloth from Lancashire weaving mills in November equalled the industry's best result for two years. The figures of production show that the industry's 141,000 operatives produced an average of 57,370,000 yards of cloth each week. This matched the result of the previous month but showed an improvement of almost 9,000,000 yards a week on production in November, 1952.

The last time the mills exceeded their November output was in December, 1951, when the average weekly production was 63,210,000 yards. November recruitment to the weaving mills totalled 910. Lancashire cotton spinning mills also recorded their highest output for almost two years in the week before Christmas. During the week the mills spun 20,850,000 lbs. of cotton and rayon yarn, which was 3,340 000 lbs. more than in the corresponding week of the previous year. Not since January, 1952, when output was 20,000 lbs. higher, has the week's production been exceeded.

Yarn Offtake

Any expansion of output by the Lancashire cotton spinning industry is bound to be slow because of labour recruitment difficulties, Mr. W. T. Winterbottom, Chairman of the Yarn Section of the Manchester Chamber of Commerce, declared. In a report to the annual meeting of the section, he confirmed that yarn production was increasing but, he said, it was not possible at present to see what further expansion was likely.

The fact that spinners generally had longer order books than they had known for two years accentuated the main problem, which was recruitment of workers. He said: "Only slowly is confidence returning following the recession, and in several sections, particularly mule spinning, lack of labour has been severely felt to the extent that most spinners are unable to offer near deliveries in any qualities."

Discussion export trade in Lancashire-made cotton yarns, Mr. Winterbottom said that shipments abroad in the first 10 months of 1953 aggregated 24,000,000 lbs., as compared with 29,600,000 lbs. in the same period of 1952. Exports were little more than half the 1951 total, however. The value of cotton yarn exports in 10 months of 1953 was £13,740,000. He said: "In the last few months enquiry from overseas has increased generally, especially in those countries where textile activity has followed the trend in the United Kingdom."

Statistics showed that Australia had returned to its position as a principal buyer of cotton yarns from Lancashire —at 4,700,000 lbs., exports in the first 10 months last year were almost double the quantity shipped in the same period of 1952.

Shipments to Canada, the Irish Republic and European countries also showed an increase but there was a "serious decline" in yarn exports to Finland, Yugoslavia, Switzerland and Pakistan.

Steadiness in Prices

One of the most outstanding features of trade in cotton goods last year was the stability in raw material rates which persisted in spite of developments which might well have caused substantial fluctuations. Unaided by the American Government's price-support programme, there is little doubt that values would have suffered a severe decline in view of the large surplus supplies which are in existence.

Since the Raw Cotton Commission revised its system of quoting selling rates for spinners

INDIAN COTTON SITUATION BECOMING TIGHT

MILLS DIRECTED NOT TO EXCEED THEIR QUOTAS

COTTON mills have been advised by the Textile Commissioner to the Government of India to organise their purchases of cotton and production of cloth in such a way that there may be no need for them to exceed the cotton quotas allotted to them by the Government. The mills, it has been suggested, should utilise foreign cotton and staple fibre to meet any possible gap between their requirements and the allotted quotas of Indian cotton. It may be recalled, in this connection, that the Government has made a liberal allocation of Indian cotton for the 1953-54 season, which amounts to 120 per cent. of the Indian cotton allotted to them during the 1952-53 season. The mills, therefore, should not find it difficult to accept the Textile Commissioner's advice to "programme their provisioning of cotton and their production of cloth and yarn in such a manner that they will be able to maintain production of cloth and yarn without purchasing or consuming Indian cotton in excess of the quotas allotted to them."

The Government's warning to the mills not to exceed the quotas allotted to them will at least clear the air of any lurking uncertainty about Government's policy in regard to quotas. If the mills know beforehand that no increase in the allotted quotas is likely to be permitted, they might be more inclined to live within the quota of Indian cotton allotted to them or to supplement the quotas by other fibres or by imported cotton. Trade opinion is, however, divided on the question whether the quota system should be allowed to continue at all. Some observers hold the view that the quota system, along with the whole system of cotton control, has outlived its utility and should, therefore, be abolished. There is, however, another section which takes a more cautious view of the need for continuation of cotton control. This section believes that, so long as cotton production is not plentiful, there is need for maintaining some form of quota system. In this connection, this section points out that the current season's commercial cotton crop may be only of the order of 40 lakh bales, as against 42 lakh bales predicted some time ago. The quantity of Indian cotton brought into the current season is also comparatively smaller at 14.6 lakh bales, as compared with 19.5 lakh bales a year before. This gives a total supply of 54.6 lakh bales. This could hardly be called a very comfortable level of supply, considering that the mills might require about 37½ lakh bales of cotton and that the country might have to export at least two lakh bales. If this year's monsoon does not turn out to be satisfactory, the position might conceivably be worse. In these circumstances, it is held that, until a clearer and more hopeful cotton picture emerges, it will be necessary to maintain some system of allocation of cotton to mills.

Quota System

The Government, it is now clear, holds a similar view of the role of cotton allocation system. Thus, the Textile Commissioner's circular says:

"Suggestions have, however, been made from time to time that the system of quota allocations should be abolished altogether. Individual millowners have also been asking from time to time, that they should be allotted extra quantities of Indian cotton over and above the 120 per cent. already allotted. A commercial crop of nearly 42 lakh bales was tentatively estimated for the 1953-54 season, as being available. It is well known, however, that the outturn of cotton is subject to weather conditions to an exraordinary degree and the actual outturn can never be predicted with accuracy until about March.

"The control of cotton, although in a simplified and relaxed form, has been maintained only because we are not yet fully self-sufficient and for some time yet, in order to meet the requirements of mills and ensure a reasonable carry-over, the available resources of Indian cotton have to be carefully husbanded.

"The current season's crop, while it is bound to be a good deal better than last season's, is certain not to be so large as to render quota allocations unnecessary. So long as quota allocations are necessary, it is evident that they must be enforced in order to ensure equitable distribution of available supplies of Indian cotton *inter se* between mills."

The mills have also been warned that purchases of Indian cotton in excess of the allotted quotas is a "contravention of the Cotton Control Order and is punishable." Mills are, therefore, advised, as already stated, to utilise "foreign cotton and staple fibre as permissible, in order to meet any likely gaps between the requirements of fibres and their quotas of Indian cotton." They have further been told that they should not "bank upon fresh allocations being made when the full picture of the current season's cotton crop becomes known." Proceeding, the Government states that the country's cotton economy has for several years past been of a "hand-to-mouth" variety, that no prediction is possible as regards the next monsoon and also that it is "imperative" that an adequate carry-over is built up in order to "meet all contingencies." It adds:

"Excessive consumption of Indian cotton, without taking all factors into account, will be an indefensible gamble and will receive no quarter. It need not be emphasised that in order to continue to maintain adequate supplies of cloth and yarn both to the market within India and to our customers abroad at reasonable prices, production must be maintained without curtailment."

The Government's directive to the mills not to exceed the allotted quota of Indian cotton implies that imports of foreign cotton will be freely allowed, if not actually encouraged. There is, no doubt, that the world cotton supply position has eased significantly in recent years, and that it is, therefore, possible to arrange for imports of cotton even more easily than it was in the earlier seasons. No change has, however, been made by the Government in its licensing policy for raw cotton for the January-June, 1954, period. Licences will be given to mills and importers, as they were being given till now, for cotton of 1.1/16" staple and above from non-dollar areas, on the production of evidence of purchase from overseas supplier. The restriction, which prevents importers from selling cotton to parties other than mills without the prior approval of the Textile Commissioner, has been continued. Thus, the Government has provided for the easy importation of non-dollar cotton. It remains to be seen whether this will lead to more plentiful imports. Among non-dollar varieties, the East African varieties might have served the Indian mills, if the latter had been more prompt in ordering their requirements. The mills were too slow in taking them up, so that other countries seem to have benefited at India's expense. The demand for Egyptian cotton, another non-dollar variety, will be determined by considerations, such as the offtake of finer varieties of cloth by the Indian market, for there is no extensive overseas market for these varieties.

Non-dollar Cotton

So far as dollar cotton is concerned, the Government has announced that no application for this cotton will be considered. The Government has, however, revalidated the unutilised import licences originally issued for 900,000 bales of the 1951-52 crop U.S.A. cotton for shipment by 30th June, 1952. These licences have been extended upto 30th June, 1954. Incidentally, this is the fourth extension which Government has given to the importers, who now find that their default has paid them rich dividends. The other importers, who committed the indiscretion of abiding by the law, have no chance of participating in the import of cotton. When Government thus penalises commercial integrity which it preaches in and out of season, and rewards those who have repeatedly failed to import the cotton for which they showed evidence of purchase, it cannot blame the traders if they feel that it pays to disobey Government.

Since the import of dollar cotton is thus restricted only to the unutilised licences, it is difficult to estimate what quantity of this cotton is likely to be imported in the near future. The quantity of cotton covered by these licences is estimated at between 70 000 and 112,000 bales; no reliable figure is available. Whether a larger quantity of dollar cotton will become available to Indian mills is a question that will depend upon Government's import policy, the trend of cloth production in the country and U.S. export policy. If the U.S. is willing, as is widely believed, to export cotton against local currencies, it is possible that more American cotton, which would then cease to be "dollar" cotton, will be imported. Again, if the U.S. were to grant an export subsidy, it would certainly stimulate the offtake of American cotton in this country. But this is opposed by many interests in the U.S. Indeed, this possibility has already receded to the background.

The Government will, therefore, do well to give such facilities as are necessary in order to see that foreign cotton, both dollar and non-dollar, is imported in sufficiently large quantities. This will ensure that the allotted quotas of Indian cotton to mills are not exceeded. Further, it might serve as a corrective to unhealthy speculation in the domestic forward markets which has tended to raise its ugly head once again.

COTTON CONSUMPTION

During the first month of the current (1953-54) season, namely, September, 1953, the Indian mills consumed 310,827 bales of Indian cotton and 62,812 bales of foreign cotton, as against 269,606 bales and 89,464 bales respectively, in the same month of the previous season. Thus, the total consumption of cotton in September, 1953, aggregated 373,639 bales, as compared with 359,070 bales in September, 1952. That the rate of consumption of Indian cotton is going up will be evident from the fact that the September rate of consumption of Indian cotton at 310,827 bales is much higher than the monthly average of 300,970 bales in 1952-53 and of 248,950 bales in 1951-52.

COMMONWEALTH FINANCE MINISTERS' CONFERENCE AT SYDNEY

TEXT OF FINAL COMMUNIQUE

THE following *communique* was issued by the Commonwealth Finance Ministers at the conclusion of their Conference at Sydney on 15th January, 1954 :

The object of our present meeting was to consolidate the economic progress made by the Sterling Area and the Commonwealth during the last 12 months, to seek means to accelerate that progress, and to ensure that they make their full contribution to world prosperity.

During the last year, the Sterling Area countries of the Commonwealth have made great strides towards the objectives which they set for themselves in January, 1952, and confirmed and amplified in December, 1952. The Commonwealth countries rejected then, and we reject now, the view that any solution of our problems can be found in the creation of a closed system of discriminatory arrangements which could lead only to chronic restrictions and recurring crises. We, therefore, reaffirm our agreed objectives, which are to strengthen the position of each country and of sterling as a currency and to establish with other countries a wider and freer system of trade and finance in which the convertibility of sterling is an essential part. Thus we shall serve the best interests of all not only in our own countries but in the world as a whole.

Outlook for World Trade

We have considered the outlook for world trade. The Commonwealth is responsible for about one-third of that trade. We are conscious of the vital importance which the actions and policies of our countries could have when, as must be the case from time to time, there is some uncertainty about the future.

Our first resolve is to ensure that our own actions and policies will be such as to inspire confidence. We stand prepared to take appropriate steps, both individually and in concert with each other, to sustain production and trade and the sound development of resources and to ensure that temporary economic fluctuations are not permitted to interfere with our progress towards our long-term objectives. We are also ready to co-operate with other countries and international institutions to this end.

In this co-operation, the United States of America and Europe have a special part to play, because with the Commonwealth and the Sterling Area they are responsible for three-quarters of world trade.

We were, therefore, encouraged by the recent message from President Eisenhower to the United States Congress in which he said: "This Administration is determined to keep our economy strong and to keep it growing". . . . "This moment, we are in transition from a war-time to a peace-time economy. I am confident that we can complete this transition without serious interruption in our economic growth. But we shall not leave this vital matter to chance. Economic preparedness is fully as important to the nation as military preparedness."

Progress in Europe

The Chancellor of the Exchequer reported to the Conference developments during the last year in Europe and in the Organisation for European Economic Co-operation and called attention to the expansion of production and the strengthening of the position of European countries generally.

We also noted that the International Monetary Fund in its report to the Economic and Social Council of the United Nations stated that "in order to prevent small depressions from growing into large ones such supplementary reserves (i.e., international reserves in the International Monetary Fund) should be supplied early on liberal terms and in adequate amounts but primary reliance for the avoidance and cure of depressions must be placed upon appropriate measures at the national level, especially in industrial countries."

The sound economic policies pursued by the Commonwealth countries, the publicly expressed resolve of the United States Government to keep the economy of the United States strong and growing, the expansion of production in Europe, and the substantial increase in monetary reserves outside the dollar area provide in our judgment solid grounds for confidence.

The Conference then discussed current policies, namely, (a) the maintenance of a strong balance of payments position and the strengthening of the central gold and dollar reserves; (b) sound internal policies and the need to restrain inflation; and (c) economic development of resources.

Considerable progress has been made in the application of these policies during the past 12 months, a period when, despite weakness in certain commodity prices, economic conditions have been generally favourable. In the result, the overall deficit in the Sterling Area balance of payments in 1951-52 was turned into a surplus in 1952-53, the position of sterling in the world has been strengthened, and the central reserves have steadily increased. But we realise that much still remains to be done.

Balance of Payments

The policies adopted since the meeting of Commonwealth Finance Ministers in January, 1952, have been at the base of the remarkable change in the balance of payments of the Sterling Area. In the year ended 30th June, 1953, the Sterling Area had a surplus of over £400,000,000 in transactions with the outside world, as compared with a deficit of nearly £1,000,000,000 in the year ended 30th June, 1952. This marked improvement in the fortunes of the Sterling Area, to which all members have contributed, brought with it an increase of about £250,000,000 in the central reserves of gold and dollars. These reserves have continued to increase, although rather more slowly in the second half of 1953, and at the end of the year stood at £900,000,000. Through the period sterling has gained strength.

The Conference reviewed the prospects for the coming year. We agreed that the Sterling Area as a whole would seek to maintain a substantial surplus in its payments with the rest of the world. Earlier main emphasis was placed on dollar earnings. Although the dollar situation has improved, we should not relax our efforts to achieve a dollar surplus, but it is just as important today that we should earn a substantial surplus in other non-sterling currencies. We recognise that success in these aims will depend in part on the level of world trade, but we emphasise that the primary task of all Sterling Area countries in the forthcoming year is to increase their earnings by intensive efforts over the whole field of exports.

In this task, we must show ingenuity, increased efficiency and competitive strength. We cannot afford to disregard any market and we must develop our exports wherever we can. While we must continue to expand our traditional major exports, we must also expand our exports of the immense variety of other products which, in the aggregate, form so large a proportion of the total earnings of the Sterling Area.

The *communique* of the Commonwealth Economic Conference in December, 1952, referred to the extensive restrictions which some countries of the sterling Commonwealth had needed to impose upon imports from the United Kingdom and other Commonwealth sources. There was agreement at that time that these restrictions should be relaxed as the external financial position of these countries improved. We note with satisfaction the progress in this matter which has since been made by several Sterling Area countries and the prospects of further progress made possible by continuing improvement in their balances of payments.

Internal Policies

We have reviewed the internal policies of our countries and have observed that considerable improvement has been made during the past year. But more remains to be done and the importance of this part of our task cannot be over-emphasised. On the application of sound economic policies depends the purchasing power of money, the cost of living and the ability to sell exports in increasingly competitive world markets. Shortcomings in the internal policies of any one member affect the external fortunes of the whole Sterling Area by creating excessive demand for imports, diverting resources from export industries and throwing the balance of payments out of equilibrium. Our Governments will continue to follow the policies which have served satisfactorily in the past year. Where necessary, they will be adjusted so as to encourage increased production for export and to stimulate savings upon which the development of the Commonwealth substantially depends.

The Commonwealth has great resources—natural, human and industrial. The need for their development is urgent and vital. The aim of all Sterling Area Commonwealth countries is to concentrate on the development of these resources, which directly or indirectly contribute on an economic basis towards improving the balance of payments of the Sterling Area. In some countries of the Area, however, development plans have been made to provide for some basic improvement in the standards of living which is a necessary foundation for further economic developments.

The outstanding impression given by the reports made to us by our colleagues is of the immense variety and intensity of the efforts which are being made to turn to productive use the many resources, both large and small, of the Commonwealth countries.

Development Projects

It is impossible to describe briefly all these activities. The following are examples :

The development of food production has been intensified throughout the Commonwealth. This has called for irrigation and other schemes for bringing more land under cultivation, technical improvements, mechanisation and training. The production of such commodities as cotton, jute, wool, wood-pulp, timber, tobacco and sisal has been maintained. There has been continued development of the mineral resources of the Commonwealth, in particular uranium, gold, copper, nickel, chrome, asbestos, coal, iron ore and bauxite. The production of some commodities, such as tin and rubber, has been affected by fluctuations in world demand. In a number of countries, the search for oil and the development of oil and production of natural gas are in progress. The development of heavy industries continues to have an important place. The expansion of iron and steel production and of the production of aluminium is proceeding in a number of countries. A great variety of other industrial development is also taking place. Efforts to improve and extend transport facilities have continued and there has been considerable expenditure on roads, railways and harbour works. Substantial programmes for increasing electrical generating capacity, both thermo- and hydro-electrical, are in progress. Schemes for improvement of housing, education and health services are under way.

There is much evidence that development has everywhere gone ahead more smoothly and economically as inflation has been checked and excessive competition for resources has been materially lessened. This makes it clear that sound internal policies are just as important to economic growth as they are to a healthy balance of payments.

We have reviewed the factors which affect the scope and pace of development. Supplies of goods for development have much improved. But in most cases, finance is the major factor limiting development. Each of our Governments will continue policies designed to secure the highest possible level of internal savings. However, most individual countries and the Sterling Area as a whole still need additional financial resources from outside.

Finance From U.K.

At the Commonwealth Economic Conference of December, 1952, the United Kingdom Government undertook to make a special effort to provide additional capital for Commonwealth development in the knowledge that this required an adequate level of internal savings and an adequate surplus in its overseas accounts. In 1953, the United Kingdom Government authorised loans and grants totalling £120,000,000 for development in the sterling Commonwealth, including the colonial territories for which the United Kingdom has a special responsibility. The loans were made through a number of channels, including the London market, the Export Credits Guarantee Department, and the Colonial Development Corporation. The grants were made to the colonial territories from Colonial Development and Welfare funds. The United Kingdom Government will continue this policy in 1954 and will make special efforts to develop its own resources. While this involves burdens and risks, the United Kingdom Government has consciously undertaken the task in the faith that sound development is the basis of the future prosperity of Britain and the Commonwealth, that such development is needed in bad times as in good, and that the provision of finance from the United Kingdom will substantially help its own exports.

Finance from the United Kingdom for Commonwealth development flows through many channels. Two new channels were opened up in 1953. The Commonwealth Development Finance Company has started operations, its role being primarily to help the financing of development undertaken by private enterprise. A beginning has also been made in the use of the sterling which the United Kingdom made available for lending through the International Bank for Reconstruction and Development. There are cases, however, which International Bank finance does not fully cover, for example, where development consists of large self-contained projects combined with a mass of small items involving overall a high proportion of local expenditure. Commonwealth Governments may now approach the London market after consultation with the United Kingdom Government, not only in relation to particular projects but also in support of general programmes of development, provided the necessary conditions have been fulfilled. In view of the many claims upon this market, including provision for development in the United Kingdom, access has to be limited. The United Kingdom Government will, therefore, wish to be sure, first, that the programmes as a whole are in conformity with the general policy of concentrating on the improvement of the Sterling Area balance of payments and, secondly, that the country concerned is making an adequate contribution from its own resources. It is also necessary in the general interest for the timing of any such borrowing to be carefully regulated.

We have reaffirmed our determination to press on with development in conformity with our general policy to the limit of available resources. In some of our countries, private enterprise is making a large contribution to development. Governments will be concerned to promote balanced development, whether public or private, to pursue policies designed to increase the flow of savings, and to encourage private investment from both internal and external sources.

Collective Approach to Freer Trade

We reaffirm our support for the proposals shortly referred to as the collective approach which emerged from the Commonwealth Economic Conference of December, 1952. These proposals, which are set out in full in the *communique* of that Conference, are designed in general to bring about the widest possible system of multilateral trade and payments, the reduction and progressive elimination of import restrictions, and the convertibility of sterling and other important currencies. They are based on collective action by debtor and creditor countries to bring about a balance in the world economy on the basis of "Trade, not aid."

The growing confidence in sterling and the increasing strength and flexibility of the economies of the Sterling Area countries have enabled them to make progress in the move towards expanding trade and freeing currencies, but decisive action must be related to fulfillment of the conditions indicated in the *communique* of the Commonwealth Economic Conference. These conditions are (a) the continuing success of internal policies of sterling Commonwealth countries; (b) the prospect that trading nations will adopt trade policies which are conducive to the expansion of world trade; (c) the availability of adequate financial support through the International Monetary Fund or otherwise.

We have noted with great satisfaction the passage in President Eisenhower's recent message to Congress in which he referred to the creation of a healthier and freer system of trade and payments in which others could earn their own living and the United States economy could continue to flourish. All Commonwealth countries await with interest the detailed recommendations which the President will make to Congress after the Joint

(*Continued on page 147*)

SUGAR INDUSTRY IN MADHYA BHARAT

CANE DEVELOPMENT REQUIRES SPECIAL ATTENTION

THE sugar industry in Madhya Bharat seems to be passing through a period of crisis, owing to poor and inadequate sugarcane cultivation. An indication of this is provided by the fact that the industry has been working very much below actual capacity. Thus, out of the aggregate installed capacity of 29,304 tons per annum, not more than 25 per cent. is being utilised; the production of sugar during the 1952-53 season amounted to a bare 7,326 tons. The sugar output in the current season is expected to be less than even this low figure, if the present estimates of the sugarcane crop prove correct. Of the five factories in existence, two factories did not crush at all during 1952-53.

The crisis in the Madhya Bharat sugar industry, as noted above, has not developed all of a sudden. The industry has been moving in that direction since the past few years, although the 1951-52 season was somewhat encouraging. The following table reveals the actual working of the industry during the last five seasons:

Season	Cane crushed (Tons)	Sugar produced (Tons)	Duration of the season	Recovery percentage of sugar
1948-49	202,198	18,681	87	9.28
1949-50	126,007	11,355	64	9.05
1950-51	94,504	8,425	46	9.21
1951-52	190,110	17,949	74	9.31
1952-53	79,437	7,326	45	9.35

It will be evident from the foregoing statement that the fall in sugar output during 1952-53 closely followed the reduction in the quantity of cane crushed, which was the result of inadequate supplies of cane to the factories. Such inadequate cane supplies were due primarily to the decline in the sugarcane crop, despite the slight improvement in the per-acre yield from 8.49 tons to 9.05 tons. The total yield of cane during the 1952-53 season was 380,000 tons, as against 450,000 tons in the previous season, which represents a drop of 7 per cent. The fall in sugarcane crop was occasioned by reduction in acreage under cane from 53,000 acres in 1951-52 to 42,000 acres—a fall of 13 per cent. The acreage is expected to be still less in the current season. Thus, according to the first official estimate of sugarcane crop for 1953-54, the area sown for cane is placed at 40,000 acres. Assuming that the yield per acre is maintained at the previous season's level of 9.05 tons, the aggregate yield may be estimated at 362,000 tons, which, as compared with the 1952-53 season's output, represents a decline of 18,000 tons.

Consequent on reduced cane supplies to the sugar factories, the duration of the crushing period in Madhya Bharat was shorter, being only 45 days, as against 74 days in 1951-52. This compares very unfavourably with 118 days in Uttar Pradesh, Bihar and Bombay and 89 days in Madras. Although the recovery percentage of sugar in Madhya Bharat has registered an improvement in recent years, it continues to be as low as 9.35, which compares unfavourably with 9.75 in the U.P., 10.03 in Bihar, and 11.51 in Bombay.

Setback in Cane Cultivation

Two principal factors are said to have been responsible for the setback in sugarcane cultivation, namely, occurrence of droughts and lack of necessary irrigation facilities to the cane growers. Since there are no adequate canal irrigation available in the State, the sugarcane crop is today dependent solely on the monsoons. The authorities also do not appear to have been paying due attention to cane development work, despite the repeated representations made by the industry to the Government. In the course of a communication addressed recently to the Minister for Commerce and Industry, Government of Madhya Bharat, the Madhya Bharat Sugar Mills Association pointed out, for instance, that, unless a vigorous scheme for developing sugarcane cultivation, both intensively and extensively, was launched, the interests of cane growers and factories would ever remain at stake.

This warning of the Association is indeed quite timely, considering the vital role which the sugar industry plays in the economy of Madhya Bharat. The industry is the second largest industry of the State with the interests of a vast population of agriculturists inextricably bound up with it. The industry provides employment to as many as 5,000 people. There are five sugar mills in the State, with an aggregate cane crushing capacity of 2,400 tons per day. If the factories were to be assured of adequate cane supplies at reasonable price, the production of sugar could be maintained at over 29,000 tons, which is more than sufficient to meet the State's requirements fully.

To maintain the above level of output, about 290,000 tons of cane are required, on the basis of the percentage sugar recovery of 10 per cent. The quantity of cane now being available to the sugar mills falls short of this figure by 210,000 tons. Clearly, there is imperative need for bringing a larger area under cane cultivation, on the one hand, and introducing scientific methods of cultivation, on the other. After all, it must be remembered that sugar is made not in the factory but in the field.

Valuable Suggestions

The Madhya Bharat Sugar Mills Association has done well, therefore, to put forward the following suggestions:

(i) New wells should be dug in the cane-growing areas of the factories and the existing wells should be deepened and repaired.

(ii) Power pumps should be installed.

(iii) Dams should be constructed on the rivers flowing in the factories areas.

(iv) Tanks should be repaired and their storage capacity increased.

(v) Arrangements should be made for adequate supply of fertilisers and manure.

(vi) Good quality seeds of cane should be distributed to the cultivators.

(vii) Cane cultivators should be educated in scientific cultivation of cane—collective and mechanised farming, correct use of manure and fungicides, methods of controlling and preventing diseases of cane.

(viii) Roads should be constructed to link the cane centres to the factories to eliminate the difficulty of the cultivators for the transport of their crop, as the factories will then be able to make their own arrangements of trucks.

(ix) Above all, sizable plots of land should be made available to the factories to enable them to own their own farms for cane cultivation.

These are indeed valuable suggestions which deserve the careful consideration of the Madhya Bharat Government. The latter must examine the whole case and, if it finds that the proposals put forward by the Association will enable production of sugar at economic rates, that is, without placing an unduly heavy burden on consumers, it should proceed to implement them.

TRANSPORT OF COAL AND COKE

ALLOTMENT OF WAGONS INADEQUATE

IN response to the request made by the Planning Commission some time back, most of the State Governments have submitted their present and prospective demands for wagons for transport of brick-burning coal and soft coke in the light of the present transport situation. Details about their demands are not yet available. But Press reports from New Delhi indicate that there is a large amount of pent-up demand for brick-burning coal and soft coke and that this is bound to increase as the Five-year Plan progresses. Transport facilities, however, are inadequate and, unless something is done quickly to remove this handicap, the supply of bricks will fall short of demand.

A brief review of the Press reports disclose the following:

(1) *Rajasthan*: The estimated requirements are 200 wagons per month for transport of brick-burning coal and 83 wagons for transport of soft coke, as against actual allotment of 164 wagons and 35 wagons per month, respectively.

(2) *Bihar*: The demand for transport of soft coke is estimated at double the present allotment of 800 wagons per month. Actual movement of soft coke at present, however, is 70 per cent. of the quota of 800 wagons.

(3) *P.E.P.S.U.*: The demand for transport of soft coke is put at 121 wagons per month, as against an allotment of 42 wagons per month during December-June and 60 during July-November.

(4) *West Bengal*: The present Coal Commissioner's monthly quota of 3,196 wagons for soft coke is said to be far below the requirements. The average monthly arrivals are, however, 2,706 wagons.

(5) *Bombay*: The present quota for the July-November period is 500 wagons per month for soft coke and for December-June, 395 wagons per month, but the full quota has never been received during the past two years and there has been usually a shortfall of about 10 per cent.

(6) *Madras*: The present quota of 63 wagons per month for transport of brick-burning coal is considered to be adequate. So far as soft coke is concerned, the State was till recently getting its supplies from Bengal and Bihar by rail route, but, at present, supplies are coming by ship from Calcutta due to the bottleneck in the Calcutta-Waltair-Madras rail route. This change has resulted in an increase in the price of soft coke from Rs. 50 per ton to Rs. 70 to Rs. 75 per ton in Madras. There has also been a deterioration in the quality of soft coke, consequent on extra handling to which it is subjected. As a result, the demand has fallen.

(7) *Saurashtra*: This State is suffering from considerable lack of wagons.

Siding Accommodation

From the above, it is clear that, unless the allotment of wagons is increased, there is hardly any prospect of satisfying even the pent-up demand. The Indian Collieries Union is reported to have informed the Planning Commission, through a memorandum, that, besides the shortage of wagons, there is woeful lack of loading space and siding accommodation. There are three types of sidings, namely, railway-owned sidings, assisted sidings and private sidings. It may be noted that, in the case of assisted sidings, the mine-owners have to provide for the cost of sub-grade work and the value of land and the Railway Administration all the permanent-way materials. Expressing the opinion that, as a matter of policy, construction of assisted sidings should be encouraged, the Indian Collieries Union has urged the Planning Commission to earmark sufficient funds for the extension of siding facilities.

The Planning Commission's recommendations on this subject are awaited eagerly, especially because the use of brick burning coal and soft coke has to be encouraged, with a view to conserving the fast depleting forests and cowdung. At present, forests are being depleted in many parts of the country, as a result of people cutting the trees for firewood, which is used both for brick-burning and domestic cooking. Cowdung is being used in rural areas as fuel for domestic purposes, instead of as manure. Soft coke is the cheapest form of fuel for household purposes, especially in urban areas, where charcoal is being used now. India's deposits of low-grade coal, from which soft coke is prepared, are large. Increased manufacture of soft coke can be easily organised in Bihar and Bengal collieries. It is to be hoped that the supply of wagons will be stepped up and construction of new sidings undertaken. Besides, the improvement of the existing tracks and construction of new ones should be expedited.

FIRE * MARINE * ACCIDENT

journey to prosperity

The huge, long train chugs and wheezes and groans to a stop. Villagers—eager, expectant, excited—gather round . . . it is an event of historic importance in the life of the community. For, village produce, the fruit of their labour, will travel to the city in this train.

In the years to come the produce of our villages will flow to the cities on thousands of miles of rails and roads. 3,000 miles of track will be rebuilt during the period of the Five Year Plan. 770 miles of new concrete roads, 66 giant bridges will be constructed to lay the foundations of an efficient communications system. Along these arteries of trade, commerce and culture our people will journey to a richer, more complete life.

Lakhs of tons of Steel will be used to implement the many diverse projects of the Plan. And so, in numerous significant ways Steel will provide the foundations for a richer, more rewarding future for our nation and our people.

DANGERS FROM JUTE SUBSTITUTES

NEED FOR INDO-PAKISTAN CO-OPERATION STRESSED BY U.N. SURVEY

THE jute industry, and those in the Central and State Governments, both in India and Pakistan, which will be called upon, from time to time, to deal with problems concerning jute, have some food for thought in the observations on jute and jute manufactures appearing in *A Study of Trade Between Asia and Europe*, a United Nations publication released this week. This publication is prepared by the Secretariats of the E.C.A.F.E., E.C.A., and the F.A.O. of the world body. The rapid survey of the jute industry which it contains is not only objective but both critical and constructive. The conclusions of this survey, coming as they do from a world body and calculated to serve the larger interests of the jute industry, are impartial. They, therefore, deserve a careful consideration. The highlight of its suggestions is the emphasis on the need for close co-operation between India and Pakistan for stabilising the position of the industry in the world economy. It says:

"Co-operative action by India and Pakistan, including policies to promote Indian purchases of Pakistan jute and possibly steps to limit the Indian trend to jute self-sufficiency, may be considered as desirable alternatives to some of the existing programmes for action."

The need for such co-operation was emphasised by the consequences of Partition and the reiteration by the U.N. bodies of the same is a true remedy not only for the present ills of the industry but even for the conflicts between India and Pakistan.

Much of the ground covered by the survey—especially the sections dealing with production, consumption, supplies and prices of both jute and jute goods—is familiar to those connected with the industry and there is, therefore, no need to cover the subject here once again. But some of the dangers facing the industry and the action necessary to overcome them suggested by it are worthy of mention.

According to the U.N. survey, the greatest danger facing the jute industry is the inroad made by paper and other substitutes as alternatives to jute packing. The development of these substitutes was occasioned by the post-war shortages of jute and jute goods and the consequent prohibitive rise in the prices of these commodities. Says the survey: "During the period of post-war shortage, jute prices have advanced, almost continuously, reaching a peak at some 12 or 15 times the pre-war level (in terms of £) in consuming centres in 1950 and 1951, when prices in India were decontrolled and when the Korean war had added impetus to demand elsewhere. Even at the lower levels which prevailed during 1948-49, prices of jute were four or five times higher than the pre-war average, having advanced more than the prices for any other industrial fibre and substantially more than prices in general."

The result of the rising trend of prices was damaging. For the extraordinarily high prices for jute and jute goods after the war stimulated the search for cost economies in packing and transportation. The latter found itself expressed in "broader trends, some of which have been accelerated by the war, such as the integration of industry, the growth of co-operative marketing and the location of consuming industries in raw-material producing areas"—all of which helped bulk transport and reduced handling.

In addition to bulk handling, paper, too, made inroads into the uses for which jute cloth was suited. This is illustrated by the developments in the U.S. Whereas in 1939, hessians accounted for 33 per cent. of the materials used for the manufacture of bags in the U.S., by 1950 the proportion had fallen to 17 per cent. and there was a further sharp decline in 1951. The share of paper, on the other hand, rose from 29 per cent. in 1939 to 67 per cent. in 1950. In Europe, too, paper has been more widely used in place of jute, both as a packing material and as backing for carpets. In floor and other coverings, economies in the use of jute have been effected, it is stated, by a greater use of the materials with which it is combined.

While substitution of paper for jute goods has been taking place on a considerable scale affecting Indian mills, the substitution of other fibres for raw jute, though on a limited scale, such as *kenaf* and "Congo jute," also adversely affected raw jute, a matter which can hardly be ignored by Pakistan in formulating its jute policy. The survey says that of ultimate significance for European trade may be the expanding production of "Congo jute" in the Belgian Congo and French Equatorial Africa and the commencement of plantations in British Guiana. Again, Brazil, in the last few years, has quadrupled its output of jute fibre, and, by 1951, was almost self-sufficient, we are told.

The fall in the demand for jute goods and raw jute caused by paper and other fibres thus underlines the fact that winning the battle of jute is not the primary responsibility of either India alone or Pakistan alone. The responsibility devolves on both, for one is deficient in raw jute but fully equipped with plant and machinery with ability to process the jute goods in quantities almost as much as the world needs. The other is deficient in processing equipment but is capable of producing all the jute the world wants. While each is engaged in following a policy detrimental to the other, both are experiencing the sad spectacle of their products giving way to substitutes. If they have to regain their lost position and retain it by making further headway, "policies and programmes by both Government and industry in India and Pakistan" should be such as to achieve the triple aims suggested by the survey. These are as follows:

(1) supplies must be sufficiently abundant to assure continuous availabilities to all purchasers without the necessity of allocations. This will probably involve foreign trade policies designed to secure long-term contracts (the February 1953 Indo-Pakistan trade agreement follows this course) and/or a domestic buffer stock policy in the major producing country designed to absorb fluctuations in demand and prices, while long-term production is planned in suitable volume;

(2) increased attention is required to reduction of marketing and production costs, primarily through research and its application to improve yields, quality and efficiency of handling from producer to user; and

(3) there appears to be a need for continual efforts to recapture markets lost in part through the high price and scarcity of supply during most of the pre-war period, as well as a search for new uses of the product in order to offset, at least partially, the competition of substitutes.

The survey says that both the Governments have introduced policies to meet these foregoing three needs, but only partially.

The survey opines that despite the development of the jute industry in the various parts of the globe, "India will remain a very strong competitor in world trade in jute goods," in view of its lower labour costs and flexibility in the use of export taxes. It seems to be convinced that the industry can hardly bear the heavy export taxes—a fact which has been amply stressed in these columns ever since the Central Government embarked on raising the export duty on jute manufactures following the devaluation of the rupee. In this context, the concluding remarks on the Indian industry's position *vis-a-vis* the European industry are worth mentioning here.

"The world market for jute goods is becoming increasingly competitive. Unlike the recent past, the supply of raw jute in future will probably be sufficient to keep all jute-manufacturing industries as fully occupied as the demand for jute goods requires. Excess capacity was characteristic of these industries in pre-war years. An additional industry is being built in Pakistan, sharing many of the cost advantages of the neighbouring Calcutta industry and with the added benefit of recent technological advances. Much has been done in modernising the Dundee industry and its efficiency is increasing. In these circumstances, the exceptionally favourable position which the Indian industry has enjoyed in post-war years may very well be modified. It is unlikely that its output can any longer bear the heavy export taxes or the destinational quotas (now abolished) which were gradually undermining the industry's competitive position *vis-a-vis* the European industries."

EXECUTION OF KOYNA PROJECT

WORLD BANK LOAN SOUGHT

AT long last, work on the Koyna Project has begun. Inaugurating the project on the 16th inst., Mr. Morarji Desai, Chief Minister of Bombay, disclosed that, very shortly, experts from the World Bank would be inspecting the project, with a view to examining the request for a World Bank loan for its execution. The project is expected not only to end the shortage of power in the State of Bombay, but also to provide considerable irrigation facilities.

The Koyna power-cum-irrigation project will be carried out in three stages. The first stage, estimated to cost Rs. 33 crores, will provide 240,000 kw. of power, out of which 230,000 kw. will be used in the Bombay-Poona area and the rest in the Karad-Miraj area. In the second stage, power generation will be stepped up by 170,000 kw. to 410,000 kw. At the third stage, a "tail race" underground power house will be constructed to generate 60,000 kw. and another power house at the foot of the dam generating about 300,000 kw. (seasonal). The total power generation, when the whole project is completed, will thus be about 500,000 kw.

It is a pity that, although the potentialities of power generation from the waters of the Koyna, which is a tributary of the Krishna River, were realised as long back as in 1917, when Tatas commenced investigations for power generation, it is only now that work has commenced. This is due to a number of causes, including the State Government's failure to realise the importance of power generation at an earlier date. The interest in constructing a major project waned at the end of the First World War and a smaller scheme was examined by Tatas, but even this was given up subsequently for various reasons.

In 1947, however, interest in this project was revived. The Government of India, under its Electric Grid Department, undertook the work of surveying and investigating the power possibilities of the Koyna by utilising to the full the available water of the catchment at a distance, 2½ miles from Helwak, a village in Patan taluk of Satara North District on the main Karad-Chilun road, where a dam was proposed to be constructed. Later on, the dam site was inspected by the officers of the Geological Survey of India, as well as by some eminent engineers. The opinion of these experts in favour of developing the power site was stated to be unanimous. By the end of 1949, sufficient field data was obtained to adjudge the full possibilities and limitations of the site and it was decided to construct a dam, with a height of 300 feet, capable of storing 156,000 million cubic feet of water. The then estimated cost of the project was Rs. 63 crores; after allowing for pro rata debit for storage for irrigation, the net cost debitable to power was Rs. 51.9 crores.

Heavy Cost

The cost of the project, however, was considered very heavy and, therefore, it was subsequently decided to recast the whole scheme in such a way as to make it capable of execution in stages. Accordingly, in 1951, the Government of Bombay constituted an expert committee, under the chairmanship of Mr. A. N. Khosla, to advise on the feasibility of construction in stages and the types of dam and powerhouse most suitable for such development. The Committee reported favourably on the desirability of executing the project in stages.

Up to this time, there was no suggestion that there was any restriction on the use of all the water available from the Koyna catchment for power development. Subsequently, however, the other States having water rights on the Krishna, of which the Koyna is a tributary, raised an objection to the diversion of 119,500 million cubic feet of water to the sea. An inter-State conference of the States concerned was held under the ægis of the Planning Commission and it was decided that the maximum quantity of water to be utilised for power development should not exceed 67,500 million cubic feet.

This necessitated the modification of the original proposal for full utilisation of the Koyna waters for power purposes. The Government of Bombay directed that the first stage of the project should provide for water storage sufficient to generate 300,000 kw. of power, of which the needs of Bombay-Poona area was estimated at 240,000 kw. and those of Karad-Miraj area 60,000 kw.; the generation and transmission at the first stage, however, were to be planned only for the requirements of Bombay area.

Thereafter, the Government recommended the inclusion of the Koyna project in the First Five-year Plan. After further consideration, the Planning Commission included the scheme in the final Five-year Plan. Provision has been made in this scheme for power generation at the first stage only to the extent of 240,000 kw., of which only 10,000 kw. is meant for the Karad-Miraj area and the rest in the Bombay-Poona area. The unique feature of the scheme is that, for the first time in India, the power units will be located underground.

It is difficult to assess the cost of power to the consumer. But it is estimated that, if power is sold in bulk at 0.40 anna per unit (which is less than 5 pies), the scheme would become self-supporting from the third year of operation and will show a small profit when all power generated is utilised. As the scheme progresses beyond the first stage, it is expected that the power demands of the industrial units in Kolhapur, Bijapur and Sholapur districts in Maharashtra-Karnatak can be met. In fact, there is at present no large source of power, either coal or hydel, for this area. Accordingly, industrialisation of Maharashtra and a part of Karnatak is contingent almost entirely on the availability of power from Koyna.

ROUMANIAN PETROL FOR INDIA

The Western India Oil Distributing Co., Ltd., which had to suspend import of petrol and petroleum products from Russia in 1941, on account of war, has resumed its activities in this regard. The first post-war cargo, consisting of 2,700 tons of kerosene and 2,000 tons of petrol from Roumania, has already arrived at Bombay. The Company expects to import during the course of the year about 30,000 to 40,000 tons petroleum products. It is stated that the trade pact between Soviet Russia and India has helped to place the business of the Company on a more secure basis.

At present, the Company has a bulk oil installation at Wadala (Bombay) in complete working order and proposals are under consideration for putting up tankage at the Company's installation at Madras. There are also plans to construct bulk oil installations at other important ports in India.

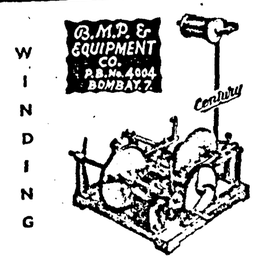
The Company does not envisage any competition from the other oil companies distributing oil in India. It considers that there is not only a large pent up demand, but also great prospects for an increase in demand for petroleum products. It is of the opinion that, even after all the three oil refineries now under construction, go into production, there will be a substantial balance of demand for imported petrol.

INDIAN ROADS CONGRESS

The Indian Roads Congress will hold its eighteenth annual session at Bhubneswar (Orissa) from 4th to 11th February, 1954. About 300 highway engineers from all over the country are expected to attend. Mr. R. K. Batra, Chief Engineer, P.W.D., Madhya Pradesh, who is the President of the Congress, will deliver the presidential address. The Congress will discuss technical papers relating to highway engineering and allied subjects, standard designs and codes of practice. The Chief Engineers of the States and the C.P.W.D., and representatives of the Military Engineering Services will also hold a conference to discuss current road problems, policies and programme. Visits to engineering works, including the Hirakud Dam Project, are also scheduled. A technical engineering exhibition, in which various engineering firms, and Public Works Departments of the States are expected to participate, will be held at the time of the session.

BRITISH LOCOMOTIVES FOR WORLD MARKETS

Fifty years ago three famous Scottish firms of locomotive-builders in Glasgow were amalgamated to form the largest industrial concern of its kind in Europe—the North British Locomotive Company, Limited, with 8,000 employees and a combined works area of 60 acres. Since 1903, they have built nearly 28,000 locomotives. Almost one-third of them were for British railways, and at present about 90 per cent. of the production is exported. The firm has sent 7,900 locomotives to India and the Far East, 4,000 to Africa, 2,500 to Europe, 1,100 to Australia and New Zealand and 3,300 to other countries, mainly to North and South America.



TUBEWELL PROGRAMMES IN INDIA

PROGRESS SO FAR SATISFACTORY

A BRIEF review of the progress of the tubewell programmes in India, as made by Mr. Shantikumar Raja, Tubewell Projects Administrator, Ministry of Food and Agriculture, Government of India, in the course of a broadcast from New Delhi, on the 15th inst., discloses the potentialities of tubewells as an important source of minor irrigation. How important they are will be clear from the fact that a tubewell serves the purpose of nearly 60 surface wells, while its capital and recurring cost will be less than that of constructing and running 60 surface wells. Each tubewell, including the cost of a pump set and expenditure on the construction of pump houses, channels and transmission lines, is estimated to cost about Rs. 50,000.

Among the various sources of minor irrigation in India, tubewells are of recent origin. It will be recalled that a beginning in tubewell construction was first made in U.P. and Bihar about 20 years ago. There were about 2,500 tubewells in these two States by 1950. For the first time in 1950, the Government of India sponsored a large-scale programme of tubewells construction in U.P., Bihar and the Punjab, as a part of the Grow-more-food campaign. This programme, which provides for the construction of 440 tubewells in U.P., 300 in Bihar and 225 in Punjab is nearly completed.

Encouraged by the progress of this scheme, the Government of India has embarked upon a still larger scheme, under the Indo-American Technical Assistance Programme. This scheme, the largest ever undertaken in the world, provides for the construction of 2,000 tubewells, of which 995 will be in U.P., 350 in Bihar, 355 in the Punjab and 300 in P.E.P.S.U. The aggregate expenditure on this scheme is estimated at Rs. 14.68 crores. The programme will be completed in three years. The financing arrangements are that the U.S. Government will provide the dollar exchange for imported articles, under the dollar aid being given to India, and the Government of India will find all the rupee expenditure required to finance the project. The proportion of dollar and rupee expenditure is roughly half to half. The entire expenditure on the tubewells will be treated as a loan to the State Governments from the Government of India. The State Governments have to repay the loan in regular instalments. Of the 2,000 tubewells, 495 will be constructed departmentally by the State of U.P., Bihar and Punjab. The remaining wells have been entrusted, on contract basis to foreign contractors, after inviting global tenders.

Exploratory Project

Two more programmes of tubewell construction schemes, involving a further expenditure of about Rs. 9 crores, have also been undertaken under the Indo-American Technical Assistance Programme for 1953-54. The first project covers the construction of 650 tubewells in the Indo-Gangetic alluvium area and the second project envisages exploratory programme of 350 tubewells in the hitherto unexplored regions of the whole country from north to south. The first programme may be considered more or less an extension of the 2,000 wells programme. Out of 650 tubewells, 165 will be constructed by State Governments departmentally and the balance of 485 tubewells by contractors. The work on this project is expected to commence some time in April 1954 and be completed by 31st December, 1955.

The exploratory project for 350 tubewells covers 16 States all over the country. The areas have been broadly demarcated on the basis of the preliminary investigations carried out by the Geological Survey of India. Allotment of wells to the various areas have been made on the basis of recommendations of the technical experts of the Government of India. A site selection committee, consisting of these experts and also the Chief Engineer of the State concerned, will visit these areas and determine the exact sites.

The sum up, by the end of 1955, nearly 2,650 tubewells, excluding the exploratory ones, will have been constructed. They are expected to bring under irrigation about 8 lakh acres of land and produce 1.6 lakh tons of additional foodgrains every year. The exploratory wells are expected to disclose the possible underground water resources in the scarcity regions and open new vistas for agricultural production.

POSTAL INSURANCE AUTHORITIES' BID TO EXTEND THEIR OPERATIONS

INSURERS STRONGLY RESENT

LIKE the Mysore State Government, which is reported to have decided to extend the operations of its Insurance Department to wider fields, the Central Government, too, is considering the extension of the insurance facilities it provides through the Postal Insurance Fund, beyond the restricted sphere of Central Government officials to whom the scheme applies at present. Mr. H. L. Jerath, Director-General of Posts and Telegraphs, for instance, announced recently that the Department was considering the extension of the facilities provided by the Postal Insurance Department not only to semi-Government institutions, such as the Airlines Corporation and the Sindri factory, but also to the staff of "well-established and recognised firms," inclusive of "leading" newspaper offices. This has caused some resentment amongst private insurers, who feel that the Government's entry into the public arena will be to hit the insurers below the belt and to indulge in unfair competition.

"It is only natural that private insurers should be perturbed by the Government's move, since it signifies an invasion into a field which they hitherto regarded as one meant for being developed by them. The Government projects, such as Sindri Fertilisers and Indian Airlines Corporation, are pockets of high income in India. They might be lost irretrievably to private insurers. If the Government enters private offices, too, it would mean a still further loss.

Comparative Chart

That the Government has, on its part, been keen on extending its insurance activity is evident from the fact that it has already circulated a chart to departmental heads, in order to show that the Postal Insurance offers better advantages than what are offered by the leading private insurers, Indian and foreign. The chart compares the Postal Insurance rates with the rates of other insurers in the country. Thus, the premium rate for a 30-year endowment (with profits) policy for Rs. 1,000, taken at age 25, is only Rs. 33½ in the case of Postal Insurance, whereas it varies from Rs. 36-9 to Rs. 39-14 in the case of private insurers, who also charge an additional amount per year, varying from Rs. 2 to Rs. 2-8 for acceptance of payment by monthly instalments. The bonus rates declared by the Postal Life Insurance are Rs. 10 on new policies and Rs. 12 on old policies, whereas the bonus rates of the leading private insurers vary from Rs. 7 to Rs. 12 in the case of Indian insurers and from Rs. 9 to Rs. 17½ in the case of certain foreign insurers. Again, the expense ratio of the Postal Life Insurance is only 12.5, as against 21.7 to 36.9 of the leading Indian insurers and 20.6 to 26.42 in respect of the foreign insurers. The chart also compares the ratio of payments by death to payment by maturity in the case of Postal Insurance with that of each of the other leading insurers, in order to show that its survivance rate is higher than that of other insurers. Also, it compares the amount that an imaginary policyholder would pay throughout the 30-year endowment period and the amount he would be entitled to get on maturity of his policies, inclusive of bonuses. This comparison is instituted, in order to show that, whereas a policyholder of the Postal Life Insurance would pay only Rs. 1,012½ but receives Rs. 1,300—Rs. 1,360, there is no similar advantage for the policyholders of other insurers.

Insurers' Practice

Now, the insurers question not only the ethics of instituting such a comparison between the rates of Postal Insurance and those of other insurers, but also the validity of the results of this comparison. They recall, in this connection, that a similar practice prevailed, till recently, among the insurance agents in this country, which directly led to the evils of rebating. The insurers, therefore, reached a "gentlemen's agreement" which provided that such comparisons should not be made by insurance agents in their canvassing work. They are, therefore, surprised that the Government should do what the private insurers now desist from doing.

The insurers hold that Postal Insurance and the insurance offered by private insurers are not comparable items at all, and that it would be clearly wrong to draw any results from such a comparison. Not only does the organisation of private insurance companies differ from the Postal Insurance Fund but also the policy conditions and the methods of doing business differ substantially. Any comparison would have to take into account many factors, which have been ignored by the Government-sponsored comparative chart. For instance, it is wrong to compare the ratio of mortality to survivance of the Postal Insurance Fund with that of private insurers, because the former does not issue policies for ages beyond 55, whereas the other insurers issue policies maturing up to age 70. It is again wrong to show the additional amount which the insurers, unlike the Government, charge for payment of premia by monthly instalments, since they also show, unlike the Government, a corresponding concession where premium payments are made annually.

Wrong Comparison

It is true that the premium rate and the expense ratio of Postal Insurance are comparatively lower than those of private insurers. But the insurers rightly contend that this comparison is wrong. In the first place, the Postal Insurance Fund does not pay income-tax nor does it conform to other restrictions under the Insurance Act by which the private insurers are governed. Secondly, the collection of premiums for the Fund is undertaken by the Postal Department which does not render a similar service to other insurers. Thirdly, the medical examination of prospective policyholders is undertaken by Government doctors at a nominal cost. Fourthly, the Fund's investments are tax-free; it does not also incur other investment expenses such as brokerage, etc. Fifthly, it does not pay rent for its premises, nor for postages and stamps, nor for legal charges. Finally, it presumably gets audit and actuarial examination free of charge. With these advantages, the surprise is not that it is able to quote slightly lower rates of premium but why it does not quote still lower rates.

Nor should one ignore that somebody has to, and does, pay for these advantages. This "somebody" is, of course, the taxpayer. The taxpayers, who are far more numerous than the group of men who benefit from the Fund, pay for the advantages which this group enjoys. So long as the Fund restricts its activities to officials of the Central Government, the public might be inclined to ignore these special privileges of the Fund on the ground they are a part of the normal service which an enlightened Government might be expected to give to its employees. But, when the Fund, armed heavily with these privileges and special advantages, chooses to descend to the public arena to cross swords with private insurers, the affected interests are entitled to ask whether the Government is playing the game. In this connection, Mr. T. R. A. Pai, President of the Association of Mutual Life Offices in India, has, in a Press note, criticised the Central and State Governments for allowing their Insurance Departments to indulge in "unfair competition" with Indian insurers, especially when the latter are already facing competition from foreign insurers. He has appealed to the Governments to view the problem in its "correct perspective" and to "desist from their extremely unwise move."

Will It Work?

It may also be wondered whether the Government's scheme for extending the Fund's activities will work satisfactorily in actual practice. In the first place, how will it meet the objection that, whereas a full-fledged State Government employee is not allowed to benefit from Postal Insurance, an employee in a semi-Central Government project gets that facility? Secondly, if this consideration encourages the State Governments also to set up Insurance Departments of their own, as in the case of Mysore, will it not bring into existence far too many insurance organisations in a country where the available insurance business is strictly limited? Thirdly, since the Fund seeks to extend its activities to employees of "well-established" private offices and "leading" newspapers, how is the Government going to determine which of the private offices are good enough to come within the purview of the Fund's activities? Again, on what basis will it judge whether a newspaper occupies a "leading" position in order to entitle it to claim the Fund's benefits. On what will this depend—on quality, circulation or the political support it gives?

Constitutional Propriety

Apart from these considerations, there is the far more relevant question of the constitutional propriety of extending the Fund's services to only one section of the population. It is doubtful whether the Fund's authorities have examined the legal and constitutional implications of their move. Again, it is not clear whether this move is only a thin end of a nationalisation wedge. It would then be a very serious matter, indeed. If the move, on the other hand, is only a particular variant of the "mixed economy" policy, to which the Government is wedded, it is surely a travesty of that policy that the Government should fight private insurers from a vantage ground. If it decides to fight them at all, the least that it should do is to separate the Fund from the rest of the Government, to pay taxes, to publish its report, audited accounts and valuation reports, to conform to the provisions of the Insurance Act and, in short, to work, in every way, as any other insurer does. But before such a development takes place, it would be necessary to examine the question whether there is scope or need for a Government-sponsored insurance company.

HEALTH INSURANCE SCHEME

A review of the work already done in pursuance of the Employees' State Insurance Scheme and an indication of the future programme of extension of the Scheme were provided by the Union Minister for Labour, Mr. V. V. Giri, in the course of his address at the recent session of the Indian Labour Conference, held at Mysore. The scheme, as is well known, is in force only in Delhi, Kanpur and a few industrial centres in the Punjab. Mr. Giri admitted that the progress of implementation of the Scheme "has unfortunately not been very satisfactory." The Scheme now covers only about 8 per cent. of the total insurable labour population of the country. Referring to the work taken in hand in order to extend the Scheme to other areas, Mr. Giri said:

"Active preparations are afoot for the implementation of the Scheme in Calcutta City and Howrah District within the next few months. Thanks to the co-operation of the West Bengal Government, we hope to make rapid progress in our preparations. Local offices are being selected and set up, staff recruited and trained and the necessary arrangements for the selection of panel doctors made. The financial implications of the implementation of the Scheme in Bombay are being studied and as soon as we come to an agreement with the State Government, we hope to be able to make rapid progress there also. The number of employees in the Calcutta and Howrah regions is about 2¼ lakhs and in the Bombay region 4 lakhs. If we successfully extend the Scheme to these two places, we would have discharged a large part of our responsibilities. Simultaneously, however, steps are being taken to introduce the Scheme in Bangalore, Nagpur, Coimbatore and certain towns in Madhya Bharat in the near future. The Corporation has accepted, in principle, a proposal to extend medical benefits on a restricted scale to the families of workers. This will place a great burden on the finances of the Corporation, but even so, that decision was inevitable. I am sure that every section of this Conference is anxious to see the Scheme implemented throughout the country as quickly as possible. I would, therefore, appeal to every one of you to extend the fullest possible measure of co-operation in the implementation of this very difficult Scheme."

Mr. Giri did not explain how he proposed to meet the opposition of the doctors in West Bengal to the Scheme. Nor did he indicate when the Scheme would be implemented in South India.

ASSOCIATED CEMENT COMPANIES LIMITED

MR. DHARAMSEY KHATAU ADDRESSES SEVENTEENTH ANNUAL MEETING

GOVERNMENT'S ATTITUDE TOWARDS PRIVATE ENTERPRISE DEPRECATED

THE Seventeenth Annual General Meeting of The Associated Cement Companies, Ltd., was held in Bombay on Friday, 15th January, 1954. The Chairman, Mr. Dharamsey M. Khatau, referring to the concepts of a Welfare State and a mixed economy, said: "A Welfare State must rely for its fulfilment on the efforts of its people. It is, therefore, vital at this stage of the nation's development that stress be laid on the responsibility for hard work and all out effort, which both industrialists and workers must face up to in order to achieve the national goal."

"So far as 'mixed economy' is concerned," the Chairman continued, "It is important that both the public and private sectors understand clearly the principles on which its operation is based. As I see it, these principles envisage the development of two distinct and clearly defined spheres of industrial activity, each complementary to the other, each fortifying the other, and both knowing that they can count upon operating within the security of a nationally accepted, long-term plan of economic development."

Speaking of the attitude of Government and the public towards private enterprise, the Chairman observed: "Today, the morale of the industrialist is at a low ebb. He constitutes a ready target, and is often the subject of abuse in public speeches. He is painted as an anti-social evil thriving as a parasite on the exploitation of other's efforts; as a person to be tolerated only for as long as is necessary to bring about his replacement. If private enterprise is to achieve that which the nation expects of it, then this attitude should change. We do not expect either molly-coddling or fulsome praise, but is it too much to hope that when we have been able to contribute very substantially to the advancement of national interest, at least some gesture of appreciation, or some word of encouragement should be forthcoming from the responsible leaders of our country? Whatever social and political form Indian economy might eventually take, it is clear that during the foreseeable future at any rate, private enterprise is not only necessary but is essential. No one can doubt that the industrialist will be encouraged to undertake his task with infinitely greater resolution when he knows that his initiative and endeavours are appreciated and accepted as an honourable contribution towards the betterment of the nation. We make no plea for the condoning of malpractices in the field of industry. Whenever these occur, either in the public or private sectors, they must be rooted out and given no quarter. What we do ask is that Government and the enlightened public learn to differentiate between the good and the bad, that all are not painted with the same brush, and that the good element is given the support and encouragement which it deserves and is entitled to."

Unemployment

The Chairman then referred to the crucial problem of unemployment in the country, the major cause of which was the terrifying rate at which the population was increasing, and hoped that the work being done to rationalise production would be further intensified, so that the rate of increase might be brought within manageable bounds in a reasonable period of time.

Referring to the role of industry in solving this problem, the Chairman continued: "I would like to take this opportunity of sounding a note of warning to those who advocate that one solution of the unemployment problem lies in industry being compelled to employ a larger number of workers than is necessary for the manufacture of its products. Such action would not only fail to ease the situation, but would inevitably further provoke it. This problem cannot be tackled by frustrating efforts at increasing the efficiency and output of labour. The best contribution which industry can make towards the provision of better jobs for more people is by the creation of greater wealth through higher efficiency, and the utilisation of this wealth to develop more industries. Thus alone will it be capable of providing expanding opportunities for employment."

Production and Sales

Reviewing the progress of the Company during the year, the Chairman said: "We have produced and sold a substantially larger quantity of cement than was the case last year. When it is remembered that the production and sales for the year 1951-52 were also considerably higher than the previous year, shareholders will appreciate the very strenuous and sustained efforts which the Company has made to increase production. Unfortunately, even though production and despatches have been very much higher this year than they were during the year 1950-51, the profits of the Company are less now than they were then. This unhappy position is due to an increase in production costs beyond our control, which has not been compensated for in the selling price allowed by Government.

Tariff Commission

Referring to the Tariff Commission enquiry, the Chairman stressed that the Company had pointed out the necessity of its being enabled to earn enough to provide for the modernisation and rehabilitation of its older plants, as well as to allow for the expansion programme laid down in the Five-year Plan. Continuing, he said: "It is understood that, arising out of this enquiry, the Tariff Commission had recommended to Government that the profits of the Company should be limited to a 10 per cent. return on the gross block and a 4½ per cent. return on the working capital employed. Out of this profit element the Company is expected to meet not only taxation and dividends, but also bonus to employees and Managing Agents' commission. The latter two items have not been accepted as items of cost. When it is so transparently clear that management is an integral part of the Company's organisation, and indeed is responsible for providing its very direction, and that bonus to labour results from adjudications ordered by Government itself, then it is difficult to understand the reasoning which excludes expenditure under these heads as being part and parcel of the cost structure. The result is that after paying agency commission, taxation and bonus to employees, the return of 10 per cent. on gross block is reduced to about 4 per cent. I submit that in any country, much more so in an underdeveloped one like ours, where the immediate need is for the production of greater wealth through rapid and efficient industrialisation, such a poor return is grossly inadequate to provide the incentive for people to save, and to risk their savings in the promotion of industrial expansion."

Price Prospects

The Chairman went on to say that, though he had hoped that the Government would take a more realistic view of the profits which the Company should be permitted to earn, the present indications were to the contrary, and that even the meagre increase in selling price recommended by the Tariff Commission was not likely to be sanctioned.

He then added: "The cement industry as a whole, and the A.C.C. in particular, can show a record of achievement which I submit will bear favourable comparison with other industries in the country. Your Company has always adopted a policy of producing and marketing the maximum quantity of cement at the lowest price possible, consistent with the aims of maintaining its plant efficiently; providing a reasonable return to its shareholders; anticipating and providing for the growing needs of the nation; and ensuring the well-being and welfare of its workpeople. Further, it has consistently followed the practice of ploughing back every surplus rupee into the strengthening of the business, so as to create greater national wealth and increasing employment. In fact, I believe that the A.C.C. can with every justification claim to have achieved all that is best in robust private enterprise It has justified the confidence reposed in it not only by its workers and shareholders, but also by its consumers, namely, the public and Government. In view of this record, it is my earnest hope that Government will allow this Company a fair selling price in the secure knowledge that the incentive so provided will be utilised to the fullest effect in furthering the interests of the industry and those of the country."

Plant Rehabilitation and Expansion

The Chairman next reviewed the progress maintained by the Company under its plant rehabilitation and expansion programme and stated that since the Company embarked upon its post-war expansion programme, it had already increased its annual capacity by 11 lakhs of tons. Plans had been translated to continue this expansion further, and to carry out a systematic programme for the modernisation and rehabilitation of several of the older factories. Under these schemes, it was intended to modernise the factories at Shahabad, Kymore, Dwarka, Kistna and Patiala.

Referring to the Sindri factory now under construction, the Chairman observed that the first unit of this plant with an annual capacity of 1,00,000 tons of cement would come into production in the latter half of 1955, and that a second unit with a similar capacity would begin operation a few months later. These expansion and rehabilitation projects had been designed and were being carried out entirely by A.C.C. engineers and technicians and a great majority of the machinery for these projects were manufactured in the Company's workshops.

The Chairman continued: "As and when this programme is completed, your Company will have added a further annual capacity of 10,00,000 tons of cement over and above the 11,00,000 tons which I have already reported. The ability of the Company to achieve this programme must, of course, depend on its earning capacity and this in its turn must necessarily be regulated by the selling price permitted to us by Government."

Pakistan

Referring to the Company's factories in Pakistan, the Chairman remarked that negotiations were still going on with the Pakistan Industrial Corporation for the formation of a new company in that country, and when negotiations were concluded, the matter would be placed before the shareholders for their consideration.

Labour-Management Relations

Turning to labour relations, the Chairman observed: "It is with some sorrow that I must again report to you this year that even though there has been an appreciable increase in the wage bill resulting from voluntary increments given by the Company, adjudication awards, labour legislation, etc., this has not been reciprocated by a corresponding increase in production effort on the part of labour.

"So far as the management of your Company is concerned, we believe that in the human will to work lies the greatest single source of productivity. We accept also that it is an inescapable function of management to ensure that our workpeople are given such material benefits as lie within the earning capacity of the Company. Further that they are provided with security and the opportunity to advance; and are treated as useful and essential members of society, whose day-to-day work is conducted in an atmosphere of personal dignity. It is to the attainment of these ends that we have dedicated our labour policies. And it is towards their achievement that we shall continue to strive.

"The attitude, however, of labour leadership, as I see it, is still most discouraging. It continues to emphasise increasingly the privileges which are due to labour, and to make on its behalf exorbitant and impossible demands. Little effort is made to enunciate the responsibilities that are labour's in the promotion of industrial progress, which alone can create the wealth required to provide a betterment in the standard of living. Government policy also takes the form of producing a bewildering succession of labour legislation without proper consideration of the impact which this must have on the industrial structure. The attitude is still abroad in Government that they must protect labour against the wiles of unscrupulous employers. These approaches to this essentially human problem on the part of Government and trades union leadership frustrate all attempts at increasing efficiency and the *per capita* output. Ultimately this will retard economic progress, and imperil the competitive position of Indian products in world markets.

"The crying need of the hour is for an immediate cessation of the studiously fostered

(Continued on page 126)

PROGRESS OF THE FIVE-YEAR PLAN

INFLATION HELD—WHOLESALE PRICES LOWER

THE end of the year 1953-54 will see the completion of a three-year period under the Five-year Plan. During this period, the amount spent on activities, for which provision has been made in the Plan, aggregates Rs. 998 crores. This includes the estimated expenditure of Rs. 413 crores for the year 1953-54, the actual expenditure for each of the other two years, namely, 1951-52 and 1952-53, being Rs. 261.5 crores and Rs. 323.5 crores, respectively. In the next two years, about Rs. 1,069 crores will be spent on the execution of the Plan, exclusive of a sum of Rs. 175 crores covering the recent expansion of the Plan.

As against this expenditure, already undertaken in order to execute the Plan, the country can show, according to a review of the working of the Plan during the first three years, made recently by the Planning Commission itself, some notable achievements on the credit side. Thus, production of foodgrains in 1952-53 had increased by 4.4 million tons. Industrial production had also increased. Thus, the index number of industrial production which stood at 117 in 1951, moved upto 129 in 1952 and still further to 134 in the first eight months of 1953. The index number of wholesale prices, which stood at 433 at the end of 1951, came down to 393.6 before the end of October, 1953. The balance of payments position, which showed a deficit of Rs. 134 crores in 1951-52, improved in the following years, so that the year ended June, 1953, witnessed a surplus of Rs. 64 crores. India's sterling balances now stand at Rs. 700 crores. Thus, the three main achievements of the Plan, according to the review, are: (a) Increase in production, both agricultural and industrial, (b) control of the price situation. and (c) establishment of a stable economy.

The Commission points out that, in spite of several initial difficulties, it has been possible to increase expenditure on the Plan progressively; as stated already, this was Rs. 261.5 crores in 1951-52, Rs. 323.5 crores in 1952-53, while the estimate for the current year is Rs. 413.0 crores. Many States were in a position to enlarge upon their current programmes, in several others the first task was to organise a minimum machinery of administration, especially in the field of development. The Commission observes: "Even if the expenditure actually incurred during 1953-54 should fall somewhat short of the budgetted amounts, as might indeed happen in the ordinary course, the effective increase in the level of development expenditure during the first three years of the Plan would still be quite substantial."

Although there has thus been a progressive increase in expenditure, its tempo has to be further increased to catch up to the targets of the Plan. The balance to be spent during the remaining two years of the Plan period is of the order of Rs. 1,069 crores plus the amount covering the recent expansion of the Plan (ceiling Rs. 175 crores).

Resources

Analysing the resources for the Plan, the review points out that, during the first two years, the rate of development expenditure did not require any large-scale deficit financing. The first year of the Plan closed with a small overall surplus. In the second year, there was a budgetary deficit of Rs. 120 crores, but this was accompanied by a net reduction in the indebtedness of the Government to the Reserve Bank to the extent of about Rs. 40 crores. Allowing for various relevant factors, the net creation of new purchasing power on account of the budgetary deficits in the first two years of the Plan is likely to have been in the neighbourhood of Rs. 40 to Rs. 45 crores.

During the first three years of the Plan, the State Governments have raised about Rs. 30 crores from measures of additional taxation. In view of the acceleration of the Plan from 1953-54, it will be incumbent upon them, the review says, to find additional resources to a much larger extent. Conditions in the capital market have steadily improved. During 1951-52 the State Governments were able to raise loans amounting to about Rs. 12 crores. In 1952-53, they raised Rs. 17 crores and in 1953-54, the net realisation was Rs. 39 crores.

There has been considerable activity also in the field of small savings. The target of the Five-year Plan period was Rs. 270 crores, of which Rs. 103 crores were secured during the first two years. A promising recent development has been the setting up of a National Advisory Committee for promoting small savings through voluntary women workers.

The Central assistance to the States during the first three years of the Plan amounted to Rs. 183 crores, out of which Rs. 163 crores were given as loans and Rs. 20 crores as grants.

The external assistance during the period of the Plan has been of the order of Rs. 133 crores. This assistance has come from the United States of America, from the Colombo Plan countries including Canada, Australia and New Zealand, from the Ford Foundation and Norway. Assistance in the form of loans has also been received from the International Bank.

Highlights of Progress

Highlights of progress since the beginning of the Plan period are indicated below :

(Except when specifically mentioned the figures relate to the period of the first two years of the Plan (i.e., 1951-52 and 1952-53). In considering the progress indicated below, it is important to bear in mind that they are *highlights*, and do not by any means indicate all the progress in all spheres that have so far been made.)

Agriculture and Community Projects

Production of *foodgrains* in 1952-53 increased by 4.4 million tons as compared to that of the basic year 1950-51.

National Extension Service.—One villager out of every eight is receiving attention either under community programme or National Extension Service. Over 47,000 villages with a rural population exceeding 37 millions have been covered so far.

Minor Irrigation Works.—Irrigation water provided to about 2.5 million acres of land upto the end of 1952.

Land Reclamation.—5,00,000 acres of *kans*-infested land reclaimed during the first half of the plan period.

Irrigation and Power

New land brought under irrigation by the river valley projects was about 1.5 million acres (upto 1952-53).

Additional Power Generated—425,000 kw.—Also, several phases of the multi-purpose projects on hand were completed and preliminary work in connection with a few new projects, e.g., Kosi, was taken up.

Industry

Cotton Textiles.—*Cotton yarn*: Production increased to 1,450 million lbs. in 1952-53 from 1,179 million lbs. in 1950-51.

Cotton Cloth (mill-made): Target for the Plan period, namely, 4,700 million yards, nearly reached.

Iron and Steel.—Agreement concluded with Messrs. Krupp and Demag for financial and technical collaboration in connection with the new Government-owned steel plant. Expansion schemes of Tata Iron and Steel Company, the Indian Iron and Steel Company and the Mysore Iron and Steel Company progressed. The Indian Iron and Steel Company was helped by the Government of India to obtain a loan of 31.5 million dollars from the World Bank for its expansion programme.

Cement.—Production increased to 3¼ million tons in 1952-53 from 2.69 million tons in 1950-51.

Fertilisers.—With the completion of the Sindri Fertiliser Factory, the production of sulphate of ammonia increased to 252,000 tons in 1952-53, as compared to 46,304 tons of indigenous production in 1951.

Locomotives.—The Chittaranjan Locomotive Works started production during the period. The total number of locomotives so far built is about 100.

Petroleum Refineries.—Work has commenced in the two petroleum refineries which are to be set up at Trombay Island by Burmah-Shell and the Standard-Vacuum Oil Company of New York. An Agreement has been finalised with the Caltex Company regarding a third oil refinery which is to be located at Vishakhapatnam.

Telephones.—The Indian Telephone Manufacturing Factory went into production in 1953, its annual output being 40,000 telephones.

Schemes in Public Sector.—The following important projects in the public sector are expected to go into production in 1954 :

The Machine Tools Factory, Jallahall; Indian Rare Earths Ltd., Travancore; U.P. Government Cement Factory; Nepa Mills Ltd., Madhya Pradesh; Penicillin Factory; D.D.T. Factory; Hindustan Cables Ltd; and Bihar Government's superphosphate Factory.

Coaches and Wagons.—During the first half of the Plan period, 1,751 coaches were built. The number of wagons built was 12,770.

Road Construction.—National Highways: 240 miles of roads completed within the first two years and work on 450 miles on hand.

Bridges: 17 new bridges completed and work on 20 more are on hand.

State roads: Nearly 7,200 miles of State roads were constructed or improved.

Shipping.—Coastal shipping tonnage increased by 77,000 g.r.t. The share of Indian ships in the coastal trade which was 80 per cent. in 1950-51 reached 160 per cent. in 1952-53.

Ships Constructed.—At the Hindustan Shipyard Ltd., Vishakhapatnam, six ships each of 8,000 d.w.t. were constructed during the first two years of the Plan.

Social Services

Displaced Persons from W. Pakistan.—Relief camps for displaced persons from West Pakistan were practically liquidated. From a population of 12.5 lakhs in these camps at the end of 1947, the number now is only 36,000, consisting mostly of unattached women and children and old and infirm persons. 2.5 million displaced persons from West Pakistan were settled on land left by evacuees and an equal number in urban areas.

As regards housing, in addition to making 179,000 evacuee houses available to displaced persons, the Government constructed 139,000 new houses and private parties constructed, 42,000 houses with assistance from Government. Altogether 14.7 lakh persons were allotted evacuee houses and 9.10 lakh persons went into new houses. To provide gainful employment, over Rs. 11 crores were granted as loans.

Displaced Persons from E. Pakistan.—About 2.49 lakh families have been settled on land owned by Government and private parties. Financial assistance by way of loans amounting to Rs. 8 crores were given for purchasing agricultural implements, while for housing, loans amounting to nearly Rs. 9 crores were granted.

Townships.—In addition, 12 new townships for displaced persons, both from West and East Pakistan, have been constructed or are in the process of construction.

Health.—Under the malaria control programme, protection given in 1953 is about 50 per cent. more than that of the previous year. Under the B.C.G. vaccination programme, 24 million people have been tested and 7½ million vaccinated.

Education.—A new scheme for opening a large number of single-teacher schools and social education centres has been started. The total employment potential is 80,000.

Social Welfare.—In addition to progress on social welfare schemes in the Five-year Plan, a Central Social Welfare Board has been set up to provide assistance to voluntary institutions for expanding their welfare activities. The Board has so far provided assistance of the order of nearly Rs. 18 lakhs to about 480 institutions.

People's Participation.—People's participation in those aspects of work in which such participation can be useful has been active and enthusiastic. In the Community Projects as well as in the Local Works Programme, there is welcome evidence of such participation. Nearly 12,000 local works costing over Rs. 3 crores have been launched with the people's initiative.

Employment

Complete data regarding employment figures are not available, but new employment has been provided in the multi-purpose river valley projects, industries in the public and private sector, in the Community Projects and in the National Extension Service and in new schemes launched last year. Nonetheless, the employment situation in 1953 was far from satisfactory, a most important contributory factor to this state of affairs being the appearance of a "slack" in the economy, consequent on the receding of the Korean war boom conditions. Recently, the Plan has been expanded and the investment programmes, both in the public and private sectors, are proposed to be stepped up. A number of new schemes, with large employment potential, are expected to be launched. It is hoped that the cumulative effect of all these steps will be favourable on the employment situation.

Indeed, it is the threat of the rising unemployment in the country that has compelled the authorities to revise the Plan so as to increase its employment potential. What is now proposed is that, during the next two years, additional projects should be undertaken. The ceiling for the additional expenditure is, as already stated, fixed at Rs. 175 crores; it is expected to be at least Rs. 150 crores. The schemes on which this additional expenditure would be incurred will fall under four broad categories :

(1) Additions in the programmes of the Central Ministries; (2) programmes of permanent improvement in scarcity areas; (3) additions in the programmes of the State Governments; and (4) new programmes for increasing employment especially in the urban areas.

The total addition to the Central Government's programmes would be Rs. 70 crores. Schemes for scarcity areas and additions to the programmes of the State Governments (items (2) and (3) above) would together amount to a total of Rs. 65 crores. The rest of the amount, ranging between Rs. 15 and Rs. 40 crores, will be utilised on special programmes for increasing urban employment.

The additions to the Central schemes cover projects for the rehabilitation of displaced persons (Rs. 45 crores), road development (Rs. 10 crores), construction of office and residential buildings (Rs. 2.5 crores), health schemes (Rs. 2 crores), agricultural schemes (Rs. 2.16 crores) and miscellaneous (Rs. 8.34 crores).

The rehabilitation programme for which an allotment of Rs. 85 crores had been made in the Plan for the first three years will thus be increased to Rs. 130 crores and cover the whole period of the Plan. Under the expanded rehabilitation programme, in addition to housing schemes, it is proposed to devote special attention to the development of refugee townships, a number of which have become centres of chronic unemployment. Under the road construction programme certain roads which are either important for inter-State communications or are likely to promote rapid development will be taken up.

Scarcity Areas

For the chronic scarcity areas which really come under the State sector, additional amount of Rs. 40 crores has been provided. The scarcity areas are those in which because of low purchasing power and repeated interruption of economic activity, relief work and other measures are needed from time to time. It is hoped that with the completion of these works local purchasing power will expand and the areas will develop greater capacity to start future development programmes. The programmes extend to twelve States, namely, Assam, Bihar, Bombay, Uttar Pradesh, West Bengal, Andhra, Madras, Hyderabad, Mysore, Saurashtra, Rajasthan and Ajmer. The schemes under the scarcity area development programme will be financed by loans from the Central Government, repayable over a period of 30 years. These loans will be interest-free for the first five years.

Besides works for the scarcity areas, the plans of the State Governments have been strengthened to the extent of Rs. 25 crores. The main fields of development to which funds have been allotted are: Power development (Rs. 9.1 crores); roads and road transport (Rs. 8.1 crores); irrigation (Rs. 3.5 crores); housing (Rs. 1.5 crores); social services (Rs. 1.8 crores); and industry and technical training (Rs. 1.1 crores).

On special programmes for relief of urban unemployment an amount ranging between Rs. 15 and Rs. 40 crores will be spent. The details of the schemes to be taken up under this head are being worked out by the Planning Commission in consultation with the appropriate authorities. The programme broadly would be of the following categories:

(1) Assistance in setting up State Finance Corporations for small-scale and cottage industries (over and above the provision in the Plan); (2) provision of additional thermal plants in urban areas; (3) loans for housing programmes for low income municipal and Government employees and for co-operative housing; (4) financial assistance for the development of road transport services; (5) work and training camps, apprenticeship and reorientation courses; and (6) implementation of the recommendations of the Standing Education Commission relating to the diversification of courses, introduction of crafts, improvement of teaching of science, etc.

The proposed establishment of an Industrial Development Corporation will also materially improve the employment position. This proposal has been approved in principle by the Central Government. Through this Corporation, it may become possible for the Central Government to promote an active policy for industrialisation and in particular to assume initiative in those spheres of the private sector where private enterprise is not readily forthcoming, but where in the public interest development may be desirable.

Already, a new scheme for increasing the employment opportunities for educated persons is being implemented. Introduced in August, 1953, the scheme aims at employing 80,000 additional primary school teachers in rural areas and to open 10,000 social education centres in urban areas.

GIANT PNEUMATIC TYRES

The large-scale engineering projects of India's First Five-year Plan called for earth-moving machinery of gigantic proportions and, consequently, giant pneumatic tyres upon which they could roll. Hitherto, these massive tyres were only available from abroad and, therefore, large sums of foreign exchange were being expended to import them into India. Firestone-India have come to the assistance of the Government of India by manufacturing these "New Super Giants" in their plant at Sewree, Bombay, which necessitated the factory being considerably enlarged, new equipment installed and the most experienced craftsmen selected to undergo extensive training. These huge tyres contain more than 100 pounds of rayon cord with a total length of 64 miles. The weight of rubber in the tyre is approximately 400 pounds (as against 11 pounds in an ordinary passenger tyre); and each tyre contains more than 200 pounds of various chemicals. The load capacity of the Firestone "Earthmover" is 15,490 lbs. at 25 m.p.h. and 17,350 lbs. at 10 m.p.h. The height of the tyre is 69 inches and the total weight is 748 lbs., as against 24 lbs. of an ordinary passenger tyre.

The earthmover machine is indeed one of the principal tools which will build the new developments in India and Firestone's "Earthmover" tyres will make it possible for them to keep rolling and ensure the continuity of the progress of the Five-year Plan.

NEW PUBLICATIONS

Capital Annual Review of Trade, Commerce and Industry. Editor: Neil McInnes. Published by "Capital" Ltd., 5, Mission Row, Calcutta. Price: Rs. 5.

A VARIED fare is provided by the *Capital Annuel Review* which carries articles on economic subjects of topical and more than merely topical significance. Mr. Colin Clark analyses the agricultural and industrial development in India in the light of the increase in population and tries to clear up much unnecessary pessimism over the problem of Indian population. Nothing brings out the essence of his attitude more clearly than his statement that, if only the Indian peasant "were able to learn the simple arts practised by the Italian peasant, of fruit growing and cheese making and similar skills, he would soon be twice as well off." For industrial development, he feels that, for India, "Japan is a more useful and encouraging model to take than Soviet Russia." In a stimulating article on foreign capital, Mr. Geoffrey Tyson, a former editor of *Capital*, clinches the whole argument for a more liberal treatment of such capital when he says that since there is "little prospect of the underdeveloped countries being swamped with foreign capital, either now or in the foreseeable future, there would seem to be a strong case for encouraging any kind of investment which will create new avenues of employment." After surveying the economic developments which have taken place in recent years in India, Mr. N. Das, in an article entitled "Economic Position of the Average Indian," reaches the conclusion that, if the average consumer has not felt the increases in production, it is "mainly because of the enormous increase in population." Dr. Sudhir Sen, Secretary of the Damodar Valley Corporation, writes engagingly on the implications of the concept of public corporations which are set up in order to run nationalised industries. He urges that Parliamentary control should be "restricted to important policy matters." "There is a crying need," he says, "for far more incisive thinking in this field." The subjects of other notable articles include trade unionism in India, money supply and credit control and radio-active minerals.

The Eastern Economist Annual Number 1953. Editor: E. P. W. da Costa. 52, Queensway, New Delhi. Price: Rs. 5.

The *Eastern Economist Annual Number, 1953*, is undoubtedly a commendable attempt at portraying a vivid picture of India in Asia. The Editor, Mr. da Costa, seems to have spared no pains to collect voluminous statistical data relating to Asian population, natural resources, railways, road transport, shipping, education, etc., with a view to giving the reader a true perspective of the economies of Asia. The picture of Asia emerging from his study has been put in a nutshell by him thus: "For Asia as a whole, it is the story of the old vicious circle. Because income is low, education is deficient, health is poor, capital formation low. And because of these things, productivity is low and incomes are low. And thus the cycle proceeds, making it almost impossible to narrow the widening gap." The Editor has also made a critical review of the foreign policy of the Government of India and drawn certain conclusions that are thought-provoking.

A separate section devoted to India in 1953 contains a review of the development of the Indian economy in the spheres of production, balance of payments position, business activity, transport, and stock exchanges.

Industrial Finance in India. By Dr. Saroj Kumar Basu. Published by Sibendranath Kanjilal, Superintendent, Calcutta University Press, 48, Hazra Road, Ballygunge, Calcutta. Price: Rs. 12.

That this book has entered the third edition—the first edition was published in 1939—is itself an indication of its wide popularity. In the present edition, all the chapters have been thoroughly revised and brought up to date. Thus, the war and post-war developments in the sphere of industrial finance in India and abroad have been amply reviewed. The problems of industrial credit during war years have been analysed against the background of the mechanism evolved in several belligerent countries for financing their industries, and the major gaps that existed in the financial mechanism in India indicated. The machineries established in several countries for the financing of post-war industry has also been studied. The utility of the publication is enhanced by the inclusion of a review of the structure, organisation and financial methods of the British F.C.I. and I.C.F.C., the Canadian Industrial Development Bank, and the Industrial Finance Department of the Commonwealth Bank of Australia. The present edition contains, besides, a critical review of the Industrial Finance Corporation of India (I.F.C.I.) during the years 1948 to 1952 and includes an entirely new chapter on State Financial Corporations.

The study of the I.F.C.I. has been based on the lessons drawn from the experience of the foreign institutions. Dr. S .K. Basu, the author, has offered several suggestions pertaining to the methods which the I.F.C.I. should adopt in granting financial assistance to the industries, the procedure it should follow in dealing with applications for assistance, and the departments it should establish for its successful financing. Dr. Basu's analysis of the whole problem clearly emphasises that, for the industrial development of India, what is required is not merely loan finance but provision of equity capital as well. Thus, he says:

"If the Government is at all unwilling to extend the scope of the I.F.C. by authorising it to provide equity capital, the Government should at least be prepared to confine the I.F.C. to function as an industrial mortgage bank to which it has been virtually reduced and establish an Industrial Development Corporation to work side by side with the I.F.C. which will develop, foster and pioneer new industrial projects and modernise and extend old ones and integrate such development into the Five-year Plan of the country. Such types of Institutions are specially called for in backward and underdeveloped countries and may help in the work of capital formation."

The recent reported decision of the Central Government to establish an Industrial Development Corporation, albeit for starting new industries, which private enterprise is unlikely to start on its own, fully bears out the force of Dr. Basu's contention. The publication under review will, there is no doubt, be widely read for the balanced and impartial analysis of the principles of industrial finance, and of the working and results of the various institutions which are engaged in the grant of industrial credit.

International Social Science Bulletin. Published by the U.N.E.S.C.O., 19, Avenue Kleber, Paris-16e. Price: $1.

The prediction of people's behaviour is not only a popular pastime, but also a matter of practical necessity in many aspects of modern life. Those whose personal or business success depends upon the reactions of the public must inevitably formulate their policies and programmes on the basis of certain assumptions about the public's probable behaviour. In recent years, business men, Government agencies and educational groups have been employing the public opinion survey for the purpose of predicting the public's response.

Through personal interviews in which a selected sample of the public are questioned about their habits, opinions and plans, it has been possible, in many cases, to achieve surprisingly accurate forecasts of how people will behave in the future. In other cases, however, events have proved these predictions wrong, and the question thus arises: Are public opinion surveys able to predict behaviour, and can they be relied upon to do so? Under the title, "Public Opinion Research," the problem is fully examined in the most recent number of the *International Social Science Bulletin*, the quarterly publication of the United Nations Educational, Scientific and Cultural Organisation.

The introduction to this 200-page issue of the *Bulletin* is written by Mr. George Gallup. In an article entitled "The Use of Surveys to Predict Behaviour," Dr. Paul B. Sheatsley, Director of the New York office of the National Opinion Research Centre of the University of Chicago, and Dr. Herbert Hyman, Assistant Professor of Sociology at Columbia University, analyse some of the problems presented by public opinion research. They describe the techniques used to solve them and give examples of the use of the public opinion survey to make predictions in such fields as probable election results. On the basis of results obtained by the Government Social Survey of Great Britain, of which he is the Director, Dr. Louis Moss seeks to determine the extent to which sample surveys can be useful to administrators. He sets forth, among other examples, the case of an enquiry made on the initiative of the British Government to find out about how many of the seven million British subjects entitled after the war to a total of some 20 million war medals and decorations would officially claim them if invited to do so.

IMPORTANCE OF TOURIST INDUSTRY

INDIA HAS YET TO DO A LOT FOR ITS PROMOTION

(By A. SITARAMAN, M.A., A.M. Inst. T. [Lond.])

THE extent to which tourism can contribute to a nation's economic welfare and further the cause of peace and international understanding has been receiving increasing recognition in recent times by the countries of the world. Tourism ordinarily implies both movement of internal population for holiday, recreational or private purposes, and also the reception and accommodation of visitors from abroad. The same services are performed in either case, but a greater significance attaches to the visit of the foreigner, in that he has a high value as an important invisible export of the country visited. Under the pressure of world events in the post-war era, nations are adopting economic policies which restrict the free flow of goods and direct the trade into particular channels. Tourism, viewed in this narrower definition of visitors from overseas, plays, indeed, a vital part in solving the balance of payments problem.

Very little is heard of the tourist industry in this country such as we recognise today. Even in the eafly thirties, when the railways were hard hit by the world economic depression and the rising competition from road motor transport, measures were directed only to find out possibilities in the development of inland tourist travel within the country. The habit of pilgrimage of the Indian masses was, however, greatly stimulated by the provision of cheap travel facilities and other amenities like pilgrim specials and tourist fares. It is true that the Central Publicity Bureau, which was then in existence doing publicity work on behalf of the Indian Railways, was concerned with the stimulation of foreign travel through its two branches in London and New York. But no substantial results seem to have been achieved in this direction. It can, therefore, be said that the international aspect of travel was virtually relegated to an insignificant place.

One must pause to consider as to how the transformation in outlook has been brought about to regard tourism in terms of international travel. Out of the bitterness and misery of conflict caused by the impact of two world wars, people's ideas and ways of thinking have been profoundly influenced and the hunger of the millions for peace has basically changed the attitude of the mind. The belief is gaining ground that direct contact between peoples of different nations can help secure much social good and further the cause of international understanding. We have seen that, during the last fifty years, there has been a constant and continuous improvement in the means of transport and the speed of technical progress has been greatly accelerated by the two world wars. With the diversification of the means of transport and in the improvement in the facilities created, an enormous increase in the movement of goods and persons has taken place, enlarging the scope and volume of international trade. Travel has become easier with the annihilation of distance and time, and the latent urge of the people has been stimulated towards a desire for travel. It is increasingly realised that it is in the general interest of the world to set in motion larger and larger sections of the population and the conviction is acquiring strength that travelling is in the common interest of all, with great social, cultural and economic value. It is thus clear that tourism is intimately connected with transport and there can be no tourist industry without transport, although transport without tourist industry can exist in a restricted pattern.

Role of Travel Agent

The history of the tourist industry in many countries, shows that it is the travel agent, who first conceived the idea of promoting travel and observed its possibilities and attractions. The methods he adopted to stimulate foreign travel differed from time to time. It was he who organised the first visits and put the places of interest on the tourist map. In modern times, the travel agent has to perform a vital role in the successful organisation of tours. He has to study the contemporary market and co-ordinate the facilities offered by the hoteliers, the providers of transport on the international routes and within the country, and search out new attractions, so as to present an acceptable picture to the prospective tourist. The responsibilities are manifestly great, requiring thought, initiative and courage.

Tourist industry embraces a network of industries concerned with supplying and servicing the travellers. The main production units of the industry are the providers of transport, both international and inland, and the undertakings which provide the amenities and amusements for the comfortable stay of the traveller. The travel organisations both function as wholesale and retail distributors of personal services. In fact, the basic raw material of the industry is personal service and the spread of interests on the economy of the country is, indeed, wider. The operation of the industry generates a spate of continuous activities, involving both internal and external trade, and its success depends on maintaining stable conditions. Yet, in times of financial stringency, Governmental action in many countries is not infrequently to adopt restrictive measures by way of depressing the tourist amenities and cutting down the allowances for foreign travel, treating tourism as an inessential item. This approach to the industry is definitely an unwise step and may have adverse reactions on a wide range of trades connected with the tourist industry and may even tend to destroy tourist values which have been created with great effort. There has, however, been lately a growing awareness and development in Governmental understanding of what tourism can achieve and how broadbased its impacts are on the nation's economy and on the international field.

What Tourism Implies

Tourism implies the stimulation of international travel of persons. Nearly every country in the world possesses a certain variety of climatic and geographical conditions and, moreover, has a national civilisation of some value. Every country can, therefore, exercise a growing attraction for the traveller from abroad and tourist promotion is essentially to sell the attraction of one's country to the foreign visitor. This is when the travel is undertaken for pleasure as distinguished from business travel, the stimulation of which requires planned effort to spread greater knowledge on the economic position of the country, its resources, trade and industry.

The promotion of tourism is a major task in a highly competitive market. In order to achieve the object, a well organised publicity campaign is essential. The function of publicity is to disseminate knowledge on scenic areas, historical spots, and places of resort in the country which may appeal as tourist attractions. The common methods of publicity adopted by the countries are Press advertising, exhibitions and display by bills, posters, descriptive booklets and publications illustrating tourist attractions in artistic make-up. Photographic films of interesting segments of travel are publicised and lecture tours by way of propaganda are organised. The method of propaganda has a greater effect as it goes psychologically deeper and helps fostering the goodwill of the foreign traveller.

Transport Must Be Efficient

The organisation of international travel depends upon providing the various means of transport for reaching the various resorts and the services for the comfortable stay of the traveller. The part that transport has to play is to make travel easy, convenient and cheap *in real value*. There must be adequate coordination of services so as to eliminate detention on route, as journeys may involve sea, air, rail and road transport. The facilities for transport should cover, *inter alia*, arrangement for through travel tickets with appropriate reservation and the provision of tourist and restaurant cars. For the comfortable stay of the traveller, the amenities should provide for the required standards in respect of food, accommodation and personal services. A guide or interpreter service may help the traveller in a correct appreciation of the tourist values of the places of interest visited.

International travel implies the crossing of national frontiers, and, in the disturbed post-war conditions of the world, considerable restrictions were placed on the free movement of persons resulting from international conventions. These restrictions are really in the nature of obstacles to transport operators as well as to transport users. Some of these are the customs regulations, passport procedure, currency control, immigration rules, epidemics, and other formalities. Steps are being taken by the countries to smoothen the restrictions and simplify the formalities so as to remove these barriers to travel.

The Government of India have been taking active steps for the last five years to promote tourist travel in this country. A committee was set up in 1948 consisting of representatives of Government and the various interests concerned to evolve a scheme, embracing the several facets of the tourist industry. With the assistance of the Committee, considerable developments have taken place and State-sponsored organisations have been rapidly expanded on a regional basis to disseminate correct information on tourist centres and the amenities provided and to render necessary assistance to the tourists to perform their travel without impediments or inconveniences. The "Tourist Introduction Card" is an instance in point, which is issued to every overseas visitor to enable him to obtain assistance of Government authorities in getting the essential facilities. Tourist publicity has been intensified, to spotlight the attractions of the country in artistic pictorial illustrations. Government regulations, which, *prima facie*, hamper the freedom of the foreign traveller, are being continually reviewed and adequate relaxations are made. The shift in the emphasis has lately been towards dollar tourism, forming an integral part of the export drive to hard currency countries. An informal committee has been working to take necessary steps to attract more dollar tourists. Advisory committees at regional levels have been constituted to improve the tourist facilities and to bring the regional organisations into closer contact with the various personal service trades connected with tourism.

Great Leeway To Be Covered

There is, however, still considerable leeway to be made up to raise the standard of amenities and the provision of facilities in transport to anything like these obtainable in Western countries. Nevertheless, the position in this country shows that efforts in this new line of business have been attended with progressively encouraging results from year to year. It has been estimated that about 20,000 tourists visited India in 1951, of whom 3,500 were Americans. For 1952, the estimated figure is about 25,000 tourists, of whom 5,000 were Americans. The figures for 1953, when available, are likely to show an increase as a large number of visitors in parties was received. A sample survey has lately been undertaken to assess the receipts from tourist traffic and our income on travel account is bound to show a steadily increasing record.

With the execution of the development schemes under the Five-year Plan, the country's industrial system is bound to make great advancement, and our nascent tourist industry will tend to occupy an increasingly important place in the national economy. India has a wealth of attractions to offer to satisfy diverse tastes and it must be our constant endeavour to attract the greatest possible number of tourists to this country and to create a real market for travel. Our transport system, which is the largest component of the tourist industry, should be maintained at high standards, providing a good network of services, making easy access to every corner of the land. With such promotional activities, tourism can undoubtedly be expected to rank high in the country's invisible export and make an important contribution to the national prosperity and international understanding.—*All Rights Reserved.*

ASSOCIATED CEMENT COMPANIES LIMITED

(Concluded from page 123)

propaganda by labour leadership that Indian capital is based on the exploitation of its workpeople. This attitude should be substituted by an approach which advocates joint endeavour by honourable men, imbued with a determination to make the country industrially prosperous, and in doing so to provide material well-being and social welfare."

Bonus Shares

The Chairman then announced that sanction of the Central Government to the issue of fully-paid bonus shares, in the ratio of one such share for every five shares held, had now been obtained, and steps were being taken to call an extraordinary general meeting of the shareholders for this purpose.

Bonus to Staff

The Chairman then stated that the Board had recommended this year the payment of a bonus equivalent to three months' basic earnings to the employees at the head office, the works, and other places, and concluded by referring to the Company's appreciation of the loyalty and efficiency of the staff and operatives.

The report and the audited statement of accounts for the year ended 31st July, 1953, were then adopted.

CHOCOLATE INDUSTRY CLAIMS FURTHER PROTECTION

MR. ADARKAR REVIEWS POSITION

THE Tariff Commission's Panel, presided over by Mr. B. N. Adarkar, started the public enquiry into the claims of protection to the cocoa powder and chocolate industry on the 15th inst. Besides Mr. Adarkar, the Panel included Mr. B. N. Das Gupta and Mr. C. Ramasubban. Mr. Adarkar's opening remarks reviewing the present position of the industry spotlighted attention of the meeting on one crucial fact, namely, the gap between actual production and rated capacity. Last week, a similar situation was noted in the case of the bichromates industry. This is invariably the story repeated by a number of other industries which were started during the war years and which have appeared before the Tariff Commission. An analysis of the position of these industries discloses that it is due to fall in demand on account of high prices, consumers' resistance, low purchasing power in the hands of the people, and, to a certain extent, consumers' prejudice against indigenous manufactures arising out of low quality goods put on the market. Consequently, the question of raising the demand for the products should engage the serious attention of the Government and the Planning Commission which, it is believed, is now busy drafting the second Five-year Plan laying greater emphasis on industrial development of the country than in the first Five-year Plan. No plan can ever be expected to succeed, if it provides for starting new industries, while old ones are passing through critical times on account of their inability to utilise their idle capacity. The Tariff Commission also should carefully examine this problem and submit a memorandum to Government suggesting measures for arresting the growing tendency of plant and machinery remaining unused.

To return to the cocoa powder and chocolate industry. The total available supplies of cocoa powder and covering chocolate based on production and imports, according to Mr. Adarkar, were 4,602 cwts. in 1950, 8,676 cwts. in 1951 and 6,930 cwts. in 1952. During January-June, 1953, 5,256 cwts. were available. Although there are four units connected with the manufacture of cocoa powder and chocolate, only one of them, namely, Sathe Biscuits and Chocolate Co., Ltd., Poona, is manufacturing continuously on a commercial scale from cocoa beans. As a result of installation of additional machinery, the capacity of this firm has risen to 3,000 cwts. of cocoa powder and 9,000 cwts. of covering chocolate. These figures are taken from Mr. Adarkar's statement, but it is not clear how the productive capacity was arrived at. It will be interesting to know the basis followed for calculating such capacity, whether, for instance, it is on a single-shift basis or a double-shift basis.

The Government of India had some time ago sanctioned the establishment of a factory by the world-famous Cadbury-Fry, through the establishment of an Indian subsidiary, for manufacturing cocoa powder and covering chocolate directly from cocoa beans. It is understood that the Company has not yet imported the necessary machinery so far. The Tariff Commission must go into the reasons for this and see as to how long it will take for this Company to commence its manufacturing operations.

During the last three years, the actual output of cocoa powder amounted to 231 cwts. in 1951, 520 cwts. in 1952 and 1,041 cwts. during the 11 months of 1953. In the same years, the production of chocolate amounted to 3,032 cwts., 3,446 cwts., and 1,840 cwts., respectively. "It will be noticed," observed Mr. Adarkar, "that there is disparity between the installed capacity and actual production. The indigenous producers have attributed this to the lack of demand for indigenous products and to the fact that imports of foreign products were allowed for special reasons."

Imports of cocoa powder and chocolate were banned during 1950, 1951 and 1952, except during the second half of 1951 when actual users were allowed to import their six months' requirements from soft currency areas. During the first half of 1953, established importers were granted a token quota of 5 per cent. of one half of their best year's imports for covering chocolate. The same policy was continued in July-December, 1953, also, but was made applicable to cocoa powder as well as covering chocolate. While this was the general policy, Messrs. Cadbury-Fry (India) Ltd., who, as stated earlier, have been permitted by Government to set up a factory for the manufacture of cocoa powder and covering chocolate, were granted licences for import of these products for experimental purposes. Total imports during the last three years amounted to 5,393 cwts. in 1951, 2,964 cwts. in 1952 and 4,485 cwts. in January-August, 1953.

As regards the quality of the indigenous cocoa powder and chocolate, the opinions received by the Tariff Commission show, it is stated, that the taste and flavour of the indigenous products were as good as those of the imported ones. The source of this opinion is, however, not known, while one's personal experience hardly supports the view. Certain brands of chocolates sold in the market are not only below the standard, but some of them have neither the taste nor the flavour of the foreign-made chocolates. It is also not uncommon to come across chocolate toffees which are no more than *gur* drops coated with chocolate powder. It is the presence of spurious products such as these which kills whatever little taste there is in a consumer for chocolates. This danger must be eliminated at all costs, if the industry is to survive.

In 1946, the Tariff Board recommended conversion of the then existing revenue duty of 30 per cent. *ad valorem* on cocoa powder and covering chocolate into a protective duty. The duty was given effect to as from 19th April, 1947. The period of protection was extended, from time to time, and is due to expire on 31st December, 1954. The industry has thus enjoyed protection for about seven years. It has now asked for continuance of protection and for grant of assistance in various forms. It has, for instance, requested that cocoa beans should be placed on O.G.L. and that arrangements should be made to make sugar available at a fair price. High priority in the matter of transporting the finished product is also demanded. The last mentioned demand is evidence of the fact that transport facilities have not expanded to the extent necessary to cope with the increase in industrial and agricultural production in the country.

WILL U.S. SELL BUTTER TO RUSSIA?

The U.S. Administration has restated the U.S. export policy towards the Soviet bloc countries. Under this policy, the U.S. Government has been approving the export of non-strategic goods to the U.S.S.R. and other East European countries of the Communist bloc, except for transactions which would adversely affect the security interests of the free world. U.S. exports to Communist China and North Korea, however, continue under a complete embargo.

The statement on export policy contained in the Twenty-fifth Quarterly Report on Operations under the Export Control Act, prepared by the Secretary, U.S. Commerce Department, observes: "From the outset our security export controls have been selective—being concentrated on those goods specially indentified as of strategic value to the Soviet bloc. Despite the absence of export restrictions on goods of little or no strategic value, however, our exports of such goods to the Soviet bloc have fallen to extremely low levels over the past several years."

The aforesaid official restatement of the U.S. export policy was occasioned by the Soviet offer to purchase from the U.S. 150 million pounds of U.S. butter and an equal amount of cottonseed oil from the U.S. Government surplus stocks. In this context, it is pointed out that the Soviet fats and oils situation is most unsatisfactory, because of the failure to raise milk and butter production as desired and because of the poor showing with regard to flaxseed. The Malenkov regime has, for months now, been buying fats and oils abroad in an effort to make good the deficiency in domestic supplies. The demand for buying U.S. butter and cottonseed oil is evidently a part of this move.

In spite of the restatement of the official policy, as mentioned above, it is not clear whether the U.S. Government will meet the demand from Russia. Commenting on the Russian bid for U.S. butter, the *New York Times* observes thus:

"Whether or not these purchases will be accepted is apparently to be decided at the highest levels of the Eisenhower Administration. On the one hand, since the prices offered by the Soviet Union are below the support prices paid to acquire these commodities, there may be understandable reluctance to take an action that might seem like a subsidy to the Soviet Union. Yet, similar exports, at a loss, have been made before. On the other hand, President Eisenhower indicated only last Monday, in his farm policy message to Congress, that he wishes to promote farm exports as much as possible. Neither butter nor cottonseed oil is a strategic military commodity such as those whose export we have sought to prohibit."

It will be noted from the above quotation that there is no reason why the U.S. should turn down the Russian offer so long as the prices offered by the Soviet Government are in line with the world rates. Refusal on the part of the U.S. might be interpreted by the outside world as yet another instance of that country not wanting to live in peace with a Communist country. It will provide first class material to the Russian propagandists and they are sure to make capital out of it. It is to be hoped that the U.S. authorities will give no room for such an allegation. On the contrary, they should welcome this opportunity to prove to the people of Russia that they have no enmity towards them. They should not mind accepting the present offer, even if it means some loss to them, for they could get no better chance to carry their goodwill to Russian workers and peasants.

U.S. exports to Soviet bloc countries dropped to a new low of $220,000 in the second quarter of 1953, as compared with quarterly average exports of 1952 of $274,000. Tobacco and cigarettes comprised 73 per cent. of the exports in April-June, 1953. The balance was made up largely of clothing and other non-strategic commodities.

U.K. FOREIGN TRADE

The adverse balance of trade of the United Kingdom in 1953 at £660 million was 12 per cent. less than in 1952. Thus, according to provisional figures, imports into Britain in 1953 aggregated £3,347 million. This figure was 4 per cent. lower than in 1952 and 14 per cent. below the 1951 total, but 28 per cent. more than in 1950 when it amounted to £2,608 million. Exports, including re-exports, amounted to £2,687 million. Of this, exports, excluding re-exports, at £2,582 million were practically the same as those in 1952.

The monthly average of U.K. exports in the fourth quarter, provisionally estimated at £230,600,000, was higher than in any other quarter since the first quarter of 1952. Imports in the fourth quarter of 1953, at a monthly average of £276,800,000, were slightly above the third quarter level but 2 per cent. less than the rate in the first half of the year.

The highlight of the trade figures for the year under review issued by the U.K. Board of Trade is a rise of 14 per cent. in sales to North America.

With regard to the U.K.'s trade with India, the pattern was almost similar to that in 1952, with imports and exports almost balancing each other. Complete figures published relate to only 11 months of the calendar year 1953. Exports from the U.K., during this period, amounted to £104,894,000, as compared with £102,911,000 in the same period in 1952. Imports from India during the period amounted to £101,500,000, against £103,964,000 in the previous year.

The table below discloses the U.K.'s overall trade with India during the 11 months of 1953, as compared with that in the same period of 1952:

	Full year	11 months Jan.-Nov.	
	1952	1952	1953
	£	£	£
Total all exports	112,149	102,911	104,894
Of which:—			
Machinery	35,626	32,631	30,839
Vehicles (including ships and locomotives)	16,823	15,522	14,019
Electrical goods and apparatus ...	11,391	10,192	10,037
Chemicals, drugs, dyes and colours	9,967	9,480	9,242
Total all imports ...	114,554	103,964	101,500
Of which:—			
Tea	48,732	43,573	44,747
Jute manufactures	13,256	13,148	6,593
Seeds and nuts for oil, oils, fats, resins and gums ...	6,144	5,766	4,037
Leather and manufactures	9,284	7,786	13,000

It will be seen from the table above that machinery constituted the major item of imports into India. Valued at nearly £30.8 million in the period under review, they were, however, slightly lower than the value of imports in the same period in 1952. Vehicles, including ships and locomotives, come next, with a value of £14.02 million, as compared with £15.52 million in the previous year. Imports of electrical goods and apparatus amounted to £10.04 million, as against £10.19 million. Chemicals, drugs, dyes and colours imported in the period under review were valued at £9.24 million, as against £9.48 million.

As regards exports from India, tea accounted for 44.7 million or £1.17 million more than the value of imports in the 11 months of 1952. The value of jute manufactures dropped by almost 50 per cent. from £13.15 million to £6.6 million. There was also a marked decline in the value of exports of seeds and nuts for oil, oils, fats, resins and gums, from £5.7 million to £4.04 million. But exports of leather and leather manufactures staged a marked improvement from £7.78 million to £13.00 million.

Over the 11 month period of 1953, India had an adverse balance of trade of the order of £3.39 million, as compared with a favourable trade balance of £1.05 million in the same period of 1952.

B.I.F.—U.K.'S "SHOP-WINDOW"

The British Industries Fair for 1954 will take place in London and Birmingham from 3rd to 14th May this year. This Fair will be run by the Board of Trade as usual, but, in 1955, the London section of the Fair will be organised by a new non-profit-making company, the capital of which will be guaranteed by Government. No alterations are, however, contemplated in the arrangements for the Birmingham section of the Fair which will continue, as hitherto, to be organised by the Birmingham Chamber of Commerce. The transfer of responsibility for organising the London section is attributed to the desire of Her Majesty's Government to make industry take a direct interest in running the Fair which today has developed into the status of the nation's "shop-window."

The Fair will be held at Castle Bromwich, Birmingham, and the two London centres, Earls Court and Olympia. These three centres provide for more than 1,000,000 square feet for display. As many as 30,000 manufacturers of all types are participating in the London section alone.

The British Industries Fair was not originally intended to become an annual event. But, from its initial success, what started as a war-time expedient in 1915, has for the past 32 years grown into a national institution, attracting thousands of shrewd buyers from all corners of the globe every year. Its popularity is attributed to the inventiveness, flexibility of method and study of the customers' needs which have been brought into action on a scale never before done in the past.

RESEARCH IN VILLAGE INDUSTRIES

A plan for modernising techniques in rural industries through the establishment of an Industrial Research Institute has been submitted by the Research Committee of the All-India *Khadi* and Village Industries Board. The main function of the Institute will be the introduction, in village industries, of an improved technology calculated to improve the quality and reduce the costs of articles produced by these industries. The Institute will conduct practical research on the following industries, namely, village oil industry, village soap industry with special reference to neem oil, improved implements for hand-pounding rice, palm *gur* and village tanning glue and bone products. The objectives of the research, in general, are:

(1) The use of economic fuels by rural industries (e.g., methane gas produced by fermentation of cowdung and vegetable waste) and development of heat transfer equipment;

(2) the use of simple motive power;

(3) the development of low cost unit plant and machines designed on sound chemical engineering and mechanical principles;

(4) quality control, based on standardised plant, processes and improved technique as well as the introduction of simple quality control methods; and

(5) economies of tools and equipment.

The Institute will also pay attention to a number of other aspects bearing on village industries which require investigation such as utilisation of agricultural wastes, market analysis, co-operatives, management, etc.

The Institute will have a laboratory fitted with the necessary chemical and engineering equipment for conducting research. The Institute will get into touch with the big Research Institutes already in the field for the purpose of co-ordinating its work with the work of the big institutes.

E.C.A.F.E. MEETING AT KANDY

The three major conferences of the United Nations Economic Commission for Asia and the Far East have been in session at Kandy, Ceylon, since the 20th inst. The Inland Transport Committee which began its session on that day will sit till the 25th inst. The Committee on Industry and Trade will meet from 26th January to 5th February next. The Commission itself will be in session from 8th to 18th February.

INSTABILITY IN COMMODITY MARKETS

U.N. EXPERTS SUGGEST SETTING UP OF WORLD STABILISATION COMMISSION

THE most outstanding feature of the international trade in primary commodities in the post-war period has been its marked instability. Prices of some of the commodities have fluctuated more rapidly and more widely than in any previous period. Such violent fluctuations have had serious economic consequences for exporters, and even for importers of raw materials, with consequent dislocation of world trade and hindrance to economic development. If, therefore, the ship of world trade in primary commodities is to sail smoothly, it is of the utmost importance that vigorous measures should be adopted to overcome the instability in prices of commodities. It is precisely with a view to considering what these measures should be and how they should be adopted that the five U.N. experts have suggested, in their report submitted to the U.N.O. recently, the establishment of an inter-Governmental Trade Stabilisation Commission. The experts have also favoured the use of buffer stocks, by which price stability would be maintained by buying and withdrawing supplies from the market when prices are weak, and selling stocks when supplies fall short of demand—systems of compensatory payments to ensure international flow of money in the event of sharp fluctuations in primary commodity markets.

This report of the Committee of Experts on International Price Relations is the outcome of a decision of the U.N. General Assembly in 1952. The Assembly then recommended to Governments that, whenever they adopted measures affecting prices of primary commodities for international trade, they should consider the effect of such measures on the terms of trade of countries in the process of development, so that primary commodity prices would be kept in equitable relation to prices of capital goods and other manufactured articles. The Governments were also recommended to give serious consideration to all other aspects of the problem of undue fluctuations in the terms of trade.

At the same time as it approved these recommendations, the Assembly also asked that a report should be prepared about the practical measures which it might be advisable to adopt in carrying them out. To prepare this report, the Secretary-General selected a Committee consisting of five experts, namely, Mr. C. F. Carter (United Kingdom), Professor of Applied Economics, Queen's University, Belfast, Northern Ireland, Mr. Jan Goudriaan (Netherlands), Professor of Industrial Economics, University of Pretoria, South Africa, formerly President of the Netherlands Railways; Mr. Klaus Knorr (United States), Professor at the Centre of International Studies, Princeton University, Princeton, New Jersey; Mr. Francisco Garcia Olano (Argentina), business consultant and economic adviser, and Sumitro Djojohadikusumo (Indonesia), Professor at the University of Djakarta, until recently Minister of Finance in the Indonesian Government.

The Problem

The prices of many primary commodities entering into international trade have been for many years, and continue to be, subject to violent short-term changes. For example, the year-to-year variations of prices paid by the United States for primary products during the period 1922-49 show that, out of 218 averages, only 18 were below 10 per cent.; 143 were in the range 10-19.9 per cent.; 50 in the range 20-29.9 per cent.; and 7 were 30 per cent. and upwards.

For a selection of 11 commodities, the variation between the high and the low points of market prices within the same year averaged 27 per cent. over the half century from 1901 to 1950. In the case of rubber, the price in the London market quadrupled during 1950. In the case of wool, prices were multiplied by three and then fell back to their original level within a period of 18 months. What makes price variations so serious for primary producing countries is the fact that some of them are highly specialised in their exports, which are limited to one or a few products, and that some have a very high ratio of foreign trade to national production. Furthermore, capital development in the underdeveloped countries depends heavily on current export proceeds for its finance. Since much of those proceeds is required to pay for imports of essential consumer goods, the variations of trade have a violent effect on the margin available to finance capital goods imports.

Balance of National Advantage

All countries produce both primary and manufactured goods; many have significant exports of both, and many have significant imports of both. The balances of national advantage cannot, therefore, be explained by a simple division between the advanced manufacturing countries and the underdeveloped primary producers. The United States, for instance, is a major exporter of cereals, tobacco and cotton, and at times, of coal and petroleum. Primary products account for about 25 per cent. of its export trade. Even the United Kingdom, though its export trade is now largely concentrated in manufactures, has an import trade which is by no means specialised on primary products. It is also very interested in the earnings of the whole sterling area which is a major exporter of primary commodities. Both the United States and the United Kingdom, as well as the other industrial countries, have an interest in high and stable incomes in countries which form a major market for their exports. On the other hand, the primary producing countries have a great stake in the prosperity and high economic activity of the industrially advanced countries which are the main outlets for their raw commodities.

Single-commodity Agreement

The experts consider that single-commodity agreements can prevent excessive short-run fluctuations in the price of the commodity. If, however, they are used to hold in check the long-run movement of prices, by design or by accident, they will either break down or be maintainable only by restriction, which would be wrong except in rare special cases. The experts also think that buffer stocks for individual commodities, or for a group of them, are preferable to multilateral contracts, provided the problem of finance can be solved. They, however, point out that the nature and long-term movement of particular commodity markets may render them unsuitable for buffer stock schemes, while multilateral contracts may promise a measure of stability.

At present, the experts see no grounds for confidence that agreements for single commodities will be concluded in sufficient number to meet the more general demands of the underdeveloped countries for stability of earnings. In particular, multi-commodity buffer stocks would require an ample and assured source of finance, and the management of their price policy would be by no means easy. According to them, there is a useful place for general stabilising measures, such as contracyclical lending, which would enable industrial countries to maintain the disbursement of their currencies to the outside world at a time when they are afflicted by a business recession. They favour too compensatory schemes, under which, and in circumstances to be defined, the countries that gain from a shift in the terms of trade would be called upon to make compensatory payments to countries which have suffered income losses from that shift.

Internal Measures

On the national level, the experts indicate the various ways in which nations can, by measures within their domestic jurisdiction, help towards greater stability. These include the establishment of buffer fund and a smoothing of the flow of contracts for heavy engineering goods. There are, besides, the various ways in which nations can avoid causing violent disturbance to the economies of other countries, as, for instance, in the accumulation or liquidation of stockpiles. If the Governments wish to have an assurance of as much stability of price relations as is consistent with economic change and progress, then they must look beyond schemes relating to particular commodities and review the general structure of the world's monetary systems. The experts examined one such possibility for monetary reform, namely, the "commodity reserve currency" scheme which would authorise commodity units to qualify as monetary reserves.

The experts note that there is, at present, no effective international procedure for discuss-

(*Continued in first column*)

(*Concluded from third column*)

ing and proposing action on the broad aspects of stabilisation. They have, therefore, recommended the establishment of an inter-governmental Trade Stabilisation Commission. The proposed Commission should be advisory and not executive, and its main tasks would be:

(i) to consider and make recommendations to the Economic and Social Council on general proposals for stabilisation, whether they are referred to it by the Council as meriting examination, or originate in the Commission, and

(ii) to report, from time to time, on its activities to the Council, and when stability of the world's markets appears threatened, to make prompt recommendations to the Council for appropriate inter-governmental action which would be sent at once to all Governments.

In order to provide permanent representation for the most important trading countries and an adequate rotation of representation for the others, the experts believe that it would probably be necessary to have eight or nine member-Governments on the Commission. They also envisage that it would be necessary to have meetings for a number of weeks several times a year.

TRIPARTITE LABOUR CONFERENCE

TIME FOR FAIR WAGES NOT PROPITIOUS

IT will be recalled that, last week, we referred, in the course of an editorial, to some aspects of the labour policy of the Centre and the States, with special reference to the address of Mr. V. V. Giri, Union Minister for Labour, to the four-day session of the Tripartite Labour Conference which concluded at Mysore on the 10th inst. This week we propose to deal with the reactions of the employers to his speech. We also propose to deal with the proceedings of the Conference, which covered, among others, discussions on the fixation of minimum and fair wages, need for a Central law relating to maternity benefits and payment of provident fund dues.

Mr. Giri criticised the attitude of employers towards labour as unhelpful, if not altogether destructive. He warned against vague talk, among some employers, of breaking away from the machinery of tripartite discussions and bipartite agreements and declared that the old days, whether good or bad, were not going to return and that prudence demanded of them adjustment to changing conditions of the world. He alleged that there was a tendency among employers to hold labour alone as responsible for low productivity.

These allegations are grave, indeed, and it is not surprising that employers felt compelled to refute them in the same tone that was adopted by Mr. Giri. The employers, in general, criticised the Union Labour Minister's address as highly pro-labour, disregarding the contribution of employers towards ushering in better industrial relations. They felt that the stand taken by Mr. Giri was partisan and unbecoming of his status. They pointed out how untrue his remarks were and how they were calculated to accentuate the yawning gulf between labour and capital. Mr. Naval H. Tata, the employers' delegate, accused the Government of not honouring the agreements reached at tripartite conferences. He alleged that the changes made in these agreements were such as to vitate not only the letter but also the spirit of the agreements. Consequently, he is reported to have asked as to what good purpose would be served by employers being a party to such agreements.

The reactions of Mr. Tata are understandable. For, latterly, instances of Government altering the agreements reached between employers and workers in tripartite conferences have been quite a few, with some of them being of a glaring nature. Mention may be made here of three outstanding instances which have made employers to lose their faith in the utility of tripartite labour conferences.

Industrial Disputes Act

The most glaring one relates to the recent amendment by the Industrial Disputes Act in regard to compensation to workers, who are either retrenched or laid off. In this instance, the Ordinance promulgated in October, 1953, was beyond the agreement, in that it was strictly understood that legislation to implement this agreement would be enabled through a Bill in Parliament which would give scope and time for all the parties concerned to examine the provisions thereof. The resort to emergency powers of the Government for this purpose was thus a breach of understanding. Secondly, the important clauses which stated that no matter relating to lay-off shall be referable to conciliation or adjudication did not find a place in the Ordinance; it has been deliberately left out even in the Act which has replaced the Ordinance. Thirdly—and this is a very important deviation from the agreement—the Act which has replaced the Ordinance provides for payment of compensation for lay-off, in certain circumstances, even beyond the maximum period of 45 days laid down in the agreement. In fact, this clause was inserted at the last moment and had escaped the notice of many.

The second instance relates to provident funds. In this case, too, the Government of India promulgated an ordinance in November, 1951 (which was subsequently replaced by an Act of Parliament), in flagrant breach of its promise to circulate the draft Bill to the members of the Standing Labour Committee. The Bill to replace the Ordinance was introduced in Parliament in February, 1952, ignoring the request of the Federation of Employers to call an urgent meeting of the Standing Labour Committee, with a view to arriving at a workable scheme before replacing the Ordinance.

The third instance relates to holidays with pay. It is true that there was no unanimous tripartite agreement in this regard. But it was on the basis of seven days' leave with pay for every continuous year of service that the employers expressed their approval separately for the proposal. Workers and State Governments, too, had expressed their approval separately. A Bill was accordingly introduced and, after approval, came up for discussion before the Central Legislature during the budget session of 1945. At the last stage of the Bill, a non-official member moved an amendment to increase the number of holidays from seven to ten. The Labour Member with the Government of India having agreed to it, the measure was passed by the Legislature. It is true that Parliament is supreme in the matter of legislation and this is not questioned by anyone. But, in fairness to employers, with whom an agreement had been reached, the Government member ought to have explained the position to Government and should have refused to vote in favour of the amendment.

Mock Institution

The last mentioned instance is no doubt an old one. But the latest instance, referred to first, has turned out to be the last straw on the camel's back. And coming on top of these, Mr. Giri's remarks about employers in his prepared address to the Conference amounts to adding insult to injury. They have given rise to the impression among employers that even where Government, as the mediator, ought to hold the scales even, it is taking the side of labour, though it is not found wanting in delivering homilies to labour. They feel that the tripartite body is merely a mock institution, maintained by the Government of India only to show that the employers have been consulted in labour matters.

In fairness to Mr. Giri, however, we must quote his explanation for the manner in which Government has been implementing the agreements reached at tripartite conferences. Referring, in particular to the Ordinance relating to lay-off and retrenchment—the only one of the three instances that happened after he assumed office as Labour Minister—Mr. Giri said:

"I have heard certain criticisms from employers' organisations that we went far beyond the terms of the agreement in the matter of compensation for lay-off and that bipartite agreements would lose their importance, if Government chose to modify them unilaterally. I do not wish to go into the details of the particular case to which the criticisms relate, but it is my belief that the spirit of the agreement has not been violated by any of the provisions incorporated in the Ordinance or the Act. In this connection, I should like to draw the attention of both the parties to what I consider an important point. Bipartite agreements are invariably the result of compromise. In entering into compromises, parties, in their anxiety to achieve something, often avoid what ought to be faced in the interests of the proper working of the agreement. Bipartite agreements are sometimes incomplete in details and insufficient in scope and do not present a complete picture such as would be required for the enactment of legislation. We have found this on many occasions, while trying to enforce settlements and agreements between parties. If such an agreement has to form the basis of a law, the blanks have to be filled and the loopholes plugged. This, I maintain, is inevitable. In the absence of any emergency, the parties concerned get plenty of opportunity to examine the Bill as a whole and to express their opinion on all such supplementary provisions. It is unfortunate that, on account of the emergency, this normal process could not be gone through in the particular case to which the criticisms relate."

This explanation, however, is not satisfactory. The changes that were made in the Ordinance were fundamental and by no stretch of imagination can they be regarded as belonging to the variety described by him. Agreements arrived at tripartite conferences should be treated as sacrosanct. They should not be changed without the consent of the parties concerned.

Settlement of Disputes

Mr. Giri's retreat from his earlier policy of promoting mutual negotiation and settlement of disputes, in place of adjudication, is another subject which is receiving prominent attention. Almost all employers' organisations had extended their support to this new approach. They, however, failed to take the occasion by the forelock by not extending their wholehcarted support to Mr. Giri when he first enunciated his new policy. Instead of jumping at Mr. Giri's offer, they hesitated and stipulated conditions regarding Appellate Tribunal and so on. Their attitude was similar to that of a person who wanted to have the cake and also eat it. The delay and vacillation on the part of employers helped the States Labour Ministers, most of whom are politicians and not trade unionists, and the labour leaders to strengthen their position and dissuade Mr. Giri from implementing his policy. These people knew very well that, if Mr. Giri's policy were to succeed, they would lose the power they now hold. Thus, the reactionaries won the day and genuine trade unionists like Mr. Giri suffered a defeat. For this state of affairs, employers are more responsible than Mr. Giri himself. It is true that Mr. Giri ought not to have recanted and retreated, but he is more to be pitied than criticised, for he had no support from any quarters.

That, in our opinion, is the main reason for the continuation of the status quo in the sphere of industrial relations. We wish Mr. Giri had been honest enough to state this real reason for dropping his earlier policy, instead of throwing the blame on employers and painting them black. Explaining his failure to implement his first move, Mr. Giri said in his speech at Mysore:

"Unfortunately, we have entered on a period in which profits, particularly in the industrial sphere, are not what they used to be. Employers do not feel impelled to maintain their activities at the highest possible level, irrespective of the cost of production. The reduced margin of profit, with which they have now to be content, naturally compels them to explore all possibilities of economy, including retrenchment of workers and rationalisation of the methods of production. In such an economy, the bargaining power of labour is very limited, especially in sectors in which workers are not adequately organised. There can be no question of bargaining when one of the parties is in the position of being able to do without it. I cannot, therefore, blame workers and their organisations, if they feel that we have chosen the wrong time to make them self-reliant. There is also another important reason why we should avoid any radical experiments for the present. The first Five year Plan is only half-way through, and it is of the utmost importance that we should all pull our weight together in the full implementation of it. The Plan is for the benefit of the country as a whole and it would not be proper for sectional interests to indulge in activities or methods which might retard the progress of the Plan even though these might otherwise be unexceptionable."

Explanation Not Convincing

The aforesaid explanation is not convincing at all. When the "Giri Approach" was first enunciated, the economy of the country was by no means better than it is now. At that time, several industries had been suffering from the aftermath of a slump and were actually losing. Mr. Giri probably has in mind the cotton textile industry, a section of which threatened to close down in September last. But now the industry as a whole is better off than it was at the time of the Nainital Conference, as witness the firmness of cotton mill shares on the Stock Exchange to-day. The bargaining power of workers has always been strong and it has not diminished. If proof of this were needed, one need only to recall that, in the last round of negotiations beween the Tata Iron and Steel Company, Ltd., and its workers, the latter succeeded, and the management had to yield. Again, the Five-year Plan was there even when Mr. Giri announced his new policy.

Mr. Giri, more than anyone else, must be aware that the retention of the provision for compulsory adjudication takes away the incentive to trade unions to organise themselves on healthier lines. He must also be aware of the obvious truth that no living organism can grow when put in a strait jacket and, even if it did, it would be unbalanced and weak. It is, however, gratifying to find that Mr. Giri still realises the need for ending the system of compulsory adjudication, as witness his remark that "it ested in the eventual building up of a strong trade union movement to give the largest possible measure of support to the policy of mutual negotiation and settlement of disputes." Continuing, he observed:

"What is needed is not a mere arrangement for the day-to-day settlement of disputes but the development of a new and more desirable approach to the whole problem of labour-management relations. Let labour and management realise that they are not in opposite warring camps and that the greatest battle that they have to wage and win is the conquest of their own prejudices and predilections so that collective bargaining may take on a new meaning, putting more emphasis on collective thinking rather than on conflicting bargaining."

With Mr. Giri's unduly biased attitude towards employers, the Mysore session of the Tripartite Conference presented a very sorry spectacle this time. But this was not all. There was considerable divergence of opinion between workers and employers on the various items discussed at the Conference, with the result that it has left the impression that labour and capital are irreconcilable.

The most important subject discussed at the Conference related to the Fair Wages Bill. It is true that there was unanimity of opinion in regard to the basic principles of the measure. But, with regard to its enactment and implementation, workers differed from employers. The workers' representatives advocated the revival of the Bill, while those of employers were of the view that the present juncture was not opportune for its introduction. The employers felt that the concept of fair wage was still vague and the introduction of the Bill would add to the cost of industry, ultimately leading to greater unemployment.

The objection of employers is unassailable. At a time when it has become difficult even to assure minimum wages, the prescription of fair wages sounds ridiculous. How difficult has been the task of enforcing the minimum wages legislation, covering agriculture and sweated industries, will be evident from the fate of the Minimum Wages Act, 1948. The process of implementation, even after allowing for the fact that the Act came into force in Parts B and C States much later than it did in Part A States, has been rather slow with regard to sweated industries, let alone agriculture. Even the last date of fixing the minimum wages in industries, given in Part I of the schedule of the Act, expired on 31st March, 1952, while that in agriculture, mentioned in Part II, expired on 31st December, 1953. Accordingly, the time limit for the fixation of minimum wages is sought to be extended upto 31st December, 1954. But it is doubtful whether the States would be in a position to implement this Act even by that time.

Few can dispute the principle that the worker should get a wage that will guarantee a reasonable standard of living. But this should not be carried so far as to push up production costs to such an extent as to price the products out of the markets. In such cases, the only principle that should be followed is "what the traffic can bear" and not prescription of wage levels and other amenities which cut right at the root of the new industries and thus eliminate whatever chances there may be for increasing employment in the country.

Our leaders are never tired of drawing our attention to the rapid progress that has been made by Germany and Japan. It will be pertinent to mention here that the rapid reconstruction of these countries would not have been possible, if the workers there had demanded comfortable living conditions and costly amenities. In these two countries, there has been no Industrial Disputes Act. The workers there work almost 12 hours a day, so that costs might be lower and the projects completed quickly in the interest of the nation as a whole.

It is, of course, true that, where workers cannot be given a decent wage, wage levels must bear a reasonable relation to the market value of the product of their labour. But, at the same time, the workers must realise the need for setting apart sizable amounts for rehabilitation of plant and machinery and for future expansion. They must also appreciate the need for allowing a decent return on the capital invested, so that investors may have an incentive to save more and to invest their savings in new industries. They can neglect these aspects only at the expense of those large numbers for whom employment has to be found.

Uniform legislation for maternity benefits was another subject that was discussed at the Mysore Conference. The workers' representatives favoured Central legislation, in view of the lack of uniformity in regard to the various aspects of maternity legislation in the States. They were generally in favour of adopting the I.L.O. Convention, as the basis for minimum standards. They urged uniform benefit on the basis of average pay and the qualifying condition of 150 days of actual work. It is reported that the representatives of States and employers were generally against legislation on this subject, but no account of the reasons for this opposition is available.

On the question of payment of provident fund dues to a subscriber before retirement also, there was considerable divergence of opinion. The employers' group took a consistent and logical view on this question. The employers appreciated the objectives of the Provident Funds Scheme, as distinct from any unemployment or current savings scheme. They pointed out that a worker should not be permitted to consider the Provident Funds Scheme as a co-operative society. Each scheme has its objective and the Provident Funds Scheme should cater to the welfare of the worker in old age. Savings in the provident fund account should not, therefore, be expended on current needs. They did not support the proposal that T.B., leprosy and such other diseases should be regarded as sufficient grounds for payment of the provident fund due. They contended that all these diseases, though very serious, were curable and the worker should not be allowed to spend his old age provision when he is afflicted by such diseases. They did not consider it appropriate to make advances to workers on account of illness in the family or ceremonies, as such would lead to numerous fictitious claims for withdrawal.

Mr. Vithal Rao of the A.I.T.U.C. criticised the stand of employers on this subject. His main argument was that a man starving to death could hardly be expected to have patience or be amenable to the argument that the scheme was for the benefit of his old age. Even if all dues under the provident fund were given to a worker on retirement, he was still bound to be in difficulties. He pointed out that invariably railway employees, after satisfying all their debts from their provident fund money, go back into some employment. This being the position, the object of the provident fund should not be rigid and the money sacrosanct. While he suggested that immediate payment should be made in all cases of dismissal, discharge or retrenchment, he also suggested that a worker when he rejoined the same factory should not be asked to put in another period of 240 days for making himself eligible for provident fund membership.

The Conference reviewed the working of the I.L.O. Conferences and Committees held recently and felt that sincere efforts should be made to put into effect the spirit of the I.L.O. Conventions. The workers' delegates urged that some of the important conventions, especially those relating to social security, should be ratified at once. The Conference suggested that a tripartite committee should examine these conventions and see to what extent and how soon they could be observed in this country.

LABOUR CONDITIONS IN TRAMWAYS

An article on labour conditions in tramways has been published in the November, 1953, issue of the *Indian Labour Gazette*, which shows that the number of workers employed in the four tramway companies in India increased from about 15,000 in 1950 to about 19,000 in 1953. The most important department from the point of view of the number of workers employed is the traffic section which in January, 1953, accounted for 52 per cent. to 82 per cent. of the total employment in the different centres.

The basic minimum wage of the least skilled worker in the Tramway services is Rs. 30 p.m. in Delhi, Rs. 37-8 p.m. in Calcutta and Rs. 1-7-2 per day in Bombay. In addition to basic wages, workers are also paid dearness allowance which in the case of the lowest paid workers amounts to Rs. 40 p.m. in Delhi, Rs. 47-8 p.m. in Calcutta and Rs. 2-6 per day in Bombay. With the exception of the Calcutta *Tramways Company*, no annual profit bonus is paid by any of the tramway companies. The units in Bombay and Calcutta have provided housing to a small proportion of their workers, while the unit at Delhi has not provided any housing accommodation. Provident fund schemes are in operation in all the units.

ALWAYS IN THE LEAD . . .

It was the powerful acceleration of Hindusthan 14 that brought it victory at a recent motor sports event in Calcutta. This proves once again that Hindusthan 14, with its special features and outstanding qualities, tops every car in its range. The graceful modern lines of the mono-construction body ensure added speed and reduced petrol consumption by eliminating idle weight and wind resistance. The roomy interior seats six persons comfortably on latex-foam cushioning, cradled between the wheels, that have double shock absorbers for smoother ride. Topping everything is the price, as low as that of a smaller car.

PROCEEDINGS OF THE A.C.C. MEETING

CHAIRMAN EXPLAINS POSITION REGARDING CEMENT PRICE

THE annual general meeting of the Associated Cement Companies, Ltd., held on Friday last, proved to be, as usual, a long-drawn-out affair, having lasted nearly three and a half hours. The number of shareholders who took part in the proceedings and the several points relating to the affairs of the Company—even to the most minute details of the accounts—on which they sought elucidation from the Chairman, showed their keen interest in the welfare of this largest cement combine in the country. The shareholders wanted to know, in particular, the Government's attitude towards the investing public, the price of cement and the reasons for the rising trend of the Company's expenses and the difficulty in getting adequate supplies of cement by the public. They also desired information on the use of paper bags, the prevention of adulteration in cement, the sale of the Company's holdings of Government securities, the amalgamation of the Patiala Cement Company, the earnings and assets of the Company in Pakistan, the bonus shares and the dividend prospects.

Several shareholders expressed their concern over the attitude of the Government to the investing public. By not allowing the industry to earn adequate return, they said, the Government was jeopardising the interests of the investing public. In particular, they referred to the Chairman's remark that the Government was not likely to accept the Tariff Commission's recommendation of a 10 per cent. profit element, so far as the A.C.C. was concerned, and asked what use such an expert body as the Tariff Commission was, if the Government were to flout its recommendations. The Chairman's indication that even the meagre rise in the selling price recommended by the Commission was not likely to materialise, roused the anxiety of the shareholders who wanted the Chairman to throw more light on the latest position regarding the price.

Replying to the shareholders, Mr. Dharamsey M. Khatau, Chairman, said that the position was still fluid. He, however, disclosed that the Tariff Commission had recommended an increase in the price of cement manufactured by the A.C.C. and similar other old factories to Rs. 72 per ton. This price was based on a return of 10 per cent. on the gross block, and included an element of Rs. 2 per ton, specifically meant for rehabilitation. The Government was not willing to allow a return of more than 8 per cent. which meant a price of Rs. 70-8. It was, however, willing to pay a round sum of Rs. 71, that is, the same price as was being paid now, provided the Company was agreeable to control over the rehabilitation fund created out of the proceeds of Rs. 2 per ton. This rehabilitation fund was to be utilised for Government-approved schemes. Mr. Khatau said that the Company had sought clarification on the principle of joint administration of the fund. He, however, revealed that the Company had expressed its willingness to have Government control over the fund, provided the fund was allowed to be utilised for schemes already in hand. He hoped that a satisfactory solution acceptable to the Government as well as the industry would be arrived at.

Replying to the complaints about the increasing expenditure of the Company, the Chairman said that the Company's production was going up, consequent on the expansion programme taken up on hand. In these circumstances an increase in expenses was inevitable. Those items of expenses which were amenable to the management's control were being strictly regulated. But expenses such as freight, wages, bonus, etc., were beyond the control of the management. The solution, therefore, lay, he added, in increasing production per unit.

The reference to the rising trend of production of cement brought several complaints from shareholders of difficulty in obtaining cement even in small quantities without permit. But, they added, if a premium was paid cement was obtainable in any quantity without a permit. The shareholders asked as to how long the control over cement would continue. In his reply, Mr. Khatau said that production was going up every year by 10 per cent. but consumption also was rising by a similar extent. The Government alone was taking up 47 per cent. of the Company's production for its development purposes. The balance was available for public consumption. There might be some shortage in some parts of the country, but it was due, to a large extent, to transport difficulties. Generally speaking, he said that supply was normal to meet the demand. As regards black-marketing, Mr. Khatau asked the shareholders to bring such instances to the notice of the management.

As regards suggestions for the use of paper bags instead of jute bags, Mr. Khatau said that paper bags were not so popular in this country as jute bags. Further, the use of jute bags would be an encouragement to the jute industry. In order to prevent adulteration, one of the shareholders suggested that cement might be sold in sealed bags as had been done before. But Mr. Khatau said that sealed bags did not prevent adulteration. The Company was thinking of using valved bags which would close automatically when they got filled up.

The sharp decline of Rs. 123.61 lakhs in the value of the Company's holdings in Government securities, as shown by the accounts, prompted shareholders to ask why the Company liquidated the securities and incurred a loss on the sale. The Chairman replied that the Company required large funds for its capital expenditure and it had, therefore, to sell the securities.

While welcoming the Chairman's disclosure that the Government had given its consent for the issue of bonus shares, one of the shareholders asked whether the dividend of Rs. 9-8 per share would be maintained on the increased capital. Replying, Mr. Khatau said that the prospects were not very bright for maintaining the dividend.

Besides the foregoing, Mr. Khatau made the following points in the course of his reply to shareholders: (1) The Company was hopeful of getting sanction for the amalgamation of the Patiala Cement Co., Ltd., with the A.C.C., (2) the profit of the Company's factories in Pakistan this year was Rs. 25 lakhs, the book value of the assets in Pakistan was Rs. 83 lakhs and liquid assets amounted to about Rs. 82 lakhs; and (3) the prospects of return on the capital invested in the Burma Cement Co., Ltd., were better.

JOINT OIL VENTURE IN BURMA

After prolonged negotiations lasting two years, an agreement was signed last week in Rangoon, between the Burmese Government and the three British oil companies operating in Burma, namely, the Burmah Oil Company, the Indo-Burma Petroleum Company and the British Burma Petroleum Company, under which the Burma Government would participate on a one-third basis in the country's oil industry under a joint venture. The Burmese Government is at liberty to increase the proportion of its interest to any limit as and when it so desires.

The new company, which will be called the Burmah Oil Co. (1954) Ltd., will have a nominal capital of Rs. 30 crores divided into three million shares. The three oil companies will make a cash gift of Rs. 1 crore towards the funds of the new company as a goodwill measure. This they can well do, because of the fairly substantial grants received from the British Government for rehabilitation of their assets destroyed during the war. It is planned to provide for refining 4,500 barrels of petroleum daily in the first instance. Eventually, this output will be raised to 10,000 barrels daily, so as to enable Burma to revive its export trade in petroleum products. Neither the Burmese Government nor the oil companies are under any obligation to provide fresh capital for the new venture, apart from that required for producing 4,500 barrels in the first instance. This evidently means that the additional capital required for this purpose will be raised from the open market.

The Burmese Government may acquire a share in the marketing of petroleum products in Burma at any time after the country becomes nearly self-sufficient or at any time after it has acquired the majority interest in the joint company. Provision has been made for accelerated Burmanisation in the administrative and technical branches. The new company has undertaken to evolve a programme of training for Burmese citizens, both in Burma and abroad.

The Directors of the Kanpur Sugar Works Ltd. (Managing Agents: Messrs. Begg, Sutherland and Co., Ltd., Kanpur) have decided, subject to sanction by the Government of India, to capitalise a sum of Rs. 15 lakhs from out of the existing reserves and issue 1,50,000 ordinary shares of Rs. 10 each as capital bonus to the existing shareholders. The present paid-up ordinary capital of the Company is Rs. 15 lakhs made up of 1,50,000 ordinary shares of Rs. 10 each. The reserves stand at Rs. 63 lakhs, of which general reserve accounts for Rs. 35.5 lakhs.

JARDINE HENDERSON JUTE GROUP'S RESULTS

HOWRAH TO REHABILITATE ITS MACHINERY

THAT the fortunes of the Indian jute industry have been of a fluctuating nature is amply illustrated by the financial results of the three jute companies, Howrah, Reliance and Bally, under the management of Messrs. Jardine Henderson Ltd., Calcutta, for the half-year ended 30th September, 1953, as compared with those for the previous two half-years. All the three Companies, which had reported higher profits for the half-year ended 31st March, 1953, than those for the preceding one, have again suffered a setback in their results for the six months ended 30th September, 1953. Thus, their aggregate trading profit, which had shown a smart improvement from Rs. 19.05 lakhs for the half-year ended 30th September, 1952, to Rs. 34.54 lakhs for the subsequent half-year, has dropped to Rs. 24.49 lakhs for the half-year under review, all the three Companies sharing the decline. It is, however, gratifying to note that the profit for the period under review is higher than that for the corresponding half-year of 1952.

The trend of dividends of the three Companies, however, is not uniform. Howrah's dividend has been pruned from 17½ per cent. per annum paid for the previous two half-years to 12½ per cent. per annum. This Company's financial position is so satisfactory that the Directors could have easily maintained the dividend, but they have instead wisely chosen to reduce it and conserve a part of the profit for financing the rehabilitation of the Company's mill. It is encouraging to find that they have taken up this matter in right earnest. Reliance, which had returned to the dividend list only in the previous half-year (after a break of four years) with a payment of 5 per cent. per annum, has maintained the dividend at that level. This is not surprising because the dividend is a very modest one, being well covered by net profits. Further, the outlook for the current half-year being a little more encouraging, the Directors must be confident of the financial results for that half-year. Bally, on the other hand, has again gone off the list, after a welcome break in the previous half-year for which a distribution of 8 per cent. per annum was made. This has become inevitable, inasmuch as there has hardly been any net profit for distribution.

Commenting on the trading conditions which prevailed during the half-year under review, the Directors observe, in their report to the shareholders, as follows:

"Trading conditions during the period under review have not been easy. Due to the uneconomic price levels of raw jute ruling during the early part of the year, sowings for the 1953-54 crop were considerably curtailed which, followed by some-ther reduction in output, resulted in a general upward movement of prices for raw material. Ilea-sion prices improved due mainly to large purchases by the Argentine, but unfortunately, sacking prices lagged far behind and at no time during the half-year has it been possible to manufacture heavy goods at a profit. Consumer demand for hessians was further stimulated following the reduction by the Government of India of the export duty on hessians by Rs. 155 per ton (Rs. 275 to Rs. 120) on 15th September, 1953."

The Directors of the Bally Jute further add:

"We regret to report that a deliberate go-slow policy adopted by members of the mechanical staff has for some time seriously affected the productive capacity of the mill. Subversive elements were responsible for acts of gross indiscipline which resulted in a closure following a partial strike on 5th October, 1953. The mill restarted on 16th October, 1953."

To revert to the performance of individual companies. The trading profit of the Howrah Mills amounts to Rs. 15.35 lakhs for the half-year under review, as compared with Rs. 20.47 lakhs and Rs. 15.16 lakhs for the two half-years preceding the one under review. After maintaining the provision for depreciation at Rs. 2 lakhs and reducing the tax provision from Rs. 7.26 lakhs to Rs. 5 lakhs, the net profit amounts to Rs. 5.59 lakhs, representing a decline of Rs. 1.95 lakhs from the net profit for the half-year ended 31st March, 1953 and an increase of Rs. 0.98 lakh over that for the corresponding half-year of 1952. Following the provision of Rs. 2 lakhs to the machinery renewal reserve made in the previous half-year, the Directors have now added Rs. 1 lakh to this reserve from the profit for the half-year under review. After taking into account the surplus of the previous half-year, namely, Rs. 1.55 lakhs, the Directors propose to distribute Rs. 91,875 to the 7 per cent. preference shareholders and Rs. 4.10 lakhs to the ordinary shareholders, leaving to be carried forward Rs. 1.14 lakhs.

Referring to the appropriations made out of the profit, the Directors of the Howrah Mills say:

"Your Directors in considering the above appropriations, have borne in mind the need for conserving the resources of the Company in view of the large capital outlay necessary for the re-habilitation of the mills with modern machinery. The first of the new machinery has now arrived and more is in transit. The erection of the new machinery is likely to commence very shortly and it is hoped that it will be in operation during the coming year."

The trading profit of the Reliance Jute Mills shows a drop from Rs. 9.85 lakhs for the previous half-year to Rs. 6.66 lakhs, which, however, compares very favourably with Rs. 1.46 lakhs for the half-year ended 30th September, 1952. The provision for depreciation has been reduced from Rs. 1.50 lakhs to Rs. 1 lakh, while no amount has been set aside, as in the previous half-year, for taxation. The net profit of Rs. 3.15 lakhs compares with that of Rs. 6.06 lakhs for the previous half-year and a net loss of Rs. 1.07 lakhs for the corresponding six months of 1952. A sum of Rs. 1 lakh has been added to the provision for contingencies, while, six months ago, a sum of Rs. 1.50 lakhs had been transferred to the debenture redemption fund. The payment of dividend on the 7 per cent. preference shares requires Rs. 70,000 and that on ordinary shares Rs. 1.24 lakhs. The sum left to be carried forward is Rs. 71,971, as compared with Rs. 48,080 brought in.

The Bally Jute has earned a trading profit of Rs. 2.48 lakhs, as against Rs. 4.22 lakhs and Rs. 2.43 lakhs for the previous two half-years under comparison. Depreciation has been provided with Rs. 75,000 (Rs. 75,000) and taxation with Rs. 55,000 (nil). The net profit amounts to no more than 9,960, as against Rs. 1.75 lakhs for the previous half-year and Rs. 83,604 for the corresponding half-year of 1952. This net profit has been supplemented by withdrawing Rs. 51,493 from the general reserve and by Rs. 72,634 brought in from the previous half-year. After paying the 7 per cent. preference shareholders, the undistributed surplus is Rs. 64,088.

The following synopsis of the balance-sheets of the three Companies as on 30th September, 1953, provide an idea of their financial position:

		Howrah	Reliance	Bally
		Rs.	Rs.	Rs.
LIABILITIES				
Capital	..	91,87,500	60,50,000	40,00,000
Reserves and surplus	..	52,91,009	4,71,971	29,80,003
Debentures	..		25,00,000	
Provision for taxation	..	14,71,815	54,693	3,05,750
Liabilities	..	3,83,596	37,03,586	5,71,253
	Rs.	1,05,42,619	1,36,80,255	78,81,015
ASSETS				
Gross block	..	1,65,53,177	1,23,47,175	97,56,036
Less—Depreciation	..	1,11,34,865	86,07,248	84,26,882
	..	54,18,309	37,39,927	13,30,054
Net block	..	54,55,640	41,90,184	22,91,407
Stocks	..	27,12,300	17,51,452	7,15,300
Stores	..	10,22,576	8,93,091	22,40,219
Debts, deposits and advances	..	2,61,812	1,23,250	1,00,523
Investments	..	42,71,973	1,22,427	1,79,402
Cash	..			
	Rs.	1,05,42,659	1,36,80,255	78,81,015

It will be observed that, in the case of all the three Companies, the financial position is satisfactory. Only, the reserves of Reliance are small as compared with those of the other two, with the result that it has found it necessary to have a debenture capital of Rs. 25 lakhs to cover its needs of working capital.

BIRD-HEILGERS JUTE GROUP DIVIDENDS

Last week, the jute section of the Calcutta Stock Exchange had a pleasant surprise when the Directors of the jute companies under the management of Messrs. Bird & Co., Ltd., and Messrs. F. W. Heilgers & Co., Ltd., announced the dividends for the half-year ended 30th September, 1953. Though the dividend pattern is not uniform in all the cases, the fact that the dividends of as many as six companies of the group have been stepped up had a cheerful effect on the operators. The following table shows the dividends recommended for the latest half-year, as compared with those for the previous two half-years:

(Rupees per share)

	Half-year ended		
	30-9-53	31-3-53	30-9-52
Auckland (100)	2	2	4
Dalhousie (100)	3	1	1
Kinnison (100)	5	4	7
Lansdowne (100)	3	2	3
Lawrence (100)	3	2	4
Naihati (100)	Nil	Nil	Nil
Northbrook (10)	As. 8	As. 6	As. 4
Standard (100)	1	1	1
Union (100)	4	1	1

N.B.—The figures in brackets represent the face value of the shares.

Points From The Chair

Approaches to Labour Problem

"THE attitude, however, of labour leadership, as I see it, is still most discouraging. It continues to emphasise increasingly the privileges which are due to labour, and to make on its behalf exorbitant and impossible demands. Little effort is made to enunciate the responsibilities that are labour's in the promotion of industrial progress, which alone can create the wealth required to provide a betterment in the standard of living. Government policy also takes the form of producing a bewildering succession of labour legislation without proper consideration of the impact which this must have on the industrial structure. The attitude is still abroad in Government that they must protect labour against the wiles of unscrupulous employers. These approaches to this essentially human problem on the part of Government and trades union leadership frustrate all attempts at increasing efficiency and the per capita output. Ultimately, this will retard economic progress, and imperil the competitive position of Indian products in world markets."

DHARAMSEY M. KHATAU,
Associated Cement Cos., Ltd.

Freedom for British Sugar Refiners

"You will not be surprised at our intense disappointment, to say the least, with the way in which the refining industry had been handed back in partial freedom. Circumstances entirely outside our control gave the appearance that free enterprise had failed to reduce prices. We had foreseen these circumstances; I had commented on them in public statements; representations had been made to the Ministry. All were of no avail. We are energetically seeking means of reducing our selling prices, but we must look to the cost of raw material and duty for any large effect. Duty accounts for about £4 per ton, nearly ½d. a pound. We would welcome any change in duties which, while maintaining Empire preferences, abolished a revenue duty on an essential food. Apart from duty, there is the price of the raw sugar itself. This we buy from the Ministry of Food at a fixed price. We have been given to understand that the reduction of £1 6s. 8d. in the negotiated price to be paid to Empire producers during 1954 will not result in a reduced price to British refiners. From the best estimates we can make, we believe that, at the same time as carrying out the Empire Agreement to the letter, we could secure supplies at about £1 per ton less than the price with which we are at present being charged, if the responsibility was handed back to us."

LORD LYLE OF WESTBOURNE,
Tate & Lyle Ltd.

Convertibility Near at Hand

"Since the end of the war the world's hopes for convertibility have waxed and waned with Britain's exchange reserves. Today with reserves at $2,520 million and steadily improving, Britain can afford once more to consider freeing the pound sterling with the great advantage that now she will move from a position of strength rather than weakness. I think, we can say that Britain and her partners in the sterling area, as well as most of her N.A.T.O. partners in Western Europe, have not only accepted convertibility as desirable in principle, but have, in fact, subjected themselves to the discipline, in their domestic monetary and fiscal policy which is one of the prerequisites to convertibility. I believe, the time has come for the dollar area to show evidence of good faith by reducing trade barriers both in the form of tariff duties and in the form of customs formalities and red-tape. The dollar area must, in addition, show willingness to undertake certain responsibilities in the international monetary field."

JAMES MUIR,
Royal Bank of Canada

Insufficiency of Available Funds in Industry

"Sufficient funds are not left in industry after paying the high taxation to replace their worn-out assets, the tools by which they earn sufficient to pay wages and install new machinery. To purchase and pay for the new or modernised factory, the only alternative to incurring a fresh debt by issuing debentures is to invite the public to subscribe new risk capital. Even if the public has the cash available, after paying their own high taxes, there is little encouragement to put depleted savings into business which, if it is successful and makes a profit, has again to suffer penal taxation, and in an atmosphere where it is considered by some to be almost immoral to make a profit at all."

A. HAROLD BIBBY,
Martins Bank Ltd.

Rent Control in the U.K.

"It is to be regretted that the intentions of the Government to deal with the Rent Acts so far published do not make the bold attack upon the problem which is both necessary and desirable in the interests of property owners as well as tenants of rent-controlled properties. Present indications are that the Government's proposals will make a very minor contribution towards the problem of repairing the poorest type of slum property, but make no contribution at all towards the solution of the problem in connection with the better type of rent-controlled properties owned by your company, the maintenance and repair of which have to be supported from the finances provided by other operations."

SIDNEY H. J. BATES,
Thames Estates and Investments Ltd.

TEXTILES

(*Concluded from page 112*)

said, will hardly affect the cotton industry at all. The third measure, the refund of the turnover tax on goods exported, is considered inadequate. Under the proposed scheme, products for exports will go into four different lists, envisaging refund of 1 per cent., 2 per cent., 3 per cent. and 4 per cent., respectively. Even if cotton products are included in the fourth list, it is pointed out, it will not in any way suffice to render Italian prices competitive which are more than 4 per cent. higher than those of other exporting countries.

TEXTILE INDUSTRY IN SWEDEN

Textile circles in Sweden are expressing considerable concern over the prospects for the textile industry during 1954. This concern is born of the apprehensions regarding the growing foreign competition in the domestic market. The two factors which are said to have stimulated such competition are the high cost of manufacture and the Swedish Government's tariff system. This, at any rate, is the view expressed by Mr. N. W. Horstadius, Chairman of the Swedish Textile Council. Mr. Horstadius says:

"The industry, having recovered from the crisis in 1951-52 so far as employment is concerned, is now faced with a trade-political handicap that is severely hampering activities. Contrary to the case in most European countries, Sweden practically lacks protection for its home market and the country is an easy victim to exploitation for foreign manufacturers. In addition, waves of dumping from abroad have, from time to time, undermined the financial basis of the domestic industry."

The textile industry in Sweden, it is said, has completed the implementation of a programme of modernising the mills with up-to-date machinery and equipment. The capacity of the industry is said to be sufficient to meet 75 to 80 per cent. of the domestic requirements of textiles. The value of textile goods produced every year is estimated at about 1,500 million kroners (about £100 million).

MILLOWNERS' ASSOCIATION'S CHAIRMAN

In electing, once again, Mr. Vithal N. Chandavarkar, Managing Director of Messrs. N. Sirur & Co., Ltd., Bombay, as its Chairman for the year 1954, the Millowners' Association, Bombay, has added greatly to its stature. Mr. Chandavarkar brings with him ripe knowledge and rich experience in the field of cotton textile industry and trade. He joined the Committee of the Association as far back as 1933 and was elected its Deputy Chairman in 1935, 1942, 1951, 1952 and 1953. He has held the office of Chairman nine times in the past—a record surpassed only by the late Mr. Dinshaw Manekji Petit in the history of this 89-year old body.

Mr. Vithal has a long and varied record of public service to his credit. He was the Mayor of Bombay in 1932-33 and became a member of the Bombay Legislative Council in 1933. He represented the millowners of Bombay in the old Central Legislature, of which he was a member from 1941 to 1945. He became President of the Employers' Federation of India, following the appointment of Mr. Homi Mody as Governor of Uttar Pradesh. Mr. Vithal has always taken keen interest in the affairs of Bombay University and was its Vice-Chancellor for three terms from 1933 to 1939.

SOUTH AFRICA RAISES IMPORT DUTY ON CLOTH

The South African Government has raised the customs duty on plain cotton piecegoods imported from certain countries, including India, Japan, Spain, Hungary, Mexico and Pakistan, and imposed an additional dumping duty on cloth imported from Japan. It has, for instance, enhanced the import duty on woven cotton cloth, excluding prints, f.o.b. price of which does not exceed a specified value, from 15 per cent. to 50 per cent. This decision of the South African Government is only of academic importance to India, since there is an embargo on the trade between India and South Africa imposed by the Government of India as a protest against the colour bar policy towards non-Europeans.

Notice

THE METTUR CHEMICAL AND INDUSTRIAL CORPORATION LIMITED

NOTICE

THE DIRECTORS HAVE SANCTIONED THE payment of arrears of Preference Dividend of 6 per cent. per annum tax-free for the year ended 31st March, 1953. The dividend will be paid to the holders of Preference shares standing in our Books as on 14th February, 1954.

The Share Transfer Books of the Company in respect of Preference holdings will be closed from 15th February to 27th February, 1954, both days inclusive.

SESHASAYEE BROS. LTD.,
Managing Agents.

METTUR DAM R.S.,
16*th January*, 1954.

NIZAM SUGAR FACTORY REPORTS EXCELLENT RESULTS

ELGIN MILLS' PROFIT DWINDLES

Nizam Sugar Factory Ltd.

THE directors of the above Company (Managing Agents: Hyderabad Government Industrial Trust Fund, Hyderabad-Deccan), submit the audited accounts of the Company for the year ended 30th June, 1953.

The accounts show that the working of the year has resulted in a net profit of O.S. Rs. 48,33,545 (O.S. Rs. 36,26,739), after providing for depreciation Rs. 27,90,677 (Rs. 18,98,638), interest on loan Rs. 6,25,697 (Rs. 4,42,485), contribution to employees' provident fund Rs. 1,60,280 (Rs. 1,75,421), and managing agents' commission Rs. 5,37,061 (Rs. 4,02,941). This profit added to the balance of Rs. 3,402 (Rs. 48,633) brought forward from the previous year, makes up a total of Rs. 48,36,947 (Rs. 36,75,372) to the credit of profit and loss account. But a sum of Rs. 12,788 (Rs. 1,57,970) being the additional bonus paid to the employees in terms of the Award of the Hon'ble Industrial Tribunal, which being in excess of the provision Rs. 6,80,200 made in the previous year, has to be deducted from the aforesaid profit. Hence, the amount available for distribution is O.S. Rs. 48,24,159 (O.S. Rs. 35,17,402), which the directors propose to appropriate as under:—

Dividend on five per cent. cumulative preference shares at the rate of Re. 1-4 (Re. 1-4) per share of Rs. 25 fully paid, free of income-tax Rs. 60,000 (Rs. 60,000), dividend on 4 per cent. cumulative preference shares at the rate of Re. 1 (Re. 1) per share of Rs. 25 fully paid, free of income-tax Rs. 96,000 (Rs. 96,000), dividend on ordinary shares at the rate of Rs. 3 (Rs. 2-4) per share of Rs. 25 fully paid, free of income-tax, Rs. 11,04,000 (Rs. 8,28,000), bonus on ordinary shares at the rate of Re. 1 (As. 12) per share of Rs. 25 fully paid, free of income-tax Rs. 3,68,000 (Rs. 2,76,000) bonus to employees including Rs. 5,000 to operative director Rs. 9,92,783 (Rs. 6,80,200), labour welfare and amenities reserve Rs. 75,000 (Rs. 50,000), taxation reserve Rs. 18,00,000 (Rs. 14,00,000), special depreciation reserve Rs. 1,31,200 (Rs. 73,800), investment depreciation reserve Rs. 75,000 (Rs. 40,000), dividend equalisation reserve Rs. 20,000 (nil), general reserve Rs. 75,000 (Rs. 40,000) and balance to be carried forward to next year Rs. 27,176 (Rs. 3,402).

The directors inform, that the mortgage loan of I.G. Rs. 40 lakhs proposed to be obtained from the Industrial Finance Corporation of India was not taken, as the sugar sales position having since improved, it was not necessary to borrow it.

Accounts in brief are as under:—

Liabilities	O.S. Rs.	Assets	O.S. Rs.
Capital ...	1,27,46,557	Block ...	2,65,89,470
Reserves ...	2,32,34,203	Stock-in-trade	1,77,97,729
Provision for taxation ...	10,20,786	Stores, etc.	42,05,891
Liabilities ...	2,07,01,467	Cane plantation in progress ...	63,07,435
Profit and loss account ...	48,24,159	Other assets	2,93,902
		Debts, deposits and advances ...	67,24,664
		Investments	1,98,895
		Cash ...	4,09,176
	O.S. Rs. 6,25,27,162		O.S. Rs. 6,25,27,162

Elgin Mills Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Begg, Sutherland and Co., Ltd., Kanpur, U.P.) submit the audited accounts of the Company for the year ended 30th September, 1953.

The result for the period, after making the usual provisions, shows a profit of Rs. 17,39,071 (Rs. 26,05,262) from which has been deducted depreciation Rs. 7,50,000 (Rs. 5,50,000) and rehabilitation reserve Rs. 3,00,000 (Rs. 10,00,000), leaving a balance of Rs. 6,89,071 (Rs. 10,55,262). To this amount has to be added the carry forward from the previous year of Rs. 1,23,353 (Rs. 1,22,091) leaving at credit of profit and loss account Rs. 8,12,424 (Rs. 11,77,353). This balance, the directors recommend, should be disposed of as follows:—

In payment of a dividend on the preference shares of 8 per cent. per annum for the year ended 30th September, 1953 Rs. 88,000 (Rs. 88,000), in payment of a dividend on the "B" preference shares of 5 per cent. per annum, free of income-tax, for the year ended 30th September, 1953 Rs. 21,000 (Rs. 21,000), in payment of a dividend at the rate of Re. 1 (Re. 1-8) per share for the year ended 30th September, 1953, on the vendors and ordinary shares Rs. 6,30,000 (Rs. 9,45,000) and carry forward to next account Rs. 73,424 (Rs. 1,23,353).

After provision of Rs. 10,00,000 has been made for the taxation estimated to be payable on the profits for the year, and for depreciation of Rs. 7,50,000, calculated at the rates applicable under the Indian Income-tax Act, the directors have transferred the sum of Rs. 3,00,000 to rehabilitation reserve.

In view of the high replacement cost of machinery, referred to in the two last preceding reports, and of the inadequacy, to meet that cost, of depreciation allowed under the Indian Income-tax Act, the directors considered it essential, in the shareholders' interest, that substantial sums be transferred to rehabilitation reserve whenever possible. The Indian Cotton Textile Industry in general has experienced most difficult trading conditions during the past year. For Mills situated in Uttar Pradesh which are subject to special disabilities—some of them within the control of the State Government—the outlook is most uncertain. In the inevitable struggle for survival, only those mills can hope to succeed which maintain their plant and machinery in an efficient and up-to-date condition.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	78,20,000	Block ...	27,63,531
Reserves ...	46,00,000	Stock - in - trade ...	87,62,530
Provision for taxation ...	2,14,978	Stores and spare parts ...	12,15,694
Liabilities ...	25,30,241	Debts, deposits and advances ...	12,39,034
Profit and loss account ...	8,12,424	Investments	1,67,540
		Cash ...	18,29,264
	Rs. 1,59,77,643		Rs. 1,59,77,643

Anglo-India Jute Mills Co., Ltd.

The directors of the Company (Managing Agents: Messrs. Duncan Brothers & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the half-year ended 30th September, 1953.

After providing Rs. 4,00,000 (Rs. 4,00,000) for depreciation and Rs. 3,25,000 (Rs. 9,50,000) for taxation, the accounts show a credit balance on profit and loss account of Rs. 3,87,126 (Rs. 9,18,270) to which was added the amount brought forward from the previous half-year Rs. 1,32,947 (Rs. 1,77,827), making a total of Rs. 5,20,073 (Rs. 11,46,097), from which the directors recommended that the following dividends be paid without any deduction for income-tax paid by the Company:

On preference shares at the rate of 7 per cent. per annum (Rs. 3-8 per share) Rs. 1,40,000 (Rs. 1,40,000) and on ordinary shares at the rate of 10 (20) per cent. per annum (Rs. 5 (Rs. 10) per share) Rs. 2,46,035 (Rs. 4,12,070) leaving to be carried forward the balance of Rs. 1,34,038 (Rs. 1,44,601).

Three canteens and two creches were completed and are in operation, thus the purpose for which the labour welfare reserve was created has been fulfilled. Accordingly, the balance standing to credit of that account has been transferred to machinery replacement reserve, in order to help finance the new machinery for Lower Mill which is due for shipment next summer.

In accordance with the Working Time Agreement of the Indian Jute Mills' Association 12½ per cent. of total looms remained sealed throughout the period and working hours continued at 42½ hours per week.

The gunny market for the major part of the half-year under review remained depressed by the volume of stocks in Calcutta godowns, but, on 14th September, Government reduced the hessian export duty from Rs. 275 to Rs. 120 per ton and since then there has been a welcome improvement in shipment and local stocks. Owing to a smaller crop, raw jute prices have in general been higher than parity with heavy goods hence trading conditions have been difficult for mills.

The last fortnight of the half-year was marred by strikes in the sewing departments of three of the Company's mills, where reduction of the number of workers was necessary following a change in production. Workers at Lower Mill forcibly detained two managers for twelve hours on two occasions in three days rendering the closure of that mill for three days unavoidable.

Trading results of the Company's subsidiaries Messrs. Landale & Clark Ltd. and Messrs. Landale & Clark (Pakistan) Ltd. for the year ended 31st May, 1953, showed an improvement on the previous year, but there was continued disparity between the price of jute obtainable in Calcutta and the purchase price at mofussil agencies in India and Pakistan which prevented the attainment of an economic turnover.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	89,20,700	Gross block	2,30,55,106
Reserves ...	79,44,144	Less—Depreciation ...	1,71,40,000
Taxation reserve ...	19,99,932	Net block ...	59,15,106
Liabilities ...	52,80,030	Stocks ...	85,99,720
Profit and loss account ...	1,34,038	Stores ...	10,14,198
		Investments	41,20,132
		Debts, deposits and advances ...	27,66,068
		Cash ...	3,63,600
	Rs. 2,33,78,844		Rs. 2,33,78,844

Naskarpara Jute Mills Co., Ltd.

The directors of the above Company (Managing Agents: Howrah Trading Co., Ltd., Calcutta) submitted the audited accounts of the Company for the half-year ended the 30th April, 1953.

The accounts showed a loss of Rs. 1,52,890 (profit of Rs. 2,20,791) after providing Rs. 1,52,953 (Rs. 3,23,093) for interest, commission allowance and other expenses which when adjusted with a credit balance of Rs. 5,104 (credit of Rs. 16,393) brought forward from the last half-year left a net loss of Rs. 1,47,786 (credit of Rs. 17,184 after having dividend of As. 12 per share, absorbing Rs. 30,000 and transfers to reserves and taxation) which was carried forward.

Regarding the observation of the auditors in connection with the absence of any entry in respect of Rs. 20,00,000, the directors mentioned that this item related to usance promissory notes executed in favour of the Imperial Bank of India by Soorajmull Nagarmull in connection with the overdraft arrangement which was since adjusted back.

During the period the mills worked in accordance with the supplement working time agreement of the Indian Jute Mills' Association.

As already observed in the last report the period had also been seriously affected due to heavy fall in the prices of jute goods which had a very adverse effect on the profits of the Company.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	20,00,000	Block ...	11,05,065
Debentures	5,00,000	Stock and stores ...	51,83,220
Reserves ...	15,80,000	Other assets	21,804
Provision for taxation ...	26,31,979	Debts, deposits and advances ...	22,41,383
Liabilities ...	23,46,242	Investments	48,502
		Cash ...	3,10,159
		Profit and loss account ...	1,47,736
	Rs. 90,58,221		Rs. 90,58,221

Central Kurkend Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Anderson, Wright & Co., Calcutta) submit the audited accounts of the Company for the half-year ended 31st December, 1952.

The profit, after deduction of all working charges and commissions, amounts to Rs. 1,21,204 (Rs. 34,151) to which is added the credit balance, brought forward from the previous half-year Rs. 1,23,477 (Rs. 41,872). After providing for taxation Rs. 36,957 (nil) and depreciation Rs. 29,651 (Rs. 35,000) there remains a balance of Rs. 58,569 (Rs. 6,672) which the directors recommend should be carried forward.

In view of the urgent necessity of sand stowing at the collieries, the directors are of the opinion that the financial position of the Company should be strengthened to meet this contingency. They, therefore, do not recommend any dividend for the half-year under review.

Raisings of coal during the half-year were 68,070 tons as compared with 77,097 tons during the previous half-year and 68,566 tons during the corresponding period of 1951. Despatches were 82,013 tons as compared with 54,297 tons and 52,873 tons respectively.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	8,00,000	Block ...	18,62,834
Reserves ...	13,30,330	Stocks ...	5,02,140
Provision for taxation ...	96,700	Stores ...	2,49,129
Liabilities ...	10,91,965	Other assets	22,318
Profit and loss account ...	56,569	Debts, deposits and advances ...	9,05,290
		Cash ...	33,853
	Rs. 33,75,564		Rs. 33,73,564

South Karanpura Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Bird & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st August, 1953.

As much as 1,05,393 tons of coal were raised and 1,00,523 tons were despatched during the period in comparison with the figures of 1,00,000 tons and 1,00,283 tons respectively during the preceding half-year. Of these figures, the new quarry accounted for raisings of 20,025 tons and despatches of 14,370 tons, representing an increase of approximately 3,000 tons raised and a decrease of 3,000 tons despatched over the half-year ended 28th February, 1953.

It will be noted from the preceding paragraph that despatches did not keep pace with output, and in fact coal stocks rose by 4,870 tons during the period. Unfortunately this trend has not been reversed and the accumulation of colliery stocks presents a serious problem. In addition to the market difficulties which are affecting the coal industry in general, the company's colliery is subject to severe movement restrictions imposed by the railways. In order to reduce cross traffic to a minimum the railways have prohibited the movement of coal produced in the Karanpura field in any direction other than to the north and west. This action has naturally severely curtailed the markets for Sirka coal, and in fact the Company has been compelled to seek fresh outlets for the considerable tonnage which the colliery used to despatch regularly to consumers in the south and east.

It should be pointed out that the railways have not been consistent in the imposition of traffic restrictions. For while there is a total ban on downcountry movement from Karanpura, coal from the Ranigunge field is allowed to be despatched freely to higher priority consumers in the north and west of India. The company is thus subject to severe competition in the only markets permitted to it, while being denied access to those markets which it formerly supplied for many years.

Although the attention of the authorities has repeatedly been drawn to this anomalous situation no relief has yet been granted. Unless the railways can be persuaded to adopt a more liberal view the position at the colliery is bound to deteriorate, particularly during the early months of 1954, when traffic dislocation due to the Kumbh Mela is expected to have an adverse effect on the movement of coal to the only area permitted to the colliery.

For some years the electric power requirements of Sirka colliery were supplied from the power house at the neighbouring Argada colliery owned by the Government Railways. In 1952 the railways, apprehending an excess of demand owing to the increase in power consumption in their own mines, gave notice of termination of the agreement under which current was supplied to Sirka.

Through the continued co-operation of the Chief Mining Engineer, Railway Board, alternative supplies were made available in 1953 from the Government Railways' Bnurkunda colliery power house, current being passed over a high-tension line erected by the Bihar Government. This h.t. line is to form part of the distribution system in this area of the Damodar Valley Corporation's grid supply, which it was expected would be connected in the middle of this year. Simultaneously, further electrification of colliery plant had been undertaken in order to take advantage of the plentiful and comparatively cheap electricity to be made available from the grid.

Unfortunately, the grid is not now expected to make connection until some time in 1954, and meanwhile expenditure on power has increased considerably because the current supplied by the Government Railways has been charged at the original rate in force when overall consumption was low. In terms of the agreement with the Chief Mining Engineer, Railway Board, the company is liable to be charged the actual cost of supply. It is probable, therefore, that future accounts will contain a considerable rebate in respect of the period under review. It is anticipated that the colliery's full power requirements will be met at a satisfactory price once grid supply becomes available.

The profit and loss account, after providing for depreciation, Rs. 5,007 (Rs. 27,701) for current taxation, Rs. 18,200 (Rs. 31,444) for tax contingency reserve and including Rs. 24,000 (Rs. 14,000) for tax contingency reserve and including the sum of Rs. 26,614 (Rs. 28,050) brought forward from last half-year, shows an available balance of Rs. 50,663 (Rs. 81,493) which the directors propose to dispose of as follows:—

In paying a dividend at the rate of 2½ (7½) per cent. per annum without any deduction for income-tax paid by the Company Rs. 21,875 (Rs. 65,625) and in carrying forward Rs. 28,788 (Rs. 15,868).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	17,30,000	Block ...	21,64,546
Reserves ...	11,02,200	Capital expenditure-in-progress ...	65,864
Provision for taxation ...	42,537	Stock-in-trade	1,44,075
Liabilities ...	7,10,313	Stores and spare plant	3,89,963
Profit and loss account ...	28,788	Debts, deposits and advances ...	8,31,772
		Investments	4,076
		Cash ...	33,542
	Rs. 36,33,838		Rs. 36,33,838

Neelamalai Tea and Coffee Estates Ltd.

The directors of the above Company (Managing Agents: A. V. Thomas & Co. (India) Ltd.) submitted the audited accounts of the Company for the year ended 30th June, 1953.

During the year under report, 71 acres of coffee were uprooted and cleared for tea, in accordance with our plans to replace poor yielding coffee by tea. A small piece of land measuring 1.51 acres lying between Katary and Bhawani Estates was purchased in order to round off the boundaries of our Katary Estates New Clearings and also to facilitate free movement of labour force from one estate to another.

The crop of tea harvested during the season 1952-53 amounted to 13,24,155 lbs., as against an estimate of 15,35,000 lbs. and the crop of 14,41,471 lbs. in 1951-52.

Due to adverse weather conditions during the early period of the season, there was a shortage of 1,17,316 lbs. over last season's crop. The total f.o.b. cost per lb. for the season was Re. 1-4-8, as against Re. 1-4-2 in the previous year and the small increase is mainly due to the shortfall in crop. The average realisation was Rs. 2-1-4 per lb., as against Rs. 2-1-3 in the previous year.

The crop of coffee secured during the season 1952-53 amounted to 278.08 cwts., as against an estimate of 335 cwts. and 406.17 cwts. harvested in 1951-52.

The shortfall in crop is accounted for by adverse weather conditions. The cost of production was Rs. 139-0-8 per cwt., as against Rs. 173-0-8 per cwt. last season. The entire crop was delivered to the Pool and the average price realised was Rs. 215-2-5 per cwt. and the closing stock has been valued at Rs. 183-12-1.

The accounts show, after providing for depreciation, income-tax, estate manager's furlough pay and passage and managing agents' commission, etc., a net profit of Rs. 5,58,773 (Rs. 5,70,221). This, together with the balance brought forward from last year, Rs. 81,628 (Rs. 36,407), provided a sum of Rs. 6,40,401 (Rs. 6,00,628) for distribution, which the directors disposed of as under:

5 per cent. dividend on preference shares for 1952-53 already paid Rs. 90,000 (Rs. 90,000), 12 (10) per cent. dividend on ordinary shares for 1952-53 Rs. 4,32,000 (Rs. 3,60,000), dividend equalisation reserve Rs. 50,000 (Rs. 75,000), general reserve Rs. 25,000 (nil) and carry forward Rs. 43,401 (Rs. 81,628).

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	54,00,000	Block ...	60,65,142
Reserves ...	13,79,400	Stock-in-trade	7,19,625
Taxation reserve ...	4,04,131	Stores, spares, etc. ...	2,44,200
Liabilities ...	2,80,900	Debts, deposits and advances ...	5,22,310
Profit and loss account ...	5,50,401	Investments	48,134
		Cash ...	4,15,421
	Rs. 80,14,832		Rs. 80,14,832

N.B.—Figures within brackets relate to the corresponding period of the previous year.

COMPANY MEETINGS AND DIVIDENDS

CENTRAL KURKEND COAL CO., LTD. Half-yearly General Meeting, Calcutta, 29th January, 1954. Dividend: Nil. Transfer books closed from 23rd to 29th January, 1954, both days inclusive.

GUZDAR KAJORA COAL MINES LTD. Half-yearly General Meeting, Calcutta, 29th January, 1954. Transfer books closed from 22nd to 29th January, 1954, both days inclusive.

PURE SITALPUR COAL CONCERN LTD. Half-yearly General Meeting, Calcutta, 29th January, 1954. Transfer books closed from 22nd to 29th January, 1954, both days inclusive.

SHREE MAHAKALI COAL MINES LTD. Half-yearly General Meeting, Calcutta, 29th January, 1954. Transfer books closed from 22nd to 29th January, 1954, both days inclusive.

NIZAM SUGAR FACTORY LTD. Annual General Meeting, Hyderabad-Deccan, 30th January, 1954. Dividend: Rs. 3 per share. Transfer books closed from 18th to 30th January, 1954, both days inclusive.

THIRUMBADI RUBBER CO., LTD. Annual General Meeting, Kozhikode, 2nd February, 1954. Dividend: 30 per cent. Transfer books close from 25th January to 2nd February, 1954, both days inclusive.

SCINDIA STEAM NAVIGATION CO., LTD. Annual General Meeting, Bombay, 24th February, 1954. Dividend: As. 12 per share, payable on and after 1st March, 1954.

SRI KRISHNARAJENDRA MILLS LTD. Interim-dividend of Rs. 2 per share, free of income-tax, for the half-year ended 30th September, 1953. Transfer books close from 31st January to 3rd February, 1954, both days inclusive.

DALHOUSIE JUTE CO., LTD. Dividend of Rs. 3 per ordinary share, for the half-year ended 30th September, 1953.

LAWRENCE JUTE CO., LTD. Dividend of Rs. 3 per ordinary share, for the half-year ended 30th September, 1953.

KINNISON JUTE MILLS CO., LTD. Dividend of Rs. 5 per ordinary share, for the half-year ended 30th September, 1953.

NORTHBROOK JUTE CO., LTD. Dividend of As. 8 per ordinary share, for the half-year ended 30th September, 1953.

STANDARD JUTE CO., LTD. Dividend of Re. 1 per ordinary share, for the half-year ended 30th September, 1953.

UNION JUTE CO., LTD. Dividend of Rs. 4 per ordinary share, for the half-year ended 30th September, 1953.

SHREE AMBICA JUTE MILLS LTD. Dividend of Re. 1 per ordinary share, for the half-year ended 30th September, 1953.

NATIONAL IRON AND STEEL CO., LTD. Dividend of As. 6 per share, for the year ended 31st March, 1953.

NATIONAL ROLLING AND STEEL ROPES LTD. Dividend of As. 9¼ per ordinary share, for the year ended 30th June, 1953.

KHARDAH CO., LTD. Dividend of Rs. 10 per ordinary share, for the half-year ended 31st March, 1953.

ASSOCIATED MINING INDUSTRIES LTD. Dividend of As. 9 3/5 per ordinary share, for the year ended 31st December, 1953.

BRITANNIA BISCUIT CO., LTD. Interim-dividend of As. 5 per ordinary share, for the year ending 31st March, 1954.

NEW SAVAN SUGAR AND GUR REFINING CO., LTD. Dividend of As. 4 per share, for the year ended 31st May, 1953.

COMPANY REGISTRATIONS

PRABHA MILLS LTD. (First Director: Mr. N. L. Kanoria.) Business: Spinners, Weavers, etc. Authorised capital: Rs. 50,00,000. Public company. Address: 33, Netaji Subhas Road, Calcutta.

BIHAR MINES LTD. (First Director: Mr. H. S. Singhania.) Business: Purchase, Acquire and Work on Mines, etc. Authorised capital: Rs. 10,00,000. Public company. Address: 7, Council, House Street, Calcutta.

FRANCIS KLEIN & CO., LTD. (First Director: Mr. W. Elmenhorst.) Business: Mechanical and Structural Engineers, etc. Authorised capital: Rs. 10,00,000. Private company. Address: 1, Royal Exchange Place, Calcutta.

ANTOINE BENTZ LTD. (First Director: Mr. P. Raj Bakshi.) Business: Merchants, etc. Authorised capital: Rs. 5,00,000. Private company. Address: 9 Stephen House, Calcutta.

NIRSHAH KHAS COLLIERY LTD. (First Director: Mr. Kumar, K. N. Maliah.) Business: Proprietors of Collieries and Coal Dealers, etc. Authorised capital: Rs. 5,00,000. Private company. Address: 14, Cullen Place, Howrah.

UNIVERSAL COMMERCIAL AGENCIES LTD. (First Director: Mr. R. P. Kayan.) Business: Importers, Exporters, etc. of General Produce, etc. of Coal Ores, Mica. Authorised capital: Rs. 5,00,000. Public company. Address: 3, Jagmohan Mullick Lane, Calcutta.

METAL AGENTS LTD. (First Director: Mr. R. L. Thirani.) Business: Steel and Iron Dealers. Authorised capital: Rs. 5,00,000. Public company. Address: 203/1, Harrison Road, Calcutta.

FLAVIEN (PROPERTIES) LTD. (First Director: Mr. A. Flavien.) Business: Acquire by Purchase, Lease, Exchange any Lands, etc. Authorised capital: Rs. 5,00,000. Private company. Address: 12, Kyd Street Suite No. 7, Calcutta.

INSURANCE

(Concluded from page 122)

The tardy rate of progress of the Scheme is certainly reprehensible, especially because the employers are compelled to contribute their share of the expenditure without deriving any benefit whatever.

BARODA STATE INSURANCE

The Government of the Bombay State, with which the former Baroda State has been merged, has issued a Press note, clarifying the position of the Insurance Scheme which was in force in the Baroda State before the merger took place. After referring to the complaint that nothing has been heard about the scheme, after a bonus was declared, in July, 1948, for the period ended 31st July, 1945, the Government states that, following the merger of the Baroda State, the Baroda State Insurance Fund was taken over by the Posts and Telegraph Department as a closed fund, with effect from 1st April, 1950, with the stipulation that no further new policies would be issued from that fund but the policies active on 1st April, 1950, would continue, as usual, till maturity and would also be governed by the old Baroda State Insurance Rules. Accordingly, the existing policyholders, it is stated, are paying their premia by deductions from their pay bills as well as in cash into post offices, where deductions from pay bills are not convenient. Payments are also being made in respect of the policies discharged by death, maturity or surrender by the Post Master General, Bombay, through post offices. As regards bonus after 31st July, 1945, the valuation data of the Fund as on 31st March, 1950, the Press note says, have already been intimated to the Controller of Insurance, Simla, and orders of the Union Government on the subject are awaited. Those who seek any further information about the scheme are advised to contact the Director, Postal Life Insurance, Calcutta, or the Post Master General, Bombay.

AIR TRAVEL INSURANCE

The authorities of the Indian Airlines Corporation, as we stated last week, are believed to be contemplating the adoption of a system of compulsory insurance for air travellers, in order to provide cover against risk to life during air journey. In this connection, Mr. S. Rangarajan, Actuary, the Prithvi Insurance Company, Ltd., Madras, suggests, in a communication addressed to us, that the air travel insurance business should be distributed among all insurance companies. He says:

"When the various air services in India were being managed by private enterprise, a number of companies had their booths in the various airports and were issuing cover, thereby fulfilling a useful service. The fact that the Indian Airlines Corporation has under its consideration a proposal to take an agency of a single firm is very disconcerting in the sense that the business is likely to be monopolised by a single institution. If the proposal of the Corporation is to pass on the business to the Indian Insurance Companies Association Pool, then that will be the best way of tackling the problem. All the companies that share in the business of the Pool will be benefited, instead of one company alone taking away the business of the whole Corporation. If, however, there is any difficulty about the Indian Insurance Companies Association Pool taking up the business, the other alternative for the Corporation will be to arrange for the sharing of the business among the various companies that are now transacting this business. The fact that the air service is now under State monopoly should not, by itself, lead to a monopoly of the business by a single insurance company. As there is going to be a compulsory levy for insurance of all passengers, it is but fit and proper that the business should be shared among all the insurance companies transacting this business in India."

MANCHESTER LETTER

(Concluded from page 113)

in this country from the beginning of September last, the trend of values has kept relatively constant. Only minor fluctuations have been noticeable in the cover bases and the occasional movements in index prices have not been large. The table on page 113 shows the variations which have occurred in prices for the main cover base, index rates for actual cotton and representative yarns since the Commission's new scheme came into operation.

An interesting development in the past week or two has been the upward movement in the case of actual American cotton which was moved a little out of alignment with the ATNY cover symbol. When the price of 15/16" Middling reached 32d. it was at the highest level for four when the stock situation in the United States is recalled.

Raw Cotton Imports

The first week in 1954—year of freedom for raw cotton trading—brought a large intake of privately bought raw cotton into British ports. Out of total imports of 23,566 bales, only 3,345 bales were procured by the State-sponsored Raw Cotton Commission, which is to be wound-up at the end of August. Chief suppliers were the United States which contributed 17,217 bales and the Sudan with 2,749 bales. Among quantities of cotton still afloat for Britain are 15,095 bales from Egypt and 10,350 bales from Pakistan out of total expected arrivals of nearly 43,500 bales.

ACTIVITY IN MONEY MARKET RESTRICTED

(From Our Own Correspondent)

BOMBAY, 20th *January*

Activity in the short-term money market was considerably restricted during the week under review, due more to paucity of funds than to any decline in demand for them. With no influx of funds from any quarter and with an expansive demand in evidence, conditions became extremely stringent. Inter-bank call money continued to be done at 2½ per cent. among the Exchange banks and big Indian banks and at 3 per cent. among the smaller Indian banks. House money at call was also placed at 2½ per cent.

Short-term deposits were offered 3 per cent. for periods from one to six months, but even this higher rate failed to attract funds in requisite quantity.

The upward trend in Treasury Bill rate noted in the past two weeks was maintained this week also when the rate touched a record high of Rs. 2-8 per cent per annum. The amount offered dropped from a little more than Rs. 1.21 crores to Rs. 1.01 crores against the usual invitation for Rs. 1 crore.

A further expansion of Rs. 3.68 crores in notes in circulation following the rise of Rs. 22.61 crores noted in the previous week, is disclosed by the Reserve Bank of India statement for the week ended 15th January, 1954. Notes held in the Banking Department have also gone up by Rs. 5.81 crores, so that the total notes issued are up by Rs. 9.49 crores. This increase in covered by a rise of Rs 10 crores in foreign securities and a decline of Rs. 50.63 lakhs in rupee coin. In the Banking Department, for the second week in succession, Central Government's deposits show a drop, the decline in the latest week being Rs. 8.82 crores. Deposits of other Governments have risen by Rs. 6.38 crores and those of banks by Rs. 2.48 crores. On the assets side, cash balances disclose an increase of Rs. 5.88 crores, while balances held abroad have fallen by Rs. 8.06 crores. Loans and advances to Governments are lower by Rs. 69 lakhs, while other loans and advances are higher by Rs. 1.09 crores, of which advances to Scheduled Banks against usance bills account for Rs. 40 lakhs. Investments have declined by Rs. 1.36 crores. Government Treasury Bills purchased and discounted account for a rise of Rs. 3.80 crores.

A decline of Rs. 5.62 crores in demand deposits and Rs. 2.03 crores in time deposits are revealed by the Scheduled banks' statement for the week ended 8th January, 1954, as compared with that for the previous week. Inter-bank borrowings show an increase of Rs. 1.39 crores. Borrowings from the Reserve Bank have increased by Rs. 2.53 crores and those from the Imperial Bank by Rs. 2.74 crores. Advances have recorded a sharp rise of Rs. 12.63 crores and bills purchased and discounted Rs. 3.92 crores. Cash on hand and balances with the Reserve Bank have together dropped by Rs. 10.32 crores, balances with other banks in current account by Rs. 2.73 crores and money at call and short notice by Rs. 99.75 lakhs.

Activity in the Gilt-edged market continued to be limited and hardly any variations in prices was noticeable in most counters. The decision of the Reserve Bank of India on Wednesday last week to suspend sale of securities was a short-lived one for the Bank commenced its operations again on Friday. The undertone remained steady. 3 per cent. 1957 was unchanged at Rs. 98-6, but buyers were found at Rs. 98-5½. 3 per cent. 1958 had buyers at Rs. 98-1½ and sellers at Rs. 98-2. 3 per cent. 1959-61 was wanted at Rs. 96-1½, but sellers quoted Rs. 96-2. Some business was done in 3 per cent. 1963-65 at Rs. 92-8. 3 per cent. 1964, 3 per cent. 1966-68 and 3 per cent. 1970-75 were all wanted at the unchanged rates of Rs. 92-7, Rs. 90-4 and Rs. 86-8. 3 per cent. 1986 Conversion Loan was a notable exception, in that it experienced a rise of As. 4 to Rs. 82-7 on scattered enquiries and short covering. 3½ per cent. N.P. Bonds was taken up at Rs. 98-13½.

FURTHER RISE IN METAL PRICES

(From Our Own Correspondent)

CALCUTTA, 19th *January*

The metal market presented a better appearance during the week under review, and further additions were recorded in most base metals. There was keen demand, as manufacturers continued to buy the raw material to meet commitments. The best feature again this week was the strength of electrolytic copper which advanced from Rs. 172 to Rs. 176. A small quantity of ingots changed hands and fresh supplies were difficult to be located. Scrap was almost hard to find.

There was good demand for copper and brass sheets for re-rolling. The price of mercury improved from Rs. 560 to Rs. 565, although there was no worthwhile business. Tin was throughout quoted at Rs. 424 and, because stocks were satisfactory, buying was limited. The early fall in the price of virgin lead from Rs. 65 to Rs. 62-8 could not be recovered, but a further decline to Rs. 62 was recorded. A moderate quantity was covered against tenders. More tenders are expected. Electrolytic zinc was held firm at Rs. 54.

TRADING IN LINSEED LIMITED

(Messrs. A. Bradley & Co.)

CALCUTTA, 18th *January*

A generally weaker undertone prevails in the linseed market this week, despite very scarce arrivals, and trading has been limited. Sellers are rather reserved, whilst crushers have shown little interest, except at lower prices. Dull conditions prevail in the oil section. Small transactions have been recorded, but local buyers have on the whole been very reserved. Latest quotation is:—Ready Rs. 21-6 per maund.

BULLION BULLISH

(From Our Own Correspondent)

BOMBAY, 20th *January*

The bullion market presented lively conditions during the week under review, particularly during the last three days. Both silver and gold registered fair gains over the week on enlargement of speculative activity induced by such favourable factors as increased offtake in the ready section of silver, reports that prominent bulls were prepared to take delivery of as much as 1,500 bars of silver in the maturing settlement, a decline in arrivals of gold and seizure of contraband gold worth Rs. 18.5 lakhs from a bullion merchant on Monday (18th inst.) morning. Expectations of improved offtake in silver continued to encourage bull activity, with the result that automatic margin was enforced today against bulls. On balance, silver recorded a rise of Rs. 3.9 per 100 tolas and gold Rs. 1-10 per tola over the week.

It will be interesting to note here that, since the beginning of the current year, forward silver has gone up by Rs. 6-6 and forward gold by Rs. 2-2.

The market remained closed on Thursday last (14th January) on account of *Makara Sankranthi*. Opening at Rs. 155-1 on Friday, silver for forward delivery (21st January settlement) remained featureless early in the week, but the undertone was fully steady, as witness the rise in price to Rs. 155-10 on Saturday. From Monday onwards, however, activity broadened considerably and prices began to soar on bull manipulation coupled with nervous bear covering. Purchases by option dealers also induced a rise in prices. Forward silver touched a high of Rs. 158-13 today and stood at Rs. 158-12 at the close. This rate was more than Rs. 7 above the official sterling rate for the current settlement. Consequently, payment of margin by bulls at the rate of Rs. 500 per bar on all their outstanding purchases came into fore automatically. Business for the February settlement opened at Rs. 155-11 and finished today at Rs. 159-8.

Ready silver (.996 Mint) was done at par with the forward rate for the January settlement, the opening and closing prices being Rs. 155-1 and Rs. 158-12, respectively. The floating stocks of silver are placed at 2,300 bars. The daily average offtake was 20 bars.

Gold for forward delivery (20th January settlement) was quiet early in the week and trading was colourless, with the quotation shading off from Rs. 82-13 to Rs. 82-8. A decline in arrivals from Saturday onwards gave a fillip to bulls. The seizure of contraband gold on Monday morning and decline in offerings of Kolar gold imparted further strength to them. Consequently, it advanced by quick stages to touch a high of Rs. 84-14, today, before closing at Rs. 84-9. Business in the February settlement was done at the opening at Rs. 82-9½, the *budla* charges being As. 1½ against sellers. On Saturday, the budla charges against sellers widened to As. 5½, but they again narrowed down to As. 2 at the close today, when February settlement was quoted at Rs. 84-7.

Ready gold opened at Rs. 82-12 and closed at Rs. 84-9. The floating stocks of gold are reported to be 30,000 tolas. The daily average arrivals were about 4,000 tolas; the daily average offtake was also at about the same rate.

The following comparative table shows the trend of the market during the week under review:

	20-1-54	Highest	Lowest	13-1-54
	Rs. a.	Rs. a.	Rs. a.	Rs. a.
GOLD				
Ready (.99 fine Mint)	84 9	84 15	82 0	82 14
Forward	84 9	84 14	82 8	82 13
Sovereign	56 8	56 8	56 4	56 4
SILVER				
Ready (.996 fine Mint)	158 12	158 13	155 0	155 5
Forward	158 12	158 13	155 0	155 3
London Ready ..	73½*d.*	—	—	73½*d.*
London Forward .	73½*d.*	—	—	73½*d.*
New York Ready .	85½c.	—	—	85½c.

TEA FOR EXPORT EASY

(From Our Own Correspondent)

CALCUTTA, 19th *January*

Although there was strong demand during yesterday's export auction, where offerings consisted of 61,900 packages, prices of most varieties eased. The easing tendency suggested that prices during the previous sale reached rather unnatural levels which could hardly be supported. It will be remembered that, during the auction a week ago, gains varying from As. 3 to As. 10 were recorded; but, yesterday, As. 2 to As. 3 were lost by medium B.O.Ps., medium fannings and brokens declining by an anna. After an early firm start, whole leaf grades fell in line with the general trend and sold at prices below brokers' valuations. Even an improvement in quality could not arrest the fall in prices of best liquoring varieties. The only varieties which were firm were the commonest teas. Quotations were: Best C.T.C. Assam B.P. Rs. 2-8 (nominal), medium Assam B.P. Rs. 2-6-6 to Rs. 2-7, clean black pekoe Rs. 2-9-6, and clean common B.P. Rs. 2-6-6.

Very steady conditions were witnessed during the internal sale held last week, when 21,209 packages of dust and 3,196 packages of other grades were offered. Demand was strong and attractive additions in prices were recorded. All varieties of dusts were supported and were taken at As. 4 to As. 5 above brokers' valuations. Thus, best Assam C.T.C. dusts were quoted at Rs. 2-5, medium Assam grainy dusts at Rs. 2-2 and medium Dooars dusts at Rs. 2-1-6. In the leaf market also, demand was active, the commonest varieties improving by As. 5.

COTTON FIRM

(From Our Own Correspondent)

BOMBAY, 20th *January*

After behaving in a less fidgety manner for a whole week, with the range of fluctuations remaining within narrow limits, below the Rs. 700 pose early this week and registered an advance of nearly Rs. 22 in the price of the February contract after the last week-end. There was, however, some justification for this rise, if not on grounds of any inherent change in the situation with regard to cotton supply and consumer demand, at least on those of the general buoyancy prevailing in all the forward markets in the country. The speculative element in the business community has been caught in a wave of bullishness based mainly on ideas of currency inflation and deficit financing on a progressive scale during the next two years. Operators in the forward cotton market, therefore, cannot be blamed for collecting contracts and pushing up prices.

The only flaw, however, so far as cotton is concerned, is the widening of the difference on the wrong side between the February and May contracts. If the belief in scarcity of supplies or any continued inflation be well-founded, it must be repeated once again that either of these factors will operate with a greater emphasis when the May contract which would mature than in February and prices for the latter contract should not lag behind those of the one which would terminate next month. It is this unnatural difference of Rs. 9 in favour of February which indicates that the present strength in the market does not rest entirely on intrinsic factors but on the temporary technical position which is being exploited by the operators.

Consistently steady conditions prevailed in the spot market because of firm upcountry prices and the continuous purchases from mills direct in the producing areas. In view of the spurt in the cloth and yarn market and the general expectation that textile exports will possibly reach the 1,000 million yards target this year and might even overshoot it, there is a justified belief in the spot market circles that the present demand from mills for cotton of almost every description will not only be sustained in the future months but will possibly be broadened. This feeling is confined not merely to Indian cotton; it is getting stronger in the case of imported cotton. In the latter case, there has been a veritable scramble for the last two or three days. Apart from the various well-favoured Jarilla and the East Punjab varieties, Vijay has been in good demand during this week, because the supply of Gaorani 12 is expected to be of a restricted nature this season. There has been a steady increase also in the prices of imported cottons with East Africans taking a lead in this direction. There is good enquiry also for U.S. varieties and it is expected that imports from this source this year will increase considerably. Unused licences for American cotton now amount to only about 70,000 bales and though the grouse against the Government's policy to renew them repeatedly, thus denying opportunities for trade to those who used up their licences under pressure from the Government in the earlier stages, continues, it is believed that these importers, who have been out of business for some time so far as imports from the U.S.A. are concerned, will have fresh opportunities of resuming their imports from this source. There was also some demand in the spot market for Egyptian cotton which, however, was confined mainly to Karnak.

The trend of prices in the forward section of the local cotton market during the week under review was as follows:

	Opening	*High*	*Low*	*Closing*
I.C.C. Feb. ...	Rs. 694½	718½	693	717
I.C.C. May ...	Rs. 688½	710	688	709

The following are the latest available quotations for some of the varieties in which trading took place:

Hansi 216F Rs. 980; Aurangabad G12 Rs. 801; Dhulia Rs. 115 on; Vijay Rs. 183 on; Bengal New Rs. 627 Jan. del., Mogial old Rs. 700.

In common with all the world cotton markets, prices at Karachi have also taken an upward swing of a substantial nature during the week. As the export position for the U.S.A. cotton is becoming clearer, attention in Continental centres has naturally once again turned to this market. Shortage of supplies elsewhere in Uganda and Sudan also had its effect in this revival. As cloth from Japan becomes available in bigger quantities, about which a hitch had been reported earlier, enquiries from Japan also are bound to increase in volume. The present rise, however, at Karachi is due not so much to large-scale orders from abroad as to sympathy with other markets and lesser readiness on the part of holders in expectation of better prices ahead. Exports upto the end of the first week of this month from Karachi amounted to 399,082 bales as compared to 506,097 bales during the same period in the previous season.

The following are the latest available quotations from the Karachi market: Sind *Deshi* Rs. 67½; Punjab *Deshi* Rs. 64½ to Rs. 68; 4F Punjab R.G. Rs. 66 to Rs. 67½; S.G. Rs. 71 to Rs. 72½; LSS. Punjab R.G. Rs. 71½; S.G. Rs. 77.

At Alexandria, trading has been, if anything, a trifle more active than in the preceding weeks. Curiously enough, the foreign enquiries are confined largely to medium grades of Karnak. The higher grades of this style are being offered at the *Commission's* prices, while a premium of three-quarters of a penny is being asked for for the medium grades. There is practically no demand for Ashmouni and Giza 30 which are now available for a premium of about 2½*d.* per lb. Market interest, however, at Alexandria has centered more round the future policy of the Government. It has now been authoritatively announced that the official buying prices for the next crop will continue unchanged except for a small premium of ½*d.* for December and a penny for February deliveries. The Ministry of Agriculture expects a profit from its trading operations this year. Three-quarters of these will be returned to the growers, with one quarter going to the cotton prices equalisation fund. One other thing which emerges from official circles is that the acreage under Ashmouni will show no increase next season as the seed for such an increase is not available. However, this position is likely to be improved from the season after the next, as the authorities are taking measures to ensure a sufficient supply of seed of good quality from the next crop.

At New York, the firm tone in the market continues unchecked with a rise of 50 points and over in prices. A part of this firmness is due to the increasing volume of the Government loan and brighter prospects for exports during the coming months. The spot demand by spinners also continues to be healthy and progressive. The authorities expect a moderate increase in exports over last year. This is based on the present estimates that while the world production during the season will be eight lakh bales short of last year, consumption during the year is likely to increase by half a million bales.

The following are the latest available quotations from New York as compared with those a week and a fortnight before:

(In cents per lb.)

	19-1-54	12-1-54	5-1-54

October	33.86	32.76	32.75

COTTON YARN FORGES AHEAD

(From Our Own Correspondent)

BOMBAY, 20th *January*

The cotton yarn market continued to remain fully steady this week also. Following inspiring advices from Coimbatore and other South Indian centres, enquiries for yarn, especially of fine qualities produced by first class mills, broadened and values forged ahead. Besides, local dealers and consumers showed interest in purchasing yarn for forward delivery, in anticipation of a further rise in prices. This anticipation was the result of firmness in cotton in sympathy with the upward trend in Egyptian and American cotton markets.

As already noted, fine counts cotton yarn evoked special buying enquiries. Among 60s, for instance, Vasanta firmed up from Rs. 38-8 to Rs. 41 per bundle of 10 lbs. Coimbatore Spinning advanced by Rs. 2-4 to Rs. 41-8, Kothari and Vijayaed by Rs. 2 each to Rs. 43 and lakshmi hardened by Rs. 2 each to Rs. 1-12 Rs. 39, respectively. Rsjalakshmi put on Re. 1-12 to Rs. 40-4 and Pankaja Re. 1-8 to Rs. 37. Pioneer gained As. 12 to Rs. 43. Prices of 40s also registered improvement, Madura and Meenakshi being higher by As. 4 at Rs. 26-4 and Rs. 25, respectively. 30s and 20s were well maintained. Among 10s, Podar picked up As. 6 to finish at Rs. 12-4.

The art silk yarn market ruled bullish during the week under review. Besides the improvement in cotton yarn prices, there was good offtake in the ready section, on encouraging reports from the ready markets. Buying support that ensued lifted the values of art silk yarn to the rayon fabrics highest levels so far touched this year. Art silk yarn (150/D) for January delivery rose from Rs. 745 to Rs. 768 today before closing at the shade lower at Rs. 762 per case of 200 lbs. In the ready section, 120 Italy and 150 Italy were higher by an anna, the former at Rs. 4-1 and the latter at Rs. 3-13½ per lb. 150 Japan which had receded to Rs. 4-2 early in the week recovered to Rs. 4-4. 120 Japan was steady at Rs. 4-10.

The table below gives the prices of art silk yarn quoted today, as compared with those on the 13th and 6th inst:

	20-1-54	13-1-54	6-1-54
	Rs. a.	Rs. a.	Rs. a.
150 *January* (per case of 200 lbs.) ..	762 0	745 0	745 0
150 Japan (per lb.)	4 10	4 10	4 10
150 Japan	4 4	4 4	4 2
150 Japan	4 1	4 0	4 1
120 Italy	3 13½	3 12½	3 12
150 Italy			

The staple fibre yarn section was no exception to the general trend. Among Indian yarns (40/2), Sriram and New Great hardened by an anna and a half each to Rs. 3-13 and Rs. 3-14½, respectively. Hind gained an anna to Rs. 3-13½. Century was a shade higher at Rs. 3-14½.

GROUNDNUT FIRM AT CLOSE

(From Our Own Correspondent)

BOMBAY, 20th *January*

The oilseeds market presented a mixed trend this week also. The groundnut section ruled virtually dull during the first few sessions of the week, as buyers were hesitant awaiting further fall in prices, following heavy arrivals. But, subsequently, it depicted a firm trend in sympathy with the sharp rise in cotton and on renewed buying linseed section also looked up, on renewed buying induced by higher advices from North Indian markets. In the castorseed section, however, futures ruled easy, early in the week, on *mandi* option by a leading stock holder and on reports that the U.S. Commodity Credit Corporation had offered for sale 10,000 *tons* of castor oil. Thereafter, however, the trend was reversed, on revival of rumours about (*a*) free licensing of exports of castor oil for the first half of 1954 shortly and (*b*) reduction in the export duty of Rs. 300 per ton on the oil. Spots improved in sympathy with the futures.

In the groundnut section, Bold F.A.Q., which opened at Rs. 35-4 as against Rs. 35-10, declined to Rs. 35 on the subsequent day. Thereafter, it improved gradually to close, today, at Rs. 36. December-January gained As. 6 to Rs. 36 and February-March As. 9 to Rs. 36-3. Khandesh quality was done at Rs. 37, as against Rs. 36-4.

There were rumours that the Government of India would shortly announce export quotas in groundnuts and groundnut oil. But the upward trend in the market is hardly conducive to allow exports. With the exception of minor setbacks here and there, prices of groundnut particularly have been moving steadily up during the past few weeks. Today, Khandesh quality is quoted at Rs. 37, as against Rs. 33-2 on the 16th December, 1953. In the circumstances no export quotas will be possible as the Government is committed to allow exports only if prices declined to reasonable levels and stabilised there.

The linseed section presented a strikingly gay appearance after a long time, despite general absence of export enquiries. This was, as stated at the outset, due to covering by shorts on higher advices from upcountry centres. Bold ready gained Re. 1 to Rs. 30 and February-March Re. 1-2 to Rs. 26-6. Linseed oil advanced from Rs. 15-12 to Rs. 16-4.

In the castorseed section, May delivery which opened at Rs. 113-8 as against Rs. 114-2, declined to Rs. 112-4 on the 15th inst. Subsequently, it improved gradually to close today at Rs. 117. F.A.Q. disclosed a gain of Re. 1 at Rs. 25 and Madras As. 8 at Rs. 25-4. First Pressures were higher by As. 4 at Rs. 14-8 and Commercials As. 2 at Rs. 13-8. Oil B.S.S. was enquired at Rs. 14-10, as against Rs. 14-8.

Among others, *kardi* Bold declined from Rs. 25-8 to Rs. 24-8, while *niger* F.A.Q. advanced from Rs. 30 to Rs. 30-2. *Niger* Madras was quiet at Rs. 30-8 and February-March at Rs. 29-12.

Arrivals of oilseeds and oils from 1st January to 14th January, 1954, as against those in the corresponding period of the previous year, were as follows:

(In cwts.)

	1954	1953
Groundnut	208,810	205,037
Linseed	3,925	1,292
Castorseed	2,261	22,746
Groundnut oil	48,391	14,122
Linseed oil	2,617	386
Castor oil	749	4,115

The following table shows the prices of oilseeds and oil on the 20th inst. as compared with those at the end of the previous two weeks.

	20-1-54	13-1-54	6-1-54
	Rs. a.	Rs. a.	Rs. a.

SUGAR BEARISH

(From Our Own Correspondent)

BOMBAY, 20th *January*

The Bombay sugar market presented a rather curious trend during the week under review. Despite several bullish factors such as firmness in *gur* markets, reduced arrivals and strong advices from North Indian centres, its undertone was easy. This was chiefly due to rumours that a shipload of Czechoslovakian crystal sugar would be diverted to Bombay. This rumour was sufficient to place a curb on fresh buying support.

Sugar for *Posh* delivery, which had stood at Rs. 82-4 per bag last week, was squared up at Rs. 81-10. *Maha* delivery had buyers at Rs. 83-12, as against Rs. 84 last week. In sympathy with the forward section, the ready section also registered a fall in prices. Medium and large grain sugars dropped Rs. 2 each to Rs. 93 and Rs. 96, respectively. Small grain sugar, however, was unaltered at Rs. 92. Among foreign sugars, British refined receded by As. 8 to Rs. 83-12 per bag of 2 cwts. Cuban sugar was neglected at Rs. 36-8 per 100 lbs. net and Mexican at Rs. 40-8 per bag of 110½ lbs.

As already noted, arrivals of sugar into the Bombay market during the week were smaller, being 11,300 bags, as against 16,000 bags last week.

NARROW MOVEMENTS IN PEPPER

(Messrs. Parekh & Co.)

BOMBAY, 20th *January*

Malabar black pepper at almost all the primary markets remained steady during the week, moving within a narrow range of Rs. 50, the highest and the lowest being Rs. 1,850 and Rs. 1,800 respectively. The daily arrival averaged at about 350 candies and the greater part of it was taken up by the exporters against their sales to the U.S.A. and Russia. Though the buying from New York is reported slow, yet, having proved steadier, it has so far sustained the prices at the present level. After haggling for a lower price for a day or two, some New York dealer or other appeared as a buyer and took up a fair quantity at full price, seeing the stability of the Indian market, in spite of limited foreign activities during the past three weeks. One analyst opines, under the *circumstances, that* if New York continues to buy at this rate, Indian growers are not likely to allow Alleppey prices to fall below the present resisting level of Rs. 1,700, expecting that foreign enquiries will surely develop after testing their holding strength during February when competition is likely to be rather keen between Alleppey and Tellicherry crops. The Indian trade is also watching the Korean P.O.Ws development. New York is reported to have bought January shipment at $0.87, while Feb/March was paid for at $0.85.

In the local A.S.T.A., section, January shipment was done from $0.87 to $0.86½, while Feb/March and March changed hands from $0.85 to $0.86 per lb. c. & f. New York.

In the delivery section, business is reported meagre, the highest and the lowest for February delivery being Rs. 1,570 and Rs. 1,500 respectively.

Following are today's nominal quotations:—Ready Rs. 200/240 per cwt., February Rs. 1,530/50 and March Rs. 1,540/60 per candy of 5½ cwts.

TEA VERY STRONG

(Messrs. Forbes, Ewart and Figgis Ltd.)

COCHIN, 15th *January*

There has been no dust sale this week due to holidays; the next dust sale, sale "B" will be held on Monday, 25th January, at 10 a.m. During the week there has been an extremely strong demand and at the sales held in London, Colombo and Calcutta, prices have advanced As. 4 to As. 5 per pound. From the U.K. comes news of an increase in retail prices of 4*d.* per lb.

London Market.—Excited market. Generally 3*d.* to 4*d.* dearer.

Colombo Market.—Very active. High-grown brokens below best generally dearer following quality. Mediums and low-growns advanced 15 to 20 cents.

Calcutta Market—Export.—Excited demand. Prices As. 6 to As. 7 dearer, especially at the bottom.

Dust.—2,100 packages. Very strong demand. Market opened As. 2½ to As. 3 dearer, but strengthened as sale progressed. C.T.C. and Middle East types strongest feature.

Export Quota.—The market advanced sharply at the beginning of the week and business was done up to 48 pies. The present quotation is 52 pies and business has been done at this rate.

Forthcoming auctions.—Sale No. 2 will be held on Tuesday, 19th January. Dust sale "B" will be held on Monday, 25th January, at 10 a.m.

As we go to press, Messrs. Forbes, Ewart and Figgis Ltd., wire:—

"*Sale* 2.—9,32,000 lbs. Very strong general demand for all grades. Prices have advanced As. 4 to As. 5."

JUTE GOODS DECLINE

(From Our Own Correspondent)

CALCUTTA, 19th *January*

Conditions were depressed in all sections of the jute market during the week, and a further decline in prices was recorded. Foreign buyers of jute goods kept out of the market because of the declining trend. Likewise, mills were not interested in making offers. When, therefore, there were no sellers and buyers, it would be pertinent to ask as to how then a decline could occur. The answer is the *fatka* market and the manoeuvres of the speculative elements. A fall in prices of jute goods is indeed to be welcomed since this would increase their competitive capacity *vis-a-vis* that of the Continental mills. However, if this is not accompanied by a proportionate fall in prices of the raw material, as was unfortunately the trend this week, then the increase in the competitive capacity affects the economic functioning of mills. That was why mills this week preferred to refrain from making many offers at the declining prices. Although, however, goods were available to the foreign buyer at low rates, he did not show keen interest, since he always prefers to make purchases when the market is steady or, at any rate, after prices have touched lowest levels and then show signs of an upward movement. Any unusual or abrupt fall in the prices of raw jute is ruled out, as, although the supply position can by no means be considered tight, the availability is less than usual at this part of the year. In view of this, stockists look forward to an upward movement in prices, which, of course, is also ruled out in market circles, as purchases by mills would be cautious in view of the need to keep down prices of manufactured goods. For it is only by such a method the disposal of production of mills can be ensured and a repetition of the marketing problem again this year can be prevented.

Advices from New York were steady, but after the beginning of the year enquiries have not yet become normal. For some time is necessary for the foreign stockist to review his holdings and commitments, before ordering for replenishment. Although actual business was lacking, the feature last Tuesday was the rise in the price of ready 40" 10 oz. hessians to Rs. 45-4 from Rs. 44-6, and that of B. twills to Rs. 105-8 from Rs. 103-4, following speculative manipulations. Subsequently, these rates were more or less maintained, but on Friday hessians at Rs. 45-6 gained 2 annas and, on the other hand, B. twills lost ground to Rs. 104-14. Over the week-end, some business was put through, and yesterday, following covering demand, 40" 10 oz. hessians were better at Rs. 45-12 and B. twills at Rs. 105-6.

In the raw jute market, small business was transacted. Prices were mostly unchanged, but wherever changed, differences were just fractional, depicting the strength of raw jute in spite of the lethargic conditions in the jute goods sections. Thus Pakistani northern bottoms were unaltered at Rs. 29, and middles at Rs. 33. Indian northern

STOCK & SHARE QUOTATIONS

Abbreviations:—D=Deferred shares. P.O.=Preferred Ordinary shares. Y=Accounts published yearly. H=Accounts published half-yearly. P=Company has Preference shares. T=Company has Debentures. N=Nominal quotation. x.d.=Ex-Dividend. c.d.=Cum. Dividend. i=Interim Dividend. f=Dividend for first half of the year.

Shares:—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery, and all other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends.—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year, they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly, dividends shown are for their financial year. Where, however, the accounts are closed half-yearly, dividends are shown separately for the respective half-years.

* Including bonus. ‡ Sales and amount written off. (h) Investments. † For ten months ended 31st December 1951.

(j) Made up of an interim dividend of Rs. 1-12 per share on 1,20,000 shares and final dividend of Rs. 1-10 per share on 2,40,000 shares of which 1,20,000 shares are bonus shares.

* The following explanatory notes relate to the abbreviations and marks shown on page 148 in the debentures. section:—

B Option to repay on six months' notice, on any interest due after 31st December, 1951, at 102 per cent. Also redeemable out of a cumulative sinking fund of 1½ per cent. per annum (commencing in 1938) by drawings at 102 per cent. or by purchase at or 102 per cent.

(c) Option of repayment at any time at 3 per cent. premium.

(b) Bearer bonds of Rs. 1,000 each repayable at par.

(c) Bearer bonds of Rs. 1,000 each repayable on 31st July, 1959.

(d) Bearer bonds of Rs. 1 000 each with option of redemption in whole or in part at par on 30th June, 1952 or on any subsequent interest date at one month's notice.

(e Returnable on or after 31st July, 1950, at Rs. 102-8 or at par after 31st July, 1955 on six months' notice in each case.

(f) Bearer bonds of Rs. 1,000 each with option of redeeming on 3 months' notice at ½ per cent. premium after 1st March, 1954, but before 1st March, 1957, and 1 per cent. premium on or after 1st March 1957.

(g) Option of redemption on or after 1st July, 1949, at par.

(h) Option of repayment at any time at par at any time on or after 30th June 1947 on six months notice

MARKET GOSSIP

(Concluded from page 103)

entire industry as comprised in the Federation were brought into the survey, inasmuch as the representative units have already been included in the present investigation. The Federation adds :

"It will be seen that the survey confirms the views of the President of the Federation which he expressed while presiding at its last general meeting, held in Bombay, last month, namely, 'where any success has been lately achieved (in raising capital), it is certainly due to the persistence of the confidence of habit amongst the investing public, coupled with an element of anticipation that Government would soon accept the strength of the industry's case for raising the rate of return.' Should events prove this 'anticipation' to have been wrong, then even the most favourably placed undertakings can be expected shortly to find that they have reached the point of impasse for the future."

MARKET REPORTS

(Concluded from page 137)

bottoms changed hands at Rs. 28-8, but Assam bottoms at Rs. 28 were lower by As. 8. *Bimli* f.a.q bottoms at Rs. 25, as were *tungli* bottoms at Rs. 25. On the other hand, Murshidabad bottoms declined to Rs. 25-8 from Rs. 26, and Orissa bottoms to Rs. 29 from Rs. 29-8.

SUGAR QUIET TO STEADY

(From Our Own Correspondent)

HAPUR, 19th *January*

Crystal sugar markets remained quiet to steady during the week under review. The sentiment at the ports was comparatively quieter, as the supplies position was satisfactory due to recurring imports. In the upcountry markets, traders complained of lack of stocks owing to railway loading difficulties.

In Uttar Pradesh and Bihar, the sugar industry is faced with serious trouble. The U.P. *Hind Kisan Panchayat* has been agitating for an increase in the sugarcane price from Re. 1-12 per maund. It has appealed to the peasants to stop supplying sugarcane to the mills from tomorrow if their demand was not met by the State Government.

The sugar import policy of the Government of India is on the anvil these days. Total imports last year came to 250,000 tons. The only indication given by the Centre so far has been that imports would not be halted so long as sugar shortage continued. So far, imports have been on Government's own account, but there are rumours that they may be handed over to private traders now. Domestic production has seemingly been given priority in distribution these days and imported stuff has been mostly confined to the ports and South India.

Local mill delivery quotations (per maund) are: Simchauli Rs. 30-12, Iaswant Rs. 30-12, Amroha Rs. 30-4, Bijnor Rs. 30-4, Sehora Rs. 30, Mansoorpur Rs. 31-12, Rohana Rs. 32 and Rampur Rs. 33.

The *gur* markets remained quietly steady with prices wavering within a narrow range. Lower prices attracted enlarged enquiry. There was slight increase in the market arrivals following the clearing of weather after the recent rains, but they were still below normal. There was good enquiry from importing areas.

Despatches from the local station were fairly good, but Meerut and Musaffarnagar complained of lack of similar facility. Although allotment for a larger number of wagons were received, actually few were made available for loading. Stocks have, therefore, accumulated there. Rajasthan has been an active buyer of *gur* at Hapur. Saurashtra and Madhya Bharat also drew some quantity. Meerut and Musaffarnagar had good enquiry from West Bengal and Assam which normally drew substantial quantities from Ankapalli during this part of the season. It is reported that arrivals of *gur* at Ankapalli this year are insufficient to meet the needs.

Pansera *gur* at Hapur is quoted at Rs. 15-3 and Balti at Rs. 16 per maund. Daily arrivals average 3,000 maunds. Local stocks are estimated at 20,000 maunds.

Forward trading in *gur* is being carried on in almost all surplus *gur* assembling markets of West Uttar Pradesh, Meerut, Musaffarnagar and Hapur in particular. Prices in the local market moved erratically on speculative manipulations stimulated by activities in the ready section. *Gur* fagan at Hapur is presently quoted at Rs. 15-7 per maund. The highest and the lowest levels touched during the week were Rs. 16-12 and Rs. 14-15½, respectively.

FOOD POSITION VERY SATISFACTORY

(From Our Own Correspondent)

HAPUR, 19th *January*

The overall food position in the country continued to be very satisfactory, although prices in most of the markets were well maintained. The Union Food Minister, Mr. R. A. Kidwai, has indicated that there will not be any need in future to import foodgrains from abroad. According to him, rice will be decontrolled after the Centre builds up a reserve stock of 1.5 million tons. The only thing preventing the decontrol of wheat is shortage of wagons. The Deputy Food Minister has stated that about 1.2 million tons of rice have been declared surplus by some of the States for the current year and this should be more than sufficient to meet the demands of the deficit States such as Bombay, Travancore-Cochin, Madras and West Bengal. If the price were favourable, the Centre may import some quantity of rice from Burma and Thailand to build up its reserve.

Free trading in coarse grains has been resumed in some of the States and will start in Bombay from the 21st inst. The actual movements of stocks from the surplus to the needy areas has, however not yet gathered any tempo. Nevertheless, the difference in prices between the despatching and the receiving markets is gradually narrowing down. There has been a general rise in wheat prices throughout North India resulting from transport bottleneck. The Central and the State Governments have taken note of this and steps are being taken to arrest the trend. The Punjab Government has decided to start distribution of wheat and *atta* in the non-rationed rural areas also. Similar steps have also been taken by the P.E.P.S.U. Government and fair price shops have been opened in all important towns. It is reliably understood that the Union Food Minister has persuaded the U.P. Government to reduce the price of wheat to Rs. 15-8 per maund in the near future. The Centre has already allowed the sale of imported wheat from Central storage depots directly to licensed dealers in West Bengal and Orissa without any quantitative limits. The Delhi State Government has decided to increase the quantity of wheat and *atta* from 9 ozs. to 12 ozs. for an adult per day. This has been done as a preliminary to the removal of all quantitative restrictions on all foodgrains obtained from ration depots and with a view to easing the food position in the State.

The supply position in regard to millets, maize, *juwar* and *bajra* is likely to improve in the needy areas very shortly, when movements of coarse grains outside Rajasthan gather momentum. It is learned that large stocks of millets purchased by traders from a number of States are awaiting transport. Despite moderate arrivals, coarse grain prices at Delhi remained firm and some of the quantity was re-exported from here to the needy markets in the country. The exporting centres are now diverting their supplies to far-off places in the South where prices are reported to be slightly higher. The movement of gram and its products from any place in Bihar to any other place outside the State within the Union of India is now free.

Current quotations (per maund) in the local market are: Wheat Rs. 17-8 to Rs. 19; gram Rs. 14-8; barley Rs. 11-6; *bejhar* Rs. 11-8; maize Rs. 13-3; *bajra* Rs. 12-4 to Rs. 13; *juwar* Rs. 9-8 to Rs. 11 and white Rs. 12-4; *guwar* Rs. 10-8, rice: *basmati* Rs. 30, sela Rs. 26, and coarse Rs. 19 to Rs. 20; peas Rs. 12; *arhar* Rs. 12

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent Who else must sweat and toil and gain but scanty fare."
William Blake

VOL. LXXXVIII. No. 2241 BOMBAY, 30 JANUARY, 1954 PRICE Rs. 1/8

FROM ONE FALSE STEP TO ANOTHER

THE irrational sugar policy adopted by the Government of India has started yielding bitter sweets. The fundamental defect of the Government's policy has been the pampering of sugarcane growers in Uttar Pradesh and Bihar, with the object of getting the peasants' support for the Congress. Two years ago, the Government of India realised that it was high time the consumer's interest was safeguarded. The price of cane was accordingly reduced from Re. 1-12 to Re. 1-5 per maund. But pressure from the U.P. Government forced the Centre to raise the price again, albeit by a fraction, to Re. 1-7 per maund for the current season. At the same time, the Centre stated that the same price would be maintained for the 1954-55 season as well, so that cane growers might know before they planted it. It is common knowledge that, when this upward revision was made in September last, the U.P. interests were not fully satisfied. Like Oliver Twist, they wanted more. The Centre, however, was adamant and refused to budge an inch. On the contrary, Mr. Rafi Ahmed Kidwai, under whose portfolio of Food and Agriculture sugar and sugarcane fall, told us, in reply to our criticism that the consumer had had a raw deal, that, under his revised policy of stabilising the price of sugarcane by announcing the minimum price of cane well in advance of sowing time, he would reduce the price of cane for the 1955-56 season before the commencement of planting for that season. The latest developments reveal that Mr. Kidwai had underestimated the power of U.P. cane growers and that, instead of a downward revision of cane prices, there might well be an upward revision, as we had then feared. The U.P. cane growers seem to have not only the appetite of Oliver Twist but also the tenacity for getting what they want. It would appear that Mr. Kidwai is unable to resist their demand. This is not surprising, because of the inherent defects in his sugar policy. It is again a case of one false step leading to another.

The cane growers in Uttar Pradesh have, in a body, demanded that the so-called minimum price of sugarcane should be raised from Re. 1-7 to Re. 1-12 per maund. They have threatened, through their co-operative marketing federation, to stop supplies of cane to the factories from Monday next (1st February), if their demand is not conceded. In the course of a resolution adopted to this effect a few days ago, the U.P. Sugarcane Growers' Co-operative Federation declared:

> "The Federation had made an appeal to the factories for increasing the price of sugarcane, but the appeal has gone unheeded. Though the fair price of sugar for this season has been determined as Rs. 27 per maund, nowhere is it possible to get sugar at lower than Rs. 30 per maund and, in many places, it is being sold as dear as Rs. 35 per maund. In the last season, too, sugar had been sold at Rs. 35 per maund, while the cane price had been fixed at Re. 1-5 per maund. In this manner, the growers have been deprived of crores of rupees legitimately due to them. The agricultural income-tax, increase in irrigation rates and increase in the prices of day-to-day necessaries, combined with the heavy reduction in cane price, have affected the economy of growers. In order to increase the purchasing power in villages, it is necessary to increase the cane price. It is not possible for the growers to wait any longer. If the increase in cane price is not effected by 31st January, the cane unions would stop supplies to factories from 1st February."

This move of the Federation constitutes a serious threat not only to the economy of the sugar industry in U.P. but to the consumers of sugar all over India, as U.P. accounts for more than 50 per cent. of India's total sugar production. How united the U.P. cane growers are will be evident from the fact that the Federation has a membership of nearly 1.4 million cane growers, representing 272 co-operative unions in the 25 districts of the State. The aggregate quantity of cane supplied by this body to the sugar mills, amounting to about 195 million maunds, forms as much as 91 per cent. of the total cane crushed by the factories.

According to reports published in the Lucknow daily Press, the foregoing demand is the result of agitation fomented by the Praja-Socialist Party, to which even a few Congressmen are said to have extended their support. Whoever might have initiated the movement, the case made out by the cane growers is well-reasoned, logical, in the light of the Government's policy, and no impartial observer can find fault with it. The price of Re. 1-7 per maund is described as the minimum. Mark our words; it is not we who say that it is the minimum, but the Government. If that is the minimum and if on that basis, the fair price for sugar is Rs. 27 per maund, then, when the price of sugar realised by the factories goes above that level and stays at that level for months together with no signs of falling in the foreseeable future, how can one expect the farmer to be satisfied with a price of Re. 1-7 per maund for his produce? The cane growers in U.P. and Bihar are no longer an ignorant lot. They are well organised and led, evidently by persons who are shrewd. They cannot be bluffed. Further, they have all along been pampered by the Party in power and have become the spoilt children of Indian agriculture. Now, the political parties in opposition are apparently trying to win the support of cane growers by adopting the same tactics followed by the Congress, namely, to secure higher and still higher prices for sugarcane. Naturally, the Congress Party cannot sit back with folded hands and see its supporters being won over by its opponents. It has, therefore, got to support the cane growers and it is no wonder that Mr. Kidwai could not resist the pressure and has had to find a compromise in favour of the growers. This is the result of allowing political considerations to influence decisions on purely economic issues.

Even at the time when the minimum price was fixed at Re. 1-7 per maund, the industry, instead of meekly accepting it, ought to have protested against fixing the minimum price at a level which is high enough to be called the maximum. But, strangely enough, some of the sugar manufacturers themselves said that the price of cane should be raised to Re. 1-12, on the score that Re. 1-7 was not adequate to encourage production of more cane. Evidently, they did not have the foresight to envisage what was likely to happen later. They should have realised that, after all, a minimum price is a minimum. It does imply that the farmer can ask for a higher price, if he so chooses and that a factory, too, can offer more, if it wishes to do so. Now the farmer wants more and he justifies that demand by saying that the factories are realising, on the sale of their sugar, much more than what they had accepted as fair price, and further, that the taxes he has to pay have been stepped up. Thus, the logic of his demand is sound. And he has a machinery through which he can make himself felt. The Co-operative Movement has come in quite handy for this purpose. All growers have joined together, because they know now that in unity lies strength. Incidentally, the Co-operative Movement was meant to safeguard the interests of growers, by preventing exploiting manufacturers and middlemen. But, in this case, it is being utilised by growers to fleece the consumer. Herein lies a new danger. One of the grounds on which Mr. Kidwai refused to abolish the minimum price for cane was his impression that cane growers were weak and would not be able to resist the attempts of factories to beat down the price of cane. It would now appear that he was very much mistaken.

The sugar factory owners, for their part, can argue that there is no ceiling on the price of their manufacture, that it is no concern of the cane growers whether they get a higher price or not for their sugar, that they are under no obligation to pay anything more than Re. 1-7 per maund, that just as the cane growers have the right to get together in order to hold a pistol against them, they, too, have the right to unite together and refuse to pay a pie more than the so-called minimum price, and that, since cane growers would not be willing to share the loss, if any, they have no right to ask for a share in the profit. Thus, the tug-of-war between the raw material producer and the processor of such material can go on, to be settled ultimately by the law of strength. Or, alternatively, the cane growers and factory owners may hit upon a mutually agreed solution, according to which each factory may agree to pay a higher price, based on the price it realises on its sugar.

But both the solutions have a drawback, in that they do not take into account the consumer's interest. The first solution may mean loss of production for some days, if not weeks, which may bring about a perceptible short-supply in, and, consequently, higher prices for, sugar. The second solution may mean the producer and the processor of sugarcane combining together and holding the consumer to ransom. The consumer can, of course, be protected against these eventualities by allowing liberal imports of sugar either freely or through State regulation, in case it is felt that unregulated imports of cheap sugar would inflict serious injury on the sugar industry and thereby endanger the long-range interests of the consumer himself.

Current reports have it that, instead of following this course, the Government proposes to

pursue its policy of appeasing the cane grower. Thus, the latest position is that, while the factories in U.P. have refused to yield to the threat of the cane growers, Mr. Kidwai has decided to intervene. While he is unwilling to raise the minimum price of sugarcane, he is trying to evolve a scheme, whereby the cane grower would get a part of the extra price realised by the factories over and above the fair prices. This is undoubtedly a wrong step, in that it ignores the interests of the consumer and may have unhealthy repercussions on the other sectors of our economy, as we shall presently show.

The present embarrassing situation would not have arisen, if the Government's sugar policy had not been a bundle of inconsistencies. Surely, it was wrong on the part of the Government to have retained the price control on sugarcane after having removed the control on the price of sugar. If the Government had the courage to accept the suggestion of this journal, the present impasse in U.P. would probably not have arisen. Our suggestion was that the Government should remove all controls on sugar and sugarcane and regulate sugar prices through imports, as conditions in international markets were (and are even now) favourable for doing so. In order to ensure that free imports did not cause any undue hardship to cane growers and the sugar industry, we suggested that the import duty should be so fixed as to give a reasonable amount of protection to producers of both. The adoption of this policy would pave the way for the development of the sugar industry on sound economic lines. The price of sugarcane, for instance, would be determined on the basis of its quality which, in turn, would eliminate inefficient and uneconomic growing of sugarcane. It is only this policy that can ensure justice to consumers of sugar and prevent waste in the utilisation of the country's natural resources.

An alternative, but less satisfactory, method would be to fix the minimum price of cane at a level which, in a poor country like India, would ensure nothing more than a bare subsistence income to producers and which would leave some scope for prices to be paid according to quality. The object of minimum price it needs to be emphasised here, should not be confused with that of a fair price which would enable the farmer not only to have a decent standard of living but also to set aside something for a rainy day or for spending on luxuries. The minimum price would operate only when a depression sets in. In normal times, the actual price realised would be well above the minimum, such being determined by the quality of cane and other economic factors. The chances of excessive growing of sugarcane, and hence of prices declining to the bottom, can be prevented by a broad regulation of the acreage under cane.

As mentioned by us at the outset, the demand of U.P. sugarcane growers is logical, nay, even understandable, having regard to human nature. But that does not mean that the demand is either just or economically desirable. The so-called minimum price of Re. 1-7 is no minimum price but a fancy price. It is not justified either by the quality of sugarcane grown in U.P. and Bihar or by the return available on the competing crops. It provides for a generous return to the grower at the cost of the consumer not only in these two States but also in other States. The rate of Re. 1-7 itself represents an increase of 9.5 per cent. in the price of cane, as compared with that allowed in the 1952-53 season, which has nullified the advantage the consumer derived through the abolition of the special excise duty of Re. 1 per maund of sugar imposed in the past season. If the present demand of sugarcane growers were to be conceded, it would mean a further rise of 21.7 per cent. in the price of cane, or a total increase of 33 per cent. over the 1952-53 season rate, in striking contrast to the generally lower level of prices of other competing agricultural crops. Surely, the sugarcane grower does not deserve this increase. If conceded, it would encourage others to ask for more and amount to giving an inflationary twist to the economic trends in the country which are already tending towards that direction, once again. An increase in the price of cane, either through raising the minimum level or through a share in the extra profit earned by sugar mills, will lead to a rise in the prices of wheat and other foodgrains, thus reviving the vicious spiral of prices and wages chasing each other. Even as it is, the workers in some of the U.P. factories are asking for more wages and additional amenities. If the authorities bow to the growers now, as has been proposed by Mr. Kidwai, they cannot help doing the same to workers.

The solution to the present situation in U.P., therefore, lies in firmly dismissing the demand of growers. The authorities should explain the situation to cane growers and try to persuade them to be content with the present handsome price of Re. 1-7 per maund. If persuasion fails, they should leave the matter to be settled by the factories themselves. But, at the same time, they should import more sugar and sell it at substantially lower prices than now, so that the factories may not be attempted to pay more for cane growers and pass on the incidence to consumers. In fact, the Government should straightaway announce that it will allow further imports of foreign sugar and that such sugar will be sold at a price which will be low enough to compel the factories to mark down their selling prices. Further, the Government should avail itself of this opportunity to announce that the system of minimum prices for cane will not be in force from the next season onwards. Clearly, it is high time the present policy of pampering the sugarcane grower was dropped; we do not see any reason why, of all the agricultural producers, the sugarcane producer alone should receive such favoured treatment as the one he is getting at present. The abolition of the system of minimum price will do him no great harm, for, besides the general expansion that has taken place in the consumption of sugar, the prohibition policy of some of the State Governments provides him a substantial protection against falling prices by assuring an expanding market for gur. Indeed, this protection is so strong that it has now become necessary to provide counter-protection for the consumer of white sugar against excessive price.

PRIVATE ENTERPRISE

FOLLOWING the recent meeting of prominent industrialists in Bombay, called by Mr. H. P. Mody, there is evidence of some hard thinking going on amongst those who participated in these deliberations. Mr. Dharamsey M. Khatau's address to the shareholders at the last annual general meeting of the Associated Cement Companies, Ltd., gave an indication of the present mood and the new spirit that enlivens the thoughts of those associated with the management of industry. Mr. Khatau not only expressed the agony from which private enterprise suffers from being slighted and threatened at every turn, but also gave an indication of the search for lines of constructive contribution to the nation's economic effort by fitting itself in the new industrial set-up, in which the minds of those prominent in the private sector are at present engaged. Some further elucidation as to what was actually discussed and generally accepted at this important gathering in Bombay was forthcoming from Mr. M. R. Masani of the House of Tatas, which obviously has taken a lead in bringing about a new orientation in the attitude of private enterprise, in his speech at the Rotary Club of Hyderabad last week.

Mr. Masani wants accredited spokesmen of enlightened free enterprise to create a congenial climate by coming forward with what he called a Charter or Declaration of Faith, based on a policy of "clean hands" and "nation first," with an avowal of their readiness to live by it in a spirit of trusteeship of wealth, as preached by Mahatma Gandhi throughout his life. Mr. Masani is one of those who took part in the meeting called by Mr. Mody. Specifically welcoming this move on the part of private enterprise to prepare and present its case to the public at large, Mr. Masani says that, if industry were to be protected from further encroachments, it could be secured only by the co-operation of those engaged in industry and the sovereign people. Mr. Masani, in spite of his avowed socialistic leanings and personal affiliation to this school of thought, at least as an intellectual, has no hesitation in admitting that free enterprise is alive and kicking and that it refuses to become an anachronism. On the other hand, he is equally prepared to admit that not everything in this garden is rosy and quotes, in support of this view, Mr. Mody's emphatic denunciation, at the last annual general meeting of the Employers' Federation in Bombay, of those who were out to exploit by every means they could the undertakings of which they had acquired control and his (Mr. Mody's) declaration that good industrialists would have no truck with such people.

Mr. Masani's analysis of the basic facts of the country's industrial life today, if not altogether scientific, is workable and, to that extent, satisfactory. The basic facts include, according to him, first a discontented labour force, which does not understand the wide inequalities it sees, and which, in its keenness to secure a larger slice of the industrial cake, has failed to realise that, unless the size of the cake is first increased, there will be precious little to divide; secondly, the employers, who, being constantly abused by politicians of all parties, have become so sick at heart, at being burdened and shackled as anti-social elements, that their capacity for securing industrial expansion and contributing finance for nation-building activities has been impaired; and, thirdly, the Government, whose policy of mixed economy in the country's interests has led to developments threatening to disturb the delicate balance between the private sector and State enterprise to an extent, where it imperils the very functioning of private enterprise.

Mr. Masani puts two questions as arising from this analysis and tries also to answer them. He first asks whether free enterprise has still got a valued role to play in the future. His answer is, of course, in the affirmative and there can be no difference of opinion with this view. He thinks that the trend of world thought in recent years has been veering away from the dogma of State ownership and management and, in support of this, he points to the results of the general elections in Germany, Japan, the U.S.A., and the United Kingdom, as indicating a swing of the pendulum away from nationalisation. He finds further support for his view from the fact of the Trade Union Congress in Britain, guided by the experience gained so far, having refused to be committed to a fresh advance in this direction. To its detractors here, Mr. Masani pertinently points out the fact that it is the free enterprise that has given this country its present industrial structure and that, even in the last few years, the index of industrial production has been rising steadily.

The second question raised by him is: "If a continuation of the mixed economy is desired, in what way can an appropriate climate be created for its effective functioning?" It is when he attempts to answer this poser that Mr. Masani fumbles and fails to be convincing. His vague, undefined and impracticable panacea of a new approach to the problem in industry on the lines of the *Bhoodan Yagna* movement of Acharya Vinoba Bhave for the solution of the land problem, is, in the first place, not easily applicable in this field—one cannot give away a part of the productive machinery and buildings as an offering—and, secondly, it may not be acceptable to the general body of industrialists and shareholders. At the same time, Mr. Masani's belief that the challenge which faces both the have-nots, whom he calls, in a fit of sentimentalism, the "dispossessed," and those who control the instruments of production can be met, deserves to be supported. But the country, in general, and those elements which today stand apart and frown at each other, in particular, will have to go through some more hard thinking before a reasonable and generally acceptable approach to resolve the present ideological differences is discovered.

Mr. Masani, however, is right in holding that the bold lead taken by Mr. Jayaprakash Narayan, the Socialist leader, in telling the workers in unequivocal terms that they could improve their condition, only if organised labour was prepared to take joint responsibility for increased production, is an encouraging sign and augurs well for the future, as tending to bridge the gulf from the other end. The industrialists have been making sacrifices under pressure or compulsion; they are now in a realistic mood of making more sacrifices and that voluntarily, though not willingly, if they are treated better and allowed enough elbow room in the field of management. Indeed, even today, there are, in the private sector, some who are imbued by a new spirit, which is not confined to profits and incentives alone. If evidence of this is needed, one has only to look up the speech of Mr. J. R. D. Tata, delivered at the last annual meeting of the Tata Iron and Steel Co., Ltd., in which he candidly admitted the necessity for instilling "in the private sector a sense of trusteeship as advocated by Mahatma Gandhi." In such a situation as this, if leaders of the status and standing of Mr. Narayan were to prevail upon workers to be reasonable, to take a long view and be prepared at least to reduce their demands to what industry can bear, if not to make some sacrifice, at the same time helping in building up efficiency and raising production, the wide gaping chasm which keeps them asunder could be filled or bridged. But before this can happen, the Government, too, will have to cast away its fetish of false prestige and give up its pet fads, as well as mere vote-catching legislative activities.

KETTLEWELL BULLEN TRANSFER DEAL NOT APPROVED BY GOVERNMENT

SHARP RISE IN MONEY SUPPLY—RANDALL COMMISSION'S REPORT

THURSDAY, 5 P.M.

THERE has been no fundamental change in the trend of equities since we discussed it in these columns last week. The undertone of all the share markets continues to be strong and values are generally higher than those a week ago. The closing rates are, of course, not the highest for the week, but this is only natural, considering that there has been a substantial increase in recent days. There has been some profit-taking, but the offerings have been easily absorbed. Keen interest is being evinced in cotton textiles, while selective buying is the feature of miscellaneous industrials. Steel shares have, once again, been the cynosure of speculators, with a handsome advance in Indian Irons, which have crossed the limit of Rs. 28. Tata Deferreds have established a new high for recent years by piercing through the level of Rs. 2,100. Tata Ordinaries have caught the fancy of operators and are being well held at Rs. 360, despite sizable profit-taking. It looks as though the investor's idea of yield on this scrip is undergoing a distinct change in the downward direction. Hitherto, a yield of 6 to 6.5 per cent., free of tax, on the shares of T.I.S.Co. was considered to be the safe limit. But now investors and dealers seem to be prepared to be content with a yield of 5.5 to 5 per cent. For this change of attitude, the Conversion scheme is mainly responsible. When the Deferreds go off the list, the speculative risk in Tata Ordinary shares will be greatly reduced, thereby obviating the need for allowing a special margin in the yield for this risk. Although Tata Ordinaries will continue to be a leading counter even after the schemes for conversion and capitalisation of reserves are put through, they will not be so highly vulnerable to speculators' caprices as the Deferreds.

MARKET GOSSIP

• • • •

The bullion and commodity markets also continue to display bullish fervour, though such is not as strong as it was a week or fortnight ago. In bullion, silver has registered a further hardening, while gold is a shade quiet. Among some gain, while gold is a shade quiet. Among commodities, oilseeds are fractionally lower, following profit-taking by a section of bulls. It is too early to say from this development whether this is the beginning of the end of the 2½-month-old upward trend, or a temporary pause, though one would heartily wish that it were the former. There are, however, reports in market circles that a substantial amount of hoarding has been taking place, especially in groundnuts, in expectation of inflation. In cotton, the week has seen further advance in prices. Although, in the futures section, the contract rates are some 90 points below the ceiling, in the ready section, prices of several varieties are very near their ceilings. So far, none of them has touched, much less pierced, the ceiling. Nevertheless, the Textile Commissioner did well in addressing a stern reminder to the market that ceilings were still in force and that contraventions of the Cotton Control Order would be taken serious notice of. This warning has led to a certain measure of caution among operators. It is likely to induce the merchants to sell their cottons at the ceiling prices, as the advantages of holding on to their stocks are practically nothing. While one cannot completely rule out the possibility of dishonest deals taking place above the ceilings, it will not pay, generally speaking, to retain one's holdings in expectation of making something on the sly.

• • • •

In view of the inflationary psychology prevailing in all the markets at present, several readers have written to us asking for an indication of the extent to which money supply has increased in the current busy season. Our calculation shows that between 26th September, 1953 and 15th January, 1954, the last date for which complete figures are available, the total money supply has gone up by Rs. 85.89 crores, as against only Rs. 7.55 crores in the corresponding period of the previous year. A breakdown of this figure reveals that, while the currency with the public has expanded by Rs. 87.19 crores, as against Rs. 24.77 crores, the deposit money has declined by Rs. 1.30 crores, as against Rs. 17.22 crores. It will be noted from these figures that, so far during the current season, the expansion in money supply has been far greater than in the same period of the previous season. This is partly due to decontrol of many commodities and goods and partly due to an increase in Government expenditure. It may be mentioned here that, during the period under review, the Central Government's balances with the Reserve Bank have declined by Rs. 38.66 crores, whereas, in the corresponding period of last year, they had actually increased by Rs. 27.69 crores.

• • • •

While a certain amount of inflation cannot be avoided when a country tries to implement a huge programme for rapid development of its economy, it is easy to exaggerate the inflationary consequences. That India has decided upon deficit financing is well known, but it is rather premature to say what would be the size of this uncovered expenditure. Be that as it may, market men should not indulge in wild guesses. In this connection, they will do well to read with care the observations of Mr. C. D. Deshmukh, made in the course of his addresses at Madras early this week and referred to elsewhere in this issue. It will be noted, therefrom, that Mr. Deshmukh will take all precautions to see that deficit financing is not carried to such an extent or in such a manner as to affect adversely the fundamental structure of the country's economy. Speculators and hoarders should also bear in mind that the Finance Minister may one day come down on them, if they carried their activities too far and made his position uncomfortable. Surely, he is not going to resort to the device of created money merely to help them line their pockets.

• • • •

The Central Government is reported to have denied permission for the sale of a well-known British Managing Agency house of Calcutta, namely, Messrs. Kettlewell Bullen & Co., Ltd., to Indian interests. It would appear that the controlling interest in the Company was publicly offered to Indian buyers, and a certain bid, though not the highest, was accepted by the present management. Now that the Government has acquired powers to approve or reject such a transaction, it is reported to have utilised these powers in order to stop the contemplated sale. In this connection, it may be recalled that the Government issued an Ordinance, in July, 1951, which provided for prior approval by the Government for any change in the controlling interest of a company. It is not clear on what grounds the Government has taken this somewhat unprecedented step. One report has it that the reason given was that the price was too high. Another report has it that the Government insisted that 75 per cent. of the shareholders of the companies, for which Kettlewell Bullens are the managing agents, should also approve of the transaction.

• • • •

The Government's action has caused considerable resentment in the financial Press in London. It is asked whether this action does not run counter to the Government of India's assurances to foreign investors that their capital would be allowed to be repatriated. Again, it is asked whether this does not mean that the Government is prepared to allow a transaction to take place only when the price agrees with its own ideas of a correct price. In any case, since the matter affects all foreign interests in India and raises issues of far-reaching significance to the future of foreign investment in this country, the Government should clarify the position and state the grounds on which the permission for the deal was refused.

• • • •

One possible explanation is that the Government must have taken into account the sorry state of affairs in many a company, the management of which has changed hands in recent years from foreign to Indian. Many instances might be quoted to show how the once well-managed companies have become cesspools of corruption after their ownership passed into Indian hands. What happens in such cases is that a fabulous price is often paid for acquiring interest in the concerned companies. Since it is difficult to get an adequate return on such a large outlay through fair means, the new management is tempted to resort to foul means to get an adequate return. It must be remembered, in this connection, that the change in the ownership of the managing agency firm implies not merely the change in the ownership of that particular firm, but in the management of a host of other concerns for which that firm holds the managing agency. Thus, the change affects the fortunes of lakhs of shareholders of not only the managing agency firm but also those of all the managed companies. The result is that the interests of hundreds of innocent shareholders, not to mention the employees, are jeopardised. Experience has shown that, invariably, these shareholders suffer a loss in the intrinsic value of their holdings and also in the periodical return on their capital. Foreign managing agency firms will, therefore, do well to take care that, when they sell their interests, they do so after making sure that the purchasers are not merely men of resources but also of commercial integrity and experience, who can be expected to maintain the reputation of the companies under their management for efficiency and sound administration. They owe it both to themselves, and to the country of their adoption, to see that the concerns which they have built up with great care and devotion, pass into the hands of really capable and honest men.

• • • •

Among the countries which have recently shown an interest in investing their capital in India, Japan is one. Japan is reported to be seeking a loan of $25 million from the World Bank as a contribution to a proposed expenditure of some $50 million in developing South-East Asia's natural resources. The plan is to increase the output of crude salt, bauxite, iron ore, coking coal and copper ore in the South-East Asian countries; this would lessen Japan's dependence on the dollar area. The mineral output of these countries would be developed with the help of Japanese equipment and technical advice. It is estimated that Japan would then be able to save about $160 to $170 million in its dollar expenditure. Under this plan, Japan will invest $3.3 million in an aggregate development fund of $5.4 million in the Philippines, Siam, Indonesia and India for the development of salt resources. It will provide, under the plan, $5.7 million out of a total investment of $23 million for developing iron ore mines in Hongkong, the Philippines and in Bihar and Orissa. The plan also includes investment of $14 million for the development of coal mines in Formosa and Borneo and $845,000 for development of copper ore mines in the Philippines.

• • • •

Few reports have been awaited with such expectation as the Randall Commission's Report released last week-end. The Commission appointed by the U.S. President, Mr. Eisenhower, in August last, consisted of Presidential nominees and representatives of the Congress. It was authorised to indicate the pattern for American foreign economic policy. It was, indeed, a heavy responsibility, for, apart from the fact that such a policy is as much a political as an economic issue, it involves in the case of the U.S., an acknowledged leader of the free world to-day, questions of deeper international significance. That the Report was awaited with interest should, therefore, occasion little surprise. Whether the Report, now that its contents have been known, was worth waiting for may be a debatable question. It is arguable that some of its significant recommendations embody no novel feature, not known before. Nevertheless, that a Commission of this kind should have made them does add to the significance of the recommendations.

• • • •

Broadly, the Commission's recommendations fall into three groups—agriculture, trade and investment policy, and convertibility of currencies. This is a division made only for the sake of convenience, for it is impossible to contain the effects of any particular recommendation within the confines of any single economic sphere. The Commission's recommendations on American farm policy are in accord with the known predilections of the Republican party, and in line with the President's observations on this policy in his recent "State of the Union" message to the Congress. The Commission thus emphasises that "inflexible" price-support programme, which hold domestic prices above world prices, result in accumulations of surpluses that would otherwise have moved into consumption within the country or abroad. They breed, it is stated, fixed prices, open or concealed export subsidies, import quotas at home and abroad, excessive use of tariffs in the U.S. and in other countries, exchange restrictions and State trading. The Commission, therefore, urges the elimination of these price-support devices "as rapidly as feasible". But any revolutionary departure from price-support progammes, as anyone conversant with American politics knows, is a serious party issue, not to be lightly dealt with. Perhaps, the new flexible price support policy, now recommended by the U.S. President to the Congress, is as far as the Republican Party can be expected to go, without running the serious risk of losing the "farm vote."

• • • •

The Commission is probably conscious that it is treading on controversial ground when it deals with the U.S. tariff policy. Its recommendations steer clear of the plea, made by several non-American countries, for freer trade and a sizable reduction in tariffs, and of the opposition of the ultra-protectionist group in the U.S. to any lowering of the tariff walls. It is a concession to the latter group when the Commission declares that "free trade is not possible under the conditions facing the U.S. today." This view is based upon the consideration that many U.S. tariffs are low—although many are high—and more than half the U.S. imports enter free of duty. Nevertheless, a number of valuable, though cautious, recommendations has been made in the interest of the expansion of world trade. Among those recommendations are proposals to extend the U.S. Reciprocal Trade Agreement programme for at least three years, with presidential authority to reduce any existing tariff rate by as much as five per cent. in each of the years, to relax the so-called "Buy-American" Act to give foreign companies greater facilities in bidding for U.S. contracts and to simplify the U.S. customs procedure. Three other notable recommendations are: (1) the Tariff Commission should be asked to frame proposals for the simplification of commodity definitions and rate structures, (2) the President should be authorised, with or without receiving reciprocal concessions, to reduce tariffs by not more than one-half of the rates in effect in 1945 on products which are not being imported or imported only in negligible quantities; and (3) East-West trade, and trade with China and North Korea should be promoted in so far as it could be done without imperilling security.

• • • •

Although these recommendations will, when implemented, go some way towards enabling the free countries to have a larger volume of trade with the U.S., it must be recognised that they do not constitute a bold policy of freer world trade. Indeed, most countries have now realised that American aid, which did play an important role in the early years of post-war reconstruction, must give place, both in the American and world interest, to facilities for trade. So long as high tariff walls exist in the U.S., the country cannot hope to see an increasing volume of imports, and, therefore, cannot hope to increase its exports of a wide range of goods for which a market must be found. The more responsible section of American opinion has realised that the dollar gap in the rest of the world has cost the U.S. more than $5,000 million a year in foreign aid since the war, and that a reduction in tariffs would lessen the burden on the American taxpayer. Also, unless U.S. imports move, it cannot possibly export more. And, the export trade, at over $12,000 million a year since the war, has become a major outlet for a larger proportion of American industry than at any time previously. Indeed, to many American industries, export trade is vital to their prosperity to a relatively larger extent than it was in former years. "Trade, not aid" is thus a slogan not merely for British or European prosperity but also for the expansion of American economy.

BULLISH TREND PERSISTS IN SHARES

TATA DEFERREDS CROSS RS. 2,100 MARK

(From Our Own Correspondents)

BOMBAY, *28th January*

FOR the third week in succession a strong bullish fervour was sustained on the Stock Exchange, with steels and textiles vying with each other to assume the leadership of the market. Brisk deals were put through in almost all the counters of these two sections and fresh high levels were touched by the scrips under a spell of vigorous speculative buying and frantic short covering. Miscellaneous industrial shares witnessed selective buying and useful gains were recorded by the favoured ones. However, bank and insurance shares lagged behind, while support to public utilities was meagre and patchy.

The buoyancy in the market was kept up by a combination of bullish factors, such as the continued strong advices from the cotton, commodity, and bullion markets, reports of broadening demand for cotton piecegoods in the domestic markets and anticipation of further currency expansion leading to the creation of inflationary tendencies. However, operators were cautious at every bulge and were inclined to book profits. The closing levels were, therefore, below the best levels for the week.

Hectic activity marked the dealings in the steel section. Tata Deferreds opened on a confident note at Rs. 2,086-4, as against the previous week's closing of Rs. 2,077-8, but soon a corrective reaction set in, and the shares reacted to Rs. 2,072-8 early on Saturday. With the resurgence of a buying wave and frantic short-covering the shares crossed the Rs. 2,100-mark to touch a high of Rs. 2,103-12 on Monday this week for the first time after a period of over 2½ years. Although subsequently they dropped to Rs. 2,083-12, once again the upward trend was again resumed and the shares saw a peak of Rs. 2,116-4 today before settling down at Rs. 2,109-12. Tata Ordinaries advanced smartly from Rs. 352-8 to Rs. 361, but closed a shade lower at Rs. 360. Buoyant advices from Calcutta where big blocks of Indian Irons were reported to have passed hands, gave a fillip to trading in these shares. The buying in Indian Irons was based on expectations of imminent increase in steel retention prices. Consequently, the shares forged ahead from Rs. 26-4 to Rs. 28-0½ at the close today.

Textile shares attracted considerable speculative dealings on expectations of higher dividends and favourable outlook for textile mills. Bombay Dyeings were marked up from Rs. 410 to Rs. 423-12, but closed lower at Rs. 418-12. Kohinoors picked up strength from Rs. 309 to Rs. 320-4, but finished at Rs. 319-12. A rise of Rs. 6-4 to Rs. 147-8 was noted in Ahmedabad Advances. Central Indias were noted at Rs. 190, a rise of Rs. 3-8 over the week. Centurys added Rs. 7-12 and closed at Rs. 302-12. Edward Textiles firmed up by Rs. 10 to Rs. 267-8. Finlays rose by Rs. 8 to Rs. 274, Indu Ordinaries by As. 5½ to Rs. 11-14 and Khataus by Rs. 2-8 to Rs. 195. Dawns moved up by Rs. 7 to Rs. 80 and Mysore Spinnings by Rs. 3-12 to Rs. 161-4. New Citys came to the forefront with an advance of Rs. 5-8 to Rs. 180-8. New Greats were comparatively dull at Rs. 174-8. Phœnix shares were wanted Rs. 6-4 higher at Rs. 127-8. Simplex changed hands, Rs. 6 higher, at Rs. 157. Standards showed no variation at Rs. 327-8, while Svadeshis were done Rs. 4 better at Rs. 286. Vishnus were pushed up by Rs. 8-12 to Rs. 152-8. Bradbury made a big rally from Rs. 860 to Rs. 922-8. Sholapurs had buyers upto Rs. 1,700, as against Rs. 1,520 last week.

Bank shares were quiet, the sentiment having been further adversely affected by the cut in dividend of the Central Bank. Central Banks dropped from Rs. 62 to a low of Rs. 57, but recouped to close at Rs. 58-4. Their new shares came down from Rs. 65-12 to Rs. 60 before recovering to Rs. 61. Barodas were, however, a rupee better at Rs. 107-8. Imperial Fully Paids could add no more than Rs. 2-8 before closing at Rs. 1,792-8, while the Contributories were unchanged at Rs. 433. Indias stood at Rs. 154-4. United Commercials were a fraction lower at Rs. 41-12.

A rise of Rs. 13-8 to Rs. 1,376 in Tata Powers was the only feature of trading among public utilities. Tata Hydros were steady at Rs. 136-8. Andhra Valleys were unchanged at Rs. 262-8. Ahmedabad Electrics were down by As. 10 at Rs. 113-12. A similar decline was noted in Bombay Suburbans at Rs. 122-8.

Leading counters in the miscellaneous section also participated in the upward movement, but both the volume of business and rise in prices were not as spectacular as those in steels and textiles. A.C.C. attracted attention on hopes that a satisfactory compromise would be arrived at between the Company and the Government regarding the control of the rehabilitation fund. The shares put on Rs. 2 to Rs. 176. Belapurs were taken up Rs. 4-8 higher at Rs. 258. Bombay Burmahs received moderate support and advanced by Rs. 2-8 to Rs. 388-12. Scindias gained As. 11 to Rs. 16-11 on influential support. Premier Constructions were stagnant at Rs. 118-8. B.I.Cs. were dull at Rs. 8-15½. National Rayons staged a further rally from Rs. 146-12 to Rs. 152 on rumours of handsome dividend, but closed lower at Rs. 149-8 on profit-taking. Phalton Sugars met with selling and dropped Rs. 4 to Rs. 110-8. Tata Chemicals added a fraction to Rs. 11-11 and Tata Oils to Rs. 36-4. Walchandnagars were in demand and rose by Rs. 5 to Rs. 177-8. Wimcos were quiet at Rs. 206-4. Hindustan Motors were in enquiry and as a result moved up to Rs. 6-7.

• • • •

Calcutta Stock Exchange

CALCUTTA, *27th January*

With a striking increase in the volume of business, the Calcutta Stock Exchange commenced trading this week on an extremely cheerful note, which subsequently turned into almost buoyancy. Gains were recorded in all sections but they were only fractional. The main cause for this week's sudden wave of buying, which started first from the "light-weight" counters, was the good outlook for the major industries, which stand to be benefited by the proposed expansion of the Five-year Plan. Buyers were indeed cautious, and this was reflected by the gains being confined to selected counters. Note was taken of the Finance Minister's statement in Madras that the Government could not say how the deficit in finances required for the completion of the Plan would be met. This could either be met by increased taxation or borrowing or external assistance or more savings. However, market circles have noted that resort to the first alternative would only be after the Taxation Enquiry Commission had submitted its report. Evidently, therefore, no major changes in the taxation structure are expected in the forthcoming budget. No doubt, industry has already submitted its case for a reduction on the burdens imposed on it, and market circles hope that the Enquiry Commission, composed as it is, with eminent men well versed in the economic conditions of the country, would weigh the different points of view of industry in India before submitting its recommendations to the Government.

Among textiles, renewed interest was shown in Kesorams, and as a result the rate gained to Rs. 22-2 from Rs. 21. New Victorias were taken at Rs. 1-9. Dunbars touched Rs. 193 and Bengal Nagpurs were better at Rs. 13-5. Jayshrees changed hands at Rs. 4-8.

Coals were steady, and gains were maintained despite profit-taking. At Rs. 25-13 East Indians added As. 7, while Khatras Jherriahs spurted to Rs. 40-8 from Rs. 39-4. Pench Valley improved to Rs. 23-12 from Rs. 23-10, West Jamurias to Rs. 18-13 from Rs. 18-10, and New Beerbhooms to Rs. 18-6 from Rs. 18-3. Talchers were steady at Rs. 3-1 and Burrakurs were wanted at Rs. 8-11. Central Indias were bought at Rs. 6-3 and Raneegunges at Rs. 11-4, as against Rs. 6-9 and Rs. 11 respectively in the previous week.

There were moderate gains in selected jute shares. Howrahs at Rs. 24 were higher by As. 9, and at Rs. 137, Lansdownes gained Rs. 2. Good support was continued to Fort Glosters which were pushed up to Rs. 400 from Rs. 385. Reliances hardened to Rs. 15 from Rs. 14-4, Nuddeas to Rs. 45-8 from Rs. 43-8, and Presidencies to Rs. 5-7 from Rs. 5-5. Gourepores were bought at Rs. 269 ex-div.

Considerable activity centred on Indian Irons in the engineering section. Opening at Rs. 25-15, the rate was consistently pushed up, in active trading, to Rs. 27-6 but gave way to Rs. 27-2 on profit-taking on Friday. There was no lack of buying support on Monday, and it took no time to recover to Rs. 27-9, before closing at Rs. 27-7. Indian Galvanizings continued to attract attention, and realised Rs. 16-7, the improvement this week being by As. 8. Marshalls were steady at Rs. 6-9, Kumardhubis improving to Rs. 8-7 from Rs. 8-4.

In the miscellaneous group, Martin Burns gathered strength to Rs. 20-5, subsequently giving way to Rs. 20-2. Rohtas Industries looked further up at Rs. 11-9. Alkali Chemicals at Rs. 16-4 added Re. 1-8.

Madras Stock Exchange

MADRAS, *26th January*

When almost all the markets in India have been depicting a bullish trend, under the influence of an inflationary psychology, the Madras Stock Exchange can hardly prove an exception. Here too, as in other markets, the sentiment has hardened with most of the scrips recording sizable gains. Among them, textiles and teas have been very prominent. The textile section has been firm. Activity has been broadbased, on continued support. Higher cotton advices and good export demand have been responsible for it. Teas have been in the lead, among the planting scrips, as the outlook for the tea industry is extremely encouraging. There have been repeated and continuous enquiries for tea leaves, especially from the U.K. and the Continent. Rubbers and coffees also have looked up in sympathy with the generally upward trend. The miscellaneous scrips have come to enjoy considerable support.

The market remained closed today, being Republic Day. During the remaining sessions, textile scrips came in for good support, as indicated at the outset. Rajalakshmis shot up from Rs. 83 to Rs. 90-8. Premiers put on Rs. 5 to Rs. 90. Coimbatore Cottons were also higher by a similar amount at Rs. 175.

Teas were the brightest among plantings. Mlamallays firmed up from Rs. 35-8 to Rs. 38-8 and Peermades from Rs. 28 to Rs. 30-4. Haileyburias improved from Rs. 13 to Rs. 16-4 and Emerald Valleys from Rs. 4-6 to Rs. 5. Udayagiris gained As. 6 to Rs. 7-6. Alageswar and Nilgiri teas put on As. 5 each to Re. 1-12 and Rs. 13, respectively.

Rubbers also put on a bright appearance. Rajagiris disclosed a gain of As. 4 at Rs. 11-2 and Be Bes As. 3½ at Rs. 2-7. Anandams and Vaikundams were higher by As. 2 each at Rs. 8-10 and Rs. 16 respectively.

Favourites among the miscellaneous scrips were in considerable demand this week. Thus, Spencers were demanded higher by As. 12 at Rs. 15-12 and Indian Cements by As. 10 at Rs. 16-10. Bangalore Transport was up by As. 8 at Rs. 11-8 ex-right. Mysore Papers advanced from Rs. 15-14 to Rs. 16-4 and Parrys Rs. 4-6 to Rs. 4-9. South Arcot Electrics were up by Rs. 5 at Rs. 100.

MORE BANK PROFITS

A few more scheduled banks in India have published their preliminary results of working during the year ended 31st December, 1953, which show that their profits for the past year, as compared with those for 1952, do not show any variation from the general trend disclosed by the results published in our earlier issues. Prominent among these is the Central Bank of India, the profit of which has suffered the sharpest decline, namely, about 24 per cent. A part of this decline has had to be passed on to the shareholders by cutting the final dividend and, consequently, the total distribution for the year. The list is, however, not altogether devoid of exception, which is provided by the Bank of Maharashtra Ltd., the profit of which is higher, albeit by a small extent, than that for 1952.

Bank of Baroda Ltd.

The preliminary results of working of the Bank of Baroda Ltd., during the year ended 31st December, 1953, show that the profit of the Bank, subject to audit, amounts to Rs. 22,45,006, which, as compared with that for 1952, shows a decline of Rs. 2,63,586. The amount brought in, at Rs. 2,38,382, compares with the corresponding figure of the previous year at Rs. 2,14,790. The provision for taxation has been maintained at Rs. 3,00,000, while the amount transferred to the Bank's investment account has been reduced from Rs. 4,50,000 to Rs. 1,50,000. Bonus to staff has been provided with Rs. 6,00,000, an increase of Rs. 65,000 over that set aside a year ago. The return to shareholders has been maintained at 12 per cent. (including an interim of 5 per cent.) made up of a bonus of 2 per cent. and a dividend of 10 per cent. This is the eighth year in succession that the Bank is paying this dividend. This requires Rs. 12,00,000, leaving a surplus of Rs. 2,33,389 to be carried forward.

Central Bank of India

The net profit of the Central Bank of India Ltd., subject to audit, discloses a contraction of Rs. 24,09,817, that is from Rs. 1,00,60,981 for the year 1952 to Rs. 76,51,364. The amount brought in from the previous year, at Rs. 1,23,014, represents a small drop from the corresponding figure of Rs. 17,65,629 of the previous year. Out of the total sum of Rs. 93,74,378, as against Rs. 1,00,60,981, available for distribution, the interim dividend paid for the half-year ended 30th June, 1953, at the rate of Re. 1-8 per share of Rs. 25, or 6 per cent. (same as in the previous year) absorbed Rs. 18,87,255. Out of the balance, the Directors have set aside Rs. 20,00,000 to the Bank's investments account, a reduction of Rs. 15,00,000 from that provided a year ago; Rs. 6,50,000 for taxation, as compared with Rs. 10,00,000; and Rs. 13,00,000 towards payment of bonus to staff, an increase of Rs. 1,00,000 over the year. The final dividend has been cut from Rs. 2 to Re. 1-8 per share, thus reducing the total distribution for the year from 14 per cent. to 12 per cent., the first cut in the Bank's dividend since 1946. The final dividend requires Rs. 18,87,255, as against Rs. 25,16,340, leaving Rs. 16,49,868 to be carried forward.

United Commercial Bank

To the rank and file of banks which have reported lower profits for the year 1953 is to be added the United Commercial Bank Ltd. The profit, subject to audit, shows a decline of Rs. 5,02,580 to Rs. 23,51,201, or a drop of over 17 per cent. The Directors have reduced the provision for taxes from Rs. 10,00,000 to Rs. 9,50,000 and the allocation to the reserve fund from Rs. 7,50,000 to Rs. 5,00,000. A sum of Rs. 50,000 has been utilised for paying donations to public and charitable purposes, while no appropriation had been made for such purposes in the previous year. Whereas a sum of Rs. 3.74 lakhs had been disbursed as ex-gratia payment to staff in the previous year, nothing has now been provided for the same. The dividend is proposed to be repeated, for the fourth year in succession, at Rs. 2 per share, or 4 per cent. per annum. This will absorb Rs. 8,00,000, leaving to be carried forward Rs. 1,52,320, as against Rs. 1,01,119 brought in.

Bank of Maharashtra

The Bank of Maharashtra Ltd. has earned a profit of Rs. 2,88,858, an increase of Rs. 34,338 over that of Rs. 2,54,520 for 1952. As in the previous year, the profit has been arrived at after writing off loss on sale of investments and providing for payment of bonus to staff. A sum of Rs. 34,156 (as against Rs. 31,654) has been utilised for the former and Rs. 25,000 (Rs. 21,000) for the latter. With the sum of Rs. 58,370 (Rs. 54,850) brought in from the previous year, the distributable sum stands at Rs. 3,47,228, as compared with Rs. 3,09,370. The provision for taxation has been raised from Rs. 1,20,000 to Rs. 1,47,000 and the transfer to the reserve fund from Rs. 51,000 to Rs. 84,000. The dividend has been maintained at 9 per cent. per annum, absorbing Rs. 80,000. These appropriations leave a surplus of Rs. 36,228 to be carried forward to next year.

NEWS IN BRIEF

THE Indian Telephone Industries, Bangalore, manufactured and supplied 40,000 telephone instruments in 1953, as against 25,000 in the previous year.

Coastal shipping recorded an increase of 77,000 tons (G.R.T.) in the first two years of the Five-year Plan. The share of Indian ships in the coastal trade, which was 80 per cent. in 1950-51, reached 100 per cent. in 1952-53.

The Government of India has decided to allow the export of iron and steel scrap up to a total of 65,000 tons in 1954. These include turnings, auto scrap, condemned old and broken machinery parts (not more than five per cent. of which will be cast iron), and sheet cuttings and punchings.

The Standing Committee of the all-India Handloom Board has decided to recommend to the Government of India that interest-free loans should be made available to a limited extent to State Central Weavers' Co-operatives Societies for purchase of handloom fabrics manufactured by primary societies.

The Foreign Operations Administration has allotted to India $25½ million out of the U.S. aid funds for the purchase of 240,000 tons of steel as part of the U.S. Technical Co-operation programme. Steel is to be bought in free world markets outside India and will be used in shipbuilding and repairs, railway car building and various other fields.

Senior flight executives of Air-India international are taking up a coarse of instruction on the Comet at the training school at Hatfield, U.K. They are studying technical and operational details of jet airliners to enable them to prepare plans for the commercial introduction of Comet planes, which the airline has recently ordered for its London-Bombay-Tokyo services.

Another meeting of the Commonwealth countries will be held "a few months" before October to ascertain if any common approach in regard to the future of G.A.T.T. can be evolved, according to the Union Finance Minister. Mr. Deshmukh told newsmen in Madras last week that the question of Imperial Preference did not arise at the Commonwealth Finance Ministers' Conference, but that there was some reference to the future of G.A.T.T., agreements in respect of which were due for renewal next October. It was, therefore, decided at the Conference that the best thing for the Commonwealth countries to do would be to meet a few months before October in order to ascertain if any common approach to the future of G.A.T.T could be evolved.

A few seats for specialised training in soap technology, edible oils, metallurgical engineering, steel foundry and radio servicing are available with the Bombay Regional Office of the Ministry of Education, Government of India, for immediate allotment to graduates or diploma holders in the relevant subjects. The period of training varies from one to two years, during which period the trainees will be paid stipends at the rate of Rs. 150 per month for graduates and Rs. 75 per month for diploma holders. Qualified candidates should apply immediately through the Principals of their colleges to the Assistant Educational Adviser (Technical) to the Government of India, Ministry of Education, Western Regional Office, Manecklee Wadia Building, 129, Bell Lane, Fort, Bombay-1.

The Madras Electric Tramways Co., Ltd. was ordered to be wound-up by the Madras High Court last week, on a petition filed on behalf of the Directors for the winding-up of the Company on the grounds that the Company was unable to pay its debts and it had also ceased to carry on business. The petition was opposed by the Madras Government, on whose behalf it was argued that the present petition was neither by a creditor nor by a contributor, but only by the Directors, and the Directors were not the Company. It was contended by the Government that Directors could not present the petition for the winding-up of the company, unless they were authorised to do so by a special resolution in that behalf. Dismissing the claim of the Government, the Court held that, when the affairs of the Company had come to such a stage that it was unable to pay its debts or could not carry on its business, the only rational thing to do was to wind-up its affairs in an orderly manner and salvage whatever could be salvaged.

A meeting of the Secretaries of the State Departments of Agriculture, held in New Delhi on the 19th inst., discussed the measures that should be taken to increase the consumption of chemical fertilisers in the different States during 1954. The State Governments agreed to distribute increased quantities of fertilisers, the total quantity decided upon for distribution during the year exceeding 400,000 tons. The question of reducing the incidental charges and equalising the railway freight, with a view to making the fertilisers available to the cultivators all over the country at a uniform price, was also considered. It was agreed that immediate steps should be taken to get this expenditure reduced and to fix a uniform price at which the fertilisers could be made available to the cultivators in all the States. The meeting also agreed to have a large number of demonstration centres throughout the country to popularise the use of ammonium sulphate, super-phosphate and other fertilisers.

From Abroad

Japan is seeking a loan of $25 million from the World Bank to finance a part of the country's plan to develop South-East Asia's natural resources.

The output of tea in Indonesia in 1953 amounted to about 75 million lbs., as against 81 million lbs. in 1952 and 103 million lbs. in 1951, according to a firm of tea merchants of Rotterdam. Exports amounted to nearly 63 million lbs., as against 70 million lbs. in 1952 and 88 million lbs. in 1951.

The Egyptian Government has increased the 1953-54 cotton acreage in Upper Egypt from 33 to 37 per cent. of the cultivable area. Acreage in Lower Egypt has been fixed at 30 per cent. The increase has been made because of bigger foreign demand for Egyptian cotton and also to offset the low yield of the crop due to the use of unclean seed which is said to have caused a reduction in output by 10 per cent.

Malaya proposes to seek Indonesia's consent for the establishment of an international rubber buffer stock on the lines of the international tin agreement. If Indonesia agrees to the proposal, a joint demand will be made by the two countries at the third Rubber Study Group Conference to be held in Colombo in May, 1954. The buffer stock proposal was abandoned by the Rubber Study Group Conference in London last October.

In order to meet the cloth shortage in the country, Pakistan has purchased textiles worth £4 million, of which the U.K. has supplied goods of the value of £100,000. Supplies from the U.K. will reach Karachi next month. Textiles of inferior quality worth £3 million have been bought from Japan. The first consignment from Japan will reach Karachi by the end of February. By March, the bulk of the purchases will reach Pakistan for distribution to the Provinces.

The World Bank has agreed to give a loan of £7.8 million (Rs. 104 million) to the Ceylon Government to meet the full foreign exchange cost of the second stage of the latter's hydro-electric scheme. One of the conditions of the loan is said to be that the Ceylon Government will meet the full domestic cost of the project, estimated at about Rs. 45 million. Another condition is that the Ceylon Government should set up a statutory corporation to manage the hydro-electric scheme.

Deposits in Sweden's commercial banks touched an all-time record during the past year, increasing by Kr. 1,481 million or 14 per cent., to Kr. 11,839 million (£816.5 million). The heavy growth of the deposits in the commercial banks reflects the marked change on the money market in the 1417-half of 1953, during which deposits rose by Kr. 1,162 million. This development was due to heavy Government expenditure, largely financed through short-term borrowing in the banks. Loans granted to others than the Government rose by Kr. 240 million to Kr. 9,932 million.

The Canadian Government is considering a proposal to make a broad change in the mechanics of credit control by the Bank of Canada. According to this proposal, the cash ratio which chartered banks should maintain against deposit liabilities will be variable and will be altered by the Bank of Canada, according to circumstances. At present, chartered banks are required to maintain with the Bank of Canada not less than 5 per cent. of their deposit liabilities. The ratio that is usually kept is, however, about 10 per cent. Under the proposed plans, the Bank of Canada will set a minimum ratio of 8 to 12 per cent., the percentage varying according to circumstances.

PERSONAL

MR. K. B. Bhatia, Divisional Commissioner, Planning Commission, has been appointed Planning Adviser to the Government of Nepal under the Colombo Plan.

Mr. J. B. Shah and Mr. M. R. Sanghvi have been elected President and Vice-President, respectively, of the Electric Merchants Association, Bombay, for 1954.

Mr. Madamohan R. Ruia, a prominent business man and industrialist of Bombay, has been re-elected President of the Cotton Buyers' Association, Bombay, for the year 1954. Mr. Jehangir P. Patel has been elected its Vice-President.

Mr. F. C. Badhwar, Chairman of the Indian Railway Board, and Mr. T. P. De Munasinghe, Director of Public Works, Government of Ceylon, have been elected President and Vice-President, respectively, of the E.C.A.F.E. Inland Transport Committee.

Mr. N. Dandekar, of the Scindia Steam Navigation Co., Ltd., has been elected President of the Indian National Steamship Owners' Association for the current year. The other office-bearers of the Association are: *Vice-President*: Mr. Pratapsinh S. Vallabhdas (Malabar Steamship Co., Ltd.); *Hon. Treasurer*: Mr. Vasant J. Sheth (Great Eastern Shipping Co., Ltd.); *Honorary Secretary*: Mr. S. N. Haji (Scindia Steam Navigation Co., Ltd.); *Members of the Committee*: Mr. Bijoy Prasad Singh Roy (India Steamship Co., Ltd., Calcutta); Mr. G. T. Kamdar (Bharat Line Ltd.); Mr. N. H. Dhunjibhoy (South East Asia Shipping Co., Ltd.); Mr. M. G. Kapadia (Merchant Steam Navigation Co., Ltd.) and Mr. S. Gill (Gill Amin & Co., Ltd.).

Mr. K. G. Milne, Vice-Chairman and Managing Director of the Managing Agency House of Killick Industries Ltd., has been elected Vice-President of the Bombay Chamber of Commerce for the year 1954-55. Mr. Milne has been intimately connected with the electric supply industry for more than 20 years, and for the last three years has been President of the Federation of Electricity Undertakings of India. He is also a Councillor of the Association of Electrical Undertakings, Bombay. In his capacity as Managing Director of Killick Industries Ltd., he is the *ex-officio* Chairman of the Ahmedabad, Surat and Bombay Suburban Electricity Companies. His other business activities include the chairmanship of the Central Provinces Railways Co., Ltd. and directorships of the Associated Cement Cos., Ltd. and the Kohinoor Mills Co., Ltd.

"COMMERCE" 1929

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, *26th January*

India Becoming Air-minded

The time is, therefore, very opportune for civil aviation to "take off" from Indian soil and boom into the great highway of aerial progress. Next month, the Karachi Aero Club hopes to start instructing its members in flying; and the Bombay Aero Club has already started. Two of the latest "Moths" with Gipsy engines are now at the Juhu Coast Aerodrome 12 miles from Bombay), and the Club has much influential support, both European and Indian, under the Chairmanship of Sir Victor Sassoon. The new Governor of Bombay, Sir Frederick Sykes, was formerly Director-General of Civil Aviation in England, so that Bombay's efforts to become "air-minded" should certainly not lack official sympathy. The Bombay Club assumes that it will take only 12 hours' flying on an average for a prospective pilot to obtain a licence; so that quite a number of trained pilots should be produced before the break of the monsoon next June turns the Juhu Aerodrome into a sea of mud, and renders flying impossible. Little imagination is needed to envisage the tremendous benefit the future development of air transport will bring to the vast "continent" of India. The flat plains of the Punjab, the United Provinces, and the Deccan, provide easy landing grounds, though the difficulty with regard to cities, such as Karachi, Bombay and Calcutta, is that the landing grounds so far used are too far away from the centres of these places. It is not improbable that in many parts of India an aeroplane for a civil official will supplant the method of transport in use for many hundreds of years—the elephant.

AN IMPORTANT ANNOUNCEMENT.

LAW OF INCOME-TAX IN INDIA

by V. S. SUNDARAM (*late of I.A. & A.S.*)

SEVENTH EDITION

This book of a class by itself and familiar to those concerned with income-tax matters as a comprehensive and dependable book of reference of unique value, has not been available for some years. The last edition was issued in 1947. The author has brought the book up-to-date and re-arranged and re-written the book extensively. The forthcoming edition will therefore be found even more valuable than the previous editions.

PROSPECTS FOR TEA FAIR

THAT the position of the tea industry has latterly improved in terms of prices realised is common knowledge by now. But that it has also improved in some other directions is evident from the observations made by Mr. S. H. Davies, Chairman, Indian Tea Association, in the course of his address at the annual meeting of the Dooars Branch of the Association on the 21st inst. According to him, supply of coal to the Dooars tea gardens has been very satisfactory. The gardens have saved considerably in freight by moving a much lower proportion of the coal by the river-cum-rail route, and, in addition, the loss in transit has been much lower. Anxiety over food supplies has been almost entirely absent during 1953, although the State Government has continued to charge more than the rate at which the Centre provided the grain in certain areas. There has also been no increase in rations but supplies have been regular.

The tea gardens in the Dooars area, however, still seem to be suffering from frequent labour troubles sponsored by irresponsible agitators who are misrepresenting the managements' policies, pursued in the true interests of the shareholders, the State, and the employees themselves. Mr. Davies' remarks in this context are noteworthy. He stated: "Not all the labour leaders are so irresponsible, and labour's interests will be better served when labour turn more to those who do not demand the impossible and who work genuinely in the interests of labour." He was glad to note that the cut in wages which the tea gardens had effected only in the last resort in 1952 had been restored. He justified the cut as being the lesser evil than the alternative of closing down the gardens.

The outlook for tea industry, according to Mr. Davies, appears to be fair, provided both Governments and labour base their expectations, on an average of 1952 and 1953, and not only on the 1953 results. Time should be given to the industry for recovering from the effects of the recent depression. For the gardens have to repay bank overdrafts and replenish reserves, in order to safeguard them against another crisis. Again, the factories also have to be improved and machinery replaced, if they have to raise the standard of manufacture. There is also the need to intensify the replanting programmes and provide for loss of revenue, while the replanted areas are out of bearing. All this can be achieved, Mr. Davies says, provided the gardens are not pressed too hard by the Government and labour for costly amenities to the latter. There is also the need to avoid growing bad quality tea and in excess of demand—the two factors which, in fact, were responsible for the crisis of 1952.

OUTLOOK FOR ART SILK

A note of optimism about the "definitely" bright outlook for the art silk industry in India was struck by Mr. Murarji J. Vaidya, Vice-Chairman of the Silk and Art Silk Mills' Association Ltd., in the course of a talk which he gave in Bombay on Thursday last week. For two important reasons, this note of optimism assumes more than ordinary significance. First, it was been struck by a person who has several years of intimate knowledge of the conditions of the industry. Secondly, Mr. Murarji has based the note on his personal impressions about the art silk industry and trade in the Middle and Far Eastern countries gathered during his recent visit to those countries.

Mr. Vaidya emphasised, in particular, the need for eradicating internal competition, on the one hand, between the silk and art silk mills and, on the other, among the art silk mills themselves. He also urged the need for improving the quality of the indigenous product by the adoption of scientific and technological processes of manufacture. How important is this aspect will be evident from the remarkable progress made by the other leading silk goods producing countries, especially Japan and Italy. According to Mr. Vaidya, Japan and Italy are bringing out new types of rayon yarns which are cheap as well as durable. Italy, for instance, is now producing a new type of art silk yarn—perlon yarn—manufactured out of castor oil (imported from India). Japan is producing scrimped yarn which has the appearance of woollen yarn. The remarkable progress of the art silk industry in these two countries has been rendered possible by technical advancement and general scientific outlook.

An important suggestion which Mr. Vaidya put forward relates to the establishment of a joint corporation of all the art silk mills, "with a view to improving their present lot." In the absence of more details regarding the suggestion, it is rather difficult to say whether it can be implemented with success.

Discussing the export prospects for Indian art silk goods, Mr. Vaidya felt that they were not bleak, provided prices were reduced and quality maintained. He urged the Government, in this connection, to grant a rebate of the import duty on foreign yarn used for the manufacture of cloth meant for export. Apart from the consideration that an industry's raw materials should not be made to carry heavy fiscal burdens, Mr. Vaidya's plea deserves special consideration, in view of the fact that art silk fabrics have now become an important earner of foreign exchange. Even the Government of India has conceded his aspect, as witness its withdrawal of the drawback on imported cotton and other raw materials used in the production of cloth meant for export. The issue would be automatically solved, if the Government were to treat the imported art silk yarn as a raw material used in the manufacture of art silk woven goods.

ANOTHER AWARD AGAINST BOMBAY COTTON MILLS

The Bombay Industrial Court has decided that the workers of the cotton mills, which were closed for certain days during 1951-52 on account of power shortage, should be paid compensation for the loss of wages they sustained. The dispute, arising from the workers' claim for compensation, was referred to the Court by the Government of Bombay. It may be recalled that the failure of the monsoon in 1951 led to a cut in power supply to the mills. It was then decided that the mills should work on five days of eight hours each instead of six days; there was thus an extra day of closure in addition to Sunday. This arrangement lasted between 1st November, 1951 and 13th July, 1952. The maximum number of days on which some mills were closed was 38. Several mills, however, did not cut down the normal working period, for they met the power cut either by economy in the consumption of electricity or by installing their own generating sets or both. The question of compensation for loss of wage refers only to the workers in the mills which were compelled, by the cut in power supply, to reduce their working week.

The mills denied the workers' claim for compensation on two main grounds. In the first place, they held that any claim for compensation would be contrary to Standing Order 16, which states that a company cannot be held liable for compensation for loss of working arising out of a "fire, catastrophe, breakdown of machinery or stoppage of power supply, epidemic, civil commotion or other cause, beyond the control of the company." Secondly, they relied on a precedent, the well known case, *Digambar Ramachandra* vs. *Khandesh Spinning and Weaving Mills Co., Ltd.*, where the Bombay High Court held that the "Industrial Court had no jurisdiction to determine a liability outside the standing orders and give relief on moral and humanitarian considerations."

The Industrial Court has, in the present case, turned down both these contentions. The Court states that Standing Order 16 cannot apply to the present case, inasmuch as it refers only to the stoppage of power supply, which "cannot be foreseen and which puts the mills out of action." Legal experts are bound to differ among themselves on the question whether such an interpretation could be put on the Standing Order. The closure of the mills, in the present instance, the Court stated, is not due to a "catastrophe" but is in the nature of a "planned closure." The Court has further held, in effect that the High Court's judgment in the Khandesh Mills' case cannot apply to the present case since the subsequent amendment to the Bombay Industrial Relations Act empowers an Industrial Court to decide a dispute involving the application and interpretation and the propriety and legality, of standing orders.

Having turned down the mills' argument, the Court upheld the claim of the workers for compensation. The Court has decided that the workers are entitled to compensation at the rate of 50 per cent. of the wages and dearness allowance they would have drawn but for such closure. In the case of piece-workers, the daily wages and dearness allowance will be determined by the average of wages and dearness allowance earned by them in the month in which the closure took place. *Badli* workers, who have completed six months' continuous service preceding the dates of the closure, will also be entitled to compensation.

The award raises some important issues of social justice, legal obligations and economic effects. In deciding this award, the Court took into account the "present-day concept of social justice", as revealed in the Industrial Disputes (Amendment) Act, 1953, which provides for compensation to workers for loss of wages through the closure of factory on account of shortage of coal, power or raw materials. The Court has also drawn attention to the fact that the Bombay High Court, which decided the Khandesh Mills' case in favour of the Mills, recommended the payment of wages on "compassionate grounds." It is not clear, in the present case, whether the workers' claim for compensation rested on compassionate or legal grounds.

In this connection, it must be said, to the credit of the Bombay mills, that they did carry on negotiations with workers' representatives for the settlement of the dispute without prejudice to their contention that no legal liability was involved. The award, however, rejects this contention. In effect, it means that the mills are liable to pay compensation for involuntary closure—a liability which now forms part of the Industrial Disputes (Amendment) Act. Since the award sets aside, at least apparently, the legal sanctity of standing orders, it is possible that it may be a prelude to more litigation. Incidentally, this serves to emphasise how difficult it is to legislate and to interpret the growing mass of labour legislation in the country.

The economic burden imposed on the mills by the award, though not onerous, is by no means light. It will involve more than one crore of rupees for the mills which are now engaged in paying to the workers the bonus for 1952 to the tune of Rs. 1.43 crores. It must be remembered that the mills have also spent several lakhs of rupees in installing generating sets, though this new equipment is a valuable addition to their block. Be that as it may, in giving this award, the Court stated that most of the mills had "good reserve" while it could not be "disputed" that the workers did not get a "living wage." Now, it is arguable that the reserves should be considered in relation to the enormous cost of replacement, and that the question whether the workers have a living wage or not should be settled in relation to the level of wages in other industries and occupations and to the industry's level of earnings. Judged by these standards neither the mills' reserves could be considered high nor the workers' wages low. At any rate, as the mills' profit position had already been examined in connection with the bonus award, the new award of compensation constitutes a fresh burden on them. To this extent, the mills are entitled to claim that the expenditure on account of this compensation should be set off against the profit on which subsequent bonuses might be awarded.

CONDITIONS OF SERVICE OF WORKERS

Much interest attaches to the forthcoming fifth meeting of the Joint Consultative Board of Industry and Labour to be held at New Delhi on 4th and 5th February, 1954. It will discuss, among others, the suggestions to amend the present law relating to alterations in conditions of service of workers during the pendency of conciliation or adjudication proceedings. The findings of the Board on this question will carry much weight and the tripartite character of this Board will ensure that decisions arrived at there will form the basis for any possible changes in the Centre's labour policy.

Section 33 of the Industrial Disputes Act, 1947, as amended in 1950, and section 22 of the Industrial Disputes (Appellate Tribunal) Act, 1950, deal with alterations in conditions of service during the pendency of conciliation or adjudication proceedings. Section 33 of the Industrial Disputes Act, 1947, as amended in 1950, provides that "during the pendency of any conciliation proceedings or proceedings before a Tribunal in respect of any industrial dispute, no employer shall (*a*) alter, to the prejudice of the workmen concerned in such dispute, the conditions of service applicable to them immediately before the commencement of such proceedings, or (*b*) discharge or punish, whether by dismissal or otherwise, any workman concerned in such dispute, save with the express permission in writing of the Conciliation Officer, Board or Tribunal, as the case may be."

Similar provisions are contained in the Industrial Disputes (Appellate Tribunal) Act, 1950 (*vide* section 22). Briefly, these provisions require that, in every case of discharge or dismissal or other punishment, the employer should seek the prior permission of the Conciliation Officer, Board or Tribunal, even for misconduct not connected with the dispute constituting the subject matter of the proceedings.

There is no doubt that the law, as it stands, has created genuine and serious difficulties to many employers. Since an employee or employees against whom a dispute is pending cannot be got rid of easily even in case of gross misconduct or indiscipline, such as misappropriation or violence, the maintenance of discipline in the factories has become a serious problem. It is true that there might be some unscrupulous employers who, by taking advantage of loopholes, may victimise workers. Consequently, there is a necessity to afford not only reasonable relief to employers, but also provide safeguards against victimisation to workers, particularly office-bearers who are most likely to suffer at the hands of vindictive employers. It may be recalled that this subject was discussed at the twelfth session of the Indian Labour Conference, held in October, 1952. As a result of consultations there and of discussions subsequently among employers' and workers' organisations and State Governments, it is now suggested that the law should be changed.

In the case of workers other than office-bearers of labour unions, there are two alternatives: either to evolve some new procedure or to revert to the original provisions of the Act, as they were before the 1950—amendment to the Act, which permitted employers to take action against workers for misconduct, not connected with the dispute constituting the subject matter of proceedings. The Government's view on this question seems to be that the original provisions would be ineffective in actual practice, as it would lead to victimisation of workers, under the plea that the action taken was for misconduct not connected with the dispute. In such a case, the only remedy available for the workers would be fresh adjudication.

The proposal, now suggested as an alternative, provides that, where an employer wishes to dismiss or discharge or remove a worker during the pendency of proceedings, he should give one month's wage to the worker which might be said to be in lieu of notice and ask him not to attend the factory. There will be no formal suspension of the worker; the employer, however, has simultaneously to file an application before the Conciliation Officer, Board or Tribunal concerned seeking permission to dismiss, discharge or remove the worker. Priority of disposal should be given to such an application. If the authority gives permission eventually, the employer will have no further liability in regard to the worker. If, on the other hand, such permission is refused, the employer will be required to re-employ the worker on payment of wages for the period of the worker's absence after making allowance for the month's wages already paid. The Joint Consultative Board's decision on this proposal will be awaited with interest. It is, however, learned that, generally speaking, the employers have no serious objection to the aforesaid alternative proposal.

WORLD BANK MISSION TO MALAYA

A World Bank Mission is now in the Federation of Malaya, busy conducting a general survey of economic conditions. It plans to remain there for some time. It will visit also the Crown Colony of Singapore.

After the survey, the Mission will submit recommendations designed to assist the Governments of the Federation of Malaya and Singapore in formulating long-term development programmes. The recommendations will relate to priorities for public capital expenditures, the rate at which these expenditures can be undertaken, measures which could increase production, and economic and fiscal administrative policies necessary for the success of the programme.

Addressing the Kanara District Co-operative Field Workers' Conference at Sirsi on the 22nd inst., Mr. M. P. Patil, Minister for Co-operation, Bombay State, stated that the Co-operative Movement had already covered 70 per cent. of the villages and 30 per cent. of the rural population and had achieved the targets set by the Nanavati Committee. He was confident that the Five-year Plan target of covering the entire population of the State would be achieved within the stipulated period. He advised co-operators in Kanara to derive the fullest advantage from the National Extension Service introduced in the district to spread the movement.

OFF THE RECORD

(By "ROVER")

I SUPPOSE it would be a sacrilege to select a text for my weekly sermon from the market place from any source other than the Congress President's address to the open session at Kalyani in East Bengal during the last week-end. For many in this country, what Mr. Jawaharlal Nehru speaks on such occasions has the force of scriptures. I, however, hope it is permissible to illustrate the text with a simple story.

A bright and bold flapper sat on a gate dangling her feet one sunny Sunday afternoon, when she should have been better employed at Sunday school. Her pastor, who happened to be passing by, gently rebuked her for her flightiness.

As if she were completely unaware of the constant challenge her provoking eyes threw to the otherwise placid and unimaginative young men in the village, the maiden demurely told the priest that she longed to be good but the boys won't let her be.

I do not know what retort the worthy man of God made to this damsel or whether he made any.

Like a wise Prime Minister in charge of the destiny of hundreds of millions of his countrymen, Mr. Nehru readily and earnestly agreed that "after the attainment of independence, our urgent task has been to devote ourselves to the economic betterment of our people, to raise their standards of living, to remove the curse of poverty and to promote equality and social justice. The extent to which we succeed or fail in this great task will be the measure of our achievement. That remains, therefore, and will remain, our first duty and concern."

But, having admitted this, he straightaway embarked on piling up excuses after excuses for his utter preoccupation with external affairs and the deaf ears he turned to the call of his countrymen. Like my legendary flapper, Mr. Nehru longs to love his home and work for it, but the wicked world will not let him be. He is possibly not aware that the compulsion driving his soul to stray abroad constantly, lies within his soul itself and within his temperament and not in the siren voice of the world outside India. It is his spirit of intellectual and international adventure which lures him away from the comparatively dull, drab and dreary field of household chores at home, which alone can bring sustenance, comfort and solace to his unhappy countrymen.

In a manner very characteristic of him, Mr. Nehru pleaded in defence that "the world presses in upon us from all directions and we cannot remain unconcerned with what happens elsewhere, more especially in Asia. . . . The geographical position of India in South Asia has throughout history brought her in intimate contact with the other parts of Asia. We cannot ignore or change geography."

It is true that we cannot ignore or change geography. We do not have to. There are others similarly situated as we are geographically. They are also similarly situated as we are in the matter of having just attained freedom from colonial rule. So we should all be naturally more busy building up our own countries and facing the innumerable problems this opportunity has brought in its wake. Apart from size, Ceylon, Burma, Indonesia do not differ from us materially in this respect. It cannot be said that they are shirking their normal international obligations and responsibilities in any manner. But they do not find that the world presses upon them from all directions so much that they cannot attend too their more humble task of national reconstruction.

Not unlike us, these countries and many others farther afield too "stand on the threshold of the atomic age, which knits together the world and makes it one integrated whole for good or ill." But these less ambitious and more modest countries, aware of their pressing internal needs, do not go gallivanting all over the world, on adventures which appear to some as not very far removed from quixotic. Mr. Nehru is, perhaps, not aware that even those who stay at home and try to set and keep their homes in order also serve the world and humanity. Our own problems, mostly economic and industrial, are piling up. Both the population and the number of those in it who cannot find gainful employment are increasing. The problem of poverty and that of the pitiably poor standard of living are no nearer solution today than on the day we assumed control over our own affairs. All these spell as much danger at home to ordered progress, as the constant threat of war, dreaded by Mr. Nehru, constitutes a menace to the well-being of humanity.

Nobody advocates a policy of isolation here. As Mr. Nehru says, we cannot live in isolation. Every time the question has been put, the country has backed, almost with one voice, his policy of non-alignment and dynamic neutrality. He has our full backing in developing friendly relations with all the countries and peoples in the world. But some of us are getting a little nervous at the amount of daily involvement in distant affairs, which our Prime Minister's policy of non-alignment and the dynamic part of his neutrality is bringing us.

Mr. Nehru's concept of neutrality is possibly too dynamic for our slow-moving brains. A neutrality, which instead of leaving us free to pay more attention to our own urgent affairs, keeps our Prime Minister, Governments and people on their toes all the time, is in a sense more disturbing and even destructive than active alignment, which, of course, nobody advocates. We are neutral to find ourselves, to find our feet economically, and to maintain an integrity when we have found it. Instead, we seem to be getting so involved as to feel almost lost in our pursuit of non-alignment.

But apart from this direct outcome of our Prime Minister's unceasing preoccupation with foreign affairs, there are many, especially in the business community, who deplore this tendency in him, which, instead of showing any reduction, is growing, because it leaves little time to him for solving the problems of industry. They are a legion, and one wrong step does not lead to another but to a score of wrong steps. Before any of the old problems are solved, many more new ones are cropping up. Our industrialists, without whose enthusiasm and spirit of enterprise, our economy can neither function in a wholesome manner or expand, are today in a mood of exasperation and desperation. The constant suspicion and abuse to which they have been subjected by his comrades in the party and the Governments have cooled their enthusiasm and maimed their spirit of enterprise.

In any country situated as ours, this would claim the immediate and almost exclusive attention of the head of the Government, especially so when we have reached a critical stage of the Plan and the next two years will make it or mar it. The private sector, however unenlightened and selfish many of its constituents might be, can boast of some who love their country as much as they love profits. In any case, it has a big part to play in the fruitful and successful implementation of the Plan. But in comparison to what is happening in distant Korea or North Africa and more distant Washington and Moscow, this is of little consequence to him. So far he has chosen to leave the economic section, except inasmuch as it affects elections, to his subordinates.

Even today, when things have reached a state of crisis, he has not much time for giving it a close examination or for taking private enterprise into his confidence and winning it over for unstinted co-operation in his Government's efforts for securing economic expansion. No one else can do it, because the Prime Minister is today the Government, the party-in-power and the country. And the Prime Minister would fain put aside any important job related to economic reconstruction within the country, at the entrance of his private secretary with a cable from the United Nations or Pan Mun Jon and Shantinagar in Korea or from any of India's Ambassadors in Cairo, Peking or Paris. These things cannot brook delay and so our most important problems must wait or be relegated to a colleague with a word or two, indicating the lines along which these may be settled. And this goes on day after day and month after month, till one has almost come to regard him as lost to us for our day-to-day affairs, such as, inflation or unemployment.

To my mind this is not a matter of any difference regarding foreign policy between the Prime Minister and the people. It is entirely a matter of emphasis and urgency. By training, temperament, experience and outlook, the Prime Minister has brought himself to a state of mind where it is apt to lay a greater emphasis on world affairs, however distant their effect on our humble economy, than on what is going on inside the country from day-to-day. And along with this emphasis goes urgency. It is not so with the administrative heads of other countries. They give due attention to what is going on in the world but their feet are firmly on the native soil and they view world affairs in the context not of how they will affect the future of humanity and spread of democracy in the world, but in that of the internal situation in the country at any given time.

Mr. Nehru, in the exaltation of his soaring spirit, is apt, on the other hand, to look upon his country's affairs in the light of world events. We are proud of this distinction, which has earned us immense prestige, but our small and circumscribed selves, with our puny struggle for getting half a loaf to satisfy our hunger, a bit of roof to lay our heads down to rest under and a piece of cloth to cover our none too healthy bodies, are bound to feel dissatisfied when the arrears of unsolved problems keep mounting up here, while Mr. Nehru exerts himself all the time to avert a clash between two aggressive giants, deliberately treading on each other's toes or in commiserating with some unfortunate people in Asia or Africa. Perhaps, if we all had a little more food in our stomachs and a little more strength in our bodies, we too might feel inclined to accompany our leader on this highly spiritual enterprise in search of "Peace, Absolute Truth and perfect Social Justice."

I shall illustrate my point by a rough and ready analysis of Mr. Nehru's address to the Kalyani Congress. The Indian National Congress is not the same as the Indian Council of World Affairs. It claims to be a cross-section of the people of this country and to represent them. The country's main problem, from every point of view, is economic. Almost a good half of this address at the very outset was devoted completely to a consideration of our foreign policy, about which, I repeat, there is no difference. It shows, like nothing else, the constant preoccupation of our Prime Minister with world affairs.

When he had hardly begun to touch upon some aspects of our economy and had started speaking in the vaguest of terms about his Government's policy about nationalisation, as if there were no other more specific economic problems apart from the Plan and social ownership of the means of production, he swiftly switched over once again to an enunciation of his views on colonialism which forms part of our foreign policy and which needed no great emphasis, because, here again, the country is entirely with him. And he almost ended his peroration on this note. The disproportionate importance and space given to the international situation and our relations with people abroad made me wonder for a while if Mr. Nehru was not by some subconscious urge addressing not so much hordes of his countrymen but the people of the world over our meek and bent heads.—*All Rights Reserved.*

ECONOMIC RECONSTRUCTION OF INDIA

MR. C. D. DESHMUKH ON MEANS TO DEVELOP RESOURCES

THE Union Finance Minister, Mr. C. D. Deshmukh, covered a wide ground of economic problems in the course of his two speeches at Madras early this week—at the Pachiappa's College and at the Andhra Chamber of Commerce—and made quite a few observations, which indicate, in a broad way, the Government's mind on the economic issues facing the country. He dealt with some of the wider problems of general significance, such as the goal of the Government's economic policy, as well as such urgent and day-to-day commercial issues as sales tax. Although he was, naturally enough, guarded and non-committal in his observations, and provided no cut-and-dried solutions to the problems, he was, at the same time, sufficiently communicative to let the listeners know that the Government was seized of the importance of these issues.

Mr. Deshmukh prefaced his address at the Pachiappa's College by a reference to the immensity of the Indian problem. In terms of human welfare, he said, the Indian problem was a "gigantic problem." Taking only one index, that of national income per head, there were countries whose national income was just 30 times India's. Tracing the history of India's backwardness, he said:

"History has played a considerable part in shaping our destiny. That alas, in the last century or two, has been a history of withdrawal of resources from us, not for our benefit, but for the benefit of someone else. But history has done us greater harm than that, because in that process of what may be historically regarded as exploitation, a system flourished in India which took us away from that classless society which had now been recognised as the objective of our new State. Secondary and tertiary exploitations flourished under foreign rule. Class consciousness increased and I believe that the verdict of history would be that the chief causes of India's decline were the jealousies, intrigues and the struggles for power among the privileged, who were very few as compared with the masses of the population.

"Now like a fairy princess, after a sleep of a thousand years, India has awakened to a dawn of new life with new horizons coming into its ken. The long dark night has ended and the first rays of hope come to us with our Independence. Today for the first time after centuries we are able to see the Indian problems as a whole, as they affect the whole of the country, through Indian eyes. Against this background it is easy to realise the urgency of economic development. But it would be a great mistake if we consider the problem to be merely a statistical one. It is far more than that. It is a psychological problem. Today the pathetic contentment which was part of our fallen state is showing signs of thawing, although luckily for those whose business it is to govern the country, it has not yet turned into sour discontent. The Indian soil is not still acid and the heart of the common man is still sweet. While we are all striving for a decent living. I do not believe we are yet consciously trying to hitch our wagon to the pole star."

India's planners, Mr. Deshmukh said, had to take stock of the country's resources—land, water, ores and men. Except perhaps in manpower, the country's resources were inadequate in "every conceivable respect." Nature, for instance, had not treated the country generously in oil. Since human resources were an important factor on which they could rely and which they had to use, they were "seeking ways and means for finding out projects which are labour intensive and not capital intensive." Again, since the physical resources were limited, the planners had to remember the question of conservation of resources also. He said: "So far as conservation is concerned, I believe that among the long-term problems, the problem of soil erosion is problem No. 1." They were also trying to harness the waters of the rivers for irrigational purposes. The total volume of water that the rivers carried was very considerable indeed. Till recently they were able to make use of only five per cent. of it. Here was a very vast field for development, a field in which they had already acquired a certain amount of expertness as a result of experience. What had been achieved already compared very favourably with all that had been achieved in the endless past. He said: "I feel myself that, within the next ten years, we shall have taken very great strides forward in harnessing our rivers for irrigation, for flood control and for the generation of power."

Created Money

The Government, Mr. Deshmukh said, had to utilise the country's resources to the "optimum extent." He did not think that "finance" need be regarded necessarily as a "limitation." The real limitation was the physical and technological resources that were available or could be available for development purposes. In these circumstances, it was not always easy to determine the size of the Plan. But one could determine the principle on which this size could be fixed and that principle should be "development without inflation but not necessarily development without the creation of money." Mr. Deshmukh expatiated upon this idea at the Andhra Chamber of Commerce. He said: "You have referred to deficit financing. I prefer to call it development by the creation of money without incurring the danger of inflation." He added that as to what limits should be prescribed for created money would be a matter for "current judgment," and no limit could be laid in advance except for a short period. He added:

"In other words, our sights have to be adjusted from time to time and if any modifications are required in the light of changed conditions, those modifications have to be brought about without imperilling the general pattern and content of the plans."

He recognised that there was one danger in deficit financing, namely, that the States would not be very careful about their projects. So long as the States themselves had to find the money for their projects, they would be particular about the economic prospects of their projects. If they received Central assistance, even if that assistance was in the form of loans, there was "danger of loose projects being formulated." He was, however, sure that those who were in charge of the governance of States were conscious of this danger but it was a tendency which had to be guarded against.

Mr. Deshmukh admitted that the Five-year Plan was largely a plan for the public sector. Although they had laid down targets for industry, they had not indicated the means by which those targets could be attained by the private sector. After referring to the complaint that the private sector had been starved of resources for the benefit of the public sector, he said: "I have always held the view that whatever we are abstracting from the common pool is something that will not only develop public utilities but will also provide social capital and provide the foundation on which private industry can develop within the field that might be assigned to it from time to time."

Foreign Aid

Since capital resources were limited, Mr. Deshmukh said that, if a foreigner was prepared to make a contribution to India's development without laying down conditions which are unacceptable to the country, he did not see "any reason why assistance so proferred should not be accepted." In this connection, he referred to India's accumulated sterling balances and said:

"In regard to foreign assistance, it will be recalled that we held a great deal of sterling accumulated during the war, and for the purpose of planning we have assumed that the releases of these balances will be obtained in accordance with agreements arrived at, which now are regarded as satisfactory to both sides. To the extent to which this sterling is convertible into goods on a wider and wider scale, to that extent obviously our interests are likely to be better served. In other words, any move towards multilateral and freer currencies is a move that is of special interest, and will be of special benefit to India. Sterling is one of the most important currencies of the world, and for historical and traditional reasons we are members of the Sterling area. The development of the resources of the Sterling area and the strengthening of its resources are matters of very great importance to us and these were the matters that were discussed at Sydney."

Since the Andhra Chamber of Commerce had drawn the attention of the Finance Minister to the importance of the development of mineral resources in the new State, Mr. Deshmukh referred to this problem and stated that it was a matter which related not only to Andhra but to the whole of India. He pointed out that the value of ores exports had risen from Rs. 4 crores in 1948-49 to Rs. 40 crores in 1952-53. He was sure that the problem was already receiving a "great deal of attention." In this connection, he referred to the discovery of lignite in the South and said:

"So far as the South is concerned, I believe that you are on the eve of a very significant industrial revolution. I refer to the deposits of lignite that are now being explored in one of the districts of the Residuary Madras State. I am told that the quality of the lignite is very good and that most of it can be won by open mines, and that the total available deposits are of the order of 3,000 million tons. If that is so, then I should think that the problems of fuel supply in the South, as well as the ancillary problems of transportation, must be affected to a very significant degree. I hope these early expectations will not be falsified and if they are realised to any appreciable extent I feel sure that industry will seek this cheaper fuel that will be made available in the South."

Sales Tax

Yet another problem, to which the Andhra Chamber of Commerce had referred and on which Mr. Deshmukh made a few notable observations, is sales tax on inter-State trade. He said:

"From the point of view of the States, it is a fact that certain items were escaping taxation because of the confusion in regard to places of delivery and of consumption. We also know that the Constituent Assembly thought it fit to insert the particular explanation, the ruling in regard to which has given rise to these difficulties. It will be recalled that there is another section to that Article 286, which deals directly with Inter-State trade and commerce. It is a somewhat confusing situation that inter-State trade and commerce is referred to directly under the second clause of Article 286 and is referred to indirectly in the first clause of that Article. Confusion is worse confounded by the attempt made in the explanation to define what is inside a State, rather than what is outside a State. I myself think that the original intention was to use the first part of the Article in regard to imports and exports, and the second in regard to inter-State trade and commerce. We are trying to exercise our influence in the direction of moderation, particularly in regard to retrospective taxation, where we have succeeded a great deal, though not cent per cent.

"I am not sure if the particular remedy which has been advocated by the President would be practicable or would be acceptable to the States. I do not really see what great difference it will make to you, for instance, whether the State of consumption collects the tax, or whether the State of origin or location collects the tax. The laws relating to sales tax in a large number of States would have to be studied by the manufacturer. So far as the entertainment of establishment is concerned, I do not believe that there will be any great saving. You will ask 'what is the remedy?'

"If counsels of moderation fail, I should myself think that the remedy then would be two-fold. This is an observation I am making without prejudice, so to say. I am only in a sense reporting to you the present state of our thinking, because there are many matters which are still being studied. The first remedy is to take advantage of the second clause of Article 286, and for Parliament, to define generally and adequately the limits within which the sales or purchase tax can be imposed on transactions entering into inter-State trade and commerce. After we have completed our investigation and taken our decision, it may conceivably take the form of a purchase tax, in which case many of the administrative difficulties, which, at the present moment, are proving so irksome, will naturally disappear. But even in the matter of purchase tax, there are administrative difficulties of another kind which we shall have to face.

"In any case, I am trying to see how a draft of legislation under the second clause of Article 286 would look like, and may be, if we get a draft cut, we shall again consult with the States, and see if

THE

CENTRAL BANK OF INDIA

LIMITED

The Net Profits of the Central Bank of India, Ltd., for the year ended 31st December, 1953, subject to audit, including the sum of Rs. 17,23,014-9-9 brought forward from the previous year's Account, amounted to Rs. 93,74,378-5-2 which the Directors have disposed of as follows:—

The following appropriations have been made:—

	Rs.	a.	p.
An *ad-interim* dividend paid for the half-year ended 30th June, 1953, at the rate of 6 per cent., free of income-tax, i.e., Rs. 1-8 per share on 12,53,170 shares..	18,87,255	0	0
Amount transferred to Bank's Investments	20,00,000	0	0
Amount provided for Taxation..	6,50,000	0	0
Amount provided for Bonus to Staff	13,00,000	0	0
	Rs. 58,37,255	0	0
The balance of Rs. 35,37,123-5-2 the Directors propose to recommend to the Shareholders to dispose of as follows:—			
To pay a final dividend for the half-year ended 31st December, 1953, at the rate of 6 per cent., free of income-tax, i.e., Rs. 1-8 per share on 12,56,170 shares (making in all 12 per cent. per annum for the whole year) ..	18,87,255	0	0
To carry forward to next year's account	16,49,868	5	2
	Rs. 93,74,378	5	2

PAKISTAN NOTES

ECONOMIC TRENDS IN PAKISTAN

DOMESTIC SUPPLY OF GOODS NEEDS TO BE RAISED

AFTER the sharp and all-round deterioration in 1952, Pakistan's economy displayed a certain measure of stability during 1953 both in its external and internal finances. The prices of jute and cotton—Pakistan's principal foreign exchange earners—which had fallen by some 100 per cent. during 1952 showed some steadiness during the year under review and, though still much below the dizzy heights reached in March-April, 1951, were higher as compared to the end-1952 levels. Exports were also moving at a fairly satisfactory rate; the quantity of cotton lifted during the cotton season ended August, 1953, for instance, attained a record level. This, together with a drastic cut in the imports, had a favourable effect on the external payments position of the country. Despite the heavy purchases (till the recent gift of 1 million tons of wheat from the U.S.A.) of foodgrains from abroad necessitated by the famine conditions, Pakistan earned a surplus—albeit modest—of Rs. 7.74 crores in her balance of payments during the first nine months of 1953 for which figures are available. This was a considerable improvement over the record deficit of Rs. 84 crores incurred during the year 1952. It was for the first time after the first half of 1951 that there was a surplus in the balance of payments in January-March, 1953. Government's budgetary position, as evidenced by the level of its balances with the State Bank, also showed less deterioration during the year, its balances going down by only Rs. 7 crores during 1953 (during the 11 months to November), as compared with Rs. 20 crores in 1952.

Interest Rates and the Banking System

The gradual return of the economy towards an equilibrium was very well reflected in the structure of interest rates and the seasonal variations in the Scheduled banks' liabilities and assets which during the year conformed to the usual busy and slack season pattern, as the following figures will bear out:

Scheduled Banks in Pakistan

(In crores of rupees)

	Busy season Sept. 1951-March 1952	*Slack season April-August 1952*	*Busy season Sept. 1952-March 1953*	*Slack season April-August 1953*	*Busy season Sept.-Nov. 1953*
Demand liabilities ..	+ 4	— 6	+ 4	+16	— 7
Cash and balances with State Bank	—10	— 2	+ 2	+11	— 8
Excess of balances with the State Bank over the legal minimum ..	—11	— 1	+ 2	+10	— 8
Advances and bills discounted	+86	—14	+ 1	—10	+ 6
Call money rate (during the period)	2%	2%	2½%	1¾%	1¾%

It will be seen that, in the recent slack season (April-August, 1953), in tune with the decline in business activity, the demand liabilities and cash and balances of the Scheduled banks went up by Rs. 16 crores and Rs. 11 crores, respectively, and their advances fell by Rs. 10 crores, while the call money rate eased to as low as ¼ per cent. With the progress of the busy season from September, the demand liabilities and the cash resources have declined, while advances are going up and the call money rate has tended to harden. At the end of the slack season in 1952, the position of the banking system was much less liquid and conditions in the money market had continued to remain stringent, owing mainly to the failure of exports to move up. Only Rs. 14 crores of the advances had been retired during that slack season, although, in the previous busy season, they had gone up by Rs. 36 crores. The call money rate also continued to rule high at the earlier busy season level of 2 per cent. The demand liabilities, instead of increasing, actually fell by Rs. 6 crores. Because of this distorted pattern, the changes in the following busy season—September, 1952, to March, 1953—also showed a deviation from the normal; demand liabilities went up, while advances practically remained stationary.

Governmental Policy

Unlike in 1952, Governmental policies were much more realistic during 1953 and helped in no uncertain measure to arrest the deterioration in the economy. First, imports were rigorously held in check throughout the year the cut in which was primarily responsible for balancing the external accounts. Secondly, the "price-support" schemes which had prevented a natural adjustment in prices last year were discontinued. Prices were not, therefore, kept up at artificially high levels and, consequently, exports were not affected. As internal incomes were not sustained, the demand for imports was also correspondingly reduced. Finally, the decision to cut down jute acreage drastically was in sharp contrast to the halting and piecemeal steps taken last year which were almost always too little and too late.

While some progress has been made in stabilising the economy, Pakistan is yet far way off from a completely secure position. First, as the following table indicates, a balance has been achieved in the external payments only by the negative method of severely cutting down the imports, especially those on private account:

(In crores of rupees)

	1952	1953 Jan.-Sept.	*Change*
Total receipts ..	191.77	117.14	— 74.63
Commercial imports ..	185.90	61.77	—124.22
Government imports ..	59.19	32.39	— 26.80
Other payments ..	31.49	15.30	— 16.19
Total payments ..	276.66	109.40	—167.26
Surplus/Deficit ..	—84.89	+7.74	

A surplus was secured by reducing the imports by over Rs. 167 crores of which the share of private imports was Rs. 124 crores. Export earnings actually declined by about Rs. 75 crores. This reduction in imports has resulted in an acute shortage of many consumer goods, notably textiles, and has pushed up the prices of many of them by anything between 50 and 100 per cent. The prices of longcloth, e.g., have shot up from Rs. 50 to Rs. 60 per piece at the beginning of 1953 to Rs. 126 per piece in November. This scarcity has also resulted in profiteering, speculation and hoarding of goods on a very large scale. The Government's recent decision to import quickly cloth worth about Rs. 4 crores and also to issue advance licences against the quotas in January-June 1954 period, are pointers to the acute urgency of replenishing supplies of essential consumer goods. Further, the fact that Government has decided to import cloth on its own account and not to entrust it to the trade is sufficient evidence of the degree of profiteering by the traders.

OUR LONDON LETTER

This customary feature of ours is published on page 195 of this issue.—ED.

Moreover, the margin of surplus is still precariously small. Besides, deficits still persist—although on smaller scale—with some of the areas, as will be seen from the table below:

Area-wise Balance of Payments

(In crores of rupees)

	1952	1953 Jan.-Sept.
Dollar area	—13	— 8
Sterling area	—81	—24
O.E.E.C. countries	+ 8	+17
Japan	—17	+20
Rest	+19	+ 3
Total ..	—84	+ 8

The imbalance with the dollar area, in particular, is chronic. Even in the days of record surpluses in 1951, Pakistan had a deficit with the dollar area. The position would have been very serious in the last quarter of the year but for the timely gift of 1 million tons of wheat which has saved Pakistan about Rs. 25 crores in foreign exchange. Finally, the level of the gold, dollar and foreign exchange reserves at about Rs. 67 crores is too low to meet any large-scale deficits in the balance of payments. At the moment, the balance of payments position is too sensitively balanced and much more will have to be achieved to give it sufficient strength and resistance to withstand the impact of the growing demands for development purposes.

Ways and Means Position

Similarly, the improvement in the Government's ways and means position has been only moderate. During the first half of the year, the Central Government balances were almost continuously being run down till they reached a record low of Rs. 16 crores on 12th June, 1953, and it was only the flotation of new loans on 17th June that arrested the fall. In the following three months, the balances were fairly steady at around Rs. 35 to Rs. 40 crores and reached Rs. 44 crores on 18th September, after which, however, they were again on the downward trend, partly perhaps due to transfers to the Provincial Governments, and stood at around Rs. 30 crores towards the end of November. Besides, it has also to be remembered that the contributions of individuals, firms and joint-stock companies to the new loans did not exceed a few lakhs, and the issues were subscribed largely by the Scheduled banks (the State Bank also probably subscribed Rs. 3 to Rs. 4 crores) who presumably had no alternative attractive sources for employing funds in view of the depressed state of the economy and the import cuts. Thus, it was not from the genuine savings of individuals, etc., that the Government's borrowing programme has been supported. The Central Government also has not really repaid the ways and means advance of Rs. 15 crores taken from the State Bank in October, 1952, as it has been merely converted into Treasury Bills.

The prospects of increasing revenues are far from bright, as Pakistan largely depends upon customs duties, and the yield from these in the foreseeable future is likely to be maintained at no more than the 1953-54 levels in view of the shrinkage of both exports and imports. It may be recalled that, during the year 1953-54, customs duties are expected to bring in only Rs. 31.75 crores; this compares with the amount of Rs. 82.20 crores realised in 1951-52. If, therefore, the Government is to look towards a genuine and larger surplus for going ahead with the development plans, it will have to seek economies of expenditure elsewhere, particularly defence and administration, or obtain a large amount of foreign aid.

Another disturbing feature of Pakistan's finances is the increasing recourse of the Provincial Governments to *ways and means* advances from the State Bank. As the Governor of the State Bank recently pointed out in his annual address, these have reached such a high level and have been so persistent that they can no longer be considered as temporary advances to tide over temporary difficulties. These ways and means advances to Provincial Governments like those to the Central Governments add to the level of the money supply in the country and this tendency will have to be curbed, if the inflationary forces are to be kept under control.

Future Prospects

After this review of the present situation, we may now attempt an assessment of the future prospects. As we have already noticed, at present the prices of Pakistan's chief export commodities are competitive and their offtake is also reasonably steady. The quantities of both jute and cotton exported during the year have exceeded those in 1952, although the export earnings have shrunk because of the low prices of both the commodities. In the context of the trends in world prices, the abundance of crops like cotton and the general feeling that some "adjustment" if not a recession is round the corner, it seems extremely unlikely that either the prices or the quantities of exports will pick up appreciably. Accordingly, the current level of export earnings should be regarded as normal. This fact rules out any possibility or need for any devaluation of the Pakistani rupee for the present, as any adjustment of the exchange rate is not likely to bring about any improvement in the total export earnings. On the other hand, by enhancing the internal prices of imports, devaluation will only retard development and also add to the inflationary tendencies. Therefore, with very limited prospects of increasing exports and the fact that imports have already been cut down to a bare minimum, the only long-term solution is to try to increase the internal supply of goods by producing as many of them in the country as possible.

For doing this, the development programme will have to be planned very carefully and it is on the proper handling of the development programme that the future will hang in balance. It would probably be difficult to support many heavy industries and it would be advisable to concentrate more on light industries such as textiles and also on small-scale production units which do not require much additional investment by way of transport facilities, housing, etc., as the heavy industries do. Much also will depend upon the loans and assistance (like the U.S. gift of wheat) which Pakistan will get from foreign countries. If they get it in adequate measure they will be able to finance a reasonably ambitious development programme. Otherwise, they will have to tighten their belts still further.

FINANCING OF INDUSTRIAL DEVELOPMENT

POSITION IN SOME LATIN-AMERICAN COUNTRIES

IN India the need to expand industry for providing employment has prompted an earnest search for new capital. The flow of loanable funds into the capital market has considerably diminished in recent years, especially since independence. The disappearance of the *zamindars* and princes has choked one of the biggest sources of supply of funds. Enforcement of higher wages and larger amenities to industrial workers with poor thrift habits coupled with high level of taxation, has reduced the investible amounts with industrial concerns. Little or limited return of funds from rural areas which have benefited from the high prices for agricultural produce and the resulting diffusion of money incomes have stunted the growth of savings available to capital markets in big cities. The disintegration of the middle class investors caused by inflationary conditions has almost dried up another source of capital. On top of this comes the progressive increase in taxation of incomes of individuals and industries which, too, has contributed to diminish funds available for investment. And last but not least, there has been an increasing tendency on the part of the Government to canalise the flow of surplus funds into its own bonds. The net result has been a great dearth of finance for developing industries in the country. This situation has now led to the appointment of the Shroff Committee which, as stated in previous issues of this journal, has set about collecting data for suggesting measures calculated to augment funds for development of industries, particularly from the banking sector. In this work, it can derive considerable benefit from the article on the financing of industries by credit institutions in Latin America, prepared by the Research Department of the Reserve Bank of India. A review here of this article, which appears in the December 1953 issue of the *Reserve Bank of India Bulletin*, may be useful to all those interested in the problem.

In Latin America, as in other underdeveloped countries such as India, there is a dearth of domestic capital for economic development. Low incomes, insufficient savings, excessive preference for real estate investment and undeveloped capital market have all combined to militate against adequate domestic capital for investment in industries. A study sponsored by the U.N. in 1951 estimated the net domestic savings for entire Latin America at a little over 8 per cent. of national income in 1949. This poor rate of savings in these countries has given rise to the problem of how best they can mobilise domestic private capital for meeting the increasing requirements of expansion in industry and agriculture. The way in which the countries have been tackling the problem makes interesting reading.

General Observations

Before dealing with the position in each of the several countries, namely, Argentina, Mexico, Brazil, Chile, Colombia, Venezuela, Bolivia, Puerto Rico, etc., it will be appropriate to mention here some general observations pertaining to all these countries. In Latin America, as in India, commercial banks are engaged mostly in short-term operations. This is partly due to profitability and safety of these operations and partly to legislation requiring the banks to maintain a certain degree of liquidity. Nevertheless, commercial banks of these countries do extend, either directly or through special official agencies, medium and long-term credit to industry. In certain countries commercial banks are persuaded to perform investment operations to a limited extent. Apart from these banks, in several Latin-American countries, the central banks also aid economic development by providing finance. As agents of Governments, they are intimately concerned with the financing of public enterprises, a fact which is of considerable significance to India. They also provide substantial credits to "Fomento" organisations or specialised industrial or mining credit institutions. These latter institutions, which have been started for the purpose of providing long-term credit to industry, function as autonomous Government agencies. They are engaged in the positive work of organising and financing new industries. They finance, participate in, or establish directly, various types of undertakings that are temporarily not attractive to private capital.

Now to give a brief account of the service rendered by (a) commercial banks, (b) central banks, and (c) Fomento credit organisations in each of the several big Latin States.

In Argentina, the method of industrial financing by commercial banks is different from that in other Latin-American States. The State renovated its credit system under the Banking Reform of 1946. Under this law, the Central Bank was nationalised and was invested with all the functions of carrying out the economic policy of the Government. All deposits with commercial banks are held for account of the Central Bank for which the commercial banks act merely as agents. The Central Bank provides funds for loans through rediscounts, which need not bear any fixed relation to the deposits held by the individual banks. Thus, with its overall control on bank deposits and loans, the Central Bank guides and controls the economic policy and makes funds available to finance industry, or for that matter, the economic plans of the Government. This accounts for the broader bank credit that is provided for industry.

There is no "Fomento" Corporation in Argentina, but, with a view to facilitating industrial financing, a special banking institution—*Banco de Credito Industrial*—was established in 1944. The capital of the Bank, wholly subscribed by Government, was originally fixed at 50 million pesos and was subsequently raised to 100 million pesos. Later, under the Banking Reform of 1946, this Bank became an integral part of the Central Bank. Its total capital was raised again to 155 million pesos consisting of (a) 50 million pesos for long and medium-term operations, (b) 25 million pesos for short-term operations, (c) 50 million pesos for special industrial loans, and (d) 30 million pesos for financing mining development. In 1949, the control of the Bank passed on from the Central Bank to the Ministry of Finance. The Bank works in co-operation with the Argentina Trade Promotion Institute and Banco de la Nacion. During 1951, the Bank granted loans of 4,070 million pesos, as against 2,646 million pesos in 1950.

Mexico

As a rule, there is a traditional aversion among commercial banks in Mexico to long-term financing operations. Specific measures were taken up by the Government to induce the banks to extend long-term credit. Along with raising the minimum capital requirements of commercial banks, they were authorised to grant installation and repair loans for a maximum period of two and five years, respectively. However, with a view to ensuring stability among commercial banks, it was provided that (a) the total of such loans and investment in private securities for terms of over two years should not exceed 20 per cent. of current liabilities, (b) the amount of loan should not exceed 50 per cent. of the real value of the property offered as security or of the capital and reserves of the borrowing institution, and (c) the institution receiving loan should not pay dividends while the loan was outstanding.

For providing long-term credit, the *Nacional Financiera* or the National Industrial Financing Corporation was created in 1933. Half the capital of 100 million pesos is owned by the Mexican Government and the remainder is held by private and official credit institutions. The functions of the *Financiera* are to supervise and regulate the national securities and long-term credit market, to promote investment of capital in the organisation and development of industries of national importance. It has obtained substantial credits from the World Bank. It raises funds for the sale of 3- to 15-year bonds and of certificates valid for an indefinite period.

There are also private finance companies which promote and organise enterprises and participate in the issue and distribution of public and private securities. They grant long- and short-term credit in the form of discounts, direct loans, pledge loans, and installation and repair loans. They grant letters of credit for the purchase of machinery and raw materials, contract public loans extending upto 30 years, and issue finance bonds with specific backing instead of general bonds. The resources of these banks rose from 67 million pesos in 1940 to 980 million pesos in 1948.

Brazil

In Brazil, until recently, there were no investment banks or full-fledged specialised industrial credit institutions. Consequently, private banks combined commercial with investment banking functions. At the end of 1952, of the total loans extended by the commercial banks, excluding loans to official entities, nearly 31 per cent. was for industry.

The Bank of Brazil, a Commercial bank, performs many of the central banking functions. It has a department of agricultural and industrial credit to extend loans to agriculture and industries for periods of one to five years. The Bank is authorised to issue bonds. Its resources also consist of deposits from social security institutions and public utility companies as well as amounts transferred to it from its general funds.

In Brazil, the credit institutions known as mixed industrial corporations are in charge of the publicly planned projects and generally each of them is associated with a specific industry. The bulk of their capital stock is held by the Federal Government. Much of the capital is also subscribed by semi-public institutional investors such as savings banks and social insurance agencies. Some of them receive substantial credit from the U.S. Import-Export Bank.

In 1952, a new investment banking company—*Interamericana de Financiamento e Investmentos*—was created in Brazil. The object of this company is to assist the mobilisation of Brazilian capital for productive purposes and to promote joint Brazilian-American industrial enterprises in Brazil. A part of the capital is subscribed by the Chase National Bank and the International Basic Economy Corporation of U.S.A. In the same year another institution, the National Bank for Economic Development, was started.

Chile

In Chile, on specific occasions, commercial banks have performed investment functions, where adequate guarantees have been furnished. The law does not permit the banks to make loans for terms not exceeding one year. But, in practice, they extend substantial credits to existing enterprises to carry out their normal operations through short-term loans and by the grant of overdrafts up to a certain sum which are renewed for so long that they actually amount to medium loans.

The central bank provides funds to the Industrial Credit Institute, the Mining Credit Bank and other specialised institutions for enabling them to carry out their credit operations.

The most important of the official agencies for the promotion of industrialisation is the Production Development Corporation. It was created in 1939 and, as an industrial development agency, it is intended to exploit the natural resources of the country, to co-ordinate the development of industry with that of mining and agriculture and to attract domestic capital to productive industrial activities. The resources of the Corporation comprise the proceeds of certain specified taxes, realisation from sales of stock participation and the receipt of amortisation, interest and dividend payments from companies. The Corporation is also authorised to borrow both internally and abroad. The Corporation's functions were initially confined to extending credit facilities to new and existing industries. But they now cover the supervision of the entire sphere of industry. Loans are generally extended for a period of three to ten years. As soon as an enterprise proves successful and is able to gain the support of private investors, its shares held by the Corporation will be disposed of in the markets.

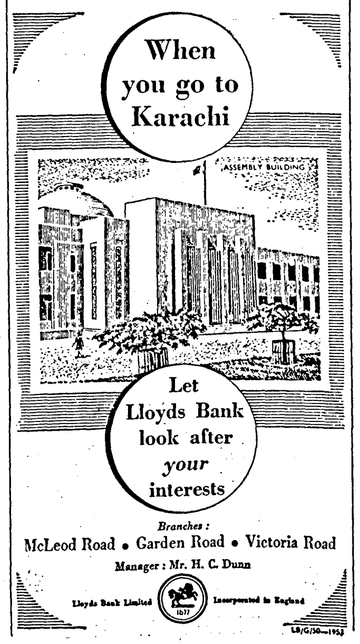
Chile has also an Industrial Credit Institute and a Mining Credit Bank to provide finance for small-scale industrial and mining enterprise. In 1953, the former was merged with the National Savings Bank, the Mortgage Credit Bank and the Agrarian Credit Bank to form a new State Bank, namely, the *Banco del Estado*. This new Bank has an authorised capital of 5 billion pesos and is empowered to borrow from the central bank or to issue bonds for financing development projects. The loan programme of the State Bank includes provision for industrial loans upto a term of 10 years.

Colombia

In Colombia, commercial banks provide ample short-term funds to industry. The banking law, modified in 1950, allows the banks to grant loans with maturities up to five years for the construction or enlargement of works exclusively for economically useful purposes. These loans, which may be re-discounted at the central bank, may not exceed 10 per cent. of a bank's deposits or the total capital and reserves of the bank.

The Bank of Republic is the central bank in Colombia. It was authorised in 1950 to make loans with maturities up to five years to specified industrial enterprises.

The Agricultural, Industrial and Mining Bank, a semi-official agency, provides short- and medium-term loans to agriculture and small industries. In the sphere of industry, the Industrial Development Institute, created by the Government, is entrusted with the development of basic industries and mines in areas not easily accessible to private enterprise. It can establish industries on its own account. The Government participation in developing industries is through this Institute.



SLIGHT EXPANSION IN COTTON MILL INDUSTRY'S CAPACITY

PAID-UP CAPITAL HIGHER BY RS. 2.68 CRORES

THE report of the Cotton Textile Enquiry Committee and the Government of India's decisions thereon are being awaited with considerable interest by both the textile industry and the trade, not to speak of the consumer of textiles. The interest is quite natural, since the future pattern of development of the cotton textile industry would probably be on the lines recommended by the Committee. In this context, the need for having a clear picture of the latest position regarding the size and composition of the mill sector of the industry assumes special significance. For the fulfilment of this need, one has only to refer to the customary annual Mill Statement (priced at Rs. 5 each) of the Millowners' Association, Bombay. The latest edition of this Statement relates to the cotton year ended 31st August, 1953, just published.

According to the aforesaid Statement, the number of spindles and looms in existence as at the end of August, 1953, was higher at 11,721,139 and 207,250, as against 11,427,034 and 208,786, respectively, a year before. It will thus be seen that, over the year, the number of spindles has gone up by 294,105 and that of looms by 3,464. The number of mills, too, has gone up from 453 to 457. The following table shows at a glance the progress of the industry in the past two years:

	As on 31st August		
	1951	1952	1953
Total No. of mills	445	453	457
No. of mills in course of erection ..	26	22	17
No. of mills idle	20	19	20
Paid-up capital (in crores of Rs.)	103.89	106.93	109.61
Spindles installed	11,240,635	11,427,034	11,721,139
Spindles working	9,794,260	10,104,719	10,592,112
Looms installed	201,484	203,786	207,250
Looms working	183,045	187,282	188,606
Cotton consumption (in bales of 392 lbs.)	3,637,154	4,132,632	4,419,702
No. of hands employed (day shift)	425,032	432,588	435,138

As will be seen from the above figures, the increase in the number of mills in 1952-53 was only four, as against eight in 1951-52 and 20 in 1950-51. This fall is understandable, in view of the fact that no new mills are allowed to be started and the increase that has taken place merely represents the completion of mills that had already been under erection. The latter had been planned before India obtained independence. Following the increase in the number of completed mills, the number of mills in course of erection and/or registered at the end of August, 1953, was smaller at 17, as against 22 a year before. The paid-up capital of the industry has gone up by Rs. 2.68 crores to Rs. 109.61 crores. Practically the whole of this increase represents capitalisation of reserves, as no new capital was issued to our knowledge. Despite the increase of one in the number of idle mills, the number of hands employed in day shift alone has risen from 432,588 to 435,138. This is evidently due to the increase in the number of spindles and looms actually working.

A Comparison

It will be interesting to compare, in this connection, the position of spindles and looms installed and operating in India with that in some of the leading textile manufacturing countries of the world. This is done in the following table; the figures relating to the foreign countries refer to the end of 1952:

(Spindles in millions; looms in thousands)

	Spindles		Looms	
	Installed	Working	Installed	Working
U.K.	27.23	21.10	350	230
U.S.	23.08	22.14*	899	829
India	11.72	10.29	207	189
Japan	7.46	6.87	290	156
Germany	7.16	N.A.	141	120
Italy	5.78	5.10	138	112

*1951. N.A.—Not available.

These figures show that, next to the U.K. and the U.S., India possesses the largest number of spindles in the world. As regards looms, though the number installed is smaller than in Japan, the number actually working is larger. The aggregate world cotton spindles and looms as at the end of July, 1952, stood at 129 million and 2.73 million, respectively.

A study of the progress of the cotton mill industry during 1952-53, as compared with that in the previous year, discloses that the number of mills in the State of Bombay declined from 212 to 211, but spindles and looms installed rose from 6,362,451 and 135,251 to 6,506,959 and 136,093, respectively. The number of idle mills in the Bombay State rose by three to 10, with the result that half of the total number of idle mills in the Indian Union was accounted for by this State. In the case of Madras and West Bengal, the number of mills increased by three and two to 93 and 38, respectively. Similarly, spindles installed in these States moved up from 1,968,590 and 469,830 to 2,034,864 and 505,944. Looms installed also were higher, being 9,195, and 10,427 as against 8,520 and 9,862. The number of mills in all the other States remained unaltered. The spindles installed, however, were larger in all the States, except Madhya Pradesh, which recorded a slight decline. With regard to looms installed, all the States, with the exception of Travancore-Cochin, recorded an improvement.

Although there was an expansion in the number of spindles and looms employed, such was well below that in the total installed capacity. Thus, as against a rise of 294,105 in spindles installed, the spindles actually working moved up by only 187,393. The experience in regard to looms also was the same. Whereas the number of looms installed advanced by 3,464, that of looms working was higher by no more than 1,324. This shows that the utilisation of the available productive capacity was not as high as it could have been, considering the growth that had taken place in the size of the industry.

Reflecting the rise in the spindles and looms working and the absence of any major labour strike, the production of cloth and yarn showed an impressive improvement. The quantity of cloth and yarn actually produced during the year ended August, 1953, was 4,902 million yards and 1,507 million lbs., as compared with 4,358 million yards and 1,389 million lbs., respectively, a year before.

An indication of the marked rise in the production of cotton textiles in the mills is also provided by the increase in the quantity of cotton consumed, which, during 1952-53, amounted to 4.42 million bales (of 392 lbs. net each), as against 4.13 million bales in 1951-52.

Pattern of Distribution

The statement below indicates the pattern of distribution of cotton textile mills in the different areas as on 31st August, 1953:

Situation	No. of mills	Spindles installed	Looms installed	Average number of hands employed
Bombay—				
Bombay City and Island.	65	3,017,049	65,628	113,429
Ahmedabad	74	2,035,710	42,578	71,833
Saurashtra ..	11	167,000	3,639	7,335
Other States	61	1,286,540	24,248	49,873
Total Bombay State.	211	6,506,959	136,093	242,466
Madras	93	2,034,864	9,195	56,578
W. Bengal	38	505,944	10,427	22,657
U.P.	29	811,428	13,231	27,034
Madhya Bharat and Bhopal	18	445,402	11,383	22,199
Madhya Pradesh	11	367,822	7,265	18,071
Rajasthan, Ajmer and P.E.P.S.U. ..	12	109,494	3,877	6,140
Punjab	11	213,232	5,132	6,820
Mysore	11	223,199	3,084	12,356
Travancore-Cochin ..	10	133,503	716	3,506
Hyderabad	7	150,704	3,244	7,699
Bihar and Orissa	8	79,699	1,011	2,296
Pondicherry	3	81,812	1,992	5,419
Grand Total ..	457*	11,721,139	207,250	435,138

* This number does not include 17 mills which have either been registered and/or are in course of erection.

It will be seen from these figures that Bombay State occupies the pride of place on the textile map of India. This State accounts, for instance, for as much as 54.4 per cent. of Indian aggregate spindleage and 65.7 per cent. of loomage, although its share in the number of mills is less than 47 per cent. This clearly reveals two striking features. First, the average size of cotton mills in Bombay is larger than that in the other States. Secondly, the mills are well-balanced composite units. It is no wonder, therefore, that Bombay accounts for the largest production of woven goods in India. Next in importance to this State is Madras, the share of which in the country's aggregate spindles and looms is of the order of 17.7 per cent. and 4.4 per cent., respectively. The growth of the cotton mill industry in the State of Madras thus shows a significant tendency towards the formation of single process (spinning) units. West Bengal and Uttar Pradesh also figure prominently on the textile map.

WOOLLEN INDUSTRY

The Central Government's decision to reduce the import quota for the current half-year period in respect of woollen fabrics from 25 per cent. to 12½ per cent. and of shady woollen goods from 40 per cent. to 25 per cent. has prompted the affected interests in the import trade to protest against the Government's policy. At a conference, recently organised by the Bombay Woollen Piecegoods Merchants' Association, a resolution was adopted stating that there was an acute scarcity of cheap qualities of woollen fabrics in the country and that imports in the past had not affected adversely the domestic woollen industry which already enjoys tariff protection. The prices of woollen goods, according to some spokesmen of the trade, have gone up by about 15-20 per cent. as a result of the reduction of the import quota. The woollen manufacturers, who stand to benefit by the reduction in the import quota, however, point out that there has been no rise whatever in the prices of woollen goods in the Indian market. Indeed, they would be happy if they could successfully dispose of all their stocks at the prices which prevailed in November-December, 1953, because in recent weeks, which generally constitute the busiest season for the industry, trading conditions have been dull and turnover has not been encouraging. They deny that there is any likelihood of the emergence of shortages in the woollen piecegoods market. Even if any shortage were to arise, such could, in fact, be more than met by the mills, it is stated. It would appear that the mills have been working only one shift, and some of them even less than a shift. If the ban on imports leads to an increase in demand, the industry has sufficient capacity to meet the needs of the internal market. The industry produced 18.5 million lbs. in 1950, 17.7 million lbs. in 1951, 16 million lbs. in 1952 and about 12.3 million lbs. in the first nine months of 1953. The woollen industry had 116,800 spindles at the end of 1950-51. Since then, 10,000 spindles have been installed, and licences for another 21,000 spindles have been issued. All this addition to the industry's capacity means an additional production of 5 million lbs. (both yarn and cloth), as against the average imports of only two million lbs. in the last two years. It is, therefore, evident that the industry is certainly capable of meeting the internal demand for woollen goods. But the traders' protest, irrational and needlessly panicky as it is, will nevertheless have served at least a good purpose, if it spurs the industry to further its efforts towards meeting the consumers' needs, both in price and quality.

EXPORT PROMOTION COUNCIL FOR COTTON TEXTILES

All available information shows that the Cotton Textiles Export Promotion Council will be constituted in about a month's time. The recommendations pertaining to the constitution of this Council, made by the *Ad Hoc* Working Committee at its meeting held in Bombay recently, are under the active consideration of the Central Government. If these recommendations were to be accepted in full, the formation of the Council would be on the following lines:

The Council will consist of the members of the *Ad Hoc* Committee with such additions as the Government may subsequently make in consultation with the Working Committee to be established for the purpose of running the organisation. The duration of the first Council will be one year from the date of constitution. It will be for this Council to decide upon the subsequent set-up. It will meet at least once in every three months.

The Council will be entrusted with the task of conducting market studies in individual markets on an *ad hoc* basis, including the sending out of missions, as has been done by the U.K. Cotton Board. The other functions cover: (1) appointment of representatives in important markets who will have to report continuously on prices, market preferences, reception accorded to actual deliveries of Indian textiles, etc.; (2) appointment of correspondents in markets which are rather less important; (3) continuous propaganda and promotion drives as in the case of jute, tea, etc.; (4) collection of statistics and dissemination of information relating to export trade in cotton textiles; and (5) laying down of standards of quality and setting up of, or in liaison with, an organisation which may be established for the inspection of exports.

The finance for the work of the Council is to be met from the Cotton Textiles Fund. According to tentative estimates drawn up, the financial requirements for the operation of the Council in the first year will amount to Rs. 5 lakhs.

MILLOWNERS ASSOCIATION'S DEPUTY CHAIRMAN

Mr. Neville N. Wadia, chief of the Bombay Dyeing and Manufacturing Company, Ltd., and Chairman of the Millowners' Association, Bombay, for 1953, has been elected its Deputy Chairman for 1954. Mr. Wadia became a member of the Committee of the Association 19 years ago and has held the office of Deputy Chairman four times in the past. A prominent industrialist of Bombay, Mr. Wadia is an active spectator of the cotton mill industry and is connected with various committees appointed by the Government. He is also Chairman of the Cotton Advisory Board. Mr. Wadia was a member of the Indian Delegation to the International Textile Conference which was held at Buxton (England) in September, 1952.

BONUS FOR BOMBAY'S TEXTILE LABOUR

All the workers of 40 cotton textile mills in Bombay City, which were directed to pay bonus under an award issued by the Industrial Court last month, received payment on the 25th inst., despite the propaganda by the *Rashtriya Mill Mazdoor Sangh* and the Red Flag Union against its acceptance. The Industrial Court had awarded a bonus equivalent to 15 per cent. of the basic wages earned by these workers in 1952.

Both the Millowners' Association and the *Rashtriya Mill Mazdoor Sangh* have appealed against this decision to the Labour Appellate Tribunal.

KEEN COMPETITION FROM JAPAN ANTICIPATED

SHORTAGE OF COTTON SUPPLIES FEARED

(From A Special Correspondent)

MANCHESTER, 19*th January*

OUTPUT of yarn by the Lancashire cotton spinning industry last year was over 181,000,000 lbs. higher than in 1952, according to the Cotton Board. The mills produced a total of 952,510,000 lbs. of cotton and rayon yarn in the 53 weeks ended 2nd January, 1954, as compared with 770,670,000 lbs. in the 52 weeks of the previous year when the recession severely curtailed production.

MANCHESTER LETTER

The following table shows the experience of the spinning industry in the final 17 weeks of 1953, together with the corresponding output of yarn in the previous year and the rate of recruitment:

Week ended	Yarn production (000's lbs.)		Recruitment	
	1953	1952	1953	1952
September 5	20,020	14,230	+659	+103
,, 12	19,770	15,040	+121	+417
,, 19	18,670	15,000	+ 85	+382
,, 26	19,450	15,550	+193	+323
October 3	20,220	16,310	+151	+337
,, 10	20,350	16,710	+152	+312
,, 17	20,310	16,780	+212	+223
,, 24	20,290	16,980	+176	+212
,, 31	20,380	16,940	+189	+214
November 7	20,620	17,390	+ 68	+239
,, 14	20,670	17,540	+ 73	+439
,, 21	20,660	17,620	+ 85	+368
,, 28	20,690	17,560	+ 95	+370
December 5	20,840	17,490	+171	+344
,, 12	20,820	17,740	+ 98	+255
,, 19	20,860	17,810	— 87	— 75
,, 26	16,420	10,400	—285	— 97

Gains recorded in securing new labour for the mills were not as encouraging at the end of last year as they were in 1952 when manpower was flowing back after the earlier exodus. In the final four months of 1953, the improvement was almost 2,000 full-time operatives and a further 1,000 part-timers, whereas, in 1952, the spinning industry recruited an extra 4,600 full-time operatives.

Fresh Labour

Recruitment experts have a difficult task ahead of them. The initial impetus of the return to the mills has largely spent itself and much depends on conditions during the next few months as to whether fresh labour is obtained in sufficient quantities to offset inevitable wastage.

In the opinion of at least one trade leader, the labour force "may now well be at its peak level." This was the view expressed by Mr. W. T. Winterbottom, Chairman of the Yarn Section of the Manchester Chamber of Commerce, in his annual report. "It is not possible at present to see what further expansion in yarn output is likely," he said, "but, with the present difficulties in recruitment of labour, it must be slow."

Sectional reports issued at this time of the year by the Manchester Chamber of Commerce usually follow a similar pattern based on the experience of the textile industries during the previous 12 months. On this occasion, the reviews can afford to be rather more optimistic than they were a year ago, and the tale told is a more encouraging one.

Underlying all the surveys of those sections which cater primarily for manufacturers and exporters of cotton goods, however, is the threat of latent competition from Japan. This "looking-over-the-shoulder" attitude is a characteristic of Lancashire men, who suffered so severely from Japanese inroads on their markets before the last war. It is a state of mind not easily banished.

One of the biggest setbacks for Lancashire export trade last year was the heavy decline in shipments to Pakistan. From a total of more than 42,000,000 yards in 1952, exports last year shrank to little more than 2,500,000 yards. Mr. Frank S. Winterbottom, Chairman of the India Section, spoke of the "very considerable disadvantage" under which Lancashire traders laboured because of the agreement between Pakistan and Japan linking imports of 100,000,000 yards of Japanese textiles with the provision of some 650,000 bales of Pakistan cotton.

Whether the newly-created Lancashire-Pakistan Cotton Committee will be able to make headway in some form of mutual trading arrangements has yet to be discovered. Certainly, no effort should be spared to open the way for some two-way plan to stimulate Lancashire trade with this large potential consuming area. India, herself a net exporter of cotton textiles, would seem to be no longer a likely market for Lancashire goods, and trade in this direction must inevitably be infinitesimal as compared with the palmy days of the past.

Empire Trade Threatened

Japanese competition is by no means confined to countries outside the British Commonwealth. The Dominions section of the Chamber has referred to the concern felt by the increased opportunities given to Japan to expand export trade with Australia in a wide variety of textiles. Representations have been made to the appropriate authorities in an effort to safeguard the interests of British exporters. Mr. Frank H. Beckett, Chairman of the section, says: "We are naturally anxious that conditions should not be allowed to develop which will plunge the trade into unbridled competition with Japan in the market."

Far Eastern rivalry has also made itself felt in trade with South Africa. Imports of cotton cloth from Japan increased considerably during the past year, aggregating more than 20,600,000 square yards in the first half of 1953, as against 9,400,000 yards for the whole of 1952. Only in Africa, where the import restrictions on Japanese goods have been maintained, is the picture brighter. According to the Africa Section of the Chamber, Lancashire exporters have taken advantage of the increased trade possibilities afforded by the continuance of import restrictions on Japanese textiles by the authorities in Nigeria and the Gold Coast. Assurances have been given that supplies will be readily available for the needs of these particular colonies. As a result, orders for about 120,000,000 yards of cloth have been secured which might otherwise have gone to Japan.

In East Africa, although advantage has also been taken of the more favourable position caused by the virtual embargo on Japanese cloth, there is anxiety among Lancashire shippers over future prospects. "Much concern is felt lest the shortage of sterling by Japan may influence the Government to open wider the doors to Japan, thus largely nullifying the good results achieved by the Lancashire mission to East Africa," declares the sectional report.

Raw Cotton Supplies

Because they believe that shortages of certain grades of raw cotton will halt production in Lancashire mills when the State-sponsored buying of the mills' raw material ends in August, the union leaders of 150,000 spinning workers have tabled a claim on employers for a pay protection pact. They want pay packets guaranteed, should a situation arise in which lack of raw cotton throws spinning machines idle. The claim—put forward by the Cardroom Workers' Amalgamation and the Operative Spinners' Amalgamation—will be the subject of a joint meeting with leaders of the Federation of Master Cotton Spinners' Associations in Manchester this week. Mr. Alfred Roberts, General Secretary of the Cardroom Amalgamation, said that the unions had made specific demands to the employers. Union leaders, he said, felt "pretty certain" shortages of cotton would occur.

Union advocates of State-sponsored buying of raw cotton for Lancashire's 450 spinning mills have claimed that stocks built up by private merchants in readiness for the take-over will not be sufficient to keep the mills running. Hinting recently in his report to 20,000 mule spinners that the unions might seek special safeguards, Mr. Charles Schofield, of Bolton, General Secretary of the Operative Spinners' Amalgamation, and a part-time member of the Raw Cotton Commission, said that there had been no evidence forthcoming that merchants would build up stocks in the future. "Fair warning is now given that, in the event of unemployment arising, a most serious view will be taken," he declared.

A "Gamble"—Or Not?

Reopening the Liverpool Futures Market and winding-up the Raw Cotton Commission is a "colossal gamble" which could easily lead to unemployment in Lancashire mill towns through shortage of supplies, Mr. Alfred Roberts, General Secretary of the Cardroom Workers' Amalgamation, declared this week. In a report to the union's 50,000 members, Mr. Roberts said that, before the war, Liverpool carried a stock of 1,000,000 bales of every variety of cotton, but there was little likelihood of brokers and merchants carrying a tenth of that now. "Whatever criticism has been made of the Raw Cotton Commission, it is an unchallengeable fact that, throughout its existence, even with severe

(*Continued on page* 181)

COTTON ECONOMY IN ASIAN COUNTRIES

PRODUCTION MOVES UP IN POST-WAR YEARS

RAW cotton continues to play an important role in the economy of the Asian countries, notably of India, Pakistan, China and Japan. The cotton economy of each of these countries has certain distinguishing features. Thus, India is at once a leading producer, consumer and importer of cotton. Pakistan is a producer and exporter. China is a producer and consumer of cotton. Japan, as is well known, is a leading consumer and importer of this commodity. Again, the economy of these countries has undergone some notable changes in recent years. Thus, Pakistan is beginning to rank as a consumer of cotton. Japan, which lost temporarily its position as one of the world's leading importers of cotton, thanks to the damage its textile industry suffered in the last war, is again coming into its own. In this connection, in the interesting analysis of the cotton economy of the Asian countries, which appears in the U.N. Report, entitled *A Study of Trade between Asia and Europe*, will be read with interest.

Before the First World War, the output of cotton in India (undivided) and China accounted for about 24 per cent. of the world total output. In the inter-war years, production in both India and China expanded more rapidly than did world production and by 1934-38, their share advanced to 27 per cent. In the post-war years, production has been on a much reduced scale. This is because the war-time and post-war need for food production, especially in India, limited the resources available for the expansion of cotton production. In China, production was adversely affected by the unsettled political conditions which prevailed in that country. The net effect of these factors, the Report points out, was that cotton production in Asia in 1948-49 was at its lowest ebb in 40 years and accounted for only 17 per cent. of the world total. The following table shows the changes in the cotton output of these countries in the pre-war, inter-war and post-war years:

World Output of Cotton

(In 000 tons)

	(1) *India*	(2) *Pakistan*	(3) *China*	(4) *Total of (1), (2) and (3)*	*World total*
1909-13 ..	780*	..	330	1,110	4,670
1924-28 ..	1,010*	..	550	1,560	5,810
1934-38 ..	1,150*	..	630	1,780	6,620
1946-47 ..	770*	..	420	1,190	4,670
1947-48 ..	570	195	495	1,230	5,480
1948-49 ..	435	175	460	1,070	6,280
1949-50 ..	520	220	370	1,110	6,760
1950-51 ..	595	265	520	1,380	6,030
1951-52 ..	645	250	675	1,570	7,470

* Undivided India.

Since then there has been, as the table will show, considerable recovery in cotton output. India expanded its acreage under cotton. In Pakistan, the yields of cotton have shown a significant improvement. So far as China is concerned, the Report says: "Little is known about the conditions governing the Chinese crop, except that economic incentives to planting have been greatly increased and production is reported to have increased very fast." By 1951-52, those three major cotton producers in Asia had reached a substantially larger volume of cotton output, and were together responsible for 21 per cent. of the world production of cotton, as against 27 per cent. in 1934-38.

Changes in Export Trade

Some changes have taken place in these countries' export trade too. Thus, China was, in pre-war years, an exporter of cotton, albeit on a variable scale and mostly to Japan. The Report says that China may again be an exporter of cotton, if the upward trend in cotton production continues. Pakistan now provides the major part of the Far East's exportable supply. With the major cotton-exporting areas of the Indian Sub-continent falling to Pakistan and the chief manufacturing centres to India, cotton is Pakistan's most valuable export commodity, representing as much as one-half of the total export trade. India, as is well known, has ceased to be an important exporter of cotton. Summing up the position of the E.C.A.F.E. region, the Report says: "The E.C.A.F.E. region as a whole is, and already was before the war, a net importer of cotton. This is due to the large volume of Japanese consumption requirements, all of which have to be imported, and to the import requirements of the Indian industry normally for longer staples."

In the Asian countries, the consumption of cotton went up steadily in the years preceding World War II. Thus, during the 1911-13 period, the consumption of cotton in India, Japan and China aggregated only 750,000 tons annually. It rose to 1,317,000 tons in the 1924-28 period and still further to 1,757,000 tons in the 1934-37 period. But World War II interrupted this growth, mainly as a result of the lower consumption in Japan. During the period 1947-48 to 1950-51, the annual rate of cotton consumption in these three Asian countries was 1,557,000 tons. The rise in cotton consumption in Asia in the inter-war years reflects the growth of the textile industry in this region. By 1934-37, the cotton requirements of Asia at 1.75 million tons almost equalled those of Europe. In more recent years, the European textile industry accounts for a higher rate of cotton consumption than the Asian textile industry. Thus, during the 1947-48 to 1950-51 period, Europe consumed 1,690,000 tons, as against 1,557,000 tons in the three main cotton consuming countries of Asia, namely, India, China and Japan.

Price-trend

Few commodities have seen such wide price-fluctuations as cotton, because the variations are influenced by prospective and actual outcome of harvests. The price of cotton is also sensitive to variations in the activity of textile industries. In more recent years, however, the changes in prices have been controlled by the Governments of the producing countries through measures, such as price-support legislation, fixation of floors and ceilings, and control on foreign trade in cotton. The following table shows the fluctuations in the American and Indian cotton prices in pre-war years, and in the American, Indian, and Pakistani prices in the post-war years.

Cotton Prices

(U.S. cents per lb.)

Year beginning 1st August	*American*	*Indian*	*Pakistani*
Liverpool market—Spot prices—			
1925	21.82	18.15	..
1926	16.57	14.58	..
1927	22.65	18.66	..
1928	21.36	16.30	..
1929	18.44	12.95	..
1930	11.61	8.19	..
1931	7.54	6.76	..
1932	8.52	7.29	..
1933	12.47	9.35	..
1934	14.24	10.78	..
1935	13.50	10.78	..
1936	14.62	10.87	..
1937	10.31	7.96	..
1938	10.16	7.14	..
Local markets—spot prices—			
1946	33.33	16.88	24.11
1947	32.38	21.56	28.50
1948	30.04	23.43	36.05
1949	30.30	17.50	30.03
1950	41.35	30.00	46.98
February, 1952	39.50	21.33	39.84

American: Middling fair staple (1"); post-war-spot middling (1"). Indian: Pre-war Oomra No. 1, fine; post-war—Jarilla fine. Pakistani: 289F, Punjab S.G.F.

It will be seen from the table above that Indian cotton prices have been maintained at below the world price-levels. This is because the Indian market for cotton, as the Report says, has been "insulated from international price development" by official control over prices.

Cotton Vs. Rayon

The U.N. Report discusses the prospects for cotton in the light of the emergence of rayon as an important textile fibre. Considerable inroads have been made by rayon into many of cotton's end-uses—apparel, household and industrial. The world production of rayon has increased since pre-war years. Thus, the output of continuous filament rayon moved up from 453,000 tons in 1938 to 875,000 tons in 1950 and of staple fibre from 422,000 tons in 1938 to 710,000 tons in 1950. The factors which have affected the competition between the two fibres are price relationship, quality differences, consumer preferences, industrial policies, technical considerations and currency difficulties. Discussing the relative quality of cotton and rayon, the Report says:

"Cotton's durability, absorbency and retention of strength when wet give it a quality advantage in laundering and consequently in such items as underwear, work clothing and more generally in apparel where climatic conditions are warm and humid. The same advantage prevails in towels and bed linen. In many end-uses, however, cotton's quality advantage in this respect is not absolute and, where rayon is less expensive, cotton may be adulterated or replaced. Rayon, on the other hand, has a quality advantage in its lustre and draping quality and may be preferred for women's dresses and in decorative household fabrics. In the industrial field, high-tenacity rayon is preferred for heavy truck tyres because of its high strength when dry."

Rayon was, at first—until well into the thirties—regarded as a substitute for silk, and, therefore, only as a competitor to silk. This was due both to the then existing price relationships and to rayon's lustre and continuous form. Hence, rayon came to be subjected to "luxury" tariffs. This is a factor which still affects its competitive capacity *vis-a-vis* that of cotton. In more recent years, the development of rayon staple has convinced industrialists and traders of rayon's potentialities as a substitute for cotton. But the use of rayon requires "adjustments to manufacturing equipment and in methods of handling." The Report concludes its discussion of the relative merits of rayon and cotton by pointing out that it seems "reasonable" to say that "the price disparity in favour of rayon has to be significant and persistent before a switch over from cotton to rayon is made. "The Report next discusses the recent changes in the comparative price-levels of cotton and rayon, and says:

"Cotton emerged from the war twice to three times more expensive while rayon was scarcely one-third dearer. Hereby, rayon has become the cheaper fibre. In 1946-47, the price of viscose rayon staple in the United States at 29 cents per pound was 7 cents below the comparable price for middling 15/16" cotton and in the United Kingdom at 14 pence it was 4 pence below it. This price advantage existed in other European countries. It has persisted ever since and was enlarged in Europe in 1949, as a result of currency adjustments, when prices of cotton advanced in terms of devalued currencies. There is little doubt that the price of rayon, produced as it is by a small number of large concerns, has been fixed with an eye to the level of cotton prices, the comparative stability of rayon prices being itself an advantage to textile industrialists."

Since rayon, which is a factory product, is capable of being marketed at relatively stable prices, as compared with cotton, an agricultural commodity, it would be seen that any measure which ensures stable prices for cotton also would increase its competitive capacity. Again, the cotton prices should be maintained at an attractive level. And those who continuously urge higher prices for cotton or ask for measures to support cotton at an artificial level of prices would do well to realise that they are not necessarily serving the long-term interests of this commodity.

PRIVATE BUYING OF COTTON IN U.K.

The Liverpool Cotton Association has warned the cotton industry that the present trend of price support policy in America gives little hope for an early return to pre-war trading conditions when spot cotton in Liverpool was sometimes cheaper than that offered for direct shipment from producer countries. On the other hand, the gradual introduction of private buying during last season has enabled spinners to readjust their conception of marketing methods after a long period of artificiality. Many have turned over from hand-to-mouth buying on the spot market to forward shipment contracts with considerable success.

A feature of most discussions about the re-introduction of private trading in raw cotton, the association says, has been the constant query as to whether private enterprise will produce a spot market to supply the spinning industry with such of its requirements as it may need to purchase by those means. The statement points out that it is first necessary to recognise a clear distinction between stockholding by the Raw Cotton Commission and by private merchants. The former, the report says, arises primarily by reason of a statutory duty to supply the industry with any reasonable requirements on demand, at either short or long notice. Stockholding by merchants, on the other hand, will only be undertaken where it is a reasonable commercial proposition. It adds:

"This fact should not be interpreted as meaning that a State trading organisation is prepared to provide a free service for which the merchant exacts a profit.

"Stockholding by any public body in this country, if not based on strictly commercial considerations, must sooner or later result in either generally higher prices to the industry or losses borne by the taxpayer. Recent experience of the centralised holding of excessive stocks of Egyptian-type cottons has illustrated this."

The price of spot stock, as compared with shipment cotton, the statement continues, must be considerably increased both by the costs of handling and storage and by the wider margin of profit required to offset the price risks involved.

It follows that the extent to which merchants will invest in such stock will depend upon the strength of indications that spinners are prepared to pay those higher prices, bearing in mind that the latter are free to buy direct from the country of origin. The statement says:

"Only experience can decide what is the right level of such spot stocks, and if those spinners who prefer to buy from stock and pay the additional costs indicate to the market their need and stand by their expressed intentions, then undoubtedly that need will be met.

"As a general policy for the industry, however, it would seem inevitable that the need to keep raw material costs to the minimum will mean that by far the larger part of its requirements will be catered for by direct shipment."

WOOL'S PLACE AS A WORLD TRADE COMMODITY

NEED FOR INCREASING PRODUCTION

(By EWEN M. WATERMAN, Chairman, International Wool Secretariat)

A VITAL fact emerging from today's world trade situation is that the British Commonwealth's material advancement and the well-being of its people rest substantially on the future of wool as an international commodity. Wool holds the confidence of traders and consumers throughout the world. Its importance as an item of primary produce to the people of Australia, New Zealand and South Africa is matched only by its high position in commerce and in its various manufactured forms.

While people in the Commonwealth wool-growing countries are apt to look upon wool only from its value as a raw commodity, in Britain it has assumed, in textile form, a forward position as a great dollar-earner. Many manufacturers have convinced themselves that producers are unable to meet the expanding demand for wool. This state of mind is a challenge which the Commonwealth growers, in common with those of other wool-growing countries must answer.

The need for greater production is made more urgent by the fact that today wool is being used as an upgrading or quality-increasing fibre to compensate for missing characteristics in other fibres or to overcome inherent disabilities. Even as wool holds its place in world trade, there is potential danger in any failure by wool-growers to meet the increased demand for their product. If they cannot supply the wool that is needed, then the manufacturers of other fibres are most certainly liable to step in. Once a market is lost, there is always the danger that it might never be won back.

Keen Demand

For wool, world markets are wide open and the demand is keen. The auction system of sale assured a highly competitive demand, a steady flow and a proper place. Apart from its quality as a natural fibre, wool has achieved greatness in international commerce by the smooth, orderly and regular manner in which it is allowed to flow from producer to consumer. Last season's flow from producer to consumer was particularly smooth and orderly. As manufacturers' and merchants' stocks of raw and processed wool and finished woollen goods are still well below the pre-war normal, an even flow of wool from Commonwealth wool-growers throughout the world in the immediate future seems assured.

A parallel taken from the use of wool from the end of World War II up to the present reflects the healthy state of demand. Accumulated war-time stocks that leading experts in the trade in London estimated, in 1944, would take 13 years to dispose of, were absorbed in five years. Production in the three main apparel wool production countries—Australia, New Zealand and South Africa—during the past seven years has increased by 25 per cent. In spite of forebodings in many quarters, Argentine's accumulation offered last season was absorbed without any serious effect on market prices. The comparative inactivity of the United States in last season's market—due to the anticipation of peace in Korea causing tight and light inventory maintenance and the general confusion connected with the marketing of synthetics—had little or no effect. (The outlook for immediate future American competition appears brighter.)

Prices Will Be Steady

Since the end of the war, there has been an annual increased consumption of wool—except in 1951, when the check was caused by the extremely high price of wool. As soon as the price fell, there was rapid recovery and adjustment, and there has been no setback since. Surely, there could be no better indication of public demand for wool when the price is reasonable.

Market prices for wool are now about half the peak price of 1950-51, and all indications are that they will remain steady. I believe that the confidence felt in wool throughout the world is rooted in the fibre itself. Wool has uniquely balanced properties and it remains unrivalled among its competitors. The more men try to imitate wool, the more valued becomes its outstanding characteristics. Synthetic fibre producers aggressively claim that they can produce fibre for every purpose. However, no synthetic products can approach the amazing versatility of the wool family of fibres in their properties, their quality, or their variety of purpose. Though boldly challenged by synthetics, wool remains supreme. No fibre has been produced yet that possesses all, or even the majority, of the characteristics of wool.

But the wonders of wool should not blind the growers of this commodity into complacency and contentment. The wool industry cannot rest on its laurels. The wool-growers must meet the demand of a trading situation which requires increased production. Growers in Australia, New Zealand, South Africa, and all other important wool-producing countries, must also realise that the great factors of international economics are related to their own security. There is danger for the producer in high prices. In fact, the only fear that wool-growers need have is that price rises might reach a level that keeps wool off the consumer's back.

Synthetic Fabrics

Synthetic fabrics of 100 per cent. composition have failed to usurp wool's place in public favour. Now, they are being blended in many forms with wool and are being promoted almost entirely upon their resemblance to pure woollens and worsteds. Wool blends and mixtures with other fibres are nothing new. Virgin wool has been mixed with its own re-used fibre, cotton, linen and silk for centuries. In most cases, the basic purposes have been to reduce price, thus making available the diluted qualities of wool in clothing at lower price ranges which might be more acceptable to sections of the public.

The acceptance of such fabrics is probably in ratio to the percentage of wool they contain and the expertness and care exercised in the construction. Most of the new synthetics today have little or no important price advantage. When rayon was introduced it was prophesied it would not be many years before wool was only a blending fibre. Today no more rayon is used in blends with wool than during the 1930's—although more rayon is used alone, because, like the new synthetics, it is more competitive with other fibres than with wool. Like rayon, the new synthetic fibres are again attempting to relegate wool to the role of a blending fibre. These synthetics are still in their experimental stages, and wool is being blended with them in increasing amounts to compensate for missing characteristics or quality and also to overcome the inherent defects of the new materials.

Science certainly has made and will doubtless continue to make important contributions to the clothing of man, but it is yet a long way from producing a man-made fibre that can equal wool in quality. Pure wool worsted suiting—to take one notable example—remains, in face of all opposition, unrivalled in real value. The world demand for wool goods depends largely on real income—after taxation and distribution of income. National incomes have continued to increase, and there is no sign of a change in this trend. A reversal of trading activities in the United States would inevitably bring about a fall in the demand for wool, along with other production goods.

Strong Influences

In some quarters, this is feared as a possible result of the end of the war in Korea and the slackening of international tension. It is by no means certain, however, that this would bring about a general reduction in capital expenditure at least for long. Other strong influences in the world today seem likely to prevent such a development. It is equally probable that reduction in expenditures on defence and associated stockpiling of material may give wider opportunities for capital expenditure.

The Westernisation of Japan is resulting in increased wool purchases to the point that makes Japan one of wool's most important buyers. In India and Pakistan, any man who serves in the army clings tenaciously to the woollen blanket and any other wool garment that may be issued to him. It is most significant that India consumes. 0.116 of a lb. a head a year of wool. In Europe, nobody has greater appreciation of wool today than the people of those countries—especially Germany and Italy—that were forced to use *ersatz* fibres during, and even before, World War II.

It is also a well-established fact that, as living standards improve, the *per capita* consumption of wool rises—so that the future of wool depends largely on the ability of the producer to keep his production up to the pace of consumption, bearing in mind that what will count most is better husbandry, improved pastures, growing the best type of wool experience and condition permit, close attention to the preparation of the clip for market, and, above all, wholehearted co-operation with the scientist. Science, it must be remembered, is aiding wool as well as the producer of synthetic fibres. Every wool-grower must remember that "There is no substitute for wool." Wool is a miracle of nature, perfected by man through hundreds of years of selected breeding. Whatever problems may be ahead, the wool-grower's future is, in my opinion, as certain as the future of any producer in the field of human endeavour.

"Commerce" Annual Number
1953

ON SALE NOW

This Number contains a comprehensive review of important developments in the sphere of Finance, Industry and Commerce during 1953, besides 50 feature articles by leading economists and eminent business men on subjects of topical importance. The Number is invaluable to all business men, economists and students of economics.

PROGRESS OF SUGAR INDUSTRY IN AUSTRALIA

A LESSON FOR INDIA

THE one conclusion that emerges from any dispassionate review of the developments in the Indian sugar industry so far is that the benefits of even a substantially long period of 18 years' protection have been defied by the unsatisfactory conditions under which the industry is carried on in India, namely, defective location, poor cane cultivation, and lack of attention to modern methods of sugar manufacture. If, therefore, the industry is to be stabilised and set on a solid footing, the removal of these defects is of utmost importance. It is precisely in this work that India has much to learn from the experience of the other sugar-producing countries of the world. Since Australia possesses a highly developed and most efficient sugar industry, the developments that take place in the industry there will be of much interest to us in India.

The sugar industry in Australia today rests on a sound foundation of 9,000 cane farms, with an average of 50 acres each. The establishment of these farms is in distinct contrast to the position in India, where the sugarcane growers are scattered all over the country and the average holdings are very small, being three to four acres. In Australia, the total cane yield in a normal year comes to about 6 million to 6.5 million tons. Another striking feature is the close relationship which exists between the sugar-producing units and the cane-growing farms. Thus, out of the 36 units manufacturing sugar, nearly half are owned and administered by sugarcane growers themselves on co-operative lines. In India, on the other hand, the agricultural and industrial sectors of the sugar industry, especially in the two major producing States, namely, U.P. and Bihar, are bifurcated and, except in the case of a few mills in the Deccan, the factories are generally at the mercy of cane cultivators for their requirements of cane supplies.

Cane Cultivation

In Australia, the sugarcane-growing areas lie along the plains of the eastern coast of the Continent. In its virgin state, cane land usually carries a heavy cover of jungle growth. Clearing, once a "heart-breaking business of ring-barking, grubbing and burning off," is now done with bulldozers. This operation is said to be costly. With a view to ensuring a thorough preparation of the soil, the farmers normally begin 18 months or two years before they harvest the first crop of the three which usually result from each planting. Three or four ploughings are carried out to a depth of 10 inches or 1 foot, according to the depth of topsoil overlaying the heavy clay sub-soil, with intermediate harrowings to break the surface into a comparatively fine tilth. Cane is propagated from short lengths of cane cut to embody three joints. The cane is cut into segments for various reasons. If rot attacks the sett in the ground, only six or eight inches of cane are lost. Some growers say that the cutting helps sprouting of the nodes, or eyes, which protrude at each joint and from which the stools of cane originate; and, if, in cultivation, the tines of a harrow should contact the cane, only a short length is disturbed or brought to the surface.

In the old method of planting, the setts were prepared by hand, hung in a bag around the shoulders of the planter, placed by hand in six inches deep furrows, and covered over with a hoe. Sometimes, the whole cane was placed in the furrow and there chopped into setts, but whichever way it was done, it was a time-consuming and back-breaking job. Now, the whole operation is done by a wheeled mechanical planter. Drawn by the ubiquitous tractor, it is operated by one person seated on the platform of the machine between two vertical bundles of cane which is stripped off the leaves or trash. In front of him is a funnel into which he feeds the length of cane. In the throat of the funnel, there is a knife moving backwards and forwards cutting the cane into the desired lengths of sett. As the cane is cut, it is coated with a mercurial spray to protect it from pineapple disease, a ground-dwelling virus that turns the heart of the stalk into pulp. Each acre absorbs about 17 to 18 gallons of this spray.

Fertiliser is added from a reservoir behind the operator in varying quantities, according to the needs of the land. Soil analyses are carried out by the Sugar Experimental Station and they are checked every three of four years. The land around Mackay, the most productive cane area of the north coast, takes up to 5 cwts. of superphosphate per acre, to which is added 37 lbs. of gammexane, a chemical exterminator for the control of worms and grubs that attack the setts. The furrow to accommodate the setts is dug by a small steel snout like a keel below the platform of the machine. Directly behind it, a hooked tine throws earth inwards to cover the setts and a small wooden roller, tailing the whole set-up, flattens the earth over them. Each loading of the machine is sufficient for 45 chains of planting. The opened furrow shows a continuous line of sets in the ground, surrounded by fertiliser and immunised from attack by disease.

Quality of Cane

The foregoing description indicates how the whole process of cane cultivation in Australia has been mechanised. It is no wonder, therefore, that both the yield of cane per acre and the sucrose content are considerably high in Australia *vis-a-vis* those in India. The average quantity of cane raised from one acre of land in Australia, for instance, amounts to more than 14 tons, as against about 12 tons in India. Again, the recovery percentage of sugar in cane is nearly 14, which compares very favourably with the all-India average yield of 9.97 (1952-53).

Thanks to the progress in cane development, production of sugar has turned out to be one of Australia's greatest and most highly organised industries. The rate of sugar output averages 800,000 to 900,000 tons per annum. The value of this sugar at present prices is estimated at more than £A23 million. The value of mill assets, farm equipment and land aggregates £A100 million. The industry, including the agricultural side of it, provides employment to over 39,400 persons, of whom 33,000 have direct employment on the cane farms and 6,400 in raw sugar mills. To add to these, there are about 51,350 persons who are indirectly employed, as, for instance, in the transport and distribution trades. The most outstanding feature of development of the Australian sugar industry is its high concentration in Queensland. This State accounts for as much as 95 per cent. of the total sugar output. About a fifth of the population of the State—200,000 to be precise—is supported by the sugar industry.

CANE DEVELOPMENT IN U.P.

Although the Annual Report of the U.P. Cane Development Department for the year ended June, 1952, is out of date, in that it relates to a period which is nearly two years old, it serves to emphasise the fact that the efforts of the Department in the direction of improving cane cultivation have not met with any success. Thus, according to the Report, the average yield of sugarcane grown in the reserved areas of the State during 1951-52 was not more than 278 maunds per acre, as against 296 maunds in the previous year. The highest per acre yield for the whole of the State, however, was as large as 2,048 maunds, as compared with 2,131 maunds. There was also a setback to recovery percentage, the figure for 1951-52 being 9.3, as against 9.8. The chief reasons adduced for this state of affairs are unfavourable weather conditions, ill-distributed and irregular rainfall, and drought in eastern districts. The fall in the recovery percentage of cane was the result of the early start and late closure of the factories. The trend of cane yield in the different parts of Uttar Pradesh during 1951-52 was as follows:

(In maunds)

	Western	*Rohilkand*	*Central*	*Eastern*
Average yield ...	331	270	242	284
Highest ...	2,048	1,993	1,706	1,643

The aggregate quantity of sugarcane raised in the reserved areas during the year under review was 399.6 million maunds. Of this, only 244.0 million maunds could go to the sugar factories. The average supply of cane per acre worked out to 170 maunds; the shares for the aforesaid four ranges were 195 maunds, 164 maunds, 133 maunds and 190 maunds, respectively.

Notwithstanding reduction in the supply of sugarcane from the reserved areas to factories and setback to recovery, the quantity of sugar produced was higher, being 22.74 million maunds in 1951-52 as against 16.12 million maunds in 1950-51. The factories had an abnormally long season. In the eastern zone, the factories worked on an average of 108 days and in the western zone on an average of 184 working days, as compared with 90 days and 112 days, respectively, in the previous season.

RAILWAY FREIGHT ON COAL

MOVE FOR INCREASE REPORTED

THE official move for a further increase in the freight rate on coal and the possibility of the withdrawal of special concessions in fixing the terminal and short-distance rates have come as a bolt from the blue to producers, consumers and traders of coal. The move to increase the freight on coal is stated to be due to the need for augmenting railway earnings, which of late is believed to have been downward, and for offsetting the increasing demands of labour for higher emoluments and better amenities. The rumour about the possibility of the withdrawal of the special concessions is stated to have been based on the recent recognition by the authorities concerned that, as they are discriminatory in nature, they should no longer be retained. It is said that this question will be placed shortly before the Railway Rates Tribunal for its decision.

If the reported move to increase the freight rates is correct, it will surely be a matter for deep concern for the interests affected. It is being contended that the increase in rail freight by about 30 per cent. since 1st April, 1952, has adversely affected the fortunes of the industry. Any further increase will, therefore, only aggravate the situation. It is pointed out that coal is a major item that enters into the cost of manufactured commodities and any increase will raise the cost of manufactured goods. Consequently, the multiplier effect of such an increase will be to stimulate the inflationary spiral already in evidence in the case of many commodities. This will set in motion the demands for increased wages. Thus, there will set in the vicious circle of wages chasing prices and *vice versa*.

The railway authorities, however, may contend that coal constitutes about 40 per cent. of goods traffic carried by rail and, as such, it must bear a part of the increase in the operation cost of the railways. They may further argue that, as the cost of replacement of railway assets has gone up, freight rates should be such as to allow a reasonable return on the capital investment. Moreover, freight rates for coal in India are still the cheapest in the world and there is no reason why this public undertaking should continue to subsidise the private sector. Again, there is considerable scope for the private sector to economise its expenditure and to improve its efficiency. By keeping freight rates at low levels, the railways, it can be conceivably argued, are only covering the wasteful methods of operation of undertakings in the private sector. Another argument that is put forward in support of higher coal freights is that, by keeping them low, the railways are attracting the cargo that ought to go to coastal shipping. This is the other side of the picture and those who are opposed to an increase in coal freights must come forward and effectively counter these arguments.

NEW PLASTIC SAFETY ROLLER FOR COAL MINES

A new British conveyor roller made of plastic is likely to contribute to greater safety in the world's coal mines. Designed primarily to reduce the risk of fire from steel or cast iron rollers, it has the advantage of needing no inflammable oil or grease as lubricant. Moreover, it is not possible for stones or pieces of coal to generate enough heat to start a fire when rubbing on the surface of the roller.

The plastic roller is also simpler in use. As no grease is required, periodic lubrication is not needed. At the same time, the plastic rollers are substantially lighter than steel, making it easier to move conveyor systems to new positions. The new roller is said to withstand corrosion and moisture. Consequently, it is likely to have a wide range of industrial applications. Among them will probably be the handling of uranium ore which involves the use of sulphuric acid.

PEGGING THE OUTPUT OF COKING COAL

The Government of India has announced, as was mentioned in our last issue, its decision that the output of A and B grades of coking coal in 1954 should be limited to 7.4 million tons and that of Grade I and II coals to the level of production in 1952. It has also announced that the targets of production of various grades of coal for individual collieries in 1954 should be fixed by the Coal Board with due regard, among others, to the actual production of each in 1953. The target would be so fixed as to avoid any excessive retrenchment of labour and uneconomic working of the collieries. The pegging of the output will be regulated through the supply of wagons, each colliery being given a despatch target for a year, which may include the stocks left over from the raisings of 1933. All collieries under one management will be treated as one group, the production quota of each grade being transferable from one colliery to another. All collieries, including Government collieries, are subject to this scheme and any attempt to down-grade the coals to avoid pegging will be deprecated.

PLANTATION LABOUR ACT

GOVERNMENT'S MOVE TO IMPLEMENT IT

THE fifth session of the Industrial Committee on Plantations, which is being held in Calcutta this week-end (the 30th and 31st instant), is expected to discuss two questions of considerable importance to the plantation industry, namely, the payment of compensation for lay-offs of labour and the implementation of the provisions of the Plantation Labour Act, 1951. It is understood that the Hon'ble Mr. Giri, the Labour Minister of the Government of India, will preside over the session.

The question of compensation for lay-offs of labour on plantations is a comparatively new one. During the debate on the Industrial Disputes (Amendment) Bill, 1953, some members of Parliament strongly urged the Government to extend the provisions relating to lay-off in that Bill to all sections of the plantation industry. The Minister for Labour is then reported to have stated that this would be considered at the forthcoming session of the Industrial Committee on Plantations.

It is not denied that compensation for lay-offs is a desirable and necessary provision in some industries, especially those situated in urban areas. In the case of the plantation industry, however, the position is slightly different. Unlike in many other industries, employment in the plantation industry is seasonal in character, as the work depends to a large extent on conditions of climate and the soil. In the case of a rubber plantation, for instance, there is practically no work done in the heavy monsoon periods which sometimes extend to two or three months in a year. Employers of plantation labour are nevertheless doing their utmost to provide as many days' work as possible for their labour, and there is, in practice, no lay-off except when seasonal conditions make it compulsory. It is recognised that there is a case for some sort of compensation for lay-offs even in agricultural industries, but the point to remember is the seasonal character of the plantation industry and the fact that the regulations applicable to non-seasonal industries should not be applied to that industry in toto.

The question of implementation of the Plantation Labour Act, 1951, is a more serious matter and it is to be hoped that this will be given the best possible care and consideration and not rushed through in an experimental fashion. In 1952, the Rajaram Rao Committee on Enquiry recommended to Government that the provisions of the Plantation Labour Act should not be implemented for a period of two years, in order to give adequate time to the tea industry to recover from the serious effects of the slump of that year. The industry should be thankful to Government for having acted in accordance with that advice. The question now arises whether the plantation industry as a whole, including coffee and rubber, has reached a position in which it can bear the incidence of the Plantation Labour Act without disrupting the industry's economy. The tea crisis of 1952 was so severe that the liquid reserves of a large number of gardens were liquidated, and it is only since the middle of 1953 that gardens have been able to make up for a part, at least, of the colossal losses, taking advantage of the improved prices. How long these prices will remain at their present, or improved, levels no one can foretell, but high prices in themselves have many undesirable attractions. The case of coffee is an instance in point. Recent improvement in coffee prices caught the Union Government's attention so much that it decided to divert some of it to the Exchequer by means of an export duty. It is strongly rumoured that tea may suffer the same fate as coffee if the present spurt in prices continues for some time. If this happens, and Government decides to enhance the export duty on tea—and it is to be hoped very much that it will not—tea growers must again prepare themselves for a lean period ahead.

The case would not be different with coffee or rubber. Government's decision to mop up a large part of the coffee price by means of an export duty has greatly weakened the coffee growers' ability to accept commitments such as those contemplated in the Plantation Labour Act. In addition, the recent attempt of the Income-tax Department in Madras to assess a portion of the income of coffee growers to income-tax must be regarded as a blow to a large majority of coffee growers who have already had a raw deal at the hands of Government.

No one now complains that the rubber price, pegged as it has been at Rs. 138 per 100 lbs. of No. 1 quality, is not enough to meet the normal working expenditure of a rubber plantation, or to provide for a small return on capital, but the price certainly does not cover any proportion of the expenditure that it will have to bear if the Plantation Labour Act is applied to it. The situation is, however, covered by the fact that the Government would agree to a revision of the price if there is any increase in cost of more than 10 cents per pound.

It is thus obvious that the plantation industry is still not ready to accept the burdens contemplated in the Plantation Labour Act. The burdens are numerous as well as costly. To mention only a few. There are sections 7, 9, 10, 11, 12, 14, 15 and 18 dealing, respectively, with the appointment of certifying surgeons, the provision of conservancy, medical facilities, canteens, creches, educational and recreational facilities, housing, and the appointment of welfare officers. Model rules in respect of these sections have already been drafted by Government and circulated for comments. Many of these model draft rules have been strongly criticised by the industry on the ground that they have been drawn up without practical knowledge or appreciation of the conditions prevailing in the plantation areas. It is thought that, as a result of this criticism, the Central Government may revise the draft rules with a view to making them more practical and easy of compliance. The Plantation Labour Act having gone on the Statute Book, the application of its provisions to the plantation industry can be rendered easy and practical only by ensuring that the Rules under the Act are properly drawn up and it is thought that the Industrial Committee on Plantations will devote a considerable part of its time to this aspect of the question.

It is understood that the Government has not yet circulated any model rules for educational and recreational facilities on estates or for the housing of employees. As far as housing is concerned, the plantations have already agreed to follow a housing plan which aims at rebuilding houses in accordance with a set standard during the course of 12 years, two of which have already elapsed.

In the absence of rules specifying the nature and extent of the amenities to be provided on the estates, it is probably not possible to reckon the cost of implementation of the provisions of the Plantation Labour Act. Assuming, however, that the draft model rules already circulated are going to be implemented without any change, and estimating the normal cost of providing other amenities for which draft model rules have not yet been circulated, one estimate puts down the capital cost at about Rs. 4-3 per worker per day for a year, and the recurring expenditure at about Re. 1-4 per worker per day. This may be an exaggeration for an estimate but there is hardly any doubt that the total cost of implementation of the Act is certainly going to make a very substantial addition to the unit cost of producing the plantation crops concerned.

In spite of all this, it may be expected that the Government of India will attempt the implementation of the Act soon after the Industrial Committee meeting. We do not think that the industry will be reluctant to go ahead with the implementation of some of the provisions of the Act, so long as it is within the practical limits of the industry's economic capacity. As already stated, the time has not yet come for all units in the industry to accept the additional responsibilities. The Government should, therefore, without doubt go slow in the matter. It would be best if they could draw up a five- or ten-year programme of gradual implementation of the provisions of the Act. It should begin with those provisions which are likely to cause the least practical and financial difficulties, and there should be some provision whereby the implementation can be held up in times of emergency. Unless the whole scheme is thus rendered flexible in its practical working, it is bound to cause a great deal of hardship on the different units in the industry. In addition, particular units of the industry, which for the time being are situated in a less fortunate position than the others, should be exempted from carrying out their obligations for the duration of the emergency.

PHYSIOLOGY OF JUTE PLANT

EFFECT OF LIGHT AND TEMPERATURE ON GROWTH

IT is common knowledge that jute is one of the most important commercial crops in India. It has been in cultivation for a long time in Bengal, parts of Bihar, Orissa, and Assam. The climatic conditions in these areas are very suitable not only for the growth of healthy plants but also for their retting necessary for the extraction of the fibres. But the different environmental factors such as temperature, light, humidity, rainfall, photoperiod, etc., all influence the growth and development of a plant like jute, but very little is known about the effects of these factors. It has for long been realised that it is extremely useful to have detailed knowledge of the influence of these factors with a view to obtaining improved strains. Experimental studies so far conducted on the physiology of jute plants seem to have yielded some valuable results. Among such studies, mention may be made of the results of scientific investigations made by Mr. J. C. Sen Gupta, Calcutta University, and his assistants, Mr. Gobinda Prasad Mitra and Mr. Jogendra Nath Halder. The team was also assisted by Mr. K. C. Basak, Director, Economic Research Section, Indian Central Jute Committee.

Mr. Sen Gupta's studies on the physiology of jute plants relate to two well-known species, namely, *Corchorus capsularis* L and C. *olitorius* L. It is believed that, as a cultivated plant, capsularis came to India from China or Cochin China and that olitorius might have originated in India. Experiments conducted on these two varieties were confined to finding out the effect of the time of sowing and vernalisation on growth and development on the plants. Although these experiments involve greatly complicated issues, they have revealed, it is stated, sufficient facts to devise improved methods of cultivation and to find out the most suitable sowing time under different environmental conditions. The summary of the findings given below make interesting reading.

The two species of jute, namely, capsularis and olitorius, were grown in pots at intervals of one month in 1945, commencing from 15th April, and at intervals of 15 days in 1946, commencing from 1st March; there were thus 12 sowings in 1945 and 24 sowings in 1946.

Time of Sowings

The sowings revealed that vegetative growth and development were greatly influenced by the time of sowings. It was found that, as the sowing was delayed from 15th April, the vegetative period was reduced in both the species, and for widely different times of sowing between April and July, the flowering time was between the middle of August to the end of September.

The daily light period increases from about 12½ to 13½ hours for April to the latter part of June and then falls to about 12 hours 15 minutes. From the response of the plants to the daily light periods, it was inferred that plants flowered in the long light periods and vegetation stunted during short light periods. It was found that plants sown in September and later, being exposed in November onwards to the lower temperature of the season, had their vegetating growth very much reduced. Sowings of 15th November to 15th January had plants of very stunted growth and sometimes these plants died soon after germination.

Again, total height reached by plants was greater in the sowings of 31st March or 15th April and progressively decreased with the lateness of sowing time. The plants showed a high rate of increase in height during the rainy season, but the best growth was found in plants which had been exposed to the high temperature and long hours of bright sunshine for about two months before the commencement of the rainy season.

The favourable time for sowing jute under these environmental conditions appeared to be between the end of March and end of April for capsularis and between the middle of April and the middle of May for olitorius. Plants, especially of the latter variety, flowered early even when they were sown towards the end of March.

It was generally found that June-July sowings produced larger number of fruits than the April-May sowings. This might be due to the fact that plants sown in June-July came to flower before its complete potential capacity for vegetative growth approached exhaustion, whereas the plants sown in April-May had greatly exhausted their potential capacity of vegetative growth when they came to flower.

In five years—
NINE TIMES more fertiliser!

In 1951, India's output of ammonium sulphate — vitally-needed fertiliser for her fields — was 46,300 tons. In 1956 it will be 4,50,000 tons, a ninefold increase!

Largest single producing unit is the giant State factory at Sindri, already producing five out of every six tons of Indian fertiliser. Like so many other important industrial buildings, the Sindri factory is *built to last* with ACC cement.

India's great projects, of which Sindri is one, will ensure better living for everyone. They will call for vast quantities of cement, and the A. C. C. is helping to achieve National Targets by producing more and more quality cement.

IRON AND STEEL TECHNOLOGY

LATEST DEVELOPMENTS REVIEWED

FOR a nation like India, which has embarked upon expansion of its iron and steel industry, continuous touch with the developments taking place in iron and steel technology is of primary importance. In this connection, the Paper on the main developments in 1953 and the direction in which new developments may be expected, including an evaluation of their importance to the industry, prepared by the *U.N. Industry Division of the Economic Commission for Europe*, made available to us last week, is an extremely useful document.

The Paper is based largely on articles appearing in the world technical Press, as well as on specific contributions received from various experts. It is noteworthy that only those developments which appear to be of particular interest or of such a nature as to make a major contribution to the current production techniques have been described. The developments of a more experimental nature, which have not yet advanced sufficiently far beyond the preliminary experimental stages to permit of evaluation of their practical possibility, have not been discussed. It is true that the Secretariat, which prepared this Paper, is aware that opinions as to the value and importance of developments differ widely, but has proceeded with its task in the hope that it will provide some interesting material worth consideration.

The Paper is divided into three parts, namely, (1) pig-iron production and blast furnace practice, (2) steel-making, with particular reference to the use of oxygen, and (3) rolling and finishing processes.

The Paper cites, at the outset, some of the developments taking place on three completely different lines in the field of blast furnace practice. These relate to (1) improved efficiency in conventional blast furnaces; (2) further efforts to make the low-shaft furnace a practical proposition; and (3) the recent development of a small-capacity furnace with reasonable efficiency and suitable for less developed countries.

Conventional Blast Furnaces

So far as improved efficiency in conventional blast furnaces are concerned, the Paper states that the new development of "high top pressure" has recently produced interesting results. This method of operation is stated to have a far greater degree of flexibility than the conventional pressure. In order to assess the value of high top pressure on operating results, the Paper refers to the comparative tests made by the Clyde Iron Works of Colville's Ltd., Scotland, on two basically similar furnaces, each with 18′ x 3″ diameter hearths, the one equipped with high top pressure and the other with conventional pressure.

Dealing with further efforts to make the low-shaft furnace a practical proposition, the Paper sets out both the advantages and the disadvantages of the low-shaft blast furnaces. The advantages are:

(a) Owing to the low pressure in the stack, a softer grade of coke can be satisfactorily used, thus making these furnaces less dependent on hard metallurgical coke.

(b) The low-shaft blast furnace is suitable for reduction of fine ores, although the developments of high-top pressure in standard furnaces may make this advantage illusory in low-shaft furnaces.

(c) A subsidiary advantage of low-shaft furnaces is that a richer gas is produced.

The disadvantages are:

(i) The consumption of oxygen in the blast is high. For a furnace producing approximately 100 tons of iron per day and using 50 per cent. oxygen-enriched blast, the consumption will be some 40 to 50 tons per day.

(ii) The charge requires a far more careful preparation than is necessary for standard furnaces.

It appears too early to state definitely that low-shaft blast furnaces have reached the stage of development when they can be regarded as a serious rival to modern large-size furnaces with their high thermal efficiency. Oxygen-enriched blast has been used in the experimental furnaces and low-cost oxygen is essential, if this is to become standard practice. It is pointed out, in this connection, that preliminary results obtained with the rebuilt experimental low-shaft blast furnace at Oberhausen, in West Germany, appear to show that the furnace lends itself particularly well to the production of ferro-alloys, especially ferro-manganese, where considerable reduction in coke consumption has been noted. Despite the high cost of oxygen, the fuel consumption cost with this furnace is said to have disclosed some significant savings. As against the savings, however, the high cost of careful ore preparation and pelletising must be taken into consideration. Reliable figures on comparative costs involved in the operation are not available, but it seems that, in small-scale operations, the cost of ore preparation and pelletising may well exceed the savings in fuel cost. But, in large-scale operations, they may be reduced.

Small-capacity blast furnaces are of particular interest to less developed countries, especially those considering the development of a steel industry using local raw material resources, which may not be of the quality necessary for large-scale operations. The development has taken place, recently, of a small-capacity blast furnace with a pig-iron production of 10,000 to 15,000 tons a year, using ores with a Fe content of less than 30 per cent. and using solid fuel with a heating value of under 5,000 calories and with up to 30 per cent. ash. A pilot plant has been in operation near Lausanne, in Switzerland.

The value of this type of unconventional reduction furnace, as compared with other better known types such as the rotating furnace, can only be judged after trials have been made on a pilot plant with the ores and fuel available in the country in which it is proposed to install such equipment. This type of low-shaft furnace, owing to its simplicity and low cost, would appear to offer good chances of success with a very wide range of raw materials.

Steel-making

The Paper then deals with steel-making. The most interesting and extensive development in steel-making has been the improvement in quality by the use of oxygen in basic Thomas converters. Two developments are taking place at the same time. They are:

(1) The employment of the conventional bottom-blown converter, using a mixture of oxygen and superheated steam in place of air blast, the main object being to reduce the nitrogen content in Thomas steel and thus improve quality; and

(2) a more revolutionary development, using a simple converter without the complicated bottom-blast arrangement and relying entirely on high-pressure oxygen blown on the surface of the metal.

These two developments, which are of such outstanding interest for the industry as a whole, are described in this Paper in some detail.

Finally, the Paper has dealt with rolling and finishing processes. It is common knowledge that the problems associated with continuous casting of steel have been a matter of research for many years. The practice of continuous casting has been used on a commercial scale for some time in the non-ferrous metal industries, particularly aluminium, and developments have now reached the point where steel can be continuously cast satisfactorily for the production of billets or slabs, thus eliminating the need for high capital cost cogging equipment for ingot reduction.

There has also been an interesting development in the technique of hot-rolling steel strip. This is the so-called planetary mill, which is revolutionary in design and incorporates a basically new prnciple to reduce, in one pass, a thick steel slab into comparatively thin hot-rolled strip. Other developments relate to electrolytic tinning, the use of extrusion process for non-ferrous metals in the production of simple and complicated shapes, as well as tubes of all types, and the possibility of using oxygen cutting flame to replace hot slab and bloom shears.

(*Concluded from next column*)

grity of the engineer which should be given greater weight than hitherto, while making promotions. Above all, a code of ethics should be enforced among officers, in which integrity should be given a high place.

Such, in brief, are the recommendations of the first seminar, the implementation of which will go a long way towards reducing the cost of the projects to the nation. But much will depend upon the integrity and efficiency of the engineer. Unless he realises the importance of the job he is doing to the nation, no material improvement over the existing state of affairs can be expected. He must have his heart in the work, remain true to his science and base his efforts for public recognition upon acquired knowledge, scientific attainment and excellence of performance.

INDIAN IRRIGATION ENGINEERING

NEED FOR POOLING KNOWLEDGE STRESSED

THE seminar of engineers on problems connected with the execution of river valley projects, which took place at Nangal recently, was a very useful one. The recommendations of the engineers who took part in the seminar are, as pertinently pointed out by Mr. Gulzarilal Nanda, Union Minister for Planning, Irrigation and Power, "valuable, exciting and worthwhile in terms of application." Certainly, when a start is made to implement them by the Committee of Engineers and the Board of Ministers to be reconstituted shortly by the Government of India, as pointed out in our Delhi Letter last week, they are expected to usher in a new era of irrigation engineering in India.

The recommendations of engineers are designed to execute river valley projects efficiently, economically and speedily. They cover a wide range of subjects, from the formation of a pool of technical personnel to eradication of corruption, from the operation, maintenance and depreciation of machinery to provision of spare parts and from assessment of technical manpower for long-term planning to fixation of uniform unit rates for concrete and masonry dams.

The most important recommendation relates to standardisation and pooling of machinery, equipment and spare parts and their maintenance. The engineers recommended that, in view of the limited quantity of equipment in the country, paucity of technical personnel and India's dependence on foreign countries for the supply of spare parts, the sizes and makes of the machines should be standardised. There should be a Machinery and Spares Directorate, the duties of which should include "(1) integration of the record of spare parts on projects, (2) helping projects in scaling their forward requirements for spares, and (3) compiling statistics of capital and equipment on projects." They also suggested that the Government should encourage the production of spare parts within the country.

Deputation Reserve

The engineers urged that a Deputation Reserve—a pool of specialist officers drawn from different States—should be created at the Centre, so that experts may be moved from one project to another. It was unanimously agreed that no machine or technical man should be allowed to remain idle. Further, it was stressed that the execution of projects should be phased in such a manner that, when one project reached its peak, another must start and lie in readiness to receive the plant and personnel. It was also felt that the Government should maintain a Central Directorate of technical manpower for river valley projects. The Directorate should conduct training centres, issue certificates and keep up-to-date record of the operating personnel on all projects. It was disclosed at the conference that an assessment of the technical manpower required for the next seven to eight years and technical facilities available in the country was being made by the Government.

The engineers suggested that the authorities concerned with the projects should report to the Central Water and Power Commission the break-up cost on each item of work, which will help in making proper comparison of the varying rates of different projects. Also, the project progress reports should be so designed as to provide data for judging not merely quantitative progress but also efficient working of the organisation, including the condition of machinery.

Another important recommendation agreed upon was that, if the time factor was not an important consideration and if the estimated savings were not significant, hands should be preferred to machines. It was stated that, in certain cases, the use of machinery ultimately did not and would not lead to economy. Consequently, manual labour should be preferred for such work.

The oft-repeated charges of corruption among engineers were also discussed at the seminar. The engineers did not tend to minimise the seriousness of such charges but contended that the problem was a complex one and not peculiar to any one department and that no single remedy could be suggested to combat it. They also recommended that the scales of pay, wherever inadequate, should be revised and positive steps should be taken to appreciate the inte-

(*Continued in previous column*)

IRRIGATION AND POWER PROJECTS

PROGRESS OF WORK DURING FIRST HALF OF FIVE-YEAR PLAN

THE Planning Commission's progress review of irrigation and power projects during the first half of the Five-year Plan admits that what has been achieved, though encouraging, is only very little. There is, accordingly, need for a sense of urgency and intense effort among the administrators at the Centre and the States to step up their activities. The people, too, must take greater interest in these things than they have been doing hitherto and extend their wholehearted co-operation to the authorities. No nation can make rapid progress, unless its people participate with enthusiasm and determination to carry through the projects. It, however, goes without saying that mere appeals to people, especially to those who have been accustomed to take life easily and throw the blame on Providence for decades together will not do. The policies and actions of the authorities should be so designed as to evoke the maximum public co-operation and participation.

During the years 1951-53, irrigation and power projects already on hand progressed well and preliminary work in connection with the new projects, which are to be taken up for execution at the end of the Plan period, was started. Some idea of the progress that has been made on large irrigation schemes included in the Plan can be had from the fact that more than 1.5 million acres of new land have been brought under irrigation and that an additional power capacity to the tune of 425,000 kw. has been installed.

Multi-purpose Projects

Of the projects taken on hand, three multi-purpose projects are important. The first of them is the Bhakra-Nangal Project. This project consists of:

(1) The Bhakra dam across the Sutlej;
(2) the Nangal dam, 8 miles down the stream;
(3) the Nangal power channel;
(4) two power houses on the Nangal canal;
(5) the Bhakra canal system; and
(6) the transmission line.

Work on this project has been proceeding satisfactorily. Already partial irrigation has commenced and about 19,000 acres were under irrigation in 1951-52 and 100,000 acres in 1952-53.

The second is the Damodar Valley Project, the full development of which involves the construction of eight dams on the Damodar and its distributaries, a thermal station at Bokaro and an irrigation canal system. The first phase of the system, as included in the Plan, provides for:

(i) The Bokaro thermal station of 150,000 kw. capacity;
(ii) the Tilaiya dam with a power station;
(iii) the Konar dam;
(iv) the Maithon dam with a power house;
(v) the Panchet Hill dam;
(vi) the Durgapur barrage and canals; and
(vii) the transmission line system.

Some stages of the first phase of the Damodar Valley Project have been completed. Thus, the Bokaro thermal station of 150,000 kw. capacity has been completed and so also the construction of the Tilaiya dam. The hydro-power station on this dam, with two generating sets of 2,000 kw. each, has been commissioned. An area of 5,000 acres was irrigated during 1952-53. At the Konar dam, 80 per cent. of the earthwork and 95 per cent. of the concrete work have been completed. The construction of the Maithon dam is in full swing. The winter flow of the river has been diverted through a tunnel and about one-third of the work on the main dam has been completed. Over 150 miles of the main transmission lines have already been erected and good progress has been made on further 92 miles. Five grid-sub-stations and four receiving stations have already been brought into operation.

The third important multi-purpose project is the Hirakud. This project is the first in a series of three dams for the integrated development of the Mahanadi Valley in Orissa. The first stage of the Hirakud Project provides for:

(i) A dam built of concrete, masonry and earth;
(ii) earth dykes on both flanks;
(iii) the canal system one on either side;
(iv) a power house at the dam, with an installed capacity of 123,000 kw.; and
(v) transmission lines.

On the main dam, about 23 per cent. of the total concrete and masonry work was completed by the end of September, 1953. On the earth dam, about 28 per cent. of the work had been executed even before four months ago.

As regards work on the dykes, as much as 62.7 million c. ft. of earthwork had been done for the embankment on the left dyke, up to end of September, 1953. On the right dyke, however, excavation is behind the schedule. The total quantity of earthwork done on the main canals and drainages is 310 million c. ft. and distributaries and minors 50 million c. ft. The work on masonry structure has commenced.

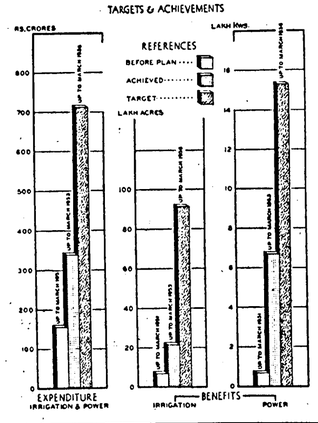
As regards the power house, draft tubes for two 24,000 kw. generators were received at site and the erection of these sets is expected to be taken up during the current working season. Detailed route surveys on 67 miles of the transmission system have been completed.

There has been some setback, due to bad foundation material, which has been met with in the power dam and spillway sections, necessitating deeper foundations and additional drilling and grouting.

New Projects

Five new irrigation projects are to be taken up for execution towards the end of the Plan period. They are Koyna, Rihand, Krishna, Chambal and Kosi.

As regards the Koyna Project, administrative approval to stage I of this project, which is estimated to cost Rs. 33.22 crores, has been recently accorded by the Government of Bombay. The International Bank has arranged for experts



to study the project, on the spot along with certain aspects of the power requirements of the city of Bombay, the Bombay-Poona area and other areas to be served by power from the Koyna.

The Rihand Project is expected to generate 240,000 kw. of power for agricultural and industrial advancement in the eastern parts of U.P., the western part of Bihar, and the neighbouring areas in Vindhya Pradesh and Madhya Pradesh. Work on the project will commence shortly. The project has been included in the Indo-U.S. Technical Co-operation Programme for 1953-54 for the supply of equipment.

Investigations and surveys on the Krishna Project on the lines recommended by the Technical Committee, appointed by the Planning Commission, have been in progress and will shortly be completed. Field-work on the Nandikonda dam has been carried out.

The first stage of the Chambal Project has been included in the Plan, the estimated cost of which, according to the joint project report by the Governments of Madhya Bharat and Rajasthan in 1952, is Rs. 33.75 crores. The excavation of foundations at the Gandhi Sagar dam site in Madhya Bharat has been taken on hand and up to June, 1953, about 1.5 million c. ft. of earthwork was accomplished. Surveys for the alignment and preparation of preliminary estimates for the main canal have been completed. Other phases of investigations, such as revenue, agricultural and soil surveys are under way.

Preliminary investigations for the first stage of the Kosi Project have been completed. An advisory committee, which recently scrutinised the proposals for the project, has recommended the implementation of the first stage of the project, which is to consist of:

(i) A barrage at Hanuman Nagar, costing Rs. 13.27 crores;

(ii) flood banks from Hanuman Nagar, extending nearly 70 miles on either side at an estimated cost of Rs. 10.67 crores; and

(iii) a canal system to irrigate 1.4 million acres in Bihar and 180,000 acres in Nepal, at an estimated cost of Rs. 16.32 crores.

The total cost of the first stage of the project is thus expected to be Rs. 40.26 crores, of which perhaps about Rs. 9 crores may be spent during the remaining period of the Plan. Besides affording irrigation facilities to about 1.6 million acres in Bihar and Nepal, the project will provide flood protection to a large area lying between Hanuman Nagar and Jhamta on the right bank and Bangaon on the left bank.

Employment Aspect

The Planning Commission's review also deals with the employment aspect, which, it states, is under close study. A rough estimate, however, is stated to indicate that nearly 2½ lakh persons are being employed annually. The actual increase in employment, consequent on the implementation of power schemes, will be known only after the completion. It will depend upon the expansion of existing industries and the starting of new ones. As an illustration of the expected magnitude of employment potential, the review points out that, roughly, about half a million persons can be provided with employment from the power generated from new projects like the Koyna or the Rihand.

As in other fields, public co-operation is essential for the effective implementation of irrigation and power projects in the Plan. The promotion of village labour co-operatives for the construction of distributaries and other local works is, therefore, an important element in the success of the Plan. Dealing with this aspect, Planning Commission says that, in Bombay, for instance, an effort has been made to entrust works to labour co-operatives without calling for tenders. The number of labour co-operative societies increased from 11 in June, 1949, to 43 in July, 1953. In Madras also, labour camps consisting of men from various districts have been organised in connection with the Lower Bhawani Project. In the Punjab, several minor schemes constructed by labour co-operatives were opened during the past few years.

In Rajasthan, labour co-operatives have been formed with the help of contractors and earth-work on channels is being done through them. These are a few examples of a more widespread trend which needs to be encouraged actively as an integral aspect of the execution of the Plan.

Imposition of betterment levy is one of the means through which additional funds required for river valley projects are sought to be raised. Dealing with the progress made in this direction, the review states that Bombay, Punjab, Hyderabad, Mysore, Rajasthan and P.E.P.S.U. have enacted legislation for the levy of betterment fees, while Assam, Madras, West Bengal, and Uttar Pradesh are considering proposals for legislation. Several other States, such as Bihar, Orissa, Madhya Bharat and Travancore-Cochin, have accepted the principle of betterment charges. Proceeding, it says that the levy of betterment fees and adjustments in water rates are among the major sources of additional finance which State Governments are expected to develop, with a view to financing their development programmes, and it is important that, in States which have not yet implemented this recommendation, the necessary steps should be completed at an early date.

In passing, it may be noted that the programme of irrigation and power projects of the first Five-year Plan forms a part of a more long-term objective, namely, the doubling, in a period of 15 to 20 years, of the area under irrigation and the production of power amounting to 7 million kw. The immediate programmes include about 140 large irrigation schemes and about 100 power schemes. The total outlay on irrigation and power development during the Plan period is Rs. 670 crores, of which the multi-purpose and major irrigation projects account for Rs. 430 crores, power schemes for Rs. 128 crores and minor irrigation schemes Rs. 112 crores.

INSURERS AND FINANCE FOR PRIVATE INDUSTRIAL SECTOR

NEED FOR RELAXING RESTRICTIONS ON INVESTMENTS

IN many of the Western countries, insurance companies have played and continue to play an important role as active participants in the task of promoting economic progress by diverting the funds which they derive from their policyholders for purposes of supporting new and promising ventures. It is true that an insurance company cannot take great risks, in the same way as individual and certain other institutional investors can, for their primary responsibility is towards the policyholders whose money they hold in trust. Within this limit, imposed either legally or accepted voluntarily by the insurers, they continue to make their contribution to economic development. Indeed, they constitute one of the largest sources of finance for the private sector of economic activity.

This position is in sharp contrast with that of Indian insurers who are prevented from aiding freely new undertakings, or even certain older and well-established undertakings, by the existing laws which lay down rigid restrictions on the investment activities of insurance companies. Briefly, the Insurance Act (section 27) lays down that 25 per cent. of the funds of life assurance companies should be invested in Government securities, 25 per cent. in Government or other approved securities, and the balance in "approved investments" specified in section 27A. The Central Government has powers, under section 27(A) (s), to declare, by notification in the official *Gazette*, any particular investment as an "approved investment." Besides these restrictions, the Act envisages certain other conditions for investment. Thus, section 27(A) (3) provides that an insurer should not invest in the shares of any one banking company or investment company, more than 2½ per cent. of his funds, or more than 2 per cent. of the subscribed share capital and debentures of the banking company or investment company concerned. Again, section 27(A) (4) lays down that an insurer should not invest in the shares or debentures of any one company, other than a banking company or investment trust, more than 2½ per cent. of his funds or 10 per cent. of the subscribed share capital and debentures of the company, whichever is less.

The question of insurers' investment of their funds has now assumed a new significance, in view of the fact that the Shroff Committee is engaged in investigating the availability of financial resources for the private sector. Indian trade and industrial organisations, which have submitted their replies to the Committee's questionnaire, have all stressed the need for relaxing the statutory restrictions on the investment of insurance funds. Thus, the Federation of Indian Chambers of Commerce and Industry has pointed out that the insurers should, "within certain limits, be allowed some latitude for investment in established undertakings, as also in new industrial undertakings." The Indian Merchants' Chamber, Bombay, recognises that similar restrictions prevail in the U.S. and Europe. It urges, however, that the conditions in India are different. Thus, the Secretary to the Chamber says:

"As far as India is concerned, the case of Japan is more apt, where the limitations and restrictions on insurance funds were, in the pre-war period, generously relaxed with a view to facilitating the flow of these funds for the purpose of bringing about rapid industrialisation in the country. There is no doubt that this policy largely contributed to the development of productive enterprise in Japan."

In its reply to the Shroff Committee's questionnaire, the Indian Life Assurance Offices Association has also struck the same note, namely, the need for the liberalisation of investment restrictions. The Association rightly points out that the insurance companies are in a better position to aid private sector than the banks since the former's investment, unlike the Bank's investments, are essentially of a long-term nature. The present statutory restrictions on their investments, it is pointed out, are onerous. This is because the insurers find that, after investing a part of their funds in Government and approved securities, making such normal investment as land and house property, and providing for agents' balances, loans on policies, outstanding interest, cash balances and similar items, they find that "very little margin is left for the insurance companies to invest freely in industrial shares and debentures." The Association has, therefore, urged that the Act should be so amended as to require life insurance companies to invest only 20 per cent. of their funds in Government securities, and 20 per cent. in Government and approved securities, leaving a balance of 60 per cent. for other investments as per section 27A.

Provident Fund Scheme

The Association has further pointed out that the Central Government should make a more liberal use of its powers under section 27(4), subclause (s). It would appear that the Government is "very reluctant" to exercise its powers under this sub-clause which, as already stated, empowers the Government to declare any investment as an "approved investment." The Association has also stressed the need for amending clauses (3) and (4) of section 27A, to which a reference has been made above. The Association wants that the figure 2½ per cent. which occurs in these clauses and also the figure 2 per cent. which occurs in sub-clause 3 should be increased to 5 per cent. In other words, the Association wants that each insurer should be permitted to invest a maximum of 5 per cent. of his funds in banks, investment trusts, shares and debentures of each company, as well as up to 5 per cent. of the total paid-up issues of banks and investment trusts. It further wants that the Employees' Provident Fund Scheme should be so amended as to "empower the Commissioner to make payment of insurance premia on policies of employees absolutely assigned to the appropriate boards direct to the insurers each time premia falls due on such policies, instead of the present provision, requiring the employee to apply to the Commissioner for the withdrawal of the insurance premium each time a premium falls due." Finally, it has emphasised the need for relaxing the limits of exemption for insurance premia from income-tax so as to raise them from the present limits of one-sixth of one's income, subject to a maximum of Rs. 6,000 in the case of an individual and Rs. 12,000 in the case of a joint-Hindu family, to one-fifth of the income, with a maximum of Rs. 10,000 for individual and Rs. 20,000 for joint-Hindu family.

There is thus a strong case for the liberalisation of investment restrictions, which deserves to be examined by the Shroff Committee and the Government. But it should, at the same time, be remembered that these restrictions were brought into effect because a section of the insurers ignored the consideration that they were trustees of the policyholders' money and that they should aim at maximum possible yield, consistent with security of capital. From this point of view, it is gratifying to note that the Association itself "appreciates the underlying reasons for these restrictions, namely, that of the safeguarding of the moneys of the policyholders and preventing interlocking." It should, however, be possible for the Government, without impairing the basic considerations of security of investment and prevention of interlocking of funds, to relax, in a judicious manner, the present restrictions on insurers' investments.

TAXATION OF REINSURANCE TREATIES

Indian insurers are perturbed by the Income-tax authorities' move to tax Indian insurance companies in respect of the profits earned by foreign companies on the reinsurance business which the former cede to the latter companies. Indian companies are, for purposes of taxation, treated as merely agents of the foreign companies with which they have reinsurance treaties. Indian insurers base their opposition to this move on three grounds:

(1) It shows an insufficient appreciation of the importance and value of reinsurance facilities; (2) such practice does not prevail in other countries and (3) it will affect adversely Indian general insurance business.

A representation on these lines, it is learned, has been made by the Indian Insurance Companies Association to the Government of India.

It would appear that the place of foreign insurance companies, which have treaty connections with Indian insurers, was considered by the authorities in this country at the time of the passage of the Insurance Act, 1938. The authorities then felt that there was no need to place any restrictions on foreign insurers, who accept reinsurance treaties from India, or even to require them to register themselves. In this connection, it is pointed out that when an Indian insurer buys a reinsurance cover from a foreign company, the Indian insurer stands in the same relation to the foreign company as the Indian insured does towards the Indian company with which he insures. An insurer's transaction with a foreign company is not subject to tax because, in the first place, the transaction is as between principal and principal and, secondly, the reinsurer sells his cover to India from abroad and does not trade in India. The Government's present move, it is stated, is contrary to those well-established principles of taxation of insurers.

What intrigues Indian insurers about the Government's present move is that it is contrary to the practice followed in other countries. Indian insurers have reinsurance treaty connections with many countries, none of which has ever sought to subject our insurers to tax. The present practice is that any profit which the Indian company makes through its reinsurance connections with a foreign company is subject to tax in India. Similarly, any profit which the foreign insurer makes through its reinsurance business with Indian insurers is subject to tax in the country of the overseas insurer. If the foreign insurer were made to subject itself to tax in India, in addition to the tax it would have to pay in its own country, the insurer would be compelled to pay taxes to this Government.

Indian insurers, therefore, feel that if the Government persists in its present move, it would interfere with the growth of reinsurance business. It might provoke other countries to take retaliatory measures which they would be perfectly justified in taking. This would affect adversely the position of Indian insurers in the international reinsurance market. Indian insurers point out, in this connection, that they have attained their present position only through the assistance provided by foreign insurers through the reinsurance facilities which the latter have provided for insurers in this country. It would be wrong for this country, they argue, to take any measure which would provoke other countries to retaliate and thereby disturb the happy relations between Indian and foreign insurers. Finally, they emphasise that reinsurance is vital to the growth of insurance, and further, that Indian insurers cannot afford to dispense with the services of their powerful foreign allies. Indeed, in some branches of insurance, such as aviation and hull insurance, since the risks involved are immense, it is necessary to spread them far and wide. The Government's move, it is stated, will kill the foreign insurers' incentive to offer reinsurance facilities to India, and thereby stifle the healthy development of Indian Insurance.

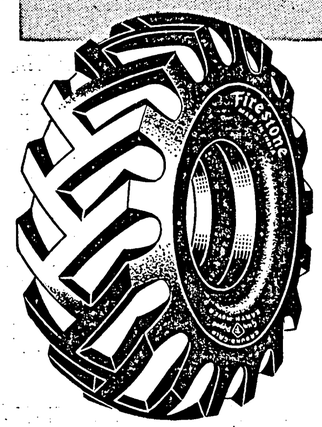
Firestone
Proudly Presents
THE FIRST
'earthmover'
MADE IN INDIA



India has now entered a phase of development and construction of huge dams, irrigation projects and hydro-electric generation which is an integral part of its Five-Year Plan to raise the living standards of the people within the shortest possible time. To accomplish this, large quantities of earth-moving equipment are required and, to match this equipment, a correspondingly large number of special tyres are needed. Firestone immediately responded to this demand and now present with pride the *first* earthmover Tyre to be built in India.

ANOTHER Firestone FIRST!

TO SPEED THE PROGRESS OF THE FIVE-YEAR PLAN

THE BRITISH INDIA GENERAL INSURANCE COMPANY, LIMITED
(INCORPORATED IN INDIA)

FINANCE FOR PRIVATE SECTOR

VIEWS OF SOME INDIAN BANKING INTERESTS

(Contributed)

THE Planning Commission has assigned an important role to the private sector in the implementation of the National Plan. Investment in this sector, however, has lagged behind the level assigned to it in the Commission's report. This has been due to a number of factors, among which difficulties of securing the needed finance must be reckoned to be an important one. As readers are aware, the Reserve Bank of India has, therefore, appointed, with the approval of the Government of India a Committee, under the chairmanship of the well-known industrialist and financial expert, Mr. A. D. Shroff, to examine how increased finance, particularly bank finance, can be made available to the private sector, through sources other than those which are under the consideration of the Taxation Enquiry Commission. The Committee has prepared three sets of "points for discussion with industrial insurance and banking interests" respectively. These interests have submitted detailed memoranda on the points to the Committee, which is now engaged in taking the oral evidence of the representatives of the interests. Reference has already been made, in the previous two issues of *Commerce*, to the viewpoints of industrialists, traders, investors and Exchange banks. It is proposed in this article to deal with some of the points raised by the Committee for discussion with banking interests, so as to indicate what some Indian bankers have been feeling about them.

Example of Germany

The first point is "general views regarding the advisability of banks participating in provision of finance to industries: (*a*) short-term, (*b*) medium term and (*c*) long-term. On this point, the Indian bankers feel that it is generally safe for commercial banks to make short-term advances to industrial concerns against good security in the form of stock-in-trade and the banks actually make such advances to a great extent. On 30th June, 1953, the advances of Scheduled banks to industrial concerns amounted to Rs. 189 crores out of the total advances amounting to Rs. 545 crores. Orthodox banking practice does not regard it advisable for commercial banks to make medium-term or long-term advances to industrial concerns, because their working funds consist chiefly of current or short-term deposits. But, on account of the present underdeveloped state of India and the urgent need for developing the country rapidly, it is necessary for commercial banks in India to adopt a broader and more national outlook. In this connection, it may be mentioned that German banks have again been playing a very active part during the last few years in rebuilding German industry. Some of the Indian banks may be prepared to make to industrial concerns short-term advances to a larger extent and medium-term or long-term advances to some extent, provided the following facilities are given to them:

(*a*) Short-term advances made by banks to industrial concerns against stock-in-trade may be converted into bills, which should be readily discounted by the Reserve Bank and readily renewable. Further, if the Reserve Bank undertakes to rediscount *Multani hundis* which have been discounted by commercial banks, in lump sums, with a limit fixed for each bank, it will give much encouragement to the *hundi* business, which provides finance to numerous small enterprises. The practice of the Imperial Bank of India, extending over many years, of discounting *Multani hundis* to a fair extent indicates that that this business is organised and conducted on fairly sound lines.

(*b*) The Reserve Bank should lend readily against documents created in connection with medium-term and long-term advances made by banks to industrial concerns against the latter's fixed assets. In this connection, it may be noted that the Reserve Bank Amendment Act, 1953, has permitted the Reserve Bank to grant accommodation to co-operative banks upto Rs. 5 crores against advances made by them for periods varying between 3 and 5 years.

(*c*) The Reserve Bank should lend readily against the investments of banks in debentures and shares of industrial concerns which are guaranteed by the Central Industrial Corporation, or a State Industrial Corporation or the Government.

It is true that the above suggestions are not in accordance with central banking practices in advanced countries. But it is felt that the central banking authority in India must also adopt a broader and more national outlook, in view of the special circumstances of the country, indicated above.

The second point refers to "present level of banks' investment in large-scale industries: (*a*) investments in shares, debentures, etc., and (*b*) investments in working capital." The present investments of banks in debentures and shares of industrial companies, it may be mentioned here, are not large, being about Rs. 12 crores out of total investments amounting to Rs. 384 crores. Banks also help in further provision of long-term finance to industries by making advances to business men, investors, share brokers, etc., against the security of debentures and shares of industrial concerns.

The third point is whether the demand for industrial advances is more than what the banks can satisfy or whether there is a paucity of borrowers. The position in this respect is that the demand of large and established industrial concerns is fully satisfied by commercial banks and that the banks can in fact give more of such advances against adequate and acceptable security. But small and medium-sized industrial concerns find it difficult to secure even short-term finance from banks, because they have no acceptable security to offer in the shape of standard goods which can be readily marketed and which are properly stored in godowns.

In the fourth point the Committee asks: What are the conditions under which the banks lend to industries at present? The answer is that they make short-term advances to industrial concerns mostly against pledge or hypothecation of the stock-in-trade of the concerns. Moreover, the banks often demand and obtain the personal signatures of the managing agents or one or more directors of the concerns. The advances are mostly repayable on demand, but they are generally continued for one year, may be renewed for another year and may continue for several years, if the financial position of the borrower and the lender remains satisfactory.

Bank Advances

The Committee then wants to know whether bank advances are confined to some industries and, if so, whether this is due to any special features of banking or of industries in India. The reply of Indian bankers is that banks make advances readily to large, well-established and creditworthy industrial concerns, which have been earning good profits from year to year. They are, however, reluctant to make advances to new concerns and even to old and large concerns, if the latter have not been earning profits regularly, unless the parties managing the concerns are creditworthy and sign pronotes, thereby giving their personal guarantee.

The sixth point is whether any special measures are necessary to enable banks to lend to industries, on the assumption that there is an increase in demand for finance by industries. The answer is that the assumption is correct, in view of the important role assigned by the Planning Commission to the private sector and the special measures needed are those indicated in the answer to the first point.

The seventh point raised by the Committee is whether the supply of credit would be enhanced and rendered easier if special institutions, such as Industrial Development Corporations, Industrial Finance Corporations, Investment Trusts, etc., are created. The reply is in the affirmative, provided the Reserve Bank is prepared to make advances against debentures and shares of such Corporations, both of which are trustee securities, as readily as it does against Government securities, thereby abandoning its present practice of not advancing to banks against such debentures and shares, except during an emergency and after the banks have used up their holdings in Government securities. This is necessary, because banks can never afford to neglect the liquidity of their investments.

The eighth point is whether labour legislation has led to increased costs of operating banks and retarded the development of banking in undeveloped areas. The reply to this question also is in the affirmative, because while, on the one hand, it has increased the remuneration which banks have to give to their employees, on the other, it has greatly diminished the control of banks over their employees, leading to a substantial reduction of efficiency, discipline and will to work. In 1947, the total earnings of Indian Scheduled banks were Rs. 29.83 crores and their establishment expenses amounted to Rs. 9.61 crores. By 1952, they had increased to Rs. 34.38 crores and Rs. 13.91 crores, respectively. This shows that the percentage of their establishment expenses to earnings increased from 32.2 in 1947 to 40.5 in 1952. This increase has been mostly due to the awards of various Tribunals.

While labour legislation has increased the remuneration of bank employees, it has paid no heed to the necessity of employees producing adequate output per man-hour. On the contrary, indiscipline and disloyalty have increased among employees of banks, because labour legislation has provided an elaborate and lengthy procedure for dealing with cases of indiscipline and even fraud. There have been cases of fraud on the part of employees, in which all that the banks could do was to suspend them and to go on paying them maintenance allowances and to refer their cases to Tribunals, which took many months to dispose of the cases. Moreover, in several cases, banks have been prevented from discharging surplus staff, resulting from the closing of unremunerative branches, by the orders of Labour Commissioners or Tribunals. Further, there have been cases of Tribunals ordering the reinstatement of some employees, whom banks had retrenched on account of the closing of a few branch offices. The employees resigned as soon as they received the arrears of remuneration awarded by the Tribunals and the banks discovered that the employees had served elsewhere during the interval and had obtained double pay. Although these cases were brought to the notice of the Tribunals as well as the Government of India, both expressed their inability to do anything in the matter.

Difficulties in Opening New Offices

These difficulties have made banks unwilling to add to their liabilities by opening new offices, particularly in undeveloped areas. This unwillingness to expand activities, even where there is scope for doing so, has checked the growth of banking in India. In recent years, the total number of banking offices in India, far from increasing, has diminished. This is shown by the fact that, between 1948 and 1952, the number diminished from 5,277 to 4,839.

The object of enacting labour legislation in India has been to protect illiterate and semi-illiterate labour employed in organised industries. Its recent application to bank employees, who, except the subordinates, are well-educated and have a career to work for, has proved disastrous. Banks are credit institutions, having their own peculiarities and needs. Labour legislation, devised for the benefit of industrial labour, therefore, is unsuited to banks. Cumbersome legal machinery, involving inordinate delays, has been interfering seriously with the smooth and efficient working of banks. This is not the case even in such advanced countries as the U.K., Canada, and the U.S.

Bank employees can be given protection by adding a section to the Banking Companies Act, empowering the Reserve Bank to regulate relations between banks and their employees. The Reserve Bank has wide powers of supervision over banks and they can be expanded so as to include regulation of employer-employee relations. With its intimate knowledge of the peculiarities and needs of banking and with a free hand, the Reserve Bank can lay down conditions of service either in banks, generally, or in particular banks, according to their capacity, and can encourage opening of new branches of banks by keeping terms of employment rather elastic. The Reserve Bank may set up a new Department for doing this work. New banking offices would mean additional employment and the unemployed would welcome this new employment, even on somewhat lower remuneration, in the confidence that, with good work, they would be able to secure better terms, with the progress of the new banking offices.

The ninth point is whether banks can make any suggestions which would enable them to open branches in undeveloped areas. The reply is that such branches should be exempted from the operation of bank awards and Shops and Establishment Acts and should be given a subsidy for a limited period, free facilities for watch and ward and adequate remittance facilities by Government.

The tenth point is whether there has been overconcentration of banking facilities in urban areas. The reply is in the negative, taking into consideration Western standards. If it is felt that there are more banking offices in urban areas than are required by the banking needs of the areas, this seems inevitable, because banks find it necessary to open offices in new places for handling there the business of their other offices, as their experience is that their agents in those places do not provide the direct and speedy service which their own offices can render. Further, urban areas offer far more business than rural areas and naturally banks are attracted to the former by this business.

Suggestions for Augmenting Deposits

The eleventh point is whether banks can make suggestions for augmenting bank deposits in areas where banking facilities are freely available. The reply is that, whereas in the U.K. bank deposits are nearly four times the amount of currency in circulation, in India they are only two-thirds of the currency in circulation. Further, whereas they have increased in the U.S., Canada, the U.K. and Pakistan, they have fallen in India by Rs. 120 crores between 1948 and 1953. This indicates that there is much scope for increasing bank deposits in India. With this object, the following suggestions are made:

(1) If the penalty against the misuse of cheques is made stringent in India, as it is in the U.S. and the U.K., the cheque habit will develop rapidly, because creditors will be more willing to accept payment by means of cheques than at present.

(2) Discreet and continuous educative propaganda should be conducted among the public to make them realise that keeping their money idle at home is anti-national and anti-social, in the present context of the underdeveloped conditions and low standard of living of the country, and that they must make it available for the development of the country by depositing it in banks.

(3) Government and the Central Banking Authority should not only refrain from doing anything, such as issue of statements or adoption of legislative or other measures, which would lower the confidence of the public in licensed banks, but should also take positive steps to increase the confidence of the public in these banks and to make the public feel that all licensed banks are safe. Some of these steps are to allow Government Departments, local and quasi-Government bodies, as well as concerns sponsored by Government, to open current accounts with licensed banks and to keep short-term deposits with them without demanding the deposit of an equivalent value of securities from the latter, to allow Government Departments to accept the guarantees of licensed banks, on behalf of suppliers and contractors, with a limit for each bank but without demanding deposit of Government securities, and to allow all companies to deposit provident funds of their employees, pending investment, with the licensed banks.

Further the Central Banking Authority should take all possible steps to prevent runs upon any licensed bank and to see that a licensed bank does not fail. For the failure of a bank means in practice loss of confidence even in sound banks. The Authority should, if necessary, even risk a part of its large annual income and change the directorate or management of a licensed bank and give it directions for strengthening its position, in order to ensure the stability of all licensed banks.

(4) A deposit insurance scheme, similar to that prevailing in the U.S. but with the necessary modifications to suit Indian conditions, may be sponsored by the Government of India, through the Reserve Bank, for insuring all deposits in licensed banks upto Rs. 10,000 and the burden of half of the premium may be shouldered by the Reserve Bank.

(5) The scrutinies of the Income-tax Department and the Income-tax Investigation Commission, often amounting to undue probing, and their peremptory demands upon banks for information regarding the customers' accounts are something which are not found in other countries and should be minimised, because their practical effect has been that a number of customers have either minimised their operations with banks or ceased to deal through them. Although these probings have secured some more revenue for Government, they have proved harmful to the larger economic interests of the country.

The next two points raised by the Committee are allied and are whether it is possible to reduce the present ratio of banks' cash to deposits and whether the remittance facilities available at present are handicapping banks in the maintenance of the minimum necessary cash balances. The answer is that the present remittance facilities are inadequate and compel banks to immobilise appreciable amounts of cash at their branches, with the result that the present average percentage of cash of Indian Scheduled banks to their deposits is as high as 16.5, as against 9 in the case of foreign Scheduled banks operating in India and 8 in the case of banks in the U.K. If free, quick and adequate remittance facilities as between all currency chests, Government treasuries, etc., are made available to banks on the lines mentioned on page 110 of the issue of *Commerce* dated 23rd January, 1954, Indian Scheduled banks will be able to reduce the existing percentage of their cash to liabilities by 5 and to give additional advances and to discount additional bills to the extent of Rs. 50 crores.

Branch Banking

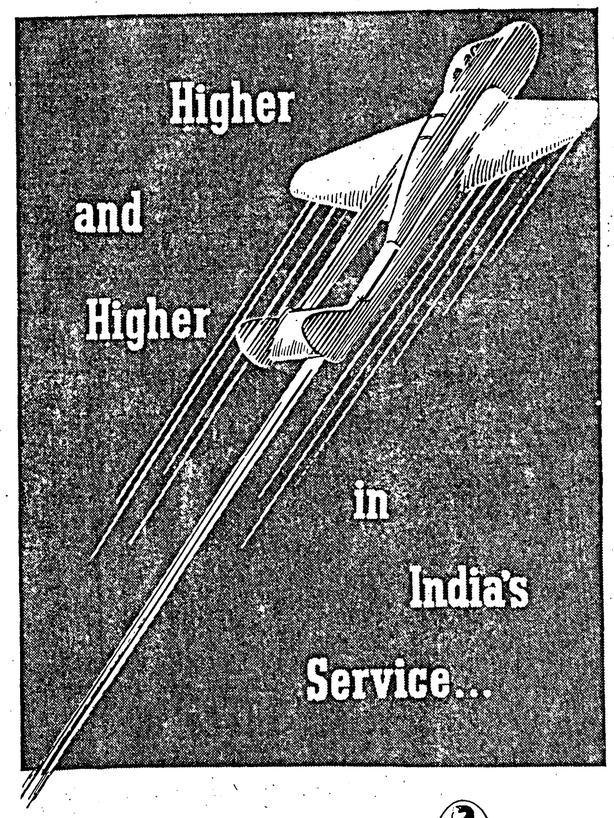
The final point is whether the present policy of the Reserve Bank in granting permission to open branches has led to the uneconomic working of branches in undeveloped areas. In answering it, it is pertinent to point out that, in a circular dated 13th March, 1947, issued to all banks, the Reserve Bank stated that, in order to avoid wasteful competition, banks should form associations for every place, district, province, etc., and enter into mutual agreements regarding the rates of interest for various classes of deposits or advances, exchange for drafts and telegraphic transfers, commission for the collection of bills, purchase and sale of securities, etc. Banks have tried to follow this sound advice, but either their attempts to enter into such mutual agreements have not succeeded or these gentlemen's agreements have not been kept. Hence, a certain amount of cut-throat competition has been prevailing among them in some places and this has produced an adverse effect upon their resources and development. It is, therefore, necessary for the Reserve Bank to take the initiative in bringing banks together for fixing their scales, rates, charges, etc., because, in the absence of sanctions, it is difficult to keep any understanding arrived at among banks in this respect, without such initiative.—*All Rights Reserved.*

WORLD BANK'S TRAINING SCHEME

The sixth annual general programme of the World Bank began on the 15th inst. The programme gives an opportunity to nationals of member-countries to become acquainted with all aspects of the Bank's operations. The trainees will learn, at first hand, the way the Bank is organised and administered, how it makes loans, how it markets its bonds, the various methods it uses in giving technical assistance in drawing up long-range development programmes and in analysing projects. It is intended that the experience and training received at the Bank will help the trainees to contribute more effectively to the economic growth of their own countries.

Participants in the 1954 programme come from eight of the Bank's member-countries, namely, Brazil, Burma, Colombia, Germany, India, Japan and Turkey.

The training programme was inaugurated in 1949. With the current year's group, the programme covers 40 of the Bank's 55 member-countries.



Jet fighters of the Indian Air Force need special tyres. These tyres are now being made for the first time in India by Dunlop, founders of the tyre industry.

U.S. PRESIDENT SUBMITS $65,600 MILLION BUDGET

AID FOR NON-EUROPEAN COUNTRIES

THE U.S. budget for the fiscal year commencing 1st July, 1954, which has been presented to Congress by the President, Dwight D. Eisenhower, estimates the revenue at $62,700 million and expenditure at $65,600 million. The budget, which is the first to be prepared entirely by the Eisenhower Administration, assumes fairly stable conditions, internally and externally, for the period it covers. American security and prosperity will depend, Mr. Eisenhower said in his message accompanying the budget, on the success with which the U.S. undertakes its responsibilities as a leader of the free world.

The budget recommends total expenditures of $65,600 million. This is $5,300 million less than estimated expenditures for the current year. These anticipated savings, the President said, are being reflected in some tax reductions effective from 1st January and in some further tax revisions recommended in the 1955 budget. These somewhat lower taxes, he said, will encourage continued high levels of capital investment and consumer purchases.

Deficit Forecast

Revenues for the 1955 fiscal year are estimated at $62,700 million indicating a prospective budget deficit of $2,900 million. This would compare with deficits of $4,000 million in the fiscal year 1952, of $9,400 million in the fiscal year 1953, and of $3,300 million estimated in the fiscal year 1954.

On a cash basis, however, the 1955 proposed budget has in prospect an estimated excess of public receipts over public payments of about $115 million. This is because the Government cash transactions with the public include receipts and payments of social security and other Government trust funds which are not considered part of the national budget.

National security programmes, estimated at $44,900 million, make up the largest budget item. This includes expenditures for the Department of Defence, the programme of aid to other countries, atomic energy, and stockpiling of strategic materials. Such expenditures aggregated $50,300 million in the 1953 budget, and are estimated at $48,700 million in the 1954 budget, thus accounting for the largest single element of budget reduction.

The President pointed out, however, that these savings result from revisions in programmes and improvements in operations. "Our security," he noted, "is being strengthened—not weakened." He observed, for example, that 1955 expenditures for air power will be the largest since World War II.

Economic Aid

The budget proposes expenditures of $1,028 million toward development of other nations—with most of such aid going to non-European countries. The message does not break down the proposed aid by area or country. Such a breakdown may be made later during Congressional consideration of proposed legislation to implement the President's requests.
